14. In contrast, Dr. Parry concluded that Claimant had not reached MMI for his August 25, 2015 industrial injuries. She assigned Claimant a 20% whole person impairment rating for his emotional liability under Table 1 of the *AMA Guides*. Dr. Parry commented that she rated Claimant's emotional liability under Table 1 "rather than combining an additional mental impairment with his impairment secondary to his brain injury." She remarked that the *AMA Guides* permit a great deal of flexibility in assigning psychological impairments. Dr. Parry acknowledged that Dr. Reichhardt's total 8% whole person rating for both psychological and neurological impairments was not incorrect. She simply would have rated Claimant differently pursuant to the *AMA Guides*. The record reveals that Dr. Reichhardt properly exercised his discretion pursuant to the *AMA Guides* in combining Claimant's 3% psychological impairment with his 5% neurologic impairment for a total 8% whole person rating as a result of the August 25, 2015 accident. Dr. Parry simply disagreed with Dr. Reichhardt's MMI and impairment determinations. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Reichhardt's MMI determination and 8% whole person impairment rating were incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings

as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Reichhardt that he reached MMI on April 7, 2016 and suffered a 5% neurologic impairment and a 3% psychological impairment as a result of his August 25, 2015 admitted industrial injuries. On August 25, 2015 Claimant was injured when a pickup truck traveling at highway speeds between 60 and 80 mph collided with the rear of his impact truck. Claimant commented that his chest struck the

steering wheel and his head hit a glass panel behind the driver's seat. He remarked that he suffered a brief loss of consciousness as a result of the impact. ATP Dr. Lugliani diagnosed Claimant with a traumatic brain injury, visual disturbances, a liver laceration and a lumbar strain. He prescribed medications and referred Claimant for pain management treatment and physical therapy. After receiving additional conservative medical treatment, including extensive neurological testing, Dr. Lugliani reported that Claimant had resumed full duty employment without complications and was not taking any medications. Dr. Lugliani noted that Claimant's subjective complaints were minimal, his objective complaints were benign and he could work full duty with no restrictions. He concluded that Claimant had reached MMI on April 7, 2016 with no permanent impairment.

8. As found, on August 19, 2016 DIME Dr. Reichhardt determined that Claimant suffered a traumatic brain injury and an aggravation of his pre-existing anxiety and depression as a result of the August 25, 2015 accident. He agreed with Dr. Lugliani that Claimant had reached MMI on April 7, 2016. Dr. Reichhardt remarked that Claimant warranted a functional score of 1.5 or a 3% psychological, whole person impairment. He specifically considered Table 1, page 109 of the *AMA Guides* in rating Claimant for episodic neurologic disorders and assigned a 5% whole person impairment. Combining Claimant's 3% psychological impairment with his 5% neurologic impairment yields a total 8% whole person rating as a result of the August 25, 2015 accident.

9. As found, in contrast, Dr. Parry concluded that Claimant had not reached MMI for his August 25, 2015 industrial injuries. She assigned Claimant a 20% whole person impairment rating for his emotional liability under Table 1 of the *AMA Guides*. Dr. Parry commented that she rated Claimant's emotional liability under Table 1 "rather than combining an additional mental impairment with his impairment secondary to his brain injury." She remarked that the *AMA Guides* permit a great deal of flexibility in assigning psychological impairments. Dr. Parry acknowledged that Dr. Reichhardt's total 8% whole person rating for both psychological and neurological impairments was not incorrect. She simply would have rated Claimant differently pursuant to the *AMA Guides*. The record reveals that Dr. Reichhardt properly exercised his discretion pursuant to the *AMA Guides* in combining Claimant's 3% psychological impairment with his 5% neurologic impairment for a total 8% whole person rating as a result of the August 25, 2015 accident. Dr. Parry simply disagreed with Dr. Reichhardt's MMI and impairment determinations. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Reichhardt's MMI determination and 8% whole person impairment rating were incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a 5% neurologic impairment and a 3% psychological impairment for a total 8% whole person rating as a result of his August 25, 2015 admitted industrial injuries.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether Claimant proved by a preponderance of the evidence that the surgery proposed by Steven Seiler M.D. to remove a volar ganglion cyst is reasonable, necessary, and related to her admitted industrial injury.

FINDINGS OF FACT

1. Claimant has worked for Employer for 19 years. She is a supervisor in the cheese department.

2. There was no evidence admitted at hearing that Claimant had a diagnosis or treatment related to her right wrist prior to July 2016. Claimant testified she had never been diagnosed with a cyst prior to her injury.

3. On July 12, 2016, Claimant suffered an admitted industrial injury while working for Employer. She injured her right hand when a cap came off a pipe and brine sprayed on her hand. She tried to replace the cap and brine covered her hand. She lost her balance and hit her right hand when she caught herself. Claimant testified her hand looked like it was covered with plastic and had immediate swelling.

4. Claimant was taken to the emergency room at Colorado Plains Medical Center-Fort Morgan. Claimant reported that while at work she placed her ungloved hand for 30-45 seconds in front of a pipe that was blowing brine, which was kept between 8°-10° Fahrenheit. The ED physician noted Claimant had serous-filled blisters on her hand. Claimant testified she spent six days in the burn unit.

5. Claimant was treated by Kevin Vlahovich, M.D. at Banner Occupational Health Clinic. Claimant was first seen by Dr. Vlahovich on July 22, 2016. At that time, her complaints were pain related to frostbite in the right hand and fingers. Claimant reported no joint pain and she denied any parasthesias. Claimant reported pain of 3/10. She had returned to modified work activity. Dr. Vlahovich observed necrotic tissue throughout the fingers, as well as bleeding. Examination revealed that her skin wounds had mostly closed. His diagnosis was frostbite with tissue necrosis of the right hand-initial encounter. Claimant was given a prescription for Mobic, as well as work restrictions.

6. A General Admission of Liability ("GAL") was filed on behalf of Respondent on July 27, 2016. Respondent admitted for indemnity and medical benefits in the GAL.

7. Dr. Vlahovich oversaw Claimant's treatment over the next several months. She received physical therapy, treatment for her burns and was ultimately referred for an orthopedic evaluation, as she had continued pain in her right hand.

8. On August 10, 2016, Claimant was evaluated by orthopedic surgeon, Steven Seiler, MD. Her main complaint was right middle finger stiffness. On examination, Dr. Seiler noted Claimant's skin showed erythema volar and dorsally over the fingers and the palm. Her wrist extension and flexion were approximately 70°. Dr. Seiler's assessment was frostbite of the right-hand, with post-frostbite contracture of the middle finger. He thought Claimant's main need was for physical therapy to get her finger moving. The ALJ notes Claimant had no complaints specifically referable to the right wrist.

9. On August 29, 2016, Claimant returned to Dr. Vlahovich. Examination of the right hand revealed bright red discoloration over fingers 2/5 up to and including the knuckles. Examination showed that Claimant could nearly make a full fist with all fingers, and with her middle finger, Claimant revealed difficulty bending at the PIP and DIP joints. Additionally, Claimant described mild tenderness over the PIP joint, along with mild tenderness into the forearm. Dr. Vlahovich decreased Claimant's work restrictions from no lift to maximum lift, push, pull, carry of 5 pounds with the right hand to 10 pounds. Dr. Vlahovich discussed long term complications of frostbite with Claimant, including Raynaud's phenomenon, scarring, and arthritis.

10. An amended GAL was filed on October 20, 2016. The GAL reflected to Claimant's return to work with restrictions, which were accommodated by Employer.

11. On November 7, 2016, Claimant underwent an MRI of her right wrist. The films were read by Jay Cook, M.D., whose impression was no abnormality at the level of the radial aspect of the wrist. The digits were intact. No marrow signal abnormality was identified and no synovial fluid collections were present. Claimant had an incomplete tear of the triangular fibrocartilage. Dr. Cook did not report the presence of a cyst in the volar radial aspect of the wrist. Small cysts were noted in the capitate bone, which Dr. Cook felt represented an old injury.

12. Claimant returned to Dr. Seiler on November 16, 2016. Dr. Seiler noted the MRI was not available at the time at the office visit. Claimant's range of motion ("ROM") of her fingers was significantly improved, but she complained of significant wrist pain. Dr. Seiler noted some slight fullness about the volar radial aspect of her wrist. Wrist extension and flexion were approximately 70°.

13. Dr. Seiler's assessment was frostbite of the right hand. Dr. Seiler reviewed the MRI[1], which he said showed a radial ganglion cyst. He noted that an excision of the cyst could be performed. Claimant was to follow-up with his office on an

[1] It was unclear from Dr. Seiler's report whether he viewed the MRI films or was referring to the radiologist's report.

as needed basis. The ALJ noted Dr. Seiler did not offer an opinion that the volar cyst was caused or aggravated by, or related to the industrial injury at this time.

14. On November 30, 2016, Claimant returned to Dr. Vlahovich. Claimant described her pain as 3/10. Dr. Vlahovich recommended that Claimant return to Dr. Seiler for evaluation. (Claimant's Exhibits, pp. 18-20)

15. On December 6, 2016, Dr. Seiler submitted a request for authorization for excision of a volar radial ganglion cyst.

16. On January 11, 2017, Claimant returned to Dr. Vlahovich. Claimant reported her hand got red and feels hot. She had trouble making a fist, as well as pain on the radial side of the wrist and proximal forearm. On examination, Claimant was able to make a full fist, with grip strength of 4/5. Tenderness was noted into the forearm and the radial side wrist-volar aspect. The Finkelstein test was negative. Dr. Vlahovich's diagnosis was frostbite, with tissue necrosis of the right hand, subsequent encounter; pain in right arm; radial styloid tenosynovitis; and adjustment disorder with mixed anxiety and depressed mood. Claimant's restrictions were continued. Conservative treatment for the right wrist was noted. Dr. Vlahovich did not express an opinion with regard to the cause of Claimant's right wrist pain in this report.

17. On February 3, 2017, Dr. Mordick conducted an independent medical examination on behalf of Respondent. On examination, he found no visible swelling or atrophy of the right compared to left upper extremities. Claimant had full range of motion of the elbows, wrists and small joints. Claimant had a negative Finkelstein's test and was not tender over the first extensor compartment on either side. Although there was a note by Dr. Seiler indicating that she had a ganglion cyst that was restricting a range of motion, on Dr. Mordick's examination, he noted Claimant had no restricted range of motion; she had no palpable or visible ganglion cyst, and her MRI showed no evidence of a ganglion cyst. Dr. Mordick concluded this patient had multifocal pain in her right upper extremity, but there was no objective pathology.

18. Dr. Vlahovich responded to a letter from counsel for Respondent on or about February 27, 2017. In particular, he was asked to comment on Dr. Mordick's opinion whether the MRI showed a right ganglion cyst. Dr. Vlahovich disagreed, noting that on sequence six, image nine, a volar a radial ganglion cyst was visible as a white spot adjacent to the radial artery. He said the radiologist did not report this, but it was present on the MRI. Dr. Vlahovich also noted trauma was a common cause of the volar ganglion cyst, but it was unclear whether the cyst was the cause of her pain. Removal of the cyst was a reasonable treatment. Dr. Vlahovich did not believe Claimant was at MMI.

19. X-rays were taken of Claimant's right wrist on March 13, 2017. The films were read by Dr. Cook who compared the films with those taken on August 5, 2016. Dr. Cook's impression was: no evidence for an acute or chronic osseous or joint space injury.

20. Dr. Mordick issued a supplemental report on March 17, 2017 after reviewing the MRI films. He concurred with the radiology report that there was a cyst in the proximal capitate, but there was no evidence of a ganglion cyst/synovial cyst in the volar radial wrist.

21. In Dr. Mordick's assessment, he noted Claimant sustained a frostbite injury to the right upper extremity, which healed uneventfully and had no scarring. He opined an injury like that would not be expected to cause any joint pathology and it was unclear why she was experiencing pain at the MP, PIP and DIP joints of all four digits. With respect to pain complaints in the radial aspect of the right wrist, the orthopedic surgeon indicated a ganglion cyst was restricting her ROM, but Dr. Mordick found no visible or palpable ganglion cyst and there was no MRI evidence of a ganglion cyst. The ALJ credited this opinion, as it was based on Dr. Mordick's evaluation (after he palpated the wrist) and reviewed the MRI films. Since there was no evidence of a ganglion cyst, there was no need to remove it. Dr. Mordick noted ganglion cysts appear to be idiopathic. Under the Colorado Division of Workers' Compensation Medical Treatment Guidelines ("Treatment Guidelines"), if such a cyst was made symptomatic, it was to be treated through the Worker's Compensation system. However, Dr. Mordick reiterated there was no evidence of a ganglion cyst.

22. On April 13, 2017, Dr. Mordick testified by evidentiary deposition. Dr. Mordick noted that his primary area of practice for 25 years has been hand surgery. He is Level II accredited pursuant to the WCRP. After residency, he participated in a hand surgery fellowship at the University of Utah. Additionally, Dr. Mordick is board certified in plastic surgery, with the added qualification of hand surgery. Finally, he is a member of the American Society of Surgery of the Hand. The ALJ accepted Dr. Mordick as an expert in hand surgery.

23. Dr. Mordick testified the ER report did not describe any trauma, other than the frostbite.[2] In addition, the radiologist's report eliminated the likelihood of a volar ganglion cyst. Specifically the report said: "And it says there are no synovial fluid collections identified, so they specifically looked for and stated they don't see a ganglion cyst, as opposed to a report that just doesn't comment on it".[3] Dr. Mordick explained that synovial fluid is the fluid inside the joint and a ganglion cyst is a protrusion off the wrist filled with that fluid.[4] Dr. Mordick testified he routinely reviews MRIs in order to correlate what the board certified radiologist has interpreted.[5] In the present case, Dr.

[2] Deposition ("Dep.") of Dr. Mordick, p. 7:3-8.

[3] Dep. of Dr. Mordick, p. 9:10-13.

[4] Dep. of Dr. Mordick, p. 9:23-25.

[5] Dep. of Dr. Mordick, p.11:3-6.

Mordick testified he reviewed the MRI films, specifically looking for a ganglion cyst and agreed with the radiologist that a volar ganglion cyst was not present.[6]

24. Dr. Mordick testified that when he examined Claimant, the tenderness she described did not correlate to where a cyst would be located. "Generally, ganglion cysts are right at the wrist flexion crease over the thumb side and that is where you are going to -- on the MRI, that one little speck that I did see that I don't think is a ganglion cyst, I think is just a vessel, any fluid filled thing will show up white on that imaging, a vein, an artery, a ganglion cyst, was over at the radial carpal joint more proximal. Her pain is more distal at the scaphoid trapezial joint, as I indicated in my report, and I did not feel any fullness or anything in the area where one would expect a ganglion cyst".[7] Dr. Mordick opined that Claimant's subjective complaints were not consistent with a ganglion cyst and neither was his physical examination.[8] He testified that he did not see anything that was protruding off the wrist. Within a reasonable degree of medical probability, Dr. Mordick opined Claimant did not have a ganglion cyst.

25. On cross-examination, Dr. Mordick agreed Claimant had no prior symptoms or treatment for her right wrist. He also testified that the Treatment Guidelines provided that when a cyst became symptomatic during employment, such a cyst is treated as an employment injury. He also agreed it was reasonable to perform surgery to remove a ganglion cyst. Dr. Mordick testified that in Claimant's case, if Claimant fell at work, started having wrist/hand pain and developed a ganglion cyst, the cyst would be associated with the work-related injury under the Treatment Guidelines. Dr. Mordick testified that if Claimant had a symptomatic ganglion cyst, then Dr. Seiler's request to remove the cyst is reasonable, necessary, and related to Claimant's work injury. However, such a surgery was not necessary. Dr. Mordick noted that it was unknown how ganglion cysts develop or why cysts became symptomatic.[9]

26. Claimant failed to prove that excision of a right wrist ganglion cyst was necessary and related to the industrial injury.

27. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1),C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the credibility of the physicians (and their reports) were determinative of the medical benefits issue.

Medical Benefits-Surgery

Respondent is liable for medical treatment reasonably necessary to cure or relieve the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability, but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

In the case at bench, there was a conflict in the evidence as to whether a radial volar cyst was the cause of Claimant's symptoms. Contrary medical opinions were admitted on the subject. Claimant argued (and there was no evidence to the contrary)

that she never had symptoms, nor required treatment for her right wrist prior to her work injury. Claimant contended this event made the cyst symptomatic and necessitated the surgery. In this regard, Claimant noted that Dr. Seiler concluded there was a ganglion cyst present, based on the MRI. (Finding of Fact 12). Claimant also relied on the opinions of an ATP, Dr. Vlahovich, who initially offered no opinion on causation. (Finding of Fact 16). He then opined the cyst was work-related after receiving Dr. Mordick's report. (Finding of Fact 18).

However, the ALJ was not persuaded that a cyst was the cause of Claimant's wrist symptoms. This was based first on the findings of the radiologist who reviewed the MRI films. Dr. Cook did not record the presence of a cyst. (Finding of Fact 11). Dr. Cook identified small cysts from an old injury were noted in the capitate bone. *Id.* Claimant's x-rays also showed no abnormalities. These reports constituted objective evidence that supported the conclusion no cyst was present.

Second, Dr. Mordick provided expert testimony to the Court and offered an opinion, which diverged from Dr. Vlahovich's. The ALJ credited Dr. Mordick's opinion, as he is Level II accredited and had a particular expertise in hand surgery, the specialty in which he is board-certified. When Dr. Mordick examined Claimant, he did not discern the presence of a cyst in the volar aspect of the wrist. Dr. Mordick also noted Claimant's pain complaints were not supportive of the presence of such a cyst. (Finding of Fact 17). Dr. Mordick reviewed the MRI films and noted there was no evidence of a ganglion cyst/synovial cyst in the volar radial wrist. (Finding of Fact 20). Dr. Mordick also disagreed that the work injury caused a cyst, noting that it was not understood what caused or made cysts symptomatic. (Finding of Fact 25). Thus, Dr. Mordick's opinions were detailed and provided his analysis as to why a cyst was not present. This was more persuasive than the opinions offered by Dr. Vlahovich. Also, the surgeon who requested authorization for the surgery (Dr. Seiler) did not offer an opinion that the injury caused the cyst, aggravated it or that the presence of the cyst was in any related to the industrial injury. (Finding of Fact 12).

On balance, after considering the medical evidence, the ALJ was persuaded by the testimony and reports of Dr. Mordick, as well as Dr. Cook's report. Claimant failed to establish that she had a ganglion cyst or synovial cyst in the volar radial wrist. Accordingly, her request for surgery to remove such a cyst is denied.

ORDER

It is therefore ordered that:

1. Claimant's request for surgery to remove a right ganglion cyst is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Third-Party Administrator (TPA)

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 22, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 6/22/17, Courtroom 1, beginning at 8:30 AM, and ending at 10:45 AM).

Claimant's Exhibits 1 through 3 were admitted into evidence, without objection. Respondents' Exhibits A through were admitted into evidence, without objection.

At the conclusion of the Respondent's case-in-chief, Claimant's counsel moved for judgment in the nature of a directed verdict, which was granted. Thereupon, the ALJ referred preparation of a proposed decision to counsel for the Claimant. The proposed decision was filed, electronically, on June 25, 2017. On June 27, 2017, the Respondent filed an objection requesting that the findings concerning the testimony and opinions of their telephonic Independent Medical Examiner (IME), Thomas S. Allems, M.D. OF San Francisco be fleshed out with a little more detail. After a consideration of the proposed decision and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

Section 8-41-209, C.R.S., creates a rebuttable presumption that disability of a firefighter who has completed five or more years of employment as a firefighter, caused by. Cancer of the digestive system (this includes pancreatic cancer) shall be considered an occupational disease and presumed to result from employment, if at the time of becoming a firefighter, the firefighter underwent a physical exam that failed to reveal substantial evidence of such condition that pre-existed employment as a firefighter. The standards are established in *City of Littleton v. Indus. Claim Appeals Office*, 370 P.3d 157, **2016 CO 25** and *Indus. Claim Appeals Office v. Town of Castle Rock,* 370 P.3d 151, **2016 CO 26.** Consequently the issue is whether the Respondent has rebutted the presumption, essentially, proven that the Claimant did not suffer the compensable occupational disease of pancreatic cancer during the course and scope of his employment as a firefighter for Employer.

The Respondent bears the burden of proof, by preponderant evidence and the burden of going forward.

At the conclusion of the Respondent's case-in-chief, the Claimant moved for a judgment in the nature of a directed verdict on the basis that Respondent's case had **not** overcome the presumption of compensability; and, on the fact that Respondent's case could not get any better at that juncture. Consequently, the ALJ granted the Claimant's Motion.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated, and the ALJ finds, that Claimant qualifies for the presumption of compensability as outlined in §8-41-209, C.R.S. in that Claimant has completed in excess of five or more years of employment as a firefighter and has been diagnosed with pancreatic cancer. The pancreatic cancer is a cancer of the digestive system.

2. The parties further stipulated, and the ALJ finds that if the claim is compensable the treatment directed by authorized treating physician (ATP), Tomm VanderHorst, M.D., is causally related and reasonably necessary to cure and relieve the effects of the pancreatic cancer.

3. The Claimant is a firefighter with the Arvada Fire Protection District and he has been a firefighter for approximately 20 years.

4. The Claimant was first diagnosed with pancreatic cancer on or about September 28, 2016 (See Claimant's Ex 2, p.76).

5. Respondents filed a Notice of Contest, dated September 19, 2016. (Claimant's Ex 1, p.1).

Findings

6. Following his diagnosis, the Claimant began treatment with ATP Dr. VanderHorst. In his report of September 16, 2016, Dr. VanderHorst confirmed the Claimant's pancreatic cancer diagnosis and stated "Based on the information available for consideration at this visit, the presenting injury **is considered work related within a reasonable degree of medical probability** (emphasis supplied)" (Claimant's Ex 3, p. 46). Dr. VanderHorst further was of the opinion: "There being no history or risk exposures consistent with an alternative explanation for his cancer, this is considered a **work-related condition** (emphasis supplied)" (Claimant's Ex 3, p. 46).

7. Dr. VanderHorst stated: "We discussed upcoming care issues. His treatment issues will be managed by his Kaiser physicians. I will help monitor his ability and safety to work" (Claimant's Ex 3, p. 46).

8. Dr. VanderHorst's report of September 30, 2016 reiterates: "Based on the information available for consideration at this visit, the presenting injury **is considered work related within a reasonable degree of medical probability** (emphasis supplied)" (Claimant's Ex 3, p. 50).

9. Dr. VanderHorst confirmed that the Claimant has been employed as a firefighter for more than 5 years; had no evidence of cancer at his pre-employment physical; has no non-employment risk factors for pancreatic cancer; and the pancreas is considered part of the digestive system (Claimant's Ex 3, p. 50).

10. The evidence establishes that the Claimant is and has been a non-smoker.

11. The ALJ finds Dr. VanderHorst's opinions highly persuasive and credible because he has the greatest familiarity with the Claimant's medical case, his opinions are based on first-hand treatment, and his opinions are clearly and cogently articulated.

Respondent's Independent Medical Examiner (IME), Thomas S. Allems, M.D. of San Francisco

12. Dr. Allems performed a telephonic IME interview with the Claimant at Respondent's request. Dr. Allems did not physically examine the Claimant.

13. Dr. Allems is board certified in Occupational Medicine and Internal Medicine. He has no persuasive credentials in Oncology or Epidemiology other than general medical knowledge, yet he claims that Epidemiology is part and parcel of Occupational Medicine. The ALJ infers and finds that any field of medicine "under the sun" is part and parcel of occupational medicine and internal medicine, however, it becomes an issue of weight to be accorded to fields outside of occupational and internal medicine. By way of analogy, ordinarily, physician specialists in one area are not competent to render opinions concerning standard of care in another area. The ALJ finds that his Oncological and Epidemiological opinions are entitled to little weight. His opinions are not based on first-hand knowledge, in contrast to the opinions of Dr. VanderHorst, who has actually been treating the Claimant.

14. Dr. Allems allegedly obtained an employment history from the Claimant over the telephone, but the ALJ finds that this was lacking in critical detail concerning exposures over the last 20 years. In its Objection, the Respondent alleges that Dr. Allems "had a general understanding of the different types of fires to which the Claimant responded during his career as a firefighter as well as his hazmat experience." Having heard Dr. Allems' telephone testimony, the ALJ finds Dr. Allems testimony in this regard sketchy and lacking an in-depth understanding of firefighting, other than Dr. Allems concession that smoke inhalation was a hazard of firefighting and the Claimant (a non-smoker) was bound to have experienced smoke inhalation during his 20 years as a firefighter. Otherwise, Dr. Allems relied on his interpretation of the articles attached to his written report.

15. In his corresponding IME report, Dr. Allems states that the Claimant's pancreatic cancer "was not caused by occupational exposures sustained during his employment … – it is more probably related to nonindustrial factors." (Respondent's Ex C).

16. Dr. Allems testified at the hearing, by telephone, where he was endorsed as an expert in Occupational and Internal Medicine. Dr. Allems is neither an oncologist nor an epidemiologist.

17. At hearing, Dr. Allems conceded that the Claimant did not have a cancer diagnosis prior to his employment as a firefighter. Dr. Allems further conceded that the Claimant has been a firefighter for approximately 20 years; that the Claimant is not a smoker; that the Claimant does not use smokeless tobacco; and, that no member of the Claimant's family has ever been diagnosed with pancreatic cancer.

18. Dr. Allems could **not** provide information as to how many calls the Claimant conducted or what specific exposures Claimant encountered during his 20 years as a firefighter (including Hazmat and Wildfire calls). He could not provide information concerning the Claimant's exposure to smoke while fighting fires.

19. In his corresponding IME report, Dr. Allems cited several studies regarding the propensities of cancer risks in firefighters. Dr. Allems stated, however, that the Claimant did not participate in any of the studies he cited in his report. Dr. Allems further stated that none of the Claimant's calls or exposures were used in any of the studies he cited in his report.

20. Dr. Allems conceded that the firefighters who participated in the studies he cited in his report would not have the exact same exposures as encountered by the Claimant over his 20 year career as a firefighter.

21. Dr. Allems cited the Claimant's diet as a potential non-employment risk factor. Dr. Allems stated that "In [Claimant's] case, his dietary habits would be an identified risk factor for pancreatic cancer (his records refer to him eating a lot of red meat" (Respondent's Ex C, p. 23). When asked to clarify how much red meat the Claimant eats, Dr. Allems testified that he did not know. The ALJ finds that this statement is a compelling example of the generalized nature of Dr. Allems' opinions, thus, lessening the weight to be accorded his opinions.

22. The ALJ finds that Dr. Allems opinions and conclusions are based, almost entirely, on his interpretation of the articles he attached to his report. His expertise in Oncology and Epidemiology is dubious yet his opinions are heavily laden with his interpretation of epidemiological articles. The ALJ finds Dr. Allems' opinions are based, substantially, on hearsay medical articles with few, if any, identifiable opinions of his own. His opinions are neither credible nor persuasive. Dr. Allems bases his conclusions on general assumptions, and sometimes unsupported assumptions, regarding what exposures the Claimant may or may not have encountered over the course of his 20 year career. Dr. Allems further bases his opinions substantially, as found herein above, on generalized studies as opposed to evaluating the Claimant's individualized exposures and causation. Dr. Allems opinions fail to overcome the presumption as outlined in §. 8-41-209, C.R.S., as it pertains to the Claimant's diagnosed pancreatic cancer.

Ultimate Findings

23. The Claimant's testimony was credible and, essentially, undisputed. The ALJ finds the opinions of Dr. VanderHorst substantially more credible than the opinions and testimony of Dr. Allems for the reasons stated herein above.

24. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. VanderHorst and to reject the opinions of Dr. Allems.

25. Section 8-41-209, C.R.S., creates a rebuttable presumption that disability of a firefighter who has completed five or more years of employment as a firefighter, caused by. Cancer of the digestive system (this includes pancreatic cancer) shall be considered an occupational disease and presumed to result from employment, if at the time of becoming a firefighter, the firefighter underwent a physical exam that failed to reveal substantial evidence of such condition that pre-existed employment as a firefighter. The Respondent has failed to rebut the presumption by preponderant evidence as of the conclusion of its case-in-chief. Therefore, a judgment in the nature of a directed verdict was warranted at that juncture.

26. It has been established, by preponderant evidence that the Claimant suffers from the compensable occupational disease of pancreatic cancer the onset of which was on or about September 28, 2016, the date of diagnosis.

27. As stipulated and found where not stipulated, all of the Claimant's medical care and treatment for his pancreatic cancer was and is authorized, within the chain of authorization, causally related, and reasonably necessary to cure and relieve the effects of his pancreatic cancer.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254

(1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was, essentially, undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the opinions of Dr. VanderHorst are substantially more credible than the opinions and testimony of Dr. Allems for the reasons stated in the Findings of Fact herein above.

b. As found, by way of analogy, ordinarily, physician specialists in one area are not competent to render opinions concerning standard of care in another area. *See Horwitz v. Colorado State Bd. Of Medical Exam'rs,* 716 P.2d 131 (Colo. App. 1985), *cert. denied,* 1986. The ALJ concludes that this is a consideration in weighting the credibility of Dr. Allems' opinions outside his field of occupational and internal medicine.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by substantial evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting

medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. VanderHorst and to reject the opinions of Dr. Allems.

Judgment in the Nature of a Directed Verdict

d. Colo. Rules of Civil Procedure, Rule 41(b) (1), provides that, after a plaintiff in a civil action *tried without a jury* has completed the presentation of his evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief. In determining whether to grant a motion to dismiss or in the nature of a directed verdict, the court is not required to view the evidence in the light most favorable to the plaintiff, as argued by a claimant. *Rowe v. Bowers*, 160 Colo. 379, 417 P.2d 503 (Colo. 1966)*; Blea v. Deluxe/Current, Inc.*, W.C. No. 3-940-062 [Indus. Claim Appeals Office (ICAO), June 18, 1997] (applying these principles to workers' compensation proceedings). Neither is the court required to "indulge in every reasonable inference that can be legitimately drawn from the evidence" in favor of the Claimant. Rather, the test is whether judgment for the respondents is justified on the claimant's evidence. *Amer. National Bank v. First National Bank*, 28 Colo. App. 486, 476 P.2d 304 (Colo. App. 1970); *Bruce v. Moffat County Youth Care Center*, W. C. No. 4-311-203 (ICAO, March 23, 1998). The question of whether the Claimant carried this burden was one of fact for resolution by the ALJ. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, the Respondent's case could not get any better as of the conclusion of its case-in-chief and, at that juncture, the Respondent had not rebutted the presumption of compensability, by preponderant evidence.

The Firefighter Presumption

e. As found, the Claimant qualifies for the presumption of compensability as outlined in §8-41-209, C.R.S. in that Claimant has completed in excess of five or more years of employment as a firefighter and has been diagnosed with pancreatic cancer. The pancreatic cancer is a cancer of the digestive system. § 8-41-209, C.R.S., creates a rebuttable presumption that disability of a firefighter who has completed five or more years of employment as a firefighter is caused by the employment as a firefighter. As found, cancer of the digestive system is an occupational disease resulted from the Claimant's employment, as a firefighter. At the time of becoming a firefighter, the Claimant underwent a physical exam that failed to reveal substantial evidence of such condition that pre-existed employment as a firefighter. The standards are established in *City of Littleton v. Indus. Claim Appeals Office*, 370 P.3d 157, **2016 CO 25** and *Indus. Claim Appeals Office v. Town of Castle Rock,* 370 P.3d 151, **2016 CO 26**. In *City of Littleton,* the Supreme Court held that to overcome the presumption, the employer can show, by a preponderance of the medical evidence, either: (1) that a firefighter's known or typical occupational exposures are not capable of causing the type of cancer at issue (the Respondent's expert, Dr. Allems, conceded that smoke inhalation while fighting fires could cause pancreatic cancer); or (2) that a firefighter's employment did not cause

the particular cancer (the Claimant's ATP, Dr. Vanderhost, who was found more credible than Respondent's expert, Dr. Allems, is of the opinion that the Claimant's work as a firefighter caused the Claimant's pancreatic cancer). Consequently, the Respondent failed to overcome the presumption under the *City of Littleton* test. In *Town of Castle Rock,* the Supreme Court held that an employer could meet its burden of overcoming the presumption by presenting particularized risk-factor evidence indicating that it is more probable that the firefighter's cancer arose from some source other than the firefighter's employment. As found, Respondent presented no credible evidence in this regard other than, perhaps, Dr. Allems' unsupported and incredible "red meat" alleged risk factor. Ultimately, as found, the Respondent failed to overcome the presumption by a preponderance of the evidence.

Burden of Proof

f. The burden of proof is placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Respondent had not satisfied its burden as of the time it rested its case.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant sustained the compensable occupational disease of pancreatic cancer, arising out of his employment as a firefighter for the Employer herein.

B. The Respondent shall pay all the costs of medical care and treatment for the Claimant's pancreatic cancer, subject to the Division of Workers' Compensation Medical Fee Schedule.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Claimant has established, by a preponderance of the evidence that he is unable to earn a wage in the same or other employment, and is therefore, permanently and totally disabled as a consequence of his admitted December 27, 2012 industrial injury.

II. Whether Respondents proved by a preponderance of the evidence that an overpayment in benefits paid to Claimant exists in their favor.[1]

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant, who is currently a 50-year-old, English speaking male, was employed by Employer as a maintenance worker when he sustained a compensable injury to his groin/lower abdomen on December 27, 2012. As part of completing a service call, Claimant felt a pop/pull in his groin while attempting to lift a 50-80 pound tool box. He reported his injury and liability for the same was admitted. Claimant was referred for medical care.

2. On December 28, 2012, Claimant was evaluated by his authorized treating provider ("ATP"), Shireen Rudderow, M.D. Dr Rudderow ordered an ultrasound which was performed December 31, 2012. The ultrasound revealed no evidence of right inguinal mass or hernia. Claimant continued to experience pain and dysfunction so a second ultrasound was ordered and performed January 3, 2013. This ultrasound revealed a right inguinal hernia. Dr. Rudderow referred Claimant to Khurram Khan, M.D., who performed laparoscopic right inguinal hernia repair with mesh placement on January 23, 2013.

3. Following the surgery, Claimant continued to have significant pain in the upper groin area along with weakness and numbness in his legs. Claimant's ongoing symptoms were aggravated by work and certain movements including walking and twisting.

[1] The undersigned ALJ precluded Respondents from presenting evidence concerning the specific amount and recoupment of any asserted overpayment; however, did not foreclose Respondents right to seek determination of the same through additional hearing based upon the statements of counsel regarding a prehearing conference order issued by Prehearing Administrative Law Judge (PALJ), Jeffrey Goldstein dated May 10, 2017.

4. On April 17, 2013, Claimant underwent CT scan of the abdomen and pelvis, which revealed no evidence of recurrent hernia; however, Claimant's right common femoral vein was slightly larger than the contralateral side. It was felt that this could be a normal finding, but because a deep vein thrombosis ("DVT") could not be ruled out completely, a Doppler ultrasound was performed of the bilateral lower extremities on April 19, 2013, which was negative of DVT.

5. On May 17, 2013, Claimant returned to Dr. Rudderow with complaints of burning pain under his surgical area, shooting pains and bilateral weakness in his legs, numbness in the left foot and tingling into the right testicle. Claimant also reported bladder incontinence, nocturia (twice per night) and increased urinary frequency. Claimant was instructed to see a urologist regarding his urinary symptoms.

6. On June 12, 2013, Claimant was evaluated by Dr. Phillip Ballard who felt Claimant's ongoing groin pain was related to nerve entrapment or scar tissue.

7. On June 18, 2013, Claimant underwent a Functional Capacity Evaluation ("FCE"). During the FCE Claimant reported right testicular/groin and shoulder pain. While he attempted all tasks prescribed, he had "great difficulty with the performance of tasks at low height level positions. Moreover, some tasks such as kneeling, stair climbing and crouching were not tolerable secondary to increased groin and testicular pain.

8. Following the FCE, Dr. Rudderow placed Claimant at maximum medical improvement ("MMI") without impairment on June 27, 2013. Dr. Rudderow recommended permanent work restrictions as follows: ". . . no lifting over 10-20 pounds, no carrying over 10-20 pounds, no pushing/pulling over 10-20 pounds, no walking over 6 hours per day, no standing over 6 hours per day, no sitting over 10 hours per day, and no crawling, kneeling, squatting or climbing."

9. A Final Admission of Liability ("FAL") was filed by Respondents on July 17, 2013. Respondents admitted to an average weekly wage ("AWW") of $814.30. No permanent partial disability ("PPD") benefits were admitted to based upon the report of Dr. Rudderow. Finally the Respondents admitted to maintenance care in the form of prescription medications, including Gabapentin and Ultram for a duration of one year.

10. At the request of Respondents, Carlos Cebrian, M.D., conducted an Independent Medical Exam ("IME") of Claimant on July 18, 2013. Following his evaluation, Dr. Cebrian agreed with Dr. Rudderow that Claimant was appropriately placed at MMI without permanent impairment noting that Claimant did not have evidence of a recurrent hernia and was without palpable abdominal defect. Dr. Cebrian opined that there was "no indication for ilioinguinal nerve ablation and/or explantation of the surgical mesh placed by Dr. Khan on January 23, 2013.

11. Claimant timely objected to the July 17, 2013 FAL on July 29, 2013 and filed an

Application for a Division Independent Medical Examination ("DIME") on August 15, 2013.

12. Dr. Brian Beatty, completed the requested DIME on April 29, 2014. During the DIME, Claimant reported worsening symptoms of right lower abdominal pain radiating into the right testicle. Bending, coughing, sneezing, exercise, prolonged walking and lifting greater than 20 pounds aggravated Claimant's ongoing symptoms.

13. Dr. Beatty placed Claimant at maximum medical improvement ("MMI") on June 27, 2013 and provided a 4% whole person impairment rating; however, he believed that Claimant should obtain a second opinion regarding whether injections and/or additional surgery for mesh excision or an ilioinguinal neurotomy would be appropriate. Dr. Beatty recommended restrictions, including no more than six hours of walking or standing per day, no longer than 15 minutes at a time with a 15 minute break, no lifting, pushing, pulling, or carrying over 20 pounds, and occasional bending at the waist.

14. After completion of the DIME, Respondents filed a second FAL on May 28, 2014, admitting liability for permanent impairment consistent with Dr. Beatty's April 29, 2014 DIME report.

15. On September 23, 2014, Claimant presented to John Sacha, M.D., for a second opinion. During his evaluation, Dr. Sacha noted that Claimant denied pain and had normal sensation in the lower extremities although he continued to endorse "pain localized to the right groin that radiates into the right scrotum with burning, numbness, and tingling." It was also noted that Claimant had suffered a work-related closed head injury in 2001 and a heart attack in April 2014. Following his evaluation, Dr. Sacha reached an impression of ilioinguinal neuropathy which he felt may respond to a "one-time right ilioinguinal radiofrequency procedure." Dr. Sacha also noted because Claimant did not have a recurrent hernia, the chance that his symptoms would improve with repeat surgery was low. Claimant underwent an ilioinguinal radiofrequency neurotomy on October 10, 2014, which provided no improvement.

16. Claimant presented to Michael Crissey, M.D., with a cane on November 17, 2014 for a urology consult. Dr. Crissey completed a thorough examination after which he noted that Claimant had a challenging problem which he could not solve. He recommended the following: "Repeat surgical exploration with lysis and possible mesh removal."[2] "Repeat RFA (radio-frequency ablation) of the inguinal nerve and a trial of Lyrica.

17. On December 22, 2014, Dr. Sacha performed a records review and opined that a repeat radiofrequency for ilioinguinal neuropathy had a very low chance of providing any kind of benefit and recommended no surgical procedures other than home exercise, strengthening program, and a gym pass. Dr. Sacha also opined that a cane was not reasonable, necessary and related to the work injury as a cane for someone that had ilioinguinal neuropathy and was actually contraindicated "because the alteration in gait mechanics will actually contribute to issues with other areas other than the ilioinguinal

[2] Concern was raised for possible hernia recurrence as well as failure to relieve pain.

neuropathy."[3] Dr. Sacha reiterated that Claimant was at MMI and no further active care was indicated.

18. Following Dr. Sacha's records review, Claimant filed an Application for Hearing on January 23, 2015, endorsing reasonable and necessary medical care, AWW, temporary total disability ("TTD"), and overcoming the DIME regarding MMI and PPD. Respondents timely filed a Response to Application for Hearing on January 23, 2015.

19. On February 24, 2015, Claimant was evaluated by Dr. Jeffery Jenks. Claimant described continued pain symptoms in the right groin region with radiation into the right leg aggravated by Valsalva maneuvers and significant depression. Dr. Jenks noted that Claimant had been seen by a number of physicians and that there was a was a disagreement among them as to whether Claimant should have further surgery. Dr. Jenks recommended referral to Bruce Ramshaw, M.D., a nationally known expert for revision surgery for failed herniographies with entrapment of the ilioinguinal nerve.

20. At the request of Respondents, Claimant presented to Dr. Cebrian for a follow-up IME on March 20, 2015. Dr. Cebrian reiterated his opinion that Claimant was appropriately placed at MMI on June 27, 2013, noting further that Claimant's "constellation of symptoms has continued to expand" with reported weakness and collapsing resulting in falls. Dr. Cebrian opined that there was no claim-related physiologic explanation for Claimant's expanding complaints. He also noted that Claimant was no more functional while taking opioid medications than without them. Consequently, he recommended that Claimant be weaned from opioids over the next month. Dr. Cebrian also opined that the restrictions provided by Dr. Beatty were arbitrary and that it was not medically necessary that Claimant limit himself**.** He recommended an increase in Claimant's activity level to help attenuate the nerve response and noted that Claimant was able to work in his medically probable opinion.

21. On April 24, 2015, Respondents requested Dr. Sacha provide an opinion on whether Dr. Jenks' referral to Dr. Ramshaw was medically reasonable, necessary, or related. Dr. Sacha opined that Claimant would not be a good candidate for any type of aggressive interventional procedure, and that Claimant refrain from opioids. Dr. Sacha recommended an aggressive home exercise strengthening and conditioning program.

22. Claimant returned to Dr. Jenks on May 14, 2015, who again referred him to Dr. Ramshaw for evaluation regarding revision surgery status post hernia repair.

23. On May 28, 2015, Respondents requested Dr. Cebrian to conduct a Rule 16 review and provide an opinion on whether Dr. Jenks' referral for an additional surgical consultation was medically reasonable, necessary, or related to Claimant's December 27, 2012 work injury. Dr. Cebrian noted that he agreed with Dr. Sacha that no further surgical treatment was medically reasonable or necessary and the likelihood of any

[3] Dr. Ballard's Office would later respond to a letter affirming the medical necessity and relatedness of Claimant's use of a cane to his industrial injury.

benefit would be extremely low. Accordingly, Dr. Cebrian opined that the referral to Dr. Ramshaw was not medically reasonable or necessary and should be denied.

24. Respondents denied the referral to Dr. Ramshaw prompting Claimant to file an Application for an Expedited Hearing regarding his need for additional medical benefits on June 2, 2015.

25. A hearing was held on May 20, 2015 before ALJ Donald E. Walsh, who denied and dismissed Claimant's request to set aside Dr. Beatty DIME opinions with respect to MMI and PPD. However, Claimant's request to reopen his claim was granted paving the way for Claimant's evaluation by Dr. Ramshaw. ALJ Walsh also ordered Respondents to pay Claimant TTD benefits beginning May 20, 2015 and ongoing until terminated by operation of law and found Claimant's AWW effective October 1, 2013 to be $946.83.

26. Respondents filed a General Admission of Liability ("GAL") on August 7, 2015 consistent with the order of ALJ Walsh.

27. Claimant presented to Dr. Ramshaw on September 3, 2015 for medical evaluation at which time both surgical and nonsurgical options for further treatment were discussed.

28. Approximately one year later, on May 27, 2016, Claimant presented to Dr. Ramshaw for diagnostic laparoscopy with explantation of the right inguinal mesh placed by Dr. Kahn in 2013. Claimant also underwent neurolysis, neurectomy, and laparoscopic assisting right groin nerve blocks with long acting local anesthetic without complication.

29. Following his recovery from surgery, Claimant returned to Dr. Jenks. Dr. Jenks placed Claimant at MMI with 17% whole person impairment on September 6, 2016. As part of his September 6, 2016 report, Dr. Jenks noted that Claimant would be limited permanently to sedentary work with no lifting over 10 pounds; no bending, kneeling, or crawling. He also indicated that Claimant would need to alternate between sitting, standing and walking as needed.

30. On October 28, 2016, Respondents filed a FAL consistent with Dr. Jenks' September 6, 2016 report. The FAL, however, failed to acknowledge the statutory cap on benefits.

31. Claimant filed an Objection to the FAL and an Application for Hearing on November 23, 2016, endorsing compensability, medical benefits, PPD, and Permanent Total Disability ("PTD"). Respondents filed a Response to Application for Hearing on December 5, 2016.

32. At the request of Respondents, Claimant presented to Dr. Cebrian for another

IME on February 6, 2017. Dr. Cebrian opined that Claimant was appropriately placed at MMI by Dr. Jenks on September 6, 2016. Dr. Cebrian opined that the continuation of opioids was not medically reasonable or necessary. Dr. Cebrian also opined that the permanent restrictions imposed by Drs. Beatty and Jenks were excessive and that they relied on Claimant's subjective complaints in setting these restrictions and that Claimant needed to increase his activity.

33. Because the October 28, 2016 FAL did not limit indemnity payments to the statutory cap and because Respondents were paying PPD over the cap, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation ("Petition") on March 1, 2017. Based upon C.R.S. § 8-42-107.5, Respondents requested to suspend compensation for the period from December 9, 2016 and ongoing because Claimant's date of injury was December 27, 2012 with a statutory cap of $78,482.00. Respondents asserted that the statutory cap was met and exceeded on December 9, 2016.

34. After filing their Petition, Respondents filed an Opposed Motion to Endorse Additional Issues for Hearing ("Motion") on March 1, 2017, including termination of payment of indemnity benefits over the statutory cap, credits, overpayments, and reimbursement by Claimant to Insurer of indemnity benefits paid to him over the cap. Claimant filed an Objection to the Petition on March 6, 2017.

35. A preconference hearing was held on March 15, 2017 before Prehearing Administrative Law Judge ("PALJ"), Robert J. Erickson, who, among other things, added Petition to Modify, Terminate, or Suspend Compensation to the issues to be addressed at hearing. However, the Division of Workers' Compensation did not rule on the Motion. On May 3, 2017, Respondents requested a ruling. The Motion was denied. PALJ Goldstein ruled that it was too late to add the issue(s) to the May 18, 2017 hearing, but that another hearing may be held on the issue(s). At the hearing on May 18, 2017, Respondents requested the ALJ reconsider PALJ Goldstein's Order. The undersigned ALJ denied the request.

36. On April 14, 2017, Katie Montoya, a vocational expert evaluated Claimant at Respondents request for purposes of completing a Vocational Assessment. Ms. Montoya obtained a history concerning Claimant's educational and vocational background. This history reveals Claimant completed high school, enlisted in the Air-Force, completing two years of active duty and attended some college. Ms. Montoya performed vocational research and considered the various physical restrictions imposed by the providers involved in this case. Considering the totality of the materials provided her along with her vocational research, Ms. Montoya reached the conclusion that Claimant "maintains the capacity to return to work; however, his alternatives will vary based upon provider considered."

37. Scott Danfelser, the adjuster for this claim, testified that as of May 18, 2017, Respondent-Insurer has paid a total of $90,098.16 in indemnity benefits. Mr. Danfelser testified that recently, ongoing PPD payments stopped because the total amount of PPD was paid, which was above the statutory cap. Mr. Danfelser explained that the

PPD payments were made before the date listed in the FAL because a lump sum in the amount of $10,000.00 was paid to Claimant at Claimant's request, which resulted in PPD being paid in full in advance of the bi-weekly schedule.

38. Dr. Cebrian testified consistent with his IME reports, Additional Addendum Reports, and Reviews, totaling 74 pages. Specifically, Dr. Cebrian testified that it is not medically necessary that Claimant limit his activity and that Claimant is able to work.

39. Based upon his physical evaluations and the thorough review of the medical record, including the results of the FCE and the various aspects of Claimant's treatment, the ALJ finds that Dr. Cebrian is aware of Claimant's physical capabilities. The ALJ finds Dr. Cebrian's testimony credible and persuasive.

40. Katie Montoya, M.S., Q.R.C., vocational consultant, testified consistent with her April 14, 2017 report. Ms. Montoya testified that, based on consideration of Claimant's restrictions and other human factors, he retained the capacity to earn wages. Specifically, Ms. Montoya opined that based on Dr. Cebrian's opinion that Claimant is physically able to engage in work activities, as well as all of the other physicians who provided various opinions of Claimant's physical restrictions, Claimant could go back to any of the work that he previously performed, including fast food, production, driving, office cleaning and maintenance. Consistent with her report, Ms. Montoya testified that a 20-pound lifting limitation would allow for a full range of light classification work activities.

41. Claimant did not produce any vocational assessment or vocational expert testimony tending to establish he is unable to earn any wages in the same or other employment.

42. The ALJ credits the report and testimony of Ms. Montoya to find that the representative sampling of sedentary to light sedentary positions she identified present a number of prospective job positions existing in the local labor market, which afford Claimant the opportunity to earn a wage. Based on the evidence presented, including the report and testimony of Ms Montoya, the ALJ finds that Claimant retains the ability to earn a wage in employment reasonably available to him within his physical restrictions.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S., *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the respondents. *Section 8-43-201, C.R.S.*

B. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The ALJ has considered these factors and concludes, based upon the totality of the evidence presented, that both Dr. Cebrian and Ms. Montoya are credible witnesses. Moreover, the ALJ finds and concludes, based upon the evidence presented, that Ms. Montoya's opinions are more persuasive than the assertion of Claimant that he is incapable of earning any wages.

C. In accordance with Section 8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5. P3.d 385 (Colo. App. 2000).

Permanent Total Disability

D. Under the applicable law, a claimant is permanently and totally disabled if he/she is unable to "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). In *McKinney*, the Court held that the ability to earn wages in "any" amount is sufficient to disqualify a claimant from receiving permanent total disability benefits. If wages can be earned in some modified, sedentary or part-time employment, a claimant is not permanently and totally disabled for purposes of the statute. See *also, Christie v. Coors Transportation*, 933 P.2d 1330 (Colorado 1997).

E. Moreover, there is no requirement that Respondents must locate a specific job for a claimant to overcome a prima facie showing of permanent total disability. *Hennenberg v. Value-Rite Drugs, Inc.*, W.C. 4-148-050 (September 26, 1995); *Rencehausen v. City and County of Denver*, W.C. No. 4-110-764 (November 23, 1993); *Black v. City of La Junta Housing Authority*, W.C. No. 4-210-925 (December 1998); *Beavers v. Liberty Mutual Fire Ins. Co.*, W.C. No. 4-163-718 (January 13, 1996), aff'd.,

Beavers v. Liberty Mutual Fire Ins. Co., (Colo. App. No. 96 CA0275, September 5, 1996)(not selected for publication); *Gomez v. Mei Regis*, W.C. No. 4-199-007 (September 21, 1998). To the contrary, a claimant fails to prove permanent total disability if the evidence establishes that it is more probable than not that he/she is capable of earning wages. *Duran v. MG Concrete Inc.*, W.C. No. 4-222-069 (September 17, 1998). As long as a claimant can perform any job, even part time, he/she is not permanently totally disabled. *Vigil v. Chet's Market*, W.C. No. 4-110-565 (February 9, 1995). Nonetheless, when determining whether a claimant is capable of earning wages, the ALJ must consider the claimant's unique "human factors", including age, education, work experience, overall physical/mental condition, the labor market where claimant resides and the availability of work within claimant's restrictions, among other things. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). The crux of the test is the "existence of employment that is reasonably available to the claimant under his or her particular circumstances." *Id*. at 558. This determination must be made on a "case-by-case basis," and "will necessarily vary according to the particular abilities and surroundings of the claimant (e.g. whether and how far the claimant is able to commute)." *Id*. at 557.

F. For example, in *Duran*, the court considered various factors, including the claimant's education, work history, transferable skills, physical restrictions and level of day to day activities. *Duran v. MG Concrete Inc.*, W.C. No. 4-222-069 (ICAO Sept. 17, 1998). The ALJ credited the respondents' vocational expert, who identified jobs available to the claimant within his restrictions, and concluded that he was capable of earning wages as a janitor or deliverer. *Id*. Therefore, the ALJ denied Claimant's claim for PTD. *Id*. Similarly, in *Hazard-Ross*, the ALJ credited the vocational expert, who testified that numerous jobs were available to the claimant, and concluded that the claimant failed to show that she was unable to earn wages in employment reasonably available to her. *Hazard-Ross v. HIS of Colorado Springs*, W.C. Nos. 4-2321-227 & 4-279-308 (ICAO June 6, 2005). Accordingly, the ALJ denied her claim for PTD benefits. *Id*.

G. Considering the human factors involved in the instant case[4], the ALJ is not convinced that Claimant is incapable of earning any wages in other employment. Rather, while it is more probably true than not, that Claimant is precluded from returning to his former occupation and similar positions, the representative sampling of sedentary to light duty type positions identified by Ms. Montoya as falling within Claimant's physical capabilities present a number of perspective job positions existing in the local labor market affording Claimant the opportunity to earn a wage. Furthermore, the ALJ is also not convinced that Claimant's age and education, in combination with his physical restrictions completely preclude his ability to earn a wage. Per the information contained in Ms. Montoya's report, Claimant has only attempted what the undersigned

[4] As noted, Claimant is 50 years-old and speaks English. According to Ms. Montoya's vocational assessment , which Claimant did not dispute, he completed high school, some college, and was in the military for approximately two years. Claimant lives in Colorado Springs, which is a large metropolitan area with a variety of employment options according to Ms. Montoya.

finds to be a rudimentary job search. In this regard, the ALJ credits the report and testimony of Ms. Montoya to conclude, that while it won't be easy for Claimant to secure employment, his prior work history and military experience will help him compete for and secure any of the jobs identified by Ms. Montoya. Accordingly, Claimant has failed to demonstrate, by a preponderance of the evidence, that he is permanently totally disabled as a consequence of his December 27, 2012 work injury.

Overpayments

H. Section 8-40-201(15.5), C.R.S. provides as follows:

> "Overpayment" means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability benefits under said articles.

Thus, §8-40-201(15.5), C.R.S. provides for three categories of possible overpayment: (1) when a claimant receives money "that exceeds the amount that should have been paid"; (2) money received that a "claimant was not entitled to receive"; and (3) money received that "results in duplicate benefits because of offsets that reduce disability or death benefits" payable under articles 40 to 47 of Title 8. *See Simpson v. Industrial Claim Appeals Office,* 219 P.3d 354 (Colo. App. 2009), *rev'd in part on other grounds, Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010).

I. Respondents bear the burden, by a preponderance of the evidence that Claimant received an overpayment of TTD benefits. Respondents' assertion of the right to recover an overpayment is a factual matter for determination by the ALJ. *Karyn Milazzo v. Total Long-term Care*, *Inc.*, W.C. No. 4-852-795-02, (Industrial Claims Appeals Panel June 11, 2014). An ALJ may issue an Order requiring repayment pursuant to § 8-43-207(1)(q), C.R.S. In this case, the ALJ agrees that Respondents that Section 8-42-107.5, C.R.S., limits the amount of compensation a claimant may receive in TTD and PPD benefits depending on the claimant's impairment rating. If a claimant's impairment rating is below 25%, his compensation is limited to $78,482.00 based on a date of injury on and after July 1, 2012. See § 8-42-107.5, C.R.S. Here, Claimant was injured on December 27, 2012, provided a 3% mental impairment and 15% physical impairment, which was admitted to by Respondents. Accordingly, under Section 8-42-107.5, C.R.S., Claimant's compensation, including TTD and PPD benefits, is limited to $78,482.00.

J. Respondents filed a Petition requesting termination of payment of indemnity benefits paid to Claimant over the statutory cap. Claimant objected to Respondents' Petition. Thus, Respondents could not unilaterally stop paying indemnity benefits to Claimant without an order from the court or until the total payment was complete. *See Mattorano v. United Airlines*, W.C. No. 4-861-379-01 (ICAO July 25, 2013). Respondents paid the full value of PPD just prior to hearing and therefore ongoing

payments ended. Now, Respondents have stopped paying indemnity benefits to Claimant. However, the evidence presented persuades the undersigned ALJ that an overpayment in benefits paid to Claimant exists because the statutory cap pursuant to § 8-42-107.5, C.R.S was met and exceeded. Under Section 8-40-201(15.5), C.R.S, there is an overpayment that has been made by Respondents, because Claimant received money that he was not entitled to receive based upon the aforementioned cap on benefits. Respondents may proceed with another hearing on issues concerning the amount and recovery of any overpayment from Claimant per PALJ Goldstein's May 10, 2017 Order.

ORDER

It is therefore ordered that:

1. Claimant's claim for permanent total disability benefits is denied and dismissed.

2. An overpayment in indemnity benefits made by Respondents to Claimant for payments over the statutory cap exists in favor of Respondents. Respondents may file a subsequent Application for Hearing seeking determination regarding the specific amount of said overpayment and the right to recoup the same.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 29, 2017

Colorado Springs, CO 80906

ISSUES

1. Did Claimant prove by a preponderance of the evidence he suffered a compensable injury to his right elbow on or about January 10, 2016?

FINDINGS OF FACT

1. Claimant works as a steel pourer for Employer. His duties include taking multiple samples of molten steel during each shift. Some samples must be stamped with a four-digit number. While the steel is still hot enough to be relatively malleable, Claimant holds a number stamp against the sample with his left hand and strikes the stamp with a 2.5-pound hammer using his right hand. He repeats the process for each of the other digits for each sample.

2. The record contains several estimates regarding the number of times Claimant strikes the samples during a typical shift, ranging from 90 to over 200. Dr. Ridings calculated 216 hammer strikes during a 12-hour shift, which the ALJ credits for this decision. Each strike takes only one or two seconds, and it typically takes less than 60 seconds to complete the entire marking process. Claimant performs additional hammering motions with a pipe when breaking up crusted steel slag, but there is no persuasive evidence to quantify how many times he performs that activity each shift.

3. Steel-pourers are also required to "throw" rice hull bags onto the steel bath to create a barrier from the surrounding atmosphere. The bags weigh approximately 20-30 pounds, and the worker will throw approximately 10 bags per shift.

4. One of the main duties of a steel-pourer is to simply watch the level of the molten steel, which comprises approximately 50% of a typical work shift.

5. Claimant first noticed pain in his right elbow while hammering samples on January 10, 2016. Claimant was scheduled to be off work the next two days, but by January 13, 2016 he was still having pain over the right lateral epicondyle. He reported the symptoms to his supervisor and was referred to the on-site nurse.

6. Claimant saw the on-site nurse on January 14, 2016. Claimant reported increasing pain in his right elbow for "last 7 days." Claimant that "started at work when hammering and is worse on days that patient works and reduced somewhat when not working." The nurse diagnosed lateral epicondylitis, gave Claimant an epicondylar brace, and instructed him to take ibuprofen regularly.

7. Claimant saw the on-site nurse a few times, and then treated with his primary care provider. On March 7, 2016 Claimant saw Jack Hall, PA-C at Parkview Family Medicine. He reported right lateral epicondylitis pain which he attributed to "repetitive motion at work." He had been wearing a tennis elbow brace without benefit.

PA-C Hall diagnosed medial epicondylitis[1] and polyarticular arthritis. He referred Claimant for a surgical consult with Dr. Farnsworth.

8. Claimant saw Dr. Farnsworth's partner, Dr. Matthew Simonich, on March 23, 2016. He reported progressive right elbow pain for approximately six months. Claimant told Dr. Simonich "he works at the steel mill and swings a 2.5-pound hammer at least 150 times each day and has done so for 10 years. He also cooks a lot and cuts with his right hand." Dr. Simonich diagnosed right lateral epicondylitis which he termed an "overuse injury related to work." There is no discussion of the basis for Dr. Simonich's causation opinion.

9. Dr. Simonich gave Claimant a cortisone injection which provided significant, but temporary, pain relief.

10. Dr. Simonich completed a Physician Certification form in connection with Claimant's request for FMLA leave on April 26, 2016. He indicated Claimant's condition would cause periodic flare-ups that would interfere with his work duties. Dr. Simonich opined that "repetitive hammering motion can re-aggravate lateral epicondylitis."

11. Claimant's symptoms worsened significantly in May 2016, despite having been off work for several weeks. Claimant told Dr. Simonich he did not know why his pain worsened because he "did nothing" with the right arm during that period.

12. Claimant had a second cortisone injection which was not helpful.

13. Dr. Simonich completed another Attending Physician's Statement on May 25, 2016. Dr. Simonich noted Claimant's symptoms "began ~ Sept. 2015," which does not correlate to Claimant's alleged date of injury. Dr. Simonich opined that the lateral epicondylitis was caused by "repetitive hammering motion" at work. There is no analysis regarding the amount of hammering in which Claimant engaged, or the amount required to cause lateral epicondylitis. Dr. Simonich stated Claimant had no specific restrictions but had been "encouraged" to "protect" the elbow.

14. Claimant followed up with Dr. Simonich on July 14, 2016, reporting that the elbow felt "horrible" and "his symptoms have worsened over time." Claimant had been off work for approximately nine weeks. Because of his severe and worsening symptoms, Claimant wanted to pursue surgery.

15. Katie Montoya, a vocational expert, performed a Job Demand Analysis (JDA) of the steel-pourer job on July 6, 2016 at Respondent's request. Ms. Montoya observed a coworker rather than Claimant, but there is no persuasive evidence that the coworker performs the job in a substantially different manner than Claimant. Ms. Montoya concluded that none of the primary or secondary risk factors described in the 2010 version of the CTD MTGs were present.

[1] This is likely a reporting error, because the remainder of the report references lateral epicondylitis.

16. Claimant saw Dr. Eric Ridings on September 7, 2016 for an Independent Medical Examination (IME) at Respondent's request. Dr. Ridings obtained a detailed description of Claimant's work duties, with particular attention to the stamping process. Dr. Ridings agreed with the diagnosis of lateral epicondylitis but did not consider the condition to be caused by Claimant's work. Dr. Ridings opined that "with typical and proper usage of the hammer, I would not expect any significant use of the wrist extensors . . . [which] are the involved anatomic structures in lateral epicondylitis." Dr. Ridings further noted "the patient does not describe activity which from a mechanical standpoint I would expect to cause lateral epicondylitis. By the same token, his described activities do not meet the cumulative trauma disorder guidelines for causation of lateral epicondylitis."

17. Dr. Ridings subsequently reviewed the JDA and issued a supplemental report. Dr. Ridings thought the job description in Ms. Montoya's report was consistent with the history he received from Claimant. Dr. Ridings concluded:

> I see nothing that would cause, aggravate or accelerate lateral epicondylitis. Additionally, Ms. Montoya's report confirms that the patient's job duties did not come close to meeting the primary or secondary risk factors for a cumulative trauma disorder under the Medical Treatment Guidelines. With this confirmatory job demands analysis report, it is my judgment well within a reasonable degree of medical probability that [Claimant's] lateral epicondylitis is not work-related.

18. Mr. Matt Medve, Respondent's asset manager coordinator, testified in a deposition on May 23, 2017. Mr. Medve was Claimant's supervisor on the date of injury. Mr. Medve described the process of imprinting digits on the samples with the hammer. He estimated the steel pourer would typically perform 90 hammer-strikes per shift. A hammer-strike takes seconds to perform on each sample. Mr. Medve also described the use of channel lock pliers and the activity of throwing rice hull bags into the steel bath. Mr. Medve testified that Ms. Montoya's JDA accurately portrays the job duties.

19. Ms. Montoya's JDA report is credible and persuasive.

20. Dr. Ridings' opinions are credible and persuasive.

21. Claimant failed to prove by a preponderance of the evidence that his right lateral epicondylitis is causally related to his employment.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to

find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which he seeks treatment. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, *supra*.

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equally exposing stimulus requirement effectuates the "peculiar risk" test and requires that the hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). In other words, the claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*.

The mere fact that an employee experiences symptoms while working duties does not compel an inference that the condition was caused by the work. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, October 27, 2008). There is no presumption that a condition which manifests at work arose out of the employment. Rather, the Claimant must prove that there is a direct causal relationship between the employment and the injury. Section 8-43-201; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure the quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP Rule 17, Exhibit 5 addresses

cumulative trauma conditions including, but not limited to, lateral epicondylitis.[2] The ALJ may consider the MTGs as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (ICAO, January 25, 2011). But the ALJ is not bound by the MTGs when determining whether requested medical treatment is reasonable, necessary, or injury-related. Section 8-43-201(3).

As found, Claimant failed to prove by a preponderance of the evidence that he suffered a compensable work-related injury. The dispositive issue in this case involves medical causation and Claimant did not present sufficient persuasive evidence to prove that his work activities caused him to develop lateral epicondylitis.

Ms. Montoya's report, Mr. Medve's testimony, and even Claimant's own description of his work activities show he is not consistently exposed to epicondylitis risk factors identified in the MTGs.[3] Although the hammer Claimant uses weighs more than two pounds, he does not use it long enough to cross the durational thresholds for the primary risk factors (six hours) or secondary risk factors (three hours). The MTGs state that "hours are calculated by adding the total number of hours per day during which the worker is exposed to the defined risk. Breaks, time performing other activities, and inactive time are not included in the total time." (Rule 17, Ex. 5, § D.3.b). Based on that methodology, Claimant's accumulated time wielding the hammer during a typical shift is well under the threshold considered causative under the MTGs. Indeed, Claimant spends more hours "watching" than performing any other single activity in his job.

Claimant has primarily attributed the development of lateral epicondylitis to hammering steel samples, but the ALJ has also considered whether other job duties are causative. Besides the hammer, Claimant uses other small tools such as channel-lock pliers, a sample testing pole, and a pipe to break up crusted steel. But Claimant presented no persuasive evidence that he accumulates enough hours to reach the level of a primary or secondary risk factor. Claimant's testimony that he uses multiple tools "all day every day" is not supported by other persuasive evidence in the record.

After reviewing all the evidence, the ALJ is not persuaded that any of Claimant's work duties, either singly or in combination, caused his condition. Dr. Ridings persuasively opined that Claimant's lateral epicondylitis was not likely caused by his work. Claimant presented no persuasive evidence to refute the credible expert opinions of Ms. Montoya and Dr. Ridings. The ALJ finds Dr. Simonich's opinions conclusory and unpersuasive. The ALJ acknowledges that a claimant does not have to present expert opinion evidence to establish medical causation, *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990), but the lack of persuasive opinion evidence is a factor the ALJ can consider when evaluating the totality of the evidence. Although the ALJ does not doubt that Claimant's elbow pain started while hammering, that does not convince the ALJ to depart from the evidence-based principles in the MTG causation matrix.

[2] The most current version of the CTD MTGs became effective March 2, 2017.

[3] Ms. Montoya's report addresses the risk factors as defined in the then-current 2010 version of the CTD MTGs. The ALJ notes many of the durational thresholds have been lowered in the 2017 version, particularly with respect to secondary risk factors. The ALJ has considered both versions of the MTGs, and concludes Claimant does not satisfy the criteria of either.

Claimant failed to prove by a preponderance of the evidence that he suffered a compensable injury or occupational disease.

ORDER

Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm

DATED: June 13, 2017

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-038-431-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 29, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 6/29/17, Courtroom 5, beginning at 1:30 PM and ending at 2:30 PM).

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondents' Exhibits A through D were admitted into evidence, without objection.

A written transcript of the telephonic, evidentiary deposition of Joseph Mwangi, taken on June 19, 2017, was accepted in lieu of his in person testimony at hearing (hereinafter referred to as "Mwangi Depo.," followed by a page number).

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns average weekly wage (AWW).

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant injured his neck in an admitted injury of November 21, 2016.

2. The Respondent filed a General Admission of Liability (GAL), filed February 15, 2017, admitting for medical benefits, an AWW of $1,011.08, temporary partial disability (TPD) benefits from December 25, 2016 through December 29, 2016, at the rate of $14.30 per week; and, temporary total disability (TTD) benefits from December 30, 206 through "ongoing," at the rate of $674.05 per week.

Average Weekly Wage (AWW)

3. Joseph Mwangi, an adjuster for the self-insured Employer, testified that he first calculated the AWW by first excluding the two weeks of unpaid leave that the Claimant had taken in the last 40 weeks, but later added it in (this would decrease the average) because the Claimant had decided to litigate AWW (Mwangi Depo., p. 11). Mwangi stated that the Claimant's hourly wage was $21. The Claimant agreed. Mwangi stated that peak seasons with more overtime occurred within 12 weeks before the admitted injury. Therefore, he felt that 40 weeks before the injury was the fairest measure of the Claimant's AWW. Nonetheless, the 40-weeks before calculation reveals that overtime pay was involved. Ultimately Mwangi calculated the AWW at $1,011.08, which was the Respondent's theory of AWW.

4. The Claimant testified that his hourly wage was $21 an hour, which was corroborated by Mwangi. According to the Claimant, he generally averaged 55 to 56 hours per week (overtime of 15 to 16 hours per week), and he was paid time and a half for overtime. 40 hours per week at $21 an hour calculates to $840 per week. Overtime pay at time and a half equals $30.50 per hour, or $457.50 for 15 hours overtime. The total of this is $1,297.50 as the putative AWW. This mechanistic formula, however, does not fairly reflect the measure of the Claimant's AWW because of fluctuations in

overtime. Although the 12 weeks before his admitted injury may have been a peak season, the ALJ finds that it is the fairest measure of the Claimant's AWW. This was the Claimant's theory of AWW. As reflected in Respondent's Exhibit B, the Claimant's gross earnings for the 12 weeks before the admitted injury, according to Respondent's Exhibit B, were $1,147.07. The ALJ hereby finds that the Claimant's AWW and the best reflection of his temporary wage loss (which would also factor into the formula for permanent disability) is $1,147.07.

Ultimate Findings

5. The ALJ finds the Claimant generally credible, but it is understandable that he lacked specific recollection concerning the fine details of actual hours worked. On the other hand, the ALJ does **not** find Mwangi's methodology for calculating AWW credible, especially in light of the fact that Mwangi decided to "play hardball" by including the two weeks of unpaid leave (which would lessen the overall calculation) once he knew the Claimant was litigating AWW, previously having excluded it on apparent "fairness" grounds.

6. Between conflicting testimonies, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's general testimony and to reject Mwangi's testimony.

7. The ALJ finds that the Claimant's AWW and the best reflection of his temporary wage loss (which would also factor into the formula for permanent disability) is $1,147.07, which yields a TTD rate of $764.71 per week, or $109.24 per day, a differential of $90.66 per week, or $12.95 per day, as compared to the admitted benefits.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within

the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant was generally credible, but it is understandable that he lacked specific recollection concerning the fine details of actual hours worked. On the other hand, the ALJ does **not** find Mwangi's methodology for calculating AWW credible, especially in light of the fact that Mwangi decided to "play hardball" by including the two weeks of unpaid leave (which would lessen the overall calculation) once he knew the Claimant was litigating AWW, having previously excluded the unpaid leave period on apparent "fairness" grounds.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals*

Office, 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's general testimony and to reject Mwangi's testimony.

Average Weekly Wage (AWW)

c. . An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. Ordinarily, the AWW calculation for hourly employees should be determined by multiplying the hourly rate times the number of hours in a day during which the employee was working at the time of injury **or would have worked had the injury not intervened.** § 8-42-102 (2)(d), C.R.S. Consequently, this calculation could have been based on the Claimant's testimony ($21 an hour + $30.50 for 15 hours of overtime = $1,297.50). As found, however, the fairest measure of the Claimant's AWW should be based on gross wages for the 12 weeks before the admitted injury, which equal $1,147.07, yielding a TTD rate of $764.71 per week, or $109.24 per day, a differential of $90.66 per week, or $12.95 per day, as compared to the admitted benefits. The period between the commencement of TTD benefits on December 30, 2016, and the hearing date of June 29, 2017, both dates inclusive, equals 182 days. The aggregate differential on the TTD rate during this period equals $2,356.90.

d. An ALJ has the discretion to determine a claimant's AWW, including the claimant's cost for COBRA insurance, based not only on the claimant's wage at the time of injury, but also on other relevant factors when the case's unique circumstances require, including a determination based on increased earnings and insurance costs at a subsequent employer. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). As found, the Claimant consistently worked overtime at time and a half, and the fairest measure of his AWW is as stated herein above in paragraph c.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As

found, the Claimant has sustained his burden on AWW. As found, the Claimant has proven that his AWW is $1,147.07.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant's average weekly wage is hereby re-established at $1,147.07.

B. For the period from the commencement of temporary total disability benefits from December 30, 2016, through June 29, 2017, both dates inclusive, a total of 182 days, the Respondent shall pay the Claimant the differential of $90.66 per week, or $12.95 per day, as compared to the admitted benefits, in the aggregate amount of $2,356.90, which is payable retroactively and forthwith.

C. From June 30, 2017 and continuing until cessation of temporary disability benefits, Respondents shall pay the Claimant $764.71 per week in temporary total disability benefits. The General Admission of Liability, as modified by the herein decision remains in full force and effect.

D. The Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2017.

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course and scope of her employment with employer on December 2, 2016.

- If claimant has proven a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that medical treatment she received was reasonable and necessary to cure and relieve her from the effects of the December 2, 2016 injury.

- If claimant has proven a compensable injury, what is her average weekly wage ("AWW")?

- If claimant has proven a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that she is entitled to temporary partial disability benefits ("TPD") beginning December 19, 2016 and ongoing.

FINDINGS OF FACT

1. Claimant has worked for employer since September 2009. She has worked as a bartender, cocktail server, and lounge supervisor. Claimant was promoted to the position of lounge supervisor in August 2016.

2. Claimant provided testimony regarding a prior work injury she sustained to her neck in March 2012. While receiving treatment for that 2012 injury, claimant treated with Dr. Craig Stagg. On October 25, 2012, Dr. Stagg placed claimant at maximum medical improvement ("MMI") for the March 2012 injury.

3. After she was placed at MMI for the 2012 injury, claimant received maintenance medical treatment. The medical records entered into evidence indicate that claimant returned to Dr. Stagg on December 18, 2012, May 17, 2013, and February 18, 2014 because of "flare ups" of her neck symptoms. Each time Dr. Stagg referred claimant to physical therapy treatment. After claimant returned to physical therapy Dr. Stagg noted that claimant experienced improvement in her pain symptoms.[1] Although claimant was placed at MMI in October 2012, Dr. Stagg placed claimant on "permanent restrictions" on May 15, 2014 that included a 30 pound limit for lifting, carrying, pushing, and pulling.

[1] See medical records dated January 18, 2013, June 4, 2013, and March 25, 2014, respectively.

4. Claimant testified that she treated these occasional flare ups of neck pain with ice and Tylenol and was able to continue to perform all of her job duties. This testimony is supported by the undisputed fact that claimant was offered the promotion of lounge supervisor in August 2016. At the time of the promotion, claimant was not experiencing any neck or arm pain.

5. Claimant testified that she injured her neck at work on December 2, 2016, while assisting with set up for a banquet. Claimant testified that clean drinking glasses are kept in large racks that are then stacked. Each stack can reach six to six and a half feet from the floor. A rack has a lip that locks into the rack below it so that the racks remain stacked and do not slip. To remove a rack from the top of a stack it is necessary to lift and then turn the rack to remove it from the rack below it.

6. Claimant testified that on December 2, 2016 she attempted to remove one of these glass racks from a stack that was above claimant's shoulder height. While lifting the rack above her shoulder level, claimant felt a sharp pain in her neck that radiated into her shoulders and arms. At that time claimant did not report an incident to employer and completed her shift. Claimant testified that she attempted to self-treat her neck pain with ice because in the past that successfully reduced her neck symptoms.

7. Although she was scheduled to work on December 3, 2016, claimant notified her supervisor that she would not be at work. Claimant testified that she did not report to work on December 3, 2016 because of her neck pain. Claimant reported for her scheduled shift on December 4, 2016, but she continued to have pain in her neck and weakness in her arms on that date. Again claimant attempted to treat these symptoms with ice.

8. Claimant testified that by Monday, December 5, 2016, her pain was not getting better and she determined that she needed to seek medical treatment. Based upon her past treatment with Dr. Stagg, claimant scheduled an appointment with his office. Claimant notified Sarah Austin, Human Resources Director with employer, that she had made the appointment with Dr. Stagg. Claimant testified that because of her prior 2012 neck injury, she had been instructed by employer to inform them if she sought treatment for her neck.

9. Both claimant and Ms. Austin testified that it was initially unclear to them if claimant was expected to report her neck pain as related to the 2012 injury, or report a new incident. Claimant clarified the circumstances of the December 2, 2016 incident and employer instructed her to file a "new claim" on that incident. Employer allowed claimant to retain her scheduled appointment with Dr. Stagg.

10. Claimant was seen by Dr. Stagg on December 8, 2016 and reported to him the details of the December 2, 2016 incident involving lifting the rack of glasses. Claimant also reported radiating pain into both arms and numbness in her hands and fingers. Dr. Stagg diagnosed an acute cervical strain and opined that claimant suffered a new injury on December 2, 2016. Dr. Stagg ordered a cervical x-ray and restricted claimant from work.[2]

11. On December 8, 2016, an x-ray of claimant's cervical spine showed degenerative disc disease at C6-7 with foraminal narrowing. In addition, multilevel facet arthroplathy was noted without evidence of dynamic instability.

12. Following the x-ray, claimant continued to report to Dr. Stagg that she had radiating pain from her neck into both arms and when she tilted her head back she would have lancinating pain into her back and both shoulders. Dr. Stagg ordered a magnetic resonance image ("MRI") of claimant's cervical spine

13. On December 16, 2016 the MRI of claimant's cervical spine showed reversal of the normal cervical lordosis with an unchanged bulge at C4-5 and a discoosteophytic bulge at C6-7 asymmetric to the right with slightly progressive moderate foraminal stenosis, but degenerative. It was further noted that there was no acute disc rupture, hematoma, fracture, or acute alignment abnormality.

14. The December 16, 2016 MRI results were compared with a computerized tomography ("CT") scan taken on July 6, 2012 and an MRI taken on February 24, 2014. Dr. Stagg noted on December 21, 2016 that there were no significant changes between the 2014 MRI and the results from the December 16, 2016 MRI.

15. On December 19, 2016, Dr. Stagg released claimant to return to modified duty. At that time claimant's work restrictions included no lifting, pushing, or pulling of more than five pounds. As of the date of the hearing, claimant continues to work under these restrictions.

16. Claimant testified that because of these current work restrictions she is not able to work as much as she did prior to the December 2, 2016 injury. In addition, because she is working in a primarily clerical position for employer, she is not earning the same amount of tipped income as she did prior to her injury.

17. Claimant testified that she continues to have pain in her neck with ongoing radiating pain and numbness into her arms and hands. Claimant also testified that these current symptoms are different from the symptoms she experienced following the 2012 injury. Claimant testified that her current symptoms are more intense and than her prior symptoms and are not relieved with ice and Tylenol. Claimant testified that she continues to have neck pain and arm weakness.

[2] Claimant was ultimately off from work from December 8, 2016 through December 18, 2016.

18. On January 4, 2017, respondents asked Dr. Albert Hattem to perform a review of claimant's medical records to determine whether her neck issues were caused by an injury on December 2, 2016. Dr. Hattem opined that claimant's current neck symptoms are not related to a new injury on December 2, 2016. In support of this opinion Dr. Hattem also opined that the December 2, 2016 was a minor incident. Dr. Hattem noted that when claimant was placed at MMI in 2012 she complained to Dr. Stagg of neck pain similar to the pain she has now and the recent MRI showed no acute changes to her cervical spine.

19. Respondents sent claimant to Dr. Frederick Scherr for an independent medical examination ("IME") on March 16, 2017. Dr. Scherr reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. Following the IME, Dr. Scherr issued a report in which he opined that if the December 2, 2016 incident occurred as described by claimant, then that incident "may have caused an exacerbation of her pre-existing cervical issues". Dr. Scherr also noted that in his opinion appropriate treatment for claimant's symptoms would include physical therapy and massage therapy.

20. Dr. Scherr testified by deposition in this matter. Dr. Scherr testified that he diagnosed claimant with a cervical sprain with radicular features. Dr. Scherr also testified that claimant's symptoms were the result of an aggravation of a preexisting or previous injury. In his testimony Dr. Scherr noted that at the IME claimant denied having any previous arm symptoms, but his review of the medical records indicated that claimant did have arm symptoms prior to the December 2016 incident.

21. Respondents point to claimant's renovation of her home during 2016 and a backpacking trip she took in July 2016 as evidence that her neck and arm symptoms were caused by activities outside of work. Claimant testified that she performed some home renovation in the summer of 2016 including painting, tiling, and cleaning. Claimant also testified that while working on the home renovation she was able to work all of her scheduled shifts and perform all of her work duties. Claimant testified that the home renovation was stopped in late September/early October 2016. With regard to the backpacking trip, claimant testified that it was more difficult than she and her daughter had initially believed, but that trip did not cause any neck or arm symptoms and did not limit claimant's ability to perform her work duties. The ALJ finds claimant's testimony on these issues to be credible and persuasive.

22. Claimant's spouse and daughter testified at hearing. The testimony of these witnesses was consistent with claimant's testimony.

23. The ALJ credits claimant's testimony that she had a preexisting neck condition from a 2012 injury, but that her symptoms had improved. The ALJ credits claimant's testimony that prior to the December 2, 2016 injury she was able to perform all of her work duties. The flare ups claimant experienced prior to December 2, 2016 were intermittent and successfully treated with ice and Tylenol.

24. The ALJ credits the opinion of Dr. Stagg that claimant sustained a new injury on December 2, 2016. The ALJ credits the opinion of Dr. Scherr that on December 2, 2016 claimant suffered an exacerbation of her preexisting cervical condition. Based upon these findings, the ALJ finds that claimant has demonstrated that it is more likely than not that she suffered an injury at work on December 2, 2016 that aggravated, accelerated, or combined with her preexisting cervical spine condition, necessitating treatment.

25. Respondents argue that even if the December 2, 2016 incident is deemed a compensable injury, then claimant only experienced a temporary aggravation of a preexisting condition. The ALJ is not persuaded by this argument.

26. Based upon the payroll records entered into evidence, claimant has two pay periods each month. The first is from the 1st to the 15th and the second from the 16th to the last day of the month. The ALJ calculates that for the 8 and 5/7 week period of October 1, 2016 through November 30, 2016, claimant had wages totaling $5,680.06. The ALJ credits these payroll records and finds that claimant's average weekly wage ("AWW") is $651.83; ($5,680.06 ÷ 8.714 weeks = $651.83).

27. The payroll records entered into evidence indicate that claimant averaged approximately 88 hours per pay period prior to December 2, 2016. After the December 2, 2016 work injury, claimant averaged 59 hours per pay period. The ALJ credits these records and finds that claimant has demonstrated that it is more likely than not that she has experienced a reduction in wages following the work injury. The claimant has also shown that it is more likely than not that this reduction in wages was caused by claimant's December 2, 2016 work injury and related work restrictions.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and

actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has demonstrated by a preponderance of the evidence that on December 2, 2016 she suffered an injury arising out of and in the course and scope of her employment. As found, the injury claimant sustained on December 2, 2016 aggravated, accelerated, or combined with her preexisting cervical spine condition, necessitating medical treatment. As found, claimant's testimony, the opinions of Dr. Stagg and Dr. Scherr are found to be credible and persuasive.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996).

6. As found, claimant suffered a compensable injury on December 2, 2015. Therefore, respondents are liable for the payment of reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. Although claimant has not requested specific medical treatment at this time, the ALJ concludes that respondents are responsible for payment of such medical treatment. As found claimant's testimony is credible and persuasive on this issue.

7. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

8. As found, the ALJ credits the payroll records and concludes that claimant's AWW is $651.83. The ALJ concludes that the 8 and 5/7 week period immediately preceding the December 2, 2016 work injury most accurately reflects claimant's wages at that time.

9. In order to prove entitlement to temporary partial disability ("TPD") benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

10. As found, claimant has demonstrated by a preponderance of the evidence that she has experienced a wage loss as a result of the December 2, 2016 work injury and she is entitled to TPD benefits beginning December 19, 2016 and ongoing. As found, claimant's testimony and the payroll records are credible and persuasive on this issue.

ORDER

It is therefore ordered that:

1. Claimant sustained an injury that arose out of and in the course and scope of her employment with employer on December 2, 2016.

1. Employer shall pay for reasonable and necessary medical treatment related to the December 2, 2016 work injury, pursuant to the Colorado Medical Fee Schedule.

2. Claimant's AWW is $651.83.

3. Claimant is entitled to TPD benefits beginning December 19, 2016 and ongoing until terminated by law.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP.

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether the left wrist surgery as proposed by Dr. DeVanny is reasonable, necessary, and related to Claimant's work injury which occurred on May 16, 2016.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 43-year old right-handed male who sustained a work related injury on May 16, 2016 while working for the Respondent/Employer as an apartment maintenance technician. He was loading a washing machine into a truck when he stepped off the back of the tailgate and landed on his right lower extremity. He felt a pop in his right knee at which time his leg gave out and he also landed on his right wrist.

2. Claimant was admitted into the Emergency Department at Penrose St. Francis Hospital shortly after the accident. He stated that he was moving an appliance in the bed of a truck when he tripped and fell off the truck, extending his right hand to try to minimize the impact of the fall while striking his right knee on the ground. He complained of severe pain in the right hand and the right knee. Physical examination showed right wrist deformity and soft tissue swelling of the right leg. Claimant was assessed with a right tibial fracture, right wrist fracture/dislocation, and right scaphoid fracture. There was no mention in the Emergency Department records of any injury to Claimant's left wrist. (Ex. A: pp. 1-2)

3. Orthopedic surgeon Patrick DeVanny, M.D. evaluated Claimant that same day. He did not note any left wrist symptoms in his initial evaluation. He then performed a right distal radial fracture open reduction and internal fixation and right scaphoid waist fracture ORIF to repair the damage to Claimant's right wrist. (Ex. B: pp. 69-73)

4. Following the procedure, Christopher Scott Peeters, M.D., who noted moderate displacement of the distal radial fracture, ulnar styloid fragment, and scaphoid fracture, evaluated Claimant. He did not note any symptoms in Claimant's left wrist. (Ex. C: p 74)

5. Claimant was admitted to the rehabilitation floor of the hospital. In addition to his documented fractures, Claimant was discovered on admission to have uncontrolled type II diabetes for which he began receiving treatment. No documentation exists for a left wrist injury. (Ex. D: p. 80)

6. Following surgery, Claimant spent four days in the hospital and was discharged to Health South Rehabilitation. At the time of discharge Claimant was non-weight bearing on his right leg and was unable to use his right wrist. At the time he was admitted to Health South, Claimant was required to use a wheelchair or a walker to ambulate. While at Health South, Claimant would use his walker to ambulate if he did not have to go too far. In using his walker, Claimant used his left hand exclusively to put weight on his walker and to move it forward. In addition, when Claimant used his wheel chair to get around, he used his left hand and left leg to propel him. At the time he was at Health South, Claimant weighed approximately 240 pounds. Claimant testified that he put a significant amount of weight on his left hand when using his walker. Likewise, when using his wheelchair, Claimant had to use a significant amount of force with his left wrist to propel it. When he got home, Claimant had to use a walker to ambulate. If he left his home, Claimant would use his wheelchair. Just as at Health South, Claimant had to put weight on his left hand and left leg when using his walker. Claimant also used his left hand to propel his wheelchair. *Claimant had not experienced problems with his left wrist before this work injury.*

7. On May 21, 2016, Claimant was noted by Dr. David Richman at Health South to be complaining of right leg and knee pain, right thumb pain, right wrist pain, right calf swelling without tenderness, and range of motion deficits in the right knee and wrist. There was no notation in the records any of pain, swelling, or difficulty in the left wrist. (Ex E: p. 100)

8. On May 31, 2016, Dr. DeVanny followed up postoperatively. He noted that the procedure was healing well. However, he expressed concern that Claimant was weight bearing on his right wrist and forearm, which could reinjure the joint. (Ex G: p. 192)

9. On June 7, 2016, Claimant had a follow-up postoperative visit with Dr. Richard Meinig, who had surgically repaired Claimant's right knee. Dr. Meinig performed a physical systems review noting muscle aches, muscle weakness, and joint pain but no back pain or swelling in the extremities. The doctor noted that Claimant was recovering well from the right tibial-plateau fracture. (Ex. H: p. 194)

10. Claimant returned to Dr. DeVanny on June 21, 2016. Dr. DeVanny noted excellent alignment of the hardware and fracture site of the scaphoid and distal radius. He assessed Claimant with a satisfactory postoperative recovery. He sent Claimant to physical therapy to increase his range of motion. At this visit, there was no mention noted of any issues with Claimant's left wrist. (Ex. I: p. 196)

11. On July 26, 2016, Claimant returned to Dr. DeVanny. Dr. DeVanny noted 'routine' healing. He again expressed concern over Claimant's use of his right hand/wrist, as his splint was noted at this visit to be "in tatters". No left wrist symptoms are noted at this appointment. (Ex. J: p. 199)

12. On August 23, 2016, Claimant returned to Dr. DeVanny. Dr. DeVanny opined that Claimant's right wrist was healing well, but with stiffness. He recommended additional physical therapy. Dr. DeVanny did not document any left wrist symptoms at this visit. (Ex. K: p. 200)

13. On September 8, 2016, Claimant presented to Michael Sparr, M.D., who had taken over Claimant's Workers' Compensation care. Claimant reported that he was loading a washing machine in his Ford F-250 pickup truck and was attempting to push the appliance deeper into the truck bed. He was standing on the tailgate and apparently stepped off the back of the gate and landed hard on his right lower extremity. He felt a pop in his right knee at which time his leg gave out and he fell on his right wrist. Immediately, following the incident he had severe right lower extremity and right wrist pain and an obvious deformity of his right wrist. (Ex. L: pp. 202-205)

14. This report contains the first documentation and evaluation of any left wrist injury in the case. Claimant reported at this time that his symptoms developed approximately one week after the accident, while pushing his wheelchair with his left hand in rehabilitation. Claimant reported that his worst pain at this time was with his left wrist. He described this as a dull achiness over the volar and dorsal aspects of the left wrist. Dr. Sparr assessed Claimant with left wrist tendinitis in addition to Claimant's previously diagnosed conditions. (Ex. L: pp. 202-05)

15. On September 20, 2016, Claimant returned to Dr. DeVanny. This is the first visit *with Dr. DeVanny* where any left-wrist complaints are documented. Dr. DeVanny's examination revealed a positive Finkelstein's test. At this visit, Dr. DeVanny recommended physical therapy to address "left de Quervain's" [tendonitis], instead of surgery. He did not take x-rays at the time. (Ex. M: p. 207)

16. On October 25, 2016, Claimant returned to Dr. DeVanny. He continued to complain of left wrist pain along the dorsoradial aspect and that he [Claimant] was concerned about an 'occult injury'. Physical examination showed tenderness to the snuffbox and pain with passive extension of the wrist. The neurovascular exam was normal. All flexor and extensor tendons were intact. X-rays showed a scaphoid midwaist cyst and 'questionable fracture'. Dr. DeVanny recommended an MRI or CT scan to evaluate Claimant's left wrist. (Ex. N: p. 209)

17. A November 25, 2016 left wrist MRI showed a disruption of the scapholunate ligament with mild widening of the scapholunate interval. Additionally, there were MRI findings consistent with a mild DISI deformity. A non-displaced fracture of the scaphoid waist was suspected. There was mild subluxation of the extensor carpi ulnaris tendon. It was further noted that Claimant had advanced osteoarthritis for his age. (Ex. O: p. 211)

18. On December 6, 2016, Dr. DeVanny again evaluated Claimant. Dr. DeVanny assessed Claimant with a left wrist scaphoid bony bruise with scapholunate ligament disruption. He recommended a proximal row carpectomy, scaphoid excision

and four-corner fusion, and a Brunelli reconstruction to repair the scapholunate ligament. (Ex. P: p. 212)

19. Respondents filed a December 15, 2016 Application for Hearing challenging the requested surgery as not reasonable, necessary, and related to the May 16, 2017 injury. (Ex. R: p. 225)

20. At a post-hearing deposition, Claimant offered Dr. DeVanny as an expert in orthopedic medicine. Dr. DeVanny testified that disruption of the scapholunate ligament, which he suspected here, could not be caused by simple overuse of the wrist. In this case, Claimant favoring the left wrist in rehabilitation would not have caused the very mild DISI deformity shown on Claimant's MRI, nor any of Claimant's other left wrist pathology. It may have elicited *symptoms,* but it would not have *caused* the underlying condition.

21. Dr. DeVanny initially speculated that Claimant might have had an underlying left wrist condition with advanced joint degeneration for his age (*possibly* from a prior injury) that was somehow aggravated in the fall. He went on to testify, however, that it was *debatable* whether Claimant's left wrist condition actually was related to the May 16, 2016 fall.

22. Dr. DeVanny further opined that Claimant likely hurt his left wrist in the fall, but was not focused on any left wrist pain, due to the distracting nature of the far more extreme pain from his right wrist and right knee. He acknowledged missing this left wrist issue initially. Dr. DeVanny further stated that it was unsurprising that Claimant did not initially report his left wrist to emergency room personnel, since "no one remembers what was injured at the time of a fall, it's so quick. They notice the big injuries….(DeVanny transcript, p. 30, l. 13-15)

23. His ultimate opinion was that Claimant likely had some underlying condition in his left wrist, which was then aggravated by the fall. He stated:

> A I believe he probably had some small symptoms that he didn't really pay attention to, and when he fell, it pushed them over the edge to complain.
>
> Q So --
>
> A It aggravated a pre-existing problem.
>
> Q Okay. Now, is this aggravation what we'd call--in our opinion, is this a temporary or a permanent aggravation?
>
> A This is the straw that broke the camel's back, and will be continual. (DeVanny transcript p. 31. L. 4-14)

24. He further opined that, while several other ways exist to treat Claimant's left wrist, he recommended the Brunelli procedure, in part due to Claimant's youth, and to retain his native anatomy in reconstructing the ligament.

25. Claimant testified that he told a nurse in the Penrose Hospital Emergency Room that he had left wrist pain shortly after the accident. However, the emergency room records did not reflect this. (Ex. A: pp. 1-67) Dr. DeVanny testified that this would not be typical. Additionally, Claimant testified that he told Dr. DeVanny of the left wrist symptoms long before Dr. DeVanny documented those symptoms in his medical reports. Dr. DeVanny testified that he would typically document such complaints and would always follow-up on newly reported symptoms at later visits. However, Dr. DeVanny ultimately testified that he did recall Claimant "early on" had told him that his left wrist hurt, and that he felt poorly for "blowing it off" and not documenting his complaints. (DeVanny transcript. p. 66 l. 15-20) Claimant also testified that Dr. DeVanny provided him with a left-wrist brace prior to the September 2016 visit where Dr. DeVanny first documents left wrist symptoms. Dr. DeVanny stated that this was not the case because he always documented such prescriptions “because work comp pays well.”

26. Jonathan Sollender, M.D. performed an independent medical examination of Claimant at Respondents’ request on February 7, 2016. Respondents offered him as a board certified expert in plastic and reconstructive surgery. His practice predominately focuses on surgical repair of hand and upper extremity trauma.

27. Dr. Sollender opined that the mechanism of injury described by Claimant would not have resulted in an injury to Claimant’s left wrist, as the force of the fall was isolated to Claimant’s right knee and right wrist, with significant trauma to both. Additionally, Claimant did not report that he, in fact, struck his left wrist in the fall. Tr. (4/11/17, Hearing Transcript), p. 13, line 15 – line 17. This is further supported by the emergency room physicians who did not note any left wrist symptoms or perform any diagnostic evaluation of that wrist. Indeed, the left wrist was documented until Claimant reported pain to Dr. Sparr. Concerning any injury from overuse of the left wrist, Dr. Sollender opined that documentation showed that Claimant continued to use his right wrist during his recovery and the activities described by Claimant as “overuse” could not have cause the alleged left-wrist injury. Therefore, he found that the left wrist injury was *not* related to Claimant’s work incident. (Ex. Q: p. 218)

28. Dr. Sollender did agree that a majority of scapholunate injuries go undiagnosed or untreated during the acute phase (perhaps 6 weeks after the inciting event) because the patient believes there is only some minor injury to the wrist.

29. Concerning the procedure recommended by Dr. DeVanny, Dr. Sollender opined that, even assuming it was related, it was not reasonable and necessary, as Claimant’s clinical presentation did not demonstrate a rupture of the scapholunate ligament. Claimant’s Watson’s test, which tests for instability of the scapholunate ligament, did not have the telltale sign of a palpable clunk indicative of disruption of that

ligament. Because the scapholunate had not failed, Dr. Sollender concluded that the recommended procedure was not reasonable and necessary, as it did not remedy a condition that Claimant even has. (Ex. Q: p. 218)

30. Accordingly, Dr. Sollender concluded in his initial report that the surgery recommended by Dr. DeVanny was not reasonable, necessary, or related to the May 16, 2016 injury. (Ex. Q: p.218). However, during his deposition testimony, Dr. Sollender stated the following:

> Q Okay. Dr. Sollender, is the proposed Brunelli procedure by Dr. Patrick DeVanny reasonable, necessary, and related to the May 16th, 2016 workers' compensation claim?
>
> A ***Reasonable , yes. Related , no.***
>
> Q And why not?
>
> A For the aforementioned reasons. I see no evidence that he injured his left wrist on May 16, 2016 or thereafter, *as part of his claim.* (Sollender transcript, p. 26 ll. 16-24, emphasis added)

31. Based upon the evidence presented, by a preponderance of the evidence, the ALJ makes the following ultimate factual conclusions:

> I. While Claimant is far from an imperfect historian, he did not experience pain in his left wrist before this accident. He did verbally report his left wrist pain at some point shortly after the injury, but it went undocumented. While he does not describe falling on his left wrist during the accident, this event occurred so suddenly that he might still have injured it during the fall.
>
> II. Regardless of when it occurred, Claimant *now* has a possible fracture of his left scaphoid bone, and a partial tear of the scapholunate ligament, resulting in a mild widening of the scapholunate interval. Due to this work injury, either from the fall itself, or from overuse during the rehab process, his left wrist has now become symptomatic. Dr. DeVanny is more persuasive than Dr. Sollender on the issue of relatedness.
>
> III. This now symptomatic condition is now permanent, and will require surgery to repair it. The treating physician, Dr. DeVanny (with the ultimate concurrence of Dr. Sollender) is in the best position to determine the best way to perform the needed repairs.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law.

Generally

a. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

b. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

c. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Causation

d. The right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301 (1)(c); *Faulkner v. ICAO,* 12

P.3d 844, 846 (Colo. App. 2000). Relatedness therefore is a threshold prerequisite to a showing that medical treatment is reasonable and necessary. *Wilkinson v. Wal-Mart Stores, Inc.*, W.C. No. 4-674-582 (Oct. 26, 2007); *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007); *see also Snyder v. ICAO*, 942 P.2d 1337, 1339 (Colo. App. 1997). Where the employer has admitted to a work-related injury and no DIME had taken place, the threshold issue before the ALJ is the extent of the work injury. *LeClair v. Arise Boiler Inspection and Ins. Co.*, W.C. No. 4-871-989-02 (Nov. 16, 2015). In other words, did the admitted work injury proximately cause the injury for which medical benefits are now sought.

e. The issue of causation "is generally one of fact for determination by the ALJ." *Faulkner,* 12 P.3d at 846; *see also H&H Warehouse v. Vicory*, 805 P.2d 1167, 1170 (Colo. App. 1990) "The ALJ has great discretion in determining the facts and deciding ultimate medical issues."

Claimant's possible pre-existing injury to left wrist

f. The mere fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

g. As ultimately found, the facts support a compensable injury to Claimant's left wrist. He had experienced no symptoms in his left wrist before he fell. Then, *either:*

1. Claimant fell on his left wrist and injured it during the fall, but failed to note that fact due to the far more extreme pain in his right wrist and knee. While he did not receive a left wrist brace, he did report his pain to Dr. DeVanny at some point before it was documented in the records, and then to Dr. Sparr.

or:

2. Claimant had indeed (as opined by Dr. Sollender) injured his left wrist before the fall, but it was not symptomatic until after his fall. Maybe the fall itself made it symptomatic, or maybe it became symptomatic as result of overuse during his difficult rehab, or both in combination. His newfound pain was plainly not merely the natural progression of some old injury. The consequences of the fall made it hurt.

Either way, the injury to his left wrist is compensable. Any treatment to his wrist is therefore *related* to his work injury.

Reasonable and Necessary Surgery

h. The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. ICAO, supra*; *Wal-Mart Stores, Inc. v. ICAO,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. C.R.S. § 8-43-301(8). Substantial evidence is that quantum of probative evidence, which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411, 415 (Colo. App. 1995).

h. As found, Dr. DeVanny is in the best position to determine whether the proposed surgery is reasonable and necessary to treat Claimant's work injury. To the extent that his recommendations differ from those of Dr. Sollender, Dr. DeVanny is more persuasive. In the final analysis, Dr. Sollender actually appears to have concurred on the *reasonableness* of the proposed surgery; his concerns were primarily those of *relatedness* to the work injury. Relatedness has now been established. By a preponderance of the evidence, the ALJ concludes that the surgery as proposed by Dr. DeVanny is reasonable and necessary to treat this work injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the left wrist surgery as proposed by Dr. Patrick DeVanny.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 14, 2017

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant has proven, by a preponderance of the evidence, that she suffered a compensable work injury to her left foot, either as an acute injury, or as an occupational disease in the form of a stress fracture.

II. If this is a compensable claim, is Claimant entitled to reimbursement for medical expenses (and ongoing) for treatment by Dr. Clark Johnson, DPM.

STIPULATIONS

I. In the event this is a compensable claim, the Claimant's Average Weekly Wage is $480.00

II. The issues of Temporary Partial Disability and Temporary Total Disability are held in abeyance, pending the outcome of this hearing.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

Claimant's Testimony

1. Claimant is employed by the Colorado Institute of Mental Health in Pueblo, Colorado as a CNA, responsible for patient care. It is a secured facility, and she is responsible, on average, for monitoring up to 26 patients. Her duties include periodically checking on them, taking them to dinner, the showers, the laundry room, and an open exercise yard. Another co-worker was required to be present at all times.

2. Claimant testified that she spent three fourths, or six (6) hours of her eight (8) hour shift, either walking or standing. She testified that she spent 65% of her time – or four hours out of six – on her feet walking instead of standing. Based on Claimant's characterization of a typical work day, Claimant spent her average work day as follows: Four (4) hours a day walking, two (2) hours a day standing, and two (2) hours a day sitting.

3. Claimant described her pre-injury walking duties at work as requiring walking on tile and indoor-outdoor carpet. She would go up and down two flights of stairs three times per day. The total distance she walked per day was unknown, and would vary depending on the unit she was at. The longest single distance she would walk was four blocks, one way, twice a week. Her job required her to walk outdoors, and indoors, on either tile or indoor/outdoor carpet.

4. While Claimant describes a typical work day requiring her to be on her feet for several hours, she is not required to run, jump, or carry heavy objects. She describes having to "pace" inmates twice a day, i.e., walk at a pace comfortable for the inmates, twice a day. Presumably, the inmates own state of fitness and preferences would dictate the pace to be set. Claimant did not describe frequent scenarios where she was unable to keep up.

5. At the end of a work day, her feet would be swollen and sore. At the end of a typical non-work day, her feet would be "better", and not swollen.

6. Claimant walked around “every day” as part of her normal life. She walked her dog, went up and down stairs, did yard work, watered her lawn, and cared for her ailing father, right up until March 24, 2016.

7. At hearing, Claimant testified that on Thursday, March 24, 2016, she reported to work at 2:53 p.m. At approximately 9:30 p.m. she stood up from a chair and felt a sharp pain and heard a crunch in the top part of her left foot. She had not felt a pain like this previously.

8. She completed her shift, and went home and iced her foot. It was still swollen the next day, but she went in to work. About halfway through her shift, she reported this ongoing pain to her supervisor, who directed her to the charge nurse. An Injury on Job report was completed. She then went to urgent care "on Saturday" [March 26], then PA Terry Schwartz "on Monday" [March 28]. She was ultimately referred to podiatrist Dr. Johnson.

9. The ALJ finds Claimant to be a sincere and credible witness, who has provided, in good faith, accurate information to her health care providers, and to this Court surrounding the event in question, and the symptoms she has experienced.

Medical Treatment for the Stress Fracture - March to August of 2016

10. March 26, 2016: The first physician to see Claimant was Cheryl A. Cavalli, D.O., whom the Claimant saw at the Urgent Care Parker center. (Ex. 1 p. 22). Dr. Cavalli saw the Claimant on March 26, 2016, and held off on making a diagnosis, because she did not have a formal x-ray report at the time. (Ex1 p. 24). Therefore, Dr. Cavalli neither rendered a formal diagnosis, nor did she offer any causation opinions on whether the injury was work-related. An X-ray later showed no acute injury, but “chronic changes” in the left foot were noted. (Ex. C p. 6).

11. April 11, 2016: Claimant is seen by Terrance Lakin, D.O. (Ex. D pp. 22-26.) He was informed of her prior foot pain, and noted “sig spurring in foot. Talonav joint and all other joints.” He stated Claimant had “DJD” and there was no trauma with the injury before he diagnosed Claimant with a non-work related left foot strain. p He closed the claim and referred her to podiatrist Clark Johnson, M.D. p

12. April 12, 2016: Claimant saw Dr. Johnson, who opined Claimant may have a stress fracture and ordered more X-rays. (Ex. 1 p. 4.) Dr. Johnson's reports do not reflect an awareness of any pre-existing complaints that Claimant has had surrounding her feet.

13. May 5, 2016: After looking at an x-ray that revealed a subacute fracture on the 4th metatarsal, (Ex. C p. 5), Dr. Johnson confirmed his diagnosis of a stress fracture of the 4th metatarsal. (Ex. 1 p. 7.) Dr. Johnson specifically noted that he had reviewed x-rays and there was "clinical evidence of stress fracture left 4th metatarsal. Healing bone callus is present and symptoms are improving." (Ex. 1 Pg. 7). In the same note, Dr. Johnson went on to comment on whether the stress fracture was work-related: "This injury could certainly be work-related, after reviewing pt.'s work duties and ADLs. I have encouraged her to contact her adjuster with this information and request that her case be reopened. The injury is likely related to excessive walking as part of her work-related activities." She was returned full work duties, but part time at 4 hours per day.

14. June 28, 2016: Dr. Johnson recommended a DEXA scan to evaluate for osteoporosis. (Ex. 1 p. 13.) However, the record does not show that this was ever completed. (Ex. D p. 3.)

15. August 15, 2016: Dr. Johnson returned Claimant to full work duties. (Ex 1 p. 20.)

16. October 25, 2016: Despite being back at work, Claimant was evaluated for delayed healing. (Ex. D p. 3.) Dr. Johnson noted that Claimant had been using an exogen bone stimulator for 3-6 months and that she had "**known osteoarthritis of the b/l midfeet**." (emphasis added).)

Claimant's Pre-existing Issues

17. Claimant has a history of pre-existing lower extremity issues relevant to this claim:
    a. August 6, 1999: Due to a motor vehicle accident in March, Claimant walked "with some difficulty … with a fairly distinct limp favoring right side." (Ex. G p. 1)
    b. June 20, 2003: During a physical examination, a balance test revealed the "unusual" finding of Claimant having her weight shifted onto her left foot. (Ex F. p. 2); and
    c. 2009-2010: Claimant had pain in her left foot, including in her left midfoot (Ex. D p. 34, 43-51), and x-rays showed generalized osteopenia and other degenerative changes. (Ex. C p. 7.)

18. In 2016, Claimant's feet and condition were a significant issue prior to the alleged date of injury:
    a. February 24, 2016: Claimant went to a chiropractor, and reported pain in her left foot and in all joints. (Ex. B p. 2.) She reported that she had had x-rays done, and a doctor had said something about "deteriorating". This

pain interfered with sleep, and walking hurt. The handwritten notes appear to note "foot pronator".

b. March 16, 2016: Claimant went to University Family Medicine Center for her foot pain. (Ex. E pp. 10-12.) The strength in her right side wasn't as good as it used to be, her feet were involved, and on exam she had a short leg limp that was due to a rotated pelvis. Chiropractic care and calcium were prescribed.

Expert Opinions of Dr. Michael Striplin, MD

19. Dr. Michael Striplin, MD, performed a medical records review on behalf of Respondents, and testified at hearing at an expert witness with a Level II certification in occupational medicine.

20. He testified that Claimant suffered from a stress fracture in the fourth metatarsal of her left foot sometime in the spring of 2016.

21. The following evidence regarding stress fractures was provided by Dr. Striplin:

> Stress fractures "are breaks in bones … that occur over time rather than as the result of acute trauma... Stress fractures may be the result of repetitive forceful activities such as running or jumping, and may occur following an increase in a person's regular exercise routine … and in individuals who are obese … or who have underlying arthritic or metabolic disease. Stress fractures … are more common in females. *Stress* fractures may not appear evidence on x-rays until several weeks…" (Ex. A, p. 4.) On the other hand, *acute* fractures in a metatarsal are visible "immediately."

22. Stress fractures are also "a subtle break in a bone" and are most commonly found in the second and third metatarsals – the bones that tend to bear more weight.

23. He reached the opinion Claimant had not suffered from any work-related stress fracture by *acute* injury. He also opined that standing up from a chair may cause discomfort in a *stress* fracture that already existed, but it would not *cause* a stress fracture – similarly, "simply arising from a seated position in a chair to a standing position would not subject the foot to sufficient force to cause an *acute* fracture."

24. Regarding Claimant's personal risks, Dr. Striplin's report opined that the following non-work related conditions increased Claimant's risk of stress fracture: "being female, being obese, having a short leg limp… and, if symptomatic, arthritic changes." (Ex. A p. 5.) In his testimony, Dr. Striplin expanded the above general opinion by listing and explaining the ways in which Claimant's left foot and condition differed from the general population such that she was more likely to suffer a stress fracture:

a. Weight-Bearing: Claimant's "been found, on physical examination, to have pelvic rotation. She has been found in the past … to tend to preferentially bear weight on her left foot as opposed to her right."

b. Osteopenia: "a precursor to osteoporosis… basically loss of bone calcium… if a person has osteopenia or osteoporosis, that means the bone integrity is weaker than normal bone. And that would increase the risk of developing a stress fracture."

c. Obesity: Obese individuals "submit their feet to more stress during normal ambulation. And these individuals are at higher risk for the development of stress fractures involving the feet."

d. Osteoarthritis: "She has arthritis involving the first metatarsal-phalangeal joint [the big toe]. She also has a spur on the heel bone, which is called the calcaneus." These conditions "would have a tendency for the patient… to shift weight bearing to the lateral aspect of her foot… which would put more stress on the fourth and fifth metatarsals."

e. Overall: The personal risks made Claimant "more predisposed" to have a stress fracture of the left foot than the general population.

25. On the other hand, Dr. Striplin noted that while "strenuous physical activity" such as running was a risk factor for stress fractures, that activity wasn't present in Claimant's job.

26. Dr. Striplin finalized his ultimate opinion by stating that Claimant's March 24, 2016 stress fracture was not work related.

27. The ALJ finds that Dr. Johnson, in good faith, provided the best care and professional advice to Claimant he could. His focus, however, was rightfully on treating Claimant, rather than being concerned with determining causation.

28. The ALJ finds that, given his greater access to the medical records, his Level II accreditation in Occupational Medicine, and his focus on causation, the opinions of Dr. Striplin are more persuasive than those of Dr. Johnson on the issue of causation.

Compensable Injury

29. The Medical Treatment Guidelines ("MTG") provide that a stress fracture can have an occupational relationship from "repetitive, **high impact walking**; running, or jumping." WCRP 17 Ex. 6 p. 61 (emphasis added.) Claimant's job duties do not fit this description. The ALJ finds that Claimant's work contained no *high impact walking* such that it would be considered an exposure making it more likely for Claimant to suffer a work-related stress fracture.

30. Dr. Striplin's opinion specifically addressed the concept of Claimant walking 6 hours per day, and found her walking was not strenuous activity such that it would cause a stress fracture. Furthermore, his opinion matches the guidance of the MTG and is also supported by the opinion of ATP Terrance Lakin, D.O. Dr. Lakin also took into account Claimant's pre-existing issues, while Dr. Johnson apparently had no knowledge of them.

31. Claimant also possessed unique personal risk factors for stress fractures:

    a. Osteopenia: Based on the 2009-2010 X-rays with their finding of osteopenia and Dr. Johnson's recommendation of a DEXA scan, this ALJ infers and finds by a preponderance of the evidence that Claimant had osteopenia in her left foot prior to her 2016 stress fracture. This trait is found to be a personal risk of Claimant's pre-dating her stress fracture that pre-disposed her to a stress fracture.

    b. Limp: Based on the repeated findings dating to 1999 that Claimant had a limp favoring her right side and that she put more weight on her left side, it is found by a preponderance of the evidence that prior to and during the development of her stress fracture, Claimant had a limp that, due to her gait abnormality, put more weight on her left foot than a normal person's gait. Claimant's trait of putting more weight on the outside of her left foot is found to be a personal risk of Claimant's pre-dating her stress fracture such that it uniquely pre-disposed her to a stress fracture of the left foot.

    c. Obesity: Claimant was examined and found obese as of March 16, 2016. This trait is found to be a personal risk of Claimant's pre-dating her stress fracture that pre-disposed her to a stress fracture of the left foot.

32. The ALJ finds that Claimant's walking and standing at work did not constitute a special hazard. Her walking, while it took up four hours of her work day, was interrupted by two hours of sitting and two hours of standing per day. Furthermore, walking is a ubiquitous activity that Claimant did every day outside of work. It does not constitute any special work hazard.

33. Overall, it is therefore found by a preponderance of the evidence that:

    a. Claimant's walking at work was not high impact or otherwise unique, and therefore was a ubiquitous activity that she did as part of her everyday life;

    b. Claimant did not suffer an acute injury at work, nor was her stress fracture aggravated or accelerated by work;

    c. Claimant did not suffer a work-related exposure that would cause a stress fracture.

    d. Even if Claimant was exposed to a work-related hazard resulting in her stress fracture, this claim is still not compensable because:

i. Claimant suffered the injury due to her own personal risks of left foot weight bearing, osteopenia, and obesity; and

ii. Merely walking or standing, ubiquitous activities, do not constitute a special hazard.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability & Causation

D. For an injury to be compensable under the Act, Claimant shoulders the burden of proving by a preponderance of the evidence that his injury arose out of the course and scope of his employment. Section 8-41-301(1), C.R.S. (2004); See *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). To meet the "arising out of" requirement Claimant must show a causal connection between the employment and injury such that the injury has its origins in the employee's work related functions and is sufficiently related to those functions to be considered part of the employment contract. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991)

E. The evidence must establish the causal connection with reasonable probability, not medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971). Reasonable probability exists if the proposition is supported by substantial evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). An award of benefits may not be based upon or denied upon speculation or conjecture. *Deines Bros. v. Indus. Comm'n*, 125 Colo. 258, 242 P.2d 600 (1952); *Indus. Comm'n v. Havens*, 136 Colo. 111, 134 P.2d 698 (1957).

F. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

G. Under *City of Brighton*, a purely personal injury generally is not compensable under the Act, unless an exception applies. 318 P.3d at 503. Therefore, an injury featuring some contribution from a personal, or idiopathic, characteristic, would fall into the personal risk category, which is "generally not compensable" unless accompanied by a special employment hazard. *Id.* The rationale for the rule is that, in the absence of a special hazard, an injury due to the claimant's pre-existing condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. A condition does not constitute a special hazard" if it is "ubiquitous in the sense that it is found generally outside of the employment." *In Re Booker,* W.C. No. 4-661-649 (ICAP, May 23, 2007).

H. In this case the Claimant functionally alleged that she suffered an occupational disease. "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

I. The Division's Medical Treatment Guidelines ("MTG") are generally accepted as professional standards for medical care under the Colorado Workers Compensation Act and are to be used by health care providers when working under the Colorado Workers Compensation Act. *See* §8-42-101(3)(b), C.R.S. and *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003). Here, the MTG provide that a stress fracture can have an occupational relationship from "**repetitive, *high impact*** walking**;** running, or jumping." WCRP 17 Ex. 6 p. 61 (emphasis added.) By definition, this cannot be an acute injury. Additionally, the evidence does not support an occupational disease theory.

J. As found, there was no "high impact" walking in Claimant's job, and instead, Claimant walked an unknown distance four hours a day with 2 hours of sitting mixed into her daily activities, which included the ubiquitous activity of daily walking at home and off work. Therefore, there was (a) no occupational exposure at work to anything that would cause the injury; and (b) Claimant also was exposed to walking – a ubiquitous condition – home. As a result, Claimant has not established an occupational disease in the form of a left foot stress fracture.

K. Even if Claimant was able to establish an occupational disease, she still could not claim a compensable injury due to her personal risks. *City of Brighton,* 318 P.3d at 503. Dr. Striplin testified that stress fractures can be caused by underlying non-work related conditions, including osteopenia – a finding of fact that has been upheld as a reasonable basis to deny compensability for stress fractures. See *Vitelia Crispelle v. McDonald's*, W.C. No. 4-116-041 (March 9, 1994) (upholding a denial of compensability based on an ALJ's acceptance of a doctor's opinion that osteopenia and other factors caused a hip stress fracture). Claimant suffered from personal risks that caused her stress fracture, namely osteopenia, osteoarthritis of the feet, obesity, and a limp that put more weight on her left foot. More likely than not, Claimant suffered her stress fracture due to personal risks unique to her, not due to any risk arising out of her work.

L. In the scenario of Claimant establishing a work-relate exposure, her personal risks would make this a non-compensable injury unless she could establish her walking as a special hazard. *In Re Booker,* W.C. No. 4-661-649. No special hazard existed beyond ordinary walking, and therefore even in that scenario she would not have a compensable injury

Medical Benefits

M. The right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000). Here, this claim is not compensable, so no benefits are owed to Claimant.

ORDER

It is therefore ordered that:

1. Claimant has not proven a compensable claim. Her claim for workers compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Has Respondent proven by a preponderance of the evidence that Claimant did not suffer a compensable injury, thereby entitling Respondent to withdraw its Admissions of Liability?

FINDINGS OF FACT

1. Claimant works as an Income Maintenance Technician Supervisor for Employer. Her job duties include reviewing cases, preparing reports, entering case data and reviewing cases for authorization. She uses a computer for keyboarding and mousing, and writes a substantial portion of a typical day.

2. In March 2015, Claimant requested treatment for pain in her bilateral wrists. Employer completed an Employer's First Report of Injury on March 9, 2015, describing the mechanism of injury as "continuous use of keyboard, mouse." Employer referred Claimant to Dr. Kevin Rice, who became the primary ATP.

3. Claimant initially saw Dr. Rice on March 13, 2015. She reported progressive wrist pain for the past two years that was now bothering her "all the time." She reported she could not use small pens because of pain in the thumb and lateral wrist. Dr. Rice noted "she is employed as a supervisor and does a lot of paperwork, filling forms out. She also does a lot of computer work when she authorizes cases as she supervises 6 social workers; lately, it bothers her more, worst over the past two weeks." She was tender over the first extensor compartment of the wrists bilaterally, greater on the right. Finkelstein test was equivocal on the right and negative on the left. Dr. Rice requested x-rays and recommended acetaminophen rather than NSAIDs for pain relief, due to her diabetes.

4. Bilateral hand x-rays taken on March 13, 2015 showed mild-to-moderate degenerative changes, particularly involving the first DIP joints.

5. Claimant began occupational therapy (OT) on April 7, 2015. Regarding the mechanism of injury, Claimant reported experiencing "significantly increased pain, especially toward the end of the day, while working. Working entails typing, writing, and mousing." On examination, she was tender to palpation of the bilateral thumb CMC joints. The therapist concluded "the patient presents with symptoms consistent with possible bilateral thumb CMC joint osteoarthritis and digital osteoarthritis. Symptoms are exacerbated by repetitive use at work."

6. On April 14, 2015, Claimant reported some benefit from OT, but still experienced "increased pain toward the end of her workday."

7. Claimant followed up with Dr. Rice on April 23, 2015. She noted Employer was addressing changes to her work site. She exhibited tenderness in the first extensor compartment of the wrist. Dr. Rice diagnosed "osteoarthritis, hands with tendinitis." He splinted her right hand and recommended four additional OT sessions.

8. Claimant returned to OT on May 12, 2015. Her chief complaint was "increased pain with typing and mousing."

9. On May 19, 2015, the occupational therapist reviewed elements of Claimant's workstation. The therapist noted Claimant was "using a gel rest pad in front of her keyboard, and a bulbous mouse rest pad, as well. Both items facilitate increased wrist extension, which is likely contributing to her right ulnar-sided wrist pain secondary to repetitive use of the right ECU." The therapist advised Claimant stop using the rest pads and counseled her to keep her wrists in a neutral position while typing and mousing. Additionally, the therapist thought the height of Claimant's desk might be contributing to her problems.

10. Claimant saw Dr. Rice on July 21, 2015 and reported continued bilateral wrist pain, worse on the right side. The Spica splint on her right hand was contributing to her wrist pain. Finkelstein's test was positive bilaterally, more intense on the right. Dr. Rice assessed tendinitis and arthritis in the thumbs and wrists and referred Claimant for an orthopedic evaluation.

11. Claimant saw Sadie Thomas, an orthopedic PA, on July 23, 2015. Claimant reported that "she works at a computer most of the day and does a lot of typing which aggravates her pain." On examination, she had tenderness to palpation along the thumb extensors, particularly on the right. X-rays showed mild/moderate osteoarthritis of the base of her thumbs. PA Thomas diagnosed tenosynovitis of the thumb, wrist pain, and hand osteoarthritis. Claimant was not interested in aggressive treatment such as cortisone injections. PA Thomas gave Claimant a prescription for Voltaren gel and encouraged additional occupational therapy.

12. Claimant had a second orthopedic evaluation with PA-C Leticia Hollingsworth on October 12, 2015. She reported the pain in her thumbs had improved, but the splint was making her wrist pain worse. PA-C Hollingsworth opined "I think that many of her symptoms are mechanical related to the functions of her job. She states that when she is not working and at home on the weekends, her pain is definitely better."

13. On November 17, 2015, Claimant saw Dr. Rice and reported she had a worksite evaluation and some changes were made to her workstation which she "felt good" about.

14. By January 12, 2016, Claimant was still suffering from persistent right wrist pain, so Dr. Rice ordered an MRI of the right wrist. The MRI was performed on January 27, 2016, and showed a ganglion cyst, but no other significant pathology. After

reviewing the MRI, Dr. Rice referred Claimant to Dr. Karl Larsen, an orthopedic surgeon, for a second opinion.

15. Claimant saw Dr. Larsen on February 29, 2016. Her primary complaints related to the right thumb and wrist. She noted her wrist was "quite sore" at the end of the day. On examination, she was tender over the thumb CMC joint with a positive CMC joint grind test. She was quite tender over the pisiform with a painful pisotriquetral grind test. Dr. Larsen opined that arthritis and associated MP instability accounted for her thumb symptoms. He felt the ganglion cyst shown on MRI was asymptomatic and not an issue. He opined the ulnar-sided wrist discomfort seemed most associated with pisotriquetral arthritis with some associated FCU tendinitis. He administered a pisotriquetral joint injection to try and delineate her pain generator. He also requested a splint that would protect from resting on her pisiform when she was using a computer mouse.

16. On March 30, 2016, Claimant returned to Dr. Larsen and reported ongoing complaints of ulnar-sided wrist pain. The previous injection had provided some benefit, and Dr. Larsen injected her ulnocarpal joint "to see how much this [was] contributing to her discomfort."

17. At her next visit with Dr. Larsen on April 29, Claimant reported the ulnocarpal joint injection had "helped her a lot." On examination, she was markedly tender over the thumb CMC joint and mildly tender over the fovea and pisiform. Dr. Larsen noted Claimant seemed to be doing well with conservative management and was unlikely to improve further with nonsurgical treatment. He indicated if her symptoms were unacceptable or worsened, he would consider a wrist arthroscopy. If that failed, ulnar shortening would be "the final solution." He requested that occupational therapy provide her a custom brace.

18. On June 17, 2016, Claimant returned to Dr. Larsen with ongoing symptoms, primarily ulnar-sided wrist pain. Dr. Larsen recommended wrist arthroscopy to evaluate her TFC and perform a debridement if indicated. He did not think surgery was indicated for her thumb but recommended a CMC joint cortisone injection, which he would administer intraoperatively.

19. Claimant saw Dr. Thomas Mordick on August 5, 2016 for an Independent Medical Examination (IME) at Respondent's request. She told Dr. Mordick that her job involved predominantly keyboarding and mousing. She described the onset of significant symptoms in March 2015, which she said "was exacerbated particularly by typing." She rated her pain as 4/10 at rest and 5-6/10 during an average workday. She described diffuse pain about the wrist, which was most severe in the ulnar aspect. She was not having any significant left hand symptoms.

20. On examination, Claimant was exquisitely tender over the CMC joint of the thumb. She was also exquisitely tender over the pisiform and at the base of the fifth metacarpal. She had some tenderness of the proximal hamate and the TFCC.

21. Dr. Mordick opined that Claimant had “diffuse multifocal areas of wrist tenderness that [] are not consistent with a specific anatomic diagnosis.” Dr. Mordick opined Claimant was not a surgical candidate because there were no objective findings of surgical pathology. Dr. Mordick recommended the discontinuation of treatment, as he believed Claimant was at MMI without a specific work-related diagnosis.

22. Sara Nowotny performed a Physical Demands Analysis & Risk Factor Assessment on September 12, 2016 at Respondent’s request. She concluded Claimant’s job did not expose her to any primary or secondary risk factors for a cumulative trauma injury. Dr. Mordick subsequently reviewed the report and affirmed his opinion that Claimant did not suffer a work-related injury.

23. Respondent applied for a hearing on October 7, 2016, endorsing issues of compensability, medical benefits, reasonably necessary, relatedness of Dr. Larsen’s recommended surgery, and withdrawal of the medical-only General Admission.

24. Dr. Rice placed Claimant at MMI on October 10, 2016 with no permanent impairment or work restrictions. The declaration of MMI appears predicated on Respondent's having denied the requested surgery. His final diagnosis was “persistent right wrist pain secondary to arthritis and tendinitis.” Dr. Rice recommended “maintenance care” including follow-up appointments and the wrist arthroscopy proposed by Dr. Larsen.

25. Respondent filed a Final Admission of Liability on October 18, 2016 based on Dr. Rice’s MMI report. Respondent filed the FAL “due to their statutory obligation only,” and reiterated the intent to go to hearing based on compensability and withdrawal of the admission.

26. Claimant timely objected to the FAL and requested a DIME. On January 23, 2017, PALJ Sandberg issued an order holding the DIME process in abeyance pending adjudication of the issues of compensability and withdrawal of the GAL.

27. Dr. Mordick testified at hearing on behalf of Respondent, reiterating and expounding upon the opinions expressed in his reports. Dr. Mordick opined that the only objective evidence of pathology relates to Claimant’s CMC joint. He opined that her CMC joint osteoarthritis was not work-related. Dr. Mordick referenced the Medical Treatment Guidelines regarding causation of cumulative trauma disorders. He opined that Claimant’s job did not expose her to any primary or secondary risk factors to support a conclusion that work caused her condition.

28. Claimant testified at the hearing. She testified that her thumbs and wrists feel better when she is not at work. Specifically, as the weekend progresses, her hand feels significantly better. Her sympsoms worsen when she returns to work.

29. The causation opinions of Dr. Rice, PA-C Hollingsworth, and Claimant’s occupational therapist are more persuasive than the contrary opinions expressed by Dr. Mordick.

30. Respondent has failed to prove by a preponderance of the evidence that Claimant suffered no compensable work-related injury in the first instance. Rather, the preponderance of persuasive evidence shows Claimant suffered at least a temporary exacerbation of her underlying arthritic condition that was proximately caused by her work duties.

31. Whether the surgery proposed by Dr. Larsen is reasonable, necessary, and causally related to Claimant's employment was not an issue for hearing and is not addressed in this order.

CONCLUSIONS OF LAW

A. Compensability standards

To receive compensation or medical benefits, a claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *see also, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

If an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-91-616-03 (ICAO, September 9, 2016).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused her to seek medical treatment*. E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (ICAO, August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (ICAO, April 17, 1996).

A compensable injury may result from a specific incident or trauma ("accidental injury"), or from an accumulation of workplace exposure ("occupational disease"). *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). An employer is liable for an occupational disease that is caused, aggravated, or accelerated by the claimant's employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A claimant has sustained an occupational disease when the injury is an incident of the work or the result of exposure occasioned by the work and does not come from a hazard to which the worker would have been equally exposed outside of the employment. Section 8-40-201(14).

B. Withdrawal of admissions of liability

When an employer files an admission of liability, the employer has "admitted that the claimant has sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If the employer subsequently seeks to withdraw its admission of liability, it must prove by a preponderance of the evidence that the claimant's injuries were not compensable. *See* § 8-43-201(1) ("a party seeking to modify an issue determined by a general or final admission … shall bear the burden of proof for any such modification.").

As found, Respondent has failed to prove by a preponderance of the evidence that Claimant suffered no compensable injury in the first instance. Although Claimant clearly had pre-existing degenerative changes in her hands and wrists, it appears that her work activities aggravated her underlying condition, at least on a temporary basis. Additionally, Claimant had clinical findings consistent with de Quervain's tenosynovitis, which, if not caused by her work, was at least aggravated by it. A work-related "temporary aggravation" of a pre-existing condition that requires treatment is a legally sufficient basis for a finding of compensability.

In making this determination, the ALJ credits the opinions and observations of Claimant's treating providers. Dr. Rice opined that Claimant "has a defined arthritic condition that is exacerbated by her work activities." Similarly, PA-C Hollingsworth opined that "many of her symptoms are mechanical related to the functions of her job." The occupational therapist, who worked closely with Claimant over an extended period, opined on multiple occasions that aspects of Claimant's work were causing or aggravating her wrist symptoms. The ALJ also credits Claimant's descriptions of aggravating work activities documented in her records and in her testimony. The record reflects that Claimant's symptoms were worse when she worked, and better when she was off work. On the other side of the ledger, there is no persuasive evidence of any non-occupational activities or exposure that are equally or more likely to have aggravated her condition and triggered the need for treatment.

Much of Respondent's argument appears predicated on the theory that Claimant has no current work-related diagnosis, and any further treatment (particularly surgery) is not causally related to her employment. But those issues are inextricably intertwined with the issue of MMI, which will be submitted to the DIME. The ALJ has no authority to determine MMI absent a DIME. The sole issue under consideration is whether Claimant suffered a compensable injury which warranted some medical treatment *in the first instance*. On that score, the ALJ is persuaded that Claimant sustained a compensable injury as a direct and proximate result of her work duties that required evaluation, diagnostic workup, and treatment with conservative measures.

ORDER

It is therefore ordered that:

1. Respondent's request to withdraw their admission of liability is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Administrative Law Judge
Office of Administrative Courts

ISSUES

(1) Whether Respondent proved by a preponderance of the evidence that the Claimant's C5-C6 Cervical Radiculopathy is not work-related such that they may withdraw their General Admission of Liability in this claim;

(2) If Respondent fails to prove issue (1), whether Claimant proved by a preponderance of evidence that the proposed fusion surgery is reasonable, necessary, and related to her work-injury.

FINDINGS OF FACT

1. Claimant, then age 32, alleged an occupational disease due to cumulative trauma to her right shoulder/cervical spine on September 17, 2014. Respondent initially admitted to this claim by filing a General Admission of Liability on January 11, 2016. On February 17, 2016, Claimant received a recommendation by Dr. Robert Davis for a surgery to include C4-5, C5-6 anterior cervical discectomies and fusions (the "Surgery"). Respondent filed an Application for Hearing disputing the Surgery. After a May 16, 2016 Independent Medical Exam ("IME") by neurosurgeon Michael Rauzzino, M.D. that found there was no work related condition, Respondent then added the issue of withdrawing its general admission to the hearing in this matter.

2. It is undisputed that Claimant's condition was not created by any acute trauma. Claimant had right shoulder pain going back to 2008. Starting in July 2014, Claimant had complained of paresthesia of the right hand into her fingers. She reported gradually increasing pain. By March 2, 2015, she stated her pain was always there to some degree. No medical record ever found Claimant in acute distress. Claimant remained able to play golf and softball without difficulty.

3. Claimant's Authorized Treating Physician is Kevin Rice, M.D. Claimant underwent an EMG in order to assess radiculopathy on March 8, 2015. This objective test was negative according to all physicians, including Dr. Rice and ATP Patrick McLaughlin, M.D. Dr. McLaughlin stated it showed "[n]o evidence [of] peripheral neuropathic process. (Ex. F p. 24-28 & Ex. 6 p. 1.) A negative result means "there is no permanent injury to the nerve that can be measured by the EMG test" indicating the condition was "not that severe."

4. Dr. Rice opined that Claimant's injury was right C6 cervical radiculopathy and that her pain generator was "purely" in her cervical spine. The condition at issue in this claim is right sided cervical radiculopathy due to degenerative changes at

C4-C5 and C5-C6 levels leading to right sided foraminal stenosis/impingement on the right nerve sheath. Dr. Rice and Dr. Rauzzino agreed the changes in her neck are arthritic. Their disagreement on this issue is whether those arthritic changes causing the Radiculopathy are work-related.

5. Overall, Claimant's Radiculopathy symptoms and objective condition did not objectively change after it was diagnosed. In February of 2016, Claimant told her surgeon that her pain and symptoms were "identical" to when he last saw her, which was in July of 2015 according to Dr. Rauzzino's report. For this reason, a repeat MRI in February of 2016 was deemed not necessary "after discussion" with Claimant.

6. Although Claimant alleged increased work related pain, her pain appeared to wax and wane within normal limits without regard to any of her activities:

    a. May 28, 2015: Dr. Rice, soon after his diagnosis, released Claimant to work without restrictions. On June 4, 2015, she told Dr. Rice she was "minimally, if at all better" so her condition did not change while working, and Dr. Rice did not take her off work.

    b. June 8, 2015: Claimant reported "no pain with use of her arm significantly. No pain with any overhead use. She is able to play softball and golf without difficulty."

    c. August 28, 2015: Claimant had worked a 12 hour shift without increase in symptoms.

    d. October 30, 2015: Dr. Rice continued Claimant at work with no restrictions. She was next seen on November 13, 2015, and despite working stated she was doing "quite well" – she had relatively free cervical range of motion, reduced neck pain, and no numbness or tingling.

    e. December 31, 2015: Claimant told her physical therapist that despite being off work for the holidays and having "not performed any activity that may aggravate her symptoms" her neck and shoulder were "more achy today."

    f. February 25, 2016 – September 19, 2016: Claimant worked full duty without restriction, and had no subjective or objective changes.

    g. September 19, 2016: Claimant was "status quo". Despite the lack of any change in her condition. Dr. Rice took Claimant off work completely pending "injections."

    h. October 13, 2016: After being off work for a few weeks, Claimant reported "worsening subjective symptoms."

i. October 28, 2016: Despite being off work for over a month, Claimant was stable neurologically.

j. November 19, 2016: Claimant, now off work for two months, reported persisting pain and radiculopathic paresthesias in the arm.

7. *After* her radiculopathy diagnosis, Claimant joined Cross-Fit. Claimant's name on Facebook was "Tiffany Michelle." Exhibit H shows Claimant deadlifting 265 pounds, a new personal record, on December 2, 2015. Claimant stated "I love crossfit. It pushes me everyday!" Claimant also had a Facebook posting depicting crossfit in October of 2015.

8. Despite performing these sports activities after her radiculopathy diagnosis, Claimant reported no added pain or issue with doing them.

9. Claimant has worked as a dispatcher for the Colorado State Patrol in Alamosa since November of 2007, except for a six month period working for the Department of Corrections. She testified that her job was "highly complex", her duties were a "lot of multitasking" and doing "a lot of things." She was "constantly busy," and answered hundreds of calls a day along with thousands of radio transmissions. She also updated road conditions, dispatched for six counties, answered 911 calls, and entered information at her work station.

10. A picture of Claimant's work station shows that it had 8 monitors arranged in a two vertical by four horizontal stacking. Along with a phone to her left, there were three separate computer mice and three separate keyboards spread out in front of her. Her job required her to be constantly switching between all of the monitors, mice, and keyboards.

11. A Jobsite Ergonomic Evaluation of Claimant's position took place on October 22, 2014. It noted Claimant typically worked 8 hour days five days a week, and her workstation had six monitors, four mice, and three keyboards. Claimant used her phone with a chin rest frequently, and also had no foot rest "because they [dispatchers] move so much in their chair." An analysis of all the risk factors showed that *none were present* other than mouse usage.

12. Dr. Rice, Claimant's ATP and an occupational medicine physician practicing in Alamosa, was qualified as an expert in occupational medicine and physiatry. He opined that these work duties caused Claimant's radiculopathy: the abnormality of her workspace, multitasking, maintaining attention towards different devices, cradling her phone, doing things that created relatively awkward positions. Dr. Rice stated that these activities caused increased tension in her shoulders and neck, irritating the soft tissue structures and joints of her neck, which led to irritation of her nerve tissue. Dr. Rice clarified that he believed "every day that she's at work" Claimant's job duties were irritating her joint, which then caused calcium deposits, which were causing her stenosis and irritating her nerve.

13. Dr. Hall, the retained expert for Claimant, agreed with Dr. Rice's Calcification Theory, and additionally opined that this opinion was within the Medical Treatment Guidelines ("MTG") – although no specific guideline was addressed. Neither physician identified any specific repetitive motion.

14. Dr. Rice reached his causation opinion on June 4, 2015 after the completion of initial testing. In his testimony, he stated he became more certain than not of this theory "early on," within "a few months or so" in early 2015. Despite believing Claimant's work was causing her condition, Dr. Rice released Claimant to work without restrictions for most of 2015 and 2016 until he took her off work in September of 2016.He never issued any restriction or modified her duties prior to taking her off work in late 2016.

15. He explained his failure to take her off work or restrict it because it was (a) better for her in a psychological manner; (b) returning a claimant to work when it is not appearing to actively degrade their situation is best; and (c) for the "common good" because it would be a "hardship for everybody in the Valley" if she didn't work.

16. Dr. Hall is a physiatrist and certified in physical medicine and rehabilitation. He was offered and accepted as an expert in physical medicine and rehabilitation. In his report he had "*not seen the notes from the surgeon*." Despite not having seen the surgeon's reports, he opined that the radiculopathy was work related and that the surgery proposed by Dr. Davis was reasonable, necessary, and related to the alleged work injury. Dr. Hall did not explain or mention the Calcification Theory in his report and appears to have relied upon the contemporaneous appearance of Claimant's pain while she worked for Employer.

17. At Hearing, Dr. Hall agreed with and expanded on Dr. Rice's theory of causation at hearing. He noted Claimant had a straightening of the cervical curvature, or cervical lordosis, which, combined with her extended neck posture due to her duties, created her condition. Dr. Hall suggested that it was "very unusual" for a 33 year old person to have "this level of local degenerative change… without some precipitating or aggravating activity."

18. Dr. Hall stated that the neck joints were particularly vulnerable when in extension, such as in a whiplash car accident. Specifically, that "70 to 80 percent of neck extension occurs at C4-5 and C5-6." Dr. Hall then theorized that this combination of rotation and extension traumatized Claimant's joints. However, he admitted that he had never seen a picture or video of Claimant at work, and that his knowledge of her work place was entirely based on her report and the workplace evaluation.

19. Dr. Hall also opined that Claimant's work station was very different from a "typical workstation for an administrative assistant." Regarding Claimant's out of work activities of cross-fit and golf not causing pain, Dr. Hall thought that those activities create movement, which allows proper blood flow, reducing

inflammation and pain. However, Dr. Hall admitted at Hearing that, due to the unusual circumstances, the cervical degeneration he observed wasn't "something you're going to find in a learned treatise."

20. Dr. Rauzzino is a neurosurgeon that has been in private practice since 2000, and he was qualified as a level II physician and a surgeon with a specialty in neurosurgery. Dr. Rauzzino testified on behalf of Respondent. Of the physicians that testified, Dr. Rauzzino was the only admitted (a) level II physician; (b) surgeon; and (c) expert in neurosurgery.

21. Prior to issuing his report Dr. Rauzzino spent 15 hours reviewing the records and interviewing Claimant.

22. Dr. Rauzzino's opinion was that there "is nothing in [Claimant's] job that causes undue strain, particularly only on the right side of her neck, which would cause discs to degenerate ahead of the other levels of her cervical spine or the left side." Dr. Rauzzino noted that the only identified one-sided activity was Claimant holding her phone with the *left* side of her neck, and that would actually cause more of an issue to the *left* side of her spine, not the injured *right*. He testified that her pain levels had no direct tie to work, and that she sometimes complained of pain "just sitting in the office." Despite these alleged pain issues, he found it significant that she was able to play golf, do cross-fit, ride the elliptical, do sit-ups, and generally be active.

23. Dr. Rauzzino reviewed the medical literature for cervical spine injuries and repetitive use in reaching his opinions. In both his practice and in the medical literature, he did not find evidence supporting the proposition that someone in Claimant's profession would be at risk for the cervical spine injury at issue. He discussed the Medical Treatment Guidelines ("MTG"), and noted that although the cervical guidelines allowed for an occupational disease of the neck, the studies referred to in the MTG discussed specific duties of dentists and simpler office workers such that they were not applicable to this case because, based on the picture of her work station, "Ms. Sebel sits in a chair. She has things that are at or near eye level. There's nothing to suggest that she's in a forced or awkward posture during the day."

24. On the timing of Claimant's pain and its significance, Dr. Rauzzino noted that Claimant's neck pain also occurred while off work. That was significant because "if you're saying the work is what aggravates the condition, then she should be substantially better when her condition is not being aggravated. And that's not the case in this situation."

25. Based on his review of the records, his interview with Claimant, and his knowledge of the MTG, Dr. Rauzzino opined Claimant's job did not cause or accelerate Claimant's radiculopathy. Instead, the cause of this arthritic condition was the general aging of her body, advancing with time, and that the cause of her specific condition was likely genetic.

26. Regarding Claimant's condition and treatment for it, Dr. Rauzzino opined that given her ability to tolerate cross-fit and her active lifestyle, she should have no restrictions and her care should be limited to over the counter medication.

27. Dr. Rauzzino responded to the Hearing testimony in his January deposition:

    a. The Calcification theory does not make biomechanical sense in that there is no scientific evidence to back it up; specifically the identification of any one movement that would have caused the one specific area of her neck to degenerate. There was no activity identified that would put stress on the C5-C6 joint, but not on the other joints above and below.

    b. Claimant's testimony of rapid, complex movement, including her neck, at her job, and the more complex the job, was significant because it was "less likely there would be one repetitive motion" so Claimant's job was not an environment typical of a repetitive motion injury." Further, if the job was affecting Claimant's neck, there should be multiple changes at multiple cervical levels.

    c. He agreed with Dr. Hall there is no scientific study supporting the Calcification Theory. Also, he opined that there was no specific study supporting Dr. Rice's assertion that repetitive motion can cause or accelerate spinal degeneration.

    d. He further opined that Dr. Hall's assertion that it was very unusual for someone 33 years of age such as Claimant to have this level of local degenerative change without an aggravating activity was not accurate. Dr. Rauzzino noted that, as a neurosurgeon, he saw cervical spines on a regular, daily basis, and that he saw "many people that have degeneration and often at one level more so than the other … and it's not due to a specific activity."

    e. Dr. Rauzzino opined that Dr. Hall's testimony that Claimant's work kept her in a relatively extended neck posture was inaccurate due to the amount of neck movement which Claimant testified to doing at work.

    f. He further opined that Dr. Hall's assertion that 70-80% of all neck extension occurs at C4-5 & C5-C6 were "not accurate." Instead, there is "no reason to say that C4 and C5-6 joints have any special biomechanical difference compared to the other joints."

    g. Dr. Hall's allegation that Claimant's C4-C6 joints are particularly vulnerable in extension was "not an accurate statement," per Dr. Rauzzino. Further, he stated that Dr. Hall's use of a car accident as an example of a neck extension injury in explaining the injury at issue was not comparable to this repetitive injury claim.

h. In releasing Claimant to work and allowing her to do cross-fit, Dr. Rice did not act in accordance with his opinion that her situation required surgery and that her job was causing her condition. If Dr. Rice had believed Claimant's job was injuring her, he should have advised her of that continuing to work would do cause injury. Instead, that Dr. Rice's release of Claimant back to work without restriction or modification suggested her job was "a safe environment that wouldn't aggravate or worsen her condition" and that her job was "not the cause of her troubles."

i. Dr. Rauzzino further stated that Claimant's having remained neurologically stable despite working throughout 2015-2016 suggests her condition was not work related.

j. Dr. Rauzzino further stated that Dr. Rice's explanation of the 'good of the community' as one of his reasons for returning Claimant to work was inconsistent with his responsibility to the patient, which does not include the community at large.

28. Although Dr. Davis evaluated Claimant, diagnosed radiculopathy, and recommended the surgery, there is no evidence that Dr. Davis' opined Claimant's Radiculopathy is work related or that he supported the Calcification theory.

29. By a preponderance of the evidence, the ALJ finds Dr. Rauzzino's opinions on causation to be more persuasive than those of Dr. Rice and Dr. Hall. Claimant's radiculopathy is more likely than not to be non-work related.

CONCLUSIONS OF LAW

Withdrawal of a General Admission

1. Under C.R.S. § 8-43-201(1), a party seeking to modify an issue determined by a general admission has the burden to prove by a preponderance of the evidence that such a modification should be made. *City of Brighton v. Rodriguez*, 2014 CO 7, ¶ 3, 318 P.3d 496, 500 (Colo. 2014). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. Where respondents attempt to modify an issue that previously has been determined by an admission of liability, they bear the burden of proof for such modification. *Section 8-43-201(1), C.R.S.*; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the statute in 2009 and provides, in pertinent part:

> …a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. (2) The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed.

3. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed that burden on the respondents and made such a withdrawal the procedural equivalent of a reopening. The statute serves the same function in regard to maintenance medical benefits. The Supreme Court in *Grover v. Industrial Commission*, 759 P.2d 705, 712 (Colo. 1988), provided that after the respondents had admitted for maintenance medical benefits "the employer retains the right to file a petition to reopen, … for the purpose of either terminating the claimant's right to receive medical benefits or reducing the amount of benefits available to the claimant." The amendments to § 8-43-201(1), C.R.S., then, require that when the respondents seek a ruling at hearing that would serve as "terminating the claimant's right to receive medical benefits," they are seen as seeking to reopen that admission and the burden is theirs. In *Salisbury v. Prowers County School District*, *supra,* the Industrial Claims Panel held that where the effect of the respondents' argument is to terminate previously admitted maintenance medical treatment, the respondents have the burden, pursuant §8-43-201(1), C.R.S., to prove that such treatment is not reasonable, necessary or related to the claimant's industrial injury.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

5. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

Causation

6. The Division's Medical Treatment Guidelines are generally accepted as professional standards for medical care under the Colorado Workers Compensation Act and are to be used by health care providers when working under the Colorado Workers Compensation Act. *See* §8-42-101(3)(b), C.R.S. and *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003).

7. Dr. Rauzzino was correct in stating that WCRP 17 Ex. 5 does not include any reference to any cervical repetitive motion injury. Claimant is also correct that the cervical treatment guidelines contained in WCRP 17, Ex. 8, do mention repetitive motion. This does not mean that Claimant's condition falls within the guidelines. References to repetitive motion in WCRP 17 Ex. 8 in the "relationship to Work and other Activity" section are as follows:

> "Causation of Occupational Neck Pain from Non-Whiplash Events: … In a study of office workers, it was found that workers with **greater range of motion** in cervical flexion and extension were less likely to develop neck pain. … Several studies of administrative workers and dentists suggest that awkward posture over a prolonged period of time may lead to neck pain. There is some evidence that repetitive or precision work, accompanied by prolonged neck **flexion** are likely risk factors for neck pain in the work place. Possible aggravating factors include awkward postures including neck flexion or rotation." WCRP 17, Ex. 8, p. 13 (emphasis added).

8. The MTG do allow for an occupational disease of the neck. WCRP 17, Ex. 8, p. 14. However, the section cited above does is not dispositive for Claimant. First, as Dr. Hall testified, Claimant's position was "not a typical work environment" for an administrative position due to its complexity and constant movement. Second, the bolded part of the MTG that most accurately fits this case shows that Claimant, according to the science based MTG, was less likely to develop neck pain due to her greater range of cervical motion. Third, these studies do not support the Calcification theory, which is a specific diagnosis of radiculopathy allegedly caused by general movement. Instead, they are support that neck pain, a vague condition, can develop for certain very fixed or repetitive workers. As a result, this ALJ finds the MTG supports Respondent's contention that Claimant's job was not the cause of her neck pain.

9. This ALJ generally finds Dr. Rice's opinions unpersuasive for the following reason: If he believed Claimant's work was the cause of her condition, he would have modified her duties or taken her off work completely. Instead, he never modified her duties, and did not take her off work until September of 2016.

10. Dr. Hall issued several underlying opinions: (a) that 33 year old individuals don't get cervical conditions like the Radiculopathy without an underlying activity; (b) that the C4 and C5 joints of the neck handle 70-80% of the extension; and (c) that her neck joints were more vulnerable in extension. On all of those issues, Dr. Rauzzino

disagreed with him. Dr. Rauzzino's testimony is more persuasive than Dr. Hall's on the issue of causation.

11. Dr. Rauzzino's opinion that Claimant's Radiculopathy is solely due to non-work factors such as genetics is more persuasive based on the preponderance of the evidence as follows:

A. No physician ever identified any specific repetitive motion that would cause the specific C6 radiculopathy at issue – instead, Claimant's argument of constant and generalized extended movement would logically cause degeneration throughout Claimant's neck, which does not exist.

B. Dr. Hall alleged Claimant's static position at her desk led to extra stress on her neck. Claimant was constantly moving between numerous individual and different tasks per day. Her job was not static, but instead highly complex with great variation as Claimant moved around between monitors, keyboards, and her headset. She did not spend long periods of time in a static, forced position. In the job site analysis, a footrest was not an option – according to Claimant – because Claimant's feet moved too much, suggesting she was constantly rotating her chair. As Dr. Hall testified, and the MTG confirm, all of that varied movement should have been helping prevent irritation of any one joint, not cause more irritation to any specific joint.

C. Claimant did not get worse while working full duty for most of 2015 and 2016. Her pain arose in 2014, and she was neurologically stable afterwards. As Dr. Rauzzino noted, if Claimant's job was the cause of her condition, it would have continued to get worse as she worked. Instead, it had no impact on her reported pain levels. Although her pain arose while she had a job, that shows merely a correlation, not causation.

D. Although Dr. Davis, Claimant's surgeon, did recommend the surgery, there is no evidence that he agreed as to the theory of causation provided by Claimant's general physical medicine doctors.

12. Here, Dr. Rauzzino's opinion that Claimant's Radiculopathy is not work related and instead is genetic was found to be more persuasive. Further, the part of the Medical Treatment Guidelines most directly applicable to this case state Claimant should not have developed work-related neck pain. Therefore, as found above, Respondent has met its burden of proof, by a preponderance of the evidence, that her Radiculopathy is not work related, and may withdraw its General Admission of Liability in this case.

ORDER

It is therefore ordered that:

1. Respondent is allowed to withdraw its General Admission of Liability. Claimant's claim for the cervical spinal surgery, as proposed, is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the left total shoulder arthroplasty recommended by Dr. Mitchell Copeland is reasonable medical treatment necessary to cure and relieve claimant from the effects of the December 15, 2015 work injury.

FINDINGS OF FACT

1. Claimant sustained an admitted injury to his left shoulder on December 15, 2015. The injury occurred when claimant was attempting to place tire chains on the company vehicle he was operating. Claimant testified that as he lifted the chains over the tire he felt a pain in his left shoulder.

2. Claimant began treating with his authorized treating physician ("ATP") Dr. James McLaughlin, on December 16, 2015. Dr. McLaughlin ordered x-rays and a magnetic resonance image ("MRI") of claimant's left shoulder. Dr. McLaughlin also referred claimant to Dr. Mitchell Copeland for a surgical consultation.

3. On December 16, 2015 an x-ray of claimant's left shoulder showed advanced osteoarthritis with a probable loose body.

4. On December 21, 2015 an MRI of claimant's left shoulder showed severe degenerative changes with a sizable joint effusion and a loose body superior and posterior to the humeral head.

5. Based upon the imaging results, Dr. Copeland informed claimant that he could undergo an arthroscopy and remove the loose body, or pursue a full shoulder replacement. Dr. Copeland recommended the arthroscopy.

6. On May 12, 2016 Dr. Copland performed an arthroscopy on claimant's left shoulder that included arthroscopic repair of a chronic torn supraspinatus, arthroscopic subacromial decompression with acromioplasty, arthroscopic biceps tenotomy and arthroscopic removal of a loose body measuring 19 millimeters.

7. Following the May 12, 2016 surgery claimant received other treatment including physical therapy and range of motion exercises claimant performed at home. However, claimant reported to Dr. Copeland increased pain and decreased range of motion in his left shoulder.

8. On September 8, 2016 an MRI of claimant's left shoulder showed advanced glenohumeral osteoarthritis and a complete tear of the biceps tendon long head from the biceps anchor. Dr. Copeland testified by deposition in this matter and

noted that the biceps tear appearing on the September 8, 2016 MRI was the intentional result of the biceps tenotomy performed on May 12, 2016.

9. Based upon these MRI results, claimant's continued pain, and limited range of motion Dr. Copeland recommended a left total shoulder arthroplasty. Dr. Copeland testified that it is his opinion that claimant's need for the recommended surgery is related to the December 15, 2015 work injury.

10. Dr. Jon Erickson performed a peer review of the recommended arthroplasty and opined that claimant's symptoms are related only to his preexisting advanced glenohumeral osteoarthritis. Based upon Dr. Erickson's opinion respondents denied the recommended surgery.

11. In a medical record dated October 26, 2016 Dr. McLaughlin opined that claimant's need for a full shoulder arthroplasty is due to the December 15, 2015 work injury. Specifically Dr. McLaughlin opined that the work injury permanently aggravated claimant's preexisting degenerative condition in his left shoulder. Dr. McLaughlin testified by deposition in this matter and confirmed his opinion that the December 15, 2015 work injury caused claimant's need for a total shoulder arthroplasty.

12. Claimant testified that prior to the December 15, 2015 work injury he was able to work full duty and did not have pain in his left shoulder joint. Claimant testified that prior to the work injury he experienced instances of stiffness and achiness in his neck that radiated into his shoulder blades, but not into his left shoulder joint. The ALJ finds claimant's testimony on this issue to be credible.

13. Records from claimant's primary care physicians Dr. Gregg Omura and Dr. Craig Hughes indicate that claimant had complaints of bilateral shoulder pain "between the shoulder blades" beginning in January 2011, with a focus on left shoulder pain beginning on January 7, 2014. On September 25, 2014 Dr. Omura administered a lidocaine injection to claimant's left shoulder. In March 2014, Dr. Hughes also recommended physical therapy to address claimant's complaints of left shoulder pain.

14. Chiropractor records entered into evidence indicate that claimant reported pain in his left shoulder blade pain beginning in July 2013.

15. The ALJ credits the claimant's testimony and finds that claimant has demonstrated that it is more likely than not that the December 15, 2015 work injury caused increased pain in claimant's left shoulder and this pain was not resolved by the May 12, 2016 surgery. The ALJ further credits claimant's testimony that he was performing his full duties immediately prior to the December 15, 2015 work injury. Although claimant reported left shoulder pain to his medical providers prior to the injury, it was not until after the December 15, 2015 injury that claimant needed left shoulder surgery.

16. The ALJ credits the medical records and the opinions of Drs. Copeland and McLaughlin over the contrary opinion of Dr. Erickson. Therefore, the ALJ finds that claimant has demonstrated that it is more likely than not that the December 15, 2015

work injury aggravated, accelerated, or combined with claimant's preexisting osteoarthritis necessitating a left full shoulder arthroplasty.

17. The ALJ credits the medical records and the opinions of Drs. Copeland and McLaughlin over the contrary opinion of Dr. Erickson and finds that claimant has demonstrated that it is more likely than not that the recommended left full shoulder arthroplasty is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S., *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury.

Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has demonstrated by a preponderance of the evidence that the left total shoulder arthroplasty recommended by Dr. Copeland is reasonable medical treatment necessary to cure and relieve claimant from the effects of the December 15, 2015 work injury. As found, claimant's testimony, the medical records, and the opinions of Drs. Copeland and McLaughlin are credible and persuasive.

ORDER

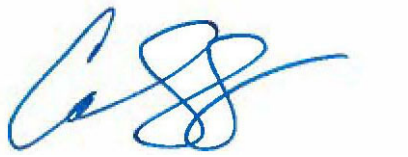
It is therefore ordered that:

1. Respondents shall pay for the recommended left total shoulder arthroplasty pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 1, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

The following issues were raised for consideration at hearing:

1. Whether Claimant sustained his burden of proof to establish that he suffered a work related injury in the course and scope of his employment for the Respondents;

2. Whether Claimant established by a preponderance of the evidence that he is entitled to an order awarding reasonably necessary and related medical benefits;

3. What is Claimant's average weekly wage (AWW);

4. Whether Claimant was disabled from his usual employment by the work related injury and therefore entitled to an award of temporary total disability benefits (TTD) from January 18, 2016, to July 18, 2016; and

5. Whether Claimant is entitled to an award of penalties for Respondents:

    a. Failure to timely admit or deny the claim under Section 8-43-203(1)(a), C.R.S.;

    b. Failure to maintain workers' compensation insurance coverage under Section 8-43-408 to 410, C.R.S.; and

    c. Failure to timely file a first report of injury under Sections 8-43-101 and 8-43-304 and WCRP 5-2.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are reached.

1. On January 18, 2016, Claimant was working as a skilled laborer for Respondents. Claimant suffered a spiral fracture to his left leg (fibula) while helping Respondent, Tommy Lee Carter, carry a washer or dryer down the stairs. Immediately, prior to the injury, Claimant was masking an area for dust protection as part of a job at a private residence.

2. Claimant immediately informed Respondent, Tommy Lee Carter, of the injury. Mr. Carter indicated that "[Claimant] should try to walk it off." Claimant informed Mr.

Carter that he needed medical attention. Mr. Carter did not direct Claimant to a medical provider. Claimant reported for treatment at NextCare Urgent Care.

3. The medical records are consistent with the history of injury provided by Claimant. Claimant was provided with the posterior splint, provided crutches and advised to be non-weight bearing until following up with a specialist. A referral was made to the specialist.

4. Claimant reported to the referred orthopedic specialist beginning on January 22, 2016. Claimant was placed on non-weight bearing at the initial appointment and continued to receive treatment from the specialist until March 28, 2016.

5. Claimant was removed from all work for a period of time by his doctors when he was non-weight bearing. Claimant was unable to return to his regular construction duties until six months after the injury or on July 18, 2016. The work injury impaired Claimant's ability to perform his regular work duties until that date.

6. All of the medical treatment that Claimant has received for his left leg fracture was authorized, reasonable and necessary as a result of the work injury of January 18, 2016.

7. After his initial medical treatment, Claimant contacted Respondents by phone on numerous occasions and left numerous messages. He has not received a response from Respondents or any representative of Respondents.

8. On February 10, 2016, Claimant filed an Employer's First Report of Injury, also referred to as an E-1, with the Division. The Division treated it as a claim for compensation and wrote to Respondents to inquire about worker's compensation coverage. The Division's records did not indicate that Respondents have worker's compensation insurance coverage on the date of the claimed injury. Claimant was copied on this notification, but never received any type of response from Respondents.

9. The Respondents has not filed documentation with the Division or provided Claimant with a notice of contest and E-1.

10. Claimant worked for Respondents, Mr. Carter dba TLC Construction, for approximately one year prior to the injury in question. Claimant was hired through a verbal agreement with Respondent, Timothy Lee Carter, to perform construction work at the rate of $25 per hour. Claimant worked approximately 40 hours a week. Claimant's AWW is $700, which is a fair approximation of Claimant's AWW on the date of injury based on Claimant admission contained in the E-1 report he prepared.

11. Claimant was not paid for the work he performed on the date of injury or for the work he completed in the weeks prior to the injury. Claimant was usually paid in cash personally by Respondent, Mr. Carter, but, on at least one occasion, he was paid via check from Respondent, TLC Construction. Claimant was paid in his own name and the check was signed personally by Respondent, Mr. Carter. Claimant confirmed that he

never operated a construction business during this period of time. Claimant viewed Respondents, Mr. Carter and TLC Construction, as one and the same.

12. Respondents, Mr. Carter and TLC Construction, did not comply with all the requirements for maintaining the corporate form. As of November 1, 2016, Respondent, TLC Construction, was noncompliant with periodic report requirements of the Colorado Secretary of State. Respondent, TLC Construction, became delinquent on December 31, 2016, and is now listed as delinquent by the Colorado Secretary of State as of January 1, 2017.

13. Neither Respondents, Mr. Carter nor TLC Construction, maintained worker's compensation insurance. Therefore, Claimant is entitled to a 50 percent increase in his indemnity benefits.

14. Claimant's work injury prevented him from performing his usual duties of his employment from the date of injury to July 18, 2016. Claimant has established his entitlement to TTD benefits from the date of injury until July 18, 2016. Claimant is not seeking indemnity benefits after that date.

15. Claimant has not been placed at MMI or evaluated for permanent impairment.

16. In regard to the imposition of penalties, Claimant did not offer evidence regarding Respondents' reprehensibility or culpability. With regard to the harm suffered by Claimant as a result of Respondents' lack of insurance, Claimant testified that he has Medicaid and thus was able to obtain medical treatment. He testified to his inability to afford a "Tox-Lock" on his vehicleerate his vehicle as a result.

17. Claimant withdrew the issue of disfigurement from consideration at hearing.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the Judge enters the following Conclusions of Law:

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to Respondents, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the Respondents. Section 8-43-201, C.R.S. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with Respondents. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

3. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

Employment Status

4. "Employee" includes "every person in the service of any person, association of persons, firm or private corporation … under any contract of hire, express or implied." Section 8-40-202(b), C.R.S.

5. Under Section 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee."

6. It is concluded that Claimant was an employee of the Respondents. Claimant established that he was not customarily engaged in the independent trade of construction at the time he was injured. In connection with his employment including the events of January 18, 2016, Claimant only dealt with Mr. Carter. He was the sole owner/operator of the TLC Construction, LLC. It is found and concluded that Mr. Carter, individually, doing business as TLC Construction, was Claimant's employer on the date of injury. Claimant was an employee under the Workers' Compensation Act.

Compensability

7. Claimant established by a preponderance of the unrefuted evidence that he was in the course and scope of his employment on January 18, 2016, when he fractured his left lower leg performing work duties.

TTD and AWW

8. In this case, the evidence established that Claimant did not return to work for the Respondents following his January 18, 2016, work injury and he was disabled from his usual employment from the date of injury to July 18, 2016. Accordingly, it is concluded that Claimant is entitled to an award of TTD from January 18, 2016, to July 18, 2016

9. Claimant contends his average weekly wage is $1000.00. Claimant represented his AWW to be $700.00 on the Employer's First Report of Injury, or E-1, filed by Claimant with the Division of Workers' Compensation on February 10, 2016 Accordingly, it is concluded that Claimant's representation on the E-1 of an AWW of $700.00 was closer in time to the date of his injury and is, therefore, deemed to be a more accurate representation of his wage. It is concluded that Claimant AWW is $700.00 and Claimant's TTD rate is $466.66.

Medical Benefits

10. Pursuant to Section 8-42-101(1)(a), C.R.S., every employer shall furnish all medical treatment necessary at the time of injury or thereafter to cure and relieve employees of the effects of their injury. It is concluded that Claimant received medical treatment from two providers to cure and relieve him of the effects of his work related injury. Claimant established that the treatment he received was reasonably necessary and related to the Claimant's injury. And, all treatment received is found to be authorized given that Respondents did not refer Claimant to a doctor for treatment.

11. Accordingly, it is concluded that Respondents shall be liable for all authorized, reasonably necessary and related medical benefits for Claimant's work related injury.

Penalties

12. The Colorado Court of Appeals in *Dami Hospitality, LLC, v. ICAO, supra,* addresses the issue of excessive penalties citing, *BMW of North America, Inc. v. Gore*, 517 U.S. 559, 575, 580, 583 (1996). In the *BMW* case, *supra*, the Supreme Court first articulated factors that should be considered when weighing the reasonableness of a punitive damages award. In deciding whether the constitutional line for an excessive fine "has been crossed," the Court condensed the factors to be considered instructing lower courts to focus on three criteria: (1) the degree of the defendant's reprehensibility or culpability; (2) the relationship between the penalty and the harm to the victim caused by the defendant's actions; and (3) the sanctions imposed in other cases for comparable misconduct." *Cooper Indus., Inc. v. Leatherman Tool Grp., Inc.,* 532 U.S. 424, 432 (2001). *Dami*, *supra*, extends these considerations to workers' compensation matters where civil penalties are imposed and concludes that consideration of the employer's ability to pay should be factored in to determining the propriety of a penalty assessment.

13. In this matter, the record does not contain evidence regarding Respondents' culpability or reprehensible behavior or ability to pay a penalty assessment.. With regard to the harm suffered by Claimant as a result of Respondents' lack of insurance, Claimant testified that he has Medicare and thus was able to obtain medical treatment. He also testified to his inability to pay for a "Tox-Lock" on his personal vehicle.

14. The *Cooper Indus., supra,* factors are examined in the context of the fined Respondents' actual behavior. In this light, it is concluded that the ALJ's award of fines totaling $55,263.30 for failure to be insured, failure to admit or deny the claim and failure to file a first report of injury in the February 23, 2017, full findings is disproportionate in light of the Respondents' actual behavior and should be corrected .

Failure to Maintain Workers' Compensation Insurance

15. In cases where Respondents fail to comply with the insurance provisions of the Act, the amount of compensation or benefits an employee may claim shall be increased by fifty-percent. Section 8-43-408(1), C.R.S. Here, Respondents failed to carry the requisite workers' compensation insurance. As such, the Claimant is entitled to a fifty-percent increase in his compensation or benefits.

16. Claimant's AWW is $700.00, and thus his TTD rate is $466.66. Claimant is entitled to TTD during his period of disability from January 18, 2016, to July 18, 2016, 183 days and 26.14 weeks. Claimant is entitled to an award of TTD in the amount of $12, 498.49. (26.14 weeks X 466.66 AWW.) As found, Claimant's TTD is increased by 50% because of Respondents' failure to maintain workers' compensation insurance. A 50% penalty increase in TTD benefits because of Respondents' lack of workers' compensation insurance is $18,734.24. (50% of 12,489.49/2 = 6,244.75; 12,489.49 + 6,244.75=18,734.24.)

17. Respondents shall be liable to Claimant for TTD increased by 50% for Respondents' failure to maintain workers' compensation insurance. Respondents shall pay Claimant increased TTD in the amount of $18,734.24.

Failure to Admit or Deny the Claim; Failure to File Employer's First Report of Injury

18. Under Section 8-43-203(1), C.R.S., Respondent is required to notify the Division whether Respondent is admitting or contesting the claim within 20 days after a report of injury is filed, or should have been filed. Based on Claimant's credible testimony, Mr. Carter was on notice of the injury on January 18, 2016. Respondents did not file a Notice of Contest within 20 days of written notification of the injury of January 18, 2016. Written notification was sent to Respondents by the Claimant on February 10, 2016, and by the Division on March 7, 2016. To date, neither an Admission nor a Notice of Contest has been filed.

19. Claimant seeks penalties of up to one day's compensation for each day's failure to admit or deny against Respondents from March 27, 2016, (20 days after the March 7, 2016, notice from the Division) and continuing. See Section 8-43-203(2)(a), C.R.S. and Rules 5-2(C) & (D).

20. The ALJ imposes a penalty at the rate of one dollar's compensation for each week's failure to admit or deny. The penalty is imposed for the period from March 27, 2016, to the date of hearing, January 10, 2017, or 290 days. (290 days = 41.42 weeks; 41.42 X $1.00 = $41.42.)

21. Respondents shall be liable to Claimant for a penalty in the amount of $41.42 under Section 8-43-203(1) for failing to admit or deny the claim. The penalty shall be paid 50% to the subsequent injury fund and 50% to Claimant.

22. Respondents also failed to file an Employer's First Report of Injury or E-1 for Claimant's January 18, 2016, injury. See Section 8-43-101(1), C.R.S. and Rule 5-2(B)(2). The date of injury was January 18, 2016, and Respondents' E-1 should have been filed within 10 days after the Claimant's initial 3 days of lost work, on or about January 22, 2016. Claimant seeks penalties of up to $1000 a day for violation of the statute and the rule from ten days after January 22, 2016, or on February 1, 2016, and continuing under the general penalties statute. See Section 8-43-304(1), C.R.S. No E-1 has been filed by Respondents and Claimant seeks penalties against Respondents. The period from February 1, 2016, to January 10, 2017, is 344 days.

23. The ALJ imposes a penalty during this 344 day period of $1.00 per day for a total of $344 (1.00 X 344=344.00) for violation of the Act and the Rule. Fifty percent of the penalty shall be paid to Claimant and 50% shall be paid to the workers' compensation cash fund pursuant to Section 8-44-112(7)(a).

ORDER

It is therefore ordered that:

1. Respondents shall be liable for all reasonably necessary and related medical treatment to cure and relieve Claimant from the effects of the work related injury on January 18, 2016.

2. Respondents shall pay Claimant TTD based on an AWW of $700.00 and a TTD rate of $466.66. Respondents shall pay Claimant TTD increased by a 50% penalty for failure to maintain workers' compensation insurance in the amount of $18,734.24.

3. Respondents shall pay Claimant $41.42 in penalty assessment for failure to admit or deny the claim. Pursuant to Section 8-43-203(2)(a), C.R.S., the penalty shall be paid 50% to the subsequent injury fund and 50% to Claimant.

4. The insurer shall pay Claimant $344.00 in penalty assessment for failure to file an Employer's First Report of Injury. Fifty percent of the penalty shall be paid to Claimant and 50% shall be paid to the workers' compensation cash fund pursuant to Section 8-44-112(7)(a).

5. In lieu of payment of the above compensation and benefits to Claimant, Respondent shall:

   a. Deposit the sum of $18,734.24 with the Division of Workers Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers Compensation, Attn: Sue Sobolik, Special Funds Unit, 633 17th St, Suite 900, Denver, CO, 80202, or

   b. File a bond in the sum of $18,734.24 with the Division of Workers Compensation within ten (10) days of the date of this order: (1) Signed by two or

more responsible sureties who have received prior approval of the Division of Workers' Compensation or (2) Issued by a surety company authorized to do business in Colorado. The bond shall guarantee payment of the compensation and benefits awarded.

c. Respondent shall notify the Division of Workers Compensation and Claimant of payments made pursuant to this Order.

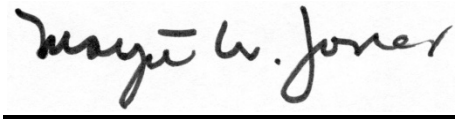
d. The filing of any appeal, including a petition for review, shall not relieve Respondent of the obligation to pay the designated sum to the trustee or to file the bond. §8-43- 408(2), C.R.S. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless the agreement or order authorizing distribution of the principal provides otherwise.

6. Respondents shall pay 8% per annum on all amounts of compensation not paid when due.

7. Any issues not resolved in this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 3, 2017



Margot W. Jones
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician David Yamamoto, M.D. regarding maximum medical improvement (MMI) and permanent partial disability (PPD) impairment rating.

FINDINGS OF FACT

1. On February 24, 2015, Claimant sustained an admitted injury when she slipped on black ice and fell in Employer's parking lot. Claimant reports that she lost consciousness, came to and called a supervisor from her cell phone, was helped into work by co-workers, and that an ambulance was called. *See* Exhibit F.

2. The initial paramedic records documented a minor contusion to the right posterior parietal region with a superficial abrasion and a left elbow contusion. The Glascow Coma Score ("GCS") was 15/15. A GCS score provides information regarding diagnosis of concussive symptoms and mild traumatic brain injury based on post-trauma behavior. A GCS score of 15 is considered normal. *See* Exhibit G.

3. On February 24, 2015 Claimant was evaluated at the emergency department of St. Anthony North by Paul Meier, PA-C. Claimant reported falling on the ice and striking her head on the pavement. Claimant reported a mild posterior headache, lateral neck pain, and left elbow pain. Claimant denied any chest pain, shortness of breath, abdominal pain, back pain, or any numbness/tingling into the arms or legs. On physical examination it was noted that Claimant had a mild right sided occipital hematoma with minimal tenderness, some tenderness in the lower cervical spine and right paraspinous region, and some tenderness over the left olecranal region in the left elbow. It was noted that Claimant had no thoracic or lumbar spine tenderness and no paraspinal tenderness. A CT scan of her head was normal, a CT scan of the cervical spine showed no acute fracture, and x-rays of the left elbow showed no acute fractures. Claimant was discharged with instructions to use a cool compress to the affected areas, to elevate them, and to use naproxen for inflammation and pain. *See* Exhibit F.

4. On February 26, 2015 Claimant was evaluated at Concentra by Christine O'Neal, PA-C. Claimant reported being injured two days prior when she slipped on ice and fell. Claimant reported being seen at St. Anthony emergency room where x-rays performed were negative. Claimant reported neck and back pain, a mild headache, no vision changes, no dizziness, and no balance problems. Claimant reported that she was taking Naproxen. Claimant reported improvement in neck pain from the day prior, noting only pain in her left side of neck when she turned her head and that the day prior

she had pain in both sides of the neck. Claimant reported minimal lumbar pain. PA O'Neal assessed neck pain, back pain, buttock contusion, and head contusion. Claimant was released to full work duties. A review of her psychiatric presentation during the physical examination was deemed normal. *See* Exhibit D.

5. On March 6, 2015, Claimant was evaluated by PA O'Neal. Claimant reported that her headache pain was gone, that her neck was doing much better, but that her lower back pain had worsened and she was having burning pain in the lower back and down her left buttocks to her left thigh. Claimant reported that her that she was no longer taking medication. The initial diagnosis of head contusion was removed from the ongoing assessment of Claimant's work injuries. *See* Exhibit D.

6. On March 6, 2015 Claimant also underwent an MRI of her lumbar spine interpreted by Charles Wennogle, M.D. as normal with no evidence of acute or chronic fracture or spondylosis. The SI joints were noted to be normal in appearance. *See* Exhibit H.

7. On March 16, 2015, Claimant was evaluated by PA O'Neal. Claimant reported that her neck pain was gone and that her back pain was much improved. Claimant reported pain in the buttocks and legs into the left thigh region. The initial diagnosis of neck pain was removed from the ongoing assessment of work injuries. Headaches were not noted at this evaluation. *See* Exhibit D.

8. On April 3, 2015, Claimant was evaluated by PA O'Neal. Claimant reported that her neck pain was gone and that her back pain was also gone. Claimant reported that her left hip pain persisted. Claimant felt that her pain was improving overall but slowly. A physical examination performed noted full range of motion in her lumbar spine and no neck problems. No headaches were noted at this evaluation. *See* Exhibit D.

9. On April 17, 2015 Claimant was evaluated by Ted Villavicencio, M.D. Claimant was diagnosed with hip bursitis and an injection was performed. On May 8, 2015, Claimant reported that her lower lumbar and left hip pan was improved following the injection. *See* Exhibit D.

10. On May 12, 2015, Claimant was evaluated by Samuel Chan, M.D. Claimant reported a slip and fall onto her left side with significant pain over the left hip and lumbar spine area. Clamant reported that she also had left elbow pain and neck pain. Dr. Chan noted that Claimant was referred to him due to findings consistent with possible sacroiliac joint dysfunction. Dr. Chan noted that x-rays of the SI joint were normal and that a left hip trochanteric bursa injection did help Claimant. Dr. Chan agreed with Dr. Villavicencio that the findings were more consistent with musculoskeletal pain and discussed the importance of following through with an active exercise program. Dr. Chan opined that a sacroiliac joint injection could be considered. *See* Exhibit D.

11. On May 18, 2015, Claimant was evaluated by Dr. Villavicencio. Claimant reported that she now had severe pain in her head. Clamant reported having a headache for the past week with no specific new injury or overuse and that she had not had problems with that area since shortly after the injury. *See* Exhibit D.

12. On May 22, 2015, Claimant was evaluated by Nancy Strain, D.O. Claimant reported that following her work fall she initially had a headache that resolved and that she had no headache again until May 11, 2015. Claimant reported that her low back was better. *See* Exhibit D.

13. In June of 2015 Claimant was evaluated by her primary care physician, who ordered a brain MRI. The brain MRI was performed on June 17, 2015 and was interpreted by Clinton Anderson, M.D. as normal. *See* Exhibit H.

14. On July 1, 2015 Claimant underwent an MRI of her lumbar spine that was interpreted by Robert Liebold, M.D. The impression was mild degenerative changes without central or foraminal stenosis. *See* Exhibit H.

15. On July 14, 2015 Dr. Chan noted that Claimant had some initial diagnostic response to an SI injection performed on July 8, 2015. He opined that if Claimant did not have a more significant response over time, he would deem the injection to be a failure. Dr. Chan also reviewed the MRI of Claimant's lumbar spine and opined that it was essentially normal. *See* Exhibit D.

16. On August 3, 2015, Claimant was evaluated by Darla Draper, M.D. Claimant reported that her headaches had improved and that she now only had occasional mild headaches. *See* Exhibit D.

17. On August 31, 2015, Claimant was evaluated by Dr. Villavicencio. Dr. Villavicencio placed Claimant at MMI with no impairment. Dr. Villavicencio opined that Claimant's physical exam showed that her SI joint pain had decreased and that any additional care could be accomplished under maintenance. *See* Exhibit D.

18. On September 4, 2015 Respondents filed a Final Admission of Liability admitting to a 0% impairment and listing a MMI date of August 31, 2015. Respondents admitted liability for post MMI medical treatment that was reasonable, necessary, and related to the compensable injury. *See* Exhibit I.

19. On September 29, 2015, Claimant was evaluated by Dr. Chan. Dr. Chan opined that Claimant had a normal MRI and a normal neurological examination. Dr. Chan opined that Claimant's findings were most consistent with musculoskeletal pain and that Claimant was to continue to follow through with an active exercise program. Dr. Chan noted the previously recommended SI joint injection could still be performed as maintenance care. *See* Exhibit D.

20. On October 7, 2015 Claimant underwent a SI joint injection performed by Dr. Chan. On October 13, 2015 Claimant was evaluated by Dr. Chan. Dr. Chan opined that Claimant's symptoms were most consistent with musculoskeletal pain and that her prognosis was good if she continued to follow through with an active exercise program. Dr. Chan opined that Claimant remained at MMI and could continue to work full time and full duty. *See* Exhibit D.

21. In response to the Final Admission of Liability, Claimant requested a division independent medical examination (DIME).

22. On December 28, 2015 Claimant underwent a DIME performed by David Yamamoto, M.D. Claimant reported falling onto ice in the parking lot outside of work and losing consciousness. Claimant reported that she currently was experiencing pain in the lower back and sacroiliac joints, ongoing headaches that were present daily, forgetfulness, daily dizziness, depression, suicidal thoughts, daily crying spells/sadness, and decreased libido and social activities. Several of her reports to Dr. Yamamoto were contrary to and new from what she had reported during her treatment with Concentra. *See* Exhibits A, D.

23. Dr. Yamamoto performed a records review. Dr. Yamamoto noted that the medical records showed specific documentation that Claimant's headaches had fully resolved by March 6, 2015 but noted that Claimant reported to him that they were not gone and that Claimant reported seeing her primary care physician for her headaches as well. Dr. Yamamoto assessed: lumbar strain, bilateral sacroiliac dysfunction, post concussive headaches with dizziness and decreased memory, and secondary depression. Dr. Yamamoto opined that Claimant was not at MMI because her depression had not been addressed and she had ongoing post-concussive headaches and dizziness with loss of memory. His specific recommendations included: a neurological evaluation for ongoing headaches and dizziness; a neuropsychological evaluation for post concussive headaches and complaints of memory loss; a psychiatric evaluation for depression; the use of a sacroiliac belt for SI joint dysfunction; and a trial of massage therapy and acupuncture for low back pain. Dr. Yamamoto assessed a provisional permanent impairment of 22% whole person arising out of a Table 53(II)(b) rating of 5%, a range of motion loss for the lumbar spine of 8%, post concussive headaches assessed under episodic neurological disorders of 5%, and a 6% rating for depression. *See* Exhibit A.

24. On June 7, 2016 Claimant underwent an independent medical evaluation performed by Lawrence Lesnak, D.O. Claimant reported diffuse superior buttock pains, occasional left lateral thigh pains, and frequent bifrontal headaches. Dr. Lesnak performed a medical records review and physical examination. Dr. Lesnak opined that Claimant had fairly diffuse pain behaviors during his evaluation, including 4/5 positive Waddell's signs. Dr. Lesnak noted that even gentle brushing of the skin overlying Claimant's low back/superior buttock region reproduced severe pain. Dr. Lesnak noted that the sitting versus supine straight leg raising maneuvers showed dramatic differences and that when distracted, Claimant did not have pain as she did during

official examination activities. Dr. Lesnak opined that Claimant gave extremely poor effort during attempted lumbar spine range of motion activities. Dr. Lesnak opined that Claimant had non physiologic findings that suggested a significant degree of somatization/functional overlay. *See* Exhibit B.

25. Dr. Lesnak opined that any symptoms stemming from a mild closed head injury/cerebral concussion would be initially worse, then get better and not recur. Dr. Lesnak noted, however, that Claimant reported an initial headache that resolved, then recurred several months later and also noted that Claimant had no initial reports of dizziness until more than seven months after the injury that would be non physiologic as related to a mild closed head injury in February of 2015. Dr. Lesnak noted initially Claimant had minimal low back complaints, but then that they became the primary source of Claimant's complaints soon afterward even though an MRI of the lumbar spine showed no abnormalities whatsoever. Dr. Lesnak opined that despite Claimant's current complaints of constant diffuse superior buttock pains, there was absolutely no clinical evidence to suggest that her complaints were related to any SI joint dysfunction, sacroilities, lumbar or sacral radiculitis, radiculopathy, or myelopathy and that the lumbar spine MRI was negative and neurologic examinations were normal. *See* Exhibit B.

26. Dr. Lesnak opined that Claimant was appropriately placed at MMI on August 31, 2015 by Dr. Villavicencio. Dr. Lesnak noted that at that time, Claimant had some residual low back/superior buttock pain complaints but that there was no evidence of any permanent functional impairment related to her injury. Dr. Lesnak opined that Claimant required no further diagnostic testing or interventional treatments. Dr. Lesnak opined that Claimant's complaints of frequent bilateral frontal headaches were completely unrelated to any possible mild closed head injury that may have resulted from the work injury on February 24, 2015 and opined that it did not make any sense that Claimant's headache complaints got better then recurred later. Dr. Lesnak opined that symptoms are worse initially and then improve and resolve with time with that type of injury. Dr. Lesnak opined that Claimant had a very high amount of depressive symptoms and a moderately high amount of somatic pain complaints and that there were significant psychosocial factors influencing Claimant's reported symptoms, recovery, and/or perceived function. Dr. Lesnak opined that Claimant's subjective complaints were somewhat unreliable at best and that therefore, any diagnoses or treatment recommendations needed to be based primarily on reproducible objective findings and not on Claimant's subjective complaints. *See* Exhibit B.

27. Dr. Lesnak opined that Dr. Yamamoto had provided medical opinions based on Claimant's subjective complaints rather than any reproducible objective findings. Dr. Lesnak noted that Dr. Yamamoto did not comment on why his exam findings were so dramatically different compared to all the multiple examinations by healthcare providers at Concentra and by Dr. Chan. Dr. Lesnak opined that Dr. Yamamoto significantly erred in his medical opinions regarding Claimant including specifically his opinion that Claimant was not at MMI and the impairment rating. Dr. Lesnak noted that although Claimant had ongoing subjective complaints, there were no

objective findings to support the subjective complaints and that it appeared to be due to a significant amount of psychosocial factors. Dr. Lesnak opined that the psychosocial factors were completely unrelated to the work injury. Dr. Lesnak opined that the development of worsened symptoms months after the incident was completely non 76physiologic in nature and not supported by any type of medical literature and was not consistent with brain physiology. *See* Exhibit B.

28. Dr. Lesnak opined that Claimant was clearly at MMI and that he completely agreed with Dr. Villavicencio that Claimant did not sustain any type of permanent functional impairment. Dr. Lesnak opined that Dr. Yamamoto erred, did not follow the guidelines and rules set forth in the AMA guidelines, and that Claimant's significant psychosocial factors were not related to the work injury. *See* Exhibit B.

29. On August 12, 2016 Claimant underwent a neuropsychological evaluation performed by Laura Rieffel, Ph.D. Claimant reported that as a result of a slip and fall at work she had ongoing back pain, headaches, and cognitive problems. Dr. Rieffel noted that the referral was to document the presence or absence of any acquired brain injury and to assess Claimant's current cognitive and emotional functioning. Dr. Rieffel performed testing and as part of the overall evaluation she administered to Claimant two free standing measures of effort. Dr. Rieffel opined that Claimant's performance was indicative of inadequate effort and that on one of the measures Claimant's scores were so low that the scores were not probable unless Claimant was intentionally recalling the correct answers and choosing the wrong answers. Dr. Rieffel opined that the Claimant's scores and insufficient effort interfered with a valid assessment of neuropsychological functioning. Dr. Rieffel opined that Claimant had a brief post concussive sequalae that resolved by March 6, 2015 and that it was inconsistent with the course of mild head injury recovery for headaches to resolve for an extended period and then return two months afterwards. Dr. Rieffel opined that any current headaches were totally unrelated to the February 2015 work incident. Dr. Rieffel opined that Claimant intentionally attempted to influence the cognitive test results and thus the scores could not be considered a valid measure of Claimant's actual abilities. *See* Exhibit C.

30. Dr. Rieffel opined that Claimant was magnifying her current symptom reports across the range of somatic, emotional, and cognitive domains and agreed with Dr. Lesnak that Claimant's self-report of symptoms were unreliable. Dr. Rieffel opined that recommendations based on Claimant's subjective reports would result in prolonged/and or unneeded treatment. Dr. Rieffel disagreed with Dr. Yamamoto's recommendations related to psychological/neuropsychological symptoms and opined that the headaches were not associated with the February 2015 work fall. Dr. Rieffel also opined that there was no evidence to support that Claimant's depression was related to the February 2015 work fall. *See* Exhibit C.

31. Dr. Yamamoto, Dr. Lesnak, and Dr. Rieffel all testified in this matter.

32. At hearing, Dr. Yamamoto conceded, after listening to Dr. Rieffel, that Claimant did not have any ongoing cognitive issues as a result of her work injury and that Claimant was at MMI for her cognitive aspects. Dr. Yamamoto also agreed that there was probably not too much more that could be done for Claimant's low back and that Claimant was at MMI for the low back. Dr. Yamamoto's ultimately testified that the only condition not at MMI was Claimant's depression.

33. Dr. Rieffel testified at hearing. Dr. Rieffel opined that based on Claimant's scores, she knew Claimant was over reporting or exaggerating and that Claimant showed inadequate effort. Dr. Rieffel opined that Claimant's scores were statistically not probable unless Claimant was intentionally picking the wrong answers and that if Claimant had closed her eyes and picked answers, she would have done better. Dr. Rieffel opined that there was no indication Claimant had any cognitive impairment as a result of the work injury. Dr. Rieffel opined that the chronology of symptoms was important in a traumatic brain injury situation and that the most severe symptoms would be immediate and would slowly get better. Dr. Rieffel opined that Claimant's reported headaches were not due to the work injury or a mild traumatic brain injury sustained in February of 2015 and that Claimant would not have had immediate headache that went away for several months and then returned. Dr. Rieffel also opined that the dizziness reported to Dr. Yamamoto was again not consistent with the work injury since Claimant had no reported dizziness after the February 2015 work injury.

34. Dr. Rieffel opined that Dr. Yamamoto needed to be cautious in relying on Claimant's subjective reports due to Claimant's symptom magnification. Dr. Rieffel opined that she would not recommend any further treatment for Claimant and that although Claimant might have mild depression, psychological issues of depression would not be related to the February 2015 work injury. She noted that it was possible Claimant suffered a mild traumatic brain injury and that even if a person is just dazed after a fall it can qualify for a mild traumatic brain injury diagnosis. However, she opined that Claimant had a GSC exam of 15, a normal CT scan of the head, and a normal MRI of the brain. Dr. Rieffel noted that blurred vision was not present following the injury and would not be related to the February 2015 work injury. Dr. Rieffel opined overall that the headaches, dizziness, and blurred vision all were not related to the February 2015 work injury.

35. Dr. Rieffel opined there was no information that objectively identified any kind of cognitive impairment that would necessitate treatment. She testified that she disagreed with the recommendations of Dr. Yamamoto because Claimant's documented symptom magnification would require that there be objective evidence she was having psychological or cognitive problems prior to any treatment. She testified no such documentation existed. Dr. Rieffel testified no additional psychological or neuropsychological treatment was appropriate in this claim. Dr. Rieffel also testified at hearing that Claimant did not have any ratable impairment for any neurological condition. Dr. Rieffel also disagreed with Dr. Yamamoto's assessment that depression was work-related. She opined that there was no documentation of depression to providers and that there was no indication of a symptom report that would be consistent

with a psychiatric disorder where you would expect it in the course of the injury recovery.

36. Dr. Lesnak testified by deposition. He opined that Dr. Villavicencio properly placed Claimant at MMI on August 31, 2015 with no impairment. He opined that there was a lack of objective findings in Claimant's case. Dr. Lesnak disagreed with Dr. Yamamoto's recommendation for a SI joint belt and noted there had been a negative diagnostic and therapeutic response to SI joint injections, no diagnosis of sacroilitis, and no pathology demonstrated on studies. Dr. Lesnak opined that it was also non physiologic that Claimant had an initial headache that resolved, then suddenly recurred two and a half months later. Dr. Lesnak opined that symptoms from a mild traumatic brain injury would be initially worse and then would get better. Dr. Lesnak opined that there were no depressive symptoms whatsoever reported by any treating providers until almost four months after MMI when Claimant reported to Dr. Yamamoto that she was depressed.

37. Dr. Lesnak opined that Dr. Yamamoto's assessment of permanent impairment for SI joint dysfunction was inappropriate and in error per the *AMA Guides*. Specifically, Dr. Lesnak opined that Claimant did not have any clinical evidence of ongoing SI joint dysfunction or any Table 53 diagnosis to support a rating. Dr. Lesnak opined for a Table 53(II)(b) diagnosis to be supported, symptomatic disk pathology, nerve root pathology, or exam findings of SI dysfunction needed to be documented. He testified that Claimant did not meet those requirements because she did not have any reproducible exam findings or MRI findings to support a diagnosis under Table 53. Dr. Lesnak testified that Dr. Yamamoto erred by providing an impairment rating based on subjective complaints without any reproducible findings.

38. The opinions of Dr. Lesnak and Dr. Rieffel are found credible and persuasive. Their opinions are consistent with the overall medical documentation and the opinions of Dr. Chan and Dr. Villavicencio.

39. Claimant's reports are not found credible or persuasive. Claimant, as found above, demonstrated significant unreliable reports and test scores. Her subjective reports to providers, including DIME physician Dr. Yamamoto cannot be relied upon to any degree of certainty.

40. Dr. Yamamoto is not found credible or persuasive. Dr. Yamamoto essentially conceded at hearing that Claimant was at MMI for all conditions other than depression. The ALJ concludes that Dr. Yamamoto based a significant amount of his opinions on Claimant's subjective reports without objective findings to support his opinions. This is in error given Claimant's unreliability.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

A DIME's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." *See* § 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the DIME physician's opinions are incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (I.C.A.O., Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*.,

W.C. Nos. 4-532-166 & 4-523-097 (I.C.A.O., July 19, 2004). Whether or not a party overcomes the DIME is a question of fact for determination by the ALJ. *See* § 8-43-301(8), C.R.S.; *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (I.C.A.O., Aug. 18, 2004).

The totality of the evidence, including testimony and medical records, establishes that Respondents proved by clear and convincing evidence that Dr. Yamamoto's opinions are clearly erroneous. As found, the opinions of Dr. Lesnak and Dr. Rieffel that the claimant was at MMI with no impairment were not merely a difference of medical opinion and were sufficient to meet Respondents' legal burden. *See Javalera*, W.C. Nos. 4-532-166 & 4-523-097 (I.C.A.O., July 19, 2004). The opinions of Dr. Lesnak and Dr. Rieffel are consistent with the overall medical records, the opinions of Dr. Chan, and the opinions of Dr. Villavicencio. Dr. Yamamoto clearly erred by relying on Claimant's subjective reports that were not consistent with the overall medical records.

As found above, Claimant's subjective reports cannot be relied upon to any degree of certainty. By relying on her reports, Dr. Yamamoto clearly erred. His opinions on MMI, impairment rating, and psychological conditions have been overcome by clear and convincing evidence. Claimant reached MMI on August 31, 2015 with no ratable permanent impairment as assigned by Dr. Villavicencio and supported by the credible opinions of Dr. Lesnak and Dr. Rieffel.

Claimant's only post concussive symptom present two days after the February 2015 work injury was a mild headache that fully resolved by March 6, 2015 and did not recur until May 11, 2015. Any ongoing headaches are not related to the work injury and are inconsistent with the course of a mild head injury. The ALJ does not credit any subjective reports by Claimant that her headaches continued during this time as they are contrary to the overall medical evidence. Dr. Yamamoto clearly erred in finding headaches to be causally related to the work injury or subject to an impairment rating. Dr. Rieffel is credible and persuasive that Claimant has no impairment for cognitive or episodic neurological conditions. Additionally, Dr. Yamamoto erred by diagnosing work related depression based on Claimant's subjective reports when there was no diagnosis or treatment for any type of psychological injury including depression during the course of her treatment. The opinions of Dr. Rieffel and Dr. Lesnak that depression is not work related are found credible and persuasive. The ALJ finds and determines that Respondents have established by clear and convincing evidence that Claimant does not have any impairment for SI joint dysfunction under Table 53 of the *AMA Guides* and is at MMI for that condition with no ratable impairment. Claimant does not have a intervertebral disc lesion or soft tissue lesion and does not qualify for a Table 53 diagnosis. Claimant has no objective pathology in her lumbar spine and Dr. Yamamoto erred by providing a Table 53 rating. The ALJ finds the opinions of Dr. Lesnak and Dr. Rieffel are not merely a difference of opinion from the DIME with regard to MMI, as it is clear Dr. Yamamoto's opinions regarding MMI were colored by his reliance on the claimant's subjective report and was not supported by the objective evidence or the totality of the record.

Dr. Lesnak and Dr. Rieffel's opinions regarding MMI are sufficiently persuasive and credible to overcome the DIME physician's opinion by clear and convincing evidence. The ALJ finds the claimant was at MMI on August 31, 2015 with no permanent impairment.

Medical Maintenance Benefits

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

As found above, Respondents admitted liability for post MMI medical treatment that was reasonable, necessary, and related to the compensable injury. Medical records note that Claimant needs to continue an individual exercise program and that additional injections may be done under maintenance care. Dr. Villavicencio also opined when he placed Claimant at MMI that any additional care could be accomplished under maintenance. Claimant has shown, more probably than not, that she may require future medical treatment to relieve the effects of the injury or prevent further deterioration. Claimant has established an entitlement to a general award of medical maintenance benefits. Respondents retain their right to dispute any specific treatment recommendation.

ORDER

It is therefore ordered that:

1. Respondents have overcome the DIME physician's opinion with regard to MMI and impairment by clear and convincing evidence. The claimant is at MMI as of August 31, 2015 with a 0% permanent impairment rating.

2. Claimant has established an entitlement to a general award of medical maintenance benefits.

3. Any issues not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 2, 2017,

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Respondents have established by a preponderance of evidence that the undersigned ALJ's November 4, 2015 Summary Order should be set aside and the case reopened due to fraud or mistake.

II. If the claim is reopened, whether Respondents have demonstrated by a preponderance of the evidence that Claimant did not sustain a compensable injury on February 28, 2015.

III. If Respondents failed to establish that the claim should be reopened for fraud, error or mistake, whether the Division Independent Medical Examiner—Dr. John Douthit—erred in his assignment of a 6% whole person impairment rating.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. While employed as a hair stylist for Employer, Claimant alleged that she suffered an injury to her neck on February 28, 2015. A hearing regarding the compensable nature of this neck injury was held September 29, 2015.

2. The undersigned ALJ issued a Summary Order on November 4, 2015 concluding that Claimant had proven by a preponderance of the evidence that she sustained a compensable aggravation of a pre-existing soft tissue condition of the cervical spine. Critical to the conclusion surrounding compensability was Claimant's testimony that she had been pain free and without the need for medical treatment for an extended period of time prior to the February 28, 2015 work injury. In this regard, the ALJ found and concluded as follows:

> "The evidence presented persuades the ALJ that Claimant's soft tissue condition also pre-existed the claimed injury in this case. Nonetheless, careful review of the record, as submitted, fails to disclose that Claimant received treatment to the neck or upper back in the years leading up to her February 28, 2015 work injury. Importantly, Dr. Lesnak acknowledged on cross examination that he saw no records documenting treatment for Claimant's previous neck injury in 2011, 2012, 2013, 2014, or 2015 prior to the date of injury in question. … Based on the evidence presented, the ALJ concludes that Claimant likely aggravated her pre-existing cervical soft tissue condition. … Given the dearth of records supporting

> cervical treatment or documented cervical complaints of pain from 2011 up through the date of injury in this case, the ALJ is not persuaded by Respondents suggestion that Claimant's prior applications for benefits to the SSA support a finding that Clamant was experiencing cervical pain at the time of the February 28, 2015 incident giving rise to the instant claim. To the contrary, the ALJ concludes, from the evidence presented that Claimant was working full duty at the time of the incident question and was probably asymptomatic from a cervical spine standpoint until she abruptly turned her head in response to be startled."

3. At the hearing in September 2015, the undersigned ALJ specifically noted "the dearth of records supporting cervical treatment or documented cervical complaints of pain from 2011 up through the date of injury."

4. Following this hearing, respondents located additional medical records and history, including records from the Social Security Administration (SSA). Upon receipt of these records, Respondents sought to set aside the November 4, 2015 summary order and reopen the claim on the basis of fraud, asserting that Claimant intentionally misled the court regarding the status of her cervical spine condition in an effort to obtain benefits.

5. The records in question were submitted as part of Respondents exhibit packet and reveal prior efforts to obtain social security disability benefits for cervical disc herniation. The records also outline multiple complaints of cervical pain with resultant treatment, including a visit referencing the status of Claimant's cervical condition only two days before the alleged February 28, 2015 work injury. Specifically, the records reveal the following:

- Claimant was seen at Centura Health ER on May 7, 2008 for neck and back pain following a motor vehicle accident. Claimant's car was at a stop when it was rear-ended by a car going 30 mph. Records note a rollover motor vehicle accident 2 years prior. Claimant was diagnosed with a back strain, cervical strain, "a typical whiplash injury and other symptoms from MVA."

- A cervical spine CT scan from May 7, 2008 revealed a disc bulge or broad-based right paracentral disc protrusion at C5-6 without disc fracture.

- On May 27, 2008, Claimant followed up with her primary care physician, Dr. Ravin, regarding the motor vehicle accident. Dr. Ravin noted that a cervical CT scan had been done and it showed a bulging and ruptured disc at C5-6. Claimant was scheduled to follow-up with a neurosurgeon, Dr. Murk. Claimant complained of persistent neck pain. Dr. Ravin assessed Claimant with somatic dysfunction – cervical/thoracic area and bulging disc at C5-6. He recommended that Claimant follow-up with Dr. Murk and start physical therapy.

- On June 26, 2008, Claimant continued to report a lot of pain and problems with her neck. Claimant had seen Dr. Murk and said he was sending her for a cervical MRI and had referred her to a physiatrist for possible injections.

- Claimant returned to Dr. Ravin on August 7, 2008. Claimant said that Dr. Murk did not want to operate and wanted to treat her conservatively. Dr. Ravin recommended additional physical therapy. Claimant underwent at least three injections in her cervical spine in the C4-C5 disc space by September 2008. Claimant continued to complain of slowly improving neck pain to Dr. Ravin at 7 follow-up appointments from September 11, 2008 to November 14, 2008.

- Claimant applied for Social Security benefits on March 16, 2009. At that point, she completed a disability report. Claimant was asked "What are the illnesses, injuries, or conditions that limit your ability to work?" Claimant responded "Bulging neck vertebrae C4-C5" and other conditions.

- A work activity report was completed by the SSA on April 6, 2009. This report noted that Claimant stopped working as of September 18, 2008 due to her medical problems.

- Claimant completed a pain questionnaire as part of the application for the SSA on May 7, 2009. Claimant was asked to describe the location of her pain and responded neck as one of the body parts. Claimant was also asked how her pain limits her activities and responded that she could not turn her head sideways.

- Dr. R. Terry Jones examined Claimant regarding her SSA application on May 22, 2009. Specific diagnostic impressions were reached by Dr. Jones following Claimant's assessment. Among other conditions, Dr. Jones opined that Claimant suffered from chronic pain in her neck secondary to motor vehicle accidents. She also had a history of fibromyalgia. Regarding her chronic neck pain, Dr. Terry noted that noted that Claimant suffered from 7/10 pain most days with a 10 being the worse possible on the scale and that on the day of her evaluation, Claimant was experiencing 8/10 pain. This pain limited Claimant's sit, stand and walk.

- On July 11, 2009, Dr. Edwin Baca examined Claimant for complaints of chronic neck pain, chronic lower back pain, depression, bipolar, fibromyalgia, and right carpal tunnel syndrome. Claimant told Dr. Baca that all of her problems started approximately 12-13 years ago after a motor vehicle accident in 1997 when she was involved in a 13 car pile-up and her car flipped over and crushed her. She said that was when all the pain in her neck, back, and extremities started. Claimant said that in 2001, she fell down several stairs exacerbating her chronic pain problems. Claimant said she was involved in a second motor vehicle accident in May 2008 that caused a C4-5 bulged disc. Claimant was treating with Dr. Raven for her chronic pain and also for fibromyalgia. Claimant alleged

that her chronic pain and fibromyalgia significantly limited her daily activities and that she had severe difficulty turning her head right or left or driving. Dr. Baca reviewed radiographic images and opined that Claimant had mild posterior disc height loss at C5-6 and findings consistent with subtle facet sclerosis at C4-5,C5-6 and C6-7. He questioned Claimant's diagnosis of fibromyalgia, noted Claimant's responses to trigger point testing were "hyper-exaggerated." Otherwise he diagnosed Claimant with multiple conditions, including chronic neck pain and C4-5 herniated nucleus pulposus.

- Claimant was admitted to Cedar Springs Behavioral Health System from April 16, 2010 to April 26, 2010 due to depression and a suicide attempt. During the hospitalization, Claimant reported neck and non cardiac in origin chest pain. She was sent to the emergency room where her neck pain was treated with medications.

- Dr. John Reasoner examined Claimant on May 8, 2013 for complaints of neck pain, neck stiffness, nausea, vomiting, and headaches after slipping on wet tiles and falling on her back while at work. Dr. Reasoner diagnosed Claimant with a neck sprain/strain.

- A cervical spine x-ray from May 8, 2013 revealed mild degenerative disease at C2-3, C4-5, and C5-6 with mild bony neural foraminal narrowing at C5-6.

- Claimant was seen by Dr. Barbee on February 26, 2015 – two days before the asserted neck injury found compensable by the undersigned ALJ following the September 29, 2015 hearing. In a noted generated from this visit, Claimant was requesting conservative management for several issues. Claimant was noted to have chronic pain and degenerative disc disease for which she was provided with a referral to pain management and physical therapy and provided with a prescription for Norco.

6. Claimant testified that her February 26, 2015 appointment was to establish care for tendinitis in her shoulder rather than for neck pain. The nursing intake section of the report documents a chief complaint of right shoulder and neck pain along with a myriad of other complaints. Claimant specifically noted that she was in the offices because of pain. The history of present illness (HPI) section of the report indicates that Claimant suffers from chronic cervical pain due to two prior motor vehicle accidents prior to 2002 with a disc herniation at C4-5. She also reported that her pain medications and gabapentin had been of little benefit in the past. Consequently, she was given the new prescription for additional Norco at 120 tablets to be taken every 6 hours on an as needed basis for pain. Physical examination of the neck revealed "[c]ervical tenderness with all planes of motion", including "[r]educed active rotation, extension and lateral flexion of neck."

7. During cross-examination, Clamant denied ever being referred for pain

management or physical therapy or getting a prescription for Norco. Claimant also testified that she had not reported having chronic neck pain following two motor vehicle accident prior to 2002 and instead reported a history of thyroid disease to the nurse. Claimant alleged that she did not tell the nurse that gabapentin had been of little benefit to her and that she had not tried gabapentin as it was her husband's prescription.

8. At hearing, Claimant testified that she "did not have any treatment or issues with [her] neck for years other than a little discomfort here and there." The records concerning the condition and treatment of Claimant's neck as referenced above dispel the ALJ of this contention. Rather, the ALJ finds from the records submitted that in 2009 Claimant was alleging, in part, that she had cervical pain so severe and debilitating that she felt compelled to file a claim for social security disability benefits.[1]

9. As part of her February 28, 2015 claim, Claimant presented to Concentra Medical Centers (Concentra) on March 2, 2015, with complaints of neck pain shooting down her right arm. During this visit, Claimant reported that said she had a prior motor vehicle accident in 2007 that completely resolved with 10 visits of physical therapy. She also saw Dr. Rauzzino for a surgical consult as part of her February 28, 2015 neck injury. On March 30, 2015, Claimant told Dr. Rauzzino that her symptoms began on February 28, 2015 when she was mopping and felt her neck pop. Claimant reported a history of a car accident in 2007 but said her symptoms completely resolved and she "was pain free until this most recent incident at work" on February 28, 2015. The report notes as follows: "She was involved in a work-related accident on 02/28/15 and symptom-free prior to that. She has a history of a car accident several years ago, but was asymptomatic for years until this work-related incident." The above referenced records contradict Claimant's assertions to the providers at Concentra and to Dr. Rauzzino. Rather, as noted Claimant remained chronically symptomatic with complaints of neck pain through 2008 and into 2009 prompting her to file a claim for social security disability benefits. She also sought treatment for neck pain in 2013 with Dr. Reasoner after falling at work.

10. Based upon the above referenced medical records, which were unavailable at the September 29, 2015 hearing, the ALJ finds that Claimant misrepresented the history surrounding her cervical spine complaints/symptoms to the providers at Concentra as well as Dr. Rauzzino.

11. The totality of the evidence as presented persuades the ALJ that Claimant

[1]Claimant testified that she did not apply for Social Security benefits. Claimant alleged that her ex-husband applied for the benefits. Claimant testified that she was unable to do anything for herself from September 29, 2009 for over 18 months due to being sick with the swine flu. Review of the application for disability benefits reveals that the application was completed prior to September 29, 2009 and that Claimant signed hand wrote and signed portions of this application. Moreover, Claimant was interviewed in person and examined by multiple physicians as part of the process. Consequently, the ALJ finds Claimant's attempt to pass responsibility for the filing of the SSA disability application, along with any assertion regarding the symptoms or disabilities contained therein, to her ex-husband unpursuasive and misleading.

suffers from chronic neck pain precipitated by preexisting injuries suffered as a consequence of falls and motor vehicle accidents. Despite Claimant's assertion to the contrary, the persuasive evidence demonstrates that she has sought treatment regarding her neck[2] in the years following 2007. Indeed, the records indicate that she saw a providers for neck pain in 2013 after a fall and again in February 2015 just prior to the incident which forms the basis for Respondents request to set aside the ALJ's Summary Order and Reopen the case on the grounds of fraud and mistake. While the Claimant is correct that February 26, 2015 record from Dr. Barbee's office reflects that she was she had complaints of right shoulder pain that belies the complete basis for her visit. The entirety of the record convincingly establishes that Claimant suffers from chronic neck pain and that she was given a prescription for additional amounts of pain medication for the same leading to a reasonable inference that Claimant's neck was symptomatic at the time she presented to Dr. Barbee's office on February 26, 2015. The ALJ is not persuaded, based upon the medical records submitted, that the provider documented an incorrect prior medical history or that Claimant's neck was asymptomatic on February 26, 2015 as she suggested.

12. Following the conclusion by the undersigned ALJ that Claimant had suffered an aggravation of a previously asymptomatic cervical spine condition, Claimant continued to treat with providers at Concentra. Dr. Hattem examined Claimant for an impairment rating on March 24, 2016. Dr. Hattem noted that Claimant reported the development of neck pain while mopping at work on February 28, 2015. For past medical history, Dr. Hattem noted "A 2007 motor vehicle accident. She says she received no treatment following that accident." Dr. Hattem's impression was cervical strain. Dr. Hattem opined that Claimant was at MMI and assessed her with 6% whole person impairment under Table 53 of the AMA Guides. Claimant's range of motion did not contribute to her impairment because her range of motion measurements were non-physiologic and self-limited according to Dr. Hattem.

13. Dr. John Douthit examined Claimant for a Division Independent Medical Examination (DIME) on August 22, 2016. Claimant reported having a prior car accident in 2007 with back and neck injuries. Claimant did not mention any of her other prior injuries or cervical condition. Nonetheless, Dr. Douthit reviewed Claimant's medical records and noted that she had prior complaints of neck pain and a "similar W.C. claim when she suffered a fall at WalMart in 2013 and was treated on May 29th, 2013 by Dr. John Reasoner for neck pain . . . "

14. Dr. Douthit noted that Claimant had multiple complaints over her entire body and substantial pain behavior including heavy breathing, an inability to move, and an out of proportion pain response. Claimant could not move her shoulders and would only lift her arms slightly over her head level with encouragement. Her neck motion was virtually zero with no motion in any direction.

15. Dr. Douthit opined that Claimant's range of motion was invalid due to the pain

[2] Claimant has undergone MRI of the cervical spine which revealed multilevel mild degenerative changes and osteophyte complexes at C4-C5 and C5-C6.

behavior he witnessed which also had been witnessed by Dr. Hattem. Dr. Douthit noted that Claimant could return for repeat range of motion measurements but he would discourage it as additional testing would also be invalid and he did not think she would cooperate with the re-measurements. Dr. Douthit opined that additional treatment would not be effective. He placed Claimant at MMI as of March 24, 2016 with 6% impairment per Table 53.

16. Dr. Lesnak examined Claimant at the request of Respondents on June 30, 2015 and November 3, 2016. Dr. Lesnak noted that on February 26, 2015, Claimant's primary care physician had recorded chronic neck pain dating back to before 2002. Following his November 3, 2016 independent medical examination (IME), Dr. Lesnak noted that Claimant exhibited numerous pain behaviors and nonphysiologic findings, which were also present during his previous evaluation on June 30, 2015. Dr. Lesnak also noted that Dr. Hattem and Dr. Douthit had also reported that Claimant exhibited diffuse and multiple pain behaviors during their examinations.

17. In a report generated following his November 3, 2016 IME, Dr. Lesnak documented that Claimant "clearly" misrepresented her medical history to him, noting as follows:

> One must recall that the medical records clearly report the patient has had chronic neck pains since before 2002, as well as chronic anxiety, depression, PTSD, and fibromyalgia that all predated 02/28/2015. In fact, the patient received a prescription for hydrocodone just two days prior to her previous alleged occupational injury of 02/28/2015. Lastly, she apparently has failed to provide an accurate medical history to her evaluating/treating healthcare providers, seemingly withholding information regarding her chronic pain syndromes, including fibromyalgia and chronic neck pain, as well as her chronic psychiatric disorders as well.

18. Claimant was questioned regarding statements made at her previous September 29, 2015 hearing. She was previously asked whether she had any neck pain in the days leading up to her February 28, 2015 injury, to which she replied "no." At the hearing on January 18, 2017, Claimant was asked if her testimony was correct. Claimant admitted this was correct, asserting that she was not having neck pain *per se* at that time. Claimant also previously testified at the hearing on September 29, 2015 as follows:

> Q: All right. And then the days leading up to the February 28th incident you were experiencing any pain in your neck then?
>
> A: No.

However, as noted above, the medical records persuasively demonstrate that Claimant had neck pain in 2013 and more probably than not had neck pain on February 26, 2015 when she presented to Dr. Barbee's office. Accordingly, the ALJ finds as unconvincing

and unreliable, Claimant's testimony that she had no treatment for her neck and that she was asymptomatic prior to February 28, 2015, when she turned abruptly in response to being startled.

19. Based upon the evidence presented, the ALJ finds that Claimant consciously concealed the true nature of her cervical spine condition at the time of her September 29, 2015 hearing in an effort to mislead the ALJ into finding her asserted neck injury compensable.

20. Based upon the evidence presented, the ALJ finds that Claimant's neck was likely symptomatic on February 28, 2015, as a probable progression of her degenerative disc disease confirmed on MRI and precipitated by prior injuries suffered in preceding falls and motor vehicle accidents. Accordingly, the ALJ has reconsidered his November 4, 2015 Summary Order to find that Claimant did not suffer a compensable aggravation of a previously asymptomatic cervical spine condition. Accordingly, the issue of whether the DIME physician erred in his assignment of a 6% whole person impairment rating need not be addressed further.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact

finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this case, the ALJ concludes the evidence presented is persuasive of the fact that Claimant intentionally failed to disclose and purposely, but falsely represented that she had not sought care for nor was her neck symptomatic prior to February 28, 2015. The medical records obtained following the September 29, 2015 hearing, convincingly contradict Claimant's assertions that she was not symptomatic nor did she seek treatment for her neck in the days prior to her asserted February 28, 2015 injury. For these reasons, the ALJ finds/concludes that Claimant's contrary testimony is unpersuasive and unreliable.

II. Setting Aside the November 4, 2015 Summary Order and Reopening of the Claim

D. Section 8-43-303(1, C.R.S. provides that "at any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition…" *Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo. App. 1989). The party seeking to reopen bears the burden of proof to establish grounds for reopening. *See Garcia v. Qualtek Manufacturing*, W.C. No. 4-391-294 (ICAO August 13, 2004). When a party seeks to reopen based on a mistake the ALJ must determine "whether a mistake was made, and if so, whether it was the type of mistake which justifies reopening." *Travelers Ins. Co. v. Indus. Comm'n*, 646 P.2d 399, 400 (Colo. App. 1981). Fraudulent testimony which procures an award or denial of benefits may constitute the type of "mistake" which justifies reopening. *See Lewis v. Sci. Supply Co*., Inc., 897 P.2d 905 (Colo. App. 1995); *Garcia v. Qualtek Mfg.*, supra.

E. Fraud may also justify reopening an otherwise final award of benefits. *See Lewis v. Scientific Supply Co., Inc.*, 897 P.2d 905 (Colo. App. 1995). The elements of fraud were set forth by the Colorado Supreme Court in *Morrison v. Goodspeed*, 100 Colo. 470, 68 P.2d 458 (1937). In that case, the Court stated: "The constituents of fraud, though manifesting themselves in a multitude of forms, are so well recognized that they may be said to be elementary. They consist of the following:

(1) A false representation of a material existing fact, or representation as to a material existing fact made with a reckless disregard of its truth or falsity; or concealment of a material existing fact, that in equity and good conscience should be disclosed.

(2) Knowledge on the part of the one making the representation that it is false; or utter indifference to its truth or falsity; or knowledge that he is concealing a material fact that in equity and good conscience he should disclose.

(3) Ignorance on the part of the one to whom representations are made or from whom such fact is concealed, of the falsity of the representation or the existence of the fact concealed.

(4) The representation or concealment made or practiced with the intention that it shall be acted upon.

(5) Action on the representation or concealment resulting in damages."

As noted by ICAP in *Essien v. Metro Cab*, W.C. Number 3-853-693 (ICAO August 22, 1991), "[t]he existence of the elements is generally a question of fact for the determination of the ALJ", and because proof of fraud is a factual issue, the ALJ may base his decision on inferences drawn from circumstantial or direct evidence. *See Essien*, supra, citing *Electric Mutual Liability Insurance Co. v. Industrial Commission*, 154 Colo. 491, 391 P.2d 677 (1964). The existence of "fraud" does not necessarily require an intent to deceive. *See Pattridge v. Youmans*, 109 P.2d 646 (Colo. 1941); *Morrison*, 68 P.2d at 458 (fraud requires a false representation or representation made with disregard for the truth); *Alexander v. Midwest Barricade Co., Inc.*, W.C. No. 3-842-739 (I.C.A.O. March 30, 1992).

F. In this case, the ALJ agrees with Respondents that the evidence clearly shows that Claimant, on multiple occasions, told her medical providers that her symptoms following the 2007 motor vehicle accident completely resolved, she did not have pain or symptoms immediately prior to the February 28, 2015 alleged work injury and she did not receive any treatment for her neck during this time. Claimant also testified that she did not receive any medical treatment between 2009 and February 2015 and that in the days leading up to the February 28, 2015 incident, she was not experiencing any pain in her neck. Medical records obtained following the September 29, 2015 hearing belie these assertions. Rather the medical records document that Claimant did in fact continue to have symptoms following the 2007 motor vehicle accident throughout 2008 and 2009. Here, Claimant's symptoms were severe enough that she filed for Social Security benefits. In her application for social security benefits, Claimant alleged that she was disabled and unable to work in part due to chronic neck pain and bulging cervical vertebrae. Claimant later sought emergency room treatment in 2010 for neck pain and was prescribed medications. In 2013, she reinjured her neck when she slipped and fell. She was again prescribed medications. Finally, two days before the work injury, on February 26, 2015, Claimant was seen by Dr. Barbee for multiple issues, including chronic cervical pain. Claimant has alleged that this treatment was only for her shoulder but nursing notes document she was seen for complaints of shoulder and neck pain. Records also note that she has chronic neck pain due to two prior motor vehicle accidents. The physical examination from this appointment date records cervical tenderness with all planes of motion, reduced active rotation, extension, and lateral flexion of the neck. Claimant is then diagnosed with cervical degenerative disc disease and referred for pain management and physical therapy and prescribed Norco. As found it is unlikely that Claimant's treatment providers associated with this visit would take an inaccurate history and/or reach conclusions regarding Claimant's diagnosis based upon an examination of the incorrect body parts forming the basis for such

complaints. Based upon the evidence presented, the ALJ finds/concludes that Claimant's testimony to the court during the September 2015 hearing meets the elements of fraud as outlined above. In short, Claimant testimony constituted a false representation of a material existing fact or concealment of a material existing fact with knowledge on the part of Claimant that her representation was false and ignorance on the part of Respondents and the Court that the representation was false. Moreover, the evidence presented persuades the ALJ that Claimant made the representation and concealed material facts with the intent that the Court act upon it, specifically issuing an Order finding her injury compensable.

G. In reaching this conclusion, the ALJ is mindful of the fact that the false representation must involve the omission of a material fact inducing another to act to his or her detriment. See *Wolford v. Pinnacol Assurance*, 107 P.3d 947 (Colo. 2005). According to Black Law's Dictionary, a material fact is one which is crucial to the interpretation of a phenomenon or a subject matter, or to the determination of an issue at hand. *Black's Law Dictionary* (10th Ed. 2014). Crucial to the determination of whether Claimant suffered a compensable injury, given the pre-existing conditions from which she suffered, was a determination of whether her neck was symptomatic and/or whether she had/was treating at the time of her alleged February 28, 2015 injury. Claimant's testimony regarding the absence of symptoms/treatment and the "dearth" of medical records supporting the same was crucial to the determination of whether Claimant had suffered a compensable aggravation of a pre-existing condition. Consequently, the ALJ rejects the assertion that Claimant's misrepresentation regarding her symptoms and treatment was not "material" to the issuance of the November 4, 2015 order. To the contrary, it was the specific misrepresentation regarding the absence of symptoms/treatment which Claimant had knowledge of and in good conscious failed to disclose that induced the undersigned ALJ to conclude that Claimant had suffered a compensable aggravation of a preexisting condition. Based upon the evidence presented as a whole, the ALJ concludes that Respondents have proven, by a preponderance of evidence, that Claimant's testimony was fraudulent and that the November 4, 2015 Order was induced by Claimant's material misrepresentations and issued by mistake. Accordingly the order shall be reopened.

H. Pursuant to § 8-43-201(1), C.R.S., Respondents bear the burden of proof regarding any attempt to modify an issue that previously has been determined by an order. *Section 8-43-201(1), C.R.S.*; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the 8-43-201 in 2009 and provides, in pertinent part:

> …a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. (2) The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted

> in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed.

I. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed that burden on the respondents and made such a withdrawal the procedural equivalent of a reopening. In this case, Respondents are seeking to modify an issue determined by the November 4, 2015 Summary Order, specifically compensability. Therefore, the burden is on Respondents to prove that Claimant did not sustain a compensable injury. As found here, the evidence persuades the ALJ that Claimant likely had pre-existing condition and that she was seen by her primary care physician, Dr. Barbee, on February 26, 2015, two days before the alleged work injury, for complaints of cervical pain and right shoulder pain. Claimant had tenderness with all planes of motion and reduced range of motion in the cervical spine. Following the alleged injury on February 28, 2015, Claimant had cervical tenderness at the emergency room. X-rays were benign with only degenerative findings. Subsequent examinations also continued to note only tenderness and limited range of motion. A cervical MRI revealed only degenerative findings with no acute abnormalities and an EMG did not reveal any cervical radiculopathy. Clamant was maintained on medications and ultimately placed at MMI after only 3 sessions of physical therapy. Pain management and physical therapy is the exact treatment that was recommended by Dr. Barbee prior to the alleged work injury. The evidence presented persuades the ALJ that Claimant's neck was likely symptomatic when she saw Dr. Barbee on February 26, 2015 and that the incident occurring two days later is not cause, aggravate or accelerate Claimant's pre-existing condition to cause her symptoms and/or need for treatment. Rather, Claimant's symptoms were likely a manifestation of the natural progression of her pre-existing degenerative disc disease caused by prior falls and car accidents. Accordingly, Respondents have proven by a preponderance of evidence that Claimant did not sustain a compensable injury on February 28, 2015 when she turned her head abruptly in response to being startled.

ORDER

It is therefore ordered that:

1. Respondents have established by a preponderance of evidence that the ALJ's November 4, 2015 Summary Order should be reopened due to fraud and/or mistake.

2. Respondents have demonstrated by a preponderance of the evidence that Claimant did not sustain a compensable injury on February 28, 2015.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Co 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-994-090-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 24, 2016, January 27, 2017 and January 30, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 8/24/16, Courtroom 3, beginning at 1:30 PM, and ending at 3:05 PM; 1/27/17, Courtroom 1, beginning at 8:30 AM, and ending at 3:30 PM; and, 1/30/17, Courtroom 1, beginning at 8:30 AM, and ending at 2:30 PM).

Claimant's Exhibits 1 through 27 were admitted into evidence, without objection, Respondents' Exhibits A through W were admitted into evidence, without objection. Claimant's objection to Respondents' Exhibit X was sustained and it was rejected.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Claimant's opening brief was filed on February 13, 2017. Respondents' answer brief was filed on February 27, 2017. Claimant's reply brief was filed on March 1, 2017, at which time the matter was deemed submitted for decision.

]ISSUES

The issues to be determined by this decision concern an alleged occupational disease to the Claimant's bilateral upper extremities, with an alleged onset date of November 13, 2014 and an alleged date of last injurious exposure of August 11, 2016; if compensable, medical benefits, average weekly wage (AWW), and temporary partial disability (TPD) benefits from November 23, 2014 and continuing.

The Claimant bears the burden of proof, by a preponderance of the evidence on all designated issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulations and Findings Thereon

1. If compensable, the ALJ accepted the following stipulations and makes findings thereon.

2. The Claimant's AWW is $803.67.

3. The Claimant endorsed the issue of TTD on his Application for Hearing. Due to his employment with Aspen Linen Company commencing June 23, 2016, the Claimant is not entitled to TTD benefits. The issue of TTD was withdrawn by Claimant.

4. Claimant is owed TPD benefits from November 23, 2014 and continuing. From November 23, 2014 through December 4, 2016, TPD is owed in the amount of $4,569.92 [*See* Claimant's Exhibit 23]. This amount represents a calculation of TPD prior to any statutory offsets. TPD from December 4, 2016 and continuing would be at a variable rate to be subsequently determined, if the claim is compensable.

5. The Claimant has been receiving short term disability benefits, beginning on August 18, 2016, through a disability policy administered by Unum [Respondents' Exhibit W]. The Employer pays 100% of the premiums of the disability policy, with no contribution of funds from the Claimant. Respondents are entitled to assert a statutory offset against TPD for Claimant's receipt of short term disability benefits commencing

August 18, 2016 until terminated. § 8-42-103(1)(d), C.R.S. Respondents will likewise be entitled to assert a statutory offset for Claimant's receipt of long term disability benefits, if such benefits are granted. As discussed at hearing, there may be an issue of whether reimbursement is owed by Claimant to Unum if the worker's compensation claim is found compensable. If the terms of the disability policy require Claimant to reimburse Unum if benefits are awarded under the worker's compensation claim and Unum pursues reimbursement, Respondent-Insurer (Pinnacol) will agree to then terminate any statutory offset being taken against TPD. If the claim is on an admission of liability by Pinnacol when Unum asserts a right to reimbursement against the Claimant, Pinnacol will agree to amend their admission to reflect a termination of their offset. Pinnacol does not agree to assume any personal responsibilities of Claimant relative to any demand by Unum for reimbursement under the terms of its policy.

6. Any potential award of TPD benefits is subject to garnishment for child support, pursuant to a Notice of Administrative Lien & Attachment served on the Insurer.

Preliminary Findings

7. The Claimant's date of birth is October 28, 1965. He is 51 years of age.

8. The Employer is a company that produces wind turbines used to harness and produce wind energy. The Employer's production plant is located in Brighton, Colorado.

9. The Claimant was initially placed with the Employer in January 2014 through SOS, a temporary staffing agency [Respondents' Exhibit O, pp. 319-321] He was then hired on as a regular employee of the Employer on June 23, 2014 [Respondents' Exhibit O, pp. 317; 331].

10. The Claimant worked as a Production Assembler for the Employer. The written job description for this position reflects: "Assembles nacelles, and their subassemblies following process work instructions (PWIs) and other written and verbal specifications." The job duties and responsibilities are summarized on the job description [Respondents' Exhibit O, pp. 328-330].

11. Production assemblers report to a Production Team Leader [Respondents' Exhibit O, p. 328].

12. The Claimant underwent a post-offer employment physical on January 3, 2014, which was required by the temporary staffing agency. The findings on physical examination included decreased range of motion in both shoulders [Respondents' Exhibit O, p. 322]. Crepitus was noted in the right shoulder as well as the right

hand/wrist [Respondents' Exhibit. O, p. 324]. The Claimant was noted to have decreased range of motion with extension in both the cervical and lumbar spine [*Id.* p. 324].

13. The Post-Offer Employment Evaluation considered all conditions of employment specified by the Employer and the report specifically stated that the Claimant "is capable of performing the essential functions of the position and does not have any present or past conditions/impairment that we believe would pose a significant risk to himself or others should he be placed in the position sought."

The Occupational Disease Claim

14. According to the Claimant, he had not experienced any problems with his upper extremities or neck prior to working for the Employer.

15. The medical records reflect that the Claimant had been involved in a motor vehicle accident in 2013 [Respondents' Exhibit C, p. 6]. When asked about this accident on cross-examination, the Claimant indicated that he "didn't recall."

16. From January 2014 – August 2014, the Claimant worked in the MS2 and MS3 production areas. "MS" stands for "Main Shaft." The Claimant's work schedule was 4 days a week with 10 hour shifts. He was on the night shift, which runs from 5:00 PM to 3:30 AM. There is a 30 minute dinner break; two 15 minute work breaks; and a 6 minute stretch break.

Procedural Posture

17. Rick Hillier filed an Employer's First Report of Injury on November 21, 2014 (Respondents' Exhibit A, p. 1). Rick Hillier is the Environmental Health & Safety Specialist for the Employer. Hillier has a Master of Science in Public Health degree, with an emphasis on industrial hygiene and safety. He has worked in the health and safety field for 36 years and is a certified industrial hygienist.

18. The Respondents filed a Notice of Contest on September 23, 2015 (Respondents' Exhibit B).

Circumstances Leading Up to the Claim

19. The Claimant transferred to the MS1 area in approximately September 2014. His work schedule and breaks remained the same. According to the Claimant, he began to have symptoms in his bilateral elbows in approximately October 2014 while working in MSA.

20. The Claimant did not report his claim to the Employer when his symptoms first developed. He eventually went to his primary care physician (PCP) at Platte River Medical Center on November 13, 2014. Randa Spencer, FNP-C, noted that the Claimant's chief complaints were "hyperlipidemia and arm pain." Nurse Practitioner Spencer directed the Claimant to ICC (Injury Care of Colorado) for further evaluation of his bilateral arm pain. ICC is another facility located in the same building as the PCP's office. ICC is one of the designated medical providers for the Employer. When the Claimant presented to ICC that day, the clinic contacted the Employer to clarify if they were aware that the Claimant was at there for evaluation. The Employer was unaware of this until receiving the call. The Claimant reported a claim to the Employer when felt that his symptoms were becoming disabling and he required a medical evaluation. Claimant advised his QPI (Quality Production Inspector) that he needed to see physician about his complaints of pain and he was advised that he should go ahead. When he consulted his PCP (Primary Care Physician), he was advised that the problems with his upper extremities "were work related" and the provider contacted the Employer.

21. After going to the clinic on November 13, 2014, the Claimant met with Rick Hillier. Hillier is the Environmental Health & Safety Specialist for the Employer. Hillier has a Master of Science in Public Health degree, with an emphasis on industrial hygiene and safety. He has worked in the health and safety field for 36 years and is a certified industrial hygienist. Hillier testified regarding his conversation with the Claimant on November 13, 2014: The Claimant told Hillier that he had been working in the MS2 and 3 areas since joining the company, and that he had moved to MS1 about a month earlier. The Claimant indicated that he had been having some soreness in his elbows and *right* shoulder for the past 3-4 weeks since moving to the MS1 area. He mentioned nothing about his left shoulder. The Claimant told Hillier that he not experienced any physical difficulties while working in MS2 or MS3. He first noticed symptoms after moving to MS1. Hillier asked the Claimant about any personal hobbies outside of work. The Claimant said that he played softball and liked to do automobile repairs and restorations. According to Hillier, the Claimant indicated that he was still doing those hobbies.

22. The Claimant and Hillier walked through the MS1 area on November 13, 2014. The Claimant described his various job tasks, including cleaning grease off the main shafts using rags, scouring pads, and a degreaser. The main shafts were laid out horizontally on a pallet. The height of each main shaft on the pallet was between thigh and chest level. Claimant estimated to Hillier that he spent **10-15 minutes** doing that particular cleaning activity per shaft, and that he typically did 4 shafts during his 10 hour shift. There was a very small amount of overhead work required when cleaning the shafts. A crane was used to raise the main shaft so that the underside could be cleaned, which was not accessible when on the pallet. It took a couple of minutes to clean the underside while it was lifted on the crane. Claimant also described the process of heating up rings for Hillier. There are 3 rings for the main shaft. The

Claimant said that the heavier rings were lifted with a crane, and that the smaller rings may be picked up manually or placed on a cart. During his testimony, Hillier confirmed that there had been a 35 pound maximum single person lift in place at the Employer's work site since 2012. The Claimant never suggested to Hillier that he had been injured due to any lifting tasks in MS1. According to Hillier, there was more than one person working in that area so the Claimant would have help if needed. The Claimant and Hillier also spoke with William Gioia on November 13, 2014, while they were walking through MS1. Gioia is a Production Team Lead. Gioia confirmed that he would be willing to make accommodations for the Claimant if needed. Employees of the Employer are cross-trained so that they can "flex" between different production areas in the plant. Hillier asked the Claimant whether he thought he was physically able to perform his normal work shift on November 13, and the Claimant said "yes." The Claimant told Hillier that he did not know if his symptoms were caused by his work.

Medical

23. The Claimant presented to ICC (Injury Care of Colorado) on November 20, 2014, where he was seen by Heather Roth, PA-C (Respondents' Exhibit. D, p. 40). According to Roth, the Claimant's "injury" was bilateral epicondylitis with possible cubital tunnel syndrome, deQuervain's tenosynovitis, and lateral epicondylitis. Work restrictions were noted.

24. The Claimant followed up with various providers at ICC/ Advanced Urgent Care, including Heather Roth, PA-C, Adam Bonner, PA-C, Julie Parsons, M.D., and Anthony Euser, D.O. (Respondents Exhibit D).

25. The medical report from November 13, 2014 documented that the Claimant was complaining of muscle aches in his bilateral arms that was allegedly work related (Respondents' Exhibit C, p.15-17). It further states that the patient was referred to ICC for further evaluation on his bilateral arm pain. On November 20, 2014, the ICC report directed to the Employer's HR (Human Resources) unit states that the Claimant could not perform tasks that required him to use his "arms" overhead or above shoulder height. The Claimant's bilateral extremities were implicated. The report states:

> The patient will need to avoid doing repetitive motion that involves flexion, extension, pronation, and supination of the bilateral elbows. Additionally, he cannot perform tasks that involve repetitive motion or using his arms overhead. The patient will need to be given duties that involve carrying less than 5 pounds per arm. Additionally the patient should not use any vibratory machinery until he is fully healed. The patient should avoid tasks that involve using his arms above shoulder height.

(Claimant's Exhibit 8, p. 64)
The above medical restrictions with indications of work-relatedness are based on the history given by the Claimant.

26. In a report dated November 20, 2014, Dr. Euser stated:

> I saw [Claimant] in the office today. After obtaining a full medical history and doing a focused physical exam on the patient, I determined that his injury is bilateral epicondylitis with possible cubital tunnel syndrome, deQuevain's tenosynovitis, and lateral epicondylitis. These injuries are determined to be work related based on the job description provided to me by [the Employer] in addition to the history given by the patient….This injury will not permit the employee to perform his job as outlined by the job description form. The patient will need to avoid doing repetitive motion that involves flexion, extension, pronation, and supinations of bilateral elbows. Additionally, he cannot perform tasks that involve repetitive motion or using his arms overhead. The patient will need to be given duties that involve carrying less than 5 pounds per arm. Additionally, the patient should not use any vibratory machinery until he is fully healed. The patient should avoid tasks that involve using his arms above shoulder height….

27. Dr. Euser works at the Claimant's PCP (primary care provider) clinic (Platte River Medical Center) as well as at ICC/Advanced Urgent Care. The Claimant's own IME, Edwin M. Healy, M.D., could not render an opinion that the Claimant's elbow problems were work related.

28. Prior to the onset of the Claimant's disabling problems (which Claimant pinpointed as November 13, 201`4), the Claimant was performed his job for the Employer. After he was given medical restrictions by Dr. Euser, the Employer witnesses stated that the restrictions were honored and the Claimant was assigned light duty tasks. The Claimant disagrees, stating that although William Gioia instructed him not to work beyond his restrictions, the Claimant had to work beyond his restrictions. This was the case until his subsequent supervisor, Craig Aragon, assigned the Claimant very light duties as herein below described.

29. The Claimant was referred for physical therapy (PT) in December 2014. He reported pain in the bilateral elbows with some numbness and tingling in his fingers. He also reported shoulder pain (Respondents' Exhibit E]. On January 13, 2015, the Claimant indicated to the physical therapist that the pain in his elbows had **decreased** and his home exercise program as going well (Respondents' Exhibit E, p. 128].

30. In March 2015, Dr. Parsons referred Claimant to Roberta P. Anderson-Oeser, M.D., at CROM (Colorado Rehabilitation & Occupational Medicine) for evaluation and treatment. At that time, the Claimant was complaining of bilateral shoulder and elbow pain, and bilateral hand paresthesia. The Claimant informed Dr. Anderson-Oeser that despite discontinuing repetitive activity, his pain had not resolved. Dr. Anderson-Oeser referred the Claimant to Scott J. Primack, D.O., at CROM for ultrasounds studies. This observation leads the ALJ to infer that it is more likely that the Claimant's continuing upper extremity problems are due to a natural progression of his underlying condition as opposed to a job related aggravation and acceleration of his underlying pre-existing condition.

31. In a report dated April 3, 2015, Dr. Primack commented that the Claimant's problem had been **insidious in onset** (Respondents' Exhibit G, p. 186). Dr. Primack recommended a regenerative solution that may include stem cells and/or PRP. Dr. Primack performed sonogram studies of the Claimant's bilateral shoulders, the results of which he interpreted to show evidence of a small right full thickness rotator cuff tear and a small left partial thickness rotator cuff tear (Respondents' Exhibit G, p. 192). Dr. Primack noted that the Claimant's **right shoulder** was far more symptomatic that his left. Dr. Primack did not offer an opinion that the Claimant's conditions were caused by his employment with the Employer.

32. The Claimant underwent EMG/Nerve Conduction studies of the bilateral upper extremities with Dr. Anderson-Oeser on July 9, 2015 (Respondents' Exhibit. F, pp. 175-177). The findings were noted to be consistent with a right median neuropathy at the wrist of moderate severity, and a mild left median neuropathy at the wrist.

33. On July 13, 2015, Dr. Parsons' diagnoses included medial epicondylitis, lateral epicondylitis, partial thickness rotator cuff tear, and carpal tunnel syndrome. She recommended wrist splints.

34. Dr. Anderson-Oeser recommended that the Claimant see John Schultz, M.D., for right lateral elbow and right shoulder PRP injections (Respondents'Exhibit F, p. 119). The Claimant underwent a PRP injection in his shoulder and right elbow on August 1, 2015 at the Centeno-Schultz Clinic (Respondents' Exhibit H).

35. On August 13, 2015, Ryan Mansholt, PA-C at ICC referred the Claimant for carpal tunnel injections (Respondents' Exhibit D, p. 101). Mansholt indicated that he would be discussing the case with Dr. Parsons (Respondents' Exhibit D, p. 100).

36. On September 2, 2015, a claims representative from Pinnacol sent correspondence to Dr. Anderson-Oeser requesting that she provide documentation under Rule 17 of the Medical Treatment Guidelines supporting a determination of causation (Respondents' Exhibit F, p. 184). The Claimant and Dr. Parsons were copied on that correspondence.

37. The Claimant commenced PT through ICC in early September 2015 (Respondents' Exhibit I). On September 9, 2015, the Claimant told the physical therapist that he was working light duty. Nonetheless, he reported that he was experiencing increased elbow pain with daily activities, such as opening a jar (Respondents' Exhibit I, p. 200). The physical therapist commented that the Claimant's forward posture was causing his chest to be right and for his thoracic spine to have limited mobility (respondents' Exhibit I, p. 203).

38. The Claimant underwent EMG studies of his bilateral upper extremities which were interpreted to be consistent with bilateral carpal tunnel syndrome. Bryan Gary Wernick, M.D., performed bilateral steroid injections on September 24, 2015 for the carpal tunnel syndrome (Respondents' Exhibit J).

39. On October 10, 2015, Dr. Parsons recommended that the Claimant finish PT and follow up with Dr. Anderson-Oeser. Dr. Parsons stated: "I have asked him to follow up with Physical Medicine and Pain Management for any further treatment options. If none – discussed FCE and permanent restrictions." (Respondents' Exhibit D, p. 102). Dr. Parsons' report indicates that the Claimant was under a 15 lbs. maximum restriction at that time.

Joseph Blythe Job Demands Analysis (JDA)

40. Joseph Blythe testified at hearing. He is a vocational evaluator and a certified rehabilitation counselor (CRC). He is registered with the Dept. of Labor in Colorado, and is also certified by the U.S. Department of Labor. He has done social security work for 20 years. Blythe started performing job analyses in 1986, while writing rehabilitation plans for the State of Colorado. Blythe estimated that he had performed around 2,000 JDAs. Blythe was accepted as an expert in the areas of vocational evaluations and job demand analyses – including the evaluation of job tasks.

41. Blythe performed a JDA in this case on October 14, 2015 (Respondents' Exhibit K). Rick Hillier and William Gioia met with Blythe at the Employer's job site on the morning of October 14, 2015. Hillier confirmed that Blythe signed in at 7:00 AM, and that he and Gioia then escorted Blythe to the MS1 area. Blythe observed a full work cycle (completion of a main shaft) in MS1. He signed out at 10:30 AM. Blythe's report reflects: "Information gathered for this report was obtained from Mr. Rick Hillier, HSE Specialist, and this evaluator's on-site evaluation by observing an alternate worker

complete the same work tasks [Claimant] was undertaking during the period under review. One work cycle was studied for this Risk Factors Assessment" (Respondents' Exhibit K, p. 247).

42. When asked how he obtained the information of the job description listed at the beginning of his report, Blythe explained that it was from the written job description, information from the Employer, and his own observations during the JDA. Blythe was asked how he arrived at the job classification of "Medium," noted in his report. He explained that the classification is based upon the U.S. Department of Labor Guidelines, as well as the Dictionary of Occupational Titles (DOT).

43. Claimant's contends that Blythe's analysis was flawed because he did not observe the Claimant performing the job, or have the Claimant present at the time of JDA so that Claimant could describe to him how he had **personally** performed the job. Blythe explained that a correct JDA, it is not based on describing the job. Rather, it is based on doing/watching. Everything is time based. As long as the worker observed was undertaking a complete work cycle, Blythe explained that is what he needs to see. Blythe confirmed during his testimony that he observed one worker for the entire cycle. He explained that he used three stop watches during the JDA: one to time force, one for handling, and one for awkward posture. If the Claimant had performed the work differently or at a different rate of speed than what Blythe observed, Blythe said that it could "possibly" affect his numbers – but cautioned that this could work both ways. For example, if the Claimant was more efficient and worked quicker when he had performed the job tasks in MS1, the 10 pound lift number might go up – but the **force** number would actually go down if he worked more quickly.

44. At the time that Blythe performed the JDA, the Claimant was under a 15 lbs. restriction from Dr. Parsons. Blythe explained that even if Claimant had been present for the JDA, he would not have been able to physically demonstrate the job tasks. Blythe explained that if an individual is under work restrictions, it is his policy not to observe the injured worker unless the injured worker is able to do the tasks he did during the time period under review.

45. Although the Claimant was not present at the time of the JDA in October 2015, Rick Hillier and William Gioia indicated that they had no concerns that job tasks being performed in MS1 that day and observed by Blythe differed in any way from what the Claimant would have previously performed. Hillier and Gioia noted that the Employer's site is an assembly plant and that the substantive job tasks in the assembly process have not changed.

46. During the JDA, Blythe assessed the physical demands of the job tasks and their frequency (Respondents' Exhibit K, pp. 238-242). During his testimony, Blythe further explained how he arrived at the findings under the various sections of his report. Regarding the "Force/Exertion" section of his report, he explained that the measuring of

force is stop watch dictated (Respondents' Exhibit K, p. 242). During the one full cycle time observed, Blythe explained that there was nothing that fits within the force category at the specific levels and times discussed.

47. Blythe was present in the courtroom to hear Claimant's testimony**.** He also reviewed Claimant's Exhibit 25, which contained Claimant's handwritten changes on the JDA report. Blythe was asked how the net result of his analysis might change if the Claimant were given the benefit of the doubt of every single handwritten change made on Claimant's Exhibit 25. Blythe explained that the only thing that he could see that might change would be the amount of force time. Claimant agreed with him on the lifting, but not on the amount of time for carrying. Blythe explained that once an object is lifted, you look at the amount of time that the object is carried. That is "force time". If Claimant were carrying the weight for longer periods of time, the force time would increase.

48. Blythe noted that the Claimant had listed pushing/pulling of 200 lbs. on Exhibit 25. Blythe explained that he had used a force meter during his analysis, and the level of force suggested by Claimant was not present with the pushing and pulling of the cart. The ALJ finds that the Claimant's lifting description, in light of the totality of the evidenced, is not credible.

49. On cross-examination, Blythe provided further testimony regarding his methodology and report. He explained that his report is divided in "Part A" and "Part B". He explained that "Part A" is done the way he did job analyses when working as a vocational counselor. "Part B" is based on part of Rule 17, which includes 5 categories: force, awkward positioning, computer work, vibration, and cold environment. He confirmed that this information comes from Rule 17, Exhibit 5, of the Medical Treatment Guidelines for cumulative trauma disorders, 7 CCR 1101-3.

50. Claimant's counsel suggested on cross-examination that Blythe's JDA did not include an evaluation for stress on the shoulder because Blythe did not specifically use Rule 17, Exhibit 4. Blythe disagreed. He explained that although he did not use Rule 17, Exhibit 4, of the Medical Treatment Guidelines which discusses the shoulder, his assessment considered activities that put stress on the shoulder – including measurements of force, hand held tools, and pushing/pulling. On re-direct, Blythe further explained what observations he made during his JDA regarding physical activities involving the shoulder. His report addresses 3 types of reaching involving the shoulder: reaching above shoulder level, reaching below the shoulder, and reaching at the shoulder. He explained that this identifies how much time the worker's shoulders were out of a neutral position within those ranges. The frequency for the activity of reaching above shoulder level was noted to be "Rare" (<10%).[Respondents' Exhibit K, p. 239]. Reaching below the shoulders was documented as "Frequent" (34-66%). Reaching at the shoulder level was "Occasional" (10-33%). The fact that Blythe did not

utilize Rule 17, Exhibit 4, of the Medical Treatment Guidelines does not mean that he did not evaluate stress on the shoulder as part of his JDA.

51. The assessment for gripping was "Occasional"(10-33%). Claimant's use of impact tools was "Rare" (<10%). Exposure to vibration was also "Rare" (Respondents' Exhibit K, p. 241). Blythe's findings from his risk factor assessment of force and repetition/duration do not support a hazardous exposure level; nor did the findings from assessment of awkward posture and repetition/duration (Respondents' Exhibit K, pp. 242-246). On re-cross, Claimant's counsel inquired whether Blythe's JDA had measured the level of force for the "scrubbing" task performed in MS1. Blythe confirmed that he had measured the level of force with this activity, which was 17-38 lbs. of force of pulling for the "wax on/wax" off activity.

Further Medical

52. The Claimant underwent a MRI (magnetic resonance imaging) arthrogram of his right shoulder on November 19, 2015. The findings included a full thickness tear of the distal supraspinatus tendon and moderate acromioclavicular joint arthritis (Respondents' Exhibit R, pp. 370-372).

53. On November 19, 2015, Dr. Parsons responded to correspondence from the claims representative and provided her current opinion of medical causation in this case. Dr. Parsons wrote: "I have reviewed the JDA on [Claimant] as well as the Rule 17 Cumulative Trauma Guidelines. I do not find any primary risk factors or any secondary risk factors in this job description that would serve to support a more than 51% probability that the bilateral epicondylitis, bilateral carpal tunnel syndrome, and bilateral shoulder injuries are due to his job activities. I would recommend that [Claimant] be discharged from the workers' compensation system and follow-up with his PCP" (Respondents' Exhibit D, p. 121).

Respondents' Independent Medical Examination (IME) by Jon Erickson, M.D.

54. Dr. Erickson is board certified in orthopedic surgery and is level II accredited. He was accepted as an expert in orthopedic surgery and the evaluation of work-related phenomena. Dr. Erickson evaluated the Claimant on April 11, 2016 at the request of Respondents (Respondents' Exhibit L). The appointment was audio recorded. Dr. Erickson confirmed that the appointment lasted 1 hour and 5 minutes. He personally asked the Claimant about his job duties, which are discussed in detail in Dr. Erickson's report (Respondents' Exhibit L, p. 256). The discussion included representations by the Claimant concerning the amount of time that he spent to clean the rust inhibitor off the main shaft, both at waist level and when the main shaft was raised overhead. The Claimant told Dr. Ericson that the cleaning on the palate took between 10-20 minutes and the cleaning overhead took 5-15 minutes (Respondents' Exhibit L, p. 256). Dr. Erickson also reviewed Joseph Blythe's JDA report. Based on

Claimant's description of his job duties as well as the JDA performed by Blythe, Dr. Erickson was of the opinion that primary or secondary risk factors had not been identified to substantiate an occupationally based cumulative trauma disorder. Dr. Erickson discussed Rule 17, Exhibit 5 of the Medical Treatment Guidelines. Besides the lack of occupational risk factors, Dr. Erickson was of the opinion that the Claimant had not been performing the alleged repetitive activities for a sufficient duration of time. Dr. Erickson cited several medical literature sources at the end of his IME report, including the *AMA Guides to the Evaluation of Permanent Impairment,* 3rd ed., Rev.,, the Medical Treatment Guidelines (including both Rule 17, Exhibit 5 and Rule 17, Exhibit 5), a NIOSH study (which he described as the "gold standard" for occupational medicine), and other sources. Dr. Erickson noted that the NIOSH study identifies occupational risk factors for the shoulder for an occupational disease. Dr. Erickson testified that he recalls asking Claimant about the extent of his overhead activities at work. The Claimant indicated that those activities were minimal to mild. The Claimant would go into an overhead position to clean the bottom 15-20% of the shaft. According to Dr. Erickson, that the only real occupational risk factor for disease in the shoulder for which there is strong evidence is awkward posture and repetition/duration.

55. According to Dr. Erickson, even if Blythe's JDA report was not accurate, it still would really not make a significant difference. Dr. Erickson stated: "We are not really even in the ballpark of an occupational disease in this case." He indicated that there is really nothing in Rule 17, Exhibit 4 discussing the shoulder that would alter the outcome of the JDA by Blythe.

56. Dr. Erickson agrees with Dr. Parsons and Dr. Anderson-Oeser that Claimant's upper extremity conditions are not work related.

57. Dr. Erickson rendered opinions regarding the Claimant's IME report of Edwin M. Healey, M.D., as well as regarding Dr. Healey's testimony. Dr. Healey had indicated that Claimant has a type 2 acromion (a down sloping acromion). Dr. Healey had suggested that this down sloping acromion is associated with impingement syndrome, and that the Claimant was at risk for developing bilateral shoulder impingement and rotator cuff tendinopathy and tears (Respondents' Exhibit M, p. 293). Dr. Erickson indicated the notion of subacromial impingement syndrome does not necessarily correlate with rotator cuff syndrome. Dr. Erickson does not believe that Claimant was predisposed to developing an occupational disease in the shoulder, as suggested by Dr. Healey. Dr. Erickson agreed with Dr. Healey's testimony to the extent that Dr. Healey was of the opinion that the Claimant's bilateral rotator cuff tears and impingement syndrome pre-existed his employment with the Employer herein.. Based on the Medical Treatment Guidelines as well as Blythe's JDA, Dr. Erickson is not persuaded that Claimant's pre-existing shoulder condition was aggravated or accelerated by his employment with the Employer.

58. Dr. Erickson explained that if the Claimant's bilateral upper extremities were work related, he would have expected his symptoms to improve when he was doing light duty or after he stopped working for the Employer. Yet, the Claimant was reporting a pain level of 9/10 to Dr. Robinson in late September 2016 – several weeks after he had stopped working for the Employer.

Claimant's IME by Edwin M. Healey, M.D.

59. Claimant was evaluated by Dr. Healey on May 27, 2016 at the request of Claimant's counsel (Respondents' Exhibit M). During his testimony, Dr. Healey rendered opinions as to causation of the Claimant's wrist condition, elbow condition, and shoulder condition. Dr. Healey was of the opinion that the Claimant's elbow condition (bilateral epicondylitis) is **not** work related within a reasonable degree of medical probability; the wrist condition (mild bilateral carpal tunnel) is **probably** work related; and, the bilateral shoulder condition is work-related. Dr. Healey indicated that the Claimant had a pre-existing shoulder condition but that his job duties aggravated or accelerated the need for shoulder surgery. Dr. Healey cited no medical literature in his report.

Additional Chronology

60. On June 23, 2016, while the Claimant was still working at for the Employer, he started working for another company, Aspen Linen Company, LLC, which is an industrial laundry service. Wage records reflect that the Claimant was working between 24 ½ - 40 hours per pay period (Respondents' Exhibit V).

61. On August 6, 2016, Dr. Euser (PCP) from Platte River Medical Clinic issued a note addressed "To whom this may concern:" "I saw [Claimant] in the office today and due to his *personal injuries* is on some work restrictions. Patient is unable to lift more than 5 lbs, is unable to lift arms above his head and no use repetitive motions…" (Respondents' Exhibit P, p. 354). This note contradicts Dr. Euser's opinion of November 20, 2014, as illustrated in Finding No.26 herein above. Claimant argues that Dr. Euser must have mis-spokne on August 6, 2016, when he noted that the Claimant's visit was for his **personal** injuries. Interestingly, Dr. Euser repeats the same basic work restrictions that he gave the Claimant on November 20, 2014, which the ALJ infers and finds was not Dr. Euser mis-speaking. The ALJ infers and finds that Dr. Euser has demonstrated that he knows the difference between **work-related and personal** injuries. Indeed, Dr. Euser's last characterization of the Claimant's injuries is "personal" injuries. For this reason, the ALJ finds the August 6, 2016 note of Dr. Euser more credible than his November 20, 2014 note.

62. On August 8, 2016, Dr. Anderson-Oeser directed correspondence to the claims representative at Pinnacol: "…*I initially saw the patient on March 16, 2015. At that time he informed that his job activities included repetitive type activities…I did not*

have a job description analysis to determine whether or not the patient was in fact performing excessive repetitive type motions that would cause his upper extremity symptoms. I recently received the Independent Medical Evaluation performed by Dr. Jon Erickson on 04/11/2016. There apparently has been a job description analysis performed and based on the analysis the patient does not meet the criteria for cumulative trauma disorder. Dr. Erickson noted multiple discrepancies in the medical records regarding the patient's overall complaints and physical exam findings. He also noted that the patient had been placed on substantial work restrictions and despite this his pain did not significantly improve; therefore, a causal relationship between his work and upper extremity symptoms could not be made. After reviewing the job demands analysis and Dr. Erickson's report, it is my opinion that within a reasonable degree of medical probability that Mr. Salazar's upper extremity complaints were not caused or aggravated by his work activities…" (Respondents' Exhibit F, p. 185).

63. The Claimant went on FMLA (Family Medical Leave Act) leave from the Employer in mid-August 2016. At that time, he began receiving short term disability (STD) benefits. The Employer's disability policy is administered by Unum (Respondents' Exhibit W). In addition to receiving STD benefits, **the Claimant has continued to work for Aspen Linen Company.** He was vague about his job duties there but he implied that they were lighter than his job duties for the Employer.

64. The Claimant was evaluated by Mitchell S. Robinson, M.D., at Panorama Orthopedics on September 26, 2016 (Respondents' Exhibit S). The Claimant's PCP, Dr. Euser, referred him to Dr. Robinson. Dr. Robinson noted: "…presents to clinic today for evaluation of his bilateral shoulder pain. He states that his symptoms have been ongoing since October 2014. He does not recall one specific event. He believes his pain is a cause of repetitive movement. He notes that his pain is a 9/10 … His pain is worsened with pushing, pulling, lifting, and activities for an extended period of time…" (Respondents' Exhibit S, p. 380). When the Claimant was reporting a pain level of 9/10 (close to the unbearable level), he was working at Aspen Linen. He had stopped working for the Employer nearly 6 weeks earlier. The ALJ finds the Claimant's reported pain level of 9/10 lacking in credibility.

65. The Claimant underwent right shoulder surgery on November 4, 2016 with Dr. Robinson (Respondents' Exhibit T). The Claimant's surgery was covered under his private health insurance, United Healthcare. He has been attending physical therapy post-operatively (Respondents' Exhibit V). Since the surgery, the Claimant has continued to work for Aspen Linen.

Employer Witnesses

66. William Gioia has been employed as a Production Team Leader with the Employer for approximately 7 years. His job duties include, among other things, the supervision of two of the production assembly areas: The Drive Train Zone (which includes BH1, MS1, MS2, and MS3); and the Hub Zone. Gioia was the Production Team Leader of the night shift from late 2014 – July 2015. The night shift is 4 days a week, 5:00 PM – 3:30 AM. Employees on the night shift are given two 15 minute breaks, a 30 minute lunch break, and a 6 minute stretch break. Gioia switched over to Team Leader for the day shift in July 2015, when an opening arose. Gioia confirmed that he was the Claimant's Production Team Leader for approximately 9 months. Gioia is personally familiar with the MS1 area. He indicated that the Claimant worked in the MS1 area from approximately September 2014 until late spring or early summer of 2015. Gioia explained that production assemblers are cross-trained. For example, if you are in MS-1, you are cross-trained in BH1, MS2, and MS3. That way, the employees are able to move back and forth between the areas to provide assistance when needed.

67. Gioia was asked how production levels are tracked by the Employer. He explained that a weekly report is sent out regarding production build plans. It is also available to the employees on a large television screen. According to the Claimant, he was completing between 3-4 main shaft units per shift in MS1 in the fall of 2014. According to Gioia, this information was **not** correct: In the fall of 2014, MS1 was producing anywhere between 1 to 2 ½ main shaft units. This is documented in production build plans. Gioia confirmed that he does have personal knowledge of the build plan numbers because he is the one that sets the pace. When asked specifically about the month of November 2014, Gioia confirmed that 2 ½ units were being completed per shift in MS1. Gioia indicated that during the last two weeks at 2014 and the first week of 2015 no units were produced in MS1. He explained that for the 2 of the 3 weeks, the company was shut down for the holidays.

68. Gioia offered testimony to refute the Claimant's assertion that the Claimant was the only production assembler working in the MS1 area during the time frame of September 2014 through February 2015. Gioia explained that he is able to determine the number of employees assigned to an area because Team Leads look at labor transactions every day: At the beginning of each shift, employees add "job on" work on to the manufacturing orders for the area they are working on. That is tracked on a weekly basis. According to Gioia, there were 2 people assigned to the MS1 area between September 2014 and February 2015. Gioia explained that BH1 and MS1 work in parallel. He testified that there were 2 employees in BH1 and 2 employees in MS1. On occasion according to Gioia, there would be 3 employees total assigned to the 2 areas, and they could move back and forth as necessary. Gioia was asked about the Claimant's testimony that the MS1 area had been short staffed in November 2014.

Gioia stated that they were actually overstaffed in light of their low production rate at that time.

69. Gioia was asked about the job task of cleaning rust inhibitor off of the main shift, using a “wax on/wax off” motion. Gioia stated that although he has not personally performed that job task, he has observed that job task being performed hundreds of times. He agreed with the general description provided by Claimant of the wax on/wax off motion. Gioia was asked how much time that task would be performed at waist level. He said on average, 10 minutes. On occasion, it may take 15 minutes. According to Gioia, the overheard work involved in cleaning the underside shaft, takes approximately 3 to 5 minutes to clean the underside shaft.. Gioia stated that Yamazumi charts are posted on the production floor. These charts are an aid for the Team Leader, QPI, (Quality Processing Inspector) or even a team member to determine how long a task should take. Prior to being a Team Leader, Gioia was a Production Engineering Technician. As the Engineering Technician, it was his job to do the time studies.

70. Gioia explained Claimant’s Exhibit 24, which was the set of photocopies. He indicated that the photo labeled as page # 6 of Exhibit 24 shows an individual cleaning the bottom portion of the main shaft, removing the rust inhibitor. Gioia confirmed that the height of the main shaft can be adjusted, to be raised or lowered to the height that is most comfortable to the individual. Gioia explained how the cleaning of the rings in MS1 differs from the cleaning of the main shaft. The cleaning of the front contact seal ring and the rear contact seal ring is quite easy, according to Gioia. They are packaged with oil, which is wiped off easier without much force. According to Gioia, it takes approximately 1 to 1 ½ minutes to clean the oil off the rings and there are 3 rings per main shaft. According to Gioia, cleaning of the rings does not involve any overhead work. Gioia was also asked about the top page of Exhibit 24, where the Claimant had written weights next to the 3 rings. According to Gioia, the weight of 40 lbs., listed for the front ring is incorrect. The actual weight of that ring is 33.2 lbs.

71. Gioia explained that after a ring is heated to appropriate temperature, a buzzer goes off. The ring is then lifted via a two person lift onto a cart and is then wheeled over to the main shaft. Gioia agrees with the Claimant’s description of then “threading the needle” of the rings onto the main shaft. Gioia was asked how long it takes to “thread the needle” and place a ring onto the main shaft. He indicated that the front ring would take the longest, which would be 20-30 seconds. The other two rings would take 15-20 seconds to place. While a ring is heating, Gioia indicated that the employees in MS1 may be cleaning up trash in the area or preparing the next ring to be heated. They may also just be standing around.

72. Gioia commented on the Claimant’s testimony regarding an impact driver to place bolts into sockets in the MS1 area. According to Gioia testified that this task would take between 3 and 4 minutes per cycle.

73. Gioia testified regarding pages #9 and #10 of Exhibit 24. He explained what tasks were being performed on the 2 pages, which are performed in BH1. Gioia testified that the task portrayed on page 9 (putting in the pins in) takes 5-10 seconds per cycle.

74. When he was the Production Team Leader on the night shift, Gioia was made aware of the Claimant's work restrictions. Gioia personally discussed the restrictions with the Claimant and worked with him to accommodate those restrictions. Gioia would remind the Claimant not to lift anything, for example, exceeding his weight restriction in place at that time. According to Gioa, the Claimant was aware that other individuals were always available to assist him – whether it be another person assigned to MS1 or BH1, or a QPI. Gioia made sure Claimant understood that he was only to do tasks that he was comfortable performing. According to the Claimant, he had to work alone on many occasions. The ALJ resolves this conflict in the testimony in favor of Gioia because Gioia's testimony is consistent with the totality of the evidence and the Claimant's testimony in this regard is not persuasively corroborated or cionsistent with the totality of the evidence.

75. Gioia indicated that while the Claimant was under restrictions, he was allowed to do other light tasks such as QDA (inspections), do keyboard entries, or do craning with an electronic remote control or be a spotter for someone else doing craning. He also laid wires in a cabinet. The Claimant was allowed to sit on a stool for that task. The height of the stool could be raised and lowered as desired. According to Gioia, the Claimant never suggested to him that his work restrictions were not being followed.

76. Gioia met with Joseph Blythe and helped set him up in MS1. He also reviewed Blythe's report. According to Gioia, the JDA report accurately depicted the job duties of a production assembler in the MS1 area. Gioia confirmed that the work content in MS1 has not changed in the time frame that he has worked at the factory. The Claimant's version of his job duties differs from Gioia's version. The ALJ finds Gioia's version of the job duties supported by the totality of the evidence, whereas the Claimant's version is **not** persuasively supported by extrinsic evidence.

77. Craig Aragon, a witness presented by the Respondents, testified that he has been employed with the Employer since October 2010. From October 2010 - July 2015, he worked as a Quality Processing Inspector (QPI). From July 2015 to the present, Aragon has been a Production Team Leader on the night shift. He is personally familiar with the MS1 area. Aragon confirmed that William Gioia was the Production Team Lead on the night shift immediately prior to him. Aragon assumed the role of Team Lead on the night shift when Gioia moved to the day shift, after a Team Lead position opened up there. Aragon confirmed that he was the Claimant's supervisor on the night shift from July 2015 – August 2016, and that the Claimant was a "direct report" to him. Aragon would regularly see the Claimant during the night shift, both at the

beginning of the shift as well as when he made his rounds throughout the night. Aragon was aware of the Claimant's pending worker's compensation claim. Aragon confirmed that the Claimant was working light duty throughout the time frame July 2015 – October 2016, when he was the Claimant's supervisor. When asked about the light duty that Claimant was performing, Aragon testified that he had the Claimant doing "review work" or quality inspections – including quality data entries. The Claimant would type on a keypad and do visual inspections. According to Aragon, the Claimant never suggested from July 2015 – October 2016 that his work restrictions were not being accommodated. Aragon confirmed that the Claimant last worked for the Employer in August 2016, but was uncertain of the exact date. On cross examination, Claimant's counsel asked if the Claimant was also training other employees on occasion in the MS1 or MS2 areas during that time span of July 2015 – August 2016. Aragon indicated that Claimant may train with verbal training instructions. According to Aragon, to his knowledge, the Claimant never did any "hands on" training in MS1 or MS1 during the time frame of July 2015 – August 2016. Any training would have been limited to verbal instructions.

Claimant's Testimony

78. According to the Claimant, the heavier rings were lifted with the crane. But he lifted the 3 rings manually and he used the crane to lift the heavier bearings.

79. The Employer's official Job description states that employees "must occasionally lift and/or move up to 50 pounds" (Respondents' Exhibit O, p. 330). The job description was given to the Claimant and he signed for it on June 23, 2014 upon officially being hired by the Employer. Claimant and Ian Dereus testified that the rings were installed by hand as a single person lift because it was difficult to "thread the needle" (shaft) without damaging the shaft of the nacelles. When clarification was requested concerning whether this changed to a two man job, the Claimant stated that it was not until 2015. The ALJ finds that the totality of the evidence concerning actual job tasks, especially when the Claimant was performing modified duties, differs from the official description.

80. According to the Claimant, Gioia may have stated that he was willing to make accommodations but, according to the Claimant, the Employer was provided with the medical restrictions from ICC, yet they continued to assign him to the MS1 area, which required him to perform allegedly repetitive motions and lifting above 5 lbs. The Employer witnesses dispute that Claimant was required to violate his medical restrictions. Indeed, the JDA, the Respondents' medical experts, and the Employer's witnesses have all indicated that the Claimant's job duties after his restrictions werw modified and/or help was available. The ALJ finds the former witnesses more credible and persuasive than the Claimant in this regard.

81. The Claimant contends that he did **not** discontinue the repetitive activities until he was taken off the MS1 assignment in July 2015 (8 months after being prov*ided* with restrictions). The ALJ infers and finds that the totality of the evidence, especially the weight of credible medical opinion, does **not** support that the Claimant was performing injurious **repetitive** activities during these eight months. .

82. Dr. Primack was of the opinion that the Claimant's problem had been "insidious" in onset. "Insidious" means that it proceeded in a gradual, subtle way, but with harmful effects. *Oxford Dictionary, Oxford University Press.* This opinion can support a "natural progression" of an underlying, pre-existing condition theory, however, it adds **nothing** to the theory of "aggravation and acceleration" of a pre-existing condition.

83. The Claimant argues that the evaluation by Joseph Blythe, who observed a full work cycle as it was being performed by several workers in MS1 one year after the Claimant was injured was somehow defective because it was done a year later. There is no credible support for this argument in the totality of the evidence, other than Claimant's unsupported testimony in this regard. The Claimant makes a point that Blythe did not observe how the work was being performed by Claimant. This argument creates a Catch-22 situation because the Employer cannot have a restricted worker doing tasks from which he is restricted. Blythe did he ask the Claimant how he performed the job, however, Blythe heard the entirety of the Claimant's testimony wherein the Claimant described how he performed his job and Blythe did not change his opinion nor did he indicate that this affected the results of the JDA.. According to the Claimant and Dereus, the Claimant was performing the job on his own, without assistance, with the exception of the craning, from August 2014 through February 2015, when Dereus joined him in the MS1 area.

84. Blythe used a force meter to determine the force of pushing the cart with the bearing cover. On cross examination, however, Blythe indicated that he had only one bearing cover on the cart. According to the Claimant, he would load up to 4 bearing covers on the cart. The Claimant's testimony in this regard does not persuasively refute the results of Blythe's JDA.

85. The Claimant downplayed the fact that he continued playing softball, working on cars and working at the Alpine Laundry. He could not recall the effects of a prior auto accident. At the time of his post-offer employment physical on January 3, 2014, which was required by the temporary staffing agency. the findings on physical examination included decreased range of motion in both shoulders [Respondents' Exhibit O, p. 322]. Crepitus was noted in the right shoulder as well as the right hand/wrist [Respondents' Exhibit. O, p. 324]. The Claimant was noted to have decreased range of motion with extension in both the cervical and lumbar spine. According to the Claimant's testimony, he had no problems prior to claiming a work-related occupational disease to the shoulder, elbows and writs. All of this adds up to a

olack of credibility in the Claimant's claimed occupational disease, allegedly aggravated and accelerated by the conditions of his employment, to which he would not have been equally exposed outside of work.

Claimant's Rebuttal Witness

86. Ian Dereus was called as a rebuttal witness by the Claimant. Dereus testified by telephone. Dereus began working at for the Employer in September 2014. He initially worked in BHI (Bearing House 1). Dereus thought that he worked in BH1 until February 2015, when he was reassigned to MS1. According to Dereus, he trained with the Claimant in MS1 on the night shift. Dereus thought that the Claimant worked in MS1 until the middle or the beginning of 2016. Claimant also asked Dereus about job tasks in the MS2 and MS3 areas. Dereus was asked on direct exam how many units he thought he would typically compete in a shift "including reworks and prototypes", and he said that the number was 4 ½ - 5 units per shift. Dereus suggested that now the number of main shafts completed per shift is less. Dereus' testimony regarding the number of units completed per shift in the fall of 2014 is in conflict with the testimony of both the Claimant and Gioia. When asked if it is common practice for employees working in either BH1 or MS1 to move back and forth when needed, Dereus agreed – but said that in the fall of 2014 they were "completely short staffed at the time." His testimony in this regard is in conflict with the testimony of William Gioia. When asked on cross exam if 20 main shafts were being produced per week in the fall of 2014 (4 per day), Dereus testified that he thought it was more than that – but he could not provide a number. Dereus said that when he was training with Claimant in the MS1 area, he was physically helping the Claimant perform the job duties in MS1. The time frames referenced by Dereus during his testimony were confusing: At one point, he said that he worked with Claimant in MS1 from February 2015 until 2016. This is in conflict with Craig Aragon's testimony that the Claimant was performing light duty from July 2015 – August 2016, which included quality inspections. The ALJ resolves this conflict in favor of Craig Anderson's testimony because it is more detailed and consistent with the totality of the evidence. On cross-exam, Dereus then said that after Claimant "got hurt", the Employer "put him just doing QDA, they put him in MS3." Dereus acknowledged that when the Claimant was doing QDA, the Claimant's role in MS1 was limited to the Claimant being a "spotter" for crane work. This corroborates Anderson's and Gioia's testimony. Dereus also testified on cross-exam that when he was still working in BH1, he would move over or help out to MS1 and help Claimant out – including cleaning of the main shafts and rings for Claimant. Claimant's counsel asked Dereus on direct exam about "prototypes". When asked on cross-exam if he agreed that there was only one prototype at the Employer's site, Dereus said he didn't know. Overall, the ALJ does not find Dereus' testimony regarding production levels credible because it is contrary to the totality of the evidence and sometimes contradicted by the Claimant's testimony. Dereus' testimony concerning the Claimant's light duty job duties is corroborated by the totality of the evidence and, therefore, credible.

Ultimate Findings

87. As found herein above, the expert opinions of IME Dr. Erickson, Dr. Anderson-Oeser, and Dr. Parsons are more persuasive and credible than opinions to the contrary, which are cursory and without persuasive supporting reasoning. In fact, Dr. Euser essentially contradicted his November 20, n2014 opinions in his August 6, 2016 note. Indeed, Dr. Erickson credibly addressed Blythe's JDA, whereas other experts did not deal with the JDA. Indeed, as found herein above, Blythe's JDA is credibly supported by all of the Employer's witnesses and it has not been persuasively undercut by the Claimant's arguments, which are based on the Claimant's self serving description of how he did his job in a manner different than the way it was meant to be done and in a manner that does not make a lot of sense in light of the totality of the evidence.. Indeed, the totality of the Claimant's testimony contains inconsistencies and anomalies that the Claimant failed to persuasively resolve. For these reasons, the ALJ does **not** find the Claimant's testimony persuasive or credible.

88. The Claimant's expert IME, Dr. Healy, was of the opinion that the Claimant's elbow condition (bilateral epicondylitis) is **not** work related within a reasonable degree of medical probability; the wrist condition (mild bilateral carpal tunnel) is **probably** work related; and, the bilateral shoulder condition is work-related. Dr. Healey indicated that the Claimant had a pre-existing shoulder condition but that his job duties aggravated or accelerated the need for shoulder surgery. Dr. Healey cited no medical literature in his report. Dr. Healy's overall opinions were lukewarm and unsupported by any persuasive reasoning. From a medical standpoint, the ALJ finds that the ultimate opinions of IME Dr. Erickson, Dr. Parsons and Dr. Anderson-Oeser are essentially dispositive of the lack of compensability of a work-related occupational disease.

89. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the ultimate opinions of Dr. Erickson, Dr. Parsons and Dr. Anderson-Oeser on causality; and, to reject the opinions of Dr. Healey and all other opinions to the contrary.

90. The Claimant's theory of compensability of an alleged occupational disease is that the Claimant's job duties with the Employer aggravated and accelerated his pre-existing shoulder, elbow and carpal tunnel conditions. As found, the Claimant underwent a post-offer employment physical on January 3, 2014, which was required by the temporary staffing agency. The findings on physical examination included decreased range of motion in both shoulders [Respondents' Exhibit O, p. 322]. Crepitus was noted in the right shoulder as well as the right hand/wrist [Respondents' Exhibit. O, p. 324]. The Claimant was noted to have decreased range of motion with extension in both the cervical and lumbar spine [*Id.* p. 324]. Despite these findings, the Claimant was allowed to do his job and continued doing his job until medical restrictions were

placed on him. On June 23, 2016, while the Claimant was still working at for the Employer, he started working for another company, Aspen Linen Company, LLC, which is an industrial laundry service. He continues to work at Aspen Linen Company, OLLC. Wage records reflect that the Claimant was working at Aspen Linen between 24 ½ - 40 hours per pay period. The Claimant has continued playing softball and he has continued doing substantial work on cars. He downplayed any potential adverse effects from all of these activities. He could not recall the effects of an auto accident in which he was involved, prior to November 2014.

91. It is the Claimant's burden to prove, by preponderant evidence (that it is more likely than not) that his job duties with the Employer caused an aggravation and acceleration of his pre-existing bilateral shoulder, elbow and wrist conditions, which resulted directly from his employment or the conditions under which his work was performed, which followed as a natural incident of the work and as a result of the exposure occasioned by the nature of his employment, and which can be fairly traced to his employment as a proximate cause of the alleged aggravation and acceleration and which does **not** come from a hazard to which he would have been **equally** exposed outside of the employment. Without corroboration, the Claimant claims to have done his job differently than the Employer witnesses and the official job description indicate how it should be done and, if done, as the Employer witnesses said it should be done it would not cause an aggravation and acceleration of the Claimant's bilateral shoulder, elbow and wrist conditions, as supported by the JDA, Dr. Erickson, Dr. Parsons and Dr. Anderson-Oeser. As found, the Claimant was not credible in his job description. For these reasons, the Claimant has failed to prove that it is more likely than not that his job duties with the Employer aggravated and accelerated his pre-existing, bilateral shoulder, elbow and wrist conditions, as opposed to factors outside of work. Therefore, the Claimant has failed to prove a compensable occupational disease by a preponderance of the evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines

the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the expert opinions of IME Dr. Erickson, Dr. Anderson-Oeser, and Dr. Parsons were more persuasive and credible than opinions to the contrary, which were cursory and without persuasive supporting reasoning. Dr. Euser essentially contradicted his November 20, 2014 opinion in his note of August 6, 2016, by characterizing the Claimant's injuries as **personal.** Indeed, Dr. Erickson credibly addressed Joseph Blythe's JDA, whereas other experts did not persuasively deal with the JDA. As found herein above, Blythe's JDA is credibly supported by all of the Employer's witnesses and it was not persuasively undercut by the Claimant's testimony and/or arguments, which were based on the Claimant's self serving description of how he did his job in a manner different than the way it was supposed to have been done in light of the totality of the evidence. As found, the totality of the Claimant's testimony contained many inconsistencies, anomalies and painted an overall picture that did not add up. For these reasons, the ALJ did **not** find the Claimant's testimony persuasive or credible.

b. The Claimant's expert IME, Dr. Healy, was of the opinion that the Claimant's elbow condition (bilateral epicondylitis) was **not** work related within a reasonable degree of medical probability; the wrist condition (mild bilateral carpal tunnel) was **probably** work related; and, the bilateral shoulder condition was work-related. Dr. Healey indicated that the Claimant had a pre-existing shoulder condition but that his job duties aggravated or accelerated the need for shoulder surgery. As found, Dr. Healey cited no medical literature in his report. Dr. Healy's overall opinions were lukewarm and unsupported by any persuasive reasoning. From a medical

standpoint, the ALJ found that the ultimate opinions of IME Dr. Erickson, Dr. Parsons and Dr. Anderson-Oeser were essentially dispositive of the lack of compensability of a work-related occupational disease. As found, Dr. Euser contradicted his November 20, 2014 opinion, concerning work-relatedness, in his note of August 6, 2016, wherein he characterized the Claimant's injuries as **personal**.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the ultimate opinions of Dr. Erickson, Dr. Parsons and Dr. Anderson-Oeser on causality; and, to reject the opinions of Dr. Healey, the November 20, 2014 opinion of Dr. Euser, and all other opinions to the contrary.

Occupational Disease

d. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). As found, the Claimant's job duties with the Employer did not cause an aggravation and acceleration of his pre-existing bilateral shoulder, elbow and wrist conditions, which resulted directly from his employment or the conditions under which his work was performed, which followed as a natural incident of the work and as a result of the exposure occasioned by the nature of his employment. His bilateral shoulder, elbow and wrist conditions cannot be fairly traced to his employment as a proximate

cause of the alleged aggravation and acceleration, and the conditions do **not** come from a hazard to which he would have been **equally** exposed outside of the employment.

Compensability

e. A compensable injury, or occupational disease, is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a pre-existing condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a pre-existing condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant failed to prove that it is more likely than not that his job duties with the Employer aggravated and accelerated his pre-existing, bilateral shoulder, elbow and wrist conditions, as opposed to factors outside of work. Therefore, the Claimant has failed to prove, by a preponderance of the evidence, a compensable occupational disease.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO),

March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to prove a compensable occupational disease arising out of his job duties with the Employer.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this_____day of March 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of March 2017, electronically in PDF format, addressed to:

Division of Workers' Compensation
cdle_wcoac_orders@state.co.us

ISSUES

I. Did Claimant prove by a preponderance of the evidence that her right shoulder condition is a compensable injury which occurred during the course and scope of her employment?

II. If such compensable shoulder injury occurred, has Claimant shown by a preponderance of the evidence that the medical benefits being sought, including the surgery proposed by Dr. Jinkins are causally related to, and reasonably necessary to treat Claimant's shoulder condition.

III. If such compensable shoulder injury occurred, did Claimant subsequently aggravate her compensable condition by moving her home in August, 2016, such that such aggravation constitutes a superceding, intervening cause which would thereby sever the nexus between her compensable injury and the medical benefits now being sought.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was injured on March 3, 2016 while working as a baker at King Soopers. The Claimant testified that at approximately 3:30 a.m., she was pulling a stack of 100 baking sheets when the top sheet flipped up causing her to lose her balance, stumble back and jerk her right shoulder backwards. The baking sheets had a lip around the edge of the sheets. The Claimant demonstrated at hearing that when the pan flipped up, she stumbled and her arm jerked backward while with her hand raised at or slightly above the height of her head.

2. She initially felt a pull in her right shoulder which the Claimant described as uncomfortable. After the incident, the Claimant testified that it "just didn't feel right". The Claimant explained that the stack of baking sheets sat on a four wheeled frame. She estimated that the stack was approximately two and a half to three feet high. She had to grab and pull on the lip of the top pan to pull the stack out from the table it rested against in order to then push the stack out the back door. These pans were then exchanged for new, clean ones which had arrived.

3. The Claimant testified that after the incident occurred, she continued to move the stack of dirty pans out through the back door of the bakery and then pulled in a new

stack. As she was doing this, she encountered Devin, the night crew foreman, who was one of her supervisors, at the bailer and told him that she thought she may have hurt her shoulder pulling the pans. He gave her no direction as to what to do so she continued working her shift. When her shoulder remained uncomfortable and still did not feel right, she paged Bryan, the general merchandise manager, who was also one of her supervisors.

4. This incident occurred in the middle of the night, and there were no co-workers in the bakery at the time. Her immediate bakery supervisor, Rodney Vanningen was not in the store. Therefore, she went to her other supervisors to report the injury. 5. After explaining to Bryan what happened, he told the Claimant that he needed to call Christine, one of the assistant store managers, at home to determine what to do next. He directed the Claimant to go upstairs to the break room and get some frozen peas to put on her shoulder. He told the Claimant to wait in the break room until he talked to Christine and received further direction as to how to deal with the issue. The Claimant did as she was told and stayed in the break room until approximately 8:00 a.m., waiting for Bryan to return. She testified that he came back once between 3:30 a.m. and 8:00 a.m. to check on her.

6. Claimant reasonably believed that she was to wait in the break room until Bryan came back or Christine began her shift and came to speak with her. When neither Bryan nor Christine returned, the Claimant went downstairs and learned that Bryan had left for the day and that Christine was not yet at work. Shannon Jones, the store manager, had come into the store at approximately 7:00 a.m. but had left for a manager meeting in Pueblo. She did not speak to Shannon about the incident because she assumed that Bryan had already spoken to him about it. She testified that she never saw Christine that day.

7. The Claimant then notified Curtis, the front end manager, of the incident. Curtis helped the Claimant fill out an incident report (Claimant's Ex 1). The Claimant was directed to seek care at Concentra if she felt like she needed to see a doctor. The Claimant testified that she had observed the same thing happen to her bakery manager, Rodney Vanningen, when he grabbed the lip of the top baking sheet and it slipped and flipped up when he attempted to pull the stack towards him. The ALJ finds that under the circumstances Claimant was under right after her injury, that she took all reasonable and appropriate steps to promptly notify her chain of command of this injury.

8. The Claimant testified that when her shoulder did not improve in the ensuing days, she sought treatment at Concentra. The Claimant saw Dr. Jones at Concentra on 3/7/16. Dr. Jones noted that the Claimant injured her shoulder "pulling a cart (on wheels) with a stack of baking sheets. While pulling backwards the top sheet popped off. To avoid it she jerked back with both arms though more the right. Sharp pain right shoulder more in post/triceps area. she is a little better, she does have hx of WC injury right shoulder/knee injury 1-14. The right shoulder healed with PT and no surgery. Right knee did require meniscal repair Dr. Simpson. The shoulder has done fine since."

9. Dr. Jones also noted that the history and mechanism of injury were obtained directly from the patient, unless otherwise noted, and appears to be consistent with presenting symptoms and physical exam. Dr. Jones referred the Claimant to physical therapy.

10. Claimant returned to work without restrictions. On 3/10/16, the Claimant was in the back freezer of the store while a vendor was delivering products, when a stack of boxes fell on her right shoulder and arm. Store management was notified of this occurrence. The Claimant didn't know if this incident made her shoulder condition worse, because her shoulder was still sore from the 3/3/16 incident.

11. On 3/10/16, the same day as the box incident, the Claimant was again seen at Concentra for her right shoulder pain. Dr. Jones noted on 3/10/16 that the Claimant was suffering from increased pain. He also noted the box incident and stated "unfortunately new injury right shoulder. States a stack of boxes fell on top of right shoulder while she was standing, now some increase in pain. States as above not much better anyway as was going to see me today anyway for something for pain. I placed her at MMI for today's injury right shoulder contusion". He further noted that the contusion from the boxes falling "obviously did not help. However, I do not believe that injury in itself will delay MMI of this injury". 12. Dr. Jones referred the Claimant to Dr Wiley Jinkins, an orthopedic surgeon, for treatment of her right shoulder pain. The Claimant underwent an MRI of her right shoulder on 5/4/16 which showed an oblique complete full-thickness tear of the supraspinatus begins just proximal to the footprint insertion and extends over a 22 X 19 mm area with mild reactive the muscle belly. Moderate severe infraspinatus and subscapularis tendinosis with areas of intrasubstance degeneration and fraying but no definable tear. It further showed moderate biceps tendinitis with chronic appearing moderate partial-thickness longitudinal tearing of the intra-articular segment. No subluxation of the tendon on these static images. Finally, it revealed narrowing of the acromion outlet with moderate subacromial subdeltoid bursitis.

13. In an attempt to avoid surgery, Dr. Jinkins gave the Claimant three steroid injections which afforded the Claimant good, albeit temporary, relief of her right shoulder pain. When her pain returned, Dr. Jinkins recommended that the Claimant undergo surgery to repair her torn rotator cuff. In September of 2016, the Claimant's shoulder pain flared up while moving from her apartment to a house. The Claimant testified credibly that she did not lift anything heavy and that she had help from friends to move heavy boxes or furniture. She lifted nothing heavier than the restrictions placed on her by Dr. Jones and Dr. Jinkins.

14. The Claimant did sustain a preexisting injury to her right shoulder on 3/14/14 while working for Environmental Control Systems, when she fell over a forklift onto her right side injuring her right shoulder and right knee. The Claimant was treated by Concentra as well as by Dr. Michael Simpson, an orthopedic surgeon, for both her right knee and shoulder. The Claimant underwent physical therapy on her shoulder after the injury. The 6/5/14 note from Concentra reflects that the Claimant estimated her

shoulder was 98% better. The physical therapy note from that same date reflects the patient stated her shoulder is improving. She has "very little pain, 1/10 level". The physical therapist noted that the Claimant was improving significantly in her shoulder.

15. On 7/15/14, the Claimant again saw Dr. Simpson, for both her knee and right shoulder. He noted that he did not think that the Claimant needed any imaging studies on her right shoulder and did not think the Claimant had any signs or symptoms of rotator cuff tear. He felt that the Claimant's shoulder pain was more a result of impingement. He opined that the Claimant would probably benefit from a subacromial injection which he planned on doing at the time of her right knee surgery.

16. No MRI study has been performed prior to May 4, 2016. The Claimant testified that she had a flare up of right shoulder pain after her right knee surgery on 9/11/14, when she was using crutches for mobility after the surgery. The Claimant testified that this pain, which is referenced in her primary care records on 11/3/14, resolved by December 2014. The Claimant testified that she had no pain in her right shoulder between December 2014 and 5/3/16 nor did she receive any medical treatment to her right shoulder during that time frame. The Claimant testified that she also suffers from diabetes but has never had any problems with her arms or shoulders, of which she is aware is related to her preexisting diabetes.

17. Dr. Anjmun Sharma performed a Division of Labor Independent Medical Evaluation on the Claimant for her 3/14/14 work-related injury at Environmental Control Systems. He assigned a 20% lower extremity impairment for her left knee injury but did not address, nor did he give any impairment rating for the Claimant's right shoulder.

18. Dr. Timothy Hall, a board-certified expert in the field of physical medicine and rehabilitation, testified on behalf of the Claimant. Dr. Hall examined the Claimant on 12/16/16 and reviewed the Claimant's prior medical records back to 2003. Dr. Hall opined, to a reasonable degree of medical probability, that the Claimant's right shoulder pain is related to her industrial injury at King Soopers of 3/3/16. He opined that the dynamic motion of her shoulder into abduction and external rotation caused trauma to her right shoulder joint when she stumbled backwards and jerked her shoulder backwards when the baking sheet slipped. He testified that the mechanism of injury as described by the Claimant is consistent with the Claimant's right shoulder rotator cuff tear, biceps tear and bursitis.

19. Dr. Hall disagreed with the opinion of Dr. Wallace Larson, the Respondent's IME physician on a number of issues. He testified that he disagree with Dr. Larson's categorization of the Claimant's right shoulder pain as a temporary aggravation. Dr. Hall explained that since the Claimant has been symptomatic since the event of 3/3/16, he would not characterize her shoulder injury as temporary. Dr. Hall opined that there is no evidence that the Claimant suffered from a torn rotator cuff in her right shoulder prior to 3/3/16. as there is no diagnostic evidence (such as an MRI) that would support this conclusion. Dr. Hall explained that while the Claimant could have had a preexisting rotator cuff tear, if she did, it was asymptomatic. While it is possible that the Claimant's rotator cuff tear pre-existed this injury, Dr. Hall opined that, based upon his years of

clinical experience, he cannot state to a reasonable degree of medical probability that it preexisted the 3/3/16 injury.

20. The Claimant's lack of pain complaints and medical treatment to her right shoulder between December of 2014 and the injury date of 3/3/16 supports his opinion that the injury of 3/3/16 is the cause of the Claimant's right shoulder injury. He explained that many times, a rotator cuff tear will not, in and of itself, cause immediate pain. Rather, it is the inflammatory process that follows the tear that causes the majority of one's pain. The fact that the Claimant's pain has waxed and waned but never gone away since the 3/3/16 injury is not unusual. He also testified that it is not unusual for an individual to have an impingement syndrome but not have a rotator cuff tear. He has treated many individuals over the years for this type of injury.

21. Dr. Hall explained that the Claimant's preexisting diabetes is not, in his opinion, the *cause* of the Claimant's right shoulder problems, although her preexisting diabetes may be a factor in why the Claimant has not recovered from the 3/3/16 injury thus far. The diabetes may be relevant insofar as it may have made the Claimant more susceptible to injury, since diabetes causes joints and tendons to degenerate quicker than those of a non-diabetic person. This could render a joint to more likely be injured with less traumatic force. Dr. Hall also explained that there was an error on page 3 of his report. In lines 8 and 9 of the second paragraph on the page, it should say "She made it clear to me and the record supports that she has been ***with*** pain since this March 2016 event". He testified that this was simply a typing error and has no effect on his ultimate conclusions.

22. Dr. Hall also opined that he does not feel the event of 3/10/16 (involving the falling boxes) would have worsened the Claimant's shoulder condition because it did not involve *movement* of the shoulder joint. Dr. Hall explained that the Claimant's response to treatment with regards to her 2014 injury was dramatically different from her response to treatment in the 2016 injury, because her condition dramatically improved in 2014 after minimal treatment.

23. Dr. Michael Simpson, a board certified orthopedic surgeon, testified by evidentiary deposition at the request of the Claimant. Dr. Simpson had treated the Claimant for her previous knee and shoulder injuries related to her 3/14/14 industrial injury. Dr. Simpson testified that he mainly treated the Claimant's knee injury but did see the Claimant for a short time with regards to her right shoulder injury. Dr. Simpson's 7/15/14 note reflects that the Claimant's symptoms at that point were consistent with an impingement syndrome. Dr. Simpson explained that even though impingement syndrome falls within the spectrum of rotator cuff pathology, he did not feel that the Claimant's shoulder warranted further diagnostic studies since she wasn't showing signs of a full thickness rotator cuff tear. Such symptoms would include lack of range of motion or weakness. He recommended a subacromial injection, although the record is unclear if this was never accomplished. The Claimant did not return to Dr. Simpson for treatment after July of 2014 for her right shoulder, although she continued to receive treatment for her for her right knee injury.

24. After reviewing the MRI of 5/4/16, Dr. Simpson opined that an individual with those findings (most especially problems with the biceps tendon) would likely have pain in the front of her shoulder, perhaps radiating down into the arm, and pain up at the top of the shoulder, difficulty moving it, difficulty using it above the head. He would also expect somebody like this to be having some weakness or fatigue doing overhead activity. The Claimant showed no signs of weakness, fatigue or traumatic injury to her biceps tendon after the 3/14/14 injury. Usually an individual who has a tear in their biceps tendon has pain which occurs pretty quickly after the injury occurs. Dr. Simpson testified that the mechanism of injury for a biceps tear usually involves a sudden pulling injury. A biceps tear can also occur when the arm is up and behind the body, like when they are throwing a ball, and then this same arm gets pulled. It occurs when an individual's arm is out to the side in an "L" shape, and then there is a backward jerking motion.

25. Claimant's testimony of how this injury occurred is reasonably consistent with the mechanism of injury described by Dr. Simpson. This incident occurred suddenly, and without warning. Claimant had likely performed a similar motion pulling the cart numerous times in the past, but without the tray slipping as it did on this date. Once she began to fall backwards, in that second or two, Claimant's instincts were geared towards avoiding falling backwards and/or getting hit by the tray, rather than being an accurate historian. Time, distance, and the ability to subsequently articulate the precise sequence of events and body position were not at the fore. She is admittedly not expert in biomechanics. Additionally, the Claimant's authorized treating physician at Concentra noted that the mechanism of injury as described by Claimant is consistent with a rotator cuff and biceps tendon tear.

26. Dr. Wallace Larson testified on behalf of the Respondents. Dr. Larson opined the Claimant did not sustain an injury to her right shoulder in the 3/3/16 incident. His opinion is based upon the fact that the movement that the Claimant made with her shoulder is an ordinary activity not beyond the typical motion allowed by a shoulder joint. The fact that the Claimant jerked back when the baking sheet slipped does not change his opinion. He opined the Claimant's rotator cuff tear pre-existed the 3/3/16 incident. However, there is no diagnostic evidence to support this opinion. He further opined that the Claimant's pre-existing diabetes made her more susceptible to degenerative changes, tendinitis and bursitis.

27. Dr. Larson admitted that there are no medical records showing the Claimant received any type of treatment to her right shoulder between December 2014 and March 2016 and no MRI had been done prior to the 3/3/16 injury. Dr. Larson admitted that he could not answer whether the Claimant was asymptomatic during the above-referenced time period since there are no medical records during that time period addressing Claimant's symptoms or lack thereof. He admitted that he would defer to Claimant's testimony with regards to being asymptomatic from December 2014 through March 2016. He also admitted that there are no medical records indicating that Claimant's preexisting diabetes has affected any additional parts of her body. He

testified that a joint with degenerative issues is more likely to be injured than a joint that does not have any degenerative changes.

28. He also admitted that bursitis (one of the findings on the Claimant's MRI of 5/4/16) is an inflammatory process, rather than simply a degenerative process. He could not opine that the active bursitis seen on the 5/4/16 MRI was probably present prior to 3/3/16. Nor could he say that, prior to this injury, the Claimant likely would not have had a diagnosis of bursitis. Dr. Larson additionally opined both in his medical report as well as during his testimony that the incident of 3/3/16 likely resulted in a temporary aggravation of whatever was going on in the Claimant's right shoulder joint. Dr. Larson admits that Claimant's subjective complaints were very different after the 3/3/16 injury.

29. Joe Orman testified on behalf of the Respondents. Mr. Orman is the assistant store manager at the King Soopers location at which Claimant was injured. He testified that he was paged to the back of the store after the boxes fell on the Claimant on 3/10/16. He did not know who paged him but did not believe it was Claimant. He testified that, after the box incident, the Claimant told him on 3/10/16 that she had phoned her doctor at Concentra earlier in the day to obtain a refill of prescription pain medication because of the pain in her right shoulder. The Claimant did not request to be sent back to Concentra for the 3/10/16 incident.

30. Rodney Vanningen testified on behalf of the Respondents. Mr. Vanningen is the bakery manager at the King Soopers location at which Claimant was injured. Mr. Vanningen was not on duty at the time of the incident on 3/3/16. He testified that the baking sheets are usually kept in stacks of 100, which are on a rolling metal apparatus. He estimates the weight of 100 baking sheets to be approximately 75 pounds and about four feet high. He testified that he usually pushes the stack of sheets to move them. If the stack was only two and a half feet high, he admitted he would have had to pull them out from under the table. He once experienced the same thing as the Claimant did while pulling a stack of baking sheets (a sheet slipped and flipped upwards) but felt it was no big deal when it occurred with him. He never instructed the Claimant to only push and never pull a stack of baking sheets.

31. Curtis Korwek testified on behalf of the Respondents. Mr. Korwek is a front end manager at the King Soopers location at which Claimant was injured. He testified that on 3/3/16, the Claimant came to his office between 8:00 a.m. and 8:30 a.m. to report that she had hurt herself in the bakery earlier that morning. The Claimant told him that as she was grabbing some baking pans, the top one released or slipped free and she jerked her shoulder. He estimated a stack of 100 pans to weigh fifty to sixty pounds. He testified that the stack of pans should always be pushed, never pulled. However, he never directed Claimant not to pull the stack of pans.

32. Claimant informed Mr. Korwek that she had earlier notified Devin, as well as Brian Bowman of the injury, but they did not act upon it. She had been waiting in the break room for Mr. Bowman to return, but this never occurred. Mr. Korwek admitted

that Devin and Brian were appropriate supervisors to report the injury to. Mr. Korwek supplied the Claimant with the incident report paperwork located at Claimant's Exhibit 1. He stated that a stack of 100 baking sheets were about three feet high and that they were a little tough to pull. Mr. Korwek did not speak to Devin or Brian about this claim, although they were the first individuals notified of it.

33. Shannon Jones testified on behalf of the Respondents. He is the store manager at the King Soopers location at which the Claimant was injured. Mr. Jones testified that prior to embarking to Pueblo for a meeting of store managers, he remembers seeing Claimant in the break room on 3/3/16, when he arrived at the store between 6:30 a.m. and 7:00 a.m. He testified that Claimant did not say anything to him about the incident, nor did she seem as if she were injured. His normal habit and practice when arriving at work is to personally greet each employee. He does not specifically remember if he spoke to Devin or Brian Bowman that morning. If he did so, neither of them notified him of the Claimant's injury.

34. The ALJ finds the Claimant's testimony to be credible. Her medical reporting for her injuries from 2014, and both from 2016 is consistent with the clinical data available. There is no evidence of medical treatment or complaints for the Claimant's right shoulder between December, 2014 and her injury date of 3/3/16.

35. Claimant also testified about moving her home's belongings in August of 2016. She avoided lifting heavy items, such as furniture or heavy boxes, instead working on lighter items and packing. After this occurred, she reported increased shoulder pain to Dr. Jinkins in September, 2016. Claimant also informed Dr. Jinkins during this office visit that she had help for moving the heavy items, and limited herself to packing and light duties. Nonetheless, she reported increased pain as a result.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers Compensation Act of Colorado (Act), C.R.S. 8-40-101, *et seq*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *§ 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an “injury” arising out of and in the course of employment. *§8-41-301(1), C.R.S.; Faulkner v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page*

v. Clark, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *§ 8-43-201, C.R.S*. A workers compensation claim is decided on its merits. *§8-43-201, supra.*

B. In accordance with C.R.S. 8-43-215, this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. In determining credibility, the ALJ should consider the witnesses' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Compensability

D. As noted, for an injury to be compensable under the Act, it must arise out of and occur within the course and scope of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). The "arising out of" test is one of *causation*. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. C.R.S 8-43-201, *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

E. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). The existence of a causal relationship between the admitted injury and this Claimant's right shoulder injury is a

question of fact. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985).* Here, the persuasive evidence demonstrates that Claimant injured her right shoulder on March 3, 2016 resulting in a torn rotator cuff and a torn biceps tendon, as well as bursitis of the biceps tendon and subacromium.

F. Under the Act, there is a distinction between the terms "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." § 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. City of Boulder v. Payne, 162 Colo. 345, 426 P.2d 194 (1967); see also, § 8-40-201 (2) (injury includes disability resulting from accident). Consequently, a "compensable injury" is one which requires medical treatment or causes disability. Id.; Romero v. Industrial Commission, 632 P.2d 1052 (Colo. App. 1981); Aragon v. CHIMR, et al., W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); H & H Warehouse v. Vicory, 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." Romero, supra; § 8-41-301, C.R.S.

G. Given the distinction between the terms "accident" and "injury" an employee can experience symptoms, including pain during, or from an event or incident, at work without sustaining a compensable "injury." This is true, even when the employee is clearly in the course and scope of employment performing a job duty when she experience pain. See Aragon, supra, ("ample evidence" supports ultimate finding that no injury occurred even where a claimant experienced pain when struck by a bed she was moving as part of her job duties); see also, McTaggart-Kerns v. Dell, Inc., W.C. No. 4-915-218 (ICAO, May 29, 2014) (where a claimant involved in motor vehicle accident without resultant injuries suffered no compensable injury). As explained in Scully v. Hooters of Colorado Springs, W.C. No. 4-745-712 (October 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in Scully noted, "[C]orrelation is not causation." Thus, merely because there may be a coincidental correlation between Claimant's work and her symptoms exists in this case does not mean there is a causal connection between Claimant's alleged injury and her work duties.

H. If an industrial injury aggravates, accelerates, or combines with a preexisting condition so as to produce disability and a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997.

I. This ALJ finds that the opinions of Dr. Timothy Hall and Dr. Simpson are more persuasive than those of Dr. Wallace Larson. Dr. Hall's opinion is supported by Dr. Simpson's 7/6/14 note, wherein Dr. Simpson opined that the Claimant was suffering from an impingement in her shoulder *which did not warrant an MRI*. There is no

diagnostic testing prior to the 5/4/16, which would confirm a pre-existing injury to her right shoulder. Further, the DIME physician (for the 3/14/14 injury), Dr. Anjmun Sharma, did not address or assign an impairment rating for the Claimant's *right shoulder,* but he did for her *knee.*

J. Dr. Hall and Simpson's opinions are both consistent with the mechanism of injury as described by the Claimant. Both doctors opined that one would need to either pull something or engage in motion of the shoulder into abduction and external rotation, much like the shoulder would move if one was throwing a ball, to result in an injury to one's biceps and rotator cuff tendons. Claimant's treating physicians at Concentra also felt that the Claimant's mechanism of injury is consistent with the torn rotator cuff and biceps tendon found in her right shoulder.

K. Finally, Dr. Larson admitted that the inflammatory changes seen on the Claimant's MRI probably did not pre-exist the injury of 3/3/16. Dr. Larson admitted that the subjective complaints and findings after the 3/3/16 injury were different than those before the injury. In fact, Dr. Larson admits that the Claimant probably suffered, at a minimum, an exacerbation of her shoulder injury from this work-related occurrence.

L. Regardless of whether a torn rotator cuff (partial or otherwise) pre-existed the occurrence in the bakery on 3/3/16, it is more likely than not that the jerking motion of her shoulder when she stumbled backwards significantly aggravated any preexisting, degenerative conditions in the Claimant's right shoulder. In this case, the ALJ finds that this tear to Claimant's rotator cuff became complete on 3/3/16. Claimant became symptomatic after this date. Her diabetes and relative lack of physical conditioning may well have explained her greater susceptibility to injury than her better conditioned co-worker, who (credibly) declared his similar work incident to be "no big deal". Claimant has proven by a preponderance of the evidence that on 3/3/16 she suffered a compensable injury to her right shoulder arising out of and within the course and scope of her employment at King Soopers.

Intervening, Superceding Cause, and the Need for Medical Care

M. C.R.S. § 8-42-101 (1) (a) provides that respondents shall furnish medical care and treatment reasonably necessary to cure and relieve the effects of the injury. Claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition. Ashburn v. La Plata School District 9R, W.C. No. 3-062-779 (May 4, 2007). Therefore, claimant is not entitled to medical care that is not causally related to her work-related injury or condition. As noted in Bekkouche v. Riviera Electric, W.C. No. 4-514-998 (May 10, 2007), “A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary.” Where the relatedness, reasonableness or necessity of medical treatment is disputed, claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. Ciesiolka v. Allright Colorado, Inc., W.C. No. 4-117-758 (ICAO April 7, 2003).

N. The causation chain and the right to medical benefits may be severed by an efficient intervening event or aggravation. As stated in Baer v. Sherwin Williams, W.C. No. 4-217-692 (ICAO March 7, 1996), an efficient intervening injury which causes claimant's subsequent disability and need for further treatment supports the denial of benefits. See also Metz v. Cornerstone Care Center, W.C. No. 4-151-534 (ICAO March 7, 1994) (claimant's right knee condition which pre-existed an admitted work injury was worsened in an injury on the weekend after the work injury); In Baer v. Sherwin Williams, supra, after the occurrence of an admitted low back injury, claimant suffered a subsequent, intervening, back injury while installing a sprinkler system at home which necessitated surgical repair of a herniated disc that was denied as not causally related to the admitted injury. In Kowal v. JVK Enterprises, Inc., W.C. No. 4-271-333 (ICAO September 20, 1996), claimant injured his neck while wrestling his manager at work, but did not lose any time from work until he experienced severe neck pain while reaching across a restaurant table while away from work, the herniated disc found unrelated to this claim's injury as it was caused by this subsequent unrelated event. All results flowing proximately and naturally from an industrial injury are compensable. Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970) However, compensability ends when a later accident, injury or condition occurs that is related to some intervening, unrelated cause. Post Printing & Publishing Co. v. Erickson, 94 Colo. 382, 30 P.2d 327 (1934). Whether a particular condition is the result of an independent intervening cause is a question of fact for resolution by the ALJ. Owens v. ICAO, 49 P.3d 1187 (Colo. App. 2002).

O. Claimant moved her home belongings in August of 2016. Afterwards, she reported increased pain, coinciding with the move. As has been noted, *correlation is not causation.* Nor does increased pain necessarily equate to an injury. The state of the record is insufficient to conclude that Claimant's activities during her home move somehow necessitated the proposed surgery. The rotator cuff tear was already complete well before the move, as shown in the MRI. The fact that she experienced increased pain during this time period does not show that she was *injured* during this home move. The activities of moving, as described, were not significantly more strenuous than her work routine, which had been ongoing. Her shoulder just hurt more, and helped lead Dr. Jinkins to conclude that this shoulder surgery, previously hoped by all to be avoided, was now advisable. By a preponderance of the evidence, the ALJ finds that this surgery is reasonable and necessary, and related to the compensable claim.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury to her right shoulder on March 3, 2016.

2. Respondents are ordered to pay all reasonable and necessary medical expenses related to this shoulder injury, as recommended by her Authorized Treating Physicians.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

- Whether respondent has demonstrated by a preponderance of the evidence that claimant experienced an intervening event sufficient to sever respondent's liability and terminate claimant's maintenance medical care.

- Whether claimant has demonstrated by a preponderance of the evidence that continued medical treatment, including physical therapy and prescription pain medication, constitutes reasonable maintenance medical treatment necessary to maintain claimant at maximum medical improvement ("MMI").

FINDINGS OF FACT

1. Claimant sustained an admitted injury to his low back on January 21, 2008 while shoveling coal during his employment with respondent. During the course of this workers' compensation claim claimant has received physical therapy treatment and takes prescription medications. Claimant testified that he currently takes Oxycontin, Percocet, Valium, and the sleep aide Ambien.

2. In 2012 claimant began employment with Tri State Generation and Transmission ("Tri State") as a utility technician. Claimant testified that he then moved into the position of scrubber operator. Claimant currently works for Tri State as a plant operator.

3. Claimant testified that with each position change at Tri State his work has become less physically demanding. When comparing his current position as a plant operator to the position he held with respondent, claimant testified that his current position is much less physically demanding. Claimant also testified that he is working toward a position in Tri State's training center, which would be even less physically demanding.

4. Following the January 21, 2008 work injury claimant underwent surgery on August 12, 2009. On that date Dr. Timothy Wirt performed a L4-5 discectomy, hemilaminectomy, and facetectomy. Thereafter on August 19, 2010 Dr. Wirt performed a L4-5 fusion with laminectomy, foraminotomy, and discectomy at that level. On December 19, 2011 claimant underwent a left side rhizotomy at the L5-S1 level.

5. Dr. Frederick Scherr placed claimant at MMI on April 13, 2012 and assigned a permanent impairment rating of 18% whole person. Dr. Scherr did not assign any permanent work restrictions and indicated that claimant could return to full duty. On May 23, 2012, respondents filed a Final Admission of Liability ("FAL") admitting to this MMI date and impairment rating.

6. Claimant contested the FAL and requested a Division-sponsored independent medical examination ("DIME"). Dr. Gary Zuehlsdorff performed a DIME on September 11, 2012 and agreed that claimant reached MMI as of April 13, 2012. However, Dr. Zuehlsdorff assigned a permanent impairment rating of 22% whole person. With regard to permanent restrictions, Dr. Zuehlsdorff did not list any restrictions but stated in his report "[a]s previously noted by primary".

7. After being placed at MMI in 2012, claimant continued to complain of low back pain. On May 15, 2014 claimant underwent a L4-5 revision anterior lumbar discectomy and interbody arthrodesis performed by Dr. Joshua Seinfeld.

8. On January 26, 2016, Dr. Zuehlsdorff conducted a follow up DIME in which he placed claimant back at MMI as of that date and assigned a permanent impairment rating of 24% whole person. In the January 26, 2016 DIME report Dr. Zuehlsdorff suggested a "recalibration" of claimant's work restrictions, but did not opine as to any specifics, again deferring to claimant's primary physician. On March 29, 2016 respondent filed a Final Admission of Liability ("FAL") based upon Dr. Zuehlsdorff's January 26, 2016 DIME report and admitted for reasonable and necessary medical benefits post-MMI.

9. Claimant testified that after he was placed at MMI in January 2016 he returned to full duty and has not sustained any additional injury to his low back. Claimant also testified that he continues to have low back pain that radiates into his buttocks and down his left leg to his knee. Claimant testified that these are the same symptoms he had when he was placed at MMI on January 26, 2016.

10. Claimant's post-MMI treatment includes physical therapy and pain medication. Claimant testified that the use of prescription pain medications enable him to function well at work and away from work. Claimant also testified that he exercises at home and continues to seek physical therapy treatment because his physical therapist is able to release muscle spasms, which claimant cannot do on his own. Claimant testified that he goes to physical therapy approximately once every two weeks because of his work schedule. The ALJ finds claimant's testimony to be credible and persuasive.

11. Based upon the physical therapy records entered into evidence at hearing, claimant returned to physical therapy treatment on October 15, 2015 and had 60 visits from that date until December 7, 2016. Of these 60 physical therapy visits, 42 were between claimant's date of MMI and December 7, 2016.

12. On October 31, 2016 Dr. Carlos Cebrian performed a review of claimant's medical records and issued a written report in which he noted that claimant has increased the frequency of physical therapy visits. Dr. Cebrian opined that this increase in physical therapy visits is related to claimant's work for Tri State and not related to the 2008 work injury. Dr. Cebrian also raised concerns regarding claimant's continued use of prescription opioids. Specifically, Dr. Cebrian opined that claimant should discontinue his use of opioids by gradually tapering off his usage.

13. Dr. Cebrian testified at hearing in this matter and confirmed his opinion that claimant's increased physical therapy visits and continued use of opioids point to an intervening event caused by claimant's current employment. Dr. Cebrian testified that the Medical Treatment Guidelines ("the Guidelines") provide for 10 physical therapy visits during the first year after a claimant reaches MMI and five visits per year thereafter. Dr. Cebrian testified that he calculates that claimant attended 49 physical therapy visits in a 14 months period, which exceeds the number of visits allowed under the Guidelines. In his testimony, Dr. Cebrian also reiterated his concerns surrounding claimant's continued opioid use.

14. The ALJ credits claimant's testimony and the medical records and finds that respondent has failed to demonstrate that it is more likely than not that claimant has suffered an intervening event sufficient to sever respondent's liability in this matter. The ALJ specifically finds that claimant has reduced the physical demands of his employment by moving to less physically demanding positions. The ALJ is not persuaded by Dr. Cebrian's opinion. The ALJ finds no persuasive evidence in the record that an intervening event has occurred that has triggered a disability or the need for medical treatment.

15. The ALJ credits claimant's testimony at hearing regarding the therapeutic nature of claimant's post-MMI treatment and finds that this testimony is supported by the medical records entered into evidence.

16. The ALJ finds that although the number of physical therapy treatments claimant has received post-MMI exceeds those allowed under the Guidelines, this ongoing treatment continues to be therapeutic in nature regarding claimant's condition and the evidence establishes that the treatment is necessary for claimant to maintain MMI. Similarly, the ALJ finds that claimant's continued use of prescription pain medications, including opioids, is necessary for claimant to remain at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S., *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d

385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. The questions of whether an injury arose out of and in the course of employment, whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury, and whether there has been a subsequent intervening event, are generally questions of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996); *University Park Care Center v. ICAO*, 43 P.3d 637 (Colo. App. 2001). If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See Post Printing & Publishing Co. v. Erickson*, 94 Colo. 382, 384, 30 P.2d 327, 328 (1934).

5. As found, respondent has failed to demonstrate by a preponderance of the evidence that claimant suffered an intervening event sufficient to sever respondent's liability. Although the ongoing physical therapy treatment exceeds those allowed under the Guidelines, as found this ongoing treatment continues to be curative in nature regarding claimant's condition and the evidence establishes that the treatment is necessary for claimant to maintain MMI. As found, claimant's testimony and the medical records are credible and persuasive.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

7. The Division's Medical Treatment Guidelines ("the Guidelines") are generally accepted as professional standards for medical care under the Act and are to be used by health care providers when providing care. See Section 8-42-101(3)(b), C.R.S.; *Hall v. ICAO*, 74 P.3d 459 (Colo. App. 2003). The ALJ is not required to grant or deny medical benefits based on the Guidelines and the ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

8. As found, claimant has demonstrated by a preponderance of the evidence that continued physical therapy treatment and use of prescription pain medication is reasonable medical treatment necessary to maintain claimant at MMI. As found, claimant's testimony and the medical records are credible and persuasive.

ORDER

It is therefore ordered that:

1. Respondent's request for an order severing their liability for ongoing medical treatment is denied and dismissed.

2. Respondents shall continue to pay for claimant's post-MMI maintenance medical treatment including physical therapy and prescription pain medication.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 7, 2017

Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Have Respondents proven by a preponderance of the evidence that Claimant was responsible for termination of her employment on May 31, 2016?

2. Has Claimant proven by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits ongoing since May 31, 2016?

3. Has Claimant proven by a preponderance of the evidence that she is entitled to additional temporary partial disability (TPD) benefits from May 3, 2016 to May 30, 2016?

4. Should Claimant's average weekly wage (AWW) be increased by the cost of continuing her health insurance? If so, what is the amount of the increase?

5. Is Claimant entitled to an order regarding authorization of future prescriptions, even though Respondents are not denying any specific medical benefits at present?

STIPULATIONS

1. The parties stipulated that any increase in Claimant's AWW because of the COBRA continuation cost is effective May 31, 2016.

FINDINGS OF FACT

1. Claimant worked as a patient care advocate for Employer. She suffered an admitted industrial injury on October 16, 2014 as a result of a fall.

2. Insurer paid TTD and TPD benefits at various times since the date of injury. The most recent admitted period of TTD was from April 27, 2016 through May 2, 2016. Insurer subsequently admitted for TPD benefits from May 3, 2016 to July 6, 2016.

3. Claimant started working for Employer in October 2011. Claimant was given access to the Employee Handbook, which, among other things, outlines Employer's policies regarding attendance and progressive discipline. Claimant acknowledged receipt of this information when she was hired.

4. Employer's attendance policy defines four types of attendance events, three of which relate to the disputed issues in this matter: (1) an "absence" is defined as "an occurrence when an individual does not report for work or work his/her scheduled shift"; (2) an "early quit" is defined as "an employee leaving his/her duties prior to the end of their scheduled time without leadership's approval"; (3) a "No Call/No Show" is

defined as “failure to contact the appropriate resource within 2 hours after . . . the scheduled start time.”

5. The attendance policy implements a points system for each occurrence. An absence is one occurrence point. A No Call/No Show is four occurrence points. Occurrence points are accumulated over a rolling six-month period, with varying levels of progressive discipline. For occurrences 1-5, the appropriate action is to coach the employee. For six points, the employee receives a documented verbal corrective action. At eight points, the employee receives a written corrective action. Ten points result in a written final warning, and after twelve points, the employee is terminated.

6. On June 9, 2015, Claimant received a documented verbal warning that her attendance score was 72.2%. Claimant had been absent or left early 11 times in the previous 45 days. Claimant was advised to improve her attendance, or she may face further disciplinary action.

7. Claimant has been under work restrictions since her date of injury. As of May 2, 2016, Claimant was released to modified duty by her ATP, Dr. Daniel Olson. The restrictions limited Claimant to a shift starting no earlier than 6:00 AM, and lasting no longer than six hours, with a 10-minute break every hour.

8. Claimant returned to work on modified duty on May 3, 2016. Although she reported late to work that day, Employer did not assign any occurrence points.

9. Claimant again reported for work late on May 4, 2016, but Employer again did not assign any occurrence points.

10. On May 5, 2016, Claimant saw Dr. Olson and reported an upcoming shift change that would require her to work in the evenings. She told Dr. Olson this was “stressful” because she could not pick up her children.

11. The May 2016 shift change was part of a company-wide shift bid process. Claimant’s supervisor, Michael Sowa, explained that the shift change process affected many employees other than Claimant. Mr. Sowa explained that, while the shift change was inconvenient, it was done to meet Employer’s business needs. “Out of my three employees [affected], they all had reservations about moving to the night shift. You have to explain that it’s business need. It was an enterprise shift. A lot of people were affected. I myself went from the morning shift to an overnight shift. I just made the life-balance accommodations.”

12. Claimant’s first scheduled day of work on the new shift was May 9, 2016. Claimant called off work May 9, May 10, May 11, and May 12, 2016. Claimant was a No Call/No Show on May 14, 2016. Claimant again called off on May 16, 2016.

13. On May 10, 2016, Mr. Sowa gave Claimant a written corrective action pursuant to the attendance policy. Mr. Sowa advised Claimant she had accumulated nine occurrence points as of May 9. He advised her regarding the importance of punctuality, and on the rare instance she needed to call off, she was expected to follow

procedure and appropriately notify her supervisor. Claimant was advised that further attendance issues could result in a final written warning and eventual termination. Claimant electronically acknowledged the warning on May 18, 2016. Notably, of the nine points Claimant had accumulated by May 9, all but one occurrence occurred before the shift change.

14. On May 17, 2016, Claimant participated in a telephone conference with Mr. Sowa and Joshua Madrid, Mr. Sowa's supervisor. The purpose of the telephone conference was "more of a wellness check . . . [because] we've really noticed that you've missed a lot of work. Is everything okay? And then, from there, we moved into concerns for not coming to work. At that point, the daycare concern was raised, and that's when we made the accommodation."

15. After the May 17 telephone conference with her supervisors, Claimant's work hours were shifted one hour "to the right." This meant instead of starting at 2:30 PM and ending at 8:30 PM, Claimant would start her shift at 3:30 PM and end at 9:30 PM. Employer voluntarily implemented the change to accommodate Claimant's childcare needs.

16. Claimant was also advised during the telephone conference she had exceeded the 12 occurrence points allowed before termination. Mr. Sowa testified "we were just kind of discussing the concern that we were outside of the attendance policy, but we would make an exception here, and that we would retain [Claimant's] employment rather than trying to move down the termination path." Mr. Sowa explained that "normally we would have pursued termination after 12 occurrence points." Mr. Sowa explained Employer was bending its rules due to concerns regarding Claimant's injury and limitations. He testified "we were just treading really lightly to make sure that we didn't have any concerns with not meeting those accommodations."

17. Although Claimant testified she does not recall the May 17, 2016 conversation with Mr. Sowa and Mr. Madrid, the meeting is documented in Claimant's contemporaneous personnel record. The ALJ finds the written employment records more reliable than Claimant's memory, particularly given the residual effects of her documented head injury.

18. On May 23, 2016, Mr. Sowa issued a final written warning regarding attendance. He advised Claimant that she had accumulated 20 occurrence points as of May 21, 2016. Despite being eight points over the termination threshold, Employer gave Claimant one last chance to remedy her attendance issues. Claimant was again advised regarding the importance of reporting to work in a timely fashion, and that further violations could result in termination. Claimant electronically acknowledged receiving this warning on May 23, 2016. She was actually late to work that day, but Employer did not assess an occurrence.

19. After receiving her final warning, Claimant missed work on May 24, May 25, May 26, and May 28, 2016, resulting in four additional occurrence points. As a result, Employer terminated Claimant's employment, effective May 31, 2016.

20. Claimant admitted at hearing she understood the absences after May 23 would result in her termination.

21. Claimant alleges she stopped reporting for work because Employer refused to accommodate her work restrictions. Specifically, Claimant alleges she was expected to work eight-hour shifts, despite Dr. Olson's restriction to six-hour shifts.

22. Mr. Sowa and Mr. Madrid credibly testified that Employer intended to modify Claimant's new shift to comply with Dr. Olson's length-of-shift restrictions. Although Claimant's new regular shift was eight and one-half hours long, Employer did not expect her to work longer than the six hours allowed by Dr. Olson.

23. Immediately before her termination, Claimant and members of her family had health insurance under Employer's group plan. She maintained medical, vision, and dental insurance on herself and her children. Claimant's husband was covered for dental and vision only. In accordance with the COBRA notice, the cost of continuing medical insurance on Claimant and her children was $1,083.90 per month. The cost of maintaining family dental coverage was $115.85 per month, and the family vision coverage cost $20.74 per month. This computes to a weekly cost of $281.65.

24. Claimant's husband was not covered for *medical* insurance under Employer's policy at the time of her termination.

25. Claimant is requesting TPD benefits from May 3, 2016 to May 30, 2016. That period has already been admitted per Respondents' November 3, 2016 GAL. (Resp. Ex. E). The GAL provides supporting documentation outlining Respondents' calculation of Claimant's entitlement to TPD benefits. (Resp. Ex. E, p. 9). Respondents' calculations are based on wages Claimant would have earned had she worked the modified duty shifts offered by Employer, consistent with Dr. Olson's six-hour shift restriction.

26. Respondents have proven by a preponderance of the evidence that Claimant was responsible for the termination of her employment.

27. Claimant has failed to prove by a preponderance of the evidence that she is entitled to additional TPD benefits from May 3, 2016 to May 30, 2016.

28. Claimant has proven by a preponderance of the evidence that her AWW should be increased by $281.65 to account for (1) the COBRA cost for medical insurance for herself and her children, and, (2) the vision and dental coverage for Claimant, her husband and her children.

29. Effective May 31, 2016, Claimant's AWW is $639.65.

CONCLUSIONS OF LAW

A. Claimant was responsible for her termination

The termination statutes, § 8-42-103(g) and § 8-42-105(4)(a), provide:

> In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.

The employer must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008).

To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). Failure to take action that a reasonably prudent person would take under the circumstances also satisfies the requirement that the claimant has exercised a degree of control over the circumstances resulting in the termination. *Sparks v. Mattas Marine*, W.C. No. 4-98 to-976-01 (ICAO, Sept. 26, 2016).

An employer's policy, particularly one which may lead to discharge for absenteeism without regard to the reasons for the absences, is not determinative of whether a claimant acted volitionally regarding a separation. *See Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. App. 1987). The mere fact that the employer discharged the claimant in accordance with its personnel rules does not automatically establish that the claimant acted volitionally or exercised control over the circumstances of the termination. Rather, the ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for her termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (ICAO, March 17, 2004).

Moreover, the term "responsible," as used in the termination statutes, may not be construed in a fashion which undermines the "overall scheme of the Act." *Colorado Springs Disposal v. Industrial Claim Appeals Office, supra,* In *Colorado Springs Disposal* the court held the "word 'responsible' does not refer to an employee's injury or injury-producing activity." The court reasoned that treating a claimant as "responsible" for the loss of employment caused by physical limitations resulting from the compensable injury itself would significantly alter fundamental principles of the Act.

Hence, a claimant does not act "volitionally" or exercise control over the circumstances leading to the termination if the effects of the injury ultimately lead to her termination. *E.g., Kauffman v. Noffsinger* W. C. No. 4-608-836 (ICAO, April 18, 2005);

Blair v. Art C. Klein Construction, Inc., W.C. No. 4-556-576 (ICAO, November 3, 2003); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (ICAO, April 24, 2002).

As found, Respondents have proven that Claimant was responsible for the termination of her employment. Claimant was terminated due to excessive absenteeism, which was not necessitated by her injury. Claimant knew of Employer's attendance policies and was repeatedly warned that additional unexcused absences could lead to her termination. Employer gave Claimant more leeway than was technically required under its policies, as an accommodation for her injuries. Despite Employer's willingness to work with Claimant, Claimant effectively abandoned her employment by refusing to work. Under the circumstances, Employer's decision to terminate her on May 31, 2016 was objectively reasonable.

Claimant alleges she stopped reporting for work because Employer would not accommodate her work restrictions. Specifically, Claimant alleges she was expected to work eight-hour shifts, despite Dr. Olson's restriction to six-hour shifts. But no persuasive evidence corroborates Claimant's position in this regard. In fact, Claimant's allegations are rebutted by the credible and persuasive testimony of Mr. Sowa and Mr. Madrid, who explained Employer intended to modify Claimant's new schedule to comply with Dr. Olson's length-of-shift restrictions. Although Claimant's new regular shift was eight and one-half hours long, Employer modified that schedule and did not expect her to work more than six hours. Although Claimant may have been personally confused regarding Employer's intention regarding her new schedule, any such subjective confusion is not reasonable under an objective standard.

In making this determination, the ALJ acknowledges Dr. Olson's July 29, 2016 opinion that it was "reasonable" for Claimant to refuse her new shift. Dr. Olson's opinion is not persuasive because it is based on the mistaken assumption that Employer required Claimant to work from 2:30 PM to 11:00 PM (8 ½ hours). The evidence adduced at hearing shows that Employer limited Claimant's shift to six hours, and moved her start time to 3:30 PM to accommodate her childcare needs. Based on the totality of persuasive evidence presented, the ALJ concludes that Employer did not require Claimant to exceed her work restrictions.

The attendance issues that lead to Claimant's termination most probably related to her dissatisfaction with her work-life balance under the new schedule, rather than the effects of her industrial injury.

The ALJ is persuaded that Claimant exercised control over the circumstances and that her termination was the result her volitional actions. Accordingly, Claimant was responsible for the termination of her employment.

B. Claimant is not entitled to additional TPD benefits from May 3, 2016 to May 30, 2016

Temporary partial disability (TPD) benefits are payable when a temporarily disabled claimant returns to work at a rate lower than her preinjury wage. Section 8-42-

106. Here, Claimant is requesting a closed period of TPD, from May 3, 2016 to May 30, 2016. That period was already admitted per the November 3, 2016 GAL. Respondents' calculations are based on wages Claimant would have earned had she worked the modified duty shifts Employer offered her. Although Claimant did not actually work the shifts she was offered, she did not provide persuasive evidence that her refusal to work was caused by her injury. Respondents' computational methodology is consistent with case law that effectively allows a credit for wages a claimant *would have* earned from modified duty even if the claimant ultimately declines the work. *E.g., Tarman v. US Transport*, W.C. No. 4-91-955-01 (ICAO, June 2, 2016). Claimant has failed to prove by a preponderance of the evidence that Respondents' calculation of TPD reflected on the November 3, 2016 GAL is incorrect.

C. Claimant's AWW increased to $639.65 effective May 31, 2016 based on her COBRA continuation cost

Section 8-40-201(19)(b) provides that the term "wages" includes "the employee's cost of continuing the employer's group health insurance plan and, upon termination of the continuation, the employee's cost of conversion to a similar or lesser insurance plan." There is no requirement that a claimant actually purchase insurance for the continuation or conversion cost to be included in their AWW. *Industrial Claim Appeals Office v. Ray*, 145 P.3d 661 (Colo. 2006). Once the employer stops contributing to the claimant's health insurance, the entire cost is included, even if the claimant had previously paid a portion of the insurance during their employment. *Humane Society of Pikes Peak Region v. Industrial Claim Appeals Office*, 26 P.3d 546 (Colo. App. 2001). The statutory reference to "health insurance" includes employer-sponsored dental and vision coverage, as well as medical insurance. *Cortese v. Kaiser Space Products*, W.C. No. 4-171-138 (ICAO, April 8, 2010); *Sickler v. City Market*, W.C. No. 4-638-377 (ICAO, July 25, 2008).

Claimant's health insurance coverage was terminated when she was fired on May 31, 2016. The COBRA notice shows the cost of continuing Employer's coverage, and therefore establishes a *prima facie* case for the appropriate increase in the AWW. To the extent Respondents wish to rely on the lower cost of conversion to a similar or lesser plan, they must prove a specific alternate amount. Although Claimant admitted her husband has "health insurance" through his job, there was no testimony or other evidence regarding whether he also had dental or vision coverage. As reflected by Claimant's COBRA notice, medical, dental, and vision typically constitute separate coverages under the umbrella term "health insurance."[1] Absent additional evidence, the ALJ is not willing to assume that Claimant's husband's "health insurance" through his employer includes dental and vision coverage. Indeed, Claimant's husband was not covered under Employer's medical insurance policy when Claimant's employment was terminated. (Cl. Ex. 9, pp. 173-74). Based on the evidence presented, the ALJ concludes that Claimant's husband likely had medical coverage through his employer

[1] *See e.g.*, *Fortune v. Restaurant Technologies, Inc.*, W.C. No. 4-915-420-01 (ICAO, January 26, 2015); *McGuire v. Family Dollar Stores, Inc.*, W.C. No. 4-738-209 (ICAO, October 13, 2011); *Cortese v. Kaiser Space Products*, W.C. No. 4-171-138 (ICAO, April 8, 2010); *see also* § 10-16-501, C.R.S.

before Claimant was terminated, and simply continued that arrangement after her termination. Moreover, even if Claimant's husband started receiving dental and vision coverage through his employer, there is no evidence regarding the cost of that alternate coverage. Based on the totality of evidence presented, Respondents failed to establish a basis to depart from the cost figures reflected in Claimant's COBRA notice.

As found, Claimant's AWW should be increased by $281.65 to account for her COBRA continuation cost, resulting in an AWW of $639.65 effective May 31, 2016.

D. The ALJ has no authority to issue an advisory opinion regarding authorization of Claimant's future prescriptions

Under § 8-43-201, ALJs have original jurisdiction to hear and decide all matters arising the Workers' Compensation Act. The heading of that section refers to "disputes" arising under the Act. The ICAO has repeatedly stated that "this language restricts ALJs from issuing advisory opinions that do not involve any actual controversy between the litigants." *Reed v. Choice Hotels International*, W.C. No. 4-903-225-01 (ICAO, November 5, 2013); *Franklin v. Colorado Springs School District 11*, W.C. No. 4-436-174 (ICAO, July 25, 2007); *Piltz v. Quality Mitsubis*hi, W.C. No. 4-351-844 (ICAO, December 20, 2001).

Claimant argues that prescription authorizations have been delayed on several occasions in the past. Respondents acknowledge past delays, but assured the ALJ they are working diligently to avoid delays in the future. At the time of the hearing, no specific prescriptions were denied, nor were any prescriptions pending authorization. The ALJ does not see a justiciable issue regarding authorization of Claimant's future prescriptions. Although the ALJ can appreciate Claimant's frustration with the prescription authorization process, the ALJ is not empowered to issue purely "advisory opinions" regarding disputes that may or may not arise at some unspecified time in the future.

ORDER

It is therefore ordered that:

1. Claimant's claim for TTD benefits commencing May 31, 2016 ongoing is denied and dismissed.

2. Claimant's claim for additional TPD benefits from May 3, 2016 to May 30, 2016 is denied and dismissed.

3. Respondents shall adjust Claimant's AWW to $639.65 effective May 31, 2016.

4. Claimant's request for an advisory opinion regarding future prescriptions is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-011-040-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 22, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 2/22/17, Courtroom 1, beginning at 1:30 PM, and ending at 2:15 PM). No witnesses testified. The parties submitted the case based on stipulations.

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondents' Exhibits A through E were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. The proposed decision was filed, electronically, on March 1, 2017. Respondents were given three working days within which to file objections. No timely objections having been filed, the matter was deemed submitted for decision on March 7, 2017. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns the modification of the average weekly wage (AWW) insofar as it factors into the formula for the calculation of whole person permanent partial disability (PPD), contained in§ 8-42-107 (8) (e), C.R.S. The claimed increase is based on the Employers cost of health care and other benefits provided at the time of the injury. The parties provided stipulated facts in lieu of testimony at the hearing.

The Claimant bears the burden of proof, by a preponderance of the evidence on all designated issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, which consisted of Stipulations and the documentary record, the ALJ makes the following Findings of Fact:

1. The Claimant suffered an admitted injury on July 18, 2015 and treated for the injury until being placed at maximum medical improvement (MMI) on June 29, 2016. In the Final Admission of liability (FAL), dated September 23, 2016, the Respondents admitted for 23% whole person PPD with an admitted AWW of $309.78, for aggregate PPD benefits of $18, 999.84, payable at the rate of $206.52 per week from the date of MMI.

2. The Claimant continues to be employed with the Employer, after the MMI date. The Employer continues to provide health insurance and other benefits to the Claimant as of the date of the hearing. The health insurance and other benefits have never been suspended since the date of loss.

3. The Claimant was provided with health insurance and other benefits paid by the Employer. The parties stipulated, and the ALJ finds, that the value of the health insurance benefits is $128.34 per week. Claimant's AWW as admitted does not include the cost of the health benefits.

4. The FAL was based on the whole person impairment rating of Gregory Muench, M.D., and/or Gretchen Brunworth, M.D. The Claimant does not dispute the rating. The rating is 23 % whole person. The Claimant filed a timely objection to the FAL and requested a hearing on the issue of AWW insofar as it factored into the formula for calculating whole person PPD benefits.

5. The Claimant's date of birth is November 19, 1947. As of the MMI date, she was 69 years old. Her temporary total disability (TTD) rate pursuant to the FAL was $206.52. The Employer's cost of health insurance and other benefits provided is $128.34 per week. Since the Employer continues to pay for the Claimant's health insurance and other benefits, the TTD rate is not affected, however, A PPD award is a one-time only award for medical impairment only and loss or gain of earnings is irrelevant to PPD. When the health insurance and fringe benefits are added to the admitted AWW, the AWW for PPD calculations only is $438.12, 2/3rds of which is $292.08, a hypothetical TTD rate, based on the premise that the Claimant may not always receive Employer-paid health benefits and other fringe benefits. Indeed, part of the Claimant's compensation package included Employer-paid health insurance benefits, but the Employer was directly paying these benefits on top of the Claimant's regular earnings.

Ultimate Finding

6. It would be fundamentally unfair if the Claimant's total compensation package equal to $438.12 per week, which included Employer-paid health insurance of $128.34 per week—presumably tax sheltered—did not reflect the measure of his AWW insofar as2.3rds of it factored into the formula for the calculation of PPD (medical impairment) benefits contained in § 8-42-107 (8) (d) and (e), C.R..S., whereby the insurance carrier could "low ball" the Claimant in a PPD award by excluding the value of the health insurance from the formula in calculating whole person PPD. The ALJ hereby exercises his discretion as permitted by the AWW Section of the Workers' Compensation Act (the "Act") for purposes of the PPD formula. Including the health benefits , this calculates to an increased TTD rate of $292.08 per week (for formula purposes only), based on an AWW of $438.12.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Average Weekly Wage for Permanent Partial Disability Calculations

a. Section 8-40-201, C.R.S. defines "wages" as follows:

> (19) (a) "Wages" shall be construed to mean the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied.

(b) The term "wages" includes the amount of the employee's cost of continuing the employer's group health insurance plan and, upon termination of the continuation, the employee's cost of conversion to a similar or lesser insurance plan, and gratuities reported to the federal internal revenue service by or for the worker for purposes of filing federal income tax returns and the reasonable value of board, rent, housing, and lodging received from the employer, the reasonable value of which shall be fixed and determined from the facts by the division in each particular case, but does not include any similar advantage or fringe benefit not specifically enumerated in this subsection (19). If, after the injury, the employer continues to pay any advantage or fringe benefit specifically enumerated in this subsection (19), including the cost of health insurance coverage or the cost of the conversion of health insurance coverage, that advantage or benefit shall not be included in the determination of the employee's wages so long as the employer continues to make payment….

b. Section 8-42-102, C.R.S., defines AWW as follows:

(1) The average weekly wage of an injured employee shall be taken as the basis upon which to compute compensation payments. (2) Average weekly wages for the purpose of computing benefits provided in articles 40 to 47 of this title, except as provided in this section, shall be calculated upon the monthly, weekly, daily, hourly, or other remuneration which The injured or deceased employee was receiving at the time of the injury, and in the following manner….

(3) Where the foregoing methods of computing the average weekly wage of the employee, by reason of the nature of the employment or the fact that the injured employee has not worked a sufficient length of time to enable earnings to be fairly computed there under or has been ill or has been self-employed or for any other reason, will not fairly compute the average weekly wage, the division, in each particular case, may compute the average weekly wage

> of said employee in such other manner and by such other method as will, in the opinion of the director based upon the facts presented, fairly determine such employee's average weekly wage.
> .
> (5) (b) Nothing in this subsection (5) alters the discretion of the division or the director (in this case an ALJ) to fairly determine a worker's average weekly wage in accordance with subsection (3) of this section.

c. The entire objective of wage calculation is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. Although AWW generally is determined from the employee's wage at the time of injury, § 8-42-102(2), C.R.S., if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage. § 8-42-102(3), C.R.S.; *see Williams Brothers, Inc. v. Grimm,* 88 Colo. 416, 297 P. 1003 (1931); *Vigil v. Indus. Claim Appeals Office*, 841 P.2d 335 (Colo.App.1992) Campbell v. IBM Corp., 867 P.2d 77 (1993) As found, the ALJ made a discretionary distinction between the addition of the cost of the health benefits for temporary disability, where it is replacing lost wages, and the value of those benefits for the purpose of calculating whole person PPD, a one-time only award that may increase to permanent total disability but never decrease to a lesser degree of PPD award when a claimant gets better. *See City and County of Denver v. Indus. Claim Appeals Office,* 58 P.3d 1162 (Colo. App. 2002).

d. Under the Act, injuries are classified as either partially or totally disabling and as either temporary or permanent in nature. Temporary disability benefits, whether total or partial, compensate an employee directly for loss of earnings from the date of injury, *Eastman Kodak Co. v. Indus. Comm'n*, 725 P.2d 107 (Colo.App.1986), until such time as the employee's underlying condition has stabilized. Thereafter, a permanently and **partially** disabled individual either gets a one-time only scheduled award or a one-time only whole person award regardless of loss or gain of earning capacity. This award should fairly reflect in the formula what the employee was actually earning (including employer-paid health insurance benefits).

e. The Act is designed to compensate an injured worker for two distinct losses resulting from an industrial injury or occupational disease: the loss of earning capacity based on the concept of disability, and medical and other costs associated with the injury or disease. See 2 A. Larson, *The Law of Workmen's Compensation* § 57.11. While calculation of a claimant's AWW is generally tied to the time of injury, the discretionary exception affords an ALJ the discretion to determine a claimant's AWW,

including the claimant's cost for COBRA insurance, based not only on the claimant's wage at the time of the injury, but also on other relevant factors when the case's unique circumstances require. In *Avalanche Industries, Inc. v. Clark*, 198 P.3d 589 (2008) the ALJ did not abuse his discretion when he determined the claimant's AWW, including COBRA insurance, based on her increased earnings and insurance costs at a subsequent employer. If a future employer does not pay health insurance, the injured worker would be on her own to have health insurance. Indeed, the addition of the cost of replacement health insurance is appropriate regardless of whether the employee actually obtains replacement health insurance. *See Ray v. Indus. Claim Appeals Office,* 124 P.3d 891 (Colo. App. 2005); *Avalanche Industries, Inc. v. Clark, supra.* While not squarely on point to the issue at hand, *Ray* is instructive insofar as it sheds light on the underlying intent behind the definition of "wages." Further, "wages" are an underlying consideration in the PPD formula. Otherwise, the TTD rate would not be part of the formula. Indeed, it makes no sense that the underlying intent of this portion of the formula was to mechanistically apply the TTD rate without regard to the employer-paid health benefits.

f. The ALJ concludes that to properly calculate the Claimants AWW for purposes of determining her PPD, the ALJ must use discretionary authority and determine that the Respondents' cost o health insurance benefits should be included and factored into the formula to arrive at a fair and just determination of the Claimant's permanent medical impairment. As long as the Claimant continues working for the Employer, the Employer will presumably continue paying for the Claimant's health insurance. The PPD award is independent of the Claimant continuing to work for the Employer. Why should it be lower and impervious to Employer-paid health insurance. It should not. Moreover, it should be factored into the formula contained in § 8042-107 (8) (d), C.R.S.

g. Under the formula contained in § 8-42-107 (8) (d) and (e), C.R.S., the correct calculation for someone over 60 years of age, under this decision, is: 1 X 400 X $292.08 X 23% (whole person rating) =$26, 871.36, which exceeds the admitted PPD award of $18,999.84 by $7, 871.52.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products,*

Inc., W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on the designated issue.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the Claimant aggregate permanent partial disability benefits of $26, 871.36, which exceeds the admitted aggregate amount of $18, 999.84 by $7,871.52, which is payable retroactively and forthwith.

B. Respondents are entitled to credit for all permanent partial disability benefits paid to date.

C Respondents shall pay the Claimant interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

DATED this_____day of March 2017.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the cervical fusion recommended by Dr. Amir Abtahi is reasonable medical treatment necessary to cure and relieve claimant from the effects of the March 10, 2016 work injury.

- If claimant fails to prove that the recommended surgery is reasonable and necessary, whether claimant has proven by a preponderance of the evidence that the cervical injection recommended by Dr. William Faragher constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the March 10, 2016 work injury.

FINDINGS OF FACT

1. On March 10, 2016, claimant sustained an admitted injury arising out of and in the course of his employment with employer. The injury occurred when the claimant slipped on a wet floor and fell. Claimant testified that he fell on his left side and injured his neck, back, left hip, left shoulder, and left arm. Claimant testified that he felt areas of soreness after the fall.

2. Claimant reported the injury to employer on March 10, 2016 and employer sent claimant for treatment at Peak Family Medicine. On March 16, 2016, claimant began treating with Peak Family Medicine as his authorized treating physician ("ATP") and was seen by Norman Dockins, PA-C. Mr. Dockins referred claimant to physical therapy and to Dr. William Faragher for pain management.

3. On March 21, 2016, claimant began physical therapy with Scott Baadte, PT at Mountain View Therapy. On that date, claimant reported to Mr. Baadte complaints of pain in his back, hip, neck, and shoulder. Claimant continued with physical therapy until September 27, 2016.

4. Claimant testified that although he has had neck pain since the March 10, 2016 work injury, his initial medical treatment was focused on his low and mid back because those areas were causing him the most pain. The ALJ finds claimant's testimony on this issue to be credible and persuasive.

5. The medical records indicate that claimant received treatment for his lumbar and thoracic spine including an interlaminar epidural steroid injection at the T8-9 level on August 1, 2016 and medial branch blocks at the L4, L5, and S1 levels on October 17, 2016.

6. On August 24, 2016, Dr. Faragher reviewed results of a magnetic resonance image (”MRI”) of claimant’s thoracic spine and noted the appearance of advanced degenerative disc disease and stenosis in claimant’s cervical spine. As a result, Dr. Faragher recommended a cervical spine MRI to evaluate potential pain generators in claimant’s neck, bilateral shoulders, and mid back.

7. On September 9, 2016 an MRI of claimant’s cervical spine showed that at the C3-4 level a disc osteophyte complex effacing the left nerve root exit zone with left unconvertebral spurring, resulting in moderate left neural foraminal stenosis. In addition, at the C4-5 level the MRI showed a left paracentral disc osteophyte complex contacting and mildly flattening the ventral aspect of the spinal cord and effacing the left nerve root exit zone. At the C6-7 level there was “a bony ankylosis across the disc versus congenital non-segmentation”.

8. After he reviewed the cervical spine MRI, Dr. Faragher referred claimant back to physical therapy to address his cervical spine. Claimant returned to physical therapy on October 4, 2016.

9. On October 13, 2016, claimant was seen by Mr. Dockins who noted that although claimant had returned to physical therapy for his cervical spine, he continued to have pain in his neck. As a result, Mr. Dockins referred claimant to Dr. Jim Youseff at Spine Colorado. On October 21, 2016 claimant was seen at Spine Colorado by Dr. Abtahi. Claimant reported to Dr. Abtahi that his pain was 6 out of 10 in his neck and radiating into shoulders.

10. Dr. Abtahi reviewed the results of the cervical spine MRI and noted left sided disc herniations at C3-4 and C4-5 resulting in impingement of the exiting nerve root and moderate to severe neuroforminal narrowing. Dr. Abtahi found that claimant had failed conservative treatment and recommended claimant undergo an anterior cervical discectomy and fusion from C3 to C5.

11. On October 29, 2016, a peer review was conducted by Dr. Robert Mack related to the recommended cervical fusion. Dr. Mack opined that claimant’s cervical spine symptoms were not related to claimant’s work injury. In support of this opinion, Dr. Mack noted that the September 9, 2016 MRI showed a congenital fusion at C6-7. Dr. Mack opined that this congenital condition is a factor in the degenerative changes to claimant’s cervical spine. Dr. Mack also opined that because of that congenital condition at C6-7, a fusion from C3 to C5 would put significant added biomechanical stress on the adjacent discs possibly resulting in adjacent segment disease. Based upon Dr. Mack’s opinion, respondents denied the recommended cervical fusion.

12. On December 14, 2016 Dr. Faragher recommended claimant undergo a left interlaminar epidural injection at the C5-6 level.

13. On December 18, 2016, Dr. Mack reviewed the recommendation for a cervical injection. Dr. Mack again opined that claimant’s cervical symptoms are not

related to the March 10, 2016 work injury. Respondents denied the recommended cervical injection.

14. On January 20, 2017, Mr. Dockins noted that the cervical surgery was denied and agreed that the cervical stenosis was not caused by the work injury, but that claimant's March 10, 2016 fall at work could have caused an exacerbation of claimant's cervical stenosis.

15. Claimant testified that his current symptoms include a stabbing and pricking pain in his neck that radiates into his shoulders and upper back. Claimant also testified that he attributes his neck pain to the March 10, 2016 work injury. Claimant testified that prior to the March 10, 2016 work injury he did not have pain in his neck and he was unaware of any congenital condition in his neck.

16. The ALJ credits the medical records, the opinions of claimant's treating providers, and claimant's testimony over the contrary opinion of Dr. Mack and finds that claimant has demonstrated that it is more likely than not that the March 10, 2016 work injury aggravated, accelerated, or combined with claimant's preexisting stenosis in his cervical spine to lead to the need for treatment, including surgery.

17. The ALJ credits the medical records and the opinion of Dr. Abtahi over the contrary opinion of Dr. Mack. Therefore, the ALJ finds that claimant has demonstrated that it is more likely than not that the recommended cervical fusion is reasonable medical treatment necessary to cure and relieve claimant from the effects for the March 10, 2016 work injury.

18. As claimant has met his burden with regard to the recommended fusion surgery, the ALJ does not address the requested alternative treatment of a cervical injection.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d

385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has demonstrated by a preponderance of the evidence that the March 10, 2016 work injury aggravated, accelerated, or combined with claimant's preexisting cervical stenosis, resulting in the need for surgery. As found, the medical records, the opinions of claimant's providers, and claimant's testimony are credible and persuasive on this issue.

6. As found, the claimant has demonstrated by a preponderance of the evidence that the recommended anterior cervical discectomy and fusion from C3 to C5 is reasonable medical treatment necessary to cure and relieve claimant from the effects for the March 10, 2016 work injury. As found, the opinion of Dr. Abtahi is credible and persuasive on this issue.

ORDER

It is therefore ordered that:

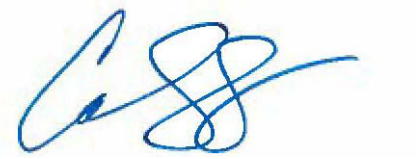
1. Respondents shall pay for the recommended anterior cervical discectomy and fusion from C3 to C5, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail,

as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 8, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that her right knee scheduled impairment rating should be converted to a whole person impairment rating.

II. Whether Claimant has proven by a preponderance of the evidence that her left shoulder scheduled impairment rating should be converted to a whole person impairment rating.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant suffered injuries in a work accident to her right knee and left shoulder on March 11, 2013. The claim was admitted. Claimant has underdone conservative treatment, as well as two surgeries to treat her left shoulder. The first was performed in September, 2014, consisting of a clavicle resection and subacromial decompression. The second was performed in July, 2015, consisting of an arthroscopic debridement, subacromial debridement, and bicep tenodesis. Both were performed by Dr. Armodios Hatzidakis, M.D.

2. Claimant was evaluated by Dr. Ted Villavicencio on December 23, 2013. Claimant reported 7/10 pain in her shoulder. Claimant reported her knee was overall doing well with regular duties. Dr. Villavicencio noted, "Neck: no point tenderness over the cervical spine. Minimally tender with palpation of the left trapezius muscles; normal range of motion in all directions." Following examination, Dr. Villavicencio opined the Claimant had reached MMI. Dr. Villavicencio assigned Claimant with a 14% left upper extremity rating and an 11% right lower extremity rating.

3. Claimant attended a DIME with Dr. William Watson on June 17, 2014. With regards to the Claimant's right knee Dr. Watson noted, "The examinee states she has done fairly well following this and has had minimal difficulties." Claimant reported ongoing left shoulder pain at 6-7/10. Dr. Watson noted both Dr. Mark Failinger and Dr. James Lindberg did not believe Claimant was a surgical candidate due to concerns with recurrence of Complex Regional Pain Syndrome ("CRPS") symptoms following surgery. Claimant's CRPS problems have existed for years, and are not related to the Claimant's March 11, 2013 industrial injuries.

4. Following examination, Dr. Watson opined the Claimant was not at MMI. Dr. Watson opined the claimant should undergo surgical intervention of the left shoulder. Dr. Watson assigned Claimant a provisional 15% upper extremity rating and

did not provide a rating for the Claimant's right knee. The surgeries then proceeded with Dr. Hadzidakis, as noted.

5. Claimant was evaluated by Dr. Scott Richardson on September 3, 2015. Upon examination Dr. Richardson noted the claimant's neck, "Is supple and symmetric with midline trachea and no masses." Dr. Richardson opined the Claimant had reached MMI and assigned claimant a 17% lower extremity rating for the knee.

6. On February 18, 2016 Claimant was evaluated by Claimant's Authorized Treating Physician ("ATP"). Dr. John Burris. Dr. Burris noted the Claimant had a preexisting history of CRPS and ulnar nerve neuropathy. Claimant reported 7/10 pain to the left shoulder region as wells as continued right knee pain.

7. Upon examination Dr. Burris noted, "Neck is supple to palpation, full range of motion in all planes. Left upper extremity neurovascularly intact throughout. At the shoulder, well-healed surgical scar and no unusual swelling or tenderness. Non-tender over clavicle and AC joint. Right lower extremity is neurovascularly intact throughout. Surgical scars at the knee are well-healed with no unusual swelling, erythema or tenderness. No joint effusion present." Following examination Dr. Burris opined the Claimant had reached MMI. Dr. Burris noted, "There have been no significant changes in her functional status or subjective complaints." On April 27, 2016 the Parties stipulated the Claimant had reached MMI for all her work related conditions as of February 18, 2016, pursuant to the opinion of Dr. Burris.

8. The Parties agreed to waive any requirement that Claimant return to Dr. Watson for a follow-up DIME on the issues of MMI and permanent impairment. (Respondent's Ex. A, pg. 1).

9. The Parties stipulated the Claimant's final permanent partial disability rating for her right lower extremity (knee) was 17% scheduled. (Respondent's Ex. A, pg. 2).

10. The Parties stipulated the Claimant's final permanent partial disability rating for her left upper extremity (shoulder) was 15% scheduled. (Respondent's Ex. A, pg. 2).

11. Claimant reserved the right to seek "conversion" of the extremity ratings to a working unit. (Respondent's Ex. A, pg. 2).

12. An Order approving the stipulation was signed and filed on May 6, 2016. (Respondent's Ex. A, pg. 7). Following the Order, and subsequent Final Admission of Liability. Claimant objected and sought to convert both scheduled ratings to whole person.

13. Claimant's ATP, Dr. Burris sat for an evidentiary deposition on September 8, 2016.

14. Dr. Burris testified he became a Level II accredited physician in 1996. Dr. Burris testified he is board certified in occupational medicine as of 1996 and has practiced in the field since. Dr. Burris was admitted as an expert witness in the field of occupational medicine.

15. Dr. Burris testified he had only evaluated and examined the Claimant once, on February 18, 2016 to assess MMI and her impairment ratings. He further testified the claimant had sustained a right knee contusion and a left shoulder strain as a result of the March 11, 2013 industrial accident. Dr. Burris testified the Claimant suffered from CRPS and an ulnar nerve condition which pre-existed the March 11, 2013 industrial injuries.

16. Dr. Burris testified that regarding the claimant's right knee injury there were not a lot of relevant findings. Claimant's range of motion was good and symmetrical with the unaffected leg. She had good motor strength and sensation. Dr. Burris was questioned whether the claimant had any clinical findings or complaints of any altered gait which may have affected her ability to walk or her lower back. Dr. Burris credibly testified, "She didn't complain to me about back pain. She only complained about her continued shoulder pain, she also complained about right knee pain."

17. Dr. Burris viewed Dr. Richardson's MMI report dated September 3, 2015. This report did not contain any discussion of back pain. Dr. Richardson's MMI report was limited to the lower extremity.

18. Dr. Burris was asked the following:

Q: ….do you believe based upon a reasonable degree of medical probability as it relates to the right knee injury, that Ms. Flanigan has any permanent medical impairment that is not limited to the lower extremity?

A: No.

Q: And I understand – you understand better than I do that – that doctors, Level II doctors are instructed when they do an impairment rating, as a matter of course, if they rate an extremity, to give the appropriate conversion for the working unit under the AMA Guides; is that correct?

A: Yes.

Q: And notwithstanding that requirement, in your medical opinion, do you believe that the situs of the functional impairment as a result of a knee injury is limited to the lower extremity?

A: Yes.

Q: Do you feel that there's any functional impairment not expressed on the extremity rating, what we call the schedule of disabilities, to the right lower extremity?

A: No, I don't think there's anything beyond the extremity.

(Burris Depo. pgs. 16-17, lines 17-25).

19. Dr. Burris was asked to review Dr. Watson's DIME report regarding the left shoulder. Dr. Burris testified that Dr. Watson's DIME report limited the Claimant's impairment rating to the upper extremity. Dr. Burris testified, "No, he doesn't talk about anymore proximal involvement. He does talk about the acromioclaviuclar joint in the front and into the trapezius musculature in the back."

20. Dr. Burris was asked to explain the Claimant's symptoms slowing of the ulnar nerve across her elbow. Dr. Burris testified these symptoms were not due to the shoulder injury, but her previous injury.

21. Dr. Burris testified on the date he examined Claimant she had full range of motion in all planes of her cervical spine and she had no limitations of motion in her neck.

22. Dr. Burris did acknowledge that Claimant did suffer from an impairment to her range of motion of her left arm, most notably a deficit in flexion and secondarily, in abduction. He further noted that the repair consisting of the clavicle resection occurred inside of (proximal to) the glenohumeral joint. Further, that the Claimant's loss of range of motion could be due to inflammation of the spinatus and/or supraspinatus tendons, which attach to the neck and scapula, which "can be considered a portion of the torso."

23. Dr. Burris was asked to explain his examination of the Claimant's shoulder. Dr. Burris testified, "So she had some positive findings. She had well-healed surgical scars. Her motor strength is good. Her sensation is good. She's got some loss of motion in the shoulder. She doesn't have a drop-arm sign, which is a good sign that the rotator cuff is functioning. And she did have a positive impingement test, and that's another provocative test where you're pinching the rotator cuff, and that was positive for her. When you go to the functional issues, the main things I look for are the status of the scapula." Dr. Burris testified the Claimant had normal scapula *function.*

24. Dr. Burris was asked to review Dr. Villavicencio's December 23, 2013 MMI report. Dr. Burris testified that Dr. Villavicencio had limited the Claimant's impairment rating to the upper extremity.

25. Dr. Burris was asked, "To your knowledge, and including your own opinions where you indicated there was no additional impairment other than those that had been given before, but in your opinion, your own clinical exam, your review of prior ratings and findings by Dr. Watson and Dr. Villavicencio, are you aware of any evidence

for impairment to Ms. Flanigan's shoulder other than range of motion loss?" Dr. Burris answered, "No."

26. Dr. Burris was then asked the following:

Q: Are you aware of any evidence in this case, based upon a reasonable degree of medical probability, of permanent functional limitations that are not limited to the upper extremity?

A: No.

Q: Again, same question that I had with regard to the lower extremity. In your opinion, at least from a medical point of view, and in your discretion as the authorized treating physician, would you be inclined to convert the upper extremity rating that we've stipulated to, to a working unit rating in this case?

A: You mean the whole person?

Q: A whole person.

A: No.

Q: Okay. And why would that be, Doctor?

A: Because it's not -- it's functionally limited to the extremity.

(Burris Depo. pgs. 28-29, lines 25-16).

27. On redirect examination Dr. Burris was asked the following:

Q: The – the last reference by counsel to numbness and tingling in the fingers and some intermittent neck pain, is that more likely due to the ulnar nerve problem we discussed earlier, not related – not related to this claim?

A: The tingling in the fingers is.

Q: And I think you already testified that on clinical examination and on the EMG there was no evidence – objective evidence of radiculopathy?

A: Correct.

Q: Did you see any evidence in the record or your examination of limitations of function to the neck, the scapula, or the clavicle?

A: No.

(Burris Depo. pgs. 45-46, lines 12-10).

27. The ALJ finds Dr. Burris' testimony to be credible and persuasive.

28. Claimant did not testify, in person or by deposition, about any of her own functional limitations.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Conversion

4. Section §8-42-107(1), C.R.S. provides that a claimant is limited to a scheduled disability award if the claimant suffers an "injury or injuries" described on the schedule in C.R.S. §8-42-107(2). Where the claimant suffers an injury not enumerated in C.R.S. §8-42-107(2), the claimant is entitled to whole person impairment benefits under C.R.S. §8-42-107(8). *Strauch v. PSL Swedish Healthcare Sys.*, 917 P.2d 366 (Colo. App. 1996). Thus, scheduled injuries may not be compensated with whole person medical impairment benefits. *United Airlines, Inc. v. ICAO*, 993 P.2d 1152, 1158 (Colo. 2000).

5. Conversion of a scheduled injury rating into a whole person rating is a question of fact for an ALJ and is not a medical determination for the authorized treating physician. *Eacker v. True Value Hardware*, W.C. No. 4-661-379 (ICAO February 15, 2007). The ALJ must determine whether the claimant has proved beyond a preponderance of the evidence that his injury resulted in functional impairment to a portion of the body not listed on the schedule. *O'Connell v. Don's Masonry*, W.C. No. 4-609-719 (ICAO December 28, 2006); *Lovett v. Big Lots*, W.C. No. 4-657-285 (ICAO November 16, 2007) (affirmed at Colo. App. No. 07CA2375).

6. The mere fact that a claimant may have physical injury to *structures* adjacent to the arm does not compel a finding of *functional* impairment beyond the shoulder. *Lovett supra*. Further, a claimant's testimony alone, and without supporting medical testimony or evidence, *may* be enough to support conversion. *Duran v. Big O Tires,* W.C. No. 4-367-183 (ICAO May 23, 2000). *It is not the location of the physical injury or the medical explanation for the loss that determines the issue, but rather where the* ***impairment*** *lies.*

6. Whether a claimant has sustained a scheduled "injury" measured as a "loss of an arm at the shoulder" under C.R.S. § 8-42-107(2)(a), or a whole person impairment compensated under C.R.S. § 8-42-107(8)(c), depends on whether the claimant sustained "functional impairment" beyond the arm at the shoulder. This is true because the term "injury," as used in C.R.S. § 8-42-107(1)(a)-(b), refers to the part or parts of the body which have been impaired or disabled, not the *situs* of the injury itself or the medical reason for the ultimate loss. *Warthen v. ICAO*, 100 P.3d 581 (Colo. App. 2004).

7. Claimant offered no testimony that she suffered a functional impairment beyond the left shoulder or her right knee. Claimant relied upon the medical records from her authorized treating provider and DIME report to support her claim of conversion of the two (2) scheduled injuries; to wit: her right knee and left shoulder.

8. The medical records, combined with Dr. Burris' deposition testimony, do not support the Claimant's assertion that she has experienced a functional impairment beyond the right knee.

9. The medical records, combined with Dr. Burris' deposition testimony, do not support the Claimant's assertion that she has experienced a functional impairment beyond the left shoulder.

10. Claimant has failed to show, by a preponderance of the evidence, that she suffered permanent functional impairment to her whole person, beyond what has been scheduled for her right knee or her left shoulder. Claimant is not entitled to convert either scheduled injury to a whole person impairment.

ORDER

It is therefore ordered that:

1. Claimant's request to convert her right knee scheduled impairment rating to a whole person rating is denied and dismissed.

2. Claimant's request to convert her left shoulder scheduled impairment rating to a whole person rating is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the right knee arthroscopic debridement and meniscectomy recommended by Dr. Norman Harris is reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 22, 2016 work injury.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his right knee on February 22, 2016. The injury occurred when claimant was working at a job site and his right foot became twisted in an air hose. Claimant testified that at that time he noted sharp pain and swelling in his right knee.

2. Claimant timely reported the injury to employer on February 22, 2016 and employer completed a First Report of Injury on February 23, 2016. On April 5, 2016, employer filed a General Admission of Liability ("GAL") admitting for medical benefits.

3. Claimant testified that in 1985 he underwent a surgery to his right knee that was intended to "clean out" some arthritis. Claimant testified that between the 1985 surgery and the February 22, 2016 work injury he did not have right knee pain.

4. Claimant testified that since the February 22, 2016 work injury he has not missed any work, he continues to perform his normal job duties, and he is able to engage in his personal hobbies of hiking, fishing, and hunting. However, claimant testified that he has right knee pain that worsens throughout the work day.

5. On March 1, 2016 a magnetic resonance image ("MRI") was taken of claimant's right knee and showed a complex tear of the medial meniscus.

6. On March 18, 2016, Dr. Norman Harris discussed treatment options with claimant, including a corticosteroid injection. Claimant declined injections because he is "deathly afraid of needles". As a result, Dr. Harris recommended that claimant undergo a right knee arthroscopic debridement and meniscectomy. In a May 27, 2016 medical report, Dr. Harris found that claimant had failed conservative treatment, including physical therapy, and was a surgical candidate. Respondents have denied the recommended surgery.

7. On July 7, 2016, Dr. Harris authored a letter in which he addressed respondents' denial of the recommended surgery. In that letter Dr. Harris opined that claimant had a new injury to his meniscus on top of old degenerative arthritis.

8. Dr. Jon Erickson and Dr. James Lindberg reviewed claimant's medical records and have both opined that the recommended surgery is not related to claimant's February 22, 2016 work injury. In an April 1, 2016 peer review, Dr. Erickson opined that claimant has a preexisting degenerative medial meniscal tear coupled with advanced osteoarthritis. In that same review, Dr. Erickson noted that results of arthroscopic debridement are "uniformly poor" when the individual has advanced osteoarthritis. Dr. Erickson recommended that claimant undergo a vigorous course of non-operative care including work restrictions and physical therapy treatment focusing on muscle strengthening and range of motion exercises.

9. In a peer review dated October 11, 2016, Dr. Lindberg opined that the claimant's meniscal tear is a progression of his underlying arthritis and not related to the February 22, 2016 work injury.

10. Dr. Lindberg testified at hearing and stated that the surgery claimant underwent in 1985 was a meniscectomy. Dr. Lindberg testified that the findings on the March 1, 2016 MRI are consistent with an old meniscectomy. Specifically, Dr. Lindberg opined that the micro tears in claimant's meniscus are related to the 1985 surgery and not any recent event. Dr. Lindberg also testified that the recommended procedure would likely provide no benefit to claimant.

11. The ALJ notes that claimant continues to perform his normal job duties and engage in his hobbies. Although claimant complains of knee pain, the ALJ credits the opinions of Drs. Erickson and Lindberg that claimant's knee pain is unrelated to the February 22, 2016 work injury. Therefore, the ALJ finds that claimant has failed to demonstrate that it is more likely than not that the February 22, 2016 work injury caused the need for the recommended right knee arthroscopic debridement and meniscectomy.

12. The ALJ credits the opinions of Drs. Erickson and Lindberg over the contrary opinion of Dr. Harris and finds that claimant has failed to demonstrate that it is more likely than not that the February 22, 2016 work injury aggravated, accelerated, or combined with claimant's preexisting osteoarthritis to necessitate surgery.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S., *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has failed to demonstrate by a preponderance of the evidence that the recommended right knee arthroscopic debridement and meniscectomy is reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 22, 2016 work injury. As found, the opinions of Drs. Erickson and Lindberg are credible and persuasive in regard to this issue.

ORDER

It is therefore ordered that:

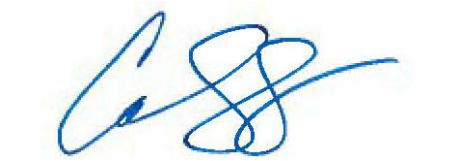
1. Claimant's request for medical benefits consisting of a right knee arthroscopic debridement and meniscectomy is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 9, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Has Claimant proven by a preponderance of the evidence that he is entitled to ongoing treatment for chronic urticaria and immunological symptoms, including omalizumab (Xolair) therapy?

2. Has Claimant proven by a preponderance of the evidence that an April 19, 2016 bill from Quest Diagnostics for lab work is reasonable, necessary, and causally related to his industrial injury?

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury on October 25, 2014, while working for Employer as a maintenance technician. He was cleaning a large ice machine with a cleanser that contained phosphoric acid. The acid splashed onto his forearms above his protective gloves, causing chemical burns.

2. Claimant immediately rinsed his arms for approxiately ten minutes. He washed his arms again with soap and water when he arrived home. He applied an OTC antibacterial cream and bandaged his arms.

3. When he awoke the following morning, he had large, painful blisters on his forearms. He discussed the injury with his supervisor who took Claimant to Premier Urgent Care that day.

4. The notes from Premier document chemical burns to Claimant's arms, noting they were red, swollen, and blistered. Claimant was given Silvadene cream, which he applied to his arms.

5. The few days after using the Silvadene cream, Claimant developed an itching, burning rash moving up from his arm to his neck and a portion of his back. He called the clinic later that day to report the symptoms and was instructed to stop using the Silvadene cream.

6. Claimant then started taking Benadryl. Initially, the rash seemed to improve. But several days later he broke out in large hives on multiple areas of his body.

7. Claimant returned to Premier and was instructed to discontinue the Benadryl. Dr. Magnuson at Premier diagnosed dermatitis post chemical burns, and referred Claimant to a dermatologist, Dr. Ron Johnson.

8. Claimant received two steroid injections which helped for approximately two days each time. He was also given a prednisone taper starting at 60 mg, which was not particularly helpful.

9. Dr. Johnson recommended Claimant see an allergy specialist and referred him to Dr. Matthew Bowdish at the William Storms Allergy Clinic.

10. Dr. Bowdish first examined Claimant on January 12, 2015. Dr. Bowdish noted the onset of hives following the Silvadene and Benadryl treatment. Claimant brought pictures of the lesions to his appointment, and Dr. Bowdish stated: "they look like urticarial lesions." Dr. Bowdish noted that Claimant was still breaking out in hives approximately two to three times per week despite discontinuing the Silvadene and Benadryl. Dr. Bowdish diagnosed subacute-going-on-chronic urticaria. He opined that "either the Silvadene or the Benadryl cream promoted some sort of immunologic response that is still sputtering with urticarial lesions that are not very well controlled and not particularly responsive to systemic corticosteroids." Claimant questioned whether he should be tested for an allergy to Silvadene or Benadryl, but Dr. Bowdish felt it was more critical to control the hives first. He recommended an antihistamine/leukotriene regimen and prescribed Singulair and cetirizine. If that did not work, Dr. Bowdish indicated he would consider omalizumab (a.k.a. Xolair) to treat the hives.

11. Claimant returned to Dr. Bowdish on February 24, 2015. He noted his hives were "partially controlled" with cetirizine, but he could not tolerate increased doses. He had previously tried loratadine which was not helpful. The Singulair was not helpful either. On physical examination, Claimant had several urticarial lesions on his left arm, his hands and his chest. Dr. Bowdish diagnosed chronic idiopathic urticaria, which was resistant to multiple antihistamines, leukotriene inhibitors, and systemic steroids. Dr. Bowdish recommended implementing omalizumab therapy. Dr. Bowdish indicated omalizumab would hopefully modulate and suppress Claimant's immune response. The plan was to administer the medication for 6 to 9 months, and then evaluate whether he could stop it. Dr. Bowdish opined Claimant's condition, and the recommended treatment, were "related to workplace issues."

12. Insurer did not authorize the omalizumab. Instead, Insurer's nurse case manager, Nancy McMillan, contacted Dr. Bowdish on March 17, 2015 to discuss the causal connection between the current treatment recommendations and the October 2014 incident. Dr. Bowdish explained disruptions in the immune system causing flareups. He opined that there was "no obvious, 100% way to prove . . . whether this is related to the burn, but certainly given the time course of the symptoms starting 4 days after the burn was treated with Silvadene there is probably some relation." Given Claimant's lack of response and negative reactions to other treatment options, Dr. Bowdish felt omalizumab was the most reasonable next step. Dr. Bowdish assured Ms. McMillan that Claimant had been compliant with treatment, and stated he would make himself available to her or the adjuster to facilitate Claimant's treatment.

13. Claimant underwent an Independent Medical Examination (IME) at Respondents' request with Dr. Tashof Bernton on June 1, 2015. Dr. Bernton opined that symptoms such as rashes, hives, swelling, and difficulty breathing all represent different aspects of a "type 1" allergic reaction, which is characterized by histamine release and mediated by an IgE antibody. Dr. Bernton noted such allergic reactions are typically time-limited, particularly with treatment. But Dr. Bernton noted that occasionally "allergic reactions such as this can go on to chronic urticarial reactions such as this patient had." Dr. Bernton noted there was no prior medical history that would suggest an alternate cause of Claimant's symptoms. Dr. Bernton concluded:

> given the timing of the initial allergic reaction and the characteristics of the history, it is most probable that the chronic urticaria was precipitated by the patient's use of Silvadene cream to treat the work-related injury and the subsequent allergic reaction. I would, therefore, regard this problem as work-related.

14. Despite receiving Dr. Bowdish and Dr. Bernton's opinions, Insurer did not authorize omalizumab.

15. At his August 18, 2015 appointment with Dr. Bowdish, Claimant reported the hives were improved and were occurring less frequently. Dr. Bowdish was "hopeful" that the hives were resolving on their own as they had become more sporadic. Dr. Bowdish opined that if the hives worsened, they would need to reconsider the omalizumab therapy.

16. Claimant was put at MMI June 2016 per Dr. Sharma, and Respondents filed a Final Admission of Liability. Claimant timely objected to the FAL and requested a DIME.

17. On November 30, 2015, Claimant saw Dr. Jack Rook for the DIME. Dr. Rook noted that Claimant had broken out in hives within a few weeks of his MMI evaluation with Dr. Sharma. Claimant reported having "full-blown hives" approximately once per month. He also reported difficulty breathing at times when the allergic symptoms flared. Claimant explained that Insurer had paid for all of his doctor visits, but had not covered the medications. Therefore, he was paying for the medications out of his own pocket. Claimant told Dr. Rook he wanted to try the omalizumab therapy because the ongoing symptoms were "very bothersome."

18. Dr. Rook diagnosed a generalized allergic reaction status post chemical burns to both forearms. He noted, "the allergic reaction is felt to be related to use of Silvadene cream after the chemical burns." Dr. Rook further commented, "all medications prescribed to treat itching and hives should be covered by the workers' compensation insurance carrier. Likewise, if the patient proceeds with the trial of . . . omalizumab, this medication should be covered by the work comp insurance." Given that Claimant continued to have ongoing allergic symptoms, and since all medications recommended by the allergist had not yet been attempted, Dr. Rook opined that

Claimant was not at MMI. Dr. Rook opined, "I recommend that he pursue the medication trial recommended by his allergist."

19. Respondents initially applied for a hearing on the issue of overcoming the DIME, but they withdrew the issue before any hearing occurred. Ultimately, as stated on the record by counsel for Respondents at the commencement of the hearing, Respondents did not challenge Dr. Rook's determination and accepted the results of the DIME.

20. Claimant returned to the William Storm's Allergy Clinic on April 19, 2016 and saw Dr. Bowdish's nurse practitioner, Kathryn Blair. Claimant reported acute swelling of his tongue — "the worst swelling that he has ever had." NP Blair ordered lab work, which was conducted by Quest Diagnostics later that day. Claimant testified at hearing that NP Blair ordered the lab work to investigate why his tongue was swelling.

21. The Quest bill has not been paid, and Quest continues to send Claimant collection notices seeking payment of $539.73.[1]

22. Claimant returned to Dr. Bowdish on June 7, 2016, at which time he thought Respondents had agreed to authorize a trial of omalizumab. Dr. Bowdish was "happy" to learn (albeit mistakenly) that Insurer had agreed to allow the trial of omalizumab. He opined that the only other option would be to try some other immunosuppressive medications, but omalizumab "by far" had the "best side effect profile."

23. Respondents applied for a hearing on August 26, 2016 seeking "an order limiting medical benefits to those causally related to the original injury consistent with the DIME and ATP's opinions." Claimant filed a timely Response endorsing medical benefits, specifically authorization of the Xolair/omalizumab treatment.

24. In preparation for the hearing, Respondents propounded a letter to Dr. Bowdish requesting further opinions regarding causation. In the interim, Dr. Bowdish had left the Storms Allergy Clinic. Dr. Storms responded for Dr. Bowdish, and stated, "After reviewing [Claimant's] chart, I do not believe that Silvadene is the cause of his ongoing urticarial reactions."

25. Claimant subsequently underwent an IME with Dr. Michael Volz on November 17, 2016. Dr. Volz described Claimant's case as "highly complex and involved with multiple factors to consider." Dr. Volz's diagnoses included chronic urticaria (CU) and angioedema (swelling). He indicated it was clearly histaminergic because histamine blockers, montelukast and systemic steroids all helped reduce the manifestations. He opined it is very challenging to determine why the episode began and why the manifestations are being perpetuated. Dr. Volz opined there is "a high degree of medical probability that the chemical exposure was involved in initiating the [disease] process." He felt Dr. Bowdish had done a good job of evaluating and

[1] On September 15, 2016, Quest sent Claimant a "FOURTH" and "FINAL" collection notice, indicating the account would be forwarded to a collection agency if not paid "immediately."

eliminating many other potential causative factors. According to Dr. Volz, Silvadene has been available for many years and is typically well-tolerated by most patients. Although rare, it is medically "plausible" that Silvadene triggered Claimant's reaction. There is limited evidence-based data/literature on this topic. He opined that NSAIDs such as ibuprofen might perpetuate the hives, which could be easily tested by stopping NSAIDs for several days. Dr. Volz also opined Claimant's Vitamin D deficiency is likely contributing to the hives.

26. Regarding treatment, Dr. Volz agreed that omalizumab is a reasonable option and in many cases can lead to a full resolution, sometimes after a single dose. He also opined that further testing could be considered, particularly obtaining a Vitamin D level. Dr. Volz opined that Claimant is not at MMI because "there are opportunities to manage the hives better and possibly to resolution." Dr. Volz recommended that additional testing be completed before Claimant tries omalizumab.

27. Dr. Storms subsequently reviewed Dr. Volz's report and walked back his previous opinion. Dr. Storms stated "since I have never seen this patient … it is impossible for me to give a medical opinion."

28. Dr. Bowdish's opinions regarding the cause of Claimant's condition and appropriate treatment are credible and persuasive.

29. Dr. Volz's opinions are generally credible and persuasive, except for his recommendation to delay implementation of omalizumab treatment for further testing.

30. Claimant's testimony is credible.

31. Claimant has proven by a preponderance of the evidence that additional treatment for his chronic urticaria and immunological symptoms is reasonable, necessary, and causally related to his industrial injury.

32. Claimant has proven by a preponderance of the evidence that omalizumab treatment is reasonable, necessary, and causally related to his industrial injury.

33. The additional testing recommended by Dr. Volz is reasonable and necessary if Claimant wishes to pursue it.

34. The Quest Diagnostics charges dated April 19, 2016 were for reasonable, necessary, related and authorized diagnostic treatment to evaluate Claimant's symptoms and determine a potential course of treatment.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even after an admission of liability

is filed, the respondents retain the right to dispute the relatedness of any particular treatment, because the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The claimant must also prove that the requested treatment is reasonable and necessary." Section 8-42-101(1)(a). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201, C.R.S.

As found, Claimant has proven by a preponderance of the evidence that additional treatment for his chronic urticaria and immunological symptoms is reasonable, necessary, and causally related to his industrial injury. Dr. Bowdish consistently opined that Claimant's symptoms were related to his industrial injury. The DIME subsequently found that Claimant's ongoing allergic reactions are causally related to the original work injury, and Claimant will not reach MMI until all the medications and options proposed by his treating allergist are attempted. Dr. Volz agrees that the work exposure "initiated" Claimant's condition, but thinks other factors may now contribute to its perpetuation. Given the convergence of expert medical opinion that the industrial injury precipitated Claimant's condition, the ALJ is not persuaded to sever that causal connection based on supposition that non-occupational factors might be perpetuating the condition. Based on the totality of evidence presented, the ALJ is persuaded that Claimant's industrial injury is the most likely caused of his ongoing symptoms.

Claimant is entitled to reasonable, necessary, and related treatment to cure and relieve his ongoing allergic and immunological problems. At the moment, the only specific medical benefit in dispute is omalizumab. Claimant has tried numerous treatments for his allergic condition, including Silvadene, Benadryl, steroid injections, prednisone, Singulair and cetirizine, without significant benefit. Dr. Bowdish suggested as early as January 2015 that Claimant may require omalizumab at some point to get the hives under control. In February 2015, Dr. Bowdish was ready to implement omalizumab, but Insurer did not authorize the medication. Dr. Bowdish continued to recommend omalizumab through his last note dated June 7, 2016. Dr. Rook and Dr. Volz agree that omalizumab is an appropriate treatment for Claimant.

As found, Claimant has proven by a preponderance of the evidence that omalizumab treatment is reasonable, necessary, and causally related to his industrial injury. The ALJ is not persuaded that Claimant must wait for additional testing before initiating the omalizumab therapy.

Dr. Volz suggested additional testing along with the omalizumab treatment, including testing for levels of vitamin D, B12, folate, iron, vitamin D, methylmalonic acid, in homocysteine, along with testing for the MTHFR gene. The ALJ concludes that additional testing requested by an ATP to further diagnose and treat Claimant's condition, including testing as outlined above, would be reasonable and necessary.

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay for omalizumab therapy.

2. Respondents shall pay for all reasonable and necessary medical treatment to cure and relieve the effects of Claimant's injury, including additional diagnostic testing suggested by Dr. Volz if Claimant chooses to pursue same.

3. Respondents shall pay the $539.73 bill from Quest Diagnostics for lab work performed on April 19, 2016. Respondents are encouraged to pay the bill forthwith to mitigate any further damage to Claimant's credit.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 9, 2017

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the left knee lateral meniscus debridement and chondroplasty surgery recommended by Dr. Braden Mayer is related to Claimant's January 21, 2015 industrial injury.

FINDINGS OF FACT

1. Claimant is a 42 year-old man employed by Employer as a Deputy Sheriff. Claimant has worked for Employer since approximately January 2004. Claimant sustained an admitted industrial injury to his right knee on January 21, 2015 while running down a ramp to respond to an assistance call.

2. Claimant primarily treated under the direction of Brian Beatty, D.O., and Braden Mayer, M.D. Claimant underwent an MRI of the right knee on February 6, 2015, which revealed patellofemoral arthritis, a lateral meniscus tear, and degeneration in the medial meniscus. Dr. Beatty referred Claimant to an orthopedic surgeon, Philip Stull, M.D., who recommended surgery.

3. On March 12, 2015, Claimant underwent a right knee arthroscopy with partial lateral meniscectomy, extensive arthroscopic debridement, and chondroplasty.

4. Claimant continued reporting right knee pain subsequent to the surgery despite being released from treatment by Dr. Stull. Dr. Beatty requested a second orthopedic opinion with Thomas Noonan, M.D., with the Steadman Hawkins Clinic. Dr. Noonan first evaluated Claimant on June 18, 2015. Dr. Noonan noted, in part, tenderness and subtle effusion of the right knee. Regarding the left knee, Dr. Noonan noted good motion and strength, and found Claimant's left knee neurovascularly intact and ligamentously stable. Dr. Noonan impressed right knee pain. Dr. Noonan did not provide an impression for the left knee. With respect to the right knee, Dr. Noonan explained that conservative treatment options could include physical therapy, cortisone injections, and possibly an unloader brace; however, there would likely need to be a total right knee replacement at some point in time due to Claimant's moderate to advanced arthritis that was exacerbated by the work injury.

5. There are no physical examination findings for the left knee or impressions of the left knee noted in the medical records for the subsequent evaluation on August 7, 2015.

6. Claimant began reporting left knee pain as of an evaluation with Dr. Beatty on September 23, 2015. Claimant continued reporting left knee pain in subsequent evaluations, including a January 20, 2016 evaluation with Dr. Beatty in which Claimant

reported that his left knee pain was getting worse than the right knee pain. Claimant attributed the left knee pain to his altered gait.

7. Claimant's antalgic gait is documented in the Physiotherapy Associates physical therapy records, Dr. Beatty's January 30, 2015, February 6, 2015, February 27, 2015, March 20, 2015, October 7, 2015 and January 20, 2016 evaluation notes, and Dr. Noonan's June 18, 2015 evaluation notes.

8. Subsequent to Claimant's report of knee pain in September 2015, the medical records do not include physical examination findings for the left knee or impressions of the left knee until an October 21, 2015 evaluation with Dr. Beatty.

9. On October 21, 2015, Dr. Beatty noted tenderness of the left knee over the distal quad and laterally with no swelling or effusion. Dr. Beatty noted flexion at 135 degrees with full extension. Dr. Beatty did not include an impression of the left knee. Dr. Beatty noted the same exam findings for the left knee on November 4, 2015.

10. There are no physical examination findings for the left knee or impressions of the left knee noted in the medical records for the subsequent November 18, 2015 evaluation.

11. On December 7, 2015, Dr. Mayer reevaluated Claimant and documented patellofemoral irritation of the left knee with no medial or lateral joint line tenderness. Dr. Mayer noted Claimant was ligamentously stable and neurovascularly intact distally with a range of motion from 0 to 130 degrees with pain. Dr. Mayer did not provide an impression for the left knee. Dr. Mayer wrote a new prescription for left knee physical therapy.

12. There are no physical examination findings for the left knee or impressions of the left knee noted in the medical records for the subsequent December 30, 2015 and January 20, 2016 evaluations.

13. On February 15, 2016, Dr. Mayer reevaluated Claimant and noted Claimant's left knee showed "significant patellofemoral rotation with grind and compression, which is the maximal source of his pain." Dr. Mayer found no medial or joint line tenderness. Dr. Mayer commented that Claimant's left knee continued "to be aggravated due to the increased compensation from his contralateral side." Dr. Mayer impressed patellofemoral irritation of the left knee.

14. There are no physical examination findings for the left knee or impressions of the left knee noted in the medical records for the subsequent February 17, 2016 and March 7, 2016 evaluations.

15. Dr. Mayer reevaluated Claimant on March 28, 2016 for a follow-up on Claimant's right knee. Dr. Mayer noted that the physical examination was unchanged from the February 15, 2016 evaluation. Dr. Mayer impressed degenerative joint disease of the right knee and left knee patellofemoral syndrome.

16. There are no physical examination findings for the left knee or impressions of the left knee noted in the medical records for the subsequent the April 18, May 9, and May 16, 2016 evaluations.

17. On June 6, 2016, Douglas C. Scott, M.D., M.P.H., conducted an Independent Medical Evaluation ("IME") at Respondents' request. Dr. Scott issued an IME report on July 4, 2016. Dr. Scott conducted a medical records review and a physical examination. Upon examination, Dr. Scott noted no click with left knee extension, no medial compartment collapse, and no ligamentous laxity. Dr. Scott further noted that Claimant walked without significant antalgia. Dr. Scott assessed probable left knee patellofemoral chondromalacia or osteoarthritis.

18. Dr. Scott opined that Claimant likely aggravated the patellofemoral osteoarthritis and/or chondromalacia of his left knee due to off-weighting his right knee and placing more pressure on his left knee. Dr. Scott further opined that Claimant "probably does not require any specific treatment other than conservative treatment of anti-inflammatory medication, icing, and possibly a knee sleeve."

19. Claimant underwent an MRI of his left knee on July 26, 2016. The history given for the purpose of the MRI was "Left knee pain, grinding, and popping x6-7 months." Craig Stewart, M.D., impressed a complex tear of the lateral meniscus, including a displaced meniscal flap adjacent to the anterior horn and anterior root of the lateral meniscus; parameniscal cysts adjacent to the anterior horn; and mild tricompartmental chondromalacia.

20. Claimant returned to Dr. Mayer for an evaluation of his left knee on August 1, 2016. Dr. Mayer stated that this was a "new problem." Claimant reported that he had wear and tear of his left knee over several years, and that he was now experiencing an "achy pain that awakens him at night." Claimant denied any specific injury or trauma. Claimant reported mechanical clicking in the left knee. Dr. Mayer physically examined Claimant and reviewed the July 26, 2016 MRI. Upon physical examination, Dr. Mayer noted significant lateral joint line tenderness and mild medial joint line tenderness. Dr. Mayer impressed complex lateral meniscus tear with flap component, parameniscal cyst, and mild tricompartmental DJD. Dr. Mayer remarked that the tear was "suspecting to his work and daily activities." Dr. Mayer recommended arthroscopic surgery for lateral meniscus debridement of the flap component, and to evaluate the chondrol surface at the time of surgery for likely chondroplasty.

21. Dr. Scott conducted a review of additional medical records on August 20, 2016. Dr. Scott reviewed the July 26, 2016 MRI of Claimant's left knee and medical records from August 1 and August 9, 2016. Dr. Scott noted,

> "At the June 6, 2016 IME appointment [Claimant] told me that around September 2015 his left knee started hurting above the knee cap to below the knee cap, and he noted pain every time he got up form a chair and was going up and down stairs. With extension of the left knee he felt like it would lock up. These symptoms suggest both patellofemoral syndrome

and a cartilage flap tear. However, [Claimant's] report to me of these symptoms was nine months after his report of left knee pain to Dr. Beatty."

22. Referring to medical literature, Dr. Scott stated acute meniscus injuries are "generally considered to be caused by rotation of the femur on a fixed tibia while weightbearing." Dr. Scott also referenced the Colorado Medical Treatment Guidelines for Lower Extremity Injury, noting that "meniscus injury is a tear, disruption, or avulsion of the medial or lateral meniscus tissue."

23. Dr. Scott opined that Claimant did not sustain a left knee injury knee due to the January 21, 2015 work injury. Dr Scott found no evidence establishing that Claimant's left knee complex degenerative flap tear was due to the January 21, 2015 work injury. Dr. Scott concluded Claimant "probably had a temporary irritation of his left knee underlying and pre-existing patellofemoral chondromalacia with patellofemoral syndrome from placing excessive weight on the left knee," noting Claimant weighed 294 pounds. Dr. Scott noted that the structural diagnostic testing evidenced a complex tear of the lateral meniscus, parameniscal cysts, and mild tricompartmental chondromalacia, opining that those structural findings, were "long standing, chronic, degenerative and pre-existent to the 1/21/2015 work injury."

24. Dr. Scott opined that the requested surgery is reasonable and necessary but not related to Claimant's January 21, 2015 work injury. Dr. Scott noted Claimant did not have an acute injury to the left knee meniscus or cartilage on January 21, 2015. Dr. Scott opined that, while the increased weightbearing on Claimant's left knee may have irritated his pre-existing left knee chondromalacia, the increased weightbearing "did not cause a lateral meniscus tear requiring a debridement of a cartilage defect requiring a chondroplasty."

25. On October 28, 2016, Timothy O. Hall, M.D., conducted an IME at the request of Claimant. Dr. Hall issued an IME report of the same date. Dr. Hall reviewed Claimant's medical records and conducted a physical examination. Dr. Hall noted that Claimant reported occasions during which Claimant's "right knee would buckle and he had to catch himself with the left." Dr. Hall noted that such situations could create the "acute mechanics of a meniscal tear."

26. Dr. Hall opined, within a reasonable degree of medical probability, that the requested surgery was reasonable, necessary and directly related to Claimant's January 21, 2015 injury. Dr. Hall remarked, "If not for that injury, he would not be dealing with the left-sided symptoms." Dr. Hall noted that Claimant's left knee symptoms worsened over time, and that Claimant's weight increased because of the injury. Dr. Hall opined, "One could make an argument that the reason his left knee hurts is this weight gain as much as it is abnormal weightbearing and gait disturbance. All of these factors are contributors and all of them relate to his January 2015 work-related injury."

27. At hearing, Claimant testified that he had no issues performing his work duties prior to January 2015. Claimant testified that he worked 10-12 hour shifts, which

required him to stand for 80-90% of a shift. Claimant's job duties also required walking and running.

28. Claimant testified that he sustained a meniscus tear in his right knee in his early 20's, for which he underwent arthroscopic surgery. Claimant testified that he did not experience subsequent issues with his right knee or require additional treatment on his right knee until the January 21, 2015 work injury. Claimant testified that he did not have any prior left knee injuries or need for treatment for his left knee prior to January 21, 2015. Claimant testified that he has not sustained any injuries since January 21, 2015 that would cause his antalgic gait, or is he aware of any other reasons for the antalgic gait.

29. Claimant testified that, subsequent to the January 21, 2015 work injury, his right knee was always in pain. Claimant testified that since the March 2015 surgery, he has not been able to walk normally. Claimant testified that he feels as though his right knee will "pop out," causing him to stabilize himself with his left leg and require Claimant to place more weight on his left knee. Claimant testified that his left knee did not begin hurting until approximately September 2015. Claimant testified that he currently experiences pain, problems sleeping on his side, and problems walking, all of which he did not experience prior to the January 21, 2015 work injury.

30. Dr. Scott testified at hearing as an expert in occupational medicine. Dr. Scott testified consistent with his July 4, 2016 and August 20, 2016 reports. Dr. Scott testified that the purpose of the recommended surgery was to remove the mensical flap and to reduce pain and mechanical dysfunction. Dr. Scott opined that Claimant's left knee condition was not related to the January 21, 2015 injury or the altered gait. Dr. Scott opined that it was not plausible or probable that weightbearing caused Claimant's cartilage to tear, opining that that meniscus tears usually result from tortion or rotation and require some sort of force. Dr. Scott testified that he has treated patients with altered gaits and those patients did not develop flap tears.

31. Dr. Scott opined that Claimant must have had "some type of twisting event" between June 6, 2015 and September 23, 2015 resulting in the flap tear. Dr. Scott noted that Dr. Mayer referred to Claimant's left knee issues as a "new problem" in his August 1, 2016 medical notes. Dr. Scott testified that a flap tear is acute and not degenerative. Dr. Scott's testimony is contradicted by his August 20, 2016 authored opinion that the structural findings of the July 26, 2016 MRI were degenerative and pre-existed the January 21, 2015 work injury. When asked about the contradiction between his testimony and his medical report, Dr. Scott testified, "So I may have made a mistake or something, but that's what I put."

32. Claimant's testimony is found credible and persuasive.

33. The ALJ credits the opinion of Dr. Hall over the contrary opinion of Dr. Scott and finds that claimant has demonstrated that it is more likely than not that the left knee lateral meniscus debridement and chondroplasty surgery is reasonably necessary and causally related to the January 21, 2015 work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of

conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Reasonable, Necessary and Related Medical Treatment

A claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). If Claimant establishes a causal nexus, Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* Section 8-42-101(1)(a), C.R.S. The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has met his burden to establish that it is more probably true than not that the proposed surgery is reasonable, necessary and related to Claimant's January 21, 2015 admitted industrial injury. Although the medical records document Claimant having reported some "wear and tear" to his left knee, Claimant credibly testified that he did not have any issues with his left knee or need for treatment for his left knee prior to January 21, 2015. Claimant credibly testified that he has not been able to walk normally at any point since the March 2015 surgery, and that on occasion his right knee will become unstable, causing him to put additional stress on his left knee. Claimant did not develop issues with his left knee until overcompensating for several months following the January 21, 2015 work injury, including having to catch himself with his left leg when his right leg would buckle. Dr. Hall credibly opined that such circumstances could cause a meniscus tear in Claimant's left knee. Based on the totality of the evidence, Claimant has established that, more likely than not, the left knee lateral meniscus debridement and chondroplasty surgery is reasonably necessary and causally related to the January 21, 2015 work injury.

ORDER

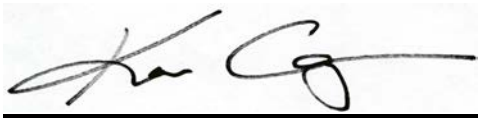
It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that he is entitled to the left knee lateral meniscus debridement and chondroplasty as requested by Dr. Braden Mayer. Respondents shall pay for this procedure.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 9, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Respondents have established by a preponderance of the evidence that they are entitled to withdraw their February 8, 2008 Final Admission of Liability (FAL) that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's April 18, 2005 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. On November 2, 2016 the Office of Administrative Courts (OAC) mailed a Notice of Hearing to Claimant in this matter. The Notice of Hearing was mailed to the following address on file with the OAC: 3696 Downieville St., Loveland, CO 80538. The Notice of Hearing specified that a hearing was scheduled for February 10, 2017 at 1:00 p.m. at the 19th Judicial District-Weld County Center in Greeley, CO 80631. Furthermore, Respondents properly served Claimant with the Notice of Hearing on December 1, 2016 at her home consistent with the address on file with the OAC. Claimant thus received notice of the scheduled hearing. However, Claimant failed to attend or otherwise participate in the February 10, 2017 hearing.

2. Claimant worked for Employer as a Certified Nursing Assistant. On April 18, 2005 Claimant sustained an admitted industrial injury to her lumbar spine while working in a nursing home. Claimant was transferring a patient from the restroom to the bed when she felt the acute onset of lower back pain.

3. Claimant began conservative medical treatment with her authorized treating physicians and was taken off work. She received substantial conservative care in the form of physical therapy, injections, pain medications and acupuncture.

4. Claimant was not a surgical candidate and Authorized Treating Physician (ATP) John Charbonneau, M.D. determined that she reached Maximum Medical Improvement (MMI) on March 7, 2007. Dr. Charbonneau recommended ongoing medical maintenance care to maintain Claimant at MMI.

5. On December 11, 2011 Claimant underwent a Division Independent medical Examination (DIME) with James Crosby, D.O. Dr. Crosby agreed that Claimant had reached MMI on March 7, 2007 and assigned her a 12% whole person impairment rating for her lumbar spine. Dr. Crosby agreed with the recommendations from Dr. Charbonneau for ongoing medical maintenance care.

6. On February 8, 2008 Respondents filed a Final Admission of Liability (FAL) consistent with the DIME determination of Dr. Crosby. Respondents acknowledged that Claimant was entitled to receive reasonable, necessary and related medical maintenance care.

7. Claimant has been receiving maintenance care from her treating physicians since 2008. Her maintenance care has included office visits, narcotic medications, radiofrequency neurotomies, medical branch block injections and epidural steroid injections.

8. Allison M. Fall, M.D. has evaluated Claimant several times since the inception of the claim and performed several medical records reviews on behalf of Respondents. On January 8, 2015 Dr. Fall specifically addressed Claimant's ongoing medical maintenance care. After considering Claimant's medical history, responses to prior treatment and physical examination, Dr. Fall determined that interventional procedures, such as radiofrequency neurotomy, were not likely to lead to any additional functional benefit. Regarding Claimant's medications, Dr. Fall explained that Norco is no longer effective and Claimant should rely on non-pharmaceutical management of pain rather than opioid medications. She thus recommended a gradual weaning of opioid medications. Dr. Fall summarized that "once [Claimant] has discontinued the opioids, it is my opinion that no further medical maintenance treatment will be indicated provided she continue with a consistent exercise program."

9. Respondents retained an Investigator to conduct video surveillance of Claimant. In April 2016 David Sherrow observed Claimant over the course of several days and videotaped her activities. Investigator Sherrow testified at the hearing in this matter. He specifically explained that he filmed Claimant performing several activities on April 22-23, 2016. Mr. Sherrow commented that Claimant was filmed going to the bank, getting in and out of her car several times, attending yoga classes and running a 5k race. He remarked that Claimant did not appear to have any back pain and moved fluidly without a limp or physical restrictions.

10. Dr. Fall testified at the hearing in this matter. She maintained that Claimant no longer requires medical maintenance care for her April 18, 2005 industrial injury. Dr. Fall explained that there was no objective evidence throughout the medical records that Claimant exhibited functional gains as a result of her medical maintenance treatment. She commented that Claimant's use of Norco and other narcotic medications would not be expected to improve her condition. Dr. Fall further noted that recent urine screens performed in 2016 were inconsistent with Claimant's use of the prescribed narcotic medications. Specifically, the urine screens were negative for the presence of Norco or any other narcotic medications.

11. Dr. Fall reviewed the surveillance footage captured by Mr. Sherrow. She testified that the surveillance further confirmed her opinions that Claimant no longer required any maintenance care relating to her April 18, 2005 injury. Dr. Fall confirmed that the footage showed Claimant moving without any pain behaviors and she was able

to perform several activities inconsistent with her pain complaints. She specifically remarked that Claimant was filmed running a 5k on April 23, 2016. Dr. Fall summarized that Claimant would not be able to perform the activities on the surveillance video if she was suffering chronic, ongoing lumbar spine pain.

12. Respondents have established that it is more probably true than not that they are entitled to withdraw their February 8, 2008 FAL acknowledging reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's April 18, 2005 industrial injury or prevent further deterioration of her condition. On April 18, 2005 Claimant suffered an admitted lumbar spine injury and subsequently underwent substantial medical treatment. She reached MMI on March 7, 2007. DIME physician Dr. Crosby subsequently assigned Claimant a 12% whole person impairment rating. Dr. Crosby agreed with the recommendations from Dr. Charbonneau for ongoing medical maintenance care. Respondents acknowledged continuing medical maintenance care through a February 8, 2008 FAL.

13. Dr. Fall persuasively maintained that Claimant no longer requires medical maintenance care for her April 18, 2005 industrial injury. She explained that there was no objective evidence throughout the medical records that Claimant exhibited functional gains as a result of her medical maintenance treatment. She commented that Claimant's use of Norco and other narcotic medications would not be expected to improve her condition. Dr. Fall further noted that recent urine screens performed in 2016 were inconsistent with Claimant's use of the prescribed narcotic medications. Specifically, the urine screens were negative for the presence of Norco or any other narcotic medications. She also testified that surveillance video further confirmed her opinions that Claimant was no longer in need of any maintenance care relating to her April 18, 2005 injury. Dr. Fall noted that the footage showed Claimant moving without any pain behaviors and she was able to perform several activities inconsistent with her pain complaints. She summarized that Claimant would not be able to perform the activities on the surveillance video if she was suffering chronic, ongoing lumbar spine pain. Accordingly, Respondents are permitted to withdraw their February 8, 2008 FAL acknowledging reasonable, necessary and related medical maintenance benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2015), C.R.S. On February 18, 2008 Respondents filed a FAL in response to Dr. Crosby's MMI and impairment determinations. The FAL also specified that Claimant was entitled to receive reasonable, necessary and related medical benefits. In order to withdraw the FAL Respondents thus have the burden of proving by a preponderance of the evidence that Claimant is not entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her April 18, 2005 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

6. As found, Respondents have established by a preponderance of the evidence that they are entitled to withdraw their February 8, 2008 FAL acknowledging reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's April 18, 2005 industrial injury or prevent further deterioration of

her condition. On April 18, 2005 Claimant suffered an admitted lumbar spine injury and subsequently underwent substantial medical treatment. She reached MMI on March 7, 2007. DIME physician Dr. Crosby subsequently assigned Claimant a 12% whole person impairment rating. Dr. Crosby agreed with the recommendations from Dr. Charbonneau for ongoing medical maintenance care. Respondents acknowledged continuing medical maintenance care through a February 8, 2008 FAL.

7. As found, Dr. Fall persuasively maintained that Claimant no longer requires medical maintenance care for her April 18, 2005 industrial injury. She explained that there was no objective evidence throughout the medical records that Claimant exhibited functional gains as a result of her medical maintenance treatment. She commented that Claimant's use of Norco and other narcotic medications would not be expected to improve her condition. Dr. Fall further noted that recent urine screens performed in 2016 were inconsistent with Claimant's use of the prescribed narcotic medications. Specifically, the urine screens were negative for the presence of Norco or any other narcotic medications. She also testified that surveillance video further confirmed her opinions that Claimant was no longer in need of any maintenance care relating to her April 18, 2005 injury. Dr. Fall noted that the footage showed Claimant moving without any pain behaviors and she was able to perform several activities inconsistent with her pain complaints. She summarized that Claimant would not be able to perform the activities on the surveillance video if she was suffering chronic, ongoing lumbar spine pain. Accordingly, Respondents are permitted to withdraw their February 8, 2008 FAL acknowledging reasonable, necessary and related medical maintenance benefits.

ORDER

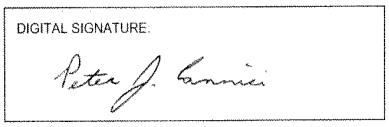
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents are permitted to withdraw their February 8, 2008 FAL acknowledging reasonable, necessary and related medical maintenance benefits.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: March 9, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUE

The issue raised for consideration is whether the left hip scope labral repair reconstruction-femoral acetabular osteoplasty recommended by Dr. White on July 27, 2016, is reasonable, necessary and related to the work injury.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. On December 12, 2014, Claimant worked for Employer installing a satellite for a television for a customer. He was carrying a ladder that weighed approximately 75 pounds when he felt pain in his back, hips, and groin area. Claimant felt that he pulled something initially. Claimant continued to work.
   1.
2. Later that same day, Claimant carried two cinder blocks each weighing 30 pounds from his truck to the customer's house four times when he noticed more pain in his back, groin area, and hips. Claimant called his supervisor and reported the injury.

3. Claimant's supervisor took him to Concentra the next day. On December 13, 2014. Dr. Danahey notes that on December 12, 2014, Claimant felt pain and tightness in the lower back carrying a cinder block and 22 foot ladder. The doctor recommended physical therapy and restricted Claimant to no lifting more than 10 lbs.

4. On January 16, 2015, Candice Sobanski, M.D. noted that Claimant's pain radiates into hips. And, on February 23, 2015, again Dr. Sobanski noted hip pain, left side worse than right.

5. On March 16, 2015, Catherine Kent, a physical therapist, did manual therapy on Claimant noting tight left internal and external rotation. On March 24, 2015, Claimant went to a different physical therapist than he normally visits. The physical therapist's name was Catherine. At physical therapy, the therapist had Claimant lay on his back while she pulled Claimant's left leg out and then twisted it outward to a 45 degree angle. Claimant felt immediate pain in his left hip. The physical therapist did this exercise three or four times

6. On March 26, 2015, physical therapist Louise Long noted discomfort walking and sitting after last treatment session.

7. On March 30, 2015, nurse practitioner Rosalie Einsphar, noted PT causes Claimant increased pain while attending PT two times per week.

8. On April 13, 2015 Dr. Sobanski noted uncomfortable hip pain after PT the previous week. On April 16, 2015, physical therapist Darla Lopez noted Claimant was sore after the last physical therapy treatment. The physical therapist notes that Claimant's pain could the result of massage or the traction during PT.

9. On July 14, 2015, Dr. Caroline Gellrick noted on physical exam that Claimant's hip exam showed popping in the left hip and positive left anterior groin pain. Claimant had tenderness down to the trochanteric region. Dr. Gellrick recommended an MRI of the hip.

10. On July 20, 2015, Claimant's hip MRI that showed "Small left hip acetabular labral tear anteriorly; mild chondral thinning over the left femoral head and adjacent acetabular roof anteriorly; mild bony prominence of the lateral femoral head neck junction of the left hip and this can predispose patients to cam-type femoroacetabular impingement." (Claimant's Ex. 8 pg. 138).

11. On July 22, 2015, Gellrick noted that Claimant's symptoms corresponded to the MRI's labral tear on the left hip. Dr. Gellrick referred the Claimant to Dr. Schneider who felt that Claimant needed surgery on his shoulder. Claimant had surgery on his shoulder and then Dr. Gellrick referred Claimant to Dr. White to address his hip.

12. On May 18, 2016, Dr. Brian White, M.D. noted that Claimant's left leg was manipulated during physical therapy and Claimant was injured. Dr. White noted that Claimant's hip is the source of his pain. Dr. White opined that a diagnostic injection was reasonable and necessary to confirm that the joint is the source of Claimant's pain. After the confirmatory injection, Dr. White recommended hip arthroscopy as the next reasonable step.

13. On May 26, 2016, a physician's assistant, Shawn Karns, noted that Claimant's diagnostic injection relieved his pain and that Claimant wanted to move forward with scheduling the left hip arthroscopy surgery.

14. On July 27, 2016, Dr. White noted the MRI and the diagnostic injection confirmed a labral tear and that the doctor would perform a hip arthroscopy to reshape the ball and reshape the cuff and perform a labral reconstruction given the chronicity of the symptoms. Dr. White finally noted that Claimant's original injury was probably more related to his back, but during physical therapy Claimant's hip became most symptomatic.

15. Dr. Gellrick opined in her deposition that to a reasonable degree of medical probability the traction that was performed during the physical therapy caused Claimant's labral tear. Dr. Gellrick opined that surgery is reasonable, necessary, and related to the work injury because the injury occurred during

treatment for the primary injury in physical therapy and is compensable to the work injury.

16. In his November 2, 2016, deposition, Dr. White noted that he performed the anterior impingement maneuver and posterior impingement maneuver and that both were basically positive indicating that Claimant has a significant labral tear that is irritated. Dr. White noted the positive diagnostic injection and concluded that he recommends the arthroscopy.

17. It is found and concluded that Dr. White's recommendation for a left hip arthroscopy to reshape the ball and reshape the cuff and possibly perform a labral reconstruction given the chronicity of the symptoms is reasonably necessary and related medical procedure for which Respondents are liable.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are reached.

1. The purpose of the Workers' Compensation Act of Colorado (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of- fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592, P.2d 792 (1979).

2. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43- 201, C.R.S. The ALJ factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. The ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *See Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. ICAO*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witnesses testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d (1936). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v.Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968). The ALJ has broad discretion to determine the admissibility and weight of evidence based on an expert's knowledge, skill, experience, training and education. See Section 8-43- 210, C.R.S; *One Hour Cleaners v. ICAO,* 914 P.2d 501 (Colo. App. 1995).

COMPENSABILITY

4. To recover workers' compensation benefits, the claimant must prove she suffered a compensable injury. A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment arises out of the employment. *Finn v.Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London Lancashire Indemnity Co*., 135 Colo. 372, 311 P.2d 705 (1957). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43- 201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

5. Under the quasi-course of employment doctrine, injuries sustained while undergoing or traveling to and from authorized medical treatment are compensable under the quasi-course of employment doctrine even though they occur outside the ordinary time and place limitations of normal employment. *Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo. App. 1993). The rationale for this doctrine holds that, because the employer is required to provide reasonable and necessary medical treatment, and because claimant is required to submit to it or risk suspension or termination of benefits, treatment by the authorized physician becomes an implied part of the employment contract. *See Employers Fire Insurance Co. v. Lumbermens Mutual Casualty Co*., 964 P.2d 591 (Colo. App. 1998);

Schreiber v. Brown & Root, Inc., 888 P.2d 274 (Colo. App. 1993). The quasi-course doctrine is designed to attenuate the usual requisites of compensability.

6. Here, Claimant's hip injury that occurred in his course of getting physical therapy for his back is compensable. Claimant visited Concentra following his work-related injury, where he was recommended to physical therapy per Dr. Danahey. Claimant's hip was manipulated during physical therapy, causing intense pain. This pain is well documented in the medical records by other physical therapist, physician's assistant and doctors, beginning on March 26, 2015. Finally, Drs. White and Gellrick in their November 2, 2016, and December 7, 2016, depositions, respectively, opined that it was Claimant's physical therapy that caused the labral tear. Because Claimant would not have undergone physical therapy had it not been for his initial work-related injury, and because Claimant's labral tear occurred during the course of physical therapy, Claimant's hip injury is compensable under the quasi-course of employment doctrine.

MEDICAL BENEFITS

7. Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of a work-related injury. Section 8-42- 101(1) (a), C.R.S. Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work related injury and the condition for which benefits are sought. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

8. Here, Claimant underwent an MRI on July 20, 2015, for his hip pain which revealed a labral tear. Dr. Gellrick referred Claimant to Dr. White for possible hip surgery. Dr. White performed a diagnostic injection to confirm that Claimant's joint was the source of his overall pain. Dr. White noted on May 18, 2016, that if the diagnostic injection took away Claimant's hip pain, it would be appropriate to proceed with the arthroscopy. On May 26, 2016, the diagnostic injection performed on Claimant's hip reduced his pain. Dr. White also noted the improvement in Claimant's hip pain, and recommended proceeding with the arthroscopy. In Dr. Gellrick's deposition she opined that Claimant's left hip condition is caused by physical therapy and is therefore compensable. Thus, Claimant's left hip scope labral repair reconstruction-femoral acetabular osteoplasty is reasonable, necessary, and related medical treatment.

ORDER

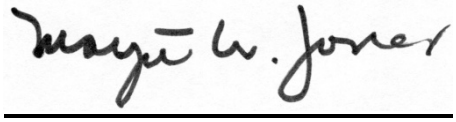
It is therefore ordered that:

Claimant's left hip scope labral repair reconstruction-femoral acetabular osteoplasty recommended by Dr. White on July 27, 2016 is reasonable, necessary, and related to the work injury and shall be authorized by Respondents. Respondents shall be liable for this medical benefit.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 13, 2017



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on June 18, 2016.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to reasonable and necessary medical benefits for his June 18, 2016 work injury.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

FINDINGS OF FACT

1. Claimant works for Employer as a lead overnight medical technician. Claimant has been so employed since approximately October of 2012. Claimant's normal schedule is from approximately 10:00 p.m. to 6:00 a.m. Claimant is responsible for the building and residents, handling medications, moving patients, and dealing with staff.

2. On June 18, 2016 Claimant alleges that he sustained a work related injury. Claimant alleges that on that night one resident had not been put to bed and that Claimant and his wife (who also was employed by Employer) got the patient ready and transferred her to bed.

3. Claimant alleges that the patient had her arms around his neck and that he had his arms around the patient's waist. Claimant alleges that as he pulled the patient up he heard a pop in his back and had sharp pain in his back. Claimant testified that his back pain lingered throughout the night but was not as sharp as at the time of the incident. Claimant testified that he finished his shift and then had the next two days off of work.

4. Claimant alleges that he returned to work on a Tuesday evening the next week and that his pain had worsened.

5. On June 28, 2016 Claimant was evaluated by Kelly Yde, PA for an ankle injury that he had sustained a few months prior. PA Yde noted that Claimant had poor bone quality but that his left ankle fracture had been treated non operatively. Claimant declined x-rays stating that he was having significant back pain and would not be able to get on and off the x-ray table. *See* Exhibit J.

6. On June 29, 2016 Claimant called Judi Pring, Employer's executive director for the location Claimant worked at. Claimant stated that he had been injured at work and that he wanted to file a claim. Claimant was unable to clearly specify what had happened to cause his injury. Claimant said that the injury had happened the weekend prior, but was unable to give a specific date of injury. Ms. Pring contacted Dana Gill, the business office coordinator to advise Ms. Gill of the call from Claimant.

7. On July 1, 2016 Claimant met with Ms. Gill. Ms. Gill asked Claimant questions about when exactly the injury had occurred and Claimant stated after looking at the calendar behind Ms. Gill's desk, "lets go with the 18th." Ms. Gill asked Claimant why he had not reported the injury immediately and Claimant stated that he was not feeling any pain but that the pain came on a few days later, that he had pain on/off for one week, and that the pain had gotten worse. Claimant was referred for medical treatment.

8. On July 1, 2016 Claimant was evaluated at Concentra by Jennifer Pula, M.D. Claimant reported that he was injured at work on June 18, 2016 and that after transferring a resident from a wheelchair to a bed he felt pain later that night. Claimant reported worsening lower back pain and muscle spasms worse with movement that was bilateral and radiated into his hips. Dr. Pula noted that Claimant was wearing a Butrans patch from a prior ankle injury. Claimant reported feeling similar to a previous back injury and also reported that he had been using a power wheelchair. Dr. Pula noted a history of a lumbar sprain with a transfer of a resident the year prior and that Claimant had physical therapy, massage therapy, and chiropractic treatment and made an 85% recovery. Dr. Pula noted that Claimant was wearing a back brace and using a cane. Dr. Pula assessed lumbar sprain and muscle spasm of back and referred Claimant for chiropractic and acupuncture treatment as well as physical therapy treatment. *See* Exhibits F, 8.

9. On July 8, 2016 Claimant was evaluated Stephen Danahey, M.D. Claimant reported injuring his lower back transferring a patient. Claimant reported that he was not doing well and that he had back spasms on either side of the lower back. Claimant reported a prior back injury two years prior and that he had pretty much recovered from it and was 90% improved and working regular duty when this new injury occurred. Claimant reported having an injury at home six months ago when he fell through a crawl space and aggravated the arthritis in his right hip and that he also fell down the stairs at his home two months ago and fractured his left ankle. Claimant reported that he had been using a cane for the last six months or so. Claimant reported that for the last 4-5 months his pain had been managed by Comprehensive Pain Management in Golden. On examination of the lumbosacral spine Dr. Danahey noted tenderness at the left paraspinal, right paraspinal, right sciatic notch, and left sciatic notch. Dr. Danahey also noted left sided and right sided muscle spasms. Dr. Danahey assessed lumbar sprain, and muscle spasm of back. *See* Exhibits F, 6.

10. On July 13, 2016 Claimant was evaluated by Dr. Danahey. Claimant reported continued pain in the lower back. Dr. Danahey noted that Claimant was

continuing to use a cane on the right. Dr. Danahey referred Claimant to a physical medicine and rehabilitation physiatrist. *See* Exhibits F, 6.

11. On July 25, 2016 Claimant underwent an MRI of his lumbar spine interpreted by Samuel Scutchfield, M.D. The impression was: acute to sub acute compression type fracture of L1 with approximately 50% loss of vertebral body height and minimal retropulsion with mild spinal canal stenosis as a result; lesser acute to sub acute compression type fractures of T11, T12, and L2; prominent chronic deformities of the superior endplates of L4 and L5 with some retropulsion also present; significant spinal canal stenosis at L4-5 due to a combination of retropulsion and degenerative change; and infrarenal aortic aneurysm measuring approximately 4 cm. *See* Exhibits D, 5.

12. On July 25, 2016 Claimant was evaluated by Allison Fall, M.D. Claimant reported assisting a resident from a wheelchair to a bed and that he had his arms underneath the patient's shoulders when he felt a burning in his lower back. Clamant reported that 2.5 years prior he had a lumbar spine injury at work with leg issues and sacroiliac issues and that he got 90% better but was still having some problems. Claimant also reported that 8 months prior he was in a crawl space and fell through aggravating arthritis in his right hip and that he used a wheelchair for four months at work. Claimant reported he then developed left ankle tendinitis from walking funny due to his hip and was seeing a doctor for that when he fell down stairs in April at his home and fractured his left fibula. Claimant reported that at the time of this new injury he was still wearing a boot and had minimal low back pain on and off from his hip problem. Claimant reported that he saw a pain management doctor who was treating his ankle, hip, and minimal low back pain. *See* Exhibits E, 10.

13. Claimant reported that he had recently been diagnosed with osteopenia and that he had arthritis and pain in the right hip. Claimant reported a family history significant for aortic aneurysms in a father and brother and that his father had back fractures. Dr. Fall noted that Claimant ambulated with a cane. Dr. Fall reviewed the MRI films Claimant brought in and noted that there were significant findings. Dr. Fall assessed L1 compression fracture 50% with retropulsion and central stenosis; chronic degenerative changes at L4-5 with retropulsion; and infrarenal aorta measuring 4 cm. Dr. Fall referred Claimant STAT to Dr. Castro, an orthopedic surgeon to ensure Claimant was not causing any further harm to his spine with activities. Dr. Fall advised Claimant to avoid bending, lifting, and twisting. *See* Exhibits E, 10.

14. On July 26, 2016 Claimant was evaluated by Michael Rauzzino, M.D. as Dr. Castro was not available to take a STAT referral. Claimant reported a history of low back pain from a previous injury treated through his primary physician. Claimant reported the acute onset of severe pain on June 18, 2016 when he was transferring a resident from a wheelchair to a bed and felt a pop in his back and that the pain became worse later on during the course of the night. Dr. Rauzzino also noted a history of injury again to Claimant's back last year when transferring a resident and that he made approximately 80-99% recovery from that injury. Dr. Rauzzino noted that an MRI was

completed on July 25, 2016 that showed chronic degenerative changes at L4-5 with stenosis and acute fractures of multiple vertebral bodies including L1, slight signal intensity to T11, a little more T12 and L2, and a fracture of L5. Dr. Rauzzino noted that the L5 fracture was not read on the initial study but that he discussed and confirmed with the radiologist that Claimant in fact had an acute fracture at L5 as well. *See* Exhibits C, 11.

15. Dr. Rauzzino noted that Claimant was using a walker to get around and was in severe back pain. Claimant reported a history of osteopenia and reported taking Percocet and butrans for the chronic back pain. Dr. Rauzzino opined that Claimant had multiple compression fractures due to the lifting injury and opined that Claimant was certainly predisposed to this due to Claimant's osteopenia but that were it not for the work injury, the fractures would not have occurred. Dr. Rauzzino opined thus that they were work related. Dr. Rauzzino opined that Claimant needed to be treated on an expedited basis and recommended kyphoplasty at multiple levels including L1 and T12, potentially L2 and L5 depending how they will do at the time of surgery. Dr. Rauzzino noted that hopefully the surgery could be done in the next few days. Dr. Rauzzino opined that if untreated, given Claimant's osteopenia and his large body habitus, it was likely that the fractures would progress further retropulsing fragments into the canal at which point they might not be able to treat with kyphoplasty alone. *See* Exhibits C, 11.

16. On July 28, 2016 Claimant was evaluated by Dr. Danahey. Dr. Danahey noted that a lumbar MRI had demonstrated an L1 vertebral body fracture with loss of height and retropulsion as well as other acute fractures of L5 as well. Dr. Danahey noted a history of osteopenia. Dr. Danahey noted that Dr. Rauzzino had recommended an urgent kyphoplasty at multiple levels and felt the fractures were related to lifting at work. Dr. Danahey noted that Claimant was wearing a back brace and using a walker. Dr. Danahey assessed lumbar compression fracture and agreed with proceeding with kyphoplasty as soon as possible. *See* Exhibits F, 6.

17. On August 8, 2016 Claimant was evaluated by Dr. Fall. Dr. Fall noted that Claimant had seen neurosurgeon Dr. Rauzzino who had recommended kyphoplasty at multiple levels. Dr. Fall noted that Claimant was in a back brace and using a walker. Dr. Fall assessed multiple compression fractures, thoracic and lumbar spine and recommended that Claimant follow through and try to pursue kyphoplasty surgery through Claimant's personal health insurance and then try to get it covered through workers' compensation. *See* Exhibits E, 10.

18. On August 29, 2016 Claimant underwent X-rays of his lumbar spine interpreted by Vernon Chapman, M.D. Dr. Chapman found: L1, L4, and L5 vertebral compression fractures with stable height loss; interval loss of height of the L2 vertebral body with approximately 40% height loss consistent with an interval compression fracture; lumbar facet degenerative change; diffuse osteopenia; and abdominal aortic aneurysm evident with atherosclerotic calcification. *See* Exhibits D, 5.

19. On August 29, 2016 Claimant was evaluated by Dr. Fall. Claimant reported that he had still not received authorization for the surgery recommended by Dr. Rauzzino and that his private insurance had told him it was work related and that they would not cover it. Dr. Fall assessed multiple compression fractures on top of a chronic low back pain syndrome and underlying osteopenia. *See* Exhibits E, 10.

20. On September 30, 2016 Claimant was evaluated by Sharad Rajpal, M.D. Claimant reported that he was transferring a resident from the wheelchair to the bed when he felt a twinge in his back and that the pain continued and got worse. Claimant reported a prior back injury in 2014 with small residual back pain but not to the same degree that he had now. Dr. Rajpal recommended an updated MRI of Claimant's lumbar spine due to the new x-ray showing a questionable new injury and to determine if Claimant had new fractures before making a final surgical plan. Dr. Rajpal recommended a kyphoplasty at the multiple acute fracture levels and an L4-5 laminectomy. Dr. Rajpal noted Claimant's diagnosis of osteopenia and opined that given Claimant's poor bone quality, instrumentation would not work successfully in Claimant's spine. *See* Exhibit 12.

21. On October 5, 2016 Claimant underwent an MRI of his lumbar spine interpreted by Nancy Benedetti, M.D. The impression was: T12 inferior endplate compression fracture and L3 superior endplate compression fracture new from the prior MRI; compression fractures at T11, L1, L2, L4, and L5 previously seen were nearly completely healed; unchanged severe canal stenosis at L3-4 due to L4 superior endplate retropulsion, ligamentum flavum infolding, and facet hypertrophy which could result in impingement of the traversing cauda equine nerve roots; neural foraminal stenosis moderate bilaterally at L3-4 and moderate on the right at L4-5 which could result in impingement of the exiting bilateral L3 and right L4 nerve roots; and 4 cm infrarenal abdominal aortic aneurysm. *See* Exhibits G, 5.

22. On October 13, 2016 Claimant was evaluated by Dr. Rajpal's PA, Erika Frieberg. PA Frieberg noted that she had reviewed Claimant's new lumbar spine MRI that demonstrated unhealed compression fractures at T11, T12, L1, L2, L3, L4, and L5 and that Claimant had significant stenosis at L3-4. Claimant reported that he would like to proceed with surgery and PA Frieberg noted that surgery would include kyphoplasties at T11, T12, L1, L2, L3, L4, L5 and laminectomy at L3-4. PA Frieberg noted that the plan was discussed with Dr. Rajpal. *See* Exhibits B, 12.

23. On January 9, 2017 Claimant underwent an independent medical evaluation (IME) performed by Elizabeth Bisgard, M.D. Claimant reported that on June 18, 2016 one of the residents had not yet been put to bed and that he and his wife assisted the resident around 11:30 pm. Claimant reported he bent his knees, leaned forward and had the resident put her arms around his neck and that he grabbed around her and grabbed the gait belt near her spine. Claimant reported that as he went to the lift the resident, he straightened his knees and felt a series of pops in his back associated with pain. Claimant reported an immediate sharp pain but described it as not debilitating. Claimant finished his shift. Claimant reported that he then worked the

Saturday/Sunday night shift and left a note on Sunday morning on his supervisor's desk advising her of the injury. Claimant reported that he then had the next two days off and felt a bit better because he took his medications (from his prior injuries) and relaxed. Claimant reported that when he returned to work the following Tuesday night, he felt his back pain progressively worsen and he developed spasms in his back. Dr. Bisgard diagnosed: compression fractures extending from T11 to L5; spinal stenosis; osteoporosis; cardiovascular disease; obesity; sleep apnea; hypogonadism with low testosterone; osteoporosis right hip; and abdominal aortic aneurysm, infrarenal. Dr. Bisgard opined that Claimant had several risk factors for spontaneous compression fractures. She opined that he had been diagnosed with idiopathic osteoporosis on April 14, 206. Dr. Bisgard noted that Claimant had compression fractures shown on the initial MRI scan but that after the first MRI scan, Claimant was taken off work, placed in a back brace, and was sedentary. Despite being sedentary, Dr. Bisgard noted that MRI scan showed new fractures at levels T12, L2, and L3 despite no new trauma and that the new fractures were spontaneous. Dr. Bisgard opined that before rendering an opinion on causality of the compression fractures she wished to review additional information regarding when the injury was reported and what was discussed. She also requested additional medical records including 2014 chiropractic treatment records, records from Dr. Cassera, records from a recent hospitalization, and updated records from Dr. Rajpal. *See* Exhibit A.

24. Claimant has a significant prior history of treatment.

25. In November of 2014 Claimant injured his back when he was transferring a resident from a wheelchair to a toilet. Claimant reported that he received some treatment and that he had pain levels from that injury of 1-3/10 but wanted to be released from care and was placed at maximum medical improvement and discharged without an impairment rating on March 23, 2015. In September of 2015 Claimant was evaluated by his primary care physician for worsening intermittent low back pain for the past month. Claimant reported that the back pain from his November, 2014 injury had never fully resolved and gradually worsened.

26. Claimant had bilateral ankle pain in April of 2015 and saw an orthopedic doctor who was concerned about dense osteopenia. In October of 2015 Claimant fell at home when working in a crawl space and had significant right hip pain and difficulty weight bearing. Claimant began using a walker after this fall. Claimant reported that due to the hip and ankle pain, his gait changed and caused his low back pain to worsen even more.

27. Claimant had a right hip injection after x-rays showed moderate to severe osteoarthritis of the right hip with osteophyte formation. Claimant continued to use a cane for walking, and Claimant was referred for pain management.

28. On February 11, 2016 Claimant was evaluated by pain specialist Eric Mehlberg, M.D. It was noted that Claimant was referred for bilateral ankle pain, joint pain, back pain, and right hip pain. Claimant reported that he had strained his back 1.5

years prior and that he was slowly improving. Claimant reported that the back injury caused extra wear on his hips and ankles and that worsening the situation, he fell about two weeks prior and flared his ankles. Dr. Mehlberg noted that Claimant walked with a walker. Claimant reported that a hip injection gave him good relief for a while. Claimant reported that he had arthritis of the right hip and that he hurt his hip while turning to lift a resident at work. On examination, Dr. Mehlberg noted lumbar/lumbosacral spine spasms, tenderness on palpation, reduced range of motion, pain with palpation, lumbar facet pain on twisting, extension, and tenderness over the facet joints of the lumbar spine bilaterally. Dr. Mehlberg assessed: neuralgia, hip pain, ankle pain, lumbosacral spondylosis without myelopathy, and long term drug therapy. *See* Exhibit I.

29. On March 1, 2016 Claimant was evaluated at the Colorado Center for Bone Research. Claimant reported that he had lost one half of an inch in height. Claimant also indicated that he had osteoporosis or osteopenia, that he had a family history of bone fractures involving his father who had fractures everywhere, and that he smoked one pack of cigarettes per day and that he had been a smoker for 34 years. Claimant was assessed with osteopenia, and the plan was to order labs for bone turnover markers to rule out secondary reasons for bone loss. Claimant was advised that smoking increased the risk of fracture. *See* Exhibit H.

30. On March 10, 2016 Claimant was evaluated by Dr. Mehlberg. Dr. Mehlberg added the assessments of myofascial pain and sacroiliac joint inflamed. On April 7, 2016 Claimant was evaluated by Dr. Mehlberg who assessed lumbosacral spondylosis without myelopathy in the lumbosacral region and recommended low back arthritis exercises. Claimant was also assessed with neuralgia, ankle pain, osteoarthritis, and hip pain. *See* Exhibit I.

31. In April of 2016 Claimant fell down the stairs and sustained injuries to his left ankle and right toes. Claimant sustained a fracture of the distal fibula on the left and right metatarsal fractures of the 2nd and 3rd toes. Claimant reported that he had a great deal of left ankle pain and was non weight bearing on his left ankle. Claimant reported that at home he had to crawl on all fours which put additional stress on his back and caused a gradual increase in his back pain. Claimant returned to work and used a motorized cart to go up and down the hallways to dispense medication. Claimant also continued to use crutches or a walker.

32. On April 14, 2016 Claimant was evaluated by Paul Miller, M.D. Claimant reported that since he had last seen Dr. Miller he had a low-trauma fracture of the distal tibia where he fell down four stairs. Claimant reported that the amount of trauma was not very great. Dr. Miller noted that Claimant also had broken the right metatarsal. Claimant's laboratory work showed again that his total and free testosterone levels were low with a free testosterone of 3.9 compared to a normal range of 7.2 to 24 and with a total testosterone of 236 and normal range of 348 to 1197. *See* Exhibit H.

33. On May 18, 2016 Claimant was evaluated by Dr. Miller. Claimant was assessed with idiopathic hypothalamic hypogonadism and idiopathic osteoporosis with

the low-trauma fracture of the distal left tibia that was being monitored with evidence of healing. Dr. Miller opined that the fracture was probably related to Claimant's hypogonadism. *See* Exhibit H.

34. On May 26, 2016 Claimant was evaluated by Dr. Mehlberg. Claimant reported low back and ankle pain at an 8/10 with his medications. Dr. Mehlberg noted that Claimant walked with a walker and/or cane. On examination, Dr. Mehlberg noted lumbar/lumbosacral spine spasms, tenderness on palpation and reduced range of motion. Dr. Mehlberg noted pain with palpation in the lumbar facet, pain on twisting, extension, and tenderness over the facet joints in the lumbar spine bilaterally. Dr. Mehlberg assessed ankle pain, neuralgia, lumbosacral spondylosis without myelopathy, hip pain, osteoarthritis, and ankle injury. Dr. Mehlberg prescribed norco and a butrans patch for the lumbosacral spondylosis without myelopathy. *See* Exhibit I.

35. On June 23, 2016 Claimant was evaluated by Dr. Mehlberg. Claimant reported his pain level at a 9/10 and that his back was very stiff due to having to hold himself up well at work. Claimant reported that physical therapy had been helping him out and that the butrans patch was really working and reported that he would like to stay on the patch. Claimant did not report any new injury. Claimant's spine examination was the same as his May 26, 2016 examination. Dr. Mehlberg continued the same assessments that were assessed at the May 26, 2016 visit and refilled the norco and butrans patch prescriptions. *See* Exhibit I.

36. On July 28, 2016 Claimant was evaluated by Dr. Mehlberg. Claimant reported that he had again flared his low back with radicular complaints in the lateral legs and left leg weakness. Claimant reported pain at a 9/10 and that he was scheduled for multilevel kypho with Dr. Rauzzino. *See* Exhibit I.

37. Claimant continued to treat with Dr. Mehlberg. Dr. Mehlberg continued his assessments and prescriptions. On November 3, 2016 it was noted that Claimant continued to walk with a walker or cane, that Claimant had flared his low back with radicular complaints in the lateral legs and left leg weakness after a fall at work in June of 2016, and that Claimant was unable to get kyphoplasty surgery yet. Claimant's physical exam of the lumbar spine remained the same and Dr. Mehlberg assessed: spasm, neuralgia, ankle pain, lumbosacral spondylosis without myelopathy, chronic pain syndrome, hip pain, lumbar spondylosis, osteoarthritis, and ankle injury. *See* Exhibit I.

38. Dr. Bisgard testified at hearing. Dr. Bisgard opined that given the different scenarios and histories as to how the incident occurred and the progression of symptoms, she could not accurately rely on the history provided by Claimant. Dr. Bisgard opined that the MRI taken in July of 2016 showed chronic deformity of the end plates with prominent loss of height centrally at the L4 and L5 levels and that those compression fractures clearly pre-existed a June, 2016 work injury. Dr. Bisgard opined that the grade 3 compression fracture at the L1 level was the cause of Claimant's back pain. Dr. Bisgard compared the October, 2016 MRI with the July, 2016 MRI and noted that the T11 acute to subacute compression fracture had fully healed and that the T12

compression fracture at the superior endplate had healed. Dr. Bisgard noted new compression fractures at the inferior endplate of the T12 and at the L-3 level that were not present in July. Dr. Bisgard noted that these new fractures had occurred spontaneously and unrelated to any known trauma. Dr. Bisgard noted that Claimant had been placed in a lumbar brace immobilizing his back and that Claimant had been less active when the new fractures occurred.

39. Dr. Bisgard opined that the compression fracture at L1 could also have occurred spontaneously without trauma. Dr. Bisgard opined that Claimant had compression fractures that had occurred in the past, then developed more compression fractures after June of 2016 in the absence of trauma. Dr. Bisgard noted that she was unable to opine within a reasonable degree of medical probability that the lifting incident at work as reported by Claimant caused any acute compression fractures. Dr. Bisgard opined that someone with an acute compression fracture can remember exactly when/where it happened. Dr. Bisgard noted that when someone goes from 0 pain to 7-9/10 pain acutely, they know exactly when it happened and what they were doing.

40. Claimant's wife, Dianna Bigley testified at hearing. Ms. Bigley reported that she was working with Claimant on June 18, 2016 and that when transferring a resident, Clamant said bad words followed by "I hurt my back." She testified that she was with Claimant when he reported the injury to Ms. Gill and that there was no discussion of the date of injury.

41. Overall, the testimony of Claimant and his wife is not found credible or persuasive. Claimant's testimony is inconsistent with various medical records and reports.

42. The testimony of Ms. Pring, Ms. Gill, and Dr. Bisgard is found credible and persuasive and consistent with the overall medical records.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for

the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish, more likely than not, that he sustained an injury to his back on June 18, 2016. Claimant has also failed to establish that he aggravated his underlying back pain and problems on June 18, 2016. Claimant is not found credible or persuasive. Claimant provided multiple reports of how specifically the injury occurred, Claimant failed to clearly specify to Ms. Pring what had happened to cause an injury when he called her, and Claimant reported inconsistently about when he experienced the onset of pain. Claimant reported to different providers that he had either a pop in his back, a series of pops in his back, a twinge in his back, pain from holding himself up well at work, or a burning in his back. Prior to the alleged incident, Claimant had pain reported at an 8/10, was on norco and a butrans patch, and was using a cane or walker for walking as well as a motorized cart. Although Claimant

reported to Dr. Danahey that he had pretty much recovered from his prior back injury and was 90% improved and working regular duty when this new injury occurred, the records clearly document that Claimant was at a 8/10 pain level, walking with a cane/walker, and that he had significant pain medications and findings on examination in his lumbar spine just prior to the alleged injury.

Significantly, Claimant was evaluated by Dr. Mehlberg on May 26, 2016 with pain from his low back and ankle reported at an 8/10 with medication. Claimant was walking with a walker or cane. Claimant had significant findings on examination in the lumbar spine. At the next appointment with Dr. Mehlberg on June 23, 2016 and 5 days after the alleged new injury, Claimant failed to report a new injury, had a pain level increased only slightly at a 9/10, and had the same findings on examination that he had in May. Claimant also specifically reported to Dr. Mehlberg that his back was stiff from holding himself up well at work. No new injury or new trauma was reported to Dr. Mehlberg. Given Claimant's multiple different reports, Claimant's subjective reports cannot be relied upon as far as what incident caused any fractures. Claimant's symptoms and examinations with Dr. Mehlberg were essentially the same prior to and following the alleged work incident. Additionally, Claimant's wife, Ms. Bigley is also not credible or persuasive. It is not logical to believe her testimony that when speaking with Ms. Gill about the injury and while Ms. Gill was filling out paperwork, there was no conversation at all about the date of injury or when the injury occurred.

Claimant also has significant risk factors for developing fractures without any trauma or incident including his hypogonadism, his osteoporosis, his habit of smoking one pack per day for 34 years, and his family history including his father who suffered from multiple fractures. As found above, Dr. Miller opined that Claimant's low-trauma fracture of the distal left tibia was probably related to Claimant's hypogonadism. Claimant also developed new fractures in between his first MRI in July of 2016 and his second MRI in October of 2016 despite being in a back brace and on restricted activity. These new fractures occurred without any known trauma. It is just as likely that any fractures shown on the July 2016 MRI occurred outside of work and with no known trauma. Claimant is not credible that an incident occurred on June 18, 2016 that created the need for treatment. Although Dr. Rauzzino opined that Claimant had multiple compression fractures due to the lifting injury and opined that Claimant was certainly predisposed to this due to Claimant's osteopenia but that were it not for the work injury, the fractures would not have occurred, Dr. Rauzzino did not appear to have the full medical records noting discrepancies in how Claimant reported the injury, date of injury, onset of symptoms, etc. Since Dr. Rauzzino's opinion was based on Claimant's subjective non credible reports, Dr. Rauzzino's opinion also cannot be relied upon. Dr. Bisgard, overall, is credible and persuasive. Claimant has failed to meet his burden to establish that he sustained a work related injury on June 18, 2016.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and

necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As Claimant has failed to establish that he sustained a compensable work related injury, Respondents are not liable for medical treatment.

TTD

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

As Claimant has failed to establish that he sustained a compensable work related injury, Respondents are not liable for temporary total disability benefits.

ORDER

1. Claimant has failed to meet his burden to establish by a preponderance of the evidence that he sustained a compensable injury on June 18, 2016. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory

reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Respondent overcome, by clear and convincing evidence, the DIME physician's whole person impairment rating of 9%, based upon injuries to her cervical spine.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant was born on January 3, 1982, and was age 35 on the date of the hearing.

2. Claimant's date of injury is May 21, 2015. This is an admitted, compensable claim.

3. Claimant was injured when she was struck in the jaw by a combative patient, while she was working at a skilled nursing unit.

4. Claimant presented at the Penrose St. Francis emergency department and was diagnosed with jaw bruises and a concussion.

5. Five days after the injury she was diagnosed at Concentra with among other things, a mild left cervico-occiptal pain and headache.

6. Claimant complained of cervical pain on visits to her treatment providers in June, July, August, September, and November of 2015. She further complained of neck problems, tightness, to Dr. Hattem in March of 2016.

7. Claimant was also examined on September 8, 2015, by Dr. Jeffrey Jenks, MD. On that date, Dr. Jenks noted that Claimant had "two trigger points in the trapezial ridge bilaterally."

8. Dr. Hattem placed Claimant at Maximum Medical Improvement on March 10, 2016. He states in his records of that visit that Claimant had full range of cervical motion but had, "slight paracervical tenderness." Dr. Hattem gave Claimant a zero impairment rating and released her to full duty.

9. Dr. Higginbotham performed a DIME on September 12, 2016 and gave Claimant a four percent Table 53, II B rating and a five percent rating for ROM deficit which equals a nine percent whole person rating.

10. When applying the Table 53 guidelines to his Figure 81 "Cervical Range of Motion" calculations, Dr. Higginbotham interpolated (and rounded) his cervical flexion figures between the listed "% Impairment of Whole Person" of 0% and 2%, to yield a final Whole Person Cervical Flexion rating of 1%.

11. When applying the Table 56 guidelines to his Figure 81 "Cervical Range of Motion" calculations, Dr. Higginbotham interpolated (and rounded) both his right and left lateral cervical flexion figures between the listed "% Impairment of Whole Person" of 0% and 1%, to yield a final Whole Person Lateral Flexion rating of 1/2% for each of the left and right sides.

12. When applying the Table 57 guidelines to his Figure 81 "Cervical Range of Motion" calculations, Dr. Higginbotham interpolated (and rounded) both his left and right rotational figures between the listed "% Impairment of Whole Person" of 0% and 1%, to yield a final Whole Person Rotational Reading of 1/2% for each of the left and right sides.

13. Dr. Higginbotham extensively documented Claimant's medical history, which was noted by Dr. Ridings as well.

14. On his physical exam he found positive mild bicipital groove tenderness on palpation and tenderness in the neck muscle.

15. Claimant was evaluated by Dr. Ridings who performed an IME at the request of Respondent on December 7, 2016. Dr. Ridings was offered and accepted as a medical expert in physical medicine and rehabilitation, and is Level II accredited.

16. Dr. Ridings found in his exam that Claimant was tender to palpation bilaterally in the neck.

17. In the seated position during Dr. Ridings exam Claimant had increased muscle tone on both sides of the neck.

18. When examined in the prone position Claimant relaxed and her muscle tone was supple but she still complained of pain on palpation.

19. The same finding by Dr. Ridings was made regarding increased tone in the bilateral shoulder elevators when seated but not when prone.

20. Dr. Ridings opines the supple muscle tone while prone was because Claimant was guarding when sitting, not any underlying muscle injury.

21. Dr. Riding did ROM studies on the Claimant's neck and did have deficits equating to a 2% whole person rating compared to Dr. Higginbotham's 5% ROM deficit.

22. Dr. Riding states because the cervical muscles in the neck and the elevators are supple in the prone position the Claimant is not entitled to a Table 53, II B rating which is a precursor to a ROM rating.

23. Claimant has consistently reported tightness in the neck from the time she was under treatment for her neck injury.

24. The reporting of neck tightness by Claimant was from the injury date to Maximum Medical Improvement and during both exams by the DIME physician Dr. Higginbotham and the IME exam by Dr. Ridings.

25. Claimant complained of tenderness palpation from the date of injury to Maximum Medical Improvement and up to and including the DIME by Dr. Higginbotham and the IME by Dr. Ridings.

26. Only Dr. Ridings discussed in his report the difference in neck tightness on palpation between Claimant in the seated position and Claimant in the prone position.

27. Claimant had over six months of complaints of tightness in the cervical neck and gave pain reports when palpated in that area.

28. Dr. Higginbotham found pain when he palpated the cervical area. Dr. Ridings found tightness and pain when he palpated Claimant's neck in the seated position.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (ACT) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. See *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. See §8-43-201(1), C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witnesses' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice or interest. See *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936). A workers' compensation case is decided on its merits. See §8-43-201, C.R.S. The judge's factual findings concern only evidence and inferences found to be crucial of the issues involved; the judge has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and as rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. Industrial Claims Appeals Office, 5* P.3d 385 (Colo. App) 2000.

DIME Process

3. The findings of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only overcome by clean and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claims Appeals Office,* 134 P.3d. 475, 482 (Colo. App. 1998 App. 1995); *Eller v. Indus. Claim Appeals Office*, 224 P. 3d 397, 400 (Colo. App. 2009). As a matter of diagnosis, the assessment of impairment requires a rating physician to identify and evaluate all losses and restrictions which result from the industrial injury. *Egan v. Indus. Claim Appeals Office,* 971 P. 2d 664 (Colo. App. 1998); *Colorado AFL v. Donlon*, 914 P.2d396 (Colo. App. 1995).

4. A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. §8-42-101(3.7); §8-42-104(8)(c) C.R.S. The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clean and convincing evidence, present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Indus. Claim Appeals Office* 17 P.3d 202 (Colo. App. 2000). Deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2006); *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. Aug. 2, 2005).

Range of Motion figures by the DIME

5. In this case, the ALJ is not persuaded by clear and convincing evidence that the DIME process in calculating Claimant's range of motion has been overcome. The Division of Workers' Compensation "Desk Aid #11-Impairment Rating Tips", General Principles 4 states:

> Impairment Rating "Rounding": Although the AMA Guides *allows* rounding of an impairment rating to the nearest whole number ending in 0 or 5, the Division recommends rounding up or down to the nearest whole number when presenting the ***final rating.*** A number ending in .50 or above should be rounded up. Fractional ratings are not acceptable.

The *final* impairment rating expressed by Dr. Higginbotham was expressed as a whole number. There is nothing in the available literature proscribing the interpolation which Dr. Higginbotham used at arriving at his 1/2% rating for the individual components for cervical range of motion. The ALJ finds the Claimant's combined cervical range of motion Impairment Rating under Figure 81, as calculated by Dr. Higginbotham, to be 5%.

Physiologic Correlation and Rigidity

6. Under Section 8-42-107(8), “For purposes of determining levels of medical impairment, the physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation.” §8-42-107(8), C.R.S.; *see* also the Impairment Ratings Tips Sheet (Rev’d July 2016).

7. In this instance, Table 53, II, B requires a medically documented injury (which the ALJ so finds), **and** a minimum of six months of medically documented pain (which the ALJ so finds) **and *rigidity***, with or without spasm…." (emphasis added).

8. Taber's Cyclopedic Medical Dictionary defines "**Rigidity**" as 1. *Tenseness,* immovability: *stiffness*; *inability to bend or be bent.* (emphasis added).

9. The American Heritage Stedman's Medical Dictionary defines "**Rigidity**" as 1. The quality of *stiffness* ***or*** *inflexibility*. (emphasis added).

10. Arguably, the *stiffness* which Claimant consistently reported to her providers for well over six months after her injury might not meet the criteria of anatomic or physiologic correlation.

11. However, the *inflexibility,* which was documented by Dr. Higginbotham's range of motion calculations *does* constitute the needed physiologic correlation. This is so, even if one accepts Dr. Ridings' interpretation (which the ALJ does not) that the guarding he noted with Claimant in the upright position does not constitute rigidity.

12. Further, at least one data point in the records, from September 8, 2015 by Dr. Jenks, notes a trigger point in her trapezial ridge, thus providing further physiologic correlation to her complaints of stiffness.

13. There is thus ample evidence in the records to support the DIME physician's findings of at least 6 months of rigidity.

14. Respondents have not overcome, by clear and convincing evidence, the DIME physician's Table 53 whole person rating of 4%.

15. Claimant's Whole Person Cervical Spinal Impairment Rating is thus 9%.

ORDER

It is therefore ordered that:

1. Claimant's whole person impairment rating is 9%.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

1. Has Claimant proven by a preponderance of the evidence that he suffered a compensable work-related injury to his left knee on March 7, 2016?

2. Has Claimant proven by a preponderance of the evidence that his left total knee replacement surgery was causally related to his work for Employer?

STIPULATIONS

1. The parties stipulated to an average weekly wage (AWW) of $387.60. The parties also stipulated that if the claim is compensable, Claimant is entitled to a closed period of TTD benefits from April 19, 2016 to July 27, 2016.

FINDINGS OF FACT

1. Claimant works as a ramp agent for Employer at the Colorado Springs Airport. He has worked for Employer in this capacity since 2009.

2. Claimant's work duties include loading and unloading aircraft with baggage and supplies.

3. Luggage in the terminal is loaded by hand onto carts. The carts of luggage are then towed out to the aircraft with a tug. The ramp agents then pull the bags off the carts and load them onto a belt loader which conveys the bags up to the cargo hold of the aircraft. Typically, one ramp agent loads bags at the bottom of the belt loader and one agent is up in the baggage pit of the plane. The process is reversed when unloading aircraft.

4. Employer utilizes three aircraft at the Colorado Springs Airport: the CRJ-200, the CRJ-700, and the ERJ-175. Claimant can stand up in the cargo hold of the CRJ-200 and CRJ-700 and does not have to crawl or get on his knees to load luggage onto those aircraft. However, the ERJ-175 has lower ceilings, which requires Claimant to either sit down or kneel while loading bags. Claimant testified that the ERJ-175 is a relatively new aircraft that Employer has only been using since early 2015.

5. Claimant has substantial pre-existing medical problems which are pertinent to this claim. Claimant was seriously injured in a motor vehicle accident in his 20s. Claimant had a stroke which primarily affected his left side. Claimant continues to suffer from residual left-sided weakness and associated alteration of his gait.

6. Additionally, Claimant has long-standing severe degenerative arthritis in his left knee. On February 3, 2015, while treating at Concentra for a hernia injury, he reported his left knee had been painful for "[a] few months [with] no specific injury." Ten

days later Claimant saw his primary care physician, Dr. James Zimmer, and reported "constant" knee pain and swelling. Dr. Zimmer drained the knee and gave Claimant a cortisone injection. Claimant later told his physical therapist he had left knee pain since 2013.

7. Claimant saw Dr. Eric Jepson, an orthopedic surgeon, regarding his left knee on November 19, 2015. He described difficulty walking long distances due to pain. He told Dr. Jepson that he works at the airport and is on his feet for 10-hour shifts. He reported that the previous cortisone injection was not helpful. On physical examination, he had effusion, reduced range of motion and joint crepitus. X-rays showed "end-stage" degenerative changes of the left knee, including complete obliteration of the medial joint space, osteophytes, and sclerosis. Dr. Jepson discussed a total knee arthroplasty, but believed it was "appropriate to exhaust all conservative options prior to proceeding with knee replacement." Dr. Jepson prescribed an anti-inflammatory (Mobic) and advised Claimant to return for consideration of a steroid injection if the medication was not effective. Dr. Jepson reiterated "[Claimant] understands that he may [need] a knee replacement in the future."

8. Claimant returned to Dr. Jepson's office on December 22, 2015 and requested an injection. He was using a knee brace "as needed." Although Dr. Jepson had previously mentioned a cortisone injection, his PA-C, Robert Peterson, administered a hyaline viscous injection instead.

9. At his next visit with Dr. Jepson on February 4, 2016, Claimant reported that the hyaline injection "offered very little relief." He was taking the Mobic in the morning but "by the time he gets home every night the knee is pretty painful." Claimant reported he works "on his feet all day with a lot of bending, squatting, twisting and uneven ground." Claimant requested another cortisone injection. Dr. Jepson noted "he is getting closer to wanting to proceed with knee replacement. He feels a big portion of this has been the significant work that he has done over time, which is very manual labor work with a lot of twisting, bending, and kneeling." The knee pain was becoming "a bigger and bigger deal and affects every aspect of his life."

10. Claimant testified he believes his left knee was aggravated by activities such as exiting tugs, crouching, kneeling and crawling to load and unload luggage, and standing and walking.

11. In March 2016, Claimant reported an injury to Employer and was directed to Concentra for an evaluation. Claimant saw Dr. Walter Larimore at Concentra on March 7, 2016. Claimant told Dr. Larimore he had jumped off some equipment at work and twisted his left knee."[1] He also told Dr. Larimore that the knee pain worsened during the day and with prolonged standing. Dr. Larimore ordered x-rays, which showed "bone-on-bone" in the medial compartment on the left. There was much less significant arthritis affecting the right knee. Dr. Larimore diagnosed chronic left knee pain and osteoarthritis. He opined "with pre-existing, non-work-related, degenerative knee

[1] Claimant reiterated that history in his sworn answers to interrogatories.

arthritis, and no preceding injury, this would not be considered a work caused injury." Dr. Larimore opined that Claimant was at MMI, and advised him to follow-up with personal physicians.

12. Claimant saw Dr. Jepson again on March 25, 2016 with questions regarding "the etiology of his underlying arthritis." Dr. Jepson opined "I believe his arthritis in his left knee is accumulative of the mechanical abnormality he has dealt with since his stroke causing increased stresses across his knee. [It] is also caused by the manual labor work which he performs on a daily basis. [It] also is attributable to just typical wear and tear."

13. On April 15, 2016, Dr. Jepson's office submitted a request for a left total knee replacement to Employer. In the section of the form that asked whether the injury was work-related, Dr. Jepson checked both yes and no and put a question mark.

14. Dr. Jepson performed a left total knee arthroplasty on May 4, 2016.

15. After surgery, Claimant started physical therapy on May 24, 2016. On the patient history form, Claimant indicated the left knee pain began three years earlier, and continued from 2013 to 2016.

16. Claimant saw Dr. Mark Paz for an Independent Medical Examination (IME) on November 8, 2016 at Respondents' request. Claimant told Dr. Paz he works approximately 34 hours per week, performing activities such as lifting luggage, sorting bags, stepping on and off equipment and servicing airplanes. Claimant told Dr. Paz that the knee pain began in January 2016. The pain occurred daily at work and home. His pain level was typically better when he was off work. Claimant attributed the symptoms to jumping on and off equipment at work. Dr. Paz opined that Claimant's left knee osteoarthritis was not causally related to his work activities. Dr. Paz opined that "the left knee osteoarthritis which required medical treatment as early as February 2015 is attributable to non-occupational exposures." Dr. Paz emphasized the residual effects of the 1986 stroke and resulting neuromuscular deficits. Dr. Paz opined "the resultant abnormal gait and the effects of the abnormal gait on the chondral surfaces of the left knee joint, during the last 30 years, has slowly and progressively applied excessive and unbalanced forces across the left knee joint, causing advanced osteoarthritis and the need for left total knee arthroplasty." which led to altered gait and stressed Claimant's left knee "for the last 30 years." Claimant's work for Employer did not cause, aggravate or accelerate Claimant's underlying condition. Although Dr. Paz agreed that the arthroplasty was reasonable and necessary, he did not believe it was causally related to Claimant's employment.

17. Dr. Paz reiterated and expounded upon his opinions in his hearing testimony. Dr. Paz further testified that the lack of right knee symptoms corroborates his opinion that the advanced left knee osteoarthritis was related to pre-existing left-sided weakness and not employment activities. He explained that a person who is genetically predisposed to osteoarthritis will generally show signs in both knees. Dr. Paz testified that if the employment duties caused or aggravated Claimant's left knee osteoarthritis,

there would be signs of equal or greater issues in the right knee. However, xrays of the right knee showed only mild changes, and the medical records do not document significant right knee symptoms.

18. Dr. Paz testified that the May 4, 2016 surgery was reasonable and necessary but was not related to Claimant's cumulative job duties or any specific incident that occurred in March 2016.

19. Dr. Paz's opinions regarding causation are credible and persuasive.

20. Claimant has failed to prove by a preponderance of the evidence that he suffered a compensable work-related injury in March 2016.

21. Claimant has failed to prove by a preponderance of the evidence that treatment he received for his left knee, including arthroplasty, was causally related to his employment.

22. The May 4, 2016 arthroplasty resulted from the natural progression of Claimant's pre-existing condition, which was not aggravated or accelerated by his work.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury proximately caused the condition for which benefits are sought. Section 8-41-301(1)(c); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. For an injury to be compensable under the Act, there must be a "sufficient nexus" between the employment and the injury. *In re Question Submitted by the U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

The fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation. If a claimant's work aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). But

the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Cotts v. Exempla*, W.C. No. 4-606-563 (ICAO, August 18, 2005). Rather, when a claimant experiences symptoms at work, the ALJ must determine whether the subsequent need for treatment was caused by an industrial aggravation of a preexisting condition or due to the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

As found, Claimant has failed to prove by a preponderance of the evidence that he suffered a compensable injury to his left knee. Claimant has alternatively asserted that his injury results from a specific incident on March 3, 2016, or accumulated work exposure. Neither theory of liability is persuasively supported by the evidence. The March 3, 2016 incident of stepping or jumping down from equipment was insignificant and did not aggravate or accelerate Claimant's underlying severe osteoarthritis. Although that incident may have temporarily increased his pain, it did not proximately cause a need for any medical treatment. Claimant's knee was already severely degenerated, constantly painful, and repeatedly irritated by otherwise innocuous, routine activities. Claimant had received no benefit from conservative treatment and was an appropriate candidate for a knee arthroplasty before March 3, 2016. The March 3 incident did not change the type or course of medical treatment needed to treat his condition.

Regarding Claimant's cumulative trauma theory, the ALJ is persuaded by Dr. Paz's opinion that the end-stage arthritis in Claimant's left knee developed over a prolonged period of time independently of his work activities. Dr. Paz explained that Claimant's long-standing left lower extremity weakness and altered gait set the stage for, and eventually precipitated, the severe osteoarthritis. The arthroplasty was the end result of the natural progression of the underlying arthritic condition. Dr. Paz's opinion is supported by the fact that Claimant's left knee is far more degenerated than the right knee, even though both knees were exposed to the same work activities. Dr. Paz's opinions are also supported by Dr. Larimore's determination that Claimant's knee pain is not a work-related condition. Although Dr. Jepson opined that Claimant's arthritis was *partially* due the nature of his work, he also opined it was caused by the longstanding mechanical abnormalities related to Claimant's previous stroke and "just typical wear and tear." When asked whether the arthroplasty was work-related, Dr. Jepson equivocated and responded with a question mark. Based on the evidence presented, the ALJ concludes that Claimant's work was not a proximate cause of his need for knee arthroplasty.

Although Claimant experienced knee pain at work, that is not enough to establish a compensable claim. Claimant had severe "bone-on-bone" degenerative arthritis in his left knee. That degenerative condition would reasonably be expected to cause pain with routine activities such as standing, walking, crouching and crawling, regardless of whether those activities were performed at work or elsewhere.

Based on the evidence presented, the ALJ is not persuaded that Claimant's work caused, aggravated, accelerated, or combined with his pre-existing condition to produce

the need for knee replacement surgery. Rather, the left knee replacement surgery was necessitated by the natural progression of Claimant's underlying, pre-existing osteoarthritis.

ORDER

It is therefore ordered that:

1. Claimant's claim for compensation and medical benefits regarding his left knee is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 15, 2017

s/Patrick C.H. Spencer II

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she sustained a compensable left knee injury on November 2, 2015.

II. If Claimant has proven by a preponderance of the evidence that she sustained a compensable injury on November 2, 2015, was the surgery performed by Ian Weber, M.D. reasonable, necessary and related to her injury.

STIPULATIONS

1. Claimant's average weekly wage is $569.23.

2. If Claimant has proven by a preponderance of the evidence that she sustained a compensable injury, Claimant is entitled to Temporary Total Disability benefits beginning February 27, 2016, ongoing.

FINDINGS OF FACT

1. Claimant worked for Employer as a Deli Clerk. Claimant worked for Employer in such capacity since May 2012.

2. Claimant testified that during her shift on the morning of November 2, 2015, her left knee went out and hit the concrete floor while she was squatting down to retrieve ingredients from a cabinet. Claimant testified the incident occurred between approximately 6:00 a.m. and 7:00 a.m. Claimant testified that she felt immediate pain and instability and began limping. Claimant continued to work her shift.

3. Claimant initially testified that her left knee "went out" later in her shift, around 11:00 a.m. or 11:30 a.m. Claimant later testified that she dropped a pan and twisted her left knee.

4. Claimant testified that she reported the incident to Peter Vick, Assistant Deli Manager, on November 2, 2015 and to Adam Thao, Assistant Store Manager, on November 3, 2015. Claimant reported to Mr. Thao that she bent to retrieve spices from a cabinet and hit the floor "a little hard." Claimant also reported that her left knee gave out later during her shift. On the Worker's Claim for Compensation Form dated November 20, 2015, in response to the question, "How did the injury occur?" Claimant reported, "Twisted to get out of way." In response to the question "What object or substance directly harmed you?" Claimant replied, "Twisting."

5. Pradeep Rai, M.D., evaluated Claimant on November 3, 2015. Claimant reported that she fell to the floor after her left knee gave out when squatting to retrieve

something from a lower cabinet. Dr. Rai noted an antalgic gait, limited mobility in the left knee, and tightness and tension around the peripatellar area, especially to the superolateral region. Dr. Rai also noted effusion to the superolateral area. Dr. Rai assessed pain to the left knee and ordered an MRI of Claimant's left knee. Dr. Rai instructed Claimant to continue icing the area and taking ibuprofen. Dr. Rai ordered an MRI of the left knee and referred Claimant to orthopedics.

6. Claimant returned to Dr. Rai on November 5, 2015 for clarification regarding her work status and restrictions. Dr. Rai noted that Claimant's gait remained antalgic with limited range of motion. Dr. Rai again assessed pain to left knee. Dr. Rai instructed Claimant to work as tolerated, ice the knee, and continue taking ibuprofen.

7. Claimant underwent an MRI of her left knee on November 8, 2015. Barry G. Hansford, M.D., interpreted the MRI and his impression was, in part:

> 1. Small tricompartmental osetophyte formation with regions of focal full-thickness chondral loss and underlying reactive marrow signal change at the patellofemoral articulation as described above which is compatible with mild osteoarthritis most pronounced at the patellofemoral articulation. 2. There is approximately 2-3 mm hypointense round focus located at the central weightbearing portion of the medial tibiofemoral compartment with associated focal underlying reactive marrow edema at the subjacent tibial plateau. This is suspicious for a small intra-articular body with the subjacent edema likely mechanical in nature. Recommend further evaluation with dedicated knee radiographs. 3. There is focal heterogeneous intermediate to hyperintense somewhat organized appearing signal abnormality along with anterior aspect of the intracondylar notch with adjacent edema within the central portion of Hoffa's fat pad. This constellation of findings may be associated with Hoffa disease/syndrome of the infrapatellar fat pad impingement. Correlate for associated symptoms. 4. Findings suspicious for remote partial injury/mucoid degeneration at the origin of the medial head of the gastrocnemius muscle with associated probable extra and intraosseous soft tissue ganglion formation as detailed above. The region of intraosseous multilobular T2 hyperintense cystic-appearing change within the medial femoral condyle should not be focally symptomatic. Recommend dedicated knee radiographs for further characterization of the intraosseous cystic appearing change at the medial femoral condyle.

8. George Kohake, M.D., evaluated Claimant on November 13, 2015. Dr. Kohake documented that Claimant's November 8, 2015 MRI showed "some tricompartmental osteophyte formation with full-thickness chondral loss and also findings consistent with Hoffa disease/syndrome of the infrapatellar fat pad/impingement." Dr. Kohake noted that there was no swelling or sign of trauma to the left knee. Dr. Kohake further noted Claimant walked with an antalgic gait and was using a knee immoblizer. Dr. Kohake recommended Claimant begin physical therapy and see an orthopedist.

9. John O. Roth, M.D., read the x-rays of Claimants left knee taken on November 13, 2015. Dr. Roth noted moderate joint effusion, mild patellofemoral joint arthritic change, and small calcified intra-articular bodies. Dr. Roth found no acute fracture, and his impression was degenerative changes and effusion.

10. Dr. Rai reevaluated Claimant on November 19, 2015. Claimant reported worsening symptoms. Dr. Rai noted that Claimant's gait remained antalgic, and that her left knee had limited flexion. Dr. Rai remarked that Claimant had a "significant amount of pain to the lateral aspect, along the joint line, of the left knee with a significant amount of tenderness to that area." Dr. Rai assessed pain to the left knee.

11. Claimant returned to Dr. Rai for a follow-up evaluation on November 23, 2015. Dr. Rai remarked that the knee x-ray showed no acute fracture. Dr. Rai summarized the findings from the November 8, 2015 MRI reports. Dr. Rai noted that there was no change since the last exam. Dr. Rai assessed sprain to the left knee and possible arthritis. Dr. Rai recommended that Claimant continue taking ibuprofen. Dr. Rai referred Claimant to another orthopedic surgeon for a second opinion on her MRI, per Claimant's request.

12. Jared J. White, D.O., evaluated Claimant on November 20, 2015. Claimant reported she fell directly onto her knee while at work and had been experiencing anterior and lateral knee pain. Dr. White reviewed the November 13, 2015 x-rays of Claimant's left knee and documented, "There are some loose bodies noted. There is moderate tricompartmental osteoarthritis with mild medial tibial femoral joint space narrowing and patellofemoral chondromalacia. There is a mild lateral patellar tilt. Cystic changes noted of the patella as well as the metaphysis of the mediofemoral condyle." Regarding his review of the November 8, 2016 MRI, Dr. White noted full-thickness chondral loss of the patella facets with subchondral cystic changes of the median ridge of the lateral patella facet. Dr. White also noted an intra-articular loose body and reactive marrow edema of the central weightbearing portion of the medial tibiofemoral compartment. Dr. White assessed chondromalacia of left patellofemoral joint, Hoffa's fat pad disease left knee, osteoarthritis of left knee, knee joint cyst, left multiobluar cyst of mediofemoral condyle, and loose body of the left knee.

13. Dr. White remarked that Claimant's fall likely caused exacerbation of Claimant's chronic knee arthritis and patellofemoral chondral malacia. Dr. White indicated that Claimant was best suited for conservative measures at the time, stating "The patient has well established knee arthritis based on her history, exam and radiographs. This is treated by a conservative approach and surgery is not recommended." Dr. White further remarked, "The goal is to stay active and buy time to eventual surgical procedures will be discussed at a future time based on the initial response to treatment."

14. Respondent denied Claimant's claim on December 1, 2015, stating treatment after December 1, 2015 would not be paid, and referrals to any orthopedics would not be authorized. Respondent filed a Notice of Contest on December 3, 2015.

15. Claimant testified that she continued to experience pain and subsequently sought treatment with Cornerstone Orthopedic.

16. Ian Weber, M.D., evaluated Claimant on February 12, 2016. Referring to x-rays of the left knee taken that day, Dr. Weber noted that there was "not a tremendous amount of arthritic change seen here." Dr. Weber assessed osteoarthritis of the left knee, and left knee pain with evidence of chondromalacia and cartilage thinning. Dr. Weber administered a cortisone injection to Claimant's left knee and referred Claimant to physical therapy. Dr. Weber remarked, "At this point, I told [Claimant] I do not think there is anything on a scope I can take care of."

17. Dr. Weber reevaluated Claimant on March 4, 2016. Dr. Weber documented that the administered cortisone injection was not helpful to Claimant. Claimant reported pain to the inside of her left knee. Dr. Weber noted tenderness on the medial joint line, a normal gait, and no use of an assistive device. Dr. Weber commented, "We went back and reviewed her MRI and I really do not see any bone marrow edema lesions and the meniscus looks fine." Dr. Weber again assessed osteoarthritis of left knee.

18. Dr. Weber reevaluated Claimant on April 8, 2016. Dr. Weber remarked that Claimant continued to experience "pain on the left side," noting tenderness in the medial joint line and medial femoral condyle. Claimant's gait was normal and Claimant was not using an assistive device. Dr. Weber assessed derangement of the left knee. Dr. Weber ordered another MRI of Claimant's left knee commenting, "At this point, I think we should order an MRI and see if we are missing anything. She did have an injury and then it got worse. Make sure this not (*sic*) a bone contusion or some type of cartilage tear or osteochondral lesion."

19. Claimant underwent an MRI of her left knee on April 15, 2016. Charles Wells, M.D., interpreted the MRI. Dr. Wells compared the April 15, 2016 MRI to the November 8, 2015 MRI. Dr. Wells noted:

> Cartilage - Patellofemoral: Diffuse, high-grade cartilage loss along the patella involving the medial facet, median ridge, and lateral facet, cystic change at the median ridge and lateral facet. Mild diffuse loss along the trochlea. Small patellar and trochlear osteophytes. Findings are stable to slightly worsened. Medial compartment: Again seen is a small focus of round hypointense signal at the central weightbearing surface of the medial tibial plateau. This is decreased in size and prominence compared to the prior MRI. However, the bone marrow edema like signal in the subajacent medial tibial plateau has increased. There is mild diffuse cartilage loss along the weightbearing surface with small osteophytes. Lateral compartment: Mild diffuse cartilage thinning with small osteophytes. No focal defect or subchondral cystic change.
>
> Bone Marrow – Again seen in the medial femoral condyle, at the origin of the medial head gastocnemius muscle, is multilobular PFS hyperintense

abnormal signal. This appears to arise from the origin, which is focally disrupted by PDFS hyperintense signal, similar to the prior study.

20. Claimant returned to Dr. Weber for a reevaluation on April 29, 2016. Dr. Weber documented a limp and tenderness in the medial joint line. Claimant was not using an assistive device. Per his review of the April 15, 2016 MRI, Dr. Weber noted Claimant "had a pretty large bone marrow edema right underneath that tibia. There may be a little bit of an intra-articular body on that lateral plateau, but she does have some mild osteoarthritis in the medial and patellofemoral, but again, bone marrow react edema is worse in that medial tibial plateau, indicating a nondisplaced fracture." Dr. Weber commented that the recent MRI showed more reactive bone marrow compared to the November 8, 2015 MRI. Dr. Weber assessed osteoarthritis of right knee and closed displaced fracture of medial condyle of left tibia with delayed healing. Dr. Weber noted that Claimant could receive an injection or a percutaneous fixation of the tibial plateau. Claimant indicated tshe would consider the options.

21. On May 17, 2016, Kathy McCranie, M.D., conducted an Independent Medical Evaluation ("IME") of Claimant at the request of Respondents. Regarding the mechanism of injury, Claimant reported to Dr. McCranie that she hit her knee while kneeling and, approximately one hour later, "jerked away" after dropping some pans. Dr. McCranie performed a medical records review and a physical examination of Claimant. Dr. McCranie impressed status post left knee contusion, osteoarthritis of the left knee, and query closed displaced fracture of the medical condyle of the left tibia.

22. Dr. McCranie stated that additional records would be helpful to determine work-relatedness. Dr. McCranie remarked that the mechanism of injury reported by Claimant could be consistent with a contusion, but that Claimant's underlying degenerative changes would not be work-related. Dr. McCranie noted that the radiographic studies she reviewed did not indicate a closed displaced fracture of the medial condyle of the left tibia, but that further examination of additional records would help determine if there was further injury.

23. Dr. McCranie opined there was no aggravation of a pre-existing condition, and that Claimant's degenerative changes in the knee were not work-related. Dr. Weber opined that, if Claimant did have a work-related fracture, the treatment would involve "immobilization and orthopedic follow-up." Dr. McCranie further opined, "If there is no fracture related to her work-injury, then she would have otherwise reached maximum medical improvement at the time she declined treatment with Dr. White, around November 2015."

24. Dr. Weber reevaluated Claimant on June 24, 2016. Dr. Weber noted Claimant had a normal gait and was not using an assistive device. Dr. Weber remarked that Claimant's pain was on the inside of the knee, noting tenderness in the medial tibia, medial femoral condyle, and medial joint line. Referring to x-rays taken that day of Claimant's lateral knee on the left, hat day, Dr. Weber commented that there were "no real arthritic changes seen there." Regarding previous x-rays, Dr. Weber stated, "She does have DJD on the right, and she does have, based on the MRIs, a subchondral

fracture of her medial tibia on the left that did show worsening from November all the way to April." Dr. Weber assessed closed displaced fracture of medial condyle of left tibia with delayed healing. Dr. Weber recommended an arthroscopy-assisted percutaneous fixation of Claimant's medial tibial plateau on the left knee.

25. On July 25, 2016, Dr. Weber performed an arthroscopic-assisted medial femoral chondroplasty, arthroscopic medial tibial plateau chondroplasty, and a percutaneous fixation of the medial tibial plateau on Claimant's left knee. In the operative report, Dr. Weber incorrectly refers to Claimant being involved in a motor vehicle accident in October. Dr. Weber remarked that Claimant's patellofemoral joint "looked pristine." Dr. Weber noted grade 2 injury to the medial femoral condyle on the weightbearing area and below the tibial surface. Dr. Weber further noted that there was "almost grade 3 and grade 4 damage to cartilage in some spots on the tibial plateau." Dr. Weber documented that he injected 5 ml of calcium phosphate into the area "where she had edematous changes and subchondral fracture seen on the MRI." In the "Hardware Used" section of the report, Dr. Weber stated, "We used 5mL of calcium sulfate injected in the medial tibial plateau under fluoroscopic guidance."

26. Dr. McCranie testified by deposition on July 28, 2016. Dr. McCranie testified as an expert in physical medicine and rehabilitation and pain medicine. Dr. McCranie testified Claimant's medical records documented only anterior and lateral knee pain until the March 4, 2016 evaluation, when Claimant began complaining of medial knee pain. Dr. McCranie stated that medial knee pain was different than the symptoms Claimant experienced after the alleged work injury, and was in a completely different area of the knee.

27. Regarding Dr. Rai's November 3, 2015 evaluation, Dr. McCranie testified that Dr. Rai noted effusion in the superolateral area with no mention of bruising. Dr. McCranie stated that there was no evidence in the November 8th MRI of a fracture of the medial condyle of the left tibia. Dr. McCranie stated that all of the findings on the November 8, 2015 MRI were chronic arthritic findings. Dr. McCranie further testified that the edema in the Hoffa's fat pad area could have become irritated with a strike to that area, but could "also be associated with a chronic problem, so there is not a way for me to tell if it is chronic or acute, but it does correlate with her mechanism of injury."

28. Dr. McCranie opined that, within a reasonable degree of medical probability, there was insufficient evidence of a subchondral fracture of the medial tibia on the left in the medical records she reviewed. Dr. McCranie testified that Dr. Weber's records did not provide an adequate explanation of his diagnosis.

29. Dr. McCranie opined that, within a reasonable of medical probability, Dr. Weber's treatment recommendations were not causally related to the November 2, 2015 incident. Dr. McCranie opined that Claimant sustained a contusion to the anterior and lateral aspect of her knee, which resolved, stating, "According to the MRI, edema that was initially in the anterior portion of the knee was no longer there on the second MRI. So treatment, at this point, is for the patient's underlying osteoarthritis, which is not work related."

30. Dr. McCranie further opined that, within a reasonable degree of medical probability, the November 2, 2015 incident did not aggravate Claimant's underlying osteoarthritis, or cause the osteoarthritis to later become symptomatic on the medial side. Dr. McCranie testified, "there is just no connection between those two things. Osteoarthritis is not aggravated by a contusion." When asked if Dr. Weber's recommended surgery was reasonable and necessary, Dr. McCranie testified, "I'm not a surgeon, so I can't comment on the type of surgery, but those recommendations are not reasonable and necessary for the injury that the patient sustained at work."

31. On cross-examination, Dr. McCranie testified that "a condyle fracture is typically caused by severe trauma", including sports injuries and collision injuries to the knee. Dr. McCranie testified that there was no indication in the medical records of a prior issue with Claimant's left knee.

32. Claimant attended a post-operative evaluation with Dr. Weber on July 29, 2016. Dr. Weber noted that there was no fracture, and remarked that x-rays of Claimant's knee where the percutaneous fixation was performed looked "excellent."

33. Claimant attended a reevaluation with Dr. Weber on August 5, 2016. Claimant reported some pain. Dr. Weber ordered Claimant to return to using two crutches and to attend physical therapy. Dr. Weber issued an addendum to his operative report, dated August 5, 2016. Dr. Weber clarified that Claimant's initial injury occurred "back in October when she was at King Soopers." Dr. Weber indicated that he performed a percutaneous excision of the subchondral area and a knee arthroscopy.

34. Claimant attended a follow-up evaluation with Sallie Gurganus, P.A-C., on September 16, 2016. PA-C Gurganus noted that Claimant was improving. PA-C Gurganus discussed administering another cortisone injection if Claimant's pain did not improve in the next few weeks.

35. Dr. Weber reevaluated Claimant on October 14, 2016. Dr. Weber noted tenderness on the medial joint line, referring to the tenderness as being more "skin tenderness than bone tenderness." Dr. Weber assessed primary osteoarthritis of the left and right knees. Dr. Weber indicated that he was going to arrange for Claimant to receive viscosupplementation.

36. Dr. Timothy S. O'Brien, M.D., conducted a medical record review of Claimant on November 21, 2016. Dr. O'Brien did not physically examine Claimant. Per his review of the November 8, 2016 MRI, Dr. O'Brien noted subchondral marrow edema at the patellofemoral joint and medial tibial plateau consistent with chondromalacia, and effusion consistent with the arthritic process. Dr. O'Brien commented that there was no fracture. Dr. O'Brien remarked that there were "very few changes" with respect to the April 15, 2016 MRI, noting "chondromalacia in the lateral facet of the patellofemoral joint and the medial tibial plateau and medial compartment with subchondral edema in the medial tibial plateau which was relatively unchanged."

37. Dr. O'Brien opined Claimant did not sustain a work-related injury. Dr. O'Brien found that there was no "historical, clinical or MRI scan evidence that this fall resulted in any injury to the knee." Dr. O'Brien concluded that Claimant fell to the ground after an onset of left knee pain, and that the onset of the left knee pain was a "manifestation of her personal health." Dr. O'Brien noted Claimant did not experience significant knee pain until later that day, and did not seek urgent medical attention. Dr. O'Brien further noted that there were no objective findings of a contusion, as there was no bruising, swelling, or disruption in the skin as would be expected. Dr. O'Brien concluded that there was no evidence that there was any acute injury. Dr. O'Brien opined that the bone marrow changes and the effusion were chronic, degenerative, and pre-existing.

38. Dr. O'Brien opined Claimant did not sustain a tibial fracture and that there was no evidence of a fracture of any osseous bone structure of the knee joint. Dr. O'Brien opined that the mechanism of injury would not produce a fracture. Dr. O'Brien opined that Dr. Weber misdiagnosed Claimant, stating "areas of arthritic edema have a fluctuating although typically progressive appearance on MRI scans and should not be misinterpreted as a fractured area."

39. Regarding the lack of prior medical documentation of left knee issues, Dr. O'Brien stated that it was not unusual for Claimant to not have prior medical record documentation of issues with her left knee because Claimant's right knee had historically been her main concern.

40. Dr. O'Brien opined the surgery performed by Dr. Weber was not reasonable or necessary. Dr. O'Brien contended that Dr. Weber did not internally fix a tibial fracture or perform any type of percutaneous fixation as represented, but instead performed a bone grafting procedure. Dr. O'Brien stated that orthopedic surgeons "do not bone graft areas of marrow edema that are an 'epiphenomenon' or sequela of osteoarthritis," and that it is "Illogical to treat the epiphenomenon while leaving the primary pathology," the arthritic process, untreated. Referencing the Second Edition of American Academy of Surgeons Guidelines for the Treatment of Osteoarthritis of the Knee, as well as a medical study in the New England Journal of Medicine, Dr. O'Brien stated that arthroscopic technology should not be utilized to treat osteoarthritis of the knee.

41. Dr. O'Brien further pointed to discrepancies in Dr. Weber's reports, including Dr. Weber referring to Claimant as having been in a motor vehicle accident, and indicating that Claimant's patellofemoral cartilage was "pristine" when the MRI demonstrated full-thickness loss of cartilage. Dr. O'Brien opined that Claimant would reach maximum medical improvement approximately 6-9 months following the surgery, and that radiographs would be necessary to determine if the area healed. Regarding the surgery performed by Dr. Weber, Dr. O'Brien opined that "It is very unlikely that his procedure will perceptibly alter the natural history of this condition."

42. Dr. O'Brien testified at hearing as an expert in orthopedic surgery. Dr. O'Brien testified consistent with his report. Dr. O'Brien opined, within a reasonable

degree of medical probability, Claimant did not suffer an injury on November 2, 2015, and that the treatment provided by Dr. Weber was unreasonable. Dr. O'Brien contended that there are no objective findings of injury, and the medical records evidence chronic changes.

43. Dr. O'Brien testified he "supposed" the mechanism of injury as described by Claimant could lead to a medial tibial plateau fracture, but that he has not personally observed such occurrence in his practice or read about such occurrence in any medical journal. Dr. O'Brien stated that if Claimant did suffer an acute tibial plateau fracture, there was almost 0% chance that Claimant could then get up and walk after the incident. Dr. O'Brien further stated that if there was a medial fracture, Claimant would not have experienced lateral pain.

44. Dr. O'Brien testified the standard of care for a fracture would involve restoring the anatomy, maintaining the anatomy, and rehabilitating. Dr. O'Brien reiterated there was no indication in the operative reports that Dr. Weber installed hardware in Claimant's knee. Dr. O'Brien testified that injecting 5 ccs of calcium phosphate would not be the standard of care for a fracture. Dr. O'Brien further testified that cortisol injection treatment is unreasonable for a fracture because the cortisol would retard the healing.

45. On cross-examination, Dr. O'Brien testified there were no post-operative x-rays to determine whether there were bone grafts. Dr. O'Brien also acknowledged that there was no evidence that Claimant experienced any left knee issues prior to November 2, 2015.

46. Claimant testified she did not have any prior injuries to her left knee, nor had she been under any restrictions for her left knee prior to November 2, 2015. Claimant testified that she underwent right knee surgery in 2010.

47. Claimant testified she last worked for Employer on February 26, 2016. Claimant stated that she has not received an offer of employment to return to work. Claimant testified that her left knee is still weak and requires rehabilitation. Claimant's personal insurance ceased paying for treatment.

48. The ALJ viewed video footage of the deli area taken on November 2, 2015 between 6:00 a.m. and 7:36 a.m. The video depicts Claimant entering the deli area and placing an item on the counter. Claimant bends at the waist to look into a cabinet and then squats for approximately two to three seconds before rising. Claimant appears to then squat again for approximately five to seven seconds. It is unclear from the angle whether Claimant strikes her knee on the ground. Claimant retrieves an item from the cabinet, rises, and places the item on the counter. Claimant then immediately walks to another cabinet, bends slightly at the waist, and retrieves another item. Claimant then walks out of the kitchen area. Claimant is subsequently observed walking back and forth, carrying a box, putting items in an oven and taking items out of an oven, bending at the waist to retrieve other items, and standing while preparing food. At one point,

Claimant appears to wipe up a spill on the ground using a towel. Claimant first uses her right leg to move the towel across the spill, and then her left leg.

49. The ALJ credits the opinions of Drs. McCranie and O'Brien over the contrary opinion of Dr. Weber and finds Claimant failed to demonstrate that it is more likely than not that she sustained a compensable left knee injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, the ALJ concludes that Claimant failed to prove by a preponderance of the evidence that she sustained a compensable left-knee injury. The opinions of Drs. O'Brien and McCranie are found more credible and persuasive than the opinions of Dr. Weber. Dr. O'Brien and Dr. McCranie credibly opined that Claimant's condition is chronic, degenerative, and that there was no work-related aggravation of a pre-existing condition. There is insufficient persuasive evidence Claimant sustained a contusion. There was no bruising noted in the medical records and, to the extent effusion was found, such swelling could be the result of Claimant's chronic condition. The left knee pain experienced by Claimant was the result of Claimant's pre-existing chronic and degenerative condition and was unrelated to the employment.

The ALJ further credits the opinions of Drs. O'Brien and McCranie regarding the alleged fracture. Multiple physicians reviewed MRIs and x-rays of Claimant's left knee and determined there was no fracture. Dr. O'Brien credibly opined that Dr. Weber misdiagnosed Claimant by interpreting arthritic edema as a fracture. Claimant has

failed to establish that, more likely than not, she sustained an injury arising out of and in the scope of this employment.

Medical Benefits

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Claimant failed to establish by a preponderance of the evidence that she sustained an injury to her left knee arising out of and occurring within the course of her employment with Employer. Therefore, her request for medical benefits is denied and dismissed.

ORDER

It is therefore ordered that:

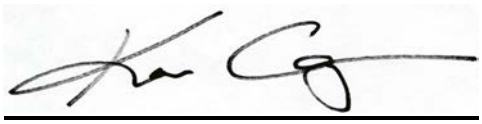
1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable left knee injury. Her claim is denied and dismissed.

1. As Claimant failed to establish that she sustained a compensable injury, her request for medical benefits and temporary total disability is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 13, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Compensability: Whether Claimant proved by a preponderance of the evidence that she experienced an occupational disease in the course and scope of her employment; and

- Medical Benefits: Whether Claimant proved by a preponderance of the evidence that the surgery recommended by Dr. Griggs is reasonable, necessary, and related to Claimant's work-related occupational disease.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant has worked for Employer for 34 years as an assembler.

2. Claimant's regular work shift was Monday through Friday and she worked 8 hours per day. Claimant would sometimes work Monday through Thursday and work 10 hours per day. Regardless of the number of hours she would work per day, Claimant would have a 15 minute break in the morning, a 30 minute break for lunch, and then a 15 minute break in the afternoon.

3. Claimant's job required her to assemble various blood donor packs.

4. The assembly of donor packs was broken down into various tasks. Each assembly worker would work on a particular assembly task for an hour and then switch tasks. Unless Claimant was working a 10 hour day, each assembly task was limited to one hour per day. If Claimant was working a 10 hour day, one assembly task might be done 2 hours per day.

5. The Respondents submitted into evidence a basic job description. The job description indicates Claimant's job requires the use of "repetitive moderate force gripping."

6. A formal job analysis was not performed by Claimant or Respondents specifically setting forth the physical requirements of Claimant's job. Therefore, there was no formal job analysis which set forth the amount of force required to perform each task or the position of Claimant's wrists and elbows while performing each task.

7. Claimant testified and described the repetitive nature of her job before the onset of her upper extremity problems in June or July of 2014. Claimant testified that her assembly job required a lot of repetitive motions with her hands. She demonstrated some of the motions she was required to perform. This demonstration showed Claimant flexing her wrists and gripping and grasping or pinching with her fingers. This also showed Claimant bending her elbows. Although the exact nature of each job task was not explicitly articulated by Claimant, the tasks were repetitive and repeated approximately every 18 seconds. This testimony was credible and persuasive.

8. Claimant testified about the amount of force used to complete some tasks. For example, Claimant discussed a task of preparing "loops" with tubing. She described the task as requiring a pretty good push of the tubing. This task was performed, at most, 2 hours per day since Claimant only performed a particular assembly task for one hour at a time and then she would switch to a different assembly task.

9. Claimant testified about the awkward posture necessary to perform her job due to her chair height and the height of the work station. This testimony was credible and persuasive.

10. Starting around June or July of 2014, Employer increased the production requirements by putting into place a run rate of 202 to 220 donor packs per hour.

11. Around June or July of 2014, Claimant started to develop pain in her upper extremities.

12. On September 29, 2014, Claimant fell at work. Claimant was evaluated by Dr. Sacha on October 7, 2014. While evaluating Claimant for her fall, Dr. Sacha diagnosed Claimant as suffering from carpal tunnel syndrome. The incident in which Claimant fell is part of another workers' compensation claim.

13. After her fall, Claimant was put on restricted duty and taken off the assembly line. Her restricted duty required her to work on braided bearings for about three months. This required her to repetitively pinch the braided bearing to make sure it was properly sealed. Claimant started work on the braided bearings after the alleged onset of her upper extremity complaints in June or July of 2014. After Claimant stopped working on the braided bearings, Claimant performed other non-assembly work for the employer.

14. After Dr. Sacha diagnosed Claimant with carpal tunnel syndrome, Claimant filed a Workers' Claim for Compensation on or about October 21, 2014.

15. On October 21, 2014, Claimant was evaluated by Deana Halat, FNP-BC. Claimant's chief complaint was bilateral hand pain up to her elbows, bilateral shoulder pain, and mid-back pain. Claimant stated that in approximately July of 2014 she started to develop extreme pain in her bilateral upper arms, particularly her hands, which radiated into her elbows. She described it as numbness and

tingling. She stated that she had similar symptoms 10 years ago, but it was limited to her left arm and resolved.

16. Claimant was referred to Dr. Yusuke Wakeshima for EMG and nerve condition studies. Dr. Wakeshima evaluated Claimant on November 11, 2014 and performed an electrodiagnostic study. The study demonstrated findings of mild to moderate carpal tunnel syndrome on the left and borderline ulnar neuropathy at the wrist on the left. The rest of the electrodiagnostic study was unremarkable. Dr. Wakeshima went on to state that it was his opinion that there is a greater than 51% probability that Claimant's current condition is related to her occupation and is most likely related to her cumulative trauma-type injury. He also stated that she does do a significant amount of repetitive motion working on an assembly line, working similar repetitive motions. He opined that there is a greater than 51% probability that her carpal tunnel syndrome is related to her work conditions, due to cumulative trauma conditions. Dr. Wakeshima's opinion regarding the cause of Claimant's condition is found to be persuasive.

17. On December 1, 2014, Claimant returned to Dr. Wakeshima. He diagnosed Claimant as suffering from mild to moderate carpal tunnel syndrome on the left and borderline ulnar neropathy at the wrist on the left.

18. On December 2, 2014, Claimant was evaluated by Dr. Sean Griggs, a hand surgeon. Dr. Griggs diagnosed Claimant with bilateral carpal tunnel syndrome with probable ulnar nerve irritation at the elbows and bilateral shoulder impingement. He recommended physical therapy and injection therapy. Dr. Griggs performed the injection and referred claimant to physical therapy.

19. On December 9, 2014, Claimant was again evaluated by Deana Halat, FNP. Ms. Halat opined that Claimant's pain complaints were related to work activities.

20. On January 6, 2015, Claimant was evaluated by Dr. Griggs. He recommended an MRI of Claimant's left elbow. On January 15, 2015, Dr. Griggs evaluated Claimant and reviewed her MRI findings. He concluded that the MRI showed medial insertional swelling of the triceps, but no tear, and the swelling extended to the superficial margin of the cubital tunnel. He also stated that the EMG nerve conduction study showed mild to moderate carpal tunnel syndrome on the left as well as evidence of ulnar neuropathy at the left wrist. Dr. Griggs diagnosed Claimant as suffering from bilateral carpal tunnel and cubital tunnel syndrome, which had failed conservative management. He went on to recommend that she undergo an endoscopic carpal tunnel release at the left wrist as well as a left cubital tunnel release. He also stated that the conditions were work related. Dr. Grigg's opinion regarding causation is found to be persuasive.

21. Claimant was evaluated by Dr. George Kohake on January 21, 2015. Dr. Kohake assessed Claimant with bilateral upper extremity pain paresthesias, diffuse and nonlocalizing with objective findings on the left, but not the right.

Based upon Claimant's diffuse nonlocalizing pain and lack of objective findings on the right, Dr. Kohake recommended an arthritis profile as well as a second surgical opinion. He also recommended a psychological evaluation.

22. Claimant was evaluated by Dr. Chan on January 22, 2015. Dr. Chan was concerned about whether there was a correlation between Claimant's symptoms and her ongoing subjective pain complaints since Claimant had an injection performed which did not provide any diagnostic or therapeutic improvement.

23. On January 22, 2015, Dr. Griggs requested authorization to perform a left endoscopic carpal tunnel release and a left cubital tunnel release. Based on the positive left sided EMG findings, combined with Dr. Grigg's opinion, this surgery is found to be reasonable and necessary to relieve Claimant from the effects of her occupational disease.

24. On January 30, 2015, Claimant was evaluated by Cynthia Johnsrud, PsyD, Licensed Clinical Psychologist. Dr. Johnsrud determined that Claimant's clinical profiles were within normal limits and did not indicate any psychiatric diagnosis. Therefore, there were no psychological contraindications for surgery.

25. On February 5, 2015, Dr. Wakeshima discussed with Claimant that the surgery being recommended by Dr. Griggs and Dr. Davis would not help her global distribution of pain in the forearm region.

26. On May 8, 2015, Claimant returned to Dr. Wakeshima. According to the office note of that day, Claimant saw Dr. Davis for a second opinion regarding surgery. Dr. Davis concurred that the surgery recommended by Dr. Griggs was reasonable and necessary.

27. On October 1, 2015 Claimant returned to Deana Halat, FNP. Claimant complained of new pain in her left forearm and right forearm.

28. On November 23, 2015 Claimant underwent an IME with Dr. Roth. In his report, Dr. Roth comments on Dr. Wakeshima's opinion of November 11, 2014 that Claimant's carpal tunnel syndrome and cubital tunnel syndrome is related to her work. Dr. Roth stated that:

> I am unable to understand the provider's failure to utilize the medical treatment guidelines with respect to causation analysis. The provider has not performed the requisite evaluation to make a determination of work relatedness. His assessment is presumptuous. There is no information contained herein with respect to the amount of force necessary to perform any specific activity, the frequency cycle with which any specific activities performed nor the duration with which that specific frequency cycle and degree of force are applied. Thus, it is not possible to make any medically probable statement. Carpal tunnel syndrome and

> upper extremity myofascial pain can be secondary to cumulative trauma but are epidemiological ordinary conditions that in the large majority of circumstances are idiopathic and are unique to the individual. This is why a very specific and detailed analysis is necessary before assigning responsibility to a third-party.

29. Dr. Roth also commented on Dr. Davis' opinion that Claimant's carpal tunnel syndrome is related to her work. Dr. Roth stated:

> With respect to causality, Dr. Davis is not unlike the primary care provider indicating that her difficulties could be attributed to her job activities as an assembly worker. That of course does not mean that her symptoms are related to work activities. There is a specific routine to be followed upon which that determination should be based. No provider herein has yet to even bother to ask questions about specific work activities performed. Contrary to the division of labor guidelines, no provider herein has thus far even asked for a formal company job description. No provider herein has asked for a jobsite analysis. Thus, it is my medically probable conclusion, that there is yet no medical records indication/information to support the notion that this person's diffuse and nonspecific complaints are related to any work activity performed. "Assembly" is not a causation assessment. That she has worked for "35 years" is not a causality assessment. In this instance, providers should be hyper vigilant given that she has widespread diffuse nonconforming complaints that do not fit with an of the diagnosis being considered and have been unresponsive to medical treatment. Based on the medical record thus far, in my opinion, it is not reasonable to anticipate that these procedures will result in any sustained benefit in terms of comfort, function, or impairment.

30. This ALJ does not find Dr. Roth's opinions to be credible or persuasive. Although Dr. Roth criticizes each provider for failing to analyze the cause of Claimant's conditions pursuant to the Medical Treatment Guidelines, Dr. Roth fails to perform such an analysis. In essence, Dr. Roth discredits their opinions because they did not follow the MTG, but yet he fails to follow MTG to determine whether Claimant's job caused her condition.

31. Claimant testified her upper extremity symptoms developed contemporaneously with her work and the increase in production requirements that were implemented around June or July of 2014. This ALJ finds the temporal relationship between the increase in production demands and Claimant's symptoms to be credible and persuasive. The evidence showed Claimant's work

caused her left sided carpal tunnel syndrome and cubital tunnel syndrome and necessitated the need for medical treatment.

32. Claimant is currently 59 years old and is right hand dominant. At the onset of her symptoms, Claimant was 57 years old, suffered from hypothyroidism, was obese, and had recently stopped smoking. However, no physician opined that these conditions were the cause of Claimant's left sided carpal tunnel syndrome or left sided cubital tunnel syndrome.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following conclusions of Law are entered.

A. Claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

B. Claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d

786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

C. Claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990).

D. The Colorado Department of Labor and Employment, Division of Workers' Compensation promulgates rules of procedure pertaining to many aspects of the workers' compensation process. Workers' Compensation Rules of Procedure, 7 CCR 1101-3. Rule 17 contains the Medical Treatment Guidelines (MTG). When evaluating this issue of causation the ALJ may consider the provisions of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the MTG are not dispositive of the issue of causation and the ALJ need not give them any more weight than he determines they are entitled to in light of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

E. This ALJ concludes that a strict application of the MTG is not appropriate to the specific facts in this case.

F. In this case, the ALJ finds the opinion of Dr. Wakeshima, one of Claimant's treating physicians, to be highly persuasive. Dr. Wakeshima performed an EMG which was positive for left sided carpal tunnel syndrome and left sided ulnar neuropathy at the left wrist. Thereafter, Dr. Wakeshima determined that there was a greater than 51% probability that Claimant's upper extremity problems were related to her work activities. Although Dr. Wakeshima did not specifically reference the MTG, it does appear that he followed the MTG, in part, by providing a specific diagnosis, which was supported by an EMG, and then determined that there was a greater than 51% chance that Claimant's work caused her upper extremity conditions. It also appears that Dr. Wakeshima considered Claimant's specific job tasks since he recommended that an ergonomic evaluation be done to minimize future cumulative trauma.

G. This ALJ also finds persuasive Claimant's testimony regarding the temporal relationship between the onset of her symptoms and the increase in production. Claimant credibly testified that around June of 2014, Claimant's production rate was increased. Claimant credibly testified that shortly after her production rate was increased, her symptoms developed around July of 2014.

H. This ALJ does not credit the testimony of Dr. Roth. Dr. Roth asserts that none of Claimant's medical providers who commented on causation followed the MTG to determine the cause of Claimant's condition. Then, Dr. Roth fails to apply the MTG to determine causation.

I. Claimant has established by a preponderance of the evidence that she suffered an occupational disease arising out of the course and scope of her employment with the Employer.

J. This ALJ concludes that Claimant has proven by a preponderance of the evidence that her upper extremity problems are causally related to her job activities.

K. Respondents are also liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

L. This ALJ also concludes that Claimant has proven by a preponderance of the evidence that the left sided surgery recommended by Dr. Griggs is reasonable, necessary, and related to her work related injury. Claimant had a positive EMG on the left side which was consistent with some, but not all, of Claimant's pain complaints. Therefore, this ALJ concludes that the surgery recommended by Dr. Griggs is to cure and relieve Claimant of the effects of her industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's claim regarding her upper extremity complaints is found to be compensable.

2. Respondents shall pay for reasonable and necessary medical treatment, including, but not limited to, the left sided surgery recommended by Dr. Griggs.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

- What was Claimant's average weekly wage when she was injured while working for Respondent-Employer?

STIPULATION

The parties stipulated that Claimant's average weekly wage was increased by $120.38 per week related to the cost of health insurance premiums under COBRA, beginning on October 1, 2016.

FINDINGS OF FACT

1. On April 17, 2016, Claimant sustained an admitted industrial injury while working for Employer.

2. On her date of injury, Claimant was paid $16.26 per hour.

3. Claimant received a Continuation Coverage Election Notice under the Consolidated Omnibus Budget Reconciliation Act of 1985 ("COBRA"), 42 U.S.C. § 300bb-1, et seq. (2010), on or about November 5, 2016. That notice specified the cost of health insurance for Claimant under COBRA was $521.63 per month.

4. Claimant testified she received holiday pay, sick pay, vacation pay, and overtime pay at various times from January 1, 2016 to April 15, 2016. The pay records admitted at hearing documented she received these different types of pay during this time frame.[1] The ALJ inferred this increased her overall compensation.

5. Claimant's statement of earnings and deductions for the pay period ending on April 15, 2016 was admitted at hearing. That document showed Claimant's year to date earnings totaled $12,006.29. This included both regular, overtime, holiday, sick, and vacation pay. As there were 15 weeks Claimant worked prior to her injury, the ALJ determined Claimant's AWW was $800.42 per week.

6. Records admitted at hearing included Archived Time Card Reports, which documented Claimant's wages from April 19, 2015 to April 17, 2016.[2] These documents showed Claimant earned a total of $32,607.37. That total figure divided by 52 weeks resulted in an average weekly wage of $627.06. These records provided a breakdown between overtime and regular pay, although two different amounts were

[1] Exhibit 1.

[2] Exhibit B.

referenced for both regular pay ($16.20 and $16.26) and overtime pay ($24.30 and $24.39). The ALJ notes there was no explanatory information provided for these differing amounts, nor was there a delineation between pay periods, which showed when a pay period began and when it ended.

7. A General Admission of Liability ("GAL") was filed on or about June 14, 2016. In the GAL, Respondents admitted for TTD benefits, based upon an AWW of $627.06.

8. Claimant also testified that she would clock in and out at work. The start of her shift was at 45 minutes past the hour.

9. Claimant satisfied her burden of proof to establish she was entitled to a higher AWW of $800.42 per week.

10. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Administrative Law Judge draws the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

AWW

§ 8-42-102(2), C.R.S., requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily,

hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra; Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007)

In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "manifestly unjust to base Claimant's disability benefits in 1986 and 1989 on her substantially lower earnings in 1979", and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. *Campbell v. IBM Corp., supra,* 867 P.2d at 82.

Likewise, in *Pizza Hut v. ICAO*, 18 P.3d 867, (Colo. App. 2001), Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, then quit the delivery job. The Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and affirmed the principle permitting wages to be calculated based on earnings from a subsequent employer and not upon wages earned at the time of injury, as this represented a fairer calculation of Claimant's AWW.

In the case at bar, the ALJ determined that a review of Claimant's actual earnings for the three months before her injury and averaging those weeks was the most fair calculation, as it incorporated the pay for her regular work hours, plus overtime, sick and vacation pay. Therefore, Claimant satisfied her burden of proof and to establish she was entitled to a higher AWW. Claimant's AWW is raised to $800.42 per week [$12,006.29 (gross wages through 4-15-16) divided by 15 weeks=$800.42]

In coming to this conclusion, the ALJ considered using the entire year before the date of injury, as contended by Respondents. As found, the evidence in the record did not provide sufficient delineation of the actual pay periods and used differing amounts for regular pay and overtime pay. Thus, an accurate calculation could not be made as to the earnings using the number of hours Claimant worked per week (alleged to be 37.43 per week). Also, Exhibit B did not provide a sufficient explanation how overtime was calculated over that calendar year. Accordingly, the ALJ determined averaging Claimant's wages over the entire year did not fairly calculate Claimant's AWW. Respondents' other contention that Claimant's AWW was $650.40, based upon the number of hours per week she was hired to work (40 hours/week X $16.26/ hour=

$650.40) was not supported by the evidence, as it did not account for Claimant's overtime, sick and vacation pay.

ORDER

It is therefore ordered that:

1. Claimant's AWW is increased to $800.42 per week for the period of April 19, 2016 to September 30, 2016.

2. Claimant's AWW is increased by $120.38 per week to $920.80 per week beginning on October 1, 2016

3. Respondents shall pay indemnity benefits based upon Claimant's higher AWW.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-013-545-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 8, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 3/8/17, Courtroom 1, beginning at 8:30 AM, and ending at 12:00 PM).

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection, Respondents' Exhibits A through J were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern: (a) compensability of a low back injury, allegedly occurring at work on February 6, 2016; (b) if the claim is compensable, whether the Claimant is entitled to medical benefits; and (c) if compensable, whether the Claimant is entitled to temporary total disability (TTD) and temporary partial disability (TPD) benefits, overall, from March 24, 2016 and continuing. Respondents raised the affirmative defense that the Claimant was responsible for his

termination of employment, and therefore not entitled to temporary disability benefits after his termination from employment.

The Claimant bears the burden of proof, by a preponderance of the evidence, as to issues (a), (b) and (c). Respondents bear the burden of proof, by a preponderance of the evidence, as to the affirmative defense of responsibility for termination.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings and Stipulations

1. At the commencement of the hearing, the parties stipulated that if the case is compensable, the Claimant's average weekly wage (AWW) is $665.96, resulting in a TTD benefit rate of $443.97 per week; and, that Claimant would be entitled to TTD benefits from April 1, 2016 through October 30, 2016—both dates inclusive—for a total of 213 days, and the ALJ finds accordingly.

2. At the commencement of the hearing, the parties also stipulated that if the case is compensable, the Claimant would be entitled to TPD benefits from March 24, 2016 to March 31, 2016 and from October 31, 2016 to March 8, 2017—both sets of dates inclusive—for a total of 136 days, and the ALJ so finds. The parties have not arrived at a liquidated TPD rate. Therefore, the issue of TPD must be reserved for future decision if the case is compensable.

3. The Claimant (date of birth, January 9,1950) suffered an injury to his back on February 6, 2016, consisting of an aggravation and acceleration of his underlying degenerative disc disease, and this injury occurred in the course and scope of his employment with the Employer herein.

4. The Respondents filed a Notice of Contest on May 2, 2016. The Claimant filed an Application for hearing on November 9, 2016; and, the Respondent filed a Response to Claimant's Application for Hearing on December 8, 2016 (Respondent's Exhibit B, bates stamp 4). The hearing was set for March 8, 2017.

Findings

5. According to the Claimant, the injury on February 6, 2016 occurred at approximately 8:00 AM, while he was walking from his car to the building. He slipped on ice and did a side-to-side split, landing on his buttocks and lower back. This landing caused the Claimant to experience pain in his lower back.

6. On February 6, 2016, immediately after the fall, the Claimant told his supervisor, Chad Raskin, of the fall. Raskin was not called to testify. Claimant then sought treatment at two different authorized clinics. Because it was the weekend, both clinics were closed. The Claimant then returned to work.

7. On February 9, 2016, the Claimant was treated by Katherine Drapeau, D.O. at Healthone Occupational Medicine and Rehabilitation. Dr. Drapeau diagnosed the Claimant with a lumbosacral sprain. Dr. Drapeau referred the Claimant for an MRI (magnetic resonance imaging) and prescribed Medrol dosepak. Thereafter, the Claimant returned to work without restrictions (Claimant's Exhibit 5, bates stamp 13).

Employer Witnesses

8. HR (Human Resources) Administrator Sharon Coffey told the General Manager, Tim Bottoms, of the injury on February 8, 2016. Coffey completed a First Report of Injury on the February 6th incident on February 12, 2016 (Claimant's Exhibit 1, bates stamp 1).

9. Bottoms testified that that he was not notified of the injury until the following week when Coffey completed her report. He testified that the Claimant had informed him on the date of injury that he was returning home to change his clothes because he had [messed himself]. According to the Claimant, he told Bottoms that he was going home to change clothes because his clothes were wet from the fall. It is plausible that the Claimant "messed himself" after the traumatic fall and simply told Bottoms he was going home (in a hurry) to change his clothes without telling Bottoms about the fall.

10. The Claimant has a pre-existing history of lower back and leg pain, primarily in the right leg. He has not lost any time from work and suffered no industrial disability in the past. Respondents, however, argue that the Claimant's incident of February 6, 2016, is not compensable because of his pre-existing degenerative disc disease. As previously found herein above, his back condition was aggravated and accelerated by the incident of February 6, 2016. The weight of the evidence supports this as opposed to a natural progression of the Claimant's degenerative back condition.

Medical

11. On February 25, 2016, the Claimant followed up with Dr. Drapeau. He was referred for a spinal consultation and again was permitted to work without restrictions (Claimant's Exhibit 5, bates stamp 15).

12. On March 17, 2016, the Claimant saw Bryan M. Pereira, M.D. at the Colorado Brain and Spine Institute. Dr. Pereria initially diagnosed the Claimant with lumbar canal stenosis with neurogenic claudication. Dr. Pereria ordered an MRI to confirm this diagnosis (Claimant's Exhibit 6, bates stamp 26). The Claimant underwent the MRI scan on March 31, 2016 (Claimant's Exhibit 7, bates stamp 30).

13. On March 24, 2016, the Claimant followed up at Healthone Occupational Medicine and Rehabilitation with Ryan Otten, M.D. Dr. Otten prescribed Meloxicam and Flexeril for the Claimant, while permitting the Claimant to continue using over the counter pain medication as needed. Dr. Otten allowed the Claimant to return to work, but under restrictions for the amount of time the Claimant could walk, stand, and sit during the day, as well as how much weight the Claimant could lift (Claimant's Exhibit 5, bates stamp 19).

14. Following the above-mentioned appointment with Dr. Otten, the Employer fired the Claimant because he "failed to meet established standards" due to a "lack of productivity" (Respondents' Exhibit C, bates stamp 12). The Employer did not offer the Claimant modified work pursuant to the medical restrictions that Dr. Otten prescribed on his employment. At no time through the present has the Employer offered the Claimant modified work that would accommodate his restrictions. The ALJ infers and finds, coupled with the Claimant's lay testimony, that Dr. Otten is of the opinion that the Claimant's back condition is work-related.

15. On April 18, 2016, Claimant followed up with Dr. Pereria regarding the results of the MRI. The MRI confirmed Dr. Pereria's initial diagnosis, and also indicated that Claimant had a degenerative lumbar spondylolisthesis (Claimant's Exhibit 6, bates stamp 27).

Respondent's Independent Medical Examination (IME) by Douglas C. Scott, M.D.

16. The Claimant was evaluated by Dr. Scott on January 13, 2017 at the request of the Respondents. Dr. Scott testified at hearing as an expert witness.

17. In his report, Dr. Scott stated that Claimant "was aware that he had prior degenerative disc disease, sciatica, and back pain" (Respondents' Exhibit J, bates stamp 82). He also indicated that the Claimant told him that "he has no prior problem with his back and prior to his claimed . . . work injury he had no problems walking or sitting" (Respondents' Exhibit J, bates stamp 80).

18. Dr. Scott concluded that Claimant suffered a possible acute lumbar sprain/strain from the slip and fall at work. Dr. Scott also noted possible temporary exacerbation of prior lumbar chronic condition (Respondents' Exhibit J, bates stamp 82). Dr. Scott attributed the Claimant's current condition to his degenerative disc disease. (Respondents' Exhibit J, bates stamp 83). Dr. Scott's opinion does not contra-indicate a compensable event on February 6, 2016, however, it does not support subsequent consequences thereof, *i.e.,* continued medical treatment and temporary disability. The ALJ finds IME Dr. Scott's opinion concerning the "possible acute lumbar sprain/strain from the slip and fall at work" credible and consistent with the totality of the evidence. Dr. Scott's opinion on the Claimant's current condition does not support a permanent aggravation/acceleration of the Claimant's pre-existing degenerative condition, however, it is contrary to the weight of the medical evidence and inadequately

supported by any reasonably articulated medical rationale. Therefore, the ALJ finds Dr. Scott's IME opinion on the Claimant's current condition, which implies a natural progression of the Claimant's underlying degenerative condition, lacking in credibility and outweighed by the totality of the medical opinions of the Claimant's authorized treating physicians (ATPs), referenced herein above, all of whose opinions support a work-related aggravation/acceleration of the Claimant's underlying pre-existing back condition.

Responsibility for Termination

19. As found herein above, following the above-mentioned appointment with Dr. Otten, the Employer fired Claimant because he "failed to meet established standards" due to a "lack of productivity" (Respondents' Exhibit C, bates stamp 12). The Employer did not offer the Claimant modified work pursuant to the medical restrictions Dr. Otten set on his employment. At no time through the present has the Employer offered the Claimant modified work that would accommodate his restrictions.

20. Bottoms testified that when the Claimant was not meeting his quota of car sales, the Claimant received base pay of minimum wage. Bottoms further testified that the Claimant was less productive than other sales persons, yet the Claimant spent excessive hours at the Employer's work site, collecting minimum wage when he was not meeting his sales' quota, but Bottoms implied that he was altruistic in keeping the Claimant around until, coincidentally, immediately after received Dr. Otten's work restrictions, Bottom's had had enough and finally fired the Claimant for not measuring up to expectations, and not being productive. The ALJ finds Bottioms' testimony lacking in overall credibility as not adding up to common sense notions. Indeed, the ALJ infers and finds that Bottoms immediate reason for firing the Claimant was because Bottoms did not want to provide the Claimant with modified employment. While the Tenth Circuit of the United States is a strong "employment-at-will" jurisdiction--whereby an employer can fire an employee-at-will without consequences as long as the firing is not based on discrimination against a class protected under the civil rights laws, or in breach of a written contract of employment, this is not an employment case but a workers' compensation case. The "responsibility for termination" affirmative defense under the Workers' Compensation Act is a "cat of a different stripe." To make an inroad into the overarching public policy that provides injured workers who are temporarily disabled with temporary disability benefits, a respondent must establish that the employee committed a volitional act, or had a degree of control over the act, that the employee could reasonably know would get him fired. This strict provision makes sense. Not measuring up to performance expectations, absent proof of deliberate slacking off, can hardly be characterized as a volitional act that an employee can reasonably expect will get him fired, although it's possible that an employee who is not measuring up may experience some vague and non-descript job angst. The opposite is also possible. For these reasons, the Respondents have failed to prove their affirmative defense of "responsibility for termination.

Ultimate Findings

21. The Claimant's overall presentation was credible. The implication of Tim P. Bottoms' (the Employer's General Manager) that the Claimant fabricated a claim and was only going home because the Claimant "messed himself" is not well taken without more. Indeed, it is plausible that the Claimant "messed himself" because of the traumatic fall, was in a hurry, and did not say more. The Claimant indicated he was going home because he was wet after the fall into the snow. As found, the opinions of the Claimant's doctors, concerning the causal relatedness of the Claimant's low back injury and the consequences thereof, including the Claimant's present condition, are more credible and persuasive than the opinion of IME Dr. Scott, with the exception of Dr. Scott conceding that it was "possible" that the Claimant experienced a lumbar strain/sprain on February 6, 2016. Other than Dr. Scott, the opinions of the Claimant's ATPs and the testimony of the Claimant credibly support an aggravation/acceleration of the Claimant's underlying pre-existing back condition. There is no evidence that the Claimant was medically restricted before the February 6, 2016 fall. He became medically restricted when Dr. Otten restricted him, after which the Employer fired him.

22. Between the conflicting testimonies of the Claimant and Tim P. Bottoms, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's version of events and to reject Bottoms' version of events. Further, between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, accepts the opinions of the Claimant's ATPs and to rejects Dr. Scott's IME opinions.

23. The event of February 6, 2016 constituted a compensable aggravation and acceleration of the Claimant's underlying back condition. Therefore, the Claimant sustained a compensable back injury on February 6, 2016, arising out of the course and scope of his employment.

24. The Claimant went to the Employer's designated medical provider and received treatment from the provider. Further, all referrals from the authorized provider were within the chain of authorized referrals. Therefore, all of the Claimant's medical care and treatment related to the February 6, 2016 back injury was authorized, causally related and reasonably necessary to cure and relieve the effects thereof.

25. The Claimant's AWW is $665.96, resulting in a temporary total disability (TTD) benefit rate of $443.97 per week. The calculated daily rate is $63.42.

26. The Claimant was temporarily and totally disabled from April 1, 2016 through October 30, 2016—both dates inclusive—a total of 213 days.

27. Pursuant to Stipulation and Finding, the Claimant is entitled to TPD benefits from March 24, 2016 to March 31, 2016 and from October 31, 2016 to March 8, 2017—both sets of dates inclusive—for a total of 136 days, however, no liquidated

wage loss sum to establish a TPD rate has yet been established. Therefore, the issue of TPD must be reserved for future decision.

28. The Respondents failed to prove their affirmative defense of "responsibility for termination," by a preponderance of the evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's overall presentation was credible. The implication of Tim P. Bottoms' (the Employer's General Manager) that the Claimant fabricated a claim and was only going home because the Claimant "messed

himself" was not well taken without more. Indeed, it is plausible that the Claimant "messed himself" because of the traumatic fall, was in a hurry, and did not say more. The Claimant indicated he was going home because he was wet after the fall into the snow. As found, the opinions of the Claimant's doctors, concerning the causal relatedness of the Claimant's low back injury and the consequences thereof, including the Claimant's present condition, were more credible and persuasive than the opinion of IME Dr. Scott, with the exception of Dr. Scott conceding that it was "possible" that the Claimant experienced a lumbar strain/sprain on February 6, 2016. Other than Dr. Scott, the opinions of the Claimant's ATPs and the testimony of the Claimant credibly support an aggravation/acceleration of the Claimant's underlying pre-existing back condition. There was no persuasive evidence that the Claimant was medically restricted before the February 6, 2016 fall. He became medically restricted when Dr. Otten restricted him, after which the Employer fired him.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made rational choices, based on substantial evidence, to accept the Claimant's version of events and to reject Bottoms' version of events; and, to accept the opinions of the Claimant's ATPs and to reject Dr. Scott's IME opinions.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if**

the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the event of February 6, 2016 constituted a compensable aggravation and acceleration of the Claimant's underlying back condition. Therefore, as found, the Claimant sustained a compensable back injury on February 6, 2016, arising out of the course and scope of his employment.

d. Testimony of an injured worker is sufficient to prove causation and inability to work. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found herein above, putting the opinions of the Claimant's ATPs together with the Claimant's testimony, the Claimant has proven that he sustained a compensable aggravation/acceleration of his underlying pre-existing back condition on February 6, 2016.

Medical Benefits

e. Because this matter is compensable, Respondents are liable for medical treatment which is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(1) (a), C.R.S; *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Pursuant to § 8-43-404 (5) (a) (I) (A), C.R.S., the employer is required to furnish an injured worker a list of at least two physicians or two corporate medical providers, in the first instance. An employer's right of first selection of a medical provider is triggered when the employer has knowledge of the accompanying facts connecting the injury to the employment. *Jones v. Adolph Coors Co.,* 689 P. 2d 681 (Colo. App. 1984). An employer must tender medical treatment forthwith on notice of an injury or its right of first selection passes to the injured worker. *Rogers v. Indus. Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). As found, the Claimant went to the Employer's designated medical provider and received treatment from that provider. Therefore, all of the Claimant's medical care and treatment related to the February 6, 2016 back injury was authorized.

f. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant*

v. Indus. Claim Appeals Office, 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, all referrals from the authorized provider were within the chain of authorized referrals.

g. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the aggravation/acceleration of his back condition on February 6, 2016. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of his compensable injury.

Average Weekly Wage and Temporary Disability

h. As stipulated and found, the Claimant's AWW is $665.96, which yields a TTD rate of $443.97 per week, or $63.42 per day. As further stipulated and found, the Claimant, on a finding of compensability, is entitled to TTD benefits from April 1, 2016 through October 30, 2016, both dates inclusive, a total of 213 days, in the aggregate amount of $13,508.46.

i. because there is no presently determined liquidated temporary wage loss sum, the issue of TPD must be reserved for future decision.

Burden of Proof

j. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has

sustained his burden on all designated issues. As further found, the Respondents failed to sustain their burden on the affirmative defense of "responsibility for termination."

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay all of the authorized, causally related and reasonably necessary medical expenses related to the Claimant's compensable injury of February 6, 2016, as herein above described with specificity, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Respondents' affirmative defense of "responsibility for termination" is hereby denied and dismissed.

C. The Respondents shall pay the Claimant temporary total disability benefits at the rate of rate of $443.97 per week, or $63.42 per day from April 1, 2016 through October 30, 2016, both dates inclusive, a total of 213 days, in the aggregate amount of $13,508.46, which is payable retroactively and forthwith.

D. The Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

E. Any and all issues not determined herein, including liquidated temporary partial disability from March 24, 2016 through March 31, 2016 and from October 31, 2016 through the hearing date, March 8, 2017 are reserved for future decision.

DATED this_____day of March 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant established by clear and convincing evidence that the DIME physician erred in determining that he had reached maximum medical improvement (MMI).

II. Whether Claimant established by clear and convincing evidence that the DIME physician erred in concluding that his neck condition was not causally related to his April 4, 2013 fall into a cistern.

III. If Claimant proved that the DIME doctor erred in concluding that his neck condition was not causally related to his April 4, 2013 fall into a cistern, whether he is entitled to an impairment rating for the cervical spine.

IV. If Claimant's cervical spine condition is determined to be related to the April 4, 2013 industrial accident, whether Respondents are liable for additional treatment related expenses for the neck.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Olson and Dr. Hughes, the ALJ enters the following findings of fact:

1. Claimant works as a driller, pump installer and well maintence man for Respondent-Employer.

2. On April 4, 2013, Claimant was involved in a work-related accident, when he fell into a cistern he was assigned to plumb. According to Claimant's testimony, the cistern was equipped with a 24 inch egress hole in which he had placed a ladder so as to climb to the bottom. After attending to his work in the cistern, Claimant attempted to exit the tank via the ladder. Claimant testified that the ladder was not quite tall enough for him to exit easily. Rather, Claimant testified that he had to jump slightly to reach the edge of the opening with his hands so as to pull himself out of the hole. Claimant testified that he had nearly pulled himself out of the hole when, he lost control and fell back into the hole and down to the bottom of the cistern. Claimant testified that he folded his arms up, flipped upside down and landed on his head at the bottom of the cistern. Claimant testified that he was knocked unconscious. Claimant came to and after struggling for some time, was able to get out of the tank. He then called his boss and reported the incident.

3. Following his fall, Claimant undertook a course of care, which included both

conservative treatment and surgical intervention. Claimant's course of care has been prolonged for a variety of reasons, including the need to address post surgical complications from his right rotator cuff repair and the need to treat acute, but non-work related medical conditions.[1]

4. On April 16, 2013, Claimant underwent his first evaluation for the work-related injury by Bernice Barnes, ANP-C at Centura Centers for Occupational Medicine (CCOM). Claimant told Ms. Barnes that after placing his ladder against the side of a cistern that was slightly deeper than his ladder, he attempted to pull himself out of the egress hole when he lost his footing on the ladder and fell back into the tank landing on his elbows. Claimant also reported a stretch injury to his arms and abdomen as he attempted to pull himself from the hole. Claimant did not mention flipping over, landing on his head, or injuring his neck. Claimant completed a pain diagram during this appointment which did not depict any head or neck pain. To the contrary, the pain diagram only depicts aching and stabbing pain in the elbows, the anterior portion of the left hip and front/back of the right shoulder. Claimant also reported that he had taken it easy for a couple of days during which his condition improved until his groin and abdominal pain was aggravated by attempting to get into and out of a small cistern on April 15, 2013, the day before his April 16, 2013 appointment.

5. Physical examination during his April 16, 2013 appointment revealed tenderness in the central lower inguinal area of the abdomen, limited range of motion and tenderness of both shoulders and tenderness of the elbows. Claimant was diagnosed with bilateral shoulder stains, bilateral elbow bruising, and acute abdominal strain. No cervical diagnosis was documented.

6. Claimant has a prior history of neck pain which he has treated with chiropractic adjustment. On February 18, 2010, Claimant completed a pain diagram for Dr. Beth Lancaster, D.C. in which he noted neck pain that had been present "off and on for 6 or 7 years."

7. Chiropractic records between 2/19/2010 and 8/15/2011 establish that Claimant complained of neck pain for which he received chiropractic treatment on at least 14 occasions. Claimant also has a history of falling down a ladder per the chiropractic records on August 12, 2010, which caused low back pain. On August 15, 2011, Claimant reported pain from "head to toe" reportedly due to cattle branding activities.

8. On April 17, 2013, Claimant told physical therapist Mary Bogenschuetz-Bonn, that he "landed with his elbows behind him," "with his shoulders abducted at 90 degrees. No mention of landing on his head or injuring his neck appears in this record. Claimant completed a pain diagram during this appointment which does not reference head or neck pain. Rather, the pain diagram is strikingly similar in terms of the body parts affected by pain to the pain diagram he completed for Bernice Barnes on April 16,

[1] During the course of treatment for his shoulder/elbow injuries, Claimant experienced a bout of acute diverticulitis with mircoperforation which was determined by order of ALJ Donald Walsh to be unrelated to the April 4, 2013 fall or the medications used to treat the Claimant's industrial injuries.

2013. Ms. Bogenschuetz-Bonn did not document a report of loss of consciousness, and diagnosed only right shoulder strain and resolving left shoulder pain.

9. On April 22, 2013, Claimant was seen by George Schwender, M.D. During this appointment, Claimant reported only shoulder, elbow, and abdominal pain. Dr. Schwender did not record a loss of consciousness or diagnose a neck injury.

10. On April 22, 2013, Claimant completed another pain diagram, which did not depict neck pain.

11. On May 1, 2013, Claimant was evaluated by Dr. Richard Nanes who documented continued complaints of left abdominal pain aggravated by a severe cough secondary to flu-like illness. Dr. Nanes also noted continued bilateral shoulder and elbow pain. Absent from this record is any suggestion that Claimant was rendered unconscious or that he injured his head or neck as part of his April 4, 2013 fall. Dr. Nanes assessed Claimant with a "left rectus femoral muscle hematoma, impingement syndrome of the right shoulder, right lateral epicondylitis and contusion of the left elbow. Claimant completed a pain diagram during this appointment that fails to depict pain in his neck. Indeed, the pain diagram is similar to those Claimant had completed previously, endorsing pain in the shoulders, elbows and abdomen.

12. On May 3, 2013 Claimant underwent MRI of the right shoulder which revealed partial tearing of the superior aspect of the supraspinatus tendon as well as an intrasubstance tear of the infraspinatus tendon with partial tear of the tendon at its insertion.

13. On May 8, 2013, Claimant was seen by Karl Larsen, M.D., who recounted the mechanism of injury without recording that Claimant flipped over when he fell, that he lost consciousness or suffered head/neck injuries. Dr. Larsen instead wrote that "the ladder . . . came out from underneath him, causing him to injure both elbows."

14. On May 15, 2013, Claimant returned to Dr. Nanes who noted the results of his right shoulder MRI. A referral was made to an orthopedist for a surgical evaluation concerning the right shoulder. Claimant also completed a pain diagram which did not identify any neck pain. In this pain diagram, Claimant was careful to note that both of his hands "go to sleep if [his] elbow [was] bent."

15. On May 20, 2013, Claimant returned to CCOM where he was evaluated by Ms. Barnes. During this encounter, Claimant reported continued upper extremity symptoms, including pain which was reportedly poorly controlled with over-the-counter Tylenol. No complaints of head or neck pain were documented and Claimant did not depict the same in his pain diagram completed during this appointment.

16. On June 7, 2013, Claimant was evaluated by Ms. Barnes for complaints of feeling feverish 4-5 times a day for as long as 25 minutes and with a temperature as high as 100.5 degrees. Claimant's temperature was recorded as 98.1 degrees as part

of this clinical visit. Ms. Barnes added Robaxin to Claimant's list of medications.

17. On June 13, 2013, Claimant underwent a right upper extremity electromyogram (hereinafter "EMG") performed by William Griffis, D.O., which was negative for cervical radiculopathy. According to Dr. Griffis, Claimant's clinical examination was consistent with a diagnosis of right sided ulnar neuritis at the elbow and right humeral lateral epicondylitis.

18. On June 19, 2013, Claimant completed another pain diagram which did not illustrate neck pain.

19. On July 12, 2013, Claimant underwent right shoulder surgery (rotator cuff tendon repair of the supraspinatus and infraspinatus) as performed by Dr. Alex Romero.[2] Claimant experienced several serious post-surgical complications, including edema in the lower extremities, deep venous thrombosis (DVT), and oxygen desaturation. Claimant also developed a right-sided Horner syndrome which was felt to be related to the interscalene block performed at the time of surgery.[3]

20. On July 18, 2013, Claimant returned to CCOM. A report by an unidentified author outlines Claimant's hospital course for treatment of complications following Claimants' July 12, 2013 surgery. It also casually mentions that Claimant suffered an injury to his neck while trying to pull himself from a cistern. This indication that Claimant suffered a neck injury is the first time such documentation appears in the record since Claimant's April 4, 2013 accident. While the report mentions that Claimant suffered a neck injury, there is a complete lack of documentation that Claimant was suffering from pain in his neck at the time of this appointment. Rather, the report mentions that from his pain diagram Claimant was "experiencing pain postoperatively in the right shoulder and arm which he describes at 100% of the time at a level of 9/10." Careful review of the pain diagram from this date of visit fails to reveal that Claimant was complaining of pain in his neck. Moreover, the record is devoid of any indication that Claimant's neck was physically examined and the author of the report did not offer a cervical spine diagnosis.

21. On July 24, 2013 and July 31, 2013, Claimant completed additional pain diagrams which did not mention neck pain.

22. On September 11, 2013, Claimant followed-up with Dr. Nanes, who did not record neck pain.

23. On October 15, 2013, Claimant underwent a second right shoulder MRI, which was compared to the prior study from May 3, 2013. The October 15, 2013 study revealed that Claimant had suffered a complete rupture of the infraspinatus tendon and surgical attachment in addition to a "near complete tear and avulsion of the surgical

[2] This information is contained in the medical record history section of the DIME report authored by Dr. John Hughes dated June 1, 2016.
[3] See page 2 of Dr. Hughes' DIME report dated June 1, 2016.

attachment of the supraspinatus tendon."

24. On November 13, 2013, Claimant underwent a second shoulder surgery (arthroscopic lysis of adhesions) secondary to continued stiffness.

25. On January 8, 2014, Claimant returned to Dr. Nanes for evaluation with continued complaints of pain in his shoulders and elbows. It was noted that Claimant had approximately 20 degrees of abduction in the right leading Dr. Nanes to opine that Claimant had "once again developed severe adhesive capsulitis and that his right shoulder was "virtually frozen." No mention of neck pain was made nor was there any depiction of the same on Claimant's pain diagram from this date.

26. On January 22, 2014, Claimant was evaluated by orthopedic specialist, Dr. David Weinstein regarding the right shoulder. Dr. Weinstein reported the history of injury as a hyper-abduction of both shoulders. He did not report any mechanism where Claimant flipped over, landing on his head, or losing consciousness during the accident. Moreover, Dr. Weinstein completed a directed examination to the cervical spine which revealed no complaints of midline tenderness and full cervical range of motion (hereinafter "ROM"). He did not diagnose any cervical spine condition.

27. On January 28, 2014, Dr. Griffis administered a second EMG, which was again negative for cervical radiculopathy.

28. On February 24, 2014, Claimant underwent a left shoulder MRI, which revealed a full-thickness tear of the supraspinatus.

29. On April 16, 2014, Claimant completed another pain diagram which did not mention neck pain.

30. On April 23, 2014, Dr. Nanes issued a report in which he related a diagnosis of diverticulitis to Claimant's use of pain medication prescribed for the work-related injury.[4]

31. On May 21, 2014, Claimant underwent a third right shoulder surgery, which was performed by David Weinstein, M.D. Following that procedure, Claimant began reporting headaches, facial numbness, and abnormal tearing in his right eye.

32. On July 2, 2014, Claimant visited Stephen Annest, M.D., who noted some pain extending into the neck as part of a supraclavicular evaluation. Dr. Annest documented a normal cervical examination with full ROM. Dr. Annest felt that Claimant's ongoing shoulder problems were related to a brachial plexus injury.

33. On July 30, 2014, Claimant followed-up with Dr. Weinstein with a primary

[4] As noted, the question of whether Claimants diverticulitis was related to his April 4, 2013, industrial injury was resolved by Summary Order of ALJ Walsh on February 3, 2016. In his order ALJ Walsh concluded that Claimant had failed to establish by a preponderance of the evidence that treatment for his diverticulitis was related to his work related fall.

complaint of numbness in his face and right sided neck pain. According to Dr. Weinstein's note from this date of encounter, Claimant reported that he had been evaluated in Denver (by Dr. Annest) and was informed that he had a brachial neuritis. Dr. Weinstein explained that the alleged brachial neuritis was secondary to previous lack of motion which would resolve over time with stretching. He was unsure of the etiology of Claimant's facial numbness so referred him back to the anesthesiologist to determine whether this was a complication of his block. As noted above, Claimant had previously developed facial symptoms consistent with Horner's syndrome which was felt to be related to an interscalene block performed at the time of his first shoulder surgery. The evidence presented persuades the ALJ that Claimant's facial numbness and abnormal tearing were, more probably than not, related to his Horner's syndrome caused by his interscalene block.

34. On September 22, 2014, Claimant underwent a third right upper extremity EMG, which was performed by Stephen Scheper, D.O., the results of which were again negative for cervical radiculopathy.

35. On December 18, 2014, Claimant was evaluated by Albert Hattem, M.D. at Respondents' request. Dr. Hattem obtained a detailed history of the injury from Claimant. During his interview, Claimant described falling backward into a 6-7 foot deep cistern injuring his shoulders when the ladder his was climbing fell from under him.[5] There is no mention in Dr. Hattem's report that Claimant flipped over and subsequently landed on his head losing consciousness. Claimant reported pain with movement of the left shoulder as well as right shoulder pain. He also reported pain in the elbows and bilateral ulnar digit numbness in addition to right facial numbness. He did not verbalize complaints of neck pain and did not endorse complaints of neck pain specifically in his questionnaire. Rather, Claimant indicated that he had "pain in many areas." The pain diagram completed as part of this independent medical evaluation (IME) reflects burning pain in the right side of the neck. Dr. Hattem did not diagnose a cervical spine injury. He opined that Claimant was at MMI and not a good candidate for further surgical intervention.

36. On February 4, 2015, Claimant was reevaluated by Dr. Weinstein, due to ongoing shoulder pain. Dr. Weinstein did not note any neck pain and again recorded full cervical ROM without tenderness.

37. On March 31, 2015, Claimant was seen by Dr. Sumant Rawat, who noted neck tenderness, but without limitation of movement. Dr. Rawat did not offer a cervical spine diagnosis, but recommended a MRI, which constitutes the first treatment/diagnostic testing directed to the neck since the April 4, 2013 accident. Dr. Rawat also recommended another EMG. The request was denied.

38. On April 17, 2015, Anjmun Sharma, M.D. authored a report in which he

[5] Dr. Hattem conducted a thorough medical records review, noting that Claimant reported to Dr. Romero that he tried to catch himself in the opening of the well with his arms in a "chicken wing" position but was unable to support his weight so fell about 7-8 feet landing on his back.

recommended against a fourth EMG because the three prior studies were negative and Claimant was not a surgical candidate in any event.

39. On April 21, 2015, Claimant underwent an MRI of the brain due to persistent "[r]ight sided facial numbness and right sided eye twitching with throat paralysis. The study was unremarkable without evidence for acute findings.

40. On June 17, 2015, Claimant followed-up with Dr. Nanes, who did not record neck pain or offer a cervical spine diagnosis.

41. On June 17, 2015 and July 29, 2015, Claimant completed pain diagrams which referenced right-sided neck pain in the same location which had been symptomatic in 2010. *Compare Resp. E-64 and Resp. O-143 and 147.*

42. On September 9, 2015, Dr. Nanes referenced neck pain for the first time in his reports, though he still had not diagnosed a cervical spine injury.

43. On December 2, 2015, Dr. Nanes noted that Claimant was "improved (sic) for a cervical MRI" and that there was a question of cervical discogenic pathology with right radiculopathy.

44. Claimant underwent a cervical spine MRI on December 4, 2015, which revealed multilevel degenerative changes, most prominent at C4-5 and C5-6. That same day, Claimant underwent a brachial plexus MRI, which was unremarkable.

45. On December 15, 2015, Claimant followed-up Dr. Rawat, who noted the "extensive disc disease" revealed by the cervical MRI, for which he recommended a neurosurgical consultation.

46. On February 4, 2016, Claimant was seen by Dr. Sana Bhatti upon the referral of Dr. Nanes. During this visit, Claimant described falling into a cistern, landing on his head and losing consciousness. This is the first time that the more recent description of the accident appears in the medical records and is noted to be approximately three years after the date of injury. Dr. Bhatti documented complaints of tenderness over the posterior aspect of the neck and right shoulder along with "sharp pain that radiates to his right arm." He also noted the Claimant's cervical MRI demonstrated right-sided disc herniation at C5-6. Dr. Bhatti also noted that Claimant had undergone "an EMG study," but he did not describe the results (i.e. no findings consistent with radiculopathy revealed). The evidence surrounding Claimant's need for additional electrodiagnostic study persuades the ALJ that Dr. Bhatti was apparently unaware that several EMGs had already been performed as opposed to a single "study." Upon completion of his examination, Dr. Bhatti opined that Claimant's arm pain "may be a right C6 radiculopathy." Treatment, including cervical discectomy and fusion were discussed.

47. On March 2, 2016, Dr. Hattem issued a physician advisor report, in which he opined that Claimant's cervical spine condition was not work-related, due to the

significant delay in seeking treatment for the neck after the accident.

48. On March 17, 2016, Dr. Nanes responded to Claimant's attorney's request for review the file and response to Claimant's assertion that he suffered a neck injury as a consequence of the April 4, 2013 fall. In a letter forwarded to Claimant's counsel, Dr. Nanes wrote: "I have had a chance to review Mr. Marsh's chart. I am in agreement with *your* conclusion that [Claimant] has a neck injury in addition to his other injuries and this is well documented in the chart." (emphasis added). Dr. Nanes seems to believe the alleged neck injury was "related to his fall," as opposed to being secondary to surgery, but the letter is vague and his opinions are unclear.

49. On March 18, 2016, Claimant was seen by Dr. Steven Scheper. Dr. Scheper noted that "[i]nformation from cervical MRI implies [Claimant's] symptoms[6] are very likely coming from C4/5 and C5/6 degenerative disc derangement." Dr. Scheper recommended an epidural steroid injection "prior to any consideration of" neck surgery. Claimant has not undergone an epidural steroid injection.

50. On May 24, 2016, Claimant was seen by Dr. Daniel Olson at CCOM as Dr. Nanes had retired. Dr. Olson diagnosed cervical "spondylosis with radiculopathy."

51. On June 1, 2016, Dr. John Hughes, was selected to perform a twenty-four month Division-sponsored independent medical evaluation (DIME) as provided for in Section 8-42-107(8)(b)(II). Following that examination, Dr. Hughes issued a report outlining his findings and opinions. Dr. Hughes concluded that Claimant reached MMI on December 18, 2014, with a 29% upper extremity rating for the right shoulder and a 2% upper extremity rating for the left shoulder. He did not feel that Claimant had sustained a cervical injury related to the April 4, 2013 fall and did not rate the Claimant for the same.

52. On June 17, 2016, Dr. Olson expressed concern for possible infection in the shoulder based on a blood test which was positive for C-reactive protein ("CRP").

53. On July 12, 2016, Pinnacol filed a final admission of liability based on the opinions of Dr. Hughes.

54. On August 22, 2016, Dr. Olson noted that acupuncture had helped and Claimant was able to discontinue his use of narcotic medication.

55. On September 2, 2016, Claimant was reevaluated by Dr. Weinstein. During this visit, Claimant demonstrated full cervical ROM without tenderness. Claimant reported subjective fevers following acupuncture and it was noted that he had blood testing which had demonstrated a "slightly elevated CRP at 18.1 mg/l." Consequently, Dr. Weinstein obtained x-rays which revealed no evidence of acute osseous abnormality. Based upon his clinical examination and the normal radiographs, Dr. Weinstein opined that there was very little chance for infection. Dr. Weinstein concluded by indicating that

[6] With the exception of Claimant's medial forearm and hand symptoms which Dr. Scheper opined were likely emanating from form a significant ulnat neuropathy at the elbow.

Claimant had maximized his treatment. According to Dr. Weinstein, Claimant was at or near MMI and he did not feel that any further treatment other than pain management and continued home exercises would be of benefit to Claimant.

56. Despite complaints of fever and increased temperatures, which Claimant has reportedly obtained himself, multiple temperatures recorded by Claimant's treating providers since the July 2013 surgery have been below 98.6 degrees. The following temps have been documented: 98.1 on June 7, 2013, 98.3 on July 16, 2013, 98.4 on July 18, 2013, 98.1 on July 31, 2013, 97.9 on November 21, 2014, 98.2 on March 25, 2015, 98.3 on May 13, 2015, 98.0 on July 19, 2015, 98.1 on October 14, 2015, 98.0 degrees on December 2, 2015, 98.0 degrees on January 13, 2016, 97.0 on March 16, 2016, 97.5 on May 24, 2016, 98.1 on June 17, 2016, 97.9 on July 18, 2016, 98.0 on November 7, 2016, and 98.0 on December 5, 2016. A "high" reading of 99.0 degrees was taken over two years ago on January 7, 2015.

57. The evidence presented, including the reports of Dr. Weinstein and Claimant's documented temperatures over the years following surgery, persuade the ALJ that it is unlikely that Claimant has an infection in the right shoulder.

58. Dr. Olson testified via deposition on October 7, 2016. Dr. Olson testified as to his understanding of the injury. He testified that he did not believe that Claimant landed on his head as part of his fall into the cistern. Rather, Dr. Olson understood the mechanism of injury (MOI) as falling backwards onto his back injuring his arm and hitting the back of his head. Regarding Claimant's assertion that he fell on his head, Dr. Olson testified that, while it would not be surprising that Claimant would experience neck pain if he fell and landed on his head, such MOI would be unusual for causing arm injuries which was Claimant's primary complaint. Dr. Olson testified that he disagreed with Dr. Nanes that Claimant sustained a neck injury during the accident, because "the earlier notes don't substantiate that." Rather, Dr. Olson testified that Claimant first documented neck pain on a pain diagram completed September 11, 2013 after his first shoulder operation. Dr. Olson noted that after his first shoulder surgery, Claimant was placed in a sling and that it was not "uncommon to start getting some shoulder and neck complaints" after that. Dr. Olson was also questioned about the potential that Claimant suffered a brachial plexus injury. He testified that the brachial plexus is a bundle of nerves that run from the neck and congregate underneath the arm pit exiting into the arm. According to Dr. Olson, Claimant may have suffered a brachial plexus injury in the fall when his "arms got caught and stretched the nerves." In addition to Dr. Annest's opinion that Claimant's continued shoulder symptoms may be caused by a brachial plexus injury, Dr. Olson testified that a brachial plexus injury may cause pain in the neck and down to the hand.

59. The testimony of Dr. Olson persuades the ALJ that he attributes Claimant's neck pain to muscular structures and the use of his sling which was necessitated by his shoulder surgery rather than falling on his head after slipping back into the cistern. Dr. Olson was careful to clarify that he did not believe that Claimant's degenerative spine condition was caused by his shoulder surgery. Moreover, he clarified that the neck pain

Claimant reported approximately four months after the April 4, 2013 incident, was "muscle pain" and "stiffness" caused by his first shoulder surgery. Dr. Olson never addressed whether Claimant's degenerative condition was aggravated or accelerated by the accident or the resulting surgery.

60. Dr. John Hughes, who is board-certified in the field of occupational medicine, testified via deposition on November 3, 2016. Dr. Hughes testified that it was plausible that Claimant had neck pain as a consequence of "problems around the brachial plexus, which [Claimant] certainly had." Nonetheless, Dr. Hughes testified that he did not believe that Claimant "sustained a cervical spine injury that would meet criteria for a specific disorder impairment rating according to Table 53 of the AMA Guides." Dr. Hughes attributed Claimant's neck pain to complications of Claimant's shoulder surgery. After considering additional information, Dr. Hughes opined that Claimant is at MMI. Dr. Hughes testified that Claimant does not need any further treatment directed at the cervical spine, particularly in light of the full cervical ROM without tenderness documented by Dr. Weinstein. Dr. Hughes further testified that any need for additional cervical spine treatment is more likely than not due to Claimant's underlying degenerative spinal condition and not the work-related injury.

61. Based upon the evidence presented as a whole, the ALJ finds that while Claimant suffers from neck pain, that pain was probably not caused by an injury to the neck or a compensable aggravation/acceleration of a pre-existing degenerative cervical spine condition. Rather, the evidence presented, including the testimony of Dr. Olson and the EMG testing which was negative for cervical radiculopathy persuades the ALJ that Claimant's neck pain was caused by a combination of referred pain from his shoulder secondary to immobility caused by sling use, a possible brachial plexus injury at shoulder level and adhesive capsulitis in addition to the natural progression of his pre-existing degenerative disc disease as revealed on MRI. In reaching this conclusion, the ALJ credits the opinions of Dr. Annest, Dr. Weinstein, Dr. Scheper, Dr. Hughes, Dr. Olson and Dr. Hattem over the contrary opinions of Dr. Nanes.

62. On November 29, 2016, Claimant was evaluated by Armadios Hatzidakis, M.D., who recorded the more recent recitation of the accident where Claimant allegedly fell "directly on top of his head." Claimant was not taking any medications at the time of this visit. Dr. Hatzidakis diagnosed right shoulder rotator cuff deficiency, acromioclavicular joint arthrosis, and possible infection versus an unspecified neurologic issue. He also diagnosed left shoulder strain with rotator cuff pathology and possible biceps lesions. Dr. Hatzidakis recommended a repeat left shoulder MRI, a repeat right shoulder MRI, another right upper extremity EMG, and an aspiration. Dr. Hatzidakis observed mild cervical ROM limitations, but did not offer any treatment recommendations directed at the cervical spine.

63. Claimant testified that he has not worked since 2013, although he still manages his ranch where he has performed several tasks requiring the use of his arms, including modifying a skid loader, operating a skid loader, drilling post holes, moving dirt, and managing cattle.

64. Dr. Hattem testified that he agrees with Dr. Hughes's causation opinion regarding the cervical spine. In this regard, he testified that any muscular neck pain which was caused by the shoulder surgery has resolved, any further neck symptoms are due to the preexisting degenerative condition, and he agrees with Dr. Hughes's opinion that Claimant does not qualify for a cervical spine rating. Dr. Hattem explained that his causation opinion is based on the treatment which Claimant required for preexisting neck pain in 2010 in 2011; the original description of the accident, which did not include falling on his head; the lack of any contemporaneously reported neck pain; the lack of any treatment recommendations for the neck until March 2015; and the "on and off" nature of those symptoms since they began being reported, which he explained is expected in a patient with a preexisting history of degenerative disc disease. As noted above, the ALJ credits these opinions over the contrary opinions of Dr. Nanes.

65. Dr. Hattem testified that he agrees with Dr. Hughes's opinion that Claimant reached MMI for the work-related injury on December 18, 2014, and none of the tests recommended by Dr. Hatzidakis are likely to lead to additional pre-MMI treatment. In this regard, Dr. Hattem testified that three negative EMGs of the right upper extremity have already been performed by two different physicians, and no other physicians are recommending another EMG. He further testified that a left shoulder MRI has already been performed and "we know what the . . . MRI shows; he has a tear there;" Claimant was pleased with his left shoulder condition at the time of his evaluation; and Dr. Hughes did not recommend any additional care for the left shoulder. Dr. Hattem further explained that Claimant has already undergone multiple right shoulder surgeries and would be at high risk for a poor outcome if he undergoes additional surgery. Dr. Hattem testified that he defers to Dr. Weinstein's opinion that Claimant probably does not have a shoulder infection, as 98.6 degrees is considered to be a normal human body temperature and Claimant's consistently normal temperature readings suggest that an infection is unlikely.

66. Claimant has failed to demonstrate by clear and convincing evidence that Dr. Hughes erred when he opined that Claimant had reached MMI for his shoulder injuries and that his cervical condition was not related to the April 4, 2013 industrial accident and as such Claimant did not warrant a cervical spine impairment rating.

67. As Claimant has failed to prove that Dr. Hughes erred in concluding that his cervical spine condition is causally related to his April 4, 2013 industrial accident, Claimant has failed to prove that his need for additional cervical treatment is reasonable, necessary or related to the April 4, 2013 accident.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. In this case, Claimant's testimony regarding the mechanism of injury has changed and expanded with the passage of time. His testimony regarding the MOI is inconsistent with causing both a neck and upper extremity injury according to the persuasive testimony of Dr. Olson. Based upon the totality of the evidence presented, the ALJ concludes that Claimant's testimony regarding the MOI, as well as, his allegation that he sustained a neck injury is unconvincing. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). As found here, the opinions of Dr. Annest, Dr. Weinstein, Dr. Scheper, Dr. Hughes, Dr. Olson and Dr. Hattem are more persuasive than the contrary opinions of Dr. Nanes.

C. A workers' compensation case is decided on its merits. *Section 8-43-201, C.R.S.* In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive

arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinions are incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). In concluding that Claimant has failed to carry his burden to establish that Dr. Hughes' opinion regarding MMI, the relatedness of Claimant cervical spine condition to the April 4, 2013 incident and his determination to not rate the cervical spine was highly probably incorrect, the ALJ finds the decision expressed in *Andrade* v. *Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005) instructive.

F. In *Andrade* the Colorado Court of Appeals held that a DIME physician's finding of MMI and permanent impairment consists not only of the initial report, but also any subsequent opinion given by the physician. Thus, the court held that an ALJ properly considered DIME physician's deposition testimony where the doctor withdrew his original opinion of impairment after viewing a surveillance video. Similarly, in *Jarosinski* v. *Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002) it was proper for the ALJ to consider a DIME physician's retraction of her original permanent impairment rating after viewing videotapes showing the claimant performing activities inconsistent with the symptoms and disabilities she had reported. *See also*, *Williams v. Canon City & Royal Gorge Railroad*, W.C. 4-775-399 (ICAO May 12, 2010). In this

case, Claimant argues that Dr. Hughes, during his deposition, essentially changed his opinion regarding the relatedness of his (Claimant's) neck pain to the April 4, 2013 industrial injury because he testified that the neck pain was "related" to a complication of Claimant's shoulder surgery. Claimant asserts that because Dr. Hughes attributes his neck symptoms to a "complication" of his shoulder surgery his neck pain is related to the industrial injury and he is not at MMI for all conditions related to the April 4, 2013 accident. Consequently, Claimant contends that it is premature to determine any disability rating attributable to the cervical spine.

G. In this case, the opinions of Dr. Hughes concerning the relatedness of Claimant's neck symptoms, as expressed in his DIME report and subsequently through his deposition testimony are arguably inconsistent. Consequently, the ALJ must resolve the threshold determination of what the actual opinion of Dr. Hughes is regarding the cause of Claimant's neck symptoms before the question of whether Claimant overcame his opinions concerning MMI can be addressed. If the DIME physician offers ambiguous or conflicting opinions, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5* P.3d 385 (Colo. App. 2000); *Stephens* v. *North and Air Package Express Services,* W. C, No. 4-492-570 (February 16, 2005), *aff'd, Stephens* v. *Industrial Claim Appeals Office* (Colo. App. 05CA0491, January 26, 2006) (not selected for publication). In this case, the ALJ concurs with Respondents that Claimant mischaracterized the testimony of Dr. Olson when he asked Dr. Hughes if he agreed with Dr. Olson that Claimant's neck pain was related to complications from shoulder surgery. When asked directly whether Claimant's neck condition was a complication from the surgery he had, Dr. Olson testified that Claimant began complaining of pain after surgery. The ALJ concludes that this statement alone does not provide a sufficient nexus, contrary to Claimant's assertion, to conclude that Claimant's neck condition and subsequent pain was caused, aggravated or accelerated by his fall into the cistern. Indeed, Dr. Olson would go on to testify that the surgery did not cause the degenerative condition revealed by MRI in Claimant's neck and that Claimant had a common complaint of referred muscular neck pain and stiffness secondary to his use of a shoulder sling. Moreover, during questioning concerning whether Claimant's neck pain was a complication of surgery, Dr. Hughes explained only that neck pain can be related to problems around the brachial plexus. Claimant did not have brachial plexus surgery and EMG testing reveals that, if Claimant did sustain a brachial plexus injury it was likely below the neck level as the testing results were negative for cervical radiculopathy. Consequently, to the extent that Dr. Hughes agreed with Dr. Olson that Claimant's neck pain was caused by "complications" of his shoulder surgery, the ALJ finds those "complications to constitute referred neck pain from immobility of the shoulder caused by sling use, a potential brachial plexus injury at shoulder level and adhesive capsulitis in addition to the natural progression of his pre-existing degenerative disc disease as revealed on MRI.

H. To the extent that Dr. Nanes' opinions concerning the relatedness of Claimant's neck pain to his fall into the cistern vary from those expressed by Drs. Olson and Hughes, the ALJ concludes that those divergences constitute a professional

difference of opinion. A mere difference of opinion between physicians fails to constitute error. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). As the evidence presented regarding the cause of Claimant's neck pain amounts to a professional difference of opinion, Claimant has failed to prove that Dr. Hughes' opinions regarding the cause of Claimant's neck pain and entitlement to impairment were highly probably incorrect. Consequently, the request to set aside Dr. Hughes' causality opinion that Claimant did not suffer a cervical injury and is not entitled to an impairment rating for the same must be denied and dismissed. Accordingly, Claimant's entitlement to additional medical treatment for his neck need not be addressed.

I. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. Recommendations for future treatment have been discussed by the courts in the context of whether a Claimant is at MMI. "A recommendation for therapies which present a reasonable prospect for improving physical function may be viewed as evidence that the claimant's condition is not stable, and the resulting impairment is not measureable. Therefore, such treatment recommendations are inconsistent with MMI…." *Gebert v. Nordstrom, Inc.*, W.C. No. 4-428-645 (ICAO, June 20, 2003).

J. After considering the totality of the evidence presented, including the medical records and testimony of Dr. Olson and Dr. Hughes, the ALJ concludes that Claimant has failed to produce unmistakable evidence establishing that the Dr. Hughes' determination regarding MMI is highly probably incorrect. Rather, the ALJ concludes that Dr. Hughes accurately determined that no further medical treatment is reasonably expected to improve Claimant's condition. Dr. Hattem convincingly agreed with this determination. Here, Claimant's EMG testing is negative, no additional shoulder surgeries are recommended and Claimant has continued to manage his cattle ranch despite the physically demanding nature of those activities which caused "head to toe" pain in the past. Moreover, the evidence presented persuades the ALJ that the additional tests recommended by Dr. Hatzidakis are neither reasonable nor necessary. Specifically, the recommendation for a shoulder aspiration is unreasonable in light of the convincing evidence that the likelihood of infection is remote based on the negative x-rays, Claimant's normal white blood cell count, and his consistently normal temperature readings post surgery. The ALJ concludes, based upon the persuasive presented that the request for an additional EMG is unnecessary, as three prior EMGs by two different providers were negative for radiculopathy (which reduces the likelihood of a false-negative result), and there is no reliable evidence to suggest that a slightly different EMG will identify previously unrevealed abnormalities. Finally, there is no need for repeat MRIs of either shoulder, because Claimant's objective abnormalities are already well-documented, he did not report any significant left shoulder problems to Drs. Hughes or Hattem, and no providers are recommending additional shoulder surgery. Even if the tests themselves were reasonable and necessary, any associated speculation that they will lead to additional treatment likely to result in improvement in Claimant's condition does not constitute clear and convincing evidence that Dr. Hughes's MMI opinion is wrong.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the opinions of the DIME physician regarding causation, MMI, and permanent impairment are denied and dismissed.

2. Claimant's request for additional permanent partial disability benefits is denied and dismissed.

3. Claimant's request for additional medical benefits for the cervical spine is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant had proven by a preponderance of the evidence that the L3-4, L4-5 lumbar foraminotomy, facetectomy, and fusion recommended by Dr. Brian Witwer is reasonable medical treatment necessary to cure and relieve claimant from the effects of the June 2, 2015 work injury.

FINDINGS OF FACT

1. Claimant was involved in an admitted work injury on June 2, 2015. The injury occurred when claimant was involved in a rollover accident while driving a dump truck for employer. Claimant attempted to avoid hitting elk on the road and the tire of the dump truck hit the soft shoulder of the road, causing the truck to roll. Following the June 2, 2015 accident, claimant had abrasions on his low back and he complained of low back pain.

2. Claimant testified that he has a history of low back pain and related surgical treatment. The medical records indicate that on February 16, 2009 claimant underwent a right sided laminotomy with intervertebral discectomy at the L4-5 level. That initial surgery was performed by Dr. Robert Fox.

3. On August 4, 2009, Dr. Witwer performed a fusion at the L4-5 level. On March 9, 2012, Dr. Witwer removed the hardware from the 2009 fusion because the hardware was causing claimant pain. At the time of the 2012 procedure, Dr. Witwer noted that x-rays showed "good position" of the 2009 fusion at the L4-5 level.

4. Claimant testified that following the 2012 hardware removal he recovered and was able to return to full duty work in physically demanding jobs. In May 2012, claimant worked as a crane rigger for a crane company. Claimant testified that while working as a crane rigger, he built a rollercoaster. Video footage of the work claimant did on the rollercoaster in May 2012 was entered into evidence as exhibit 16. In 2014 and 2015, claimant worked as a roustabout in the oil and gas industry.

5. Claimant's medical records indicate instances in which he sought treatment at the emergency room ("ER") for low back pain. On March 30, 2014, claimant sought treatment at the ER for low back pain after moving a piece of heavy furniture. On July 5, 2014 claimant again experienced low back pain after playing volleyball and sought treatment at the ER. Subsequently on January 7, 2015, claimant returned to the ER complaining of low back pain after completing a roofing demolition. Claimant testified that he sought medical treatment at the ER at these times because he did not have a primary care physician. Claimant also testified that in each instance his

low back pain resolved within days. The ALJ finds claimant's testimony regarding this issue to be credible and persuasive.

6. Claimant testified that his current symptoms include pain that radiates from his low back into his hips and buttocks. Claimant testified that prior to the June 2, 2015 work accident he would experience similar pain, but it would resolve with a few days. Claimant testified that his current low back pain is more extensive pain that does not go away, making it difficult to walk, sit, or stand.

7. Dr. Craig Gustafson with Work Partners is claimant's authorized treating physician ("ATP") for this workers' compensation claim. As indicated by the medical records, claimant was typically seen at Dr. Gustafson's office by Daniel Meyer, PA.

8. Following the June 2, 2015 work injury Dr. Gustafson and Mr. Meyer have referred claimant to various modes of treatment including physical therapy, psychotherapy, pain medications, and injections. Claimant testified that he received "targeted" injections from Dr. James Gebhard, but these did not provide him with pain relief.

9. On June 11, 2015, a magnetic resonance image ("MRI") was taken of claimant's lumbar spine and showed multilevel degenerative disease with a circumferential disc bulge at the L3-4 level with a focal protrusion in the left foraminal and lateral region contacting the L3 nerve root.

10. On July 28, 2015, claimant was seen at Dr. Gebhard's office by Todd Ousley, PA-C. During that visit an x-ray was taken of claimant's lumbar spine that showed a left-sided facet joint screw with some evidence of "interbody violation" at the L4-5 level but no obvious interbody bony consolidation. On that same date, Mr. Ousley opined that claimant's pain symptoms were arising from a "disruption" of pseudoarthrosis at the L4-5 level.

11. On August 13, 2015, Dr. Gebhard administered a left sided L3-4 transforaminal epidural injection. Claimant reported to Dr. Gebhard that this injection provided no relief.

12. On October 15, 2015, Dr. Gebhard administered bilateral L4-5 transforaminal epidural injections. Claimant reported to Mr. Meyer with Dr. Gustafson's office that he had approximately two weeks of pain relief after the October injections.

13. On January 18, 2016, Dr. Witwer recommended that claimant undergo a L3-4, L4-5 lumbar foraminotomy, facetectomy, and fusion. Respondents have denied authorization for the recommended surgery.

14. Dr. Witwer testified by deposition in this matter and stated his opinion that the disc herniation at the L3-4 level was likely caused by the June 2, 2015 work accident. Dr. Witwer also testified that because surgical treatment of the disc herniation at L3-4 level is above a previously fused level, it would be necessary to extend the fusion from L3 to L5. In addition, Dr. Witwer opined that although the pseudarthrosis at

the L4-5 level is likely a preexisting condition, it was aggravated by the June 2, 2015 accident, which necessitates the recommended surgery.

15. On May 4, 2016, respondents sent claimant for an independent medical examination ("IME") with Dr. Brian Reiss. Dr. Reiss reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the IME. Following the IME, Dr. Reiss issued a report and opined that the pseudarthrosis at the L4-5 level was symptomatic prior to claimant's June 2, 2015 work injury, but was possibly aggravated by the work injury. With regard to surgical intervention, Dr. Reiss opined that surgery at the L4-5 level may be reasonable to address the pseudarthrosis, but surgery at the L3-4 level would not be reasonable or necessary.

16. On July 14, 2016, a computerized tomography ("CT") scan of claimant's lumbar spine showed that the interbody fusion at L4-5 was "ununited" with possible pseudoarthrosis. In addition, the disc protrusion at the L3-4 level was noted as narrowing the left L3-4 foramen.

17. After reviewing results of claimant's July 14, 2016 CT scan, Dr. Reiss supplemented his May 2016 IME report and reiterated his opinions that surgery at the L3-4 level is not medically reasonable or necessary and claimant's pseudarthrosis at the L4-5 level is not related to the work injury.

18. Dr. Reiss testified by deposition in this matter and stated that it is his opinion that claimant's pain generator has not been identified and that any of the levels in claimant's spine with degenerative discs could be causing claimant's pain. Dr. Reiss also testified that claimant's pain could be myofascial.

19. Claimant's children, Savannah Buza and Alisa Drury, and their mother, Shelia Drury, testified at hearing. These witnesses testified regarding claimant's physical abilities prior to the June 2, 2015 work injury and his limitations since the injury. Prior to the injury claimant was able to run and play with his grandchildren, go fishing and play volleyball with his family. Since the work injury, claimant is unable to do any of those prior activities.

20. Claimant's former employer Rick Rakich testified at hearing that he hired claimant to work in a physically demanding position for his crane company including lifting between 50 and 75 pounds. Mr. Rackish testified that claimant had no back issues or complaints while working for his company.

21. The ALJ credits the medical records, claimant's testimony, and the opinion of Dr. Witwer over the contrary opinion of Dr. Reiss and ALJ finds that claimant has demonstrated that it more likely than not that the June 2, 2015 work injury caused the L3-4 disc herniation and aggravated or accelerated the preexisting pseudarthrosis at the L4-5 level.

22. The ALJ credits the medical records, claimant's testimony, and the opinion of Dr. Witwer over the contrary opinion of Dr. Reiss and finds that claimant has

demonstrated that it is more likely than not that the recommended surgery is reasonable medical treatment necessary to cure and relieve claimant from the effects of the June 2, 2015 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2014). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has demonstrated by a preponderance of the evidence that the June 2, 2015 work injury caused the L3-4 disc herniation and aggravated or

accelerated the preexisting pseudarthrosis at the L4-5 level. As found, claimant's testimony and the opinions of Dr. Witwer are credible and persuasive on this issue.

6. As found, claimant has demonstrated by preponderance of the evidence that the recommended L3-4, L4-5 lumbar foraminotomy, facetectomy, and fusion is reasonable medical treatment necessary to cure and relieve claimant from the effects of the June 2, 2015 work injury. As found, the medical records, claimant's testimony, and the opinions of Dr. Witwer are credible and persuasive on this issue.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the recommended L3-4, L4-5 lumbar foraminotomy, facetectomy, and fusion, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant is entitled to an award of penalties under C.R.S. 8-43-304, due to Respondent's failure to comply with a statute or rule under the Workers Compensation Act.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was employed as a paralegal for uninsured Respondent. She was injured on May 15, 2015 when a chair she was using collapsed, causing her to fall to the ground. Claimant sustained a concussion as well as orthopedic injuries. Respondent filed a General Admission of Liability as a self-insured party on June 8, 2015, admitting for temporary total disability ("TTD") and medical benefits.

2. Although referenced in Respondent's written Position Statement that the failure to carry Workers Compensation Insurance was due to an accounting error, the actual reason for non coverage is not in the evidentiary record.

3. Nonetheless, Respondent credibly testified, and substantial medical records corroborate, that Respondent has promptly authorized, and paid for, considerable medical treatment for Claimant since the date of injury, up until the dispute at issue. Such treatment included ambulance service, emergency room treatment, an authorized treating physician ("ATP"), and a second ATP upon request, multiple physicians, mental health care, physical therapy, and radiologic services.

4. Claimant treated with various healthcare providers and eventually came under the care of neurologist Bennett Machanic, M.D., on referral from Jeffrey Jenks, M.D., her ATP.

5. Dr. Machanic first met with Claimant on October 18, 2016. He noted, "…She has multiple ongoing problems due to the above on-the-job injury including periodic numbness and drooping of her right face, difficulties with numbness and weakness in the right arm, problems with headaches, difficulties with leg weakness and numbness, but also difficulties with focus, concentration, memory, and episodes of altered consciousness. All of these complexities bring her here to the office today for further evaluation…"

6. Dr. Machanic concluded, "…on May 15, 2015, she had a fall at work, suffered closed head trauma, had a likely cerebral concussion, now may have a

combination of posttraumatic stress disorder and/or posttraumatic encephalopathy although the latter is somewhat difficult for me to objectify. Of great concern to me are the posttraumatic mixed headaches, but even greater concern is the question as to whether she has post traumatic epilepsy. The latter is indeed critical…"

7. Dr. Machanic indicated; "…I would recommend an EMG nerve conduction study of the right arm. I would highly recommend a 3-5 day ambulatory EEG to make certain regarding the possibility of epilepsy and if this study is positive, she will need to be placed on antiepileptic medication. In the interim period of time, she is not to drive a motor vehicle, do activities at heights, use power equipment, swim, or take a bath alone…"

8. On October 19, 2016, Dr. Machanic issued a request for authorization of EMG testing, to be conducted by Dr. Machanic himself, and for EEG testing with "RSC (Redefining Seizure Care)." Claimant's Exhibit 9 contains fax imprints at the top of the page indicating the fax was sent around 4:00 p.m. on October 19, 2016, but the recipients are not shown. The handwritten prescription page indicates that "Blixt" was an intended recipient, with the correct fax number handwritten. The ALJ finds that this Report from Dr. Machanic was faxed to Respondent's Attorney Gerald Blixt on October 19, 2016 in the late afternoon.

9. The ALJ finds that this request arguably exceeded the Medical Treatment Guidelines on two bases: (1) The guidelines specify a "72 hour ambulatory EEG", and not a " 3 to 5 day ambulatory EEG", and (2) The guidelines imply that a "normal EEG" could be a condition precedent to ordering a 72 hour ambulatory EEG. Nonetheless, the ALJ further finds that this authorization request contained sufficient specificity and supporting documentation to comply with W.C.R.P. 16-9(F). If Respondent did not feel that the provider was in compliance with 16-9(F), Respondent failed to so state at the time.

10. Respondent authorized the EMG testing, and Dr. Machanic performed it on December 20, 2016.

11. Respondent did not authorize the ambulatory EEG testing at this time. Instead, Attorney Blixt send a one-page letter ("Blixt letter") on October 31, 2016 to Claimant's Attorney, Royce Mueller, acknowledging phone calls which had been made on Claimant's behalf, as well as a fax letter from Attorney Mueller dated October 28, 2016. The concerns expressed in the Blixt letter included, in summary:

(1). The proposed number of hours-120- for the ambulatory EEG,

(2). The cost of the procedure as proposed-$18, 250.00,

(3). The symptoms noted by Dr. Machanic, which were not previously reflected in Claimant's treatment notes to date, and

(4). His completed contact with a different neurologist, Dr. Bjork, who was willing to provide a "second opinion" regarding the conclusions being drawn by Dr. Machanic.

12. Respondent did not formally contest the request for EEG testing for either non-medical reasons or medical reasons, pursuant to the procedures outlined in W.C.R.P. 16-10(A) or (B), respectively.

13. Claimant then filed an Application for Hearing on October 31, 2016 (the same day as the Blixt letter), seeking medical benefits, authorized provider, reasonably necessary, AWW, TTD, and penalties, endorsing with specificity the failure to properly authorize (or contest) the EEG and EMG as recommended by Dr. Machanic.

14. On January 3, 2017, Dr. Machanic responded to questions from Claimant's counsel. Dr. Machanic answered "YES" in response to the question; "Is it imperative that Ms. Bivings undergo as soon as possible the EEG testing you recommended?" The doctor explained why; "If having post-traumatic seizures, has risk of severe bodily injury." Dr. Machanic was asked; "What is potential impact on Ms. Bivings' health, if any, of the continued delay in authorization of the EEG testing you recommended?" Dr. Machanic responded; "Death, paralysis, severe injury." Dr. Machanic added; "Do not understand delay!" This response was conveyed to Attorney Blixt.

15. On February 2, 2017, Dr. Shell (Dr. Jenks had left the practice at this point) reported, "…At this point I understand that an EEG has been ordered but not approved. I would certainly recommend an EEG to be performed to rule out postraumaticepilepsy." The record is unclear if this letter was conveyed to Respondent.

16. On February 3, 2017, Dr. Machanic submitted another request for authorization of various treatment modalities, including a "3 day ambulatory" EEG. (Claimant's Exbs. pg. 88).

17. Respondent authorized 72 hour ambulatory EEG testing on February 17, 2017.

18. Attorney Cullen Wheelock testified on behalf of Respondent. Ms. Wheelock previously served as an Administrative Law Judge for the State of Colorado for over 15 years. She handled workers' compensation cases. Subsequently she worked for approximately two years as an attorney representing injured workers in Colorado.

19. Respondent, through Ms. Wheelock, testified that Dr. Machanic's initial report dated October 18, 2016 allegedly described "new symptoms" not documented previously, as well as symptoms Claimant allegedly experienced prior to the work injury. Ms. Wheelock testified she conferred with her attorney and decided to obtain a "second opinion."

20. Respondent arranged for Claimant to be examined by its retained physician, Dr. Randall Bjork. However, Dr. Bjork did not see Claimant until December 8, 2016, well past 7 business days after the date Dr. Machanic recommended EEG testing. Respondent testified, with no evidence in rebuttal, that she believed that Claimant did not accept or appear for several earlier appointment dates with Dr. Bjork. Dr. Bjork did not ultimately opine one way or the other regarding the EEG testing Dr. Machanic recommended.

21. At hearing, Respondent asserted Dr. Machanic "changed his prescription to comply with the Medical Treatment Guidelines" on February 3, 2017, and once that happened, she authorized the testing. The record is not clear that Respondent, through counsel, was aware on October 31, 2016, that Dr. Machanic's request did not meet the Medical Treatment Guidelines under W.C.R.P. 17, Exhibit 10, or if later research revealed that fact. Regardless of any provisions of the Medical Treatment Guidelines, Respondent was obligated to either authorize the request, or timely take action pursuant to W.C.R.P. 16-10(A) or (B) if she wished to challenge the request.

22. When asked on direct examination why she waited until February 17, 2017 to finally authorize Dr. Machanic's request for authorization of EEG testing, Ms. Wheelock offered several reasons, including the following: her attorney was out of state; when he returned he had to move out of his office; then he got bronchitis; then he had hernia surgery; she herself was out of the country from January 19 to February 2, 2017; she is a solo practitioner with a domestic relations law practice; and due to their schedules they had difficulty "getting together." The ALJ finds that while these reasons are truthful, they do not constitute legal defenses.

23. Respondent credibly testified she has not practiced workers' compensation law for a number of years, and had not kept with the applicable rule and statute changes. Instead, she relied on her attorney to navigate the system on her behalf, so she could focus on her existing family law practice. On direct examination agreed that ignorance of the applicable workers' compensation rules is no excuse for not complying with them.

24. Respondent admitted she failed to notify Dr. Machanic in writing within 7 business days of her receipt of his request for authorization of EEG testing that she was challenging his request for the testing. Respondent admitted she failed to have Dr. Machanic's request for authorization of EEG testing reviewed by a different physician within 7 business days of her receipt of that request.

25. Respondent failed to timely contest, according to the applicable Rules, Dr. Machanic's request for authorization of EEG testing for either medical reasons or non-medical reasons.

26. Claimant testified that Dr. Machanic wanted her to stop taking her medications in preparation for the EEG testing. When Dr. Machanic first recommended the EEG testing in October, 2016, Claimant was taking Tramadol for pain; sumatriptan for headaches; escitalopram for depression; cyclobenzaprine for muscle spasms;

promethazine for nausea; and Xanax for anxiety. (Claimant's Exbs. pg. 100). Claimant testified that she stopped taking "these medications as instructed by Dr. Machanic", with the expectation that the EEG testing would be timely approved. After ceasing these medications, Claimant says she experienced increased neck and shoulder pain, headaches, anxiety, depression and difficulty sleeping.

27. Dr. Machanic's notes indicate further, however, that he *only* recommended ceasing the sumatriptan (since *it does not work at all* per Claimant), and the tramadol (which helped *"modestly"* for pain, according to Claimant herself). Tramadol could increase the risk of seizures. *At no point do Dr. Machanic's notes recommend Claimant cease taking the other four medications, including those for depression, anxiety, muscle spasms, and difficulty sleeping. These are the very medications prescribed to prevent the very symptoms she now complains of.*

28. Claimant testified that after she reviewed Dr. Machanic's responses to her attorney's questions regarding the urgency of the EEG testing and the fact that continued delay could result in death or paralysis (Claimant's Exbs. pgs. 92-94) she felt "scared to death."

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado (Act), sections 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case 6 must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385, 389 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936) (overruled on other grounds in *Lockwood v. The Travelers Insurance Company*, 498 P.2d 947, 952 (Colo. 1972)).

D. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Penalties

E. Claimant asserts that Respondent failed to comply with W.C.R.P. 16-10(A) and (B) when Respondent did not authorize, or take action to challenge, Dr. Machanic's request for authorization of EEG testing. Claimant seeks penalties under Section 8-43-304(1), C.R.S. for Respondent's failure to comply with W.C.R.P. 16-10(A) or (B), and she asserts she is entitled to a penalty for each day that Respondent failed to authorize the EEG testing. Claimant contends she is entitled to penalties beginning October 31, 2016 (the seventh business day after October 19, 2016, the date on which Dr. Machanic submitted his request for authorization of EEG testing), up to February 17, 2017, the date on which Respondent authorized the EEG testing. This is a period of 109 days.

F. The ALJ notes W.C.R.P. 16-10(F) provides that "Unreasonable delay or denial of prior authorization, as determined by the Director or an administrative law judge, may subject the payer to penalties under the Workers' Compensation Act."

G. Claimant contends she suffered physical and mental harm as a result of Respondent's failure to authorize or challenge Dr. Machanic's request for EEG testing. The ALJ does not concur in this assessment. Had Respondent promptly approved this procedure, certainly some stress while awaiting the procedure would have been prevented. However, Respondent was not obligated to *approve* Dr. Machanic's proposed ambulatory EEG; Respondent was merely obligated to file a legal *response* thereto. Respondent could have contested it, arguably on either medical or non-medical grounds. Ultimately a hearing could have settled this matter as well, but not before a similar period of time had passed as it took to reach the stipulation for coverage. *Claimant discontinued **ALL** her medications-not just the two of marginal or no effectiveness as recommended by Dr. Machanic-* in anticipation of a quick EEG, but this was before a stipulation for coverage could be reached.

H Respondent contends no penalty is warranted because its actions were reasonable. In support of this proposition, Respondent relies on its efforts to obtain a second opinion; the fact that Dr. Machanic issued second request for EEG testing on February 8, 2017; and apparent communication difficulties Respondent had with its attorney towards the end of 2016 and the beginning of 2017. In essence, Respondent claims its actions were reasonable.

I. Whether statutory penalties may be imposed under Section 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1,000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel..." Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable.

J. The ALJ notes that failure to comply with a procedural rule is a failure to obey an "order" within the meaning of Section 8-43-304(1), C.R.S. *Fera v. Industrial Claim Appeals Office*, 169 P.3d 231, 234 (Colo. App. 2007)

K The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp*., W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), but see *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996).

L. The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital*, supra. A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a provision of the Act. If the claimant makes such a prima facie showing, the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital*, supra, *Human Resource Co. v. Industrial Claim Appeals Office*, 984 P.2d 1194 (Colo. App. 1999).

M. W.C.R.P. 16-10(A) provides that if the payer wishes to contest a request for prior authorization for non-medical reasons, it must notify the provider and the parties within 7 business days of receipt of the provider's completed request for authorization. ("Non-medical reasons" are defined in W.C.R.P. 16-11(B) and include compensability not having been established, and the services "…are not related to the admitted injury…")

N. However, W.C.R.P. 16-10(A) also states that if the provider explains how the requested procedure is related to the admitted workers' compensation claim, then the payer cannot deny based solely on relatedness without a medical review as required by W.C.R.P. 16-10(B). Dr. Machanic explained how the requested EEG testing was related to the admitted claim, at least in his opinion. Reasonable minds might have differed on Sr. Machanic's conclusion at this time, but if it wanted to properly contest Dr. Machanic's request, Respondent still had to comply with W.C.R.P. 16-10(B).

O. W.C.R.P. 16-10(B) provides that if the payer wishes to contest a request for prior authorization for medical reasons, the payer must, within 7 business days of receipt of the request, have it reviewed by "…a physician or other health care professional…who holds a license and is in the same or similar specialty as would typically manage the medical condition, procedures, or treatment under review…" This did not happen.

P. As was later determined (but not referenced in the Blixt letter), Dr. Machanic's authorization request was arguably outside the Medical Treatment Guidelines on two separate bases. The pertinent provisions of W.C.R.P. 17, Exhibit 10 reads:

> 5. ELECTROENCEPHALOGRAPHY: a. Electroencephalography (EEG):…..
>
> > If during this period there is failure to improve, or the medical condition deteriorates, an EEG may be indicated to assess seizures, focal encephalopathy due to persistent effects of hemorrhage, diffuse encephalopathy due to the injury, or other complicating factors such as hydrocephalus or medications. A ***normal EEG*** does not definitively rule out a seizure disorder. If there is sufficient clinical concern that a seizure disorder may exist ***despite a normal EEG,*** then a ***72 hour ambulatory EEG*** or inpatient video-EEG monitoring *may* be appropriate. (emphasis added).

The records do not indicate that a "normal EEG" was performed before the ambulatory EEG was recommended. Secondly, as was later pointed out, once the EEG was limited to 72 hours, and the communication issues resolved, Respondent acquiesced.

Q. In this case, Claimant made a prima facie showing that Respondent violated W.C.R.P. 16-10(A) and (B) by failing to take timely action to challenge Dr. Machanic's request for authorization of EEG testing. Therefore, the burden of persuasion shifted to Respondent to show that its conduct was reasonable. Respondent did not carry its burden of persuasion to show that its conduct was objectively reasonable, according to established case law.

R. The ALJ concludes that none of the reasons proffered by Respondent for not complying with W.C.R.P. 16-10(A) or (B) were based on a rational argument based in law or fact, as recognized by established case law. Respondent's inaction in the face of a request for authorization of EEG testing was not objectively reasonable.

S. Accordingly, it is concluded that Claimant is entitled to award of penalties under Section 8-43-304(1), C.R.S.

Calculation and Apportionment of the Appropriate Penalty

T. The amount of penalty or fine, if any, is discretionary with the court. Crowell v. Industrial Claim Appeals Office, 2012 WL 503675, (Colo. App 2012)

rehearing denied. The time period between the first business day of noncompliance with the Rules (October 31, 2016), and the date Respondent authorized the procedure at issue (February 17, 2017) is 109 days. Claimant seeks $1000 per each day of noncompliance. In the event penalties are to be awarded, Respondent argues that $25 per day would be more appropriate. In this case, the ALJ will weigh certain aggravating and mitigating factors.

U. In aggravation, the length of time of noncompliance is fairly lengthy. However, since penalties are accrued on each day of noncompliance, that aggravating factor is effectively built into the final penalty amount. Claimant has endured stress by the delays in approving this claim. The public policy objectives of the Workers Compensation Act are furthered when claims adjusters familiar with the process are involved at every step. Then disputes can be resolved in a predictable and orderly process.

V. The lack of ability to communicate between Attorney Blixt (serving essentially as a claims adjuster), his client, Claimant's physician, and Claimant's attorney should not prejudice Claimant. While Claimant was understandably stressed by the delays in the process, there is no evidence of actual harm. If she failed to follow Dr. Machanic's instructions in which medications to stop, Respondent cannot be held accountable for that. While accepting as truthful the reasons set forth by Respondent (moving Mr. Blixt's practice, Mr. Blixt's two serious medical issues, Respondent's vacation plans, Respondent's own domestic practice, etc) for the delays in approval, the ALJ must still impose penalties for each day of noncompliance.

W. Mitigating factors abound, however. Respondent testified credibly that she wants Claimant to get well, and the sooner the better. No one, save Claimant herself, has a greater stake in Claimant's medical outcome. Respondent quickly admitted this claim. Respondent has authorized considerable expenses and consultations with various medical professionals, and has apparently paid them all in good faith, and in anticipation of assisting Claimant.

X. The Blixt letter of October 31, 2016 demonstrates that *the EEG was not being* ***refused.*** It was sent in response to a series of red flags raised in Dr. Machanic's request. 120 hours of ambulatory EEG sounded like a lot, even if it became apparent only at a later date that the actual text of the medical treatment guidelines was not being followed. Any reasonable person in Respondent's position would have concerns. Mr. Blixt had already priced the EEG procedure with the suggested provider, which was a considerable sum. He had reviewed the request in detail, having noted a number of symptoms not previously noted. He had already contacted a physician in a similar specialty for a second opinion. He then inquired if there was an objection to his suggestion. There was, since an Application was filed the same day seeking penalties.

Y. The Blixt letter, along with Respondent's testimony, shows that any initial noncompliance with the Rules, while objectively unreasonable, was not done *willfully* or *intentionally.* Instead, it showed that good faith and diligence was being exercised in an

effort to supply treatment that was reasonable and necessary for Claimant's recovery. Respondent's actions at issue herein fit a pattern of 17 months of responsiveness to Claimant's medical needs. At most, they represented some initial unfamiliarity with the requirements of W.C.R.P. 16-9 and 16-10, and the medical treatment guidelines.

Z. Draconian penalties are simply not warranted under such facts, even if the Respondent were a deep pocketed insurer. This was a precautionary diagnostic procedure, not prescribed treatment which would alleviate pain or injury. Claimant, at this juncture, has not shown physical harm by this delay beyond her own stress of waiting. Respondent could have delayed the process by months anyway, simply by following the Rules correctly. A maximum penalty as being suggested by Claimant would certainly not further the objectives of either party of bringing about her recovery. Indeed, her prospects would be greatly diminished. Given the mitigated nature of these facts, $10.00 per day of noncompliance is appropriate.

AA. The cumulative penalty imposed for this violation is therefore $1,090.00.

BB. Due to the stress suffered by Claimant from the delays in this diagnostic process, this penalty is apportioned to be payable at 100% to Claimant, and 0% payable to the Workers Compensation Cash fund, pursuant to C.R.S. 8-43-304(1).

ORDER

It is therefore ordered that:

1. Respondent shall pay penalties in the total amount of $1,090.00, 100% of which are to be paid to Claimant, and 0% to the Workers Compensation Cash Fund.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Has Claimant received an overpayment of indemnity benefits?

2. Are Respondents entitled to reduce Claimant's ongoing TTD benefits by 50% to recover an existing overpayment?

FINDINGS OF FACT

The parties stipulated to the following facts, which were accepted by an Order dated January 20, 2017:

1. Claimant sustained an admitted industrial injury to his right knee on January 2, 2007. Claimant later sustained an injury to his left knee as part of this claim. Claimant had total knee replacement surgeries on both knees. As of the date of the parties' stipulation, Claimant was not at MMI and remained on TTD.

2. Claimant's TTD rate is $719.74, the applicable maximum rate. Per § 8-42-107.5, the applicable cap is $120,000 for impairment greater than 25%.

3. Claimant received $16,071 in unemployment benefits from March 7, 2009 through October 31, 2010.

4. Claimant received Social Security Disability Insurance (SSDI) benefits of $486.35 per week, beginning November 1, 2010. The SSDI amount consists of payments to Claimant of $324.35, and payments to Claimant's minor daughter (date of birth September 12, 2005; currently 11 years old) of $162.00 ($324.35 + $162 = $486.35). The SSDI offset is $243.18 per week.

5. Claimant presently receives $476.56 per week in TTD, which reflects the SSDI offset ($719.74 - $242.18 = $476.56).

6. As of September 30, 2016, Claimant was entitled to a total of $212,371.26 in TTD benefits, as outlined in a General Admission of Liability dated October 27, 2016.

7. As of September 30, 2016, Respondents had paid Claimant $231,386.63 in indemnity benefits.

8. On October 31, 2006, Respondents filed a Petition to Modify Compensation, seeking to reduce Claimant's TTD rate by 50% to $238.31 per week, due to the existing overpayment of $19,015.37. Claimant timely objected.

9. A hearing on the overpayment issue was scheduled for January 24, 2017, in Colorado Springs.

10. The parties agreed that a hearing was unnecessary, and the issues could be determined on the submission of briefs, with the stipulations (including the October 27, 2016 General Admission with attachments) being the evidence for consideration.

Based on the stipulated facts, the ALJ makes the following additional findings:

11. As of September 30, 2017, Claimant was overpaid by $19,015.37 ($231,386.63 - $212,371.26 = $19,015.37).

12. Although Respondents reduced Claimant's ongoing TTD payments at some point to recover overpayments, there remains an uncollected overpayment of $19,015.37.

13. The ALJ finds it appropriate for Respondents to prospectively reduce Claimant's weekly TTD benefits by 50% to $238.31 per week to recover the overpayment.

CONCLUSIONS OF LAW

Section 8-42-103(1)(f) provides that TTD benefits shall be reduced by the amount of concurrent unemployment benefits a claimant received. Respondents have a statutory offset of $16,071 for unemployment benefits Claimant received.

Section 8-42-103(1)(c) provides that TTD benefits shall be reduced by one-half of the amount of SSDI benefits payable to a claimant and his dependents. Claimant received $486.35 per week in SSDI benefits commencing November 1, 2010, resulting in a weekly SSDI offset of $243.18 as of that date.

Section 8-40-201(15.5) defines an "overpayment" as:

> money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received to disability or death benefits under said articles."

The statutory definition creates three categories of possible overpayments. One category is for overpayments created when a claimant receives money "that exceeds the amount that should have been paid"; the second category is for money received that a "Claimant was not entitled to receive"; and the final category is for money received that "results in duplicate benefits because of offsets." *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd in part on other grounds, Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

As found, Claimant has been overpaid $19,015.37. Although Claimant argues he satisfied the overpayment by December 2013, review of the indemnity payment log and

the stipulated facts do not support that assertion. Despite any previous benefit reductions, Claimant remains overpaid by $19,015.37.

The ALJ has discretion to determine the appropriate remedy for an overpayment, including the rate at which to allow recovery of the overpayment, given the totality of the factual circumstances at the time of the ALJ's order. *Louisiana Pacific Corp. v. Smith*, 881 P.2d 456 (Colo. App. 1994); *Schramek v. Chico's FAS*, W.C. No. 4-601-867 (ICAO, June 14, 2011).

Under the circumstances, the ALJ finds it appropriate for Respondents to prospectively reduce Claimant's weekly TTD benefits by 50% to recoup the overpayment. Although Respondents petitioned to modify Claimant's benefits on October 31, 2016, the ALJ is not persuaded by Respondents' request to take a 100% offset to account for the weeks between October 31, 2016 and the date of this order. The ALJ concludes that would cause an undue hardship on Claimant.

ORDER

1. Respondents may prospectively reduce Claimant's ongoing TTD benefits to $238.31, by filing an Amended GAL following receipt of this Order. The reduction may commence the day after the "paid through" date of the TTD payment immediately preceding the filing of the Amended GAL.

2. All matters not determined herein, including but not limited to resolution of any overpayment that may remain after Claimant's entitlement to TTD benefits terminates, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 17, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-955-695-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 21, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 2/21/17, Courtroom 1, beginning at 1:30 PM, and ending at 3:40 PM).

Claimant's Exhibits 1 through 12 were admitted into evidence, without objection. Respondents' Exhibits A through J were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Respondents' answer brief and opening brief on overcoming the Division Independent Medical Examination (DIME) of David Yamamoto, M.D., was filed, electronically, on February 27, 2017; Claimant's opening brief/answer brief was filed, electronically, on March 6, 2017; Respondents' answer brief (to Claimant's conversion issue)/opening brief on overcoming the DIME was filed on March 9, 2017. Claimant's reply brief was filed on March 15, 2017. Respondents' reply brief, if any was due on March 17, 2016; however, none was timely filed. Consequently, the matter was deemed submitted for decision on March 20, 2017..

ISSUES

The issues to be determined by this decision concern the Respondents' request to overcome the DIME opinions of Dr. Yamamoto; and, the Claimant's alternative request to convert ATP Dr. Hattem's RUE rating to a whole person rating.

The Respondents bear the burden of proof, by clear and convincing evidence, of overcoming the DIME opinion of Dr. Yamamoto. The Claimant bears the burden of proof, by a preponderance of the evidence, on the issue of conversion of the 12% left upper extremity (LUE) rating of ATP Dr. Hattem and, in doing so, must accept the four corners of Dr. Hattem's ultimate opinions.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant sustained an admitted injury to her left upper extremity (LUE) on July 14, 2014. She sustained a fracture of her left proximal humerus which required open reduction and internal fixation of her left humerus. The left humerus is part of the left arm below the shoulder. This procedure was performed by Jared Michalson, M.D., on July 23, 2014.

2. The Respondents filed a Final Admission of Liability (FAL), dated April 14, 2016, admitting for post maximum medical improvement (MMI) medical maintenance benefits; an average weekly wage (AWW) of $748.50; temporary total disability (TTD) benefits of $499 per week through February 11, 2016; and, permanent scheduled impairment of 12% of the LUE with an MMI date of February 12, 2016, pursuant to the recited rating of Matthew Miller, M.D., which actually was the rating of authorized treating physician (ATP) Albert Hattem, M.D.

3. The Claimant filed a timely objection to the FAL, and a Notice and proposal to select a DIME. David Yamamoto, M.D., was selected to perform the DIME.

4. The Claimant underwent three left subacromial bursa injections performed by Dr. Michalson on November 14, 2014, December 9, 2014 and January 15, 2015.

5. Scott Primack, D.O., referred the Claimant to Patrick J. McNair, M.D., for a second orthopedic opinion.

6. The Claimant developed posttraumatic arthrofibrosis of her left shoulder as diagnosed by Dr. McNair. As a result, the Claimant underwent a second surgical procedure performed by Dr. McNair on March 2, 2015. The procedure performed by Dr. McNair included examination under anesthesia of the left shoulder, diagnostic arthroscopy of the left shoulder, extensive lysis of adhesions within the glenohumeral joint, extensive lysis of adhesions of the subacromial space without subacromial decompression and extensive lysis of adhesions in the subdeltoid space. (*See* Claimant's Exhibit 10, pp. 81-85)

7. The Claimant underwent a third surgical procedure on August 31, 2015, performed by Dr. McNair. The procedure included removal of left proximal hardware plate and screws to address persistent hardware pain. (*See* Claimant's Exhibit 11, pp. 86-88). Review of Dr. McNair's report (Claimant's Exhibit 11, p. 87), demonstrates, "I performed an arthroscopic lysis of adhesions and manipulation. We regained range of motion but once range of motion was found, we identified that she had symptomatic hardware" (p. 88) "Once the plate and screw construct was removed the arm was placed through a range of motion and there was no further impingement at the subacromial space. I have reasonable range of motion at this point and did not feel any excessive adhesions."

8. The Claimant was provided with and underwent 45 sessions of physical therapy. She was taught home exercise programs.

9. The Claimant was placed at MMI on February 12, 2016 by Albert Hattem, M.D., an ATP at Concentra Medical Centers. Dr. Hattem rated the Claimant a 12% permanent scheduled rating of her LUE which he converted to a 7% whole person impairment rating, pursuant to the *AMA Guides to the Evaluation of permanent Impairment,* 3rd Ed., Rev. Dr. Hattem noted full cervical range of motion but did not perform formal range of motion testing of the Claimant's cervical spine. Dr. Hattem discharged the Claimant with permanent restrictions of no lifting, push or pull more than 5 pounds using left arm and no use of left arm above chest height. Respondents admitted liability consistent with Dr. Hattem's report, noting in the FAL that the rating and MMI date were pursuant to Dr. Miller's opinions.

Division Independent Medical Examination (DIME) by David Yamamoto, M.D.

10. The Claimant requested and underwent a DIME performed by Dr. Yamamoto. Dr. Yamamoto rated the Claimant at 16% permanent impairment rating for the LUE that could convert to a 10% whole person permanent impairment rating. Dr. Yamamoto also was of the opinion that the Claimant qualified for a permanent impairment rating for her cervical region. Dr. Yamamoto rated the Claimant at 9% whole person permanent impairment for loss of cervical range of motion utilizing the Impairment Rating Tips provided by the Colorado Division of Workers' Compensation, updated July 2016. Dr. Yamamoto agreed with the permanent restrictions provided by

Dr. Hattem. Dr. Yamamoto recommended treatment of the myofascial injury to the Claimant's neck, including possible massage therapy, acupuncture, topical medication and trigger point injections.

Respondents' Independent Medical Examination (IME) by Kathleen D'Angelo, M.D.

11. Claimant underwent an IME with Dr. D'Angelo at the request of Respondents. Dr. D'Angelo issued her report on or about January 26, 2017. Claimant indicated in her history that she had ongoing pain and limitations in her arm, shoulder and neck. This was identified on the Claimant's pain diagram prepared in association with the IME. Dr. D'Angelo asked specific questions about the Claimant's neck, to which Claimant indicated that her neck problems had been going on as part of her left arm and shoulder injury and Claimant would get pain shooting up to her neck with household chores and driving. Nonetheless, Dr. D'Angelo was of the opinion that the Claimant did not qualify for a cervical impairment rating and that her functional limitation was limited to her left arm.

12. According to Dr. D'Angelo adhesive capsulitis is not the severe shoulder pathology as indicated in the Tips. Dr. D'Angelo testified that severe shoulder pathology as used in the Tips refers to osteomyelitis or avascular necrosis. Dr. D'Angelo stated it is not unusual in a diabetic who smokes*, i.e.,* the Claimant, to develop adhesive capsulitis due to disuse of an arm post surgery. While this may create reasonable doubt as to cervical disability, at most, this is a difference of opinion with DIME Dr. Yamamoto, and it does not rise to the level of clear and convincing evidence.

Conversion of LUE Scheduled Rating to Whole Person Rating

13. Conversion is appropriate when permanent impairment is determined at MMI, and since Dr. Yamamoto agreed with the February 12, 2016 date of MMI. The ALJ finds that Dr. Hattem's 12% permanent medical impairment rating of the Claimant's LUE, as it existed at maximum MMI, would be the more appropriate rating to convert as opposed to Dr. Yamamoto's 16% scheduled impairment rating that was found at the DIME for the reasons herein below specified. DIME Dr. Yamamoto and ATP Dr. Hattem have a difference of opinion on the degree of scheduled impairment of the LUE. The ALJ makes a rational choice to accept ATP Dr. Hattem's scheduled rating of 12% LUE and to reject DIME Dr. Yamamoto's scheduled rating of 16% LUE. ATP Dr. Hattem dealt with the Claimant more extensively than Dr. Yamamoto. The next question is should the scheduled rating of 12% LUE be converted to a whole person rating. ATP Dr. Hattem is **not** of the opinion that a conversion of his 12% LUE rating to a whole person rating is appropriate. Consequently, accepting the four corners of Dr. Hattem's opinions, a conversion to a whole person rating has not been proven. Neither is DIME Dr. Yamamoto's scheduled rating. He mechanistically converted his scheduled rating of

16% LUE to 10% whole person, as required by the *AMA Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev., without rendering an opinion that conversion to a whole person rating was appropriate. Therefore, Dr. Yamamoto's reports do not support a conversion. The DIME physician and the ATP are on the level playing field of "preponderant evidence," on the **conversion** issue. The significant difference between ATP Dr. Hattem's rating and DIME Dr. Yamamoto's ratings is that Dr. Hattem declined to rate the Claimant's cervical spine and DIME Dr. Yamamoto rated it.

Overcoming the DIME of David Yamamoto, M.D.

14. As found herein above, Dr. Yamamoto was of the opinion that the Claimant was entitled to a permanent impairment rating to her cervical region. He rated the Claimant's cervical spine at 9% of the whole person permanent impairment for loss of cervical range of motion utilizing the Impairment Rating Tips provided by the Colorado Division of Workers' Compensation, updated July 2016. Dr. Yamamoto agreed with the permanent restrictions provided by Dr. Hattem. Dr. Yamamoto recommended treatment of the myofascial injury to Claimant's neck, including possible massage therapy, acupuncture, topical medication and trigger point injections.

15. Dr. Hattem evaluated the Claimant's cervical spine stating, "the cervical spine demonstrates full range of motion" (*See* Respondents' Exhibit D, pp. 108, 118, 120, 122, 124 and 127). As found herein above, there is a difference of opinion between Dr. Hattem and Dr. Yamamoto, however, this difference of opinion does not rise to the level of making it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Yamamoto's rating of the Claimant's cervical spine was in error. By the same token, there is a difference of opinion between IME Dr. D'Angelo and DIME Dr. Yamamoto which does not rise to the level of clear and convincing evidence.

16. Dr. Yamamoto applied the Impairment Rating Tips of the Division of Workers' Compensation (DOWC) in support of issuing a 9% whole person rating for cervical range motion. A physician's application of the Impairment Rating Tips when assessing an impairment rating and any deviation from the Impairment Rating Tips is a factor for the ALJ to consider in assessing the weight the ALJ chooses to give to an impairment rating. The Impairment Rating Tips were admitted into evidence as Respondents' Exhibit J. The Impairment Rating Tips provide for an exception to the requirement of a Table 53 impairment rating pursuant to the *AMA Guides to the Evaluation of Permanent Impairment*, 3rd Edition, Rev. In relevant part the Impairment Rating Tips, under Spinal Rating, provides:

> In unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature, an isolated cervical range of motion impairment may be allowed if well-justified by the clinician.

17. Dr. Yamamoto discusses in great detail the rationale for providing a permanent impairment rating for cervical range of motion. He documented severe shoulder pathology with his assessment of Post Traumatic arthrofibrosis of the left shoulder, status post extensive lysis of adhesions and manipulation under anesthesia. As found, Dr. Yamamoto recommended treatment to the cervical musculature in the nature of massage therapy, acupuncture, topical medication and trigger point injections. He documented ongoing functional loss to the neck as evidence by an inability to work and drive. Dr. Yamamoto was clearly of the opinion that the Claimant sustained loss of function to her cervical musculature as a direct and proximate result of her left arm and shoulder injuries. Referred pain from the primary site of the injury may establish proof of functional impairment to the whole person. Thus, pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for purposes of determining whether an injury is on or off the schedule. Therefore, the site of functional impairment includes the cervical region which is part of the trunk of the body.

18. DIME Dr. Yamamoto performed formal range of motion testing, while the treating physicians at Concentra, including Dr. Hattem, and their referrals, performed cursory evaluations of the Claimant's cervical region, commenting on inspection that Claimant had full range of motion or nearly full range of motion. For these reasons, among other reasons, the ALJ finds Dr. Yamamoto's opinions concerning the cervical impairment more credible and persuasive than all other opinions to the contrary.

19. According to the Claimant, Claimant, she no longer felt safe to drive due to her inability to turn her head, neck pain and stiffness. The Claimant also testified concerning ongoing pain and limitation in her left arm, shoulder and up into the left side of her **neck.** This testimony was consistent with the information provided to Dr. Yamamoto and Dr. D'Angelo and it is credible and persuasive. The Claimant's testimony in this regard is un-refuted and it implicates the trunk of the Claimant's body, corroborates DIME Dr. Yamamoto's cervical rating, and it merits a whole person rating of the cervical spine.

20. The ALJ infers and finds that the situs of functional impairment, as determined by DIME Dr. Yamamoto, is the cervical spine, which he separately rated from the LUE.

Ultimate Findings

21. For the reasons herein above stated, the ALJ finds ATP Dr. Hattem's 12% scheduled rating of the Claimant's LUE more credible and persuasive than Dr. Yamamoto's 16% rating of the LUE for purposes of the **conversion** issue. Nonetheless, the ALJ finds DIME Dr. Yamamoto's whole person rating of 9% for the cervical spine more credible and persuasive than Dr. Hattem's finding full cervical range of motion and not rating the cervical spine; and, more credible and persuasive than IME

Dr. D'Angelo's opinions to the contrary. Also, the Claimant's testimony about his neck limitations in driving and other functions is credible, corroborated by the histories he gave to medical providers and, essentially, undisputed.

22. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinion and cervical spine whole person rating of DIME Dr. Yamamoto and to reject opinions to the contrary. The ALJ, however, accepts ATP Hattem's 12% scheduled rating of the LUE and rejects DIME Dr. Yamamoto's scheduled rating of 16% LUE. Further, conversion to a whole person rating is unwarranted because neither Dr. Hattem nor Dr. Yamamoto expressed an opinion concerning the appropriateness of a conversion as considered separately and distinctly from the cervical rating.

23. The Claimant has failed to prove, by a preponderance of the evidence that conversion of the LUE rating is appropriate, or that DIME Dr. Yamamoto's 16% LUE rating is more appropriate than ATP Dr. Hattem's 12% LUE rating.

24. The Respondents have failed to prove that it is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Yamamoto's 9% cervical spine whole person rating is in error. Therefore, the Respondents have failed to overcome the DIME by clear and convincing evidence.

25. The Claimant's LUE permanent scheduled impairment and her 9% cervical impairment are two separate and distinct impairments.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The

same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, Dr. Hattem's 12% scheduled rating of the Claimant's LUE was more credible and persuasive than Dr. Yamamoto's 16% rating of the LUE for purposes of the **conversion** issue. Nonetheless, as found, DIME Dr. Yamamoto's whole person rating of 9% for the cervical spine was more credible and persuasive than Dr. Hattem's finding full cervical range of motion and not rating the cervical spine; and, more credible and persuasive than IME Dr. D'Angelo's opinions to the contrary. Also, as found, the Claimant's testimony about his neck limitations in driving and other functions was credible, corroborated by the histories he gave to medical providers and, essentially, undisputed.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals*

Office, 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinion and whole person cervical spine rating of DIME Dr. Yamamoto and to reject opinions to the contrary. The ALJ, however, accepted ATP Hattem's 12% scheduled rating of the LUE and rejected DIME Dr. Yamamoto's scheduled rating of 16% LUE. Further, conversion to a whole person rating was unwarranted because neither Dr. Hattem nor Dr. Yamamoto had expressed an opinion concerning the appropriateness of a conversion as considered separately and distinctly from the cervical rating.

Overcoming the DIME of Dr. Yamamoto

c. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Respondents failed to prove that it is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Yamamoto's 9% whole person cervical spine rating is in error. Therefore, the Respondents have failed to overcome the DIME opinion concerning the cervical spine by clear and convincing evidence. Also, as found, DIME Dr. Yamamoto determined that the situs of the Claimant's cervical impairment was the cervical spine, a part of the trunk of the body (which is separate and distinct from the LUE injury). It is not the situs of the initial injury but the situs of functional impairment that is

determinative of whole person impairment, and this is a factual question to be resolved by the ALJ. *See Strauch v. PSL Swedish Healthcare* but the situs of functional impairment that drives a whole person rating, *Sys* 917 P.2d 366 (Colo. App. 1996).

Scheduled and Whole Person Awards Separate

d. Scheduled and non-scheduled impairments are treated differently for purposes of determining permanent disability. *See Delaney v. Indus. Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000). § 8-42-107 (7) (b) (II), C.R.S. provides that scheduled injuries shall be separately compensated from whole person injuries. As found, herein above, the LUE injury is separate and distinct from the cervical injury, thus, a separate award for the scheduled LUE injury and the separate cervical injury is warranted.

Burden of Proof with Respect to Conversion of the Scheduled LUE Rating

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain her burden with respect to a conversion of the scheduled LUE rating and with respect to the proposition that Dr. Yamamoto's 16% LUE rating is more appropriate than ATP Dr. Hattem's 12% LUE rating. When the contest is **scheduled rating vs. scheduled rating,** a DIME physician is on the level playing field of "preponderant evidence." And, in this case, it was the Claimant's burden to prove that Dr. Yamamoto's LUE rating of 16% was more appropriate than ATP Dr. Hattem's rating of 12% LUE. The Claimant has also failed to sustain this burden.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Final Admission of Liability is re-affirmed with respect to 12% scheduled rating for the left upper extremity; and, any and all claims for conversion thereof to a whole person rating, or adoption of Dr. Yamamoto's 16% left upper extremity rating are hereby denied and dismissed.

B. For and on account of the Claimant's permanent whole person medical impairment of 9%, the Respondents shall separately pay the Claimant $499.00 per week, retroactively and forthwith, from February 12, 2016, the date of maximum medical improvement, according to the formula contained in § 8-42-107 (8) (d), C.R.S. [9% x 400 x 1.0 x $499.00= $17,964.00].

C. The Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

DATED this_____day of March 2017.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the left shoulder arthroscopy performed by Dr. Kennan Vance on May 24, 2016 constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 17, 2015 work injury.

- Whether claimant has proven by a preponderance of the evidence that the sacroiliac ("SI") joint fusion recommended by Dr. Kirk Clifford constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 17, 2015 work injury.

FINDINGS OF FACT

1. Claimant has been employed with respondent since 2005. In February 2015 claimant worked at Nisley Elementary School in the severe needs and behavior classroom. Claimant sustained an admitted work injury on February 17, 2015. The injury occurred when claimant tripped and fell outside while following an agitated student across a school playground.

2. Claimant testified that she fell forward onto both hands and both knees. Claimant testified that because she was carrying a radio in her left hand at the time of the fall, she had greater impact on her right side. In addition, claimant scraped her back on a concrete bench. Claimant testified that the body parts impacted by her February 17, 2015 fall included her right elbow, left hip, back, both shoulders, both hands, and both knees. Claimant timely reported the injury to employer and employer sent claimant for treatment with Dr. Craig Stagg as her authorized treating physician ("ATP").

3. Claimant testified that she has a prior history of back pain and scoliosis. On March 19, 2008, Dr. James Gebhard performed an extensive fusion from the T11 level to claimant's sacrum. Claimant testified that following the 2008 fusion surgery she did very well and returned to full duty work.

4. Following the February 17, 2015 work injury, claimant began treating with Dr. Stagg on February 18, 2015 and reported, among other issues, pain in both shoulders. Claimant testified that prior to the February 17, 2015 injury she did not have issues or pain in her shoulders.

5. Claimant suffered a radial head injury to her right elbow, requiring surgery. Claimant's right elbow surgery was performed on February 27, 2015 by Dr. Michael Rooks.

6. Claimant testified that following the elbow surgery she continued to have pain in both shoulders and consistently notified her health care providers of her bilateral shoulder pain. Claimant testified that her right shoulder was addressed first because she had more pain in that shoulder. Claimant testified that she received various modes of treatment for both shoulders including physical therapy, injections, and magnetic resonance imaging ("MRI").

7. Claimant's spouse, Kenneth Simms, testified at hearing. Mr. Simms testified that he attended many of claimant's medical appointments and that claimant complained of bilateral shoulder pain at these appointments.

8. On May 13, 2015, Dr. Stagg referred claimant to Dr. Mark Luker to address claimant's shoulder and knee pain. On June 1, 2015, claimant saw Dr. Luker and he recorded that claimant's chief complaint was right shoulder pain and bilateral knee pain.

9. On September 9, 2015, Dr. Stagg noted that claimant had bilateral shoulder pain. At that time he referred claimant to Dr. Kenneth Vance. Claimant first treated with Dr. Vance on September 14, 2015.

10. On November 12, 2015, an MRI of claimant's right shoulder showed supraspinatus outlet impingement with probable tendinosis of the supraspinatus tendon.

11. On November 12, 2015, an MRI was performed on claimant's left shoulder with findings that suggested supraspinatus outlet impingement, with no evidence of a rotator cuff tear.

12. Based upon these MRI results, Dr. Vance recommended a right shoulder arthroscopy. Respondent authorized surgery to claimant's right shoulder and it was performed by Dr. Vance on December 8, 2015. Claimant testified that during surgery Dr. Vance discovered that she had a rotator cuff tear and a tear of her bicep tendon. The medical records indicate that during the December 18, 2015 surgery it was determined that claimant had a tear of the right supraspinatus that was greater than 70%.

13. Dr. Vance also recommended that claimant undergo a left shoulder arthroscopy given the results of the November 12, 2015 MRI.

14. On January 7, 2016, respondent filed a General Admission of Liability ("GAL").

15. On March 6, 2016, Dr. Wallace Larson performed a medical records review related to the recommended left shoulder arthroscopy and opined that claimant's left shoulder pain is not related to the February 17, 2015 work injury. Based upon Dr. Larson's review respondent denied the left shoulder surgery.

16. Despite respondent's denial, claimant elected to undergo the left shoulder arthroscopy. The surgery was performed by Dr. Vance on May 24, 2016 and it was paid for by claimant and her health insurance, CNIC.

17. On September 27, 2016, respondent sent claimant for an independent medical examination ("IME") with Dr. Larson. Dr. Larson reviewed claimant's medical records, obtained a history from claimant and performed a physical examination in connection with the IME. Following the IME, Dr. Larson issued a report in which he opined that it was medically reasonable for claimant to undergo surgery on her left shoulder. However, Dr. Larson also opined that claimant's left shoulder issues are unrelated to the February 17, 2015 work injury, but rather the result of the natural progression of a preexisting condition.

18. Claimant testified that the focus of the September 27, 2016 IME with Dr. Larson related to her left shoulder. Claimant also testified that although she raised her low back and SI joint issues during the IME, Dr. Larson did not examine her low back or her SI joint.

19. On April 1, 2015, claimant reported to Dr. Stagg that she had significant back pain. Dr. Stagg recorded this back pain as being in claimant's lower thoracic and upper lumbar region. At that time Dr. Stagg referred claimant to Dr. Gebhard regarding her complaints of back pain. Thereafter, on April 27, 2015, claimant reported to Dr. Stagg bilateral foot numbness.

20. Based upon claimant's complaints of back pain, Dr. Gebhard referred claimant for SI joint injections, which claimant received on August 4, 2015. Claimant reported to Dr. Stagg that she had good results from the injection. On March 16, 2016, claimant underwent bilateral SI injections which were administered by Dr. Robert Frazho. Claimant testified that she had several weeks of pain relief following the March 2016 injections. Claimant testified that her current low back symptoms include pain that radiates into her buttocks and legs.

21. On June 9, 2016, claimant was seen by Dr. Gebhard and Jason Bell, PA-C. On that date, Mr. Bell noted that claimant had positive responses to two diagnostic injections. Dr. Gebhard recommended the possibility of an SI joint fusion and referred claimant to Dr. Clifford for consultation because Dr. Clifford has more recent experience with SI fusion techniques. Subsequently, Dr. Clifford recommended claimant undergo fusion of her SI joint.

22. Dr. Larson performed a second medical records review on November 8, 2016 regarding the recommended SI joint fusion. In that review Dr. Larson opined that the recommended SI fusion was not reasonable and not indicated by the Colorado Medical Treatment Guidelines ("the Guidelines"). Based upon Dr. Larson's report, respondent denied the recommended SI fusion.

23. On November 30, 2016, claimant's counsel sent Dr. Clifford a written request to respond to a number of questions regarding the recommended SI fusion. Dr.

Clifford responded in writing on that same date and opined that prior to the work injury claimant was asymptomatic following major spinal surgery and that the fall on February 17, 2015 "irritated" claimant's SI joint.

24. In his November 30, 2016 written response, Dr. Clifford also explained that SI joint fusion is indicated for patients who have SI joint pain with "provocative maneuvers" and experience pain relief from SI joint injections. Dr. Clifford opined that claimant is a candidate for SI joint fusion given her prior spinal fusion, increased SI joint pain, and successful SI joint injections.

25. Dr. Larson testified at hearing in this matter and confirmed his opinion that although the surgery performed on claimant's left shoulder was medically reasonable and necessary, it is not related to the February 17, 2015 work injury. Dr. Larson testified that upon his review of the November 2015 MRI he found tendonitis and bursitis in claimant's left shoulder, which Dr. Larson considers a common degenerative condition.

26. In his testimony Dr. Larson also confirmed his opinion that claimant's SI joint issues are unrelated to the February 17, 2015 work injury, and that the recommended SI joint fusion is not reasonable or necessary medical treatment. Dr. Larson testified that an SI joint fusion is typically recommended when there is an acute injury to the SI joint and is not recommended to treat mechanical low back pain.

27. Dr. Stagg testified by deposition in this matter and stated that it is his opinion that claimant's left shoulder issues are not related to the February 17, 2015 work injury. In support of his opinion, Dr. Stagg testified that it is his understanding that claimant did not begin to complain of left shoulder pain until well after the February 2015 injury.

28. Dr. Stagg also testified that he agrees with Dr. Larson that the recommended SI joint fusion is not reasonable and necessary medical treatment to address claimant's low back pain. Dr. Stagg testified that an SI fusion is typically recommended when there is trauma and disruption of the SI joint, which was not present with claimant's injury.

29. The ALJ credits claimant's testimony and finds that following the February 17, 2015 injury she continued to have bilateral shoulder pain and reported that bilateral shoulder pain to her medical providers. Claimant's testimony in this regard is supported by the medical records and the testimony of claimant's spouse.

30. The ALJ credits claimant's testimony and the opinion of Dr. Vance over the contrary opinion of Dr. Larson and finds that claimant has demonstrated that it is more likely than not that the February 17, 2015 work injury caused claimant's left shoulder issues, necessitating surgery.

31. The ALJ credits claimant's testimony and the opinion of Dr. Vance over the contrary opinion of Dr. Larson and finds that claimant has demonstrated that it is more likely than not that the left shoulder arthroscopy performed by Dr. Vance on May

24, 2016 constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 17, 2015 work injury.

32. The ALJ credits the medical records and the opinions of Dr. Gebhard and Dr. Clifford over the contrary opinions of Dr. Larson and Dr. Stagg and finds that claimant has demonstrated that it is more like than not that claimant's SI joint pain is related to the February 17, 2015 work injury. More specifically, claimant has successfully demonstrated that it is more likely than not that the February 17, 2015 fall at work aggravated, accelerated, or combined with claimant's preexisting SI joint condition to necessitate medical treatment. Based upon claimant's testimony regarding the February 17, 2015 fall, in which she struck her low back on a concrete bench, the ALJ finds that it is it is likely that claimant suffered an injury or aggravation to her SI joint.

33. The ALJ credits the medical records and the opinions of Dr. Gebhard and Dr. Clifford over the contrary opinions of Dr. Larson and Dr. Stagg and finds that claimant has demonstrated that it is more likely than not that the recommended SI fusion is reasonable medical treatment necessary to address claimant's low back pain.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where

the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondent is liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has demonstrated by a preponderance of the evidence that the February 17, 2015 work injury included an injury to claimant's left shoulder, necessitating surgery. As found, claimant's testimony and the opinion of Dr. Vance are credible and persuasive on this issue.

6. As found, claimant has demonstrated by a preponderance of the evidence that the left shoulder arthroscopy performed by Dr. Vance on May 24, 2016 constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 17, 2015 work injury. As found, Dr. Vance's opinion on this matter is credible and persuasive.

7. As found, claimant has demonstrated by a preponderance of the evidence that the February 17, 2015 work injury aggravated, accelerated, or combined with claimant's preexisting SI joint condition, necessitating surgery. As found, the opinions of Dr. Gebhard and Dr. Clifford on this matter are found to be credible and persuasive.

8. As found, claimant has demonstrated by a preponderance of the evidence that the recommended SI joint fusion is reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 17, 2015 work injury. As found, the opinions of Dr. Gebhard and Dr. Clifford on this matter are found to be credible and persuasive.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the left shoulder arthroscopy performed by Dr. Vance on May 24, 2016.

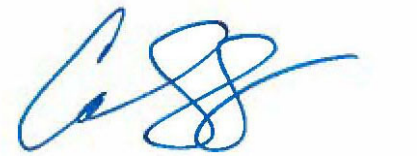
2. Respondent shall pay for the sacroiliac joint fusion recommended by Dr. Clifford, pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor,

Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 20, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether claimant has proven, by a preponderance of the evidence, that his claim should be reopened pursuant to Section 8-43-303, C.R.S. based on a change of condition.

- If claimant's claim is reopened, whether claimant has proven, by a preponderance of the evidence, that the lumbar fusion surgery recommended by Dr. Kirk Clifford is reasonable medical treatment necessary to cure and relieve claimant from the effects of the September 6, 2013 work injury.

- At hearing the parties stipulated that if claimant's claim is reopened his average weekly wage ("AWW") is $473.61.

FINDINGS OF FACT

1. Claimant began his employment with employer in 2007 as a utility employee. At that time, employer was a contractor with the public bus system, Grand Valley Transit. When a new entity, Trans Dev, contracted with Grand Valley Transit, claimant continued his employment with Trans Dev in the same utility employee position. Claimant's job duties with both employer and Trans Dev include washing the buses and performing minor maintenance. In addition, claimant removes money boxes containing bus fares from the buses.

2. Claimant suffered an admitted injury to his low back on September 5, 2013 while employed with employer. Claimant testified that the injury occurred during his shift on September 5, 2013. On that date, he was removing a fare box from a bus and when he twisted, he felt a pop in his back. Claimant testified that completed his shift on September 5, 2013 and did not report the incident to employer at that time.

3. Claimant testified that following his shift on September 5, 2013 he went home and went to bed. At approximately 3:00 a.m. claimant was awakened by pain in his low back. Claimant's pain was so intense that it caused him to vomit. Claimant was eventually transported by ambulance to St. Mary's Hospital the morning of September 6, 2013. Claimant testified that at that time his back pain was primarily on his left side, radiating into his left leg, with some leg numbness.

4. On September 6, 2013, claimant notified employer of the work injury. The employer completed an employee injury report and sent claimant for treatment with Dr. J. Robert Gershon as his authorized treating physician ("ATP"). Dr. Gershon diagnosed a lumbar strain with lumbar radiculitus and a disc herniation. He prescribed pain medications and referred claimant to physical therapy.

5. On September 6, 2013, a magnetic resonance image ("MRI") was taken of claimant's lumbar spine. The MRI showed a broad based central and paracentral disc extrusion at the L5-S1 level that was contacting and compressing the traversing left S1 nerve root. At the L2-L3 level the MRI showed a far left lateral disc protrusion contacting the exiting left L2 nerve root.

6. On September 10, 2013, claimant began physical therapy treatment with Grand Junction Therapies.

7. October 9, 2013, an x-ray of claimant's lumbosacral spine showed multilevel degenerative disc disease and s-shaped thoracolumbar scoliosis.

8. Dr. Gershon referred claimant to Dr. Kenneth Lewis for epidural steroid injections. On October 30, 2013, Dr. Lewis administered a left parasagittal interlaminar epidural steroid injection ("ESI") at L2-3. On November 13, 2013, claimant reported to Dr. Lewis pain relief following the injection. On December 19, 2013, Dr. Lewis administered a left parasagittal ESI at L4-5.

9. On January 16, 2014, claimant returned to Dr. Gershon who noted that claimant had good relief from the ESIs. Claimant also reported to Dr. Gershon that he continued to have pain in his low back that he described as "mostly an aching sensation". On that same date, Dr. Gershon placed claimant at maximum medical improvement ("MMI") and released claimant to return to full duty with no work restrictions. Due to the existence of the disc herniation, Dr. Gershon assigned an impairment rating of 5% whole person.

10. On February 21, 2014, respondents filed a Final Admission of Liability ("FAL") admitting for the MMI date of January 16, 2014, the 5% whole person impairment rating, and reasonable, necessary, and related post-MMI medical care. Claimant did not contest the FAL and his claim was closed.

11. Claimant testified that he has continued to have low back pain and leg numbness since he was placed at MMI on January 16, 2014. However, claimant did not seek maintenance medical care for these ongoing pain complaints. Claimant testified that he did not know that such treatment was available to him. Claimant testified that throughout this time he treated at home with ice, heat, and over the counter anti-inflammatory medication, such as Ibuprofen.

12. On February 18, 2016, claimant returned to the emergency room with complaints of low back pain and vomiting. Claimant testified that he worked until 10:00 p.m. the day prior and did not experience a new injury at work or at home. Claimant informed the hospital staff that his pain on February 18, 2016 was similar to the pain he had in September 2013. Medical records from February 18, 2016 indicate that claimant told hospital staff that he had not had any back issues since that 2013 incident. Claimant testified that the medical record is incorrect as he experienced ongoing pain between January 2014 and February 18, 2016.

13. Following the February 18, 2016 incident, employer sent claimant to Dr. Craig Stagg as his ATP. Claimant testified that Dr. Stagg recommended physical therapy and "eventually" surgery.

14. On March 25, 2016, an x-ray of claimant's lumbar spine showed no acute fractures. That same x-ray showed multilevel degenerative disc disease and facet disease with severe degenerative joint disease at the L3-4, L4-5 and L5-S1 level. In addition at the L4 level it was noted that a bony deformity of the superior articulating facet process that appeared to be hypertrophied bone related to L4 bilateral pars defects and severe chronic arthrosis.

15. On March 29, 2016, an MRI of claimant's lumbar spine showed degenerative disc bulges at multiple levels. The MRI showed a central to left paracentral disc extrusion causing moderate to severe left neural foraminal stenosis and moderate central canal stenosis at the L5-S1 level.

16. Following the MRI, Dr. Stagg referred claimant to Dr. Kirk Clifford for a surgical consultation. Claimant was seen by Dr. Clifford on April 13, 2016 and he referred claimant to Dr. Robert Frahzo for evaluation of whether claimant was a candidate for rhizolysis.

17. On May 25, 2016, Dr. Frahzo administered medial branch blocks at the left L2, L3, L4, and L5 levels. Claimant testified that the injection administered by Dr. Frazho was the "worst pain of [claimant's] life". Claimant reported to Dr. Stagg that the injections gave claimant only 30 minutes of pain relief.

18. On June 15, 2016, claimant returned to Dr. Clifford who noted that claimant had failed medial branch blocks and was not a candidate for rhizolysis. Dr. Clifford recommended surgery, specifically an L5-S1 anterior lumbar interbody fusion ("ALIF"), decompression, and restoration of spinal alignment with anterior discectomy.

19. On June 28, 2016, Dr. Thomas Hoffeld reviewed the requested surgery. In his report, Dr. Hoffeld opined that the recommended L5-S1 ALIF with instrumentation was medically reasonable and necessary.

20. Respondents sent claimant for an independent medical examination ("IME") with Dr. Tashof Bernton on July 27, 2016. Dr. Bernton reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the IME. Following the IME, Dr. Bernton issued a report in which he opined that claimant's back pain is not work related and it is not medically reasonable to connect the claimant's February 18, 2016 back and leg pain to the September 2013 work injury. Dr. Bernton also indicated that it is his opinion that the 2013 injury has nothing to do with the 2016 disc herniation, which he believes is a new herniation.

21. With regard to the surgery recommended by Dr. Clifford, Dr. Bernton opined in his IME report that this surgical treatment was not reasonable because claimant had not yet received conservative treatment, (such as epidural steroid

injections), for the 2016 disc herniation. In addition, Dr. Bernton opined that performing a fusion at a level below an L-4 spondylolysis would likely increase stress on the spondylolysis and increase deterioration and instability at that level.

22. On September 7, 2016, a computerized tomography ("CT") scan of claimant's lumbar spine showed a left foraminal lateral disc bulge at the L2-3 level that was possibly impinging on the left L2 nerve; bilateral spondylolysis at L4 and advanced bilateral facet arthrosis at L3 to S1; moderate canal stenosis at L5-S1 with mild canal stenosis at L3-4 and L4-5.

23. On September 29, 2016, claimant filed a Petition to Reopen his claim for workers' compensation benefits on the basis that he suffered a change in medical condition.

24. Dr. Bernton testified at hearing and confirmed his opinion that claimant's current symptoms are not related to the September 6, 2013 work injury. Dr. Bernton also testified that it is his opinion that the work injury claimant sustained on September 6, 2013 was treated with appropriate conservative care and resolved with a good outcome prior to claimant being placed at MMI. Dr. Bernton supports his opinion by noting that claimant had good relief with injections in December 2013 and at MMI claimant was released to full duty without restrictions and no pain medications. Dr. Bernton also testified that claimant has a number of risk factors for acute disc herniation that include being male; middle aged; overweight; and a former long time smoker.

25. Claimant testified that his current symptoms include low back pain that radiates into both legs and into his right knee as well as popping in his back. Claimant also testified that his current pain is worse than it was in January 2014 when he was placed at MMI. Claimant testified that he wants the recommended surgery because he wants to be normal and that it is a struggle for him every day to continue working. Claimant continues to work full time without work restrictions. Claimant testified that although he does not have work restrictions his current supervisor is understanding and allows him to rest as needed during the work day.

26. The ALJ does not find claimant's testimony that he did not know that he could receive post-MMI medical treatment to be credible or persuasive. Claimant received treatment from the date he reported the 2013 injury until he was placed at MMI eleven months later. The ALJ finds that it is more likely that if claimant had experienced the ongoing pain he describes in his testimony he would have sought medical treatment at some point between January 16, 2014 and February 18, 2016.

27. The ALJ credits the opinion of Dr. Bernton and finds that claimant has failed to demonstrate that it is more likely than not that his condition has worsened and his workers' compensation claim should be reopened. The ALJ credits the February 18, 2016 ER record over claimant's contradictory testimony and finds that claimant did not have ongoing back pain between January 2014 and February 18, 2016. The ALJ notes that although claimant may have experienced a worsening of his low back pain as of

February 18 2016, that worsening is unrelated to claimant's September 6, 2013 work injury.

28. As claimant has failed to meet his burden of proof to reopen his claim, the ALJ does not address claimant's request for the recommended lumbar fusion.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. At any time within six years after the date of injury, the ALJ may reopen an award on the ground of a change in condition. Section 8-43-303(1), C.R.S. A change in condition refers to "a change in the condition of the original compensable injury or to a change in claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

4. As found, claimant has failed to demonstrate by a preponderance of the evidence that he has suffered a worsening condition to necessitate reopening his claim. As found, the medical records and Dr. Bernton's opinion are credible and persuasive regarding this issue.

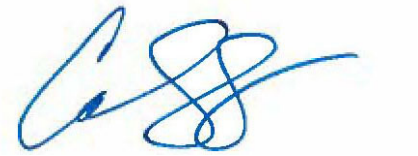
ORDER

It is therefore ordered that:

1. Claimant' request to reopen his claim due to a change of condition is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 20, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Has Claimant proven by a preponderance of the evidence that the compounded cream prescribed by her ATP is reasonable and necessary to relieve the effects of her industrial injury?

2. Is Claimant entitled to additional disfigurement benefits beyond those awarded by ALJ Lamphere on July 16, 2014?

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury to her right lower extremity on February 8, 2012 while working for Employer. Because of the injury, Claimant underwent a complicated course of treatment, including three surgeries. Claimant subsequently developed chronic neuropathic pain/complex regional pain syndrome (CRPS) and peroneal neuropathy.

2. She underwent QSART and thermographic testing with Dr. Schakarashwili in 2015, which showed a "high probability for the presence of complex regional pain syndrome." Dr. Schakarashwili noted additional findings related to peroneal neuropathy. He opined it was unnecessary to precisely differentiate the effects of peroneal neuropathy versus CRPS, "since treatment for nerve pain and CRPS is essentially identical."

3. Claimant's condition has been refractory to treatments typically used to treat neuropathic pain/CRPS. She had minimal relief from sympathetic blocks, although had a good response to a peroneal nerve block. Claimant suffers from GERD and GI issues which limit her ability to tolerate oral NSAIDs. For example, Arthrotec (diclofenac) caused "itching and dizziness," and Mobic caused GI distress when she tried it in July 2014. Oral gabapentin was not helpful, and she could not tolerate Lyrica. Claimant has avoided opioids.

4. Because of her pain, Claimant has significant difficulty participating in activities that require ambulation. Despite that, she continues to work full-time for Employer.

5. On November 20, 2015, Claimant's ATP, Dr. George Johnson, prescribed a compound cream to relieve Claimant's pain. The cream consists of: ketoprofen 10%, gabapentin 5%, baclofen 5%, clonidine 0.2%, lidocaine 5%.

6. Initially, as reflected in Dr. Johnson's notes, Claimant did not find the cream to be helpful. But as she credibly explained at hearing, she subsequently appreciated significant benefit from the cream, particularly at night when trying to sleep. The compound cream also helps relieve Claimant's pain at work and while performing

routine activities such as driving and shopping. The decreased pain allows Claimant to be more active.

7. Due to concerns regarding ongoing authorization of the compound cream, Claimant tried over-the-counter lidocaine cream (Aspercreme) in its place.

8. The OTC lidocaine cream was less effective than the prescription compound cream. The numbing sensation from the OTC cream did not last as long and she received less pain relief. Additionally, when Claimant applied the OTC cream to her foot, it caused a "stinging" sensation that she found "irritating." The OTC cream was also less helpful with Claimant's sleep.

9. Claimant refilled the compound cream five times between June 1, 2016 and November 23, 2016 through Injured Worker Pharmacy ("IWP"). IWP's Reimbursement Worksheet shows an outstanding balance of $3,334.60. That amount has not been fee scheduled under WCRP 18-6(N)(4).

10. Dr. Jeffrey Jenks testified in a deposition on August 18, 2016 on behalf of Claimant. Dr. Jenks opined that the compound cream prescribed by Dr. Johnson is "very reasonable."

11. Dr. Henry Roth performed a medical record review on behalf of Respondents on November 14, 2016. Subsequently, Dr. Roth testified in an evidentiary deposition on January 16, 2017, wherein he reiterated and expounded upon the opinions expressed in his report.

12. Dr. Roth opined that the compound cream is not reasonable or necessary. Dr. Roth opined "there really isn't a positive anything known to be gained" by using the compound cream instead of taking the medication orally. He further stated "I would call it snake oil and good salesmanship." Dr. Roth opined that other topical creams may be appropriate, such as Voltaren gel and lidocaine gel. Dr. Roth admitted he had never evaluated or met with Claimant, and did not know she had tried lidocaine cream and compared its effectiveness to the prescription compound cream. Dr. Roth opined that Claimant's positive response to the compound cream may be a placebo effect, and did not change his opinions.

13. Dr. Roth's opinions regarding the compound cream are not persuasive.

14. Claimant has proven by a preponderance of the evidence that the compound cream prescribed by Dr. Johnson is reasonable, necessary and related treatment to relieve the effects of Claimant's industrial injury.

15. Claimant's injury has caused permanent, visible effects which are normally exposed to public view. Claimant has two areas of discoloration/loss of pigmentation on her right foot. The first area is approximately the size of a quarter, and the secondary is approximately the size of the dime. Additionally, Claimant has a significant limp and utilizes a four-point cane to assist with ambulation.

16. Claimant had a prior disfigurement evaluation with ALJ Lamphere on July 15, 2014. ALJ Lamphere considered surgical scarring and generalized swelling about the right ankle. Because of that disfigurement, ALJ Lamphere awarded Claimant $3,200. ALJ Lamphere did not evaluate the aforementioned areas of discoloration or altered gait.

17. The persuasive evidence shows Claimant's gait has worsened since July 2014. Claimant was previously put at MMI by Dr. Johnson on March 30, 2014. On that date, her pain was described as "mild and infrequent." Dr. Johnson specifically noted "she is not limping." The report made no mention of any assistive device.

18. After the disfigurement hearing, Claimant had additional surgery on August 26, 2014. Because of the surgery, she was taken off MMI. Subsequently, Claimant developed chronic neuropathic pain and/or CRPS. Medical records show increased difficulty with activities involving standing and walking because of the CRPS. (E.g., Ex. 3/237; Ex. 4/245; Ex. 5/257; Ex. 6/261; Ex. 7/267; Ex. F/81; Ex. G/83). On November 9, 2015, Dr. Simpson documented that Claimant walked with "[a] limp and [an] antalgic gait."

19. Claimant has proven by a preponderance of the evidence she experienced a change of her medical condition after the July 2014 disfigurement hearing that warrants reopening the issue of disfigurement.

20. The ALJ finds Claimant should be awarded an additional $1,196 for disfigurement.

CONCLUSIONS OF LAW

A. Compounded cream for pain relief

Section 8-42-101(1)(a) provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

Thus, the respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement (MMI) if the claimant requires further care to relieve the effects of the injury or prevent deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

Even where the respondents admit liability for medical benefits after MMI, they retain the right to challenge the compensability, reasonableness, and necessity of specific treatment. *Hanna v. Print Expediters Inc.*, 77 P.3d 863 (Colo. App. 2003). When

the respondents challenge the claimant's request for specific post-MMI medical treatment, the claimant must prove entitlement to the medical benefit(s) at issue by a preponderance of the evidence. *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO February 12, 2009).

Under § 8-42-101(3)(b) and WCRP 17-2(A), medical providers are required to use the Medical Treatment Guidelines (MTGs) furnishing medical treatment. As the arbiter of disputes regarding treatment, the ALJ may consider the MTGs as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (ICAO, January 25, 2011). But the ALJ is not bound by the MTGs when determining whether requested medical treatment is reasonable, necessary, or injury-related. Section 8-43-201(3).

The persuasive evidence shows that the compound cream has helped reduce Claimant's pain and allow her to be more functional. Dr. Roth speculates that a different formulation may provide similar benefit. Given the inherent difficulty of treating chronic neuropathic pain, the ALJ is loath to terminate a treatment which has been effective in Claimant's particular case, based on supposition that some other treatment may prove equally efficacious.

Dr. Roth relied heavily on the CRPS MTGs to support his opinion, specifically section (G)(j) regarding "Topical drug delivery." That section states:

> ***At the time this guideline was written***, no studies identified evidence for the effectiveness of compounded topical agents other than those recommended above. Therefore, other compounded topical agents are not generally recommended. In rare cases they may be appropriate for patients who prefer a topical medication to chronic opioids or ***have allergies or side effects from other more commonly used oral agents***." (Emphasis added).

The ALJ is not persuaded by Dr. Roth's application of the CRPS MTGs in Claimant's case. The MTGs approve all the individual components of the compound cream if taken in oral form (or topically, in the case of the lidocaine). Claimant has well-documented difficulty tolerating many oral medications, which puts her into the subset of patients who can be appropriate candidates for "other" types of topical medications under the MTGs.

Moreover, Dr. Roth neglected to consider the DOWC's changing view of topical medications since the CRPS MTGs were last updated in December 2011. Since that time, the DOWC has updated other MTGs, including those relating to lower extremity injuries (Rule 17, Exhibit 6) and shoulder injuries (Rule 17, Exhibit 4). Section (F)(9)(k)(iii) of the current lower extremity MTGs provide:

> Other topical agents, including prescription drugs (i.e. lidocaine), prescription compound agents, and prescribed over-the-counter medications (i.e. blue ice), may be useful for pain and inflammation.

The section regarding other topical agents was not present in the previous version of the lower extremity MTGs. Admittedly, the lower extremity MTGs are not as specific to CRPS/neuropathic pain as the CRPS MTGs. Nevertheless, the new language regarding topical drug delivery suggests an evolution in the quality of evidence regarding their effectiveness and counsels against slavish adherence to MTGs written more than five years ago.

Dr. Jenks opined the compound cream is "very reasonable" in Claimant's case. Based on Claimant's positive response to the cream, the ALJ agrees with Dr. Jenks that it is reasonable and necessary to relieve the effects of her injury.

B. Disfigurement

Section 8-42-108(1) entitles a claimant to additional compensation if she is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." The statute establishes two tiers of disfigurement awards with maximum limits based on severity. The disfigurement maximums are adjusted annually by the Director. Based on Claimant's date of injury (February 8, 2012) and the nature of her disfigurement, the maximum disfigurement award is $4,396.

Claimant had a previous disfigurement evaluation with ALJ Lamphere on July 15, 2014. ALJ Lamphere considered surgical scarring and generalized swelling about the right ankle. Because of that evaluation, ALJ Lamphere awarded Claimant $3,200.

At the February 1, 2017 hearing before the undersigned ALJ, Claimant requested additional disfigurement benefits based on two areas of discoloration/loss of pigmentation on the right foot, and alteration of her gait. Respondents objected to an award based on altered gait, on the theory that gait abnormality could have been considered at the July 2014 disfigurement hearing with ALJ Lamphere, and is therefore closed.

As found, Claimant has proven by a preponderance of the evidence that she experienced a change of condition after ALJ Lamphere's July 2014 order that justifies reopening the issue of disfigurement. The medical records corroborate Claimant's testimony that her gait pattern worsened after the previous disfigurement hearing. Dr. Johnson placed Claimant at MMI on March 30, 2014, and on that date, he specifically noted Claimant was "not limping." Claimant had additional surgery on August 26, 2014, and was taken off MMI. Subsequently, she was diagnosed with chronic neuropathic pain and/or CRPS. The medical records reflect significant difficulty with ambulation because of the neuropathic pain. In November 2015, Dr. Simpson documented that she walked with "[a] limp and antalgic gait." The totality of evidence presented persuades the ALJ that Claimant's gait worsened after July 2014.

The disfigurement the ALJ observed at the February 1, 2017 hearing entitles Claimant to an additional disfigurement award of $1,196.

ORDER

It is therefore ordered that:

1. Insurer shall pay for the compound cream as prescribed by Dr. Johnson, pursuant to the WC fee schedule, including the prescriptions Claimant filled from June 2016 through November 2016.

2. Insurer shall pay Claimant an additional $1,196 for disfigurement.

3. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 20, 2017

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-006-651-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 19, 2017 and March 13, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 1/19/17, Courtroom 1, beginning at 8:30 AM, and ending at 10:15 AM; and, 3/13/17, Courtroom 1, beginning at 1:30 PM, and ending at 2:30 PM).

Claimant's Exhibits through 9 were admitted into evidence, without objection. Respondents' Exhibits A through K were admitted into evidence, without objection.

ISSUE

The sole issue to be determined by this decision concerns the causal relatedness of corneal surgery recommended by Holly D. Kent, M.D., Claimant's treating corneal surgeon, to address a corneal scar, allegedly caused by the Claimant's admitted accident of February 3, 2016.

The Claimant bears the burden of proof, by a preponderance of the evidence.

PRELIMINARY PROCEDURAL MATTER

At the commencement of the January 19, 2017 session of the hearing, counsel for the Respondent indicated that the Respondents had subpoenaed Ron W. Pelton, M.D. Ph.D., as their expert ophthalmologist, and he failed to appear. Dr. Pelton had performed a review in response to a request for prior authorization, filed by the office of Holly D. Kent, M.D. On February 13, 2017, the ALJ entered an order extending the time for the Respondents to produce a transcript of an evidentiary deposition of Dr. Pelton before the next scheduled session of the hearing. Dr. Pelton's evidentiary deposition was taken on February 20, and a written transcript thereof was filed on February 28, 2017. The Claimant presented no rebuttal testimony at the March 13, 2017 session of the hearing. Consequently, the matter was deemed submitted for decision on March 13, 2017.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a bus operator for the Employer. She was born on May 6, 1983. Her duties involve driving bus routes.

2. While walking through the Employer's parking lot on February 3, 2016, the Claimant slipped and fell backwards on black ice, hitting her head and sustaining back, neck, left elbow and right finger injuries. The Claimant testified that her right eye was red after the fall. She reported the incident to her Employer immediately and was first seen at the emergency room (ER) of Swedish Hospital where she was evaluated including x-rays, treated and released.

3. The Respondents filed a General Admission of Liability (GAL), dated September 13, 2016, admitting for medical benefits; an average weekly wage (AWW) of $626.21 and temporary total disability (TTD) benefits of $417.47 per week from February 3, 2016 through March 15, 2016; and, from June 14, 2016 through September 8, 2016; and, temporary partial disability (TPD) benefits of $44.14 per week from March 16, 201`6 through June 13, 2016. The Claimant received a full duty release to return to work, effective September 9, 2016.

4. The Claimant saw Brian Beatty, D.O., at Rocky Mountain Medical Group, who became the Claimant's authorized treating physician (ATP). Br. Beatty noted that the Claimant reported some neck stiffness and experiencing blurry vision. Dr. Beatty

diagnosed: (1) head contusion; (2) cervical strain; (3) lumbar strain; (4) left hip contusion; (5) right thumb sprain; and, (6) left elbow contusion. He was of the opinion that the objective findings were consistent with a work-related injury. He was further of the opinion that the Claimant was unable to work at the time.

5. In a follow up report of February 12, 2016, Dr. Beatty noted that the Claimant "continues to show signs of symptom magnification."

The Right Eye

6. On March 3, 2016, Dr. Beatty referred the Claimant to Thomas A. Politzer, O.D., an optometrist, for her "blurry vision." Dr. Politzer first saw the Claimant on April 18, 2016. Dr. Politzer, in a report dated April 19, 2016 (Respondents' Exhibit I, bates stamp 000269), and he stated that the Claimant was only reporting blurred vision only in the right eye. Dr. Politzer noted that the Claimant's "uncorrected distance visual acuities are less than 20/400 for the right eye and 20/70 for the left eye. He further noted that the scar of the Claimant's right eye "does appear to be of longstanding nature." Dr. Politzer was of the opinion that the "scar is the most likely cause of her decreased vision." On June 1, 2016, Dr. Politzer recommended to ATP Dr. Beatty that the Claimant be referred to a medical specialist for her eye.

7. On June 14, 2016, ATP Dr. Beatty referred the Claimant to Barry Ogin, M.D. for the Claimant's neck complaints; and to Holly D. Kent, M.D., a corneal surgeon, for the Claimant's eye complaints.

Holly D. Kent, M.D.

8. Dr. Kent first saw the Claimant on June 8, 2016. She referred the Claimant to Dr. Gallegos for corrective lens. Dr. Gallegos advised Dr. Kent that the Claimant's vision in the right eye could only be corrected to 20/80 and the Claimant needed 20/40 vision to do her job. Therefore, Dr. Gallegos referred the Claimant back to Dr. Kent for evaluation of "possible surgery" (to correct the scarring on the right eye).

9. Dr. Kent has **not** rendered an opinion that the surgery to correct the scarring on the Claimant's right eye is causally related to the injuries of February 3, 2016, or that the event of February 3, 23016 aggravated and accelerated the scarring of the Claimant's right eye. Indeed in the Pelton evidentiary deposition, exhibit 1, Dr. Kent states that 'this type of injury (corneal scarring) rarely happens unless the eye is directly hit. It cannot be from a fall and hitting the back of her head."

10. On July 13, 2016, Dr. Kent's office sent a request for prior authorization to the insurance carrier because the Claimant was scheduled for corneal surgery on August 15, 2016. The request indicates that the Claimant "alleges [this] happened when fell; at work." A timely response to the request for prior authorization was referred to Ron W. Pelton, M.D., Ph.D., a physician who is board certified in Opthamology, who

reviewed medical records and was of the opinion that the medical documentation did not support a causal relationship between the corneal scar of the right eye and the accident (Respondents' Exhibit A). He noted that a corneal graft was necessary to attempt to improve the Claimant's vision and it is reasonable treatment. He further noted that "a corneal graft, like a kidney transplant, requires significant maintenance after the surgery to battle rejection (*Id)*.

11. In his evidentiary deposition, Dr. Pelton stated the opinion that in order for the Claimant to aggravate her corneal scar "there would have to be some direct hit to the eye." Neither the Claimant's testimony nor the medical reports support a direct hit to the Claimant's right eye (Pelton Depo., p. 24, lines 16-21). At one point, Dr. Pelton noted that the Claimant's vision in the right eye was 20/2400, as noted by Dr. Pulitzer (according to Dr. Pelton), which is tantamount to legally blind (Pelton Depo. pp.19, 20).

12. The Claimant's request for prior authorization of the corneal surgery was denied and the matter was set for hearing.

The Corneal Surgery

13. The Claimant's first corneal surgery occurred on September 9, 2016 and it was paid by Medicaid. It corrected her vision to 20/20 and she was released to return to work at full duty, whereby drivers are required to have 20/40 vision. The Claimant is concerned about follow up surgeries and her co-pays.

Ultimate Findings

14. The opinions of Dr. Pelton and Optometrist Dr. Politzer that the Claimant's right corneal scarring was not caused by the fall of February 3, 2016, or aggravated/accelerated thereby, is credible, persuasive and, essentially, un-refuted. Dr. Kent also supports the lack of causal relatedness to the accident of February 3, 2016.

15. The Claimant has failed to prove, by preponderant evidence, a causal relationship between her admitted injuries of February 3, 2016 and any aggravation/acceleration of her corneal scarring, which caused the need for right eye surgery. The weight of persuasive and credible medical opinion is that the right corneal scarring is of long-standing duration and, absent a direct hit to the right eye, the corneal scarring could not be aggravated or accelerated.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the opinions of Dr. Pelton and Optometrist Dr. Politzer that the Claimant's right corneal scarring was not caused by the fall of February 3, 2016, or aggravated/accelerated thereby, is credible, persuasive and, essentially, un-refuted. Dr. Kent also supports the lack of causal relatedness to the accident of February 3, 2016.

Causal Relatedness of Medical Treatment

b. An employer must provide an injured employee with reasonably necessary medical treatment to "cure and relieve the employee from the effects of the injury." § 8-42-101(1) (a), C.R.S. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). As found, the Claimant has failed to establish a causal link between the accident of February 3, 2016 and the need for the corneal surgery.

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to satisfy her burden of proof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims for payment of the corneal surgery recommended by Holly D. Kent, M.D., are hereby denied and dismissed.

B. The General Admission of Liability, dated September 13, 2016, remains in full force and effect until and unless modification thereof is warranted by law.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of March 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-999-129-04

STIPULATED ISSUES

I. Whether Respondents made an offer of modified duty that complied with statute and rule of procedure to unilaterally terminate Claimant's temporary total disability (TTD) benefits.

II. If Respondent's modified duty offer did not comply with statute and rule of procedure, whether Respondents should be penalized for unilaterally terminating Claimant's TTD benefits.

III. Whether Respondents should be penalized for violating WCRP 5-5(c)(1).

FINDINGS OF FACT

Based upon the written evidence presented, the ALJ enters the following findings of fact:

1. Claimant suffered an admitted injury to his right shoulder on October 20, 2015 while attempting to stabilize a 13 foot I-beam as a machine drilled the beam into the ground.

2. Claimant began conservative treatment and was given work restrictions, which the Employer was able to accommodate. Conservative treatment failed to produce lasting improvement. Consequently, Claimant was taken to surgery on March 5, 2016, where he underwent surgical repair his right shoulder. Claimant was taken off work to recover and Respondents began paying TTD benefits on March 8, 2016.

3. Claimant was released to modified duty on April 27, 2016; however, Employer could not initially accommodate light duty work because Employer's job in Colorado had concluded.

4. On August 3, 2016, Respondents sent a letter to Claimant's treating provider, Dr. Terrance Lakin which provided information regarding a modified job which had been located for Claimant. Respondents requested that Dr. Lakin review the list of identified job tasks for the position and provide feedback to verify that Claimant was able to perform the identified duties in advance of formally offering the modified position to Claimant.

5. Dr. Lakin noted that Claimant was able to perform the tasks identified in the letter by signing the same on August 8, 2016.

6. On August 10, 2016, Employer extended to Claimant an offer of modified duty for

the position identified in the August 3, 2016 letter directed to Dr. Lakin. The position was identified as a Facility Assistant (through a non-profit organization – Habitat for Humanity Restore). The job offer provided that an initial meeting was to be held on August 16, 2016, at 10:30, noting further that the start date was tentative and dependent upon completion of an application for employment and a background check which could take up to 48 hours to clear. Consequently, the offer letter also indicated that the "modified job would begin on Friday, August 19, 2016 at 9:00 a.m." The letter went on to request that Claimant "report for work on this date and time." The offer letter was sent in Spanish and English.

7. Claimant did not report for the initial meeting on August 16, 2016. He did not complete an application, nor did he complete the required background check. Accordingly, Respondents terminated Claimant's TTD benefits via a General Admission of Liability filed on September 6, 2016. Respondent continued to pay temporary partial disability (TPD) benefits of $33.70 based upon the number of hours Claimant was to work in modified duty at the hourly rate identified in modified duty offer letter, i.e. $16.80/hr.

8. On September 9, 2016, Claimant filed a Contested Motion seeking on Order from the Court that TTD benefits continue until a hearing could be held on the issue of the reduction of TTD benefits. On September 23, 2016, ALJ Patrick Spencer denied Claimant's Contested Motion. In his order ALJ Spencer noted that the Industrial Claims Appeals Office (ICAO) has held that § 8-42-105(3)(d) does not allow for termination of temporary disability benefits based upon an offer of modified duty that a claimant "cannot as a practical matter accept." Concluding that the question of whether the offer of modified duty in the instant case was one that Claimant could, as a practical matter, accept was factual in nature, ALJ Spencer denied the motion.

9. On October 3, 2016, Claimant filed a Motion asking the ALJ Spencer to Reconsider his September 23, 2016 Order.

10. On October 4, 2016, Claimant filed an Application for Hearing listing the only issue as penalties for what Claimant perceived to be an improper Rule 6 Modified Job Offer. Claimant has argued the modified job offer was improper as it was a "tentative" offer since Claimant had to complete a background check. The Hearing on Claimant's Application was set for January 12, 2017.

11. On October 19, 2016, ALJ Spencer denied Claimant's Motion for Reconsideration.

12. On November 14, 2016, Respondents filed a General Admission of Liability which increased Claimant's TPD benefits to $375.20. The pay increase occurred because the ICAO affirmed a decision of ALJ Donald E. Walsh that held Claimant's average weekly wage (AWW) was $1,176.00 as opposed to the originally admitted $663.75. Although the new admission increased Claimant's TPD benefits it does not admit for TTD as Respondents continue to rely on Claimant's failure to accept modified duty as the basis for termination of Claimant's TTD benefits.

13. On January 11, 2017, Respondents filed an Unopposed Motion to Vacate the January 12, 2017 hearing date, and instead, submit briefs arguing the parties respective positions (over whether or not a proper WCRP 6 Modified Job Offer existed). The Unopposed Motion was granted on January 13, 2017.

CONCLUSIONS OF LAW

Based upon the aforementioned findings of fact, the ALJ draws the following conclusions of law:

A. CRS § 8-42-105(3)(d)(I) allows for the unilateral termination of TTD benefits when the attending physician gives the employee a release to return to modified employment, the employment is offered to the employee in writing, and the employee fails to begin the employment. Additionally, the procedures for terminating TTD benefits by filing an admission without a hearing are set forth in WCRP 6. Termination of TTD benefits based on an offer of modified duty is governed by WCRP 6-1(A)(4), which provides Respondents may terminate TTD benefits without a hearing by filing an admission of liability with:

- a letter to the claimant or copy of a written offer delivered to the claimant with a signed certificate indicating service, containing both an offer of modified employment setting forth duties, wages and hours and a statement from an authorized treating physician that the employment offered is within the claimant's physical restrictions.

B. Claimant does not dispute that the above requirements were met by Respondents. Rather, Claimant advances an assertion slightly different than the one he argued in his contested motion dated September 9, 2016. In his motion, Claimant contended that the August 10, 2016, Modified Job Offer did not constitute an "actual job offer" because it required Claimant to disclose personal information to a third party (via the required background check). In his Position Statement, Claimant, citing § 24 of the Restatement (Second) of Contracts asserts that the evidence supports a conclusion that there was no offer of modified duty extended because the offer was controlled by a third party who had to approve/accept Claimant after a background check. Consequently, Claimant argues that under the express terms of the modified job offer, no offer was extended because he could not, by his own actions make a binding agreement and conclude the bargain. In support of his contention, Claimant cites to the decision reached in *Sumerel v. Goodyear Tire & Rubber Company,* 232 P.3d 128, 133 (Colo.App. 2009), or more precisely case law cited in *Sumerel*. Specifically, Claimant argues that the legal principals applied in *Bourque v. FDIC*, 42 F.3d 704 (1st Cir.1994), as cited in *Sumerel* is analogous to the situation presented here.

C. In *Bourque*, the plaintiff offered to purchase some real property from the FDIC. The FDIC rejected Plaintiff's offer and made an express counteroffer which informed the plaintiff that all offers were subject to FDIC approval and that if he wanted to accept the counteroffer, he needed to complete a form of purchase and sale agreement that was provided with the counter offer. Plaintiff completed and

signed the necessary forms and returned them to the FDIC. However, the FDIC had received a better offer so refused to go through with the sell to Plaintiff unless he matched the better offer. Plaintiff refused to match the offer and sued to enforce the agreement. The Court rejected the request concluding that the FDIC's counteroffer to match the consideration of the other buyer amounted to an invitation to make another offer, thereby inviting additional negotiations. As such, the Court concluded that the FDIC's counteroffer was not an offer Plaintiff could accept, because it contemplated "further discussion." See, *Citywide Bank v. Herman*, 978 F.Supp. 966 (D.Colo.1997)(where use of qualifying language, such as "proposed resolution" or "potential issue" demonstrates that there is no definitive offer). As noted by the *Sumerel* Court, "there is no offer properly capable of acceptance where the purported offeree 'knows or has reason to know that the person making [the purported offer] does not intend to conclude a bargain until he has made a further manifestation of assent."

D. Relying on these principals, Claimant asserts that the August 10, 2016 modified duty offer letter amounted only to an invitation to initiate "preliminary negotiations" regarding his return to modified duty. Specifically, Claimant contends that the "preliminary negotiations would involve the Claimant agreeing to a background check with a third-party, and then there would be further negotiations involving the third party, depending on whether it found the Claimant acceptable to work at its facility after the background check." Only then, Claimant argues, would there be a possible modified job offer made to the Claimant. Accordingly, Claimant asserts that the modified job offer letter was qualified and one he was "powerless to accept" because additional negotiations were necessary to conclude the bargain. The ALJ is not convinced; concluding that Claimant has misconstrued the language contained in the modified job offer letter and has added an inference unsupported by the plain language of the document. As noted, Claimant asserts that the language in the modified job offer letter suggests that there would be additional negotiations regarding Claimant's return to modified duty for the third party depending on whether it found Claimant acceptable to work at its facility and that no job would be forthcoming unless Claimant "passed" a background check. The ALJ concludes that the contents of the letter do not support such an inference. Rather, the letter, on its face provides that Claimant was extended an offer of modified duty at $16.80/hour, to start August 19, 2016. In order to accept this "offer", Claimant was to meet with the third party on August 16, 2016 to complete an application and a background check. Because the application and background check could take up to 48 hours to "clear", Claimant's start date was "tentative." In order to ensure that Claimant could accept the offer given the delay necessary to process the application and background check, Respondents set Claimant's staring date for August 19, 2016. As noted the start date was made tentative in the event that it took more than 48 hours to process the application/background check. Contrary to Claimant's assertion, the letter does not provide that Claimant would have to pass a background check to be acceptable to the third party. The ALJ finds and concludes that the letter provides only that the offer was dependent upon Claimant's completion of an application and background check, not that he had to pass said background check.

E. Based upon the evidence presented, the ALJ finds and concludes that

Claimant's argument is akin to the line of cases that address when/where an offer of employment/employment contract is entered into. In those cases, it has been held that such 'mere formalities' as completion of paperwork or a drug test or a driving test do not mean a contract of employment was not already formed via an offer and acceptance. *See for example, Huffman v. Multiple Concrete*, W.C. No 4-876-455-03 (February 20, 2013). The ALJ finds/concludes the assertion that the modified offer letter in this case was one Claimant could not accept on the grounds that it was "tentative" because it required a background check which could divulge personal information uncompelling. Background checks are routinely requested when a Claimant is place on modified duty which brings the injured worker into an office setting and in contact with money or the public. See *Derrick Carmichael v. SOS Staffing Services, Inc.*, W.C. 4-654-154 (ICAO, March 20, 2006). Following Claimant's reasoning would mean a modified job offer was "tentative" where a Claimant has to complete an Application (which often calls for personal information) or an I-9 (which does call for personal information) or a W-2 which also calls for personal information. Here, the undersigned ALJ agrees with ALJ Spencer that the September 6, 2016, General Admission of Liability is otherwise compliant with the requirements of WCRP 6-1(A)(4). Because all that was required by statute and rule to constitute a modified job "offer" was properly contained in the August 10, 2016 letter and properly conveyed to Claimant, Respondents were within their rights to terminate Claimant's TTD when he failed to complete an application and otherwise refused to submit to a back ground check. A contrary ruling under the facts of this claim would render meaningless not only the modified job offer process but also C.R.S § 8-42-105(3)(d)(I) and WCRP 6-1 (A)(4).

F. Section 8-43-304(1) identifies four categories of conduct and authorizes the imposition of penalties when an employer or insurer: (1) Violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or Panel. *Pena v. Industrial Claim Appeals Office*, 117 P.3d 84 (Colo. App. 2005). The imposition of penalties under §8-43-304(1), supra, requires a two-step analysis. The ALJ must first determine whether the disputed conduct constituted a violation of a rule or order. *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623 (Colo. App. 1995). If the ALJ finds a violation, the ALJ must determine whether the employer's actions which resulted in the violation were objectively reasonable. *See City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003). The reasonableness of the employer's action depends on whether it is predicated in a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003).

G. The standard for the imposition of penalties is an objective one "measured by the reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676, (Colo.App. 1995). Section 8-43-304 is penal in nature and is to be narrowly and strictly construed. *Support, Inc. v. Indus. Claim Appeals Office*, 968 P.2d 174 (Colo. App. 1998). If an employer did not violate a provision of the Act or a rule of procedure, the claim for penalties is properly dismissed. *Montoya v. Industrial Claim Appeals Office*, 203 P.3d 620 (Colo. App. 2008).

H. In this case, Claimant's argument for penalties is not based on a clear and direct violation of a rule or statute. Specifically, he does not argue the attending physician (*did not*) give him a release to return to modified employment; or that the employment (*was not*) offered to him in writing; or that a letter (*was not*) sent to him with a copy of a written offer delivered to him with a signed certificate indicating service, containing both an offer of modified employment setting forth duties, wages and hours with a statement from an authorized treating physician that the employment offered is within the claimant's physical restrictions. Instead, his argument for penalties is limited to an argument that the modified job offer was somehow tentative and thus invalid because it called for additional negotiation following completion of a background check. In short, this is based on his interpretation of what constitutes a valid modified job offer which this ALJ finds/concludes is a strained interpretation in this case. Based upon the evidence presented, the ALJ concludes that because Claimant failed to prove that the modified job offer was improper in any way, he failed to establish the disputed conduct constituted a violation of a rule or order. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). Consequently, Claimant's claim for penalties must be denied and dismissed. *See Montoya supra*.

I. Even if a violation occurred, the employer's actions were objectively reasonable as they were predicated on a rational argument based in law or fact, meaning no penalties can be awarded. Claimant also argues penalties are owed as the September 6, 2016 GAL stops TTD benefits as of August 19, 2016, the date Claimant was supposed to start modified employment. However, CRS § 8-42-105(3)(d)(I) clearly allows the termination of TTD benefits as of the date Claimant no shows to modified employment. Finally, Claimant argues that Respondents violated Rule 5-5(C)(1). The evidence presented persuades the ALJ that Claimant failed to state this penalty with specificity. Accordingly, the claimed penalty is denied and dismissed.

ORDER

It is therefore ordered that:

1. Respondents lawfully terminated Claimant's TTD benefits by extending an offer of modified duty that complied with statute and rule of procedure which Claimant failed to accept.

2. Claimant's claims for penalties for violating CRS § 8-42-105(3)(d)(I), WCRP 6-I(A)(4) and WCRP 5-5(c)(1) are denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-860-080-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 22, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 3/22/17, Courtroom 1, beginning at 8:30 AM, and ending at 10:00 AM).

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection. Respondents' Exhibits A through E were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUE

Prior to the commencement of the hearing, counsel conferred and announced that they wished to enlarge the issue designated in the Case Information Sheet (CIS), which was "causal relatedness and authorization of alleged exercise induced asthma testing." Counsel stated that they wished to enlarge the issue to include the causal relatedness of "exercise induced asthma." Prior to testing, this would be putting "the cart before the horse." Consequently, the issue in this decision concerns the causal relatedness of the testing only and whether the need for the testing is causally related to

arriving at a diagnosis concerning the Claimant's present upper respiratory condition; and, a medical determination of whether the Claimant's condition is work-related in terms of an aggravation/acceleration of the Claimant's breathing problems, *i.e.,* coughing, wheezing, difficulty breathing after each of her surgeries wherein she was placed under general anesthetic (the last of which was in January 2015).

The Claimant bears the burden of proof, by a preponderance of the evidence.

PRELIMINARY MATTER

Jason McCarl, M.D., a pulmonologist at National Jewish Health, made a request for authorization of "an exercise bronchoconstriction study, and methacholine challenge study, and complete pulmonary function testing." Respondents denied the request and filed an Application for Hearing on September 2, 2016; and obtained an Independent Medical Examination by Jeffrey Schwarz, .M.D. On February 14, 2017, Pre-Hearing ALJ (PALJ) Robert J. Erickson denied the Claimant's motion for an extension of time to commence the hearing, however, the Office of Administrative Courts (OAC), ultimately, set the hearing for March 22, 2017, which occurred.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant's date of birth is February 5, 1979, and she was 38 years old on the date of hearing. She worked as an instructor for the Employer, engaged in outdoor instructional activities that were quite physically demanding.

2. The Claimant sustained severe, multiple injuries to her back, lower extremities, left upper extremity (LUE), and a **collapsed lung** on July 5, 2011, when she fell 45 feet while rock climbing in her work for the Employer. Immediately after the fall, the Claimant was taken to Vail Valley Medical Center and then transferred to Denver Health, where she was hospitalized for approximately one week. Since the date of injury, she has undergone nineteen (19) surgeries as a result of the admitted injuries, many of which were under general anesthetic. The last surgery under general anesthetic was in January 2015. She could not begin resuming her previously active lifestyle for approximately four years.

3. Ultimately, the Respondents filed a Final Admission of Liability (FAL), mailed March 24, 2016, admitting for a date of maximum medical improvement (MMI) of December 1, 2015; temporary disability benefits through November 30, 2015; an

average weekly wage (AWW) of $1,36.72; 3% whole person permanent impairment for visual impairment; 34% of the right lower extremity (RLE); 33% of the left lower extremity (LLE); 28% of the LUE: and, post-MMI medical maintenance benefits.

The Claimant's Testimony

4. It is undisputed that the Claimant has had no history of asthma, family or otherwise. She had minor allergies while she lived in Oklahoma (hay fever), prior to the admitted injuries and before to coming to Colorado in 2005. Thereafter, she had no significant breathing, coughing, wheezing or lung problems until after the admitted injuries and the consequent surgeries under general anesthetic.

5. Prior to the admitted injuries, the Claimant pursued an active lifestyle, including high-level aerobic exercises, mountain biking, hiking, backpacking, and snowboarding. She only began returning to these activities in 2016. She had no prior problems with her lungs, unless hay fever is considered a problem.

6. After each of the surgeries under general anesthetic the Claimant has had a prolonged cough that would sometimes last as long as two months but, according to the Claimant, the cough was not related to wheezing or shortness of breath. She was prescribed a Flovent inhaler which was not helpful. She also experienced right, lower, lateral chest pain when exercising. The Claimant has never been a smoker and has had no environmental exposure to irritating dusts or fumes.

7. It is the Claimant's lay opinion that her current lung problems are attributable to the admitted injuries of July 5, 2011, including her lung collapse, and the consequent 19 surgeries thereafter. Although the Claimant cannot render an expert opinion, the circumstantial evidence concerning a before-and-after analysis of her condition is overwhelming and more compelling that the theory of Jeffrey Schwartz, M.D., that the Claimant may have, coincidentally, developed the onset of adult asthma. Yet, Dr. Schwartz stated that testing of reversible airflow obstruction would be necessary to determine in the Claimant had asthma.

8. The Claimant presented straight-forwardly, persuasively and credible. Therefore, the ALJ finds her testimony highly credible and persuasive.

9. The Claimant's authorized treating physician (ATP) Kristin D. Mason, M.D., referred the Claimant to National Jewish Health for her pulmonary problems. The Claimant came under the care of Jason McCarl, M.D., an Assistant Professor of Medicine in the Division of Pulmonary and Critical Care Medicine at National Jewish.

Jason McCarl, M.D.

10. Dr. McCarl first saw the Claimant on June 28, 2016. He took a through history, consistent with the Claimant's testimony at hearing. He noted that the Claimant had a collapsed lung. He noted the Claimant's lung problems since the admitted fall with dyspnea "that can occur after exercise." His impression was that the Claimant had dyspnea "which occurs with exertion, which is "possibly related to exercise-induced asthma." ("Dyspnea" is defined as "difficult or labored breathing" in *Dorland's Illustrated Medical Dictionary,* 26th Ed.); allergic rhinitis/hay fever; and, the history of the admitted fall with numerous fractures including pneumothorax, requiring multiple surgeries and exposure to frequent general anesthesia. At the first visit, Dr. McCarl rendered no opinion concerning the causal relatedness of the need for the "exercise-induced asthma" testing he was recommending (Respondents' Exhibit B, bates stamp 010-012).

Independent Medical Exam (IME) by Jeffrey Schwartz, M.D.

11. Dr. Schwartz performed his IME on September 29, 2016. The ALJ infers and finds that Dr. Schwartz minimized the significance of the Claimant's collapsed lung. He indicated that the diagnosis of exercise-induced asthma depends on a demonstration of reversible airflow obstruction. He indicated that pulmonary testing would be necessary to determine if there was "reversible airflow obstruction " (Respondents' Exhibit A).

12. Dr. Schwartz stated: "However, while it is suspected but **unproven** (emphasis supplied) that [Claimant] has developed adult-onset asthma, her development of asthma would not be causally related to her injuries sustained on 07/05/11." He indicated that there was "no medical evidence her exposure to anesthetic agents from her previous surgeries could cause asthma." Dr. Schwartz did **not,** however, render any opinions concerning whether or not the Claimant's admitted injuries, including the collapsed lung, aggravated/accelerated the Claimant's lung/breathing problems (*Id.*).

13. In a statement that seemingly does not add up, Dr. Schwartz states: "In summary, [Claimant] has symptoms of adult-onset asthma, likely related to her underlying environmental allergies. Without having evidence of reversible airflow obstruction, her diagnosis of asthma is not established." Ultimately, Dr. Schwartz is of the opinion that if the Claimant has asthma, it is not related to her work injuries or the treatment of her injuries over the years, despite his observation that testing for reversible airflow obstruction had not been done (which would establish whether or not the Claimant had asthma). Thereupon, he opines that the Claimant's post-surgical cough "is unclear but is not related to inhaled anesthetic agents but more likely to be related to the upper airway irritation from the intubation with an endotracheal tube (a

consequence of the admitted injuries)." He offers no persuasive explanation for this opinion. Nowhere does Dr. Schwartz address the issue of whether or not the Claimant's lung/breathing problems were aggravated/accelerated by the treatment and consequences of her injuries and the subsequent treatment thereof.. Indeed, the ALJ infers and finds that Dr. Schwartz's overarching theme is that the Claimant coincidentally developed lung/breathing problems independent of and unrelated to the treatment and consequences of her admitted severe injuries. He attributes these problems to her allergies, which consisted of hay fever for which she had no significant problems after moving to Colorado from Oklahoma in 2005.

14. Overall, Dr. Schwartz is unclear about the cause of the Claimant's lung/breathing problems, other than to categorically render unsupported opinions that her problems are not work-related. For the reasons stated herein above and herein below, the ALJ finds the Claimant's testimony, the overwhelming circumstantial evidence that it creates, and the plausible inferences drawn there from more persuasive and credible than the ultimate opinion of Dr. Schwartz, concerning the lack of causal relatedness of the need for exercise-induced asthma testing. On the one hand, Dr. Schwartz cannot rule out asthma without the reversible airflow testing. Yet, on the other hand he is categorically of the opinion that the Claimant does not have asthma. He does not know for sure what the underlying cause of the Claimant's lung/breathing problems are after the admitted injuries. Despite his opinion of lack of causal relatedness, his opinions support the pulmonary testing recommended by Dr. McCarl. Without the benefit of pulmonary testing, the ALJ finds it incredulous to deny work relatedness of the treatment after the admitted injuries causing an aggravation/acceleration of the Claimant's breathing/lung condition, without having the results of the tests recommended by Dr. McCarl. Therefore, the ALJ does not find Dr. Schwartz's precipitous opinion concerning lack of work relatedness credible at this juncture, without the benefit of the results of the tests recommended by Dr. McCarl.

Dr. McCarl After Reading Dr. Schwartz's IME Report

15. In a brief report of January 9, 2017, Dr. McCarl stated: "I agree with Dr. Schwartz (having read Dr. Schwartz report) that any airways disease—in this case, asthma—is unlikely a result of her accident of 2011, or from general anesthesia from previous surgeries." Based on Dr. McCarl's summary statement, without further explanation, the ALJ finds that Dr. McCarl's opinion in this regard stands or falls with Dr. Schwartz's opinion as noted in Finding Nos. 13 and 14 herein above. Thereupon, Dr. McCarl recommended proceeding with an exercise-induced bronchoconstriction study, and methacholine challenge study, and complete pulmonary function testing. Nowhere does Dr. McCarl render an opinion concerning the causal relatedness, or lack thereof, of an aggravation/acceleration of the Claimant's lung/breathing problems as a consequence of the treatment for her admitted injuries, including the collapsed lung. Based on the brevity of Dr. McCarl's report of January 9, 2017 (Respondents' Exhibit B, bates stamp 008), the ALJ infers and finds that the fact that Dr. McCarl is

recommending further testing to determine the actual causes of the Claimant's coughing/lung problems, and whether further testing could determine whether the Claimant's lung/breathing condition is directly or indirectly within the proximate chain of causation from the Claimant's original admitted injuries. The ALJ infers and finds that Dr. McCarl perfunctorily agreed with IME Dr. Schwartz's opinion of lack of causal relatedness, without giving any persuasive explanation or analysis concerning his agreement with Dr. Schwartz. Therefore, Dr. McCall's precipitous opinion, prior to getting the results of his recommended tests, is not credible at this juncture.

Ultimate Findings

16. The Claimant's highly credible testimony establishes compelling circumstantial evidence that her treatment for the admitted injuries (including a collapsed lung and 19 surgeries, many under general anesthetic) could possibly be the cause of her current breathing/lung problems. Therefore, the pulmonary testing recommended by Dr. McCarl is part of the diagnostic procedures to rule in or out the work relatedness of the Claimant's breathing/lung conditions, and arrive at a definitive diagnosis of the Claimant's current breathing/lung condition. As found, without the benefit of the test results, Dr. Schwartz's and Dr. McCarl's precipitous opinions on lack of causality are not credible at this juncture. Indeed, both doctors did not address the issue of whether the Claimant's post-accident treatment and surgeries may have aggravated/accelerated her breathing/lung condition.

17. Between conflicting lay and medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's opinions, the plausible inferences drawn there from and the circumstantial evidence it establishes; and, to reject the precipitous opinions of Dr. Schwartz and Dr. McCarl at this juncture, rendered without the benefit of the pulmonary test results.

18. Before ruling out work-relatedness of an aggravation/acceleration of the Claimant's underlying lung/breathing condition, pulmonary testing is a critical diagnostic step in order to arrive at a definitive determination of work-relatedness or lack thereof.

DISCUSSION

This matter is somewhat unusual because the outcome goes against the grain of routinely deferring to medical opinions on causality issues. As found herein above, IME Dr. Schwartz rendered an opinion that the Claimant's lung/breathing problems were not causally related to the admitted, severe injuries of July 5, 2011, which included a collapsed lung, and the ensuing 19 surgeries, many of which were performed under general anesthetic. Dr. McCarl, who recommended pulmonary testing, essentially, deferred to IME Dr. Schwartz's opinion on lack of causality Both doctors were of the opinion that pulmonary tests were necessary to make a definitive diagnosis of the

Claimant's lung/breathing condition. For this reason, the ALJ found that the two medical opinions were precipitous and, therefore, not credible at this juncture, without the benefit of the pulmonary test results.

By way of analogy, diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a claimant's condition so as to suggest a course of further treatment *See In the Matter of the Claim of William Soto, Claimant,* W.C. No. 4-813-582 [Indus. Claim Appeals Office (ICAO), October 27, 2011]. Granted, the issue herein is whether the tests recommended by Dr. McCarl are a "compensable" benefit or, at least diagnostic procedures leading to a determination of whether or not the Claimant's breathing/lung condition is within a proximate causal chain from her admitted injuries. Indeed, the tests are to determine whether the Claimant's lung/breathing condition, or an aggravation/acceleration thereof, is among other things work-related and, if so, would treatment thereof be a "compensable" benefit.

In *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), the Court of Appeals dealt with an analogous situation wherein the injured worker could proceed no further with medical treatment and evaluations because the employer and the treating physician took the position that because the claimant had resigned her employment, she was **not** entitled to further evaluations. Ultimately, the Court of Appeals concluded that a medical opinion was not necessary to prove causation because imposing such a requirement would be reading something into the statute that was not there. *See Jacoby v. Metro Taxi, Inc.,* 851 P.2d 245 (Colo. App. 1993). § 8-41-301, C.R.S., which specifies the conditions necessary for a compensability determination (this would include the compensability of a medical procedure or diagnostic tests) does **not** provide that a medical opinion is necessary to make such a determination. As observed in *Lymburn*, to require a medical opinion to support a causality determination would be to read something into the statute that does not exist. Consequently, *Lymburn* remains good law.

The facts in the present case are highly unusual because of the severity of the Claimant's injuries, her 19 surgeries, her collapsed lung as a result of the admitted injuries, and a comparison of her breathing/lung condition before and after the surgeries resulting from her admitted injuries. Before the admitted injuries and consequent surgeries, the Claimant could be characterized as a healthy, hearty outdoors person with a very active and physically demanding lifestyle. IME Dr. Schwartz places some importance on the Claimant's allergies in Oklahoma before 2005. It turned out that the allergies consisted of hay fever. It appears that Dr. McCarl "rubber-stamped" Dr. Schwartz's causality opinion and, thereafter, recommended proceeding with the pulmonary tests. The totality of the Claimant's testimony paints a compelling circumstantial picture that her present lung/breathing condition is more than coincidental as Dr. Schwartz implies. Indeed, the Claimant's lay testimony presents compelling and sufficient circumstantial evidence of "cause-and-effect," *i.e.,* the Claimant's four-year

ordeal with 19 surgeries, many under general anesthetic, had a likely effect on her breathing/lung problems.

The ALJ may make a causality determination based on lay testimony, despite medical evidence to the contrary. In the present case, the ALJ is primarily dealing with the Claimant's credibility and the circumstantial evidence it establishes versus the precipitous medical opinions of IME Dr. Schwartz and Dr. McCarl and the fact that they do not address aggravation/acceleration, which may be addressed in pulmonary test results. At present, this case is in the posture of a "probable cause" determination, *i.e.,* probable cause to believe that the Claimant's breathing/lung problems may be in the proximate chain of causation from her admitted injuries, thus, the recommended pulmonary tests are necessary to make a causality determination concerning the Claimant's present breathing/lung condition.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad

discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's lay testimony was highly credible, established circumstantial evidence of the Claimant's before-and-after (the admitted injuries) condition, which warrants the testing recommended by Dr. McCarl, and was essentially undisputed from the factual and chronological progression of the Claimant's lung/breathing problems. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179. As further found, the precipitous opinions of Dr. Schwartz and Dr. McCarl are not credible at this juncture, without the benefit of the results from the pulmonary tests recommended by Dr. McCarl.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting lay and medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's opinion, the plausible inferences drawn there from and the circumstantial evidence it establishes, and to reject the precipitous opinions of Dr. Schwartz and Dr. McCarl at this juncture, rendered without the benefit of the pulmonary test results.

Causal Relatedness of the Need for Recommended Pulmonary Tests

c. Without the benefits of the pulmonary test results (recommended by Dr. McCarl), there should be "no rush to judgment" to rule out work-relatedness (an aggravation/acceleration of an underlying breathing/lung problem). By way of analogy, diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a

claimant's condition so as to suggest a course of further treatment *See In the Matter of the Claim of William Soto, Claimant,* W.C. No. 4-813-582 [Indus. Claim Appeals Office (ICAO), October 27, 2011]. Granted, the issue herein is whether the tests recommended by Dr. McCarl should be a "compensable" benefit to rule in or out work-relatedness. Indeed, the tests are to determine whether the Claimant's lung/breathing condition, or an aggravation/acceleration thereof, is work-related and, if so, would treatment thereof be a "compensable" benefit.

d. An employer must provide an injured employee with reasonably necessary medical treatment to "cure and relieve the employee from the effects of the injury." § 8-42-101(1) (a), C.R.S. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Without the benefit of the pulmonary test results (the tests recommended by Dr. McCarl), we are **not** there yet. Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). As found, the pulmonary tests recommended by Dr. McCarl are, among other things, for the purpose of diagnosing the Claimant's breathing/lung condition, or an aggravation/acceleration thereof, and to determine whether or not the condition is work-related.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of a medical procedure and/or tests to appropriately diagnose a condition, ruling in or out work-relatedness and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Street,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County*

Bi-Products, Inc., W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on the appropriateness of the pulmonary tests recommended by Dr. McCarl.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the costs of all the pulmonary tests recommended by Jason McCarl, M.D., subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The issue of work-relatedness, or an aggravation/acceleration, of the Claimant's breathing/lung condition is reserved for future decision.

DATED this_____day of March 2017.

Wc.ord

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on August 12, 2016.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to a general award of reasonable and necessary medical benefits.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits from September 9, 2016 and ongoing.

4. Whether Claimant has established by a preponderance of the evidence that he is entitled to temporary partial disability (TPD) benefits for various dates between August 12, 2016 and September 8, 2016.

STIPULATIONS

1. Claimant's average weekly wage is $1,089.75.

2. Banner Occupational Health in Loveland, Colorado is an authorized provider.

FINDINGS OF FACT

1. Claimant was employed by Employer as a machinist. Employer is a small machine shop that manufactures small production prototypes. Employer typically has 0-2 employees.

2. In the summer of 2016 Employer had a large job order that needed to be completed on a short timeline. Employer's owner, Jeff Hansen, and Claimant began working 12 hour opposite shifts to keep the machines going 24 hours per day in order to get the order completed. Claimant began working from approximately 8 p.m. to 8 a.m. while Mr. Hansen began working from 8 a.m. to 8 p.m.

3. For approximately two months, Claimant and Mr. Hansen worked 12 hour opposite shifts. When they became closer to completing the large order, Claimant and Mr. Hansen began scaling back their hours and slowing down production because they knew they would be able to meet the deadline.

4. On August 12, 2016 Claimant was working the night shift. At approximately 2:00 a.m. Claimant wheeled out a garbage can full of scrap aluminum

that he estimated weighed close to 100 pounds. Claimant squatted, lifted the can, and twisted to dump the can out in the dumpster when he felt a tweak in his mid back.

5. Claimant felt immediately like he had pulled a muscle. Within a day or two the pain got more intense and by the night of August 13, 2016 Claimant was in significant pain.

6. Claimant had August 13, 2016 off of work. By August 14, 2016 Claimant had reported to Mr. Hansen that he felt like he had pulled a muscle and that he was going to take it easy. Claimant did not request or seek medical treatment.

7. Claimant continued to work his regular schedule and duties but took it easy. Claimant could not work as physically and had to take the scrap metal bin out to the dumpster more frequently so that it did not get as full or weigh as heavy.

8. Approximately one week after the incident, Claimant had difficulty even getting out of bed.

9. On August 23, 2016 Claimant again reported the injury to Mr. Hansen because he had not gotten better and believed the injury was more serious than he initially thought. Mr. Hansen asked Claimant to put the date of the report of initial injury as either August 22 or 23 to comply with his workers' compensation reporting requirements.

10. Mr. Hansen filled out a report of injury, and referred Claimant for medical treatment.

11. On August 24, 2016 Claimant was evaluated at Banner Occupational Health Clinic by James Hebard, M.D. Claimant reported that he was lifting a heavy 100lb. barrel of scrap metal into a dumpster when he felt a tweak in his low back like he had pulled something. Claimant reported thinking it would fade and that he took the rest of the shift easy and rested at home. Claimant reported that the pain persisted and increased with stiffness so he reported the injury when he returned to work on August 15 but continued to try his regular duty and tried to take it easy. Claimant reported that the pain continued so he re-reported the injury and came in for treatment. *See* Exhibit H.

12. Claimant reported to Dr. Hebard that he had a history of chronic low back stiffness since working as a roofer in his teens and that he had routine episodes of low back soreness if he overdid it. Claimant reported having massage therapy and chiropractic treatment once per week for about 7 months. Claimant reported a tailbone contusion in approximately 1999 and also reported a right hand nail gun injury in 2012. Claimant reported pain of 8/10 on the pain scale along his lower back and bilateral hips. Dr. Hebard noted on examination that Claimant had joint pain, joint stiffness, muscle pain, muscle weakness, and back pain. Claimant was mildly tender to palpation over the lumbosacral spine, moved very slow and guarded. Dr. Hebard diagnosed

lumbosacral back strain and lumbar radiculopathy. Claimant was prescribed motrin, flexeril, and norco, was placed on light duty, and was referred for a lumbosacral MRI. *See* Exhibit H.

13. On August 29, 2016 Insurer took a recorded statement from Claimant. Claimant reported that the injury happened two weeks prior to reporting it and that he thought maybe he had just twisted wrong or something so he let it go initially and didn't say anything about it. *See* Exhibit AA.

14. On August 30, 2016 Claimant underwent an MRI of his lumbosacral spine interpreted by Bruce Berkowitz, M.D. Dr. Berkowitz found at level L4/5 a diffuse disc bulge with a superimposed far left lateral disc protrusion and moderate to severe left and mild right neural foraminal stenosis. At level L5/S1 Dr. Berkowitz found a broad based right lateral disc protrusion with a small free disc fragment present within the right central region and moderate right and moderate to severe left neural foraminal stenosis. *See* Exhibit I.

15. On August 31, 2016 Claimant was evaluated by Dr. Hebard. Dr. Hebard referred Claimant for a neurosurgery consultation to review the MRI. Claimant reported continued pain in the low back and bilateral right greater than left hips that had not improved despite medication and light duty work. The Claimant was scheduled to see Dr. Hebard again on September 21, 2016. *See* Exhibit J.

16. On September 8, 2016 Claimant felt increased and sharp pain in his right hip as he bent forward to throw away a piece of scotch brite. Claimant reported to Mr. Hansen that he thought he hurt his hip and that he had called the clinic to get in to see Dr. Hebard early. Claimant demonstrated what he had done when he felt the right hip pain. Mr. Hansen responded "really?" and informed Claimant to go home and tend to his hip and that he could no longer accommodate Claimant's restrictions.

17. Mr. Hansen contacted his insurance carrier to report this information and was instructed to complete another first report of injury. Claimant did not return to work after September 8, 2016.

18. On September 8, 2016 Claimant was evaluated by Dr. Hebard. Claimant reported that his right hip felt 40-50% worse after he bent forward at work, that his low back felt about the same, and that his left hip felt a little bit better. Claimant reported that he was tolerating light duty work without problems by taking things slow and taking his medications. Dr. Hebard noted that the neurosurgery consultation was coming up and that Claimant would return after that consult. *See* Exhibit J.

19. On September 16, 2016 Claimant was evaluated by neurosurgeon Beth Gibbons, M.D. Claimant reported low back and hip pain and mild leg pain. Claimant reported that he thought he injured his back while lifting and that it slowly worsened over the next week. Claimant reported being nearly unable to get out of bed when the pain was at its worst and that it was slightly better. Dr. Gibbons reviewed the MRI and

opined that the MRI showed Claimant's lumbar spine was generally healthy but with mild degenerative changes and areas with small disc herniations. Dr. Gibbons opined that the pain was most likely from the muscles, joints, and ligaments in the lower back and that surgery was not indicated. Dr. Gibbons recommended referral to physical therapy. *See* Exhibit K.

20. On September 29, 2016 Claimant underwent physical therapy. Claimant reported that he had lifted something heavy at work when he felt tightness in his back and thought he had pulled a muscle but that it kept getting worse. Claimant reported no previous back problems and that he performed an active job without difficulty that he could not tolerate now due to stiffness and pain limiting his mobility. *See* Exhibit L.

21. On November 2, 2016 Claimant was evaluated by Alicia Feldman, M.D. Claimant reported that he was lifting a garbage can with scrapped chips in it trying to get it in the big dumpster when he twisted wrong and hurt his thoracic spine. Claimant reported he thought he pulled a muscle but that after a week the pain got so bad that he couldn't get out of bed. Dr. Feldman diagnosed lumbar degenerative disc disease. *See* Exhibit M.

22. On November 7, 2016 Claimant was evaluated by Dr. Hebard. Claimant reported feeling overall about 50% better with some days with no real pain but just uncomfortable versus other days with 2/10 low back pain even at rest. Dr. Hebard continued to assess lumbosacral back strain and lumbar radiculopathy and continued to opine that the cause was related to work activities. *See* Exhibit N.

23. On November 18, 2016 Claimant underwent an independent medical evaluation performed by Douglas Scott, M.D. Claimant reported that prior to August 12, 2016 his back felt good and that he required no treatment. Claimant reported seeing a chiropractor prior to August 12 for adjustments with his last one sometime around February 2016. Claimant reported that he was never in pain, but needed to have his spine adjusted. Claimant reported that on August 12 he was lifting a garbage barrel of scrap metal into the dumpster at work when he felt immediate pain in his mid to lower back. Claimant reported that on September 8, 2016 he felt a sharp nerve like pain in his right hip when throwing some scotch brite pads into a trash container and leaning over at 5 degrees. Claimant could not recall a 2004 injury, could not recall a July 2013 motor vehicle accident, and reported that he had not been seen at Yellowstone Chiropractic in September of 2014 for a 2013 motor vehicle accident. Dr. Scott performed a medical records review and a physical examination. *See* Exhibit A.

24. Dr. Scott opined that Claimant had positive pain behavior that seemed to increase during the interview session. Dr. Scott opined that Claimant's spine was mal-aligned with curvature to the left in the lower thoracic and upper lumbar spine. Dr. Scott noted that Claimant had taut paraspinal musculature with associated tenderness, that Claimant's right shoulder blade was above the left, that Claimant's right iliac crest was above the left, and that the left SI joint was above the right. Dr. Scott also noted positive pelvic and scapular obliquity. Dr. Scott noted that Claimant had medical record

evidence of a pre-existing history of pain and stiffness in the thoracolumbar spine which required periodic chiropractic manipulative adjustment as recently as February 22, 2016 with pain at 8/10 and subluxations at L2 and L5. Dr. Scott noted that the MRI scan findings were suggestive of spondylosis with possible remote disk injury with a dislodged small free disk fragment at L5-S1. Dr. Scott opined that Claimant may have irritated his pre-existing back condition on August 12, 2016 but given the late reporting and his ability to work his regular job for 12 days before reporting, it was possible that Claimant irritated his pre-existing back condition but that the irritation did not persist for more than on the day of August 12, 2016. Dr. Scott opined that the findings on MRI were related to degenerative changes and that no acute structure findings were found to suggest an acute disk injury on August 12. Dr. Scott opined that Claimant should engage in daily home exercise for core strengthening and stretching of the lumbar spine and that Claimant might benefit from chiropractic adjustments or lumbar spine mobilization to correct the curvature in his lumbar spine. *See* Exhibit A.

25. On December 8, 2016 Claimant was evaluated by Dr. Hebard. Claimant reported feeling 100% worse with pain in the middle of his back and Claimant was upset that an MRI of his thoracic spine had been denied. *See* Exhibit Q.

26. On December 16, 2016 Claimant was evaluated at the emergency room of McKee Medical Center. Claimant reported bilateral low back pain that had increased over the last few days. Claimant reported an onset two days prior when he was lifting, turning, bending, and doing laundry at home and that at onset the degree of pain was moderate but that it was now severe. Claimant was provided with pain medications and was advised to follow up with his doctor as scheduled. *See* Exhibit R.

27. Claimant had prior injuries and treatment directed at his back.

28. On June 15, 2004 Claimant was evaluated by Dana Larson, M.D. Claimant reported lifting a 300 pound piece of metal with a coworker and that as he stood up he felt a sharp pain in his left mid back. Claimant reported the pain did not radiate but that it hurt to take a deep breath. Dr. Larson noted acute lumbar muscle spasms on examination. *See* Exhibit B.

29. On June 18, 2004 Claimant was evaluated by Howard Reeve, M.D. Claimant reported lifting a heavy frame when he injured or strained his back and that he was still having a lot of pain. Dr. Reeve recommended physical therapy, medications, an x-ray of the lumbar spine, and light duty work. *See* Exhibit D.

30. On September 23, 2014 Claimant was evaluated at Yellowstone Chiropractic by Ryan Laqua, D.C. Claimant reported aching pain in the upper back in the left and right, in the mid back on the left and right, and moderate pain in the lower back on the left and right. Claimant reported that his pain was persistent and aggravated by working as a card dealer. Dr. Laqua noted restricted range of motion in the cervical, thoracic, and lumbar regions and found subluxations in those areas that were adjusted. On the registration and history form Claimant reported his reason for

visit as his lower back mostly but all of the back, that his back normally hurt, everyday, and that the pain comes when he is dealing cards mostly. *See* Exhibit E.

31. On April 11, 2015 Claimant was evaluated at The Joint chiropractic by Ryan Gebhardt. Claimant reported low back pain at 8/10 and neck and upper back pain at 9/10. Claimant reported the reason for his visit was lower back/shoulders and that the pain was constant for the most part. On the pain diagram Claimant circled the lower and mid back, base of the neck, bilateral hips, and bilateral knees. Claimant reported a history of neck pain/stiffness, shoulder pain/stiffness, low back pain/stiffness, and upper back pain/stiffness. *See* Exhibit F.

32. Claimant continued to treat at The Joint chiropractic between April of 2015 and February of 2016 and treated approximately once per week for approximately 42 total visits. The pain ratings on each visit report remained identical to the first visit. *See* Exhibit F.

33. A few days prior to the alleged August 12, 2016 injury Claimant and Mr. Hansen had a conversation about Claimant's job security. Claimant was interested in buying a home and wished to know whether, if work slowed down, he or another employee would be let go first. Mr. Hansen explained that Claimant would be let go first because the Claimant was paid more and because Mr. Hansen was better able to take over Claimant's job duties without losing production.

34. Claimant testified at hearing. Claimant reported that between his last chiropractic visit in February of 2016 and the alleged injury in August of 2016 that he felt great and was working full time, overtime shifts, and performing his normal job duties including lifting cans full of scrap metal without problem. Claimant reported that he went to the chiropractor for soreness/tightness. Claimant reported that after August 12, 2016 he had trouble lifting the cans and that he was a lot slower at work. Claimant reported that Mr. Hansen told him the injury would be written as reported on August 23 since he had 12-24 hours to report to the insurance company. Claimant testified that Employer did not offer work to accommodate his restrictions after September 8, 2016. Claimant testified that when speaking with Insurer he stuck with the date of the reported injury that Mr. Hansen used because of what Mr. Hansen had told him about the reporting requirements. Claimant testified that he has been receiving unemployment benefits since approximately October of 2016 at a rate of approximately $510.00 per week.

35. Mr. Hansen also testified at hearing. Mr. Hansen testified that the first he had heard about the incident was on August 23, 2016 and that he had no memory of Claimant stating he had tweaked his back on August 12 or August 14. Mr. Hansen agreed that the scrap metal barrels could get up to 100 pounds. Mr. Hansen testified that Claimant reported to him on September 8, 2016 that Claimant had hurt his hip on September 6, 2016 and that he again called Insurer to report and filled out another new report of injury and told Insurer he could not accommodate Claimant's light duty restrictions any longer. Mr. Hansen testified that Claimant returned to day shifts on August 22, 2016 and that he did not notice any lapse in Claimant's production between

August 12, 2016 and August 23, 2016 and also did not notice any problems with Claimant walking or performing any job duties. Mr. Hansen testified that Claimant complained a lot about his back problems when working and that he had to leave early to go see a chiropractor. Mr. Hansen disagreed that Claimant lost hours at work because of the injury. Mr. Hansen testified that Claimant's hours lessened when they caught up on their large order and were able to slow down production and not due to an injury.

36. Dr. Scott also testified at hearing. Dr. Scott opined that Claimant might have irritated a pre-existing condition. However, Dr. Scott noted the prior evaluations and treatment by chiropractors for a pre-existing condition and found it significant that Claimant was able to perform his normal job duties between August 12 and August 23. Dr. Scott opined that usually with an acute work injury, it is immediately painful and reported early because someone knows they have been injured. Dr. Scott opined that Claimant did not sustain an injury to the spine on August 12, 2016 and that it was possible there was no injury or possible there was a strain on that date. Dr. Scott found it probable that no structural injury to the spine occurred, but possible that irritation of a pre-existing condition occurred. Dr. Scott also noted that he found mal-alignment of Claimant's spine on November 18, 2016 that had not been noted or reported earlier by any providers and noted that the mal-alignment was very apparent. Dr. Scott opined that Claimant's mal-alignment was musculature and a muscular imbalance where muscles on one side pull down more than muscles on the other side. Dr. Scott opined that the imbalance could be an indication of a recent acute injury. Dr. Scott agreed that the mechanism of injury made sense for a lumbar spine injury. Dr. Scott also noted that if Claimant had reported the injury within a few days of it occurring, his opinion would change.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder

should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established, more likely than not, that he sustained a compensable injury on August 12, 2016. Claimant is credible and persuasive that on this date he felt a tweak in his back that became more intense within a few days. Claimant is also credible that he reported this to Mr. Hansen by August 14 but that he did not seek medical treatment and just took it easier on the job. Claimant is credible that by August 23, 2016 he had not gotten better and believed the injury was more serious than he initially thought so he made a report and sought treatment. Claimant is also credible that when he did so, Mr. Hansen listed the date of the initial report as August 23 and that he agreed to go along with that as the reporting date due to what Mr. Hansen reported to him as an insurance requirement.

Claimant’s reports of the mechanism of injury have been consistent throughout the claim and are found credible. Claimant’s reports of the onset of pain are also found

credible. Although Claimant has a history of back pain and prior treatment, Claimant was working full duty in a fairly demanding job and was working 12 hour shifts leading up to the injury. Claimant was able to perform his job duties prior to the injury without restriction. Although Claimant had pre-existing issues in his back, the ALJ concludes that Claimant's work duties on August 12, 2016 and the tweak while lifting the can of scrap metal aggravated, accelerated, or combined with Claimant's pre-existing issues to produce both disability and the need for medical treatment that did not exist leading up to August 12. Prior to August 12 Claimant was working long shifts in a fairly demanding job. Afterwards, and due to the injury on August 12, Claimant was unable to continue with his normal duties. Dr. Scott agreed that Claimant may have irritated a pre-existing condition and noted mal-alignment of the spine that could be indicative of a recent acute injury. Notably, in prior chiropractic treatment records over a long period of time, no mal-alignment of the spine was noted. Dr. Scott also based a large part of his opinion on the fact that Claimant did not report the injury within a few days. However, the ALJ credits Claimant's testimony that he advised Employer by August 14 that he had tweaked his back, was going to take it easy, and didn't need treatment. Claimant reasonably believed his back would get better and when it didn't, sought treatment less than two weeks after the injury.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has established that he sustained a compensable work related injury and that he is entitled to a general award of reasonable and necessary medical benefits. Respondents are liable for medical treatment that is reasonable and necessary and retain their right to object to any specific treatment recommendations in the future.

Temporary Total Disability (TTD)

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively

and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

Claimant has established that he sustained a compensable work related injury, and that he had restrictions of body function due to his pain and limitations following the injury and that he sustained wage loss as a result of his limitations and disability. As found above, Employer was unable to accommodate Claimant's restrictions and Claimant's last day of work was September 8, 2016. Claimant has established an entitlement to TTD benefits beginning September 9, 2016 as following that date he left work due to his injury and disability and suffered actual wage loss. As found above, Claimant testified as to his receipt of unemployment insurance benefits and Respondents are entitled to an offset for this.

Temporary Partial Disability (TPD)

Claimant has failed to establish an entitlement to TPD benefits. Although wage records show that beginning August 24, 2016 Claimant's total work hours were reduced and although on some of the dates where he had reduced hours, Claimant had medical appointments, the evidence is also persuasive that at this same time production had slowed down. Claimant has failed to establish a causal connection between any reduced hours and his work injury. It is unclear and insufficient evidence was offered to connect reduced hours on any specific dates to Claimant's injury versus just being due to a slower production schedule.

ORDER

1. Claimant has established by a preponderance of the evidence that he sustained a compensable injury on August 12, 2016.

2. Claimant is entitled to a general award of reasonable and necessary medical benefits to treat his August 12, 2016 injury.

3. Claimant has established an entitlement to TTD benefits from September 9, 2016 and ongoing until terminated by law.

4. Claimant has failed to establish an entitlement to TPD benefits. His claim for TPD on various dates between August 12, 2016 and September 9, 2016 is denied and dismissed.

5. Respondents are entitled to an offset for Claimant's receipt of unemployment benefits.

6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUE

Whether Respondent has demonstrated by a preponderance of the evidence that Claimant did not suffer industrial injuries to his lumbar and cervical spines during the course and scope of his employment with Employer on February 20, 2015.

FINDINGS OF FACT

1. Claimant worked for Employer as a Custodian. On February 20, 2015 he was walking through a band room in a school while performing his job duties. Claimant stepped on drumsticks, fell to the floor and landed on his right buttock, right knee and right hip. He got up from the floor and continued to perform his work activities.

2. Claimant explained that he attempted to sit down during a break. However, he experienced significant pain in his tailbone area. He also noted that he began to suffer pain in his right hip and right knee.

3. On February 21, 2015 Claimant visited the Longmont Clinic for an examination. Claimant reported that his worst pain was located in the small of the back and tailbone. He was diagnosed with a closed traumatic fracture of the coccyx with injuries to the right knee and right hip.

4. On February 25, 2015 Claimant visited Firestone Family Medicine for an evaluation. Claudia Williams, M.D. diagnosed Claimant with a right knee injury, a right hip injury and a coccyx fracture/sprain.

5. On February 27, 2015 Claimant returned to Firestone Family Medicine for an examination. Ruth A. Vanderkool, M.D. diagnosed Claimant with coccydynia, right hip pain and right knee pain. She remarked that Claimant's conditions were at least 50% likely to have been caused by his work activities.

6. On March 6, 2015 Claimant again visited Firestone Family Medicine for an evaluation. Dr. Vanderskool diagnosed Claimant with "pain in joint, pelvic region and thigh; pain in joint, lower leg." She noted that Claimant was able to return to modified duty work from March 7, 2015 until March 13, 2015.

7. On May 28, 2015 Claimant returned to Firestone Family Medicine for an examination. Authorized Treating Physician (ATP) Heather Banks, M.D. remarked that Claimant's work-related diagnoses included right knee pain, right hip pain and coccydynia. She released Claimant to regular duty employment with no restrictions.

8. By July 17, 2015 Claimant again visited Dr. Banks for an examination. Dr. Banks reiterated that Claimant's work-related diagnoses included right knee pain, right

hip pain and coccydynia. She noted that Claimant's right hip pain had improved. Dr. Banks commented that Claimant had undergone an orthopedic consultation, received physical therapy and taken medications for his February 20, 2015 industrial injuries. She again released Claimant to regular duty employment with no restrictions.

9. On August 14, 2015 Claimant returned to Dr. Banks for an evaluation. She continued to diagnose him with right knee pain, right hip pain and coccydynia.

10. On September 24, 2015 Claimant again visited Dr. Banks. Dr. Banks noted that Claimant was no longer suffering pain in his coccyx. She explained that Claimant's right hip pain had resolved after an injection and physical therapy had helped his right knee pain. In addressing Claimant's lower back concerns, Dr. Banks stated that Claimant had been suffering symptoms since his August 14, 2015 appointment. Dr. Banks also remarked that Claimant had reported "he does not know if he had this from the beginning because everything else hurt so bad." She also commented that Claimant's back pain began approximately three weeks earlier. Dr. Banks determined that Dr. Vanderkool's first M-164 Form revealed a medical diagnosis of lower back pain. However, she summarized that Claimant "has never complained of low back pain to me before." Dr. Banks specifically characterized Claimant's lower back pain as "new." She speculated that Claimant may not have mentioned lower back pain because he had been sitting for months as his tailbone was healing.

11. Dr. Banks addressed Claimant's lower back symptoms at a November 5, 2015 evaluation. She explained that x-rays revealed degenerative changes to Claimant's "lower lumbar spine with narrowing of L4-5 and L5-S1 but no subluxation or flexion or extension views." Dr. Banks referred Claimant for an MRI.

12. On November 13, 2015 Respondent filed a General Admission of Liability (GAL). The GAL recognized that Claimant was entitled to receive medical benefits, Temporary Total Disability (TTD) benefits and Temporary Partial Disability (TPD) benefits as a result of his February 20, 2015 injuries.

13. Claimant subsequently received bilateral sacroiliac joint injections and medial branch blocks. He also underwent numerous massage therapy sessions directed to his hip, knee, sacral attachment, iliac crest, trochanter-femur attachments and glutral musculature.

14. On March 16, 2016 Claimant returned to Dr. Banks for an evaluation. He reported pain and numbness in his hands. Claimant inquired whether his hand symptoms were related to his fall on February 20, 2015. Dr. Banks responded that his symptoms were unlikely related to the February 20, 2015 incident because he had not previously mentioned them. She also advised Claimant to ask his spine surgeon whether he had suffered a new injury or his symptoms were caused by chronic, long-standing, degenerative disc disease.

15. On April 5, 2016 Claimant underwent C3-C4 and C4-C5 neck surgery. At an April 16, 2016 visit with Dr. Banks Claimant reported that he was uncertain if he had any back pain because he was on "tons" of medication after his neck surgery.

16. On June 30, 2016 Claimant underwent an independent medical examination with Henry J. Roth, M.D. Dr. Roth thoroughly reviewed Claimant's medical records and conducted a physical examination. He concluded that Claimant's lumbar and cervical spine symptoms were not related to the February 20, 2015 industrial incident. Dr. Roth detailed that Claimant did not initially report middle and lower back symptoms after the February 20, 2015 incident. In fact, Claimant did not mention "lumbar discomfort and bilateral sciatica" until September 24, 2015. Dr. Roth specifically remarked that "prior to that point in time there were no complaints of right or left-sided low back, and no left-sided gluteal, hip or leg symptoms." Although Claimant had mentioned to Dr. Vanderkool that he had pain in the small of his back and tailbone on February 21, 2015, an examination did not reveal any "lumbar tenderness on palpation." Dr. Roth commented that on September 24, 2015 Dr. Banks had characterized Claimant's lumbar discomfort as a "new symptom" after treating him since April 3, 2015. Moreover, Dr. Roth commented that Claimant did not mention upper back or cervical pain to Dr. Banks until March 16, 2016. He explained that it was not medically probable that Claimant's lumbar and cervical symptoms "would have escaped 29 medical appointments over a 7 month timeframe."

17. Dr. Roth reasoned that Claimant's November 13, 2015 MRI revealed pre-existing degenerative changes in Claimant's back. The February 20, 2015 incident did not aggravate Claimant's pre-existing, degenerative condition because his symptoms would have manifested shortly after the February 20, 2015 incident instead of failing to appear for approximately seven months. Based on Claimant's delayed onset of back symptoms and degenerative condition Dr. Roth concluded that his lumbar and cervical spine conditions were not caused or aggravated by the February 20, 2015 incident.

18. Claimant testified at the hearing in this matter. He attributed his lumbar and cervical spine symptoms to the February 20, 2015 industrial incident. He explained that he suffered from lower back and coccyx pain immediately after he slipped and fell on the drumsticks at work. However, he was uncertain of the location of his back pain and his coccyx area was the most painful. Claimant explained that, although he had previously experienced muscle spasms in his lower back, after the accident he suffered muscle spasms higher on his back and they occurred with more frequency. Claimant acknowledged that he did not begin to experience neck or cervical pain until the Spring of 2016 but nevertheless attributed his symptoms to the February 20, 2015 incident.

19. Dr. Roth testified at the hearing in this matter. He maintained that the February 20, 2015 incident did not cause, aggravate or accelerate Claimant's lumbar and cervical spine symptoms. He reiterated that it was not medically probable that Claimant's back symptoms would not manifest for approximately seven months after the industrial event. Moreover, Dr. Banks had characterized Claimant's report of lumbar discomfort as a "new" symptom on September 24, 2015. Accordingly, Dr. Roth reasoned that the February 20, 2015 industrial incident did not aggravate, accelerate or

combine with Claimant's February 20, 2015 industrial incident to produce a need for medical treatment.

20. Respondent has demonstrated that it is more probably true than not that Claimant did not suffer industrial injuries to his lumbar and cervical spines during the course and scope of his employment with Employer. On February 20, 2015 Claimant slipped on drumsticks and fell to the floor while performing his job duties. On February 21, 2015 Claimant was diagnosed with a closed traumatic fracture of the coccyx with injuries to the right knee and right hip. Claimant regularly visited ATP Dr. Banks and received significant treatment for his injuries including injections, medial branch blocks and massage therapy. On November 13, 2015 Respondent filed a GAL recognizing that Claimant was entitled to receive medical benefits, TTD benefits and TPD benefits as a result of his February 20, 2015 injuries. On September 24, 2015 Claimant mentioned to Dr. Banks that he had been suffering from lower back pain. Dr. Banks summarized that Claimant had "never complained of low back pain to me before." She specifically characterized Claimant's lower back pain as "new." On March 16, 2016 Claimant noted pain and numbness in his hands. Dr. Banks responded that his symptoms were unlikely related to the February 20, 2015 incident because he had not previously mentioned them. She also advised Claimant to ask his spine surgeon whether he had suffered a new injury or his symptoms were caused by chronic, long-standing, degenerative disc disease.

21. Claimant attributed his lumbar and cervical spine symptoms to the February 20, 2015 industrial incident. He explained that he suffered from lower back and coccyx pain immediately after he slipped and fell on the drumsticks at work. However, he was uncertain of the location of his back pain and his coccyx area was the most painful. Claimant acknowledged that he did not begin to experience neck or cervical pain until the Spring of 2016 but nevertheless attributed his symptoms to the February 20, 2015 incident. In contrast to Claimant's testimony, the medical records reveal that Claimant did not mention lower back pain until approximately seven months after the March 20, 2015 industrial incident. Although Claimant consistently reported right hip, right knee and coccyx symptoms, he did not report cervical or lumbar symptoms. The temporal delay in reporting lumbar and cervical symptoms suggests that they were not caused by the March 20, 2015 incident.

22. The persuasive testimony of Dr. Roth also reveals that Claimant likely did not suffer cervical or lumbar injuries as a result of the February 20, 2015 incident. Dr. Roth detailed that Claimant did not initially report middle and lower back symptoms after the February 20, 2015 incident. In fact, Claimant did not mention "lumbar discomfort and bilateral sciatica" until September 24, 2015. Dr. Roth specifically remarked that "prior to that point in time there were no complaints of right or left-sided low back, and no left-sided gluteal, hip or leg symptoms." Although Claimant had mentioned to Dr. Vanderkool that he had pain in the small of his back and tailbone on February 21, 2015, an examination did not reveal any "lumbar tenderness on palpation." Dr. Roth commented that on September 24, 2015 Dr. Banks had characterized Claimant's lumbar discomfort as a "new symptom" after treating him since April 3, 2015. In fact, Dr. Roth noted that on September 24, 2015 Dr. Banks remarked that Claimant's lumbar

discomfort and “new sensation in the posterior aspect of both the upper legs” had only been present for three weeks. Moreover, Dr. Roth commented that Claimant did not mention upper back or cervical pain to Dr. Banks until March 16, 2016. He thus explained that it was not medically probable that Claimant’s lumbar and cervical symptoms “would have escaped 29 medical appointments over a 7 month timeframe.” He maintained that the February 20, 2015 incident did not cause, aggravate or accelerate Claimant’s lumbar and cervical spine symptoms. Accordingly, based on the medical records, temporal proximity of symptoms, Claimant’s degenerative back condition and the persuasive testimony of Dr. Roth, Respondent has demonstrated that the February 20, 2015 industrial incident did not likely aggravate, accelerate or combine with Claimant’s pre-existing condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d

571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2016), C.R.S. On November 13, 2015 Respondents filed a GAL recognizing that Claimant was entitled to receive medical benefits, TTD benefits and TPD benefits as a result of his February 20, 2015 industrial injuries. Accordingly, Respondents bear the burden of proving that it is entitled to withdraw the GAL.

8. As found, Respondent has demonstrated by a preponderance of the evidence that Claimant did not suffer industrial injuries to his lumbar and cervical spines during the course and scope of his employment with Employer. On February 20, 2015 Claimant slipped on drumsticks and fell to the floor while performing his job duties. On February 21, 2015 Claimant was diagnosed with a closed traumatic fracture of the coccyx with injuries to the right knee and right hip. Claimant regularly visited ATP Dr. Banks and received significant treatment for his injuries including injections, medial branch blocks and massage therapy. On November 13, 2015 Respondent filed a GAL recognizing that Claimant was entitled to receive medical benefits, TTD benefits and TPD benefits as a result of his February 20, 2015 injuries. On September 24, 2015

Claimant mentioned to Dr. Banks that he had been suffering from lower back pain. Dr. Banks summarized that Claimant had "never complained of low back pain to me before." She specifically characterized Claimant's lower back pain as "new." On March 16, 2016 Claimant noted pain and numbness in his hands. Dr. Banks responded that his symptoms were unlikely related to the February 20, 2015 incident because he had not previously mentioned them. She also advised Claimant to ask his spine surgeon whether he had suffered a new injury or his symptoms were caused by chronic, long-standing, degenerative disc disease.

9. As found, Claimant attributed his lumbar and cervical spine symptoms to the February 20, 2015 industrial incident. He explained that he suffered from lower back and coccyx pain immediately after he slipped and fell on the drumsticks at work. However, he was uncertain of the location of his back pain and his coccyx area was the most painful. Claimant acknowledged that he did not begin to experience neck or cervical pain until the Spring of 2016 but nevertheless attributed his symptoms to the February 20, 2015 incident. In contrast to Claimant's testimony, the medical records reveal that Claimant did not mention lower back pain until approximately seven months after the March 20, 2015 industrial incident. Although Claimant consistently reported right hip, right knee and coccyx symptoms, he did not report cervical or lumbar symptoms. The temporal delay in reporting lumbar and cervical symptoms suggests that they were not caused by the March 20, 2015 incident.

10. As found, the persuasive testimony of Dr. Roth also reveals that Claimant likely did not suffer cervical or lumbar injuries as a result of the February 20, 2015 incident. Dr. Roth detailed that Claimant did not initially report middle and lower back symptoms after the February 20, 2015 incident. In fact, Claimant did not mention "lumbar discomfort and bilateral sciatica" until September 24, 2015. Dr. Roth specifically remarked that "prior to that point in time there were no complaints of right or left-sided low back, and no left-sided gluteal, hip or leg symptoms." Although Claimant had mentioned to Dr. Vanderkool that he had pain in the small of his back and tailbone on February 21, 2015, an examination did not reveal any "lumbar tenderness on palpation." Dr. Roth commented that on September 24, 2015 Dr. Banks had characterized Claimant's lumbar discomfort as a "new symptom" after treating him since April 3, 2015. In fact, Dr. Roth noted that on September 24, 2015 Dr. Banks remarked that Claimant's lumbar discomfort and "new sensation in the posterior aspect of both the upper legs" had only been present for three weeks. Moreover, Dr. Roth commented that Claimant did not mention upper back or cervical pain to Dr. Banks until March 16, 2016. He thus explained that it was not medically probable that Claimant's lumbar and cervical symptoms "would have escaped 29 medical appointments over a 7 month timeframe." He maintained that the February 20, 2015 incident did not cause, aggravate or accelerate Claimant's lumbar and cervical spine symptoms. Accordingly, based on the medical records, temporal proximity of symptoms, Claimant's degenerative back condition and the persuasive testimony of Dr. Roth, Respondent has demonstrated that the February 20, 2015 industrial incident did not likely aggravate, accelerate or combine with Claimant's pre-existing condition to produce a need for medical treatment.

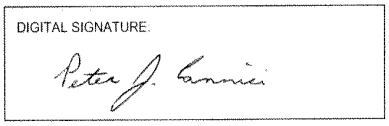
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: March 21, 2017.



Peter J. Cannici
Administrative Law Judge

Denver, CO 80202

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to maintenance medical treatment after being placed at maximum medical improvement ("MMI").

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On March 14, 2015, Claimant, who was a lift operator, was seriously injured while skiing at work. Claimant was snowboarding down the mountain after a shift and he unintentionally skied over the edge of a cat walk and struck a tree. He was taken to Vail Valley Medical Center and stabilized. Multiple injuries were noted, including a comminuted fracture of the left scapula, traumatic brain injury, C1 fracture and C2 fracture, left sided pneumothorax, left second rib fracture, left lateral fifth, eighth, ninth, tenth, and eleventh rib fractures, splenic laceration, bilateral sacral fractures, L5 lamina and spinous process fracture, numerous lung contusions and lacerations with partially collapsed left lung, and pneumomediastinum.

2. Due to the severity of his injuries, Claimant was transferred to Denver Health Medical Center Hospital. Further evaluation revealed likely fourth through eleventh rib fractures and left L2-5 transverse process fractures. He was treated conservatively during his inpatient stay at Denver Health Medical Center.

3. On, or about, April 6, 2015, Claimant went back to his home with family in Connecticut. At that time, he was primarily confined to a wheelchair.

4. Claimant was seen and evaluated by Dr. Lauren Burke of Orthopedic Associates of Hartford. At that time, cervical spinal stabilization with fusion was recommended.

5. On June 12, 2015, Claimant underwent ORIF [fusion] of his C2 fracture via an anterior approach, anterior cervical discectomy of C2-3, with use of structural allograft and anterior plating at the C2-3.

6. On follow-up evaluation, it was determined that there was hardware failure.

7. On July 1, 2015, Claimant underwent a revision fusion with replacement of structural allograft at the C2-3 disc space. Thereafter, Claimant continued with conservative strategies, self-management techniques, and slow reintegration to improving activities through a home exercise program.

8. On January 18, 2016, Claimant returned to Dr. Burke. Dr. Burke indicated that she was pleased with Claimant's progress. X-rays were taken and showed some consolidation of the graft and no lucency of the hardware. Dr. Burke advised Claimant to see a spine surgeon the "next year" prior to beginning skiing and to have additional x-rays taken to ensure that he has had fusion.

9. Claimant returned to Colorado.

10. On July 29, 2016, Claimant was placed placed at MMI by Dr. Brian McIntyre. In his July 29, 2016 report, Dr. McIntyre stated the following regarding maintenance care:

> "I strongly encourage an evaluation with a spine surgeon, preferably Dr. Stewart Levy, M.D., prior to any high impact activity or skiing/snowboarding. I am optimistic that after this evaluation, Dr. Levy will be able to opine further on the status of fusion and this may directly impact activity as well as possibility of some future difficulties that he may have in terms of his high fusion level. I am not aware of any known immediate threat to his encountering deterioration in physical functioning over the next 5-10 years, at least.
>
> He is well versed in self-management strategies, as well as further counseling provided today regarding muscle relaxation and self massage as well as local use of muscle rub-benefits. I'm optimistic that he'll be able to stay at MMI, without further need for intervention, or formal therapeutic activities, or medications."

11. On August 15, 2016, Dr. McIntyre issued another report. In this report, he determined Claimant's impairment rating and again commented on maintenance care. Dr. McIntyre again stated:

> I strongly encourage an evaluation with a spine surgeon, preferably Dr. Stewart Levy, M.D., prior to any high impact activity or skiing/snowboarding. I am optimistic that after this evaluation, Dr. Levy will be able to opine further on the status of fusion and this may directly impact activity as well as possibility of some future difficulties that he may have in terms of his high fusion level.

12. Claimant is not currently taking any medications due to his work related injuries.

13. Claimant is able to manage his pain at this time through self massage and other self directed techniques.

14. The medical treatment recommended by Dr. Burke and Dr. McIntrye is post MMI.

15. On January 23, 2017, Respondent authorized Claimant to see Dr. Levy for a one time evaluation. However, as of the date of the hearing, Claimant had not been evaluated by Dr. Levy.

16. Claimant testified that he has to be more careful since his occupational injury as he feels that he is more prone to injury and he cannot engage in all of the same activities that he would prior to the injury. However, the extent of his restrictions and the types of activities he can engage in have not been determined since the status of his fusion is unknown.

17. The care recommended by Dr. Burke and Dr. McIntyre is to maintain maximum medical improvement and can reasonably be expected to prevent a deterioration of Claimant's condition.

18. Dr. McIntyre referred Claimant to a spinal surgeon, Dr. Levy, to evaluate Claimant's spinal fusion to see if it has fused. This is consistent with the recommendation made by Dr. Burke on January 18, 2016, in which she recommended an evaluation the following year with a spine surgeon to make sure Claimant's neck has fused. It is anticipated that Dr. Levy will evaluate the status of Claimant's fusion and render an opinion about Claimant's restrictions based on the status of his fusion.

19. Determining the status of Claimant's fusion, post MMI, is reasonable and necessary to monitor Claimant's work related injury. The status of Claimant's fusion could result in the need for additional treatment. Moreover, the status of Claimant's fusion will be used to determine current restrictions for Claimant.

20. Having a spinal surgeon, such as Dr. Levy, evaluate Claimant post MMI, and determine restrictions is reasonable and necessary to maintain Claimant at MMI and can reasonably be expected to prevent Claimant's condition from deteriorating. Claimant is very active and currently working at Big O Tires, which involves quite a bit of physical lifting, carrying, pushing and pulling. If Claimant's restrictions are not delineated, Claimant could end up engaging in activities that worsen his condition.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Section 8-42-101(1), C.R.S., requires the employer or insurer to provide medical benefits which are reasonable and necessary to cure and relieve the industrial injury. See *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). However, this obligation terminates at maximum medical improvement, and after that point, Claimant may obtain future medical benefits only to maintain maximum medical improvement or to prevent a deterioration of his condition. *See Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

Claimant is entitled to *Grover*-type medical benefits where there is substantial evidence in the record to support a determination that future medical treatment will be reasonable and necessary "to relieve a claimant from the effects of an [industrial] injury" or prevent further deterioration of the claimant's condition. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609, 611 (Colo. App. 1995); *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992).

Moreover, an award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999).

Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). In establishing entitlement to *Grover*-type benefits, Claimant is not required to prove that a "particular" or "specific course of treatment" is anticipated. *See Stollmeyer v. Industrial Claim Appeals Office, supra*. Furthermore, there is no distinction between "active treatment" and "diagnostic procedures." *See Brock v. Jack Brach and Sons Trucking*, W.C. No. 3-107-451, December 15, 1995; *Atwood v. Western Slope Industries*, W.C. No. 3-069-135, November 28, 1994 (medical monitoring compensable). To the contrary, the court has held that once Claimant establishes a need for future medical treatment, "such medical treatment irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or prevent deterioration of the claimant's present condition." *See Milco Construction v. Cowan*, 860 P.2d 542.

The post MMI treatment recommended by Dr. Burke and Dr. McIntyre is in the form of an evaluation by a spinal surgeon. This evaluation is necessary to determine whether Claimant's fusion has fused. This evaluation is also necessary to determine appropriate restrictions based on Claimant's current condition. The determination of proper restrictions based on Claimant's current condition is necessary to determine the type of activities in which Claimant can participate. The failure to properly evaluate Claimant and determine his current restrictions can reasonably be expected to cause a deterioration of Claimant's condition. Therefore, the post MMI treatment, in the form of

an evaluation, is reasonable and necessary medical treatment which is intended to relieve Claimant from the effects of his injury and prevent further deterioration of Claimant's condition. Thus, this ALJ concludes that Claimant has proven his entitlement to maintenance medical treatment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Insurer shall provide maintenance medical treatment.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

1. Determination of a just and equitable allocation of death benefits between Spouse Claimant and Minor Claimant.

2. Determination of proper safeguarding and disposition of Minor Claimant's benefits.

3. Determination of which party is responsible for the payment of the GAL's attorney fees.

FINDINGS OF FACT

1. Decedent worked for Employer as a driver and laborer. Decedent died on April 16, 2014 as a result of injuries arising out of and in the course of his employment.

2. At the time of his death, Spouse Claimant was pregnant with Decedent's son. Minor Claimant was born approximately three months after his father's death and was born on July 23, 2014.

3. Respondents admitted to death benefits for Minor Claimant only. Spouse Claimant contended that she was the common law spouse of Decedent and the matter went to hearing to determine whether or not she was entitled to death benefits.

4. A hearing before ALJ Cain was held on June 19, 2015. In an Order dated November 18, 2015, ALJ Cain found that Spouse Claimant had proven that she became Decedent's common law spouse after she turned 18 and before Decedent's April 16, 2014 death and that she was Decedent's dependent for purposes of § 8-41-501(1)(a), C.R.S. ALJ Cain found and that both she and Minor Claimant were dependents entitled to death benefits. *See* Exhibit A.

5. ALJ Cain ordered that another hearing be set to determine issues including allocation of death benefits between the dependents, proper safeguarding and disposition of the minor child's benefits, and payment of the GAL's attorney fees. *See* Exhibit A.

6. On November 10, 2016 Spouse Claimant applied for hearing on the issue of apportionment of death benefits. *See* Exhibit B.

7. On November 18, 2016 GAL on behalf of Minor Claimant filed a response to the application for hearing endorsing apportionment of death benefits, request for appointment of conservator for Minor Claimant's benefits at the expense of

Respondents, and determination of which party was responsible for payment of reasonable fees and costs of the GAL. *See* Exhibit D.

8. At hearing, Respondents took no position on the allocation of death benefits. Respondents maintained their position that Spouse Claimant was not a dependent and indicated their intent to appeal the decision of ALJ Cain once the benefits were allocated as their first appeal was dismissed as being interlocutory.

9. At hearing, GAL on behalf of Minor Claimant and Respondents submitted a stipulation. Spouse Claimant was not a party to the stipulation. The stipulation requested appointment of a conservator for Minor Claimant. The stipulation indicated that GAL sought a lump sum benefit for Minor Claimant and that the lump sum be deposited in an account of the conservator's choosing subject to withdrawal only upon good cause and with an Order from the Director of the Division of Workers' Compensation or his representative until Minor Claimant's 18th birthday. The stipulation provided that the lump sum benefits be available to Minor Claimant when he turns 18 years of age. The stipulation provided that the conservator provide a report once per year to both the Division of Workers' Compensation and to Spouse Claimant. *See* Exhibit E.

10. GAL requested that Craig Eirich, settlement specialist, be designated as the conservator for Minor Claimant's lump sum proceeds and noted that Mr. Eirich had agreed to act as conservator. *See* Exhibit E.

11. GAL also requested that her fees be paid at the rate of $150.00 per hour and that Insurer be responsible for the fees. GAL and Respondents noted in the stipulation that $150.00 per hour is the rate that Pinnacol Assurance pays for GAL services and that when a GAL is requested or appointed in a case that Pinnacol is involved in, Pinnacol typically pays for the legal services provided by the GAL. *See* Exhibit E.

12. GAL requested that the apportionment of death benefits be split equally between Minor Claimant and Spouse Claimant, with 50% to each.

13. Spouse Claimant was self-represented and agreed that she wished to proceed at hearing without legal counsel. Spouse Claimant requested that the death benefits be allocated 80% to her and 20% to a protected account for her son. Spouse Claimant indicated that she needed more than half of the benefits as requested by GAL so that she could care for her son and herself and indicated her desire to purchase a home.

14. Respondents requested that the GAL fees be split equally between Respondents and Minor Claimant. Respondents noted that although they requested the GAL, they had an ethical obligation to do so because of the potential conflict of interest between Spouse Claimant and Minor Claimant. Respondents argued that Minor Claimant had a great interest in having legal representation and that equity should require splitting the fees.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *See* § 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. *See* § 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

Allocation of death benefits

Section 8-42-121, C.R.S. provides that death benefits shall be paid to such one or more of the dependents of the decedent, for the benefit of all the dependents entitled to such compensation, as may be determined by the director, who may apportion the benefits among such dependents in such manner as the director may deem just and equitable. The ALJ has reviewed the positions of the parties and determines that Spouse Claimant's request for 80% of the death benefits is just and equitable. The ALJ determines that a just and equitable split of the death benefits is 80% to Spouse Claimant and 20% to Minor Claimant. As Minor Claimant is only two years of age, and in the care of Spouse Claimant, Spouse Claimant has established that she will have significant costs in raising and caring for Minor Claimant and that a split of benefits in this percentage will assist her in caring for and meeting the everyday basic needs of Minor Claimant. As indicated by the parties in their stipulation, Spouse Claimant has only an 8th grade Mexican education, moved to the United States in March of 2013 to live with Decedent and was supported by Decedent. Although GAL on behalf of Minor Claimant requested a split of 50% to each, this is not found reasonable since the percent that goes to Spouse Claimant also has to be used to meet the basic needs of Minor Claimant for the next 16 years. Setting aside 20% in a protected account for Minor Claimant to access when he turns 18 and providing 80% to Spouse Claimant is sufficient to both provide benefits to Minor Claimant but to also ensure that Minor Claimant's basic needs for the next 16 years are met and this split is deemed just and equitable.

Conservator for Minor Claimant

Section 8-42-122, C.R.S. provides that in all cases of death where the dependents are minor children the director may protect the rights and interests of any dependents that the director deems incapable of fully protecting their own interests by depositing the payments in specific accounts or providing for the manner and method of safeguarding payments due to dependents in such manner as the director sees fit. As Minor Claimant is only two years of age, the ALJ determines that Minor Claimant is incapable of fully protecting his own interests and the ALJ determines that the appointment of a conservator of the estate is appropriate. This appointment of conservator to handle Minor Claimant's death benefits shall continue until Minor Claimant reaches the age of 18. Minor Claimant does not have the capacity to manage his own funds at this time and the GAL has established that the payment of lump sum death benefits and the appointment of a conservator are in Minor Claimant's best interest. GAL has found a specialist who is qualified to be conservator and who has agreed to be conservator for Minor Claimant. The ALJ thus appoints Craig Eirich to be the conservator of Minor Claimant's death benefits until Minor Claimant reaches the age of 18. Respondents shall pay death benefits to Minor Claimant in a lump sum. Mr. Eirich shall deposit the lump sum in an account of his choosing subject to withdrawal only upon good cause and with an Order from the Director of the Division of Workers' Compensation or his representative until Minor Claimant's 18th birthday. Mr. Eirich shall provide an annual statement to Minor Claimant's mother, Spouse Claimant, and to the Division of Workers' Compensation. Such annual statement shall be due June 1, of each year.

Payment of GAL's attorney fees.

Section 8-43-207(1)(l), C.R.S. provides the authority for an ALJ to appoint guardians ad litem, as appropriate, in matters involving dependents' claims and to assess the reasonable fees and costs therefore from one or more of the parties.

Here, a GAL was appointed to represent Minor Claimant's interests. GAL requests to be paid at the rate of $150.00 per hour for services she has provided. The ALJ determines that $150.00 per hour is a reasonable fee for attorney services provided to Minor Claimant and is consistent with the rate paid by another major insurer in Colorado. Further, the ALJ determines that the costs of the GAL services shall be paid for by Insurer. The ALJ determines this to be just and equitable and consistent with the approach of another major Insurer in Colorado.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. A just and equitable split of death benefits is found to be 80% to Jennifer Munoz Botello and 20% to Jose Balquier Munoz Jr.

2. Respondents shall pay Minor Claimant's death benefits in a lump sum to conservator Craig Eirich. Mr. Eirich shall deposit the lump sum death benefits in an account of his choosing subject to withdrawal only upon good cause AND with an Order from the Director of the Division or Workers' Compensation or his representative until Minor Claimant's 18th birthday. Mr. Eirich shall provide annual statements to the Division of Workers' Compensation and to Jennifer Munoz Botello by June 1 of each year.

3. GAL Janet Frickey shall be paid for her reasonable fees and costs at a rate of $150.00 per hour. Insurer shall pay for these fees. Ms. Frickey shall submit a bill to Insurer within 30 days of the date of this order.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Respondents have overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Greg Reichhardt, M.D. regarding maximum medical improvement (MMI).

2. Whether Respondents have overcome by clear and convincing evidence the opinion of DIME physician Dr. Reichhardt on permanent partial disability (PPD).

FINDINGS OF FACT

1. Claimant is employed by Employer as a flight attendant.

2. On March 1, 2015 Claimant was on a flight when the airplane hit a patch of turbulence. The turbulence knocked Claimant into the airplane's rear galley door and Claimant's back struck the door's handle.

3. On March 2, 2015 Claimant was evaluated at Concentra by Stephanie Missey, PA-C. Claimant reported dull and aching lower back pain and stiffness without any radiation that began after she was thrown into a door handle when an airplane she was working on hit turbulence. When her vitals were checked by Joshua Urdank, Claimant reported a pain scale level of 5/10. With PA Missey, Claimant reported her pain level as 3/10. Claimant did not report any prior back problems. PA Missey noted on examination that Claimant had tenderness in the lumbar spine (paraspinal, L3, L4, L5, and S1). PA Missey assessed low back strain and muscle spasm and prescribed metaxalone for muscle spasm and naproxen for the low back strain. *See* Exhibit C.

4. On March 4, 2015 Claimant was evaluated by PA Missey. Claimant reported that her symptoms and complaint of back pain had resolved and that she was not taking the medications prescribed since her symptoms had resolved. PA Missey noted on examination that there was no tenderness in the lumbosacral spine and full range of motion. PA Missey also noted normal lordosis and straight leg raises negative bilaterally. Although Claimant reported complete resolution of her symptoms to PA Missey, when Claimant's vitals were checked by Paula Berger, Claimant reported a pain scale level of 2/10. PA Missey opined that Claimant had reached maximum medical improvement (MMI) and released Claimant from care. *See* Exhibit C.

5. On March 4, 2015 Claimant was also evaluated by her primary care provider Marla White, D.O. Claimant reported that she had an injury while at work and during evaluations for that injury her blood pressure was noted to be elevated so she was instructed to follow up with her primary care provider. Dr. White noted that

Claimant had a known history of hypertension but had discontinued medication a few months ago. On review of systems, Dr. White noted that Claimant had no back pain or neck pain and on examination Claimant was noted to have normal range of motion. Dr. White assessed elevated blood pressure, hypertension, and dyslipidemia and recommended restarting blood pressure medications. *See* Exhibit F.

6. On March 22, 2015 Respondents filed a final admission of liability noting a MMI date of March 4, 2015 and noting no impairment. *See* Exhibit 7.

7. Following her **March** 4, 2015 appointment with PA Missey where Claimant reported that her symptoms had resolved, Claimant continued to work her normal duties for Employer.

8. On May 20, 2015 Claimant was evaluated by Dr. White. Claimant reported achy, sharp, tense and tight pain across her lumbar L4 area that she rated as a 4/10 on the pain scale. Claimant reported an onset of low back pain on March 3, 2015 and that it occurred while working. Claimant reported that the low back pain was recurrent but improving slowly. On examination Dr. White noted that Claimant had decreased range of motion in the lumbar back, tenderness in the bilateral S1 joints and the paralumbars, and lumbar back spasm. Dr. White diagnosed acute lumbar sacral strain with a date of injury of March 3, 2015 and referred Claimant to physical therapy. Dr. White prescribed naproxen for the sacral strain, flexeril for the muscle spasms, and increased blood pressure medications. *See* Exhibit F.

9. On June 18, 2015 Claimant underwent x-rays of her lumbar spine that were interpreted by Jonathan Flug, M.D. Dr. Flug provided the impression of grade 2 spondylolisthesis at L5-S1 with severe L5-S1 degenerative disc disease. *See* Exhibits K, 6.

10. On July 6, 2015 Claimant was evaluated at Peachtree Orthopedics by Stephanie Polsinelli, PA-C. Claimant reported midline to bandlike lumbar sacral pain with symptoms that initially began in May of 2015 (sic) while Claimant was working. Claimant reported turbulence while a flight attendant where she was prolonged into the air and landed with her back hitting the bar on the door. Claimant reported working the rest of the evening but that when she went to wake up the next day she could barely move. Claimant reported that she was diagnosed with muscle spasm and given medications and that she let the providers know that her symptoms were not improving but that they did no other treatment. Claimant reported she decided to follow up with her primary care provider who finally performed x-rays in June of 2015 and recommended therapy and evaluation by a spine specialist. Claimant reported she then moved to Atlanta and has not had any treatment thus far. Claimant reported she had continued to work regular duty throughout. Claimant reported having some good days and some severe days where she was unable to get out of bed. Claimant reported having a prior motor vehicle accident several years ago where she was diagnosed with lumbosacral strains as well as bilateral hip strains and treated with a chiropractor for around a year. *See* Exhibits E, 4.

11. PA Polsinelli noted that x-rays were performed out of state by Claimant's primary care provider, but took new x-ray films in the office. PA Polsinelli noted that the films showed a grade 2-3 spondylolisthesis at L5-S1. PA Polsinelli recommended Claimant obtain a lumbar MRI and referred Claimant to physical therapy. *See* Exhibits E, 4.

12. On July 7, 2015 Claimant contacted Lindsey Williams, the insurance claims examiner for the workers' compensation case. Claimant reported that she could not afford treatment and wanted to put her treatment on workers' compensation. Claimant had not contacted Insurer between March 4, 2015 and July 7, 2015 and had not sought to reopen her claim or get additional treatment until this phone conversation in July.

13. On July 14, 2015 Claimant underwent an MRI of her lumbar spine interpreted by Patricia Davis, M.D. Dr. Davis provided the impression of L5-S1 advanced disc space narrowing with grade 2 anterolisthesis, type 1 endplate change, and spondylolisthesis. *See* Exhibits K, 5.

14. On July 27, 2015 Claimant was evaluated by PA Polsinelli. PA Polsinelli noted that Claimant's x-rays and MRI showed that Claimant had lumbar spondylolisthesis at L5-S1 and opined that most likely, Claimant had an acute exacerbation related to this. *See* Exhibits E, 4.

15. On October 8, 2015 Claimant was evaluated by PA Polsinelli. Claimant reported good and bad days since she was last seen with continued bandlike lumbsosacral pain with an achiness feeling of the right hip and cramping occasionally into the right lower extremity. *See* Exhibits E, 4.

16. On December 17, 2015 Claimant was evaluated by PA Polsinelli. Claimant reported that she had been having more bad days than good days and that beginning on November 26, 2015 she had pain that started radiating down the right leg and that since that date the pain had been on a more frequent basis. Treatment options for the spondylolisthesis were discussed and Claimant wished to hold off on any type of injection treatment. *See* Exhibits E, 4.

17. On May 26, 2016 Claimant was evaluated by PA Polsinelli. Claimant reported worsening low back pain and that over the past several weeks she had persistent increasing bandlike lumbosacral pain that occasionally radiated to the hips. PA Polsinelli noted a lengthy conversation about treatment options and noted that Claimant was moving to Denver in three weeks so opined it would be best to continue treatment in Denver. PA Polsinelli noted the possibility of injection or possibly surgery. *See* Exhibits E, 4.

18. On July 1, 2016 Claimant underwent an independent medical examination performed by John Raschbacher, M.D. Claimant reported no past medical history other

than osteoarthritis in the right knee. Claimant reported a motor vehicle accident 4-5 years prior where she had pain at the right hip and no low back pain. Claimant reported that since hitting a door and metal handle with her low back from turbulence, she had symptoms that never went away and had been steady. Claimant reported that the symptoms had been worsening gradually since her injury. Dr. Raschbacher performed a physical examination and reviewed medical records. Dr. Raschbacher assessed history of lumbar contusion and pre-existing non work related lumbar disc disease and spondylolisthesis. Dr. Raschbacher opined that on March 4, 2015 Clamant was appropriately discharged at MMI and he noted that at that time Claimant reported her symptoms had resolved and she had no tenderness and full range of motion. Dr. Raschbacher opined that Claimant was not likely to have a ratable impairment. Dr. Raschbacher recommended additional records be obtained from all of Claimant's prior treatment. *See* Exhibit B.

19. On July 26, 2016 Claimant underwent a Division Independent Medical Evaluation (DIME) performed by Greg Reichhardt, M.D. Claimant reported that due to turbulence she was thrown in the air and hit the aft galley door and her back against a long door handle on March 1, 2015. Claimant reported pain in the lower back that initially was not severe but increased by the following day. Claimant reported that she was treated with medications and discharged and that she continued working but had increased pain. Claimant reported that she tried to go back for treatment at Concentra but that she was denied. Claimant reported that she saw her primary care provider Dr. White and was treated with medication and after x-rays was diagnosed with a slippage in the back. Claimant reported pain in the low back with no radiation down the legs and a pain scale rating of 2/10. Claimant reported no prior back problems. Claimant reported a prior motor vehicle accident where she had groin pain. Dr. Reichhardt noted on review of systems a positive response for anxiety and depression and noted that Claimant described a number of non work related factors contributing, but also that the work injury represented a component. *See* Exhibits A,1.

20. Dr. Reichhardt reviewed medical records from 2011 from Cosak Chiropractic as well as medical records following the March 1, 2015 reported injury. Dr. Reichhardt also performed a physical examination where he noted tenderness to palpation in the lumbar spine at the L4-5 and L5-S1 levels. Dr. Reichhardt provided an impression of low back pain potentially secondary to L5-S1 spondylolisthesis, rule out discitis and symptoms of depression and anxiety potentially related to both work and non work related factors. Dr. Reichhardt opined that Claimant was not at MMI and that further evaluation and treatment of her low back pain and depression was indicated. Dr. Reichhardt opined that it would be appropriate for Claimant to be evaluated with a psychologist to evaluate for depression versus adjustment disorder and that if there was a work related component to Claimant's psychological condition, then pain management counseling would be appropriate. Dr. Reichhardt opined that based on the specific disorder of the spine and the grade 2 spondylolisthesis, Claimant had an 8% whole person impairment. He opined based on range of motion limitations, Claimant had a 5% whole person impairment with a total impairment of 13%. *See* Exhibits A,1.

21. On September 7, 2016 Claimant was evaluated at Rocky Mountain Spine Clinic by John Barker, M.D. Claimant reported being injured as a flight attendant on March 1, 2015 when she was in the air, the airplane hit unexpected turbulence, and she was thrown against a wall. Claimant reported that since that time, she had low back pain as well as some left leg numbness and tingling. Claimant reported being initially seen by workers' compensation where she was told she had a muscle strain and was given muscle relaxers. Claimant reported returning several months later because she was still in pain and that she was told her case was closed. Claimant reported that she saw her primary care provider who ordered x-rays and then told Claimant to see an orthopedic spine specialist immediately. Claimant reported she then moved to Atlanta and saw an orthopedic provider. Claimant reported that she had not had any injections. Dr. Barker reviewed x-rays and noted grade 2 spondylolisthesis at L5-S1 with severe disc space collapse and severe foraminal stenosis at L5-S1. Dr. Barker opined that Claimant had severe spondylolisthesis that was asymptomatic prior to the accident on March 1, 2015. Dr. Barker opined that since the accident, Claimant had developed back pain and left leg symptoms that had failed 18 months of non operative care. Dr. Barker opined that Claimant was a candidate for an L5-S1 TLIF and discussed the surgery with Claimant. *See* Exhibits D, 3.

22. On October 13, 2016 Claimant underwent an independent medical examination performed by David Orgel, M.D. Claimant reported that after her first two visits at Concentra, she returned within the week complaining of ongoing pain but was told that she had to contact her company to have the claim reopened. Claimant reported variable symptoms where at times her pain was absent but at times where she had very significant discomfort. Dr. Orgel noted that chiropractic records showed Claimant was seen in 2011 from January until May for low back pain and neck pain with frontal headache due to a motor vehicle accident. Claimant denied any other issues with her low back and reported that an x-ray obtained at that time did not show any evidence of a spondylolisthesis. Dr. Orgel performed a physical examination. Dr. Orgel noted that Claimant had been treated conservatively but had significant symptoms that interfered with her work and leisure activities and that Claimant wished to proceed with additional interventions including surgery and he therefore opined that Claimant was not at MMI. Dr. Orgel provided an impairment rating of 8% for the grade 2 spondylolisthesis and a 12% range of motion impairment, which he combined for a 19% whole person impairment rating for the back. *See* Exhibit 2.

23. Dr. Orgel noted on his causation analysis that Claimant indicated that her pain had persisted after her claim was closed and that on her return to Concentra she was told to contact her employer. Claimant reported she had an email related to this that Dr. Orgel requested to see. Dr. Orgel also requested to see a copy of an x-ray taken after the 2011 motor vehicle accident since Claimant reported that the x-ray after the motor vehicle accident showed no spondylolisthesis. Dr. Orgel also noted that Claimant reported that she was asymptomatic prior to her injury. Dr. Orgel opined thus, that Claimant had a work related back injury causing a grade 2 spondylolisthesis. Dr. Orgel opined that Claimant had quite a significant in flight injury and that Claimant even reported considered to require a wheelchair. He therefore opined it was reasonable to

state that the spondylolisthesis was the direct result of the work injury and he noted that additional confirmatory information was pending. Dr. Orgel noted that his opinions were based on the information provided and that if more information became available, an additional report could be requested and may or may not change his opinions. *See* Exhibit 2.

24. Prior to the March 1, 2015 work injury, Claimant had multiple prior injuries to her lower back.

25. On January 11, 1993 Claimant was evaluated by Gabriel Olivo, M.D. Claimant reported having an injury the day prior at the lumbosacral area while playing basketball. Dr. Olivo noted a prior history of back injury. Dr. Olivo noted on physical examination that the lumbosacral had moderate paravertebral tenderness with spasm and that the bilateral straight less raises were positive at 30 degrees. Dr. Olivo diagnosed lumbosacral strain, prescribed Flexeril, and referred Claimant to physical therapy. *See* Exhibit J.

26. On December 21, 2010 Claimant was involved in a motor vehicle accident. Claimant had low back pain, and stiff shoulder and neck the next days after her accident. Claimant underwent approximately 30 sessions of chiropractic care with Michael Wilson, DC and at each visit her low back pain and low back treatment was noted. Dr. Wilson noted that Claimant was under his professional care and had been placed on disability from January 5, 2011 through January 20, 2011 for severe low back and neck pain due to an automobile accident. On February 8, 2011 Claimant reported that her lower back pain was not as intense. Dr. Wilson listed diagnoses as including cervical cranial syndrome, thoracic segmental dysfunction, lumbo sacral iliac disorder, and spondylolisthesis. *See* Exhibit I.

27. On August 22, 2012 Claimant was evaluated by Diana Accinelli, M.D. Claimant reported that she was a flight attendant and that while in a hotel in Alabama for work she sat in a chair that collapsed and dropped her on the ground. Claimant reported going to the ER and that x-rays performed were negative. Claimant reported pain across the lower back and also reported that she had been in a car accident on December 27, 2010 and had low back pain that radiated to her hips. Claimant reported pain at a 7/10. *See* Exhibit G.

28. On September 4, 2012 Claimant was evaluated by Gary Hollinger, PA. Claimant reported that on the date of injury she fell out of an office chair because the seat was broken and that she fell onto her lower back. Claimant reported lumbar pain that was 6/10 in intensity and she denied pain radiating into her lower extremities. Claimant reported that in December of 2011 she had a motor vehicle accident and suffered a lumbar strain and she reported that her pain did not completely resolve before the current injury and was usually about a 2/10 in intensity at the end of her workday. *See* Exhibit G.

29. In September of 2012 Claimant underwent three physical therapy sessions. Claimant reported pain in her bilateral low back and right groin from the fall out of the chair. Claimant reported improvement in her symptoms and that she rarely felt any groin pain. Claimant also reported that she continued to feel some low back pain but that the intensity was much reduced. The physical therapist noted the continued low back pain that was persistent and fairly moderate in intensity. *See* Exhibit H.

30. Dr. Raschbacher testified at hearing. Dr. Raschbacher opined that after the initial incident Claimant had no bruising, swelling, or abrasion that objectively indicated an injury and that three days later Claimant reported that she was fine and asymptomatic. Dr. Raschbacher noted that spondylolisthesis is most commonly congenital and that it was clear from the earlier 2011 x-rays that Claimant had this condition before the March 1, 2015 work injury. Dr. Raschbacher opined that a person with spondylolisthesis may or may not have intermittent symptoms. He opined that if the March 1, 2015 work injury had aggravated Claimant's underlying and pre-existing spondylolisthesis, then symptoms would have been present three days later when Claimant reported she was asymptomatic. Dr. Raschbacher noted his concern that Claimant was not truthful with him or with DIME physician Dr. Reichhardt and he opined that Claimant's subjective reports were not reliable.

31. Dr. Raschbacher noted that Claimant saw her primary care provider in May of 2015 and had x-rays where spondylolisthesis was found and that Claimant was told urgently to go to see an orthopedic specialist but that Claimant knew she didn't need to urgently see someone because it was not an emergency and she had the condition since at least 2011. Dr. Raschbacher opined that there was no objective basis to say that the spondylolisthesis was worse due to the airplane turbulence or March 1, 2015 incident and that the airplane turbulence and lower back pain resolved after three days, and then two months later Claimant had symptoms that were unrelated to the airplane turbulence. Dr. Raschbacher opined that any need for surgery related to spondylolisthesis is not work related, that Claimant was at MMI on May 4, 2015 and he agrees with Concentra's date of MMI. Dr. Raschbacher opined that there was no objective basis to say that the pre-existing spondylolisthesis changed due to the work injury and he noted that Claimant did not tell the DIME physician Dr. Reichhardt or Dr. Orgel about her pre-existing back issues. Dr. Raschbacher opined that Claimant had no ratable condition as a result of the work injury and that Dr. Reichhardt did not have an accurate picture or representation of Claimant's prior history when Dr. Reichhardt provided the DIME opinions.

32. Dr. Orgel testified at hearing. Dr. Orgel noted that Claimant had told both him and Dr. Reichhardt that she had no prior back problems. Dr. Orgel noted that the grade II spondylolisthesis was present prior to the work injury and that the 2011 x-ray did show the spondylolisthesis even though Claimant had reported to him that the 2011 x-ray did not show it. He noted that Claimant did not tell the providers that she already knew that she had spondylolisthesis. Dr. Orgel opined that as you age symptoms of spondylolisthesis start being reported. Dr. Orgel changed his opinion that the March 1,

2015 work injury caused spondylolisthesis and instead he opined that the March 1, 2015 work injury aggravated Claimant's underlying and pre-existing spondylolisthesis.

33. Dr. Orgel agreed that Claimant reported no symptoms three days after the March 1, 2015 injury and that she reported the same to her primary care provider. Dr. Orgel noted that Claimant was not asymptomatic before the March 1, 2015 injury, but opined that after the March 1, 2015 injury, Claimant's complaints were accelerated. Dr. Orgel opined that 10-12 days after Concentra closed her claim, Claimant tried to go back but was told her claim was closed. Dr. Orgel opined, however, that Claimant should not have been closed and that she was not at MMI and needed further treatment and surgery.

34. Claimant is not found credible or persuasive. Claimant failed to disclose a significant history of prior low back pain and low back treatment to multiple providers. Claimant also failed to disclose to multiple providers that she had spondylolisthesis prior to this work injury. Claimant testified at hearing that she had no prior back injuries and that her motor vehicle accident required only treatment for her right hip. This testimony is contrary to multiple medical records noting significant low back treatment following the motor vehicle accident. Claimant is not credible that she sought medical treatment at Concentra shortly after being discharged at MMI. Her reports are inconsistent that she went back either a week, or a month later and Claimant overall lacks credibility. Rather, the records show she reported resolution of her symptoms and had new and different symptoms a month and a half later when she presented to her primary care provider on May 20, 2015. Claimant's subjective reports cannot be relied upon to any degree of certainty.

35. The opinions of Dr. Reichhardt, Dr. Barker, and Dr. Orgel are based in large part on Claimant's incredible subjective reports that she was asymptomatic and had no prior back pain before March 1, 2015. The opinions of these medical providers cannot be relied upon as they used incredible information provided by Claimant. Not only did Claimant have a diagnosed and pre-existing spondylolisthesis, she had severe degenerative changes at L5-S1and had intermittent low back pain radiating to her hips for years prior to the March 1, 2015 work injury.

36. Dr. Reichhardt erred in his DIME opinions by relying on incredible information provided by Claimant.

37. The opinion of Dr. Raschbacher, who pointed out many inconsistencies throughout Claimant's reporting and testimony, is found credible and persuasive. Claimant's minor lumbar strain from the March 1, 2015 work injury resolved and Claimant was at MMI a few days later on March 4, 2015. Any new pain reported months later relates to her pre-existing non work related conditions and not to the minor lumbar strain she sustained on March 1, 2015.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." *See* § 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. *See* § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Here, Respondents have overcome DIME physician Dr. Reichhardt's opinion on MMI. Respondents have shown that it is highly probable and free from serious or substantial doubt that Dr. Reichhardt was incorrect in providing an opinion that Claimant had not yet reached MMI for her work related injury. As found above, Claimant provided incorrect and incredible information to Dr. Reichhardt. Claimant denied prior back problems at her DIME. She also reported incredibly to other providers that she could barely move the day after her March 1, 2015 work injury, that she had no prior issues with her back until her March 1, 2015 work injury, and that she did not have spondylolisthesis until her March 1, 2015 work injury. These assertions that Claimant provided to multiple providers are incredible and contrary to multiple medical records. Claimant, as found above, reported that her symptoms had resolved a few days after her March 1, 2015 work injury. Claimant again is incredible that she went back to Concentra and was told her claim was closed shortly after being placed at MMI.

Claimant incredibly and inconsistently claims she went back either a week or a month later to try to get additional treatment. This is not credible. When Claimant sought new treatment on May 20, 2015, her symptoms were different and the findings were completely new and different from findings in early March of 2015. Claimant has pre-existing spondylolisthesis and has had symptomatic low back pain dating back to at least her motor vehicle accident in December of 2010. After her 2010 motor vehicle accident, Claimant had persistent low back pain that she reported in 2012 had never gone away. Similarly, after treatment for her 2012 work injury she reported at her last visit that her low back pain was reduced but was still fairly moderate and persistent. Her pre-existing back pain was not accelerated by the March 1, 2015 work injury. Rather, the minor strain she sustained resolved per her own reports within a few days. Claimant was then back to her baseline of persistent low back pain.

Although the DIME physician noted that he reviewed chiropractic records, his opinions were based in part on Claimant's subjective reports that are not credible. Therefore, his ultimate conclusions cannot be relied upon as they are based in part on incorrect and false information given to him by Claimant. Due to Claimant's significant omissions of her medical history, the DIME physician Dr. Reichhardt's opinions lack credibility. Respondents have established that the DIME physician's opinion that Claimant had not reached MMI were clearly incorrect. For her work related minor lumbar strain, Claimant's symptoms resolved within a few days. Claimant had pre-existing spondylolisthesis, pre-existing severe degenerative disc disease at L5-S1, and a significant prior history of persistent ongoing lower back problems. Claimant's ongoing problems/symptoms are not related to the minor strain of her lower back that she sustained on March 1, 2015 but are related to her pre-existing problems that she failed to disclose to multiple providers. Dr. Raschbacher is found credible and persuasive that Claimant had pre-existing and non work related lumbar disc disease and spondylolisthesis and he has shown that Dr. Reichhardt's opinions were clearly incorrect and relied significantly upon clearly incorrect information given by Claimant. Although Dr. Reichhardt provided an impression that Claimant had low back pain potentially caused by her L5-S1 spondylolisthesis, this is not causally related to her March 1, 2015 work injury and was pre-existing as shown by multiple medical records. Respondents have established by clear and convincing evidence that the DIME erred in relying on Claimant's incredible assertion that she had no prior low back pain. The providers who opined that the work injury aggravated her underlying spondylolisthesis rely heavily on her statement that she was asymptomatic prior to March 1, 2015 which is not found credible or persuasive. Respondents have established by clear and convincing evidence that the DIME erred and that Claimant reached MMI on March 4, 2015 as assigned by the authorized treating provider.

OVERCOMING DIME ON PPD

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. *See* § 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which

renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Dr. Reichhardt provided a whole person impairment rating of 13%. This was provided based on the lumbar spine and was based on specific disorder of the spine, item 3A, grade two spondylolisthesis. Based on that, Dr. Reichhardt provided an 8% whole person impairment and then measured range of motion limitations which provided a 5% whole person impairment. However, as found above, Claimant's spondylolisthesis was pre-existing and symptomatic prior to this work injury. As found above, Claimant reached MMI with regard to this injury on March 4, 2015 and the ALJ concludes that Respondents have met their burden to overcome the DIME opinion on the MMI date and that Claimant reached MMI on March 4, 2015 with no impairment. This is consistent with the opinions of Dr. Raschbacher and Claimant's authorized treating provider who are both found credible and persuasive. As of March 4, 2015 Claimant was back to her baseline and the work injury did not cause spondylolisthesis or Claimant's limitations in range of motion. The rating provided by Dr. Reichhardt was in error as it rated a pre-existing condition. Respondents have shown by clear and convincing evidence that the rating provided by Dr. Reichhardt was in error and that Claimant sustained no permanent impairment as a result of the minor work injury.

ORDER

It is therefore ordered that:

1. Respondents have overcome by clear and convincing evidence the opinion of DIME physician Dr. Reichhardt regarding maximum medical improvement. Claimant reached MMI for the work injury on March 4, 2015.

2. Respondents have overcome by clear and convincing evidence the opinion of DIME physician Dr. Reichhardt regarding permanent impairment. Claimant did not sustain any permanent impairment as a result of her March 4, 2015 work injury.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence that he sustained a compensable injury on June 4, 2015 arising out of and in the course of his employment?
- If compensable, did Claimant prove he was entitled to TTD benefits?
- If compensable, was Claimant's request for medical benefits reasonable, necessary and related to his injury?
- Does Employer's failure to carry workers' compensation insurance subject it to penalties?

FINDINGS OF FACT

1. Claimant testified that he was working within the course and scope of his employment for Employer when he sustained an injury to his right shoulder on June 4, 2015. The ALJ credited this testimony.

2. Claimant's Worker's Claim for Compensation, dated August 6, 2015, specified the injury occurred while Claimant was installing a gutter. It was raining and his foot slipped, which caused him to fall.

3. At the time of the injury, Claimant was being paid an average weekly wage of $560.00 per week. Claimant's TTD rate is $373.33 per week.

4. Claimant reported the injury to the owner of the Employer, Mr. Phillip Lobo, and was advised by Mr. Lobo that Employer did not have workers' compensation insurance coverage.

5. Mr. Lobo instructed Claimant to go to whatever doctor he needed to in order to take care of his physical condition.

6. Claimant missed about 4 or 5 days of work immediately after the accident for which Employer paid him wages and Claimant thereafter returned to work but was restricted in what he could do.

7. Claimant sustained an injury to his hand on the job on July 9, 2015 and by then Employer had obtained workers' compensation insurance coverage. Claimant was paid temporary total disability benefits for that injury from July 10, 2015 to April 18, 2016, at which time that claim was settled on a full and final basis. The ALJ has

reviewed the General Admission of Liability and the Settlement Agreement in that claim, W.C. No. 4-987-707.

8. Claimant received TTD benefits for the July 9, 2015 injury and Claimant testified thereafter all communication with Employer ceased.

9. Claimant had ongoing problems with his right shoulder, which limited his ability to work. Claimant underwent an MRI on July 28, 2015. The films were read by Michael Kershen, M.D., whose impression was: non-displaced fracture of the greater tuberosity, tendinopathy and low grade interstitial tearing of infraspinatus tendon; tendinopthy without tear of the superspinatus and subscapularis tendons of the right shoulder; degeneration and tearing of the superior and posterior superior labrum; mild subacromial subdeltoid bursitis; and degenerative changes of the acromioclavicular joint. Claimant testified that he thought Employer paid for the MRI.

10. Claimant testified he received no further treatment for his shoulder after the MRI.

11. On May 20, 2016, Claimant was examined by Phillip Stull, M.D. Dr. Stull recorded the history of the fall while working for Employer, which had no insurance. Dr. Stull noted Claimant had not been able to get treatment for his shoulder complaints. Upon examination, Dr. Stull determined that Claimant had sustained a torn labrum and impingement of his right shoulder and suggested several treatment options including arthroscopic surgery.

12. Claimant has continued to experience pain and restrictions related to his right shoulder which has gone untreated.

13. No ATP has placed Claimant at MMI.

14. Claimant testified, and the testimony stands unrebutted, that he was unemployed from April 18, 2016 to June 19, 2016 and again from September 17, 2016 through November 30, 2016. The ALJ finds Claimant is entitled to TTD benefits for those separate periods of time.

15. Claimant further testified that for the other periods of time from April 18, 2016 through the date of the hearing that he was gainfully employed, although in pain, and that his earnings exceeded those that he was paid by Employer at the time of injury. Claimant is not seeking TPD benefits for those periods of time.

16. The ALJ finds Claimant has not reached MMI for his right shoulder injury of June 4, 2015 and is entitled to intermittent periods of TTD as a result of the condition of his right shoulder.

17. Claimant further testified that he has not sustained any additional injuries to his right shoulder since the on-the-job injury of June 4, 2015 and that he desires to undergo the care and treatment as recommended by Dr. Stull.

18. The ALJ finds Claimant sustained a compensable industrial injury arising out of and in the course of his employment for Employer on June 4, 2015.

19. The ALJ finds Claimant requires medical treatment to cure and relieve the effects of the June 4, 2015 injury, to be provided by Respondent-Employer.

20. The ALJ finds that the MRI and the care and treatment of Dr. Stull was reasonably necessary, causally related and authorized medical treatment for the compensable industrial injury which Claimant sustained on June 4, 2015.

21. The ALJ further finds Employer was not covered by a policy of workers' compensation insurance coverage on June 4, 2015. Employer is liable to Claimant for the failure to be insured for workers' compensation pursuant to § 8-43-408, C.R.S. and for the 50% penalty pursuant to § 8-43-408(1), C.R.S.

22. Evidence and inferences contrary to these findings are not credible and persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Compensability

The legal standard applicable to the compensability issue is found in § 8-41-301(1)(c), C.R.S., and it provides as a condition for the recovery of workers'

compensation benefits the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of the employment".

The ALJ determined Claimant met his burden of proof and established he sustained an injury proximately caused by the performance of duties arising out of and in the course of his employment. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). As found, the ALJ credited Claimant's testimony that he was injured arising out of and in the course of his employment on June 4, 2015. (Findings of Fact 1 and 18).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In the case at bench, the ALJ determined Claimant proved he required medical treatment to cure and relieve the effects of the June 4, 2015 injury. (Finding of Fact 19). The MRI of Claimant's right shoulder revealed objective evidence of the injury. (Finding of Fact 9). Further, Dr. Stull opined Claimant required treatment to address the condition of his right shoulder. (Finding of Fact 11). No contrary evidence was introduced at the time of hearing.

Thus, the ALJ determined the proposed treatment recommended by Dr. Stull is reasonable and necessary, as well as related to the injury. (Finding of Fact 21). Respondent-Employer shall provide medical benefits to Claimant for his industrial injury.

TTD

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability; and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). § 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*.

The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily

continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that Claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Claimant introduced evidence at hearing that his right shoulder injury caused him to miss time from work and thereafter he was constrained in what he could do. Claimant's testimony established his earning capacity was impaired. (Findings of Fact 6 and 12). Moreover, Dr. Stull's examination documented objective evidence of Claimant's injury which impaired his ability to work. There was also no evidence in the record that an ATP determined Claimant was at MMI. Therefore, Claimant established his entitlement to TTD benefits.

Penalties for Failure to Carry Workers' Compensation Insurance

The ALJ found Respondent–Employer failed to carry workers' compensation insurance and § 8-43-408(1), C.R.S. subjects it to penalties. That section provides in pertinent part:

> "In any case where the employer is subject to the provisions of articles 40 to 47 of this title and at the time of an injury has not complied with the insurance provisions of said articles, or has allowed the required insurance to terminate, or has not effected a renewal thereof, the employee, if injured, or, if killed, the employee's dependents may claim the compensation and benefits provided in said articles, and in any such case the amounts of compensation or benefits provided in said articles shall be increased fifty percent."

As determined in Findings of Fact 4 and 20, Respondent-Employer failed to carry workers' compensation insurance, as required by Colorado law. No contrary evidence was presented at a hearing and indeed, Respondent-Employer failed to participate at the hearing. The failure to carry workers' compensation insurance subjects Respondent-Employer to a 50% penalty under the Act, which will be imposed on the medical and indemnity benefits awarded to Claimant.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable on the job injury arising out of the course of his employment with the non-insured Employer on June 4, 2015.

2. Respondent-Employer shall pay for reasonable and necessary medical treatment in the form of Claimant's treatment with Dr. Stull, as well as all referrals made by Dr. Stull. Respondent-Employer shall pay the bill for the MRI Claimant underwent at

Health Images, pursuant to the Colorado Workers' Compensation Fee Schedule, to the extent that bill was not paid.

3. Respondent-Employer shall pay TTD to Claimant at the rate of $560.00 per week (TTD rate $373.33 X 50% penalty= $560.00) from April 18, 2016 to June 19, 2016 and again from September 17, 2016 through November 30, 2016.

4. Respondent-Employer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence that she sustained a compensable injury on July 25, 2016 arising out of and in the course of her employment?

- If compensable, did Claimant prove she was entitled to medical benefits?

FINDINGS OF FACT

1. Claimant worked as a groundskeeper for Employer, starting on April 12, 2016. Claimant testified she did not work during the first part of 2016, but previously worked cleaning offices.

2. Claimant's job duties included cleaning the hallways, elevators, play area, pool area and dog area. Claimant described her job at Employer as much harder than her previous position.

3. Claimant testified she had no injuries to her low back before working for Employer. She lost no time from her prior job because of problems with her back. There was no evidence in the record which showed Claimant suffered a previous injury to her low back at work.

4. Claimant's records from Kaiser Permanente were admitted, which documented she treated for low back pain after starting with Employer. In particular, Claimant was evaluated by Ray Howe, M.D. on April 15, 2016. At that time, she was evaluated for low back pain, present at the middle-low back. The pain was described as ongoing for the past 1-2 months and had worsened after starting a new job as a groundskeeper. Dr. Howe diagnosed low back pain with bilateral sciatica. Dr. Howe prescribed Naproxen and Prednisone, as well as ordering physical therapy ("PT").

5. Claimant testified the pain she felt at the time of the April 15, 2016 visit was like a cramp. The pain after her injury was more significant.

6. On June 10, 2016, Claimant returned to Kaiser and was evaluated by Todd Landin, M.D., at which time a lumbar MRI and plain films were ordered.

7. Claimant underwent an MRI on June 20, 2016. The radiologist's impression was: approximately 7 mm chronic spondylolytic anterolisthesis of L5/S1; multilevel degenerative disc disease and facet osteoarthropathy changes throughout the lumbar spine as described above; left lateral recess stenosis at L5/S1 could impinge the left S1 nerve root; moderate stenosis of the neural foramina bilaterally at L5/S1 could

impinge the exiting L5 nerve roots on either side.

8. The findings/impression for the x-rays of the lumbar spine were grade one L5-S1 spondylolisthesis, with L5 spondylolyses; marked degenerative disc changes at the L5-S1 level; hypertrophic degenerative joint changes in the articulating facet joints bilaterally at the L4-L5 and L5-S1 levels.

9. Claimant testified she sustained an injury on July 25, 2016. She was cleaning up trash and was in room three. In that room there was a piece of furniture (TV). She retrieved a cart (flat) from downstairs and went to pick up the piece of furniture. No one was helping her at that time. When she lifted the TV stand, it felt like something had pulled in her spine/hip. She felt a bit of pressure on the hip, then continued to work. The ALJ notes there was no contrary evidence in the records to contradict Claimant's testimony this event occurred. Claimant was a credible witness when she described the injury. Claimant testified she did not report the incident that day.

10. On July 27, 2016, Claimant testified she was moving dumpsters, as well as sweeping and mopping. She felt pain in her hip and reported the injury. She reported the injury first to her supervisor (Dion), and then to the manager, Lasarha Pass.

11. Claimant testified she was not referred to an ATP for Employer.

12. Claimant testified she went to the emergency room at North Suburban on July 27, 2016 because of back pain.

13. Claimant was evaluated at Kaiser on August 3, 2016, complaining of back pain. Jennifer Hronkin, M.D. noted Claimant had been at the ER within the past two days and received IV meds. Dr. Hronkin diagnosed lumbar radiculopathy and prescribed Ketorolac and Oxycodone. Claimant was referred to a neurosurgeon for the thoracic and lumbar spine.

14. Claimant returned to Dr. Landin on August 16, 2016. The treatment notes recorded chronic worsening low back pain, with right sided radiation. Dr. Landin's assessment was low back pain with right sciatica. Dr. Landin's notes recorded that Claimant was considered temporarily and totally disabled if Employer could not accommodate the work restrictions. Claimant was advised to follow-up with her employer regarding whether the injury should be treated through workers' compensation. This note leads to the inference by the ALJ that Claimant advised Dr. Landin and/or medical personnel at Kaiser she was injured at work.

15. On August 18, 2016, Claimant was evaluated by Lloyd Thurston, D.O. at Concentra. Dr. Thurston recorded Claimant moved heavy furniture on 7/25 and then had low back pain and radicular symptoms on July 27, 2016. On examination, she had tenderness of the right SI joint, with intact neurovascular function. Dr. Thurston's assessment was: strain of lumbar paraspinal muscle and lumbosacral radiculitis at S1.

Dr. Thurston opined he was 51% certain this was a work-related injury, even though symptoms started two days after the work event. He ordered an MRI and made a referral to a physiatrist. Claimant was given work restrictions of: may lift, push/pull up to 20 pounds up to three hrs./day, occasional bending, may stand and walk frequently. The findings and opinions of Dr. Thurston helped to corroborate Claimant's testimony that she sustained an injury. The ALJ credited Dr. Thurston's opinion.

16. Claimant was offered modified duty on August 19, 2016, which she accepted on August 22, 2016.

17. An MRI was performed on August 31, 2016. The films were read by Robert Leibold, M.D., whose impression was severe right L5-S1 foraminal stenosis; chronic bilateral L5 pars interarticularis defects with grade one anterolisthesis of L5 on S1 and advanced L5-S1 degenerative disc disease.

18. Claimant was evaluated by Frederic Zimmerman, D.O. on September 1, 2016. Her symptoms were right-sided buttock and lumbosacral pain, which radiated down the posterior lateral aspect of her right leg to include her lateral calf. On examination, Dr. Zimmerman noted weakness in the extensor hallucis longi, as well as dorsiflexors and plantar flexors, as demonstrated by rapid fatigue during heel and toe walking. He found decreased sensation to light touch in the right lateral lower leg to include the lateral ankle and foot complex. Dr. Zimmerman's assessment was: lumbosacral spondylolisthesis, grade one with bilateral pars defect; right lower extremity radiculitis; facet arthropathy at the bilateral L5-S one and to a lesser extent L4-L5 levels. His treatment plan was a right L5 plus S1 transforaminal epidural steroid injection ("ESI") and to begin PT.

19. On September 9, 2016, Dr. Thurston evaluated Claimant and continued Claimant's restrictions, as well as beginning her on a course of PT. His assessment was concordant with Dr. Zimmerman's. Claimant returned to Dr. Thurston on October 10, 2016, noting that her symptoms were unchanged. Claimant's lumbar spine had restricted range of motion ("ROM"), but Waddell signs were negative. Dr. Thurston returned Claimant to Dr. Zimmerman for evaluation and treatment.

20. A Worker's Claim for Compensation was prepared by Claimant and signed on October 4, 2016.[1] Claimant testified her daughter helped her complete this form, which described the injury as follows: "I was picking up a TV set from a trash room when I felt pain in lower back". Claimant testified this description was a mistake, as it was a piece of furniture for a T.V.

21. On October 27, 2016, Dr. Zimmerman examined Claimant, who reported a diagnostic response following the ESI. Claimant's pain was essentially resolved other than in the buttock region. She also reported perisacral pain. On examination, Claimant had restrictions in lumbar ROM, along with tenderness directly over bilateral SI joints. Claimant had diffuse myofascial pain in bilateral upper and lower quadrants through the

[1] Exhibit 1.

lumbar paraspinals and gluteus media muscles. Claimant also had a positive fibromyalgia screen. Dr. Zimmerman ordered bilateral SI joints steroid injections for diagnostic and therapeutic purposes, after which time PT would be restarted.

22. Brian Reiss, M.D. testified as an expert in orthopedic surgery, the specialty in which he is board-certified. He is Level II accredited pursuant to the W.C.R.P. Dr. Reiss was present during Claimant's testimony. He reviewed the medical records from Kaiser, as well as Concentra. Dr. Reiss also reviewed the actual films for the MRIs of Claimant's lumbar spine. Dr. Reiss did not examine Claimant and did not prepare a written report.

23. Dr. Reiss opined that while it was possible, it was unlikely Claimant suffered a work-related injury. He based this opinion on the fact the Claimant had back pain prior to working for Employer and the Kaiser Permanente records documented a worsening of her condition. Her symptoms included radiculopathy, which was worsening immediately before her alleged injury. Dr. Reiss testified there was no significant difference between the two MRIs taken. Dr. Reiss believed Claimant's pre-existing low back pain was significant, as evidenced by the fact that both an MRI and plain films were ordered by the physicians at Kaiser. The ALJ credited Dr. Reiss' testimony regarding the condition of Claimant's low back and his opinion regarding similarity in the MRIs. However, Dr. Reiss did not address the potential aggravation of this preexisting condition in Claimant's lumbar spine. More particularly, he did not address whether her work activities could have caused the symptoms as described to Drs. Landin and Thurston. Dr. Reiss also did not discuss the precise mechanism of injury as articulated by Claimant. The ALJ found Dr. Landin's and Dr. Thurston's opinions more persuasive than those of Dr. Reiss, who did not evaluate Claimant.

24. Claimant's testimony that she suffered an injury was credible and persuasive.

25. Claimant proved she sustained an injury to her low back and hip on July 25, 2016 arising out of and in the course of her employment. The injury was caused by her work. Her low back condition was aggravated by her work activities on July 27, 2016.

26. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Compensability

The legal standard applicable to the compensability issue is found in § 8-41-301(1)(c), C.R.S., provides as a condition for the recovery of workers' compensation benefits the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of the employment".

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. ICAO*, 107 P.3d 999, 1001 (Colo. App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury, the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siegfried v. Industrial Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

The ALJ determined Claimant met her burden of proof and established she sustained an injury proximately caused by the performance of duties arising out of and in the course of her employment. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). As a starting point, Claimant's testimony first established her job with Employer was more physically demanding than her previous position. (Finding of Fact 2). The medical records adduced at hearing proved she experienced symptoms within three days of starting her job. (Finding of Fact 5). The ALJ found Claimant to be a credible witness and credited her testimony in which she described the incident. No contrary evidence was introduced by respondent to rebut this testimony.

Second, Dr. Thurston, the occupational medicine physician at Concentra offered his opinion Claimant's injury was work-related and the ALJ credited this opinion. (Finding of Fact 15). The Concentra treatment records evinced the opinion of those physicians that Claimant suffered a work-related injury. As found in Findings of Fact 18-19, Drs. Thurston and Zimmerman recorded limitations in ROM of Claimant's lumbar spine, which correlated to the injury. Claimant had objective indicia of an injury, as

documented by these physicians. The ALJ was persuaded that Claimant's job duties while working for Employer aggravated her low back.

Based upon the totality of the evidence, the ALJ concluded Claimant sustained a compensable injury on July 25, 206. Although she had preexisting issues with her lumbar spine, this condition was aggravated by her specific job duties that day. This aggravation caused Claimant to require medical treatment and the treating physicians also issued work restrictions.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to her low back and hip arising out of and in the course of her employment on July 25, 2016.

2. Respondents shall provide medical benefits to Claimant.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that a fourth epidural steroid injection recommended by Dr. Stanley is reasonable, necessary and related to relieve Claimant from the effects of his admitted February 2, 2015 industrial injury or to prevent deterioration of his condition.

FINDINGS OF FACT

1. Claimant is a 46-year-old man who has been employed with Employer for approximately seven years. On February 2, 2015, Claimant sustained an admitted industrial injury to his low back while moving bags of seed between two palettes.

2. Eric R. Hoyer, M.D. read an MRI of Claimant's lumbar spine on February 23, 2015. Dr. Hoyer's impression was small central disc protrusion and broad-based disc bulge L4-5, and mild broad-based disc bulge asymmetric to the left L5-S1.

3. Claimant received conservative therapy for his back injury, which included chiropractic care, physical therapy, medications, a TENS Unit, and acupuncture.

4. Michael Gesquiere, M.D. administered a translaminar epidural steroid injection ("ESI") to Claimant on August 28, 2015. Dr. Gesquiere noted pre-and-postoperative diagnoses of lumbar herniated nucleus pulposus, lumbar degenerative disc disease, and lumbar radiculopathy. Dr. Gesquiere provided Claimant with a pain journal to document local anesthetic effect.

5. Dr. Gesquiere administered a second translaminar ESI to Claimant on October 14, 2015, along with a diagnostic left L5 selective nerve root block. Dr. Gesquiere noted pre-and-postoperative diagnoses of lumbar radiculopathy, lumbar spinal stenosis, and lumbago. Dr. Gesquiere provided Claimant with a pain journal to document local anesthetic effect.

6. Claimant's authorized treating physician, Scott K. Stanley, M.D., evaluated Claimant on February 10, 2016. Dr. Stanley noted pain, normal strength, muscle tone and symmetric deep tendon reflexes and sensation. Dr. Stanley assessed herniated lumbar disc and herniated nucleus pulposus. Referring to an additional injection, Dr. Stanley remarked, "I think he may periodically need this under maintenance care."

7. Dr. Gesquiere administered a third translaminar ESI on March 2, 2016, along with a left L5 selective nerve root block. Dr. Gesquiere noted pre-and-postoperative diagnoses of lumbar spinal stenosis, lumbar radiculopathy, and low back pain. Dr. Gesquiere provided Claimant with a pain journal to document local anesthetic effect.

8. Claimant testified each injection provided relief for approximately two to four months. On a scale from one to ten, with ten being extreme pain, Claimant rated his pre-injection pain at a level five or six, and his post-injection pain at a level two. Claimant testified his pain has been at a level five or six since the last injection subsided.

9. Dr. Stanley placed Claimant at maximum medical improvement ("MMI") on April 8, 2016. Dr. Stanley referred Claimant to Linda Mitchell, M.D. for an impairment rating.

10. In a note dated May 20, 2016, Dr. Stanley stated,

> [Claimant] underwent epidural steroid injection on March 2, 2016. This provided him with 80% relief. The symptoms improved for about two months. He would like to have another injection. He has not had any other changes in his history. Given that a series of epidural steroid injections could be helpful, I think it is reasonable he undergo this. We will ask his workman's compensation carrier to authorize an additional injection.

11. On May 27, 2016, John Douthit, M.D. conducted a medical records review at the request of Respondents. Dr. Douthit opined the recommended additional injections were not reasonable, necessary or related, as Claimant's medical records did not include diagnostic evidence of radiculopathy or sciatica, and the MRI did not evidence nerve root compression. Dr. Douthit further noted there is no scientific evidence that nerve block injections, other than epidural steroids for nerve root irritation, are effective. Dr. Douthit diagnosed Claimant with mechanical low back pain and opined Claimant was at MMI.

12. Based on Dr. Douthit's report, Respondents denied authorization of the additional ESI recommended by Dr. Stanley.

13. On June 7, 2016, Dr. Mitchell performed an impairment evaluation of Claimant. Dr. Mitchell conducted a medical records review and physical examination. Dr. Mitchell noted no neurologic system impairment. Dr. Mitchell assigned a final combined whole person impairment of 19% under the American Medical Association Guides to the Evaluation of Permanent Impairment, 3rd Edition, Revised.

14. Respondents filed a Final Admission of Liability on August 23, 2016. Respondents admitted liability for the 19% whole person impairment and for reasonable and necessary medical maintenance care. Respondents indicated Claimant reached MMI on April 8, 2015.

15. Claimant filed an Objection to Final Admission of Liability on September 16, 2016.

16. Aaron Wilson, M.D. evaluated Claimant on September 12, 2016. Claimant reported worsening lower back pain with pain radiating to his left and right calves. Claimant reported the epidural steroid injections were helping. Dr. Wilson noted bilateral leg tingling, tenderness to the lumbar spine, and moderately reduced range of motion. Dr. Wilson assessed lumbar region intervertebral disc degeneration.

17. Claimant testified he continues to experience pain in his low back area. Claimant testified he has not experienced any back injuries subsequent to the February 2, 2015 work injury. Claimant is currently taking acetaminophen as needed for pain. Claimant returned to work for Employer in his same capacity, subject to weight restrictions.

18. Claimant testified he wants to receive the injections recommended by Dr. Stanley and he wants Dr. Gesquiere to administer the injections. Claimant testified the injections administered by Dr. Gesquiere were "greatly helpful" and allowed him to function better at work and in his personal life. Claimant testified the injections helped with tasks such as driving, sitting, and working.

19. Claimant testified he has participated in hunting, fishing, camping, four-wheeling, competitive trap shooting, and snowmobiling since the industrial injury.

20. Dr. Douthit testified at hearing as an expert on behalf of Respondents. Dr. Douthit is board certified in orthopedic surgery and Level II accredited with the Division of Workers' Compensation. Dr. Douthit testified consistent with his report. Dr. Douthit indicated Dr. Stanley was recommending an additional ESI with the nerve root block procedure. Dr. Douthit opined, within a reasonable degree of medical probability, the

recommended injection and nerve block procedure are not reasonably necessary to relieve Claimant from the effects of the work-related injury, or to maintain Claimant at his functional state. Dr. Douthit opined the recommended procedure was not necessary in Claimant's case because there is no objective evidence of an inflamed nerve or documentation of functional improvement.

21. Dr. Douthit opined Claimant experienced relief from the prior injections because the injections were placebos, and there was no actual therapeutic effect on the pain.

22. Referring to the Colorado Division of Workers' Compensation Medical Treatment Guidelines for Low Back Pain, Rule 17, Exhibit 1 (the "Guidelines"), Dr. Douthit stated there are no therapeutic or long-term benefits of ESIs. Dr. Douthit acknowledged the Guidelines indicate there are some short-term benefits of ESIs for patients with radicular issues. Referring to the Guidelines, Dr. Douthit testified Claimant did not have clear nerve impingement nor was Claimant a clear candidate for surgery. Dr. Douthit noted the negative straight leg raise findings in Claimant's medical records indicate there was most likely no nerve root impingement.

23. The ALJ took administrative notice of the Low Back Pain Medical Treatment Guidelines, Rule 17, Exhibit 1. The Guidelines provide in pertinent part:

> Regarding short-term benefits from injections, there is strong evidence that epidural steroid injections have a small average short term benefit for leg pain and disability for those with sciatica. Additionally, specific to transforaminal injections, there is good evidence that the addition of steroids to a transforaminal bupivacaine injection has a small effect on patient reported pain and disability. Regarding long-term benefit from injections, there is strong evidence that epidural steroid injections (ESI) do not, on average, provide clinically meaningful long-term improvements in leg pain, back pain, or disability in patients with sciatica (lumbar pain or radiculopathy)…There is strong evidence that ESI has no short or long term benefit for low back pain. A high quality meta-analysis provides additional good evidence against the use of lumbar facet or epidural injections for relief of non-radicular low back pain...There is no proven benefit from adding steroids to local anesthetic spinal injections for most injections, with the possible exception of patients who are strong candidates for surgery based on a herniated disc and clear nerve impingement.

24. The Guidelines also provide instructions for assessing the functional efficacy of a procedure:

> The interpretation of the test results are primarily based on functional change. Symptom reports and pain responses (via a recognized pain scale) before and at an appropriate time period after the injection should also be documented. The diagnostic significance of the test result should be evaluated in conjunction with clinical information and the results of other diagnostic procedures. Injections with local anesthetics of differing duration may be used to support a diagnosis. It is obligatory that sufficient data be accumulated by the examiner performing this procedure such that the diagnostic value of the procedure is evident to other reviewers. This entails documentation of patient response regarding the degree and type of response to specific symptoms. As recommended by the International Spine Intervention Society (ISIS) guidelines, the examiner should identify three or four measurable physical functions, which are currently impaired and can be objectively reassessed 30 minutes or more after the injection. A successful block requires documentation of positive functional changes by trained medical personnel experienced in measuring range of motion or assessing activity performance…To be successful the results should occur within the expected time frame and there should be pain relief of approximately 80% demonstrated by pre and post Visual Analog Scale (VAS) scores. Examples of functional changes may include sitting, walking, and lifting. Additionally, a prospective patient completed pain diary must be recorded as part of the medical record that documents response hourly for a minimum requirement of the first 8 hours post injection or until the block has clearly worn off and preferably for the week following an injection.

25. The Guidelines further provide, "The recommendations in this guideline are for pre-MMI care and are not intended to limit post-MMI treatment."

26. Claimant is found to be credible and persuasive.

27. The ALJ notes the conflicting medical opinions expressed in this case, but finds the opinion expressed by Dr. Stanley to be more credible and persuasive than the contrary opinion of Dr. Douthit.

28. Based on the evidence presented, the ALJ finds Claimant established it is more likely than not the fourth epidural steroid injection recommended by Dr. Stanley is

reasonably necessary and related to relieve Claimant from the effects of his admitted February 2, 2015 industrial injury or to prevent deterioration of his condition.

CONCLUSIONS OF LAW

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. The need for medical treatment may extend beyond the point of maximum medical improvement where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). The evidence must establish a causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).*

An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

Pursuant to Workers' Compensation Rule of Procedure 17-2(A) health care practitioners are to use the *Guidelines* when furnishing medical care under the Workers' Compensation Act. *See* §8-42-101(3)(b), C.R.S. The ALJ may also appropriately consider the *Guidelines* as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. 4-665-873 (ICAP, Jan. 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the *Guidelines*. *Thomas v. Four Corners Health Care*, W.C. 4-484-220 (ICAP, Apr. 27, 2009). The ALJ's consideration of the *Guidelines* may include deviations where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (ICAP, Jan. 25, 2011). There is no requirement for an ALJ to award or deny medical benefits based on the *Guidelines*. *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (ICAP, Apr. 27, 2009); *see Nunn v. United Airlines*, W.C. No. 40785-790 (ICAP, Sept. 9, 2011).

The ALJ concludes Claimant has established, more likely than not, the recommended fourth epidural steroid injection is reasonably necessary and related to relieve Claimant of the effects of the industrial injury or to prevent deterioration of Claimant's condition. As found, the ALJ credits the opinion of Dr. Stanley, who treated Claimant and observed Claimant's success with the administered injections. Dr. Stanley indicated Claimant achieved 80% relief from the injections and contended the injections are reasonable maintenance care. Dr. Douthit reviewed Claimant's medical records but did not physically examine Claimant. Claimant credibly and persuasively testified the injections significantly reduced his pain and allowed better functioning. To the extent Dr. Douthit relied on the Guidelines, the Guidelines clearly state the recommendations therein are for pre-MMI treatment and are not meant to limit post-MMI treatment. As such, Claimant proved by a preponderance of the evidence that the fourth epidural steroid injection recommended by Dr. Stanley is reasonable, necessary and related to relieve Claimant from the effects of his work injury or to prevent deterioration of his condition.

ORDER

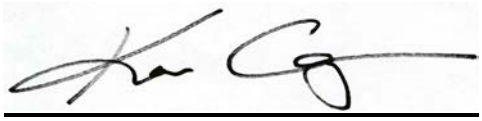
It is therefore ordered that:

1. Claimant's request for authorization of an additional epidural steroid injection as recommended by Dr. Stanley, and to be performed by Dr. Gesquiere, is GRANTED.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 16, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she is entitled to maintenance medical treatment benefits for her August 30, 2007 industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a long time employee of the Colorado Mental Health Institute located in Pueblo (CMHIP), having worked there as a registered nurse (RN) for the past 23 years.

2. As an RN for the CMHIP, Claimant works with patients who have a variety of general medical and psychiatric conditions. Over the course of her employment with the CMHIP, Claimant has suffered a number of work related injuries to her neck. She has also sustained injuries to these same body parts as a result of motor vehicle accidents in 1991, 1994 and 2007. Consequently, Claimant has a complicated workers' compensation claims and medical treatment history that requires clarification before addressing her entitlement to maintenance medical benefits.

3. As noted above, has suffered injuries to her neck from both work and non-work related accidents. In 1991, Clamant had a motor vehicle accident (MVA) with the onset of cervical pain and lower back pain. She was then involved in a second MVA in a 1994, where she again suffered neck and low back pain after being involved in a rollover accident as an unrestrained occupant. An MRI from April 8, 1997, revealed asymmetric disc bulging at C6-7, without other abnormal findings. On December 31, 2003, Claimant was evaluated by Dr. Michael Dallenbach for complaints of neck, upper back and low back pain with radiation into the right lower extremity and right inguinal area after helping a patient sit down after she began to fall. X-rays obtained on January 5, 2004 revealed moderate C6-7 degeneration and mild anterior subluxation of C3 on C4 and C5 on C6. On March 17, 2005, Claimant alleged a work related injury to her neck and back while helping move a patient who was resistant to changing position. During this incident. Claimant reported a pulling sensation in her neck and back which resulted in worsening symptoms the following day. Claimant continued with a course of conservative care which included chiropractic treatment. Due to continued complaints of pain and given the results of her MRI study, she was referred to Dr. Sanjay Jatana. On June 27, 2006, Dr. Jatana noted that Claimant had "failed a long course of conservative treatment with no significant improvement", noting further that Claimant was desirous of definitive treatment. Consequently, Dr. Jatana performed a C6-7

anterior discectomy, bilateral neural foraminotomy with resection of the posterior longitudinal ligament and artificial disc replacement. On March 12, 2007, Claimant was involved in a third motor vehicle accident where she rear-ended a truck while traveling at approximately 45 mph. This incident caused a marked increase in her neck pain and an accompanying decrease in functioning.

4. On August 30, 2007, Claimant sustained injuries to her neck and low back along with an onset of headaches after suffering whiplash type injuries after being forcefully pushed in the chest by a patient.

5. Following the August 30, 2007 incident, Claimant reported three additional workplace incidents/injuries. Those incidents included: (1) An October 5, 2007, injury where an altercation with a patient alleged caused an increase in neck pain, headaches, and an onset of sciatica; (2) an October 29, 2007, incident with injuries of unclear etiology as medical records reflect treatment for an earlier injury; and (3) a March 6, 2008 incident where an elderly patient struck her in the chest causing her to again experience forceful flexion and extension of the cervical spine.

6. On April 14, 2009, Claimant was evaluated by Dr. Rachael Basse at the request of Employer's then third party administrator, Pinnacol Assurance. Dr. Basse was asked to perform the independent medical examination (IME) to address questions regarding Claimant's need for treatment related to her March 17, 2005 injury. In that regard, Claimant had reported to Dr. Basse that she felt she need additional box injections, a replacement splint for her temporomandibular joint (TMJ) dysfunction and ongoing pain medication. Dr. Basse opined that Claimant was at MMI with regard to her March 17, 2005 injury and that it was reasonable to repeat a series of Botox injections on a maintenance basis. She did not feel that there was a temporal relationship between Claimant's need for a TMJ splint and her March 17, 2005 injury. Finally she felt that Claimant's need for ongoing medications were likely partially related to Claimant's March 17, 2005 injury; recommending that Claimant's treating providers identify what pre-injury symptoms Claimant had for which medications were necessary to treat so as to apportion these from her March 17, 2005 related medication needs.

7. In her IME report Dr. Basse documents the following from Claimant's medical records:

- On September 18, 2007, Claimant went to Dr. Caughfield for a reevaluation of her headaches photophobia, nausea, and motion sensitivity. She reported her pain remained localized to the neck and interscapular area. Dr. Caughfield suspected Claimant's headaches were coming from the C2-C3 level with facet involvement and recommended diagnostic medial branch blocks. No mention of the August 30, 2007 incident was made in the report.

- On January 2, 2008, Dr. Dallenbach noted completion of facet and medical branch blocks, which offered some pain relief. The report, however, does not mention the August 30, 2007 incident.

- On May 23, 2008, Claimant presented to Dr. Jill Castro, a physical medicine and rehabilitation specialist, for a new evaluation concerning her March 17, 2005 injury. Claimant again did not report the August 30, 2007 incident during this evaluation but did report neck and upper back pain 6-8/10. She did not report radiating pain or numbness in her upper or lower extremities. Dr. Castro assessed Claimant with cervical strain with underlying degenerative changes status post disc replacement. She questioned radiculitis versus myofascial pain. She recommended against injections or surgery at that time.

8. On April 1, 2010, Dr. John Sacha performed a Division Independent Medical Examination (DIME) regarding Claimant's March 17, 2005 injury. Dr. Sacha opined that Claimant had reached maximum medical improvement (MMI) for her March 17, 2005 injury on March 13, 2007 when she suffered injuries to her neck as a consequence of her subsequent motor vehicle accident occurring March 12, 2007. Regarding Claimant's need for maintenance care, Dr. Sacha specifically noted that "[a]ny and all" treatment beyond that (March 13, 2007) should have been pursued under Claimant's private insurance.

9. On March 7, 2011, the parties entered into a Stipulated Motion to Resolve Issues. The stipulation is multi-faceted involving the worker's compensation claims brought between March 17, 2005 and March 6, 2008. The motion specifically provides that the parties agreed that any treatment necessary to treat Claimant's neck and upper back conditions was not attributable to her March 17, 2005 injury. The stipulation goes on to indicate that the parties agreed that any treatment necessary to treat any "current" neck/back symptoms, which were determined to be work related, would be attributable to the August 30, 2007 injury. Finally, the stipulation documents the parties' agreement to consolidate any work related injury treatment needs necessary as a consequence of Claimant's October 5, 2007, October 29, 2007 and March 6, 2008 injuries under her August 30, 2007 claim. In this regard, the stipulation provides as follows:

> The parties are fully aware that Claimant may have suffered industrial injuries to these same body parts on dates subsequent to August 30, 2007,but that treatment for these body parts necessary to any subsequent industrial injury occurring between August 30, 2007, and the date of this order, including but not limited to WC#4826581, carrier #3432480, DOI October 5, 2007, WC#4826580, carrier #3432474, DOI October 29, 2007, WC#4826578, carrier #3432447, DOI March 6, 2008, will be provided under the August 30, 2007 claim, WC#4826583, carrier #3432381.

10. In the stipulation, Claimant agreed to allow the March 17, 2005 claim to close. Claimant further agreed to withdraw her applications for hearing on the contested October 5, 2007, October 29, 2007, and March 6, 2008 claims. Pursuant to the stipulation, Claimant was to withdraw her Applications for Hearing on these cases and not object to the notices of contest that had been filed on those claims.

11. Claimant purportedly sustained a work related injury to her right low back and lower extremity on December 6, 2011 while attempting to lift 260-pound patient off the floor.

12. On January 15, 2013, Dr. Basse performed a second IME to address questions regarding the August 30, 2007 claim. Following an extensive history and medical records review, Dr. Basse opined that Claimant has experienced "functionally limiting" pain in her neck and shoulder girdle area for almost 20 years and that in the two months prior to the August 30, 2007 injury, Claimant had been seen by both Dr. Dallenbach and Dr. Jatana whose notes described extensive treatment to address waxing and waning pain with flares up of moderate to high intensity. Based upon the medical records reviewed along with the history provided by Claimant, Dr. Basse concluded that the August 30, 2007 incident caused a "temporary, acute aggravation of Claimant's cervical, shoulder girdle, and headache symptoms. For these injuries, Dr. Basse opined that Claimant was at maximum medical improvement (MMI) as of May 23, 2008 based on her visit with Dr. Castro. Dr. Basse opined that there was no permanent impairment from the August 30 incident. She encouraged settlement of the claim and recommended that any maintenance medical treatment take place outside of the workers' compensation system.

13. On May 29, 2013, Dr. Erasmus Morfe performed an 18-month DIME for the August 30, 2007 incident. He assessed Claimant with chronic neck pain, multifactorial without any specific deficits; components of myofascial pain; potentially some underlying structural discomfort; cervicogenic headaches; and prior disc replacement surgery. He noted that treatment had been "appropriate and extensive"; noting further that "anything moving forward would be maintenance care, and that is, in fact, what she was doing with the headache type medications that she listed on her regular medications." He opined that Claimant was at MMI as of January 15, 2013. He agreed with Dr. Basse that "maybe finding a regular PCP who could treat her more locally would be more convenient and might overall help her condition." Contrary to Respondent's suggestion, the ALJ does not interpret the DIME report to indicate that further treatment for Claimant should be done outside the workers' compensation system. Rather, the DIME report simply indicates that Dr. Morfe agreed that with Dr. Basse that "transferring all care to a single provider who knows her and is more conveniently located may help her condition.

14. On September 7, 2013, Dr. Basse performed a third IME to address questions surrounding Claimant's alleged December 6, 2011 injury referenced above. Dr. Basse. Dr. Basse provided an excellent review of the treatment notes surrounding this injury in her IME report. In her report, Dr. Basse notes that Claimant reported lifting

a 260 pound patient from the floor when she developed low back, buttock, and right hip/groin pain. Claimant was referred to physical therapy for this injury which included dry needling. Claimant was placed at MMI for this injury on April 5, 2012 after she elected not to return to physical therapy for additional treatment. Regarding this injury, Dr. Basse agreed with Dr. Olson, Claimant's authorized treating provider, that Claimant had reached MMI on April 5, 2012. She also opined that Claimant did not have permanent impairment and did not require maintenance treatment.

15. Dr. Castrejon completed a DIME on December 5, 2013, taking over for Dr. Morfe as the DIME physician on the case. He opined that, based upon a review of Claimant's file, she sustained only a temporary exacerbation of neck symptoms from the August 30, 2007 incident. According to Dr. Castrejon, the need for treatment for the August 30, 2007 injury was short lived such that by the time of her examination with Dr. Caughfield (on September 18, 2007) her condition had returned to its pre-injury status, as she did not even think to report the incident to Dr. Caughfield.

16. Dr. Castrejon opined that any continuing treatment was related to Claimant's March 12, 2007 motor vehicle accident rather than her August 30, 2007 work injury. In reaching this conclusion Dr. Castrejon noted: "Today the claimant offered a different version of the motor vehicle accident. She indicates that she was stopped, looked down to put away some tea and in so doing let go of the brake. As a result, her vehicle moved forward, impacting the vehicle ahead. She contends that there was no change in terms of her neck symptoms and stated that she was already participating in therapy therefore was not provided with any new and additional therapy as a result of this motor vehicle accident."

17. Dr. Castrejon determined that the medial file belied Claimant's characterization that the March 12, 2007 MVA was a "mild incident." Based upon the treatment records, Dr. Castrejon opined that the March 12, 2007, MVA resulted in a permanent aggravation of her baseline condition. Consequently, ongoing treatment would be related to the MVA and not the August 30, 2007 work related injury. This would include the need for cervical facet medial branch blocks as well as cervical rhizotomy. At the very most, Dr. Castrejon opined that Claimant would have achieved MMI status by May 23, 2008 with her visit to Dr. Castro. As there was no permanent aggravation of Claimant's condition secondary to the event of August 30, 2007, Dr. Castrejon opined that there is no permanent impairment.

18. Based upon a review of the evidentiary record as a whole, the ALJ finds the opinions of Dr. Castrejon to be credible and persuasive.

19. On September 18, 2015, Dr. Castrejon performed a follow-up DIME consisting of a records review only. He reviewed additional medical records, taking into account the October 5, 2007, October 29, 2007, and March 6, 2008 incidents, and updated his opinion on the August 30, 2007 incident. Following this additional review, Dr. Castrejon concluded that Claimant had a long standing history of chronic neck pain that predated her workplace injuries of March 17, 2005 and August 30, 2007. He also

concluded that Claimant's March 12, 2007 motor vehicle accident resulted in a permanent, non-work-related aggravation of her baseline neck condition. Concerning the August 30, 2007 incident, he stated that the incident was relatively minor's especially given that Claimant did not mention it to doctors Caughfield (September 18, 2007), Dallenbach (January 2, 2008), and Castro (May 23, 2008). Therefore, Dr. Castrejon concluded that it was medically probable that the August 30, 2007 incident did not result in any longstanding symptoms or permanent impairment.

20. On March 29, 2016, Dr. Basse performed a fourth IME for the August 30, 2007 injury. She again concluded that the August 30, 2007 injury resulted in a temporary, acute aggravation of Claimant's underlying, prior, or long-standing cervical, shoulder girdle, and headache symptoms. She also evaluated the October 5, 2007, October 29, 2007, and March 6, 2008 incidents, considering them to be temporary aggravations as well. She noted that there was no local trauma with which an anatomic change would be medically probable based on any of these incidents. Dr. Basse continued to maintain May 23, 2008 as the date of MMI for all four incidents. She recommended against medical maintenance treatment for all four dates of injury.

21. Dr. Jeffrey Jenks has treated the Claimant under the worker's compensation system since 2010. He has provided injection therapy and medication management services. On August 5, 2010, Dr. Jenks noted that Claimant had been placed at MMI and that he understood that he was providing maintenance care. Later on August 6, 2013, Dr. Jenks noted Claimant was placed at MMI per an IME for her March 17, 2005 injury on January 15, 2013. He agreed with that date of MMI and opined that Claimant had a 25% impairment rating. Based upon review of his treatment records through August 6, 2013, the ALJ finds that Dr. Jenks was providing care, including injection therapy and medication management for Claimant's March 17, 2005 injury. Thereafter, the records reflect continued maintenance care until December 10, 2015.

22. On December 10, 2015, Claimant was evaluated by Dr. Jenks for complaints of "significantly increased low back and right leg pain" after Claimant's unit flooded prompting her and the other floor nurses to clean up the water with blankets. Dr. Jenks attributed Claimant's increased back and leg pain to "lifting the heavy water soaked blankets, using mops and lifting buckets." Claimant's treatment continued in the form of additional injections and increased medications although it is unclear as to whether the need for this treatment was necessitated by the flooding incident or whether it was "maintenance care" secondary to Claimant's March 17, 2005 injury.

23. At the hearing, Claimant testified that she continues to be plagued by neck and low back symptoms at work. Specifically, Claimant testified that she has difficulty performing duties that require prolonged standing or bending as it places strain on her low back. In addition, Claimant reported that the prolonged sitting necessary to write reports aggravates her neck pain. She reportedly has difficulty concentrating and has occasional trouble with word finding. Although she admits to depression and anxiety, she speculated, perhaps jokingly, that she might have dementia because of her

perceived cognitive deficits. She testified that her job involves a substantial amount of sitting and that in addition to the neck problems she associates with writing reports while sitting, she experiences pain in her buttocks and down her legs after sitting for long period of time. She reported daily headaches which begin at the base of the skull and radiate forward over the top of the head and into the forehead. She also experiences episodes where she will breakdown and cry. In testifying to these ongoing symptoms, Claimant did not directly relate them to the August 30, 2007 or any other work related injury.

24. Claimant is currently taking the following medications: Mobic for arthritis; Lyrica for nerve pain; Cymbalta for depression and nerve pain; Fioricet and Topamax for headaches; and Ambien and Trazadone to improve her sleep pattern/duration. Claimant testified that these medications help cure and relive her of her ongoing symptoms. Without these medications, Claimant testified that she cannot function and would be unable to work.

25. In addition to the above medications, Claimant testified that she had an epidural steroid injection to the neck in the distant past and recently, i.e. last year at L4-5 which proved very helpful in reducing her symptoms. She also reported that physical and massage therapy along with acupuncture and chiropractic treatment were helpful in controlling her symptoms.

26. During, cross-examination, Claimant admitted to a long history of neck and low back pain predating the March 17, 2005 and August 30, 2007 incidents. In addition to the above referenced incidents, Claimant admitted that she was the victim of a domestic violence attack in 1990 where her boyfriend choked her and hit her about the face.

27. On cross-examination she also acknowledged that Drs. Castrejon and Basse had recommended against continued medical treatment related to the August 30, 2007 and the incidents occurring on October 5, 2007, October 29, 2007, and March 6, 2008. Rather, she was aware that these physicians attributed her current need for medical treatment to non-work related conditions. She was unaware of Dr. Morfe's opinions regarding the need for maintenance medical treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence

is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo.App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

II. Claimant's Entitlement to Maintenance Medical Treatment

D. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents still retain the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

E. While a claimant does not have to prove the need for a specific medical

benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003).

F. Here, the ALJ credits the opinion of Drs. Castrejon and Basse to find and conclude that Claimant likely had pre-existing symptomatic degenerative changes throughout her neck and back prior to her August 30, 2007 work injury. Indeed in the months leading up to her August 30, 2007 injury, Claimant had seen both Drs. Dallenbach and Jatana for ongoing neck complaints that in 2006 had failed a long course of conservative care prompting Dr. Jatana to perform a cervical artificial disk replacement procedure. More likely than not, Claimant's serious MVA on March 12, 2007 resulted in a permanent aggravation of her baseline condition which was temporarily aggravated further by the relatively minor incident where Claimant was pushed in the chest on August 30, 2007. A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo.App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo.App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). So it was with Claimant here; she received care for her temporary aggravation of her pre-existing condition until it resolved and she returned to baseline. While she probably had an ongoing need for treatment, that treatment was, as noted by Dr. Castrejon, convincingly related to her long standing history of chronic neck pain and low back pain that predated her workplace injuries of March 17, 2005 and August 30, 2007. Claimant has not met her burden to show the need for maintenance medical treatment is related to the August 30, 2007, the October 5, 2007, the October 29, 2007, or the March 6, 2008 incidents. Rather, as noted, the ALJ credits the opinions of Drs. Castrejon and Basse to find that these incidents were minor exacerbations that resolved quickly with no need for future treatment. These conclusions are supported by the medical records and the reports of the medical experts who reviewed Claimant's condition. The evidence Claimant presented at the hearing, including the medical records she submitted for injuries sustained after March 6, 2008, do not support a contrary conclusion as these records refer to treatment for other dates of injury not relevant to this case. Consequently, Claimant claim for maintenance medical treatment for injuries claimed August 30, 2007, October 5, 2007, October 29, 2007 and March 6, 2008 must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for post-MMI medical maintenance benefits are related to claims for injury filed August 30, 2007, October 5, 2007, October 29, 2007 and March 6, 2008 is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on June 30, 2016.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to a general award of reasonable and necessary medical benefits.

FINDINGS OF FACT

1. Employer is a day labor job agency that offers jobs/tickets to eligible workers for work that is available on any given day. Workers line up outside Employer's office early each morning and they receive tickets for day jobs if day jobs are available.

2. Employer has two separate agencies. Ready Construction Services provides day labor tickets on construction jobs that are generally heavier and more physical assignments. Ready Temporary Services provides day labor tickets on jobs that are light industrial work. The two agencies share the same physical office and workers can choose which agency to take job tickets from.

3. Claimant moved to Denver in June of 2016. The day after arriving in Denver, Claimant went to Employer's office to fill out an application and to begin employment. Employer records show that Claimant's date of hire was June 3, 2016. *See* Exhibit A.

4. At Employer's office, Claimant initialed and signed Employer's core policies form. The forms advised that if he sustained a work related injury, Claimant was required to inform his supervisor on site as well as Employer dispatchers as soon as possible and that it was important to report immediately. *See* Exhibit I.

5. Claimant worked for Ready Temporary Services on jobs on the following dates: June 3-4; June 6, June 8-11, June 13-23, June 27, July 1, and July 5-7. Claimant worked for Ready Construction Services on the following dates: June 7, June 24, and June 28-30. Claimant testified that the various work that he performed included a construction site job moving temporary fencing and sand bags, a roofing job, and a job setting up large rugs in activity halls. *See* Exhibit I.

6. Claimant reported that he had no symptoms after the jobs involving the construction site and temporary fencing, roofing, and setting up large rugs.

7. On July 5, 2016 Claimant began a temporary job assignment in an industrial laundromat. Claimant's duties included making sure that each of 7 stalls with

workers all had linen bags for the workers to sort. Claimant had to twist, turn, reach, and lift the laundry bags and then carry them to each stall. Claimant worked at this location for a total of three work days on July 5, 6, and 7.

8. Claimant testified both that during this Laundromat job, he began to experience pain in his right foot and also that he began to have right foot pain at the end of June of 2016. Claimant testified that he waited to report the pain because he was not sure what had caused it.

9. Claimant did not identify any incident that specifically caused the pain in his right foot just that his foot started causing him pain. Claimant alleges that he kept working for three days after the pain came on but that it got to be unbearable with him hobbling, limping, and in such severe pain that he could no longer go to work.

10. On July 11, 2016 Claimant was evaluated by Lorenzo Rodriguez, M.D. Claimant reported right foot pain and swelling that started gradually about one week prior and that he had increased activity with working manual labor through a temp agency. Claimant reported no trauma. Claimant reported to nurse McBride that he was having pain on the dorsal side of his right foot for one month and that his foot became swollen if he was on his feet during the day. Dr. Rodriguez noted on examination that Claimant's right foot was noticeably more edematous than the left foot, that Claimant had mild erythema, and that Claimant was generally worse over the 3rd and 4th metatarsals. Dr. Rodriguez requested an x-ray of the right foot. *See* Exhibit F.

11. On July 11, 2016 Claimant underwent x-rays of the right foot interpreted by Bradford Robinson, M.D. The findings were no fracture or dislocation but minimal soft tissue swelling along the dorsum of the foot at the level of the metatarsals. *See* Exhibit H.

12. Claimant testified that one week later he knew the injury was significant enough to prevent him from working, so he decided to report it to Employer.

13. On July 18, 2016 Claimant reported the injury to Employer. Claimant met with Employer's workers' compensation administrator Travis Pomeroy. At that meeting, Mr. Pomeroy tried to pinpoint when and where the injury had occurred. Claimant said it happened at a construction site job and described fencing and sandbags but could not point to a specific mechanism of injury. Mr. Pomeroy pulled the tickets that Claimant had worked on and the job/ticket involving fencing and sandbags was on June 30, 2016 for Employer Ready Construction.

14. Mr. Pomeroy filled out a first report of injury listing the date of injury as June 30, 2016 and listing the activity as working all day, moving equipment and noted that Claimant could not point to a mechanism of injury. Mr. Pomeroy also referred Claimant for treatment. *See* Exhibit A.

15. On July 18, 2016 Claimant was evaluated at Concentra by Ron Rasis, PA-C. Claimant reported right foot pain for several weeks with an onset of pain on July 6, 2016. Claimant reported that he had been working for a temporary service for five weeks and that several weeks ago he was working a physical job with temporary fencing at a parking lot and that then that he was working in an industrial laundry. Claimant reported that he began developing pain and swelling in his right foot two weeks prior and that he had gradually worsening pain. Claimant denied any single event that caused the pain and also denied any direct trauma to his right foot. Claimant reported that he had pain while walking and swelling that increased over time. On examination, PA Rasis noted that Claimant's foot had diffuse tenderness on the dorsal aspect. PA Rasis assessed acute foot pain, right. *See* Exhibit G.

16. Claimant reported at the time of the onset of his symptoms he was simply working, sleeping, and had no extracurricular activity. Claimant admitted that he never made a report of injury on the job site related to any acute onset of pain. PA Rasis discussed with Claimant that there was no mechanism for an on the job injury, that walking was a ubiquitous activity, and that with no mechanism of injury to support an on the job injury, he was unable to determine causation for an on the job injury. PA Rasis released Claimant from care. *See* Exhibit G.

17. On July 22, 2016 Claimant underwent an MRI of his lower right extremity interpreted by Elizabeth Carpenter, M.D. Dr. Carpenter's impression was a mildly comminuted relatively non displaced second metatarsal neck fracture. Dr. Carpenter noted that the second metatarsal alignment was preserved, that there was a small joint effusion, and diffuse surrounding periosteal reaction and callus formation without evidence to suggest pathologic marrow replacement. Dr. Carpenter found moderate-severe first metatarsophalangeal and sesamoid phalangeal osteoarthritis. Dr. Carpenter also noted diffuse soft tissue edema surrounding the second metatarsal shaft. Dr. Carpenter noted that these findings were not present on the recent right foot radiographs. *See* Exhibit H.

18. On July 27, 2016 Claimant was evaluated by Dr. Rodriguez. Dr. Rodriguez noted that Claimant was there for follow-up on a recent MRI that was notable for a non-displaced 2nd right metatarsal fracture. Dr. Rodriguez noted that Claimant's pain and swelling was improving, but still present. Dr. Rodriguez provided Claimant a boot to keep his foot immobilized and also provided medications. *See* Exhibit F.

19. Dr. Rodriguez testified at hearing. Dr. Rodriguez noted that Claimant reported an onset of new right foot swelling with no trauma to the area. Dr. Rodriguez testified that he was concerned initially about a stress fracture. Dr. Rodriguez opined that a stress fracture might not show up on an x-ray for a couple of weeks and that the July 22 MRI did show a fracture even though the July 11 x-ray did not. Dr. Rodriguez opined that the stress fracture could be from walking or bearing weight. Dr. Rodriguez opined that based on Claimant's subjective reports that the onset was with work activity, he thought that the injury was work related. Dr. Rodriguez testified that new activity or a marked increase in activity including walking or weight bearing could cause a fracture.

20. PA Rasis also testified at hearing. PA Rasis noted that Claimant had reported that some sort of strenuous activity at work had caused his pain. PA Rasis noted that Claimant did not describe a specific onset but just that gradually over time the pain got worse with walking. PA Rasis testified that there was no job related task described as causing the onset of pain. PA Rasis testified that Claimant's reported onset and pain with walking was ubiquitous and that he could not opine that the pain was work related and that he closed the case after the first visit as not work related. PA Rasis was uncertain as to what caused the pain and testified that Claimant's report of just doing stressful work was not sufficient for him to make a causal connection to job duties or to a work related injury. PA Rasis opined that Claimant did not sustain a work related injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the condition for which he seeks medical treatment was proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish, more likely than not, that he sustained a work related injury. Although an MRI on July 22, 2016 showed a second metatarsal fracture, Claimant has failed to establish that this fracture was caused by his employment. Rather, the fracture just as likely could have been caused by non work activities or by the natural progression of a pre-existing condition unrelated to employment. Claimant has failed to establish that the fracture was proximately caused by an injury at work. Claimant's initial reports both to Employer and to medical providers identified no mechanism of injury or acute injury but just an onset of pain over time. Claimant reported to Mr. Pomeroy that his onset of pain began at a job involving fencing and sandbags but later testified that the onset of pain began at an industrial laundromat job. Claimant also reported inconsistently as to the date of the onset of his pain being either June 30, 2016 or July 6, 2016. Claimant did not begin working at the Laundromat until July 5, 2016 and only worked there for three days. Despite this, Claimant also reported that he continued to work for three days after the onset of pain even though records and Employer's testimony shows Claimant only worked three days total at the Laundromat. Despite alleging significant pain that caused him to stop being able to work and that caused severe pain, Claimant also failed to report any injury to Employer until July 18,

2016. Claimant had recently, and within the prior month, signed policies requiring immediate reporting of any injuries. Claimant's actions are inconsistent with someone who sustained a work related injury. Claimant overall is not found persuasive that a work related injury occurred.

The testimony of PA Rasis is found credible and persuasive that no work related mechanism of injury exists and that the injury and second metatarsal fracture is not work related. The opinion of Dr. Rodriguez is not found as persuasive. Dr. Rodriguez based his opinion on Claimant's subjective reports that the pain began at work. However, Claimant's reports are found to be inconsistent as to the date of onset, the job where the onset occurred, and overall cannot be relied upon to any degree of certainty. Therefore, the opinion of Dr. Rodriguez, based on Claimant's subjective reports, also cannot be relied upon to any degree of certainty. Claimant has failed to show, more likely than not, that he sustained a work related injury and his claim is denied and dismissed.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As Claimant has failed to establish that he sustained a compensable work related injury, Respondents are not liable for medical treatment.

ORDER

1. Claimant has failed to meet his burden to establish by a preponderance of the evidence that he sustained a compensable injury on June 30, 2016. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ISSUES

- What was Claimant's average weekly wage when he was injured while working for Employer?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for the employer as a warehouse and logistics employee.

2. Claimant was injured on November 19, 2012.

3. Respondents admitted for an average weekly wage ("AWW") of $772.68.

4. Respondents determined Claimant's AWW by averaging twelve of his weekly pay periods. The 12 pay periods used were September 1, 2012 through November 17, 2012. During these pay periods, Claimant earned $9,272.27. However, during this time Claimant was involved in a house fire and was taking time off from work. Thus, Claimant earned significantly less during the pay periods used by Respondents to calculate his AWW. For example, for the weekly pay period ending September 15, 2012, Claimant earned $0.00 and for the weekly pay period ending September 29, 2012, Claimant earned $8.25. Therefore, the AWW to which Respondents admitted was artificially low.

5. Claimant was hired to work 40 hours per week.

6. Pursuant to the Wage Statement submitted by Respondents dated July 1, 2014, which is after the date of injury, Claimant was paid $24.54 per hour. At 40 hours per week, this equates to an AWW of $981.60.

7. Pursuant to the Wage Statement submitted by Claimant, which is dated October 6, 2016, which is also after the date of injury, his hourly rate is $25.95. At 40 hours per week, this equates to an AWW of $1,038.00.

8. The Wage Statement Summary submitted by Claimant shows the number of hours Claimant worked per week from November 26, 2011 through November 17, 2012, i.e., 52 weeks. As noted, there are some weeks Claimant worked less than 20 hours per week and some weeks in which he worked more than 40 hours.

9. Claimant testified that after his work related injury, he had earned as much as $71,000 per year.

10. Claimant submitted his 2012 W-2. His 2012 W-2 indicated Claimant earned $54,759.36 during 2012. This averages to $1,053.06 per week.

11. It is found that Claimant's average weekly wage is $1,053.06.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Section 8-42-102(2), C.R.S., requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* It would be within the ALJ's discretion to use the wages the Claimant earned the following year in the formulation of the average weekly wage. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008).

In this case, Claimant was injured on November 19, 2012. For the week ending November 17, 2012, Claimant worked 40 hours and was paid $986.81, which is $24.67 per hour. Claimant, however, did not always work 40 hours per week. As set forth in his wage records, Claimant would sometimes work less than 20 hours per week and would sometimes work more than 40 hours per week. For example, for the week ending February 4, 2012, Claimant worked 58.25 hours and earned $1,602.09.

In order to fairly calculate Claimant's AWW, this ALJ believes that the most reasonable method is to average Claimant's earnings during 2012. This will take into consideration Claimant's lower and higher weekly earnings. For 2012, Claimant earned $54,759.36. This equates to an AWW of $1,053.06 per week.

Therefore, this ALJ concludes that Claimant's average weekly wage is $1,053.06.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's AWW is $1,053.06 per week.

2. Insurer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

- Whether Claimant's request for medical benefits (medial branch block) was reasonable, necessary and related to her injury.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury on November 7, 2011 while working for Employer. She was pulling a pallet jack, which stopped abruptly and caused pain in her hip and low back.

2. Claimant received medical treatment through Workwell, the ATP for Employer, and was treated by Peter Mars, M.D. Dr. Mars referred Claimant to Roberta Anderson-Oeser, M.D.

3. Dr. Anderson-Oeser first treated Claimant on January 5, 2012 and has provided treatment to her as an ATP since then. Dr. Anderson-Oeser testified as an expert in Physical Medicine and Rehabilitation. The transcript of her deposition, taken on April 4, 2016, was admitted into evidence.[1] Dr. Anderson-Oeser evaluated Claimant prior to her surgery, providing treatment recommendations and work restrictions.

4. On April 18, 2014, Claimant underwent surgery on her left hip, which was performed by Dr. White. Dr. White repaired a left hip labral tear. Dr. Anderson-Oeser testified Claimant has had SI joint problems, facet problems in her low back, as well as piriformis problems. She noted Claimant had periods in which symptoms were under control, then experienced flare-ups, which required treatment.

5. The records admitted at hearing from Dr. Anderson-Oeser documented the fact that she was involved in Claimant's post-surgical care. At the time of the August 12, 2014 evaluation, Dr. Anderson-Oeser noted that Claimant had an overall improvement following the left sacroiliac joint steroid injection. At the October 1, 2014 examination, Claimant reported improvement in her gluteal pain following trigger point injections. However, Claimant had less improvement after the next injection. Dr. Anderson-Oeser continued to oversee Claimant's treatment from October 8, 2014 through April 2016.

6. On January 28, 2015, Claimant was evaluated by Kirk Kindsfater, M.D. At that time, Claimant had low back pain in the area of the SI joint, lateral-based pain and

[1] Exhibit 3.

pain in the groin. On examination, Dr. Kindsfater noted Claimant had no restrictions in the range of motion of her hip, although the numerical values appeared to show some restriction (e.g. flexion to 110 degrees, internal rotation to 40 degrees, rotation to 50 degrees and abduction to about 60 degrees). In Dr. Kindsfater's impression, he noted Claimant had persistent left hip pain 3 1/2 years after the injury and nine months after arthroscopy. The treatment plan was to repeat the MRI to determine whether she had significant effusion and a grade 4 change. Dr. Kindsfater opined it would be unlikely Claimant would have a predictable benefit from hip arthroplasty.

7. In the evaluation of April 16, 2015, Claimant's lumbar range of motion was noted to be restricted on forward flexion and extension. Left hip range of motion was restricted as well. Dr. Anderson-Oeser's impression was: left hip labral status post repair; left sacroiliac joint pain and dysfunction; left hip myofascial pain; chronic opioid usage; left trochanteric bursitis.

8. John Burris, M.D. performed an IME at Respondents' request on December 23, 2015. At that time, Claimant was reporting 5/10 pain in the left low back region, which wrapped around her hip into her groin. On physical examination, Dr. Burris found that, although Claimant had diffuse tenderness over the left lower lumbar region extending over the SI joint, she had functional motion in all planes with the main limitation on forward flexion. She had full extension and lateral bending bilaterally. Claimant was neurologically intact throughout the lower extremities with motor strength 5/5 throughout, deep tendon reflexes-2+ and symmetrical negative seated straight leg raise to 90 degrees bilaterally. Claimant had positive tenderness on the left hip, but negative on the right and negative Waddell's testing. With regard to the left lower extremity, Claimant had normal color, temperature and muscle tone. She had no unusual swelling, arrhythmia or tenderness at the left hip. Claimant was tender in the groin and laterally over the greater trochanter.

9. Dr. Burris' assessment was low back pain and left hip pain. Dr. Burris noted Claimant was diagnosed with femoroacetabular impingement ("FAI"), which was a pre-existing, congenital condition. Her diagnosis of labral tear was more likely than not a direct consequence of her anatomical impingement. Dr. Burris opined that Claimant's left hip condition was not causally related to her work activities on November 7, 2011. He noted there had been no significant documented changes in her subjective complaints or her functional status over the last four years. Dr. Burris opined it was not reasonable to expect she would benefit from any additional active treatment. Therefore, Dr. Burris concluded Claimant was at MMI and sustained no medical impairment as a result of her industrial injury.

10. On January 28, 2016, ATP Terrell Webb, M.D. agreed with Dr. Burris and concluded Claimant reached MMI. He assigned a 0% permanent medical impairment rating and was in agreement with Dr. Burris that Claimant would not benefit from any additional active treatment. The ALJ found Dr. Webb simply adopted Dr. Burris' conclusions both on the issue of impairment and the need for additional treatment.

There was no evidence in the record Dr. Webb evaluated Claimant on this occasion, including performing range of motion testing.

11. Claimant testified she would see Dr. Webb every three-four weeks and he would perform a brief physical exam, but very little in the way of treatment. Dr. Anderson-Oeser testified she was the specialist primarily responsible for Claimant's treatment. She understood Dr. Webb was evaluating Claimant for her work restrictions. She was somewhat surprised Dr. Webb had placed Claimant at MMI when there were still treatment options. Dr. Anderson-Oeser did not believe Claimant was at MMI.

12. Dr. Anderson-Oeser performed a diagnostic/therapeutic injection of the left L4-5 and L5-S1 facet joint on January 8, 2016.

13. On February 5, 2016, Insurer filed a Final Admission of Liability ("FAL").[2] The FAL admitted for ongoing medical benefits after maximum medical improvement. The FAL stated post MMI benefits were admitted: "Reasonable and necessary medical care related to this claim per authorization from authorized treating physician". [3]

14. Dr. Webb evaluated Claimant on February 22, 2016. At that time, Claimant was complaining of left hip pain. Dr. Webb's diagnosis was: sprain of ligaments of lumbar spine, initial encounter; pain in the unspecified hip. Dr. Webb said he concurred with Dr. Burris' assessment and recommendations. Dr. Webb noted despite all of the extensive evaluations and treatment, there had been a little improvement in Claimant's condition. Dr. Webb returned Claimant to her primary care physician for further care and management of her ongoing symptoms.

15. Dr. Anderson-Oeser examined Claimant on February 25, 2016, at which time it was noted Claimant had 80% relief from the previous facet steroid injection.

16. On March 14, 2016, Claimant returned to Dr. Anderson-Oeser, who noted Claimant had restricted ROM in her lumbar spine on examination. Dr. Anderson-Oeser's impression was: left lumbar facet pain and dysfunction; lumbar facet arthropathy; left sacroiliac joint pain and dysfunction; muscle spasms; left hip labral tear, status post repair; left trochanteric bursitis. Dr. Anderson-Oeser noted Claimant recently underwent left L4-5 and L5-S1 facet joint steroid injections with significant improvement of her low back pain. The ALJ notes Dr. Anderson-Oeser recommended diagnostic left L3, L4, L5 medial branch blocks because Claimant's symptoms had returned and a medial branch block was performed at this appointment. This medial branch block was done with Bupivacaine. Claimant reported relief of her symptoms.

[2] There was no evidence in the record that either party challenged the finding of MMI by requesting a DIME.

[3] Exhibit 2.

17. Dr. Anderson-Oeser recommended proceeding with second diagnostic left L3, L4, and L5 medial branch blocks to determine if the medial branches were the primary pain generators. Dr. Anderson-Oeser testified in her deposition that if Claimant had 70% reduction in her pain complaints, these blocks would be diagnostic.[4] Dr. Anderson-Oeser testified if there was no response to the injection, she was not recommending additional injections. If there was a response, she recommended a second set of medial branch blocks to be done with a different anesthetic. This second set was described as "confirmatory", to make sure this was the pain generator and to rule out a placebo response.

18. Dr. Anderson-Oeser testified that if the confirmatory injection was positive, a rhizotomy would be considered. The medial branch injections were for Claimant's back pain, not treatment of the hip.[5] Dr. Anderson-Oeser disagreed that the FAI condition caused Claimant's need for treatment of the hip with Dr. White. The ALJ was persuaded that the treatment recommended by Dr. Anderson-Oeser (the first and second medial branch blocks) were reasonable and necessary. Dr. Anderson-Oeser credibly testified as to her rationale for said treatment and why it was required in this case. The ALJ found Dr. Anderson-Oeser's testimony more credible than that of Dr. Burris.

19. Claimant testified she wishes to have the second medial branch block.

20. On April 5, 2016, Dr. Anderson-Oeser noted she disagreed with Dr. Webb that Claimant had no restrictions and should have been able to return to full duty.

21. Dr. Burris issued a supplemental report, which he signed on April 8, 2016. In this report, he responded to a missive from Respondents' counsel regarding the proposed medial branch blocks at L3, L4 and L5. Dr. Burris opined these were not reasonable, nor necessary and not related to the November 7, 2011 injury. He explained there was no benefit from prior facet injections and Claimant remained at MMI.

22. Claimant returned to Dr. Anderson-Oeser on May 24, 2016. At that time, it was noted she continued to have left sacroiliac, buttocks and hip pain. Claimant was tender over the left sacroiliac joint and continued to have a positive Faber's test. Dr. Anderson-Oeser discussed proceeding with a left SI joint injection for therapeutic purposes with Claimant, who wished to proceed with that injection. Dr. Anderson-Oeser planned to see Claimant back to perform that injection.

23. At hearing, Dr. Burris testified regarding why additional medial branch blocks were not reasonably needed. He stated Claimant had undergone facet injections

[4] Deposition of Dr. Anderson-Oeser, pages 16:21-18:14.

[5] Deposition of Dr. Anderson-Oeser, page 9:13-14.

back in 2012. If the pain generator was in the facets, then the response to the facet blocks would have been positive. Because the response to the facet blocks back in 2012 was negative there is no reasonable medical justification for doing medial branch blocks because there was no reasonable medical expectation that Claimant's pain is being generated by the facet for which medial branch blocks are designed to cure or relieve or maintain maximum medical improvement therefrom. Dr. Burris testified the medial branch blocks were not warranted under the Workers' Compensation Medical Treatment Guidelines.

24. No party contested the determination of MMI.

25. Claimant proved the proposed branch medial block is reasonable, necessary and related to her industrial injury. The ALJ finds the second medial branch block will maintain MMI, as it will prevent deterioration of Claimant's condition.

26. Evidence and inferences contrary to these findings are not credible and persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Proposed Medial Branch Block

In cases where the Respondents file a FAL admitting for ongoing medical benefits after MMI, they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When Respondents challenge Claimant's request for specific medical treatment, Claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether Claimant proved that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, the ALJ was persuaded Claimant satisfied her burden of proof and established the proposed treatment is reasonable and necessary. The ALJ's rationale was two-fold. First, Dr. Anderson-Oeser has been involved in Claimant's treatment since 2012. (Findings of Fact 3, 5, 11, 12, 14-17, 20, 22). The ALJ concluded Dr. Anderson-Oeser was in the best position to evaluate Claimant's need for treatment and found her credible when describing the medial branch block. (Findings of Fact 14 and 17). The ALJ credited her testimony, particularly her explanation concerning the rationale behind the medial branch blocks.

Second, Dr. Burris testified Claimant had no response to the previous facet injections, which was contrary to the evidence. (Finding of Fact 16). Dr. Burris also testified that the proposed treatment was related to Claimant's hip issue and not warranted under the Medical Treatment Guidelines. The ALJ found Dr. Anderson-Oeser to be more credible than Dr. Burris on these issues. (Finding of Fact 18). Both Claimant's testimony and that of Dr. Anderson-Oeser ran counter to Dr. Burris' supposition that she had no positive response to the previous injections, including the first medial branch block. The ALJ was persuaded that the proposed treatment (the first and second medial branch blocks) were reasonable and necessary. Further, the ALJ concluded Claimant's hip and low back symptoms were related to Claimant's industrial injury.

Since there was no evidence before the ALJ that either party requested a DIME, the ALJ declines to find Claimant is no longer at MMI. Therefore, this treatment is to be provided as post-MMI medical treatment. As found, the treatment proposed by Dr. Anderson-Oeser will prevent deterioration of Claimant's condition. The ALJ reasoned this will help Claimant maintain MMI.

This case fits within the ambit of the recent case of *Chisholm v. Walmart*, WC 4-809-103 (January 9, 2017). In that case, Claimant received ongoing physical therapy after MMI as part of maintenance care. A surgeon recommended a reverse total arthroplasty under maintenance care, which was denied by Respondents. The case proceeded to hearing and the ALJ approved the surgery ass reasonable and necessary to "cure and relieve" the effects of the injury. Noting that post-MMI treatment which

maintains MMI or prevents the deterioration of Claimant is approproiate (as opposed to treatment designed to relieve the effects of the industial injury), the panel remanded the case to the ALJ to determine whether the goal of the proposed surgery was to cure the effects of the injury.

In the case at bench, continued relief of Claimant's low back symptoms is potentially provided by the proposed treatment. As such, the medial branch block is appropriate under these facts.

ORDER

It is therefore ordered that:

1. Respondents shall pay for reasonable and necessary medical treatment in the form of the first and second medial branch blocks recommended by Dr. Anderson-Oeser, subject to the Colorado Division of Workers' Compensation Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Did Claimant sustain a compensable injury to her right shoulder arising out of, and in the course and scope of, her employment with Respondent on October 9, 2015.

II. Did Respondent prove by a preponderance of the evidence that the General Admission of Liability was improvidently filed, and should now be withdrawn with prospective relief to Respondent.

III. Whether, if the Court concludes Respondent has not proven by a preponderance of the evidence that the General Admission of Liability of April 14, 2016, was improvidently filed and should be withdrawn with prospective relief, Claimant has proven by a preponderance of the evidence that her need for medical benefits directed to her right shoulder, specifically but not limited to the rotator cuff pathology and shoulder surgery proposed by Michael Simpson, M.D. on May 3, 2016, are reasonable, necessary, and causally related to her October 9, 2015, injury.

FINDINGS OF FACT

Based on the evidence and testimony presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant, a clerk at employer's store at 3980 Ivywood in Pueblo, Colorado, was assisting a store customer purchase items at the cash register and front counter on October 9, 2015. The customer wished to purchase a can of chewing tobacco. The store's chewing tobacco display is kept behind the store's cash register and counter, out of the reach of customers, and only a store clerk operating the cash register or working behind the store's front counter can access the chewing tobacco. The cans of chewing tobacco are kept on shelves in the display. When working on the cash register at the store's counter, the clerk's back is turned towards the rack of chewing tobacco products.

2. Claimant testified that on October 9, 2015, she reached her right hand towards the can of the brand of chewing tobacco the customer wanted to purchase. She claimed that as she reached up, she felt a pop, and had pain, in her right shoulder. Claimant was not holding or lifting anything in her hand, when this incident occurred. She reported the incident and symptoms to Ms. Stormy Frank, but felt she could continue working. Ms. Frank testified that anyone reaching for a can of chewing tobacco would need to turn one's body away from the counter and register, toward the rack of tobacco products, to reach for the can of tobacco.

3. Claimant did work the remainder of her scheduled shift for respondent on October 9, 2015. Claimant testified she went home the evening, and her shoulder's symptoms did not improve. She therefore decided to go to EmergiCare's office in Pueblo the next day for an evaluation, as this was the provider she selected as her medical provider in this claim.

4. Claimant saw Ryan Sefcik, D.O. at EmergiCare on October 10, 2015. Dr. Sefcik reported that claimant said she, "[W]as lifting an item at work and felt her right shoulder pop." Dr. Sefcik gave claimant work restrictions, and respondent accommodated those restrictions. Claimant continued to work for employer within her restrictions. Claimant's care then passed to Dr. Douglas Bradley, M.D., who continued as her authorized treating physician ("ATP").

5. Respondent filed a General Admission of Liability for medical benefits only on April 14, 2016. Respondent has paid no indemnity benefits in this claim, and has filed no subsequent admissions. One month later, Respondent filed an Application for Hearing, seeking to withdraw that admission and obtain prospective relief from that admission, on May 13, 2016.

6. Dr. Wallace Larson performed an independent medical examination ("IME") on behalf of Respondent on July 24, 2016. Claimant demonstrated her position to him of how she was reaching for the can of chewing tobacco. Dr. Larson testified, and wrote in his report, that claimant, "[D]emonstrates to me a position of somewhat abduction and external rotation of the right shoulder. She does not demonstrate any severe position of the shoulder."

7. Dr. Bradley admitted when he testified that he did not obtain any detail regarding her positioning and reaching when he treated claimant, "I don't believe I went through anything deeper than for her to reach up initially to grab a tobacco product overhead . . . ." (Bradley depo. pgs. 17-18: 18-2) Dr. Bradley focused on the treatment of claimant's symptoms, and not on assessing, analyzing, and considering anything about the causation of those symptoms (Bradley depo. pg. 18: 5-7).

8. A right shoulder x-ray done October 12, 2015, revealed a, "Normal shoulder." (Resp. Ex. D, pg. 93). A right shoulder MRI performed October 20, 2015, was interpreted to only show, "Small right shoulder effusion." (Resp. Ex. E, pg. 94). Claimant's right shoulder symptoms continued despite conservative care overseen by Dr. Bradley. A second right shoulder MRI done March 28, 2016, was interpreted to Charles Domson, M.D. to show:

> 1. Thinning, tendonosis, and partial articular surface tear to the supraspinatus tendon insertion without retraction. Mild atrophy is noted in the muscle.
> 2. Mild thinning and tendonosis in the infraspinatus tendon without tear.
> 3. Small right glenohumeral joint effusion is noted. (Resp Ex. E., pg. 95)

Dr. Bradley referred Claimant to Michael Simpson, M.D., an orthopedic surgeon, for his opinion regarding further treatment for Claimant's right shoulder.

9. Dr. Simpson saw Claimant on January 11, 2016. Claimant, he wrote, reported, "She was just reaching out away from her body reaching for a can of tobacco. She felt a pop in her arm." (Resp. Ex. C, pg. 86). Claimant's shoulder had full range of motion on his examination.

10. Dr. Simpson saw Claimant again on April 27, 2016. Claimant still had full range of motion. Dr. Simpson believed the MRI revealed, "[A] partial articular surface tear of the supraspinatus insertion without retraction. She has a small glenohumeral effusion." His diagnosis was a partial thickness rotator cuff tear of Claimant's right shoulder, and he recommended that Claimant, "[P]roceed with an arthroscopic evaluation of the shoulder, subacromial decompression, and debridement versus rotator cuff repair." (Resp. Ex. C, pg. 91)

11. Dr. Simpson did not address causation or relatedness in this report. Dr. Simpson's office sought pre-authorization for that surgery on May 3, 2016. Respondent denied authorization for that surgery contending that surgery was not causally related to this claim's October 9, 2015, alleged injury.

12. Wallace Larson, M.D., is a Level II certified provider familiar with causation analysis in workers' compensation claims. He is an orthopedic surgeon specializing in evaluation, treatment, and surgery on the upper extremities including the shoulder joint. Dr. Larson saw Claimant for a medical examination at respondent's request on July 24, 2016. Dr. Larson concluded that the surgery requested by Dr. Simpson was reasonable and necessary, and agreed with Dr. Simpson's diagnosis concerning claimant's right shoulder. Dr. Larson obtained a full history from Claimant, including her detailed description, physical demonstration, and depiction of how she was positioned and how she moved to reach for the can of chewing tobacco when she felt her arm pop. He concluded Claimant's right shoulder condition, diagnosis, and need for medical treatment including the surgery recommended by Dr. Simpson was not causally related to the incident claimant claims occurred at work on October 9, 2015.

13. In response to questions by Respondent's representatives, he explained in his report:

> It is **unlikely** the patient has a work-related diagnosis. She does have subacromial impingement. It is **very unlikely** subacromial impingement was either caused or aggravated by very mild abduction and external rotation of her right shoulder. It is possible, and by history, likely that she **noticed** her right shoulder impingement while she was at work but it is very **unlikely** her occupational exposure caused or aggravated subacromial impingement. The simple act of lifting 2 ounces to 5 ounces of material for placing the arm and very mild abduction external rotation **would not cause** subacromial impingement and certainly without (sic) result in any type of aggravation that would be longstanding. (emphasis added). (Resp. Ex. A, pg. 4).

He concluded, “From a medical standpoint, the patient does not have an occupational disorder.” (Resp. Ex. A, pg. 5)

14. Dr. Larson testified at hearing consistent with this written opinion. He explained that the act of reaching for the can of chewing tobacco, as described and demonstrated by Claimant, would not, and could not, cause any rotator cuff pathology, impingement of the right shoulder, right shoulder bursitis, shoulder trauma, or the changes and findings seen on the right shoulder MRI scans done October 20, 2015, and March 28, 2016. He said that there was no medical support for Claimant’s assertion that there was a shoulder injury caused by her simple, one-time act of reaching at work on October 9, 2015.

15. The MRI scans showed, he explained, degenerative conditions that arise over time. He explained all of claimant’s symptoms and need for medical treatment. These changes clearly existed before October 9, 2015, he testified. Simply reaching for the can of chewing tobacco did not, and could not, place any injurious force on Claimant’s right shoulder joint and rotator cuff. The need for right shoulder surgery is not, he testified, due to Claimant’s reaching for a can of chewing tobacco. She would need that surgery whether she had reached for that can of chewing tobacco or not.

16. Claimant’s attorney took Dr. Simpson’s evidentiary deposition to address the causation and relatedness of Claimant’s right shoulder diagnosis and condition to this claim’s alleged injury. Dr. Simpson clarified that he believed claimant’s symptoms were consistent with an impingement syndrome, and not a rotator cuff pathology (Simpson Depo pg. 16: 8-12). When given a full history, including all facts concerning Claimant’s actions and movements when she was injured on October 9, 2015, and a fuller understanding of the medical records, including Dr. Larson’s medical report, Dr. Simpson testified Claimant’s right shoulder condition was not likely caused by the simple act of reaching for a can of chewing tobacco on October 9, 2015.

17. He testified about the causes of Claimant’s right shoulder’s impingement syndrome and rotator cuff’s partial-thickness tear, “That’s something that’s still open for a lot of debate, what are the causes of impingement, and impingement is seen quite commonly in people as they get over the age of 40. We’ll start seeing more and more problems with shoulder impingement. It’s probably an overuse phenomenon of the rotator cuff.” (Simpson depo. pg. 19: 13-18) “[I]t’s a whole spectrum and it’s probably a multifactorial problem.” (Simpson depo. pg. 20: 7-9) The partial thickness tear seen in claimant’s right shoulder’s rotator cuff, “[U]sually requires weight lifting attached to it.” (Simpson depo. pg. 21: 6-9) Importantly, Dr. Simpson was asked by claimant’s attorney whether the mechanism of injury alleged by claimant in this claim could cause her shoulder’s diagnosis and rotator cuff pathology. Dr. Simpson answered:

> I would say if she was reaching for a can of tobacco, something relatively lightweight, reaching from a shelf, I would not have expected that to cause a partial-thickness rotator cuff tear. (Simpson depo. pgs. 21-22: 24-2).

18. When claimant's attorney asked him to reconsider his answer to assume claimant was facing the opposite direction, and reaching her arm backwards at an angle as Claimant alleged at hearing she did, and as she described to Dr. Larson, he reached a similar conclusion:

> I still don't think that would have led to the actual tear. If there was a traumatic episode that led to the tear, I wouldn't have expected that to be medically probable to cause the tear. (Simpson depo. pg. 22: 14-21)

19. Dr. Simpson stated again that he could not state that the rotator cuff and other pathology seen in the MRI scan of March 28, 2016, and assessed by himself, was due to reaching to retrieve a can of chewing tobacco on October 9, 2015 (Simpson depo,. pg. 23: 10-15). Dr. Simpson said he could and would not say that the allegedly injurious activity on October 9, 2015, caused claimant's right shoulder impingement syndrome (Simpson depo. pg. 27: 12-15). He could not, and did not, state that Claimant's right shoulder diagnosis, pathology, and need for surgery was due to the allegedly injurious single episode of simply reaching at work as alleged by claimant on October 9, 2015.

20. Dr. Sean Griggs is an orthopedic surgeon who performed an IME on behalf of Claimant on March 7, 2016. Dr. Griggs noted in his report that the MRI which he examined was of the humerus, and not of the shoulder joint. He further noted that, based upon the information available, he felt that Claimant may have experienced "some minor trauma to the rotator cuff muscle", with subsequent bursitis. He did not recommend the surgery that even Drs. Simpson and Larson recommended.

21. Dr. Bradley, during his deposition, was asked whether he would defer to Dr. Simpson's opinions and conclusion on causation and relatedness for the right shoulder's diagnosis. He testified that he would defer to Dr. Simpsons' opinion on causation, and on whether the mechanism of injury reported by Claimant in this claim caused claimant's right shoulder condition. "I would defer to that." (Bradley depo. pgs. 18-19: 18-9).

22. The Court finds that the opinions of Dr. Simpson, and Dr. Larson are credible and persuasive. There is no sufficient evidence to rebut or refute their opinions that the cause of Claimant's right shoulder symptoms, diagnoses, pathology, and need for medical treatment including surgery is not and cannot be causally related to the alleged incident in this claim.

23. While the ALJ finds Claimant to be credible at all times pertinent, by a preponderance of the evidence, Respondent has now shown that Claimant sustained no injury to her right shoulder when she reached for the can of chewing tobacco on October 9, 2015. Rather, Claimant experienced crepitus when her shoulder "popped", and pain which manifested itself at that time due to preexisting subacromial abnormalities.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ enters the following Conclusions of Law:

Generally

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P. 3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things: the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. Prudential Insurance Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

4. Where a party presents expert opinions, the weight, and credibility, of the opinions are matters exclusively within the discretion of the ALJ as the fact-finder. Cordova v. Industrial Claim Appeals Office, P.3d (Colo. App. No. 01CA0852, February 28, 2002); Rockwell International v. Turnbull, 802 P.2d 1182 (Colo. App. 1990). To the extent that expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. Colorado Springs Motors, Ltd. v. Industrial Commission, 441, P.2d 21 (Colo. 1968).

Compensability Generally

5. "Claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer; and a workers' compensation case shall be decided on its merits." Qual-Med, Inc. v. Industrial Claim Appeals Office, 961 P.2d 590, 592 (Colo. App. 1998) ("Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); Lerner v. Wal-Mart Stores, Inc., 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence."). Proof by a preponderance of the evidence requires claimant to establish that the existence of a contested fact is more probable than its nonexistence. Hoster v. Weld County Bi-Products, Inc., W.C. No. 4-483-341 (ICAO March 20, 2002).

6. The phrases "arising out of" and "in the course of" are not synonymous and claimant must meet both requirements for the injury to be compensable. Younger v. City and County of Denver, 810 P.2d 647, 649 (Colo. 1991); In re Question Submitted by U.S. Court of Appeals, 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. Popovich v. Irlando, 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co., 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). In this regard, there is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. Finn v. Industrial Commission, 165 Colo. 106, 437 P.2d 542 (1968); *see also*, Industrial Commission v. London & Lancashire Indemnity Co., 135 Colo. 372, 311 P.2d 705 (1957).

7. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. C.R.S. § 8-41-301(1) (c); Faulkner v. ICAO, 12 P.3d 844 (Colo. App. 2000). In other words, claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. Wal-Mart Stores v. Industrial Claim Appeals Office, 989 P.2d 521 (Colo. App. 1999); Snyder v. Industrial Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997).

8. A compensable industrial accident is one which results in an injury requiring medical treatment or causing disability. H & H Warehouse v. Vicory, 805 P.2d 1167, 1169 (Colo. App. 1990). To satisfy her burden of proof on compensability, claimant must prove that the industrial accident is the proximate cause of claimant's need for medical treatment or disability. § 8-41-301 (1) (c), C.R.S. An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. Subsequent Injury Fund v. State Compensation Insurance Authority, 768 P.2d 751 (Colo. App. 1988) The question of whether claimant had proven a causal relationship between employment and the alleged injury or disease is one of fact for determination of the ALJ. City of Durango v. Dunagan, 939 P.2d 496 (Colo. App. 1997); Metro Moving & Storage v. Gussert, 914 P.2d 411 (Colo. App. 1995)

9. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. Horodyskyj v. Karanian, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while, or in the case of her first elbow injury, shortly after performing job duties, does not mean that she sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985); Parra v. Ideal Concrete, W.C. No. 3-963-659 and 4-179-455 (April 8, 1988); Barba v. RE1J School District, W.C. No. 3-038-941 (June 28, 1991);

Hoffman v. Climax Molybdenum Company, W.C. No. 3-850-024 (December 14, 1989).

10. Under the Act, there is a distinction between the terms "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." § 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. City of Boulder v. Payne, 162 Colo. 345, 426 P.2d 194 (1967); see also, § 8-40-201 (2) (injury includes disability resulting from accident). Consequently, a "compensable injury" is one which requires medical treatment or causes disability. Id.; Romero v. Industrial Commission, 632 P.2d 1052 (Colo. App. 1981); Aragon v. CHIMR, et al., W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); H & H Warehouse v. Vicory, 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." Romero, supra; § 8-41-301, C.R.S.

11. Given the distinction between the terms "accident" and "injury" an employee can experience symptoms, including pain during, or from an event or incident, at work without sustaining a compensable "injury." This is true, as in the instant case, even when the employee is clearly in the course and scope of employment performing a job duty when she experience pain. See Aragon, supra, ("ample evidence" supports ultimate finding that no injury occurred even where a claimant experienced pain when struck by a bed she was moving as part of her job duties); see also, McTaggart-Kerns v. Dell, Inc., W.C. No. 4-915-218 (ICAO, May 29, 2014) (where a claimant involved in motor vehicle accident without resultant injuries suffered no compensable injury). As explained in Scully v. Hooters of Colorado Springs, W.C. No. 4-745-712 (October 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in Scully noted, "[C]orrelation is not causation." Thus, merely because there may be a coincidental correlation between Claimant's work and her symptoms exists in this case does not mean there is a causal connection between Claimant's alleged injury and her work duties.

12. The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. In Re Question Submitted by the United States Court of Appeals, 759 P.2d 17 (Colo. 1988); Moorhead Machinery & Boiler Co. v. Del Valle, 934 P.2d 861 (Colo. App. 1996). Moreover, the question of whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Faulkner v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000).

13. Simply because claimant noticed her condition at work is not dispositive of whether claimant sustained a right shoulder injury on October 9, 2015. Claimant's right shoulder had long-standing, degenerative conditions and disease process. As credibly and persuasively opined by Dr. Simpson, and Dr. Larson, the simple of act of reaching

as Claimant reports in this claim did not cause any injury to claimant's right shoulder. That ubiquitous activity places no injurious force or strain on claimant's right shoulder, and could not, and did not, cause any injury to the shoulder joint, including rotator cuff tear, tendonosis, or bursitis. The ALJ concludes claimant's shoulder pathology did not arise out of or in the course and scope of her employment with respondent on October 9, 2015.

The Burden of Proof is on the Respondent who now seeks to withdraw a General Admission of Liability

14. Pursuant to C.R.S 8-43-203(1)(a) an employer must provide notice that liability is admitted or contested within 20 days of the date it becomes aware of a disabling injury. Once an admission of liability is filed, the employer may not unilaterally withdraw it , but rather must continue to make payments consistent with the admission of liability until the ALJ enters an order allowing revocation in full or part. C.R.S 8-43-203(2) (d); HLJ Management Group, Inc. v. Kim, 804 P.2d 250 (Colo. App. 1990).

15. Admissions of liability bind Respondent, subject only to subsequent litigation. H.L.J. Management v. Kim, 804 P.2d 250 (Colo. App. 1990). Once either party endorses an issue for adjudication, prior admissions of liability may be altered, changed or withdrawn on a prospective basis. H.L.J. Management, supra. Respondent may even obtain complete relief, including a finding that no compensable injury ever existed. Faulkner v. Industrial Claim Appeals Office, 12 P.3rd 844 (Colo. App. 2000). Pursuant to C.R.S. Section 8-43-201 (1), Respondent has the burden of withdrawing their April 14, 2016, general admission of liability by a preponderance of the evidence. The ALJ concludes Respondent has met this burden, and that this admission shall be withdrawn and void prospectively. Respondent, the ALJ concludes, shall have no further liability for any benefit in this claim.

16. Since Respondent has now shown that this is not a compensable claim, there is no further need to address the reasonableness and necessity of her proposed shoulder surgery.

ORDER

It is therefore ordered that:

1. Respondent's request to withdraw the April 14, 2016 General Admission of Liability is granted, and Respondent is no longer bound by it.

2. Claimant's claim for further worker's compensation benefits is denied and dismissed. Her claim is no longer compensable.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 28, 2017

ISSUES

1. Is the DIME's finding that Claimant is not at MMI, based on a diaganosis of CRPS, barred or otherwise limited by the doctrine of issue preclusion based on ALJ Walsh's May 8, 2016 Final Order?

2. If the answer to the first question is no, have Respondents overcome the DIME on the issues of diagnosis and MMI by clear and convincing evidence?

3. Is the repeat lumbar sympathetic block, triple phase bone scan, and replacement H-wave unit recommended by the DIME reasonable and necessary treatment for the admitted industrial injury?

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury on April 4, 2014 while delivering food to a customer of Employer. While walking down the customer's driveway, he fell in a pothole, injuring his right knee, right hip and shoulder. Eventually, his hip and shoulder issues resolved, but his right knee pain persisted.

2. Claimant had three previous workers' compensation claims involving the right knee, in 1985, 2004, and 2008. He had an arthroscopic meniscectomy for the 2008 injury and ultimately received a 15% lower extremity impairment rating. The rating included 10% for chondromalacia with crepitus and locking.

3. After the April 2014 injury, Claimant was referred to Plum Creek Medical clinic for authorized treatment. PA-C Bart Keller initially diagnosed a traumatic strain/contusion of the right knee. PA-C Keller referred Claimant for a right knee MRI to evaluate possible internal derangement.

4. Claimant had the right knee MRI on April 21, 2014. It was essentially normal. There was some physiologic joint fluid and a tiny Baker's cyst, but there was no evidence of cartilage abnormality in the medial, lateral, or patellofemoral compartment.

5. PA-C Keller subsequently referred Claimant to Dr. David Oster for an orthopedic evaluation due to "slow resolving" right knee traumatic strain.

6. Claimant saw Dr. Oster on May 12, 2014, who diagnosed a first-degree MCL sprain and recommended continued bracing and physical therapy. By July 2014, Claimant's knee was slightly improved, but still significantly symptomatic. Dr. Oster recommended a repeat MRI with contrast to better see the articular surfaces and the medial meniscus.

7. The MRI with contrast was performed on July 17, 2014. The medial meniscus was normal, aside from "subtle" undersurface scuffing. There was no high-grade chondromalacia in the medial, lateral, or patellofemoral compartment.

8. Dr. Oster subsequently reviewed the MRI images and appreciated a long tongue of synovium underneath the medial facet of the patella. He suspected that impingement of this tongue was causing Claimant's pain. Dr. Oster recommended arthroscopic surgery with debridement of the synovium.

9. Dr. Oster performed arthroscopic surgery on Claimant's right knee on September 18, 2014. Visual inspection inside the knee did not show degenerative pathology. There was no fraying, softening or fissuring of the patellar surface, *i.e.*, no "chondromalacia." Similarly, the articular cartilage in the medial compartment was intact without significant fraying or fissuring. There was some "trace" thinning along the central and lateral aspects of the medial femoral condyle. In the lateral compartment, the articular surfaces were intact without softening or fissuring. There was no significant wear of the trochlea or the anterior aspects of the femoral condyles. The only pathology was a hypertrophied tongue of synovium being impinged underneath the patella, as Dr. Oster had suspected before surgery. Dr. Oster debrided the synovium and concluded the surgery.

10. Unfortunately, Claimant did not receive significant benefit from the surgery. By November 28, 2014, he was still suffering from severe knee pain and relying on crutches to ambulate, so Dr. England at Plum Creek Medical recommended a second opinion with another orthopedic surgeon, Dr. Todd Wente.

11. Claimant saw Dr. Wente on December 10, 2014. He reported ongoing severe anterior and medial knee pain. Claimant was still using crutches to ambulate. Without his crutches, Claimant's gait was severely antalgic favoring the right leg. Visual inspection of the knee was unremarkable. He had tenderness along the medial and lateral joint lines, and more tenderness with palpation of the patellar facets. Dr. Wente achieved full extension of the knee, but it was very painful. Fat pad impingement test was markedly positive. Claimant exhibited moderate diffuse atrophy of the quadriceps and calf muscles. Neurological function was intact. Dr. Wente felt no surgical procedure could improve Claimant's condition. He recommended a Kneehab brace and gave Claimant a cortisone injection. Dr. Wente prescribed a compound cream, and hoped controlling the pain would allow the Claimant to strengthen his knee and normalize his gait pattern. Dr. Wente noted, "I do not think there is a quick fix here."

12. Dr. England subsequently referred Claimant to a pain specialist, Dr. Gretchen Brunworth.

13. Dr. Brunworth first examined Claimant on April 20, 2015. Claimant reported the cortisone injection he received in December 2014 made his knee feel approximately 50% better for a few days. He had a second injection in March 2015 which was not helpful. Claimant described constant aching pain in the posterior aspect of the knee and constant stabbing pain in the anterior aspect of the knee. He reported

swelling, locking, popping, and a feeling of instability. Claimant was using crutches to ambulate and had an antalgic gait when not using the crutches. Physical examination revealed slight effusion of the right knee and slight fullness around the patellar tendon. There was tenderness over the medial joint line and the patellar tendon. The right knee was slightly warm when compared to the left, but there was no obvious color change and no hypersensitivity to touch. Dr. Brunworth noted that Claimant had "significant disability" but appeared to be approaching MMI. She recommended a repeat MRI of the knee "just to make sure we are not missing something before his case is closed." She also recommended a compounded cream, which had been denied in the past. Dr. Brunworth indicated she "would like to get him off the crutches before we close his case."

14. The repeat MRI was performed on May 8, 2015, and showed no significant pathology. The articular cartilage was normal. The radiologist noted there was "no chondromalacia whatsoever." There was no evidence of any inflammatory condition or synovitis. The only notable abnormality was mild to moderate distal quadriceps tendinosis.

15. On May 21, 2015, Dr. Brunworth met with Claimant to review the MRI report. She concluded there was likely nothing else to offer him, and referred Claimant for a functional capacity evaluation in anticipation of MMI.

16. After Claimant's appointment on May 21, Dr. Brunworth had an "uneasy feeling" that she "might be missing something." She noted that Claimant appeared to be an upstanding person, did not appear to be faking anything, and yet was in disabling pain. She was troubled by simply releasing Claimant to live with his situation. Therefore, Dr. Brunworth presented Claimant's case to the partners in her medical practice. Because of that consultation, Dr. Brunworth began to suspect that Claimant suffered from sympathetically mediated pain. Consistent with the Complex Regional Pain Syndrome Medical Treatment Guidelines (CRPS MTGs), Dr. Brunworth recommended a thermogram and QSART testing. Dr. Frank Polanco performed a Rule 16 peer review and agreed the testing should be authorized.

17. Dr. Tashoff Bernton evaluated Claimant and performed thermographic and QSART testing on July 31, 2015. Dr. Bernton's physical examination findings were equivocal regarding CRPS. Specifically, Dr. Benton noted some color differences between the left and right knee, but noted no hair or skin changes other than discoloration. He also documented slight swelling of the right knee and restricted range of motion, which could be related to CRPS but could also be caused by other conditions. Claimant was maximally tender over the anterior prepatellar region but did not have hyperalgesia. Dr. Bernton noted that Claimant's "clinical examination is not particularly impressive with respect to CRPS, but CRPS of the knee often presents with a clinical profile more characterized by restriction of motion and pain than by marked swelling, color changes, hyperalgesia, and other findings which are more prominent and common with distal extremity complex regional pain syndrome. The patient's presentation is more consistent with this usual presentation of CRPS in the knee."

18. The test results supported the diagnosis of CRPS. The thermogram noted temperature asymmetries throughout the right leg. Dr. Bernton opined that the demonstrated temperature asymmetry "is consistent with the diagnosis of complex regional pain syndrome and meets diagnostic criteria." On the QSART testing, Claimant demonstrated significant sudomotor asymmetries, which Dr. Bernton opined "represents high probability of dysautonomia." Dr. Bernton ultimately concluded the combination of Claimant's clinical evaluation and sudomotor test data "represents high probability of complex regional pain syndrome." Dr. Bernton further opined "together with the positive thermographic stress test, [the] patient has two positive objective tests for CRPS, which does meet Colorado Workers' Compensation diagnostic criteria."

19. Dr. Bernton recommended Claimant switch to a compound cream with agents such as ketamine or amitriptyline. He also recommended a trial of sympathetic blocks. Dr. Brunworth referred Claimant to Dr. Usama Ghazi for the first block.

20. Dr. Ghazi performed a right lumbar sympathetic block on August 27, 2015. Dr. Ghazi noted that, post-injection, Claimant had 100% resolution of his erythema, 100% resolution of his edema, and complete resolution of the burning sensation at rest. After the block, Dr. Ghazi noted "I was also able to perform a light and then deep and heavy pressure over the saphenous nerve and geniculate branches without any withdrawal or guarding. The patient still reports that he had some 7/10 pain that was unchanged deep within the knee, which is more of a bony arthritic and pressure like sensation; however, the superficial sensitivity was just completely resolved postop."

21. Two weeks later, Claimant saw Dr. Marc Steinmetz for an Independent Medical Examination (IME) at Respondents' request. Dr. Steinmetz's findings on physical examination did not support a diagnosis of CRPS. Dr. Steinmetz noted no temperature changes, no skin, hair, or color changes, no hypersensitivity or allodynia. The only swelling Dr. Steinmetz noted was "a slight fullness palpable around the knee cap which would represent fluid around the knee cap." Based on his evaluation and review of the records, Dr. Steinmetz concluded that Claimant does not have CRPS. Dr. Steinmetz opined that Claimant does not meet the diagnostic criteria outlined in the CRPS MTGs. Dr. Steinmetz opined the most likely cause of Claimant's symptoms was synovitis and chondromalacia. He opined that the QSART test results represented a "false-positive." Dr. Steinmetz opined that the "main criteria" for CRPS is lack of a better medical explanation. Dr. Steinmetz believed chondromalacia and synovitis provided a "better explanation" for Claimant's symptoms than CRPS. Dr. Steinmetz opined that Claimant was at MMI, and should receive ongoing maintenance care, to include non-narcotic medication, a TENS unit, the H-wave unit, five physical therapy sessions and a gym membership.

22. On October 14, 2015, Dr. Brunworth reevaluated Claimant and reviewed Dr. Steinmetz's IME report. Dr. Brunworth disagreed with Dr. Steinmetz's opinions and conclusions. She noted the objective data from the thermogram and QSART testing was positive for CRPS. She explained that sympathetically-mediated pain in the knee does not always present clinically the way it does in the distal extremities, and clinical signs can be "quite minimal." That is consistent with Dr. Bernton's opinions. She also

noted that Claimant had 100% relief of the edema, erythema, and burning sensation in his knee immediately after the sympathetic block. She reiterated her recommendation of a repeat sympathetic blocks, and possible consideration of a spinal cord stimulator.

23. Dr. England issued a report on October 28, 2015 expressing his disagreements with Dr. Steinmetz's opinions. He agreed with Dr. Brunworth's recommendations.

24. Claimant underwent an IME with Dr. Timothy Hall on January 6, 2016 at the request of his counsel. Dr. Hall stated:

> [O]ne certainly does not think of complex regional pain syndrome simply upon observing [Claimant's] leg. There really is little that would point you in that direction other than the fact that he has pain out of proportion to local pathology. He has a very significant pain reaction to even minimal palpation along the joint line medially or the posterior joint. I think it is important to keep in mind that the definition of sympathetically-mediated pain or complex regional pain syndrome is pain out of proportion to local pathology. . . . The fact that this man cannot weightbear on his leg with a fairly simple diagnosis of synovitis and chondromalacia certainly rises to the level of pain out of proportion to local pathology.

25. Dr. Hall disagreed with Dr. Steinmetz's opinions and agreed with Dr. Brunworth's assessment. Dr. Hall concluded, "from my evaluation, reading of the file, and review of the testing results, he does meet [the] criteria for sympathetically maintained symptomatology/complex regional pain syndrome." Dr. Hall recommended a second sympathetic block, and consideration of a spinal cord stimulator trial.

26. Dr. Brunworth testified at the March 1, 2016 hearing before ALJ Walsh consistently with her previous reports regarding Claimant's condition and her recommendations for treatment. Dr. Brunworth opined the diagnosis of CRPS is supported by Claimant's documented exam findings of swelling, color and temperature changes. She further opined the diagnosis is supported by the positive thermogram, QSART and Claimant's positive response to the sympathetic block. Dr. Brunworth opined Claimant satisfies the diagnostic criteria of the CRPS MTGs. She disagreed with Dr. Steinmetz's characterization of the test results as "false-positives." Dr. Brunworth also disagreed that chondromalacia or synovitis would explain Claimant's symptoms. She testified that she conferred with Dr. Bernton and "he says that there's no way the findings on the thermogram or QSART could be due to synovitis or chondromalacia if they were present. But on the MRI, they're not even present."

27. Dr. Brunworth justified her request for a second sympathetic block, even though Claimant did not have lasting benefit from the first block. She explained that sometimes a second block results in a different response, particularly if the block is attempted either more distally or more proximally. She noted the MTGs state it takes

one to two blocks to gauge effectiveness.[1] She further explained, "sometimes, if you have block on block, you can slowly dampen down those sympathetic nerves."

28. During her testimony, Dr. Brunworth physically examined Claimant's knee. She pointed out some effusion in the knee and testified that she had observed more "significant swelling" when she examined Claimant ten days earlier. She also pointed out the muscle atrophy and subtle color differences. She appreciated no significant temperature differences. Claimant demonstrated no overt signs of allodynia while Dr. Brunworth was examining his knee.

29. Dr. Steinmetz testified at the March 1, 2016 hearing on behalf of Respondents, reiterating and expounding upon the opinions expressed in his IME report. Dr. Steinmetz noted Claimant had previously received a permanent impairment rating for a meniscus injury and chondromalacia. Dr. Steinmetz opined the swelling in Claimant's knee is a result of activity, not a neurological condition. He emphasized that Claimant did not exhibit allodynia on Dr. Brunworth's physical exam at the hearing or his exam at the IME. He reiterated his opinion that Claimant does not satisfy the diagnostic criteria for CRPS in the MTGs. He also discussed the 6th Edition of the *AMA Guides*, which tracks the diagnostic requirements of the MTGs.

30. In an order dated May 8, 2016, ALJ Walsh found that Claimant had failed to prove by a preponderance of the evidence that he suffers from CRPS. Crediting Dr. Steinmetz's opinions, ALJ Walsh ordered that "claimant's request for treatment for a diagnosis of CRPS is denied and dismissed."

31. After receiving ALJ Walsh's order, Respondents wrote to Dr. Brunworth and asked whether Claimant was at MMI. Dr. Brunworth opined she did not believe Claimant was at MMI from a medical perspective but stated "if no further treatment is going to be authorized for CRPS, he would be at MMI at the time of the ALJ's decision." Dr. Brunworth indicated she continued to recommend a spinal cord stimulator trial.

32. Dr. Shimon Blau evaluated Claimant for a DIME on August 3, 2016. Claimant reported ongoing severe pain in his right lower extremity, especially his right knee. He reported symptomatic aggravation with activities such as weightbearing or extended sitting or standing. He told Dr. Blau the H-wave unit had helped his symptoms, but the unit had broken. As a result, he had increased his medication useage.

33. On physical examination, Dr. Blau noted Claimant was in mild distress secondary to right lower extremity pain, particularly with weightbearing. Examination of the right leg was "difficult secondary to extreme guarding." Dr. Blau observed atrophy of the right leg. He documented tenderness to palpation and slight allodynia in the right thigh, knee, and calf. He also observed "slight atrophic changes" in the right leg. Claimant's right leg was "significantly colder to touch when compared to the left side." Right knee range of motion was significantly reduced. Claimant exhibited decreased sensation in the entire right leg. His gait was antalgic and he was using two crutches to

[1] The CRPS MTGs state "[f]or diagnostic testing, use two blocks over a 3-14 day period."

ambulate. Dr. Blau noted Claimant "has extreme difficulty standing, secondary to pain in his right lower extremity with weight bearing. He is unable to fully plant his foot on the floor, and stands with a toe-touch stance on the right."

34. Regarding Claimant's diagnosis, Dr. Blau stated:

> [T]here is disagreement with regards to whether or not the patient meets the criteria for complex regional pain syndrome. Dr. Steinmetz is of the opinion that [Claimant] does not have CRPS, and that the positive QSART and thermogram were false positives. Dr. Brunworth and Dr. Hall disagree with this assessment. I agree with Dr. Brunworth and Dr. Hall that [Claimant] very likely does have a diagnosis of CRPS. The radiologist's report from the most recent right knee MRI performed on 5/8/2015 stated that there was "no chondromalacia whatsoever." This was also negative for synovitis. I do not believe that the fact that [Claimant] can barely walk or put weight on his right lower extremity is due to chondromalacia and/or synovitis. Both his history, as well as findings on physical examination, are consistent with CRPS. He has pain out of proportion to previous diagnostic studies, as well as allodynia and temperature changes in his right lower extremity. In addition, while the lumbar sympathetic block did not provide long lasting improvement, he did have immediate improvement in his pain symptoms following this procedure.

35. Dr. Blau determined that Claimant is not at MMI. He recommended a triple phase bone scan, for further work-up of CRPS. Additionally, Dr. Blau recommended one more lumbar sympathetic block. Dr. Blau recommended that the block be performed by a different physician, who is not a partner of Dr. Brunworth. Dr. Blau emphasized that he considers Dr. Ghazi to be "an excellent physician," and "one of the best interventional list in the state of Colorado." He simply recommended a different physician to ensure there was no question of bias "whatsoever." He recommended that Claimant's H-wave unit be repaired or replaced. Finally, he opined that a spinal cord stimulator trial "should remain on the table . . . as a last resort for treatment."

36. Although he did not believe Claimant was at MMI, Dr. Blau provided an advisory rating of 50% whole person, based on impairment of gait and station.

37. After the DIME, Claimant followed up with Dr. Brunworth. Dr. Brunworth agreed with Dr. Blau's recommendations, and immediately referred Claimant for the bone scan, the sympathetic block with Dr. Vilims, and ordered a new H-wave unit.

38. Claimant returned to Dr. Brunworth on November 15, 2016, reporting no change in his condition. None of the recommended treatment has been authorized by Respondents, and without private insurance, Claimant had no way to obtain treatment.

39. Claimant testified briefly at the hearing before the undersigned ALJ on February 1, 2017. He described pain in the entire right leg. He testified that he drives in a "very limited" manner.

40. Respondents called no witnesses at the February 1, 2017 hearing, but relied on a transcript of Dr. Steinmetz's testimony from the March 1, 2016 hearing with ALJ Walsh. Over Claimant's objection, the undersigned ALJ accepted the transcript to document the issues and arguments that were presented to ALJ Walsh, to maximize judicial economy, and save the parties the expense of calling their experts again.

41. The opinions of Dr. Blau, Dr. Brunworth and Dr. Hall are credible and more persuasive than Dr. Steinmetz's opinions.

42. Issue preclusion does not apply to the DIME's MMI determination, because the issues involved at the present stage of the proceedings are not identical to those considered by ALJ Walsh in 2016.

43. Respondents have failed to overcome the DIME's diagnosis of CRPS by clear and convincing evidence.

44. Respondents have failed to overcome the DIME's determination regarding MMI by clear and convincing evidence.

45. The preponderance of persuasive evidence shows Claimant meets the criteria in the CRPS MTGs for "confirmed CRPS."

46. The CRPS-related treatment recommended by Dr. Blau and Dr. Brunworth is reasonable, necessary, and causally related to Claimant's admitted injury.

CONCLUSIONS OF LAW

1. Issue preclusion does not apply to the DIME's determination of MMI.

The DIME determined that Claimant suffers from CRPS, and found he is not at MMI, pending treatment for CRPS. As previously noted, whether Claimant has CRPS and is entitled to a treatment for the condition — including a lumbar sympathetic block — was the subject of ALJ Walsh's May 8, 2016 final order. ALJ Walsh found that Claimant failed to prove he has CRPS, and therefore denied and dismissed his request for medical treatment related to CRPS.

Respondents argue that the DIME's MMI finding is overcome as a matter of law because it rests a diagnosis and treatment that was previously adjudicated against Claimant in a final order. On the other hand, Claimant argues that the Act allows the DIME to revisit ALJ Walsh's determination when deciding whether Claimant is at MMI, and the prior finding is not binding if a party seeks to overcome the DIME's determination.

Issue preclusion (*i.e.,* collateral estoppel), is an equitable doctrine that bars relitigation of an issue that has been finally decided by a court in a prior action. *Bebo Construction Co. v. Mattox & O'Brien*, 990 P.2d 78, 84 (Colo. 1999). The doctrine's purpose is to relieve parties of the burdens of multiple lawsuits, to conserve judicial resources, and to promote reliance on and confidence in the judicial system by

preventing inconsistent decisions. *Id*. Although issue preclusion was conceived as a judicial doctrine, it has been extended to administrative proceedings, where it "may bind parties to an administrative agency's findings of fact or conclusions of law." *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44, 47 (Colo. 2001).

In *Sunny Acres*, the Supreme Court held that issue preclusion bars relitigation of an issue if: (1) the issue sought to be precluded is identical to an issue already determined in the prior proceeding; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. *Id*.

In the context of issue preclusion, a full and fair opportunity to litigate the issue requires the availability of procedures in the earlier proceeding commensurate with those in the subsequent proceeding, and that the party against whom issue preclusion is asserted had the same incentive to vigorously assert its position in the previous action. *Id*.

Elements (2)-(4) *Sunny Acres* factors are clearly present here.[2] But the difficult question involves whether the first prong of the test is met. Respondents argue the issues in the two proceedings are identical because ALJ Walsh specifically found Claimant does not have CRPS, and the diagnosis of CRPS was the basis for the DIME's determination that Claimant is not at MMI. ALJ Walsh denied and dismissed Claimant's request for a repeat lumbar sympathetic block,[3] which the DIME specifically recommended as treatment necessary to bring Claimant to MMI. In fact, ALJ Walsh denied any medical treatment "for a diagnosis of CRPS," which arguably covers all treatment the DIME recommended.

In a long series of cases, the ICAO has repeatedly indicated that the DIME's authority to determine MMI and permanent impairment is not constrained by prior ALJ orders. *E.g.*, *Mahana v. Grand County*, W.C. No. 4-430-788 (ICAO, February 15, 2007); *Braun v. Vista Mesa*, W.C. No. 4-637-254 (ICAO, April 15, 2010); *Ortega v. JBS USA*,

[2] The ALJ disagrees with Claimant's argument that the fourth element (similar incentive to litigate in the prior proceeding) is not satisfied. Both parties had substantial incentive to litigate the issues at the prior hearing. Both parties are aware that treatment for CRPS can be very costly. At the time of the prior hearing, Claimant's MMI status appeared to hinge on the outcome of the hearing. Dr. Brunworth had already suggested a spinal cord stimulator as a possible treatment. Respondents had strong incentive to litigate the issues because they were facing significantly higher medical costs and additional indemnity benefits. Likewise, Claimant had a strong incentive to litigate because he stood to lose his indemnity benefits and be left with a debilitating condition with no reasonable prospect of improvement. The importance of the issues at the prior hearing is further evidenced by the fact that each party was willing to incur substantial expert witness fees to present live testimony to ALJ Walsh. The ALJ cannot discern any substantive difference between the parties' incentive to litigate at the two hearings.

[3] At the hearing with ALJ Walsh, the parties agreed Claimant was requesting the compound cream, a sympathetic block, and approval of the psychological screening necessary for a trial spinal cord stimulator." (Tr. 5:3-7; 6:5-6). But the recommendations were all predicated on the diagnosis of CRPS.

W.C. No. 4-804-825 (ICAO, June 27, 2013); *Sanchez v. American Federation of State*, W.C. No. 4-666-226-06 (ICAO, November 27, 2013); *Madrid v. Trinet Group, Inc.*, W.C. No. 4-851-315-03 (ICAO, April 1, 2014); *Jackson v. Select Comfort Corp*., W.C. No. 4-914-418-03 (ICAO, November 16, 2016); *Sharpton v. Prospect Airport Services*, W.C. No. 4-941-721-03 (ICAO, November 29, 2016). The common thread in these cases is that the first prong — identity of issues — is not present.

The facts in *Mahana v. Grand County, supra*, are almost identical to the situation in Claimant's case. In *Mahana*, ALJ Jones had previously determined that the Claimant did not suffer from CRPS and failed to prove that sympathetic blocks were a reasonable and necessary treatment for the industrial injury. Subsequently, the claimant underwent a DIME, which determined that the claimant suffered from sympathetically mediated pain (SMP) or complex regional pain syndrome (CRPS) and recommended sympathetic blocks. The respondents challenged the DIME at a hearing before ALJ Felter. ALJ Felter found the respondents failed to overcome the DIME on MMI and ordered respondents to pay for the sympathetic blocks. The respondents argued ALJ Felter was precluded from adjudicating whether the claimant was entitled to sympathetic blocks because ALJ Jones had previously denied that same treatment in a prior final order.

The ICAO ultimately held that ALJ Jones' final order did not preclude ALJ Felter from readjudicating the claimant's entitlement to medical benefits *in the context of challenging a DIME*. The ICAO stated:

> Affording preclusive effect to ALJ Jones' order regarding the Claimant's diagnosis of CRPS would eviscerate the DIME process designed to permit a party to challenge maximum medical improvement or the extent of permanent impairment. The DIME physician in this case was specifically charged with determining whether the claimant was at maximum medical improvement. . . . As we read the DIME report, it was expressly *because* the claimant was suffering from SMP and expressly *because* she needed the sympathetic blocks to treat that condition that the DIME physician opined that she had not reached maximum medical improvement. **Precluding the DIME physician from stating that opinion regarding maximum medical improvement because a previous ALJ had determined that the medical treatment was not reasonable and necessary would, in our view, impermissibly interfere with the statutory role of the DIME doctor.** (Italics in original, bold emphasis added).

The ICAO has subsequently followed this principle repeatedly in a variety of contexts. For instance, in *Braun v. Vista Mesa, supra*, the ICAO held that a previous ALJ finding that the claimant suffered from thoracic outlet syndrome (TOS) and awarding medical benefits did not preclude the DIME from subsequently determining the claimant did not have TOS and did not require further treatment for TOS.

Similarly, *Madrid v. Trinet Group, Inc., supra*, held that a previous ALJ order denying treatment for symptoms beyond the claimant's elbow as unrelated to the

industrial injury did not preclude the DIME from determining the claimant suffered from CRPS of the entire arm and was not at MMI without a spinal cord stimulator trial.

In *Sanchez v. American Federation of State*, *supra*, a previous ALJ finding that the claimant's low back problems were causally related to his industrial injury was not binding when the DIME later determined that the back issues were not injury-related.

The ICAO revisited this issue and reaffirmed its interpretation of the law several times within the last few months. *Jackson v. Select Comfort Corp*., W.C. No. 4-914-418-03 (ICAO, November 16, 2016); *Sharpton v. Prospect Airport Services*, W.C. No. 4-941-721-03 (ICAO, November 29, 2016); *Holcombe v. FedEx Corp*., 4-824-259-05 (ICAO, May 24, 2017).

Jackson v. Select Comfort Corp., *supra*, involved a situation where an ALJ denied treatment for the claimant's low back/SI joint condition as unrelated to the claimant's industrial injury. The DIME subsequently provided an impairment rating for the lumbar spine/sacroiliitis. A second ALJ found that issue preclusion did not apply, and the respondents had not overcome the DIME's rating. The ICAO affirmed.

Sharpton v. Prospect Airport Services, supra, involved a similar situation, in the context of carpal tunnel syndrome.

Finally, in *Holcombe v. FedEx Corp*., *supra*, an ALJ had found that an elbow surgery recommended by the claimant's treating physicians was not reasonable and necessary. Subsequently, a DIME determined that the claimant was not at MMI, and would not be at MMI until he underwent the elbow surgery that the ALJ had denied. A second ALJ determined that the DIME was not bound by the previous ALJ's decision regarding the surgery, and that respondents failed to overcome the DIME's determination regarding MMI. The ICAO affirmed.

The rule in *Mahana* and the subsequent cases is based on a conclusion that the issues in a hearing challenging a DIME are not "identical" to issues tried in a previous hearing, because the statute creates differing burdens of proof (*i.e*., "preponderance" vs. "clear and convincing") and places the burden on the party challenging the DIME. The ICAO has repeatedly cited *Holnam, Inc. v. Industrial Claim Appeals Office*, 159 P.3d 795 (Colo. App. 2006) as "instructive" on how different burdens of proof impact the application of issue preclusion. In each case, the ICAO stated that issue preclusion did not apply because the issues decided by the first ALJ were not "identical" to the issues addressed by the second ALJ when reviewing a DIME's determination.

In this case, issue preclusion does not apply to the DIME because the issues at the two hearings were not "identical." There were substantive differences in the burdens of proof and the party to whom the burden was assigned. At the first hearing with ALJ Walsh, Claimant had the burden to prove by a preponderance of the evidence that treatment for CRPS was reasonable and necessary. At the current hearing, the statute puts the burden on Respondents to overcome the DIME's determination of MMI by clear and convincing evidence. Although the general subject matter was the same at both

hearings, the specific issues were different due to the different context in which the issues were considered. The fact that Respondents find themselves back in court litigating an issue similar to one they previously won is simply a function of the statutory scheme, which assigns responsibility for determining MMI primarily to physicians, as a *medical* determination, rather than judges as a *legal* decision.

Since there was no identity of issues between the two proceedings, it follows that the DIME was not precluded from determining that Claimant has CRPS and requires treatment for the diagnosis, notwithstanding ALJ Walsh's order. Consequently, the DIME's determination is binding unless overcome by clear and convincing evidence.

2. Respondents failed to overcome the DIME regarding MMI by clear and convincing evidence.

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if there is a course of treatment that has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990). Additionally, a finding that a claimant is not at MMI may rest solely upon a recommendation for further diagnostic evaluation. The ICAO has repeatedly held that diagnostic procedures constitute compensable medical benefits that must be provided before MMI if such procedures have a reasonable prospect of diagnosing or defining the claimant's condition so as to suggest a course of further treatment. *E.g., Soto v. Corrections Corp*., W.C. No. 4-813-582 (ICAO, October 27, 2011).

The DIME physician must necessarily engage in a "diagnostic process" in evaluating whether a claimant is at MMI. A determination of MMI inherently involves issues of diagnosis because the DIME must determine what medical conditions exist and which are causally related to the industrial injury. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Hodges v. ATR Collision, Inc*., W.C. No. 4-751-557 (ICAO, August 24, 2010). The DIME's findings regarding diagnosis and causation are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(II); *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007).

The DIME physician's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME physician's conclusion must demonstrate that it is "highly probable" that the MMI and impairment findings are incorrect. *Qual-Med*, 961 P.2d at 592.

It is well established held that "mere differences of medical opinion" do not constitute clear and convincing evidence that the DIME's determination is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (ICAO March 18, 2016); *Javalera v. Monte Vista Head Start, Inc.*, W.C. No. 4-532-166 (ICAO July 19, 2004); *see also Gonzales v. Browning-Ferris Industries of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000).

As found, Respondents have failed to overcome the DIME's determination that Claimant is not at MMI by clear and convincing evidence. The DIME's MMI determination is supported by his own physical examination findings, the objective test data, Claimant's positive response to the sympathetic block administered by Dr. Ghazi, and the credible opinions of Dr. Brunworth, Dr. Bernton, and Dr. Hall.

Respondents' challenge to the DIME rests primarily on Dr. Steinmetz's opinions. The centerpiece of Dr. Steinmetz's argument is that there is a "better explanation" for Claimant's symptoms than CRPS. But the ALJ is persuaded by the opinions of Dr. Blau, Dr. Brunworth, and Dr. Hall that chondromalacia and synovitis do not explain Claimant's severe symptoms. Although Claimant received a prior impairment rating partially attributable to chondromalacia, the MRIs and intraoperative inspection showed no evidence of chondromalacia. Similarly, the May 8, 2015 MRI did not show evidence of synovitis. While it is possible that Claimant has some residual synovitis too subtle to be detected by MRI, it is not plausible that such a mild condition would cause the severe symptomatology from which Claimant suffers.

Admittedly, Claimant has not consistently demonstrated allodynia on examination of his knee, which is somewhat incongruous with the diagnosis of CRPS. But that anomaly is most likely attributable to individual patient variability, and the natural tendency of CRPS signs and symptoms to wax and wane. Claimant demonstrated allodynia on exam by Dr. Blau and Dr. Hall,[4] and the MTGs do not require specific clinical signs to be present on every examination. Moreover, Claimant satisfies the other "Budapest Criteria" in the MTGs, with several documented instances of color changes, temperature asymmetry, swelling and range of motion deficits. Claimant also satisfies the criteria for "confirmed CRPS" under the MTGs. He had positive thermography and QSART testing, and positive response to a sympathetic block. The totality of evidence presented persuades the ALJ that Claimant meets the diagnostic criteria for CRPS, as opined by the DIME, Dr. Brunworth, and Dr. Hall.

3. The CRPS-related treatment recommended by the DIME and Dr. Brunworth is reasonable, necessary and related to Claimant's admitted injury.

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where the respondents dispute a

[4] Although Dr. Hall did not use the term "allodynia," he noted Claimant had "a very significant pain reaction to even minimal palpation along the joint line medially or the posterior joint." The ALJ interprets this as synonymous with allodynia.

claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The claimant must also prove that the requested treatment is reasonable and necessary. Section 8-42-101(1)(a). The claimant must prove entitlement to benefits by a preponderance of the evidence.

The DIME made several treatment recommendations in the context of determining Claimant is not at MMI. Those recommendations largely track the recommendations made by Dr. Brunworth. ALJ Walsh previously denied the requested treatment because he found Claimant does not have CRPS. But the DIME determined that Claimant does have CRPS, and needs treatment for CRPS to bring him to MMI. Respondents failed to overcome the DIME's findings, including the diagnosis of CRPS.

The DIME report provides critical new and persuasive evidence regarding Claimant's diagnosis that was not available to ALJ Walsh. The preponderance of persuasive evidence in the current record, including the new evidence developed since the hearing before ALJ Walsh, establishes that the treatment recommended by Dr. Blau and Dr. Brunworth is reasonable and necessary to cure and relieve the effects of his admitted injury, and is necessary to bring Claimant to MMI. Therefore, Respondents are liable for treatment of CRPS as recommended by the DIME and Dr. Brunworth.

ORDER

It is therefore ordered that:

1. Respondent's request to overcome the DIME regarding MMI is denied and dismissed.

2. Respondents shall pay for all reasonable and necessary treatment to cure and relieve the effects of Claimant's injury, including treatment for CRPS, as recommended by the DIME. At a minimum, Respondents shall pay for at least one repeat lumbar sympathetic block, the triple phase bone scan, and replacement of Claimant's H-wave unit.

3. All matters not expressly determined herein, including whether Claimant is a candidate for a spinal cord stimulator trial, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 29, 2017

Office of Administrative Courts

ISSUES

I. Whether the Claimants' claim for death benefits is barred by the statute of limitations.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Decedent suffered an admitted back injury on August 31, 2011 which became the basis of claim number W.C. 4-867-608.

2. Decedent was eventually placed at maximum medical improvement in claim number W.C. 4-867-608 and applied for hearing on permanent total disability benefits. Hearing was originally scheduled for December 18, 2013.

3. The decedent passed away on November 19, 2013 due to a pulmonary embolism (Respondents Exhibit C, p. 12). A death certificate was issued on November 25, 2013.

4. Counsel for Decedent then vacated the December 18, 2013 hearing, and notified Respondent's attorney of the death. There is nothing in the record indicating that any discussion occurred regarding the cause of death, if compensability was an issue, or if there were any dependents potentially qualified for benefits.

5. The record is then silent until a report was issued by Dr. Hall, the contents of which suggest that his report was being issued at the request of Decedent's dependents (hereafter "Claimants"). The report was based upon medical records in existence at the time of Decedent's death.

6. On March 23, 2015, Dr. Timothy Hall issued this report opining that the decedent's death was related to the August, 2011 work injury.

7. On July 2, 2015, Claimants' attorney sent, via fax, an Entry of Appearance, a Dependents' Notice and Claim for Workers Compensation, and supporting documents totaling 9 pages, to the Office of Administrative Courts ("OAC") in Colorado Springs, Colorado. The "date of injury" is listed as 10-18-12. There is no evidence that the Colorado Springs OAC took any action, or forwarded this documentation to any third party.

8. On November 5, 2015, Claimants' attorney sent, via fax, the same 9 pages to the OAC in Denver, Colorado. There is no evidence that the Denver OAC took any action, or forwarded this documentation to any third party.

9. On December 7, 2015, Claimants' attorney sent, via fax, the same 9 pages to the correct fax number of Division of Workers Compensation ("Division") in Denver, Colorado.

10. On January 7, 2016 the Division of Workers Compensation issued a letter Acknowledging receipt of the Dependents' Notice of death Claim. The enclosed documents contained the Division's date stamp of January 6, 2016.

11. The Division of Workers Compensation forwarded a copy of the claim to Respondent Zurich American Insurance Company.

12. On March 3, 2016, Zurich American Insurance Company filed a notice of contest denying liability for claimant asserting that the claim was barred by the statute of limitations and also that the death is presumed unrelated, pursuant to § 8-41-207.

CONCLUSIONS OF LAW

The claim was not timely filed in the proper forum.

A. The decedent passed away on November 19, 2013. Pursuant to Section 8-41-207 of the Colorado Revised Statutes a notice of claim for compensation under the Workers Compensation Act should have been filed with the Division of Workers Compensation on or before November 19, 2015. This occurred on December 7, 2015. Because the claim was not filed with the Division of Worker's Compensation within two years, Claimants failed to meet the two year filing deadline for the statute of limitations and the claim is time barred. Clubb v. RE Monks, W.C. 4-952-696 (March 31, 2015).

B. Claimants have asserted that the statute of limitations is tolled by inaction on the part of Respondents. Pursuant to the rule of independence the death claim of the dependents is a separate and distinct claim from the underlying worker's compensation claim. C.R.S. 8-41-207 states "in case death occurs more than two years after the date of receiving any injury, such death shall be prima facie presumed not to be due to such injury…." Decedent died on November 19, 2013, which is more than two years after the original date of injury.

C. There is no evidence that Respondents were provided with any information that the death was in any way related to the admitted work injury from August 31, 2011 until the notice of death claim was provided to Respondents in

January of 2016. Nothing triggered any duty on the part of Respondents to file any notice with the Division that the injury in this claim had resulted in a death. To the contrary, Respondents are entitled to the benefit of the statutory presumption that the decedent's November 2013 death was in fact unrelated to her August 2011 work injury.

D. Similarly, there is no evidence that Claimants made Respondents aware that decedent had dependents to pursue a dependents' death claim. As Respondents could not have known of a potential claim for death without knowing the cause of death which could potentially be related to the 2011 work injury, and possibly rebut the presumptions established by § 8-41-207, Respondents had no duty to file any additional report of incident beyond the notices and admissions that had already been filed in claim number W.C. 4-867-608.

All the facts which could reasonably be relied upon to establish compensability - probable or not - were known at the time of Decedent's Death

E. Claimants have relied upon Dr. Hall's 2015 report as the point in time when they realized the "probable compensable nature" of the decedent's death. However, Dr. Hall merely opines in his report that he believes there is a causal link between the cause of death and the work injury. Claimants were constructively aware of the medical reports necessary to ascertain the potentially compensable nature of the claim at the time of the decedent's death. Claimants were aware of both the cause of death and the work injury at the time of Decedent's death. Moreover, they were aware of, and had access to, all of the other medical records reviewed by Dr. Hall in 2013 and thus were constructively aware of the facts that led to his conclusion. There was no additional "treatment" or medical records obtained or developed between 2013 and 2015 that helped claimants further elucidate the cause of decedent's death. *Therefore, claimants knew or should have known the "probable compensable nature" of the injury on the date of death.*

F. The record is silent why Claimants waited until March of 2015 to ask Dr. Hall or any other provider to opine on causation. Claimants *asked* Dr. Hall to review the records and provide a report and offer an opinion on causation. Claimants and/or their counsel must have at least suspected that there might have been a connection between the work injury and the decedent's death. Claimants have not identified any facts that developed between November 19, 2013 and March 16, 2015 (the date of claimants' counsel's letter to Dr. Hall) or any additional medical or other records that were obtained during this period that led to this 2015 request of Dr. Hall. It cannot be presumed that the mere passage of time suddenly made it more or less likely that the death was compensable.

G. Claimants are presumed to know the law. Clubb, supra. In each of the cases referenced by Claimants, there were facts either unknown or undiscoverable to the *injured* (not *deceased*) worker until several months later. Here, Claimants knew all of the information they were ever going to know about the Decedent's death, and could have obtained the additional information to wit: the medical opinion on causation at any time thereafter. To rule as Claimants suggest would essentially negate the statute of limitations altogether, and place the timing of the filing of claims entirely in the hands of a decedent's dependents. They could conceivably wait for years before seeking out medical opinions which would only then establish a "probable compensable nature" of a given death claim. The ALJ finds that the statute of limitations herein began to run on the date of death.

Claimants have not shown good cause to extend the statute of limitations one additional year

H. Section 8-43-103 does allow for a one year extension of time to the statute of limitations where a reasonable excuse exists *and* where the employer's rights have not been prejudiced. Claimants did not meet the two year statute of limitations. Claimants contend that a reasonable excuse does exist to effectively extend it one additional year. Claimants point to the receipt of Dr. Hall's report. Claimants have not established a reasonable excuse based upon the receipt of Dr. Hall's report. Even assuming Claimants had a legitimate excuse for waiting 16 months to obtain a medical opinion (i.e. saving money for the opinion- in this case $300) Claimants could have filed the claim with the Division and waited to file the application for hearing until after the report was received. Therefore, waiting until after March 2015 to file the notice of claim does not constitute a reasonable excuse for the late filing of the Dependent's Notice of Claim. Cf. Gallegos v. Lifecare services W. C. 4-367-958 (March 29, 1999) (lack of corroborating medical evidence does not constitute reasonable excuse).

I. Additionally, Claimants have asserted the filing of the claim with the Office of Administrative Courts should be deemed a timely filing of the claim. It is not. By making this argument, Claimant essentially asserts that the Office of Administrative Courts (OAC) and the Division of Workers Compensation are effectively one and the same. Each entity has its own separate rules of procedures and is consistently identified separately in those rules as well as the Workers Compensation Act. The filing of a document with the incorrect Office of Administrative Courts location does not result in timely filing. See, Lambert v. Sema Construction, W.C. 4-504-756 (March 9, 2006) (mailing Petition to Review to Grand Junction where order required Petition to be filed in Denver resulted in untimely appeal and dismissal of same).

J. Additional case law has held that failure to identify each party separately on a Certificate of Mailing rendered a document deficient. Rivera v. Sheridan School District 2, W.C. 4-919-001 (August 5, 2015). In Rivera, a Petition to Review was denied and dismissed as untimely because the claimant

had failed to identify either the OAC or Division on the Certificate of Mailing. The OAC did receive a copy in the mail, and forwarded a copy to the Division. The date of receipt by the Division was recorded as five days *later* than the date of receipt noted by the OAC, and the Division had no other record of receipt. In order to timely file Notice of Claim, Claimants had to timely file the claim with Division of Workers Compensation, and not with any of the various OAC offices.

K. A claim was faxed to the OAC office in Colorado Springs in July 2, 2015. There is no evidence that the OAC in Colorado Springs forwarded this claim to the Division or did anything to further process this claim. There is no evidence of any actions taken by Claimants or their counsel for the next four months to inquire of the status of the claim. Claimants thereafter faxed the claim, not to the Division of Workers Compensation, but to the OAC in Denver on November 5, 2015, possibly expecting that office to forward the claim to the Division on their behalf. When the Denver office similarly failed to forward the claim, Claimants finally sent the claim to the Division of Workers Compensation. Claimants have provided no explanation for not filing the claim with the Division of Workers Compensation in the first instance. There is no evidence that anyone *misdirected* Claimants in any fashion. There is no evidence of *fraud or mistake of fact.* There is no evidence of some computer error, or serious illness of a key player in the final weeks before the two year statute ran out. Nor have claimants provided any explanation for taking no action for four months after initially filing the claim with OAC in Colorado Springs. And, Claimants have not explained why after initially filing the claim with OAC in Colorado Springs, (who declined to forward the claim to the Division), Claimants thereafter filed the claim with the Denver OAC office (who also declined to forward the claim to the Division) rather than filing the claim with the Division.

L. Whether or not a claimant has shown a reasonable excuse for the late filing of a claim is a discretionary decision for the administrative law judge. Reasonable excuses have been found in cases where employers have knowingly and willfully *misled* claimants about the compensability of injuries. The determining factor if an excuse is reasonable is reasonableness of the Claimant's actions. Here, the Claimants' actions were simply not reasonable. Assuming Claimants did not know that the Office the Administrative Courts was not the equivalent of Division of Workers Compensation, this still would not excuse the late filing. A mistake of law is not a reasonable excuse. Emrich v. Jackson Hewitt, W.C. 4-241-443 (October 27, 1998). Waiting four months to correct this error only to repeat it by re-filing the claim with the OAC in Denver cannot be construed as reasonable. Some action should have been taken to check the status of the claim. A simple telephone call would likely have sufficed. Once action was taken after four months, the claim should have been properly filed with the Division rather than filed with another location within the OAC. These actions were neither reasonable nor excusable under established case law.

M. The delays by Claimants in filing this death claim are not otherwise reasonable or excusable; thus there is no need to address the issue of prejudice alleged by Respondents. Nonetheless, *if* the late filing - by less than one month- were otherwise excused, the ALJ has seen an insufficient showing of prejudice by Respondents. Had Claimants properly filed their claim a month sooner, an autopsy would still have taken well over two years after death to be conducted. An autopsy taken one month earlier under these circumstances would not likely provide additional evidence beneficial to Respondents on the issue of causation. Respondents made no showing that some critical witness or evidence would have become unavailable with the passage of an additional month. Nonetheless, such an analysis is not necessary, as the purpose of the statute of limitations is to avoid the litigation of stale claims in the first place, and the issues inherent in processing them. The steps to process these claims are plainly enumerated in the statutes and Rules, and were not taken in a timely manner.

ORDER

It is therefore ordered that:

1. This case is barred by the statute of limitations. The Claimants' claim for death benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 30, 2017

Colorado Springs, Colorado 80906

ISSUES

- Did Claimant prove by a preponderance of the evidence that she suffered a compensable injury on July 21, 2013?
- If compensable, did Claimant's injuries sustained on August 31, 2014 constitute an intervening event?
- Did Claimant prove by a preponderance of the evidence that she suffered a compensable injury on December 22, 2014?
- If compensable, what medical benefits is Claimant entitled to cure and relieve the effects of her injur(ies)?
- Is Claimant entitled to temporary disability benefits?

PROCEDURAL HISTORY

A Notice of Contest was filed for the July 21, 2013 injury on or about September 17, 2013. (W.C. 4-928-974). A Worker's Claim for Compensation was prepared on behalf of Claimant on July 20, 2015. It listed the date of injury/disease as July 21, 2013, noting the injury occurred reaching for and pulling on books and other materials.

On or about October 7, 2015, a Worker's Claim for Compensation was filed on behalf of Claimant for the December 22, 2014 injury. (W.C. 4-995-409). A Notice of Contest for that date of injury was filed on October 23, 2015.

The cases were consolidated by Order on November 3, 2015.

STIPULATION

The parties stipulated that if the claim was found to be compensable, Claimant would be entitled to periods of temporary disability benefits. These periods would be determined by the parties post-hearing. The parties requested a general award of temporary benefits, the specific periods to be determined after an Order was issued.

FINDINGS OF FACT

1. Claimant is employed as a Specialist for Employer. Previously, she worked as a Lead Materials Handler. She has worked for Employer for twenty-two (22) years.

2. A written job description for Material Handler II was admitted into evidence. 40% of the job duties included check-in, 25% was supervisor assistance, 25% was holds and 10% of the job involved shelving. Claimant testified this job description did not include work at the returns desk, although the ALJ infers this was included in the "check-in" category.

3. Claimant testified that first thing in the morning, they would pick up the return materials which were on the floor and put those items into bins. Photographs of the drop room where the bins were located were admitted into evidence. They (Claimant and other librarians) would also take materials from other libraries that were placed in bins and put these in carts. The materials were also checked in at that time. She would write on a white dry erase board the various jobs everyone would be doing for the day. At least two times per day, she would work the return desk, which required her to stand up at the desk which was as high as her solar plexus. She said they had to move quickly, as patrons would be waiting for their books to be checked in, so they could check out other books.

4. Claimant's medical history was significant in that she received treatment for an injury to her right arm in 2007. Treatment records for this injury were admitted into evidence at hearing.[1] On August 8, 2007, Claimant struck the lateral side of her right elbow two times. She was evaluated on August 13, 2007 by Elizabeth Bisgard, M.D., who diagnosed right lateral epicondylitis. Claimant received conservative treatment for this injury, including physical therapy ("PT").

5. Claimant was also referred to Hand Surgery Associates and on October 30. 2007, she was evaluated by In Sok Yi, M.D. Dr. Yi's impression was right lateral epicondylitis after contusion with possible bony contusion. Claimant's x-rays were described as normal. He recommended wearing a splint at night and considered an injection.

6. The treatment notes over the next two months noted Claimant's right lateral epicondylitis was improving. In the last report from Dr. Bisgard admitted at hearing (dated October 23, 2007), she noted Claimant was experiencing pain from acupuncture, which was discontinued. Claimant was given work restrictions of 5-10 pounds lifting, carrying, pushing or pulling. She was also to avoid activity with her right elbow extended.

7. On November 20, 2007, Dr. Yi examined Claimant, at which time he noted improvement in that she was no longer tender over the lateral epicondyles, but tender over the super chondral ridge proximal to the humerus. There was no indication in these records the Claimant was found to have a permanent impairment or permanent restrictions from the August 2007 injury.

8. Claimant testified that there were layoffs which occurred in January 2013. Six (6) people in her department were laid off. Also, Employer also eliminated all of the

[1] Exhibit M.

volunteer positions. This required Claimant and the other individuals to work faster, particularly with regard to checking in books.

9. Claimant's testified her job at the return desk required her to extend her arm out 90° as well as lifting above her shoulder. She had to lift above her shoulder when putting books on shelves. The ALJ inferred these tasks required movement of the shoulder joint.

10. On July 21, 2013, Claimant was working at the return desk. She reached for a stack of books and felt pain in her wrist, arm and shoulder. She reported her injury to her supervisor. Claimant explained her use of the word "repetitive" related to the fact that they had to work at a "crazy, fast pace". The ALJ credited Claimant's testimony that her workload increased after the lay-offs.

11. A computerized report of injury, dated July 23, 2013 was admitted into evidence. Claimant described the injury as a repetitive injury and noted she had an injury to the same arm eight (8) years ago. This injury was described as much more painful. She described the fast pace of work as the problem. This report of injury was made close in time to July 21, 2013.

12. Claimant testified that there was a delay in seeing Dr. Bisgard and she complained to HR and was told they were waiting for approval from insurance. In the employment records admitted at hearing, Claimant e-mailed a Chris Chavez to note there was a delay in getting approval to see Dr. Bisgard and the next available appointment was August 9.[2] Mr. Chavez responded to the effect that, from Employer's perspective, Claimant was authorized to see Dr. Bisgard. This response constitutes agreement by Employer that Claimant's symptoms were to be treated through the workers' compensation system.

13. Claimant was evaluated by Dr. Bisgard on August 9, 2013, whom she had not seen in almost six years. At that time, she was complaining of pain in the anterior portion of her right shoulder and the ulnar side of her right wrist. She noted they had lost six people in the department and canceled volunteers. Claimant said she had been doing a lot of shelving of books, reaching overhead, computer work, mouse work, returns in which she had to work at a fast-pace, along with scanning and work with DVD players. She rated her pain as 8/10. Dr. Bisgard's assessment was right shoulder tendinitis, possible rotator cuff tear; wrist ulnar tendinitis. Claimant was given the right carpal tunnel splint to wear at night and a prescription for Biofreeze spray. Dr. Bisgard issued work restrictions including a maximum of 2 pounds lifting, carrying, pushing/pulling with the right hand of, as well as no overhead reaching.

14. Claimant returned to Dr. Bisgard on September 18, 2013. At that time, she was noted to have improved substantially, with her pain levels down to 3/10. Claimant was still having pain and limited range of motion (in "ROM") with her right shoulder. Claimant was going to physical therapy. Records from Health One

[2] Exhibit 13, p.73.

Rehabilitation document Claimant received physical therapy from August 16, 2013 through September 13, 2013. Dr. Bisgard's assessment was: ulnar wrist tendinitis, improved; right shoulder tendinitis, possible rotator cuff tear. Dr. Bisgard opined that it was less likely she had a rotator cuff tear. The ALJ notes Dr. Bisgard's records confirm there was a concern regarding a potential rotator cuff tear in 2013.

15. Dr. Bisgard reevaluated Claimant on October 11, 2013. After checking with her cardiologist, Claimant was not to do any type of PT modalities such as iontophoresis, electrostimulation or a TENS unit. Dr. Bisgard's diagnosis was the same as the prior appointment An M-164 form completed by Dr. Bisgard confirmed the 5 pound lifting, repetitive lifting, carrying, and pushing/pulling work restrictions. Claimant was also not to reach overhead with the right arm. Dr. Bisgard left blank that portion of the form regarding the work-relatedness of the condition.

16. Claimant testified the treatment helped her wrist and forearm, but the pain in her shoulder remained.

17. On October 25, 2013, a Job Demands Analysis was done by Joe Blythe, M.A. Mr. Blythe conducted the Job Demands Analysis on October 23, 2013. Claimant was present and reviewed her work schedule with him. Mr. Blythe calculated the amount of lifting Claimant did: for a 6.49 hour workday X 11 lifts/hour equaled 72 lifts per workday. For a 7.5 hour workday, it equaled 83 lifts per workday. Mr. Blythe concluded Claimant did not use hand tools or object weighing 10 pounds or more. She did not engage in 3-4 hours of pinching, nor lifting unsupported objects. He also found Claimant totalled 343 cycles per 6.49 hour workday and 397 cycles per 7.5 hour workday of pronation. Mr. Blythe opined there were no risk factors identified at threshold levels for Claimant's position. The ALJ notes Mr. Blythe did not fully describe Claimant's job duties at the beginning of the shift; namely picking up returned library materials and placing same into bins. Mr. Blythe also did not refer to overhead work Claimant performed.

18. On October 29, 2013, a record review was completed by Jonathon Sollender, M.D. on behalf of Insurer. Dr. Sollender did not evaluate Claimant. He noted Claimant had been diagnosed with bilateral tendinitis of the shoulder and right wrist. He reviewed the Job Demands Analysis and noted that Claimant was far below the threshold value necessary for an occupational injury of lifting 60 times per hour for a minimum of four hours. With regard to the risk factors observed, she was observed to pronate approximately 30 cycles per hour, which was far below the required 120 times per hour for minimum four hours. She was noted to perform this pronation task one hour per workday. For computer work, total mouse use was calculated at 2.9 minutes per hour and keyboarding was 1.3 minutes per hour. Dr. Sollender opined Claimant met no primary or secondary risk factors for the development of a cumulative trauma disorder according to the definitions on pages 21 and 22 on WCRP Rule 17 Exhibit 5 of the Cumulative Trauma Conditions. Dr. Sollender stated the job site evaluation found Claimant did not reach above her shoulder except in rare circumstances. He believed

the claim should be denied, as it was not occupational in nature. Dr. Sollender's report made no reference to Claimant's elbow injury in 2007and the resultant treatment.

19. Claimant testified Dr. Bisgard did not request an MRI. Her shoulder continued to bother her. Claimant testified she found out after the worksite evaluation that her claim was going to be denied and referred to Dr. Sollender's report. She contacted Dr. Sollender's office and found out he did not treat shoulder problems. She said was she was very frustrated and felt she was going to the wrong doctor.

20. Claimant then sent an e-mail on November 10, 2013 stating she was "closing" her claim.[3]

21. There was insufficient evidence in the record to establish Claimant's e-mail was a knowing, intelligent, voluntary, unequivocal waiver of her rights to receive benefits under the Colorado Workers' Compensation Act.

22. Claimant testified she went to her family doctor, Sara Corr, M.D. who referred her to Robert Rokicki, M.D. Dr. Rokicki's assessment was severe bursitis of the right shoulder with impingement. He injected her right shoulder with 40 mg of Kenalog. Neither Dr. Corr nor Dr. Rokicki were ATPs within the workers' compensation system. Claimant testified the treatment she received at Dr. Rokicki's office provided symptom relief.

23. Claimant was seen by Dr. Rokicki on January 29, 2014. X-rays of the shoulder were essentially normal, with no significant arthritis. Claimant had a type I acromion. On examination, painful impingement was noted. Dr. Rokicki's assessment was severe bursitis with impingement and he gave her a Kenalog injection. Claimant was not to lift overhead with the right arm and not push or pull more than 50 pounds.

24. Dr. Rokicki's note of January 31, 2014 referred to a right shoulder injury and approved Claimant's return to work, no lifting greater than 20 pounds; no overhead lifting, pushing, or pulling greater than 50 pounds until March 15, 2014.

25. Claimant underwent a PT evaluation at Body Image Physical Therapy and Fitness on February 3, 2014. At that time, it was noted she received a Cortisone injection on January 30, 2014, which helped decrease the pain. Claimant's symptoms were described as consistent with rotator cuff tendinopathy and impingement syndrome. She was to begin manual therapy, neuromuscular reeducation, therapeutic exercise and electrical stimulation. The records admitted at hearing indicated Claimant had PT at this facility and was then discharged on March 25, 2014, after she did not schedule further therapy appointments. This provider was not authorized, as it was treatment outside the workers' compensation system.

[3] Exhibit 13, p. 77.

26. On March 10, 2014, Dr. Corr returned Claimant to work with no restrictions. A representative of Employer noted Claimant's FMLA case would be closed.

27. The ALJ concluded Claimant lost time from work during the period of July 23, 2013 and March 9, 2014. Claimant had work restrictions during this time. There was also evidence Claimant's work hours were reduced. Claimant would not be entitled to temporary disability benefits after March 9th, based upon her return to work without restrictions.

28. No records regarding the amount of time Claimant missed from work in 2014 were admitted at hearing.

29. Claimant was seen by Dr. Rokicki on August 15, 2014, who noted she had a history of severe bursitis of the right shoulder and was seen in January, at which time she had an excellent response to a steroid injection. On examination, Claimant had extreme pain in the right shoulder with any attempts at supraspinatus stress testing. The impingement sign was extremely positive and she had a lack of internal rotation. Dr. Rokicki's assessment was severe bursitis of the right shoulder. He injected the subacromial space with 40 mg. of Kenalog.

30. On August 31, 2014, Claimant was evaluated by Sharon Montes, M.D. Claimant had fallen on a piece of furniture in the house the day before, landed on her right ribs, and then onto her right arm. The treatment note recorded Claimant had received a steroid injection into the right shoulder to treat chronic pain. No instability was noted in the right shoulder, nor was there tenderness over the right shoulder biceps tendon. Dr. Montes' assessment was strain/sprain ribs and shoulder, AC joint. She was told to apply ice to her ribs and shoulders and take a break from the sling.

31. Claimant was reevaluated by Dr. Rokicki on September 8, 2014, who noted the incident where Claimant hit the padded arm of the couch. Claimant had pain in the area or just inferior to the breast, but no ecchymosis. She was able to move her shoulder comfortably, but had pain in the medial scapula. Dr. Rokicki's assessment was severe contusion to the right chest wall and he suspected she might have occult fractures of the ribs. He thought Claimant would be off work for one (1) month and completed an FMLA form.[4] The ALJ notes Dr. Rokicki did not recommend any treatment for Claimant's shoulder.

32. Claimant testified that on December 22, 2014 while working on the returns desk, while Claimant was reaching up and out (pulling very quickly) a heavy stack of books she felt a pull and very bad pain in the right shoulder. Claimant stated this pain has never gone away and was more intense than the previous pain from July 2013. Claimant testified she did not report this injury because she did not think it would do any

[4] Although Dr. Rokicki's notes refer to the rib injury, there were references in the STD/LTD records which indicated Claimant was on FMLA both for her ribs and her shoulder. [Ex. N, p.151-152].

good. Claimant did not report the re-injury until June 30, 2015. There were various e-mails sent by Claimant on June 30, 2015, with responses on behalf of Employer discussing a new claim for re-injury and the denial of the 2013 claim.[5] Most of the discussion in the e-mails related to the 2013 claim. Most significant to the ALJ was the fact Claimant did not reference December 22, 2014 as the date of a new injury or re-injury.

33. On January 27, 2015, Claimant was evaluated by Rudy Kovachevich, M.D., complaining of bilateral shoulder pain. She said her symptoms began approximately one year prior and came on insidiously without specific injury of trauma. The ALJ infers this refers to the July 2013 timeframe when Claimant said she did a lot of repetitive activity at her job in the library and felt that some of this may have come from that. Claimant did not refer to a D.O.I of December 22, 2014. The pain was in the anterior and lateral aspect of the shoulder and radiated down towards the elbow with use. Dr. Kovachevich felt Claimant clinically had evidence of bilateral subacromial bursitis, with likely rotator cuff tendinopathy. His diagnosis was pain, joint/shoulder; bursitis, shoulder. Dr. Kovachevich did not comment on whether Claimant's current symptoms were related to work injur(ies) or repetitive activities at her job. He recommended either conservative management or consideration of surgery. Claimant opted for the former and physical therapy was begun.

34. Claimant advised Employer on January 29, 2015 (by e-mail) that she had reinjured her the shoulder while working the returns desk and wanted to know about reopening her workers' compensation case because it was a re-injury of the same area. The ALJ infers Claimant believed she could "re-open" her claim, despite the earlier e-mail in which she request the claim be closed.

35. On February 17, 2015, Claimant underwent an MRI of the right shoulder. The films were read by Eduardo Seda, M.D., whose impression was supraspinatus, infraspinatus and biceps tendonisis, with full thickness tear at common tendon.

36. Claimant returned to Dr. Kovachevich on February 24, 2015, after having an MRI. On examination, Claimant showed good rotator cuff strength. Dr. Kovachevich noted the rotator cuff was of concern, but the fact Claimant was doing better clinically, militated against surgery. Claimant wanted to continue with conservative treatment.

37. When Dr. Kovachevich saw Claimant on April 9, 2015, her shoulder pain was worse. Dr. Kovachevich felt she need to get back into a routine and therapy. She was also to use a sling for comfort. FMLA paperwork was completed at that time. On April 16, 2015, Claimant was evaluated by Helen March, OT. At that time, Claimant was instructed on shoulder protocol and strengthening exercises. No additional records concerning this treatment were admitted into evidence.

38. Claimant was evaluated by Mark Failinger, M.D. on May 20, 2015 for complaints of right shoulder pain, deteriorating shoulder motion and weakness.

[5]Claimant's Ex. 13, pp.135-136.

Although Dr. Failinger noted full range of motion in the right shoulder, he provided no specific figures for the actual measurements. He also noted one of the goals for PT was to increase the range of motion. Dr. Failinger's assessment was right pain in joint and shoulder region, rotator cuff tear (degenerative), SLAP tear, adhesive capsulitis of the shoulder. He ordered physical therapy for Claimant.

39. Claimant received PT in June and on June 29, 2015 she was reevaluated by Dr. Failinger. Dr. Failinger's diagnosis was the same and he recommended continued PT. Dr. Failinger provided work restrictions of no use of right arm until cleared and if not possible to accommodate, then Claimant should be off work.

40. As noted *supra*, a Worker's Claim for Compensation for the July 21, 2013 date of injury was filed on behalf of Claimant.

41. Claimant applied for short term/long term disability on August 25, 2015 because of her right shoulder problems. She related these problems to an injury that occurred while working on the returns desk, pushing and pulling a heavy stack of books in 2013, with a re-injury in December 2014. On the attending physician's report of August 28, 2015, Claimant noted her condition was work related; also she had requested re-opening and wanted to know if it should be written using the 2013 injury date or 2014 re-injury date. The ALJ notes that Dr. Failinger, who signed the form, checked the box to indicate Claimant's condition was the result of an injury.

42. On January 21, 2016 Claimant was evaluated by John Hughes, M.D. at her request. On examination, Dr. Hughes noted tenderness over the right shoulder. He elicited crepitation, particularly with passively assisted flexion. Claimant did not report she was injured on December 22, 2014 to Dr. Hughes. His assessment was 1) right shoulder sprain/strain sustained on July 21, 2013; 2) Progressive right rotator cuff tendinosis with ultimate development of a full-thickness tear at the common tendon as seen on MRI on February 17, 2015.

43. Dr. Hughes indicated that Claimant had an occupational injury of her right shoulder on July 21, 2013. He noted that this was different than the history documented early on in her care, but the history was straightforward and consistent with the likelihood of a documented right upper extremity injury sustained while handling large piles of books. He was of the opinion that these right shoulder problems were more of an occupational injury than occupational disease mechanism. The ALJ credited Dr. Hughes' opinion that Claimant's condition was in the nature of an injury. Dr. Hughes was of the opinion that the fall at home in August of 2014 was not an intervening injury because of follow up medical evaluation by Dr. Rokicki on September 8, 2014 which documented Claimant's ability to move her shoulder "comfortably". This opinion was less persuasive to the ALJ.

44. Dr. Hughes testified as an expert (by deposition) He has practiced occupational medicine since 1984, was board-certified in occupational medicine in 1988, and Level II accredited since the inception of the program on 1992. He was

involved in the development of the Workers' Compensation Medical Treatment Guidelines ("MTG").

45. Dr. Hughes testified that Dr. Sollender and Dr. Lindberg used the Cumulative Trauma Disorder Guidelines for their causation analysis, which were not the correct guidelines for Claimant's condition and were only tangentially helpful in regards to the shoulder.[6] Dr. Hughes opined that overuse was a factor, but that this was an injury.[7] Dr. Hughes testified that it was his opinion that Claimant's condition was more injury rather than overuse related to the activities of her job.[8]

46. On cross-examination, Dr. Hughes agreed Claimant got worse after the fall at home. He agreed that there was no diagnostic evidence of a tear in the rotator cuff until after the fall at home.[9] He testified that this fall could have re-injured the shoulder. However, Dr. Hughes did not believe the fall was an intervening event.

47. On February 23, 2015, Claimant was evaluated by James Lindberg, M.D. at Respondents' request. Claimant had difficulty doing certain activities and experienced pain at night, which affected her sleep. She had decreased motion of her cervical spine, scapula and decreased left rotation. Dr. Lindberg noted Claimant could flex to 90° actively, extend 45°, abduct 80° and adduct 30°. Claimant could touch her elbows together and had external rotation of 75°, with internal rotation of 90°. Claimant had negative AC pain and the impingement test caused zero pain. Dr. Lindberg's impression was that the Claimant had a rotator cuff tear of her shoulder. He felt that the episodes in which she had pain were relatively trivial, including when she was pulling a stack of books toward herself. Dr. Lindberg stated this, in and of itself, was not going to cause a rotator cuff tear. She did not meet any of the criteria for cumulative trauma on based on the evaluation that Mr. Blythe did. Dr. Lindberg noted it was fascinating that she had intact muscle strength and negative supraspinatus test and negative impingement test, which he had not seen with a rotator cuff tear.

48. Dr. Lindberg did not believe she had an acute rotator cuff tear pulling books toward her in on December 22, 2014. He did not specifically address whether there was an acute injury on July 21, 2013. The ALJ finds this lack of analysis does not rule out a specific event occurring on July 21, 2013. Dr. Lindberg noted Claimant did not meet the criteria for any kind of cumulative trauma disorder of the upper extremity

[6] Hughes Depo p. 22: 13-1.

[7] Respondents cite to Dr. Hughes' testimony where he pointed out Claimant was not on an assembly line like Lucille Ball in the classic "I Love Lucy" episode to support their argument that Claimant had an insufficient occupational exposure. However, this does not refute Dr. Hughes' analysis that Claimant suffered an acute injury interposed on top of a preexisting condition.

[8] Hughes Depo. p. 9: 1-5; 2-17

[9] Hughes Depo. p. 50: 5-20.

and did not think for the treatment need to be rendered out of the workers' compensation system.

49. Dr. Lindberg testified as an expert in orthopedic surgery, the specialty in which he is board-certified. Dr. Lindberg also has special expertise in shoulder surgery, having performed thousands of procedures. He is also Level II accredited pursuant to the WCRP.

50. Dr. Lindberg testified that Claimant did not meet the criteria for an occupational disease, based upon the evaluation done by Mr. Blythe. Dr. Lindberg conceded on cross-examination that Mr. Blythe's testing was done to analyze whether a cumulative trauma disorder could result from Claimant's work activities and did not relate to the shoulder. The MTG for cumulative trauma disorders applied to the elbow and below. The ALJ finds the MTG for cumulative trauma do not apply in this case.

51. Dr. Lindberg testified Claimant had an attritional type rotator cuff tear that was a result of the normal aging process. He said there are studies that noted somewhere between 25 to 30% of people over 60 have torn rotator cuffs that are not symptomatic.[10] Dr. Lindberg also did not believe there was a recognized mechanism of injury for rotator cuff which occurred on July 21, 2013 or December 22, 2014. Dr. Lindberg did not believe the mechanism of pulling books toward her would cause a rotator cuff tear, bursitis or tendinitis.[11] He described this as a "low energy" event. The ALJ credited Dr. Lindberg's testimony regarding the cause of the torn rotator cuff. However, the ALJ notes Dr. Lindberg did not rule out the possibility that the underlying condition of Claimant shoulder was aggravated by her work on July 21, 2013. Dr. Lindberg described Claimant's fall at home as a "high energy" event, which could have aggravated her shoulder condition.[12]

52. Dr. Lindberg stated Claimant did not suffer an occupational injury from repetitive use. This was consistent with the MTG. Dr. Lindberg disagreed with Dr. Hughes' analysis on causation. After reviewing Dr. Bisgard's records, Dr. Lindberg opined the act of pulling a stack of books would not cause tendinitis in the shoulder. The ALJ notes that Dr. Lindberg's testimony left open the possibility that Claimant had a rotator cuff tear that responded to Cortisone injections. This became symptomatic later in 2013 when Claimant, while laboring with an increased workload, injured it on July 21st. Dr. Lindberg believed Claimant needed more treatment in the form of manipulation under anesthesia, which would show whether she has a frozen shoulder and to increase her function.

[10] Hrg Tr., p. 70:19-25.

[11] Hrg Tr., p.70:4-15.

[12] Hrg Tr., p.82:21-22.

53. The ALJ concluded Claimant aggravated the preexisting condition of her right shoulder on July 21, 2013 for which she required treatment. This was compensable under the Colorado Workers' Compensation Act.

54. Claimant injured her shoulder and ribs at home on August 30, 2014. This was an aggravation of her shoulder condition.

55. There was insufficient evidence presented to show Claimant suffered a traumatic injury on December 22, 2014. Claimant did not make a timely report of injury. When she did report the injury (or "re-injury") on June 30, 2015, she did not reference the date of December 22, 2014. No explanation was provided to the ALJ for the delay in reporting this incident, particularly since Claimant was aware of the process for reporting an injury and how to request time off under the FMLA. Claimant did not suffer a compensable injury which occurred on December 22, 2014.

56. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57

P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Claimant, as well as the various health care providers, bore directly on the issue of compensability.

Compensability

The legal standard applicable to the compensability issue is found in § 8-41-301(1)(c), C.R.S., which provides as a condition for the recovery of workers' compensation benefits the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of the employment". *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014)

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. ICAO*, 107 P.3d 999, 1001 (Colo. App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury, the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siegfried v. Industrial Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986).

Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). As found, Claimant's right shoulder most probably had degenerative or attritional changes, as testified to by Dr. Lindberg. However, it was the combination of the increased workload and the act of pulling a stack of books on July 21, 2013 that caused the preexisting condition to become symptomatic. (Finding of Fact 53).

A "compensable" injury is one which is disabling and entitles the Claimant to compensation in the form of disability benefits. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). Conversely, no benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury". Id.; § 8-41-301, C.R.S. The question of whether the Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

July 21, 2013

Claimant contends that she sustained a compensable injury on July 2013, which was subsequently re-injured in December 2014. She relied on her testimony as well as the expert testimony of Dr. Hughes to support her claim.

Respondents put forth several arguments as to why the claim was not compensable, starting with the assertion that Claimant's work duties were not sufficient to cause an occupational disease. Respondents relied upon the Job Demands Analysis done by Joe Blythe, as well as the expert testimony of Dr. Lindberg.

The ALJ determined Claimant met her burden of proof and established she sustained an injury proximately caused by the performance of duties arising out of and

in the course of her employment. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). As a starting point, Claimant's testimony first established that her work load increased after lay-offs occurred. This included work activity involving the right arm (and shoulder). Claimant testified that the act of moving a stack of books caused pain in her shoulder. (Finding of Fact 10). The ALJ found Claimant reported this injury in a timely fashion preparing an electronic report of injury on or about July 23, 2013. (Finding of Fact 11).

Moreover, the ALJ credited Dr. Hughes' testimony that this event was more in the nature of an injury as opposed to a cumulative trauma disorder. (Finding of Fact 43). Dr. Bisgard's assessment of a rotator cur injury also supports this conclusion. (Finding of Fact 13). In coming to this conclusion, the ALJ considered Respondents' argument that Claimant to continually referred to her injury as one which came out of repetitive activities at work. There were multiple references in both Claimant's testimony, as well as reports to physicians that her shoulder pain came from both repetitive activities and the increase pace of work. (Findings of Fact 11, 33, and 41). The ALJ did not credit the analysis of Mr. Blythe or Dr. Sollender as the MTG on which they relied did not apply to the shoulder.

On balance, the ALJ determined that the weight of the evidence led to the conclusion that there was a specific injury which occurred on July 21, 2013. The resultant shoulder pain constituted an aggravation of an underlying degenerative condition, as identified by Dr. Lindberg. The evidence in the record let the ALJ to conclude there was an injury and Claimant was entitled to benefits.

Intervening Injury of August 30, 2014

As found, Claimant's fall at home injured her shoulder. The evidence showed Claimant injured her shoulder in the fall. The ALJ was persuaded by Dr. Lindberg's testimony that this was that the fall was a "high energy" event, which could aggravate the underlying condition of Claimant's shoulder. (Finding of Fact 51). Dr. Hughes did not disagree with the characterization of the fall as a higher energy event.

The ALJ also found that opinion, coupled with the fact that Claimant experienced shoulder symptoms following this injury, was significant in the chain of causation and served to cut-off Respondents' liability for the July 21, 2013 injury. (Finding of Fact 54).

December 22, 2014

The ALJ determined Claimant failed to prove she sustained a new injury on December 22, 2014. There are three reasons for this. First, Claimant did not report a traumatic injury to Employer at a time proximal to the injury. (Finding of Fact 32). The ALJ noted Claimant was well versed in the employer's policies and procedures for both reporting claims, as well as seeking time off, including under the FMLA. (Finding of Fact 55). As determined in Finding of Fact 32-33, 55, there was no evidence before the Court to establish that Claimant discussed an injury or even an increase in symptoms close in time to December 22, 2014.

Second, when Claimant was evaluated by Dr. Hughes, she did not report a discrete traumatic event anytime in December 2014. She described her problem as long standing and referred back to the July 2013 timeframe. Claimant also did not tell Dr. Kovachevich she was injured on December 22, 2014. (Finding of Fact 33). The ALJ found this evidence persuasive.

Third, and finally, when Claimant was evaluated by Dr. Hughes, she did not discuss a separate traumatic event in December 2014. Based upon the totality of evidence before the Court, the ALJ concluded Claimant did not prove she suffered a separate injury on December 22, 2014.

Medical Benefits

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In the case at bench, the ALJ determined Claimant suffered a compensable traumatic injury on July 21, 2013. (Finding of Fact 53). Therefore, Respondents are required to provide medical benefits to Claimant for treatment of her right shoulder from July 21, 2013 through August 31, 2014. This includes treatment with Dr. Bisgard and any referrals made by Dr. Bisgard.

However, as found, Claimant treated outside the workers' compensation system, starting in November 2013. (Finding of Fact 22). Claimant chose to treat with her personal physician, Dr. Corr, along with orthopedic surgeon, Dr. Rokicki. Claimant's treatment with these physicians was not authorized. (Finding of Fact 25). Accordingly, since this treatment was not authorized, Respondents are not required to pay for this treatment.

As found the August 30, 2014 fall at home injured Claimant's shoulder. This event severed the chain of causation and terminated Respondents' liability for benefits under the Workers' Compensation Act. Claimant's need for medical treatment was a result of the fall. In addition, the ALJ determined Claimant's increase at symptoms at work in December 2014 was not the cause of her need for treatment and Respondents are not required to pay medical benefits after Claimant's August 30, 2014 fall.

Waiver

Respondents have argued Claimant waived her right to receive worker's compensation benefits in W.C. case number 4-928-974. In this regard, Respondents contended Claimant's email of November 10, 2013 proved she wished to waive her rights. (Finding of Fact 20).

Claimant may waive her rights under the Worker's Compensation Act, including procedural due process rights. To be effective, a waiver must be "voluntarily, knowingly, and intelligently" made. *Walton v. Industrial Commission*, 738 P.2d 66 (Colo. App. 1987) [citing *Columbine Valley Construction Co. v. Board of Directors*, 626 P.2d 686 Colo. 1981]. To find such a waiver, there has to be sufficient evidence that Claimant knew and understood the rights she was relinquishing. *Id*. Such evidence was not present in the case of bench, including evidence that Claimant's waiver was knowing and intelligent.

As found, there was insufficient evidence to show Claimant's waiver was knowing, intelligent and unequivocal. In this regard, in the text of the email, Claimant said she wanted to in "close" her claim. Later on, Claimant sent another e-mail to Employer requesting to reopen her claim, which evinces a belief that she was not dismissing or withdrawing her claim with prejudice, but had the right to "reopen" it. No evidence was presented to the ALJ regarding whether Claimant fully understood her request, nor was it unequivocal. In fact, the evidence Claimant thought she could reopen her claim which runs counter to any argument of waiver. (Finding of Fact 34). As such, the ALJ declined to find Claimant waived her right to receive benefits.

Temporary Total Disability

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that she left work as a result of the disability; and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). § 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*.

The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that Claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Claimant introduced evidence at hearing that she missed time from work in 2013 and had restrictions. However, there were also references to the fact that Employer

accommodated her restrictions. Her hours were also reduced. Claimant also took FMLA leave, although the record was unclear whether this was paid or unpaid. The ALJ concluded Claimant lost time from work as a result of the July 21, 2013 injury. Accordingly, she is entitled to temporary disability benefits, although there was insufficient specific evidence regarding the time periods and whether it would be TTD or TPD benefits.

The parties agreed a general Order for TTD benefits could be issued and they would confer as to the specific periods. Therefore, Claimant is awarded temporary disability benefits from July 21, 2013 through March 9, 2014.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable industrial injury on July 21, 2013.

2. Respondents shall provide medical benefits to Claimant. This includes treatment provided to Claimant by Dr. Bisgard and other health care providers to whom she referred Claimant.

3. Claimant's right to receive medical benefits under the July 21, 2013 claim ended as of August 30, 2014, when she was injured as a result of falling at home.

4. Claimant is entitled to temporary disability benefits from July 21, 2013 through March 9, 2014. Counsel for the parties are ordered to confer regarding what credit, if any, Respondents are entitled to for the salary Claimant received during this period of time. If the parties are unable to reach an agreement, either Claimant or Respondents may file an Application for Hearing on the TTD/TPD issue.

5. Claimant's request for TTD benefits from March 10, 2014 and continuing is denied and dismissed.

6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that bilateral radiofrequency ablations at the L2, L3, L4, and L5 levels as recommended by Dr. Clifford Baker constitute reasonable medical treatment necessary to maintain claimant at maximum medical improvement ("MMI").

FINDINGS OF FACT

1. It is undisputed that claimant suffered an admitted injury to his left sacroiliac ("SI") joint on November 25, 2001.

2. On August 20, 2002, claimant's authorized treating physician ("ATP"), Dr. Randal Jernigan, issued a report in which he placed claimant at MMI as of August 19, 2002 and assigned a permanent impairment rating of 23% whole person.

3. Based upon Dr. Jernigan's report, respondents filed a Final Admission of Liability ("FAL") on August 29, 2002 admitting for the date of MMI and impairment rating. Respondents also admitted for reasonable, necessary, and related maintenance medical treatment "per the 8/20/02 report".

4. On March 22, 2005, Dr. Jernigan noted that in his opinion claimant's maintenance medical treatment should continue for five years post MMI. Dr. Jernigan opined that after five years any continued problems claimant might have would be "more related to arthritic change from [claimant's] usual aging process".

5. On June 12, 2012, claimant returned to Dr. Jernigan and reported that he was doing well and had not had a recurrence of his SI joint pain since "it popped back into place a while back". Thereafter, claimant's SI joint pain returned and he pursued maintenance medical care.

6. On May 23, 2015, respondents sent claimant for an independent medical examination ("IME") with Dr. Michael Rauzzino. Dr. Rauzzino reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the IME. Following the IME, Dr. Rauzzino issued a report in which he opined that claimant's ongoing pain was related to his 2001 left SI joint injury. As a result, Dr. Rauzzino recommended that claimant undergo an SI joint rhizotomy for treatment of that pain. In that same report, Dr. Rauzzino noted that "any additional treatment to [claimant's] lumbar spine related to degenerative disc disease, radiculopathy, or facet arthropathy would be treated outside the scope of workers' compensation".

7. Claimant currently resides in Arizona and is treated by Dr. Clifford Baker with Novaspine Pain Institute. Dr. Clifford has recommended that claimant undergo bilateral radiofrequency ablations (or "rhizotomies") at the L2, L3, L4, and L5 levels. On October 25, 2016, Dr. Clifford requested authorization for these procedures.

8. On November 2, 2016, Dr. Albert Hattem performed a review of claimant's medical records and issued a report in which he opined that the rhizotomies recommended by Dr. Baker would not be related to claimant's 2001 work injury, but rather to age-related degenerative arthritis. Dr. Hattem testified by deposition in this matter and confirmed the opinions contained in his report.

9. On January 24, 2017, Dr. Rauzzino conducted a medical records review related to the radiofrequency ablations recommended by Dr. Clifford. Dr. Rauzzino opined that the recommended radiofrequency ablations would not be reasonable or necessary treatment because the symptoms to be treated are unrelated to claimant's 2001 work injury. Dr. Rauzzino specifically opined that claimant's ongoing low back pain is due to age-related degenerative arthritis and is not related to the 2001 slip-and-fall work injury. Dr. Rauzzino recommended that claimant's maintenance medical treatment should be directed to his left SI joint. Dr. Rauzzino's testimony at hearing was consistent with his 2015 and 2017 reports.

10. Claimant testified at hearing that his current symptoms include back pain that makes it difficult to walk and sit for long periods. Claimant testified that it is his understanding that the recommended ablation procedures from L2 to L5 are intended to address his SI joint pain.

11. At hearing claimant argued that Dr. Rauzzino's current opinions are contrary to the opinion he held at the time of the May 23, 2015 IME report. The ALJ is not persuaded by this assertion. Although Dr. Rauzzino recommended claimant receive treatment in 2015, that treatment was related to claimant's left SI joint. In that 2015 IME report, Dr. Rauzzino clearly indicated his opinion that if pain management "was to extend to any sort of treatment for the facets, stenosis, and/or discs as pain generators or for radicular pain down his legs, this would be done outside the scope of workers' compensation and treatment for these types of symptoms would be unrelated to his original slip-and-fall when he injured the SI joint". The ALJ finds that the position taken by Dr. Rauzzino in 2015 is consistent with his current opinion that the recommended treatment of claimant's lumbar spine is not related to claimant's 2001 injury to his left SI joint.

12. The ALJ credits the medical records and the opinions of Dr. Rauzzino and Dr. Hattem and finds that claimant's current back symptoms are not related to the 2001 work injury. The ALJ also finds that claimant has failed to demonstrate that it is more likely than not that the recommended radiofrequency ablations at the L2, L3, L4, and L5 levels constitute reasonable medical treatment necessary to maintain claimant at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2001). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2001).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

4. As found, claimant has failed to demonstrate by a preponderance of the evidence that the need for bilateral radiofrequency ablations at the L2, L3, L4, and L5 levels is un related to claimant's 2001 work injury. As found, the opinions of Drs. Rauzzino and Hattem are credible and persuasive on this issue.

5. As found, claimant has failed to demonstrate by a preponderance of the evidence that the recommended bilateral radiofrequency ablations at the L2, L3, L4, and L5 levels is reasonable medical treatment necessary to maintain claimant at MMI. As found, the opinions of Drs. Rauzzino and Hattem are credible and persuasive on this issue.

ORDER

It is therefore ordered that:

1. Respondents are not responsible for payment of the recommended bilateral radiofrequency ablations at the L2, L3, L4, and L5 levels because this treatment is unrelated to claimant's 2001 SI joint injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Grand Junction, CO 81501

ISSUES

I. Whether Respondents have produced clear and convincing evidence to overcome the permanent impairment rating assigned by the DIME physician, Brian Shea, D.O.

FINDINGS OF FACT

1. Claimant worked for Employer as a Certified Nursing Assistant. Claimant sustained an admitted industrial injury on August 25, 2015 while holding a 300-400 pound patient in an attempt to prevent the patient from rolling off of a bed.

2. Matt Slaton, P.A.-C., evaluated Claimant on August 27, 2015. Claimant complained of bilateral upper arm trapezius and neck pain. PA-C Slaton noted normal range of motion, muscle strength and tone. PA-C Slaton assessed bilateral tenderness, trapezius strain, biceps strain and triceps strain.

3. Rammohan Naidu, P.A.-C, evaluated Claimant on September 2, 2015. Claimant reported pain in her left low back, upper trapezius, and right arm. PA-C Naidu assessed biceps strain, trapezius strain and triceps strain.

4. Catherine Peterson, P.A., evaluated Claimant on September 9, 2016. Claimant presented with a right arm injury. Claimant reported upper posterior shoulder pain and low back pain. PA Peterson noted that Claimant "does not feel back pain has been adequately addressed," and remarked that there were no radicular symptoms of the low back. PA Peterson found tenderness in the rhomboid and trapezius muscle, limited range of motion in all planes, normal shoulder strength bilaterally, and normal tone. With respect to the lumbosacral spine, PA Peterson noted "tenderness at level L5 lumbar spine, left paraspinal and right paraspinal, but not the right sciatic notch and not the left sciatic notch." PA Peterson also noted muscle tightness to paraspinal bilateral and remarked "AROM of 30 degrees and painful." The Waddell test was positive. PA Peterson assessed low back pain, biceps strain, trapezius strain, and triceps strain. PA Peterson ordered an X-ray of Claimant's spine.

5. John D. McArthur, M.D., reviewed the September 9, 2015 X-ray. Regarding Claimant's lumbar spine, Dr. McArthur found that the vertebral body alignment was normal and the vertebral body heights and intervertebral disc spaces were maintained. Dr. McArthur noted that there were no spondylitic changes observed, and that the paravertebral soft tissue was unremarkable. Dr. McArthur impressed "unremarkable lumbar spine. No evidence of acute injury or significant degenerative change."

6. Marie Mueller, N.P., evaluated Claimant on September 14, 2015. Claimant presented with back pain, as well as numbness and tingling in her right upper extremity. Claimant reported pain located in her upper back on the right and in her low back bilaterally. NP Mueller noted tenderness to Claimant's right trapezius muscle, but not the left trapezius muscle, left paraspinal or right paraspinal. NP Mueller also noted no bilateral muscle spasms, or right or left-sided muscle spasms. NP Mueller further noted limited range of motion due to pain in all fields. NP Mueller documented that Claimant had very limited range of motion to lumbar spine. NP Mueller remarked "when she was left in the room waiting as PT was consulted, was sitting without obvious distress, and stood without difficulty." NP Mueller assessed trapezius strain, low back pain, biceps strain and triceps strain.

7. PA-C Naidu reexamined Claimant on September 18, 2015. Claimant again presented with pain to her upper right back and lower back, as well as numbness and tingling to her right upper extremity. PA-C Naidu documented the same findings and same assessment as Claimant's September 14, 2015 evaluation.

8. Christa Dobbs, P.A.-C., evaluated Claimant on September 25, 2015. Claimant reported continuing neck, right arm and left lower back pain. PA-C Dobbs noted limited range of motion in all planes, limited to approximately 90 degrees. Regarding the lumbosacral spine, PA-C Dobbs noted tenderness at level L3-5 left paraspinal, right-sided muscle spasms, and decreased in all ranges to about 20 degrees. PA-C Dobbs assessed low back pain and trapezius strain.

9. Lloyd Thurston, M.D., evaluated Claimant on October 2, 2015. Dr. Thurston commented that Claimant was "limited by pain avoidance behavior" and had "severe pain avoidant behavior." Dr. Thurston remarked, "I reviewed the mechanism of injury and am comfortable this is muscular." Dr. Thurston noted limited range of motion in all planes, documenting the following: "Forward flexion: AROM 60 degrees and PROM 120 degrees. Abduction AROM 60 degrees and PROM 130 degrees. Internal rotation: AROM 40 degrees and PROM 60 degrees. External rotation: AROM 40 degrees and PROM 60 degrees." Dr. Thurston assessed trapezius strain and thoracic myofascial strain.

10. NP Mueller reevaluated Claimant on October 12, 2015. Claimant reported continuing pain to her right upper extremity and low back pain. NP Mueller assessed trapezius strain, thoracic myofascial strain and low back pain.

11. John J. Aschberger, M.D., evaluated Claimant on October 15, 2015. Claimant reported pain at the right trapezius area and right upper back, along with pain at the mid lumbar levels across the low back. Dr. Aschberger noted Claimant was "very hesitant for active range of motion at the shoulder." Impingement testing at the shoulder was negative. Dr. Aschberger assessed right upper quarter myofascial pain, trigger points and myofascial irritation at the infraspinatus and trapezius, rib dysfunction and restriction, brachial plexus neuropathy, and doubt cervical radiculopathy. Dr. Aschberger remarked that Claimant "had a lot of problems with pain management." Dr. Aschberger diagnosed Claimant with a lumbar strain of the low back, commenting, "She

does have low back symptomatology. On examination, she is tight and tender at the mid lumbar paraspinal musculature. I note no significant dysfunction or misalignment in the spine. The pelvis is level. Straight leg raising is tight at 60 degrees with hamstring tightness and pain in the back without radicular symptoms. Further workup does not appear necessary at this point, but that warrants continued monitoring."

12. Dr. Thurston reevaluated Claimant on October 22, 2015. Dr. Thurston documented that Claimant was asking for treatment of the low back and remarked, "I looked back at the initial visit with Matt Slaton and I don't see mention of low back injury so I am not treating that." Dr. Thurston noted tenderness to Claimant's lateral shoulder and normal palpation. Dr. Thurston deferred range of motion tests, noting Claimant had "extensive pain behavior with muscle tenderness." Dr. Thurston assessed thoracic myofascial strain, trapezius strain, and rhomboid muscle strain.

13. Claimant returned to Dr. Aschberger for an evaluation on October 29, 2015. Dr. Aschberger noted that when he questioned Claimant regarding her low back, Claimant "says no", but then reported low back irritation with prolonged standing. Dr. Aschberger noted mild pain with extension and muscular irritation, with no radicular component. Dr. Aschberger commented, "I recommend monitoring for now, and I will need to review the records regarding relatedness. Dr. Thurston did not note any issues of low back pain mentioned in the early records." Dr. Aschberger again mentioned Claimant's pain behaviors. Dr. Aschberger assessed right upper quarter myofascial pain, improved trigger points and rib dysfunction, and less indication of brachial plexus irritation.

14. Claimant returned to NP Mueller for an evaluation on November 9, 2015. NP Mueller assessed triceps strain, trapezius strain, thoracic myofascial strain, rhomboid muscle strain and low back pain.

15. Dr. Aschberger reevaluated Claimant on November 23, 2015. Dr. Aschberger assessed right upper quarter myofascial pain, radiated symptomatology into the upper extremity of uncertain etiology, rib dysfunction, pain management issues, and exaggerated pain behaviors.

16. Dr. Thurston reevaluated Claimant on November 30, 2015 and assessed rhomboid muscle strain, thoracic myofascial strain and trapezius strain.

17. John Burris, M.D., evaluated Claimant on December 31, 2015. Dr. Burris noted that X-rays of Claimant's neck and low back were normal and that there was full range of motion on all planes. Dr. Burris remarked that Claimant was "very somatically focused with significant pain behaviors." Dr. Burris found "no objective findings on her examination other than pain to palpation diffusely without localization." Dr. Burris diagnosed myofascial pain.

18. Dr. Thurston reevaluated Claimant on January 7, 2016. Dr. Thurston again assessed biceps strain, low back pain, rhomboid muscle strain, thoracic myofascial strain, trapezius strain, and triceps strain.

19. Dr. Aschberger reevaluated Claimant on January 25, 2016. Dr. Aschberger remarked that his prior exam of Claimant was complicated by "exaggerated pain behaviors," and that Claimant continued to show "marked pain behaviors." Dr. Aschberger assessed right upper quarter myofascial pain and some radiated symptomatology. Dr. Aschberger noted that electromyographic testing involving biceps and brachioradialis was attempted, but Claimant had poor tolerance to needle assessment and requested termination of the testing.

20. Joel Cohen, Ph.D., conducted psychological evaluation of Claimant on January 29, 2016, June 3, 2016, June 14, 2016 and September 6, 2016. Dr. Cohen opined that Claimant's issues could be more emotional than physiological. Dr. Cohen noted, "I suspect that the extent of pain complaint and overall pain behavior goes well beyond what can be explained from a pathophysiological perspective" and noted that there was "a substantial level of somatoform overlay."

21. Dr. Burris evaluated Claimant on February 11, 2016. Dr. Burris remarked the Claimant remained "very somatically focused" noting, "pain behaviors obscure today's examination." Dr. Burris noted full range of motion in all planes with no localized tenderness. Dr. Burris again diagnosed myofascial pain, commenting that "the patient continues to have no objective findings with extreme pain behaviors present." Dr. Burris placed Claimant at MMI as of February 11, 2016 with a 0% permanent impairment rating. Dr. Burris stated, "At this point, I really have nothing further to offer this patient. Given the level of somatization, I believe she needs to be placed at maximum medical improvement, and further followup and/or treatment can be provided through the maintenance process." Dr. Burris opined that there was "no objective basis for impairment or permanent work restrictions."

22. Claimant returned to Dr. Aschberger for an evaluation on February 18, 2016. Dr. Aschberger noted breakaway weakness and diffuse tenderness on palpation of the upper quarter. Dr. Aschberger noted, "objective examination is difficult due to her marked pain behaviors." Dr. Aschberger assessed right upper quarter pain and some reported radiated symptomatology.

23. Dr. Aschberger reevaluated Claimant on March 7, 2016. Dr. Aschberger documented marked pain behaviors, and noted shoulder abduction and flexion were restricted to 90 degrees. Dr. Aschberger assessed upper quarter pain and radiated symptoms.

24. Respondents filed a Final Admission of Liability ("FAL") on March 7, 2016. The FAL acknowledged Claimant reached MMI as of February 11, 2016, with a 0% permanent impairment rating.

25. Dr. Aschberger reevaluated Claimant on March 31, 2016. Dr. Aschberger noted marked restriction in shoulder range of motion, tenderness in low back, and that Claimant's range of motion was "significantly restricted." Dr. Aschberger assessed right upper quarter pain and radiated symptoms, remarking that the "findings are

predominantly myofascial." Dr. Aschberger remarked, "objectification is difficult, due to her marked pain behaviors."

26. Claimant returned to Dr. Aschberger for a follow-up evaluation on April 19, 2016. Dr. Aschberger noted that Claimant had sustained a new injury with a fracture to her left forearm. Regarding an MRI scan of the right shoulder, Dr. Aschberger noted that there were "findings of mild bursal irregularity with some findings consistent with impingement, but no rotator cuff tear identified." Dr. Aschberger assessed right upper quarter myofascial pain, shoulder pain, left cervical disc protrusions, fracture at the left forearm, significant pain behaviors; and pain management.

27. Dr. Aschberger reevaluated Claimant on June 6, 2016. Dr. Aschberger noted improvement in range of motion and pain behaviors. Dr. Aschberger assessed right upper quarter myofascial pain, shoulder pain, cervical disc protrusion, unrelated forearm fracture, pain behaviors and pain management. Regarding the shoulder, Dr. Aschberger noted Claimant had "some indications of bursitis with the MRI scan and with the exam."

28. Dr. Aschberger reevaluated Claimant on June 27, 2016. Claimant reported pain in her shoulders, low back, forearm, and right leg. Dr. Aschberger again assessed right upper quarter myofascial pain, shoulder pain, cervical disc protrusion, unrelated left forearm fracture, marked pain behaviors, and pain management.

29. Brian T. Shea, D.O., conducted a Division Independent Medical Examination ("DIME") of Claimant on July 18, 2016. Dr. Shea conducted a medical record review and a physical examination of Claimant. Dr. Shea noted that an April 19, 2016 medical record referred to a right shoulder and cervical MRI for which Dr. Shea did not have radiology reports. Dr. Shea noted, however, that he did request and receive radiology IME reports of Claimant's cervical spine and right shoulder. Dr. Shea noted that the MRI of the right shoulder showed mild internal impingement with no tear. Dr. Shea noted he evaluated the lumbar/low back per request of the attorney's office.

30. Dr. Shea's physical examination findings were as follows:

> Neurologically deep tendon reflexes are bilaterally symmetrical in the upper and lower extremities. There are no gross signs of muscle atrophy, motor or sensory deficits. There are no gross thoracic outlet signs or symptoms. Ranges of motion in the right shoulder have 160°of flexion, 40° of extension, 35°of adduction, 130° of abduction, 65° of internal rotation, and 85° of external rotation. Lumber range of motion has 45° of flexion, 23° of extension, 45° of right straight leg raise, 50° of left straight leg raise, 23° of right lateral flexion, and 20° of left lateral flexion. Palpation of upper back, lower neck, and lumbar sacral paraspinal musculatures are all tender to palpation.

31. Dr. Shea assessed lower cervical, thoracic and lumbar sacral myofascial pain syndromes; cervical degenerative disk disease and herniations at C4-5 and C5-6,

as well as reversal of the cervical spine at C5-6; mild right shoulder impingement syndrome; mild lumbar strain; exaggerated pain mannerisms; and adjustment disorder with mixed anxiety and depressed mood. Dr. Shea opined that the assessments regarding Claimant's cervical spine were not related to Claimant's industrial injury. Dr. Shea did not discuss the relatedness of his other assessments.

32. Referring to the American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition, Revised (the "AMA Guides"), Dr. Shea assigned Claimant a 5% lumbar range of motion impairment, combined with a Specific Disorders Table 53(II)(B) impairment of 5%, totaling a final lumbar whole person impairment of 10%. Dr. Shea also assigned Claimant a 5% right upper extremity rating, converted to a 3% whole person impairment. Dr. Shea combined the impairment ratings for a final combined unapportioned 13% whole person impairment rating. Dr. Shea found Claimant reached MMI as of February 11, 2016. Dr. Shea did not discuss the difference in his findings and opinion versus the findings and opinions of the other physicians who examined Claimant.

33. Dr. Shea recommended maintenance therapy including 3-5 sessions with Dr. Cohen, pool therapy, and one shoulder subacrominal injection by Dr. Aschberger.

34. Claimant attended a follow-up evaluation with Dr. Aschberger on September 6, 2016. Dr. Aschberger noted that an MRI scan of Claimant's shoulder showed mild bursal irregularity and some findings consistent with impingement. Dr. Aschberger noted there were no obvious rotator cuff tears. Dr. Aschberger again referenced Claimant's pain behaviors. On physical examination, Dr. Aschberger noted limited active range of motion at Claimant's right shoulder. Dr. Aschberger assessed right upper quarter myofascial pain and restrictions in shoulder range of motion with shoulder pain. Referencing the AMA Guides, Dr. Aschberger stated, "At present, as there are findings of impingement and she is not demonstrating significant restrictions with the uninvolved left upper extremity, I recommend assigning impairment based on her limitations in range of motion at the right shoulder." Dr. Aschberger recommended a 12% impairment of the upper extremity per the AMA Guides. Dr. Aschberger further noted, "objectification is difficult due to her marked pain behaviors."

35. Dr. Thurston reexamined Claimant on September 20, 2016. Claimant presented with a back injury. Dr. Thurston noted muscle pain, back pain, muscle weakness and night pain. Dr. Thurston assessed rhomboid muscle strain. Dr. Thurston released Claimant to return to full work/activity with no medical maintenance permanent restrictions.

36. On November 10, 2016, Allison M. Fall, M.D., conducted an Independent Medical Examination ("IME") at the request of Respondents. Dr. Fall conducted a review of Claimant's medical records and performed a physical examination. Dr. Fall noted that there was superficial tenderness to palpitation and that Claimant's range of motion was unrestricted, "although with complaints of pain." Dr. Fall noted that Claimant was "extremely guarded with right shoulder range of motion both passively and actively. While she was lying on her back, I was able to passively move her

shoulder to 90 degree of flexion and abduction, although she guarded against that as well." Dr. Fall found no localized finding in the lumbar spine and noted that diagnostic testing had not revealed "a significant abnormality correlating with her symptoms."

37. Dr. Fall opined that, within a reasonable degree of medical probability, Claimant's "ongoing symptomatology and pain complaints are related to an underlying or psychological issue with somatization." Dr. Fall noted that there was not an initial complaint of a lumbar strain. Dr. Fall opined that the documentation did not "support a causal relationship between the low back pain complaints, which are without objective findings, and the initial injury." Dr. Fall assessed initial right upper quadrant pain without residual objective findings and psychological overlay with somatization and secondary gain.

38. Dr. Fall further opined that Dr. Shea erred in assessing a lumbar spine injury, assigning a Table 53 diagnosis, and assigning an impairment rating for the shoulder. Dr. Fall contended Dr. Shea's physical examination did not support a Table 53 diagnosis for the lumbar spine. Dr. Fall also concluded that Dr. Shea based the shoulder impairment rating on Claimant's self-limiting behaviors and not objective findings. Dr. Fall commented that Dr. Shea "noted the nonphysiologic findings and the pain behaviors which would indicate that the right shoulder range of motion he measured was not her true functional range of motion." Dr. Fall opined that the initial strain resolved without sequelae, and that Claimant's continuing issues were somatization.

39. Dr. Fall testified on behalf of Respondents at hearing as an expert in physical medicine and rehabilitation. Dr. Fall is board certified in physical medicine and rehabilitation and is Level II accredited pursuant to the WCRP.

40. Dr. Fall testified consistent with her IME report. Dr. Fall purported that there was no objective physical evidence of a low back injury in the medical records. Dr. Fall indicated findings of tenderness were subjective, and that lmited range of motion did not establish that there was a low back injury. Dr. Fall testified that myofascial pain was generally not a permanent impairment, due to being more temporary in nature. Dr. Fall stated that the multiple references to pain behaviors and somatization throughout Claimant's medical records signaled a behavioral or psychological issue, not objective pathology.

41. Dr. Fall testified that Dr. Aschberger's recommended 12% upper extremity rating was invalidated by his own statement regarding objectification being difficult. Dr. Fall indicated that such statement indicated the rating was not based on true range of motion findings. Dr. Fall stated that MMI should be determined at the time of MMI, not seven months later, as in the Claimant's case.

42. Dr. Fall further testified that Dr. Shea's findings of a limited lumbar range of motion did not justify a permanent impairment rating because range of motion does not determine causation. Dr. Fall stated that Dr. Shea's DIME report did not indicate that his physical exam included any tests or maneuvers to determine shoulder

impingement, nor did Dr. Shea evaluate the contralateral side, as suggested by the Division of Workers' Compensation Impairment Rating Tip Sheet. Dr. Fall testified that Dr. Shea erred by failing to state a Table 53(II)(B) diagnosis, failing to provide a causation analysis, and failing to address the difference in his assessment and opinion and those of the other physicians, as suggested by the AMA Guides.

43. On cross-examination, Dr. Fall testified that myofascial pain, which includes a muscle strain, can be a diagnosis but should not be separately rated under the AMA Guides. Dr. Fall acknowledged that a lumbar strain is a specific pathology.

44. Dr. Aschberger testified by deposition as an expert in physical medicine and rehabilitation. Dr. Aschberger is board certified in physical medicine and rehabilitation and is Level II accredited pursuant to the WCRP.

45. Dr. Aschberger defined secondary gain as "a reward system for continued pain behaviors." Dr. Aschberger indicated Claimant's issues with secondary gain and pain behaviors made it difficult to make an objective assessment, stating, "I can't say that there is not an underlying problem and there is nothing wrong, particularly with the shoulder area, but the severity is difficult to determine based on the physical examination because the physical examination is very guarded and the subjective input I think is not reliable." Dr. Aschberger testified that, when he referred to "breakaway" in his medical notes, he felt that the patient possessed the underlying strength and was giving up. Dr. Aschberger testified that "breakaway" might make it difficult to ascertain "what the true strength is." Dr. Aschberger stated that tenderness is subjective.

46. Dr. Aschberger further stated that his own 12% upper extremity impairment rating was based on Claimant's presentation and active range of motion that day, and that the rating was generous based on Claimant's pain behaviors. With respect to the impairment rating, Dr. Aschberger stated "One option would be to throw it out completely and just say she is too inconsistent to make that determination."

47. Dr. Aschberger testified that there was no objective evidence in his review of Dr. Burris' February 11, 2016 report suggesting Claimant sustained a permanent impairment based on Claimant's industrial injury. When asked about the results of the MRI he ordered, Dr. Aschberger stated the MRI findings were "underwhelming," yet also stated the findings showed tendinosis and "some findings consistent with impingement." Dr. Aschberger further stated there was not a significant tear and there were was no evidence of inflamed tendons.

48. Regarding Claimant's lumbar spine, Dr. Aschberger first testified that he never evaluated or diagnosed Claimant with a lumbar spine condition. Dr. Aschberger subsequently acknowledged in his testimony that he diagnosed Claimant with a lumbar strain of the low back in his October 15, 2015 evaluation.

49. Dr. Aschberger opined that Dr. Shea erred by assigning a permanent impairment rating for the low back and finding Claimant at MMI prior to Claimant undergoing rehabilitation directed at the low back.

50. Regarding the impairment rating of the lumbar spine, the ALJ credits the medical records and opinions of Dr. Fall and Dr. Aschberger over the conflicting opinion of Dr. Shea. There is no objective evidence of a rateable low back injury.

51. The ALJ finds that Respondents have overcome the DIME physician's opinion regarding Claimant's permanent medical impairment rating by clear and convincing evidence.

52. Regarding the impairment rating of the shoulder, the ALJ credits the medical records and opinion of Dr. Shea over the conflicting opinions of Dr. Fall and Dr. Aschberger. Claimant established by a preponderance of the evidence that she sustained a permanent medical impairment to her shoulder.

53. Based on a preponderance of the evidence, Claimant's permanent impairment rating is a 5% scheduled upper extremity impairment.

54. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is

subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Physician's Opinion

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; Section 8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing that it is highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Section 8-42-107(8)(c), C.R.S. provides, "For purposes of determining levels of medical impairment, the physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings."

Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence, present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo.

App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000). As found in the case at bench, Respondents overcame the DIME physician's opinion on permanent medical impairment.

Back Impairment Rating

Respondents contend that Dr. Shea erred in assigning an impairment rating for Claimant's low back. Respondents contend that Dr. Shea did not determine a specific diagnosis under Table 53(II)(B), and that there is no objective evidence of anatomic or physiologic correlation with Claimant's subjective complaints of pain.

Table 53(II)(B) provides for impairments for unoperated intervertebral disc or other soft tissue lesions with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm associated with none to minimal degenerative changes on structural tests.

Based on the evidence presented at the hearing and contained in the record, it is determined that it is highly probable Dr. Shea's permanent impairment rating for Claimant's low back is incorrect. The ALJ credits Dr. Fall and Dr. Aschberger's opinions that there is no objective evidence of a lumbar strain. There is no indication in the records that an MRI of Claimant's lumbar spine was obtained. The X-rays of Claimant's lumbar spine showed no acute injury. Dr. Fall and Dr. Aschberger credibly testified that findings of tenderness and pain are subjective. Dr. Fall and Dr. Aschberger credibly testified that Claimant's pain mannerisms made objectification difficult. Claimant's pain mannerisms were well-documented throughout the medical records, including Dr. Shea's assessment of Claimant.

Dr. Shea based his diagnosis of a mild lumbar strain on range of motion findings, the objectivity of which was credibly called into question by Dr. Fall. Dr. Fall and persuasively demonstrated that Claimant did not have a rateable impairment of the low back due to the absence of objective pathology. Furthermore, the ALJ credits Dr. Fall's testimony finds that Dr. Shea erred in failing to include a causation analysis in his report, and failing to address the differences in his opinion and the opinions of the other physicians.

As Respondents overcame Dr. Shea's impairment rating for the low back, the ALJ is charged with calculating Claimant's impairment rating based on the preponderance of the evidence. As found, there is no objective evidence of a rateable low back injury. Dr. Fall and Dr. Aschberger credibly testified myofascial pain is not ratable pursuant to the AMA Guides. Dr. Burris and Dr. Fall assigned a zero percent impairment rating for the low back. Since there is no objective evidence of anatomic or physiologic correlation with Claimant's subjective complaints of pain regarding the low back, the correct impairment rating for the Claimant's low back is zero.

Once the ALJ determines that the DIME's rating has been overcome, the claimant's correct medical impairment then becomes a question of fact and the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *See Garlets v. Memorial Hosp.*, W.C. No. 4-336-566 (I.C.A.O. Sept. 5, 2001). "The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols." *Deleon v. Whole Foods Market, Inc.*, W.C. No. 4-600-477 (I.C.A.O. Nov. 16, 2006). Once overcame, Claimant has the burden of proof to establish an entitlement to permanent partial disability benefits by a preponderance of the evidence.

Shoulder Impairment Rating

Respondents contend Dr. Shea erred in assigning an impairment rating for Claimant's shoulder. Respondents contend that Claimant's pain mannerisms made it difficult to make an objective assessment upon which to assign a permanent impairment rating.

Claimant proved by a preponderance of the evidence that the medical impairment rating of 5% right upper extremity by Dr. Shea was correct. The ALJ credits the opinion of Dr. Shea, which not only includes limited range of motion findings, but also specifically refers to MRI findings of impingement. Dr. Shea's assessment is supported by Dr. Aschberger's testimony and medical notes referring to findings of impingement. To the extent the limited range of motion measurements were affected by Claimant's pain mannerisms, objective evidence supporting a diagnosis of impingement exists in the medical records. The opinions of Dr. Fall and Dr. Aschberger to the contrary did not persuade the ALJ.

ORDER

It is therefore ordered that:

1. Respondents overcame the DIME physician's impairment rating by clear and convincing evidence. Claimant established she sustained a permanent medical impairment. Based on the preponderance of the evidence, Claimant is assigned a 5% right upper extremity rating.

2. Insurer shall pay Claimant permanent partial disability benefits based on a 5% scheduled upper extremity impairment.

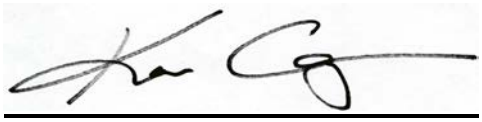
3. Insurer shall pay Claimant interest at a rate of 8% per annum on all compensation benefits not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 31, 2017



Administrative Law Judge Kara R. Cayce
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on January 21, 2016.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to a general award of reasonable and necessary medical benefits.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits from January 21, 2016 and ongoing.

4. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant is 60 years old and is employed by Employer as a Mine Water Technician and works at Employer's Climax mine location.

2. Claimant's scheduled shifts were approximately 12 hours in length beginning at either 6:00 p.m. or 6:00 a.m. Claimant's regular schedule would include working three 12 hour shifts one week for 36 hours/week, then working four 12 hour shifts the next week for 48 hours/week. From July of 2015 through January of 2016 Claimant was off work for non-work related bilateral total knee replacements. Claimant returned to work on January 18, 2016.

3. On January 21, 2016 Claimant was so employed. Claimant had worked from 6:00 p.m. on January 20, 2016 until 6:00 a.m. on January 21, 2016. At approximately 5:45 a.m. Claimant's co-worker Aaron Davis arrived in the control room where Claimant works to take over the job. Mr. Davis is also a Mine Water Technician. Claimant and Mr. Davis discussed what had happened during Claimant's shift and discussed operations. Claimant was easily able to recall information and numbers from his shift and he reminded Mr. Davis of when upcoming samples would need to be taken.

4. After speaking with Mr. Davis, Claimant gathered his coat, lunchbox, and metal paperwork clipboard/box and left. Claimant had a hard hat that he was wearing. Claimant was planning on heading down the stairs to the locker room to put some of his belongings in a locker, to clock out, and to leave for the day.

5. The control room where Claimant works is up several flights of stairs. Shortly after Claimant left the control room, Mr. Davis heard a thud and the tinging sound of Claimant's metal paperwork clipboard/box that sounded like a tin can bouncing

down the stairs. Mr. Davis was in the control room at the computer and he stood up and ran out of the office. Mr. Davis observed Claimant piled up in the corner of the first landing from the top of the staircase. Mr. Davis ran to the telephone to call security and to call a "may day." Mr. Davis told security that Claimant had fallen down the stairs and that they needed an ambulance. Mr. Davis then ran down the stairs to get to Claimant.

6. Mr. Davis did not witness what happened to Claimant. Mr. Davis acknowledged in his testimony that he does not know if Claimant fell down the stairs or if Claimant fell while on the first landing. Mr. Davis, however, believes Claimant did not fall down the stairs, but had an issue on the first landing and fell over against the wall slumping into the corner based on how he found Claimant on the landing and the location of Claimant's scattered paperwork.

7. Mr. Davis found Claimant slumped against the wall on the first landing of the stairs. Claimant's hard hat was either still on his head or close nearby. Claimant's metal paperwork clipboard/box was on the second landing and papers from inside the box were scattered down the next set of stairs between the first landing where Claimant was located and the second landing.

8. The first set of stairs leaving the control room stretch approximately 10 to 12 feet before there is a landing. After the first landing, there is a second steps of sets that stretch approximately 10 to 12 feet in length before there is a second landing.

9. When Mr. Davis got to Claimant, Claimant was convulsing and having trouble breathing. Mr. Davis rolled Claimant onto his side and stretched him out. Claimant was unresponsive. Claimant's breathing then started getting better, he stopped convulsing, and he started drooling. Claimant's eyes rolled back in his head and his eyelids shut and he started snoring as if he had gone to sleep. Mr. Davis believed that Claimant was having a seizure. Mr. Davis' younger brother has seizures and although Mr. Davis has no formal training to diagnose seizure, he believed that was what was going on with Claimant.

10. The response from emergency personnel and the mine security happened quickly. As the first person opened the door, Claimant opened his eyes and was confused as to where he was and what had happened. Claimant tried to stand up and Mr. Davis along with the first responders kept him where he was.

11. Mr. Davis picked up Claimant's scattered paperwork so that it would not be in the way for emergency personnel and the ambulance arrived shortly thereafter.

12. Summit County Ambulance Service arrived at approximately 6:12 a.m. Their notes indicate on assessment that Claimant's face, neck, chest, and spine were unremarkable. They also noted that on arrival Claimant was mildly postictal with no recollection of the event and that Claimant denied pain, dizziness, blurred vision, nausea, headache, or chest pain/discomfort. Claimant's pulse oxygen registered as 79 on room air. Claimant was placed on oxygen to get his oxygen level higher. Notes

indicate that they had been dispatched to a seizure and on arrival found Claimant sitting on the ground in an upright position. Notes also indicate that EMS personnel were advised that Claimant was walking down the stairs at work when co-workers heard a clamor and that when they checked on the noise, they found Claimant seizing on the stairs. Co-workers did not know how many stairs Claimant fell down, if any, but reported that Claimant came out of his seizure quickly after they found him. Claimant was transported to St. Anthony Summit Medical Center's Emergency Department in Frisco, Colorado. *See* Exhibits 12, G.

13. Claimant was evaluated by Marc Doucette, M.D. Dr. Doucette noted that Claimant had a witnessed seizure and fell to the ground with no significant trauma. Dr. Doucette noted no evidence of tongue biting or urinary incontinence. Claimant reported that he did not recall the incident and denied significant alcohol intake and reported that he drinks one or two drinks per night. Claimant reported no previous seizures and that he had been told that he had low oxygen in the past. Dr. Doucette noted that Claimant was at about 75% pulse oximetery on room air and 85-90% on 2 liters of oxygen. Dr. Doucette noted differential diagnoses were considered for a seizure including but not limited to electrolyte abnormality, alcohol withdrawal, medication related, head injury, altitude, hypoxia, and hypoglycemia. *See* Exhibit 13

14. Dr. Doucette noted that at the hospital Claimant had another grand mal seizure lasting about 2 minutes with full clonic tonic activity and tongue biting. Dr. Doucette noted a 15 minute postictal state and that Claimant required some basic airway management including an oral airway. Dr. Doucette opined that he was not sure as to the cause of Claimant's seizures. Dr. Doucette noted that the hypoxia was corrected yet Claimant still had a seizure and opined that Claimant required hospital admission and preferably a transfer to Denver where he could be evaluated by neurology and the pulmonary physicians regarding significant hypoxia, pulmonary embolism, probable pulmonary hypertension, polycythemia thrombocytopenia, and sleep apnea. *See* Exhibit 13.

15. Dr. Doucette indicated that radiology studies showed that Claimant's head CT was negative intracranially but that Claimant had a small right scalp hematoma, that the CT of the chest showed a small right lower lobe pulmonary emboli with low clot burden, and that the ultrasound of the left lower extremity showed deep vein thrombosis involving popliteal and calf veins. *See* Exhibit 13.

16. At 12:40 p.m. Summit County Ambulance Service contacted Claimant again to transport him from St. Anthony Summit Medical Center to St. Anthony Hospital. They noted that Claimant had two seizures and had been diagnosed with deep vein thrombosis in the left leg and pulmonary embolism and that the facility did not have medical specialist/services available, necessitating the transport. *See* Exhibits 23, G.

17. Claimant was evaluated at St. Anthony Hospital by Andrew Levy, M.D. Claimant reported that he had been feeling well until the morning when he was leaving his night shift at the mine and was walking down the stairs and had a witnessed seizure

lasting a few minutes. Claimant reported not remembering anything between walking down the stairs and waking up in the ambulance. Claimant denied any history of alcohol withdrawal or withdrawal seizure. Dr. Levy noted that Claimant had bilateral total knee arthroplasties with the left knee replaced on October 15, 2015 and intermittent swelling beneath the left knee since. Claimant needed 4 liters of oxygen at the hospital. Dr. Levy noted that Claimant had a new onset of seizure x2 and was also found to have deep vein thrombosis, pulmonary embolism, and polycythemia and thrombocytopenia. Dr. Levy assessed seizure and noted differential diagnoses including alcohol withdrawal seizure, new onset seizure from CNS lesion vs. seizure 2/2 stasis and ischemia form polycythemia. Dr. Levy noted that a brain MRI would be obtained to rule out lesion, if negative an EEG would be obtained to see if a source could be location, and he referred Claimant to neurology. *See* Exhibit H.

18. On January 21, 2016 Claimant underwent a CT scan of his head interpreted by Benjamin Aronovitz, M.D. Dr. Aronovitz provided the impression of small lateral right front scalp hematoma without acute intracranial process. *See* Exhibit 15.

19. On January 21, 2016 Claimant underwent an MRI of the brain with and without contrast that was interpreted by Craig Stewart, M.D. Dr. Stewart provided an impression of moderate nonspecific supratentorial white matter signal abnormalities, most commonly seen in the setting of chronic small vessel ischemia. Dr. Stewart found no evidence of intracranial mass, mass effect, or abnormal intracranial enhancement. *See* Exhibit 14.

20. On January 21, 2016 Claimant underwent a CTA of his chest to evaluate the pulmonary embolism that was interpreted by William Berger, M.D. Dr. Berger provided the impression of: right lower lobe pulmonary emboli with relatively minor clot burden; mild cardiomegaly; and hepoatic steatosis with probable splenomegaly. *See* Exhibit 16.

21. On January 22, 2016 Claimant had an orthopedic consultation at the hospital with Brian Morgan, PA-C. PA Morgan noted that Claimant had bilateral total knee replacements with the left knee replacement in October of 2015. PA Morgan noted that Claimant had a fall and a seizure and it was unknown whether the seizure caused the fall or vice versa. Claimant had increased swelling to his left knee after the fall and also reported some pain to the paraspinal muscles on the left side of his neck. On examination, Claimant had tenderness to palpation over the anterior aspect of the shoulder, pain with range of motion anteriorly with forward flexion and also had a large knee effusion on the left. PA Morgan recommended ice, elevation, and compression dressing for the left knee. PA Morgan recommended shoulder x-rays. PA Morgan assessed left shoulder pain- likely rotator cuff injury from the fall, and knee hemathrosis. *See* Exhibit 13.

22. On January 22, 2016 Claimant was evaluated by neurologist Byung Ahn, M.D. Dr. Ahn noted that Claimant had been admitted after a seizure while walking down the stairs at work and after a second seizure at Summit Hospital. Dr. Ahn noted

that Claimant was currently stable with no recurrence of spells and with his only complaint being pain on the left side of the body and limbs from the fall during the seizure. Dr. Ahn noted that the neurological exam was unremarkable, the MRI brain with and without contrast was unremarkable, and that a routine EEG showed no abnormal signals of seizure tendency or active electrographic seizure. Dr. Ahn recommended that Claimant continue Keppra and noted that the Keppra could be slowly tapered off if Claimant remained seizure free for 6-12 months and had resolution of polycythemia. *See* Exhibit 13.

23. A few hours later, Dr. Ahn submitted an addendum to his report that noted it had come to his attention that the Claimant clearly fell down the stairway first and then had his first seizure. Dr. Ahn added respiratory failure and head concussion as the potential etiology of his seizures but noted that polycythemia should be ruled out before attempting to wean off Keppra. *See* Exhibit 13.

24. On January 26, 2016 Claimant was discharged from St. Anthony Hospital by Richard Campbell, M.D. Dr. Campbell listed discharge diagnoses as: new onset seizures; acute on chronic hypoxic respiratory failure; pulmonary embolism; polycythemia due to chronic hypoxia with bone marrow biopsy results pending; thrombocytompenia; hepatomegaly/splenomegaly; left knee hemathrosis; and swelling of tongue, possibly resulting from seizure. Dr. Campbell noted that neurology felt that Claimant should be on Keppra for at least six months and then a decision would be made whether to continue it indefinitely. Dr. Campbell noted that Claimant would require oxygen at discharge. Dr. Campbell noted that Claimant could not drive, be around dangerous machinery, or return to work. *See* Exhibit 13.

25. On February 18, 2016 Claimant was evaluated by Edward Jonassen, M.D. Claimant reported a recent fall where he injured both knees and that he had quite a bit of swelling and bruising involving both knees. Claimant reported bruises to 60% of his body and that he was not certain what had happened and had no recollection of the event but that there was a serious head injury. Dr. Jonassen diagnosed contusion and sprains of both knees status post an un-witnessed fall where Claimant fell a full flight of stairs. Dr. Jonassen opined that most of the pain was due to contusion with resultant swelling and eccymosis. Dr. Jonassen noted that the cause of the fall was uncertain and that it was uncertain whether syncope was involved. *See* Exhibits 12, J.

26. On February 29, 2016 Claimant was evaluated by Irum Basar, M.D. Dr. Basar noted that Claimant had been admitted at St. Anthony after a fall and new onset of seizures and that he had been evaluated by Dr. Ahn and placed on Keppra. Claimant believed Keppra was making his joint pains worse and reported generalized fatigue. Claimant reported having a fall at work from a height of approximately 10 feet and that when a colleague found him he was shaking and having a seizure. Claimant noted that he had bruising and scalp hematoma in the right parietal region and that he had another witnessed generalized tonic clonic seizure at the emergency room in Frisco and was then transported. Claimant reported having tongue bite and bladder incontinence with the second event. Dr. Basar noted that an MRI of the brain and

routine EEGs showed no abnormal signals or active electrographic seizures. Dr. Basar noted that Claimant had no further seizures since discharge from St. Anthony Hospital. Claimant reported no prior history of seizures. Dr. Basar noted that Claimant had been on Allopurinol since July of 2015 for gout. Claimant's oxygen saturation was measured at 91%. Claimant's blood pressure measured 152/82 and Dr. Basar advised Claimant to contact his primary care provider about the high blood pressure. Dr. Basar noted that Claimant had two seizures, one witness in the ER, and also had a closed head injury around the initial event. Dr. Basar noted that Claimant was found to have several other co-morbidities at the time including polycythemia. Dr. Basar recommended continuing the medication to remain seizure free. Dr. Basar was concerned that the Allopurinol could potentially cause myelosuppression as well as seizures and referred Claimant to a rheumatologist for evaluation and management of gout/arthritis. *See* Exhibits 19, K.

27. On March 14, 2016 Dr. Basar completed a work status report for Employer. The report indicated that Claimant had restrictions of no climbing ladders, no use of power tools, and no operating machinery/equipment. Dr. Basar noted that in view of seizure he did not recommend driving, climbing stairs, or using power tools. Dr. Basar also noted that Claimant needed medical clearance from his primary care provider in view of the co-morbidities. *See* Exhibit 19.

28. On March 29, 2016 Claimant was evaluated by Dr. Basar. Claimant reported he had weaned himself off the Keppra as he was convinced that it was causing joint pains and body aches. Dr. Basar noted that Claimant had not used Keppra since March 19 and fortunately had no seizure recurrence. Dr. Basar noted that he had provided a referral to a rheumatologist for management of gout/arthritis but that Claimant did not feel the need to follow through as he felt better after stopping Keppra. Dr. Basar noted that Claimant had no new neurological symptoms. Claimant reported that he wanted to resume work but couldn't due to the driving restriction. Claimant was also unhappy about the restriction on climbing ladders. Dr. Basar noted that Claimant was convinced that the seizure occurred secondary to the fall since he had no prior history of seizures. Dr. Basar noted that although Claimant only had one seizure occurring in the context of a fall and new diagnosis of polycythemia, he was concerned of the risk of recurrence due to the head injury and the generally quoted 30-50% risk of seizure recurrence. Dr. Basar suggested a second opinion from a epileptologist and referred Claimant to neurologist/epileptologist Dr. Elgavish for a second opinion. *See* Exhibit 19.

29. On March 31, 2016 Dr. Basar noted that Claimant still had work restrictions of no climbing ladders, no using power tools, and no driving. Dr. Basar noted that Claimant still needed to be cleared by his primary care physician and that Claimant had been referred to another neurologist for a second opinion. *See* Exhibit 19.

30. On April 19, 2016 Claimant was evaluated by Ro Elgavish, M.D. Dr. Elgavish reviewed the history and performed a physical examination. Dr. Elgavish assessed convulsion. Dr. Elgavish noted that Claimant had one or two seizures on the same day in late January and opined that it was unclear why Claimant fell down the

stairs and that it was possible that it was a mechanical fall not due to a seizure and that hitting his head during the fall is what lead to the acute convulsion in the emergency department later that same day. Dr. Elgavish noted that imaging showed no intracranial findings and that Claimant had no other clear risk factors for epilepsy. Dr. Elgavish opined that following a single acute seizure (or two on the same day) with no intracranial findings on imaging, an anti-epileptic medication was not indicated due to the risk of lifelong anti-epileptic therapy versus the potential benefit. Dr. Elgavish noted that the risk of future seizures was not zero and that Claimant should take appropriate precautions. Dr. Elgavish noted that Claimant was to call his office if Claimant had another seizure and if so then he would strongly urge anti-epileptic therapy. Dr. Elgavish recommended an extended sleep deprived EEG and that if it was abnormal he would almost certainly start anti-epileptic therapy but that if it was normal then Claimant could follow up as needed if Claimant had another seizure. *See* Exhibit 20.

31. On April 20, 2016 Dr. Elgavish wrote a letter indicating that Claimant had been evaluated for a single witnessed seizure event. Dr. Elgavish noted that the only known acute cause for the seizure was a head injury due to the fall itself but that the workup had not yet been completed. Dr. Elgavish noted that the literature on a single unprovoked seizure showed the risk of a second seizure within the next two years was at 42%. Dr. Elgavish opined that Claimant's seizure was probably provoked (due to the fall) and that therefore, the risk of future seizure for Claimant may be lower. Dr. Elgavish noted that there was no way to predict whether Claimant would have a second seizure event and that given the risk it would be appropriate to restrict Claimant's work activities to avoid activities that would place Claimant, coworkers, or others at risk if he were to have a seizure. *See* Exhibit 20.

32. On April 27, 2016 Claimant was evaluated by Dr. Ahn. Dr. Ahn noted a normal awake and asleep electroencephalogram test. *See* Exhibit 21.

33. On May 2, 2016 Claimant was evaluated by Dr. Elgavish. Dr. Elgavish explained to Claimant that in his letter to Employer he tried to be as accurate as possible about the risks associated with Claimant's situation and that he could not tell Employer that Claimant could work with no restrictions. Dr. Elgavish opined that he could not know if/when Claimant may have another seizure and that he could not know that Claimant is no risk in the work-place. *See* Exhibit 20.

34. On May 12, 2016 Claimant underwent a sleep deprived EEG study. Dr. Elgavish opined that the study was normal but noted that the absence of epileptiform findings in the EEG did not rule out the possibility of seizure disorder. *See* Exhibits 20, L.

35. On May 24, 2016 Claimant was evaluated by Dr. Elgavish. Dr. Elgavish again discussed the possible risk of future seizures and advised Claimant to call his office if another seizure occurred. Dr. Elgavish completed short term disability paperwork. Dr. Elgavish noted that he had offered to start an anti-epileptic drug but that Claimant was not interested in starting one and Dr. Elgavish noted that even initiating

an anti-epileptic drug would not completely remove the risk of future seizures. Dr. Elgavish noted the plan was to return to the clinic as needed. *See* Exhibit 20.

36. On July 11, 2016 Claimant returned to Dr. Elgavish to discuss long term disability. Claimant reported that he had not been allowed to return to work due to the possibility that he may have further seizures. Claimant reported having no seizures since the incident January 21, 2016. Dr. Elgavish continued his opinion that the risk of future seizures was not zero. Dr. Elgavish completed the disability paperwork and again noted the plan was for Claimant to return to the clinic as needed. *See* Exhibits 20, M.

37. On December 16, 2016 Claimant underwent an independent medical evaluation performed by Greg Reichhardt, M.D. Claimant reported that in January of 2016 he fell at work after working a 12 hour night shift. Claimant reported leaving the control room and heading down the stairs and that he was found on the landing on the stairs. Claimant had no recollection of the incident until he was being loaded into the ambulance. Claimant reported that he recalled the ambulance ride and parts of the emergency room evaluation at the local hospital. Claimant reported that he had lots of tests but does not remember them all and that his memory of the first day at the hospital was foggy. Claimant reported that he was found to have a blood clot in his leg and clots in the lung and that his oxygen levels were low. Claimant reported that after the incident, he had multiple bruises and fluid on the left knee but that all of the pain problems as a result of the incident had resolved. Claimant reported following up with a neurologist for his seizures and being treated with Keppra but that the side effects were significant and his discontinued using Keppra. Claimant reported that an additional neurologist did not feel that he needed to be on an anticonvulsant and that he had no need for further follow-ups unless he had another seizure. Claimant reported that Dr. Elgavish believed he had a seizure because he hit his head. *See* Exhibit A.

38. Dr. Reichhardt performed a medical records review and a physical examination. Dr. Reichhardt opined that Claimant's presentation raised concerns about an underlying seizure disorder. Dr. Reichhardt noted that Claimant's picture was confusing and that in September of 2012 the providers suspected that Claimant had a syncopal episode as a result of the pain from a ruptured biceps tendon from forcefully pulling and that the conclusion was in part due to a yell heard from Claimant. However, Dr. Reichhardt noted that it was not unusual for patients with generalized tonic clonic seizures to have a vocalization as a result of the seizure itself and that the biceps tendon tear could have occurred as a result of the fall due to a seizure or due to the seizure itself which causes forceful and uncontrolled contraction of the muscles. Dr. Reichhardt noted with the January, 2016 incident Claimant was suspected to have a seizure at work and that although Claimant had several interictal EEGs that did not show seizure activity, it did not exclude an underlying seizure disorder. Dr. Reichhardt opined that it was not medically probable that Claimant sustained a work related injury but that it was more likely that on September 27, 2012 and on January 21, 2016 he had seizures. Dr. Reichhardt noted that Claimant's history of potentially three seizures on two separate days being years apart left Claimant at risk for subsequent seizures. Dr.

Reichhardt noted that Claimant was not having any problems at the current time but that it would be appropriate for Claimant to follow up with a neurologist. Dr. Reichhardt opined that the cause of the seizures was unrelated to work activities and that the seizures occurred coincidental to his work and were not caused by his work and that the seizures were a personal risk. *See* Exhibit A.

39. On December 19, 2016 Claimant underwent an independent medical evaluation performed by William Wagner, M.D. Claimant reported feeling very good and that he had no recurrence of seizures since the January 21 incident. Dr. Wagner reviewed medical records and performed a physical examination. Dr. Wagner noted that Claimant was status post two witnessed generalized tonic clonic seizures associated with a fall and possibly hitting his head in January. Dr. Wagner opined that so far there was no definitive evidence of epilepsy. Dr. Wagner opined that the seizures could have represented immediate impact seizures associated with hitting his head and noted that the etiology of the seizures was uncertain. Dr. Wagner opined that there was also the possibility that this could represent an early manifestation of epilepsy and that the seizures may recur but again noted that it was uncertain. Dr. Wagner opined that the course of seizures was difficult to predict. Dr. Wagner opined that it was possible that Claimant may have a seizure disorder or tendency for recurrent seizures but that it was less likely given Claimant's at least 3 normal EEGs from 2012 to 2016. *See* Exhibits 22, N.

40. Claimant had a prior incident at work in September of 2012 for which the possibility of seizure was evaluated.

41. On September 27, 2012 St. Vincent Hospital Ambulance Services were dispatched for a report of an emergent 56 year old male who had a seizure, hit his head, and was bleeding from the head. Bystanders reported that Claimant was loading a truck, seized, hit his head on a metal bar, had full body convulsions for 3 minutes, and had a postictal period of approximately 10 minutes. Claimant denied a history of seizures, syncope, or heart arrhythmia and stated he had eaten normally but did not have as much water to drink that day. Claimant reported only pain in his head and it was noted that Claimant had no other sign of trauma other than a laceration to his left anterior forehead. *See* Exhibit B.

42. On September 27, 2012 Claimant underwent a CT of his head that was interpreted by Shawn Corey, M.D. Dr. Corey provided the impression of left supraorbital laceration and contusion with no intracranial hemorrhage or hematoma and intact calvarium. *See* Exhibit 2.

43. On September 27, 2012 Claimant underwent a CR of his chest interpreted by Richard Grzybowski, D.O. Dr. Grzybowski provided the impression of minimal bibasilar subsegmental atelectasis with otherwise no acute process shown. *See* Exhibit 3.

44. On October 19, 2012 Claimant was evaluated by Mark Triehaft, M.D. Dr. Triehaft noted Claimant had a history of loss of consciousness and possible seizure on September 27, 2012. Claimant reported that a coworker heard him scream and found that he had fallen on the floor striking the left side of his head and that he had some shaking movements. Dr. Triehaft noted that a CT scan of the head only revealed a left frontal superficial laceration and that an intracranial study was normal. Dr. Triehaft noted that Claimant had also torn his right biceps tendon in this incident. Claimant reported no prior seizures. Dr. Triehaft provided the impression of syncopal spell associated with shaking and noted clinical considerations included: syncopal seizures, postconcussive seizure, and primary seizure disorder. Claimant believed that the biceps tendon rupture occurred prior to the fall and that perhaps the pain of the tear caused syncope. Dr. Triehaft recommended a brain MRI, an EEG, and echocardiogram and holter monitor, absolute driving restriction, and avoidance of all precarious activities. Dr. Triehaft opined that the history did not suggest a CNS encephalitis and he opined that the sequence of events was not clear. Dr. Triehaft noted that it would be worthwhile to speak with the coworker who witnessed the episode. In view of the indeterminate nature of the spell and isolated event, Dr. Triehaft did not institute anti-convulsants. *See* Exhibits 6, C.

45. On October 29, 2012 Claimant underwent a brain MRI that was interpreted by Sean Bryant, M.D. Dr. Bryant provided the impression of mild to moderate microvascular disease with no intracranial mass, fluid collection, or evidence of hemorrhage. Dr. Bryant found no abnormal enhancement intracranially. *See* Exhibit 7.

46. On January 14, 2013 Claimant underwent a neurologic consultation with J. Bradley Gibson, M.D. Dr. Gibson noted that Claimant had been referred because of a possible seizure while at work on September 27, 2012. Claimant reported that he remembers pulling on a strap on that date and that the next thing he remembered was sitting in a chair with a lot of people around him. Claimant reported that a coworker witnessed Claimant pulling on the strap, screaming, and falling, hitting the left side of his lead particularly near his left eyebrow which caused a laceration requiring eight stitches. Claimant's coworker observed some shaking of the extremities but Claimant reported no tongue chewing or incontinence. Claimant reported that at the ER he was aware of severe pain in the right biceps region and that it was noted that his biceps was hanging. Dr. Gibson noted that Claimant suffered a severe biceps muscle tear that was repaired surgically on November 6, 2012. Claimant reported making a good recovery from the biceps muscle tear and that he had no further episodes of loss of consciousness. Claimant reported no prior history of loss of consciousness, fainting, or seizure. Claimant reported vertigo the day after the incident that took about three weeks to resolve. Dr. Gibson opined that it appeared that Claimant had a syncopal episode due to the right biceps muscle tear when pulling on a strap and that the severe pain caused Claimant to lose consciousness, hitting the left side of his head which caused a cerebral concussion. Dr. Gibson opined that the brief shaking of the extremities was probably due to the syncopal episode and/or the direct blow to the head. Dr. Gibson recommended a sleep deprived EEG and an echocardiogram and holter monitor study.

Dr. Gibson agreed that Claimant should not be placed on an anticonvulsant based on the history and neurologic testing. Dr. Gibson noted that the brain MRI scan was essentially normal for Claimant's age. Dr. Gibson opined that if the EEG was essentially normal with no significant epileptiform activity then Claimant could go back to work without restrictions. *See* Exhibit 8.

47. On January 16, 2013 Claimant underwent an EEG performed by Jeffrey Wagner, M.D. Dr. Wagner opined that the study was normal with mild limitations and no evidence of a predisposition to seizure. Dr. Wagner noted that the study did not exclude the possibility for seizure. *See* Exhibit 9.

48. Dr. Reichhardt testified at hearing consistent with his report. Dr. Reichhardt noted a concern that Claimant had an underlying seizure disorder and acknowledged this was a complicated case and that he couldn't be certain that Claimant has a seizure disorder and opined that it was hard to make a diagnosis. However, after reviewing the 2012 incident and the 2016 incidents and the witness statements, Dr. Reichhardt opined that it was medically probable that Claimant had three seizures making it likely that Claimant has a seizure disorder. Dr. Reichhardt opined that Mr. Davis' description of the layout and landing made it likely the event occurred on the landing and not as a result of a fall down the stairs and he also noted that Mr. Domejka indicated there was no force on the strap in 2012 but that Claimant was picking up the strap making the theory of a bicep tear causing syncope causing Claimant to hit his head causing the seizure to be unlikely. Rather, Dr. Reichhardt opined that it was more likely that Claimant had a seizure in 2012 and opined that it was not unusual to have vocalization or yelling at the onset of a seizure and the bicep tear could have been due to the seizure itself and the uncontrolled muscular contractions during the seizure. Dr. Reichhardt agreed that a bicep tendon tear could be painful and could also have caused vocalization. Dr. Reichhardt also agreed that a person can have a post traumatic seizure from falling and striking their head and agreed that Claimant hit his head in both the 2012 incident and the 2016 incident.

49. Dr. Reichhardt acknowledged that all of the testing done did not clearly find or identify the cause of Claimant's seizures but opined that it did not rule out a seizure disorder, but ruled out the more obvious causes of seizures. He agreed that the EEG results made it less likely that Claimant had epilepsy or an underlying seizure disorder, but did not rule it out. Dr. Reichhardt opined that Claimant had several risk factors for seizures including Claimant's use of Allipurinol (prescribed for gout), hypoxia and hyperventilation, sleep deprivation, and alcohol withdrawal. Dr. Reichhardt noted that the neurologists were concerned enough about a seizure disorder to place Claimant on restrictions but not to put him on epilepsy/seizure medications. However, Dr. Reichhardt noted that Dr. Elgovish and Dr. Basar did not analyze fully the 2012 incident or witness statements. Dr. Reichhardt disagreed with neurologist Dr. Gibson's conclusions regarding the 2012 incident. Dr. Reichhardt opined that Claimant's seizures were not work related and that the seizures could have occurred anywhere.

50. Claimant testified that he has not worked since the incident on January 21, 2016 due to his restrictions but that he feels good now and is not seeking any additional treatment. Claimant would like to return to work for Employer. Claimant reported that with the January 21, 2016 incident he injured his right arm, left knee, and head and had a lot of bruising and that he was swollen and bruised and felt "beat up." Claimant reported that he had eaten that day, was hydrated, and that his knees felt fine. Claimant reported that with the September 2012 incident he was loading a truck for Employer and pulling on a strap and that he had no memory of falling and believes he tore his bicep. Claimant testified that the strap was locked into beams and that he remembered pulling on it to straighten it out. This is found credible and consistent to his report to medical providers that the last thing he remembered was pulling on a strap. This is found more persuasive than the testimony of Mr. Domejka. Claimant reported that after 2012 he was fine and did not require medicine, restrictions, and was able to return to full duty work. Claimant reported that he is no longer treating at the present time and that he was just told to return if he has another seizure.

51. John Domejka testified at hearing. Mr. Domejka is a co-worker of Claimant's who was working with Claimant on September 27, 2012. Mr. Domejka recalled the 2012 incident because it had frightened him. Mr. Domejka indicated that he and Claimant were loading moly bags onto a truck with a forklift and that they were behind on that day. Mr. Domejka indicated that on the way into the truck, Claimant bent down to pick up a strap to carry further into the truck and that Claimant screamed "aaaah" like he was in pain and then that Claimant was on the floor of the truck. Mr. Domejka picked up Claimant's radio and called a "may day." Mr. Domejka testified that Claimant was convulsing and moving back and forth for approximately 3 minutes. Mr. Domejka testified that Claimant hit his head and that he remembered blood but that he had no idea if Claimant tore his biceps at that time. The testimony of Claimant that he was pulling on a strap is found more credible than the testimony of Mr. Domejka that Claimant bent down and picked up a strap.

52. The opinions of neurologists who treated Claimant including Dr. Wagner, Dr. Gibson, and Dr. Elgavish are found credible and persuasive. The opinions of Dr. Reichhardt are not found as credible or persuasive. Although Dr. Reichhardt believes Claimant had a seizure causing him to fall on January 21, 2016, this opinion is not persuasive or consistent with the overall medical evidence which was wholly inconclusive and does not establish a seizure disorder caused the fall. The opinions of the neurologists who evaluated Claimant are persuasive that the cause of the fall is unknown.

53. Claimant's fall was due to an unknown cause and despite extensive testing, it is unclear whether Claimant has any medical conditions that specifically caused him to fall on January 21, 2016. Claimant has established that the fall was unexplained.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant must prove by a preponderance of the evidence that her injury was proximately caused by an injury arising out of and in the course of her employment with the employer. Section 8-41-301(1)(b) & (c), C.R.S*.; City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related

functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.* The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968).

Here, Claimant's injury occurred while he was changing shifts and walking down stairs outside of the control room to go to the locker room of Employer's facility to clock out for the day. Claimant was still on duty and on Employer's property and the injury occurred in the course of employment, within the time limits of his employment, and while he was performing activities connected to his work duties. However, the parties dispute whether or not the injury arose out of Claimant's employment.

As found in *City of Brighton v. Rodriguez*, 318 P.3d 496, (Colo. 2014), all risks that cause injury to employees can be placed within three well-established overarching categories: (1) employment risks, which are directly tied to the work itself; (2) personal risks, which are inherently personal or private to the employee him or herself; and (3) neutral risks, which are neither employment related nor personal. Here, Claimant's injury does not fit into the first risk category. There were no specific employment risks that caused Claimant's injury. Claimant's injury occurred while walking down stairs and attempting to head to the locker room to leave for the day. There is no evidence that the stairs were wet or slippery or that there was anything tied to Claimant's job duties that caused a fall when he was leaving the control room and attempting to leave work.

Additionally, the Claimant's fall does not fall into the second risk category. There is insufficient evidence that a personal or personal or preexisting idiopathic illness or medical condition caused Claimant's fall or injury. Although possible that Claimant has a seizure disorder, the ALJ finds the opinions of the neurologists and the objective testing to lack probability that Claimant has an underlying seizure disorder that caused his fall. The neurologists who evaluated Claimant, after significant testing including three separate EEGs between 2012 and 2016, were unable to determine or diagnose a seizure disorder. They were unable to find any significant source of Claimant's fall. As found above, in treatment records for the 2012 incident, neurologist Dr. Gibson opined that he did not believe Claimant had a seizure in the 2012 incident and believed it was a syncopal episode due to severe pain from a biceps muscle tear that caused Claimant to fall and strike his head causing a cerebral concussion. In treatment records for the 2016 incident, neurologist Dr. Wagner opined that the January 21, 2016 incident and seizures could have represented immediate impact seizures associated with Claimant hitting his head or could possibly represent an early manifestation of epilepsy. Dr. Wagner noted it was possible that Claimant may have a seizure disorder or tendency for recurrent seizures but opined that it was less likely given Claimant's at least 3 normal EEGs. Neurologist Dr. Elgavish opined that it was unclear why Claimant fell down the stairs and that it was possible that it was a mechanical fall not due to a seizure and that hitting his head during the fall is what lead to the acute convulsion in the emergency department later that same day. The specialists who evaluated Claimant could not determine that a seizure disorder existed or caused the Claimant to fall. Although they opined it was possible, they also noted the possibility that the fall itself caused Claimant to hit his head and to seize after striking his head. Dr. Wagner noted

that the possible seizure disorder was less likely given the normal objective testing. The ALJ finds this credible and persuasive and find that Claimant has established, more likely than not, that his fall was unexplained.

Under the *City of Brighton* analysis, the third category of risks includes injuries caused by so-called "neutral risks" and are considered neutral because they are not associated with either the employment itself nor with the employee him or herself. *Horodyskyj v. Karanian*, 32 P.3d 470 (Colo. 2001). An unexplained fall necessarily constitutes a neutral risk and because it is neither occupational nor personal and the fall is fundamentally similar to other neutral risks. *City of Brighton v. Rodriguez*, supra. Injuries stemming from neutral risks arise out of employment because they would not have occurred but for employment. *Id*. The employment causally contributed to the injury because it obligated the employee to engage in employment related functions, errands, or duties at the time of injury. *Horodyskyj v. Karanian*, supra. Here, the cause of Claimant's fall and injury is truly unknown. Claimant is credible that he does not have a memory of the event. Mr. Davis did not see the fall or know if Claimant fell down the stairs or seized and then slumped down at the landing. The doctors, who performed significant testing, similarly do not know if Claimant fell and struck his head causing seizures or if Claimant had a seizure that caused the fall. The persuasive and credible evidence is that it is entirely unknown why or how Claimant fell. The fall is not, due to a personal seizure condition. Rather, it has been established by preponderant evidence that the cause of the fall is truly unknown. The fall was not due to an employment related risk or a personal idiopathic risk. Rather, the cause was unknown and despite significant medical testing it remained unknown why or how Claimant fell. The ALJ concludes that Claimant's fall would not have occurred but for the conditions and obligations of his employment, namely the requirement that he leave at the end of his shift and travel down stairs to exit the control room. The conditions and obligations of Claimant's employment placed him on the stairs where he was found after falling. Consequently, the ALJ finds that the record evidence supports a conclusion that Claimant's injury meets the arising out of analysis and finds that Claimant has established a causal connection between his injuries and his work duties.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Claimant has established that he sustained a compensable work injury and that he is entitled to reasonable and necessary medical treatment for his injury. The issue of whether any specific treatment is reasonable or necessary was not before the ALJ. Therefore, the ALJ provides a general award of medical benefits and Respondents retain the right to contest any specific treatment recommendations going forward.

Temporary Total Disability (TTD) Benefits

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

As found above, Claimant has established that he sustained a work related injury on January 21, 2016. As a result of the injury, Claimant suffered disability that lasted more than three work shifts and sustained actual wage loss. Claimant had impairment of wage earning capacity by his inability to resume his prior work due to the restrictions placed on him by medical providers. Therefore, Claimant has established an entitlement to TTD benefits, subject to applicable offsets.

Average Weekly Wage (AWW)

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Avalanche Industries, Inc. v. Clark, supra*; *Campbell v. IBM Corp.*, *supra*.

The parties have presented insufficient evidence for the ALJ to arrive at a fair approximation of Claimant's AWW. The only documents offered into evidence that reference Claimant's wages are in Exhibits P and R which both reference an average weekly wage of $0. The ALJ logically concludes that Claimant was not working for zero wages. As insufficient evidence exists, the ALJ is unable to determine AWW.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable injury on January 21, 2016.

2. Respondents are liable for reasonable and necessary medical benefits to treat the January 21, 2016 injury.

3. Claimant has established by a preponderance of the evidence an entitlement to TTD benefits, less applicable offsets, beginning January 21, 2016.

4. The ALJ is unable to determine AWW. The parties are ordered to confer and either stipulate to AWW or schedule a hearing on that limited issue.

5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 31, 2017

/s/ Michelle E. Jones

Denver, CO 80203

ISSUES

I. Whether Claimant's right knee condition is causally related to an episode of heat exhaustion resulting in dehydration and rhabdomyolysis on September 22, 2015.

II. Whether Claimant's need for right knee surgery on April 1, 2016 is related to his September 22, 2015 episode of heat exhaustion and rhabdomyolysis.

III. Whether Claimant is entitled to additional post MMI medical treatment for his rhabdomyolysis.

IV. Whether Claimant's emergency room treatment was reasonable, necessary and related to his September 22, 2015 dehydration episode.

V. Whether Respondents properly designated a medical provider in the first instance.

VI. Whether Claimant is entitled to temporary total disability (TTD) benefits commencing October 14, 2015 and continuing through January 11, 2017.

VII. If Claimant established his entitlement to TTD benefits, what was his average weekly wage (AWW) at the time of injury?

VIII. Penalties, specifically whether:

a. Respondents should be penalized for failure to timely report Claimant's alleged injury as required by C.R.S. § 8-43-103 and WCRP 5-2.

b. Respondents should be penalized for failure to provide a designated provider list pursuant to WCRP 8-2. Specifically, whether the right to select a medical provider to attend to Claimant's injuries in the first instance passed to him.

c. Respondents could properly rely on PA Byrne's opinion that Claimant reached MMI on October 13, 2015 and whether they should be penalized for filing the February 14, 2017 Final Admission of Liability relying in part on the WC 164 Form completed by PA Byrne on October 13, 2015 and counter signed by Dr. Olson on January 23, 2017.

d. Respondents should be penalized for requesting an independent medical examination with Dr. Tashof Bernton in violation of C.R.S. § 8-42-107(8)(b)(II).

Because the ALJ concludes that he does not have jurisdiction to resolve issues I, II, and III, this order does not specifically address these questions.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as a carpenter for Employer. On September 22, 2015 he was assigned to frame the perimeter of the area for a proposed concrete pad upon which a boiler was to be placed. According to Claimant the temperature in the boiler room where he was working was approximately 130 degrees.

2. After completion of his framing work, Claimant testified that he had to proceed to the roof of the boiler room to in order to cut the holes to accommodate the necessary duct work to vent the new boiler. Claimant testified that it was approximately 90 degrees outside and that the roof was very hot.

3. Claimant reported drinking plenty of water in an effort to stay hydrated for what the record evidence indicates was a job lasting two hours.

4. Claimant completed his work shift and returned home at the end of the work day where he ate and retired for the evening. At approximately 10:30 pm, Claimant was awoken from his sleep with painful muscle cramping in both legs which progressed to involve his thighs and abdomen. He also had tingling in his hands and arms. Claimant described his cramping as if all of his muscles were "seizing up."

5. An ambulance was summoned and emergency medical personnel responded to Claimant's address. Upon arrival, Claimant was found lying on a sofa reporting 9/10 pain and hyperventilating. Claimant was given IV fluids and transported to Penrose-St. Francis Emergency Room (ER) where he was evaluated by Dr. Shawna Langstaff who ordered laboratory testing and continued Claimant on IV fluids. Claimant's laboratory testing revealed an "abnormality" according to Dr. Langstaff. Dr. Langstaff noted that the etiology of Claimant's "myalgia was unclear. She noted differential diagnoses of "laboratory abnormality versus arterial compromise versus infectious process versus dehydration." Claimant spent the balance of the evening and the early morning hours of September 23, 2015 in the ER.

6. Based upon the evidence presented, the ALJ finds that Claimant's need for medical transport to the ER constituted a bona fide medical emergency which did not require authorized from Respondents. The treatment rendered in the ER was reasonable and necessary to cure and relieve the Claimant of the direct effects of his dehydration. Consequently, the ALJ finds Respondents liable for payment of the same.

7. Claimant called off work the following morning. He also testified that he sent a text message to his supervisor that he was unable to work to which he reportedly received a message back stating "cool."

8. Claimant testified that he followed-up with his primary care physician (PCP) who performed blood tests and imposed restrictions and excused Claimant from work for a week. While the ALJ can find no medical record which substantiates this portion of

Claimant's testimony, the ALJ notes that Claimant was evaluated by Dr. Tashof Bernton at Respondents request on January 30, 2017. As part of his independent medical examination (IME), Dr. Bernton reviewed reports from Dr. Melissa Voutsalath noting that Claimant was seen in follow-up and referencing her assumption that Claimant's "symptoms [were] related to the extent of dehydration/heat exhaustion" noting further that she expected "daily" improvement. Importantly, Dr. Voutsalath noted that she would check Claimant's CPK level due to Claimant's reports of myalgias. Upon testing, Dr. Bernton noted in his IME report that Claimant's CPK level was manifestly "elevated at 1567 with an upper limit of normal of 196."

9. Based upon the content of Dr. Bernton's IME report, the ALJ credits Claimant's testimony to find that he followed up with his PCP after his dehydration episode and that she took him off work for the balance of the week.

10. The evidence presented persuades the ALJ that Claimant was unable to work as a consequence of his dehydration episode from September 23, 2015 to September 27, 2015, returning to work on Monday, September 28, 2015.

11. As noted, Claimant testified that he returned to work on Monday, September 28, 2015. He testified that he handed the restrictions imposed by Dr. Voutsalath to his foreman. According to Claimant he was not referred to a workers' compensation physician and his restrictions were not accommodated. He added that because he was hardworking and needed a job, he elected to self monitor his job duties in an effort adhere to his restrictions and keep working. Based upon the evidence presented, including Claimant's actions regarding his continued work, the ALJ is not convinced that Claimant provided sufficient information to place his supervisor on notice that he was contending that he injured his muscles and/or right knee in the course and scope of his employment on September 22, 2015 and that he needed additional treatment as a consequence when he returned to work on September 28, 2015.

12. On October 12, 2015, Claimant returned to Dr. Voutsalath who took a blood sample in order to recheck Claimant's CPK level. A letter authored by Dr. Melissa Voutsalath dated October 12, 2015 and addressed "To whom it May Concern" was admitted into evidence. This letter notes Claimant had been under her care and that he was to "perform light duty work only (desk, no heavy lifting, no standing for long periods of time) for the next week." Claimant testified that after seeing Dr. Voutsalath on October 12, 2015 he returned to work and "demanded" to see a doctor for his work injuries. The evidence presented persuades the ALJ that Claimant was then provided information regarding Employer's designated providers and that he elected to proceed to Centura Centers for Occupational Medicine (CCOM) where he was evaluated by Physician Assistant (PA) Steven Byrne on October 13, 2015.

13. Based upon the evidence presented the ALJ finds that Claimant actually reported his September 22, 2015 injury and requested to see a physician on October 12, 2015 after which he elected to proceed to CCOM. Consequently, the ALJ finds that CCOM and the providers within the clinic, including PA Byrne and Dr. Daniel Olson are authorized providers in this case. Conversely, Dr. Voutsalath is not authorized.

Accordingly, the ALJ finds that Respondents are not liable for the treatment she rendered in connection with Claimant's dehydration episode.

14. Claimant was laid off on the morning of October 13, 2015, prior to seeing PA Byrne. He testified that after he was laid off he lost his employer paid health insurance benefit resulting in his paying $1,103.00 per month out of pocket for continued coverage (COBRA). He also testified that he received unemployment insurance benefits (UI) at the rate of $460.00 per week from the date he was laid off and continuing through mid February 2016.

15. During his appointment with PA Byrne, Claimant reported a chief complaint of bilateral knee pain with muscle aching in the thighs. Physical examination revealed tenderness in the entire medial aspect of the thigh without ecchymosis. Claimant also complained of right medial collateral ligament tenderness and pain in the posterior portion of the right knee. There was a mild drawer sign noted but no medial or lateral laxity. X-rays of the right knee were obtained and read was being negative for acute injury. PA Byrne noted that Claimant appeared to have recovered well from the dehydration although he had continued tenderness in the thighs. PA Byrne considered Claimant to be at MMI and did an "open close on this case."

16. On October 14, 2015, David Caraballo completed an "Employer's First Report of Injury." She noted that Claimant was "forming concrete pads for some units" in a boiler room and got dehydrated. The first report indicates that Claimant suffered a "heat injury." Based upon the evidence presented, the ALJ is persuaded that Employer reported Claimant's alleged injury within ten days of receiving notice or having knowledge of said injury pursuant to C.R.S. § 8-43-103 and Worker's Compensation Rule of Procedure 5-2.

17. Claimant has failed to prove by a preponderance of the evidence that Respondents should be penalized for failure to timely report Claimant's alleged injury.

18. Claimant has a prior history of right knee pain. On May 8, 2015, he underwent an MRI of the right knee on the referral of Dr. Jeffery Jenks. The MRI demonstrated evidence of "complex degenerative tearing of the body and posterior horn of the medial meniscus with a horizontal component extending into the inferior articular surface" along with "moderate osteoarthritis of the medial compartment . . ." and "mild patellofemoral joint effusion with minimal chrondromalacia patellae." Claimant came under the care of Dr. John Redfern, an orthopedist who, on July 10, 2015, approximately two months prior to his dehydration episode, performed an arthroscopic right knee partial medial meniscectomy along with a medial plica resection and lateral femoral condyle chondroplasty.

19. On December 9, 2015, Claimant returned to Dr. Redfern due to an "acute onset of severe knee pain and swelling" he had developed "about 3 weeks ago." Claimant denied trauma and reported that laboratory work had been completed by his PCP who informed him that he did not have gout. Visual inspection of the right knee during this encounter revealed "marked swelling without erythema. Physical examination, including

palpation of the right knee was completed and was noted to be positive for "[g]rade II palpable knee effusion" without significant "medial or lateral joint line tenderness. Dr. Redfern did not believe that Claimant had a crystalline arthropathy given his history and examination. Rather, he noted that Claimant's symptoms could be related to an exacerbation of some underlying mild arthritis as it was noted during his arthroscopy that he has some "mild articular cartilage loss."

20. A repeat MRI of the right knee was performed January 21, 2016 at the request of Dr. Redfern. The MRI was interpreted by Dr. Matthew Lowery. The MRI demonstrated abnormal findings including age-indeterminate degenerative fraying/tearing of the medial meniscus, tricompartmental chondromalacia, with near full thickness to full thickness fissuring and adjacent cartilage surface irregularity in the medial compartment of the knee, small fluid collection in the MCL, thought to be related to an old injury, large joint effusion and anterior subcutaneous edema.

21. Dr. Redfern returned Claimant to the operating room on April 1, 2016. As part of his operative note, Dr. Redfern noted: "The patient is a 46-year-old male on whom I had previously performed right knee arthroscopic debridement. He was doing very well until he had an incident of heat exhaustion and he has continued to have pain after this. . . . I have discussed that he does have arthritis. He continues to reiterate that his knee was doing well until this episode of heat exhaustion." Dr. Redfern performed a "right knee arthroscopic chondroplasty, medial femoral condyle and patella."

22. Claimant's prior attorney, Joseph Winston, Esq. wrote to PA Byrne requesting information regarding Claimant's treatment and the relatedness of his need for right knee surgery to the September 22, 2015 dehydration event. PA Byrne responded, noting that Claimant was seen twenty one days after the dehydration incident and that when he was seen, neither he nor the records from Penrose St. Francis Hospital referenced any trauma or mechanism of injury to the extremities. According to PA Byrne, he saw no presentation that would indicate the need for further care, "let alone surgery."

23. On January 23, 2017, Dr. Daniel Olson authored correspondence responding to the question of whether Claimant's September 22, 2015 dehydration "led to or contributed to" his need for the aforementioned April 1, 2016 right knee surgery. Dr. Olson unequivocally opined that dehydration would not cause or aggravate a torn meniscus, noting further that Claimant's x-ray "showed some mild tricompartmental arthritis so if it was a meniscal tear it may have been degenerative in nature." Dr. Olson agreed with PA Byrne that Claimant was at MMI, opining that whatever knee problem Claimant had was "not caused by the dehydration episode." A WC 164 form was completed by PA Byrne placing Claimant at MMI on October 13, 2015. Dr. Olson counter signed the form, albeit after PA Byrne indicated that Claimant was at MMI. Based upon the aforementioned evidence, the ALJ finds that Dr. Olson agrees that Claimant was at MMI as of October 13, 2015 without impairment.

24. On January 26, 2017, Dr. Bernton completed the aforementioned IME. As noted

at paragraph 7 above, Dr. Bernton reviewed records from Claimant's PCP regarding his dehydration episode. Dr. Bernton notes that in comparing Claimant's laboratory results from the initial visit at the ER with Dr. Voutsalath's later blood draw and considering his CPK levels over time it is "evident" that Claimant had "rhabdomyolysis" (damage to muscle tissue due to heat exhaustion) while in the ER on September 22, 2015. During his IME, Dr. Bernton was careful to identify the area of Claimant's ongoing pain as "just above to just below the knee." He also noted that Claimant's knee pain was noted to be worse with walking, standing or sitting too long in addition to kneeling or squatting.

25. Upon completion of his IME which included a review of medical records, a physical examination and a causation analysis, Dr. Bernton opined that Claimant's:

> [e]pisode of acute onset of pain and swelling in mid November 2015 is not related or due to the heat exposure on September 22, 2015. Later MRI of the knee demonstrated advancing degenerative changes with a possible cartilage injury cause chondral flap of the patella.
>
> There is no medical basis for any causation or exacerbation of the degenerative changes in the right knee with the episode of heat exposure and probable rhabdomyolysis.
>
> Claimant's rhabdomyolysis resolved with appropriate treatment with fluids. His BUN and creatinine returned to baseline value. There is no permanent impairment associated with the episode of heat exposure.

26. Dr. Bernton opined further that Claimant is at "maximum medical improvement from his episode of heat exposure. He has no permanent impairment, no restrictions on that basis, and no requirement for further care on a work related basis."

27. Dr. Bernton testified consistently with the opinions expressed in his January 26, 2017 IME report. He explained that rhabdomyolysis does not cause joint problems but can cause kidney problems and in serious cases, vascular and cardiac problems in addition to compartment syndrome. Dr. Bernton explained that in this case, Claimant experienced only mild renal compromise which returned to normal limits relatively soon after with fluid treatment as evidenced by his repeat laboratory testing and his lack of associated symptoms. Consequently, he testified that Claimant did not need further treatment including muscle biopsy, liver or cardiac testing.

28. Dr. Bernton testified that there was no medical connection between Claimant's dehydration episode and his right knee condition. According to Dr. Bernton, Claimant's knee symptoms are related to an independent degenerative osteoarthritis and that it is common to get inflammation in the tendons above and below the knee in the areas Claimant's complains of having pain in. Considering the entire medical record including Claimant's imaging and laboratory data, Dr. Bernton testified that it is not reasonable to believe that there is a problem with Claimant's muscle caused by the effects of rhabdomyolysis. Rather, Dr. Bernton testified that Claimant's ongoing knee/leg pain is likely emanating from his osteoarthritis.

29. Respondents admitted liability for Claimant's rhabdomyolysis based upon the expressed January 23, 2017 opinion of Dr. Olson. On February 14, 2017, Respondents filed a Final Admission of Liability (FAL). Claimant has objected to the FAL and has requested a Division Independent Medical Examination (DIME) which is currently pending. The evidence presented persuades the ALJ that Respondents took no action in furtherance of filing a FAL until they had received a determination of MMI from an authorized treating physician (Dr. Olson) as required by C.R.S. § 8-42-107(8)(b)(I). Accordingly, the ALJ finds that Claimant has failed to prove that Respondents should be penalized for filing the FAL dated February 14, 2017 which relied in part of the October 13, 2015 W.C. 164 form completed by PA Byrne.

30. Claimant submitted wage records indicating that for the pay period ending October 13, 2015 he had earned $800.00. While Claimant argued that he earned, on average $1,000.00 per week, the ALJ finds no corroborating evidence to support this claim. Based upon the evidence presented, the ALJ finds Claimant's AWW to be $800.00.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App.

2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). In this case, Claimant's testimony is generally supported by the record evidence submitted, including the content of Dr. Bernton's IME report. Consequently, the ALJ credits his testimony and concludes that he is a credible witness.

Causality (Relatedness) of Claimant's Right Knee Condition and April 1, 2016 Surgery to the September 22, 2015, Heat Exhaustion, Dehydration and Rhabdomyolysis & Claimant's Entitled to Additional Post-MMI Medical Treatment for his Rhabdomyolysis.

D. Claimant contends that his right knee condition and his April 1, 2016 surgery is causally related to his September 22, 2015, dehydration and rhabdomyolysis. Relying principally upon the opinions of Dr. Olson and Dr. Bernton, Respondent's contend that Claimant's right knee condition, including his need for surgery post MMI is related to the natural and probable progression of a pre-existing condition, i.e. his independent progressive right knee osteoarthritis. Given the uncontested procedural posture of the claim, the ALJ concludes that he does not have jurisdiction to resolve these questions. In concluding as much, the ALJ finds the case of *May B. McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (ICAO January 27, 2006) instructive. In *McCormick*, the Panel held that in the absence of a completed DIME, an ALJ lacks jurisdiction to award or deny medical benefits to cure and relieve a claimant's condition after he/she has been placed at MMI. In reaching this conclusion the Panel noted:

> Pursuant to § 8-42-107(8)(b)(I), C.R.S. 2005, an authorized treating physician shall make the initial determination concerning the date of MMI. Once an authorized treating physician makes a determination of MMI, the termination of medical care is triggered and the ALJ lacks jurisdiction to conduct a hearing concerning the accuracy of the authorized treating physician's determination until a DIME is conducted. §8-42-107(8)(b)(III), C.R.S. 2005; *Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995). The Colorado Supreme Court has noted that the DIME procedure is "the only way for an injured worker to challenge the treating physician's findings -- including MMI, *the availability of post-MMI treatment*, degree of non-scheduled impairments, and whether the impairment was caused by an on-the-job injury...." *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003) (emphasis added).

* * *

> Consistent with this principle, we have stated that "once an authorized treating physician places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits for the purposes of curing the industrial injury and assisting the claimant to reach MMI unless the claimant undergoes a DIME." *Eby v. Wal-Mart Stores, Inc.*, W.C. No. 4-350-176 (February 14, 2001). *See also Anderson-Capranelli v. Republic Industries, Inc.*, W.C. No. 4-416-649 (November 25, 2002) (following MMI, "In the absence of a DIME the ALJ lacks jurisdiction to adjudicate a request for additional medical benefits to cure the effects of the injury."); *Toledo-Zavala v. Excel Corp.*, W.C. Nos. 4-534-398, 4-534-399 (November 14, 2003) (same); *Cass v. Mesa County Valley School District*, W.C. No. 4-629-629 (August 26, 2005) ("[I]f an ATP places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits to improve the claimant's condition unless a DIME has been conducted on the issue of MMI.").
>
> This result is grounded in the principle that a treating physician's finding of MMI necessarily reflects the physician's determination that no further treatment is reasonably expected to improve any of the *compensable components* of the injury, and the authorized treating physician's opinion on the cause of the claimant's condition is inherent to the physician's determination of MMI. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App.1998) We have previously stated that "[d]etermining MMI necessarily requires a physician to ascertain the cause or causes of the claimant's condition in order to decide whether the claimant warrants additional treatment for any work-related problem. Consequently, the issues of whether all work-related conditions are stable and do not require additional treatment are an inherent part of the DIME process...." *Ayala v. Conagra Beef Company*, W.C. No. 4-579-880 (July 22, 2004).

E. Because the current version of the statue in question has not changed and because the ALJ has concluded that Dr. Olson is an authorized treating provider (ATP) who effectively placed Claimant at MMI, the principals announced by the Panel in *McCormick* apply to the facts of this case. Consequently, the ALJ concludes that he does not have jurisdiction to resolve questions regarding MMI, the cause of Claimant's knee condition, the relatedness of his need for surgery to the September 22, 2015 dehydration episode or the need for additional medical treatment to cure and relieve him of any ongoing symptoms related to rhabdomyolysis until completion of the DIME he has requested.

Claimant's Emergency Room Care

F. Medical services provided during a bona fide emergency are an exception to the normal requirement that a claimant obtain authorization for all treatment of the industrial injury. Larson's Workers' Compensation Law, § 94.02[6] (1999); *Sims v. Industrial Claim Appeals Office, 797 P.2d 777* (Colo. App. 1990). There is no precise

legal test for determining the existence of a medical emergency.[1] Rather, the question of whether a claimant has proven a bona fide emergency is dependent on the particular facts and circumstances of the claim. *Timko v. Cub Foods,* W. C. No. 3969-031 (June 29, 2005). In this case, the ALJ is persuaded that the severe dehydration resulting in muscle cramping which affected not only Claimant's ability to walk but also his breathing and which required IV fluid treatment constituted a genuine medical emergency. Consequently, Claimant did not need to obtain prior authorization for the treatment associated with his transport to and treatment in the ER. As the emergent treatment was reasonable, necessary and directly related to Claimant's admitted dehydration episode, Respondents are liable to pay for it.

Claimant's Right to Select a Treatment Provider to Attend to his Rhabdomyolysis & Alleged Knee Injury & Claimant's Request for Penalties for Failure to Provide a Designated Provider List Pursuant to WCRP 8-2(A)(1)

G. Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Under §8-43-404(5)(a)(I)(A), C.R.S. 2014 the employer has the right in the first instance to designate the authorized provider to treat the claimant's compensable condition. The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). Consequently, if the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. Section 8-43-404(7), C.R.S. 2005; *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Pickett v. Colorado State Hospital*, 32 Colo. App. 282, 513 P.2d 228 (1973).

H. Under § 8-43-404(5)(a), C.R.S., the employer or insurer is afforded the right in the first instance to select a physician to treat the injury. The statute requires the employer or insurer to "provide a list of at least two physicians, . . . in the first instance, from which list an injured employee may select the physician who attends said injured employee." Similarly, Workers' Compensation Rules of Procedure, Rule 8-2(A), 7 Code Colo. Reg. 1101-3, states that "[w]hen an employer has notice of an on the job injury, the employer or insurer shall provide the injured worker with a written list . . .." In order to maintain the right to designate a provider in the first instance, the employer has an obligation to name the treating physician forthwith upon receiving notice of the compensable injury. *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 545 (Colo. App. 1987). The failure to tender the "services of a physician ... at the time of injury" gives the employee "the right to select a physician or chiropractor." The employer's duty to designate is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo.App. 2006); *Jones v. Adolph Coors Co.,* 689 P.2d 681 (Colo.

[1] The exception is not limited to situations where life is threatened. *Bunch v. Industrial Claim Appeals Office of State of Colorado,* 148 P.3d 381 (Colo.App.2006).

App. 1984); *Gutierrez v. Premium Pet Foods, LLC*, W.C. No. 4-834-947 (Industrial Claim Appeals Office, September 6, 2011).

I. In this case, Claimant contends that he had reported his injury to his supervisor on September 28, 2015 after which Respondent-employer took no action to authorize a provider to attend to his injuries. Consequently, Claimant argues that the right to select a provider passed to him and all treatment received prior to this date should properly be covered by Respondents. As found, the ALJ is not persuaded. Instead, the ALJ concludes that Claimant likely returned to work on September 28, 2015 and reported he was having muscle and knee pain, without specifically indicating that it was due to a work related cause and that he could continue to work nonetheless. The evidence presented, including Claimant's actions convinces the ALJ that he probably did not report either that his muscle pain and/or right knee pain was caused by a work related etiology until October 12, 2015 when he received the results of his follow-up blood test and demanded to see a physician. Upon such report, the record evidence supports that Claimant selected CCOM as the facility to attend to his alleged work related condition(s). Accordingly, the ALJ concludes that the right of selection did not pass to Claimant and all care received prior to October 12, 2013 is unauthorized.

J. Regarding his claim for penalties for failure to provide a Rule 8 designated provider list, the evidence presented persuades the ALJ that Claimant more likely than not was provided with one and he chose to proceed to CCOM where he was evaluated by PA Byrne. In the materials admitted into evidence is a facsimile sent to Claimant's wife requesting that she circle the Dr. and facility that attended to Claimant. The ALJ infers from the facsimile that Claimant was initially given a choice of physicians to select from and thereafter was requested to indentify which facility he chose to go to. Consequently, the ALJ concludes that Respondents, more probably than not, followed WCRP Rule 8-2(A)(1) by providing Claimant with a choice of physician/corporate facilities to choose from. Accordingly, his claim for penalties, specifically that he is entitled to a physician of his choosing must be denied and dismissed.

Claimant's Entitlement to TTD

K. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

In this case, Claimant credibly testified and the medical records support that he was suffering from a painful muscle cramping (myalgia) caused by rhabdomyolysis cased by dehydration which resulted in his removal from work by Dr. Voutsalath for the period extending from September 23, 20015 through September 27, 2015. As noted, Claimant returned to work on September 28, 2015 and worked until he was laid off on October 13, 2015. However, as the DIME in this case is pending, the question of whether Claimant is at MMI and entitled to additional TTD benefits for time periods after October 13, 2015, like the questions surrounding entitlement to additional medical treatment, is premature. Consequently, the ALJ declines to address the question of Claimant's entitlement to additional TTD and any adjustment in his AWW for lost fringe benefits benefits after October 13, 2015.

L. Based upon the evidence presented, the ALJ is persuaded that Claimant was "disabled" within the meaning of section 8-42-105, C.R.S. between September 23, 2015 and September 27, 2015, during which time frame he experienced a wage loss. Thus he is entitled to TTD benefits for this time frame. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999). Because the period of disability did not last longer than two weeks from the day Claimant left work as a consequence of the injury, the statutory three day waiting period applies in this case. Applying the three day waiting period makes the first date of eligibility for payment of TTD September 26, 2015. As Claimant returned to work on September 28, 2018, the period of entitlement to TTD terminated on September 27, 2015. Consequently, the ALJ concludes that Claimant is entitled to TTD benefits from September 26th to September 27, 2015.

Claimant's Average Weekly Wage

M. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).*

N. Section 8-42-102(2), C.R.S., sets forth certain methods of calculating the average weekly wage. Section 8-42-102(2)(d) provides that "[w]here the employee is being paid by the hour, the weekly wage shall be determined by multiplying the hourly rate by the number of hours in a day during which the employee was working at the time of the injury or would have worked if the injury had not intervened, to determine the daily wage; then the weekly wage shall be determined from the daily wage in a manner set forth in paragraph (c) of this subsection (2).

O. Section 8-42-102(3), C.R.S., permits the ALJ discretion in the method of calculating the average weekly wage if the nature of the employment or the fact that the injured employee has not worked a sufficient length of time, has been ill or self-employed, or for any other reason, the specific methods do not fairly compute the average weekly wage. *Benchmark/Elite Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Avalanche Industries, Inc. v. Clark*, 198 P.3d 589 (Colo. 2008). Here, the wage record

submitted into evidence constitutes the best evidence regarding Claimant's earning at the time of injury. While Claimant argued that he earned on average $1,000.00 per week, Claimant's argument does not constitute evidence. Indeed, the undersigned has carefully reviewed the record evidence and finds no corroborating evidence to substantiate Claimant's assertion that he earned, on average $1,000.00 per week. Based on this evidence presented, the ALJ concludes that Claimant has proven an AWW equal to $800.00. The ALJ finds that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his September 22, 2015, work related injury.

Penalties

P. As found above, the ALJ concludes that Claimant's request for penalties for Respondents alleged failure to timely report Claimant's injury as required by C.R.S. § 8-43-103 and WCRP 5-2, for the alleged failure to provide a designated provider list pursuant to WCRP 8-2 and for filing the February 14, 2017 FAL are without merit.

Q. Based upon the evidence presented, the ALJ is also not persuaded that Respondents should be penalized for requesting the January 26, 2017 IME with Dr. Bernton. Claimant contends that the IME was not proper and in contravention of C.R.S. § 8-42-107(8)(b)(II) because 24 months had not passed since the date of injury. Claimant's reliance of the aforementioned statutory provision as a barrier to Respondents seeking an IME with Dr. Bernton is misplaced. The provision cited addresses the requirements necessary to request a Division Independent Medical Examination (DIME) in the event that an authorized treating physician has not placed an injured worker at MMI for more than 24 months since the date of injury. Contrary to Claimant's assertion, the cited statute does not limit when Respondents may request an IME. Indeed C.R.S. § 8-43-404(1)(a), provides that a claimant "shall from time to time submit to an examination by a physician or surgeon . . . which shall be provided and paid for by the employer or insurer . . ." There is no statutory requirement that a Respondents IME (RIME) be conducted after 24 months as suggested by Claimant. A RIME and a 24 month DIME are distinct procedures not to be confused with one another. Since Respondents have not violated C.R.S. § 8-42-107(8)(b)(II) by requesting a RIME inside of 24 months, the claim for penalties must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Questions regarding MMI, the cause of Claimant's knee condition, the relatedness of his need for surgery to the September 22, 2015 dehydration episode and whether Claimant is entitled to additional medical treatment to cure and relieve him of any ongoing symptoms related to rhabdomyolysis are reserved for future determination as the ALJ does not currently have jurisdiction to resolve these issues.

2. Respondents shall pay for all costs associated with Claimant's transport to and treatment received through Penrose St. Francis Emergency Department.

3. Claimant has failed to establish that the right to select a physician passed to him based upon the assertion that Respondent-Employer did not properly designate a medical provider to attend to Claimant's injury in the first instance. Dr. Olson is the authorized treating physician in this case.

4. Dr. Voutsalath's care is deemed unauthorized. Consequently, Respondents are not liable for payment for the care she rendered to Claimant.

5. Claimant's AWW is $800.00.

6. Respondents shall pay temporary total disability benefits (TTD) in accordance with C.R.S. § 8-42-105, beginning September 26, 2015 for a period of two days at a rate of sixty-six and two-thirds percent of Claimant's average weekly wage (AWW), but not to exceed a maximum of ninety-one percent of the state average weekly wage per week. C.R.S.

7. All claims for penalties as asserted are denied and dismissed.

8. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-902-219-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

,

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 26, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 4/26/17, Courtroom 1, beginning at 1:30 PM, and ending at 3:00 PM).

Hereinafter shall be referred to as the “Claimant." shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 8 were admitted into evidence, without objection. Respondents’ Exhibits A through S were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and took the matter under advisement in order to prepare a written decision.

ISSUE

The issue to be determined by this decision concerns post maximum medical improvement (MMI) maintenance medical benefits (*Grover medicals*). At the commencement of the hearing, the Claimant withdrew the designated issue of mileage, and the Respondents withdrew the designated issue of overpayments.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant's date of birth is May 8, 1974, and she was 42 years old on the date of the hearing, and 33 years old on the date of her admitted low back injury.

2. The Claimant sustained an admitted low back injury on January 15, 2008, while working as a manager for the Employer. She was lifting a roll of leather and she reported bilateral intermittent lower extremity paresthesias. She first saw Michael Ladwig, M.D. at the Aviation and Occupational Medicine Clinic on January 22, 2008. Dr. Ladwig diagnosed a dorsal lumbar spine strain. Dr. Ladwig gave the Claimant temporary restrictions of no repetitive lifting, carrying, pushing and pulling. She continued working for the Employer, at full pay, with restrictions, until March 25, 2013, at which time she was let go for reasons unrelated to her injury. Nonetheless, at this time, the Employer no longer made modified work available to the Claimant; the Claimant has not worked since that time; and, the Respondents admitted liability for temporary total disability (TTD) benefits from March 26, 2013 through September 8, 2016 (a little over 3 ½ years), the day before she was admittedly placed at maximum medical improvement (MMI).

3. After March of 2013, the Claimant was placed at MMI and taken off MMI several times. She has had extensive treatment from the date of injury through 2016, including physical therapy, massage therapy, acupuncture. facet injections and a rhizotomy. Indeed, Anjmun Sharma, M.D., the Division Independent Medical Examination (DIME) performed a DIME on the Claimant and issued a report, dated September 9, 2016, which catalogs 41 treatment notes from January 22, 2008 through

September 9, 2016, 2016 (Respondents' Exhibit F, bates stamp 00023 through 00085—62 pages), which are noted to illustrate the extensive treatment the Claimant has received, over the years, for the admitted back injury of January 15, 2008.

4. Prior to the admitted back injury of January 19, 2008, the Claimant had no significant previous history of back problems where she needed extensive medical care or was restricted from working full duty. The Clamant was only 42 years old on the date of the hearing, and she was 33 years old on the date of her injury. She had no prior disabling back problems and she had been able to work fulltime until her injury of January 15, 2008, according to her credible testimony. Thereafter, she was under medical restrictions and her Employer accommodated her restrictions until the Claimant was let go in March 2013. She has been unable to work at her pre-injury job duty since that time; and, she has not worked at all since that time.

5. On October 29, 2008, the Claimant came under the care of doctors at Arbor Occupational Medicine, where she was first treated by Jade Dillon, M.D., who advised the Claimant to go back to work. 10 days after returning to work, the Claimant's symptoms worsened. Thereafter, the Claimant continued under the treatment of David Kistler, M.D., and, subsequently and for the last several years, Sander Orent, M.D. The physicians at Arbor continued to treat the Claimant through 2016 until Dr. Orent retired. After Dr. Orent retired, Lawrence A. Lesnak, D.O., became the Claimant's primary ATP (he had been an ATP along with Dr. Orent before he became the primary ATP).

6. Ultimately, the Respondents filed a Final Admission of Liability (FAL), dated October 25, 2016, admitting for an average weekly wage (AWW) of $623.34; temporary total disability (TTD) benefits of $415.56 per week from March 26, 2013 through September 8, 2016 (a period of over 3 ½ years); for 14% whole person; and **denying** post maximum medical improvement medical maintenance benefits (*Grover* medicals).

The Claimant's Testimony at Hearing

7. The Claimant is relatively young, at present. She was 42 on the date of the hearing, and 33 on the date of her admitted back injury, January 15, 2008. Ever since the admitted injury, she has continued to experience worsening back pain, which has been characterized as chronic. Prior to the admitted injury, she had no disabling back problems. On February 6, 2006, she presented to The Point Sports medicine and Rehabilitation to be examined for physical therapy (PT). She reported bilateral lower extremity pain. This was a one-time only visit and there is no indication that she saw a physician for her complaint. The ALJ infers and finds that the Claimant recovered from this back pain shortly after February 2006 and was able to work full duty without pain until she experienced the admitted injury of January 15, 2008.

8. The Claimant testified persuasively and credibly that she cannot function without the medications that her authorized treating physician (ATP), Lawrence A. Lesnak, D.O., continues to prescribe for her, despite the insurance carrier's refusal to further authorize him after the FAL, declaring the Claimant at MMI on September 9, 2016, was issued. The Claimant's back condition, originally caused by the admitted injury of January 9, 2008, has continued to become worse, according to the Claimant. This is corroborated by the opinions of her ATPs and by the surgical evaluator, Bryan A. Castro, M.D.

Follow Up Division Independent Medical Examination (DIME) of Anjmun Sharma, M.D.

9. Ultimately, a Follow-Up Division Independent Medical Examination (DIME) was performed by Dr. Sharma, and his report is dated September 9, 2016 (Respondents' Exhibit F). Dr. Sharma extensively catalogued the Claimant's medical treatment from 2008 through 2013 (Respondents' Exhibit F, bates stamp 00023 to 000-60). His entries reveal that the Claimant had continuing problems and a need for treatment for the admitted back injury of January b19, 2008.

10. As a result of the Follow Up DIME, Dr. Sharma placed the Claimant at MMI, effective September 9, 2016 and rated her permanent medical impairment at 14% whole person for her back injury. Dr. Sharma, in his Follow-Up DIME Report stated: "No maintenance medical care will be assigned. It is unnecessary." He went on to state: "The injured worker is finishing school. She will likely be **in a low impact (**emphasis supplied) job anyway doing work as an estheticician." The ALJ infers and finds that in not recommending maintenance care, Dr. Sharma's opinion is based heavily on the fact that the Claimant "is finishing school" and "will be in **a low impact job."** The ALJ infers and finds that this undue emphasis on the Claimant's future plans partially undermines the credibility of Dr. Sharma's opinion that the Claimant does not need maintenance care. Further, his opinion in this regard is contrary to the weight of the ATPs' opinions and the Claimant's credible lay testimony concerning how the prescribed medications help her. Contrary to the opinions of the Claimant's ATPs, Dr. Sharma prescribed no work restrictions and was of the opinion that the Claimant was unlikely to deteriorate. The ALJ finds that Dr. Sharma did not give a persuasive explanation for this opinion. There is no elevated standard of proof for a DIME physician's opinions on maintenance medical care and permanent restrictions. The "preponderance of the evidence" standard applies to such opinions; and, the ALJ finds that it is more likely than not that Dr. Sharma is wrong with respect to "no maintenance care and no permanent restrictions," and the Claimant's ATPs are correct in continuing to provide maintenance medical care. Indeed, the Claimant's present ATP, Dr. Lesnak, continues to refill the Claimant's prescriptions despite the fact that the insurance carrier refused to authorize further visits with Dr. Lesnak after the Claimant was placed at MMI, effective September 9, 2016. 2016.

Surgical Evaluation by Bryan A. Castro, M.D. (2014)

11. Dr. Castro first saw the Claimant on June 27, 2014, on a referral from her authorized treating physician (ATP) Sander Orent, M.D. Among other things, Dr. Castro noted that the MRIs highlighted "disc bulging centrally which does cause some mild central canal encroachment." He did not recommend surgery, however, he indicated that the Claimant "would benefit from anti-inflammatories, muscle relaxants…and other conservative modalities as prescribed by Dr. Orent. Dr. Castro noted that the Claimant had lumbar spine pain with an "onset 6 years ago. Severity level is 8. Pain is worsening. In a follow up visit of August 25, 2014, Dr. Castro noted that the Claimant reported that her symptoms were much worse. Dr. Castro assessed "lumboscaral radiculitis" and indicated that further studies were warranted, including a new MRI "since her symptoms have increased significantly over the last several months" (Respondents' Exhibit L).

Authorized Treating Physicians (ATPs) Sander Orent, M.D. and Lawrence A. Lesnak, D.O.

12. At the request of ATP Dr. Orent, an MRI (magnetic resonance imaging) of the Claimant's lumbar spine was performed by Todd D. Greenberg, M.D., on January 28, 2015. It revealed an "annular tear at L4-5, moderate disc dessication, small central protrusion, no neural effacement. Tiny facet cyst left side, outside the canal." Dr. Greenberg concluded that "compared to 05/22/13, there has been no substantial interval change. **Persistent** (emphasis supplied) protrusions at L4-5 and L5-S1."The Claimant has continued to have chronic, debilitating symptoms through the present time. Henry J. Roth, M.D., in his Independent Medical Examination (IME) report of June 13, 2016, makes an isolated, selective reference to this MRI, stating "of particular note is 'no prominent facet arhropathy." Dr. Roth summarily dismisses the other MRI finds concerning disc protrusions.

13. Dr. Orent at Arbor Clinic had been the Claimant's ATP for several years, and on January 8, 2016, his impression was that the Claimant had facet syndrome, .for which he recommended a rhizotomy, which the Claimant underwent. As of April 26, 2016, Dr. Orent was of the opinion that the Claimant required physical therapy twice a week with massage once a week for four weeks. He was of the opinion that the Claimant was "not able to work at this time." (Respondents' Exhibit J, bates stamp 000175). He was of the opinion that "a facet syndrome lumbar spine not at MMI." Dr. Lesnak was also one of the Claimant's ATPs. In a report, dated August 9, 2016, Dr. Orent diagnosed "lumbar facet syndrome," stating that the Claimant was not at MMI because she required further care and her care is in "denial" (by the insurance carrier) [Claimant's Exhibit 4, pp.22-24).

14. Dr. Lesnak scheduled a repeat bilateral L4 and L5 medial facet joint nerve branch RF neurotomy procedure for January 22, 2016, which occurred.

15. As the result of a post-MMI Re-Check, ATP Dr. Lesnak issued a report, dated May 25, 2016 (Claimant's Exhibit 3). The Claimant complained of chronic, recently recurring bilateral low back pain with intermittent mild posterior leg symptoms. This is consistent with the Claimant's testimony art hearing. Indeed, the Claimant testified that she had problems sitting for long periods of time, and the ALJ finds her testimony to be persuasive and credible.

16. Dr. Lesnak has continued the Claimant on the following medications: (1) tramadol 3 times daily for nerves; (2) Gabapentin, 1200 mg. At night to relax; (3) Cymbalta daily for depression; (4) Tizanidine taken every evening for pain; (5) Percocet, used as needed 3 to 4 nights a week—for pain; and, (6) Valium which is used on an as needed basis to 4 weeks at night. The Claimant's lay testimony concerning these medications was compelling. She stated that these medications helped her sleep, and allowed her to be functional.

17. Ultimately, as of April 5, 2017, Dr. Lesnak was of the opinion that continuing pain management was "reasonable, necessary and related medical treatment to maintain [the Claimant's] condition at MMI or to prevent deterioration" (Claimant's Exhibit 3, p. 6). Because Dr. Lesnak has been the Claimant's ATP, and despite the fact that the insurance carrier would authorize no more visits to Dr. Lesnak after the Claimant was placed at MMI on September 9, 2016, the ALJ finds his opinion concerning the Claimant's need for post-MMI medical maintenance treatment compelling and highly credible, since he continued refilling the Claimant's prescriptions despite the fact that he had no workers' compensation obligation to do so.

Independent Medical Examination (IME) BY Henry J. Roth, M.D.

18. At the Respondents' request, Dr. Roth performed an IME on the Claimant and issued a report, dated June 13, 2016 (respondents' Exhibit G). Contrary to the DIME opinion of dr. Sharma, Dr. Roth is of the opinion that he Claimant has no medical impairment as a result of the January 15, 2008 admitted injury He states that that "the advancement of degenerative change in MRIs (magnetic resonance imaging) is **idiopathic** (emphasis supplied) and has also not demonstrated to be causal of her symptoms. Dr. Roth offered no explanation for the advancement of degenerative change in the MRI being "idiopathic." Indeed, *Webster's New World Dictionary* defines "idiopathic" as "a disease whose cause is **unknown** (emphasis supplied)." The ALJ finds that this opinion amounts to a summary dismissal of the MRI results without any persuasive explanation. For this reason, among others, the ALJ does not find Dr. Roth's opinion that the Claimant doesn't require post-MMI medical maintenance care credible. Dr. Roth thereupon diagnosed the Claimant with fibromyalgia (a non work-related condition). Despite his lengthy report, Dr. Roth does not persuasively explain why the Claimant does not continue to need the powerful medications that her ATP, Dr. Lesnak, continues to prescribe and why the Clamant needs these medications in order

to function. The ALJ finds Dr. Roth's opinions to be contrary to the weight and totality of the persuasive evidence and, therefore, not credible.

19. The totality of Dr. Roth's opinions tend to cast doubt on whether the Claimant sustained a compensable injury in the first place. At a minimum, his opinions minimize the effects of the admitted January 15, 2008 injury, and his opinions are that the Claimant suffers from fibromyalgia (there is no persuasive explanation in his report concerning how he arrived at this diagnosis), a non-work related condition, and the Claimant has no permanent work-related impairment. Dr. Roth's opinions are contradicted by the totality of the evidence. Therefore, the ALJ finds that his opinions, including his opinion that no medical maintenance care is warranted are not credible.

William D. Boyd, Ph.D., Clinical Psychologist (2013)

20. Dr. Boyd saw the Claimant eight times, and when he discharged her on August 13, 2013, his diagnosis was "pain disorder with psychological and medical factors; and, adjustment disorder with anxiety and depressed mood, improving" (Respondents' Exhibit M). Correlating Dr. Boyd's diagnosis of pain disorder with…medical factors to the opinions of the Claimant's ATPs and the Claimant's lay testimony, the ALJ finds that the Claimant has been suffering from chronic panic which is a proximate result of the admitted injury of January 9, 2008. Dr. Boyd's opinions are outdated and inconsistent with the DIME's MMI date of September 9, 2016, as admitted in the FAL.

Independent Psychiatric Medical Examination (IME) by Robert E. Kleinman, M.D., Psychiatrist (2014)

21. Dr. Kleinman saw the Claimant on November 5, 2014 for a psychiatric IME. He noted no past psychiatric history. Dr. Kleinman's diagnosis was: "Pain disorder with psychological factors and a medical condition; Adjustment disorder with mixed anxiety and depressed mood." Dr. Kleinman agreed with Dr. Boyd that the Claimant was at psychiatric MMI on August 12, 2013, however, he stated that if the Claimant "cho (*sic*)ses to continue with medication she would have a 1% mental health impairment considering she is on a minimal dose of antidepressant. At hearing, the Claimant testified that she is still on all of the medications prescribed by her ATP, Dr. Lesnak, and they enable her to function. Ultimately, Dr. Kleinman was of the opinion that no further psychological treatment was necessary to maintain the Claimant at MMI. Dr. Kleinman's opinions on MMI are outdated and inconsistent with the DIME's opinion of MMI on September 9, 2016, as admitted in the FAL.

Ultimate Findings

22. The ALJ finds the April 5, 2017 opinion of the Claimant's present ATP, Dr. Lesnak, that the Claimant needs post-MMI medical maintenance care, as supported by all of his reports (Claimant's Exhibit 3), by the Claimant's lay testimony, and by the totality of the evidence is more persuasive and credible than any opinions to the contrary. Indeed, the ALJ finds IME Dr. Roth's opinions lacking in credibility for the reasons specified in Finding No. 16 herein above. Also, the ALJ finds the Claimant's presentation was straight-forward and credible. Her chronic pain, proximately caused by the 2008 back injury, continues to be disabling and real and all of the medications prescribed by Dr. Lesnak, post-MMI, allow her to function.

23. Between conflicting medical opinions, coupled with the Claimant's compelling lay testimony, the ALJ makes a rational choice, based on substantial evidence, to accept the opinion of ATP Dr. Lesnak that the Claimant requires post-MMI medical maintenance care to maintain her condition at MMI and to prevent a deterioration of the Claimant's condition, and to reject all medical opinions to the contrary.

24. The Claimant has proven, by a preponderance of the evidence that she is entitled to post-MMI medical maintenance benefits at the hands of her ATP, Lawrence A. Lesnak, D.O.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions

(this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the April 5, 2017 opinion of the Claimant's present ATP, Dr. Lesnak, that the Claimant needs post-MMI medical maintenance care, as supported by all of his reports (Claimant's Exhibit 3), by the Claimant's lay testimony, and by the totality of the evidence was more persuasive and credible than any opinions to the contrary. Indeed, as found, IME Dr. Roth's opinions were lacking in credibility for the reasons specified in Finding No. 16 herein above. Also, as found, the Claimant's presentation was straight-forward and credible. Her chronic pain, proximately caused by the 2008 back injury, continues to be disabling and real and all of the medications prescribed by Dr. Lesnak, post-MMI, allow her to function.

b. In *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997), the Court of Appeals dealt with a situation wherein the injured worker could proceed no further with medical treatment and evaluations because the employer and the treating physician took the position that because the claimant had resigned her employment, she was **not** entitled to further evaluations. In the present case, the respondents take the position that the Claimant is not entitled to post-MMI medical maintenance treatment, despite the Claimant's compelling evidence of continued and worsening chronic pain, proximately resulting from the admitted injury of 2008. Ultimately, the Court of Appeals concluded that a medical opinion was not necessary to prove causation because imposing such a requirement would be reading something into the statute that was not there. *See Jacoby v. Metro Taxi, Inc.,* 851 P.2d 245 (Colo. App. 1993). § 8-41-301, C.R.S., which specifies the conditions necessary for a compensability determination (this would include the compensability of a medical procedure or diagnostic tests, or post-MMI medical maintenance benefits) does **not** provide that a medical opinion is necessary to make such a determination. As observed in *Lymburn*, to require a medical opinion to support a causality determination would be to read something into the statute that does not exist. Consequently, *Lymburn* remains good law. In the present case, there is more than the Claimant's compelling lay testimony to support post-MMI medical maintenance care. There is the opinion of her ATP, Dr. Lesnak.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, coupled with the Claimant's compelling lay testimony, the ALJ made a rational choice, based on substantial evidence, to accept the opinion of ATP Dr. Lesnak that the Claimant requires post-MMI medical maintenance care to maintain her condition at MMI and to prevent a deterioration of the Claimant's condition and to reject all medical opinions to the contrary.

Post-MMI Medical Maintenance Benefits

d. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the injury. As found, there is substantial evidence, including the opinion of the Claimant's ATP, Dr. Lesnak, and the Claimant's compelling lay testimony that post-MMI maintenance medical care is causally related to the admitted injury of

January 15, 2008 and reasonably necessary to maintain the Claimant at MMI and prevent deterioration of her condition. This post-MMI maintenance treatment should be in the discretion of her ATP, Dr. Lesnak.

The Standard of Proof for DIME R. Sharma's Opinion that the Claimant Does Not Need Post-MMI Medical Maintenance Treatment

e. Beyond the DIME opinion concerning MMI and degree of permanent impairment as required by § 8-42-107 (8), C.R.S., a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). In the present case, DIME Dr. Sharma's opinion that the Claimant does not require post-MMI maintenance medical care is not subject to presumptive effect and it is on the level playing field of "preponderance of the evidence."

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on her need for post-MMI medical maintenance benefits, as recommended by her ATP, Dr. Lesnak.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Lawrence A. Lesnak, D.O., is the Claimant's authorized treating physician and the Respondents shall pay the costs of her return visits to him to receive post maximum medical improvement maintenance medical benefits.

B. The Respondents shall pay all the costs of a general award of post maximum medical maintenance care for the admitted injury, rendered in Dr. Lesnak's discretion, subject to the Division of Workers' Compensation medical Fee Schedule, including the costs of all Dr. Lesnak's prescribed medications.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of May 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Whether Claimant established by a preponderance of the evidence that his sternum fracture was work related, and

- Whether Claimant established by a preponderance of the evidence that he is entitled to payment of previously provided medical benefits and those medical benefits are reasonably necessary to cure or relieve the effects of a work related injury.

PROCEDURAL ISSUES

The parties stipulated that Claimant's average weekly wage on April 22, 2016, was $1900.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 47-year-old truck driver and former employee of the Employer.

2. On April 10, 2016, Claimant went on a horse ride with his son. Claimant initially testified that his horse was walking when he dropped the horse's rope and then reached for it. While Claimant was reaching, the horse stopped and Claimant's chest struck the horse's saddle. Claimant subsequently testified the horse was galloping before it stopped. On cross examination, Claimant agreed that the horse was galloping, cantering, and trotting, which, in Claimant's opinion, are all the same speed. Ultimately, Claimant stated the horse was travelling at four-tenths its maximum speed. Claimant testified that when the horse stopped, he struck his chest on the saddle's wooden pommel. This immediately caused pain and a bruise. Claimant was concerned about the bruise and sought medical care. Claimant then testified that the pain was minimal and that he was more concerned about the large bruise.

3. Approximately two hours after the horse-related accident, Claimant's chest pain began to increase. He sought medical treatment on April 11, 2016. Mauricio Waintrub, M.D., treated Claimant and X-rayed Claimant's chest. The X-ray was read as "normal" on that date. Dr. Waintrub did not note any swelling or bruising in his record of the evaluation. He prescribed Norco after Claimant complained of chest pain. Claimant testified that this injury was muscular while the alleged work injury seemed deep in his chest. However, on April 11, 2016, Claimant told Dr. Waintrub his chest felt as though it was "falling from inside." Claimant later reported to Dr. Raschbacher, Respondents' IME, that his chest had a five-inch bruise on April 11, 2016 and that it hurt to breathe.

4. Dr. Waintrub eventually concluded, after a CT scan of Claimant's chest was performed, that Claimant's sternum fracture was present when he examined Claimant on April 11, 2016.

5. No other physician treated Claimant between April 11, 2016 and April 22, 2016.

6. Claimant testified that he had pain symptoms after the April 11, 2016 appointment, but they were not severe and did not bother him. Claimant testified that the pain began to resolve within two days and completely subsided five days after the injury.

7. Claimant testified he never told anyone his horse bucked. However, Christopher Tierney, another of Employer's drivers, testified that he had a conversation with Claimant in the spring of 2016 at the Denver product terminal. Mr. Tierney had noticed Claimant looked sick or hurt while standing at a computer terminal. Claimant told Mr. Tierney he was not doing well because he had been on his horse when it had bucked and thrown Claimant into a trailer. Mr. Tierney reported the conversation to Francis Teter, Employer's fleet manager, within a couple of weeks.

8. At hearing, Mr. Teter testified that he spoke with Mr. Tierney regarding Claimant's statements two to three weeks after the initial report of injury, in May, 2016. Claimant testified that he did not have any difficulty doing his job prior to the work injury, and that he does not know who Christopher Tierney is. Claimant did recall having a brief conversation at an unknown location with unknown driver approximately three days after the horse accident. Claimant testified that he told that person he was only in a little bit of pain.

9. Claimant alleges that he sustained an injury to his sternum while at work on April 22, 2016. At hearing, Claimant testified that on April 22, 2016, he was unloading at a gas station when his hose got stuck in its storage tube mounted to the side of the truck. Claimant left the end he was initially pulling and moved closer to the storage tube. Claimant was approximately two feet from the stuck end of the hose when he grasped the hose with two hands and pulled more forcefully. Once the hose came free, Claimant testified the tip of the hose bent in such a way that it struck him in the chest. Claimant testified he lost his breath for three to four minutes after the hose tip hit him. According to Claimant, the metal tip of the hose that struck his chest weighs 25-30 pounds. However, that testimony was contradicted by Mr. Teter who testified more credibly that the metal tips are cast aluminum and weigh only two pounds.

10. Claimant reported the incident to Employer and sought medical treatment at Advanced Urgent Care ("AUC"). Claimant confirmed that the Employer's designated provider form bore his signature and handwriting, but he did not recall receiving or signing the form.

11. Claimant was treated at AUC by Christopher Wright, PA-C, on April 22, 2016. Claimant testified at hearing that on April 22, 2016, his pain level was 9/10. This

testimony was insistent with his recorded report to Mr. Wright of a pain level of 6/10. Claimant acknowledged that he did not tell Mr. Wright about the April 10, 2016 horse-related injury. Mr. Wright did not record Clamant having any bruising or swelling from the impact of the hose, nor did he impose any work restrictions after the April 22, 2016 examination.

12. Claimant testified that he called AUC to move his next appointment, which was initially on a later date, to April 27, 2016 due to an increased pain. On April 27, 2016, Claimant was evaluated by Julie Parsons, M.D. Claimant acknowledged that he did not tell Dr. Parsons about the horse-related injury because she did not ask him about it. He later admitted that Dr. Parsons did ask about prior chest injuries. Dr. Parsons recorded that Claimant was working full duty and had no skin discoloration. Claimant underwent chest x-rays and the radiologist noted a mass behind Claimant's sternum. Dr. Parsons reviewed the X-ray images and noted a possible non-displaced fracture of the sternum. She sent Claimant to the Emergency Department of North Suburban Medical Center for further evaluation.

13. At North Suburban, Claimant was treated by David Krueger, M.D. and underwent another X-ray and CT scan. The CT scan showed a non-displaced, mildly comminuted fracture of the upper body of the sternum. Claimant did not recall whether he told Dr. Krueger about his April 10, 2016 injury and Dr. Krueger's report does not indicate that Claimant did so.

14. Claimant continued treatment with Dr. Parsons who on May 18, 2016, ordered a repeat X-ray which showed "excellent healing and no displacement." Dr. Parsons ultimately placed Claimant at maximum medical improvement and released him to full duty on May 25, 2016. Throughout her treatment, Dr. Parsons never noted or otherwise indicated that Claimant told her about his horse-related injury.

15. Mr. Teter testified that he was Employer's fleet manager and had been for eleven years. When Mr. Teter hired Claimant , he learned that Claimant participated in Mexican rodeos in his free time. Mr. Teter was out of the office on April 22, 2016, and learned about the hose-related incident when he returned days later. Mr. Teter only had a more in-depth conversation with Claimant after learning that Claimant was experiencing pain. The conversation with Claimant occurred at a Murphy's station in Broomfield, Colorado, and Claimant described to him how the injury had occurred. Mr. Teter testified that the trailer pictured in Respondent's Exhibit U 131 was the trailer assigned to the Claimant when he worked for Employer. It is not possible to stand directly in front of the hose storage tubes due to the position of the loading/unloading fittings on the right side of the trailer. The storage tube for the twenty foot hose is approximately four feet and four inches from the ground. Exhibit U at page 132 shows the four inch hose inside the tube which, to Mr. Teter's knowledge, was not modified between April 2016 and the date the photo was taken. The hose tips, or fittings, are made of cast aluminum, are non-sparking, and weigh "a couple of pounds each." The hoses are made as flexibly as possible, but a twenty foot hose would require at least six feet to bend the tip of the hose back to touch the hose. The hose could not bend back over itself two feet from the end as Claimant alleged.

16. Claimant told Dr. Raschbacher that he has seen other drivers with broken jaws from his alleged mechanism of injury. Mr. Tierney has been in the industry for twelve years and has never known of anyone who broke their jaw with an unloading hose. Mr. Teter has been in the fuel hauling industry for thirty-five years and has never known of a hose breaking a driver's jaw.

17. Dr. Raschbacher testified at hearing as an expert in occupational medicine. Dr. Raschbacher performed a respondents' sponsored independent medical examination of Claimant on December 13, 2016, eight months after the initial horse-related injury. Claimant told Dr. Raschbacher about the April 22, 2016 hose incident, but did not disclose the horse-related injury until Dr. Raschbacher asked him about it directly. Claimant stated the first problem with his chest occurred on April 22, 2016. When describing the horse injury, Claimant did not describe the horse as moving. Dr. Raschbacher testified that he would expect a trauma that results in a sternum fracture to be accompanied by bruising because the force required to fracture the sternum would damage overlying tissue as well. He noted that Claimant's medical records from April 22, 2016 and subsequent appointments did not indicate any bruising, edema, swelling, or ecchymosis.

18. Dr. Raschbacher testified that three X-rays, one on April 11, 2016 and two on April 27, 2016, were not initially interpreted as showing fractures. The CT scan on April 27, 2016 did show a non-displaced, mildly comminuted fracture in the upper sternum. Dr. Raschbacher explained that a CT scan uses more accurate technology than an X-ray and produces a much higher quality image. Dr. Raschbacher agreed with Dr. Piko's report that the previous X-rays are actually consistent with the CT scan and confirm a sternum fracture prior to April 22, 2016. Dr. Raschbacher explained the April 11, 2016 X-ray was underpenetrated, meaning too little energy was applied to easily see detail within or behind the sternum.

19. Even assuming Claimant did hit himself in the chest with a hose, no persuasive evidence supports a finding that this aggravated the pre-existing fracture because Claimant presented no persuasive evidence that the fracture was disrupted. More likely than not the fracture would not have healed between April 10 and April 22, 2016, and anything striking Claimant's chest could cause severe pain. Dr. Raschbacher persuasively testified that even a deep breath could cause Claimant to experience pain.

20. Dr. Raschbacher testified further that he has little doubt that Claimant fractured his sternum on April 10, 2016 and that none of the medical care he received for the sternum fracture was work related.

21. James Piko, M.D., also reviewed Claimants' radiological images and submitted an expert report which was admitted as Exhibit B. Dr. Piko is certified by the American Osteopathic Board of Radiology National Board of Osteopathic Medical Examiners, licensed to practice medicine in Colorado and fifteen other states, and specializes in Musculoskeletal Radiology. Dr. Piko reviewed Claimant's chest X-rays and CT scan and concluded that the sternum fracture was present on April 11, 2016 and unchanged on April 27, 2016. Dr. Piko opined that Claimant did not acutely fracture

his sternum on April 22, 2016.

22. Although certain of Claimant's ATPs associated his injury with the alleged April 22, 2016 incident, the ALJ does not find their opinions persuasive because Claimant did not provide relevant diagnostic information to those physicians.

23. Based on the totality of the evidence, the ALJ finds that Claimant did not establish by a preponderance of the evidence that his injury is work related.

24. Based on the totality of the evidence, the ALJ finds that Claimant did not establish by a preponderance of the evidence that medical benefits he received are reasonably necessary to cure or relieve the effects of a work related injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S., §8-41-301(1) (c). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Id.* at 846. A compensable injury is an injury which "arises out of" and "in the course of" employment. *See* C.R.S. §8-41-301(1) (b).

In deciding whether a claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Credibility is a significant consideration when determining compensability. In assessing credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness of the testimony; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

An incident which merely elicits pain does not compel a finding that the claimant sustained a compensable aggravation or new injury. Colorado law is clear that the mere increase in pain or increase in symptoms associated with a prior injury does not compel the finding of a new injury or aggravation. *F.R. Orr Construction v. Rinta*, 717 P.2d 965, (Colo. App. 1985). Rather, to receive medical benefits the claimant must establish that the need for "additional medical treatment is proximately caused by the aggravation, and is not simply a direct and natural consequence of the pre-existing condition." *See Merriman v. Indus. Comm.*, 210 P.2d 448, 450 (Colo. 1949) and

Rockwell International v. Turnbull, 802 P.2d 1182 (Colo. App. 1990)). The ALJ must examine the totality of the circumstances to determine whether there is a sufficient nexus between the employment and the injury such that the accident may be said to have occurred in the scope of the Claimant's employment. *City and County of Denver School District No. 1 v. Industrial Commission*, 196 Colo. 131, 581 P.2d 1162 (1978).

In establishing causation, a claimant "must show that the industrial injury bears a 'direct causal relationship between the precipitating event and the resulting disability.'" *See Garcia v. CF&I Steel,* W.C. No. 4-454-548 (ICAO May 14, 2004).

The ALJ concludes that the following persuasive factors support a finding that Claimant did not suffer a new injury or compensable aggravation on April 22, 2016. But rather Claimant's symptoms are the result of a sternal fracture that occurred outside of work.

A preponderance of objective medical evidence supports this conclusion. For example:

- Drs. Piko and Raschbacher opined that Claimant's sternum was fractured on April 10, 2016and remained unchanged by Claimant's alleged work injury.

- Dr. Waintrub opined that Claimant's sternal fracture was present on April 11, 2016.

- Claimant was bruised by the injury from his horse, but was not bruised and showed no other external sign of injury from the alleged April 22, 2016 incident. Mr. Wright noted that there was not even skin discoloration on April 22, 2016. Dr. Raschbacher testified that the amount of force required to fracture a sternum would very likely cause bruising and swelling.

The mechanism of Claimant's injury is inconsistent with the properties of the equipment he was using. For example:

- Respondents' exhibits depict the hose in and partially out of the storage tube on the truck.

- In order for the tip of the hose to strike Claimant as he described, the hose would have had bend in front of Claimant until the tip faced Claimant's chest. Based on the more credible testimony of Employer's witness, the ALJ concludes that the two-foot length of hose in question was not flexible enough to make such a sharp turn, and that the hose could not have struck Claimant as he described.

- Claimant exaggerated the weight of the aluminum fittings on the ends of the hose testifying that the fittings weighed 25-30 pounds. More

persuasive testimony from Employer's witness established that the fittings were made of aluminum and weighed approximately two pounds.

And finally the ALJ concludes that Claimant was not credible for the following reasons:

- Claimant was a poor historian. His testimony was often inconsistent with his responses to interrogatories, his own statements at hearing, and prior statements.

- Claimant was not forthcoming with his medical providers and other doctors by failing to inform them of his April 10, 2016, horse-related injury despite their inquiries about prior chest injuries.

- Claimant was not forthcoming on cross-examination. For example, when Respondents' counsel asked him how fast his horse was moving just before it stopped: (1) Claimant's answers were unspecific; (2) he argued with counsel over linguistics; and (3) he then testified inconsistently that galloping and trotting were the same speed, that a canter is a half-gallop, and that cantering is the same speed as galloping.

- When asked for details about how the injury occurred, Claimant responded, "I can't remember" to at least nine consecutive questions.

- Claimant testified that the horse-related injury was not serious; however, he went to the doctor after the horse injury because he was frightened by a five-inch bruise over his sternum. In addition, despite his denial, his pain was so severe that his doctor prescribed narcotic pain relievers. In contrast, he testified that the symptoms caused by his alleged work injury were more severe. This testimony is contradicted by medical records which note there was not even redness at the alleged site of the injury and that the doctor had Claimant take over-the-counter pain relievers. As Dr. Raschbacher testified, if Claimant had struck his chest hard enough to break his sternum or aggravate the pre-existing fracture one would certainly expect the overlying soft tissue to show at least some sign of the impact.

Thus, the ALJ concludes that Claimant did not suffer a new injury or compensable aggravation on April 22, 2016.

Claimant bears the burden to prove by a preponderance of the evidence that his medical care was reasonably necessary to cure and relieve the effects of an industrial injury. Having concluded that Claimant did not suffer a new injury or compensable aggravation on April 22, 2016, the ALJ is unable to conclude that Claimant established by a preponderance of the evidence that he is entitled to payment of previously provided medical benefits and that those medical benefits are reasonably necessary to cure or relieve the effects of a work related injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to meet his burden of proving by a preponderance of the evidence that he suffered a new injury or a compensable aggravation of a pre-existing injury on April 22, 2016.

2. Claimant's claim is not compensable, and is denied and dismissed.

3. Claimant is not entitled to payment of previously provided medical benefits.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 3, 2017

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-695-181-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 4, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 5/4/17, Courtroom 1, beginning at 8:30 AM, and ending at 9:15 AM).

Claimant submitted no exhibits nor were any exchanged with the Respondents, Respondents' Exhibits A through H were admitted into evidence. The ALJ lodged an objection to Respondents' exhibits, which was overruled and the exhibits were admitted into evidence. Copies of Respondents' exhibits were given to the Claimant at the March 7, 2017 prehearing conference before ALJ Goldman, at which time the Claimant gave the following mailing address: 215 South 35, Billings, Montana 59107

At the conclusion of the hearing, the ALJ ruled from the bench and took the matter under advisement in order to prepare the written decision himself without a proposed decision. The ALJ hereby issues the following decision.

ISSUE

The issue to be determined by this decision concerns whether the statute of limitations applies to all of the Claimant's claims.

The Respondents bear the burden of proof, by a preponderance of the evidence on whether the statute of limitations applies to the Claimant's claims.

If the Respondents' satisfy their burden, the Claimant bears the burden of proof, by a preponderance of the evidence, on whether there was a tolling of the statute of limitations.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Notice

1. The Claimant attended the Prehearing Conference in person, held before ALJ Goldman, on March 7, 2017.

2. At the Prehearing Conference, the Claimant gave his mailing address as: 215 South 35, Billings, Montana 59107. Three days later, on March 10, 2017, the Office of Administrative Courts (OAC) mailed to Notice of Hearing to the Claimant at the above-mentioned address. The Notice of Hearing advised the Claimant that the hearing would be held on May 4, 2017, at 8:30 AM, at 1525 Sherman Street, 4th Floor, Denver, CO 80203. The Notice of Hearing was not returned by the U.S. Postal Authorities as undeliverable. Therefore, there is a legal presumption of receipt. The ALJ finds that the Claimant has not overcome this presumption. Therefore, the ALJ finds that the Claimant received legal notice of the May 4, 2017 hearing at 8:30 AM.

3. Although the Claimant was allowed to appear by telephone, he did not phone into the OAC at 8:30 AM, however, the ALJ reached the Claimant on his cell phone, number (406) 478-0790, and the Claimant thereupon testified, under oath, by telephone.

Preliminary Findings

4. The Claimant was born on May 10, 1966 and was 50 years old on the date of the hearing.

5. The Claimant sustained an admitted injury to his right elbow on August 6, 2006.

6. Ultimately, the Respondents filed a Final Admission of Liability (FAL), dated April 19, 2007, admitting for an average weekly wage (AWW) of $340; temporary

total disability (TTD) benefits of $226.67 per week from August 7, 2006 through September 27, 2006; a date of maximum medical improvement (MMI) of October 30, 2006; zero permanent partial disability (PPD); and, denying post-MMI medical maintenance benefits, pursuant to the opinion of Susan Geiger, D.O., one of the Claimant's authorized treating physicians (ATPs).

7. The Claimant failed to file a timely Objection to the FAL and/or a Notice and Proposal to Select a Division Independent Medical Examiner within 30 days as advised on the FAL. Therefore, the Claimant's claim was closed on or about May 21, 2007.

8. The Claimant failed to file a Petition to Re-Open his claim within 6 years of the date of his admitted injury and within 2 years of the date that his last benefits were due and payable.

9. The Claimant filed an Application for Hearing, dated December 16, 2016, nine years after the finality of the FAL, and more than ten years after the date of his admitted injury. Even if the Claimant's Application for Hearing is construed as a Petition to Re-Open, it exceeds the statute of limitations for re-opening. In his Application for hearing, the Claimant designated the issues of compensability, medical benefits and permanent total disability (PTD).

10. The Respondents raised the affirmative defense of "statute of limitations" in their Response to Application for Hearing, dated January 17, 2017.

The Claimant's Testimony at the Hearing

11. The Claimant testified, under oath, that he was working in South Dakota. His Boss, David Kampa, was on the phone call to assist the Claimant. The Claimant gave a new address: c/o David Kampa, P.O. Box 361, Groton, South Dakota 57445.

12. The Claimant testified to numerous injuries beyond the admitted right elbow injury, including back, a bleeding head and hand injuries. According to the Claimant he is still treating for all of these injuries here in the U.S. and in Mexico.

13. The Claimant failed to establish anything that would toll either of the applicable statutes of limitations.

Ultimate Findings

14. The Respondents have proven, by a preponderance of the evidence that all of the Claimant's claims, including claims for medical benefits and permanent total

disability benefits are barred by the applicable statutes of limitations. The last benefits were due and payable on or about October 30, 2007, the MMI date in the FAL. Consequently, if the Claimant's December 16, 2016 Application for Hearing is to be construed an objection to the FAL, the Respondents have proven that it was filed nine years after the FAL. If the Application for Hearing is to be construed as a Petition to Re-Open, Respondents have proven that it was filed more than ten years after the date of injury.

15. The Claimant failed to prove, by preponderant evidence that either applicable statute of limitations was

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Statute of Limitations

a. The Statute of Limitations is an affirmative defense and unless raised, it is waived. *See Kersting v. Indus. Comm'n,* 30 Colo. App. 297, 567 P.2d 394 (1977). To paraphrase the late U.S. Supreme Court Justice Oliver Wendell Holmes, Jr: "It has nothing to do with justice. It is a housekeeping device of the law to clean out old cases." When the time specified in a statute of limitations has passed, it could be conceptualized that there is a conclusive presumption that there will be prejudice to the side on the receiving end of the lawsuit. As found, herein above, the Respondents raised this affirmative defense, litigated it and proved it.

b. Section 8-43-203 (2) (b) (II) (A), C.R.S., provides that if an Objection to a FAL is **not** filed within 30 calendar days "the case will be automatically closed as to the issues admitted in the final admission…." As found, the Claimant did not object to the FAL within 30 calendar days. If his Application for Hearing is to be construed as an objection to the FAL, it was filed nine years after the finality of the FAL.

c. Section 8-43-303 (1), C.R.S., provides that a Petition to Re-Open must be filed within six years after the date of injury. Subsection (2) (a) provides that a Petition to Re-Open must be filed within two years after the last benefits were due and payable.

Tolling of the Statute of Limitations

d. There are exceptions to the two-year statute of limitations under § 8-43-103(2), but they do not apply in this case. For instance, § 8-43-103(2), C.R.S. provides that: "In all cases in which the employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division as required by the provisions of

[the Workers' Compensation Act], this statute of limitations shall not begin to run against the claim of the injured employee … until the required report has been filed with the division." *Likens v. Dep't of Corrs.*, W.C. No. 4-560-107 (ICAO Feb. 10, 2004). This exception is inapposite to the evidence herein. None of the tolling exceptions to the statute of limitations, contained in § 8-43-101, 102 and 103, C.R.S., are relevant to the facts herein.

e. The Claimant bears the burden of proving, by preponderant evidence, a tolling of the statute of limitations. *See Grant v. Indus. Claim Appeals Office*, 740 P.2d 530 (Colo. App. 1987). As found, the Claimant failed to satisfy his burden in this regard.

Burden of Proof

f. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). As found, the Respondents have satisfied their burden on the affirmative defense of both relevant statutes of limitations. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As further found, the Claimant failed to satisfy his burden with respect to a tolling of both relevant statutes of limitations

ORDER

IT IS, THEREFORE, ORDERED THAT:

The Claimant's claims for further benefits in W.C. No. 4-695-181-02, with respect to his admitted injury of August 6, 2006, are barred by the Statute of Limitations and are, therefore, denied and dismissed.

DATED this_____day of May 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-030-862-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 19, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 4/19/17, Courtroom 1, beginning at 1:30 PM, and ending at 4:45 PM).

Claimant's Exhibits 1 through 13 were admitted into evidence, without objection. Respondents' Exhibits A through O were admitted into evidence, without objection, with the exception of Respondents' Exhibit M, pages 116 through 118 to which the Claimant objected on the basis that the Tier 1 Investigator, Steve Yerger, who was not present to testify, recited the details of his interviews with Mitchell Rankin, an Employer-witness who actually testified at hearing. The ALJ sustained the objection to this portion of Respondents' Exhibit M on the basis that it does not qualify as a record of a regularly conducted activity under Rule 803 (6) CRE (Colorado Rules of Evidence). Also, none of the hearsay within the hearsay document qualifies under any exception to the hearsay rule and is therefore inadmissible by virtue of Rule 805, CRE. *See Pomeranz v. McDonald's Corp.,* 821 P.2d 843 (Colo. App. 1991), *aff'd in part, rev'd in part,* 843 P.2d 1315 (Colo. 1993) [testimony based solely on information from another person is inadmissible hearsay]. Although there were no objections to portions of Claimant's Exhibit 13 (a report by Eric B. Tentori, D.O., dated February 1, 2017), the ALJ struck all references contained in his "11-02-16" Note because it referred to Investigator Yeger's

letter (Respondents' Exhibit M, pages 116 through 118, which was rejected as evidence). Also, prior to his telephone testimony, the ALJ gave Dr. Tentori a cautionary instruction not to refer to any of Yeger's information nor could he base any of his opinions on Yeger's information which are contained in Respondents' Exhibit M, pages 116-118. During the course of the hearing the portion of Dr. Tentori's report in which he mentions Yerger's report was also excluded from the evidence (Claimant's Exhibit 13, pages 182 and 183 –the Note of 11/02/16)..

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed, electronically on April 25, 2017. Counsel for the Respondents emailed the proposed decision to the wrong email address for counsel for the Claimant: Nicole@coloradolawyer.com , and received a non-delivery notice of April 27, 2017. On May 2, 2017, the Office of Administrative Courts (OAC) emailed the proposed decision to the correct address for counsel for the Claimant: Nicole@coloradolawyer.net The office of Claimant's counsel acknowledged receipt thereof on May 2, 2017. Consequently, Claimant had two days within which to file objections to the proposed decision. The Claimant filed no timely objections. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability and, if compensable, medical benefits and average weekly wage (AWW). The Claimant bears the burden of proof, by a preponderance of the evidence on these issues.

If compensable, the Respondents bear the burden of proof, by preponderant evidence on the issue of offsets.

Because the ALJ hereby determines in this decision that the Claimant did **not** sustain compensable injuries on August 26, 2016, as he alleges, resolution of all other designated issues is moot.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated and the ALJ finds that the Claimant was a **Colorado** employee, subject to the extra-territorial provisions of § 8-41-204, C.R.S. The accident in question occurred near Layton, Utah.

2. Although the parties stipulated and the ALJ found that the Claimant's AWW was $630, the issue is moot in light of the fact that the claim is not compensable.

3. The Claimant was born on September 10, 1946 and was 70 years old on the date of hearing.

4. The Claimant began work for the Employer as an over-the-road (OTR) truck driver in August or September 2016. Prior to the present employment, he had worked as a tour bus driver and a school bus driver. No trailers were involved in these jobs. Neither of these jobs required a CDL license.

5. The Claimant's duties included driving a tractor trailer with loads of items, 7 days a week according to the Claimant, and delivering freight throughout the country. On the date of the alleged injury, he was a trainee to Mitchell ("Mike") J. Rankin, Jr., who testified at the hearing.

The Accident of August 26, 2016

6. While driving through Utah on August 26, 2016 at approximately 6:00 AM, the Claimant was involved in a motor vehicle collision when the semi-truck he was in struck a deer. The Claimant was asleep in the passenger seat at the time of the incident. He testified that he did not recall if he hit his head, but he was jolted awake by the impact. He was resting because he did not feel well as a result of some food he had eaten earlier. He felt that he had some "bad tuna," and he felt light headed and dizzy.

7. Mitchell "Mike" Rankin is a mentor driver for the Employer. As a mentor driver he trains new drivers how to drive and handle a truck on the road while making deliveries. He was the Claimant's mentor driver on August 26, 2016, and he was driving the truck at the time of the accident. He credibly testified that when he hit the deer he came to a slow stop and pulled over on the side of the interstate. He had been trained to react in this manner. Although the Claimant stated that he was asleep at the time of impact and was jolted awake, he testified that he believed that Rankin slammed on the brakes after the impact. According to Rankin, he then awakened the Claimant and told him that they had hit a deer. The impact of the deer caused damage to the radiator making the truck un-drivable, causing it to leak and damaging the front end of the vehicle (Claimant's Exhibit 1). Rankin testified that the Claimant remained sleeping until the vehicle pulled over to the side of the road. Rankin further testified that because of the Claimant's position as a passenger, it would have been impossible for the Claimant to hit his head on the dashboard, as the Claimant had stated. The ALJ resolves these conflicts in the testimony in favor of Rankin because Rankin credibly explained that he had been trained not to slam on the brakes when a large animal was hit, but instead to come to a slow stop and pull over to the side of the road; and, the Claimant could **not** have hit his head on the dashboard. For the reasons herein below

articulated, where the Claimant's version of events does not add up, the ALJ finds Rankin's version of his reaction to the impact credible and the Claimant's version lacking in credibility.

8. Both the Claimant and Rankin waited for a police officer to arrive. The Claimant did not report any injury to Rankin or Officer Martin, who responded to the accident. Rankin was not cited for the incident. Rankin testified that the truck was carrying a full load. Also, he stated he did not hard brake when he saw the deer because if he had done so, the truck would have jack-knifed or tipped over. The truck remained right side up and did not jack-knife. This is shown in the police report diagram (Respondents' Exhibit. M, p.120 and Claimant Exhibit 6, p.10). Rankin's testimony in this regard makes sense and is corroborated by the surrounding circumstances. The Claimant's version, on the other hand, does not make sense, is **not** corroborated by any persuasive evidence. Therefore, the ALJ resolves this conflict in the testimony in favor of Rankin's version of the accident, and against the Claimant's version.

9. The Claimant spoke with Tammy Bowers, the Workers Compensation Manager for the Employer, the day the incident occurred. She has been in this position for 13 years. Bowers testified that the Claimant complained of being lightheaded and experiencing dizziness. Bowers decided to put the Claimant up in an air conditioned motel room in Layton, Utah as a reaction to his complaints of lightheadedness and dizziness. As found herein above, the Claimant felt that he had a "bad tuna sandwich." He did not state that he struck his head. Bowers specifically asked the Claimant if he had any tender spots or marks on his head or anywhere and the Claimant informed her that he did not have any marks, bruising or injuries. It was not until October 2016 that Claimant alleged he had head, neck or right shoulder injuries from the August 26, 2016 accident.

Credibility

10. In an effort to discredit Rankin's credibility, the Claimant testified that he and Rankin had conflict on many things, including the music they listened to when driving. Presumably, the Claimant would have the ALJ infer from this that Rankin had a bias and motive to testify falsely, under oath. The ALJ rejects this implication. On the other hand, Rankin disclaimed any bias or motives against the Claimant; and, stated that the Claimant could listen to the Claimant's music when driving and Rankin could listen to Rankin's music when driving—a compromise that makes sense. Therefore, the ALJ infers no bias or adverse motives against the Claimant on Rankin's part.

11. The Claimant's testimony that he had a "bad tuna" and felt dizzy and lightheaded at the time that he was allegedly injured in the accident, was to address what the Claimant knew he had told Tammy Bowers on the day of the accident when he did **not** report an alleged work-related injury, and Bowers put the Claimant up in an air conditioned motel room in Layton, Utah. The ALJ infers and finds that the Claimant was

"covering his bases," knowing what he had told Bowers on the date of the incident when he did **not** report a work-related injury.

12. The ALJ infers and finds that the Claimant has the greatest interest in the outcome of the litigation, and Rankin does not. Further, the Claimant's testimony contains improbabilities (*e.g.,* that Rankin slammed on the brakes at the moment of impact), his testimony and actions after the accident of August 26, 2016 and not reporting an alleged work-related injury until October 2016 or not seeking medical attention after the incident, are inconsistent with the injuries that the Claimant now claims; and, lastly the Claimant's version of events as found herein above, is unreasonable. On the other hand, Rankin presented credibly. He has no interest in the outcome of the claim; and, his testimony was reasonable, consistent and probably quite accurate. Therefore, the ALJ finds Rankin's testimony credible and the Claimant's testimony lacking in credibility.

Medical

13. The Claimant has had numerous pre-existing injuries and issues involving his head, neck and right shoulder. He did not present any persuasive evidence that showed his pre-existing conditions had worsened, or were aggravated/accelerated, in any way. In fact, radiology records did not reveal any objective evidence of an injury on August 26, 2016 (Respondents' Exhibit F, pp. 74 – 82).

14. Eric Tentori, D.O., evaluated and treated the Claimant in this case. He is an authorized treating provider (ATP). Dr. Tentori testified by telephone that there was no evidence of any injury to Claimant on August 26, 2016. Dr. Tentori carefully avoided basing any part of his opinions on the rejected hearsay of Yeger. Based on the mechanism of injury, Dr. Tentori was of the opinion that the incident was minor and did not cause any need for medical treatment or impairment (Respondents' Exhibit B pp. 6-7 and Dr. Tentori's telephone testimony).

15. Deborah L. Mattingly, M.D., provided a record review of the Claimant's prior conditions in relation to the current claim. She also was of the opinion that the Claimant did not suffer any injury as a result of the minor motor vehicle incident (Respondents' Exhibit C). Dr. Tentori stated that any treatment that Claimant receives should be sought outside of the workers compensation given the lack of evidence of any work-related injury. The ALJ infers and finds that Dr. Tentori, the Claimant's ATP, is of the opinion that the Claimant did not sustain a work-related aggravation/acceleration of his pre-existing conditions by virtue of the minor accident of August 26, 2016.

16. The Claimant did not present any persuasive evidence concerning medical care he required as a result of the accident of August 26, 2016. He also did not present any persuasive evidence of any aggravation/acceleration of any pre-existing conditions.

17. The opinion of ATP Dr. Tentori that the incident on August 26, 2016 was minor and did not cause an injury or, aggravate or accelerate any pre-existing condition is credible, persuasive and, essentially, un-refuted. The radiology records and the medical opinion of Dr. Mattingly corroborate the lack of causal relatedness of any aggravating injury in the incident of August 26, 2016.

Ultimate Findings

18. In assessing credibility, the ALJ must weigh several factors: (1) interest in the outcome of the litigation; the consistency or inconsistency of a witness' testimony; the reasonableness or unreasonableness of the testimony (probability or improbability); the motives of a witness; and, bias or prejudice. As found herein above in Finding No. 11, these factors weighed against the Claimant's credibility and in favor of Rankin's credibility. This matter turns on credibility and because the ALJ finds Rankin credible and the Claimant incredible, the Claimant has failed to support his claim of a work-related injury or aggravation/acceleration of a pre-existing condition, on August 26, 2016.

19. The opinions of ATP Dr. Tentori and Dr. Mattingly are undisputed and they are credible. The Claimant furnished no persuasive medical opinions to the contrary. Therefore, the opinions of ATP Dr. Tentori and Dr. Mattingly are dispositive of the issue of "compensability."

20. The Claimant has failed to prove, by a preponderance of the evidence that he sustained compensable injuries on August 26, 2016, arising out of the accident whereby the truck in which he was a passenger struck a deer.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558

(Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found herein above in Findings Nos. 9 through 12, the credibility factors weighed against the Claimant's credibility and in favor of Rankin's and Bowers' credibility. This matter turns on credibility and because the ALJ found Rankin and Bowers credible, and the Claimant lacing in credibility, the Claimant has failed to support his claim of a work-related injury or aggravation/acceleration of a pre-existing condition, on August 26, 2016.

b. As found, the opinions of Dr. Tentori and Dr. Mattingly that the Claimant did not sustain work-related injuries on August 26, 2016 are undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. Further, their opinions are credible and dispositive of the 'compensability" issue.

Sufficiency of Injury to be "Compensable"

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. The consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, the Claimant did not seek or require medical attention for his claimed injuries after the incident of August 26, 2016. He is not claiming that the "bad tuna" that caused lightheadedness and dizziness was a compensable event. Indeed,

he did not seek medical attention for his alleged upper back injury until after October 2016. The ALJ concludes that the circumstances of the incident of August 26 2016, are insufficient to constitute a compensable injury.

Compensability

d. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a pre-existing condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a pre-existing condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo..App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the truck accident of August 26, 2016 did **not** aggravate or accelerate the Claimant's pre-existing conditions. Therefore, he did **not** sustain compensable injuries on August 26, 2016.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001).

"Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain his burden of proof on "compensability."

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this_____day of May 2017.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-014-029-01

ISSUES

- Whether Claimant established by a preponderance of the evidence that his sternum fracture was work related, and

- Whether Claimant established by a preponderance of the evidence that he is entitled to payment of previously provided medical benefits and those medical benefits are reasonably necessary to cure or relieve the effects of a work related injury.

PROCEDURAL ISSUES

The parties stipulated that Claimant's average weekly wage on April 22, 2016, was $1900.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 47-year-old truck driver and former employee of the Employer.

2. On April 10, 2016, Claimant went on a horse ride with his son. Claimant initially testified that his horse was walking when he dropped the horse's rope and then reached for it. While Claimant was reaching, the horse stopped and Claimant's chest struck the horse's saddle. Claimant subsequently testified the horse was galloping before it stopped. On cross examination, Claimant agreed that the horse was galloping, cantering, and trotting, which, in Claimant's opinion, are all the same speed. Ultimately, Claimant stated the horse was travelling at four-tenths its maximum speed. Claimant testified that when the horse stopped, he struck his chest on the saddle's wooden pommel. This immediately caused pain and a bruise. Claimant was concerned about the bruise and sought medical care. Claimant then testified that the pain was minimal and that he was more concerned about the large bruise.

3. Approximately two hours after the horse-related accident, Claimant's chest pain began to increase. He sought medical treatment on April 11, 2016. Mauricio Waintrub, M.D., treated Claimant and X-rayed Claimant's chest. The X-ray was read as "normal" on that date. Dr. Waintrub did not note any swelling or bruising in his record of the evaluation. He prescribed Norco after Claimant complained of chest pain. Claimant testified that this injury was muscular while the alleged work injury seemed deep in his chest. However, on April 11, 2016, Claimant told Dr. Waintrub his chest felt as though it was "falling from inside." Claimant later reported to Dr. Raschbacher, Respondents' IME, that his chest had a five-inch bruise on April 11, 2016 and that it hurt to breathe.

4. Dr. Waintrub eventually concluded, after a CT scan of Claimant's chest was performed, that Claimant's sternum fracture was present when he examined Claimant on April 11, 2016.

5. No other physician treated Claimant between April 11, 2016 and April 22, 2016.

6. Claimant testified that he had pain symptoms after the April 11, 2016 appointment, but they were not severe and did not bother him. Claimant testified that the pain began to resolve within two days and completely subsided five days after the injury.

7. Claimant testified he never told anyone his horse bucked. However, Christopher Tierney, another of Employer's drivers, testified that he had a conversation with Claimant in the spring of 2016 at the Denver product terminal. Mr. Tierney had noticed Claimant looked sick or hurt while standing at a computer terminal. Claimant told Mr. Tierney he was not doing well because he had been on his horse when it had bucked and thrown Claimant into a trailer. Mr. Tierney reported the conversation to Francis Teter, Employer's fleet manager, within a couple of weeks.

8. At hearing, Mr. Teter testified that he spoke with Mr. Tierney regarding Claimant's statements two to three weeks after the initial report of injury, in May, 2016. Claimant testified that he did not have any difficulty doing his job prior to the work injury, and that he does not know who Christopher Tierney is. Claimant did recall having a brief conversation at an unknown location with unknown driver approximately three days after the horse accident. Claimant testified that he told that person he was only in a little bit of pain.

9. Claimant alleges that he sustained an injury to his sternum while at work on April 22, 2016. At hearing, Claimant testified that on April 22, 2016, he was unloading at a gas station when his hose got stuck in its storage tube mounted to the side of the truck. Claimant left the end he was initially pulling and moved closer to the storage tube. Claimant was approximately two feet from the stuck end of the hose when he grasped the hose with two hands and pulled more forcefully. Once the hose came free, Claimant testified the tip of the hose bent in such a way that it struck him in the chest. Claimant testified he lost his breath for three to four minutes after the hose tip hit him. According to Claimant, the metal tip of the hose that struck his chest weighs 25-30 pounds. However, that testimony was contradicted by Mr. Teter who testified more credibly that the metal tips are cast aluminum and weigh only two pounds.

10. Claimant reported the incident to Employer and sought medical treatment at Advanced Urgent Care ("AUC"). Claimant confirmed that the Employer's designated provider form bore his signature and handwriting, but he did not recall receiving or signing the form.

11. Claimant was treated at AUC by Christopher Wright, PA-C, on April 22, 2016. Claimant testified at hearing that on April 22, 2016, his pain level was 9/10. This

testimony was insistent with his recorded report to Mr. Wright of a pain level of 6/10. Claimant acknowledged that he did not tell Mr. Wright about the April 10, 2016 horse-related injury. Mr. Wright did not record Clamant having any bruising or swelling from the impact of the hose, nor did he impose any work restrictions after the April 22, 2016 examination.

12. Claimant testified that he called AUC to move his next appointment, which was initially on a later date, to April 27, 2016 due to an increased pain. On April 27, 2016, Claimant was evaluated by Julie Parsons, M.D. Claimant acknowledged that he did not tell Dr. Parsons about the horse-related injury because she did not ask him about it. He later admitted that Dr. Parsons did ask about prior chest injuries. Dr. Parsons recorded that Claimant was working full duty and had no skin discoloration. Claimant underwent chest x-rays and the radiologist noted a mass behind Claimant's sternum. Dr. Parsons reviewed the X-ray images and noted a possible non-displaced fracture of the sternum. She sent Claimant to the Emergency Department of North Suburban Medical Center for further evaluation.

13. At North Suburban, Claimant was treated by David Krueger, M.D. and underwent another X-ray and CT scan. The CT scan showed a non-displaced, mildly comminuted fracture of the upper body of the sternum. Claimant did not recall whether he told Dr. Krueger about his April 10, 2016 injury and Dr. Krueger's report does not indicate that Claimant did so.

14. Claimant continued treatment with Dr. Parsons who on May 18, 2016, ordered a repeat X-ray which showed "excellent healing and no displacement." Dr. Parsons ultimately placed Claimant at maximum medical improvement and released him to full duty on May 25, 2016. Throughout her treatment, Dr. Parsons never noted or otherwise indicated that Claimant told her about his horse-related injury.

15. Mr. Teter testified that he was Employer's fleet manager and had been for eleven years. When Mr. Teter hired Claimant , he learned that Claimant participated in Mexican rodeos in his free time. Mr. Teter was out of the office on April 22, 2016, and learned about the hose-related incident when he returned days later. Mr. Teter only had a more in-depth conversation with Claimant after learning that Claimant was experiencing pain. The conversation with Claimant occurred at a Murphy's station in Broomfield, Colorado, and Claimant described to him how the injury had occurred. Mr. Teter testified that the trailer pictured in Respondent's Exhibit U 131 was the trailer assigned to the Claimant when he worked for Employer. It is not possible to stand directly in front of the hose storage tubes due to the position of the loading/unloading fittings on the right side of the trailer. The storage tube for the twenty foot hose is approximately four feet and four inches from the ground. Exhibit U at page 132 shows the four inch hose inside the tube which, to Mr. Teter's knowledge, was not modified between April 2016 and the date the photo was taken. The hose tips, or fittings, are made of cast aluminum, are non-sparking, and weigh "a couple of pounds each." The hoses are made as flexibly as possible, but a twenty foot hose would require at least six feet to bend the tip of the hose back to touch the hose. The hose could not bend back over itself two feet from the end as Claimant alleged.

16. Claimant told Dr. Raschbacher that he has seen other drivers with broken jaws from his alleged mechanism of injury. Mr. Tierney has been in the industry for twelve years and has never known of anyone who broke their jaw with an unloading hose. Mr. Teter has been in the fuel hauling industry for thirty-five years and has never known of a hose breaking a driver's jaw.

17. Dr. Raschbacher testified at hearing as an expert in occupational medicine. Dr. Raschbacher performed a respondents' sponsored independent medical examination of Claimant on December 13, 2016, eight months after the initial horse-related injury. Claimant told Dr. Raschbacher about the April 22, 2016 hose incident, but did not disclose the horse-related injury until Dr. Raschbacher asked him about it directly. Claimant stated the first problem with his chest occurred on April 22, 2016. When describing the horse injury, Claimant did not describe the horse as moving. Dr. Raschbacher testified that he would expect a trauma that results in a sternum fracture to be accompanied by bruising because the force required to fracture the sternum would damage overlying tissue as well. He noted that Claimant's medical records from April 22, 2016 and subsequent appointments did not indicate any bruising, edema, swelling, or ecchymosis.

18. Dr. Raschbacher testified that three X-rays, one on April 11, 2016 and two on April 27, 2016, were not initially interpreted as showing fractures. The CT scan on April 27, 2016 did show a non-displaced, mildly comminuted fracture in the upper sternum. Dr. Raschbacher explained that a CT scan uses more accurate technology than an X-ray and produces a much higher quality image. Dr. Raschbacher agreed with Dr. Piko's report that the previous X-rays are actually consistent with the CT scan and confirm a sternum fracture prior to April 22, 2016. Dr. Raschbacher explained the April 11, 2016 X-ray was underpenetrated, meaning too little energy was applied to easily see detail within or behind the sternum.

19. Even assuming Claimant did hit himself in the chest with a hose, no persuasive evidence supports a finding that this aggravated the pre-existing fracture because Claimant presented no persuasive evidence that the fracture was disrupted. More likely than not the fracture would not have healed between April 10 and April 22, 2016, and anything striking Claimant's chest could cause severe pain. Dr. Raschbacher persuasively testified that even a deep breath could cause Claimant to experience pain.

20. Dr. Raschbacher testified further that he has little doubt that Claimant fractured his sternum on April 10, 2016 and that none of the medical care he received for the sternum fracture was work related.

21. James Piko, M.D., also reviewed Claimants' radiological images and submitted an expert report which was admitted as Exhibit B. Dr. Piko is certified by the American Osteopathic Board of Radiology National Board of Osteopathic Medical Examiners, licensed to practice medicine in Colorado and fifteen other states, and specializes in Musculoskeletal Radiology. Dr. Piko reviewed Claimant's chest X-rays and CT scan and concluded that the sternum fracture was present on April 11, 2016 and unchanged on April 27, 2016. Dr. Piko opined that Claimant did not acutely fracture

his sternum on April 22, 2016.

22. Although certain of Claimant's ATPs associated his injury with the alleged April 22, 2016 incident, the ALJ does not find their opinions persuasive because Claimant did not provide relevant diagnostic information to those physicians.

23. Based on the totality of the evidence, the ALJ finds that Claimant did not establish by a preponderance of the evidence that his injury is work related.

24. Based on the totality of the evidence, the ALJ finds that Claimant did not establish by a preponderance of the evidence that medical benefits he received are reasonably necessary to cure or relieve the effects of a work related injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S., §8-41-301(1) (c). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Id.* at 846. A compensable injury is an injury which "arises out of" and "in the course of" employment. *See* C.R.S. §8-41-301(1) (b).

In deciding whether a claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Credibility is a significant consideration when determining compensability. In assessing credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness of the testimony; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

An incident which merely elicits pain does not compel a finding that the claimant sustained a compensable aggravation or new injury. Colorado law is clear that the mere increase in pain or increase in symptoms associated with a prior injury does not compel the finding of a new injury or aggravation. *F.R. Orr Construction v. Rinta*, 717 P.2d 965, (Colo. App. 1985). Rather, to receive medical benefits the claimant must establish that the need for "additional medical treatment is proximately caused by the aggravation, and is not simply a direct and natural consequence of the pre-existing condition." *See Merriman v. Indus. Comm.*, 210 P.2d 448, 450 (Colo. 1949) and

Rockwell International v. Turnbull, 802 P.2d 1182 (Colo. App. 1990)). The ALJ must examine the totality of the circumstances to determine whether there is a sufficient nexus between the employment and the injury such that the accident may be said to have occurred in the scope of the Claimant's employment. *City and County of Denver School District No. 1 v. Industrial Commission*, 196 Colo. 131, 581 P.2d 1162 (1978).

In establishing causation, a claimant "must show that the industrial injury bears a 'direct causal relationship between the precipitating event and the resulting disability.'" *See Garcia v. CF&I Steel,* W.C. No. 4-454-548 (ICAO May 14, 2004).

The ALJ concludes that the following persuasive factors support a finding that Claimant did not suffer a new injury or compensable aggravation on April 22, 2016. But rather Claimant's symptoms are the result of a sternal fracture that occurred outside of work.

A preponderance of objective medical evidence supports this conclusion. For example:

- Drs. Piko and Raschbacher opined that Claimant's sternum was fractured on April 10, 2016and remained unchanged by Claimant's alleged work injury.

- Dr. Waintrub opined that Claimant's sternal fracture was present on April 11, 2016.

- Claimant was bruised by the injury from his horse, but was not bruised and showed no other external sign of injury from the alleged April 22, 2016 incident. Mr. Wright noted that there was not even skin discoloration on April 22, 2016. Dr. Raschbacher testified that the amount of force required to fracture a sternum would very likely cause bruising and swelling.

The mechanism of Claimant's injury is inconsistent with the properties of the equipment he was using. For example:

- Respondents' exhibits depict the hose in and partially out of the storage tube on the truck.

- In order for the tip of the hose to strike Claimant as he described, the hose would have had bend in front of Claimant until the tip faced Claimant's chest. Based on the more credible testimony of Employer's witness, the ALJ concludes that the two-foot length of hose in question was not flexible enough to make such a sharp turn, and that the hose could not have struck Claimant as he described.

- Claimant exaggerated the weight of the aluminum fittings on the ends of the hose testifying that the fittings weighed 25-30 pounds. More

persuasive testimony from Employer's witness established that the fittings were made of aluminum and weighed approximately two pounds.

And finally the ALJ concludes that Claimant was not credible for the following reasons:

- Claimant was a poor historian. His testimony was often inconsistent with his responses to interrogatories, his own statements at hearing, and prior statements.

- Claimant was not forthcoming with his medical providers and other doctors by failing to inform them of his April 10, 2016, horse-related injury despite their inquiries about prior chest injuries.

- Claimant was not forthcoming on cross-examination. For example, when Respondents' counsel asked him how fast his horse was moving just before it stopped: (1) Claimant's answers were unspecific; (2) he argued with counsel over linguistics; and (3) he then testified inconsistently that galloping and trotting were the same speed, that a canter is a half-gallop, and that cantering is the same speed as galloping.

- When asked for details about how the injury occurred, Claimant responded, "I can't remember" to at least nine consecutive questions.

- Claimant testified that the horse-related injury was not serious; however, he went to the doctor after the horse injury because he was frightened by a five-inch bruise over his sternum. In addition, despite his denial, his pain was so severe that his doctor prescribed narcotic pain relievers. In contrast, he testified that the symptoms caused by his alleged work injury were more severe. This testimony is contradicted by medical records which note there was not even redness at the alleged site of the injury and that the doctor had Claimant take over-the-counter pain relievers. As Dr. Raschbacher testified, if Claimant had struck his chest hard enough to break his sternum or aggravate the pre-existing fracture one would certainly expect the overlying soft tissue to show at least some sign of the impact.

Thus, the ALJ concludes that Claimant did not suffer a new injury or compensable aggravation on April 22, 2016.

Claimant bears the burden to prove by a preponderance of the evidence that his medical care was reasonably necessary to cure and relieve the effects of an industrial injury. Having concluded that Claimant did not suffer a new injury or compensable aggravation on April 22, 2016, the ALJ is unable to conclude that Claimant established by a preponderance of the evidence that he is entitled to payment of previously provided medical benefits and that those medical benefits are reasonably necessary to cure or relieve the effects of a work related injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to meet his burden of proving by a preponderance of the evidence that he suffered a new injury or a compensable aggravation of a pre-existing injury on April 22, 2016.

2. Claimant's claim is not compensable, and is denied and dismissed.

3. Claimant is not entitled to payment of previously provided medical benefits.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 3, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his right knee on March 23, 2016.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to a general award of reasonable and necessary medical benefits to treat his right knee.

3. Whether Claimant has established by a preponderance of the evidence that the right knee surgery performed by Dr. Foulk on October 19, 2016 was reasonable, necessary, and related to a compensable right knee injury.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from October 19, 2016 through October 22, 2016.

FINDINGS OF FACT

1. Claimant is 59 years old and works for Employer as an Experience Advisor. Claimant's job duties include greeting customers and communicating with customers who bring their vehicles in for service. Claimant gets the customers' cars to Employer's mechanics, follows up with customers to let them know what is wrong with the vehicles, and performs various service calls to customers.

2. Prior to March 23, 2016 Claimant had no issues with his right knee. Claimant had left knee issues in 2011. In 2011 Claimant was playing tennis and ran after a ball when he had a sharp pain in his left knee. Claimant underwent a meniscal repair and two years later underwent a left total knee arthroplasty.

3. At a Kaiser Permanente evaluation in July of 2011 Claimant reported left knee pain after an injury playing tennis. *See* Exhibit B.

4. On October 6, 2011 Claimant was evaluated by Michael Gallagher, M.D. Claimant reported no significant pain in his left knee prior to July 2011 and that he had had ongoing pain since in the left knee medially, sometimes worse with activity. Dr. Gallagher noted that MRI images demonstrated evidence of significant degenerative joint disease in the left knee with osteophyte formation and medial meniscus tearing. Dr. Gallagher recommended continued conservative management and provided a corticosteroid injection. Dr. Gallagher discussed activity modification and also

discussed the possibility of arthroscopy surgery with meniscectomy. Dr. Gallagher did not recommend surgery given the degenerative changes unless Claimant had significant onset of mechanical symptoms. *See* Exhibits B, 7.

5. On April 5, 2012 Claimant was evaluated by Dimitri Zaronias, M.D. Claimant reported persistent pain on the medial joint line and now having trouble shifting in his left knee. Dr. Zaronias noted mild swelling, medial joint line pain, medial sided pain with McMurray testing, and a minimally affected gait. Dr. Zaronias opined that x-rays showed medial compartment arthritis and that an MRI scan revealed the same with an unstable medial meniscus tear. Dr. Zaronias discussed surgical and non surgical options. Dr. Zaronias noted that the surgery could debride out the torn meniscus and that surgery would potentially eliminate the mechanical symptoms but may not affect the arthritis and that Claimant may still have persistent achiness in the future as the arthritis advances. Claimant wished to proceed with surgery due to his recurring symptoms. *See* Exhibit B.

6. On April 19, 2012 Claimant underwent a left knee partial medial meniscectomy and debridement of patellofemoral joint. Following surgery, Claimant had injections for his osteoarthritis and eventually on February 11, 2014 Claimant underwent a left total knee arthroplasty for his osteoarthritis. Claimant's left knee healed. Claimant's left knee and right knee were both fully functioning and he had no pain or limitations in either knee until March of 2016. *See* Exhibits B, C.

7. On March 23, 2016 Claimant was at work. There had been a big snow storm that day with heavy and wet snow covering the ground. Claimant was at work early and he and some co-workers went outside to shovel the walkways, driveways, and entrance to the store. Claimant shoveled for approximately one hour before coming inside for a coffee break.

8. After coffee, Claimant went back outside and again began shoveling snow. Claimant was pushing the snow with a shovel when he felt a pop in his right knee. At the time he felt the pop he had his left hand forward on the shovel, his left shoulder pointed forward, bent knees, and had his right knee turned out slightly. Claimant felt the pop and a sharp pain that felt like he had been stabbed with a needle.

9. Claimant did not slip or fall. Claimant used the snow shovel to limp back into the building. Claimant reported the incident to pretty much everyone at the office that day, including a human resources person who directed Claimant to report to the safety liaison.

10. Due to the snow storm, there was also a power outage that day and the electronic reporting system for injuries was not up and running. Claimant believes that he made an electronic report of injury approximately two days later.

11. Claimant testified credibly that he wanted to go home and ice his knee and that he didn't immediately want treatment. However, he testified that one week later, his

knee was still not feeling better so he went to Concentra for treatment. Claimant testified credibly that icing and elevating didn't help it much and that he had a constant sensation of a "marble" in his knee.

12. On March 29, 2016 Claimant was evaluated at Concentra by Lloyd Thurston, D.O. Claimant reported a pop in his right knee while shoveling snow on March 23, 2016 and that his knee felt unstable. Claimant reported no prior right knee problems but a prior left knee total knee arthroplasty. Dr. Thurston found tenderness on the lateral joint line, a positive lateral Apleys grind test, and a positive lateral McMurray test. Dr. Thurston assessed tear of the lateral meniscus of the right knee and ordered an MRI of the right knee. *See* Exhibits D, 4.

13. On April 7, 2016 Claimant underwent an MRI of his right knee that was interpreted by Patrick O'Malley, M.D. The impression was: large knee joint effusion; oblique tear of the posterior horn of the medial meniscus contacting the inferior articular surface; multiplanar tear of the body and posterior horn of the lateral meniscus that contacts the superior and inferior articular surfaces; findings consistent with patellar maltracking and excessive lateral pressure syndrome and associated chondromalacia of the patellofemoral compartment; and moderate chondromalacia of the lateral femorotibial compartment. *See* Exhibits E, 5.

14. On April 12, 2016 Claimant was evaluated by Dr. Thurston. Dr. Thurston noted that he discussed the MRI results of an acute meniscus tear and chronic degenerative changes with Claimant. Dr. Thurston assessed right medial meniscus derangement and referred Claimant to an orthopedic specialist. *See* Exhibits D, 4.

15. On April 28, 2016 Claimant was evaluated by orthopedic specialist Douglas Foulk, M.D. Claimant reported a pop in his right knee and that since it felt like he was walking around on a marble. Claimant reported swelling that had persisted since the injury, pain at a 6-7/10, clicking, and catching. Dr. Foulk assessed primary osteoarthritis of the right knee, medial meniscus tear of the right knee, and pain in the right knee. Dr. Foulk reviewed the risks and benefits of surgery and non surgical alternatives. Dr. Foulk opined that Claimant had some osteoarthritis that was present prior to the claim, but opined that the meniscal pathology present would not heal with physical therapy or tincture of time and required surgical intervention. Claimant indicated that he wished to proceed with a right knee arthroscopic partial medial and lateral meniscectomy, chondroplasty. *See* Exhibits F, 1.

16. On May 2, 2016 Dr. Foulk's office submitted a surgery authorization request for right knee arthroscopy with medial and lateral meniscectomy. *See* Exhibit 1.

17. On May 12, 2016 Timothy O'Brien performed a medical records review and issued a report. Dr. O'Brien opined that Claimant was not a candidate for an arthroscopic surgery and disagreed with Dr. Foulk that surgery was reasonable and necessary. Dr. O'Brien opined that Dr. Folk's opinion was unsubstantiated and ran contrary to every epidemiologically valid scientific treatise that had been published in

orthopedic literature since 2002. Dr. O'Brien opined that given the overwhelming scientific evidence proving that an arthroscopic surgery is neither beneficial to a knee that is painful due to osteoarthritis or a knee that is painful due to a degenerative medical or lateral meniscal tear, the surgery was contraindicated. Dr. O'Brien noted that Claimant had a contralateral total knee replacement which spoke to the genetic nature of Claimant's condition. Dr. O'Brien opined that Claimant experienced a temporary aggravation of his pre-existing arthritic condition on the date of his injury and that those types of minor strains and sprains of arthritic knees were commonplace. Dr. O'Brien noted that he had performed nearly 3,000 total knee replacements and had treated tens of thousands of patients with knee osteoarthritis and opined that feeling pain while shoveling snow was not surprising. Dr. O'Brien opined that it was medically probable that Claimant's minor flare of osteoarthritis would resolve within two months and that after his minor injury healed, Claimant would remain a candidate for a total knee arthroplasty just as he was prior to the work injury. *See* Exhibit A.

18. On June 21, 2016 Claimant was evaluated by Dr. Foulk. Dr. Foulk noted that Claimant had returned for further evaluation of right knee pain that was the result of an acute injury at work on March 23, 2016. Claimant reported that the prior cortisone injection had helped alleviate symptoms by 30-50%. Claimant also reported that the surgery had been denied and Dr. Foulk reviewed the denial letter. Dr. Foulk reviewed Dr. O'Brien's report. Dr. Foulk noted that although Dr. O'Brien referred to several articles published in orthopedic surgery based literature, everyone was aware of the statistical weakness of those papers and that orthopedic surgeons managing conditions like Claimant's are aware that many patients do indeed benefit from arthroscopic treatment. Dr. Foulk noted that he was not claimant to attempt to improve Claimant's arthritic component, but was attempting to improve the meniscal component of the problem and noted that Claimant was well aware that the arthritic component would be minimally improved, if at all. *See* Exhibits F, 1.

19. On June 23, 2016 Dr. Foulk's office submitted a second surgery authorization request. *See* Exhibit 1.

20. On October 5, 2016 Dr. O'Brien performed a records review and issued a report. Dr. O'Brien opined that nothing he reviewed more recently had altered his opinion from his May 12, 2016 report and he again opined that the surgery recommended by Dr. Foulk was not reasonable or indicated. Dr. O'Brien opined that a risk/benefit analysis, peer-reviewed literature, and empirical evidence argued against the recommended surgical intervention. Dr. O'Brien noted that although Dr. Foulk indicated that his cited articles were statistically weak that most had achieved Level 1 evidentiary status which is considered the highest level of evidence obtainable. Dr. O'Brien opined that the literature does not contain any articles with a Level 1 or Level 2 evidentiary status that supported Dr. Foulk's recommendation for surgery. Dr. O'Brien opined that the surgery was contraindicated and should not be approved. Dr. O'Brien opined that the degenerative medial meniscal tear that Dr. Foulk was using as the sole indicator for the arthroscopic surgery had been biomechanically inoperative for years and was not a pain generator. Dr. O'Brien opined that it was a pre-existing condition

long prior to the work incident in question and that the work incident only temporarily aggravated the osteoarthritic condition and that Claimant had returned to his pre-injury level of function. Dr. O'Brien opined that Claimant's ongoing symptomatology was due to his osteoarthritis in the knee joint. Dr. O'Brien opined that Claimant was not a candidate for an arthroscopy but possibly was a candidate for a total knee arthroplasty. *See* Exhibit A.

21. On October 19, 2016 Claimant underwent right knee surgery performed by Dr. Foulk. The pre-operation and post-operation diagnoses were: medial femoral condylar chondromalacia, lateral femoral condylar chondromalacia, patellar chondromalacia, chondromalacia of the trochlear groove of the knee, medial tibial plateau chondromalacia, lateral tibial plateau chondromalacia, loose body in the knee joint, and knee synovitis. The procedure performed was: right knee arthroscopic partial medial and partial lateral meniscectomy; right knee arthroscopic chondroplasty of the patella, femoral trochlear groove, medial femoral condyle, lateral femoral condyle, medial condylar surface of the tibial plateau, and lateral condylar surface of the tibial plateau; right knee arthroscopic removal of loose bone of the intercondylar notch compartment; and right knee arthroscopic major synovectomy of the medial, anteromedial, and intercondylar notch compartments. Dr. Foulk found a complex full thickness meniscus tear involving greater than 50% of the posterior horn in the medial compartment, and found a white-white zone full thickness tear involving greater than 50% of the posterior horn in the lateral compartment. *See* Exhibits G, 2.

22. On October 24, 2016 Claimant was evaluated by Dr. Foulk's PA, Maria Hartman. It was noted that the incision was healing well with no signs of infection, that the swelling/effusion was moderate, and that Claimant's pain levels were at 2-3/10. PA Hartman provided work restrictions of light duty, seated or desk position until strength returned to normal. *See* Exhibits F, 1.

23. On November 9, 2016 Claimant underwent physical therapy and reported that his knee was doing well and getting better every day. Claimant reported he was going up and down stairs and was now able to go on a bike ride. *See* Exhibits H, 3.

24. On November 18, 2016 Claimant was evaluated by Dr. Foulk. Claimant reported pain at 1/10 and that physical therapy had been very helpful. Dr. Foulk noted no signs of infection. *See* Exhibits F, 1.

25. On December 7, 2016 Claimant underwent physical therapy and reported that his right knee felt really good and that he was hoping to go skiing that weekend. *See* Exhibits H, 3.

26. On December 20, 2016 Claimant was evaluated by Dr. Foulk. Claimant reported pain as mild, 1/10. Dr. Foulk performed a right knee aspiration and cortisone injection noting the indication for the injection was Claimant's primary osteoarthritis. Dr. Foulk recommended that Claimant continue with formal and home based therapy programs to increase strength. *See* Exhibits F, 1.

27. Claimant testified credibly at hearing. Claimant underwent surgery outside of workers' compensation because he was fed up with the constant pain, swelling, locking, trouble sleeping, and because he was sick of having to rely on pain medications and did not want to become addicted. Claimant's daily activities were difficult and he just wanted his knee fixed.

28. Claimant missed four days of work immediately following the surgery due to this injury. Claimant testified credibly that although he was in pain, he continued to show up for all of his other scheduled shifts and wanted to get back to work quickly after surgery. Claimant's normal pay is twice per month. Since approximately April of 2016, he had received bi-monthly paychecks with a check on the 15th of the month for gross earnings of $3,125.01 and a second check at the end of the month for gross earnings of $2,083.34. Claimant's paychecks for the period of time covering the four missed days show he was paid his normal wages with gross earnings in his October 31, 2016 paycheck (covering October 6, 2016 through October 21, 2016) of $2,083.34 and gross earnings in his November 15, 2016 paycheck (covering October 22, 2016 through November 5, 2016) of $3,125.01. However, these two paychecks also show that he was charged for vacation time of $572.46 and $151.06, respectively. The total vacation time charged of $723.52 shows diminished earning capacity during the four day period at issue. *See* Exhibit 9.

29. Claimant testified credibly that he is extremely satisfied with the results of the surgery, that he is doing much better now, and that he was able to ski multiple times this year. Claimant is still rehabbing his knee, but is doing much better.

30. Dr. O'Brien testified by deposition consistent with his medical reports. Dr. O'Brien opined that all of the MRI findings were degenerative and that the MRI showed no acute injury. Dr. O'Brien opined that no injury occurred and that Claimant's pain was a manifestation of Claimant's arthritis. Dr. O'Brien noted that when Claimant was shoveling and felt knee pain, and even a pop, that was very characteristic of arthritis to have cracks and pops and creaks and crunches. Dr. O'Brien noted that Claimant had arthritic effusion and that arthritic joints have extra water on them and that the subsequent MRI showed no evidence of acute injury and just chronic, longstanding changes due to desiccation and aging. Dr. O'Brien opined that all the factual information in Claimant's case pointed to a manifestation of an underlying condition and not new tissue breakage or yielding. Dr. O'Brien opined that you can treat symptomatic arthritis pain with ice, rest, brace, injections, but that you wouldn't be treating an injury just mitigating arthritic symptoms.

31. Dr. O'Brien also testified that the arthroscopic surgery performed by Dr. Foulk was not reasonable or necessary. Dr. O'Brien opined that scientifically and since about 2002, it is known that arthroscopy doesn't help with arthritis knee pain and that the American Academy of Orthopedic Surgeons no longer supports the use of arthroscopy for arthritic knee pain. He opined that scientific evidence overwhelmingly proves that surgeons shouldn't be scoping arthritic knees anymore. Dr. O'Brien noted

that in Claimant's left knee, Claimant had a scope followed by a left knee total replacement and that the arthroscopy scope was a failure within two years requiring a total knee replacement. Dr. O'Brien opined that with Claimant's recent surgery in October of 2016, Claimant has already required cortisone injections in December of 2016 which signifies another arthroscopic failure. Dr. O'Brien opined that the pain was arthritis pain and that the scope had absolutely no ability to positively impact arthritic pain.

32. Dr. O'Brien opined that the arthroscopic surgery that Claimant underwent on his right knee in October of 2016 did not have a positive medical outcome. He opined that surgical outcomes are judged on longer than a two or three or six month follow up. Dr. O'Brien noted that Claimant was already getting injections following the right knee scope and that Claimant's arthritic right knee is responding the same way that his arthritic left knee responded to a left knee scope. He also opined that a loose body was not an indication to perform a scope in an osteoarthritic knee and that loose bodies are common in osteoarthritic knees, don't provide enough symptomatology to warrant an arthroscopy, and not a reason to perform surgery. Dr. O'Brien further opined that a loose body was not created in March of 2016

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or

none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his employment with the employer. Section 8-41-301(1)(b) & (c), C.R.S*.; City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.* The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968).

Claimant has established, by a preponderance of the evidence that he sustained a compensable injury to his right knee on March 23, 2016. As found above, the injury occurred when Claimant was performing job duties and shoveling wet, heavy snow and felt a pop and immediate pain in his right knee. Prior to March 23, 2016 Claimant had no limitations or problems with his right knee. Following the acute injury at work while shoveling snow, Claimant had functional limitations, pain, and swelling that was not previously present. Although MRI testing showed significant underlying arthritis, Claimant was asymptomatic and has established that he sustained an acute injury to his right knee on March 23, 2016. The opinions of Dr. Thurston that the MRI showed an acute injury and that the injury was work related and the opinion of Dr. Foulk that Claimant sustained an acute injury at work are both found credible and persuasive. Claimant has established that he was in the course of his employment when shoveling snow and that the injury to his right knee arose out of his employment. Respondents' argument that Claimant did not sustain an injury but merely felt the normal symptoms of osteoarthritis is not found credible or persuasive. Rather, the opinions of Dr. Thurston and Dr. Foulk are credible and persuasive that an acute injury occurred. This is consistent with Claimant's credible testimony surrounding his lack of symptoms prior to the injury and his continued symptoms after the injury and is consistent with the medical records documenting pain, swelling, and limitation following the acute incident shoveling snow that did not exist prior to March 23, 2016.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Claimant has established that he sustained a compensable work injury to his right knee and that he is entitled to a general award of reasonable and necessary medical benefits to treat his right knee injury.

Further, the issue of whether the October 19, 2016 right knee arthroplasty performed by Dr. Foulk was reasonable and necessary was also before the undersigned. As found above, Dr. Foulk recommended and requested authorization for surgery twice. Dr. Foulk disagreed with Dr. O'Brien and opined that Claimant's meniscal pathology would not heal with physical therapy and required surgical intervention. Dr. Foulk recognized that the recommended arthroplasty would not improve Claimant's arthritic component, but opined that it would improve the meniscal component of Claimant's problem. This is consistent with the 2012 opinion of Dr. Zaronias who noted that the surgery recommended for Claimant's left knee would potentially eliminate the mechanical symptoms but may not affect the arthritis. Additionally, Dr. Gallagher in 2011 opined that given the degeneration, he did not recommend surgery unless there was a significant onset of mechanical symptoms. Here, Claimant had a significant onset of mechanical symptoms in his right knee and Dr. Foulk's opinion that the surgery was reasonable and necessary to relieve the symptoms (despite Claimant's underlying arthritis) is found credible, persuasive, and consistent with the overall medical records. Prior to surgery Claimant had swelling that persisted following the injury, pain at a 6-7/10, clicking, catching, and feeling of walking around on a marble. Following the arthroscopy surgery, Claimant had increased function, less swelling, and less pain. The hearing in this matter was approximately five months after Claimant's right knee surgery. Claimant testified credibly that he was doing well. Indeed, the arthroscopic surgery cured and relieved the effects of the industrial injury. Although Claimant may require injections and future treatment for his underlying osteoarthritis, Claimant has established that the surgery was reasonable and necessary to cure and relieve the work related injury and to treat the meniscal component of Claimant's problem in the right knee.

Dr. O'Brien's opinions are not found credible or persuasive. Claimant's surgery and the goal of the surgery recommended by and ultimately performed by Dr. Foulk was not to improve Claimant's osteoarthritis or arthritic pain. Rather, the goal was to improve the meniscal component of Claimant's right knee. The surgery performed did so and although Claimant has received injections following surgery to treat his underlying osteoarthritis, the surgery did cure and relieve the symptoms that began acutely on the date of his work injury. Claimant no longer has significant pain, swelling, catching, locking, or a feeling of a marble in his knee like he did prior to the surgical procedure. Claimant's underlying osteoarthritis is certainly still present and may require ongoing injection, treatment, and potentially even surgery, but the work related component was treated appropriately and Claimant has established that the surgery was reasonable and necessary to cure and relieve him from the effects of the work related injury.

Temporary Total Disability (TTD) Benefits

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

As found above, Claimant has established that he sustained a work related injury on March 26, 2016. As a result of the injury, Claimant underwent right knee surgery on October 19, 2016 and subsequently missed work from October 19, 2016 through October 22, 2016. During these four days, Claimant was medically incapacitated as he recovered from surgery and he was unable to work. Claimant has established an impairment to effectively or properly perform his regular employment due to surgery and sustained an impairment of wage earning capacity during this time period. Although Claimant was paid his normal salary during this period of time, he was charged vacation time that, if not for his injury, he otherwise would not have had to use. Therefore, Claimant has established that he sustained wage loss due to his injury and has established an entitlement to TTD benefits during this four day period.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his right knee on March 23, 2016.

2. Claimant is entitled to a general award of reasonable and necessary medical benefits to treat his work related right knee condition.

3. Claimant has established by a preponderance of the evidence that the right knee surgery performed by Dr. Foulk on October

19, 2016 was reasonable, necessary, and related to his compensable right knee injury.

4. Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from October 19, 2016 through October 22, 2016.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 4, 2017

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-946-819-02

ISSUES

- Whether Claimant proved by a preponderance of the evidence that she sustained functional impairment beyond the lower extremity?

- Whether Claimant is entitled to disfigurement benefits and if so, in what amount?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On February 14, 2014, Claimant, a 36-year-old female, was employed by Employer as an advanced ski patroller. While performing job duties that day, Claimant's right ski tip caught on an unidentified object causing her to twist her right knee and experience immediate pain.

2. Claimant sought medical treatment and an MRI revealed a medial meniscus tear. In April 2014, Claimant underwent a partial resection of the posterior horn of the medical meniscus with tear fixation. Claimant underwent a repeat MRI in July 2014, which showed significant internal derangement.

3. In August 2014, Claimant underwent a second surgery, manipulation under anesthesia with arthroscopic medial meniscal region scar revision and medial meniscus trimming. Claimant participated in physical therapy directed towards her right knee, but progressed slowly. In December 2014, Claimant underwent a third MRI. The orthopedic surgeon opined that Claimant suffered from arthrofibrosis affecting her right knee.

4. In January 2015, Claimant underwent a third surgery, a partial medial meniscectomy with lysis of adhesions, chondroplasty and debridement. After the third surgery, Claimant continued with physical therapy which involved using a medial unloader brace, icing machine, and H wave machine.

5. On September 1, 2016, Dr. Brian McIntyre, Claimant's authorized treating physician (ATP), placed Claimant at maximum medical improvement (MMI). Dr. McIntyre assigned a 16% scheduled rating of the lower extremity (3% loss of ROM for flexion, 0% loss of ROM for extension, 8% for medical meniscus and 5% for arthritis for arthrofibrosis). Dr. McIntyre did not assign permanent work restrictions.

6. In this claim Claimant alleges she sustained functional impairment beyond the right lower extremity and requests her scheduled rating be converted to whole person.

7. A review of the medical records submitted by both parties reveals the following. The body part injured due to the work incident was Claimant's right knee. The diagnostics ordered addressed Claimant's right knee. The treating physicians did not request MRIs for Claimant's lumbar spine or hips. Claimant's three surgeries sought to repair and improve the function of Claimant's right knee. Claimant did not undergo any invasive procedures to any body part not found on the lower extremity. At MMI, Claimant's permanent impairment rating included range of motion for the knee and Table 40 knee disorders. Claimant did not receive a permanent rating for any body part not on the schedule of disabilities. The ATP did not assign any permanent restrictions designed to prevent injury to any body part.

8. At hearing, Claimant testified that her right knee injury caused pain in her right hip and lower back due to an altered gait and positioning. Claimant testified that the ice machine and H-wave device negatively impacts her ability to sleep. While Claimant's testimony is credible in this regard, the medical evidence submitted by the parties does not support a determination that functional impairment extends beyond the lower extremity. Respondent submitted the medical records from the date of the final surgery through MMI, including the PT records. While the PT records show extensive treatment, it is limited to the right lower extremity. The PT records do not document Claimant complaining of any body part not on the schedule of disabilities. While some of the exercises performed during PT may impact other body parts, the purpose of the PT was to improve functionality of the right knee, including strengthening and range of motion. The "diagnosis" section of the PT notes consistently listed the right knee and issues related to the right knee, not low back or hip. Further, the subjective complaint section of the PT records does not reference body parts not on the lower extremity. The PT records demonstrate functional impairment of the right lower extremity, but not to body parts extending beyond.

9. Dr. McIntyre, Claimant's ATP, opined that in the six months prior to MMI, Claimant only once referenced in the self-check form, a symptom not on the lower extremity. Claimant testified that she would routinely give the physicians updates regarding her status as to symptoms and conditions related to the knee injury. Consequently, in the six months prior to MMI, the records show Claimant only once experienced any low back and/or hip symptoms, without any follow up or need for treatment. Dr. McIntyre noted that at MMI, Claimant did not complain of any symptoms other than those limited to the right lower extremity. Finally, Dr. McIntyre opined, "I do not know of another body part in which the claimant sustained functional impairment." Dr. McIntyre did note that an altered gait could alter body mechanics. However, at hearing Claimant declined to present evidence of an altered gait when given the opportunity during presentation of disfigurement evidence.

10. Aside from Dr. McIntyre and PT, Claimant was followed by a number of physicians whose records were submitted into evidence. Those records do not persuasively document functional impairment beyond the lower extremity. For example, Dr. Steven Singleton was the treating surgeon. Following the last surgery and prior to MMI, Claimant returned to Dr. Singleton five times. The records from those visits do not reveal complaints to a body part other than the lower extremity. Claimant complained of

knee pain and even ankle pain, but did not disclose any hip and/or SI/lumbar pain. Dr. Singleton's observations regarding recovery and treatment related solely to the lower extremity without reference to other body parts, such as lumbar pain due to altered gait or sleep deprivation. Implicit in this would be a determination that Claimant was not experiencing such symptoms.

11. Similarly, in May 2016, Claimant underwent an IME with Dr. John Douthit. Claimant complained of right knee weakness and pain in the medial aspect of her right knee, especially when extending the knee with motion against resistance. The physical examination revealed that Claimant walked without a limp (this examination was nearly 16 months post-final surgery and four months prior to MMI) while wearing the unloader brace. The examination was "normal" with the exception of Claimant's right knee. After reviewing Claimant's medical records and performing a physical examination of Claimant, Dr. Douthit concluded the only injury was to the right lower extremity. He did not document pain, conditions, symptoms, or functional impairment to any part body above the right lower extremity. Dr. Douthit opined Claimant had not reached MMI as she required additional PT for her right lower extremity.

12. Finally, Dr. Robert Dixon followed Claimant as well after the third surgery. On December 10, 2015 (about one year post-third surgery), Claimant presented to Dr. Dixon complaining of minimal knee pain. The report noted a secondary complaint of shoulder pain. This demonstrates that Claimant would reveal symptoms beyond the lower extremity and Dr. Dixon would record such complaint. The remaining reports from Dr. Dixon do not document any low back or hip complaints, or sleep disorder issues.

13. In summary, the ALJ finds that the medical records presented, including those from Drs. McIntyre, Singleton, Douthit, Dixon and PT notes, do not persuasively show functional impairment to any body part beyond the lower extremity.

14. Aside from the medical evidence, Claimant testified at hearing in support of her request. Claimant credibly testified that as a result of the work injury she can no longer perform many of the same activities she performed prior to the accident. For example, Claimant testified she cannot ski in extreme conditions due to knee pain and lack of strength in her lower extremities. Similarly, Claimant has difficulty walking up and down stairs due to knee pain. Regarding positioning, Claimant testified that after sitting for a number of hours her knee would become stiff and swollen, requiring her to stand and perform self-treatment techniques. Finally, Claimant testified that as a result of knee pain and lack of strength, she cannot enjoy the outdoors as much as she used to. Taken as true, and this ALJ has no reason to discredit Claimant's testimony regarding her limitations, those limitations do not justify conversion of her lower extremity rating to whole person rating. The fact Claimant's activities are more limited now than before due to the work injury is not a basis to find functional impairment beyond the lower extremity. The functional limitations described by Claimant are the result of functional impairment found on the lower extremity (i.e. knee pain, quad strength, knee swelling/stiffness). For this, Claimant received a permanent impairment rating. Claimant did not persuasively establish that her function is limited due to impairment of a body part beyond the lower extremity. Rather, to the extent Claimant

can no longer perform at a level she did prior to the work injury, this is due to the symptoms and conditions on her lower extremity.

15. Similarly, Claimant testified that her sleep is disturbed because she uses an ice machine and H-wave machine. While these devices are no doubt uncomfortable and may interrupt sleep, no persuasive evidence established that their use is permanent or that apart from the devices the work injury resulted in a sleep issue. Importantly, Claimant did not receive a rating for sleep disorder. Nor do the medical records in the year plus prior to MMI reveal complaints of sleep deprivation or treatment for such a condition. Finally, Claimant did not present persuasive evidence that her sleep interruptions somehow impacted her daily activity (i.e. sleeplessness resulted in inability to drive, unable to maintain employment or perform work activities, etc.)

16. Claimant persuasively testified that her activities of daily living are limited due to the work injury. However, this in and of itself is an insufficient basis to convert a scheduled rating to whole person. If Claimant's position were accepted, nearly every injury resulting in a scheduled rating would be converted as such injuries (especially those resulting in permanent work restrictions and/or impairment) necessarily impact an injured workers' performance of ADLs. Accordingly, it is hereby found that while Claimant demonstrated functional impairment, such functional impairment is limited to the lower extremity.

17. The ALJ finds and concludes that as a result of her February 14, 2014, work injury, Claimant has a visible disfigurement to the body consisting of four arthroscopic scars over her right knee. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation under section 8-42-108 (1), C.R.S.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. Section 8-42-107(1)(a). The term "injury" contained in § 8-42-107(1) (a) "refers to the situs of the functional impairment, meaning the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co.*, 942 P.2d 1390, 1391 (Colo. App. 1997). "Functional impairment" may not take any particular form. Accordingly, pain and discomfort which interferes with the ability to use a portion of the body may be considered "impairment." *Maynard v. Pokejoy Construction Co., Inc.*, W.C. No. 4-198-489 (ICAO, August 9, 1996). Depending on the facts of a particular claim, damage to the lower extremity may or may not reflect functional impairment enumerated on the schedule of benefits. See *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996).

The ICAO has addressed conversion of a lower extremity rating in a number of opinions. In *Colacion v. Excel Corp*, W.C. No. 4-546-219 (3/26/04), claimant sustained a right lateral meniscus tear and received a 17% scheduled rating. The ATP restricted claimant from working in temperatures under 50% and to avoid "impact activities beyond walking and standing." At hearing, claimant sought to convert the scheduled rating to whole person. The ALJ credited Dr. Lesnak's opinion that medical impairment and permanent restrictions cannot be equated because the assignment of permanent restrictions is not a prohibition against the activity, it is a recommendation for preventing further injury. Further, the ALJ found that while pain and discomfort which limits the use of his body might be functional impairment, here, claimant failed to show that the permanent restrictions were designed to relieve that pain and discomfort as opposed to prevent further deterioration of the knee. The ALJ denied claimant's request and the ICAO affirmed.

In *Yakovich v. Dayton Hudson Corp/Target Stores*, W.C. No. 4-638-044 (5/9/07), claimant sustained an injury to her right knee. Claimant proceeded to hearing to convert the scheduled rating to whole person. The ALJ concluded that a review of the medical records showed treatment was directed at problems with the right knee and right lower extremity, not low back. Further, the ALJ concluded that claimant's testimony supported restrictions to the right lower extremity, but not to body parts beyond the lower extremity. Finally, the ALJ found that other than referred pain into the back as a result of the knee injury, the record did not support any actual compromise of function in the torso as opposed to the right lower extremity. The ALJ denied claimant's request and the ICAO affirmed.

Finally, in *Parker v. Home Depot USA*, W.C. No. 4-665-039 (6/27/13), claimant injured both knees. Claimant sought to convert the scheduled rating to whole person. The ALJ denied the request, finding that the medical records supported symptoms to the lower-extremities, but no other body parts beyond the lower extremities. Further, the ALJ noted that while on two occasions claimant complained of hip pain, this did not remove the injury from the schedule because even if the claimant experienced such pain, the situs of the functional impairment remained in her legs. In should be noted, that claimant had undergone both left and right lumbar sympathetic blocks during the course of the claim. The ICAO affirmed.

The same reasoning and result applies here. The medical records reveal treatment directed towards the right knee only. The ATP, surgeon, and physical therapists recommended and provided treatment designed to relieve symptoms and improve function of the right lower extremity. Claimant did not undergo an orthopedic evaluation for the lumbar spine or right hip, nor receive treatment recommendations for any body part not on the schedule of disabilities. Further, the symptoms described by Claimant, as recorded contemporaneously with the records, are limited to the right lower extremity. Finally, as noted by Dr. McIntyre, in the six months prior to MMI, Claimant only once referenced low back/right hip pain. He concluded that Claimant did not sustain functional impairment to any part other than the lower extremity.

While Claimant testified regarding her limited activities resulting from the knee injury, Claimant did not persuasively testify that those activities were limited due to functional impairment to any body part other than the lower extremity. For example, while Claimant complained of pain into her lumbar spine and hip, first, the medical records do not corroborate Claimant's testimony and, second, Claimant failed to persuasively testify that such symptoms limited her function. Rather, to the extent Claimant's is functionally impaired, such impairment is due to the lower extremity symptoms.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Insurer shall pay Claimant $500 for her disfigurement. Insurer shall be credited for any amount previously paid for disfigurement in connection with this claim.

2. Claimant's request to convert the scheduled rating to whole person is denied.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 5, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his left shoulder, neck and upper back on June 2, 2016.

II. If Claimant did sustain compensable injuries, whether he established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical treatment to cure and relieve him of the effects of said shoulder, neck and upper back injuries.

III. If Claimant sustained compensable injuries, whether Respondent-Employer properly designated a medical provider pursuant to statue and rule of procedure.

IV. If Claimant established that he sustained compensable injuries on June 2, 2016,

whether he has proven by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits for June 6, 2016, June 7, 2016 and between June 28, 2016 through July 5, 2016.

V. If Claimant established that he sustained compensable shoulder, neck and upper

back injuries on June 2, 2016 and if he is entitled to temporary disability benefits, what was his average weekly wage (AWW) at the time of injury.

Because the undersigned concludes that Claimant failed to prove that he sustained a compensable injury on June 2, 2016, this order does not address questions II-V as set forth above.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant began working for Employer in March of 2015 as a breakfast server. As of June 2, 2016, he continued working as a server for the Employer and was also bartending at night.

2. On June 2, 2016, at approximately 11:15 a.m. Claimant slipped and fell backwards after mopping the breakfast dining room floor. Claimant explained that after breakfast ended he started mopping the floor. Claimant went to obtain the "wet floor" sign to place in the area he had recently mopped. As Claimant stepped back onto the

wet floor, his shoe slipped out from underneath him, causing him to fall backwards. Claimant reached out with his left arm and grabbed the bar counter in attempt to break his fall. Claimant testified that his head and neck went backwards as he caught himself. According to Claimant, he experienced immediate pain in his left shoulder after grabbing and hanging from the bar by his left arm. Claimant testified that it felt like his arm was "pulled out of my socket." Claimant characterized the slip and near fall as "violent."

3. A "Workers Compensation Report Form" was filled out on the day of the injury. Two witness statements were included in the form. One co-worker stated, "I saw a shadow of something fall, backed up and saw [Claimant] and said, 'Did you just fall?' He said, 'Yes.'" Another co-worker stated, "I just heard a boom and saw [Claimant] get up from the floor."

4. Respondents conceded at hearing that the incident did in fact occur; however, it is their position that Claimant's need for treatment after the incident is a continuation of symptoms from a pre-existing condition that was caused by a prior motor vehicle accident (MVA) occurring on September 18, 2015.

5. Claimant testified that after the June 2, 2016 incident, he was advised by the manager on duty (Jannette Greene) that the doctor's office was already closed for the weekend (suggesting that Ms. informed him that he would be unable to see a doctor on June 2, 2016) and to ice the shoulder and if it was not better by Monday to see the worker's compensation provider. During cross examination, Claimant was asked if he refused care at the time of his injury. Claimant did not answer the question, responding instead by indicating that he was told the clinic was closed over the weekend and that he was hoping that his condition would improve during that time. The worker's compensation report form admitted into evidence clearly indicates that Claimant refused care at 11:45 a.m., one-half hour after the incident. Claimant's hearing testimony is internally inconsistent and inconsistent with the worker's compensation report form completed by Ms. Greene.

6. The ALJ takes judicial notice that June 2, 2016 fell on a Thursday.

7. On Sunday, June 5, 2016, Claimant sought treatment at Penrose St. Francis Hospital Emergency Department (ED). Claimant presented to the ED with complaints of headaches and aching in his shoulder and neck. He reported to the providers at the hospital that, on Thursday, he had started falling when he reached out to stop himself from falling with his left arm that resulted in complaints of occipital headaches, neck pain, and left shoulder pain. Physical examination revealed the following:

> Neck: Grossly normal, no cepitus, no larynx TTP" (tenderness to palpation). Spine/Back: No midline C/T/L (cervical/thoracic/lumbar) spine TTP, no paraspinal TTP, no stepoff/deformities.

MSK/Extremities: FROM (functional range of motion), no deformities, no skin changes.

Claimant informed the ED physician that he had prior back pain as a consequence of a prior motor vehicle accident (MVA). Regarding the cause of Claimant's symptoms, the ED doctor noted: "Given the patient's mechanism of injury I think it is extremely unlikely that this represented (sic) when he was in an injury . . ." (emphasis added). As pain was the primary complaint ('major issue") on presentation, Claimant was given a prescription for narcotic pain medication for home use and a sling. He was also instructed to follow up with a primary care provider.

8. Claimant returned to work on Monday, testifying that he took up Ms. Greene offer to see a doctor. Claimant was given a Rule 8 designated provider list on Monday, June 6, 2016 which included two choices of providers: Healthquest Medical Inc. at 1495 Garden of the Gods Road, or Concentra Medical Center at 2322 South Academy Blvd. Claimant selected Dr. Frank Polanco at Healthquest Medical Inc.

9. Claimant first presented to Dr. Polanco on Monday June 6, 2016 where he completed an intake form which asked him to specify his pain levels and the location of his pain. The form documents that Claimant was complaining of left shoulder/arm pain, neck pain, and headaches. His current pain level was 8 out of 10 with his lowest being 7 out of 10 and highest being 9 out of 10. Dr. Polanco assigned work restrictions of no lifting over 25 pounds and no overhead lifting with the left arm. He also referred Claimant to physical therapy. Dr. Polanco specifically informed Claimant not to wear the sling provided in the ED.

10. Claimant's initial physical therapy evaluation with Dr. Polanco's office occurred on June 7, 2016. Claimant again complained of 8/10 pain reported further that he had experienced increased neck pain and a prolonged tension headache since the fall occurred on June 2. He reported that he had been in a "serious car accident in September 2015 and had just finished his physical therapy for his back from that episode." According to the therapy noted, Claimant's reported symptoms were "high in severity and irritability making assessment of any structural deficits challenging. He Claimant was reportedly taking Oxycodone and Ibuprofen 800mg three times a day. The physical therapist noted that Claimant was "fixated on pain any may have psychosocial contributors to recovery." She also felt that Claimant's prognosis for recovery was "fair" provided he fully complied with the prescribed treatment plan. Claimant reported the previous September 2015 MVA to his provider. No barriers to treatment were reported. Rather, it was noted that "all" treatment interventions were well tolerated and that Claimant reported "less pain" after his visit.

11. On June 9, 2016, Claimant returned to Dr. Polanco's office where he was evaluated by Certified Nurse Practitioner (NP), Kathryn Young. Claimant's pain complaints on this visit had expanded to include additional body parts. Not only did Claimant complain of headaches and pain in his neck and shoulder, but also his left elbow as well as his upper and lower back. The pain in the elbow and upper back was

described as sharp and in the case of the upper back "like a knife." According to Claimant, the pain in his upper back "took his breath away." While Claimant now had upper and lower back pain he reported that his headaches were so bad that he had had to leave both of his work shifts early. He also reported that he continued to wear his sling in the morning as it would "relax" his shoulder. Regarding his back pain, Claimant informed NP Young that he was injured approximately three years prior to his slip and near fall incident in a MVA that resulted in back pain. He went on to clarify that he currently had back pain in the same area of his back as caused by the MVA. He also explained that his symptoms from the prior MVA were "pretty much gone" by the time of the incident at work on June 2, 2016. Pain was again reported at a level 8 out of 10.

12. Regarding his prior treatment Claimant reported that he had received a Toradol injection in the ED on June 5, 2016 and that it helped for about an hour and then was no longer helpful. He did not want another injection. He reported taking both Oxycodone and Ibuprofen and while both medications seemed to help a bit with his shoulder pain, neither helped with his headache. It was specifically noted by NP Young that Claimant had received a prescription for narcotics while in the ED and a second Oxycodone prescription from his PCP to address the increase in his back pain. NP Young felt that Claimant's headaches may be a direct consequence of taking Oxycodone itself. Consequently, she instructed Claimant to "STOP" taking it.

13. As noted, Claimant was involved in the MVA on September 18, 2015. He claimed injuries to his back and neck and experienced headaches as a result of this accident. Following his MVA, Claimant went through a neurologic workup with Dr. Gregory Ales on October 7, 2015. In an intake sheet Claimant completed for Dr. Ales, he noted that he was taking "pain medicine." In his report of October 7, 2015, Dr. Ales notes that Claimant presented to the "emergency room and had a CT scan of the head and was told that he had a concussion." According to Dr. Ales, Claimant was released with some narcotic pain medications." Regarding his headaches, Dr. Ales recommended "good headache hygiene" including "getting a good night's sleep, adequate hydration, adequate fluid intake, limited caffeine use and limited abortive use of pain medications." On October 28, 2015, Claimant returned to Dr. Ales reporting intolerance to Tramadol. Acetaminophen and Motrin to control his pain because of "various side effects." He requested that Dr. Ales prescribe narcotic to "control his pain." The request appears to have been denied as Dr. Ales' note reflects "Medications: None."

14. On November 11, 2015, Claimant was evaluated by Dr. Katharine Leppard. She assessed myofascial pain syndrome and recommended Claimant "avoid narcotics." Claimant returned for a follow-up visit to Dr. Leppard on December 8, 2015. Dr. Leppard noted that Claimant had been involved in physical therapy (PT) noting improvement with his neck pain. Nonetheless, Claimant continued to have "significant pain between the shoulder blades. She also noted that Claimant's lumbar MRI demonstrated degenerative disc disease. She referred Claimant for 10 sessions of chiropractic care. There is no mention of continued headaches in Dr. Leppard's notes. Furthermore, her notes are devoid of any reference to Claimant taking narcotic medication.

15. Claimant returned to Dr. Leppard's office on February 19, 2016, reporting new symptoms involving his left arm, including "numbness and a feeling of a funny bone from the left shoulder to the wrist." He reported frustration that his mid back was in constant pain that was interfering with his ability to work one job whereas before his MVA he was pain-free and working two jobs. Physical examination revealed tenderness over the left ulnar nerve and myofascial involvement in the upper trapezius and rhomboids. A February 12, 2016 MRI of the thoracic spine, which demonstrated changes with "Scheuermann's Disease, and a healed compression deformity at T12" was reviewed. Dr. Leppard assessed thoracic pain with underlying mild Scheuermann's Disease and myofascial involvement which she felt could respond to trigger point injections. She also assessed cervical strain with myofascial involvement. Finally, she assessed lumbar strain, noting that Claimant's lumbar MRI demonstrated underlying degenerative disc disease without disc herniation or protrusions. Claimant was to continue with chiropractic care and focus on maintain good posture given the presence of Scheuermann's Disease.

16. As noted, Claimant had been referred to chiropractic care for treatment of the conditions associated with his MVA. Claimant's chiropractic care was directed through Dr. Sean Billings at Premier Alternative Health Center. Claimant's first visit with Dr. Billings on December 14, 2015. He documented cervical pain at a level 8 out of 10 in addition to thoracic pain at a level 8 out of 10. He also referenced that Claimant had occipital headaches at a level 4 out of 10 occurring seven days per week. Claimant continued treating with Dr. Billings for the MVA through April 27, 2016. By the time of his April 27, 2016 appointment, Claimant's neck pain had improved to a level of 1 out of 10. His mid back pain had improved to a level 2 out of 10, and his headache pain to a level of 1out of 10. Nonetheless, the physical therapy records generated during this same time frame demonstrate a more rocky course of care.

17. Claimant's physical therapy records demonstrate waxing and waning symptoms associated with his neck and upper back conditions as well as his headaches. The records reflect periods of limited improvement followed by worsening symptoms likely due to stress, a lack of sleep and limited participation in therapy due to Claimant's medical appointment and job schedules. A sampling of Claimant's therapy records reveals the following:

- On February 4, 2016, Claimant's PT evaluation and treatment plan included care for neck and back pain. It was noted that he had been in a MVA where his vehicle was t-boned. His complaints were of intermittent neck pain and low back pain and mid back pain that was constant. He had pain between his shoulder blades with coughing.

- During a February 19, 2016 examination, Claimant had pain in both arms, on the right arm above the elbows and on the left arm below the elbow to the forearm. He also had pain between the shoulder blades. He also had discomfort in his low back.

- On March 16, 2016, Claimant reported 8/10 level headache pain which improved to a 4/10 level post treatment.

- On April 8, 2015, Claimant reported 4-5/10 level periscapular pain bilaterally which increased with work tasks/lifting. Nonetheless, he felt as though his pain levels were improving overall. He continued to require intermittent verbal cues regarding his need for proper posture.

- On April 15, 2016, continued therapy was recommended at a rate of 2 times a week for four weeks to "work on thoracic extension, strengthening of thoracic musculature to improve posture." Claimant cervical range of motion was documented as being within normal limits (WNL).

- At a May 4, 2016 examination, Claimant reported 4/10 upon waking which increased to 5-6/10 with exercise. He also had a 5/10 headache which decreased to 1/10 after headache mobilization and stimulation for a trigger point. On palpation, his upper back and lower neck area were tender to palpation. Claimant reported that swimming (pool therapy) had helped in the past. The therapist noted that Claimant would be reassessed on his next visit for "possible discharge to pool therapy." It was also noted that Claimant had met 51-75% of his PT goals had been.

- On May 16, 2016, Claimant reported that his headache had "gone away" but that he continued to have 4/10 pain in his neck and his shoulder blades (bilateral medial scapula). He was to see his primary care physician (PCP), Dr. Joseph, whom he had been treating with for his MVA, on June 3, 2016 and continue his chiropractic care. He was discharged from PT to pool therapy.

18. Claimant returned to Dr. Polanco on June 15, 2016. At his initial appointment with Claimant on June 6, 2016, Dr. Polanco did not have the medical records associated with the information contained at ¶¶ 13-17 above. Rather, according to Dr. Polanco, Claimant provided a "very limited and sketchy history" concerning the September 2015 MVA. Consequently, Dr. Polanco requested records. Limited records were received which Dr. Polanco opined revealed a "different description of the treatment and condition [Claimant] was treated for" as a consequence of his MVA. Dr. Polanco took additional history from Claimant during which he (Claimant) noted that he had been evaluated by "multiple physicians and has had extensive treatment for multiple conditions including headaches, neck, upper, mid, lower back pain and left shoulder pain." Consistent with ¶¶ 13-17 above, Dr. Polanco documented that Claimant had been treated by "Dr. Katharine Leppard. Dr. Greg Ales, neurologist, Dr. Joseph, NP Khorn, physical therapy and chiropractic treatment with Dr. Billings." He also noted that Claimant had been referred to but was not participating fully with PT through his offices. Dr. Polanco noted Claimant to sit in a "slouched/slumped position." Based upon the additional records and history received concerning Claimant's MVA and related treatment, Dr. Polanco opined that the claimed conditions arising from the June 2, 2016

slip and near fall were pre-existing. According to Dr. Polanco, "there [was] no indication of a new injury or an aggravation of his prior injury." Rather, Dr. Polanco felt that Claimant's "complaints of neck pain, and back pain [were] ongoing from his prior injury and there [were] [no] clinical findings to support active therapy." Dr. Polanco placed Claimant at maximum medical improvement (MMI) and released him to full duty, noting that Claimant "provided [him] with a very limited and selective history initially that was inconsistent with what [he] . . . learned from the medical records and further investigation. According to Dr. Polanco, Claimant's "presentation [was] highly suggestive of symptom magnification." Dr. Polanco referred Claimant back to his PCP.

19. On June 28, 2016, Claimant returned to Dr. Billings on a self referred basis. He reported injuries to his low back and upper back. He did not report headache. Dr. Billings documented, "[Claimant] has been seen prior in this office for injuries sustain [*sic*] in an MVA but was released earlier this year. Injuries appear to not be related to the MVA."

20. On July 7, 2016, Claimant presented in the ED at Penrose St. Francis Hospital for a chief complaint of "back pain due to a fall x1 month ago aggravated by heavy lifting. The ED noted reflects that Claimant "has a history of chronic lumbar back pain for several years, exacerbated in September last year after a motor vehicle accident most recently after a near fall at work, one month ago." A review of systems indicates that Claimant had "[c]hronic neck pain and lumbar back pain, with occasional left upper extremity radiculopathy." Regarding Claimant's neurological system, the report indicates: "No headache." It was also noted that Claimant had obtained Percocet while in the ED in early June 2016 and that he had received additional Percocet for a total of 48 tablets through June 2016. Physical examination revealed Claimant's neck to be "supple" without midline tenderness. His thoracic and lumbar spine was devoid of significant tenderness although moderate paraspinal tenderness was noted. Based upon Claimant's history and physical examination the ED doctor noted: "No 'red flags' for significant pathology, suspect myofascial strain. Claimant was provided with prescriptions for Etodolac and Robaxin but no Oxycodone.

21. On September 19, 2016, Claimant followed-up with Dr. Joseph. During this visit Claimant complained of having pain in his neck back and arm. The record generated from this date of visit references that Claimant reported pain in the scapula and elbow. He reportedly "demanded" narcotics which were refused.

22. Claimant underwent an IME with Dr. Timothy Hall on November 8, 2016. Upon examination, most of Claimant's symptoms at this time were parascapular on the left lateral neck and into the shoulder on the left. Claimant reported to Dr. Hall that he had returned to work full time without restriction after the MVA and before the June 2, 2016 incident. Dr. Hall diagnosed Claimant with an upper back and neck sprain/strain, a shoulder sprain/strain, and thoracic outlet symptomatology related to the aforementioned sprains/strains.

23. Dr. Hall opined, "From a causation perspective after reviewing the situation with the patient, doing a physical examination and reviewing his record, it is clear that there was a well-documented work-related fall on 06/02/2016 that led to symptoms in his neck, upper back, shoulder, and left arm." Dr. Hall's written opinions were expounded on during his deposition on January 30, 2017 during which he admitted that his opinions were based in part upon the history provided to him by Claimant. He also admitted that his causation opinions were premised on that history being accurate. Despite substantial questioning regarding the content of the medical record generated prior to his alleged worker's compensation injury, Dr. Hall remained of the opinion that Claimant sustained a compensable injury that required medical treatment through the workers' compensation claim.

24. Dr. Polanco testified by deposition on February 23, 2017. It was Dr. Polanco's opinion based on his review of the medical records at the time of his June 9, 2016 examination, that Claimant had given a very sketchy history of the September 2015 MVA. Dr. Polanco testified that once he had a more complete picture of the extent of injuries claimed and treatment received for the MVA, it became clear to him that Claimant had sustained much more serious injuries from the MVA for which he was still treating right up until the time of the reported June 2, 2016 incident at work. Because of this, and based on his examination, Dr. Polanco testified that Claimant had not actually sustained a compensable injury on June 2, 2016. Rather, he explained that the conditions Claimant presented with and the symptoms he complained of were pre-existing and related to the September 2015 MVA without indication of any new injuries or aggravations of the pre-existing injuries. To Dr. Polanco, Claimant never even sustained an injury at work and thus, did not feel that the concept of MMI in the worker's compensation arena applied to this case. Moreover, Dr. Polanco raised concerns that the medical record supported that Claimant was magnifying his symptoms and seeking narcotic pain medication.

25. Jannette Greene testified as the former "Director of Property Operations" for Employer. Ms. Greene testified that she took Claimant's report of injury and offered him immediate medical care, which Claimant refused stating that he was fine. She also contradicted Claimant's assertion that she told Claimant that the clinic was closed and that he should simply ice his injuries. Ms. Greene explained that she would never provide such advice as she has no medical training. Ms. Greene also admitted to interviewing witnesses to the incident reporting their observations in the Worker's Compensation Report Form referenced above. While witnesses were interviewed, these coworkers didn't actually see Claimant slip or fall. Nonetheless, the evidence presented persuades the ALJ that Claimant did slip and catch himself. Indeed Respondents have admitted that an incident occurred at work.

26. Based upon the evidence presented as a whole, the ALJ credits the opinions of Dr. Polanco over the expressed opinions of Dr. Hall to find that Claimant's current symptoms and need for treatment are probably related to a pre-existing myofascial condition that was aggravated by his September 2015 MVA. The evidence presented persuades the ALJ that the symptoms associated with this myofascial

condition have waxed and waned over the past couple of years and that the condition was symptomatic on May 16, 2016, approximately 2 weeks before the June 2, 2016, slip and near fall. Given the totality of the medical record, the ALJ finds Claimant's suggestion that his current symptoms represent a new injury or at least an aggravation of his preexisting condition unconvincing.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). As found in this case, the ALJ concludes that the evidence presented supports the opinions expressed by Dr. Polanco. Accordingly, the undersigned finds Dr. Polanco credible and more persuasive that Dr. Hall.

Compensability

D. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically mopping a floor in furtherance of his duties as a server for Employer. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury is deemed compensable.

F. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while performing job duties, does not mean that he sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

G. Under the Workers' Compensation Act (hereinafter Act) there is a distinction between the terms "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2)(injury includes disability resulting from accident). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.;

Romero v. Industrial Commission, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; §8-41-301, C.R.S.

H. Given the distinction between the terms "accident" and "injury" an employee can experience symptoms, including pain from an "accident" at work without sustaining a compensable "injury." This is true even when the employee is clearly in the course and scope of employment performing a job duty. See *Aragon*, supra, ("ample evidence" supports ultimate finding that no injury occurred even where the claimant experienced pain when struck by a bed she was moving as part of her job duties); see also, *McTaggart-Kerns v. Dell, Inc.,* W.C. No. 4-915-218 (ICAO, May 29, 2014)(where Claimant involved in motor vehicle accident without resultant injuries, no compensable injury occurred). As found above, the ALJ is not persuaded that Claimant's need for neck, upper, mid and low back and headache treatment was caused by his slip and near fall or that this incident caused disability. To the contrary, the evidence presented persuades the ALJ that Claimant suffers from Scheuermann's disease affecting his thoracic spine resulting in poor posture and myofascial consequences in the parascapular muscular of the cervical, mid and low back. These conditions were substantially aggravated by his September 2015 MVA causing protracted symptoms necessitating both physical therapy and chiropractic treatment. While Claimant was discharged from land based physical therapy prior to his June 2, 2016 slip and near fall, he was both symptomatic and in need of pool therapy. Moreover, he was to continue with chiropractic treatment.

I. As explained by a Panel of the Industrial Claims Appeals Office in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), a coincidental correlation between a claimant's work and his symptoms does not mean there is a causal connection between a claimant's injury and his/her work. To the contrary, as noted by the Panel in *Scully* "correlation is not causation." Further, there is no presumption that an employee found injured on the employer's premises is presumably injured from something arising out of his work. *See Finn v. Industrial Commission,* 437 P.2d 542, 544 (Colo. 1968). As presented, the evidence does not support that Claimant sustained an injury to his neck, back and or head on June 2, 2016, causing the need for treatment and/or disability. Rather, when his symptomatic pre-existing myofascial pain syndrome is combined with his fixation on pain (arguably supporting a suggestion that Claimant is symptom magnifying and seeking narcotics), the evidence supports a conclusion that Claimant did not suffer any compensable injuries as a consequence of the June 2, 2016 incident and that psychosocial factors are at play in this case. Regarding his headaches, the ALJ credits the opinion of NP Young to find that Claimant's narcotic medication was probably contributing to rebound headaches. While the ALJ is persuaded that Claimant's pain, including his headaches are genuine and that there was nothing nefarious surrounding his requests for narcotic pain medication as suggested by Dr. Polanco, the record submitted persuades the ALJ that the headaches not unrelated to the slip and near fall incident. Consequently, the ALJ concludes that Claimant has failed to prove, by a preponderance of the evidence, that

there is a causal connection between his employment and the resulting conditions for which medical treatment and indemnity benefits are sought. §8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Because Claimant failed to establish he suffered a compensable "injury" as defined by the aforementioned legal opinions, his claim must be denied and dismissed. Accordingly, the claims for medical and temporary disability benefits need not be addressed further.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is hereby denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 5, 2017

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

STIPULATION

1. Both parties stipulated that the issue of Average Weekly Wage would be held in abeyance, pending a resolution of the contested issues heard at hearing.

ISSUES

I. Whether the Claimant has proven, by a preponderance of the evidence, that she suffered a compensable injury as a result of her fall in the employer-supplied parking lot which occurred on or about February 3, 2016.

II. If the claim is compensable, what medical benefits are reasonable, necessary, and related to this claim.

III. If the claim is compensable, has Claimant suffered from one or more intervening causes, either of which is sufficient to sever the causal relationship between the compensable injury and subsequent symptoms Claimant may have experienced.

IV. Whether Claimant has shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability benefits as a result of a compensable injury.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 21-year-old package handler for the Employer who slipped and fell on ice in the employee parking lot as she left work on February 3, 2016. Claimant began working for the Employer on December 12, 2015. Claimant worked the early morning shift from 3:00 a.m. to 9:00 a.m. and worked from 20 to 25 hours per week, at $11.00 per hour.

2. Claimant alleges that, at approximately 8:46 a.m. on February 3, 2016, she was walking through the parking lot after her shift ended and fell onto her rear, tailbone, and low back. Claimant did not hit her head, her neck, her upper back, her hands, her elbows, or any other body part beyond the low back area. Claimant testified that, after she fell, she laid on the ground "for a minute or so," until an unidentified UPS co-worker came over and assisted her in getting up. Claimant testified that this person witnessed the fall.

3. Claimant testified that she did not remember whether she felt immediate pain after the fall as she was in shock. However, Claimant later told Respondents' expert, Dr. Kathleen D'Angelo, that she felt instant pain in her tailbone pursuant to the fall during her IME examination. Respondents' Hearing Exhibits ("RHE") F at 14. After she fell, Claimant left the parking lot and attended her classes at school. Claimant testified that she first began experiencing pain when she left school and returned home. Claimant testified that she first began experiencing pain in her tailbone. Claimant did not report a work injury to UPS on this day and did not seek medical treatment.

4. Claimant reported a work injury to her supervisor at her next shift, on February 4, 2016. Claimant selected SCL Physicians at Wheat Ridge as her provider and saw Andrew Hildner, PA-C, on February 4, 2016, after completing her shift. Claimant presented with complaints of lumbar and sacral pain. RHE G at 49. Claimant denied any "neurological red flag symptoms."

5. Claimant had a normal gait and no bruising or obvious abnormality upon inspection of the lumbar spine. RHE G at 51. Claimant had no sacroiliac joint tenderness. Claimant was tender upon palpation over the inferior sacrum and had bilateral paraspinal tenderness, which had alternating sides in severity throughout the examination.

6. X-ray studies of the pelvis, sacrum, and coccyx showed no evidence of fracture or dislocation and had good anatomical alignment. There was no obvious fracture in the inferior lumbar vertebrae, which also had normal alignment. PA Hildner noted that there were no concerns for a fracture or neurological involvement, and noted that Claimant had good range of motion without complaint, a nonantalgic gait, and was able to sit comfortably during the examination. RHE G at 52. There was no crepitus noted. Claimant was given 20 pound repetitive lifting restrictions for work.

7. Claimant returned to SCL and saw Dr. Ogrodnick on February 8, 2016. RHE G at 53. Claimant reported that she had back and hip pain and had frequent "cracking" in these areas, which felt unnatural to her. Dr. Ogrodnick noted that Claimant had told PA Hildner that she was in shock and couldn't tell what was hurting her. Claimant stated that "she now knows that driving and handwriting causes increased right arm numbness," which she first noticed the evening after her initial visit. Claimant also reported left arm numbness. Claimant testified at hearing that she did not have symptoms in her left arm.

8. Claimant also reported right leg numbness, which she first noticed on February 6, 2016. RHE G at 53. Claimant further complained of urinary incontinence and had called in sick to work. Dr. Ogrodnick noted that Claimant walked with a limp and needed to hold the exam table when walking

on her toes. RHE G at 55. Claimant reported tenderness in her lumbar spine and both sacroiliac joints. Claimant became tearful with passive right hip flexion due to pain in her right buttock. *Id*. Dr. Ogrodnick diagnosed Claimant with a sacral contusion. Dr. Ogrodnick ordered a STAT MRI to eliminate concern for cauda equina syndrome. RHE G at 53.

9. Claimant had two MRI studies of the lumbar spine performed. The record is unclear why the second one occurred. The first study was performed on February 10, 2016. RHE F at 29. The second study was performed on February 11, 2016. Both studies were reviewed and compared by Dr. Michael Preece. The impression of the lumbar spine was normal. RHE H at 80.

10. A follow-up note with Dr. Ogrodnick on February 12, 2016 notes that "plain films" (X-rays) of the pelvis taken that day did not reveal any acute osseous abnormality. RHE G at 56. Dr. Ogrodnick noted that Claimant “chuckled at how she just started crying ‘for no reason’” after the x-ray that day. Claimant told Dr. Ogrodnick that this date was the first time that she experienced pain radiating into her right fifth toe. It was noted in the records that Claimant was working modified duty in a seated capacity. Claimant was positive for memory loss. RHE G at 57. Claimant again presented with a limp. RHE G at 58. Claimant began to cry when lightly palpated in her anterior right iliac crest.

11. Dr. Ogrodnick noted during a February 16, 2016 follow-up visit that Claimant was having a significant emotional response and was at risk for delayed recovery. RHE G at 59. Dr. Ogrodnick noted that Claimant’s Oswetry disability questionnaire score of 56% indicated severe disability. Claimant presented with a limp on this date and reported her leg would become numb if she did not walk in this manner. Claimant reported that she could not stand up straight due to severe pain in her low back. Claimant reported concern about becoming disabled like her parents. Dr. Ogrodnick referred Claimant to a psychologist.

12. Claimant began physical therapy on February 19, 2016. RHE F at 43. The therapist notes indicate that Claimant would benefit from stabilization and strengthening the sacroiliac region.

13. Claimant reported no improvement during a follow-up visit with Dr. Ogrodnick on February 29, 2016. RHE G at 63. Dr. Ogrodnick noted a substantial risk for delayed recovery. Claimant declined psychological treatment, as she felt there was nothing wrong psychologically. Claimant testified that she declined care because she did not believe that Dr. Ogrodnick’s intentions were to help her, because he believed that her physical pain and physical ailments were psychological. Dr. Ogrodnick noted that Claimant smiled frequently throughout the examination and ambulated without a limp. RHE G at 65.

14. Dr. Ogrodnick saw Claimant again on March 15, 2016 and expressed concern about possible somatoform disorder. RHE G at 66. Dr. Ogrodnick noted that Claimant's Oswetry questionnaire results reflected a score near the crippled category, and it was communicated to Claimant that this was highly inconsistent with her normal MRI study. Dr. Ogrodnick noted in the record that he advised Claimant that it was difficult to substantiate ongoing work restrictions due to the lack of objective findings and her inconsistent examinations.

15. Claimant presented to Dr. Tomm Vanderhorst, also at SCLP clinic, on March 16, 2016. RHE G at 69. Claimant was a walk-in evaluation because she had "too much pain with [her] current work." Claimant testified that she saw Dr. Vanderhorst because Dr. Ogrodnick was not available. Dr. Vanderhorst gave Claimant 35 pound lifting restrictions with 30 minutes maximum of standing and walking. RHE G at 70.

16. Claimant returned to see Dr. Ogrodnick on March 21, 2016. RHE G at 72. Dr. Ogrodnick noted that Claimant did not understand the resistance to taking her off work. Claimant reported that she could not even put weight on her right leg. Claimant walked slowly with a short stride and limp. RHE G at 74. Claimant told Dr. Ogrodnick "It's the worst pain I've ever been in in my life". RHE G at 72. Dr. Ogrodnick opined that Claimant's "constellation of symptoms" required a consultation to rule out multiple sclerosis. Claimant last reported to work at the Employer on March 23, 2016. She testified that she was told not to return to work until she had "hundred percent clearance from the doctor."

17. Claimant was then involved in a motor vehicle accident on March 30, 2016. Claimant was taken to St. Anthony Hospital by ambulance. RHE F at 16. Claimant told Dr. D'Angelo during her IME that she felt neck pain immediately. Claimant testified that she had neck and shoulder injuries from the accident, and that she did not have injuries to her lower back, hips, or tailbone as a result of the injury.

18. The emergency room record from St. Anthony's on the date of the accident states that Claimant was rear-ended by another vehicle traveling at low speed. RHE I at 81. It is noted that Claimant was restrained. Claimant claimed that she was thrown forward and "began to feel pain in her neck and back soon thereafter." The nurse's note indicates reports of posterior neck tenderness and low back pain. Claimant denied any extremity numbness or weakness. A CT scan of both the cervical and lumbar spine were obtained. RHE I at 82. There were no acute findings. Both studies were normal and unremarkable. RHE I at 84-85.

19. Dr. Ogrodnick maintained that Claimant's subjective complaints remained inconsistent with her objective findings during Claimant's next visit, on April 4,

2016. RHE G at 75. Claimant did not disclose that she had been involved in a recent motor vehicle accident. Dr. Ogrodnick noted that, despite the examination, Claimant denied any leg pain, numbness, or weakness. Claimant also walked without a limp during this examination. RHE G at 77. Claimant was subsequently discharged from SCL, and Dr. Vanderhorst later indicated that Claimant was discharged, as no further care was authorized. RHE G at 78.

20. As a result of this car accident, Claimant began treatment with Dr. Bethany Wallace at Injury Treatment Centers Lakewood on April 13, 2015. RHE J at 87. Claimant's complaints included the following: cervical strain; neck pain; thoracic sprain and pain; lumbar strain and low back pain; jaw pain; concussion; vertigo; memory loss; insomnia; left elbow pain and contusion; left forearm pain; occipital neuritis; posttraumatic headaches; and cervicogenic headaches. RHE J at 88.

21. Claimant underwent physical therapy treatment with regular follow-up visits with Dr. Wallace. Treatment included therapy for the low back, in addition to the cervical region, and it was noted on at least one occasion that the modalities utilized caused low back pain. RHE J at 100. At cervical MRI performed on April 28, 2017 was returned normal. RHE J at 92-93. Claimant treated with Dr. Wallace through the end of July 2016. RHE J at 108.

22. Claimant saw Dr. Bennett Machanic for an IME commissioned by Claimant on June 13, 2016. Claimant's Hearing Exhibits ("CHE") 8 at 167. Claimant presented with multiple complaints, including: low back pain; numbness over the right leg and right arm; difficulties with memory, focus, and concentration; and significant emotional depression. Dr. Machanic noted that he had been provided "a scanty amount of medical records." Dr. Machanic noted that Claimant had chiropractic care in 2011 and that it was not clear why this was done, but that the treatment nevertheless ended later that year.

23. Claimant told Dr. Machanic that she struck her lower back when she fell on February 3, 2016. CHE 8 at 168. Claimant told Dr. Machanic that she had two MRI studies, one that showed discogenic damage and another that was normal. CHE 8 at 167. Dr. Machanic noted that Claimant had been involved in a motor vehicle accident on March 30, 2016 with an automobile traveling "at a very high rate of speed driven by an intoxicated driver," and that this accident caused increased low back pain and neck pain. Dr. Machanic noted that he did not have medical records beyond March 21, 2016.

24. Upon examination by Dr. Machanic, Claimant complained of non-related neck pain, low back pain affecting the tailbone to the lower right leg, numbness in the right leg, right arm numbness, and weakness in both her leg and arm. CHE 8 at 169. Claimant claimed she dropped objects due to weakness. Claimant further complained of deficits in memory, focus, concentration, and

depression. Dr. Machanic noted that Claimant broke into tears on multiple occasions during his examination. Dr. Machanic measured breakaway weakness in the right leg. Dr. Machanic noted that it was "very clear that [Claimant] can walk without much difficulty on tiptoes, heels, perform tandem and retrogrades."

25. Dr. Machanic opined that Claimant injured her low back pursuant to a slip-and-fall at work. CHE 8 at 170. Dr. Machanic noted progressive symptoms in the right arm and leg and indicated there was right ulnar neuropathy and right meralgia paresthetica. Dr. Machanic opined that there was significant depression and "perhaps some posttraumatic emotional stress." Dr. Machanic stated that the March 30, 2016 motor vehicle accident "apparently caused neck pain" and that it was "not entirely clear" whether this made the work-related injury worse. Notwithstanding, Dr. Machanic stated that "we can separate out issues fairly nicely" based upon the available materials at the time.

26. Dr. Machanic recommended an EMG and nerve conduction studies of the right arm and leg. Dr. Machanic opined that Claimant was not at MMI and did not calculate an impairment rating. Dr. Machanic opined that Claimant had low back pain, right hip pain, and "signs" that right ulnar neuropathy meralgia paresthetica are work-related conditions.

27. In a report dated June 15, 2016, with Ginger K. Spence, LPC, Claimant presented for psychological treatment. RHE K at 109. It was noted that Claimant presented for initial treatment in November 2014 and treated through July 2015. RHE K at 109-110. Claimant denied any legal problems or problems with work or schooling. It is noted that Claimant had significant problems with anxiety and had struggled with anxiety for the majority of her life. Claimant treated for posttraumatic stress disorder and it was noted that this causes clinically significant stress or impairment in social, occupational, and other important areas of functioning.

28. Claimant presented to Dr. D'Angelo for an IME commissioned by Respondents on August 24, 2016. RHE F at 11. Claimant had complaints including: low back pain; buttock pain; right leg pain and numbness; right arm pain and numbness; problems thinking; stress; and bowel inconsistency. RHE F at 12. Claimant reported that she was worse since the injury. Claimant denied having similar or previous problems. RHE F at 13.

29. Dr. D'Angelo recorded Claimant's history of the alleged incident. Claimant stated that she fell and could not remember whether she was helped up by a person who offered assistance. RHE F at 14. Claimant stated that she then went to her car and drove directly to school. Claimant stated that she immediately felt pain in her low back and tailbone, and subsequently favored her right side due to hip pain.

30. Claimant denied having hip pain prior to the incident. Claimant stated that she did not immediately experience hip pain, which developed later. RHE F at 15. Claimant also stated she subsequently noticed symptoms in her right arm and leg. Claimant stated that Dr. Ogrodnick informed her that she had a "perfect" MRI. RHE F at 17. Claimant stated that she was denied further treatment after March of 2016 and that, as a result, "things have gotten worse." RHE F at 17. Claimant stated that she did feel improvement in her hip during physical therapy, but that she didn't feel improvement in the low back because this was not addressed by the therapist. RHE F at 18.

31. Dr. D'Angelo reviewed multiple medical records, including records from Claimant's preexisting medical history. Dr. D'Angelo reviewed records dating back to 2009, some of which reflected a long history of orthopedic issues and complaints. RHE F at 29. Claimant had bilateral foot pain in 2009. Claimant had complaints throughout 2011 of pain in her neck, including headaches, lumbar spine, thoracic spine, and right sacroiliac joint. RHE F at 24-25. These complaints also included pain down the legs. Claimant had complaints of low back pain in 2014 and complaints of bilateral hip pain at this time as well, with no known trauma. RHE F at 27. Claimant also treated for significant anxiety and depression in 2014.

32. Dr. D'Angelo noted that Claimant had numerous delayed onset of symptoms and complaints following her initial medical evaluation at SCL. RHE F at 35. Dr. D'Angelo noted that the location of the symptoms varied and metastasized over time, which was inconsistent with acute trauma and without medical explanation. Dr. D'Angelo opined that these complaints were not substantiated by objective physical or diagnostic findings. Dr. D'Angelo noted that acute traumatic spine injuries are also acutely symptomatic. *Id*. Dr. D'Angelo indicated that, had Claimant developed a lumbar disc herniation or a neurological injury due to the fall, her symptoms would have been evident immediately. Dr. D'Angelo opined that Claimant's somatic symptoms, such as cognitive difficulties, anxiety, and depression, were impossible to explain from the established mechanism injury.

33. Dr. D'Angelo opined that Claimant sustained a contusion of the coccyx with myofascial pain to the lumbar and sacral regions pursuant to the February 3, 2016 fall. RHE F at 36. Dr. D'Angelo opined that Claimant had Somatic Symptom Disorder causing a litany of complaints and that this should be evaluated under private insurance. Dr. D'Angelo opined that Claimant was at MMI with no permanent impairment.

34. Claimant was then involved in a second motor vehicle accident on October 11, 2016. RHE L at 111. This was not disclosed to Respondents through discovery requests. Claimant is represented by an attorney and is pursuing a claim against the allegedly at-fault driver.

35. Medical records from Denver Health on this date note that Claimant was the restrained passenger in a vehicle that was rear-ended at what Emergency Medical Services ("EMS") described as "incredibly low" speeds. RHE L at 111. The record indicates that the impact was so minimal that there was no paint transfer between vehicles. The speed of the impact was characterized as "walking speed." RHE L at 112. Upon EMS arrival, Claimant was found shrieking and sobbing violently, was unwilling to get out of the vehicle, and was not redirectable. EMS treated Claimant with Versed, which Dr. Machanic testified is a tranquilizer/sedative.

36. Claimant was seen in the emergency room approximately 20 minutes after the accident. RHE L at 112. Claimant complained to the emergency room doctor of neck and back pain. Claimant denied a history of anxiety attacks. It was noted that the examination was limited due to Claimant's "hysteria." A physical examination indicated no noted issues with the pelvis, cervical, thoracic, or lumbar spine, no crepitus, deformities, or evidence of trauma. It is noted in the records from that event that "all of the above serious potential etiologies are felt to be highly unlikely based upon the information available and that Claimant's symptoms improved in the emergency room. Claimant was discharged and not given further medications.

37. Claimant testified at hearing that she was still experiencing symptoms. Claimant claimed there was pain radiating from her lumbar spine to her tailbone, with cracking in the low back and hips. Claimant also testified that she still has symptoms of numbness and tingling in her right arm and leg. Claimant also testified that she had issues with frequency and urgency of urination. Claimant related all of these issues to her slip-and-fall.

38. Claimant denied having any injuries to the low back as a result of her motor vehicle accidents. Claimant also denied having received treatment for her low back. Claimant testified that she had not been having any problems with these body parts prior to the slip-and-fall and that the previous chiropractic care that she received was for "maintenance." Claimant testified that she did not have any past pain in her back or in her hip. Claimant testified that Dr. Ogrodnick's medical records from February 18, 2016, where he indicated that he palpated Claimant's iliac crest area, were incorrect and that he did not palpate this area. Claimant testified that there was no point in this claim during which her symptoms improved.

39. Dr. Machanic testified at hearing on behalf of Claimant. Dr. Machanic testified that, at the time of his examination, Claimant had difficulties or "at least complaints" in her back, her right arm and leg, her right elbow, and also with her neck. Dr. Machanic testified that he felt that the neck was not work-related. Dr. Machanic testified that, based upon the records he reviewed, the "most logical answer" to the symptoms pursuant to the fall was a sacroiliac

hip issue. Dr. Machanic also testified that he “suspect[ed] the right elbow was injured at the time of the fall,” as well as the back.

40. Dr. Machanic testified that Claimant had an aggravation of the right femoral cutaneous nerve. Dr. Machanic testified that there was no evidence that the motor vehicle accident affected these symptoms. Dr. Machanic further testified that he could not make a medical distinction between related psychological or emotional issues and those issues which are not related to the claim. Dr. Machanic testified that Claimant’s emotions did compromise interaction during examination but, “for the most part,” he thought that “probably she was a reliable historian.”

41. Dr. Machanic acknowledged that the medical records do not reflect that Claimant fell on either side of her hips, onto her hand, onto her elbows, or onto any other body part other than her low back region. Dr. Machanic acknowledged that Claimant "may or may not" suffer from a somatization disorder. Dr. Machanic had not reviewed the extent of the medical records and was not aware of the second motor vehicle accident at the time of his testimony. Dr. Machanic acknowledged that there were inconsistencies in the medical records concerning Claimant’s reports of her medical history and what the medical history reflects.

42. Dr. D’Angelo testified on behalf of Respondents. Dr. D’Angelo testified that Claimant had a somatoform disorder and a lifelong pattern of presenting frequently to providers with multiple complaints, including bilateral hip, low back, and leg pain, prior to the slip-and-fall. Dr. D’Angelo testified that the only injury Claimant suffered was a contusion to the coccyx and some myofascial irritation. Dr. D’Angelo testified that Claimant had undergone multiple diagnostic tests and that there was no evidence of objective, physiological, structural damage. Dr. D’Angelo testified that the x-ray studies performed showed no objective abnormalities to the coccyx.

43. Dr. D’Angelo testified that Claimant did not have any injury requiring active treatment and that there was “nothing to be done for this,” as there were no positive findings absent subjective complaints of pain. Dr. D’Angelo testified that the femoral cutaneous nerve was purely sensory and could not cause motor weakness, which Claimant had exhibited, and that her presentation and examination findings were inconsistent with an injury to this nerve. Tr. at 117, ll. 6-16.

44. Dr. D’Angelo testified that Claimant’s symptoms would be expected to resolve without treatment. Dr. D’Angelo testified that Claimant should have been at MMI and discharged after the February 21 and 22, 2016 MRI studies showed no evidence of an acute injury. Dr. D’Angelo testified that additional diagnostic testing was not necessary to rule out additional treatment prior to MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Credibility

D. The ALJ finds that Claimant is not reliable as a medical historian, as her account of her prior medical history in testimony and in the medical records is inconsistent with the medical records prior to her February 3, 2016 fall. The Court finds that Claimant is not sufficiently reliable in her account of the symptoms she reportedly experienced from her two motor vehicle accidents. In each instance, Claimant reported some onset or increase in low back pain as identified in the medical records.

E. The ALJ finds Dr. Machanic to be sincere, but insufficiently persuasive. Dr. Machanic's opinion was not based upon the full medical history of the claim and was derived in large part from Claimant herself. Dr. Machanic's testimony regarding clear objective findings and causality was not consistent with his own report, the medical records, the opinion of the treating providers, or his physical examination. Dr. Machanic's opinion regarding causality is not sufficiently persuasive to meet Claimant's burden of proof.

F. Dr. D'Angelo testified persuasively regarding her opinions on causality, impairment, and reasonable, necessary, and related medical treatment.

Compensability

G. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Simply because a claimant experiences symptoms while in the course and scope of their employment does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (April 10, 2008). Claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009).

H. Claimant's did suffer a work-related injury on February 3, 2016 as the result of a slip-and-fall in the icy parking lot after completing her shift. However, her continuing complaints of injury are based purely on subjective complaints without supporting diagnostic evidence. Claimant testified that she did not know whether she had pain after she fell. Claimant's representation to Dr. D'Angelo that she experienced the immediate onset of pain in her back after the fall was inconsistent with her own testimony at hearing, and her representations to PA Hildner upon her initial medical visit. Claimant did not immediately report a work-related injury or treatment and instead drove directly to school, attended her classes for the day, and testified that she did not experience the onset of symptoms until later in the evening.

I. All diagnostic tests performed in the claim were returned negative for any acute injuries or abnormalities. Upon Claimant's initial examination by the treating provider,

there was no evidence of trauma or obvious abnormality of the lumbar spine upon inspection. Claimant denied any neurological symptoms or sacroiliac joint tenderness. X-ray studies of the pelvis, sacrum, and coccyx have consistently been normal. Two MRI studies of the lumbar spine subsequently performed at the request of the treating provider reflected no evidence of any abnormalities or acute findings. A second x-ray of the pelvic region performed on February 12, 2016, at the request of Dr. Ogrodnick, showed no evidence of abnormalities. Additional diagnostics, including a CT scan performed of the lumbar spine after the March 30, 2016 motor vehicle accident, showed no acute findings. There was no evidence of crepitus in the pelvis or lumbar spine. The only initial finding was tenderness reported by Claimant upon palpation over the inferior sacral area. Dr. D'Angelo opined that Claimant simply suffered a contusion with myofascial irritation pursuant to the slip-and-fall that would not require treatment and resolve with the passage of time.

J. Dr. D'Angelo felt that Claimant had a somatoform disorder, pursuant to which Claimant had chronic complaints derived from psychological stressors. Dr. Machanic acknowledged that possibility as well, but stated that that did not mean Claimant did not suffer real injuries. Claimant had a documented preexisting history suggestive of a "lifelong" pattern of multiple complaints involving her lumbar spine, bilateral hips, and lower extremity pain and numbness. Claimant is found not reliable in regard to her account of her medical complaints of pain and dysfunction prior to the incident. Moreover, Claimant's pain behaviors after both of her motor vehicle accidents support the persistence of subjective complaints of pain in multiple body parts, including those allegedly related to her fall, without supporting objective evidence of any acute injury. Conversely, assuming Claimant's reaction to her motor vehicle accidents was genuine, it renders it problematic to apportion her back complaints between her work injury and her traffic accidents-at least one of which is subject to litigation.

K. Claimant's asserted mechanism of injury is not consistent with her complaints. Claimant had an expanding array of complaints that do not correspond to objective evidence in the record. Dr. Ogrodnick noted on multiple occasions that Claimant's subjective complaints did not correlate with objective findings. Claimant fell onto her tailbone/low back/buttocks region. Claimant did not fall onto her side or her hips and did not hit her head, neck, hands, arms, or elbows during the fall. Claimant subsequently developed complaints into her right arm, left arm, right hip, and right leg, without a supporting mechanism for these alleged injuries. Sacroiliac joint pain was not present upon initial examination- which itself occurred a day after the fall- and did not develop until later.

L. Dr. D'Angelo credibly testified that there was no medical explanation for Claimant's symptoms. Dr. D'Angelo's opinion that, if Claimant had an acute injury corresponding with her subjective complaints, her symptoms would have manifested quickly is persuasive. Dr. Machanic's opinion that Claimant suffered right arm ulnar neuropathy is not supported by a causal mechanism anywhere in the medical records or testimony. Likewise, Dr. Machanic's opinion that Claimant had breakaway leg weakness and neurological issues in her right leg as a result of a femoral cutaneous

nerve injury resulting from the fall is not supported by other medical evidence. The ALJ finds Dr. D'Angelo's opinion that an injury to this nerve should not cause breakaway weakness in the leg to be persuasive. The ALJ parenthetically finds that there was no evidence, from Dr. D'Angelo, Dr. Mechanic, or the admitted medical records, to support a psychological or mental injury related to the slip-and-fall.

Medical Benefits

M. Respondents are liable only for those medical benefits which are reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *City of Durango v. Dunagan*, 939 P.2d (Colo. App. 1997). The record must distinctly reflect the medical necessity of any medical treatment needed to cure and relieve an injured employee from the effects of the industrial injury and any ancillary service, care, or treatment as designed to cure and relieve the effects of such industrial injury. *Public Service Co. of Colorado v. Industrial Claim Appeals Office of State of Colo.*, 797 P.2d 584 (Colo. App. 1999). The question of whether medical treatment is reasonable and necessary is one of fact for determination by an ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims* Office, 989 P.2d 251 (Colo. App. 1999).

N. Treatment for a work injury must not only be reasonable and necessary but must also be causally related to that injury. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Respondents are permitted to challenge causation and relatedness of the need for any treatment, despite having admitted liability for a claim. *Hanna v. Print Expediters, Inc*. 77 P.3d 863 (Colo. App. 2003); *Snyder v. Industrial Claim Appeals Office of the State of Colo*., 942 P.2d 1337 (Colo. App. 1997). In a dispute over medical benefits that arises after filing an admission of liability, Respondents may assert, based upon subsequent medical reports, that workers' compensation claimant did not establish a threshold requirement of direct causal relationship between the on-the-job injury and need for medical treatment. *Snyder v. Industrial Claim Appeals Office of the State of Colo., supra*. Claimant bears the burden to prove a causal connection exists between a particular treatment and the industrial injury. *Id*.; *see also Grover v. Industrial Commission of Colorado*, 759 P.2d 705 (Colo. 1988). Causation is a question of fact for resolution by the ALJ. *F.R. Orr Construction v. Rint*, 717 P.2d 965 (Colo. App. 1985).

O. While this fall in the parking lot is a compensable claim, Claimant's reasonable, necessary, and related medical treatment was performed in relation to a sacral/coccyx contusion. As noted previously, Dr. D'Angelo credibly testified that this would have resolved independent of active medical care. Dr. D'Angelo credibly testified that Claimant should have been discharged after multiple diagnostic studies reflected no objective diagnostic evidence of an acute injury in February 2016. The ALJ finds Dr. D'Angelo's opinion that no *further* medical care is reasonable, necessary, or related to the claim to be persuasive. The ALJ finds insufficient evidence to support the relatedness of treatment for Claimant's multiple subjective complaints involving her right

upper extremity, her lower right extremity, her hips, her urinary incontinence and urgency, or her emotional distress. There is no *additional* medical treatment that is reasonable, necessary, or related to this compensable injury.

Intervening Cause/Event

P. While this parking lot fall is a compensable injury, there is substantial evidence in the record to support an intervening cause occurred as a result of the March 30, 2016 motor vehicle accident, as well as the October 11, 2016 motor vehicle accident.

Q. In the event of a compensable injury, an intervening cause may sever the causal relationship between an employee's work injury and the resulting disability. *El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1993). An intervening incident that breaks causation between the injury and resulting wage loss means that the employee forfeits both temporary and permanent benefits. *Schlage Lock v. Lahr*, 870 P.2d 615 (Colo. App. 1993). Likewise, an independent medical condition is also not compensated as part of the work-related injury. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002).

R. Claimant sustained two motor vehicle accidents subsequent to her fall on February 3, 2016 and during the course of this claim. The nature of both accidents was similar and involved Claimant being rear-ended by another driver while restrained and seated in a vehicle. While both accidents involved another vehicle traveling at a relatively slow rate of speed and were notably minor, Claimant's subjective complaints pursuant to each accident are nevertheless the same or similar to those prior to the first March 30, 2016 motor vehicle accident, with the exception of the neck. Both accidents involved complaints of the low back and subsequent emotional distress. Of note, Dr. D'Angelo credibly testified that symptoms of neuralgia paresthetica in Claimant's lower extremity would be *more likely* caused by a motor vehicle accident than a slip-and-fall onto the buttocks because of the tightening of the seatbelts across the pelvis.

S. Claimant also treated with Dr. Wallace, who saw Claimant after the first accident, with physical therapy for her lumbar condition. It is at least equally likely that Claimant's alleged ongoing conditions of lumbar and lower extremity radicular numbness were caused or aggravated by the motor vehicle accidents than a result of the natural progression of a compensable slip-and-fall on February 3, 2016. Likewise, given the extent and nature of the emotional reaction to the October 11, 2016 motor vehicle accident, it is more likely than not that any ongoing emotional distress is related to this subsequently occurring automobile accident.

Temporary Total Disability Benefits

T. To qualify for temporary total disability (TTD) benefits, a workers' compensation claimant must establish three conditions: 1) the work injury caused the disability; 2) claimant left work as a result of the injury; and 3) temporary disability is

total and lasts for more than three working days (emphasis added). *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997).

U. The preponderance of the evidence does not establish an ongoing work-related disability.

ORDER

It is therefore ordered that:

1. Claimant's work-related sacral/coccyl contusion has now resolved. There is no ongoing reasonable , necessary, or related medical treatment needed to further treat this injury.

2. Claimant's claim for further treatment for her right arm, leg, hips, or emotional distress is denied and dismissed.

3. Claimant's claim for further medical treatment following her second automobile accident of October 11, 2016 is denied and dismissed.

4. Claimant's claim for temporary disability benefits is denied and dismissed.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that Respondents are liable for payment of medical benefits provided by Mountain States Pathology, Colorado Springs Health Partners, and Diversified Radiology of Colorado, P.C., as a result of her compensable claim which occurred on June 27, 2016.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained an admitted industrial injury on June 27, 2016. As a result of the industrial injury, Claimant received medical care from a variety of medical providers, including Mountain States Pathology, Colorado Springs Health Partners, and Diversified Radiology of Colorado, P.C.

2. Respondents filed a Final Admission of Liability on January 3, 2017, admitting liability for medical benefits, Temporary Total Disability benefits and Permanent Partial Disability benefits. Claimant timely objected to the Final Admission of Liability and set the matter for hearing on payment of medical benefits from various medical providers, including Mountain States Pathology, Colorado Springs Health Partners, and Diversified Radiology of Colorado, P.C.

3. At the hearing, Respondents' counsel represented that Respondents admit liability for the medical care Claimant received from Mountain States Pathology, Colorado Springs Health Partners, and Diversified Radiology of Colorado, P.C.

4. Respondent's counsel further represented that payment for two other providers, Castle Rock Adventist Providers, and Emergency Physicians at Porter Hospital has been admitted by Respondents, and has either been paid, or is in the process of being paid. This representation by counsel is accepted by the ALJ.

5. The record is unclear why payment of these medical bills for this admitted claim has been delayed to date, but the ALJ finds that Respondents are now acting in good faith to rectify this matter in its entirety.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is evidence that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. Claimant received medical care from Mountain States Pathology, Colorado Springs Health Partners, and Diversified Radiology of Colorado, P.C. At hearing, Respondents admitted liability for the medical care Claimant received from those providers. Therefore, the Administrative Law Judge finds and concludes that Claimant has sustained her burden of proving by a preponderance of the evidence that Respondents are liable for payment of medical benefits provided by Mountain States Pathology, Colorado Springs Health Partners, and Diversified Radiology of Colorado, P.C.

ORDER

It is therefore ordered that:

1. Respondents shall pay, without further undue delay, for medical benefits provided by Mountain States Pathology, Colorado Springs Health Partners, and Diversified Radiology of Colorado, P.C.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Respondents have met their burden to prove that Claimant's injury resulted from the willful failure to use a safety device and/or a willful violation of a reasonable safety rule adopted by Employer for Claimant's safety in contravention of C.R.S. §8-42-112(1)(a) and (b), thus entitling Respondents to reduce Claimant's compensation by fifty (50) percent.

II. If Claimant's indemnity benefits are reduced by fifty percent, whether Respondents are entitled to an overpayment based on Claimant's receipt of full indemnity benefits.

STIPULATION

The parties stipulated that Respondents' Exhibit K accurately reflected Claimant's indemnity benefits for the purpose of calculating an overpayment should the ALJ conclude that Claimant willfully failed to use a safety device and/or violated a reasonable safety rule adopted by Employer.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer is a heating, ventilation, and air condition ("HVAC") and refrigeration company that services all types of residential and commercial air conditioning units, boilers, and, furnaces. Claimant was hired by Employer as an HVAC technician on March 28, 2016.

2. When Claimant began working for Employer, Patrick Volz, the Employer's owner and founder, worked with Claimant on a daily basis. Mr. Volz always works with new employees to ensure they know Employer's safety rules and how to perform the tasks they are assigned.

3. Mr. Volz testified that safety is of paramount importance to him. Consequently, he testified that he imposes safety rules for his workers. He specifically testified that one of the safety rules he reviews with all new employees is a rule requiring all employees to only use ladders provided to them by Employer ("Ladder Rule").

4. As part of their line of work, Employer services HVAC units that are located on roofs of buildings and recreational vehicles (RVs). According to Mr. Volz, the

Ladder Rule applies whenever an employee needs to climb to a roof to access an HVAC unit. During cross examination, Mr. Volz admitted that the rule has an exception which is that employees are allowed to use ladders that are bolted to the sides of buildings. Per Mr. Volz, the reason for this exception is that employees can be assured that ladders bolted to the sides of buildings are safe because they are inspected by government officials. Mr. Volz also admitted that the "Ladder Rule" was not reduced to writing but claimed it has been in place since the company was founded.

5. The purpose of the Ladder Rule is to guarantee that employees use safe ladders that are sturdy, do not have broken rungs, have the proper weight bearing capacity, and are made from fiberglass to prevent electrical shock. Mr. Volz testified that he is responsible for purchasing Employer's ladders and intentionally purchases fiberglass ladders that meet a 300 pound weight bearing capacity limit and have ice cleats on the legs to prevent them from slipping. According to Mr. Volz, these features render the ladder a "safety device."

6. Employer provides vans to its employees and each van is equipped with at least three ladders of varying heights to enable employees to reach roofs of different heights.

7. Mr. Volz testified that during the first two months of his employment he worked an estimated 25 times along side of Claimant. During this time, Mr. Volz testified that he communicated the Ladder Rule to Claimant on several occasions. He reported that on 3-4 occasions during this time, Claimant tried to use a ladder other than one provided on his van. On these occasions Mr. Volz testified that he counseled Claimant to use the company ladders.

8. On May 27, 2016, shortly before Claimant's injury, Claimant began climbing a ladder on the back of a camper to access the air conditioning unit on the roof. Mr. Volz reminded Claimant of the Ladder Rule and explained to him the camper ladder was unsafe because it was narrow and difficult to climb.

9. Mr. Volz testified that there was no question Claimant knew and understood the rule after it was explained to him. Mr. Volz did not write a formal disciplinary report after this incident because he believed that a verbal warning was sufficient.

10. On June 21, 2016, Claimant was assigned to repair an air conditioning unit located on the roof of a fifth wheel travel trailer. The fifth wheel was approximately ten feet high and was equipped with a ladder that was bolted to the rear of the unit. This ladder descended from the roof downward terminating approximately two feet above ground level. At the end of this ladder was a short two rung swinging extension designed to allow for easy access to the stationary ladder that ran up the back of the RV.

11. Claimant testified that after he had finished servicing the AC unit, he

lowered his tolls to the ground and began to descend the stationary ladder bolted to the back of the RV. He explained that as he traveled down the ladder, his foot got caught between the last rung of the stationary ladder and the RV. As he stepped down with the opposite foot onto the extension it moved causing him to lose his balance, fall and injure his shoulder.

12. At the time Claimant serviced the fifth wheel, his van was equipped with three ladders of different sizes. Claimant testified that for safety reasons he did not put a ladder against the RV in question because the side and roof were slippery and he had seen extension ladders slide off the sides of RVs in the past. According to Claimant, the ladder bolted to the RV and the swinging portion containing the last two rungs was factory made. He assessed it as safe and testified that he would not have climbed it if it was not.

13. Employer testified that there was plenty of space in which to set up a company ladder. According to Mr. Volz there was no reason not to. He also testified that Claimant would not have been injured if he had used an Employer provided ladder because he would not "have been dealing with [a ladder] that was swinging around." Accordingly, Respondents contend that Claimant willfully violated a company policy to always use a company ladder on the job.

14. Claimant testified the he was never instructed not to climb existing ladders. To the contrary, he testified that if there was an existing ladder at the job site that was safe, he and Mr. Volz would climb them "all the time." Per Claimant he climbed non-company ladders "all day-every day." According to Claimant, the first he heard of the Ladder Rule was after he fell and injured his shoulder.

15. John Hogan, an HVAC technician who was hired by Employer after Claimant's fall, testified that when he began working for Employer, Mr. Volz regularly communicated the Ladder Rule to him, explained the importance of the rule, and showed him how to properly set up the ladders. Based on his conversations with other employees, Mr. Hogan believes the Ladder Rule is a well-known safety rule.

16. Mr. Hogan's testimony has limited persuasive effect since he was hired after Claimant and the issue for resolution is what safety rule was in existence at the time Claimant fell, not what rules may have been put into place after Claimant fell.

17. Mariana Vergara, Employer's office manager and business administrator, completed a First Report of Injury on June 21, 2016 based on information Claimant provided to her. The First Report of Injury indicated that Claimant had been provided with safety equipment; however, the First Report fails to document whether it was used.

18. On June 24, 2016, Three days after the incident, Ms. Vergara prepared an Employee Disciplinary Report documenting what she asserted in the report was a violation of safety rules and company policies. In the report, Ms. Vergara noted that Claimant did not use the ladder provided to him by Employer to go up and down the RV.

Rather, he used the ladder located on the back of the RV which she asserted was not a "reliable ladder" and not part of his "safety tools."

19. Employer's Employee Handbook was admitted into evidence. Section 4.5 of the handbook addresses "Safety." The handbook does not specifically address safety concerns surrounding ladders and does not reference ladders as safety devices/equipment. Rather, Section 4.5 provides in pertinent part: "it is the employee's responsibility to take steps to promote safety in the workplace and work in a safe manner. By remaining safety conscious, employees can protect themselves and their coworkers."

20. Mr. Volz inspected the fifth wheel on June 23, 2016, one day before Ms. Vergara wrote him up for violating company policies and not using safety equipment. During his inspection, Ms Volz noticed that the bottom two rungs of the ladder were clamped to the base of the stationary ladder and moved freely when someone stepped on them. Mr. Volz believed that even a strong wind could cause the extension to move. Consequently, Mr. Volz reasoned that the RV ladder was not secure. While he was inspecting the RV and taking pictures, Mr. Volz testified that the owner confronted him and questioned him about the reason he was taking pictures.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office,* 5 P.3d 385(Colo. App. 2000).

Respondents Contention that a Ladder is a Safety Device

B. Respondents are relying on section 8-42-112(1)(a), C.R.S., which provides in pertinent part that a claimant's temporary total disability benefits (TTD) may be reduced by fifty percent (50%) "where injury is caused by the willful failure of the employee to use safety devices provided by the employer." In this case, the Respondents are alleging that a ladder constitutes a "safety device." The ALJ is not persuaded. In the view of the undersigned, a safety device is an instrumentality intended for a particular safety purpose to prevent injuries. Such devices may include guards, seat belts, a filtered mask to breathe through and safety harnesses. In cases that have addressed the failure of an employee to use a safety device, they have considered the use of whether a claimant failed to use a safety harness while working high above ground. *E.g., Nightingale v. Lowes Home Improvement Warehouse, Inc.*,

W.C. No. 4-912-834-01 (April 3, 2014); *Flores v. American Furniture Warehouse*, W.C. No. 4-939-951-01 (April 30, 2015); *Ramirez v. Unique Endeavors Pajaritos #2, Inc., SJC Building*, W.C. No. 4-882-966-02 (March 10, 2014). Each of the aforementioned items are safety devices because their primary function his to address a specific safety concern to prevent injury. In contrast, a ladder by its very nature, i.e. its intended use raises the risk of injury, especially if used improperly. The undersigned knows of no cases where a ladder was found to be a safety device under this statute and Respondents cite none.

C. The testimony from Mr. Volz that the features of the ladders he provides render them safety devices is unpursuasive. Here, the ladder provided to Claimant was store-bought without modification and available to anyone for purchase. The fact that it may have been made from fiberglass and had cleats does not make it a safety device. The ALJ agrees with Claimant that a ladder is simply a tool designed to assist a workers in getting his/her work done. If a ladder were a considered a safety device merely because it had some enhanced safety features, such a soft grips on a pair of pliers, then any tool provided to a claimant could be considered a safety-device. By asserting that Claimant failed to use a safety device by not using a particular ladder, the Respondents are greatly over-reaching. The primary reason a ladder was provided to Claimant was to assist him in climbing onto roofs, not to protect him from harm. In that regard, the ALJ concludes that a ladder is a tool not a safety device.

Respondents Contention that Claimant Violated a Safety Rule

D. Section 8-42-112(1)(b), C.R.S. 2014, provides for a fifty percent (50%) reduction in benefits if the employee is injured due to a willful violation of a safety rule. The term "willful" connotes deliberate intent, but mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard. *Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968). Respondents bear the burden of proof to establish that the claimant's conduct was willful. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

E. The elements of proving a violation under Section 8-42-112(1)(b) include the following: 1) There must be a safety rule adopted by the employer. 2) The safety rule must be reasonable. 3) The safety rule must be known by the employee; i.e. “brought home” to the employee, and diligently enforced. *Pacific Employers Insurance Co. v Kirkpatrick*, 111 Colo. 470, 143 P.2d 267 (Colo. 1943). 4) The meaning and content of the safety rule must be specific, unambiguous and definite, clear and non-conflicting. *Butland v. Industrial Claim Appeal Office*, 754 P.2d 422 (Colo. App 1988). 5) The violation of the safety rule must be willful, done with deliberate intent by the employee. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App 1990).

F. “Under § 8-42-112(1)(b) it is Respondents’ burden to prove every element justifying a reduction in compensation for willful failure to obey a reasonable safety rule.” *Horton v. JBS Swift and Company*, W.C. No. 4-779-078 (2010); *Strait v. Russell Stover*

Candies, W.C. No. 4-843-592 (2011). The question of whether the respondents carried the burden of proof was one of fact for determination by the ALJ. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). Here, the evidence presented persuades the ALJ that Respondents presented sufficient evidence to meet their burden of proof concerning elements 1-2 and 4.[1] Rather, the question presented here is whether the safety rule was diligently enforced and whether Claimant's injuries were caused by his willful failure to adhere to the rule against using any ladder other than those provided by employer. Based upon the evidence presented, the ALJ concludes that Respondents failed to carry their burden regarding these elements.

Employer's Failure to Conscientiously Enforce the Alleged Safety Rule

G. Having concluded that Employer, probably established a safety-rule against use of any other ladder than those provided on his service van, the ALJ turns his attention to whether the rule was diligently enforced. In concluding that Respondents have failed to meet their burden of proof to establish a willful violation of an alleged safety-rule, the ALJ finds the case of *Ronzon v. HCM, Inc.*, W.C. No. 4-914-996-01 (November 6, 2014) instructive. In *Ronzon*, as in this case, the only evidence the employer produced for an alleged safety-rule violation was a write-up against the claimant, after claimant was injured, and not before. Moreover, as in this case, the evidence presented in *Ronzon* persuaded the ALJ that "[t]he employer failed to meet its burden to prove a willful violation of a safety rule because the employer had failed to show that it enforced the safety policy prior to the date of the claimant's injury." In this case, the evidence presented demonstrates the following:

- The only write-up we have regarding the alleged rule is one that occurred after Mr. Messer was injured, and not before. As found above, Claimant was injured on June 21, 2016, but, was written up for a violation of this alleged safety rule is on June 24, 2016.

- Claimant was written up for an argument with his boss over payment for a job leading the ALJ to infer that Employer did not hesitate to write him up for violating company policy. Yet, Respondents failed to establish the existence of any write ups or other enforcement of the alleged safety-rule in question despite Mr. Volz' testimony that he personally saw Claimant violate the alleged safety rule on 3-4 occasions. Respondents presented no explanation for why Claimant was not written up over these violations other than to suggest that Employer did not think a write-up was necessary.

[1] Despite Claimant's concerns that the alleged safety-rule in this case was not reduced to writing, settled case law provides that a safety rule "does not need to be formally adopted, does not have to be in writing, and does not have to be posted for the reduction pursuant to § 8-42-112(1)(b) to apply. Rather, oral warnings, prohibitions, and directions are sufficient if heard and understood by the employee and if given by someone generally in authority." *Id.* A safety rule with exceptions is a legitimate safety rule that compels a reduction in indemnity benefits if the claimant willfully commits an act that is not within those exceptions. *See Stockdale v. Indus. Comm'n*, 232 P. 669, 670 (Colo. 1925) (holding the claimant willfully violated an oral safety rule by crossing a bridge with a full tank of water even though his supervisor testified that he allowed the claimant to cross the bridge with an empty tank).

A suggestion the ALJ finds/concludes unconvincing given the sheer number of alleged violations Claimant committed in the presence of Mr. Volz. Accordingly, the ALJ concludes that the evidence supports a finding/conclusion that if the alleged safety-rule existed in the first instance, Claimant's employer was not enforcing it.

Respondents Failure to Establish a Willful Violation of the Alleged Safety Rule.

H. "An employee's violation of a safety rule need not be considered willful if the employee had some plausible purpose to explain the violation." *Grose v. Riviera Electric*, W.C. No. 4-418-465 (2000). "Generally, an employee's violation of a rule in an attempt to facilitate accomplishment of the employee's business does not constitute willful misconduct." *Id*. "We have previously held that under some circumstances evidence the claimant possessed discretion to circumvent a safety rule might negate a finding of a 'willful' safety rule violation." *Triplett v. Evergreen Builders, Inc.*, W.C. No. 4-576-463 (2004). "Further, the exercise of poor judgment within the realm of the claimant's legitimate discretion might well qualify as mere 'negligence' sufficient to preclude a finding of willfulness." *Id*.

I. Given the fact that Claimant's employer could not even tell us what the alleged safety-rule was, since he first told us that the rule prohibited the use of any non-company ladder, only to admit later on that Claimant could use other ladders, assuming this rule existed, this creates enormous problems for the Respondents. At best, it appears that the so-called safety-rule would have allowed Claimant to decide to climb up and down ladders that are secured to other objects, like buildings and/or RVs. Since the ladder he used was attached to the fifth wheel, then he could not have willfully violated this alleged safety rule by climbing such a ladder given the exception to the rule testified to by Employer. Claimant testified that the ladder appeared safe, was attached, and was a manufactured ladder intended to be used by people to climb onto the roof of the fifth wheel. Furthermore, Claimant testified to a legitimate safety reason for using this ladder – the extension ladder was more dangerous because it could have easily slipped off the sheet-metal surface of the fifth wheel. Under these circumstances, the ALJ concludes that Claimant's violation was done in an attempt to expeditiously facilitate Employers business purposes. At best, the Respondents have shown that perhaps Claimant was negligent in using the ladder bolted to the RV because the bottom two rungs were able to swing freely. Nonetheless, under the facts of this case, the ALJ concludes that this does not reach the level of a willful violation of the purported safety rule. Accordingly, the request for a fifty percent reduction in Claimant's indemnity benefits must be denied and dismissed. Because Respondents have failed to carry their burden to established that Claimant willfully failed to use a safety device and willfully violated a known safety-rule, the claim for overpayments need not be addressed further.

ORDER

It is therefore ordered that:

1. Insurer's request to reduce claimant's compensation benefits by fifty percent

(50%) as provided for by Sections 8-42-112(1)(a) and (b), above is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

W.C. No. 4-956-806-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 18, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 1/18/17, Courtroom 1, beginning at 8:30 AM, and ending at 12:00 PM). The hearing concerns the Respondents' request to overcome the Division Independent Medical Examination (DIME) of Gary Zuehlsdorff, D.O. At the conclusion of the hearing, the ALJ ordered a Follow Up DIME because of an ambiguity in Dr. Zuehlsdorff's DIME report, based on the Claimant's testimony at hearing. Dr. Zuehlsdorff performed the Follow Up DIME on April 26, 2017, and filed his report on the same date. A briefing schedule had been established thereafter.

Claimant's Exhibits 1 through 19 were admitted into evidence, without objection, with the exception of Claimant's Exhibit 18 (a recording of an interview by Investigator Mike Whitaker), to which the Respondents' objected. The ALJ hereby sustains the Respondents' objection and rejects Claimant's Exhibit 18. Respondents' Exhibits A through FF were admitted into evidence, without objection. The evidentiary deposition of Mark Robinson, M.D., taken on October 25, 2016, was filed on May 2, 2017 (hereinafter referred to as "Robinson Depo.," followed by a page number).

At the conclusion of the hearing, the ALJ ordered a Follow Up DIME because of an ambiguity in Dr. Zuehlsdorff's DIME report. Dr. Zuehlsdorff performed the Follow Up

DIME on April 26, 2017, and filed a report of the same date. A briefing schedule thereafter was established: Respondents' opening brief was filed on May 2, 2017. The Claimant's answer brief, labeled "Claimant's Proposed Specific Findings of Fact, Conclusions of Law, and Order," was filed on May 8, 2017. Respondents' reply brief was due within two calendar days of the answer brief. There was no timely reply brief and the matter was deemed submitted for decision on May 11, 2015. The ALJ hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns the Respondents' request to overcome the DIME of Gary Zuehlsdorff, D.O., on his findings that the Claimant was at maximum medical improvement (MMI) as of April 26, 2016 and rated at 16% whole person permanent impairment. The Claimant's admitted low back injury date was January 24, 2014. Respondents' theory, contrary to Dr. Zuehlsdorff's opinions, is that the Claimant sustained an effective, independent, intervening cause on August 12, 2015.

The Respondents bear the burden of proof, by clear and convincing evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. This admitted claim stems from an incident that occurred at work on January 24, 2014.[1] Claimant is a firefighter who was conducting ice rescue training on that day. The shore crew pulled her harness, causing her to spin, hitting her back on an ice shelf. She injured her back, and was diagnosed with facet syndrome (Respondents' Exhibit FF, Exhibit A, bates 2; Exhibit C, bates 24).

2. Ultimately, the Respondents filed a Final Admission of Liability (FAL), admitting for an average weekly wage (AWW) of $1,452.36; temporary total disability (TTD) and temporary partial disability (TPD) benefits through September 1, 2014; zero permanent partial disability (PPD) benefits; and denying liability for post maximum medical improvement (MMI) maintenance medical benefits. The Claimant filed a timely objection and Notice and Proposal for Selection of a DIME. Gary Zuehlsdorff, D.O. was selected as the DIME Examiner.

1 The hearing audio for the January 18, 2017 hearing was transcribed and that transcription was submitted to the court. There are references in that transcription to injury date of April 24, 2014 which appear to be the undersigned misspeaking. *E.g. p. 30.*

Sander Orent, M.D., Authorized Treating Physician (ATP)

3. The Claimant's authorized treating physician (ATP) was Sander Orent, M.D (Respondents' Exhibit C). Dr. Orent treated the Claimant following her January 24, 2014 work incident. In his June 24, 2014 note, he noted that the Claimant was doing very well. She had had an "excellent" result from injections and was "virtually pain free" for several days (Respondents' Exhibit C, bates 28). By July 1, 2014, the Claimant was "absolutely pain free" and running four miles (*Id*, bates 30). In their November 11, 2014 encounter, Dr. Orent described the Claimant as "moving into a more asymptomatic state" (*Id*, bates 34). The Claimant had various non-invasive treatments from that point. She was working full time with no restrictions.

4. The Claimant appeared for an appointment with Dr. Orent on August 13, 2015. He described a worsening of condition. The Claimant provided him a history of a new onset of right leg pain in a radicular pattern down her right leg. "This is brand new." According to the report of Dr. Orent, the Claimant did not provide any history of an intervening event on August 12, 2015. According to Dr. Orent: "There have been no aggravating events" (Exhibit Ex. C, bates 40). He noted that "this is brand new. I think this is obviously a worsening of this condition we have been treating her for." Dr. Orent referred the Claimant for an "ASAP MRI (Exhibit C, bates 40-41). Because of "new onset" he provided work restrictions (*Id* bates 42). As found herein below in Finding No. 6, on August 10, 2015, the Claimant had told her physical therapist about increased back pain and pain in the right leg. The physical therapy note is not inconsistent with Dr. Orent's assessment on August 13, 2015 (the day after the August 12, 2015,"fence jumping" incident).

5. The Claimant's MRI (magnetic resonance imaging), conducted on August 13, 2015, was compared with a March 27, 2014, MRI, and showed a new large extrusion at the L5-S1 level, which was now effacing the S1 nerve roots (Respondents' Exhibit. J). In his follow up, Dr. Orent stated that the Claimant's new symptoms were directly related to the new compression of the nerves from the new herniated disc shown on the MRI (Respondents' Exhibit C, bates 44). He took her off work (bates 46). He made referrals for injections and for a surgical evaluation. Based on the totality of the evidence, the ALJ finds that it is highly unlikely that this new phenomenon spontaneously happened along an unbroken chain of natural progression from the admitted January 14, 2014 , back injury.

Physical Therapy Report

6. There were previous complaints of symptoms into the Claimant's right leg. The August 10, 2015 physical therapy report states that the Claimant's back symptoms increased "over the past five days" (Claimant's Exhibit 15, p. 331). The same report outlines that the Claimant presented "now with **R LE radicular complaints**" (emphasis

supplied) and the report further states “PT to recheck MD next Tuesday” (Claimant’s Ex 15, p. 331). Therefore, the record reflects that 2 days before the August 12, 2015 event Claimant had right leg symptoms. The ALJ finds that timing of these complaints are not referenced either by DIME Dr. Zuehlsdorff’s Follow Up DIME Report, nor are they referenced by any other physician. Indeed, they do not account for the new symptoms reflected in the MRI of August 13, 2015, the day after the “fence jumping” incident.

Andrew Castro, M.D.

7. After the August 13, 2015 alleged “worsening,” the Claimant was evaluated by Andrew Castro, M.D., a surgeon, who concluded that conservative treatment would be appropriate (Respondents’ Exhibit D, bates 64). Injections with Lief Sorensen, M.D., were recommended (Respondents’ Exhibit E). The Claimant requested and received a referral for a second surgical opinion. Dr. Orent provided the referral for an evaluation and consultation only to Mark Robinson. M.D (Respondents’ Exhibit C, bates 47, 50). Dr. Orent set a follow up workers’ compensation appointment for September 29, 2015, which did not occur (Respondents’ Exhibit C, bates 52).

Mark Robinson, M.D.

8. The Claimant was seen by Dr. Robinson on September 22, 2015. Without contact with Dr. Orent or the insurance carrier, Dr. Robinson went forward with surgery on September 30, 2015 (Respondents’ Exhibit G, bates 94-96; Exhibit I, Robinson Depo, P. 16 -17). Surgery was aimed at the new large disc excursion identified on the MRI of August 13, 2015 (Respondents’ Exhibit I, bates 56-57). The surgery was approved through the Claimant’s personal health insurance (Respondents’ Exhibit I, bates 95; Robinson Depo, pp.17-18). The surgery was approved by the Claimant’s private health insurance carrier and not her workers’ compensation physicians (Respondents’ Exhibit I, bates 137). (9/24/15: “Spoke to pt she will Dr. Daarud fax over medical H & P and get pt read for her surgery.” [*sic*] *Note:* There was an appointment with ATP Dr. Orent scheduled for September 29, 2015 which claimant did not attend (Respondents’ Exhibit C, bates 52). There was no request for authorization made to the workers’ compensation insurer prior to the surgery (Robinson Depo.; Respondents’ Exhibit I, bates 128). In the Claimant’s answer brief, reference is made to a recorded interview with Investigator Mike Whittaker, offered into evidence as Claimant’s Exhibit 18, which was never admitted into evidence and, therefore, cannot be considered.

9. After the surgery, Dr. Orent was asked about the relatedness of that surgery to the January 24, 2014 work incident and MMI for that work incident. Dr. Orent reviewed the results of the August 13, 2015 MRI and the new symptoms. He concluded that there must have been some new event that caused the L5-S1 disc to herniate. Based upon his experience in treating the Claimant and the history of the claim, he concluded that the Claimant had been at MMI for the January 24, 2014 work incident as of March 24, 2015 (Respondents’ Exhibit C, bates 55). He stated that there was no

impairment resulting from the January 24, 2014 work injury, based upon the "asymptomatic" reports (Respondents' Exhibit C, *Id*, bates 53-54 (See also, Exhibit G, bates 91, "Symptoms subsided until they flared in August leading to surgery").

Gary Zuehlsdorff, M.D., DIME Examiner

10. Dr. Zuehlsdorff evaluated the Claimant as a DIME on April 26, 2016. The opinions in his report did not mention the August 12, 2015 incident that the Claimant later described to Dr. McCranie and Dr. Goldman. Regarding the period between January 24, 2014 and the August 13, 2015 MRI, Dr. Zuehlsdorff's report stated, "**She claims there was no new injury during that time either at work or outside of work"** (emphasis supplied). [Respondents' Exhibit A, bates 6]. Dr. Zuehlsdorff discussed Dr. Orent's finding of MMI and no impairment for the January 24, 2014 injury. He quoted Dr. Orent, who stated, "she had an exacerbation, which she related to a training event." Dr. Zuehlsdorff included the parenthetical comment: "(Actually nothing in the record to suggest this)" [Respondents' Exhibit A, bates 5]. He stated that he found Dr. Orent's MMI report "very confusing." His DIME report states, "there is no evidence anywhere in the record of any additional injury either work or non-work related" (Respondents' Exhibit A, bates 8). The ALJ infers and finds that Dr. Zuehlsdorff's conclusion this regard is at the core of his disagreement with ATP Orent and his opinion that treatment and impairment following the change in the MRI continued to relate to the January 24, 2014 work injury. DIME Dr. Zuehlsdorff provided an MMI date of April 26, 2016 and an impairment rating of 16% whole person. He was of the opinion that the Claimant's surgery by Dr. Robinson was work related. The ALJ finds that DIME Dr. Zuehlsdorff's ultimate conclusions are based on the erroneous assumption that there was no significant intervening event, *i.e.,* the "fence jumping' incident of August 12, 2015. In his follow Up DIME, Dr. Zuehsdorff effectively concluded that the "fence jumping" incident made no significant difference. Again, this conclusion was based on inadequate medical records and an erroneous grasp of the effects of the "fence jumping" incident of August 12, 2015.

11. Following the Claimant's specific description of events on August 12, 2015 to her and a review of the medical records, Dr. McCranie stated the opinion that she was in agreement with the ATP Dr. Orent regarding MMI and impairment. She noted that most treatment had been discontinued by March of 2015. She noted the records showed acute onset of new symptoms of left lower extremity pain, numbness, and weakness, and that this correlated with the new MRI scan finding of a new disc extrusion. She called these MRI findings "distinctly different" from the previous MRI findings. Dr. McCranie was of the opinion that there was a distinct and separate new event that occurred.

Kathy Fine McCranie, M.D.

12. The Claimant was evaluated by Kathy Fine McCranie, M.D., on September 7, 2016. During that evaluation, for the first time, a medical record reflected the Claimant's description of a specific incident that lead to an immediate change in symptoms. During her interview with the Claimant, the Claimant stated that she had a new injury on August 12, 2015, the day prior to her appointment with Dr. Orent. The Claimant described jumping over a fence while on duty fighting a grass fire. "She noted immediate loss of feeling in the lateral aspect of her right calf. She also had immediate onset of right buttock pain, which she described as a searing nerve pain traveling in to the mid-calf. She could not feel where her right foot was placed and she first noted a foot drop at this time" (Respondents' Exhibit. B, bates 12-13). The Claimant provided a similar description to L. Barton Goldman, M.D., in the independent medical examination (IME) he performed on her (Claimant's Exhibit 5). At hearing, however, the Claimant's initial testimony de-emphasized the effect of the August 12, 2015 incident. She called the incident "mundane" and "benign" and described it in those terms. Her prior statement to Dr. McCranie indicated otherwise, "I jumped over a fence, and just – back was just in excruciating pain. I just lost feeling from, like I said, from about mid-calf, around the lateral aspect." This is significantly different from what the Claimant told Dr. Zuehlsdorf at the Follow Up DIME. The ALJ infers and finds that this conflict in descriptions of the "fence jumping" incident, significantly affects the Claimant's credibility on the most critical point of this case.

13. Dr. McCranie testified at hearing. She noted that, without a complete history, Dr. Zuehlsdorff's report is "fatally flawed", and is clearly wrong regarding MMI and permanent impairment attributable to the January 24, 2014 work incident. She also testified that Dr. Zeuhlsdorff's conclusions were clearly wrong, with or without full history. The ALJ finds that there is no serious and substantial doubt that there was an intervening incident that led to changes in the Claimant's spine. The MRI changes are not a "natural progression" of the January 24, 2014 work injury, diagnosed as facet syndrome. There are clear new symptoms and new pathology in August 2015 that were "dramatically different" from the initial work injury. It was those changes that lead to the Claimant being placed off work, the need for new injections and surgery. The Claimant's need for treatment and resulting impairment would not have occurred without whatever occurred on August 12, 2015, to cause that change in pathology. Dr. McCranie testified that these documented changes and resulting treatment are not causally connected to the January 24, 2014 work incident. Surgery was not recommended for the Claimant prior to the August 12, 2015 incident *(*Claimant's Exhibit 26, bates 8-10). Dr. McCranie also concluded, regarding impairment, "As a DIME physician, I'm expected to evaluate just the injury that is in question, In other words, if there is a separate work-related injury, or a subsequent work-related injury, or a prior injury, then that is a separate phenomenon and not taken into consideration with the impairment rating." Dr. McCranie testified that there was clearly an intervening injury that occurred in this case, and that, in her expert opinion, the changes seen on the

second MRI would not have occurred without something happening. For causation purposes, it does not matter if that something is the specific work incident eventually identified by claimant during her IME. Her testimony is that Dr. Zuehlsdorff was clearly wrong in his conclusions.

14. At hearing, the Claimant testified that she described the "fence incident" to Dr. Orent and Dr. Zuehlsdorff. As noted, Dr. Orent's reports do not include discussion of the incident, but Dr. Orent positively remarked that there was no incident, based on what the Claimant did not tell him. The Claimant also indicated to Dr. Goldman that she informed Dr. Orent and Dr. Zuehlsdorff of the incident "but for whatever reason they did not document it" (Claimant's Exhibit 5, bates 23). Because of this ambiguity, the ALJ ordered a follow up DIME, in order for Dr. Zuehlsdorff to clear up the ambiguity. Dr. Zuehlsdorff's resulting March 19, 2017 report was admitted into evidence as Claimant's Exhibit 19. This report states "I asked her in detail why [s]he had not commented this to me in my DIME because I specifically asked her if she had any other incident and she had told me no. The patient had no other real answers to these questions" (Claimant's Exhibit 19). The ALJ finds that Dr. Zuehlsdorff's statements are credible, in this regard, and the Claimant's testimony and statements to evaluators on this point is not credible.

Dr. Zuehlsdorff's Follow Up DIME

15. The Claimant met with Dr. Zuehlsdorff after the hearing, on April 26, 2016 (Report, Claimant's Exhibit 19). By order, Dr. Zuehlsdorff was provided limited additional documentation for his follow up DIME. He did not receive a copy of either Dr. Goldman or Dr. McCranie's reports. He was provided the section of the hearing transcript regarding the Claimant's description of the "fence" event of August 12, 2015, to Dr. McCranie. During their meeting, the Claimant provided her summary of the hearing and opinions of the other doctors to Dr. Zuehlsdorff, including that "Dr. McCranie had simply stated that she was not sure whether or not that incident would be considered new or old but that she had stated to the patient's remembrance that the progression of the MRI did not make sense." The ALJ finds that this is not an accurate representation of Dr. McCranie's opinion or testimony, as found herein above. After their meeting, Dr. Zuehhlsdorff concluded that his DIME opinion did not change, and in coming to that conclusion, he stated that the records of the Employer, regarding the August 12, 2015 incident at work, was central to his opinion. He also relied upon the representation that the Claimant's pain was "in the same distribution of back and right leg" after the August 12, 2015 incident. Because of this, he was of the opinion that her condition was an "exacerbation" of her preexisting injury of January 24, 2014. Medical records show that right leg pain was not present before the change in pathology shown on the August 13, 2015, MRI. The Claimant appeared for an appointment with her long time ATP,, Dr. Orent, on August 13, 2015. She provided him with a history of a new onset of right leg pain in a ridiculer pattern down her right leg. Dr. Orent had stated, long before the issue concerning the August 12, 2015 incident was placed in controversy,, "This is brand new" (Claimant's Exhibit C, bates 40; Dr. Robinson,

Respondents' Exhibit I, bates 105, 129 [As of September 22, 2015, "6 week history of right posterior thigh and posterior lateral calf pain"]; Centura Health Dimensions Pain Management, Ex. E, bates 66, 68 "new severe right leg pain"]; Respondents' Exhibit G, bates 90). Dr. Zuehlsdorff is clearly wrong in his statement, "since it was in the same distribution of back and right leg" and therefore wrong in his reliance upon this premise in his finding that the Claimant did not experience a new injury in August of 2015.

Analysis of the Evidence/Findings

16. The Division of Workers' Compensation (DOWC) Low Back Treatment Guidelines addresses causation, which provide insight into when an intervening injury has occurred. They state, "Most low back cases result from injuries…Clinicians need to ask the following question: "Would the recommended treatment for the condition be the same if the work-related exposure had never occurred?" *Low Back Pain Medical Treatment Guidelines, Principles of Causation of Occupational Low Back Pain, Rule 17, Exhibit 1, p. 12*, 7 CCR 1101-3 (hereinafter the "Guidelines").. Although the ALJ is not bound by the Guidelines, the suggested analysis of the impact of an event vis-à-vis causation is reasonable and helpful in this case.

17. The first MRI that was done following the admitted work injury of January 24, 2014 was on March 27, 2104. The Claimant was treated for her workers' compensation injury by Dr. Orient from April of 2014 onward. She was diagnosed with facet syndrome. The Claimant showed improvement and was described as "asymptomatic" by her Dr. Orient. More than a year later, she reported "brand new" symptoms of radiculopathy down her right leg. The records do not reflect the Claimant reporting any incident that lead to these new symptoms until after the DIME evaluation of Dr. Zuehlsdorff. Regardless, it is undisputed that the second MRI, conducted on August 13, 2015, a day after the August 12, 2015 "fence jumping incident, " showed a new extrusion, and that this new extrusion caused the new symptoms. It is also undisputed that Dr. Robinson's surgery was aimed at this large rightward extrusion at the L5-S1 level, effacing the S1 nerve roots. Dr. Zuehlsdorff's impairment rating for the back was not for facet syndrome but as a result of the surgery that took place and the residual permanent impairment. Now that the Claimant has identified a specific incident, there is a reasonable explanation for the change in pathology, and the question becomes whether the August 12, 2015, incident was an independent, effective intervening event. This entails a mixed question of ultimate fact and conclusion of law.

18. Essentially, the Claimant argues that the herniated disc, reflected on the August 13, 2015 MRI was indirectly caused by the original, admitted injury of January 24, 2014 because the ALJ should draw an inference based on the physical therapy note of August 10, 2015, which states: There were previous complaints of symptoms into the Claimant's right leg. The August 10, 2015 physical therapy report states that the Claimant's back symptoms increased "over the past five days" (Claimant's Exhibit 15, p. 331). The same report outlines that the Claimant presented "now with **R LE radicular**

complaints" (emphasis supplied) and the report further states "PT to recheck MD next Tuesday" (Claimant's Ex 15, p. 331). Therefore, the record reflects that 2 days before the August 12, 2015 event Claimant reported right leg symptoms and increased low back pain. Indeed, this does not account for the significant new symptoms, a herniated disc, reflected in the MRI of August 13, 2015, the day after the "fence jumping" incident. In fact, Dr. Orent was aware of the right leg complaints as of August 13, 2015 before he became aware of the MRI results.

19. According to L. Barton Goldman, M.D: "It is a matter, perhaps, of housekeeping from an administrative or insurer perspective as to whether to close the January 24, 2014 claim and open a new claim as of August 12, 2015, and then apply the impairment rating suggested by Dr. Zuehlsdorff in that regard" (Claimant's Exhibit 5, bates 38). Dr. Goldman's and Dr. Zeuhlsdorff's conclusions are based on the idea that it doesn't matter, as long as the new incident occurred with the same employer. It does matter. This is not merely a housekeeping or administrative question, but a pivotal question of causation to be determined by the ALJ.

20. Dr. Zuehlsdorff concludes that the incident described by the Claimant led only to an "exacerbation" and did not break the causal connection between the Claimant's January 24, 2014 work incident and her need for medical treatment or permanent disability. He relies upon his determination of factual questions, including the existence of reports to the Employer, characterization of the reported August 12, 2015, events as a new or old injury by the Claimant and her Employer, and whether the Claimant's pain was "in the same distribution" before and after the event. In his report, and elsewhere, it is clear that the Claimant had an incident that "dramatically worsened her." Substantial, undisputed evidence indicates that the change in pathology is a "significant" cause of the need for treatment. There is a direct relationship between the August 12, 2015, event and the need for treatment. To the extent that Dr. Zuehlsdorff concluded otherwise, based on the totality of the evidence, it is highly probable, unmistakable, and free from serious and substantial doubt that Dr. Zuehlsdorff was wrong in this regard. To the extent that Dr. Orent's original MMI determination and Dr. McCranie's opinion differ from Dr. Zeuhlsdorff's opinion, Dr. Orent and Dr. McCranie are highly credible because they include recognition of these facts. There is clearly more than a difference of opinion between these two doctors and DIME Dr. Zuehlsdorff.

21. Dr. Orent, the ATP, who is most familiar with the Claimant medical case and her course of treatment, stated, "it seems that there must have been some new event that caused that L5-S1 disc to herniate." At that point, he had no history of an event. Although the Claimant asserts that she told him about a work event on August 12, 2015, this is not credible because she did not tell any of the other providers until her revelation to Dr. McCranie. This was obviously a question asked by Dr. Orent, and a question that was identified as important and re-hashed later. He did not ignore the inquiry of whether something happened. His records reflect that he asked and was told there was nothing. The same occurred with Dr. Zeuhlsdorff. The Claimant's assertions

at hearing that she told DIME Dr. Zuehlsdorff about this event are not corroborated by DIME Dr. Zuehlsdorff and for this reason, among others, the Claimant is not credible in this regard. Her position radically changed in the face of Dr. Zeuhlsdorff's certainly and clear recollection that she did not tell him about the August 12, 2015 incident. When he confronted her, "I did not receive a solid good answer on this" (Claimant's Exhibit 19, p. 4). Dr. Zeuhlsdorff's original criticism of Dr. Orent's finding of an intervening event was that there was no evidence of any event, and the Claimant had denied to him there was an event. Now, there is a described event, and the MRI changes make sense. As originally found by Dr. Orent, the causal connection was severed, and the Claimant was at MMI with no impairment for the January 24, 2014 injury as of March 24, 2014. There was no permanent impairment attributable to that work injury.

22. As found herein above in Finding No. 6, the Claimant argues that an August 10, 2015 (two days before the August 12 "fence jumping" incident), physical therapy note establishes an unbroken chain of causation, in the normal progression, from the original, admitted back injury of January 14, 2014.

23. If there is a separate and new event that has caused the need for medical treatment and disability, that event needs to be treated separately. It needs to be evaluated separately. There has been no opportunity for this to occur. The Claimant has never brought a claim for the work event she now describes occurring on August 12, 2015. She has not exceeded the statute of limitations as of the present time. The Respondents have never had the opportunity to investigate the claim. The Claimant rushed to her surgery by Dr. Robinson, had it approved by her private health insurance carrier, and then informed the Respondents that it had been done. These actions are not consistent with a person who thinks her condition is work related, or a person who was told, as she testified, that she should just treat everything as one work injury. There was no opportunity to explore the relationship of the surgery to the original work injury at the appropriate time. The Claimant then omitted discussion of an intervening event all of the way through the DIME evaluation. The August 13, 2015 MRI makes clear that the August 12, 2015 "fence jumping" event is a distinct, new injury.

24. Dr. Zeuhlsdorff's Follow Up DIME opinion does not address the Claimant's credibility, in a convincing manner, regarding the fact that she had not previously mentioned the August 12, 2015 "fence jumping" incident. He notes that there is new pathology, that Claimant wasn't forthcoming about the history, that she now describes worsened pain in her back and "dramatically worsened" in her leg. The Claimant provided Dr. Zeuhlsdorff with an inaccurate interpretation of the opinions of the other doctors. Based upon his discussion with the Claimant, Dr. Zeuhlsdorff made the conclusion that there was an "exacerbation" and not a new injury [the ALJ infers that "exacerbation" is used as a word of legal art, as opposed to "aggravation/acceleration"]. Dr. Zuehlsdorff's conclusion stands upon unreliable and incomplete information. Dr. Orent and Dr. McCranie have more than a difference of opinion with DIME Dr. Zuehlsdorff. They have reasoned opinions that show Dr. Zeuhlsdorff is clearly wrong in

ignoring a new injury, and lumping everything into one claim as a "housekeeping" matter. As Dr. McCranie testified, "**regardless of what caused the change, there is a change, and a new injury" (**emphasis supplied). This is highly probable, unmistakable, and free from serious and substantial doubt, based upon the clear medical evidence. The causal connection between the January 24, 2014 work injury and the need for medical treatment and impairment was severed on August 12, 2015. The August 13, 2015, MRI clearly and unambiguously reveals a brand new injury and not an exacerbation of the original admitted injury of January 24, 2014, despite the August 10, 2015 physical therapy note indicating pain in the right leg and increased back pain. It is highly unlikely that a natural progression of the effects of the admitted January 24, 2014, injury suddenly produced the August 13, 2015 MRI results.

Ultimate Findings

25. For the reasons enunciated herein above, the ALJ finds the opinions of Dr. Orent and Dr. McCranie, that the August 12, 2015 "fence jumping" incident amounted to a "brand new" injury more credible than DIME Dr. Zuehsdorff's opinion in his Follow Up DIME that the incident was merely an "exacerbation" of the January 24, 2014 admitted injury, which the ALJ infers and finds amounts to an opinion that the direct causal link to the January 24, 2014 injury remained unbroken. As further found herein above, the Claimant's testimony that she told Dr. Orent on August 13, 2015 about the August 12, 2015, incident is not credible. Her testimony that she informed DIME Dr. Zuelsdorff of this incident at the first visit is also not credible.

26. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Orent and Dr. McCranie, and to reject DIME Dr. Zuelsdorff's ultimate DIME and Follow Up DIME opinions.

27. Although the difference between the word "exacerbation" and "aggravation/acceleration" may seem like a subtle play on words, as used by DIME Dr. Zuehlsdorff, the word "exacerbation" is used to mean a non-compensable new event along the pathway of a natural progression of the January 24, 2014 admitted injury. The totality of the evidence reveals that this is highly unlikely, unmistakable, and free from serious and substantial doubt that the August 12, 2015, "fence jumping" incident was not an 'exacerbation" as the word is used by DIME Dr. Zuehlsdorff. "Aggravation/Acceleration" are words of art that indicate a compensable phenomenon in the workers' compensation sense, as demonstrated by the case law in the Conclusions of Law herein below.

28. The Respondents have proven that it is highly likely, unmistakable, and free from serious and substantial doubt, that the Claimant suffered a "brand new injury" on August 12, 2015, which amounts to an independent, effective intervening cause, that broke the direct causal chain from January 24, 2014. Therefore, the Respondents have overcome Dr. Zuehlsdorff's DIME opinions by clear and convincing evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Orent and Dr. McCranie, that the August 12, 2015 "fence jumping" incident amounted to a "brand new" injury were more credible than DIME Dr. Zuehlsdorff's opinion in his Follow Up Dime that the incident was merely an "exacerbation" of the January 24, 2014 admitted injury, which the ALJ infers and finds amounts to an opinion that the direct causal link to the January 24, 2014 injury remained unbroken. As found, the causal link was broken by an effective, intervening

cause, the August 12, 2015 “fence jumping” incident. As further found herein above, the Claimant’s testimony that she told Dr. Orent on August 13, 2015 about the August 12, 2015 incident is not credible. Her testimony that she informed DIME Dr. Zuelsdorff of this incident at the first DIME appointed is disavowed by Dr. Zuehlsdorff, who was credible in this regard. As found, the Claimant was not credible in this regard.

Substantial Evidence

b. An ALJ’s factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is “that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence.” *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ’s resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Orent and Dr. McCranie, and to reject DIME Dr. Zuehlsdorff’s DIME and Follow Up DIME opinions.

Overcoming the DIME Opinions of Dr. Zuehlsdorff

c. The party seeking to overcome a DIME physician’s opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI, causal relatedness of related conditions which are part of the permanency evaluation, and degree of permanent impairment are binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In

other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970).* No compensability exists when a later accident or injury occurs as the direct result of an effective, independent intervening cause. An unrelated medical problem may be considered an independent intervening cause even where an industrial injury impacts the treatment choices for the underlying medical condition. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002); *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934). As found, the August 12, 2015 "fence jumping" incident was an effective, independent intervening cause of the Claimant's subsequent back problems, and it was highly, likely, unmistakable, and free from serious and substantial doubt, based on the totality of the evidence, the Dr. Zuehlsdorff's opinions that there was an "exacerbation" of the Claimant's January 24, 2014 admitted injury, was clearly in error because it amounted to an opinion that there was an unbroken chain of causation from January 24, 2014, when in fact there was an effective, independent, intervening cause, which could amount to an aggravation/acceleration of a pre-existing condition, as opposed to an "exacerbation of the January 24, 2014 admitted injury. Consequently, the Respondents have overcome Dr. Zuehlsdorff's DIME opinions by clear and convincing evidence.

"Exacerbation" Versus "Aggravation/Acceleration"

d. As found, although the difference between "exacerbation" and "aggravation/acceleration" may seem like a subtle play on words, as used by DIME Dr. Zuehlsdorff, the word "exacerbation" is used to mean a non-compensable new event along the pathway of a natural progression. The totality of the evidence reveals that this is highly unlikely, unmistakable, and free from serious and substantial doubt that the August 12, 2015 "fence jumping' incident was not an 'exacerbation" as the word is used by DIME Dr. Zuehlsdorff. The concept of "aggravation/acceleration" in workers' compensation is clear. There is a compensable injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder*

v. Indus. Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's present condition is **not** causally related to the January 24, 2014, admitted injury. If anything, the Respondents almost admit in their opening brief that the August 12, 2015, "fence jumping" incident was a new compensable injury, but they have not had a chance to properly investigate it. For this reason, the argument in the respondents' opening brief does not qualify as a judicial admission. A judicial admission is defined as a "formal, deliberate declaration that a party or his or her counsel makes in a judicial proceeding for the purpose of dispensing with proof of formal matters or facts about which there is no real dispute." *Kempter v. Hurd,* 713 P.2d 1274 (Colo. App. 1986); *Gen. Steel Domestic Sales, LLC v. Hogan & Hartson, LLP,* 230 P.3d 1275, 1283 (Colo. App. 2010). Judicial admissions must be unequivocal but become binding once they are made. *Salazar v. American Sterilizer Co.,* 5 P.3d 357 (Colo. App. 2000). *Also see Valdez v. Texas Roadhouse,* W.C. No. 4-366-133 [Industrial Claim Appeals Office (ICAO), January 25, 2001]. Stipulations are a form of judicial admission and are binding on the party who makes them. *Maloney v, Brassfield,* 251 P.3d 1097, 1108 (Colo. App. 2010).

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The opinions of the Division Independent Medical Examiner (DIME), Gary Zuehlsdorff, D.O., having been overcome by clear and convincing evidence, the Final Admission of Liability, dated November 6, 2015 remains in full force and effect.

B. Based on the totality of the evidence, and the Respondents' implied invitation in their opening brief, the Claimant is entitled to file a new workers' compensation claim, arising out of the August 12, 2015 "fence jumping" incident.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of May 2017.

EDWIN L. FELTER, JR.
Administrative Law J

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the C3-4 cervical fusion surgery recommended by Gary Ghiselli, M.D. is reasonable, necessary, and causally related to his June 28, 2015 work injury.

2. Whether Claimant has established by a preponderance of the evidence that medical treatment for his left ankle, left shoulder, right hip, headaches, concussion, cervical spine, lumbar spine, and tinnitus/hearing loss is reasonable, necessary, and causally related to his June 28, 2015 work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a major account manager and has been so employed for approximately 7 years. Claimant's work requires travel.

2. On Sunday evening, June 28, 2015 Claimant was traveling on I-70 westbound in order to be able to be able to work Monday morning. Claimant struck an elk while driving just outside of Glenwood Springs.

3. The Colorado State Patrol traffic accident report indicated that Claimant was traveling westbound in the right lane of traffic when an elk ran onto the roadway and collided with Claimant's vehicle. The report also indicated that Claimant's car traveled approximately ¼ of a mile after the impact and came to a controlled stop on the shoulder of the highway, that the airbag did not deploy, and that the injury severity was evident but non-incapacitating. The vehicle damage was noted to be major on the front right passenger side of the vehicle, on the hood of the vehicle, and in the center of the bumper of the vehicle and was noted to be moderate on the driver's side of the bumper. *See* Exhibit 2.

4. Glenwood Springs Fire Department was dispatched to the scene. Claimant reported that he had been driving at approximately 70 mph when he hit the elk head on. It was noted that the elk hit the front right side of Claimant's vehicle with significant damage but no intrusion into the cab of the vehicle and no airbag deployment. Claimant was awake, alert, and oriented to date, place, person, and situation and denied a loss of consciousness. Claimant reported that he believed he was either struck by something in his vehicle in the back of his head or that he maybe had some whiplash that had caused a severe headache. Claimant reported 8/10 pain that he described as concussion type pain and reported that he was a bit groggy and had a history of head pain due to a skull fracture in his earlier years. On physical examination, Claimant's head was the chief complaint, all vitals were within normal

limits, and all extremities moved equally and normally. Claimant was transported by ambulance to Valley View Hospital emergency department. *See* Exhibit 6.

5. On June 28 and 29, 2015, at the emergency department, Claimant was evaluated by Charlie Abramson, D.O. Claimant reported a chief complaint of headache. Dr. Abramson noted that EMS had described some damage to the front right side of the vehicle but no damage or intrusion to the driver's side and no airbag deployment. Claimant self-extricated and was attempting to flag down vehicles after the accident and upon EMS arrival, Claimant was ambulatory. Claimant reported that he did not lose consciousness and reported no midline neck pain, no chest pain, no pain in his extremities, and no abdominal pain. Claimant denied lower back pain, upper back pain, neck pain, body aches, and leg pain. Claimant reported a headache from the back of his head radiating to the front of his head with an 8/10 intensity. Claimant reported a past medical history including multiple concussions and skull fracture and also reported a prior back fusion and hip surgery. *See* Exhibit 7.

6. On examination, Dr. Abramson found Claimant's neck to be supple and non tender, Claimant's extremities were non-tender, non-swollen, and had full range of motion. Dr. Abramson performed a chest x-ray, EKG, CBC, CMP, and a CT of the head which were all found to be normal. Dr. Abramson noted that given Claimant's headache and history of multiple concussions the CT of the head was done but was negative. Dr. Abramson noted that there was no neck pain initially and that Claimant was NEXUS negative so they did not perform imaging of Claimant's cervical spine. Dr. Abramson noted that over the course of Claimant's emergency room visit, Claimant started to develop some paraspinal pain in the neck. Dr. Abramson noted, however, that when he reassessed Claimant, Claimant had no midline cervical spine pain on palpation, Claimant denied paresthesias, and Claimant's pain was reproducible with palpation of the musculature of the neck and trapezius muscles, which were noted to be in spasm. Dr. Abramson did not feel that radiography was indicated for the abdomen or pelvis. Dr. Abramson noted that Claimant was observed in the ER for over 90 minutes and with medications had marked relief of pain. Dr. Abramson noted that the basic screening labs were unremarkable and that Claimant was stable for discharge. Dr. Abramson discharged Claimant in good condition and gave him Norco and Flexeril. Dr. Abramson recommended that Claimant be reevaluated that week by a physician. Dr. Abramson advised Claimant that he would likely have more muscle aches and back pain the next day. *See* Exhibit 7.

7. A little over one week after the accident and on July 6, 2015 Claimant was evaluated at Concentra by Lori Rossi, M.D. Claimant reported that he was in a car accident where he hit an elk and that his service dog's leash hit him in the back of his head. Claimant reported that it was an 800 pound elk, that it totaled his car, and that he lost consciousness for a few seconds. Claimant reported a headache, cervical pain, and lumbar pain. Claimant reported 15 prior concussions, 3 of which were severe and reported 3 prior lumbar surgeries. On examination, Dr. Rossi noted Claimant's hearing to be grossly normal, Claimant's shoulder strength to be normal bilaterally, and Claimant's mini mental exam to be intact with a score of 27/30. Dr. Rossi noted

decreased lordosis in the cervical spine and tenderness in the cervical spine, left paraspinal, right paraspinal, left trapezius muscle, right trapezius muscle, bilateral muscle spasms, and minimal range of motion in all directions due to pain. Dr. Rossi assessed: concussion with loss of consciousness, cervical strain, lumbar strain, and thoracic strain. Dr. Rossi referred Claimant to neurology due to lack of focus and 15 prior concussions, 3 of which were severe. Dr. Rossi noted that due to Claimant's history of lumbar surgeries and relationship with Dr. Ghiselli she referred him to Dr. Ghiselli. Dr. Rossi also noted that due to the need for high level pain medications and the anticipated possibility of injections, she referred him to a physiatrist. Dr. Rossi anticipated maximum medical improvement (MMI) in 6-8 weeks. *See* Exhibit 8.

8. On July 14, 2015 Claimant underwent MRIs of his cervical and lumbar spine that were both interpreted by Neilesh Gupta, M.D. For the lumbar spine, Dr. Gupta provided the impression of: postsurgical changes related to a L4-S1 posterior fusion; some waviness along the cauda equine nerve roots at the L4 level which may be related to arachnoiditis; and mild degenerative change with mild left foraminal stenosis at L3-4. For the cervical spine, Dr. Gupta provided the impression of: degenerative change likely most significant at C3-4 where there is mild to moderate right and moderate to severe left foraminal stenosis. *See* Exhibit 10.

9. On July 16, 2015 Claimant was evaluated by Gary Ghiselli, M.D. Claimant reported getting zingers or burning down his lateral arms, left greater than right, but did not report any specific fingers involved. Dr. Ghiselli reviewed the July 14 cervical MRI and assessed mild degenerative changes from C4-7, cervicalgia, neck sprain and strain, and opined that there was no need for surgery at that point. *See* Exhibit 11.

10. On July 20, 2015 Claimant was evaluated by neurologist Alexander Zimmer, M.D. Claimant reported being injured in a motor vehicle accident when he struck an elk. Claimant recalled being hit in the back of his head and his vehicle running off the side of the road 300 yards from the site of impact. Claimant thought he may have been struck in the posterior head by a retractable dog leash. Claimant complained of severe headaches from the central and right occiput forward to the right side of ht head and that a headache was present to some degree constantly. Claimant also reported memory problems, intermittent dizziness, feeling off balance when walking, and feeling fatigued much of the time. Claimant reported multiple prior concussions totaling 17 altogether mostly while playing high school and college football. Claimant reported hitting his head in February of 2014 and being off work for three months due to headaches and other symptoms. Dr. Zimmer opined that Claimant's current symptoms, including residual headache, dizziness, and memory problems were consistent with post concussion headache syndrome and opined that Claimant's current injury had occurred on the background of multiple past concussions which may result in a somewhat more prolonged recovery timeframe. Dr. Zimmer opined that the neurological examination was predominantly normal. *See* Exhibit 13.

11. On July 22, 2015 Claimant was evaluated by Shimon Blau, M.D. Claimant reported that he was involved in a work related motor vehicle accident when he struck

an elk and that he had a brief loss of consciousness for about 30 seconds. He reported neck pain radiating into his posterior shoulders as well as "burners" down both arms with numbness and tingling in his left hand and less frequently in his right hand. Dr. Blau provided the impression of: cervical spondylosis/facet syndrome; lumbosacral spondylosis/facet syndrome; and post concussive syndrome. Claimant was referred to physical therapy and Dr. Blau opined that if Claimant's pain symptoms continued, they would consider cervical and/or lumbar facet injections versus medial branch blocks. *See* Exhibit 12.

12. On August 19, 2015 Claimant was evaluated by Dr. Blau. Claimant reported continued neck and lower back pain as well as occasional stingers and burners form his left neck radiating into his left arm. Claimant reported that after physical therapy and massage therapy, he had about 40% improvement in his neck and 30% improvement in his lower back pain. Claimant reported continued headaches that could be debilitating. Dr. Blau recommended continuing physical therapy and massage therapy and recommended bilateral C5-6 and C6-7 facet injections. *See* Exhibit 12.

13. On August 23, 2015 Claimant was evaluated at Sky Ridge Medical Center emergency room after sustaining an unrelated left ankle injury. Claimant reported that two days prior he had been walking his dog when the dog pulled him and caused him to roll his ankle inward. *See* Exhibit C.

14. On September 4, 2015 Claimant was evaluated by Dr. Zimmer. Claimant reported his symptoms were a similar degree as his visit six weeks prior. However, Dr. Zimmer opined that the symptoms of headache, dizziness, and memory issues were somewhat improved. *See* Exhibit 13.

15. On September 24, 2015 Dr. Blau performed bilateral C5-6 and C6-7 facet injections. Prior to the injections, Claimant reported burning and stabbing neck pain at a 5/10 at rest and 10/10 with aggravating activities such as neck movement. Fifteen minutes after the injections, Claimant reported 0/10 pain both at rest and with aggravating activities and reported 100% pain relief. *See* Exhibit 12.

16. On September 30, 2015, Claimant was evaluated by Dr. Blau. Claimant reported that his neck pain was improved significantly but that he continued to have severe headaches. Dr. Blau opined that Claimant's pain symptoms now seemed to be stemming much more from the upper facet joints which also explained the occipital headaches and Dr. Blau recommended bilateral C2-3 and C3-4 facet injections. Dr. Blau noted that the pain in the lower neck region improved significantly following the bilateral C5-6 and C6-7 facet injections. *See* Exhibit 12.

17. On October 14, 2015 Claimant was evaluated by Dr. Rossi. Claimant reported new issues of left ankle pain and swelling that he noticed while walking his dog, cognitive issues, and that his hip felt out of place. Claimant reported continued neck pain and headaches. Dr. Rossi found no appreciable cognitive issues. Dr. Rossi opined that Claimant's case was getting more complex with several new issues and

opined that with the mounting issues she was uncomfortable continuing Claimant's care. Dr. Rossi referred Claimant to Dr. Sacha and opined that she had a great deal of faith in Dr. Sacha's ability to handle such a difficult case along with handling the causality issues. *See* Exhibit 8.

18. On October 20, 2015 Claimant was evaluated by Dr. Ghiselli. Claimant reported that he was getting symptoms into his right hip that he associated with his right total hip arthroplasty slipping. Claimant also reported a left ankle injury that came on shortly after his accident. Claimant reported horrific headaches, facet injections that did not give him significant relief. Dr. Ghiselli noted that more cranial injections were recommended by Dr. Blau and were reasonable to help isolate the source of Claimant's pain. Claimant reported continued burning into his left hand in a non dermatomal pattern and decreased motion in his neck. Dr. Ghiselli strongly recommended injections in Claimant's neck, opined that Claimant was not at MMI, and opined that surgical intervention was not warranted yet. *See* Exhibit 11.

19. On November 4, 2015 Claimant was evaluated by John Sacha, M.D. Claimant reported that he hit an elk and had a brief loss of consciousness. Claimant reported that he had bilateral C5-7 facet injections which gave him no short term relief and no lasting relief and that Dr. Blau had then recommended bilateral C2-5 facet injections that were denied. Claimant reported pain in the bilateral neck and headaches. Claimant also reported pain in the low back and right leg and some localized pain to the right lateral him. Claimant denied having any neck problems in the past. Dr. Sacha provided the impression of: cervical facet syndrome consistent with whiplash syndrome affecting the upper cervical spine; headaches; lumbosacral radiculopathy- unclear if work related; postlaminectomy syndrome; hip complaints; and non work related bipolar and reactive depression. Dr. Sacha noted that he did not have all the medical records to adequately assess whether the low back or hip would be work related and that there was a long history of symptomatology including symptoms up to the time of the work injury. He opined that the neck was clearly work related and that Claimant had cervical facet syndrome primarily in the upper cervical spine. Dr. Sacha did not recommend facet injections in the upper cervical spine but recommended medial branch blocks followed by radiofrequency neurotomy based on the findings. Dr. Sacha noted the plan of performing bilateral C2-C5 medial branch blocks and that if there was a diagnostic response, then radiofrequency neurotomy. Dr. Sacha also noted no evidence of a closed head injury and no sequelae of it. *See* Exhibit 14.

20. On December 24, 2015 Claimant underwent bilateral C2-5 medial branch blocks performed by Dr. Sacha. Claimant reported 100% relief of pain on the right side and 80% on the left side indicating a diagnostic response to the procedure. Dr. Sacha opined that Claimant was a candidate for radiofrequency neurotomy. *See* Exhibit 14.

21. On January 14, 2016 Claimant was evaluated by David Reinhard, M.D. after a request for change of physician. Claimant reported striking a 1000 pound bull elk head on while driving 75 miles per hour. Claimant reported that he was knocked unconscious in the accident. Claimant reported that since the accident he had neck

pain, low back pain, right hip pain and a feeling like his right hip was loose. Claimant reported that his back pain had gotten quite better. Claimant reported ongoing headaches and intermittent burning pain in the left arm with associated numbness. Claimant reported being more forgetful and having decreased short term recall. Claimant reported having a couple of concussions in college football and no prior neck injury. Dr. Reinhard provided the impression of: work related motor vehicle accident; grade three concussions with residual cognitive complaints and headaches; posttraumatic migraine headaches and rule out cognitive disorder; insomnia; cervical strain and sprain with left upper cervical facet syndrome pending a medial branch rhizotomy; left shoulder sprain; left upper extremity pain and numbness of unclear etiology with MRI showing left foraminal narrowing at C3-4; right hip sprain or contusion with preexisting total hip arthroplasty; and lumbar strain due to the accident with a pre existing history of L4 through S1 fusion. *See* Exhibit 16.

22. On January 15, 2016 Claimant underwent bilateral C2-5 radiofrequency neurotomies performed by Dr. Sacha. Claimant reported a pre-procedure rating of 7/10 at rest and 8/10 with provocative maneuvers and a 3/10 at rest and 3/10 with provocative maneuvers at 30 minutes post procedure. *See* Exhibit 14.

23. On January 22, 2016 Claimant was evaluated by Dr. Sacha. Claimant reported that he still had significant post operative pain and Dr. Sacha believed it was probably too early for follow up and that Claimant should start physical therapy and come back. *See* Exhibit 14.

24. On February 4, 2016 Claimant was evaluated by Dr. Reinhard. Claimant reported getting some good relief of his neck pain from the cervical rhizotomy performed by Dr. Sacha. Claimant reported noting his left shoulder pain more. Dr. Reinhard noted that an x-ray of Claimant's right hip showed a normal arthroplasty without evidence of complication. *See* Exhibit 16.

25. On February 18, 2016 Claimant was evaluated by Dr. Reinhard. Dr. Reinhard noted that an MRI of the left shoulder showed mild to moderate attenuation of the supraspinatus tendon along the articular surface with possible small foci of longitudinal full thickness tearing and some accompanying subacromial/deltoid bursitis. Claimant reported that he was still having a lot of bilateral upper neck pain and reported no improvement in his headaches. *See* Exhibit 16.

26. On March 11, 2016 Dr. Sacha discharged Claimant from care for violating the pain contract. Dr. Sacha noted that there were urine findings of amphetamine, and benzodiazepines that were not listed by Claimant as part of his medication regimen and noted that Claimant had a history of multiple physicians giving him opioid analgesics. Claimant reported that he was not taking them, but Dr. Sacha noted that it was a class A offense for receiving controlled substances from multiple sources, that there was opioid-seeking behaviors, and an aberrant history of Adderall prescription refills. Dr. Sacha noted that the radiofrequency procedure had given Claimant no lasting relief Dr. Sacha noted that Claimant was angry and irritable and that Claimant was combative

and insistent on how disabled he was. Dr. Sacha opined that there were significant questions regarding causal relatedness of many of Claimant's ongoing issues. *See* Exhibit 14.

27. On March 17, 2016 Claimant was evaluated by Dr. Reinhard. Claimant reported a lot of upper neck pain bilaterally and a lot of headaches despite the upper cervical facet procedure. Dr. Reinhard noted that Claimant was treating his left ankle through private insurance although it was actually injured in the work related motor vehicle accident and noted that Claimant was scheduled for surgery on March 30. *See* Exhibit 16.

28. Dr. Reinhardt noted that Claimant had left arm pain and weakness as well as numbness and that there was no evidence of nerve root compression other than some left foraminal narrowing at C3-4 on MRI and opined that a lot of the weakness seemed to be stemming from the left shoulder pain. *See* Exhibit 16.

29. April 15, 2016 Claimant suffered a non-work related fall and lost consciousness. He was evaluated at the emergency department of Sky Ridge Medical Center. It was noted claimant was in the parking lot of his orthopedic physician's office for a recheck of his left ankle after a surgery two weeks prior when his scooter slid out from under him causing him to fall. Claimant believed that he hit his head and lost consciousness. A nurse found him slumped against the trunk of his car. Claimant reported bilateral neck pain and burning down both of his arms and legs with tingling. Claimant reported that he had neck pain since a motor vehicle accident in June 2015 but stated his pain was worse after the fall. Claimant reported associated nausea. On exam claimant's neck was diffusely tender to light palpation and sensation was diminished diffusely over his upper extremities. It was noted that while it was a low mechanism injury, based on claimant's degree of pain on examination and associated neurological deficits further imaging was necessary. A CT and MRI of the cervical spine showed no acute trauma and noted minimal degenerative changes within normal limits of claimant's age. Claimant was diagnosed with a cervical strain and post-concussive syndrome. *See* Exhibit 9.

30. On May 9, 2016 Claimant was evaluated by Dr. Reinhard. Claimant reported that he was doing a lot better and that his headaches were not as severe and were less frequent. Claimant reported a recent left shoulder injection helped his left shoulder pain and range of motion. Claimant did not report his recent fall and loss of consciousness three weeks prior. Dr. Reinhard noted that the C3-4 disk was a probable pain generator. Dr. Reinhard noted that the low back pain was back to baseline and that the right hip pain was also essentially back to baseline. Dr. Reinhard opined that Claimant was starting to turn the corner and that the shoulder pain was clearly coming from the rotator cuff although some might be coming from cervical spine referral. *See* Exhibit 16.

31. On May 31, 2016 Claimant was evaluated by Dr. Ghiselli. Claimant reported that a rhizotomy from C2-C4 had not helped and that he had weakness into his

arm and burning in his arm in a nondermatomal pattern. Dr. Ghiselli noted that the increasing neck symptoms into Claimant's left upper extremity had not received significant relief with radiofrequency ablations and that the MRI showed compression of the left C4 nerve root. Dr. Ghiselli recommended a left sided C3-4 transforaminal epidural steroid injection and opined that if there was good anesthetic relief, it would be reasonable to consider surgical intervention to decompress that nerve. *See* Exhibit 11.

32. On June 20, 2016 Claimant was evaluated by Dr. Reinhard. Dr. Reinhard opined that Claimant had a left C3-4 disk osteophyte complex producing severe left neural foraminal narrowing and potential compression of the left C3 nerve root. Claimant reported that his headaches were doing better with most pain prominently in the neck, left suprascapular region, left shoulder, and left arm. Dr. Reinhard referred Claimant to Dr. Ogin for a left C3-4 transforaminal epidural steroid injection. *See* Exhibit 16.

33. On July 12, 2016 Dr. Ogin performed a left C3-4 transforaminal epidural steroid injection (ESI). Claimant reported pre-procedure pain of 6/10 at rest with increased pain with cervical rotation and extension. Post-injection, Claimant reported pain of 0/10 with significant improvement in cervical range of motion particularly with left rotation and extension. Dr. Ogin opined that this was an excellent diagnostic response. *See* Exhibit 15.

34. On July 19, 2016 Claimant was evaluated by Dr. Reinhard. Claimant reported that the ESI reduced his shoulder and neck pain. He reported he was still getting headaches 1-2 times per week. Claimant was to follow-up with Dr. Ghiselli now that he had the ESI regarding possible surgery. Claimant also first reported that he noted tinnitus and hearing changes in his right ear since the injury, which had gotten worse over the past two months. On exam Claimant had good range of motion of his left shoulder with normal strength. Claimant was referred Dr. Carr, ENT doctor, regarding right-sided hearing loss and tinnitus. *See* Exhibit 16.

35. On July 25, 2016 Claimant was evaluated by Patrick Carr, M.D. Claimant reported a 13-month history of constant high-pitched noise in the right ear. Claimant reported severe head trauma during a motor vehicle accident on June 28, 2015 which left him unconscious for 30-40 minutes. He reported the tinnitus had worsened over the last year, with constant noise starting 2-3 months ago. There was no evidence of specific trauma to the right ear. *See* Exhibit BB.

36. On July 27, 2016 Dr. Ghiselli recommended a C3-4 ACDF surgical procedure. *See* Exhibit 4.

37. On August 1, 2016 Claimant underwent an MRI of his cervical spine that was interpreted by David Solsberg, M.D. The impression provided was: moderate left foraminal stenosis seen at C3-4 due to a combination of left foraminal osteophyte; small osteophyte along the anterior margin of left z-joint; no fracture, no ligamentous injury, no cord lesion, and no prevertebral soft tissue swelling. *See* Exhibit 10.

38. On August 7, 2016 Claimant sustained a non work related motor vehicle accident and was taken to Sky Ridge Medical Center emergency department. Claimant was rear ended by another vehicle traveling 15-20 miles per hour. Claimant reported midline cervical pain, left shoulder pain, and left arm pain with tingling. *See* Exhibit C.

39. On August 23, 2016 Claimant was evaluated by Dr. Reinhard. Dr. Reinhard noted that the left C3-4 ESI had produced marked relief of Claimant's neck and shoulder pain but that the follow up recommended surgery had not been authorized. Dr. Reinhard also noted that to make things more complicated, Claimant had aggravation of neck pain in a recent automobile accident. Dr. Reinhard noted he would refer Claimant under Claimant's private insurance for a repeat C3-4 ESI to get Claimant back to his baseline prior to the recent non work related motor vehicle accident. *See* Exhibit 16.

40. On September 8, 2016 Claimant underwent an independent medical evaluation performed by Carlos Cebrian, M.D. Claimant reported hitting an elk with the front of his vehicle and being unconscious for between 30 and 45 minutes. Claimant also reported that he was hit on the back of his head by his service dog's retractable leash. Claimant reported that the first thing he remembered was the paramedics being at the scene and that things were foggy. Claimant reported initial complaints including headaches, neck pain, mid back pain, low back pain, immediate tightness in his left shoulder, and burners down his left arm if he moved his head. Claimant reported that his right hip started hurting one month after the motor vehicle accident and that he also had surgery in March of 2016 on his left ankle that his surgeon said was related to the work motor vehicle accident. Claimant reported daily headaches that started at the back of his head and went to the right side and then to the front. Claimant reported that one month after the accident he started to notice ringing in his left ear that would last for a day or two and that it gradually increased in duration and had been present constantly for three months. Claimant reported that his memory was affected, that he had cognitive difficulty, that his thinking was slowed, that he had difficulty concentrating, that he got distracted easily, and that his fine motor skills were affected. *See* Exhibit 17.

41. Claimant reported having one or two prior concussions playing football and that he also lost consciousness in 2013 after tripping over a box and was treated with cognitive therapy. Claimant reported three prior lumbar spine surgeries, a right hip arthroplasty, left hand surgery, three sinus surgeries, bilateral carpal tunnel surgeries, and a Uvulopalatopharyngoplasty surgery. Dr. Cebrian reviewed extensive medical records and performed a physical examination. Dr. Cebrian opined that Claimant had the following non claim related diagnoses: left carpal tunnel syndrome; right carpal tunnel syndrome; headaches; left knee surgery; hernia surgery; lumbar spine surgeries; right knee; left ankle sprain and chip fracture; gout; right hip arthroplasty; sleep apnea; 10/7/10 motor vehicle accident; cervical spine pain; erectile dysfunction; syncopal episodes; head injuries; bilateral knee pain due to gout; lung nodules; ADHD; PTSD; left ankle sprain; and hemochromatosis. Dr. Cebrian opined that Claimant had the following claim related diagnoses: cervical spine strain; concussion with post-concussion

syndrome; and lumbar strain. Dr. Cebrian opined that Claimant was not at maximum medical improvement. Dr. Cebrian opined that the left ankle was not claim related. Dr. Cebrian opined that the right hip pain and need for treatment was not claim related and noted no reports in the medical records of right hip pain until October 14, 2015 as well as a bone scan and x-rays that show no loosening. Dr. Cebrian opined that it was not medically probable with the temporal delay in the development of right hip complaints that they were related to the June 28, 2015 motor vehicle accident. Dr. Cebrian opined that the complaints of tinnitus were not claim related and that the first documentation of tinnitus was over one year from the accident. Dr. Cebrian opined that Claimant did sustain a concussion as a result of the June 28, 2015 motor vehicle accident but noted the change in reports of loss of consciousness from none to 30 to 45 minutes. Dr. Cebrian noted that the ongoing headache complaints were complicated by Claimant's past history of headaches and concussions, cervical spine injury, pre-existing psychiatric disease and medications, longstanding history of hypertension with headaches, utilization of opioids, poorly treated sleep apnea, multiple past concussions, ADHD and PTSD, and intervening head injury on April 15, 2016, hemochromatosis, and the fact that at the time of the work related accident Claimant was taking both a muscle relaxer and a narcotic. *See* Exhibit 17.

42. Dr. Cebrian recommended neuropsychological testing to separate out what may be related to the June 28, 2015 mild concussion versus what is related to pre-existing psychiatric disease. Dr. Cebrian recommended that Claimant undergo a left upper extremity EMG/NCS to see if there was any cervical nerve root compression. Dr. Cebrian opined that Claimant sustained a lumbar strain that had resolved and that no further treatment was indicated for the lumbar strain. Dr. Cebrian could not state within a reasonable degree of probability that the left shoulder partial supraspinatus tear was related to the June 28, 2015 motor vehicle accident. *See* Exhibit 17.

43. On September 13, 2016 Dr. Ogin performed a left C3-4 transforaminal epidural steroid injection (ESI). Dr. Ogin noted that Claimant previously underwent an ESI in July which was quite helpful and lasted 5-6 weeks before his pain gradually recurred. Claimant reported pre-procedure pain of 5/10 at rest with increased pain at 7/10 with provocative maneuvers and a post-injection pain level of 0/10. Again, Dr. Ogin opined that this was a good diagnostic response. *See* Exhibit 15.

44. On September 27, 2016 Claimant was evaluated by Dr. Reinhard. Claimant reported that the second left C3-4 ESI had helped tremendously. Dr. Reinhard noted Claimant had a surgical recommendation from Dr. Ghiselli and that Claimant had second opinions pending. Dr. Reinhard opined that Claimant had two positive diagnostic and therapeutic left C3-4 transforaminal ESIs. *See* Exhibit 16.

45. On November 15, 2016 Claimant underwent an independent medical evaluation performed by Michael Rauzzino, M.D. Claimant reported that he was bothered most by headaches, followed by ringing in his ear, followed by neck and left shoulder pain. Claimant reported that the headaches start in the back of his head and wrap around to the right side of his face and that he had never had a neurologic

evaluation for his headaches. Claimant reported nerve blocks and facet injections with relief for five to six weeks. Claimant reported that a screw in his lumbar spine fusion was broken in the work related accident and that he had no other trauma so it had to be the accident that broke the screw. Claimant also reported that he hurt his ankle in the accident but that surgery was not covered. Claimant reported that before the work related motor vehicle accident he never had trouble with his neck, shoulder, or arm. *See* Exhibit 18.

46. Dr. Rauzzino reviewed extensive medical records and also performed a physical examination. Dr. Rauzzino noted normal sensory examination at C4, C5, C7, and T1 with normal C6 on the right and decreased C6 on the left. Dr. Rauzzino noted that Claimant had complicated pre-existing medical conditions prior to this work related motor vehicle accident including multiple previous concussions and a prior motor vehicle accident with neck and left arm pain. Dr. Rauzzino noted a pre-existing condition of chronic headaches refractory to treatment and a number of pre-existing neurologic complaints. Dr. Rauzzino also noted the complicated lumbar spine history with multiple lumbar spine surgeries. Dr. Rauzzino noted that after the work related motor vehicle accident, Claimant had multiple complaints primarily related to post-concussive syndrome with headaches and neck pain. Dr. Rauzzino opined that the imaging of Claimant's cervical spine was unrevealing and that there was not an acute structural injury but some chronic degenerative changes. *See* Exhibit 18.

47. Dr. Rauzzino opined that the recommended surgery at C3-4 was not likely to provide significant clinical or functional benefit based on Claimant's complaints, physical examination, radiographic findings, and response to injections. Dr. Rauzzino opined that operating at that level would not significantly improve Claimant's headaches which existed before the work related motor vehicle accident and had been exacerbated since. Dr. Rauzzino noted that the etiology of Claimant's headaches was felt to be related to multiple concussions and that in the work related motor vehicle accident it was possible that Claimant had a concussion that made his headaches worse, however operating on the cervical spine was not likely to improve the headaches. Dr. Rauzzino opined that surgery, especially a cervical fusion, should only be done when there is a significant structural problem that correlates very well with a patient's films, subjective complaints, and physical exam. Dr. Rauzzino noted no acute structural injury existed, that Claimant had normal neurologic examinations, and that the distribution of the C4 nerve root was not consistent with Claimant's reports of zingers into his arms and hands. *See* Exhibit 18.

48. Dr. Rauzzino opined that Claimant had neck pain bilaterally, but that the disease was mainly one sided, not very severe, and was not an acute injury caused by the motor vehicle accident and was a bone spur that pre-existed the work related motor vehicle accident. Dr. Rauzzino opined that while Claimant may have sustained a neck strain or myofascial injury in the car accident, Claimant did not sustain a structural injury to his spine that required surgery. Dr. Rauzzino opined that the surgery was not causally related to the motor vehicle accident and also opined that the surgery was not likely to improve Claimant functionally or clinically. Dr. Rauzzino opined that performing

a cervical fusion with the hopes of relieving Claimant's pre-existing and now exacerbated headaches, was problematic at best. *See* Exhibit 18.

49. Dr. Rauzzino opined that the left shoulder was not related to the motor vehicle accident and also that the right hip and left ankle were not related to the motor vehicle accident. *See* Exhibit 18.

50. Dr. Rauzzino opined that the headaches, myofascial neck pain, and post-concussive symptoms would be related to the motor vehicle accident. Dr. Rauzzino noted that there may be psychological issues in play and that there were some narcotic use issues raised by Dr. Sacha. *See* Exhibit 18.

51. Dr. Rauzzino testified at hearing consistent with his reports. Dr. Rauzzino opined that the MRI images showed chronic degenerative changes and excluded an acute structural injury. Dr. Rauzzino explained that the proposed surgery was to remove the bone spur and relieve pressure on the C4 nerve root and that the surgery was not causally related to the work injury. He opined that there was no acute injury to the cervical spine structure. Dr. Rauzzino also opined that Claimant's preexisting degenerative condition was not exacerbated by the work accident based on Claimant's presentation, symptoms, and the C4 nerve root distribution. Dr. Rauzzino opined that Claimant's report of zingers down the left arm and hand and the weakness Claimant reported did not correlate with a C4 nerve distribution. Dr. Rauzzino also opined that Claimant's report of dramatic improvement following the varied treatment of facet injections, medial branch blocks, and ESI did not met anatomic sense and did not correlate with a C4 nerve root distribution. Dr. Rauzzino opined that the proposed surgery was not work related and also that it was not reasonable or necessary and that there was no reason to believe that the surgery would relieve Claimant's headaches, shoulder pain, neck pain, or zingers.

52. Dr. Rauzzino testified that Claimant may have sustained a cervical strain but that there was no reason for Claimant to still be in pain related to the work accident without an acute structural problem. Dr. Rauzzino testified that the left ankle and right hip were not work related.

53. The testimony and reports of Dr. Rauzzino are found credible, persuasive, detailed, and consistent with the overall medical records and opinions of other physicians. Dr. Rauzzino explained in credible and extensive detail his opinions which are persuasive.

54. Claimant's also testified at hearing. Claimant's testimony, overall, is not found credible or persuasive. Claimant's reports of loss of consciousness vary from reporting no loss immediately following the accident where he came to a controlled stop, got out of his vehicle, and flagged down other cars, to a loss of consciousness from 30-45 minutes. His reports of the size of the elk expanded during the claim. He attempted to tell providers that his left ankle was injured in the motor vehicle accident when in actuality it was injured walking his dog. Claimant's reports to different medical providers

about the extensiveness of his past medical history was also varied. Claimant has not been consistent in his reports and is not found credible.

55. Dr. Reinhard testified by deposition. Dr. Reinhard opined that Claimant was suffering post-traumatic migraine headaches and some residual cognitive difficulties as a result of the work related motor vehicle accident. Dr. Reinhard opined that if Claimant's tinnitus started shortly after the accident as Claimant reported, then it would be related but that if it didn't start until many months later, then it would not be related. Dr. Reinhard noted Claimant's numerous concussions in the past and opined that the impact of the prior history is that Claimant's brain would be more vulnerable to another concussion and typically would thus result in a prolonged or longer course of recovery or a greater potential for residual permanent effects. Dr. Reinhard opined that Claimant sustained a neck injury in the accident. Dr. Reinhard noted that the pain generator identification was tricky, but that based on Claimant's response to the epidural steroid injection at C3-4 there was pretty good evidence that the C3-4 stenosis was a pain generator. Dr. Reinhard opined that the surgery would relieve the symptoms of the nerve root compression, would help with the headaches and neck pain, and would possibly help the arm symptoms. Dr. Reinhard opined that did not physiologically make sense, but that was what had happened with the epidural steroid injection so was expected with the surgery. Dr. Reinhard opined that If Dr. Ghiselli reviewed Dr. Rauzzino's report and cautionary note, and still felt that the C3-4 fusion was a reasonable thing to do, then he would support Dr. Ghiselli's request. Dr. Reinhard opined that the left shoulder was related to the accident but noted that it is difficult to separate out the shoulder when there is also a neck injury and that if in treating the C3-4 spine issues, the shoulder resolves, then he would say that the shoulder was not related and the rotator cuff either resolved or was maybe even pre-existing. He noted that if Claimant continued to have pain and weakness in the left shoulder after the spine issues are treated successfully, then he would be of the opinion that the shoulder was probably present from the accident and was just diagnosed later on because it was a tricky issue to sort out. Dr. Reinhard opined that even if the cervical surgery were not related to the motor vehicle accident, Claimant's cervical spine strain was not yet back to baseline or resolved. Dr. Reinhard agreed that the C3-4 stenosis MRI finding pre-existed the motor vehicle accident in all likelihood.

56. Dr. Cebrian testified by deposition consistent with his reports. Dr. Cebrian opined that no pain generator had been confirmed as the source of Claimant's symptoms and that Claimant had what would be considered a diagnostic response to both facet injections and the ESI which were very different and that the response was inconsistent for purposes of identifying a pain generator. Dr. Cebrian also noted that Claimant failed to report to him at the September 2016 independent medical evaluation that Claimant had been involved in another motor vehicle accident just one month prior. Claimant reported significant symptoms due to the June 2015 work related motor vehicle accident. Dr. Cebrian opined that no further treatment of the cervical spine would relate to the June 2015 work accident and noted no structural changes on the MRI.

57. Dr. Rauzzino, Dr. Cebrian, and Dr. Reinhard all agreed that Claimant's left ankle injury was not work related. The medical records support that Claimant reported no ankle pain following the June 2015 motor vehicle accident and that he reported specifically that he rolled his ankle while walking his dog.

58. Dr. Rauzzino and Dr. Cebrian opined that Claimant's right hip complaints are not causally related to the June 2015 motor vehicle accident and they note no temporal relationship between the start of the right hip complaints and the accident. This is found credible and persuasive.

59. Dr. Cebrian opined that Claimant's tinnitus is not causally related to the June 2015 motor vehicle accident. Dr. Reinhard opined that if Claimant's tinnitus did not start until many months after the work related motor vehicle accident, then it would not be related. Claimant did not make any complaints of tinnitus/hearing issues until over one year from the date of the accident. These opinions that the tinnitus/hearing issues are not causally related to the work accident are credible and persuasive.

60. Claimant's past medical history is extensive. Claimant reported that he has had as many as 15-17 concussions prior to this work injury. Prior to this work related motor vehicle accident, Claimant had reported to the emergency room several times for headaches, neck pain, and intermittent numbness in his left arm consistent with his degenerative neck condition and with his prior history of multiple concussions.

61. In October of 2006, claimant appeared in the ER for headaches which had been ongoing for 3 weeks with 7/10 pain and intermittent numbness in his left arm. *See* Exhibit C.

62. Claimant returned to the ER later in October of 2006 with complaints of neck pain which started 3 weeks before with 7/10 pain, headaches with blurred vision, photophobia and weakness, and left arm numbness in his shoulder and wrist/hand. *See* Exhibit C.

63. In October 2010, Claimant was involved in a low speed motor vehicle accident, at which time he reported neck pain, low back pain, right hip pain, and tingling in his left hand. A CT of claimant's cervical spine showed mild degenerative disk disease at C3-6, without evidence of significant spinal canal or neural foraminal narrowing. *See* Exhibit L.

64. In October of 2011 Claimant had two syncopal episodes on the same day one while driving his car which caused hit to drive into a ditch, the other after showering after the car accident.

65. In December of 2013 Claimant had an unexplained fall while standing in which he hit his head, and resulted in severe neck and headache complaints of 8/10.

66. In January of 2014 Claimant fell and hit his head on the edge of a coffee table and was on bed rest for one month and took months to recover. He reported headaches since that fall located in the right temple, forehead and occipital area, blurred vision, was easily confused, and had balance issues. Gait disturbance and balance issues were still noted in April 2014. *See* Exhibits R, T, O.

67. In February of 2014 claimant reported being in the ER for worsening headache, with dizziness and nausea.

68. Claimant also has an extensive and significant history of prior surgical procedures.

69. Due to chronic low back pain since his college football years, and radiculopathy pain which started in 2008, claimant underwent 3 lumbar spine surgeries which ultimately resulted in an L4-S1 fusion. *See* Exhibit E.

70. Claimant underwent a right total hip replacement in 2010 after reporting pain while undergoing physical therapy following his lumbar spine surgery and being diagnosed with advanced arthritis in his hip. *See* Exhibit I.

71. Claimant also has a history of multiple arthroscopic surgery to both knees and of bilateral carpal tunnel surgeries. *See* Exhibit R.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance*

Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101 (1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Where a Claimant's entitlement to benefits is disputed, the Claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo.App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo.App. 1997).

Left Ankle

Claimant has failed to meet his burden to establish that the June 28, 2015 motor vehicle accident directly and proximately caused his left ankle condition. Despite Claimant's reports to the contrary, medical records establish that Claimant's left ankle condition is due to an unrelated incident walking his dog and that no causal relationship exists between Claimant's left ankle condition and the June 28, 2015 motor vehicle accident. Claimant, through testimony, conceded this at hearing and any request for medical benefits to treat the left ankle is denied and dismissed.

Right Hip

Claimant has failed to meet his burden to establish that the June 28, 2015 motor vehicle accident directly and proximately caused his right hip condition or caused an aggravation to his underlying right hip condition. The opinions of Dr. Rauzzino and Dr. Cebrian are found credible and persuasive that the right hip complaints are not causally

related to the work injury. Claimant's request for medical benefits to treat his right hip is denied and dismissed

Tinnitus/Hearing Issues

Claimant has failed to meet his burden to establish that the June 28, 2015 motor vehicle accident directly and proximately caused his tinnitus/hearing issues. The opinions of Dr. Rauzzino and Dr. Reinhard are found credible and persuasive. Claimant did not make any reports of hearing issues until approximately one year following the work related motor vehicle accident. Claimant has failed to meet his burden to show a causal connection between the motor vehicle accident and his tinnitus/hearing loss and his request for medical benefits to treat his tinnitus/hearing issues is denied and dismissed.

Left Shoulder

Claimant has failed to meet his burden to establish that the June 28, 2015 motor vehicle accident directly and proximately caused his left shoulder condition. As found above, at the emergency department the day of his injury it was noted that Claimant had no pain in his extremities and Dr. Abramson noted the extremities to be normal with full range of motion. Similarly, one week after the accident, Dr. Rossi noted the strength of the extremities to be normal bilaterally. The opinions of Dr. Cebrian and Dr. Rauzzino are found credible and persuasive that Claimant did not sustain an injury to his left shoulder as a result of the work related motor vehicle accident and Claimant's request for medical benefits to treat his left shoulder is denied and dismissed.

Headaches/Concussion syndrome

Claimant has established that the June 28, 2015 work related motor vehicle accident directly and proximately caused headaches and concussion syndrome. Although Claimant has a significant prior history of concussions and of extremely debilitating headaches, it is credible and persuasive that the work related motor vehicle accident on June 28, 2015 exacerbated his pre-existing condition and caused a new concussion and additional headaches. Claimant has established an entitlement to a general award of reasonable and necessary medical benefits to treat his headaches and concussion syndrome. Claimant has not been placed at MMI for these conditions by a treating provider and the issue of any specific treatment or medical benefit was not before the ALJ.

Lumbar Spine

Claimant has established that the June 28, 2015 work related motor vehicle accident directly and proximately caused an aggravation of his pre-existing lower back condition. Claimant is entitled to a general award of reasonable and necessary medical benefits necessary to treat the aggravation. Claimant has not been placed at MMI for

this condition by a treating provider and the issue of any specific treatment or medical benefit was not before the ALJ.

C3-C4 surgery

Claimant has failed to establish by a preponderance of the evidence that the proposed C3-4 surgery is reasonable, necessary, or causally related to the June 28, 2015 work related motor vehicle accident. As found above, Claimant has pre-existing degenerative changes in his cervical spine shown by MRI that took years to develop and pre-existed the motor vehicle accident. Dr. Rauzzino is credible and persuasive that the cervical MRI excluded an acute chronic incident as the cause of the bony spurring/osteophyte. Dr. Rauzzino explained credibly that the proposed surgery would essentially drill away the bone spur and remove the osteophyte to relieve pressure on the exiting nerve root. Dr. Rauzzino is credible and persuasive that the bone spur/osteophyte took years to develop and was not causally related to the motor vehicle accident. As found above, Claimant has had neck pain and symptoms into his left arm noted in the medical records since approximately 2006 and for years prior to the work related motor vehicle accident. These records of neck pain and left arm tingling/numbness were noted on various occasions between 2006 and 2013. Dr. Rauzzino is credible and persuasive that the June 28, 2015 work related motor vehicle accident did not exacerbate this underlying condition or underlying degeneration and that the proposed surgery is not causally related to the work accident.

Further, the proposed surgery is also not found to be reasonable or necessary. Claimant's subjective reports of symptoms are not found credible, persuasive, and physiologically do not make sense. The credible medical testimony and evidence shows that Claimant's symptoms do not correlate with a C4 nerve root distribution and that C4 has not been sufficiently identified as the pain generator. Dr. Rauzzino opined credibly that C4 was not the pain generator and that Claimant's reported subjective symptoms and relief did not make sense or correlate with the C4 nerve root. Dr. Rauzzino opined that the proposed surgery won't relieve Claimant's symptoms. The ALJ finds persuasive that there is no reason to believe that the proposed surgery will cure and relieve Claimant's symptoms and that the surgery is not reasonable or necessary. Claimant has failed to meet his burden to establish that the C3-C4 surgery is reasonable, necessary, and causally related to his June 28, 2015 motor vehicle accident/work injury.

Cervical Spine

Claimant has established by a preponderance of the evidence that he sustained a strain to the cervical spine as a result of the June 28, 2015 work related motor vehicle accident. Claimant is entitled to a general award of reasonable and necessary medical benefits necessary to treat the cervical strain. The credible medical testimony and evidence establishes that this is the injury to the cervical spine area and that the strain in the motor vehicle accident did not exacerbate or aggravate Claimant's pre-existing degenerative condition or his need for surgery. The testimony of Dr. Rauzzino that

there was no damage to the cervical spine but that the injury sustained was a sore neck/soft tissue injury or strain is credible and persuasive. Claimant has not been placed at MMI for cervical strain by a treating provider and has established an entitlement to a general award of medical benefits to treat the cervical strain.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that medical treatment for his left ankle, right hip, left shoulder, and tinnitus/hearing issues is causally related to his June 28, 2015 work injury. His claim for medical benefits for these conditions is denied and dismissed.

2. Claimant has established by a preponderance of the evidence that medical treatment for his headaches, concussion syndrome, aggravation of his lumbar spine, and cervical strain is causally related to his June 28, 2015 work injury. Claimant is entitled to a general award of reasonable and necessary medical benefits to treat these conditions.

3. Claimant has failed to establish that the recommended C3-C4 surgery is reasonable, necessary, and causally related to his June 28, 2015 work injury. His request for surgery is denied and dismissed.

4. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 10, 2017

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge

ISSUES

- Whether Claimant sustained a compensable injury.
- Whether Claimant is entitled to medical benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer has employed Claimant as a plant specialist since 2004. In April 2016 Claimant worked at the Xcel Energy Cherokee Station.

2. Prior to April 25, 2016, Claimant worked 12 hour shifts. As of April 25, 2016, Cherokee Station employees worked 8 hour shifts pursuant to their collective bargaining agreement.

3. Claimant was and continues to be unhappy about the shift change. He alleges that the shift change was implemented in a "punitive manner." He has filed four grievances about the change. The union has dismissed all of grievances.

4. On July 9, 2016, Claimant reported a work-related injury consisting of fatigue and not being able to differentiate between being awake and asleep to his supervisor, Nick Dillon. Claimant reported that he was suffering from "shift work syndrome."

5. Mr. Dillon had Claimant prepare an incident report and provided him with a list of medical providers. Claimant declined to see a physician on that day but did talk to a nurse and a doctor on a helpline. The nurse advised Claimant to take Melatonin and go home to sleep.

6. Mr. Dillon testified at hearing that numerous locations on the designated provider list offered weekend hours and that he offered to take Claimant to a physician. Claimant declined and stated that he wished to continue working.

7. Claimant's union's bargaining agreement requires that if an employee calls off work, their shift be offered to other employees in sequential order. On July 9, 2016, an employee called in and Mr. Dillon went through his list to offer the shift to another employee. When Mr. Dillon came to Claimant, Claimant voluntarily accepted the additional shift. Mr. Dillon testified that he was surprised that Claimant accepted overtime and urged him not to work. Mr. Dillon advised Claimant to go home and take the Melatonin pursuant to the nurse's recommendation. Nevertheless, Claimant chose

to work a double shift the same date he reported fatigue and not being able to differentiate between being awake and asleep.

8. Since reporting the alleged injury, Claimant has lost no time from work. He has continued to work his regular job with Employer and has continued to volunteer for approximately 900 overtime hours per year, as he had before his alleged injury.

9. On July 11, 2016, Ryan Otten, M.D. evaluated Claimant and released him to full duty. Claimant reported to Dr. Otten that his insomnia and fatigue began after April 2016 when the shift change occurred. Dr. Otten prescribed Ambien and Provigil. Clamant testified that he rarely takes Ambien, but that he takes Provigil on the first few days of the day shift and only takes a quarter to half of a pill. Claimant testified that Provigil costs approximately $30 per pill and he believes it should be paid for under this workers' compensation claim.

10. Claimant testified that prior to April 2016 he had no issues with sleepiness and no "lapses of consciousness." Claimant's testimony is contradicted by persuasive medical records, including the following, which persuasively establish that Claimant's hypersomnolence and fatigue pre-existed the shift change.

- On December 4, 2014, Claimant was evaluated by cardiologist, Arif Rohilla, M.D. Dr. Rohilla's notes provide, "[Claimant] has noted unusual fatigue over the past year."

- On March 31, 2015, Claimant again complained of recurring fatigue to Dr. Rohilla.

- On April 29, 2015 Claimant saw pulmonologist Robert E. Benkert, M.D. Dr. Benkert concurred with Claimant's private doctor's diagnosis of untreated obstructive sleep apnea, and observed that Claimant also had poorly controlled bronchial asthma. Dr. Benkert also noted anatomic findings which made it highly probable that Claimant would have disordered breathing. These included extra tissue and crowding in the oropharyngeal airspace, a large neck circumference, and an elevated BMI. Dr. Benkert's impression was:

  > Excessive daytime hypersomnolence probably mostly secondary to untreated sleep disordered breathing. Also, the patient has poorly controlled persistent asthma and there may be a nocturnal component of his asthmatic symptomology which is also interfering with effective and restorative sleep.

- On June 5, 2015 Dr. Benkert evaluated Claimant and attributed his excessive daytime somnolence to obstructive sleep apnea and nocturnal asthma.

- On July 31, 2015 Dr. Benkert evaluated Claimant and attributed his excessive daytime somnolence to obstructive sleep apnea, Claimant's lack of compliance using his positive airway pressure device, Claimant's dogs awakening him, and Claimant's diagnosed nocturnal asthma.

- Dr. Rohilla evaluated Claimant again on September 16, 2015. Dr. Rohilla documented Claimant's history of obstructive sleep apnea, asthma, chronic allergic rhinitis, status post surgery for deviated nasal septum, enlarged nasal turbinates, and chronic bronchitis.

- Dr. Benkert's records from Claimant's September 25, 2015 visit establish that Claimant was being treated for hypersomnolence and that his then 12 hour shifts interfered with his therapy. Dr. Benkert documented Claimant's continued use of Advair and albuterol for his bronchial asthma.

- Dr. Benkert's January 11, 2016 record provides, "Previously established obstructive sleep apnea syndrome . . . his obstructive sleep apnea will be treated and his excessive daytime hypersomnolence which results from untreated obstructive sleep apnea will be treated as well."

11. Dr. Otten's July 11, 2016, report indicates that Claimant advised him that his fatigue problems began shortly after April 25, 2016. The ALJ finds this to be incorrect as Claimant's daytime hypersomnolence had been treated as far back as 2014 while the Claimant was on a 12 hour work schedule.

12. Claimant is unhappy with the change in shift schedules. He believes that his Circadian rhythm has altered due to working eight day as opposed to twelve hours per day. He testified that when he comes off the night shift he is unable to sleep and therefore he does not sleep enough before he starts a day shift. Claimant requests payment for Provigil to keep him awake during his day shift.

13. Mr. Dillon testified at the hearing. He is the Operations Supervisor at the Cherokee plant and has been the Claimant's direct supervisor since November 2015. Prior to April 2016 the plant operated on twelve- hour rotating shifts. In April 2016, the shift was changed to eight hours under the negotiated collective bargaining agreement. Mr. Dillon testified that Claimant was extremely vocal about his objection to the shift change and complained to Mr. Dillon on numerous occasions that it was affecting his Circadian rhythm.

14. Mr. Dillon testified that on July 9, 2016 Claimant told him that he wanted to file a workers' compensation claim because of fatigue and trouble differentiating between being awake and asleep. Mr. Dillon filled out appropriate paperwork and gave Claimant a designated provider list. He also offered to take Claimant to a medical facility on that date but Claimant declined. In addition, Claimant volunteered to work an extra shift on July 9, 2016, despite Mr. Dillon's recommendation that Claimant go home and sleep.

15. Since July 9, 2016, the Claimant has continued to work under Mr. Dillon's supervision. Claimant volunteers for extensive overtime and over the last seven months has never advised Mr. Dillon that he is too fatigued to work or that he is unfit for duty.

16. Jeremy Porter was the Operations Manager at the Cherokee Station beginning September 2015. Mr. Porter testified that when he took over plant operations, employees were working 12 hour shifts. Employees abused the schedule by working 18 to 24 hour shifts. Therefore, under the collective bargaining agreement, the plant changed to eight hour shift on April 25, 2016.

17. The change from the 12 to 8 hour shifts did not add hours to Claimant's schedule. Mr. Porter acknowledged that some employees were unhappy with the change and that Claimant was the most vocal opponent. Claimant filed grievances based on the shift change but the union dismissed them. Other plants that work under the same bargaining agreement work eight hour shifts.

18. Since reporting his alleged workers' compensation injury, Claimant has continued to work overtime. Mr. Porter confirmed that for the current month, Claimant is scheduled to work nine sixteen hour shifts; at least four more double shifts than any other employee.

19. The Claimant has experienced excessive daytime hypersomnolence since at least 2013. His medical providers have attributed it to factors including his twelve hour work schedule, nocturnal asthma, and obstructive sleep apnea. He has been treated for hypersomnolence since at least 2014, prior to any change in his work schedule. Claimant did not disclose this information to Dr. Otten. In addition, despite his allegations of extreme fatigue and daytime hypersomnolence, Claimant has continued to volunteer for and to work more overtime than any other employee at the plant.

20. Claimant does not take melatonin or Ambien to help him sleep. However, he takes Provigil to stay awake during his scheduled shifts and during the many hours of overtime that Claimant volunteers for.

21. The ALJ does not find Claimant to be a credible witness. His testimony was contradicted by his medical records, he failed to disclose his medical history to his workers' compensation provider, and he had motive to file this claim when the union dismissed his four grievances.

22. The ALJ finds the testimony of Messrs. Dillon and Porter to be credible and persuasive.

23. Claimant has not met his burden of establishing by a preponderance of the evidence that he experienced an occupation disease as a result of Employer's changing shifts from twelve to eight hours.

24. Claimant is not entitled to medical benefits.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of respondents. §8-43-201, C.R.S. (2014).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determination, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192, 1197 (Colo. App. 2002). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 395 (Colo. App. 2000).

Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of whether the Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d at 846.

Section 8-40-201(14) defines an occupational disease as a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure or occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. The Claimant is alleging that his occupational disease consists of "shift work syndrome" or excessive daytime hypersomnolence. The ALJ finds that the Claimant has failed to sustain his burden of proof in establishing such an occupational disease.

A pre-existing disease or susceptibility to an injury does not disqualify a claim if the employment aggravates, accelerates, or combines with a pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or that the employment aggravated or accelerated any pre-existing condition. In this case, the Claimant was suffering from excessive daytime hypersomnolence in 2014 and received treatment through 2016 due to multiple factors. The Claimant has provided no persuasive evidence that going from a twelve hour shift to an eight hour shift in any way aggravated or caused the need for medical treatment. Rather, Claimant requests payment for medication to keep him awake more likely than not is due to his preexisting medical conditions and desire to work overtime.

No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162, Colorado 345, 426 P.2d 194 (Colorado 1967). Claimant has failed to prove any injury or occupational disease that caused disability or the need for medical treatment. No persuasive evidence supports the conclusion that Claimant's need for medication is attributable to an occupational disease arising out of Claimant's employment.

Claimant's alleged injury consists of excessive fatigue and his allegation that he is unable to differentiate between being awake or asleep. However, on the date Claimant reported these alleged symptoms to Mr. Dillon, Claimant not only declined medical care, he also chose to work a double shift. In addition, despite Claimant's unhappiness with eight hour shifts, he continues to volunteer for numerous overtime hours. His allegation that shift change has disrupted his Circadian rhythm is not supported by persuasive evidence.

A Claimant must prove a causal relationship between the injury and the medical treatment that he is seeking. *Schneider v. Industrial Claim Appeals Office*, 942, P.2d 1337 (Colo. App. 1997). Treatment for a condition not caused by employment is not compensable. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002). The ALJ finds that the Claimant has failed to sustain his burden of proof by a preponderance of the evidence that he has sustained an occupational disease, and has

failed to show a causal relationship between his alleged injury and the medical treatment he is seeking.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for compensation is denied and dismissed.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 10, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable mental impairment under Section 8-41-301(2), C.R.S.

II. If Claimant established she suffered a compensable mental impairment, whether the January 2015 motor vehicle accident and December 2014 miscarriage were intervening events which severed the causal relationship between the work injury and Claimant's ongoing symptoms and need for treatment.

III. Whether Karen Hauser, LCSW or Caroline Gellrick, MD is the authorized treating physician.

FINDINGS OF FACT

1. Claimant worked as a personal banker for Employer since 2005. Claimant's job duties included providing service to customers, sales, and "stage-directing," which required Claimant to stand near the entrance of the bank and welcome customers.

2. On November 18, 2014, Claimant was working at the Wells Fargo bank located at 599 South Sable Boulevard. Claimant had been assigned to this branch approximately two months prior. Claimant was scheduled to work from approximately 8:30 a.m. to 6:00 p.m. Claimant arrived to work at approximately 8:15 a.m. or 8:30 a.m. and performed her normal duties throughout the day. Claimant was assigned to stage-direct at approximately 5:00 p.m. or 5:30 p.m.

3. On November 18, 2014, the bank at which Claimant worked was robbed. The perpetrator entered the bank while Claimant was stage-directing and approached Claimant.

4. Claimant testified the perpetrator told Claimant that he knew her and that he had a gun. Claimant testified she believed the perpetrator had her husband and daughter. Claimant did not actually see a gun. Claimant testified the perpetrator took something out of his pocket and struggled to unfold it. Claimant testified she was in a dark area and that she initially struggled to read the note, which asked for no less than $10,000. Claimant testified she started walking to the bank's back area, at which time the perpetrator said "One, two, three, I'm going to shoot." Claimant testified she proceeded to go to the back area of the bank and informed her co-workers of the robbery. Claimant then stayed in the back area while one of her co-workers provided the perpetrator money. Claimant testified she was subsequently in shock and did not know what to do. Claimant testified people were running around and she was worried for her husband and daughter because she did not know where they were.

5. The ALJ reviewed security footage of the robbery. Claimant is observed standing by the entrance of the bank. The perpetrator enters the bank, approaches Claimant and immediately pulls a piece of paper from his left pocket. The perpetrator appears to hand the paper to Claimant then steps backs from Claimant. Claimant appears to read the note and then walks off camera. The perpetrator follows Claimant and appears to have his hands in the pockets of his sweatshirt. The perpetrator is not observed grabbing Claimant. A second camera view shows a customer standing in the lobby area. The perpetrator walks over to the customer and places his left arm around the customer's shoulders while walking the customer to a teller window. The customer removes the perpetrator's arm from around his shoulder. The perpetrator is observed shortly thereafter exiting out of the bank's front entrance. Camera footage from the teller area shows Claimant in the back area with other tellers. A co-worker is observed hugging Claimant and brings Claimant a cup of water. Claimant briefly smiles at the co-worker. Claimant is not observed crying. No one is observed running or screaming.

6. Claimant testified that after the robbery her brain was not functioning, she was constantly afraid, and she continued to think the robber was going to come back and find her. Claimant testified she had panic attacks and anxiety attacks, lost interest in doing things, and lost the will to live.

7. Claimant was approximately three-months pregnant at the time of the robbery.

8. Claimant testified that, prior to the November 18, 2014 robbery, Claimant was not involved in a bank robbery at the 599 South Sable Boulevard branch.

9. Claimant testified she had a good experience working at the 599 South Sable Boulevard location prior to the November 18, 2014 robbery. Claimant testified she loved her job and was performing her job as required.

10. On November 19, 2014, Claimant reported her symptoms to her manager and contacted the Human Resources line. Employer referred Claimant to Karen Hauser, LCSW, through the employee assistance program for experiencing symptoms of trauma in connection with the robbery.

11. No evidence was entered at hearing establishing Claimant was provided a list of designated providers within seven days of Claimant's notification to Employer of her symptoms.

12. Ms. Hauser first evaluated Claimant on November 21, 2014. Ms. Hauser noted Claimant was very tearful, anxious, and worried about the health of her baby. Claimant continued to treat with Ms. Hauser on an almost weekly basis. As of April 2015, Claimant had attended a total of 19 sessions with Ms. Hauser. Ms. Hauser diagnosed Claimant with Posttraumatic Stress Disorder ("PTSD"). Regarding subsequent sessions in November 2014 and December 2014, Ms. Hauser noted Claimant struggled with feelings of fear and anxiety and felt traumatized by the thought of returning to work.

13. On December 2, 2014, Debra D. Baldwin, NP-C, PhD, recommended Claimant refrain from working for 21 days while undergoing counseling.

14. As of December 22, 2014, Claimant was requesting to return to work. Claimant testified she was ready to return to work at such time.

15. Dr. Baldwin recommended Claimant return to modified duty on January 12, 2015, while Claimant continued to undergo counseling.

16. Prior to returning to work, Claimant was involved in a minor motor vehicle accident on January 11, 2015.

17. Claimant was evaluated at Rose Medical Center on January 12, 2015. Claimant underwent an ultrasound which revealed Claimant had suffered a miscarriage at 14 weeks, which was approximately three to four weeks prior to the January 11, 2015 motor vehicle accident. Claimant underwent an ultrasound in December 2015 that was normal.

18. A cytogenetic analysis was performed on the fetal tissue and it was determined that there were no detectable abnormalities of chromosome number or structure.

19. Claimant testified she believes the miscarriage was influenced by the robbery. Claimant testified she let the robber break her. Claimant testified she continues to experience symptoms, that she constantly has images of the robbery, and that she fears the perpetrator is coming back to get her. Claimant testified she is triggered by people who look like the perpetrator and places that remind her of the robbery.

20. In a summary of therapy notes from January 13, 2015, Ms. Hauser noted, "Client learned yesterday her baby had no heartbeat. She is devastated. She will need a DNC. Client unable to cope with the reality of this new trauma. She blames herself for the death. She believes it is due to the stress and trauma she experienced as a result of the robbery."

21. Ms. Hauser noted subsequent counseling sessions with Claimant focused on "dealing with the loss of her baby and the inability to accept this loss." Ms. Hauser remarked, Claimant "continues to experience increased anxiety about the possibility of returning to work even at another branch, but also wants her life to return to normal."

22. In a letter dated January 26, 2015, Ms. Hauser stated, Claimant "was clearly traumatized by the robbery. She was not able to return to work and function effectively due to the trauma and her PCP recommended she take time off." Ms. Hauser also noted Claimant suffered a miscarriage and stated, "[Claimant] continues to be traumatized by all of these events. She has expressed an interest in returning to work but not to same (*sic*) location where the robbery occurred. She continues to struggle emotionally and physically…she continues to experience depression, anxiety, numbness and anger over these event (*sic*)."

23. In a subsequent letter Ms. Hauser remarked Claimant was "highly traumatized by the robbery." Ms. Hauser noted Claimant had been a victim of a robbery at a bank approximately five years earlier. Ms. Hauser stated, "Client continues to struggle with symptoms of trauma which increase significantly when she thinks about returning to

work, especially at the branch where she worked when the robbery occurred." Dr. Hauser further remarked, "She continues to feel traumatized by the robbery and of, course, the loss of her baby."

24. Claimant filed a workers' compensation claim on January 26, 2015, noting "trauma/loss of baby" as the nature of the injury/illness. Claimant indicated a date of injury of November 18, 2014.

25. Dr. Baldwin reevaluated Claimant on February 4, 2015 and noted Claimant continued to be emotionally upset regarding the bank robbery.

26. On February 17, 2015, Claimant's counsel faxed a letter to Insurer requesting the Claimant's workers' compensation claim file. The letter stated, in part,

> Also, it is our understanding that at the time of the injury, [Claimant] was not provided with a designated provider list pursuant to Rule 8-2. It is also our understanding that [Claimant] did not receive an authorized treating physician or designated provider list within seven days after she filed her Workers' Compensation claim form. As such, [Claimant] designates Dr. Caroline Gellrick as her authorized treating physician. In the event that [Claimant] was provided an authorize (sic) treating physician/designated provider list, then please accept this request to change her physician from any prior authorized treating physician to Dr. Caroline Gellrick, for all future medical treatment.

27. Respondents did not respond to the February 17, 2015 letter.

28. On March 16, 2015, Claimant's counsel faxed the same letter to Ms. Karen Sterns with Sedgwick CMS.

29. Samantha Long, Paralegal, testified on behalf of Claimant. Ms. Long credibly testified she received confirmation through a fax report indicating both faxes were transmitted successfully.

30. On March 19, 2015, Respondents' counsel sent a letter to Claimant's counsel rejecting Claimant's request to designate Dr. Caroline Gellrick as Claimant's authorized treating physician and denying any request for a change of physician.

31. Respondents filed a Notice of Contest on March 27, 2015.

32. On April 14, 2015, Lupe Ledezma, Ph.D., performed a psychological evaluation of Claimant. Regarding Claimant's psychosocial history, Dr. Ledezma documented the following, among other things: Claimant was grazed by a gunshot during an attempted carjacking at age 15 or 16, Claimant suffered a miscarriage in May 2013, Claimant underwent gastric bypass surgery in December 2013 and, approximately three years prior, Claimant's daughter suffered an illness which led to significant emotional upset for Claimant. Claimant reported that, after the November 18, 2014 robbery, her primary concern was that her continued emotional distress could harm her unborn child.

Claimant reported that it was difficult for her to get up in the morning and, despite attempts to improve her emotional state, Claimant continued to feel fear and nervousness regarding returning to work. Claimant reported replaying the robbery in her mind and feeling unsafe in public and, since the robbery, experiencing anxiety, nervousness, irritability, and lethargy. Claimant also reported startling easily, having difficulty calming down, crying, and a decreased attention span and ability to concentrate. Dr. Ledezma diagnosed Posttraumatic Stress Disorder ("PTSD") and depression. Dr. Ledezma remarked,

> "[Claimant] is experiencing emotional distress related to the robbery that occurred at work on 11/18/14. While she was not physically injured, she did feel that her life was threatened. Also, she experienced sustained fear and apprehension because the robber was not caught for several days and she feared that he did know her." "She has intrusive memories of the incident and has difficulty talking about it without becoming highly emotionally upset."

Referencing the January 11, 2015 motor vehicle accident, Dr. Ledezma stated,

> "While I do not have access to Ms. Hauser's weekly progress notes, based on a treatment summary submitted by Ms. Hauser, there is indication that the motor vehicle accident and miscarriage exacerbated the psychological symptoms that were already present. Also, her primary care physician diagnosed PTSD and took her off work before the motor vehicle accident or miscarriage occurred."

Dr. Ledezma noted that Claimant suffered a prior miscarriage and previously used psychotropic medications, but that Claimant received treatment and stopped medication before the robbery such that she was able to work without incident or emotional reactivity. Dr. Ledezma concluded that "whatever issues" Claimant had from the prior miscarriage and the prior robbery were resolved. Dr. Ledezma noted Claimant had symptoms of PTSD "well after" the prior incidents of trauma, and before the January 2015 motor vehicle accident. Dr. Ledezma further noted Claimant reported being emotionally upset immediately after the robbery and had requested psychological counseling before the January 2015 motor vehicle accident or the miscarriage. Dr. Ledezma opined that, within a reasonable degree of medical probability, Claimant's psychological symptoms are related to the November 18, 2014 robbery. Dr. Ledezma recommended Claimant refrain from returning to work at the same location, and that Claimant receive, among other things, psychotherapy, and antidepressants. Dr. Ledezma reevaluated Claimant on January 11, 2016 and April 12, 2016, noting Claimant continued to experience problems with attention and concentration, significant anxiety at work, and frequent fear responses.

33. On May 28, 2015, Claimant returned to work for Employer at a different branch. Claimant testified that after she returned to work she was afraid to greet customers at the door because it triggered anxiety and panic attacks.

34. In a June 11, 2015 letter, Dr. Baldwin noted Claimant suffered from PTSD and recommended Claimant not perform stage-directing for six months.

35. Claimant testified her manager pushed her to work the door, stating, "You have to face those demons." Claimant testified that on one occasion, after being required to stage-direct, a customer came up behind her, grabbed her at the hips, and yelled in her ear, "I gotcha now!" Claimant testified that she "just lost it and started running like a crazy woman." Claimant testified that she was trying to recover from the robbery, however the incident accentuated her biggest fear: that the robber was going to come back and get her.

36. After the incident, Claimant's manager requested that she recount everything that had happened to her as a result of the robbery to her co-workers, because it would help her get better. Per Claimant's manager's request, Claimant shared her story with at a staff meeting. Claimant testified that she was nervous and scared, and that every time she talks about the robbery she feels it all over again.

37. Claimant worked from May 28, 2015 to July 8, 2016. Claimant subsequently went on short-term disability.

38. On May 28, 2016, Caroline M. Gellrick, MD conducted an Independent Medical Examination ("IME") at the request of Claimant. Dr. Gellrick conducted a medical records review and performed a physical examination of Claimant. Dr. Gellrick diagnosed work-related PTSD and ongoing depression and anxiety with panic attacks. Dr. Gellrick opined Claimant was not at MMI. Dr. Gellrick recommended Claimant undergo a "second opinion psychological evaluation with consideration for restarting medical management." Dr. Gellrick referred Claimant to Walter Torres, PhD for a full psychological evaluation.

39. Dr. Torres first evaluated Claimant on June 29, 2016. Regarding Claimant's background, Dr. Torres noted, in part, the following: Claimant's twin brother was murdered when she was 25 years old, Claimant was molested by an older brother at age eight or nine. Dr. Torres diagnosed Claimant with PTSD and Depression. Dr. Torres noted that psychological testing performed indicated Claimant was not exaggerating her symptoms. Dr. Torres opined that Claimant developed PTSD in reaction to the robbery. Dr. Torres noted Claimant's background suggests

> …that she may have some greater vulnerability than most others to developing posttraumatic stress disorder in reaction to significant stressors. That being said, there is no evidence that she was experiencing any significant ongoing symptomatology, or certainly any disabling psychological symptoms prior the robbery which was the turning point leading to her current state.

Claimant continued to treat with Dr. Torres for 13 sessions. Claimant reported being depressed. Claimant reported experiencing panic attacks in relation to returning to the workplace or talking to her manager, being afraid at work and resenting the workplace.

Claimant reported that she continued to be afraid of individuals who had the same physical appearance as the perpetrator. There is no mention of Claimant's miscarriage again in Dr. Torres' notes until January 3, 2017. Dr. Torres remarked, "Before the death, and prior to the accident, she was in a very deep depression with very pronounced negative symptoms, deeply dulled, not eating, consumed and oppressed by intensely intrusive post traumatic imagery."

40. Dr. Torres testified at hearing on behalf of Claimant as an expert in psychology. Dr. Torres is a licensed clinical psychologist. Dr. Torres opined that Claimant was not exaggerating her symptoms based on the validity scales of his psychological testing and other medical records he reviewed. Dr. Torres explained inconsistencies between Claimant's recollection of the robbery and the surveillance footage of the incident could be caused by Claimant entering into a state of dissociation resulting from the trauma event. Dr. Torres opined that the robbery caused Claimant's PTSD. Dr. Torres testified that losing a baby "per se is not something that we would recognize as an event that characteristically would lead to posttraumatic stress disorder." Dr. Torres testified that, prior to the robbery, Claimant was functioning fine and that the robbery was a "turning point into a degraded state of functioning." Dr. Torres testified that there was no evidence that, prior to November 18, 2014, Claimant had PTSD or suffered the kinds of dysfunction she currently suffers as a result of the PTSD caused by the robbery. Dr. Torres opined there was no reason to believe Claimant's prior traumatic events triggered Claimant's PTSD condition.

41. Regarding a diagnosis of PTSD, Dr. Torres explained that "the criteria requires that a certain amount of time has passed since the event for the diagnosis of post-traumatic stress disorder to kick in. During the first week or so – and I might be fuzzy on some of these details – you would be calling it acute stress disorder…But if it persists, then we go into post-traumatic stress disorder." Dr. Torres testified that PTSD is multifactorial and always "develops with some contribution from a person's basic dispositions."

42. Dr. Torres testified that women who are subjected to a threat while accompanied by their child are more likely to develop PTSD. Dr. Torres opined that Claimant's pregnancy during the robbery "is a relevant factor her with respect to the genesis of her condition and characteristics." Dr. Torres agreed with Dr. Moe that acute fear is expectable in a robbery like the robbery Claimant experienced. Dr. Torres opined that subsequent events of being grabbed from behind by a customer and being pressured by her manager to self-disclose at a staff meeting aggravated Claimant's condition. Dr. Torres testified Claimant's cognitive functioning continues to be poor due to the severity of Claimant's PTSD. Regarding additional treatment, Dr. Torres opined Claimant required a "clean break" from Employer.

43. On July 8, 2015 Stephen A. Moe, M.D. conducted an IME at the request of Respondents. Dr. Moe issued an IME Report on July 13, 2015. Dr. Moe conducted a psychiatric interview of Claimant and reviewed Claimant's medical records and security footage of the robbery. Claimant reported experiencing a high level of fear during the first six to eight weeks following the robbery, which significantly impacted her ability to

function. Claimant reported that the robbery continued to replay in her mind, and that she experienced panic episodes and crying. Claimant reported feeling nervous and anxious after returning to work. Claimant reported that the first two months post-robbery was when she was doing worse from a psychological perspective post-accident. Claimant reported that the only time she obtained psychiatric treatment was in the wake of her daughter's illness, where she underwent counseling and took an antidepressant. Claimant reported that she ceased taking the Celexa after her first miscarriage.

44. Dr. Moe remarked, "In reflecting on her mental state in the wake of the miscarriage, the patient described feeling different in comparison to the anxiety that had predominated previously. She depicted a grieving process following the miscarriage, starting with a state of disbelief and then processing through feelings of loss."

45. Dr. Moe noted, "[Claimant] was the first to encounter the man who robbed the bank where she worked. She reported the man informed her that he had a gun, and she described the various ways he implicitly threatened to harm her for others in the bank if his demands were not met. Such an experience would be **acutely** distressing to all but the rare individual." [emphasis not added]. Dr. Moe remarked, however, "the question of whether such a experience would cause enduring emotional distress is much less clear." Dr. Moe noted that, as evidenced on the security footage, Claimant did not have physical contact with the perpetrator and was not detained by the perpetrator. Dr. Moe further noted Claimant was not physically harmed, and was subject only to implicit threats by the perpetrator, doing little more than functioning in the role of a messenger. Dr. Moe noted Claimant did not appear severely distressed post-robbery. Dr. Moe opined, "Whereas acute fear is quite expectable, her enduring distress despite numerous benign elements of the incident suggests an important contribution from factors unique to her." Dr. Moe further opined that Claimant's subsequent miscarriage and the experience of employer's response to her symptoms influenced Claimant's symptoms.

46. Dr. Moe opined Claimant merited the diagnosis of PTSD, but questioned whether Claimant's condition was primarily driven by the robbery. Dr. Moe described PTSD as a psychiatric diagnosis included in the Diagnostic and Statistical Manual. Dr. Moe explained that Section 8-41-302(a), C.R.S. sets forth an objective standard in analyzing mental impairment claims stating, "…a potential claimant is barred from establishing an emotional stress Workers' Compensation claim if pre-incident personality traits or life experiences render her uncommonly vulnerable to develop psychiatric symptoms in the wake of a particular workplace event. A worker is also excluded from making a claim if personal stressors are judged to interfere with normal/expectable ways of coping with a particular workplace event."

47. Dr. Moe conducted a follow-up IME evaluation of Claimant and issued a second IME Report on December 12, 2016. Dr. Moe reviewed additional medical records and conducted a follow-up interview of Claimant. Dr. Moe again opined,

> "Establishing the clinical diagnosis of Posttraumatic Stress Disorder (PTSD) is not sufficient to meet the statutory requirement for a mental stress claim, given that the diagnosis of PTSD is based on the so-called 'subjective standard,' whereas the latter must meet an 'objective standard.' Consequently, in the wake of a potentially disturbing experience, the greater the extent to which a worker's psychiatric symptoms are due to idiosyncratic (personal) factors, the less likely it becomes that she will meet the statutory definition of a mental stress claim."

Dr. Moe opined Claimant's assessment of her risk remained "highly distorted" despite "abundant exposure to normalizing and symptom-reducing influences." Dr. Moe opined the elements observed in Claimant's case represented "an uncommon response to any trauma, and they are especially unexpected when the trauma involves the objectively mild features that were present in this case…"

48. Dr. Moe testified at hearing on behalf of Respondents as an expert in psychiatry. Dr. Moe is board certified in psychiatry and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Moe testified consistent with his IME Reports. Dr. Moe reiterated that, while acute fear is expected under the circumstances, Claimant's enduring emotional distress is not. Dr. Moe testified that a typical reaction would involve short-lived distress where an individual's normal defenses and coping mechanisms would subsequently "kick in." Dr. Moe opined that he would expect a person might need "a few days off to collect themselves" and "reassurances the event is being taken seriously." Dr. Moe opined that people would not seek psychotherapy for the features of the type of robbery Claimant experienced, reiterating that the robbery was not a violent or highly threatening situation typically associated with PTSD.

49. Dr. Moe testified that prior traumatic events experienced by Claimant are probably are important factors in Claimant's condition, in addition to her personality, which Dr. Moe described as "very dramatic, expressive, reactive." Dr. Moe opined that Claimant personality is, to him, probably the most important variable in Claimant's situation.

50. Dr. Moe opined that the December 2014 miscarriage caused a new trauma, which he characterized as "not a posttraumatic stress disorder trauma, [but] a loss trauma." Dr. Moe opined Claimant's miscarriage modified her view of the robbery, such that Claimant's "interpretation of the bank robbery [was] for the worse and further interfered with this normal recovery process that we would expect." Dr. Moe testified that there was no causal explanation establishing the robbery caused the miscarriage.

51. Claimant's testimony is found credible and persuasive.

52. The ALJ credits the opinions of Drs. Hauser, Ledezma, Gellrick and Torres over the contrary opinion of Dr. Moe and finds Claimant suffered a compensable mental impairment as a result of the November 18, 2014 robbery.

53. The ALJ finds the January 2015 motor vehicle accident and December 2014 miscarriage were not intervening events that severed the causal relationship between the work incident and Claimant's ongoing symptoms and need for treatment.

54. The right of selection of an authorized treating physician passed to Claimant due to Respondents' failure to provide Claimant a designated provider list within seven days of her notification to Employer of the work-injury.

55. Claimant selected Karen Hauser, LCSW as the authorized treating physician by treating with Ms Hauser for at least 19 sessions.

56. Karen Hauser, LCSW remains the authorized treating physician, as Claimant did not properly request a change of physician.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846. The Workers' Compensation Act has authorized recovery for a broad range of physical injuries, but has "sharply limited" a claimant's potential recovery for mental injuries. *Mobley v. King Soopers*, WC No. 4-359-644 (ICAP, Mar. 9, 2011).

Enhanced proof requirements for mental impairment claims exist because "evidence of causation is less subject to direct proof than in cases where the psychological consequence follows a physical injury." *Davidson v. City of Loveland Police Department*, WC No. 4-292-298 (ICAP, Oct. 12, 2001), *citing Oberle v. Industrial Claim Appeals Office*, 919 P.2d 918 (Colo. App. 1996). A claimant experiencing physical symptoms caused by emotional stress is subject to the requirements of the mental stress statutes. *Granados v. Comcast Corporation*, WC No. 4-724-768 (ICAP, Feb. 19, 2010); *see Esser v. Industrial Claim Appeals Office*, 8 P.3d 1218 (Colo. App. 2000), affd 30 P.3d 189 (Colo. 2001); *Felix v. City and County of Denver* W.C. Nos. 4-385-490 & 4- 728-064 (ICAP, Jan. 6, 2009). Section 8-41-301(2)(a), C.R.S. imposes additional evidentiary requirements regarding mental impairment claims. The section provides, in relevant part:

> A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off,

demotion, promotion, termination, retirement, or similar action taken in good faith by the employer.

The definition of "mental impairment" consists of two clauses that each contains three elements. The first clause requires a claimant to prove the injury consists of: "1) a recognized, permanent disability that, 2) arises from an accidental injury involving no physical injury, and 3) arises out of the course and scope of employment. *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023, 1030 (Colo. 2004). The second clause requires the claimant to prove the injury is: "1) a psychologically traumatic event, 2) generally outside a worker's usual experience, and 3) that would evoke significant symptoms of distress in a similarly situated worker." *Id.*

Recognized Permanent Disability Arising from an Accidental Injury Arising Out of and in the Course and Scope of Employment

Claimant established she sustained a recognized permanent disability from an accidental injury arising out of and in the course and scope of employment. Drs. Hauser, Ledezma, Gellrick and Torres diagnosed Claimant with PTSD and , in some cases, depression. As noted in Dr. Moe's IME Report, PTSD is recognized as a psychiatric diagnosis in the Diagnostic and Statistical Manual of Mental Disorders. In explaining the distinction between acute stress disorder and PTSD, Dr. Torres credibly testified that more persisting trauma results in PTSD. Claimant credibly testified to the persistent and disabling nature of her PTSD and depression, which is further evidenced in Claimant's records.

Drs. Ledezma, Gellrick and Torres credibly opined Claimant's PTSD was caused by the robbery. Claimant credibly testified she began experiencing symptoms of trauma soon after the incident, which is supported by Claimant notifying Employer of her symptoms the following day. Claimant continued to report anxiety and other symptoms of trauma in connection with the robbery, as evidenced in Claimant's records.

The robbery, which the ALJ infers was an unforeseen and unexpected event, occurred while Claimant was working her scheduled shift and performing her usual work duties. Claimant came into contact with the robber by virtue of being assigned to stage-direct during the time period in which the robber entered the bank. Claimant's mental injury occurred in the time and place limits of her employment while performing her normal work duties.

Psychologically Traumatic Event Generally Outside a Worker's Usual Experience That Would Evoke Significant Symptoms of Distress in a Similarly Situated Worker

Respondents assert a diagnosis of PTSD is insufficient to establish a mental stress claim because the diagnosis of PTSD is based on a subjective standard, while the statute requires an objective standard. Respondents further contend Claimant's symptoms are more attributable to idiosyncratic factors than to the robbery, and that the

robbery would not evoke significant symptoms of distress in a similarly situated worker. The ALJ disagrees.

In *Davison*, the Colorado Supreme Court held that the statute requires an expert medical or psychological testimony to prove that the claimant suffered a psychologically traumatic event." However, the court also held that a claimant can use lay or expert testimony, or some combination of the two to prove the traumatic event would evoke significant symptoms of distress in a similarly situated worker. *Davison*, 84 P.3d at 1030. In *City of Loveland Police Depart*., the court found, "A compensable psychologically traumatic event under § 8-41-301(2)(a) must cause a significant, but not necessarily identical, reaction in similarly situated employees. Individual reactions of employees experiencing the same psychologically traumatic event will vary dramatically depending upon the physical and psychological makeup and resilience of the individuals affected." *City of Loveland Police Dep't v. Indus. Claim Appeals Office*, 141 P.3d 943, 953 (Colo. Ct. App. 2006).

Claimant established she suffered a psychologically traumatic event generally outside a worker's usual experience that would evoke significant symptoms of distress in a similarly situated worker. While Dr. Moe opined the robbery did not have the violent and highly threatening factors typically associated with PTSD, both Dr. Moe and Dr. Torres agreed acute fear would be expected in the circumstances. Moreover, as previously mentioned, Drs. Ledezma, Gellrick and Torres all credibly opined Claimant's symptoms were caused by the robbery.

Dr. Moe opined that the robbery would not evoke enduring stress in a similarly situated worker. Claimant is not required to establish the psychologically traumatic event would cause identical symptoms of distress in a similarly situated worker. As such, the pertinent issue is not whether a similarly situated worker would develop enduring distress, but rather the event itself is psychologically traumatic and would evoke *significant* symptoms of distress. "Significant" in the context of Section 8-41-301(2)(a), C.R.S. has not been legally defined. Dr. Moe's opinion effectively requires the ALJ to interpret the plain and ordinary meaning of "significant" as "enduring." The ALJ is not persuaded "significant" is solely defined by a period of duration. Thus, fear, while limited in time period, can constitute a significant symptom of distress. Claimant's enduring stress goes to the court's position in *City of Loveland Police Depart*. that individual reactions will vary dramatically.

The ALJ is not convinced Claimant's symptoms are more attributable to idiosyncratic factors than to the robbery. Claimant credibly testified she loved her job and was performing her job as required prior to November 18, 2014. Dr. Ledezma credibly opined that "whatever issues" Claimant had from prior traumatic incidents were resolved and noted Claimant was able to work without incident prior to the November 18, 2014 robbery. Further, Dr. Torres credibly testified there was no evidence Claimant was experiencing ongoing symptomatology from prior traumatic events and the robbery was the "turning point" for Claimant.

The ALJ is convinced the robbery was generally outside of a worker's usual experience, as Claimant credibly testified that she had not experienced a robbery at the 599 South Sable Boulevard location prior to November 18, 2014. Records also indicate Claimant experienced only one prior bank robbery approximately five years prior.

Based on a totality of the evidence, Claimant has established by a preponderance of the evidence she suffered a compensable work injury in the form of a mental impairment.

Intervening Injury

All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. An unrelated medical problem may be considered an independent intervening cause even where an industrial injury impacts the treatment choices for the underlying medical condition. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002); *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934).

If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See Post Printing & Publishing Co. v. Erickson*, 94 Colo. 382, 384, 30 P.2d 327, 328 (1934); *Vargus v. United Parcel Service*, W.C. No. 4-325-149 at 3 (ICAO Aug. 29, 2002); *Vandenberg v. Ames Construction*, W.C. No. 4-388-883 at 4 (ICAO Dec. 5, 2007).

Respondents contend that, if Claimant sustained a compensable work-related injury on November 18, 2014, the January 2015 motor vehicle accident and December 2014 miscarriage constitute intervening events that severed the causal relationship between the work injury and Claimant's ongoing symptoms and need for treatment. The ALJ disagrees. Despite some trauma related to the miscarriage, Drs. Ledezma, Gellrick and Torres credibly opined Claimant's PTSD was caused by the robbery. Claimant credibly testified she constantly has images of the perpetrator, and is triggered by people who look like the perpetrator and places that remind her of the robbery. Claimant's records after the miscarriage continue to refer to Claimant reporting fear and anxiety in connection with the robbery and returning to the workplace. As such, the ALJ is not convinced the motor vehicle accident and miscarriage were intervening injuries sufficient to sever the causal relationship between Claimant's work injury, her ongoing symptoms and her need for medical treatment.

Change of Physician

Section 8-43-404(5)(a)(I)(A), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the respondents must provide injured workers with a list of at least four designated medical providers. §8-43-404(5)(a)(I)(A), C.R.S. The

respondents must supply a copy of the written designated provider list to the injured worker "in a verifiable manner within seven (7) business days following the date the employer has notice of the injury." WCRP 8-2(A)(1). The list must include the insurer's contact information "including address, phone number and claims contact information." WCRP 8-2(A)(2).

Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the "services of a physician are not tendered at the time of injury, "the employee shall have the right to select a physician." WCRP 8-2(E) additionally provides that "[i[f the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician" of his choosing. An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006). However, in those situations where the claimant has signified, by words or conduct, that he has chosen a physician to treat the industrial injury he has made a physician selection. See *Rivas v Cemex* W.C. No. 4-975-918 (ICAP, Mar. 15, 2016); *Tidwell v. Spence Technologies,* W.C. No. 4-917-514 (ICAP, Mar. 2, 2015); *Pavelko v Southwest Heating & Cooling* W.C. No. 4-897-489 (ICAP, Sept. 4, 2015); *Miller v Rescare, Inc.* W.C. No. 4-761-223 (ICAP, Sept. 16, 2009).

The ALJ concludes the right of selection passed to Claimant. As found, Respondents failed to provide Claimant a designated providers list within seven days of Claimant's notification to Employer of the injury. Nonetheless, Claimant, through her words and conduct, selected Karen Hauser, LCSW by treating with Karen Hauser, LCSW for at least 19 sessions.

The ALJ further concludes Claimant failed to properly request a change of physician. Section 8-43-404(5)(a)(VI)(A), C.R.S. and WCRP 8-7 provide that, in addition to the one-time change of physician allowed within 90 days of injury under Section 8-43-404(5)(a)(III), C.R.S. and WCRP 8-5, an injured worker may submit a written request to change physicians to the insurer or employer's authorized representative. The request must be on the form prescribed by the Division of Workers' Compensation. The insurer or employer's authorized representative then has twenty (20) days from the date of the certificate of service of the request form to grant permission for the change of physician or object in writing.

As found, Claimant's change of physician request was submitted in a February 17, 2015 letter to Insurer addressing other issues. While Respondents failed to object to Claimant's February 17, 2015 letter, the request was not submitted on the form prescribed by the Division. Accordingly, the request to change physicians made on February 17, 2015 was not proper, and Karen Hauser, LCSW, remains the authorized treating physician.

ORDER

It is therefore ordered that:

1. Claimant proved by a preponderance of evidence that she suffered a compensable work-related injury in the form of a mental impairment.

2. The January 2015 motor vehicle accident and December 2014 miscarriage did not constitute intervening events which severed the causal connection to the work injury and Claimant's symptoms and need for treatment.

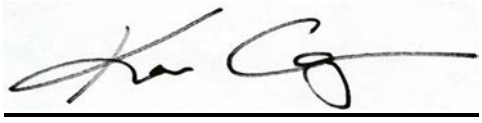
3. Karen Hauser, LCSW, is the authorized treating physician. Respondents shall pay all reasonable, necessary and related medical treatment ordered by or through Karen Hauser, LCSW.

4. Any and all matters not determined herein are reserved for future determination.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 11, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE ON REMAND

1. Whether the claimant has proven, by a preponderance of the evidence, that she is entitled to reopen her claim pursuant to the provisions of section 8-43-303, C.R.S.

ISSUES PREVIOUSLY ADDRESSED

2. Whether the claimant has proven, by a preponderance of the evidence, that she is entitled to an award of medical benefits relating to treatment of her alleged left shoulder injuries, post-MMI.

3. Whether the claimant has proven, by a preponderance of the evidence, that she is entitled to an award of temporary total benefits for the period August 9, 2015 through November 17, 2015.

4. Whether the claimant has proven, by a preponderance of the evidence that she is entitled to an award of permanent partial disability benefits arising out of the September 15, 2014, industrial injury at the Respondent Employer.

5. Whether the claimant has proven, by a preponderance of the evidence, that she was not at MMI on June 15, 2015, contrary to the determination of the authorized treating physician.

6. Whether the claimant has proven, by a preponderance of the evidence, that she is entitled to be reimbursed for medical expenses associated with her left shoulder surgery incurred post-MMI.

7. Whether the Respondents have proven, by a preponderance of the evidence that the claimant is jurisdictionally barred from raising the issues of compensability of the alleged left shoulder injury, medical benefits, TTD, PPD, MMI and "medical reimbursement" per the provisions of sections 8-42-107.2 and 8-43-203(2)(b)(II)(A) and (d), C.R.S.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. The claimant is a right-hand dominant 45-year-old woman with an August 29, 1971, date of birth. **Exhibit G, Bates 50.**

2. The claimant has been employed by the Respondent Employer as a "document controller" since 2006. **Exhibit G, Bates 50.** The claimant presented to Concentra Medical Centers on September 15, 2014, complaining of pain in the left wrist and shoulder. The claimant reported the injury occurred from turning pages and data entry. **Exhibit B, Bates 7.** The claimant gave a history of an insidious onset of left wrist pain "two months ago". According to the claimant, the pain started in the volar aspect of the left wrist and slowly radiated up to the lateral elbow and into the anterior left shoulder. **Exhibit B, Bates 8.** The treating physician, Dr. Daniel Peterson, assessed "wrist sprain, lateral epicondylitis of the left elbow, biceps tendinopathy and impingement syndrome of the shoulder". Dr. Peterson referred the claimant to Genex for a job site analysis to evaluate the claimant's workplace for risk factors for cumulative trauma conditions. He opined, "I have my doubts but does do supination/pronation with left hand turning documents and does rest her elbows on her arm rests…. Certainly has posture issues and body habitus issues…. Ultimately, causality to be determined." Physical therapy and medications were prescribed and the claimant was released to return to regular duty work. **Exhibit B, Bates 9, 10.**

3. On December 3, 2014, Colleen Waterous, M.A., CEAS, QRC, performed a job site analysis of the claimant's work stations, as recommended by Dr. Peterson. The job site analysis included a Physical Demands Analysis and Risk Factor Assessment to determine any risk factors present in the workplace as they related to the claimant's diagnosis, consistent with Colorado's Medical Treatment Guidelines, Rule 17, W.C.R.P., Exhibit 5, Cumulative Trauma Conditions. Based on her evaluation, Ms. Waterous opined that of the fourteen primary and secondary risk factors for cumulative trauma, **none** were present relative to the claimant's job as a document controller. **Exhibit C, Bates 53.**

4. Following the job site analysis, the claimant returned to Concentra Medical Centers on December 15, 2014. Jocelyn Cavender, PAC, evaluated the claimant. On physical examination, the claimant's left shoulder had a normal appearance, with no deformity, no tenderness, full range of motion, normal strength and no signs of impingement. PA Cavender noted the job site analysis showed no risk factors. **Exhibit B, Bates 16.** Physical therapy and medications were continued. The claimant was released to return to regular employment.

5. The claimant continued treating at Concentra for her left wrist, elbow and shoulder pain. The claimant was referred to Dr. Jeffrey Jenks for EMG testing of the left upper extremity. Worley Lynch, PA-C, evaluated the claimant on January 2, 2015. He opined, "Causality still needs to be established under Rule 17, depending on if really does have [cubital] tunnel syndrome or not." **Exhibit B, Bates 20.**

6. Due to the claimant's plateau in physical therapy, PA Cavender referred the claimant for a left shoulder MRI. **Exhibit B, Bates 20.**

7. The left shoulder MRI was performed on January 26, 2015. It was read as showing significant increased signal intensity in the posterior distal muscle fibers of the supraspinatus, which showed a partial thickness tear at the myotendinous junction of a large intrasubstance cyst, together with soft tissue impingement under the acromion, tendinosis in the infraspinatus, and severe tendinosis in the intraarticular portion of the biceps tendon, with thickening. The MRI also showed an anterosupralateral labral tear. **Exhibit B, Bates 35.**

8. Orthopedic surgeon, Dr. Michael Simpson, evaluated the claimant on April 20, 2015. He recommended a left shoulder surgery. **Exhibit B, Bates 45.**

9. On June 4, 2015, the carrier filed a Notice of Contest, disputing compensability of the claimant's alleged shoulder injury. **Exhibit A.**

10. The providers at Concentra continued treating the claimant, who reported gradual, but complete, improvement in her wrist and elbow symptoms. On June 15, 2015, authorized treating physician, Dr. Walter Larimore, placed the claimant at MMI, with no impairment, no work restrictions and no need for medical treatment to maintain MMI. Regarding the claimant's alleged left shoulder complaints, Dr. Larimore opined:

    "After extensive review of her job site evaluation, EMG, MRI and all of the past notes, my opinion is that there is a >50% likelihood that the left shoulder complaints are *not* work-related**." Exhibit B, Bates 45.**

11. The carrier filed a June 29, 2015, Final Admission admitting liability consistent with Dr. Larimore's opinions on causation, MMI, impairment and the claimant's need for medical treatment to maintain MMI.

12. **It is undisputed that the claimant did not object to the June 29, 2015, Final Admission, did not file a Notice and Proposal to Select a DIME and did not file an Application for Hearing on any issues then ripe, including medical benefits.**

13. On July 6, 2015, the claimant sought treatment with her personal provider, Dr. John Pak, at Front Range Orthopedics, outside the worker's compensation system, for her reported left shoulder complaints. Dr. Pak diagnosed a full thickness rotator cuff tear. **Exhibit F, Bates 87.**

14. On August 9, 2016, Dr. Pak performed an arthroscopic subacromial decompression, acromioplasty rotator cuff repair and arthroscopic debridement for shoulder arthritis. **Exhibit F, Bates 94. 95.** There is no

persuasive evidence in the record-including the MRI report which Claimant references- that this surgery was necessitated by a compensable injury.

15. On September 16, 2016, the claimant filed an Application for Hearing endorsing the issues of compensability, medical benefits, Petition to Reopen, TTD, PPD, MMI and "medical reimbursement."

16. The claimant presented no credible evidence, and failed to meet her burden of proving, the treatment provided by Dr. Pak was authorized or related to the admitted work injury of left cubital tunnel syndrome and left lateral epicondylitis. The claimant's request for medical benefits provided outside the Workers' Compensation system to treat her left shoulder complaints is not supported by the applicable law.

17. The claimant provided no credible evidence, and failed to meet her burden of proving entitlement to TTD for the period August 9, 2015 through November 17, 2015. The claimant's request for an award of TTD is not supported by the applicable law.

18. The claimant presented no credible evidence, and failed to meet her burden of proving, that she is entitled to an award of permanent physical impairment as a result of the admitted work injury. The claimant's request for an award of PPD is not supported by the applicable law.

19. Claimant testified that her shoulder has "improved today", compared with when she was placed at MMI by Dr. Larimore. Claimant presented no persuasive *evidence* (credible or otherwise) that her condition had worsened *at any point* since being placed at MMI.

20. Claimant testified about the reason for her reopening as follows:

> Q. Okay. And we're here today basically because you believe you were inappropriately placed at maximum medical improvement, is that right?
>
> A. Yes.
>
> Q. And the reason that you think that you were not at MMI is because you disagree with Dr. Lattimore's (sic) opinion that your left shoulder is not work-related
>
> A. I was still in pain, but yes, I disagreed with him.

21. Claimant presented no persuasive *evidence* (besides her assertion that she *disagreed* with Dr. Larimore's finding of MMI) that Dr. Larimore was *mistaken* or *erred* in his diagnosis, treatment, or placement of Claimant at MMI.

22. Claimant presented no persuasive *evidence* that Dr. Larimore was *mistaken* or *erred* in his opinion that her left shoulder was not work-related.

23. Claimant alleged, but presented no admissible (much less persuasive) *evidence*, that Dr. Larimore, was "coerced" into placing Claimant at MMI.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:
