ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to his lumbar and thoracic spine while working for Employer on November 29, 2016.

II. Whether Claimant is entitled to a general award of medical benefits and for all treatment provided for his lower back condition to date.

III. Whether Claimant is entitled to temporary total disability (TTD) benefits commencing December 21, 2016.

IV. A determination of Claimant's average weekly wage (AWW) at the time of his alleged lumbar and thoracic spine injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer operates an assisted living facility, i.e. a group home that shelters multiple residents with developmental and intellectual disabilities. Claimant is employed as a direct support professional for Employer. Direct support professionals perform duties rooted in assisting the residents with activities of daily living, including cooking, cleaning, doing laundry, and dispensing medications.

2. Claimant testified that on November 29, 2016, he arrived at the group home at around 3:50 PM for a scheduled 4:00 to 9:00 PM shift. According to Claimant, he was unable to clock in because the internet was down. Consequently, Claimant called his supervisor to let him know that he had reported for his shift. While he was on the phone, Claimant heard a "little bit" of commotion emanating from the back hallway of the home. Immediately after hanging up with his supervisor, Claimant proceeded to the back hallway to see what was going on. Upon arrival, Claimant testified that he saw a co-worker, Jose Diaz and resident in a back room. Claimant noticed that the resident was on the floor sitting on his buttocks and leaning backwards. Claimant asked Mr. Diaz what was going on to which Mr. Diaz responded that the resident was "just giving [him] some trouble."

3. Claimant began speaking to the resident in an effort to calm him down as Mr. Diaz left to go to the kitchen. Claimant then proceeded to help the resident off the floor by kneeling down and grabbing the resident's outstretched hand. In so doing, Claimant placed his other hand around the resident's back, somewhat under his armpit,

and helped lift the resident to his feet. As he was assisting the resident from the floor, Claimant developed a sudden "really sharp, shooting pain" in his back. Claimant testified that he promptly called his supervisor to report this incident and his injury.

4. Claimant's supervisor, Ryan Denahy provided a written statement and testified at hearing. Mr. Denahy's written statement is dated December 14, 2016. Mr. Denahy's statement confirms that Claimant called him around 3:56 PM on November 29, 2016, to inform him that that the internet was down and he was unable to clock in for his shift. The statement also indicates that Claimant called Mr. Denahy back at 4:01pm, at which time Claimant purportedly told Mr. Denahy that he had hurt his back during a *previous* shift and that it was bothering him. According to the statement, Claimant did not tell Mr. Denahy about his injury earlier because other Program Staff were next to him while he was on the phone. Finally, the statement indicates that Mr. Denahy thought Claimant reported that he had injured his back during this prior shift while helping a resident off the floor.

5. Claimant was asked about Mr. Denahy's assertion that he reported the injury as occurring during a previous shift. Claimant adamantly denied the contention.

6. Mr. Denahy testified in his capacity as the Adult Services Director for Employer. Mr. Denahy testified all residents of the home where Claimant was allegedly injured are ambulatory. He also testified that no residents living in the home have a lifting protocol and that direct support professionals are trained to let ambulatory persons get up on their own. Based upon the evidence presented, the ALJ finds that Claimant did not actually lift the resident off of the floor. Rather, the evidence presented persuades the ALJ that Claimant extended a hand to the resident and placed his other arm around him as he described in order to assist the resident in standing up. The ALJ finds it probable that Claimant would instinctively extend a hand to an emotionally distraught developmentally disabled resident to help calm him down by getting him up.

7. Mr. Denahy also testified that employees of the Employer are trained to file a "GER" (General Event Report) whenever there is an incident involving a resident, and that it must be filed by somebody, regardless of who first witnessed the event. Mr. Denahy also explained that "T-Logs" are also used to document incidents that do not rise to the level of requiring a formal GER. There were no GERs or T-Logs filed documenting the incident wherein a resident of the Employer's was on the floor on November 29, 2016. Claimant explained that he did not report the individual being on the floor to anybody at the time because he did not see what lead to the resident ending up on the floor and because he was under the impression that it was Mr. Diaz's, responsibility to report that event since he was present when whatever occurred to cause the resident to end up on the floor.

8. Mr. Denahy's testimony was consistent with his written report, in that it was his recollection that Claimant told him at 4:01 PM on November 29, 2016 that Claimant had injured himself lifting a patient albeit during a prior shift. Mr. Denahy acknowledged that he did not reduce the events of November 29, 2016 to writing until

December 14, 2016, more than two-and-a-half weeks after the incident occurred and then at the direction of Employer's CEO. He agreed that his entire statement was recreated from memory and phone call logs.

9. Claimant testified that he was able to finish his shift on the date of injury and he worked one day after his injury, which he believed was December 1, 2016, despite "horrible" back pain which had changed in character to a deep dull ache. Claimant's time cards show that he worked on November 29, 2016 and again on December 1, 2016. Claimant testified that he continued to work because "there was no way somebody was going to cover for [him]." Claimant explained that it is hard to find somebody to cover your shift, as you have to call and find and individual that is willing to cover your shift on short notice.

10. Claimant presented to Valley-Wide Health Systems on December 2, 2016 complaining of lower back pain "starting 3 days ago after helping a client of [sic] the floor." Claimant explained that after helping the resident up on "Tuesday," he has had level seven out of ten back pain ever since. The pain was described as aching involving the back with radiation into the left thigh. It was noted by Physician Assistant (PA-C) Robert Holstead that Claimant's symptoms were aggravated by ascending stairs and bending. Physical examination documented tenderness to the lumbar spine and moderate pain with motion. Claimant was prescribed cyclobenzaprine and ibuprofen. It was anticipated that the back pain would resolve on its own at that time. Claimant testified at hearing that the resident referenced in this medical report is the same resident he was referring to in his testimony.

11. Claimant testified that he was told at Valley-Wide that he had a pulled muscle in his back, which is why he was in pain, and to simply "take it easy." As noted, Claimant was prescribed an anti-inflammatory and a muscle relaxer. Consequently, the ALJ finds credence in Claimant's testimony that he was told that he had a muscle pull and that his pain would resolve on its own.

12. Claimant's low back pain persisted and by December 4, 2016, he had decided to proceed to the emergency room (ER). As Claimant got out of bed and was preparing to go to the ER he experienced severe pain in his back and numbness in his legs. According to Claimant, he was walking in the hallway leading from his bedroom when he lost feeling in the lower half of his body. Claimant specifically denied any new injury between November 29, 2016 and December 4, 2016.

13. An ambulance was summoned and responded to Claimant's home. Upon arrival, paramedics discovered Claimant sitting in the hallway of his home unable to move his legs. Claimant reported that he had injured his back "4 days ago helping someone off the ground at work." He provided the following additional history:

> I started to get muscle spasms in my lower back a couple of hours after lifting the person. The pain slowly got worse so I went to the doctor's office 2 days ago. He prescribed me a muscle relaxer and anti-

> inflammatory medication. I walked for a few hours straight yesterday and last night my back was really sore. My right leg felt like it was numb but I could still move it. I woke up this morning and when I stood up out of bed both legs felt numb. I made it about 10 feet and sat on the ground and could not move my legs.

14. Claimant was transported by ambulance to the emergency room at Arkansas Valley Regional Medical Center. The history of present illness upon intake indicates that Claimant had injured himself when lifting a patient of an assisted-living facility; however, the record erroneously indicated the event occurred that day. The note also erroneously indicates that Claimant is female. The intake form filled out by Claimant indicated that he had injured himself working for the Employer by "Helping [an] individual off of floor." Physical examination revealed neurologic deficits and CT of the lumbar spine demonstrated disc narrowing raising concerns for acute cauda equina syndrome. After consultation with Dr. Braden at Parkview Hospital in Pueblo it was decided that Claimant should proceed with an immediate MRI and be transferred to Parkview.

15. The initial note from Parkview Hospital documents that Claimant had injured his back on November 29, 2016, "when he was lifting a patient at the Assisted Living Facility that he works at. Then on this morning of December 4, 2016, he began having weakness in his legs that progressed to an inability to walk along with loss of bladder control." An MRI was performed and revealed that Claimant had a large disc herniation at L4-5 with spinal cord compression, along with stenosis and slightly lesser herniations at L3-4 and L2-3. There was also evidence of a disc herniation at T11-T12 and congenital spinal stenosis in the thoracic and lumbar spine. Claimant was diagnosed as having a disc herniation at T11-12 with spinal stenosis and low-grade thoracic myelopathy and acute cauda equine syndrome secondary to disc herniation at L2-3, L3-4, and L4-5 with bilateral complete flail foot. Neurosurgical services were consulted after which it was felt that Claimant required emergent surgery to include a laminectomy decompression and discectomy at T11-12 and also a laminectomy, decompression, and discectomy at L2 through L5. Concerning Claimant's need for surgery, Dr. Keith Norville indicated as follows: "Even if something surgical is done, he still may not gain anything back as far as motor strength or sensation but really this is a surgical emergency here for him." Claimant underwent surgery with Dr. Keith Norville on December 5, 2017.

16. Dr. Norville's December 5, 2016 surgical report outlines a complicated multilevel spinal surgery which was extremely difficult given the depth of the incision necessary to reach specific spinal structures due to Claimant's large body habitus. Among the pre and post operative diagnosis listed in the report is acute cauda equina syndrome secondary to disc herniation.

17. While recovering from his surgery as an inpatient at Parkview Hospital, Claimant received a phone call from the representative assigned to adjust the claim for Insurer. Claimant testified that he had no independent recollection of a conversation he

had with Mr. Allen Schrader regarding the November 29, 2016 incident or his injuries. According to Claimant, he did not remember much from his hospital admission because he was highly medicated on Dilauded. The aforementioned conversation was recorded and Claimant recognized his voice on the recording as it was played in open court. During the recording, Claimant is heard telling Mr. Schrader that the November 29, 2016 incident occurred around 5:00 PM. He also told Mr. Schrader that Jose Diaz was present with the individual on the ground prior to his arrival and that once the individual on the ground calmed down, Mr. Diaz left the room. Claimant described the individual as already being on one knee and presenting his hands for assistance. He also indicated that his back did not hurt immediately, but that he felt his back begin to spasm about 1 minute later when he was washing dishes. Finally, he reported that Mr. Diaz knew he had helped the resident up from the floor.

18. While inconsistencies in the details of the events leading up to Claimant's injury exist between his recorded statement and his subsequent testimony, the ALJ finds those inconsistencies minor and likely a result of the side effects of the medication Claimant was administered to control his pain. The suggestion that because Claimant's voice was clear on the recording means his subsequent testimony is not credible is not convincing. To the contrary, the ALJ finds that Claimant's ability to impart information with a clear voice during the recorded statement does not mean that the information he was providing was accurate. Based upon the well known mentally impairing effects of strong pain medication, the ALJ finds the statements Claimant made during his recorded interview unreliable.

19. Claimant was discharged from in-patient care on December 30, 2016 and referred for post-operative care and rehabilitation through Parkview Medical Center, Parkview Neurological Services, NuMotion, High Plains Community Health Center, Craig Hospital, and Matrix Rehabilitation Consultants.

20. On December 20, 2016, Dr. Jon Erickson authored a physician advisor opinion at the request of Insurer to address the "four-day lag from the time [Claimant] noted the onset of his acute symptoms and the date of his alleged lifting injury." Dr. Erickson noted that "it is not all that unusual for a delay in the symptoms following an acute disc herniation, and one can probably not tell exactly which disc was herniated at the time of his alleged injury." Dr. Erickson would continue by indicating that because there was a lifting injury and Claimant developed severe symptoms, the claim was compensable.

21. On April 14, 2017, Respondent requested an independent medical opinion from Dr. J. Raschbacher. At the time of the examination, Claimant had minimal pain, but remained unable to use his lower extremities and explained that he had no independent bladder function. Consequently, Claimant reported that he self-catheterizes six times a day. Claimant was asked about a previous low back treatment that was documented in his medical records. Claimant explained that his previous treatment was to his hip and he testified similarly at hearing. Claimant explained that

there was no specific injury that caused his hip pain, he was just sore and stiff for which he treated with his family doctor approximately four years prior.

22. Review of a May 9, 2014 report from Family Nurse Practitioner (FNP) Doug Miller at Rocky Ford Family Health Center documents: "The patient complains of follow up hip pain. The patient presents with right hip pain, right anterior thigh pain, right lateral thigh pain, and right buttock pain.

23. Dr. Raschbacher also outlined the content of a May 28, 2014 report indicating that Claimant had returned to the clinic for complaints of low back pain with "right upslip." According to Dr. Raschbacher's summary, Claimant started to have low back and right hip pain in December after being bent over a sink doing dishes for three hours. Claimant was referred to physical therapy where nerve stimulation was provided.

24. Claimant returned to FNP Miller on August 21, 2014. He requested more physical therapy. According to Dr. Raschbacher's independent medical examination (IME) report, Claimant received additional physical therapy through October 30, 2014. Claimant was discharged from physical therapy on October 30, 2014. The reason for discharge was "Rehab goals met." At the time of discharge, Claimant "still [had] bouts of pain with certain movements or walking", but demonstrated motivation and understanding to continue with an independent home exercise program (HEP). Claimant testified that he did not have significant ongoing back or hip symptoms after his treatment concluded. The ALJ finds Claimant's testimony in this regard credible given the lack of medical records documenting the need for treatment or disability for any back, hip or leg pain between October 30, 2016 and his visit to the Valley-Wide Health Systems clinic on December 2, 2016. Based upon the evidence presented, the ALJ finds that Claimant's low back, more probably than not, was asymptomatic prior to November 29, 2016.

25. The history surrounding Claimant's injury obtained by Dr. Raschbacher during his IME is consistent with the other medical records on file, regarding both Claimant's previous back/hip injury as well as the mechanism of injury for the November 29, 2016 injury. Specifically, Claimant consistently explained to Dr. Raschbacher that he injured himself helping an individual get up off of the floor, that he began having lower back pain almost immediately after the incident, and that the lower extremity symptoms began approximately four days later. Dr. Raschbacher's physical examination documented 0+/4 reflexes at the knees and ankles with no sensation of the bilateral feet.

26. Following his examination, Dr. Raschbacher opined that Claimant sustained a work related injury to his back. In concluding as much, Dr. Raschbacher stated:

> My medical opinion is that [Claimant's] current condition is the result of a work injury. Clearly he had a grossly abnormal lumbar

> and thoracic spine, the absence of which would likely have precluded this injury.[1] In any event they were present and he had a work-related episode which caused his condition to become symptomatic and it is work related in causation.

27. Claimant underwent an IME with Dr. Timothy Hall on May 18, 2017. During the IME, Claimant described a history of injury generally consistent with the content of the medical records submitted. Dr. Hall also obtained a history surrounding Claimant's prior 2014 back/hip condition wherein Claimant reiterated it was primarily his hip that was hurting at that time, and that he had no ongoing complaints that required any treatment after his physical therapy concluded in October of 2014. Relying on Claimant's description of the incident in question, Dr. Hall agreed with Dr. Raschbacher's causation opinion noting: "From a causation perspective, this seems fairly straight forward. There was clearly an initiating event on 11/29/16. There is some discrepancy in the chart about just when the pain began, but it clearly began following the event of helping a patient up." Dr. Hall also agreed with Dr. Raschbacher that Claimant's injury was likely precipitated by his underlying yet asymptomatic spinal condition stating: "It is true that [this injury] is a fairly devastating outcome from a fairly benign event, but with his history of a congenitally narrow canal, it does not take as much herniation to create nerve compression/nerve injury."

28. Claimant testified on cross-examination that he spoke to Mr. Denahy and reported the incident shortly after it happened and then proceeded to the kitchen where he began to wash dishes. The residents eat dinner at around five or six in the evening, but there are dirty dishes present "all day" at the facility. According to Claimant, prior shifts often leave dishes in the sink for the oncoming shift to wash. Mr. Diaz confirmed during his direct examination that there were probably dishes in the sink from the previous shift as it does happen often.

29. During his testimony, Claimant was asked about the Employee Accident Report dated December 8, 2016, which documents the incident occurring at approximately 5:00 PM. Claimant testified that he did not remember filling out the form. Based upon the evidence presented, the ALJ finds that the form was signed by Claimant on December 8, 2016, three days after a major back surgery and likely while Claimant was under the influence of cognitively impairing pain medication. For the same reasons that the ALJ found Claimant's oral statements to Mr. Schrader unreliable, the ALJ finds the information contained on the form completed by Claimant on December 8, 2016 equally untrustworthy. Regardless, Claimant disagreed with the 5:00 PM injury time.

30. In another Employee Accident Report completed by Ms. Rosa Salo, the interim director of Human Resources on December 5, 2016, it indicates that Claimant contacted Mr. Denahy on November 28, 2016 at 4:22pm to report that he had injured

[1] The ALJ interprets this statement to indicate that the structures of Claimant's lumbar and thoracic spine were compromised prior to the injury in question in this case and without such pre-existing disease (stenosis), the injury would not have happened.

his back a couple of days ago. Ms. Salo's accident report form is in direct conflict with the testimony of all others involved, the written statements of Mr. Denahy and Mr. Diaz and with the employment records in file. Consequently, the ALJ finds her statement and subsequent testimony regarding the date of injury unconvincing.

31. Another statement was provided by a co-employee of Claimant; however, the name affixed to the statement is illegible. This individual documented that Claimant showed up for work on December 1, 2016 grabbing his lower back and that Claimant was walking around the house very slowly. According to the statement, Claimant told the individual that he had hurt his back the other day. There is no discussion of where, when or how Claimant had been injured, only that he had been hurting for a while.

32. Finally, there is a witness statement in the record from Jose Diaz, dated December 15, 2016. Mr. Diaz wrote that he was in the kitchen washing dishes when Claimant approached him, bent over slightly and acting as if he were in pain. According to Mr. Diaz Claimant verbalized his pain and demonstrated discomfort by saying "ouch" and closing his eyes. Mr. Diaz noted: "He (Claimant) didn't performed (sic) any task that will cause no ~~othe~~r further pain. (. . . on that shift; 4 pm-9pm)." Mr. Diaz does not reflect a time that Claimant appeared in the kitchen. The ALJ finds the choice of words Mr. Diaz used in his written statement significant. It is specifically noted that Mr. Diaz used the words "further pain" suggesting that something occurred to cause Claimant pain in the first instance. While Mr. Diaz notes that no tasks were performed on the 4:00–9:00 PM shift that would cause Claimant pain, the ALJ finds this statement unconvincing. Rather, the evidence presented is persuasive of the likelihood that Mr. Diaz was not with Claimant continuously during his shift so would not necessarily be aware of all tasks/activities Claimant engaged in during the shift.

33. Mr. Diaz was specifically asked whether Claimant told him how he injured his back. Mr. Diaz responded, "No, I – I – I – I did ask him, and I said, well, why – why is your back hurting? And he goes, 'I don't know.' It's been – it's – it's just been hurting me for the past few days. That's what he told me." Mr. Diaz's witness statement dated December 15, 2016 makes no mention of Claimant telling him that his back had been hurting for "the past few days."

34. Mr. Diaz testified on cross-examination that he had worked with Claimant on the previous Tuesday, November 22, 2016 and that Claimant did not exhibit any pain symptoms at that time. Mr. Diaz also reiterated during cross examination that Claimant did approach him on November 29, 2016 complaining of back pain.

35. The totality of the evidence presented persuades the ALJ that Claimant proceeded to the back area of the house to determine what was occurring between Mr. Diaz and the resident. The evidence also persuades the ALJ that Claimant probably helped the resident to stand up as he described and in the process he injured his back. Thereafter, the evidence presented convinces the ALJ that Claimant probably called Mr. Denahy to report the incident and his injuries and he then proceeded to the kitchen where Mr. Diaz was able to see that he was in pain.

36. The ALJ credits the testimony of Claimant and the opinions of Dr's. Erickson, Raschbacher and Hall to find that the act of assisting the resident to his feet, more probably than not, resulted in acute disc herniations and an aggravation of his pre-existing, yet asymptomatic congenital spinal stenosis which in turn caused his need for treatment, including the above described emergent spinal surgery. Accordingly, the ALJ is persuaded that Claimant has proven by a preponderance of the evidence that he sustained compensable injuries to his thoracic and lumbar spine on November 29, 2016.

37. Wage records submitted into evidence extending from September 11, 2015 through the December 16, 2016 establish that Claimant earned gross wages of $32,544.59. The ALJ excludes the earnings from the pay date of December 16, 2016 as it encompasses earnings after the date of injury. However, the pay date of December 2, 2016 is used, as it is presumed based on earnings paid out December 16, 2016, that the December 2, 2016 pay date only encompassed earnings prior to the date of injury. Using the twenty-six bi-weekly pay dates, dated December 18, 2015 through December 2, 2016, the ALJ calculates Claimant to have earned a total of $24,304.70 during this time period. Consequently, the ALJ calculates Claimant's average weekly wage to be $467.40 ($24,304.70 ÷ 52 weeks= $467.40). The ALJ finds that Claimant's average weekly wage (AWW) is best calculated using 52 weeks of earnings given the fluctuating nature of his pay. Aside from Claimant's first and last pay periods, he earned anywhere from $812.70 to $1,391.25 for any given two week period.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. In this case, the undersigned ALJ concludes that Claimant is a credible witness. Claimant has consistently maintained throughout the course of the claim that he sustained an injury to his back while physically helping a resident to his feet from the floor. Claimant reported to his supervisor on November 29, 2016 that he had sustained an injury at work. Claimant maintains that he told Mr. Denahy he injured himself at work lifting a resident that same day, whereas Mr. Denahy recalled Claimant telling him that he had injured himself at work lifting a resident during a prior shift. While Mr. Denahy asserts that Claimant reported that he had been injured on a prior shift, much of the detail contained in Mr. Denahy's statement corroborates Claimant's account of the events leading up to the injury including the mechanism of injury itself. Given the totality of the evidence presented, the ALJ concludes it more likely than not that Claimant did in fact sustain an injury to his lower back on November 29, 2016, and that Mr. Denahy erred in his recollection of events when reducing them to writing two-and-a-half weeks after the incident occurred.

C. The only individuals that testified at hearing that were present at the facility around the time of the injury were Claimant and Mr. Jose Diaz. Claimant testified, and indicated on various forms filled out after the injury, that he had walked in on Mr. Diaz and a resident that was on the floor. Mr. Diaz left to wash dishes and Claimant assisted the individual to his feet. Mr. Diaz testified that he was never involved with a resident on the floor on November 29, 2016. In this case, the records document Claimant to have consistently reported a work related injury involving the lifting of a resident. At hearing, Mr. Diaz indicated Claimant told him that he had injured his back a few days prior and that Claimant did not know how he had injured himself. However, this information is conspicuously absent from his written statement. Moreover, there is no indication in the written statement of Mr. Diaz as to when Claimant appeared in the kitchen in pain as observed by Mr. Diaz despite his subsequent testimony that it was around 5:00 PM. Given the fact that Mr. Diaz continues to work for the employer, that he was asked by the employer to write a statement, that it was likely Mr. Diaz's responsibility to report the incident involving the resident, which he failed to do, and that his testimony at hearing has expanded to cover critical information not previously disclosed in his prior witness statement, the ALJ finds Mr. Diaz's written statement and testimony less persuasive that Claimant's.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item

contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

E. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App.2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

F. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

G. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2013; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

H. The determination of whether there is a sufficient "nexus" or causal relationship between Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Whether Claimant sustained his burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). In this claim, Respondent's contend that

Claimant has failed to carry his burden to establish a compensable injury based upon the assertion that his account of the events leading up to his asserted injuries is not credible. As found, the ALJ is not persuaded. To the contrary, the ALJ specifically rejects this contention to conclude that Claimant's testimony is credible and supported by the medical record submitted. In crediting Claimant's testimony, there is little question that the alleged injury occurred in the course and scope of Claimant's employment. Nonetheless, given Claimant's pre-existing degenerative and congenital spine conditions the question of whether his asserted injuries and need for treatment "arise out" his employment must be addressed before the injuries are deemed compensable. The specific question for resolution is whether Claimant's back pain and need for treatment stems from an acute injury, an aggravation of a pre-existing condition or conversely, whether it represents the natural progression of his pre-existing degenerative disc disease and congenital stenosis. As found, the totality of the evidence presented, including opinions of Dr's. Erickson, Raschbacher and Hall persuades the ALJ that the "lifting" incident involved in this case resulted in acute disc herniations which in turn aggravated Claimant congenital spinal stenosis giving raise to his symptoms and emergent corrective spinal surgery. Consequently, the ALJ concludes that Claimant suffered both acute injuries and an aggravation of a pre-existing, yet asymptomatic condition when he assisted the resident to his feet on November 29, 2016.

I. A pre-existing condition "does not disqualify a claimant from receiving worker's compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or the need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). Here, the persuasive evidence demonstrates that Claimant sought treatment for low back pain after assisting a resident to his feet. Although Claimant had pre-existing congenital stenosis, confirmed by MRI, the ALJ finds no evidence to establish that Claimant's pre-existing condition was symptomatic or disabling immediately prior to November 29, 2016. Rather, Claimant's pain and disability came on suddenly after assisting a resident from the floor. Consequently, the ALJ concludes that Claimant's ongoing symptoms are consistent with an acute event rather than the insidious worsening of symptoms representative of the natural progression of a pre-existing degenerative condition. Accordingly, Claimant has proven by a preponderance of the evidence that his injuries are compensable.

J. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and

relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

K. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained an acute disc herniation in addition to a compensable aggravation of his preexisting congenital spinal stenosis. The evidence presented convinces the ALJ that these compensable "injuries" are the proximate cause of Claimant's need for medical treatment including the surgery performed on an emergent basis by Dr. Norville. Moreover, the totality of the evidence presented establishes that the care received, including the surgery performed by Dr. Norville was reasonable and necessary in light of the findings on MRI, the neurologic findings on examination and Claimant's functional decline. Said surgery was performed on an emergent basis in an effort to preserve neurologic function and the ALJ specifically finds/concludes that Claimant's medical status constituted a bona fide emergency representing an exception to the normal requirement that a claimant obtain authorization for all treatment related to the industrial injury. Larson's Workers' Compensation Law, § 94.02[6] (1999); *Sims v. Industrial Claim Appeals Office, 797 P.2d 777* (Colo. App. 1990). For these reasons, the ALJ concludes that Respondents are liable for Claimant's medical treatment, including his hospitalization, surgical intervention and post surgical rehabilitation.

Temporary Disability Benefits

L. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-

42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). In this case, the persuasive evidence demonstrates that Claimant was incapacitated by and suffered a wage loss as a direct and proximate consequence of his industrial injury. It is undisputed that Claimant's medical condition would prevent him from returning to regular employment through the date of his hearing and there has been no modified duty offered to Claimant since the date of injury. Consequently, the ALJ concludes that Claimant is "disabled" within the meaning of section 8-42-105, C.R.S. and entitled to TTD benefits. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999). Claimant last worked for the Employer on December 1, 2016 and as noted has not returned to work as of the date of his hearing. Because the period of disability lasted longer than two weeks from the day Claimant left work as a consequence of the injury, Claimant is entitled to recover disability benefits from the day he left work in this case. Section 8-42-103(1)(b), C.R.S. Accordingly, the ALJ concludes that Claimant is entitled to TTD benefits beginning December 2, 2016 and continuing until otherwise properly terminated by operation of law.

Claimant's Average Weekly Wage

M. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).* The ALJ concludes that Claimant's wage records constitute the best evidence concerning his earnings around the time he was injured. The wage records support that Claimant's earnings varied during his employment. As found, Claimant's average weekly wage (AWW) is best calculated using 52 weeks of earnings given the fluctuating nature of his pay. Here, Claimant earned anywhere from $812.70 to $1,391.25 for any given two week period. Because of his irregular earnings, the ALJ concludes that using the broader time period of 52 weeks allows for the most accurate calculation of a figure that most closely approximates Claimant's wage loss and diminished earning capacity at the time of his November 29, 2016 compensable work related injury. Consequently, the ALJ finds that Claimant's AWW is $467.40.

ORDER

It is therefore ordered that:

1. Claimant has established that he sustained a compensable injury to his

lumbar and thoracic spine on November 29, 2016.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the effects of his compensable back injuries, including but not limited to the care received through Valley-Wide Health Systems, Rocky Ford Family Health Center, La Junta Rural Fire/Ambulance, Parkview Medical Center, Parkview Neurological Services, NuMotion, High Plains Community Health Center, Matrix Rehabilitation Consultants, and Craig Hospital.

3. Respondents shall pay temporary disability (TTD) benefits in accordance with section 8-42-103(1)(b), C.R.S. at a rate of sixty-six and two-thirds percent of Claimant's AWW, but not to exceed a maximum of ninety-one percent of the state average weekly wage per week. As Claimant's disability lasted longer than two weeks from the day that he left work as a result of his injury TTD benefits shall commence December 2, 2016 and continue until they can be terminated according to law. Section 8-42-103(1)(b), C.R.S.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-037-326-03

ISSUES

- Whether Claimant established by a preponderance of the evidence that he experienced a compensable injury on June 27, 2016?
- If so, whether Claimant established by a preponderance of the evidence entitlement to temporary total disability benefits and in what amount?
- If so, whether Claimant established by a preponderance of the evidence entitlement to medical benefits authorized and reasonably necessary?
- Whether Respondents have established entitlement for late reporting?
- Whether Respondents have established entitlement to a penalty for late reporting?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for Employer as a lead service technician servicing slot machines at the time of his alleged injury, June 27, 2016.

2. Claimant testified that on that date, he and a co-worker attempted to a unit of slot machines onto dollies to remove them from the casino. Claimant and his co-worker both testified that they needed the help of two to four others to be able to accomplish the task. While the group was lifting the machines, Claimant stepped back and said he hurt his back. Claimant testified that the immediate pain was sharp but began subsiding within fifteen minutes.

3. Claimant testified that he experienced similar symptoms approximately two years earlier with the same mechanism of injury.

4. Claimant's supervisor, Ed Hall, was not at the site at the time of the incident, but arrived about one hour later and Claimant then told Mr. Hall that he had hurt his back that morning moving the unit of slot machines. He did not ask to seek medical attention.

5. The co-worker could not recall whether Claimant reported the accident that day, whether he saw Claimant working later in the day, or whether he saw Claimant working later that week. He testified that the rest of the group continued moving the unit of slot machines. No one called for an ambulance, and the co-worker did not check with

Claimant to see if Claimant needed medical care. Claimant eventually returned to work until he was laid off.

6. Claimant testified that five or six days after the incident, he awoke with pain rated at 8-9/10. His medical records indicate his pain spiked two days after the accident. On July 5, Claimant reported to his supervisor that he could not work that day due to his back injury.

7. The Employee Injury Report, introduced as a part of Employer's file, provides:

> 8/5/16 Reported ongoing back pain, believed to be tied to 2014 back pain. Formally reported back pain on 8/12/16. In this report of injury [Claimant] states: injured while lifting shuffler (35lb) onto table on 6/27/16. Claims to have told supervisor Ed Hall on 6/27 and 7/4. [Claimant] is no longer employed with [Employer], offered severance due to campus downsizing on 7/16/16. . . . [Claimant] took three days PTO around July 4th, no claims this was due to back pain from 6/27 event.

8. Claimant testified that between the date of his alleged injury and July 5, 2016, he did not experience any other injury, accident, or lifting event. However, in his screening questionnaire for Panorama Orthopedics and Spine Center, Claimant noted that his pain started on July 3, 2016.

9. Claimant could not recall how many days, if any, he took off because of his alleged injury. He also could not recall any medical provider assigning him work restrictions. He recalled telling his co-workers that he wanted to work light duty.

10. Claimant could not recall when Employer provided him with a list of providers or when he initially sought treatment. However, he began treating at Panorama Orthopedics, a provider who happened to be on Employer's list. Claimant's initial treatment included physical therapy and being scheduled for a steroid injection. Claimant also sought treatment from the chiropractor he treated with for his 2014 injury. Claimant reported to these providers that he had inconsistent levels of pain in his low back and that the pain shot down his right outer thigh.

11. Claimant testified that he received a few weeks of physical therapy without improvement, and that the steroid injections – the last of which he received on December 13, 2016 – also provided no relief. Claimant understood from an MRI of his lumbar spine that he had a herniated disc at L4/L5 which caused his sometimes shooting and variable pain.

12. Claimant testified that he treated for four to six weeks after his 2014 injury and that he did not receive a rating or permanent restrictions for that injury. He could not recall receiving any treatment after that until his June 2016 incident.

13. Claimant testified that he had been unable to do heavy lifting since the date of the incident. His pain at best was 2-3/10 and at its worst was 6-7/10. Lying down for short periods of time sometimes relieved his pain. The ALJ is not persuaded. The preponderance of the credible evidence supports a finding that Claimant continued working his regular job until being laid off due to a reduction in force. The ALJ concludes the incident did not disable Claimant from performing his regular job, and that did not cause a wage loss.

14. On July 12, 2016, Claimant sought treatment with Dr. Lonnie Loutzenhiser, with whom he treated in 2014. Dr. Loutzenhiser prescribed Medrol and Norco which she continued at least through November, 2016.

15. Claimant's last day worked was in July 2016.

16. On July 27, 2016, Claimant learned he would be laid off during Employer's down-sizing.

17. On August 5, 2016, Claimant reported his injury to Employer.

18. Also on August 5, 2016, Claimant reported to a medical provider that he had moved one hundred and eighty pieces of lumber measuring 2" x 4" x 8' the day before. He had been finishing his basement and crouched and squatted to get the boards into his basement. Claimant worked on the project for a few weeks with the help of father and brother. Claimant admitted he cut most of the lumber for the project and also performed plumbing and electrical work.

19. On February 1, 2017, Claimant became employed by a real estate company as a commissioned realtor. On July 5, 2017 he also started working as a car salesperson.

20. Claimant received unemployment benefits for a period of time at the rate of $976 every two weeks. In order to collect that benefit, Claimant represented that he was physically capable of working.

21. Respondents called Dr. Douthit who testified as an expert in the field of orthopedic surgery.

- Dr. Douthit performed a Respondents' sponsored medical examination of Claimant on July 10, 2017. Dr. Douthit reviewed Claimant's medical records, including the MRI reports from 2014 and 2016. He observed that the free fragment herniated disc present on the 2014 MRI had resolved on the 2016 MRI. He also noted that the 2016 MRI had been read to show no evidence of acute injury and no neural impingement.

- Dr. Doughit testified that Claimant could have awoken as he did one of the first mornings in July barely able to move even without having experienced an acute injury because Claimant has advanced degenerative disc disease in his low spine which will probably plague him for his lifetime.

- Claimant had suffered a serious injury in 2014 and it would be speculative to connect Claimant's current pain to a new work injury.

- Dr. Doughit opined that there was no medical reason for Claimant to receive epidural steroid injections. Such injections are performed to treat radiculopathy – pathology of the nerve root, which Claimant does not have as seen on the 2016 MRI.

- Dr. Doughit opined that Claimant's 2016 MRI was "ordinary" for a forty-two year old male worker. While the apparent mild central canal stenosis finding by the radiologist was not "good," it was ordinary, as was the nucleus pulposis protrusion.

- Dr. Doughit attributed Claimant's thigh pain to his 2014 injury, which he thought should have been rated.

- Dr. Doughit explained that Claimant not receiving treatment between the 2014 injury and the 2016 incident could be attributed to Claimant simply being asymptomatic during that period of time.

22. Ultimately, Dr. Doughit was unable to render an opinion as to causation. He testified that based on Claimant's testimony, he might find it more likely than not that the 2016 lifting incident exacerbated Claimant's 2014 injury. However, Dr. Doughit was unable to say the exacerbation was medically probable because Claimant's testimony at hearing was inconsistent with what Claimant reported to him. Dr. Doughit also acknowledged that the 2016 lifting incident could possibly have aggravated Claimant's 2014 injury, but that he would need more information in order to opine that an aggravation was medically probable.

23. Claimant is a poor historian. He did not recall several significant events including: how many days, if any, he took off because of his alleged injury; whether any medical provider assigned him work restrictions; and when Employer gave him a list of providers.

24. Based on the totality of the evidence, the ALJ finds Claimant has *not* established by a preponderance of the evidence that he suffered a compensable injury, or the aggravation, or acceleration of one.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by

a preponderance of the evidence. *See* Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *See Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *See* §8-43-201(1), C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In order to prove a compensable injury and entitlement to benefits, a claimant must show by a preponderance of the evidence that his injury was caused by activities that arose out of and in the course of his employment. *See* §8-43-201, C.R.S. and §8-41-301(1) (c) C.R.S. "Proof by a preponderance of the evidence requires claimant to establish that the evidence of a "contested fact" is more probable than its non existence." *See* Matson v. CLP, Inc., W.C. No. 4-722-111 (ICAO August 13, 2009).

The claimant must prove by a preponderance of the evidence that the alleged injury was proximately caused by an injury arising out of and in the course of his employment with the employer. *See* §8-41-301(1)(b-c) C.R.S. *See also City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The "arising out of" element requires claimant to show a casual connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. See *Triad Painting Co. v. Blair.*

The question of whether the claimant met his burden of proof to establish a compensable injury is one of fact for determination by the judge. See *Faulkner v. ICAO*, 12 P. 3d 844(Colo. App. 2000).

Merely feeling pain at work in and of itself is not "compensable." *See* Miranda v. Best Western Rio Grande Inn, W.C. No. 4-663-169 (ICAO April 11, 2007). "An incident which merely elicits pain symptoms caused by a preexisting condition does not compel a finding that the claimant was sustained a compensable injury." *See also* F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App 1995).

The Workers' Compensation Act creates a distinction between an "accident and an "injury." An "accident" is the cause and an "injury" is the result. No workers'

compensation benefits allow an employee unless they prove by a preponderance of evidence found credible the "accident" caused a compensable injury. A compensable injury is one that causes disability or the need for medical treatment. See *City of Boulder v. Payne* 162 Colo. 345, 426 P. 2d 194 (1967).

Here, Claimant has failed to meet his burden of proof and did not show it more probably true than not a causal connection between his employment activities and an injury. Claimant failed to present credible evidence that his injury is compensable. The exact cause of the pain being based upon inconsistent information cannot be found to be credible and persuasive.

It is concluded as a matter of law Claimant failed to prove by a preponderance of the evidence that his injury was caused by his employment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is denied and dismissed.

2. The remainder if issues noticed for hearing need not be addressed.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-932-919-05

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

PENNSYLVANIA MANUFACTURERS INDUSTRY,
c/o/ GALLAGHER BASSETT SERVICES,

Third Party Administrator (TPA),

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 16, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 8/16/17, Courtroom 1, beginning at 8:30 AM, and ending at 9:45 AM). Alejandro Cesar Lurati Acourt was the official Spanish/English Interpreter.

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits A through N were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: A hard copy of the Claimant's opening brief was first filed with the Division of Workers' Compensation (DOWC) on August 24, 2017; and, then with the office of Administrative Courts (OAC) on August 25, 2017. The certificate of mailing is dated August 23, 2017. An electronic version of the opening brief was not filed until September 21, 2017, when the OAC requested an electronic version. The Respondents' answer brief evidences a certificate of mailing as August 30, 2017

however, the same was not received by the ALJ until September 26, 2017. No timely reply brief was filed. Consequently, the matter was deemed submitted for decision on September 26, 2017.

ISSUES

The issues to be determined by this decision concern Claimant's request to overcome the latest Division Independent Medical Examination (DIME) opinion of Brian Beatty, D.O., regarding maximum medical improvement (MMI), after a re-examination subsequent to the decision of ALJ Broniak, which originally determined that Dr. Beatty's DIME had been overcome.. Dr. Beatty's reports dated March 25, 2014 and January 27, 2016, which both found Claimant to be at maximum medical improvement (MMI) as of November 6, 2012. If the DIME opinion is overcome, the Claimant seeks medical benefits, and temporary total disability (TTD) benefits from October 23, 2015 and continuing at the rate established by the decision of ALJ Laura Broniak, dated October 9, 2015, $250.44 per week. If the latest DIME opinion is not overcome as to MMI, the Claimant seeks conversion of the admitted 17% scheduled rating of the right upper extremity (RUE) to a 10% whole person rating.

To overcome the DIME, the Claimant bears the burden of proof, by clear and convincing evidence. To be entitled to a conversion to a whole person rating, the Claimant must accept the four corners of DIME Dr. Beatty's DIME letter, whereupon the Claimant's burden is by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant suffered a compensable injury to her right sternoclavicular joint (SC joint) on July 31, 2012, while working for the Employer in housekeeping. At the time of the injury, the Claimant's primary duties involved cleaning hotel rooms. (Respondents' Exhibit F).

2. Subsequent to her July 31, 2012 injury, the Claimant received treatment from various physicians within Concentra Medical Center, including Theodore Villavicencio, M.D., and Robert J. Dixon, M.D. Dr. Villavicencio became one of the Claimant's authorized treating physicians (ATPs). The Claimant was diagnosed with a SC joint strain and her medical treatment primarily included work restrictions, physical therapy and pain medication. At an appointment with Concentra on August 2, 2012, the Claimant denied "any numbness, tingling, or radicular pain down her arm or up her neck." (Claimant's Exhibit 2, p. 14).

3. On September 24, 2012, the Claimant returned to regular duty with the Employer (Claimant's Exhibit 5, p. 104).

4. After a hearing on May 21, 2015, ALJ Broniak issued a decision on October 9, 2015, which determined that, while the evidence did not support a finding that Claimant suffered a second injury to her SC joint in June 2013, her recurring symptoms may have been related to Claimant's July 31, 2012 injury, and that she was not in fact at MMI as of November 6, 2012. ALJ Broniak determined that the Claimant had overcome the DIME of Dr. Beatty. ALJ Broniak then ordered Respondents to pay TTD benefits beginning August 4, 2014, and ongoing (Claimant's Exhibit 1).

5. Pursuant to ALJ Broniak's decision, which determined that the Claimant had not reached MMI, Respondents paid Claimant TTD benefits for the period of August 5, 2014 through October 22, 2015, at a rate of $250.44 for 63 3/7 weeks, for a total payment of $15,885.05 (Respondents' Exhibit F).

6. Ultimately, the Respondents filed a Final Admission of Liability (FAL), dated April 2016, presumably based on DIME Dr. Beatty's re-affirmed follow up DIME opinion after ALJ Broniak's decision, admitting for and average weekly wage (AWW) of $375.66; for TTD benefits of $250.44 per week from August 5, 2014, through October 22, 2015; for an MMI date of November 6, 2012, for 17% RUE and zero whole person permanent partial disability (PPD), payable at the rate of $266.98 per week, and denying post-MMI maintenance medical benefits (*Grover* medicals).

Medical Treatment

7. By October 30, 2012, the Claimant had responded to the conservative treatment measures and reported two pain free days to Samuel Chan, M.D. her then authorized treating physician (ATP). At that visit, Dr. Chan did not note any visible abnormalities, nor did he document any loss of range of motion (Claimant's Exhibit 2, p. 47).

8. At an appointment with Concentra on November 6, 2012, the Claimant reported no pain in the range of motion (ROM) for her right shoulder, nor any radiation of the same (Claimant's Exhibit 2, p. 49). Due to Dr. Dixon's assessment that the Claimant was consistently pain-free and functioning normally, Dr. Dixon placed her at MMI without impairment, restrictions or recommendations for maintenance care. The Claimant acknowledged understanding her diagnosis and treatment (Claimant's Exhibit 2, p. 49).

9. Following Dr. Dixon's MMI determination and the Claimant's return to full duty, records from Concentra Medical Centers indicate that the Claimant returned for treatment on June 18, 2013, alleging a new injury occurring on or about June 17, 2013,

seven months after her last reported pain and/or request for care. She was seen by Dr. Villavicencio, who noted that the Claimant had "no new injuries or activities outside of work" (Claimant's Exhibit 2, p. 50).

10. Dr. Dixon referred the Claimant to Dr. Chan, a physiatrist, for a specialist opinion. In his initial report dated October 16, 2012, Dr. Chan noted pain complaints localized over the right sternoclavicular joint (Claimant's Exhibit 2, p. 42). On examination, Dr. Chan found no tenderness over AC joints, subacromial space, or bicipital groove. He did, however, note tenderness over the right SC joint and diagnosed the Claimant with a right SC joint strain (Claimant's Exhibit 2, p. 43).

11. When the Claimant returned to Dr. Dixon on November 6, 2012, she no longer had any significant pain and she felt an improvement in her functional status. Dr. Dixon concluded that Claimant had reached MMI without impairment (Claimant's Exhibit 2, p. 49).

12. The Claimant returned to Concentra on June 18, 2013 with recurring SC joint pain. Dr. Villavicencio recommended the claim be reopened, prescribed medication for pain and made a referral back to Dr. Chan (Claimant's Exhibit 2, p. 51).

13. On July 2, 2013, the Claimant saw Dr. Chan. Dr. Chan noted that prior to the appointment, the Claimant had complained of severe pain in her right shoulder and at the SC joint, but that the complaint did not radiate from those areas, to include her right arm and/or neck region (Claimant's Exhibit 2, p. 55).

14. The Claimant saw Dr. Chan on July 2, 2013. At that time, her pain complaints again focused on the right SC joint, but she also described pain all the way from the SC joint to the subacromial space. On examination, Dr. Chan noted positive impingement signs which were not found on prior examinations. He diagnosed the Claimant with a right shoulder sprain in addition to the previously diagnosed SC joint strain and he performed an injection into the subacromial space of Claimant's right shoulder (Claimant's Exhibit 2, p. 55). The Claimant reported that the injection was beneficial (Claimant's Exhibit 2, p. 59).

15. By October 15, 2013, the Claimant's right shoulder pain had returned and Dr. Chan noted that she was again complaining of pain over the entire right shoulder girdle and that examination demonstrated tenderness at the AC joint and subacromial space. He performed another injection in to Claimant's right subacromial space (Claimant's Exhibit 2, pp. 70-71).

16. The medical records establish that Dr. Villavicencio and Dr. Chan treated the Claimant's recurrent symptoms as part of her July 31, 2012 claim.

17. The Claimant saw Dr. Villavicencio again on July 16, 2013 for follow up. Dr. Villavicencio noted that the Claimant reported her pain as a "0/10," and that the subacromial injection she received from Dr. Chan at the last appointment was beneficial (Claimant's Exhibit 2, p. 60)

18. The Claimant returned to see Dr. Villavicencio on July 23, 2013, at which time she reported recurring pain in the SC joint. Dr. Villavicencio placed the Claimant on modified duty (Claimant's Exhibit 2, p. 62).

19. In the month following the July 23, 2013 appointment with Dr. Villavicencio, the Claimant received second opinions from Drs. Hugate and Hewitt, as well as Dr. Rajesh Bazaz, M.D., an orthopedic specialist. These physicians were of the opinion that surgery was not likely to help, and recommended that the Claimant consider additional subacromial injections because they had been previously beneficial (Claimant's Exhibit. 2, p. 65). While initially undecided, the Claimant ultimately declined the recommended injection treatment (*Id.* at 67).

20. Because there were no further treatments available for the SC joint other than injections, Dr. Villavicencio placed the Claimant at MMI on September 23, 2013. (*Id.* at 68; see also Claimant Exhibit 4, pp. 88,89).

21. After placing the Claimant at MMI, Dr. Villavicencio recommended finishing physical therapy, six months of Naproxen, and follow up visits with Dr. Chan for six months for maintenance care. Dr. Villavicencio did not recommend permanent restrictions. With regard to permanent impairment, Dr. Villavicencio assigned the Claimant a 6% RUE rating for lost range of motion (Claimant's Exhibit 2, pp. 96, 99)

22. On December 26, 2013, Claimant was seen by John Burris, M.D., who concurred with Dr. Villavicencio's assessment that Claimant was at MMI, and that, apart from recommended exercises, no "further formal treatment or maintenance is appropriate" (Claimant's Exhibit 2, p. 75).

23. Dr. Burris saw the Claimant for the first and only time on December 26, 2013. He determined that the Claimant's current symptoms were not likely to be related to what he described as a relatively minor event 18 months earlier. He concluded that the Claimant was at MMI with a 6% scheduled impairment rating for the RUE (Claimant's Exhibit 2, p. 74). Dr. Burris' cursory opinion regarding the Claimant's ongoing symptoms is not sufficiently supported by a persuasive medical analysis and is not entitled to any significant weight.

Division Independent Medical Examination (DIME) of Brian Beatty, D.O.

24. Respondents filed a FAL consistent with Dr. Villavicencio's opinion, and the Claimant requested a DIME (Respondents' Exhibit F). Ultimately, Dr. Beatty was selected as the DIME physician (Respondents' Exhibit J).

25. Dr. Beatty performed the DIME on March 5, 2014. In his report, Dr. Beatty noted that on November 6, 2012, the Claimant was "pain free and functioning normal" (Claimant's Exhibit 4, p. 91). He concluded that the Claimant's current symptomatology was unrelated to her July 31, 2012 claim because the Claimant's pain did not return for almost one year, and that her constellation of symptoms were inconsistent with SC strain arising from the July 31, 2012 injury. Dr. Beatty noted an 8% RUE rating which he did **not** attribute to the admitted July 31, 2012 work injury (Claimant's Exhibit 4, p. 91).

26. The Claimant resigned her position with the Employer in August 2014, and has not returned to work since that time (Claimant's Exhibit 5, p. 96).

Independent Medical Examination of Hugh Macaulay III, M.D.

27. Following Dr. Beatty's Report, the Claimant retained Dr. Macaulay to conduct an IME, which took place on September 30, 2014 (*see* Claimant's Exhibit 5). Dr. Macauley noted that the Claimant's ROM had worsened since she was seen by Dr. Beatty. He stated that the Claimant's current impairment rating would be 16% of the RUE. Dr. Macaulay disagreed with the opinion of Dr. Beatty, and directly attributed the Claimant's loss of function in the shoulder to lost function in the SC joint. He concluded that the Claimant would not likely benefit from surgery, but recommended an MRI (magnetic resonance imaging) arthrogram of the right shoulder in order to determine the extent and nature of Claimant's complaints (*Id.* at p. 108). In her 2015 decision determining that the Claimant had overcome Dr. Beatty's MMI date of November 6, 2012, ALJ Broniak relied on Dr. Macaulay's opinions over and above DIME dr. Beatty's opinion, finding that the DIME opinion had been overcome by clear and convincing evidence.

28. The Claimant returned to Dr. Villavicencio on October 22, 2015, and Dr. Villavicencio determined that the Claimant remained at MMI. Furthermore, Dr. Villavicencio stated the opinion that he did not believe any further treatment was indicated for the SC sprain, and that the Claimant's complaints about "diffuse neck, shoulder, and RUE pain" was not related to the admitted July 31, 2012 injury, a finding consistent with Dr. Beatty's original DIME report (*See* Claimant's Exhibit 2, p. 78; *see also* Claimant's Exhibit 4, p. 91).

29. The Claimant returned to Dr. Beatty for re-evaluation on January 27, 2016. Upon his review of the Claimant's medical history and a physical examination, Dr.

Beatty's opinion remained unchanged from his previous report, which determined the Claimant to be at MMI as of November 6, 2012, and that her recurring complaints of pain in her SC joint and RUE were unrelated to the admitted July 31, 2012 injury (*See* Claimant's Ex. 6, p. 125). Additionally, Dr. Beatty noted that Claimant had not sought any additional treatment in the interim, and had been released from care by Dr. Villavicencio in October 2015 (Respondents' Exhibit J). The ALJ finds that Respondents cannot backdoor ALJ Broniak's decision by simply returning the Claimant to the DIME physician to re-assert his unchanged opinion of an MMI date of November 6, 2012, thus, permitting Dr. Beatty to overrule ALJ Broniak. ALJ Broniak's decision established the law of the case and brought the concept of issue preclusion into play—up to a point.

Procedural Developments

30. The Claimant filed an Application for Hearing, dated April 8, 2016, and a hearing date was set for August 2, 2017 (Respondents' Exhibit A).

31. The Claimant then filed a request to withdraw that application for hearing due to then-pending settlement negotiations, which was granted by OAC. Legal Assistant Ronda L. McGovern on July 27, 2016. In granting that request, McGovern ordered the Claimant to file another Application within 10 days of the signed order. *Id.*

32. There was a subsequent settlement conference on August 18, 2016, but no agreements were reached. Nonetheless, between the July 27, 2016 Order, and Claimant's March 2, 2017 Application for Hearing, the Claimant took no further action with respect to her claim, to include filing the court-ordered Application for Hearing within 10 days of the Order, nor did she seek any further treatment for her alleged recurring symptoms (Respondent's Exhibit D, p. 2).

33. Due to the Claimant's inaction for such an extended period, Respondents moved to close the matter on February 21, 2017. *Id.* at p. 1. In response, the OAC. issued an Order to Show Cause, requiring the Claimant to provide good cause as to why the claim should not be closed within thirty (30) days of the March 8, 2017 Order. The Claimant responded within that period, objecting to the closure on April 8, 2017, claiming that her March 10th MRI appointment provided sufficient cause to allow her claim to continue (Respondents' Exhibit D).

34. On March 10, 2017, the Claimant obtained an MRI arthrogram of her right shoulder, at her own expense. Upon review of the MRI, Trystain Johnson, M.D., noted there were no tears in the rotator cuff or the surrounding tendons, but suspected there may be a focal tear and/or fraying in the superior labrum (Claimant's Exhibit 7).

35. The parties appeared for a hearing before the undersigned ALJ on June 22, 2017, at 1:30 PM., at which time the Respondents were first provided with a copy of

the Claimant's recent MRI report-- due to an error in the original submission. To allow time for the Respondents to review the new information, the parties agreed to request the hearing be reset for a later date, and the ALJ approved the request, rescheduling the hearing for August 16, 2017 at 8:30 AM.

36. After receiving the MRI results from Claimant, Respondents provided Dr. Villavicencio with the MRI report. Dr. Villavicencio determined that the MRI report did not change his opinion, despite Dr. Johnson's suspicions of a labral tear, such an injury would not be consistent with the mechanics of Claimant's admitted injury and subsequent treatment history, according to Dr. Villavicencio (Respondent's Exhibit H).

Analysis of Evidence

37. Dr. Beatty's determination that the Claimant reached MMI as of November 6, 2012 is supported by clear and convincing evidence. For example, the Claimant reported to Dr. Dixon and Dr. Villavicencio, her treating physicians at that time, that she no longer had any significant pain, and that she felt improvement in her functional status as of that date. Moreover, following that appointment, seven months passed before the Claimant renewed her complaints of pain in her right shoulder. As Dr. Beatty observed, however, and her treating physicians agreed, the issues complained of were "a constellation of symptoms that would suggest other medical problems including possible tendinitis and impingement of her shoulder and radiation to multiple other areas **inconsistent with the sternoclavicular strain"** (Respondents' Exhibit J, p. 3) (emphasis supplied). While the Claimant returned to her providers at Concentra alleging a new injury on or about June 18, 2013, both her providers and ALJ Broniak determined that there was no new injury (Claimant's Exhibit 1, p. 9).

38. Although ALJ Broniak found that the Claimant's June 2013 complaints were not a new injury, she determined, at most, that her complaints were a continuation of the earlier, admitted injury. ALJ Broniak's determination, however, was based upon an IME conducted by Claimant's retained physician, Dr. Macaulay. .For example, in his September 30, 2014 report, Dr. Macaulay stated the opinion that surgery was unlikely to improve the Claimant's condition, and that "the passage of time is the only healing modality available to [Claimant]." (Claimant's Exhibit 5, p. 108). Nonetheless, Dr. Macaulay was of the opinion that an MRI arthrogram may be helpful, and that even if such a study demonstrated evidence of "labral fraying," surgery would not likely provide "material improvement to her function." *Id.* Dr. Macaulay's recommendation at that time was that Claimant should obtain an MRI arthrogram. *Id.* Claimant obtained the recommended MRI arthrogram of her right shoulder, in March 2017, albeit two and a half years after she first received this recommendation from Dr. Macaulay (Claimant's Exhibit 5, p.108). Claimant testified at the hearing that the delay was due to her need to raise the funds to purchase the MRI out-of-pocket. Respondents submitted the new MRI report to Dr. Villavicencio for his review and comment, and he responded that his opinion on her MMI status remained unchanged (Respondents' Exhibit H). Consistent

with Dr. Beatty's DIME, Dr. Villavicencio agreed that the suspected labrum tear, even if actually present, was nevertheless inconsistent with the Claimant's past medical history and examinations as a "pain generator." *Id.* Therefore, Claimant has failed to demonstrate a causal relationship between her present complaints and her admitted injury.

39. ALJ Broniak found that Claimant was not at MMI as of November 6, 2012 in her October 2016 Order, she nonetheless agreed with Dr. Macaulay that an MRI arthrogram of her right shoulder was necessary to determine whether any additional treatment would be required for the July 31, 2012 admitted injury. Rather than seek immediate treatment or an MRI consultation, the Claimant delayed, causing Respondents to file to close the matter. Despite her failure to file a timely re-application for a hearing as directed by the OAC in July 2016, the Claimant obtained the suggested MRI in March 2017, at her own expense, and asserted that the cause for delay was to raise the necessary personal funds to cover the cost. The Claimant's MRI results lend further support to the ongoing and consistent opinions of Dr. Chan and Dr. Villavicencio, and Dr. Beatty, which is the opinion that Claimant's "recurring symptoms" are inconsistent with her July 31, 2012 admitted injury and history of complaints, and that there are no other treatment options available. Because her Concentra physicians, Dr. Beatty and Dr. Macaulay agree, surgery will be of no help, and while additional subacromial injections may provide some benefit, the Claimant has refused that treatment (Claimant's Exhibit 2, p. 65). Consequently, the ALJ finds that the Claimant's MMI date is March 10, 2017, the date of the recommended MRI.

The Hearing

40. At the hearing on August 16, 2017, the Claimant testified that, immediately after her admitted July 31, 2012 injury, she experienced pain in her SC joint, but added that the pain was also felt in her neck. This testimony is inconsistent with her initial denial of such radiating pain to Concentra providers the very next day, as well as over the course of her treatment following the July 31, 2012 injury.

41. Additionally, on cross-examination, the Claimant acknowledged that after obtaining the MRI, she did not provide it to any of her treating or IME physicians for review to determine whether any additional treatment would be required.

42. At hearing, the Claimant presented no expert witnesses to interpret her March 2017 MRI results, nor to render opinions on their effects, if any, on their previous evaluations of her reported injuries and impairment ratings.

Temporary Disability

43. As found in Finding No. 26, the Claimant voluntarily resigned from her job in August 2014, and she has failed to prove that she was unable to work at her pre-injury job or was under restrictions at the time.

Overpayment Claim

44. Respondents have failed to establish a clerical mistake in their calculations leading to the Final Admission of liability for 17% RUE and in ALJ Broniak's decision of October 9, 2015, determining that the Claimant was not at MMI and awarding the Claimant continuing TTD benefits from May 21, 2015. As noted, Respondents cannot backdoor ALJ Broniak's 2015 decision by returning the Claimant to the original DIME examiner in order for him to effectively overrule ALJ Broniak. The Claimant's MMI date, as found, was March 10, 2017. The Respondents theory of "overpayment," is to retroactively recoup TTD payments after DIME Dr. Beatty attempted to overrule ALJ Broniak's MMI determination of 2015, in his follow up DIME by clinging to his original MMI opinion of November 6, 2012.

Issue Preclusion

45. The doctrine of issue preclusion (f/k/a *res judicata* or collateral estoppel) bars the re-litigation of an issue if: (1) the issue sought to be precluded is identical to an issue actually determined in a prior proceeding; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and, (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. *Feeley v. Indus. Claim Appeals Office,* 195 P.3d 1154 (Colo. App. 2008). As found herein above, ALJ Broniak found that Claimant was not at MMI as of November 6, 2012-- in her October 2016 Order. She nonetheless agreed with Dr. Macaulay that an MRI arthrogram of her right shoulder was necessary to determine whether any additional treatment would be required for the July 31, 2012 admitted injury.

Ultimate Findings

46. The ALJ finds that ALJ Broniak found that Dr. Macauley's opinion overcame DIME Dr. Beatty's opinion by clear and convincing evidence, and the doctrine of issue preclusion "kicks in" at this juncture. Based on the totality of the evidence, the ALJ finds the opinion of Dr. Macauley more credible than opinions to the contrary.

47. Between conflicting medical evidence, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Macauley on the issue of MMI, and to reject all opinions to the contrary.

48 The Claimant, as challenger of the DIME, has proven that it is highly likely, unmistakable and free from serious and substantial doubt that the opinion of Dr. Beatty, determining that the Claimant reached MMI on November 6, 2012 is wrong. Therefore, the Claimant has sustained her burden of proof on the issue of MMI, by clear and convincing evidence.

49. Accepting the four corners of Dr. Beatty's DIME Report, there is no indication that the site of the Claimant's functional impairment transcends the right shoulder. Therefore, the Claimant has failed to prove, by a preponderance of the evidence that a conversion of the admitted rating is warranted.

50. Other than the MRI, which the Claimant paid at her own expense, no post-MMI medical maintenance benefits are reasonably necessary to maintain the Claimant at MMI and/or to prevent a deterioration of her condition, Therefore, the Claimant has failed to prove, by a preponderance of the evidence that post-MMI medical maintenance care is indicated.

51. Under the unique circumstances of this case, Respondents may not re-litigate the issue of MMI by "back dooring" ALJ Broniak's decision by virtue of DIME Dr. Beatty effectively overruling ALJ Broniak with his original opinion, which ALJ Broniak rejected.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo.

App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, ALJ Broniak found that Dr. Macauley's opinion overcame DIME Dr. Beatty's opinion by clear and convincing evidence, and the doctrine of issue preclusion "kicks in" at this juncture. Based on the totality of the evidence, the ALJ finds the opinion of Dr. Macauley more credible than opinions to the contrary.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical evidence, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of DIME Dr. Beatty, ATP Dr. Villavicencio and Dr. Chan and to reject the opinions of Dr. Macauley on the issue of MMI. As found, between conflicting medical evidence, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Macauley on the issue of MMI, and to reject all opinions to the contrary.

Division Independent Medical Examination (DIME) of Dr. Beatty

c. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office***,** 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leporine Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Claimant, as challenger of the DIME, has proven that it is highly likely, unmistakable and free from serious and substantial doubt that the opinion of Dr. Macaulay, determining that the Claimant had **not** reached MMI on November 6, 2012 is correct and Dr. Beatty's DIME opinion on MMI is clearly wrong. Therefore, the Claimant sustained her burden of proof on the issue of MMI, by clear and convincing evidence.

Issue Preclusion

d. The doctrine of issue preclusion (f/k/a *res judicata* or collateral estoppel) bars the re-litigation of an issue if: (1) the issue sought to be precluded is identical to an issue actually determined in a prior proceeding; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and, (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. *Feeley v. Indus. Claim Appeals Office,* 195 P.3d 1154 (Colo. App. 2008). As found herein above, ALJ Broniak found that Claimant was not at MMI as of November 6, 2012-- in her October 2016 Order. She nonetheless agreed with Dr. Macaulay that an MRI arthrogram of her right shoulder was necessary to determine whether any additional treatment would be required for the July 31, 2012 admitted injury. The Respondents sought to re-litigate the issue of MMI, with the same parties, based on DIME Dr. Beatty's retrospective re-affirmation of his original MMI date of November 6, 2012. He re-asserted the opinion that nothing had changed since his original MMI date. ALJ Broniak, however, relied on a new opinion by Dr. Macaulay, who was of the opinion that Claimant was **not** at MMI. Under the unique circumstances of this case, Respondents may not re-litigate the issue of MMI by "back dooring" ALJ Broniak's decision by virtue of DIME Dr. Beatty effectively overruling ALJ Broniak with his original opinion, which ALJ Broniak rejected.

Conversion from Scheduled to Whole Person Rating

e. It is well-established that the question of whether a claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8) (c), C.R.S. is one of fact for determination by the ALJ. *Delaney v. Indus. Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000). In resolving this question, the ALJ must determine the site of the claimant's "functional impairment," and the site of the functional impairment is not necessarily the site of the physical injury itself. *Langston v. Rocky Mountain Healthcare Corp.,* 937 P.2d 883 (Colo. App. 1996); *Starch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Further, pain and discomfort which limit a claimant's ability to use a portion of her body may be considered "functional impairment" for purposes of determining whether an injury is on or off the schedule. *Also see, Presque v. Montrose School District RE-1J,* W.C. No. 4-969-602-01 [Indus. Claim Appeals Office (ICAO). April 14, 2017]. For a conversion, the party seeking it must accept the four corners of an ATP's or DIME'S opinion letter. The standard of proof is then "preponderance of the evidence." As found, accepting the four corners of Dr. Beatty's DIME Report, there is no indication that the site of the Claimant's functional impairment transcends the right shoulder. Therefore, the Claimant failed to prove, by a preponderance of the evidence that a conversion of the admitted rating is warranted.

Post Maximum Medical Improvement (MMI) Medical Maintenance Benefits

f. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Common of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant has failed to prove entitlement to post-MMI medical maintenance care.

Overpayment

g. Recovery of overpayments, based on mistake and on a retroactive basis, was prohibited by *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). In 1997, the General Assembly amended the re-opening statute to include overpayments as a ground for re-opening as to overpayments only. § 8-43-303 (1) and (2) (a), C.R.S. Now, employers have a statutory right to review and recalculate payments if an insurance carrier made a mistake in previous payments. *Simpson v. Indus. Claim Appeals Office,* 2009 Colo. App. LEXIS 576 (No. 07CA1581, April 16, 2009) (NSOP). Previously, an admission of liability could only be withdrawn retroactively on the basis of fraud. *Vargo v. Indus. Comm'n,* 626 P.2d 1164 (Colo. App. 1981). To the extent that a case may be re-opened, based on mistake and not fraud, if there were overpayments, the *Vargo* grounds for retroactively modifying a previously admitted award has been altered to include employer mistakes in calculations. As found, the Respondents have failed to prove entitlement to recoup any "alleged" overpayments.

Burden of Proof on Conversion and Post-MMI Medical Maintenance Care

h. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim

Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain her burden on the issue of conversion to a whole person rating and post-MMI medical maintenance care; and, the Respondents failed to satisfy their burden with respect to alleged overpayments.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant, having overcome the Division Independent Medical Examination of Brian Beatty, D.O., on the issue of maximum medical improvement (MMI), the November 6, 2012 MMI date contained in the Final Admission of Liability, dated April 2016, is hereby set aside and the date of maximum medical improvement is hereby re-established as March 10, 2017.

B. The Claimant, having failed to prove that a conversion to a whole person rating is warranted, the admitted 17% right upper extremity rating is hereby adopted and approved.

C. Post maximum medical improvement (*Grover* medicals) medical maintenance benefits, as well as temporary disability benefits beyond those admitted by the Respondents are hereby denied and dismissed.

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-037-326-03

ISSUES

- Whether Claimant established by a preponderance of the evidence that he experienced a compensable injury on June 27, 2016?
- If so, whether Claimant established by a preponderance of the evidence entitlement to temporary total disability benefits and in what amount?
- If so, whether Claimant established by a preponderance of the evidence entitlement to medical benefits authorized and reasonably necessary?
- Whether Respondents have established entitlement for late reporting?
- Whether Respondents have established entitlement to a penalty for late reporting?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for Employer as a lead service technician servicing slot machines at the time of his alleged injury, June 27, 2016.

2. Claimant testified that on that date, he and a co-worker attempted to a unit of slot machines onto dollies to remove them from the casino. Claimant and his co-worker both testified that they needed the help of two to four others to be able to accomplish the task. While the group was lifting the machines, Claimant stepped back and said he hurt his back. Claimant testified that the immediate pain was sharp but began subsiding within fifteen minutes.

3. Claimant testified that he experienced similar symptoms approximately two years earlier with the same mechanism of injury.

4. Claimant's supervisor, Ed Hall, was not at the site at the time of the incident, but arrived about one hour later and Claimant then told Mr. Hall that he had hurt his back that morning moving the unit of slot machines. He did not ask to seek medical attention.

5. The co-worker could not recall whether Claimant reported the accident that day, whether he saw Claimant working later in the day, or whether he saw Claimant working later that week. He testified that the rest of the group continued moving the unit of slot machines. No one called for an ambulance, and the co-worker did not check with

Claimant to see if Claimant needed medical care. Claimant eventually returned to work until he was laid off.

6. Claimant testified that five or six days after the incident, he awoke with pain rated at 8-9/10. His medical records indicate his pain spiked two days after the accident. On July 5, Claimant reported to his supervisor that he could not work that day due to his back injury.

7. The Employee Injury Report, introduced as a part of Employer's file, provides:

> 8/5/16 Reported ongoing back pain, believed to be tied to 2014 back pain. Formally reported back pain on 8/12/16. In this report of injury [Claimant] states: injured while lifting shuffler (35lb) onto table on 6/27/16. Claims to have told supervisor Ed Hall on 6/27 and 7/4. [Claimant] is no longer employed with [Employer], offered severance due to campus downsizing on 7/16/16. . . . [Claimant] took three days PTO around July 4th, no claims this was due to back pain from 6/27 event.

8. Claimant testified that between the date of his alleged injury and July 5, 2016, he did not experience any other injury, accident, or lifting event. However, in his screening questionnaire for Panorama Orthopedics and Spine Center, Claimant noted that his pain started on July 3, 2016.

9. Claimant could not recall how many days, if any, he took off because of his alleged injury. He also could not recall any medical provider assigning him work restrictions. He recalled telling his co-workers that he wanted to work light duty.

10. Claimant could not recall when Employer provided him with a list of providers or when he initially sought treatment. However, he began treating at Panorama Orthopedics, a provider who happened to be on Employer's list. Claimant's initial treatment included physical therapy and being scheduled for a steroid injection. Claimant also sought treatment from the chiropractor he treated with for his 2014 injury. Claimant reported to these providers that he had inconsistent levels of pain in his low back and that the pain shot down his right outer thigh.

11. Claimant testified that he received a few weeks of physical therapy without improvement, and that the steroid injections – the last of which he received on December 13, 2016 – also provided no relief. Claimant understood from an MRI of his lumbar spine that he had a herniated disc at L4/L5 which caused his sometimes shooting and variable pain.

12. Claimant testified that he treated for four to six weeks after his 2014 injury and that he did not receive a rating or permanent restrictions for that injury. He could not recall receiving any treatment after that until his June 2016 incident.

13. Claimant testified that he had been unable to do heavy lifting since the date of the incident. His pain at best was 2-3/10 and at its worst was 6-7/10. Lying down for short periods of time sometimes relieved his pain. The ALJ is not persuaded. The preponderance of the credible evidence supports a finding that Claimant continued working his regular job until being laid off due to a reduction in force. The ALJ concludes the incident did not disable Claimant from performing his regular job, and that did not cause a wage loss.

14. On July 12, 2016, Claimant sought treatment with Dr. Lonnie Loutzenhiser, with whom he treated in 2014. Dr. Loutzenhiser prescribed Medrol and Norco which she continued at least through November, 2016.

15. Claimant's last day worked was in July 2016.

16. On July 27, 2016, Claimant learned he would be laid off during Employer's down-sizing.

17. On August 5, 2016, Claimant reported his injury to Employer.

18. Also on August 5, 2016, Claimant reported to a medical provider that he had moved one hundred and eighty pieces of lumber measuring 2" x 4" x 8' the day before. He had been finishing his basement and crouched and squatted to get the boards into his basement. Claimant worked on the project for a few weeks with the help of father and brother. Claimant admitted he cut most of the lumber for the project and also performed plumbing and electrical work.

19. On February 1, 2017, Claimant became employed by a real estate company as a commissioned realtor. On July 5, 2017 he also started working as a car salesperson.

20. Claimant received unemployment benefits for a period of time at the rate of $976 every two weeks. In order to collect that benefit, Claimant represented that he was physically capable of working.

21. Respondents called Dr. Douthit who testified as an expert in the field of orthopedic surgery.

- Dr. Douthit performed a Respondents' sponsored medical examination of Claimant on July 10, 2017. Dr. Douthit reviewed Claimant's medical records, including the MRI reports from 2014 and 2016. He observed that the free fragment herniated disc present on the 2014 MRI had resolved on the 2016 MRI. He also noted that the 2016 MRI had been read to show no evidence of acute injury and no neural impingement.

- Dr. Doughit testified that Claimant could have awoken as he did one of the first mornings in July barely able to move even without having experienced an acute injury because Claimant has advanced degenerative disc disease in his low spine which will probably plague him for his lifetime.

- Claimant had suffered a serious injury in 2014 and it would be speculative to connect Claimant's current pain to a new work injury.

- Dr. Doughit opined that there was no medical reason for Claimant to receive epidural steroid injections. Such injections are performed to treat radiculopathy – pathology of the nerve root, which Claimant does not have as seen on the 2016 MRI.

- Dr. Doughit opined that Claimant's 2016 MRI was "ordinary" for a forty-two year old male worker. While the apparent mild central canal stenosis finding by the radiologist was not "good," it was ordinary, as was the nucleus pulposis protrusion.

- Dr. Doughit attributed Claimant's thigh pain to his 2014 injury, which he thought should have been rated.

- Dr. Doughit explained that Claimant not receiving treatment between the 2014 injury and the 2016 incident could be attributed to Claimant simply being asymptomatic during that period of time.

22. Ultimately, Dr. Doughit was unable to render an opinion as to causation. He testified that based on Claimant's testimony, he might find it more likely than not that the 2016 lifting incident exacerbated Claimant's 2014 injury. However, Dr. Doughit was unable to say the exacerbation was medically probable because Claimant's testimony at hearing was inconsistent with what Claimant reported to him. Dr. Doughit also acknowledged that the 2016 lifting incident could possibly have aggravated Claimant's 2014 injury, but that he would need more information in order to opine that an aggravation was medically probable.

23. Claimant is a poor historian. He did not recall several significant events including: how many days, if any, he took off because of his alleged injury; whether any medical provider assigned him work restrictions; and when Employer gave him a list of providers.

24. Based on the totality of the evidence, the ALJ finds Claimant has *not* established by a preponderance of the evidence that he suffered a compensable injury, or the aggravation, or acceleration of one.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by

a preponderance of the evidence. *See* Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *See Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *See* §8-43-201(1), C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In order to prove a compensable injury and entitlement to benefits, a claimant must show by a preponderance of the evidence that his injury was caused by activities that arose out of and in the course of his employment. *See* §8-43-201, C.R.S. and §8-41-301(1) (c) C.R.S. "Proof by a preponderance of the evidence requires claimant to establish that the evidence of a "contested fact" is more probable than its non existence." *See* Matson v. CLP, Inc., W.C. No. 4-722-111 (ICAO August 13, 2009).

The claimant must prove by a preponderance of the evidence that the alleged injury was proximately caused by an injury arising out of and in the course of his employment with the employer. *See* §8-41-301(1)(b-c) C.R.S. *See also City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The "arising out of" element requires claimant to show a casual connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. See *Triad Painting Co. v. Blair.*

The question of whether the claimant met his burden of proof to establish a compensable injury is one of fact for determination by the judge. See *Faulkner v. ICAO*, 12 P. 3d 844(Colo. App. 2000).

Merely feeling pain at work in and of itself is not "compensable." *See* Miranda v. Best Western Rio Grande Inn, W.C. No. 4-663-169 (ICAO April 11, 2007). "An incident which merely elicits pain symptoms caused by a preexisting condition does not compel a finding that the claimant was sustained a compensable injury." *See also* F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App 1995).

The Workers' Compensation Act creates a distinction between an "accident and an "injury." An "accident" is the cause and an "injury" is the result. No workers'

compensation benefits allow an employee unless they prove by a preponderance of evidence found credible the "accident" caused a compensable injury. A compensable injury is one that causes disability or the need for medical treatment. See *City of Boulder v. Payne* 162 Colo. 345, 426 P. 2d 194 (1967).

Here, Claimant has failed to meet his burden of proof and did not show it more probably true than not a causal connection between his employment activities and an injury. Claimant failed to present credible evidence that his injury is compensable. The exact cause of the pain being based upon inconsistent information cannot be found to be credible and persuasive.

It is concluded as a matter of law Claimant failed to prove by a preponderance of the evidence that his injury was caused by his employment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is denied and dismissed.

2. The remainder if issues noticed for hearing need not be addressed.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 3, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant sustained a compensable injury on November 25, 2015.

2. Whether Claimant is entitled to a general award of reasonable and necessary medical benefits to treat her November 25, 2015 injury.

3. Whether Respondents are liable for medical treatment costs from Littleton Adventist Hospital and John Prall, M.D.

4. Whether Claimant is entitled to temporary total disability (TTD) benefits.

5. Whether Claimant is responsible for the termination of her employment.

STIPULATIONS

1. Claimant's average weekly wage is $815.81.

2. If TTD benefits are awarded, Respondents are entitled to an offset for unemployment benefits received by Claimant in 2016.

FINDINGS OF FACT

1. Claimant was employed by Employer agency, owned by Jolene Johnson, as a customer service representative and began employment with Employer in approximately June of 2014.

2. Claimant's job duties included customer service, answering phones, selling and giving information about insurance policies, and sorting mail.

3. Claimant alleges that on September 7, 2015 while working for Employer she moved two desks and had pain in her lower back that later subsided. Claimant also alleges that in October, while working for Employer, she lifted a 5 gallon jug of water and also again had pain in her lower back that later subsided.

4. Claimant did not report the September 7, 2015 incident or the October, 2015 incident to Employer.

5. On Wednesday, November 25, 2015 Claimant alleges that she injured her lower back at work when bent under a desk to move a box that was full of paper needing to be recycled.

6. Claimant had been off work Monday and Tuesday, the two days prior to this alleged injury. Claimant was also scheduled to be off work the two days after the alleged injury, Thursday and Friday, for the Thanksgiving holiday.

7. Although other co-workers were in the office on Wednesday, November 25, 2015, none of the co-workers observed Claimant lift the box of recycled papers. Claimant did not inform any of her co-workers that she hurt her back moving the box of recycled papers. Claimant also did not inform her boss or anyone with Employer that she allegedly hurt her back moving the box.

8. Co-worker Gunther testified that on the day in question, Claimant was walking around limping and holding her back and that when she asked Claimant if she was okay, Claimant indicated that she was worried she had hurt her back. Claimant did not tell Ms. Gunther about lifting the box of recycled paper. Ms. Gunther testified that from September to November, Claimant had been helping Claimant's son move as he had recently purchased a home. Claimant had mentioned to Ms. Gunther that she had prior back problems.

9. Over the long holiday weekend, Claimant did not seek medical attention or inform Employer about being injured. On Sunday, November 29, 2015 Claimant sent a text message to Ms. Johnson stating that she needed Monday November 30, 2015 and Tuesday December 1, 2015 off of work to take care of personal family matters. Claimant did not report the alleged injury from Wednesday November 25, 2015 in the text message.

10. On Wednesday, December 2, 2015 Claimant was driving to work when she felt extreme pain and stopped driving. Claimant again reported to Ms. Johnson that she could not make it into work. This time, Claimant reported that she couldn't come in because she was in too much pain. Claimant did not report any injury or that she had back pain, just that she could not come in because of pain. Claimant also sent messages to Ms. Jonson on Thursday December 3, 2015 and Friday December 4, 2015 indicating she couldn't come into work. Again, Claimant failed to report any alleged work related injury when reporting she couldn't come in to work.

11. It was not unusual for Claimant to miss a significant amount of work. Claimant was gone for two weeks in July of 2015 and one week in August of 2015 for personal family matters. Claimant also missed work for non work related health reasons three to four times per month. Claimant would regularly text Ms. Johnson that she would be out and wasn't feeling well.

12. On Friday, December 4, 2015 Claimant was evaluated at the emergency department of Littleton Adventist Hospital. Claimant reported low back pain ongoing for three days. Claimant reported bending over lifting boxes when she began having increased lower back pain that radiated to her left leg. Claimant did not report that this happened at work or that it was a work related injury. Claimant reported that she had

previously ruptured a disc and that her current presentation was similar. Claimant underwent an MRI that showed disc bulging in multiple areas, and indicated poor impingement of the right neural foramen at L5. It was noted that the MRI showed disc herniation, but that Claimant had no radicular symptoms to the right. Upon secondary evaluation, Claimant reported her pain was improved and agreed to attempt home therapy with oral medications. Claimant was advised that if her pain became uncontrollable at home, she should return to the emergency department. *See* Exhibit J.

13. At some point between December 4, 2017 and December 13, 2015, Claimant's husband contacted Ms. Johnson requesting a workers compensation claim number and Ms. Johnson first became aware that Claimant was alleging a work related injury from November 25, 2015.

14. On Monday, December 7, 2015 Claimant returned to returned to the emergency department of Littleton Adventist Hospital. Claimant reported sharp pain in the left lower back that radiated behind her leg and to the outside in front of the left lower leg. Claimant reported she could not walk due to the pain. It was noted that an MRI had shown a small left L3-4 foraminal disc extrusion adjacent to left L3 nerve root, L4-5 moderate left neural foraminal stenosis, and L5-S1 neural foramen moderate stenosis. There was no noted significant nerve root compression or stenosis. The plan was to perform a steroid injection and to have an evaluation for potential surgery with Dr. Prall. *See* Exhibit J

15. At the emergency department, Claimant reported that she had a disc rupture 20 years prior, did not undergo surgery, and that it took 7 years to recover. Claimant, for the first time, reported this as an alleged work injury and stated that 10 days prior she was lifting a heavy box of papers at work and felt pain and tenderness in her left lower back that got worse over the next several days and became severe a week prior. The assessment was small bulging disc at L3-4 on the left. Claimant was kept overnight for observation and for spinal evaluation. *See* Exhibit J

16. An epidural steroid injection was performed on December 8, 2015 and Claimant's pain improved. Claimant was discharged from the hospital on December 10, 2015. Since Claimant responded to the epidural steroid injection, conservative care was noted to be reasonable and recommended along with follow up imaging in 3 months time. Hospital notes indicate that Claimant and her husband would not be happy until she had surgery and that Claimant had an episode of chest pain when told she would not require surgical intervention. Anxiety was suspected. Claimant was discharged on December 10, 2015 with instructions to follow up with neurosurgery. *See* Exhibit J

17. On December 13, 2015 Claimant returned to the emergency department of Littleton Adventist Hospital. Claimant arrived by ambulance and reported that she was awaiting insurance approval for surgery. It was noted that Claimant had been discharged the week prior after an epidural steroid injection but that Claimant was back with a return of radicular symptoms and severe low back pain. Claimant reported that

the pain was so severe she couldn't walk down the stairs at her home. The recent MRI was again reviewed and noted to show lumbar disc herniation but without severe disc herniation or nerve root compression. Claimant and her husband reported that she was not safe at home due to her severe pain. It was noted that Dr. Prall would be back the next day. *See* Exhibit J.

18. On December 14, 2015 Claimant underwent lumbar surgery performed by Dr. Prall. Dr. Prall noted that Claimant had excruciating pain over the last week or two, preceded by a longer period of discomfort that was more manageable. Dr. Prall noted that it was recommended that Claimant consider further conservative therapy but that both Claimant and her husband wanted to proceed with the surgery urgently. Dr. Prall's operative report noted that he performed a partial laminectomy, medial facetectomy, and diskectomy at L4-5 and that a fragment was found to have migrated far enough superiorly that the decompression required progressing up to the L3-4 level on the left side where a partial laminectomy and medial facetectomy and foraminotomy were performed. Dr. Prall noted that allowed for adequate visualization of the large disk extrusion midway between the 2 disk spaces. Dr. Prall noted that when removing bone during the decompression, a small durotomy was created. He repaired it with duragen, duraseal glue, and a fat graft from Claimant's subcutaneous space and performed a dural repair. Dr. Prall visualized that all the nerve roots appeared to be decompressed on the symptomatic left side prior to concluding surgery. *See* Exhibit 12.

19. Due to the dural tear from surgery with Dr. Prall, Claimant had to remain laying flat for 48 hours following surgery. On December 17, 2015 Claimant was discharged. *See* Exhibit 12.

20. On December 23, 2015 Claimant underwent an MRI of her lumbar spine. This MRI was compared to her earlier December 4, 2015 MRI. The impression was: loculated fluid centered in the recently created L4-5 laminectomy bed bulging ventrally into the left side of the spinal canal causing severe compression of the thecal sac; disc space and facet joint degeneration at other levels in the lumbar spine similar to the pre surgical appearance with no discrete disc herniations or other sites of severe thecal sac stenosis and with degenerative foraminal narrowing that still remained moderate bilaterally at L5-S1 and on the left at L4-L5. *See* Exhibit 13.

21. On February 25, 2016 Claimant was evaluated by Dr. Prall's office. It was noted that she was 2 months out from surgery and doing well with some hypersensitivity in the left leg and stiff/sore back. Claimant reported that she was dramatically improved since before surgery and was planning to start physical therapy. *See* Exhibit 13.

22. On December 18, 2015 Claimant spoke with Insurer about the alleged injury. Claimant reported that she had no prior workers compensation injuries and no prior medical conditions. When asked specifically if she had any prior back issues, Claimant responded "no." *See* Exhibit A.

23. Claimant reported to Insurer that she had moved furniture several weeks before while at work and tweaked her back, but that she did back exercises to stretch it out and that she had learned about doing back exercises from teaching aerobics. Claimant reported that on November 25, 2015 when she moved the box of paper it was more than a tweak and that it felt totally different. *See* Exhibit A.

24. Claimant reported that she called her family doctor on Wednesday, December 2, 2015 and that he prescribed her Robaxin and told her to come in if her back was not better in five days. Claimant reported she only made it until Friday, December 4, 2015 before she went to the emergency room because of her pain. *See* Exhibit A.

25. On February 22, 2016 Claimant underwent an independent medical examination performed by Itay Melamed, M.D. Claimant reported that she was doing well until around Labor Day when she moved furniture in the office, and changed a water jug. Claimant then reported that the day before Thanksgiving she tried to get a box of papers from under a desk and that following, her back pain was noticeable. Claimant reported that she eventually went to the emergency room, got an epidural steroid injection that helped her pain, and was discharged. Claimant reported that the pain became worse again and that she was taken by ambulance back to the emergency room where she was admitted and underwent surgery. Claimant reported that she was significantly better after surgery. Dr. Melamed noted that Claimant had a medical history of psychogenic seizures and that she had undergone lumbar spine surgery with Dr. Prall (L3-4 and L4-5 decompression). *See* Exhibits 23, N.

26. Dr. Melamed assessed lumbar stenosis causing back and leg pain and noted lumbar stenosis due to a herniated disc at L4-5 as well as degenerative changes of the lumbar spine. Dr. Melamed opined that Claimant's condition was mostly related to her degenerative changes in her low back but that it was possible that lifting a box of papers exacerbated the changes. However, Dr. Melamed pointed out that there was a time gap of about a week between Claimant's report of lifting the box of papers and the onset of severe pain. Dr. Melamed also noted that a disc herniation can occur for no reason and doesn't require a lifting event but that it was common to simply wake up with pain due to a herniation. Dr. Melamed opined that he could not say with medical certainty that lifting a box of paper caused Claimant's herniation and opined that in all medical probability, the majority of Claimant's problem was due to a pre-existing lumbar spine degenerative condition. Dr. Melamed opined that, at the point of his exam, Claimant had no objective findings to support her subjective complaints. *See* Exhibits 23, N.

27. Despite reporting to Insurer that she had no prior back issues, the records and Claimant's testimony at hearing indicate otherwise.

28. Claimant testified that in 1989 she injured her back while moving a tree. She indicated it took **7 years to recover** and that she did exercise ball therapy to recover.

29. On July 14, 1996 Claimant underwent a CT scan of her lumbar spine. The indications for the CT were low back pain that was exaggerated by walking, sitting, and change of position. Claimant reported that she developed numbness and tingling to her knee level frequently and occasionally to her toes. At L4-5 it was found that there was a slight concentric **disk bulge** but no focal herniation or nerve root encroachment. At L5-S1 there was disk space narrowing and evident degenerative disk disease, vacuum disk changes, mild disk height loss, and minimal concentric **disk bulge** with no focal herniation or nerve root encroachment. There were also minor facet degenerative changes noted at L5-S1. *See* Exhibit H.

30. On July 1, 2013 Claimant slipped and fell at a Walgreens. Claimant went to the emergency department two days later and was evaluated. Claimant reported that since the fall she had a headache, particularly right sided. She also reported pain in the entirety of her back as well as her hips with mild numbness and tingling of her extremities. Claimant also reported neck pain. *See* Exhibit J.

31. At the emergency department and on July 3, 2013 Claimant underwent a CT of the head and cervical spine. The impression of the head CT was: no acute intracranial process. The impression of the cervical spine CT was: degenerative changes involving the cervical spine with no acute displaced cervical spine fracture; degenerative anterolisthesis of C3 on C4; moderate loss of disc height at C4-5 through C6-7; and degenerative facet arthropathy most pronounced on the left at C3-4 and on the right at C2-3. See Exhibit J.

32. Claimant also underwent x-rays of her lumbar spine at the emergency department on July 3, 2013. The impression was: mild degenerative changes and disc space narrowing at L5-S1; some mild facet hypertrophy and minimal disc space narrowing at L4-5; and no evidence of acute fracture or malalignment. See Exhibit J.

33. The discharge diagnoses from the emergency department were: mechanical fall, sub acute; closed head injury with history; post concussive syndrome; and thoracic and **lumbar strain**. *See* Exhibit J.

34. From September of 2013 through February of 2014, Claimant underwent **extensive chiropractic treatment** performed by John Jungers, D.C. due to both the fall at Walgreens and a motor vehicle accident that she was involved in during September of 2013. At each visit, Dr. Jungers noted **continued and variable back pain** with aching and cramping affecting the upper back, interscapular region, and thoracic back. Claimant underwent extensive back treatment and adjustment over these five months without much noted improvement. *See* Exhibit K.

35. In addition to the 7 years of back problems following moving a tree, the CT scan in 1996 showing disc bulges, and the extensive back problems following her Walgreens fall and motor vehicle accident in 2013, Claimant also reported to her

primary care provider in January of 2014 that she had been involved in one motor vehicle accident and two slip and fall accidents in the last two months. *See* Exhibit L.

36. Claimant has had other medical issues that have been ongoing for the past ten years or so and eventually a possible epilepsy diagnosis was made. During her extensive treatment and medication management for these issues, psychological issues and inconsistencies were often raised.

37. On November 3, 2012 Claimant was evaluated by Richard Clemmons, M.D. Dr. Clemmons opined that Claimant was quite odd in her overall affect and behavior and strongly suspected that Claimant had significant overlying psychiatric disease. Dr. Clemmons opined that he would need to capture an epileptic seizure on EEG in order to be convinced that Claimant truly had epilepsy. He suspected that psychiatric disease underlied all of Claimant's presumed neurological complaints. *See* Exhibit I.

38. On January 4, 2013 Claimant was evaluated by Dr. Clemmons. Dr. Clemmons again opined that despite an abnormal EEG, he was not at all convinced that the spells Claimant described were epileptic in nature. Dr. Clemmons noted that Claimant had a history of assault trauma and abuse and that he was more inclined to believe that the events described were behavioral events. Dr. Clemmons had no doubt that Claimant suffered from a co-existing psychiatric condition and noted a strong family history of psychiatric disease. Dr. Clemmons strongly recommended Claimant seek the care of either a psychiatrist of psychologist. Dr. Clemmons noted that Claimant was welcome to return in the future to address her migraines and spells so long as she was also working with someone for psychiatric care. *See* Exhibit I.

39. On March 15, 2013 Claimant was evaluated by Dr. Clemmons who again expressed doubt that Claimant had epileptic seizures. He recommended inpatient video EEG monitoring to know definitively whether or not she had epilepsy. *See* Exhibit I.

40. On July 29, 2013 Claimant was admitted for continuous EEG monitoring for a five day period. The history noted that Claimant had been assaulted 17 years prior with significant trauma to her left face and head, left ear hearing loss, and pain in the left eye and that since the assault Claimant had migraines and spells of blacking out. Dr. Clemons admitted her for monitoring because of his concern that Claimant did not have epilepsy. It was noted that Claimant had been seen by multiple different neurologists in the Denver area. On August 3, 2013 Dr. Clemmons noted that Claimant's clinical events during the admission were clearly non-epileptic in nature. He had concern that past events represented true epileptic seizures and thought she potentially had both epileptic and non-epileptic events. *See* Exhibit J.

41. On September 3, 2013 Claimant was evaluated by Dr. Clemmons. He noted that Claimant had undergone a study that showed spells with no abnormal EEG correlation and opined that the spells were non epileptic events and psychogenic spells. Dr. Clemmons noted that the EEG did reveal occasional potentially epileptogenic

interictal discharges. Dr. Clemmons noted that Claimant was about to be seen by psychology for help with stress management. *See* Exhibit I.

42. On January 16, 2014 Claimant was evaluated by Dr. Clemmons. Claimant reported that her psychogenic non epileptic seizures had resolved with psychotherapy. Claimant reported continued migraines. *See* Exhibit I.

43. On June 25, 2015 Claimant was evaluated by Dr. Clemmons. Claimant reported she had been doing well until the past week with seizures twice in the last week. Claimant reported sleeping for at least 6 hours after each episode and that she had been sleeping poorly recently with 5 hours per night and that she had been under stress due to personal issues. Dr. Clemmons noted that it was unclear if the symptoms were epileptic, migrainous, or psychiatric. *See* Exhibit M.

44. Dr. Jungers testified at hearing that Claimant did not report any prior low back problems or conditions and that he did not x-ray her lumbar spine. He testified that he treated her upper back to mid back and right shoulder following a motor vehicle accident and that he didn't suspect any low back issues during his treatment of Claimant from September of 2013 through February of 2014.

45. Claimant testified at hearing. Claimant did not recall the CT scan of her lumbar spine performed in 1996. Claimant testified that she grabbed the box of recycled paper on November 25, 2015 and took it to her office and had noticeable discomfort, laid on her floor to stretch out her back, and worked the rest of the day. Claimant testified that she learned back stretches at the gym when working out. Claimant testified that her husband called Ms. Johnson at some point while she was hospitalized to get a workers' compensation claim opened and that she did not remember clearly when it was reported due to her pain.

46. Claimant's husband, Mike Masterson, testified at hearing. He recalled going to the emergency room 20 plus years prior for Claimant's low back but believed she had no diagnosis and no follow up care. Mr. Masterson testified that the next time Claimant had any low back issues was in November of 2015. He had no memory of the 1996 CT scan of Claimant's low back and did not provide any testimony about what Claimant reported was a 7 year period of time to recover from a prior back injury. Mr. Masterson testified that he phoned Ms. Johnson to request workers' compensation information after Claimant was admitted to the hospital and that Ms. Johnson provided him a claim number the same day. Mr. Masterson had no contact with Ms. Johnson before December 4, 2015.

47. Ms. Johnson also testified at hearing. She reported that she had no knowledge that Claimant's low back was the problem or that there was an alleged work injury until Claimant was at the hospital. Ms. Johnson had no contact from Claimant after Claimant's hospitalization until January 19, 2016.

48. Claimant's testimony and reports are not found credible or persuasive and her actions are logically inconsistent with sustaining an acute injury at work on November 25, 2015.

49. Mr. Masterson's testimony is not found credible or persuasive. His lack of information about Claimant's prior back issues is concerning and inconsistent with prior medical records and with information provided by Claimant.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet her burden to establish, more likely than not, that she sustained a work related injury on November 25, 2015. Although lifting a box of paper could possibly cause a lower back injury or aggravate a pre-existing degenerative back problem, Claimant is not found credible that an acute incident occurred on November 25, 2015 at work necessitating medical treatment. Claimant's actions are inconsistent with someone who sustained an acute injury on November 25, 2015. At work that day, Claimant did not report to any co-workers that she had injured her back lifting the box of papers. Claimant did not report the injury to Ms. Johnson that day. Further, when Claimant requested days off on Monday and Tuesday the following week, Claimant again did not mention or report the injury. On Wednesday of the following week, when Claimant again called off work due to her pain, Claimant still did not report the alleged injury. Only after Claimant had been hospitalized was Ms. Johnson asked for a workers' compensation claim number and told that Claimant had allegedly injured her back at work over a week before. When Claimant presented to the emergency room on December 4, 2015 she reported back pain for the last three days after having lifted some boxes. She did not report any alleged work injury or that she had injured her back acutely the day before Thanksgiving, approximately 9 days prior, lifting one recycling box at work. Claimant did not allege a work related injury or make any reports that this had occurred acutely at work until her second hospitalization on December 7, 2015 when her report changed.

Further, Claimant reported to Insurer that she had no prior back issues. This is completely inconsistent with prior medical records and Claimant's testimony at hearing.

Claimant had prior back issues and reported a prior ruptured disc to medical providers in this case. Claimant had a CT scan of her lumbar spine in 1996 that showed bulged discs and degeneration. Claimant testified that she had prior low back issues that took her seven years to fully recover from. Additionally, and more recently, Claimant treated with a chiropractor extensively in 2013. Over a period of approximately 5 months, Claimant treated 3 times per week. At each visit she reported back pain and received treatment/adjustments in her upper and mid back. Although Claimant's alleged injury in this case is to her lumbar spine, she failed to disclose to Insurer her extensive 2013 treatment to her mid and upper back when asked if she had any prior back issues.

As found above, Dr. Melamed opined that Claimant had degenerative changes to her lumbar spine that pre-existed her alleged injury. He also pointed out an inconsistency in the one week gap between the alleged injury and onset of severe pain. Claimant has a history of psychological overlay with other conditions as noted by Dr. Clemmons and the extensive medical records in this case. In this case, there are opinions that Claimant's subjective complaints are not supported by objective findings. Claimant and her husband demanded surgery when more conservative care was recommended. Claimant had an anxiety response and chest pain when told she didn't need surgery. Claimant reported inconsistently in responses, reports, and her behavior throughout the claim is unreliable and concerning, at best. Claimant, overall, is not found credible or persuasive and her testimony and reports cannot be relied upon to any degree of certainty.

Claimant has failed to meet her burden to establish that she sustained a work related injury on November 25, 2015. The inconsistent history, lack of reporting, un-witnessed incident with no report to co-workers, gap in time in the incident and severe pain, and the pre-existing history that Claimant denied to Insurer are all logically inconsistent with someone who had sustained an acute injury.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury on November 25, 2015.

2. Claimant therefore is not entitled to any awards of medical benefits or temporary indemnity benefits. Respondents are not liable for medical treatment costs from Littleton Adventist Hospital or Dr. Prall. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 4, 2017,

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Whether respondent has demonstrated by a preponderance of the evidence that on February 6, 2017 claimant was an "independent contractor" pursuant to Section 8-40-202(2), C.R.S.

- If claimant is deemed an employee, whether claimant has demonstrated by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with respondent on February 6, 2017.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that medical benefits he received were reasonable and necessary to cure and relieve him from the effects of the injury.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that that he is entitled to temporary partial disability (TPD) benefits.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that his compensation should be increased by 50% pursuant to Section 8-43-408, C.R.S.**,** for employer's failure to obtain and maintain worker's compensation insurance.

FINDINGS OF FACT

1. Claimant began working for respondent in May 2015. At that time, claimant was hired to work as a carpenter helper. Claimant continued in that position until he was injured on February 6, 2017. At the time of the injury claimant was paid $19.00 per hour and worked between 40 and 45 hours per week.

2. As a carpenter helper claimant was directed to follow instructions from the carpenters on site. Esau Ruiz, Owner of GP Construction, Inc., testified that he when he would assign claimant to a job site he would specifically instruct claimant to follow the directives of the on-site carpenter.

3. Claimant testified that on February 6, 2017 he was assisting one of the carpenters, Rene Valenzuela, with flooring. Claimant's specific task that day was to cut the flooring pieces with a table saw. While claimant was cutting a piece of flooring

another employee, David Valenzuela, moved the piece being cut. This caused claimant's hand to move into the path of the saw blade. Claimant sustained cuts to four of the fingers on his left hand.

4. Immediately following the injury claimant was treated at Valley View Hospital. However, because the appropriate specialist was not available at that hospital, claimant's care was transferred to St. Mary's Hospital.

5. The medical records identify claimant's injury as "large, macerated laceration[s]" on claimant's left ring, middle, and pointer fingers and a small laceration on claimant's left thumb. In addition, claimant suffered "an open fracture" on his left ring finger.

6. On February 6, 2017, Dr. Jeffrey Pitcher performed surgery on claimant's left hand at St. Mary's hospital. The surgery included nerve repair, tendon repair, debridement, and bony fixation. Claimant testified that his ring finger was partially amputated and his tendons were reconstructed on his pointer and middle fingers. Following surgery claimant was referred to physical therapy.

7. Claimant testified that he has work restrictions and cannot lift more than 10 pounds with his left hand. Claimant also testified that following the February 6, 2017 he did not work until approximately two weeks before the September 7, 2017 hearing. Claimant obtained a temporary position at a hotel. During that temporary job claimant worked a total of 37 hours and was paid $11.00 per hour. The ALJ estimates that claimant worked these hours in mid to late August 2017.

8. Claimant has provided evidence of $53,694.57 in unpaid medical bills. In addition, claimant paid out-of-pocket for medical treatment including prescription medications ($72.78); and a payment to St. Mary's Medical Center ($311.00).

9. At hearing, both parties provided information regarding the relationship between claimant and respondent. Based upon the testimony and evidence presented at hearing the ALJ makes the following findings of fact regarding that relationship.

10. Claimant was hired as an employee in May 2015. Between his date of hire and the February 6, 2017 injury, claimant did not work for any other company. Claimant did not bid on jobs assigned to him by respondent. Claimant does not operate a business as a carpenter helper.

11. During his time providing services for respondent claimant received pay raises culminating in the $19.00 per hour he was paid at the time of the injury. Claimant was paid by check in his own name. In early 2017, respondent issued an IRS Form 1099 to claimant for 2016.

12. Claimant would bring a tool belt and some hand tools to the job site. The items claimant would bring included a tape measure, a square, a hammer, a hand saw, and a pen. Respondent provided claimant (and other workers) with ladders, scaffolding, table saws, nail guns, and materials.

13. Claimant was directed by the on-site carpenter on his specific duties. Claimant was provided on the job training regarding specific materials used at a job site.

14. In February 2016, Mr. Ruiz directed claimant to sign a Declaration of Independent Contractor Form, and a Request for Taxpayer Identification Number and Certification form (IRS Form W-9). Respondent also instructed claimant to obtain liability insurance. Respondent instructed all other workers to complete these same steps.

15. Claimant testified that when respondent presented him with the paperwork in February 2016, he was told that if he did not comply with respondent's instructions, he would not be provided any more work and his paycheck would be withheld. Claimant testified that he did not understand the paperwork he signed in February 2016. Claimant's first language is Spanish. Claimant does not read English and the paperwork presented to him by respondent was in English.

16. Claimant complied with respondent's instructions and completed the paperwork and obtained a liability insurance policy. Claimant signed the Declaration of Independent Contractor Form on February 27, 2016. Mr. Ruiz did not sign the form until February 13, 2017, almost one year later. Mr. Ruiz testified that he although he had the form, he did not sign the form until after claimant's February 6, 2017 injury.

17. The liability policy that claimant obtained from Rapid Insurance Solutions is with Security National Insurance Company. The Certificate of Liability Insurance for claimant's policy shows that the "certificate holder" of the policy is GP Construction, Inc., Esau Ruiz. Respondent withheld money from claimant's paycheck to cover the cost of premiums for the liability policy.

18. Mr. Ruiz testified that respondent does not carry workers' compensation insurance and was not insured at the time of claimant's February 6, 2017 injury.

19. The ALJ credits claimant's testimony and the evidence submitted at hearing and finds that respondent has failed to demonstrate that it is more likely than not that claimant was an independent contractor.

20. The ALJ credits the claimant's testimony and finds that he has demonstrated that it is more likely than not that he suffered an injury on February 6, 2017 while providing services to respondent.

21. The ALJ credits the medical records and claimant's testimony and finds that claimant has demonstrated that it is more likely than not that the medical treatment

he has received for the February 6, 2017 injury was reasonable and necessary medical treatment.

22. The ALJ credits claimant's testimony and finds that claimant has demonstrated that it is more likely than not that his average weekly wage ("AWW") at the time of the injury was $855.00, (45 hours per week at $19.00 per hour).

23. The ALJ credits claimant's testimony and finds that claimant has demonstrated that that it is more likely than he has not been unable to work because of the February 6, 2017 injury, which has resulted in lost wages.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., (2016). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. "Employee" includes "every person in the service of any person, association of persons, firm or private corporation. . . under any contract of hire, express or implied." Section 8-40-202(b), C.R.S.

5. Under Section 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an

independent trade, occupation, profession, or business related to the service performed."

6. As found, claimant provided services to respondent and was paid for his services. Therefore, claimant is presumed to be an employee of respondent.

7. Respondent has the burden of proving that claimant was an independent contractor rather than an employee. Section 8-40-202(2)(b)(II), C.R.S., sets forth nine factors to balance in determining if claimant is an employee or an independent contractor. *See Carpet Exchange of Denver, Inc. v. Industrial Claim Appeals Office*, 859 P.2d 278 (Colo. App. 1993). Those nine factors are whether the person for whom services are provided:

- required the individual to work exclusively for the person for whom services are performed; (except that the individual may choose to work exclusively for that person for a finite period of time specified in the document);

- established a quality standard for the individual; (except that such person can provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed);

- paid a salary or hourly rate but rather a fixed or contract rate;

- may terminate the work during the contract period unless the individual violates the terms of the contract or fails to produce results that meet the specifications of the contract;

- provided more than minimal training for the individual;

- provided tools or benefits to the individual; (except that materials and equipment may be supplied);

- dictated the time of performance; (except the completion schedule and range of mutually agreeable work hours may be established);

- paid the individual personally, instead of making checks payable to the trade or business name of the individual; and,

- combined their business operations in any way with the individual's business, or maintained such operations as separate and distinct.

8. A document may satisfy the requirement to prove independence, but a document is not required. Section 8-40-202(2)(b)(III), C.R.S, provides that the existence of any one of those factors is not conclusive evidence that the individual is an employee. Consequently, the statute does not require satisfaction of all nine criteria in

Section 8-40-202(2)(b)(II) in order to prove by a preponderance of the evidence that the individual is not an employee. See *Nelson v. Industrial Claim Appeals Office*, 981 P.2d 210 (Colo. App. 1999).

9. In *Industrial Claim Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014) the Supreme Court revised the standard previously used to analyze whether or not an employee is customarily engaged in an independent trade or business. The previous standard had sought to simply ask if the employee had customers other than the employer. If not, it was reasoned the employee was not "engaged" in an independent business and would necessarily be a covered employee. However, in *Softrock* the Court stated "we also reject the ICAO's argument that whether the individual actually provided services for someone other than the employer is dispositive proof of an employer-employee relationship." 325 P.3d at 565. Instead, the fact finder was directed to conduct "an inquiry into the nature of the working relationship." Such an inquiry would consider not only the nine factors listed in Section 8-202(2)(b)(II), but also any other relevant factors. *Pierce v. Pella Windows & Doors*, W.C. No. 4-950-181, May 4, 2015.

10. The *Softrock* Court pointed to *Long View Systems Corp. v. Industrial Claim Appeals Office,* 197 P.3d 295 (Colo. App. 2008) in which the Panel was asked to consider whether the employee "maintained an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance." 325 P.3d at 565. This analysis of "the nature of the working relationship" also avoided a second problem presented by the single-factor test disapproved by the *Softrock* decision. That problem involved a situation where, based on the decisions of the employee whether or not to pursue other customers, the employer could be subjected to "an unpredictable hindsight review" of the matter which could impose benefit liability on the employer. See *Pierce v. Pella Windows & Doors*, W.C. No. 4-950-181, May 4, 2015.

11. Section 8-40-202(b)(IV), C.R.S., provides that a written document may create a rebuttable presumption of an independent contractor relationship if it meets the nine criteria listed in Section 8-40-202(b)(II), C.R.S. and includes language in bold faced font or underlined typed that the worker is not entitled to workers' compensation benefits and is obligated to pay all necessary taxes. Additionally, the document must be signed by both parties.

12. The ALJ notes that the Declaration of Independent Contractor Form in this case includes the nine factors listed in Section 8-40-202(2)(b)(II), C.R.S., and the bold type font required by Section 8-40-202(b)(IV), C.R.S. However, the ALJ finds that the document is ineffective in overcoming the statutory presumption of employment. Claimant did not understand the impact of the document he signed and the ALJ finds no persuasive evidence on the record to indicate that claimant intended to become an independent contractor. In addition, respondent did not sign the document until seven

days after claimant's injury. The ALJ finds that respondent cannot attempt to retroactively create a rebuttable presumption by simply signing a form after an injury. Therefore, the ALJ concludes that this document has not met all requirements of Section 8-40-202(b)(IV), C.R.S. and the statutory presumption of an employment relationship has not been overcome.

13. The ALJ has considered the nine factors listed in Section 8-40-202(2)(b)(II), C.R.S. and the totality of the circumstances of the relationship of the parties and concludes that claimant was an employee of respondent. Respondent provided claimant with tools, training, and supervision. Claimant was paid hourly and in his own name. With regard to direction and control, it is clear from the record that claimant reported directly to the on-site carpenter. Although claimant obtained liability insurance, he did so only at the direction of respondent. With regard to the liability policy, the ALJ notes that it was respondent that took unilateral steps to ensure that the premiums were paid by withholding funds from claimant's pay.

14. The ALJ concludes that claimant was not independently engaged in a trade, occupation, profession, or business as a carpenter helper. In addition, claimant was not free form the direction and control of respondent in the performance of his work as a carpenter helper. As found, respondent has failed to demonstrate by a preponderance of the evidence that claimant was an independent contractor.

15. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

16. As found, claimant has demonstrated by a preponderance of the evidence that he suffered an injury on February 6, 2017 that arose out of and in the course and scope of claimant's employment with employer.

17. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

18. As found, claimant has demonstrated by a preponderance of the evidence that the treatment he received, including but not limited to treatment from Valley View Hospital, St. Mary's Hospital, and Dr. Jeffrey Pitcher, was reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 6, 2017 work injury.

19. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

20. As found, claimant has demonstrated by a preponderance of the evidence that his AWW at the time of the February 6, 2017 work injury was $855.00.

21. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

22. As found, claimant has proven by a preponderance of the evidence that he has been unable to work because of the February 6, 2017 injury, resulting in a loss of wages. The ALJ concludes that claimant is entitled to TTD benefits beginning February 6, 2017 and ongoing until terminated by law.

23. Section 8-43-408(1) C.R.S., provides that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits provided in said articles shall be increased fifty percent.

24. As found, claimant has proven by a preponderance of the evidence that employer was not insured for workers' compensation at the time of his injury. As found, claimant's compensation and benefits shall be increased by fifty percent pursuant to Section 8-43-408(1), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant was an employee of respondent on February 6, 2017.

2. Claimant suffered a compensable injury on February 6, 2017 that arose out of and in the course and scope of his employment with respondent.

3. Respondent shall pay for claimant's reasonable and necessary medical treatment, including but not limited to treatment from Valley View Hospital, St. Mary's Hospital, and Dr. Jeffrey Pitcher.

4. Respondent shall reimburse claimant $383.78 for medical expenses claimant paid out-of-pocket.

5. Claimant's average weekly wage (AWW) is $855.00

6. Claimant is entitled to a 50% increase in compensation for respondent's failure to obtain and maintain workers' compensation insurance.

7. Respondent is liable for the payment of temporary total disability (TTD) benefits beginning February 6, 2017 and ongoing, until terminated by law.

8. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. All matters not determined herein are reserved for future determination.

10. In lieu of payment of the above compensation and benefits to the claimant, the Respondent-Employer shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $82,000.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee;

OR

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $82,000.00 with the Division of Workers' Compensation:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

11. It is further ordered that the Respondent-Employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

12. It is further ordered that the filing of any appeal, including a petition to review, shall not relieve the employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: October 5, 2017

Grand Junction, CO 81501

ISSUES

I. Have Respondents overcome, by clear and convincing evidence, the Division Independent Medical Examination ("DIME") of Dr. Thomas Higginbotham, on the issue of whole person impairment?

II. Have Respondents overcome, by clear and convincing evidence, the DIME of Dr. Thomas Higginbotham on the issue of Maximum Medical Improvement ("MMI")?

FINDINGS OF FACT

Based on the testimony and evidence presented at hearing, the undersigned ALJ enters the following Findings of Fact:

1. The Claimant sustained an admitted work-related injury on June 18, 2015. Respondents admitted to an average weekly wage of $756.22 as reflected in the Final Admission of Liability dated April 26, 2016. (Ex. 1, p.1). The Claimant's injury was listed as the thoracic and lumbar spine.

2. The Claimant was employed as a paramedic. Claimant's injury occurred while attempting to transport a patient weighing in excess of 300 pounds. The Claimant and a co-worker were transporting the patient with a hydraulic cot when the hydraulics malfunctioned. Claimant caught the gurney before the gurney struck the ground and again attempted to lift the patient and gurney but the hydraulics again failed. The Claimant then manually locked the hydraulics of the cot and manually lifted the patient up onto the cot.

3. Claimant initially did not seek treatment. The incident occurred on a Thursday. Claimant took the following Friday off and the weekend to rest. Claimant was referred by Employer/Respondent to Concentra Medical Centers for treatment. The first evaluation occurred on June 22, 2015, at which time the Claimant presented with low back injury and spasms throughout "whole back." (Ex. 5, p.42). The evaluating physician was Dr. Walter Larimore. The initial assessment included lumbar and thoracic strain. Dr. Larimore prescribed Naproxen and Cyclobenzaprine along with physical therapy. Dr. Larimore assigned work restrictions at this initial evaluation. (Ex. 5, pp. 43-45). On June 22, 2015, the Claimant began physical therapy. The diagnosis by the physical therapist included lumbar and thoracic strain. The physical examination demonstrated tenderness in the lumbar spine with bilateral *muscle spasms,* tenderness in the thoracic spine at the level of T10-12 along with bilateral *muscle spasms.* (Ex. 8, p.103). Claimant's lumbar and thoracic range of motion was noted to be normal at this visit.

4. On June 30, 2015 the Claimant presented for follow-up and evaluation at Concentra Medical Center. The evaluating physician on this occasion was Dr. Joseph Soldo. Claimant was experiencing some relief due to physical therapy and dry needle treatment, but continued with frequent *spasms* in the thoracic area along with ongoing muscle pain, back pain and joint *stiffness.* (Ex. 5, p. 46). Dr. Soldo noted bilateral muscle *spasms* to palpation with the thoracic spine and diagnosed strain of thoracic region. (Ex. 5, p. 47)(emphasis added). Once again, however, Claimant's range of motion was noted to be within normal limits.

5. On July 14, 2015 the Claimant presented for follow-up evaluation at Concentra Medical Center. The evaluating physician on this occasion was Dr. Daniel Peterson. Claimant continued with lower to mid-back spasms, with an estimated 10% recovery as of this date. (Ex. 5, p. 49). Dr. Peterson diagnosed sacroiliac strain and strain of thoracic region and initiated a prescription of Diazepam for muscle spasms. Dr. Peterson noted lumbosacral sprain tenderness and SI joint pain with extension. Dr. Peterson's report noted ongoing *spasms,* back pain, joint *stiffness* and night pain. (Ex. 5, p. 50)(emphasis added). Range of Motion was again noted to be within normal limits.

6. In a clinical summary dated July 14, 2015, Dr. Peterson identified current work-related health issues as lumbar strain, sacroiliac strain and strain of thoracic region. This physician prescribed additional physical therapy and indicated Claimant may require an SI joint injection. (Ex. 5, pp. 53-55).

7. On July 28, 2015 the Claimant returned to Concentra for a follow-up evaluation, again under the direction of Dr. Peterson. The Claimant continued with spasms in the upper back and lower back. The medical report indicates that the Claimant continued working in a modified capacity performing office work. Throughout all of these evaluations, the Claimant remained under work restrictions imposed by the Concentra physicians. (Ex. 5, p. 57). Continuing assessment provided by Dr. Peterson included lumbar, sacroiliac and thoracic region strain. On this date, Dr. Peterson referred the Claimant to Dr. Blau for evaluation of persistent slowly improving thoracic, lumbar and SI joint pain. Pending the referral, the Claimant's physical therapy was placed on hold. (Ex. 5, pp. 58 and 63).

8. On September 3, 2015 the Claimant was evaluated by Dr. Jocelyn Cavender at Concentra. The Claimant presented with back and left leg pain, left leg tingling and ongoing spasms. Dr. Cavender's assessment included strain of the lumbar strain, low back strain, thoracic strain, and SI joint strain. The Claimant's ongoing prescription medications included Naproxen, Cyclobenzaprine and Diazepam. (Ex. 5, p. 72). On October 1, 2015, the Claimant was evaluated by Dr. Blau, whose specialty is physiatry. (Cl. Ex. 5, p. 73). Dr. Blau diagnosed piriformis syndrome, left sacroiliitis, and left lumbar spondylosis. Dr. Blau recommended a piriformis injection which was accomplished on October 15, 2015. (Ex. 6, p. 99). On October 26, 2015, the Claimant reported improvement in her pain symptoms subsequent to the piriformis injection. The diagnosis provided by Dr. Blau included left piriformis syndrome and low back pain. (Ex. 5, pp. 75-76).

9. Claimant underwent an MRI of the lumbar spine on September 21, 2015. The MRI revealed a completely normal MRI of the lumbar spine with no evidence of disc herniation or nerve root impingement. (Ex. P p.128). Dr. Cebrian testified that the MRI results ruled out any disk pathology or nerve root impingement. The MRI also revealed that the paraspinal muscles, which are the muscles at the sides of the lumbar, were normal and showed no evidence of atrophy, muscle strain, or tear.

10. On December 11, 2015 the Claimant was evaluated by Dr. John Ronning at Concentra Medical Center. The Claimant continued with decreased pain complaints subsequent to the piriformis injection. Dr. Ronning's assessment included lumbar and sacroiliac strain. (Ex. 5, pp. 77-78). The Claimant presented for a follow-up appointment with Dr. Blau on December 14, 2015. It was noted that the Claimant's pain symptoms were returning and Dr. Blau suggested that if pain symptoms worsened, a repeat piriformis injection would be considered. (Ex. 5, pp. 80-81). Dr. Blau's medical report of January 11, 2016 notes that the Claimant was experiencing a relapse in her pain symptoms. The pain was radiating into the left lower extremity with *spasming* in the lower back region. Dr. Blau again assessed left piriformis syndrome and low back pain, and recommended a repeat piriformis injection which was accomplished on March 3, 2016. (Ex. 5, pp. 82-83 and Ex. 6, p. 100). Range of motion on this date was again noted to be normal.

11. On February 11, 2016 the Claimant was evaluated by Dr. Larimore at Concentra. Dr. Larimore's medical report notes constant pain in the lower back and left upper glute. Dr. Larimore's report notes that the Claimant had experienced improvement subsequent to Dr. Blau's piriformis injection in October 2015 but beneficial effects of the injection had worn off by January 2016. (Ex. 5, p. 84). On March 14, 2016, the Claimant was again evaluated by Dr. Blau. Dr. Blau's report notes that the recent piriformis injection performed on March 3, 2016 did not provide any improvement and Dr. Blau continued to diagnose left piriformis syndrome, low back pain and lesion of the sciatic nerve, left lower limb. (Ex. 5, p. 91). Dr. Blau prescribed massage therapy and added a prescription of Tramadol. (Ex. 5, pp. 79-80). On April 11, 2016, Dr. Blau again recommended continued treatment. (Ex 5, pp. 92-93).

12. After referral by Dr. Blau, but before being placed at MMI by Dr.Kurz, Claimant had been seen by Licensed Massage Therapist Christopher Wilson with Medical Massage of the Rockies, LLC. Six visits were approved, but Exhibit 9 has notes only for the first three. On April 2, 2016 (Claimant's first visit, and more than 9 months after the injury), Mr. Wilson notes under *"Objective Findings/Palpatory"*

> ….R Glute Medius, Piriformis is *tight* and *knots* were found in entire length of muscle. QL bilaterally are *tight* and sensitive to the touch. *Hip* on L side *was lifted* so we will need to work on the Psoas next session. Client's ishium sounded like it was *clicking* in ROM…(Ex.9, p. 138)(emphasis added).

"Objective Findings/Palpatory" notes from April 8, 2016 state:

….We worked on her R glute and paraformis. Trps (the ALJ infers 'trigger points' from the context of the reports) were found in erectors on L side and middle traps.(Ex. 9, p.137).

"*Objective Findings/Palpatory"* notes from April 15, 2016 state:

> Pain and *trigger points* were found in L glutes and piriformis. Hip joint in movement has been making a *popping noise,* may need an adjustment. Pain *and Trp* were found in QL, and erector was *tight* from compensation….(Ex 9, p. 136) (emphasis added).

13. Claimant returned to Concentra on April 20, 2016. It was noted that Claimant had undergone two injections, extensive physical therapy, dry needling, and massage therapy without any relief. (Ex. M p. 82). Claimant denied any new complaints. Claimant also denied loss of range of motion, strength, or sensation. The examination revealed no tenderness and full range of motion in both the thoracic and lumbar spines. (Ex. M p.84). The Claimant was evaluated by Dr. Kurz at Concentra. No prior treatment history by Dr. Kurz appears in the record. Claimant testified credibly that she had never seen him before this date. Dr. Kurz summarily placed the Claimant at maximum medical improvement, prescribed no further treatment, provided no work restrictions and further indicated the Claimant did not sustain any impairment. A Final Admission of Liability was then filed on April 26, 2016, based upon this report by Dr. Kurz.(Ex. 1).

14. On May 18, 2016 the Claimant was evaluated by Dr. Roger Sung, orthopedic surgeon. The Claimant sought evaluation outside the Workers Compensation system with Dr. Sung due to ongoing symptoms including pain and spasms resulting from her work injury. Dr. Sung's medical note indicates muscle pain, joint pain, back pain, spasms, balance problems and numbness. Dr. Sung's assessment included low back pain, sacroiliitis, and mild L5-S1 spondylosis. (Ex. 3, pp. 26-27). Dr. Sung referred the Claimant to Dr. Jenks for a left SI joint injection. Dr. Sung further discussed the possibility of a minimally invasive SI joint fusion. (Ex. 3, p. 27). Claimant elected not to proceed with this surgery.

15. The Claimant was evaluated by Dr. Jenks on June 30, 2016. Dr. Jenks provided a left sacroiliac joint injection. (Cl. Ex. 4, Page 34). The Claimant experienced some improvement in her pain symptoms as a result of the injection by Dr. Jenks. Dr. Jenks performed a second SI joint injection on July 26, 2016. (Ex. 4, pp. 37-38).

16. The Claimant had an additional SI joint injection under the direction of Dr. Jenks on September 21, 2016. It was noted that her symptoms had worsened since the last injection. (Ex. 4, pp. 39-41).

17. Respondents filed a Final Admission of Liability on April 26, 2016 admitting to zero impairment and a maximum medical improvement date of April 20, 2016, pursuant to Dr. Kurz's medical report (Ex. M, pp. 82-85 and Ex. 1, p. 1). It is

unclear how often Claimant was actually seen or treated by Dr. Kurz beyond this single visit, but his name does not appear in any other Concentra reports. Claimant, through counsel, objected to the Final Admission of Liability and requested a Division of Workers' Compensation Independent Medical Evaluation ("DIME"). Dr. Higginbotham was selected as the evaluator.

18. Dr. Higginbotham evaluated the Claimant on March 7, 2017. As a result of his evaluation, Dr. Higginbotham assigned a 2% whole person impairment for the thoracic spine under Table 53, and a 5% whole person impairment for the lumbar spine under Table 53. Combined with Range of Motion deficits, this yielded a whole person impairment of 13%. (Ex. 2).

19. Dr. Higginbotham noted that at the time of his evaluation, the Claimant was not at maximum medical improvement, indicating that an appropriate diagnosis had not been made and that further treatment may be indicated. However, the Claimant indicated that she did not want to continue with the Workers' Compensation system and therefore Dr. Higginbotham placed the Claimant at maximum medical improvement effective March 7, 2016. (Ex. 2, pp. 17-18).

21. In his DIME report, Dr. Higginbotham identifies and comments on the medical records provided to him (with the exception of LMT Christopher Wilson) with regard to treatment for the subject work injuries. Dr. Higginbotham provides a detailed explanation for his opinion that clinical findings are consistent with injury to the left iliopsoas hip flexor, left hip rotator muscles, left sacroiliac ligaments and lower left costovertebral musculoligaments. (Cl. Ex. 2, Page 19).

21 Dr. Higginbotham performed a number of pain provocative tests on Claimant, many of which are consistent with dysfunction in or around the left SI joint, to include:

> ..Hip ROM is full and symmetrical bilaterally without pain except with full and resistive abduction of the left hip. There are positive left Patrick/Fabre's signs; prone instability test to the left; thigh thrust test on the left; sacral thrust test with evidence of sacral tilt with the left posterior to the right; Lasegue's signs are negative on the right and positive on the left at 65° with pain experienced over the lower SI and buttocks area; positive slump test on the lest, weakly positive Gaenslen's test on the left and negative on the right.; minimally positive compression test on the left and none on the right. (Ex 2, p.17)

Dr. Higginbotham goes on to explain Claimant's rather unusual dilemma in producing objective evidence of rigidity or spasm to warrant a Table 53 rating:

> The #1 muscle involved with any lifting, particularly heavy lifts, is the iliopsoas muscle. It is a muscle that is *not readily palpated* because of its anatomic location. When injured, it is the muscle that refers pain to the thoracolumbar, groin, and medial thigh regions. A review of its origin as

well as its insertion, as well as its function, hip flexion and back stabilization should be readily appreciated.

….Such muscle strains are real; it is well documented anatomically and physiologically in muscular medicine and, yes, it can be *permanent* and *symptomatic.*(Ex. 2 p. 19)(emphasis added).

22. Utilizing Table 53, Page 80, IIB**,** Dr. Higginbotham assigned the aforementioned impairment ratings, stating that, "I respectfully disagree with the provider who did not believe in permanent strain or myofascial pain complaints could result in impairment." (Ex. 2, p. 19). Dr. Higginbotham further performed spinal range of motion measurements, assigning 3% Thoracic and 3% Lumbar.

23. At the request of Respondents, the Claimant underwent an independent medical evaluation with Dr. Carlos Cebrian. Dr. Cebrian is board-certified in family practice, but not in occupational medicine. He is level II accredited in Occupational Medicine. He was admitted as an expert in Occupational Medicine.

24. The overall conclusion of Dr. Cebrian is that the Claimant does not have a ratable condition because she presents with no objective pathology or objective evidence:

> There was no expectation for the injuries that Ms. Wright sustained in her June 18, 2015 incident to become permanent. The fact that she has limited discomfort does not mean that discomfort lends itself to the impairment schemes in the AMA Guides. Also, that someone has discomfort does not require a medical impairment rating. Application of medical impairment requires that a disorder being rated is identified, accurately treated, is reproducible, measurable and permanent. There also has to be a specific diagnosis and objective pathology identified that correlates with the diagnosis. There is no such that as a permanent strain. Myofascial pain complaints do not result in an impairment. Ms. Wright does not have a spinal mediated disorder. Therefore, she does not have a Table 53 diagnosis. Incidentally, Ms. Wright has full range of motion of her lumbar spine. (Ex. K, p.45).

25. Dr. Cebrian concludes that the Claimant's pain complaints are out of proportion to objective findings. Dr. Cebrian acknowledged that he is the only medical provider to reach this conclusion. The Claimant has been evaluated by multiple physicians at Concentra and by other specialists and medical providers.

26. Dr. Cebrian indicates that the Claimant's SI joint complaints are not related to the subject work-related injury. Again, Dr. Cebrian is the only medical provider to reach this conclusion out of all those who evaluated or treated Claimant.

27. The ALJ finds the testimony of the Claimant to be persuasive. Despite being placed at MMI by her Concentra physician, the Claimant sought treatment with orthopedic surgeon, Dr. Roger Sung, for ongoing pain and symptoms related to the work injury. The Claimant confirmed that there were no intervening events or other activities that had occurred and that her ongoing symptoms were all part of the original injury. The Claimant stated that she continued with daily thoracic and lumbar pain with constant pain with the piriformis, at times severe, with constant tingling in the lower extremity. The Claimant has a 19-year history working in a medical background. The Claimant noted that the piriformis and SI joint are symptomatic due to her work injury. The ALJ finds that Claimant provided accurate information to her treatment providers and IME's in a sincere effort to get better. Her frustration with the Workers Compensation system is not without merit.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ issues the following Conclusions of Law:

Generally

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); People v. M.A., 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App.

2008). In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME-Impairment

4. The medical impairment determination of the DIME is binding unless overcome by clear and convincing evidence. Section 8-42-107(8), C.R.S. *See Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Cudo v. Blue Mountain Energy Inc.*, W.C. No. 4-375-278 (ICAO, October 29, 1999). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it highly probable and free from serious or substantial doubt. As otherwise stated, clear and convincing evidence is defined as evidence which demonstrates that it is highly probable that the rating of the IME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Clear and convincing evidence is evidence which is stronger than a preponderance, is unmistakable and is free from serious or substantial doubt. *In re Welker*, W.C. No. 4-309-642 (Industrial Claim Appeals Office, 1998). *See also DiLeo v. Koltnow*, 613 P.2d 318 (1980). The enhanced burden of proof in overcoming a DIME reflects the underlying assumption that a physician selected independently by the Division of Workers' Compensation will provide a more reliable medical opinion. *Qual-Med, Inc. v. Industrial Claim Appeals Office*. Respondents have failed to prove by clear and convincing evidence that the 13% medical impairment determination by Dr. Higginbotham is incorrect. The DIME physician's opinion is the only opinion the ALJ is required to afford any presumptive weight. *Harrison v. Wal-Mart Stores*, W.C. No. 4-522-344 (ICAO, April 18, 2003). *See also Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

5. Section 8-42-107(8)(b)(III) requires that physicians must use the *American Medical Association Guides to the Evaluation of Permanent Impairment*, Third Edition, Revised, for purposes of determining all physical impairment ratings. Further, physicians may not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings (*See also* 8-42-107(8)(c)). A question of whether the DIME physician properly applied Table 53, IIB to the Claimant's condition is one of fact for the ALJ.

6. The determination by Dr. Higginbotham to provide ratings for specific disorders of the thoracic spine and the lumbar spine is supported by the medical

records and Table 53(II)(b). That table does not prohibit a rating if a lumbar MRI shows no degenerative changes. Table 53(II)(b) explicitly provides for the possibility of a 2% thoracic and 5% lumbar ratings even if the MRI structural test shows no degenerative changes. The key distinction is that the Claimant is entitled to no rating for specific disorders of the spine if she is *asymptomatic* and has no surgery. If the Claimant presents with six months of medically documented pain *and rigidity* with or without muscle spasm, associated with none to minimal degenerative changes on structural tests, then she is entitled to this Table 53 rating for specific disorders of the spine. The medical records in this matter clearly document more than six months of pain and rigidity, with or without spasm, starting with the earliest Concentra records after Claimant's injury. Even then applying Dr. Cebrian's strictest interpretation, Claimant exhibited objective findings in April of 2016 (almost 10 months post injury) to her massage therapist, including trigger points, knots, tightness, and popping sounds coming from hip movement. These are indicative of more than self reported pain; they supply the anatomic correlation with the chronic pain she describes.

7. It is duly noted that not all physicians have consistently documented limited ranges of motion, or consistent evidence of rigidity throughout her treatment process. Some of this is perhaps explained by Claimant's hypermobility from practicing yoga. Claimant's pain has waxed and waned during her treatment, sometimes confounding her providers. However, the DIME physician-tasked statutorily for this purpose-noted sufficient objective indicators, including an extensive battery of provocative tests. These induced a pain response consistent with soft tissue pathology, mainly in the lower left SI region. The ALJ finds that Claimant's pain responses to these provocative tests are more than simple self reported chronic pain over a six month period. They are further evidence of some rigidity, and there is nothing in the record to suggest the Claimant's cooperation in these tests was not genuine. Further, as noted by Dr. Higginbotham, Claimant's iliopsoas muscle does not readily lend itself to palpation to check for rigidity or spasm. On postural examination, he noted that her pelvic crests are dislevel with the right being higher than the left. There is a pelvic side shift to the right and very slight anterior rotation of the right hip relative to the left. Claimant could not even sit straight. These are observed indicia of rigidity by the DIME examiner.

8. The Administrative Law Judge does not find that the conclusions and opinions of Dr. Cebrian are sufficient to overcome the DIME. The Claimant saw multiple medical providers throughout this claim, including at least seven (7) physicians through Concentra, along with Dr. Sung, Dr. Jenks, physical therapists, and massage therapists. Out of these multiple medical providers, only Dr. Cebrian opined that the Claimant's complaints or symptoms were out of proportion to objective findings. A difference of opinion between medical experts is insufficient to overcome a DIME physician's rating by clear and convincing evidence. *In re Holmes*, W.C. No. 4-527-829. *In re Sanchez*, W.C. No. 4-377-463 (ICAO, February 19, 2002). The ICAO, in the *Sanchez* case, noted that it has upheld awards based on soft tissue injury to muscles of the spine. *Welker v. Vogue Construction, Inc.*, W.C. No. 4-309-642 (March 5, 1998).

9. The testimony of the Claimant, the medical records, and other evidence establish that the Claimant sustained permanent impairment involving her thoracic and lumbar spine. Substantial medical evidence confirms that the Claimant experienced ongoing spasms, rigidity, dysfunction to the SI joint and piriformis muscle, lumbar strain, and thoracic strain, all of which provided anatomic or physiologic correlation between the Claimant's injury and her disability. In this matter, the Claimant was consistently prescribed muscle relaxants, along with other prescriptive medications to treat muscle spasms. Dr. Sung opined that the Claimant may benefit from SI joint fusion surgery if conservative care measures continued to provide no benefit to the Claimant. The medical evidence establishes that the Claimant's impairments to the thoracic and lumbar spine, as assigned by Dr. Higginbotham, are based on anatomic and physiologic correlation, and not solely on chronic self reported pain.

10. The *AMA Guides* are often subject to more than one interpretation and reasonable physicians may disagree about their application to a particular clinical case. *Rodriguez v. Domino's Pizza, Inc.*, W.C. No. 4-467-433 (Industrial Claim Appeals Office, August 30, 2002). A difference of opinion between medical doctors is not sufficient to establish that a DIME physician's rating is clearly erroneous or highly improbable. *Rodriguez v. Aurora Public Schools*, W.C. No. 4-447-174 (ICAO, January 7, 2002). *See also Lancaster v. Arapahoe County Sheriff's Department*, W.C. No. 4-744-646 and W.C. No. 4-756-515 (Industrial Claim Appeals Office, May 12, 2010) and *Kuykendoll v. Aurora Public Schools*, W.C. No. 4-193-617 (Industrial Claim Appeals Office, June 3, 1998).

11. The DIME physician's determination of whether a claimant has sustained a permanently impairing injury under Table 53 depends upon the examiner's overall evaluation of the claimant's medical history and the examiner's clinical judgment. *Lopez v. Oasis Outsourcing, Inc.*, W.C. No. 4-416-822 (Industrial Claim Appeals Office, January 8, 2001). Further, while not always consistent from one provider to the next, Claimant's Thoracic and Lumbar ranges of motion were performed according to the AMA guide worksheet by the DIME physician. The DIME physician sufficiently addressed his measurements, and addressed the concerns of Dr. Cebrian, in his report.

12. Consequently, the Claimant is entitled to PPD benefits based upon the 13% whole person impairment rating assigned by the DIME.

Overcoming the DIME- MMI

13. Claimant was placed at MMI and provided a "0" rating on April 20, 2016 by an ATP, Dr. Kurz (who had never personally treated Claimant before this date). Eleven days prior, a different ATP, Dr. Blau, had recommended continued treatment. Inasmuch as Dr. Higginbotham found (and the ALJ does not find otherwise) continued range of motion deficiencies almost a year later, the ALJ cannot reasonably conclude that Respondents have now overcome the DIME on MMI by clear and convincing evidence. Claimant did not "improve" from her injury date up to a baseline of "0" in 2016, only to

later rate a 13% whole person impairment in 2017. While the ALJ harbors continued questions whether Claimant is even yet at MMI on the date of this Order, Claimant stipulates otherwise. The date of MMI, as set by the DIME, is March 7, 2017, and the ALJ so finds.

ORDER

It is therefore ordered that:

1. The DIME of Dr. Higginbotham has not been overcome on the impairment rating; Respondents shall pay PPD benefits based upon a 13% Whole Person Impairment.

2. The DIME of Dr. Higginbotham has not been overcome on the issue of MMI; the date of Maximum Medical Improvement is March 7, 2017.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 5, 2017

/s/ William G. Edie

Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-041-084-01

ISSUES

- Whether Claimant sustained an injury to her back on December 4, 2016, arising out of and occurring within the course and scope of her employment?

- If Claimant sustained a compensable injury, whether the medical treatment she received is reasonably necessary and related to her compensable injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a Comprehensive Health and Safety Supervisor ("CHSP") with Employer who alleges she suffered a low back injury on December 4, 2016. Claimant has been employed with Employer for over sixteen years. Claimant worked in Employer's Fresno, California facility before February of 2016, when she moved to Denver as a CHSP. Claimant has worked multiple jobs for Employer, including supervisor roles in the departments of safety, human resources, dispatch, and operations.

2. Claimant's CHSP duties included working with safety committees, coaching and mentoring employees on proper work methods, filing reports, and performing other training and compliance functions for safety. Lifting is an essential job functions of CHSP supervisors. CHSP training involves training on work-related injuries is more extensive than the training for hourly employees. As a CHSP, Claimant would have been trained in the proper procedures for reporting a work-related injury. Employer requires that work-related injuries be reported immediately to the management team or otherwise into the risk database, if management is unavailable. Employees are required to indicate how they injured themselves when reporting an injury. As a supervisor, Claimant would have undergone annual training every January.

3. In February of 2014, Claimant filed a claim against Employer with the EEOC over a promotional dispute. Claimant filed the complaint because "[Employer] had promoted four male supervisors in the span of three weeks, and admittedly did not consider a single female supervisor." Claimant was upset that she had not been interviewed.

4. On June 20, 2014, Claimant sought medical care at Kaiser. Claimant complained of work-related stress associated with being promoted to Dispatch Supervisor, a job she did not feel qualified to do. Claimant reported stress and anxiety at work and had requested time off work.

5. Also on June 20, 2014, Claimant saw a psychiatric social worker, Janet Ann Flanagan at Kaiser. Claimant reported that Employer discriminated against her by promoting three men when she was not even interviewed. Claimant reported working sixteen hours per day and not being able to take time off. After this visit, Claimant treated through Concentra, her occupational medicine service provider.

6. Claimant testified and told Respondents' IME physician, Dr. Kathleen D'Angelo, that she had injured her back at work on August 19, 2014. Claimant testified that she was putting a package on a shelf and felt pain in her back "like a twinge that went down both legs, and that the pain lasted for several days. Claimant testified that she felt a pop in her back with intense pressure.

7. On the afternoon of August 20, 2014, Claimant returned to Kaiser, complaining of severe pain in her bilateral lower legs "that made her suddenly woke [sic] up this morning." The record states that "Patient wants to know the reason, concerned for blood clot, taking Motrin and Tylenol – pain was better now, can walk well without limping." Claimant asked if the pain may be related to stress. The record does not mention a work-related injury or event precipitating pain or prompting the visit. The examining physician indicated the symptoms were possibly due to cramping.

8. An August 20, 2014 note from Kaiser ER states, "[Claimant] went to work as usual the day before last, slept at noon and awoke at 8:30 p.m. with extreme bilateral leg pain." Claimant indicated that she had been under stress at work during her night shift, and "denies any trauma." Claimant stated that she had pain that ascended into the posterior thighs bilaterally and up towards the back, and that this was different than the sciatica that she has had in the past. The provider noted that in 2005, Claimant had experienced total body pain similar to her then-current symptoms which had lasted a week and dissipated.

9. On October 23, 2014, Claimant returned to Kaiser reporting continuing stress at work over the EEOC complaint. Claimant stated she was "suddenly promoted to a job that she was not qualified for" and that she was working up to 70 hours per week. A note dated March 3, 2015 states that Claimant was reassigned and experienced stress relief. The records note that Claimant had a personal and family history of rheumatoid arthritis.

10. On September 8, 2015, Claimant e-mailed Kaiser reporting right leg pain for around three weeks at this time without a determined cause. Claimant suggested experiencing back symptoms that began before ocean diving. Claimant stated the pain varied extensively, as she was sometimes able to walk fine but other times could put no weight on her leg. Claimant underwent an MRI on September 10, 2015 for right hip pain (without trauma), and the MRI showed only degenerative changes.

11. On September 28, 2015, Claimant reported that she had worse back pain and was seeing a chiropractor. Claimant had pain with walking, standing and sitting and requested an MRI. Claimant stated "there has to be a reason for the pain . . . . how can the pain be diagnosed?"

12. Claimant returned to Kaiser on September 29, 2015, reporting six weeks of low back pain with right hip and leg pain radiating down the buttock. Claimant experienced only mild relief with chiropractor therapy and pain medication. The provider diagnosed chronic low back pain.

13. In December 2015, Claimant underwent physical therapy for her low back pain and right sciatica. On December 8, 2015, Claimant presented with low back complaints which were present "off and on for several years." The complaints involved the anterior right tibia, and hip and groin pain radiating into her lumbar spine. Claimant indicated daily pain in her right hip and shin with right leg pain upon movement, without left-sided complaints.

14. Claimant stated in a December 12, 2015 e-mail that she was worsening with therapy, and reported frequent back pain starting to affect her left leg. Dr. Karl Quinn at Kaiser noted that Claimant had back pain for four months with recent left leg pain that improved with therapy but recently returned. A lumbar x-ray on this date noted "pain without trauma" with mild degenerative spondylosis.

15. On December 13, 2015, Claimant reported to Dr. Quinn that her pain "just left" after four or five chiropractic visits but subsequently returned with symptoms into the right shin and left leg. Claimant indicated that she now had pain regardless of whether she was sitting, standing, or walking.

16. On December 24, 2015, Dr. Marsa White at Kaiser evaluated Claimant for back and right leg pain. Dr. White noted that Claimant had multiple areas of pain that could be attributed to different medical issues, including right hip osteoarthritis. Dr. White questioned radiculopathy versus tibial pathology, and ordered a right leg x-ray and lumbar MRI. On December 28, 2015, Clamant continued to indicate that she was looking for a cause for her symptoms and that she [could] "[could] not live like this for the next 20 years."

17. The December 28, 2015 lumbar MRI showed moderate canal stenosis at L3-4 and right-sided disc protrusion. The findings showed a cyst impressed on the right posterior aspect of the neural elements of the thecal sac. The estimated size of the cyst is not documented.

18. Dr. Quinn reviewed MRI findings and on January 2, 2016 told Claimant that there was a disc bulge at L3-4 that narrowed the central canal through which the nerves ran, which would match the symptoms. Dr. Quinn opined that the pain was not related to the central canal narrowing at L4-5.

19. Dr. Quinn referred the study to Dr. White but, as noted on January 6, 2016, Claimant refused to discuss the matter with Dr. White. "Patient does not allow me to speak once I announce myself. States she cannot talk and proceeds to hang up the phone." On January 11, 2016, Dr. White noted that Claimant's pain had resolved with a prednisone pack and recommended a lumbar ESI.

20. On January 19, 2016, Claimant saw Dr. Eugene Huang for a trial ESI. Dr. Huang opined that Claimant was a "not motivated" patient with radicular pain and low back pain. Dr. Huang reviewed the MRI results and listed his impression as "lumbar radiculopathy and discogenic low back pain."

21. In February 2016, Claimant transferred from Employer's Fresno facility to its Denver facility.

22. On June 21, 2016, Claimant saw Dr. Mark Mills (with Gene Cook, PA-C under supervision) at Panorama Orthopedics, complaining of back pain and bilateral radiculopathy with spondylolisthesis. Dr. Mills characterized the symptomology as "acute re-exacerbation of back and bilateral leg pain." Claimant's pain involved the base of her back with radiating pain down the back and sides of both of her legs with pain in the right greater than left front of shin. Dr. Mills noted that Claimant originally presented benignly in August 2015 with pain that started as back pain. Claimant's pain worsened after therapy and she developed a more radicular pattern, prompting an MRI. Claimant reported significant relief from the January ESI. Dr. Mills noted that Claimant's pain started to come back three weeks earlier and was steadily progressing. Claimant had good relief with prednisone from her primary care provider.

23. Dr. Mills ordered a new MRI "due to [Claimant's] inability to gain access to her [MRI] images and the fact that it has been [greater] than six months since the previous films were obtained and patient does have spondylolisthesis, I believe a new MRI is warranted to evaluate for compressive etiology for possible injection therapy and perhaps surgical planning." On July 1, 2016, Claimant began physical therapy.

24. On June 17, 2016, a repeat lumbar MRI was performed. The MRI showed multilevel degenerative changes with central canal and foraminal encroachment and degenerative anterolisthesis at L3-4. The findings showed a "small synovial cyst arising from the medial aspect of the right facet joint measuring roughly 3.4 x 2.4 mm" which minimally indents the right posterior lateral canal at L3-4. Radiographic findings showed slight, Grade 1 anterolisthesis at L3-4.

25. A July 13, 2016 note by Dr. Lonnie Loutzenhiser indicates a measurement of "5mm" for the synovial cyst at L3-4.

26. On September 14, 2016, Claimant's imaging was noted as significant for spondylolisthesis at L3-4. Claimant reported that she was doing well and felt "about 100%" with only an occasional twinge and that she was more worried about the future and preventative strategies.

27. On December 7, 2016, Employer's Health and Safety Manager, David Loya, authored an e-mail to the Area Human Resources Manager concerning the timeline of events surrounding Claimant's December 4, 2016 alleged injury. On Friday, December 2, 2016, Mr. Loya notified Claimant that she was required to work the hub on Sunday, December 4. Claimant stated that she had a school paper to finish but was

told that the shift was mandatory. Claimant also expressed concern about her ability to load and unload trailers without hurrying her back.

28. On December 4, 2016, Claimant reported to the conference room and was assigned to the small sort shift. While this position required Claimant to perform lifting, the amount of lifting and the weight of pieces lifted was significantly less than what was required in loading and unloading trailers. Claimant expressed concern for her back and again brought up her school work, but accepted the assignment. The shift began at 3:00 p.m. At 9:28 p.m., Mr. Loya received a text message from Claimant stating: "FYI. Sometimes we need to make exceptions. Right now I am in so much pain. It hurts to even walk." Mr. Loya consulted with two other management personnel and agreed that the situation would need to be addressed with Claimant, as she appeared to be either reporting a work injury or asking for an accommodation for a preexisting condition.

29. On Tuesday, December 6, 2016, Mr. Loya contacted Claimant and asked her to meet the following day. Claimant indicated she did not want to meet and attempted to minimize her prior statements. Claimant sent Mr. Loya an e-mail, in which she described the history of her back pain. Claimant noted that in May or June 2016, she had discussed with Mr. Loya needing to take time off for back surgery. Claimant indicated that in 2015 in Fresno, she had filed a claim for a back injury to the base of her spine. Claimant repeatedly stated that she was not injured on Sunday December 4, 2016, and was not going to file a claim. Claimant stated that she was in pain, but reiterated that she was not injured on Sunday December 4, 2016. Claimant stated that she had taken the next day, Monday, off, with Gary's permission, and had been up until 1:30 a.m. to finish her school paper. This was inconsistent with Claimant's hearing testimony. Claimant had worked on the paper all day Saturday, on Sunday until she had to work, and then all day on Monday.

30. At the meeting on Wednesday, December 7, 2016, Claimant was informed that the meeting was necessary because she represented that she did not meet the Essential Job Functions which included lifting. Claimant reiterated at least three times that she had not injured herself on Sunday. Mr. Loya referred Claimant to the ADA process, which Claimant refused, and a verbal altercation ensued. Mr. Loya noted that "At one point, [Claimant] stated out loud that perhaps she should claim the pain as an injury so that she could continue to work."

31. After initial evaluation, Employer's occupational health nurse, Gayle Brown, referred Claimant to Dr. John Ogrodnick at SCL for evaluation for her alleged August 19, 2014 back injury. Dr. Ogrodnick saw Claimant on December 9, 2016. Claimant stated that she did not seek medical attention for the alleged 2014 work injury. Claimant alleged that Employer told her she was not allowed to file a claim, and that her soreness "just kind of went away." The pain returned in 2015 to involve her right and left legs, to the point where it hurt to walk. Claimant reported full relief after her January 2016 ESI but the effects waned and she could barely walk again. After participating in therapy and purchasing new shoes, Claimant's pain again disappeared. Claimant stated that, on December 3, 2016, she was assigned to small sort and could barely walk out of the building after six hours. Claimant stated that she was sent by Employer's

nurse for evaluation to re-open the alleged 2014 claim. Claimant described her low back pain at 2/10 while at rest, however the pain diagram she completed at the visit showed 8/10 pain. Claimant had right shin pain. Claimant stated that her back pain on December 4, 2016 was 20/10. Dr. Ogrondick reviewed the June 2016 MRI and restricted Claimant's lifting to 30-pounds. Dr. Ogrodnick indicated that "it is not at all clear that 2014 events are responsible for current symptoms," and advised Claimant that the work-relatedness was undetermined at that time.

32. Claimant continued working under restrictions. On the morning of December 16, Claimant returned to Dr. Ogrodnick to review the 2014 events. Claimant clarified that the claim filed in December 2014 was for mental stress due to a conflict with management unrelated to the alleged 2014 lifting. Claimant also clarified that the alleged 2016 "small sort incident" occurred on December 4, not December 3. Claimant presented as pain free during the visit but had 4/10 pain in the "very, very base of [her] tailbone" while driving. Claimant stated that it had been two days since she had pain in her legs and that she did not understand her pain as it could be inconsistent. Claimant stated that sometimes it hurt when she rose from sitting and sometimes it did not. Claimant mentioned the possibility of filing another claim for compensation for the alleged 2016 injury. Dr. Ogrodnick released Claimant to full duty and indicated that he did not have sufficient evidence to make a causal connection between her then-present complaints and the alleged August 2014 incident. Dr. Ogrodnick indicated the subjective leg pain was not substantiated with objective findings on the MRI leading to questions of etiology.

33. Later on December 16, 2016, Claimant was sitting in her vehicle thinking that she could lose her job when she decided to report a work-related injury for December 4, 2016. Mr. Loya filed a First Report of Injury on December 16, 2016.

34. On December 17, 2016, Claimant presented to Dr. Natascha Deonarain at Concentra. Claimant stated that she had pain in her lower back and bilateral legs since December 4, 2016, which she believed was due to "repetitive bending of the knees." Claimant stated that she was told to work on small sort after informing her supervisor on December 2 that she was not able to perform that job. Claimant stated that she was "lifting up to 100 pounds repetitively over the course of a 5 ½ hour duration." Claimant stated that there was no specific trauma but at the end of the day she could not walk. Claimant repeated her version of events surrounding the alleged August 2014 injury, again stating that she had not sought medical treatment. Claimant was told during her previous surgical evaluation that she may need to have "special surgery" to prevent long term complications of her condition, but she did not pursue this at the time "presumably because of insurance reasons." Dr. Deonarain diagnosed sacral pain; neck pain (acute); and diffuse left and right leg pain. Dr. Deonarain imposed 30-pound lifting restrictions.

35. On December 19, 2016, Mr. Loya drafted another e-mail concerning Claimant's recent report of a work-related injury. On December 16, Claimant notified Mr. Loya by text message that she had an injury on December 3 as an "exasperation of existing injury." Claimant sent the text shortly after she was notified that she was

required to work the day sort on the following Sunday, December 18. Claimant stated that she had not been released to regular duty, which was contrary to the documentation available to Mr. Loya by Dr. Ogrodnick. Claimant demanded to see another provider, and repeatedly stated that she bent at the knees and this was how she injured her back. Claimant recanted her initial claim that she had to lift 120 pound bags. Claimant previously expressed concern about her ability to load and unload trailers. Claimant was not loading/unloading trailers on December 4 and expressed no concern for the small sort assignment that day.

36. On December 22, 2016, Claimant saw Dr. Bryan Counts. Claimant reported having had received chiropractic care for her back. Dr. Counts diagnoses explicitly included neck complaints, as Claimant reported to him that she hurt herself from "frequent head turning working in the small sort area on December 4th." Dr. Counts prescribed physical therapy for Claimant's neck.

37. Claimant subsequently reported moderate improvement and was working her regular job. On January 23, 2017, Claimant requested another ESI. Dr. Counts requested a lumbar MRI and referred Claimant to Dr. Robert Kawasaki. On February 20, 2017, Claimant told Dr. Counts she felt her back had improved and that she no longer wanted an ESI. However, Claimant did want an MRI to see if the anterolisthesis at L3-4 had worsened. Dr. Counts noted that Dr. Kawasaki had a visit that day and considered MMI.

38. On February 23, 2017, Claimant saw Dr. Kawasaki. Claimant reported that her pain had improved and was 1-2/10 to the low back and legs. Dr. Kawasaki noted "aggravation of underlying condition" with chronic low back pain but that "it is not clear if she has a new injury." Dr. Kawasaki noted that Claimant felt discriminated against at UPS, which may be impacting her recovery. Dr. Kawasaki ordered a lumbar MRI.

39. Claimant underwent a lumbar MRI on March 11, 2017. The reading radiologist read the MRI as showing: multilevel degenerative disc disease; disc bulging; moderate-severe L3-4 central canal stenosis with right L3-4 synovial cyst; and multilevel central canal narrowing and bilateral existing nerve root compression/abutment.

40. On March 20, 2017, Dr. Kawasaki reviewed the MRI and noted degenerative changes. At L3-4, there was moderate-to-severe facet arthropathy and a "4mm synovial cyst" causing some compression of the L3 nerve roots, which appeared to displace the existing L4 nerve root. The impression was "chronic low back pain from the initial workers' compensation claim in February of 2014; right L4 radiculopathy; synovial cyst at L3-4; radicular symptoms at L4; and spondylolisthesis at L3-4, grade 1." Dr. Kawasaki noted that he did not compare the 2017 MRI with the 2016 lumbar MRI. Dr. Kawasaki noted that Claimant had minimal response from the prior ESI and "quite a bit of conservative care." Dr. Kawasaki suggested a facet cyst lysis procedure or ESI and referred Claimant to Dr. Michael Rauzzino.

41. On April 1, 2017, Claimant saw Dr. Rauzzino. Claimant reported no neck complaints. Dr. Rauzzino reviewed the 2017 MRI and noted the synovial cyst at L3-4 with grade 1 spondylolisthesis. Dr. Rauzzino noted that the 2016 MRI was not available for comparison. Dr. Rauzzino recommended a fusion surgery over decompression of the cyst.

42. On April 6, 2017, Claimant saw Dr. Kawasaki and described pain, numbness, tingling, and stabbing into her posterior thigh and calf regions. Dr. Kawasaki noted that it was not clear what Dr. Rauzzino had recommended and indicated a cyst lysis procedure with an ESI at L3-4 may be appropriate.

43. On July 2, 2017, Dr. D'Angelo performed a Respondents' sponsored IME. Claimant complained of "pin-point" tenderness localized to the midline region at the upper sacral area, where Claimant had been told was the location of the cyst. Claimant claimed that she had made a conscious decision to file a work claim while sitting in the parking lot, after a week-and-a-half while thinking about the implications for her career. Claimant's decision to report the injury as work-related was preceded by denials of her previous alleged injury. Dr. D'Angelo noted that Claimant's anticipated prognosis was recurrent, intermittent episodes of pain without any traumatic provocation. Claimant had noted that the cyst was larger on repeat MRIs, however, Dr. D'Angelo compared the records and did not find that the cyst had grown. Dr. D'Angelo noted that the radiologist for the 2017 MRI noted no significant interval change since the prior examination. Dr. D'Angelo noted that there was no evidence on the MRI evaluation or physical examination of any acute trauma, though there was evidence of a genetic condition. Dr. D'Angelo did not causally relate the alleged injury to an aggravation of her underlying degenerative spine disorder. Dr. D'Angelo opined that Claimant's present symptoms were due to an absence of treatment for a chronic degenerative disease. Dr. D'Angelo opined that any aggravation would have been a brief flare with return to baseline shortly thereafter.

44. Claimant testified that she had a back injury in 2014 after putting a package weighing approximately 25 to 26 pounds on the top shelf of a package car. Claimant testified that she felt a pop and intense pressure in her lower back with pain going down into her legs. Claimant testified that she did not see a doctor because she feared retaliation. Claimant nevertheless filed an EEOC claim against Employer in February 2014 after she was not interviewed for promotion.

45. Claimant testified that she worked full duty while receiving treatment for her back in 2015 and 2016. The effects of the 2016 ESI began to wear off around May 2016, after which she sought additional treatment and was evaluated for surgery. Claimant testified that she was hesitant about undergoing surgery, so she continued with physical therapy and became pain free between September 2016 and December 4, 2016.

46. Claimant testified that she told Mr. Loya "three times" during their December 2 discussion that she was worried about her back, contrary to the record and Mr. Loya's testimony. Claimant testified that she did not speak to Mr. Loya on

December 4, except to say hello. Claimant testified that she did not express concern about her back on December 4 and did not express discontent about having to work that day due to her school work, contrary to the record. Claimant testified that she worked the next day, on December 5 (Monday), and was still able to complete her school paper and go to work the full day."

47. Claimant testified that she was reluctant to meet Mr. Loya because she was fearful of being terminated. Claimant testified that, because she is not a doctor, she did not know whether she had a new injury or not. Claimant represents that her symptoms after December 4 were "100 percent different" from her symptoms "in the weeks and months leading up to December 4." Claimant testified that Mr. Loya prevented her from seeking treatment.

48. On cross-examination Claimant testified that she "might tell my doctor that I didn't get hurt at work, not to have to deal with [Employer]." Claimant testified, contrary to her medical records, that she had neither sought nor received treatment for work-related stress due to her dispute with her supervisors. Claimant testified that she did not seek medical treatment for her alleged August 19, 2014 injury to her back. Claimant testified that the pain for which she sought treatment in the emergency department on August 20, 2014 was not the same pain that she had in 2015 or presently. Claimant testified that she was presently seeking treatment for bilateral leg pain. Claimant acknowledged that the August 20, 2014 record reflects that she denied trauma, and that if she did have trauma, she would have reported this to her doctors. Claimant testified that she had pain in the exact same locations in 2015 as she does now. Claimant testified that she was evaluated in 2016 to ascertain the etiology of her pain and that her doctors had recommended surgery as an option, which she would have had to have pursued under private health insurance. Claimant testified that she made the decision to report a work-related injury for December 4 after Dr. Ogrodnick was unable to find any causal relationship to her alleged 2014 incident.

49. The ALJ finds Claimant's credibility to be compromised by both a lack of self control, and a proclivity to exaggerate. For example:

- When asked what she meant by telling Mr. Loya that "perhaps I should claim this pain as an injury;" Claimant responded, "I was just completely beside myself . . . and I could have just blurted out something just because I blurted it out."

- When given a copy of her job description, Claimant admittedly "got belligerent" and argued with Employer's HR personnel in such a manner that she was taken out of a public area and brought into a private office.

- When filling out the injury prevention report with Mr. Loya, Claimant interpreted Mr. Loya as questioning "her integrity," and she "got frustrated." When Mr. Loya asked Claimant how much the bags weighed, she responded, "I don't know, 129 – 120 pounds." Claimant recanted that

statement, saying she had exaggerated. The bags actually weighed between thirty and seventy pounds.

- Claimant later testified that her exaggerated report of how much the bags weighed "was one of those flippant statements that I said while in the heat of disbelief that [Mr. Loya] was questioning my integrity."

- Claimant admitted that she might provide her medical providers with inaccurate information "not to have to deal with [Employer].

- Claimant reported back pain on December 4, 2016 at the level of 20/10. Pain at a level of 10/10 is commonly understood to be the worst possible pain.

50. Mr. Loya testified that he was a health and safety manager at the Denver facility on December 4, 2016. Mr. Loya's duties included designing injury prevention strategies for the district, implementing training programs, ensuring the accurate reporting of injuries, and investigating injuries. Mr. Loya testified that Claimant would have undergone more extensive training than a typical employee, including yearly training in injury reporting. He testified that work-related injuries should be reported immediately to the management team. Mr. Loya testified that lifting is part of the essential job functions of CHSP supervisors. He testified that all of Employer's employees are expected to work during peak season, from Thanksgiving through Christmas, with few exceptions.

51. Mr. Loya testified that he contacted Claimant on December 2, notifying her that she needed to report to work on December 4. Mr. Loya testified that Claimant's objection on that date was specific to her school paper, and did not recall any mention of her back. Mr. Loya testified that he also had a conversation with Claimant on December 4 and that she expressed discontent about having to work on that day. Mr. Loya testified that Claimant had concerns about loading and unloading trailers, but not small sort, which he indicated were very different jobs.

52. Mr. Loya testified that Claimant explicitly denied having a work injury, at least three times, when asked on December 6. Mr. Loya testified that Claimant gave no indication that she had any sort of bending or lifting injury on this date. Mr. Loya testified that the first time he became aware that Claimant was reporting that she had injured herself at work was on December 16, and that she did not give any specific time or specific mechanism by which she injured herself. Mr. Loya testified that he was not aware of any time that UPS ever considered terminating Claimant after December 4. Mr. Loya testified that Claimant's assertion that he prevented her from seeing a doctor on December 16 was not accurate, as he said he could not make accommodations for her restrictions without medical documentation.

53. Dr. Kathleen D'Angelo testified that, to a reasonable degree of medical probability, there was no aggravation of a preexisting condition. Dr. D'Angelo testified that there were minimal, if any, objective findings during her examination. Dr. D'Angelo

testified that, medically, an exacerbation of an underlying condition involved a flare of the underlying condition and returned to normal once prostaglandin and cytokine levels return to normal. Dr. D'Angelo testified that Claimant's intermittent pain, with no pain pattern, was not consistent with an acute exacerbation of a medical condition. Dr. D'Angelo testified that Claimant had a normal progression of her underlying condition. Dr. D'Angelo testified that Claimant's synovial cysts were directly proportional to the degree of degeneration and that the growth of cysts occurred as degenerative conditions worsened. Dr. D'Angelo opined that all of Claimant's symptoms were progressive, including spondylolisthesis and arthropathy. Dr. D'Angelo noted that the examining radiologist comparing both the June 2016 and March 2017 MRIs indicated no clinical changes. Dr. D'Angelo testified that increased pain does not suggest an injury and that, by her own admission, Claimant did not have consistent pain since December 4, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014).

An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). There must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*.

Simply because a claimant experiences symptoms while in the course and scope of their employment does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (April 10, 2008). Claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which

benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009).

In determining whether a claimant has met her burden of proof, the ALJ may resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *Bodensleck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010).

Claimant's assertion that she suffered an aggravation of her documented and extensive preexisting lumbar condition is not supported by a preponderance of the evidence. Claimant expressly denied to Mr. Loya that she injured herself at work on December 4, 2016. Claimant originally identified her symptoms as having been related to a previous alleged work injury, which was not accepted and for which no evidence was presented. Contrary to Claimant's testimony, she did seek treatment for the same symptoms in 2014 under personal insurance, did not report a work-related injury to her doctors, and denied having trauma. Rather, Claimant's treatment history reflects a pattern of intermittent, chronic pain in her low back and bilateral legs, for which she sought an explanation. When the cause of Claimant's symptoms was identified after a 2016 MRI, she declined surgery under personal insurance and claimed her symptoms resolved.

Claimant's symptoms after December 4, 2016 were identical to those for which she sought treatment in 2014, 2015, and 2016. Claimant only reported having had a work-related injury after being told twice by Dr. Ogrodnick that there was no causal relationship to her alleged 2014 work injury. The MRI studies between 2016 and 2017 showed no clinically relevant changes. The cyst at L3-4 showed no relevant changes (the original estimate on the 2016 MRI was of 3.4 x 2.4 mm, with another note suggesting 5 mm, versus 4 mm on the 2017 MRI). Regardless, Dr. D'Angelo indicated that size of cysts naturally increases with the degenerative changes to the spine, absent acute trauma. Neither Dr. Kawasaki nor Dr. Rauzzino compared the 2016 and 2017 MRIs. Dr. D'Angelo credibly testified that the present symptoms were consistent with the history of chronic, intermittent, and degenerative back pain (with a suggested genetic factor), and not consistent with an aggravation.

Claimant's history suggests a retaliatory motive in filing this claim. In February of 2014, Claimant had a dispute at UPS for which she filed an EEOC claim. Claimant had an ongoing allegation of work-related stress at the time she claims her August 19, 2014 lifting injury occurred. Claimant claims she did not file a claim or seek treatment due to fear of retaliation, despite having filed an EEOC claim and a claim for work-related stress. The contemporaneous medical records from 2014 refute Claimant's assertion that she had a work injury but support that she had a non-related back condition with exacerbations of non acute origin.

Likewise, Claimant's reporting of the December 4, 2016 work injury arose after she was denied time off to finish a school paper, due the following day. Claimant indicated that she had worked on the paper December 2, December 3, December 4 prior to work, and then left work early, finishing her paper after receiving December 5 off (contrary to her testimony). Claimant thereafter related her pain to a previous injury, and did not suggest a work-related mechanism of lifting/bending until her report to David Loya on December 16, 2016. Claimant's testimony is inconsistent with the documented history of the claim in evidence and, regardless, the documented history is not suggestive by a preponderance of the evidence that a work-related injury occurred on December 4, 2016 in the manner described.

Respondents are liable only for those medical benefits which are reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The record must distinctly reflect the medical necessity of any medical treatment needed to cure and relieve an injured employee from the effects of the industrial injury and any ancillary service, care, or treatment as designed to cure and relieve the effects of such industrial injury. *Public Service Co. of Colorado v. Industrial Claim Appeals Office of State of Colo.*, 797 P.2d 584 (Colo. App. 1999). The question of whether medical treatment is reasonable and necessary is one of fact for determination by an ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Treatment for a work injury must not only be reasonable and necessary but must also be causally related to that injury. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Claimant bears the burden to prove a causal connection exists between a particular treatment and the industrial injury. *Id*.; *see also Grover v. Industrial Commission of Colorado*, 759 P.2d 705 (Colo. 1988). Causation is a question of fact for resolution by the ALJ. *F.R. Orr Construction v. Rint, supra*.

In the event of a compensable claim, Claimant's work-related condition returned to baseline and her ongoing symptoms are the result of a chronic, non-related condition. No further treatment is reasonable, necessary, or related.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to meet her burden of proof by a preponderance of the evidence that she suffered an aggravation of a preexisting condition, or otherwise a compensable injury, arising out of the course and scope of her employment on December 4, 2016. Claimant's claim for compensation is denied and dismissed.

2. In the event of a compensable injury, no further medical benefits are reasonable, necessary, or related to the December 4, 2016 work injury, for which Claimant has returned to baseline.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 6, 2017

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

v OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-937-329-03

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 23, 2017 and August 21, 2017, in Denver, Colorado. The hearing was digitally recorded (reference:5/23/17, Courtroom 1, beginning at 1:30 PM, and ending at 4:00 PM; and, 8/21/17, Courtroom 1, beginning at 8:30 AM, and ending at 3:30 PM.).

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection. Respondents' Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a briefing schedule: Respondent's opening brief was filed, electronically, 0n August 28, 2017. Claimant filed a hard copy answer brief on September 5, 2017, despite the ALJ's directive at the conclusion of the last session of the hearing to file electronic briefs. The Claimant did not file an electronic brief until October 5, 2017, after being requested to do so by the Office of Administrative Courts. The matter was deemed submitted for decision on October 5, 2017.

ISSUES

The issues concern Respondent's request to overcome the Division Independent Medical Examination (DIME) of Joseph M. Morreale, M.D., concerning his opinion that the Claimant has not yet reached maximum medical improvement (MMI). If Respondent has overcome the DIME determination regarding MMI, then, whether the DIME erred in calculating the Claimant's degree of permanent .impairment. If the Respondent has not overcome the DIME determination regarding MMI, whether the Claimant has proven, by a preponderance of the evidence that the anterior cervical discectomy and fusion at C3-4 and C4-5 is reasonably necessary to treat her work injury;

On overcoming the DIME, the Respondent's burden of proof is "clear and convincing evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on October 5, 1965. She was 51 years old on the hearing dates.

2. On December 11, 2013, the Claimant was injured in a motor vehicle accident while in the course and scope of her employment for the Employer. Her work was as a utility worker. Her job involved maintaining and cleaning grounds and facilities in the parks and recreation district.

3. While heading west on 38th Street, the Claimant was T-boned by another vehicle and she sustained neck, whiplash injuries.

4. Two years later, on December 11, 2015, Robert Kawasaki ,M.D., the Claimant's authorized treating physician (ATP), placed her at MMI.(Respondent's Exhibit G, p. 56).

5. Dr. Kawasaki provided the Claimant with a 15% whole person impairment rating, including a 6% table 53 rating (*AMA Guides to the Evaluation of Permanent Impairment,* 3rd. Ed., Rev.) for the two-level cervical rhizotomies that were performed at C3-4 and 4-5. (*Id.*). Post-MMI maintenance medical treatment was to include pain medications and repeat rhizotomies if the pain returned after nine months. (*Id*.). Respondent filed its Final Admission of Liability (FAL), dated January 8, 2016, consistent with Dr. Kawasaki's report.

The Claimant's History, Post-injury

6. In April 2014, the Claimant began treating with ATP Dr. Kawasaki (Exhibit. 6, 4/29/14).

7. Early on, Dr. Kawasaki felt that the Claimant would be a surgical candidate (May 23, 2017 Hearing Transcript, hereinafter "T," p. 37, lns 6-9) due to hyperflexia and a positive Hoffman sign (T, p. 43: lns 12-20; T, p. 67:lns 22-25; p. 68:lns 1-11), as well as upper extremity paresthesia (T, p. 68:lns 3-5; T, p. 67: lns 22-25; p. 68: lns 1-11) and radiculopathy later shown on EMGs (T, p. 43: lns 21-24). Dr. Kawasaki was of the opinion that the Claimant had signs and symptoms of myelopathy with correlating MRI (magnetic resonance imaging) and EMG findings (T, p. 37: lns 10-13).

8. Dr. Kawasaki was of the opinion that the clinical findings of hyperflexia and positive Hoffman signs were most likely related to the MRI findings of spinal stenosis and cord compression at the C4-5 level (Claimant's Exhibit 6)..

9. In 2014, Dr. Kawasaki referred the Claimant to orthopedic surgeon Jeffrey Sabin, M.D. Dr. Sabin reported, "I feel that the patient would be in need of a C3-4 anterior cervical discectomy and fusion because of the current physical findings and symptomatology of tingling and paresthesis in her upper extremities" (Claimant Exhibit 4).

10. In a follow-up record review, Dr. Sabin added that if [Claimant] has a diagnostic response to facet blocks at C4-5 then the likely solution would be an ACDF procedure at that level (Claimant's Exhibit 4).

11. Pursuant to Dr. Sabin's recommendation, Dr. Kawasaki performed facet injections at the C4-5 level only (Claimant's Exhibit 6). The results were diagnostic.

12. Dr. Kawasaki thought it reasonable that the Claimant be seen by a second-opinion surgeon (Claimant's Exhibit 6). He referred her to orthopedic surgeon Bryan Castro, M.D.

Bryan Castro, M.D and ATP Fr. Kawasaki

13 In his initial evaluation, Dr. Castro reported that the Claimant had numbness and tingling in her arms, which was worse on the *left*, than on the right (Claimant's Exhibit 5). An addendum to the report stated that Dr. Castro felt that an anterior cervical discectomy and fusion at the C3-4 level would certainly be a reasonable consideration, though he wanted a new MRI first (Claimant's Exhibit 5, addendum).

14. The Claimant next saw Dr. Castro on January 5, 2015. Among other complaints, Dr. Castro reported that the Claimant had pain into the *left* upper extremity. Dr. Castro recommended staged injections, but he also stated, "if surgery were to be considered then a two-level ACDF would be a reasonable consideration secondary to degenerative changes seen at C3-4 and C4-5"(Claimant's Exhibit 5, Castro 1/5/15).

15 On February 20, 2015, Dr. Kawasaki performed left C3-4 and C4-5 epidural steroid injection /spinal nerve root block for "*Left* C4 and C5 radiculopathy (Claimant's Exhibit 7).

16. On March 10, 2015, Dr. Kawasaki performed EMGs on the Claimant's *left* side only, which was indicated for "numbness and tingling into the *left* arm and myelopathic findings after MVA." The results were abnormal between C2 and C4. (Respondent's Exhibit G, pp. 38-39). Dr. Kawasaki's diagnoses on that date included "cervical spondylosis with clinical findings for positive upper motor neuron signs with hyperflexia and positive Hoffman signs;" and "C4-5 spinal stenosis with significant myelopathy extending from this level" (Respondent's Exhibit G, p. 35).

17. The Claimant returned to Dr. Castro on April 20, 2015. Dr. Castro wrote that "globally speaking" he did not think the Claimant was a good operative candidate, "However, with upper cervical EMG findings as well as trapezial pain this certainly could fit a C4 or C-5 radiculopathy. I think this is a reasonable consideration." Dr. Castro recommended rhizotomies, but also stated:"Alternatively surgical intervention via an ACDF at some point is a reasonable consideration" (Claimant's Exhibit 5). At the visit as well Dr. Castro recorded that the Claimant had pain in her arms, particularly on the left.

18. On May 13, 2015, Dr. Kawasaki wrote that the Claimant had increased pain with paresthesias in the left upper extremity with Spurling's test (Claimant's Exhibit 7).

19. On June 5, 2015 and again on July 31, 2015, the Claimant underwent bilateral medial branch blocks at C3-4 and C4-5. The results were diagnostic (Claimant's Exhibit 7).

20. The Claimant then proceeded to bilateral rhizotomies at C3-4 and C4-5 on August 28, 2015 (Respondent's Exhibit G, p. 44; Claimant's Exhibit 7).

21. Before the rhizotomies, the Claimant had reported her pain level as 7; she was taking hydrocodone and gabepentin; and her work restrictions were no lifting over 20 pounds. According to the Claimant, she had intense pain in her neck causing headaches; that sunlight would intensify it; she had pain in her shoulders, tingling in her arm; she could not bend over or lift; and, she could not sit, stand or walk for a long time.

22. The rhizotomies were successful in reducing the Claimant's pain and improving her function. They were still in effect as of December 11, 2015 when Dr. Kawasaki placed the Claimant at MMI (Respondent's Exhibit G, pp. 55-59). At MMI, the Claimant reported her pain as zero at rest, 2 with normal activities and 4 with increased activities (Respondent's Exhibit G, p. 56). Her medications were ibuprofen and lidoderm patches. *Id.*

23. Dr. Kawasaki found 10% ROM impairment and assigned 6% from Table 53. His combined rating was 15% whole person. Respondent filed a FAL, admitting for the 15% rating as well as all post-MMI reasonable, necessary, and related medical benefits (Respondent's Exhibit B, p.5).

The Claimant

24. At the time the Claimant was placed at MMI by Dr. Kawasaki, she requested that all work restrictions be removed. The reason for her request was that she was feeling good and she wanted to work. Her occupational physician at Denver Health complied, but ATP Dr. Kawasaki provided permanent restrictions of lifting 50 pounds occasionally, 25 pounds frequently.

25. In January 2016, the Claimant became employed as a custodian for the Denver Public Library. Dr. Kawasaki had signed off on her job description initially, indicating that she had permanent restrictions of 50 pound occasional lift, push and pull (Claimant's Exhibit 8).

26. After working approximately one month at the new job, however, the Claimant was "let go" due to her permanent restrictions. An ADA (Americans with Disabilities Act) process was initiated, which eventually concluded that the Claimant was "disqualified" due to the absence of any position consistent with her restrictions and qualifications. The Claimant has not worked since January 2016.

27. On March 11, 2016, about three months after Dr. Kawasaki's MMI date, the Claimant returned to Dr. Kawasaki (Respondent's Exhibit G, pp. 60-62; Claimant's Exhibit 8). She requested that she be returned to Dr. Sabin for surgical evaluation. The Claimant was looking for a more permanent solution, in that the pre-MMI rhizotomies had begun to wear off and she could feel the pain returning. Dr. Kawasaki declined to make the referral on the ground that she was still doing well.

Division Independent Medical Examination by Joseph Morreale, M.D.

28 Previously, the Claimant had timely objected to Respondent's FAL and had requested a DIME. She was seen by DIME physician Dr. Morreale on May 6, 2016. Dr. Morreale is a spine surgeon (T, p. 36:lns 21-23). Dr. Morreale recommended an anterior cervical discectomy and fusion (hereinafter "ACDF") at C3-4 and C4-5 before

placing the Claimant at MMI, if the patient wished to proceed with surgery (Respondent's Exhibit E, p. 19).

29. According to the Claimant, as of the time she was evaluated by Dr. Morreale, her rhizotomies had worn off and her pain had returned. She felt as bad as she had felt before the first rhizotomies.

30. According to Dr. Kawasaki, Dr. Morreale's recommendation of surgery, and the more limited range of motion found by him, reflected that the Claimant's condition had worsened as of the May 6, 2016 date of the DIME appointment (T, p. 63: lns 17-25; p. 64: lns 1-4).

31. Regarding Dr. Morreale's provisional impairment rating, Dr. Kawasaki disagreed only with the 7% Table 53 rating. Dr. Kawasaki stated it should have been 6%, so that the total combined rating would have been 24% (T, p. 65: lns 19-25).

32. The Claimant returned to Dr. Kawasaki in June 2016. On June 27, 2016, she described herself as miserable (Respondent's Exhibit G, p. 69), which was attributable, according to Dr. Kawasaki, to the re-growth of her medial branch nerves (T, p. 45: lns 22-25; p. 46 : lns 1-2). On account of her worsening condition as well as DIME Dr. Morreale's recommendation, Dr. Kawasaki referred the Claimant back to Dr. Sabin (T, p. 46: lns 3-9).

Jeffrey Sabin, M.D.

33. The Claimant saw Dr. Sabin on July 22, 2016. Dr. Sabin mistakenly believed that the Claimant's C4-5 level had never been treated (Respondent's Exhibit H, p. 102). In fact, the C4-5 level had been treated with stand-alone facet injections (Claimant's Exhibit 6); a spinal nerve root block for left C4 and C5 radiculopathy (Claimant's Exhibit 7); medial branch blocks (Claimant's Exhibit 7); medial branch blocks again (Claimant's Exhibit 7; Respondent's Exhibit G, p. 41); and rhizotomies (Claimant's Exhibit 7; Respondent's Exhibit G, p. 44). Dr. Sabin recommended repeat rhizotomies.

34. Dr. Sabin had previously observed that the Claimant had had excellent relief from her previous rhizotomies but now her pain had returned (Respondent's. Exhibit H, p. 102). Despite the Claimant's increased pain, Dr. Sabin reported that the Claimant's cervical range of motion was normal. According to the Claimant, Dr. Sabin never examined her for ROM. Dr. Sabin's report is at odds with DIME Dr. Morreale's recent 19% measured ROM impairment (as well as Dr. Kawasaki's earlier 10% ROM impairment, when the initial rhizotomies were still in effect).

35. The Claimant had understood from her appointment with Dr. Sabin that he could not do surgery because the Respondent had not accepted all the (cervical) "levels" involved. In his first, 2014 report, Respondent's Independent Medical Examiner

(IME), Brian Reiss, M.D. had stated that the C4-5 level was not related to the accident (Respondent's Exhibit F, p. 30).

Return to ATP Dr. Kawasaki and Referral to Gary Ghiselli, M.D.

36. The Claimant returned to Dr. Kawasaki two weeks after Dr. Sabin's appointment. At that time, Dr. Kawasaki supplemented her pain relief with a prescription for Tramadol (Respondent's Exhibit G, p.74; Claimant's Exhibit 8). Pursuant to Dr. Sabin's recommendation, the Claimant enquired with Dr. Kawasaki about repeat rhizotomies, and he referred her to another surgeon, Gary Ghiselli, M.D. As the Claimant understood it, Dr. Kawasaki made the referral to surgeon Dr. Ghiselli "for his own purposes."

37. In his August 5, 2016 note discussing his referral to Dr. Ghiselli, Dr. Kawasaki wrote that previously Dr. Castro had been against surgery. He later acknowledged in his testimony that he had been mistaken regarding Dr. Castro's opinion (T, p. 19: lns 16-19; T, p. 35: lns 15-25; p. 36: lns 1-15).

38. Respondent denied authorization of Dr. Kawasaki's referral to Dr. Ghiselli (Claimant's Exhibit 10). In the course of its denial, Respondent repeated Dr. Kawasaki's erroneous statement regarding Dr. Castro's opinion. Respondent also stated, "If Dr. Kawasaki is making the referral because [Claimant] wants the surgery, she has the option of seeking her own opinion (and paying for it). If that physician wants to do surgery, she can choose to do the surgery under her own insurance and litigate it through the worker's compensation system."

39. The Claimant next saw Dr. Kawasaki on November 11, 2016, at which time he told her that his referral to surgeon Dr. Ghiselli had been denied (Respondent's Exhibit G, p. 81-82; Claimant's Exhibit 8). Since surgical referral had been denied, the Claimant requested repeat rhizotomies.

40. Also on November 11, 2016, the Claimant again described herself as miserable. She had obtained prescriptions for Notriptyline, Cyclobenzaprine and Etodolac from her personal physician. Her personal physician referred her to the surgical department, but the Claimant was unable to make an appointment with a surgeon under her personal insurance because her injury was considered work-related.

41. Two months later, on January 20, 2017, the Claimant saw Dr. Kawasaki (Respondent's Exhibit G, p. 78-79; Claimant Exhibit 9). He wrote that she was frustrated and felt that she was not being treated appropriately. According to the Claimant, she felt she wasn't getting any help. She understood that Dr. Kawasaki could see that she was in pain. She needed to know if she could undergo surgery but she was not able to see a surgeon; she wanted to know about repeat rhizotomies but nothing had been done about that. At that point, Dr. Kawasaki requested repeat rhizotomies.

42. On February 13, 2017, the Claimant underwent a Functional Capacity Evaluation (FCE), at her request. The therapist concluded that the Claimant was unable to work at all due to variable and very short tolerances (See Claimant's Exhibit 3, p. 2 of 22, ¶ 5). The Claimant testified that her condition as documented by the FCE had been her condition for many months before that.

43. According to Dr. Kawasaki, the FCE was probably a valid reflection of her function at the time (T, p. 29:lns 22-25; p. 30: ln 1). He also stated that the 50-pound permanent restriction he imposed at MMI had no longer been operative, in that the Claimant's pain had gone up and her function declined (T, p. 40: lns 5-18). At no time after the Claimant's pain returned would he have approved a job for the Claimant lifting 50 pounds (T, p. 62: lns 2-7).

44. In his written reports, Dr. Kawasaki never changed the Claimant's permanent restrictions. The Claimant understood that the reason he believed he could not change them was because they were "permanent."

45. Repeat rhizotomies were done on each side on separate dates, with the second procedure done on May 12, 2017 (T, p. 25:lns 13-14). As of the second, August 21, 2017 hearing date, about three months after the last procedure, the Claimant was still doing well, but she could feel the pressure returning.

46. After the repeat rhizotomies, Dr. Kawasaki referred the Claimant for physical therapy (PT). His hope was to increase her function so that in the long run she may be able to return to lifting 50 pounds (T, p. 39: lns 1-10). According to the Claimant the PT was helping her. She had not yet began exercises to increase her lifting capacities.

47. According to Dr. Kawasaki, his final MMI date was contingent on whether or not the Claimant underwent the ACDF procedure (T, p. 41:lns 4-7).

48. The Claimant wanted the surgery recommended by DIME Dr. Morreale. She explained that the rhizotomies wear off, and she needs a more permanent solution.

Respondent's Independent Medical Examiner (IME), Brian Reiss, M.D.

49. At the request of Respondent, Dr. Reiss evaluated the Claimant twice, in 2014 and in 2016 (Respondent's Exhibit F).

50 Dr. Reiss did not agree with the surgical recommendation. He did not believe the Claimant had any myelopathy, or radiculopathy. He stated that the levels selected for surgery (C3-4 and C4-5) were arbitrary and speculative, in that the pain generators had not been identified, as required by the Medical Treatment Guidelines (MTG). He stated the opinion that the surgery would not help and could hurt. He recommended a better exercise and conditioning program and perhaps medication modification.

51. Dr. Reiss testified that Dr. Kawasaki's diagnosis of myelopathy was pure speculation, on the ground that Dr. Kawasaki relied solely on hyperflexia in support of his diagnosis. The ALJ finds that this is not correct. In addition to hyperflexia, in support of his diagnosis of myelopathy, Dr. Kawasaki also identified positive Hoffman's signs and upper extremity paresthesia (T, p. 67: lns 22-25; p. 68 : lns 1-11) as well as the MRI (T, p. 37: lns 10-13; also, Claimant's Exhibit 6).

52. According to Dr. Reiss, while it was appropriate for Dr. Kawasaki to perform rhizotomies at the C3-4 level, the rhizotomies at the C4-5 level were performed in the absence of adequate information. Specifically, Dr. Reiss testified that Dr. Kawasaki was missing diagnostic information regarding the C4-5 level, which he could have obtained had he performed facet injections or medial branch blocks at the C4-5 level alone (instead of at the same time as at the C3-4 level).

53. In fact, facet injections were done at C4-5 alone (Claimant's Exhibit 6). In rebuttal, after this information was presented, Dr. Reiss significantly revised his testimony. He then contended that facet injections are not sufficiently diagnostic. This is internally contradictory within Dr. Reiss' testimony. Dr. Kawasaki had been following Dr. Sabin's recommendation to perform facet injections at C4-5 to aid in diagnosis of the C4-5 level for surgery (Claimant's Exhibit 4). The ALJ finds that Dr. Reiss' testimony in this regard lacks credibility.

54. Dr. Reiss testified that it was somewhat speculative for anyone to chose C3-4 and C4-5 as the levels at which a surgical procedure would be appropriate. He was unwilling to state whether the recommendation and/or performance of "speculative" surgery was medical malpractice.

55. When asked specifically whether the identification of those two levels by treating surgeon Dr. Castro was "speculative or arbitrary," Dr. Reiss shifted his direction and claimed that the facts had changed after Dr. Castro's recommendations. Specifically, Dr. Reiss contended that at the time she was seen by Dr. Castro, the

Claimant was complaining of *right* upper extremity (RUE) symptoms, but that after her visits with Dr. Castro, her complaints switched to the *left*.

56. Again, Dr. Reiss' factual predicate is inaccurate. At each of the three appointments with Dr. Castro, the Claimant had complained of *left* upper extremity symptoms (Claimant's Exhibit 5). In addition, as stated, during the same time period, namely on February 20, 2015 and on March 10, 2015, Dr. Kawasaki performed procedures and testing on the **left** on account of **left-**sided upper extremity symptoms (Claimant's Exhibit 7).

57. Dr. Reiss wrote in his 2016 report that he would agree with Dr. Castro that surgical intervention is *not* indicated here (Respondent's Exhibit. F, p. 24). Dr. Castro's opinion, as stated in Dr. Castro's records, is that surgical intervention *is* indicated here. There is no documentation in any report written by Dr. Reiss that he had reviewed any of Dr. Castro's records. In rebuttal Dr. Reiss contended he had reviewed Dr. Castro's reports before his hearing testimony, even if his report does not mention he reviewed them at that time. The ALJ finds that this is one more anomaly detracting from dr. Reiss' overall credibility.

58. Similarly, Dr. Reiss stated that Dr. Sabin's identification of the C4-5 level as one of two levels for surgery was speculative. Dr. Reiss could not adequately support his opinion of "speculative."

59. As he had stated in his written report, in which he described Dr. Morreale's proposed surgery as "arbitrary" (Respondent's Exhibit F, p. 24), Dr. Reiss stated that DIME Dr. Morreale's selection of the C3-4 and C4-5 levels as the areas for surgery was speculative and arbitrary. It was his opinion that the surgery proposed by DIME Dr. Morreale was unlikely to improve the Claimant's condition and may well make her worse (*see also* Respondent's. Exhibit F, p. 24).

60. Dr. Reiss, however, was unwilling to characterize Dr. Morreale's opinion as so lacking in medical foundation so as to be beneath the medical standard of care. Instead, he claimed that Dr. Morreale saw the patient before she had had facet rhizotomies; but that, according to Dr. Reiss, after the DIME evaluation, the Claimant had left-sided rhizotomies which resolved her left-sided symptoms and left her with only right-sided symptoms. The implication was that Dr. Morreale's opinion was no longer operative, because the facts had changed. None of this after-the-fact theory appears in Dr. Reiss' written report.

61. The ALJ finds that Dr. Reiss' factual predicates are not accurate. In fact in his earlier testimony Dr. Reiss acknowledged that the Claimant had had rhizotomies before seeing DIME Dr. Morreale on May 6, 2016 (Respondent's Exhibit. G, p. 44). For example, Dr. Reiss agreed with Dr. Sabin's statement that the Claimant had had excellent relief from her first rhizotomies but the pain had worn off. Dr. Reiss' report

documented also the Claimant's history to that effect (Respondent's Exhibit F, p. 25). Dr. Reiss was also present when Dr. Kawasaki testified that at the time the Claimant saw DIME Dr. Morreale on May 6, 2016, the effects of those first rhizotomies had worn off (T, p. 63: lns 17-25; p. 64: lns 1-4).

62. In addition, on both occasions, rhizotomies were done on both sides. The first, August 2015 rhizotomies were done on both sides in the same procedure. The second rhizotomies were done on both the left and on the right, but on two separate dates–on the left on March 17, 2017, and then on the right, on May 12, 2017 (T, p. 25: lns 13-16).

63. In summary, there is no persuasive evidence supporting Dr. Reiss' testimony that rhizotomies were only performed on the left; or that they were done only after the DIME appointment; or that the Claimant persisted with right-sided pain.

64. Dr. Reiss also questioned the validity of Dr. Morreale's report of a positive Spurling's test on exam.

65. Dr. Reiss acknowledged that when he saw the Claimant in November 2016, she looked like she was in pain. Nonetheless he was only willing to acknowledge that it was possible the Claimant's function was diminished by pain; he maintained only that it was "possible," it would be appropriate, when a patient's function diminishes, to change her restrictions. The Claimant had testified that she had to push herself to get off the couch; that traveling to medical appointments left her "done" for the day.

66. Dr. Reiss stated that he administered the same psychological screening tests at each of his two appointments, in 2014 and again in 2016. He testified that his results were "odd" because they diverged from "concerning" in 2014 to "zero" in 2016. Dr. Reiss, however, nowhere documented in his 2016 report that he administered any psychological tests, as he had in 2014 (Respondent's Exhibit F, p. 33). The Claimant testified that Dr. Reiss had administered psychological tests on a tablet in 2014, but not in 2016. In this regard, the ALJ finds the Claimant more credible than Dr. Reiss.

67. Finally, Dr. Reiss testified that he doesn't recommend rhizotomies because they lose their effectiveness. He doesn't recommend them more than twice because they don't tend to work more than a couple of times. Instead he recommends a different and better rehabilitation program. He did not know whether the Claimant was at MMI because he didn't know how she was doing now.

Claimant's Independent Medical Examiner (IME), David Yamamoto, M.D.

68 At the request of the Claimant, Dr. Yamamoto evaluated the Claimant on March 15, 2017(Claimant's Exhibit 2).

69. Dr. Yamamoto testified that there was a concern by several physicians about myelopathy. In fact, Dr. Kawasaki was hesitant to even perform rhizotomies due to the concern that the instability associated with rhizotomies could worsen the Claimant's myelopathic findings. Dr. Sabin was also concerned about myelopathy. In his 2014 report, Dr. Sabin discussed the tingling and paresthesia which he had found on his exam, and the myelopathy shown on the MRI; these factors formed the basis of Dr. Sabin's 2014 recommendation of an ACDF procedure, initially at C3-4.

70. Dr. Yamamoto was of the opinion that the combination of the MRI evidence in conjunction with the clinical evidence of myelopathy–namely hyperflexia and positive Hoffman's test–were worrisome. A person who performs physical labor is more at risk for progression of her myelopathy. Dr. Yamamoto cited Dr. Kawasaki's concern that the Claimant should avoid any kind of manipulation to the neck because of her condition, as reflective of the proposition that any stress on the neck, by, for example, performing physical labor, put the Claimant at risk.

71. Dr. Yamamoto stated that the pattern of the Claimant's arm numbness would fit myelopathy, even though it did not fit radiculopathy.

72. Dr. Yamamoto was of the opinion that successful rhizotomies do not indicate that the Claimant does not have myelopathy because these are two separate issues. He noted that Claimant's arm numbness had persisted despite the rhizotomies.

73. Dr. Yamamoto stated the opinion that there is a relationship between Dr. Kawasaki's identification of C3-4 and C4-5 as pain generating levels for the purpose of rhizotomies, and Dr. Morreale's identification of the same levels for surgery. In this connection, Dr. Yamamoto noted that the predominant findings on the MRI were at those levels, and that all the authorized treating providers referred to those levels when discussing surgery.

74. Dr. Yamamoto testified that Dr. Sabin's error in believing that the Claimant's C4-5 level had never been treated–when it had been treated with facet injections, medial branch blocks, and rhizotomies–indicated either he had not been provided with the Claimant's records or he had not reviewed them. Dr. Yamamoto found it to be not believable when Dr. Sabin wrote that the Claimant's ROM was normal. This is because Dr. Sabin's evaluation occurred shortly after the DIME evaluation, when the Claimant had a marked decrease in cervical range of motion; and after it had been documented that the Claimant had a fairly high pain level and was not doing well at the time.

75. Dr. Yamamoto was of the opinion that Dr. Sabin's evaluation in 2016 was not adequate to answer the question as to whether the Claimant was a surgical candidate. He agreed with treating physician Dr. Kawasaki that the Claimant should be

referred for another surgical evaluation. He supported Dr. Kawasaki's referral to surgeon, Dr. Ghiselli.

76. When Dr. Yamamoto saw the Claimant in March 2017, she was not doing well. His own assessment matched that of the FCE evaluator one month earlier, in that, the Claimant was not able to work.

77. Dr. Yamamoto was of the opinion that the Claimant's condition was not stable when she was placed at MMI. She deteriorated quite quickly. Only three months after the MMI date, in March 2016, she asked for more treatment.

78. In response to the ALJ's question," Is it your ultimate opinion that the Claimant is not at MMI? Dr. Yamamoto testified, "My opinion is that she is not at MMI."

Ultimate Findings

79. For the reasons articulated herein above, the ALJ finds the opinions of DIME Dr. Morreale, IME Dr. Yamamoto, and ATP Dr. Kawasaki considerably more credible than the opinions of IME Dr. Reiss and referral physician, Dr. Sabin. The ALJ further rinds than any opinions contrary to DIME Dr. Morreale's opinion that the Claimant is not at MMI, amount to a mere difference of opinion which does **not** make it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Morreale's opinion concerning MMI is erroneous. Further, it is more likely than not that DIME Dr. Morreale's surgical recommendation is correct. Additionally, the ALJ finds the Claimant's testimony persuasive, straight-forward and credible,

80. Between conflicting medical opinions, the ALJ makes a rational decision, based on substantial evidence, to accept Dr. Morreale's DIME opinion on MMI and his surgical recommendation, as well as Dr. Yamamoto's opinions, and to reject all opinions to the contrary.

81. The Respondent has failed to prove that it is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Morreale's opinion concerning MMI is wrong. Therefore, Respondent has failed to carry its burden on this issue by clear and convincing evidence.

82. The Claimant has proven that it is more likely than not that the surgery recommended by DIME Dr. Morreale is reasonably necessary to cure and relieve the effects of her admitted injury; and, causally related thereto. Further, the Claimant has proven, by preponderant evidence that further medical treatment for the effects of her admitted injury is causally related thereto and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the opinions of DIME Dr. Morreale, IME Dr. Yamamoto, and ATP Dr. Kawasaki were considerably more credible than the opinions of IME Dr. Reiss and referral physician, Dr. Sabin. As found, any opinions contrary to DIME Dr. Morreale's opinion that the Claimant is not at MMI, amount to a mere difference of opinion which did **not** make it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Morreale's opinion concerning MMI was erroneous. Further, as found, it is more likely than not that DIME Dr. Morreale's

surgical recommendation is correct. Additionally, as found, the Claimant's testimony was persuasive, straight-forward and credible,

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational decision, based on substantial evidence, to accept Dr. Morreale's DIME opinion on MMI and his surgical recommendation, as well as Dr. Yamamoto's opinions, and to reject all opinions to the contrary.

Overcoming DIME Dr. Morreale's Opinion on MMI

c. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable

or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, Respondent failed to prove that it is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Morreale's opinion concerning MMI is wrong. Therefore, Respondent has failed to carry its burden on this issue by clear and convincing evidence. The Claimant is **not** at MMI.

Surgical Recommendation of DIME Dr. Morreale

d. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the admitted injury of December 11, 2013. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of the admitted injury, including the surgery recommended by DIMEDr. Morreale.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir.

2001). “Preponderance” means “the existence of a contested fact is more probable than its nonexistence.” *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden, by a preponderance of the evidence with respect to the surgery recommended by DIME Dr. Morreale and continued medical care and treatment at the hands of her ATPs.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent having failed to overcome the Division Independent Medical Examination opinion of Joseph Morreale, M.D. that the Claimant is not at maximum medical improvement, the Claimant is entitled to continuing benefits to improve her condition.

B. Respondent shall pay the costs of medical care and treatment for the Claimant’s admitted injury of December 11, 2013, including the surgery recommended by Dr. Morreale, subject to the Division of Workers’ Compensation Medical Fee Schedule.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of October 2017.

STIPULATION

Prior to the commencement of hearing, the parties stipulated to an average weekly wage (AWW) of $1,191.07. The stipulation is hereby approved.

REMAINING ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she is entitled to temporary total disability benefits for days of work she alleged to have missed due to her diagnosis of latent tuberculosis?

II. Whether Claimant proved by a preponderance of the evidence that her medical insurance provider(s) are entitled to reimbursement pursuant to Section 8-42-101(6)(a) for medical expenses related to her tuberculosis treatment?

III. Whether Respondents proved by a preponderance of the evidence that Dr. Daniel Olson is an authorized treating physician (ATP)?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a Registered Nurse (RN). She has worked at a number of Centura Health System hospitals over the course of her career, including a stint at St. Mary Corwin Hospital (St. Mary-Corwin). Claimant testified that as a healthcare worker, she was routinely tested for tuberculosis (TB) by her employer, including St. Mary Corwin which operates under the Centura Health System umbrella.

2. On May 19, 2014, Claimant completed an annual TB screening form for Centura Health as part of her St. Mary Corwin employment. She testified that she signed and dated the form and acknowledged that she had not had any signs or symptoms of active TB including "unexplained fever, persistent cough for more than two months, coughs up blood, recurrent night sweats, unexplained weight loss."

3. On August 13, 2014, Claimant provided a blood sample for TB testing. The sample was analyzed and determined to be positive for TB. For unknown reasons, Claimant's test results were not made clear to her before she left the employ of St. Mary Corwin. Rather, she became aware of her positive test results as part of the new employee on-boarding process at Memorial Hospital which she initiated toward the end of January 2016. As part of her new employee on-boarding process, Claimant completed a tuberculin screening form on January 27, 2016. On the completed form,

Claimant checked the box expressly denying any symptoms associated with TB such as a "productive, prolonged cough (over three weeks duration), fever, chills, night sweats, easy fatigability, loss of appetite, unplanned weight loss or bloody sputum." Claimant also provided a blood sample for TB testing on this date which returned a positive result. Claimant was subsequently notified of her positive result by correspondence dated February 1, 2016.

4. Upon learning that she had been exposed to TB and had a positive test result, Claimant filed a worker's compensation claim against the Centura Health System which, as noted above, includes St. Mary Corwin on February 5, 2016. Claimant also underwent a chest x-ray on this date at Memorial Hospital PPMP employee health. The chest x-ray showed "no evidence of frank pulmonary edema, consolidation, pleural effusion, or pneumothorax" consistent with active TB. Claimant was assessed with latent (inactive) TB and instructed to follow-up with her primary care physician (PCP).

5. After filing her claim, Claimant testified that she was directed to Centura Centers for Occupational Medicine (CCOM) where she saw, but was not treated by, Dr. George Johnson on February 12, 2016.

6. During her February 12, 2016 appointment with Dr. Johnson, Claimant again expressly denied chronic cough, night sweats, bloody sputum, or shortness of breath. She denied weight loss or fevers. She denied feeling sick. She indicated that she was not aware of any exposure to a patient who had active TB. Dr. Johnson noted that her February 5, 2016, chest x-ray was normal. He diagnosed "seroconversion of tuberculosis" from an unknown source. While he agreed that Claimant needed treatment to "decrease her risk of developing tuberculosis", he noted that it was "not known how she was exposed." The ALJ interprets the February 12, 2016 note of Dr. Johnson to indicate that he did not believe that Claimant's TB was causally related to her work activities. Consequently, Dr. Johnson advised Claimant that she needed to treat with her "private care doctor."

7. On February 24, 2016, Claimant presented to her new PCP, Dr. Jena Reichelt. During her appointment with Dr. Reichelt, Claimant reported that she had had a positive TB test, but a negative a chest x-ray. Claimant did not report any symptoms associated with TB. Once again, she denied changes in weight, fevers, chills, coughing, or difficulty breathing. Moreover, she did not report fatigue, general malaise, or night sweats. Dr. Reichelt did not take Claimant off of work. Rather, she referred her for an infectious disease consult with Dr. Thomas Hackenberg. Dr. Hackenberg would start Claimant on a course of antibiotics (Rifampin), which would take four months to complete.

8. Respondents filed a "Notice of Contest" denying liability for Claimant's TB on April 5, 2016. The asserted basis for the denial was that Claimant's injury/illness was not work related.

9. On April 20, 2016, Dr. Hackenberg authored a "Progress Note" wherein he noted the reason for Claimant's visit was due to a positive TB screen and that her primary complaint was "anxiety" He also noted that Claimant had "no known TB illness," but in 2012 Claimant had been diagnosed with pertussis and missed a month of work.[1] According to his medical report Claimant denied any weight loss and fever but she noted some night sweats and a sporadic cough for the past few weeks. A review of systems was completed and noted to be negative despite Claimant's report of a "mild daily cough *lately*" (emphasis added). After careful review of the record evidence, the ALJ finds Dr. Hackenberg's April 20, 2016 report to be the first time Claimant complained of a cough and night sweats that she attributes to her latent TB.

10. Claimant testified that she finished her course of Rifampin on or around July 20, 2016. She also testified that her symptoms, particularly her fatigue and night sweats worsened with time. Nonetheless, she acknowledged that she had not been excused from work as a consequence of these asserted symptoms.

11. Dr. Jeffery Schwartz from Colorado Pulmonary Associates, P.C. performed an independent medical examination (IME) at Respondent's request on December 17, 2016. During the IME, Claimant indicated that she took Rifampin as prescribed by Dr. Hackenberg on a daily basis. She reported feeling well since completing the Rifampin, but had stress related to her TB exposure and her risk of recurrence despite having completed treatment.[2] Dr. Schwartz opined that since Claimant had no specific exposure outside of work, it was more likely that Claimant's latent TB was work related. He noted that Claimant was appropriately treated for her dormant TB with four months of Rifampin as prescribed by Dr. Hackenberg.

12. In the questionnaire Claimant completed before her IME with Dr. Schwartz, she reported that she had night sweats, fatigue and general malaise (worse after completing antibiotic treatment) beginning in 2015 and continuing into 2016.

13. Following Dr. Schwartz' IME, Insurer filed a General Admission of Liability on April 5, 2017, for medical benefits only, admitting that Claimant's latent TB was a work related condition.

14. In a follow-up letter issued on May 19, 2017, Dr. Schwartz explained the nature of the symptoms associated with of latent TB. In his letter, Dr. Schwartz reiterated that Claimant had latent TB that had been treated appropriately. He explained that people infected with TB which subsequently prompts, but is controlled by the body's immune system are rarely aware that they have been infected. Regarding

[1] A report dated September 25, 2012 from Claimant's PCP, Dr. Thomas Johnson reveals that she presented to the office with a chief complaint of coughing for five days. According to the note, Claimant had not felt well for 12 days, the last five of which included her having chills, nausea and a moist non-productive cough. Claimant was prescribed Azithromycin. Based upon the specific assertions in this case and the evidence presented, the ALJ finds and concludes that this episode of coughing is unrelated to Claimant's current TB diagnosis.

[2] As noted, Claimant reported anxiety associated with her positive TB test when she was seen by Dr. Hackenberg on April 20, 2016. She also reported having more headaches related to stress which caused her to miss work.

the symptoms related to the initial infection, Dr. Schwartz noted: A patient first infected with TB may have symptoms, consisting of low grade fever and fatigue as a result of their immune response to the infection, which would occur 1 to 2 weeks after their initial exposure and lasting and additional 1-2 weeks. Dr. Schwartz would go on to opine that it would not be consistent in a course of latent TB for a patient to experience symptoms every few months, reiterating that any symptoms associated with a latent TB infection would only occur within the first few weeks after the exposure.

15. Dr. Schwartz noted that Claimant's positive test, in the absence of active TB, signified that she had a prior exposure to TB resulting in an immune response which controlled the initial infection causing it to become inactive, or latent. The ALJ interprets Dr. Schwartz' report/opinions to indicate that while Claimant is infected with live tuberculin bacteria, those bacteria are inactive. Hence she has a positive blood test result but no active disease. Patients falling into this category are diagnosed with "latent" TB. Such patients are asymptomatic and not contagious, unless these organisms become active to produce "active" TB disease related symptoms.

16. Similar to the assertions Claimant included in the questionnaire she completed prior to her IME with Dr. Schwartz, Claimant testified that in hindsight she had symptoms she associated with TB. Specifically, she testified that she had experienced the following symptoms: (1) night sweats; (2) excessive fatigue; (3) general malaise; (4) periodic fevers; and (5) periodic cough. She did not include in her list of symptoms associated with TB, migraine headaches or diarrhea. Rather, Claimant testified that she missed work and had a wage loss because of the aforementioned TB symptoms. Accordingly, she asserts entitlement to temporary total disability (TTD) benefits for 12.5 hours of work per day for the following days: August 7, 2014, October 16, 2014, February 11, 2015, April 2, 2015, April 22-23, 2015, July 22, 2015, September 3, 2015, October 1, 2015, October 27, 2015, October 28-30, 2015, January 16, 2016, February 5, 2016, February 12, 2016 and March 8, 2016.

17. The evidentiary record in this case demonstrates that Claimant had medical appointments for dates of service which span many of the dates she claims TTD for. Specifically, the record demonstrates that Claimant was evaluated multiple times between February 5, 2015 and January 20, 2016. Careful inspection of these records reveals the following:

- On February 5, 2015, Claimant presented to her primary care physician, Dr. Thomas Johnson, for her annual physical. She indicated that her health since her last visit over a year ago was good. She did not report unexplained fevers, fatigue, general malaise, or night sweats

- On February 10, 2015, Claimant completed an annual TB screening form, this time for Penrose St. Francis Hospital, which also operates under the Centura umbrella.[3] Again, she indicated that she had not had any signs or symptoms

[3] Based upon review of the available records, it does not appear that Claimant actually underwent any TB blood testing at this time.

associated with TB including unexplained fever, persistent cough, coughing up blood, recurrent night sweats, or unexplained weight loss.

- On May 27, 2015, Claimant returned to Dr. Thomas Johnson, for a follow-up regarding her borderline hypertension. She reported that her health was very good. She did not report unexplained fevers, fatigue, general malaise, or night sweats.

- On September 21, 2015, Claimant returned to Dr. Thomas Johnson, to complete FMLA paperwork as a consequence of continued migraine headaches. She reported that she was increasingly sensitive to light, sound, and even smells. She was unable to use a computer screen. She had had headaches since she was nine years of age. She reported that the headaches were affecting her work and that she had missed two days that year already because of the headaches. She reported that her triggers were nitrates in meat, red wine, and some other foods. She did not report unexplained fevers, fatigue, general malaise, or night sweats as a reason she needed time off. As noted above, Claimant did not attribute her headaches to TB.

- On October 28, 2015, Claimant presented to Dr. Johnson for complaints of diarrhea; she was concerned that she had a parasite. Claimant reported that she had had abdominal pain and cramping with diarrhea that developed during a trip she had taken to Reno, Nevada. She reported that she was at a party where several other people were taken ill with gastrointestinal illness. The diarrhea had persisted since October 24. She did not report unexplained fevers, fatigue, general malaise, or night sweats associated with her symptoms of diarrhea and as noted above, did not attribute her bout of persistent diarrhea with her TB diagnosis at hearing. Dr. Johnson took Claimant off work form October 27th through October 30th due to her diarrhea and not because of complaints of or symptoms consistent with TB.

- On January 20, 2016, Claimant returned to Dr. Johnson for her annual physical. She reported muscle spasms of the neck and classic migraine with aura. She indicated that she had not had any trouble falling asleep, feeling tired, or having little energy. Consistent with her statement that her health was good her physical examination is devoid of any specific medical problems/complaints other than that Claimant was overweight. There was no report of unexplained fevers or night sweats.

18. The medical evidence presented strongly contradicts Claimant's assertion that she missed multiple days of work after her positive TB test because she was (in hindsight) experiencing symptoms associated with TB. Based upon the medical record, the ALJ finds that Claimant likely has dormant TB which has never developed into a symptomatic case of active TB, including the time period leading up to her treatment with Dr. Hackenberg. Indeed, Dr. Hackenberg noted on April 20, 2016, that Claimant

reported "no known TB illness." Given the content of the medical record, the ALJ credits the opinions of Dr. Schwartz to find that while Claimant could have experienced symptoms associated with her initial TB exposure for as long as two weeks after her initial infection[4], it is improbable, given the latency of Claimant's TB as of her treatment with Dr. Hackenberg, that she had symptoms associated with TB on any date after her positive August 13, 2014, TB test. Moreover, the ALJ finds Claimant's hindsight claims to the contrary unpersuasive from a reporting perspective. Claimant is a nurse with substantial medical training and experience. According to the medical record, she has worked with "many known TB patients." Her completed TB screening forms indicate that she was keenly aware of the symptoms of TB. In addition, Claimant testified that she left the employ of St. Mary Corwin for safety reasons connected to her feeling "extremely exposed" at work. Given the above, the ALJ is persuaded that Claimant is, more probably than not, aware of the serious medical consequences of contracting TB.[5] Consequently, the ALJ finds it unlikely that she would fail to report symptoms consistent with TB during any of the many appointments she had with her PCP from February 5, 2015 through January 2016, if she was, in fact, experiencing such symptoms.

19. Dr. Daniel Olson saw Claimant on May 16, 2017. Claimant testified that she went to this appointment after receiving a letter from Respondents designating Dr. Olson as the new authorized treating provider in the case. At this appointment, Claimant denied recurrent fever, any cough or productive sputum. She did report night sweats three times per week which Dr. Olson concluded was a non-specific symptom. Dr. Olson opined that Claimant had been appropriately treated for latent TB and that she may need continued monitoring with Dr. Hackenberg. He released Claimant to regular duty without restriction.

20. Connie Cridlebaugh testified by phone as the claims representative assigned to the claim. She testified that she attempted to return Claimant to Dr. Johnson at CCOM for a follow-up evaluation in April 2017. In that attempt, Ms. Cridlebaugh discovered that Dr. Johnson was no longer at CCOM. Consequently, a letter was directed to Claimant's counsel by counsel for Respondents on April 12, 2017 designating Dr. Olson as Claimant's ATP.

21. Ms. Cridlebaugh also testified that she reimbursed Claimant for co-payments she submitted for services rendered to her by Dr. Hackenberg, Dr. Reichelt, and Dr. Williams. Claimant confirmed that she was reimbursed for her out of pocket co-payments. Nonetheless, Ms. Cridlebaugh testified that she did not pay for the remaining portion of any billing associated with Claimant's TB treatment as covered by Claimant's health insurer, Kaiser Permanente.

---

[4] Including August 7, 2014.

[5] The ALJ finds the fear and medical uncertainty associated with being exposed to TB in this case explains Claimant's chief complaint of anxiety as reported to Dr. Hackenberg on April 20, 2016 and stress as reported subsequently to Dr. Schwartz during her IME on December 17, 2016. Nonetheless, Claimant specifically reported that she was unable to work as a consequence of fever, night sweats, and extreme fatigue, not stress.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

C. The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the undersigned ALJ concludes that Claimant's hindsight assertions that she had TB symptoms in the weeks and months following her positive August 13, 2014 TB test, including extreme fatigue and night sweats are not credible when the evidentiary record is viewed in its totality. As found,

the medical records submitted belie these assertions as Claimant never developed active TB before she was treated by Dr. Hackenberg and the medical records leading up to her treatment with Dr. Hackenberg are devoid of any reports of night sweats, fever, fatigue, general malaise and/or persistent cough. Indeed, the records submitted are replete with references to "good" health generally. Here, the evidence presented persuades the ALJ that the testimony and opinions of Dr. Schwartz are the most credible and persuasive regarding the symptoms to be expected with an initial exposure to TB and thereafter when the body's immune response controls the preliminary infection causing it to become latent.

Claimant's Entitlement to Temporary Disability Benefits

D. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that she left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). There is no statutory requirement that claimant establish physical disability through the medical opinion of an attending physician. Rather, a claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). Here, Claimant failed to establish a causal connection between her latent TB and her missed time from work. She acknowledged, on cross-examination, that she had missed time from work due to migraine headaches and gastrointestinal issues. Yet, she testified that in hindsight this missed time was really due to symptoms from latent TB. As found, these assertions cannot be reconciled with the content of the medical records submitted into evidence and the more persuasive opinions of Dr. Schwartz regarding the expected course of symptoms associated with a case of latent TB. Here, there is no record of Claimant reporting (1) night sweats; (2) excessive fatigue; (3) general malaise; (4) periodic fevers; and (5) periodic cough to her physicians prior to her treatment with Dr. Hackenberg. In fact, she filled out and signed a TB questionnaire each year, during the period in question, in which she expressly denied that she had any symptoms known to be caused by TB. Additionally, as credibly outlined by Dr. Schwartz, latent TB would not produce sporadic symptoms and certainly would not produce any symptoms after August 13, 2014, at which time Claimant's immune system had properly responded to the infection rendering it dormant. Accordingly, Claimant has failed to persuade the undersigned ALJ that any of the time she missed from work for days after August 13,

2014 was caused by symptoms associated with "latent" TB. Moreover, while the ALJ finds/concludes that Claimant's lost day of work on August 7, 2014 was probably associated with symptoms caused by her initial exposure to TB[6], this constitutes one lost shift in the string of work dates Claimant asserts were lost as a consequence of her TB diagnosis. As noted, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts which she failed to do in this case. Accordingly, the claim for lost wage benefits must be denied and dismissed.

Payment of the Costs Associated with Claimant's TB Treatment

E. Pursuant to C.R.S. § 8-42-101(6)(a), respondents are required to reimburse an "insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided." This reimbursement shall be adjusted pursuant to the fee schedule, as Claimant has already been reimbursed for her out-of-pocket expenses. *See* C.R.S. § 8-42-101(3)(a)(I) & (6)(b). Here, Claimant testified that she had already received reimbursement for co-pays and prescription costs for treatment of her latent TB. The dates of those medical appointments were 2/24/16, 3/7/16, 4/20/16, 5/25/16, 6/2/16, and 7/20/16. *See* Ex. 8:1. Respondents, therefore, are required to reimburse Claimant's health insurance carrier as adjusted by the workers' compensation fee schedule for any and all reasonable and necessary medical treatment related to Claimant TB. *See generally* § 8-42-101(1)(a). Respondents are not required to reimburse Claimant directly for these costs.

Dr. Olson's Status as an Authorized Treating Physician

F. Pursuant to statute, "[e]mployers that are health care providers or governmental entities that currently [have their] own occupational health care provider system, . . . may designate health care providers from their own system and [are] required to provide an alternative physician or corporate medical provider from outside its own system." *See* §8-43-404(5)(a)(II)(A)**,** C.R.S; W.C.R.P. 8-1(B).

G. Treatment is compensable under the Act where it is provided by an "authorized treating physician" (ATP). *Bunch v. ICAO*, 148 P.3d 381, 383 (Colo. App. 2006). Employers are liable for the expenses incurred when, as part of the normal progression of authorized treatment for a compensable injury suffered by a claimant; an authorized treating physician refers a claimant to one or more other physicians. Thus, the designation "authorized treating physician" includes not only those physicians to whom an employer directly refers a claimant, but also those to whom a claimant is referred by an authorized treating physician. *Bestway Concrete v. ICAO*, 984 P.2d 680, 684 (Colo. App. 1999) (citation omitted). Where an ATP refers a claimant to his or her primary care physician for continued care for the work-related condition, the primary care physician becomes authorized. *Cabela v. ICAO*, 198 P.3d 1277, 1281 (Colo. App. 2008). But this referral does not thereby de-authorize the original ATP. *See Loy v. Dillon Companies*, W.C. No. 4-972-625-03 (Feb. 19, 2016).

[6] Crediting the opinions of Dr. Schwartz that symptoms associated with an initial exposure can be expected to manifest within 2 weeks and last up to two weeks as an immune response to the initial infection.

H. Under *Yeck v. ICAO*, 996 228 (Colo. App. 1999) respondents retain the right to authorize an additional physician to provide care forthwith upon receipt of knowledge that the previous designated doctor is now refusing to provide necessary care for nonmedical reasons.

I. Here, the employer, as a health care provider with its own occupational health care provider system, designated Dr. George Johnson at one of its occupational health clinics, CCOM. Claimant attended that appointment and Dr. Johnson referred her to her primary care physician for continued care of her latent TB. Respondents learned that Dr. George Johnson had left CCOM in April of 2017 and that he would not be taking any patients with him. At that point, the persuasive evidence indicates that Respondents designated Dr. Daniel Olson, also within CCOM, as the new ATP. Claimant attended a rescheduled appointment with Dr. Olson on May 16, 2017 and was place at MMI based on the report from that appointment. The evidence presented, persuades the ALJ that Respondents have met their burden to establish that once they learned that Dr. Johnson had left the employ of CCOM, they promptly and properly designated Dr. Olson as Claimant's new ATP.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for temporary benefits is denied and dismissed.

2. Respondents shall reimburse, pursuant to the Colorado Workers' compensation fee schedule, Claimant's health insurance carrier (Kaiser) for all reasonable, necessary and related care rendered to Claimant to cure and relieve her of the effects of her latent TB.

3. Respondents have established by a preponderance of the evidence that Dr. Daniel Olson was properly designated as Claimant's authorized treating physician upon the discovery that Dr. Johnson had left CCOM without taking patients with him..

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 9, 2017

/s/ Richard M. Lamphere_____

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

At the conclusion of the hearing, the ALJ established a briefing schedule: Respondent's opening brief was filed, electronically, 0n August 28, 2017. Claimant filed a hard copy answer brief on September 5, 2017, despite the ALJ's directive at the conclusion of the last session of the hearing to file electronic briefs. The Claimant did not file an electronic brief until October 5, 2017, after being requested to do so by the Office of Administrative Courts. The matter was deemed submitted for decision on October 5, 2017.

ISSUES

The issues concern Respondent's request to overcome the Division Independent Medical Examination (DIME) of Joseph M. Morreale, M.D., concerning his opinion that the Claimant has not yet reached maximum medical improvement (MMI). If Respondent has overcome the DIME determination regarding MMI, then, whether the DIME erred in calculating the Claimant's degree of permanent .impairment. If the Respondent has not overcome the DIME determination regarding MMI, whether the Claimant has proven, by a preponderance of the evidence that the anterior cervical discectomy and fusion at C3-4 and C4-5 is reasonably necessary to treat her work injury;

On overcoming the DIME, the Respondent's burden of proof is "clear and convincing evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on October 5, 1965. She was 51 years old on the hearing dates.

2. On December 11, 2013, the Claimant was injured in a motor vehicle accident while in the course and scope of her employment for the Employer. Her work was as a utility worker. Her job involved maintaining and cleaning grounds and facilities in the parks and recreation district.

3. While heading west on 38th Street, the Claimant was T-boned by another vehicle and she sustained neck, whiplash injuries.

4. Two years later, on December 11, 2015, Robert Kawasaki ,M.D., the Claimant's authorized treating physician (ATP), placed her at MMI.(Respondent's Exhibit G, p. 56).

5. Dr. Kawasaki provided the Claimant with a 15% whole person impairment rating, including a 6% table 53 rating (*AMA Guides to the Evaluation of Permanent Impairment*, 3rd. Ed., Rev.) for the two-level cervical rhizotomies that were performed at C3-4 and 4-5. (*Id.*). Post-MMI maintenance medical treatment was to include pain medications and repeat rhizotomies if the pain returned after nine months. (*Id.*). Respondent filed its Final Admission of Liability (FAL), dated January 8, 2016, consistent with Dr. Kawasaki's report.

The Claimant's History, Post-injury

6. In April 2014, the Claimant began treating with ATP Dr. Kawasaki (Exhibit. 6, 4/29/14).

7. Early on, Dr. Kawasaki felt that the Claimant would be a surgical candidate (May 23, 2017 Hearing Transcript, hereinafter "T," p. 37, lns 6-9) due to hyperflexia and a positive Hoffman sign (T, p. 43: lns 12-20; T, p. 67:lns 22-25; p. 68:lns 1-11), as well as upper extremity paresthesia (T, p. 68:lns 3-5; T, p. 67: lns 22-25; p. 68: lns 1-11) and radiculopathy later shown on EMGs (T, p. 43: lns 21-24). Dr. Kawasaki was of the opinion that the Claimant had signs and symptoms of myelopathy with correlating MRI (magnetic resonance imaging) and EMG findings (T, p. 37: lns 10-13).

8. Dr. Kawasaki was of the opinion that the clinical findings of hyperflexia and positive Hoffman signs were most likely related to the MRI findings of spinal stenosis and cord compression at the C4-5 level (Claimant's Exhibit 6)..

9. In 2014, Dr. Kawasaki referred the Claimant to orthopedic surgeon Jeffrey Sabin, M.D. Dr. Sabin reported, "I feel that the patient would be in need of a C3-4 anterior cervical discectomy and fusion because of the current physical findings and symptomatology of tingling and paresthesis in her upper extremities" (Claimant Exhibit 4).

10. In a follow-up record review, Dr. Sabin added that if [Claimant] has a diagnostic response to facet blocks at C4-5 then the likely solution would be an ACDF procedure at that level (Claimant's Exhibit 4).

11. Pursuant to Dr. Sabin's recommendation, Dr. Kawasaki performed facet injections at the C4-5 level only (Claimant's Exhibit 6). The results were diagnostic.

12. Dr. Kawasaki thought it reasonable that the Claimant be seen by a second-opinion surgeon (Claimant's Exhibit 6). He referred her to orthopedic surgeon Bryan Castro, M.D.

Bryan Castro, M.D and ATP Fr. Kawasaki

13 In his initial evaluation, Dr. Castro reported that the Claimant had numbness and tingling in her arms, which was worse on the *left*, than on the right (Claimant's Exhibit 5). An addendum to the report stated that Dr. Castro felt that an anterior cervical discectomy and fusion at the C3-4 level would certainly be a reasonable consideration, though he wanted a new MRI first (Claimant's Exhibit 5, addendum).

14. The Claimant next saw Dr. Castro on January 5, 2015. Among other complaints, Dr. Castro reported that the Claimant had pain into the *left* upper extremity. Dr. Castro recommended staged injections, but he also stated, "if surgery were to be considered then a two-level ACDF would be a reasonable consideration secondary to degenerative changes seen at C3-4 and C4-5"(Claimant's Exhibit 5, Castro 1/5/15).

15 On February 20, 2015, Dr. Kawasaki performed left C3-4 and C4-5 epidural steroid injection /spinal nerve root block for "*Left* C4 and C5 radiculopathy (Claimant's Exhibit 7).

16. On March 10, 2015, Dr. Kawasaki performed EMGs on the Claimant's *left* side only, which was indicated for "numbness and tingling into the *left* arm and myelopathic findings after MVA." The results were abnormal between C2 and C4. (Respondent's Exhibit G, pp. 38-39). Dr. Kawasaki's diagnoses on that date included "cervical spondylosis with clinical findings for positive upper motor neuron signs with hyperflexia and positive Hoffman signs;" and "C4-5 spinal stenosis with significant myelopathy extending from this level" (Respondent's Exhibit G, p. 35).

17. The Claimant returned to Dr. Castro on April 20, 2015. Dr. Castro wrote that "globally speaking" he did not think the Claimant was a good operative candidate, "However, with upper cervical EMG findings as well as trapezial pain this certainly could fit a C4 or C-5 radiculopathy. I think this is a reasonable consideration." Dr. Castro recommended rhizotomies, but also stated:"Alternatively surgical intervention via an ACDF at some point is a reasonable consideration" (Claimant's Exhibit 5). At the visit as well Dr. Castro recorded that the Claimant had pain in her arms, particularly on the left.

18. On May 13, 2015, Dr. Kawasaki wrote that the Claimant had increased pain with paresthesias in the left upper extremity with Spurling's test (Claimant's Exhibit 7).

19. On June 5, 2015 and again on July 31, 2015, the Claimant underwent bilateral medial branch blocks at C3-4 and C4-5. The results were diagnostic (Claimant's Exhibit 7).

20. The Claimant then proceeded to bilateral rhizotomies at C3-4 and C4-5 on August 28, 2015 (Respondent's Exhibit G, p. 44; Claimant's Exhibit 7).

21. Before the rhizotomies, the Claimant had reported her pain level as 7; she was taking hydrocodone and gabepentin; and her work restrictions were no lifting over 20 pounds. According to the Claimant, she had intense pain in her neck causing headaches; that sunlight would intensify it; she had pain in her shoulders, tingling in her arm; she could not bend over or lift; and, she could not sit, stand or walk for a long time.

22. The rhizotomies were successful in reducing the Claimant's pain and improving her function. They were still in effect as of December 11, 2015 when Dr. Kawasaki placed the Claimant at MMI (Respondent's Exhibit G, pp. 55-59). At MMI, the Claimant reported her pain as zero at rest, 2 with normal activities and 4 with increased activities (Respondent's Exhibit G, p. 56). Her medications were ibuprofen and lidoderm patches. *Id.*

23. Dr. Kawasaki found 10% ROM impairment and assigned 6% from Table 53. His combined rating was 15% whole person. Respondent filed a FAL, admitting for the 15% rating as well as all post-MMI reasonable, necessary, and related medical benefits (Respondent's Exhibit B, p.5).

The Claimant

24. At the time the Claimant was placed at MMI by Dr. Kawasaki, she requested that all work restrictions be removed. The reason for her request was that she was feeling good and she wanted to work. Her occupational physician at Denver Health complied, but ATP Dr. Kawasaki provided permanent restrictions of lifting 50 pounds occasionally, 25 pounds frequently.

25. In January 2016, the Claimant became employed as a custodian for the Denver Public Library. Dr. Kawasaki had signed off on her job description initially, indicating that she had permanent restrictions of 50 pound occasional lift, push and pull (Claimant's Exhibit 8).

26. After working approximately one month at the new job, however, the Claimant was "let go" due to her permanent restrictions. An ADA (Americans with Disabilities Act) process was initiated, which eventually concluded that the Claimant was "disqualified" due to the absence of any position consistent with her restrictions and qualifications. The Claimant has not worked since January 2016.

27. On March 11, 2016, about three months after Dr. Kawasaki's MMI date, the Claimant returned to Dr. Kawasaki (Respondent's Exhibit G, pp. 60-62; Claimant's Exhibit 8). She requested that she be returned to Dr. Sabin for surgical evaluation. The Claimant was looking for a more permanent solution, in that the pre-MMI rhizotomies

had begun to wear off and she could feel the pain returning. Dr. Kawasaki declined to make the referral on the ground that she was still doing well.

Division Independent Medical Examination by Joseph Morreale, M.D.

28 Previously, the Claimant had timely objected to Respondent's FAL and had requested a DIME. She was seen by DIME physician Dr. Morreale on May 6, 2016. Dr. Morreale is a spine surgeon (T, p. 36:lns 21-23). Dr. Morreale recommended an anterior cervical discectomy and fusion (hereinafter "ACDF") at C3-4 and C4-5 before placing the Claimant at MMI, if the patient wished to proceed with surgery (Respondent's Exhibit E, p. 19).

29. According to the Claimant, as of the time she was evaluated by Dr. Morreale, her rhizotomies had worn off and her pain had returned. She felt as bad as she had felt before the first rhizotomies.

30. According to Dr. Kawasaki, Dr. Morreale's recommendation of surgery, and the more limited range of motion found by him, reflected that the Claimant's condition had worsened as of the May 6, 2016 date of the DIME appointment (T, p. 63: lns 17-25; p. 64: lns 1-4).

31. Regarding Dr. Morreale's provisional impairment rating, Dr. Kawasaki disagreed only with the 7% Table 53 rating. Dr. Kawasaki stated it should have been 6%, so that the total combined rating would have been 24% (T, p. 65: lns 19-25).

32. The Claimant returned to Dr. Kawasaki in June 2016. On June 27, 2016, she described herself as miserable (Respondent's Exhibit G, p. 69), which was attributable, according to Dr. Kawasaki, to the re-growth of her medial branch nerves (T, p. 45: lns 22-25; p. 46 : lns 1-2). On account of her worsening condition as well as DIME Dr. Morreale's recommendation, Dr. Kawasaki referred the Claimant back to Dr. Sabin (T, p. 46: lns 3-9).

Jeffrey Sabin, M.D.

33. The Claimant saw Dr. Sabin on July 22, 2016. Dr. Sabin mistakenly believed that the Claimant's C4-5 level had never been treated (Respondent's Exhibit H, p. 102). In fact, the C4-5 level had been treated with stand-alone facet injections (Claimant's Exhibit 6); a spinal nerve root block for left C4 and C5 radiculopathy (Claimant's Exhibit 7); medial branch blocks (Claimant's Exhibit 7); medial branch blocks again (Claimant's Exhibit 7; Respondent's Exhibit G, p. 41); and rhizotomies (Claimant's Exhibit 7; Respondent's Exhibit G, p. 44). Dr. Sabin recommended repeat rhizotomies.

34. Dr. Sabin had previously observed that the Claimant had had excellent relief from her previous rhizotomies but now her pain had returned (Respondent's.

Exhibit H, p. 102). Despite the Claimant's increased pain, Dr. Sabin reported that the Claimant's cervical range of motion was normal. According to the Claimant, Dr. Sabin never examined her for ROM. Dr. Sabin's report is at odds with DIME Dr. Morreale's recent 19% measured ROM impairment (as well as Dr. Kawasaki's earlier 10% ROM impairment, when the initial rhizotomies were still in effect).

35. The Claimant had understood from her appointment with Dr. Sabin that he could not do surgery because the Respondent had not accepted all the (cervical) "levels" involved. In his first, 2014 report, Respondent's Independent Medical Examiner (IME), Brian Reiss, M.D. had stated that the C4-5 level was not related to the accident (Respondent's Exhibit F, p. 30).

Return to ATP Dr. Kawasaki and Referral to Gary Ghiselli, M.D.

36. The Claimant returned to Dr. Kawasaki two weeks after Dr. Sabin's appointment. At that time, Dr. Kawasaki supplemented her pain relief with a prescription for Tramadol (Respondent's Exhibit G, p.74; Claimant's Exhibit 8). Pursuant to Dr. Sabin's recommendation, the Claimant enquired with Dr. Kawasaki about repeat rhizotomies, and he referred her to another surgeon, Gary Ghiselli, M.D. As the Claimant understood it, Dr. Kawasaki made the referral to surgeon Dr. Ghiselli "for his own purposes."

37. In his August 5, 2016 note discussing his referral to Dr. Ghiselli, Dr. Kawasaki wrote that previously Dr. Castro had been against surgery. He later acknowledged in his testimony that he had been mistaken regarding Dr. Castro's opinion (T, p. 19: lns 16-19; T, p. 35: lns 15-25; p. 36: lns 1-15).

38. Respondent denied authorization of Dr. Kawasaki's referral to Dr. Ghiselli (Claimant's Exhibit 10). In the course of its denial, Respondent repeated Dr. Kawasaki's erroneous statement regarding Dr. Castro's opinion. Respondent also stated, "If Dr. Kawasaki is making the referral because [Claimant] wants the surgery, she has the option of seeking her own opinion (and paying for it). If that physician wants to do surgery, she can choose to do the surgery under her own insurance and litigate it through the worker's compensation system."

39. The Claimant next saw Dr. Kawasaki on November 11, 2016, at which time he told her that his referral to surgeon Dr. Ghiselli had been denied (Respondent's Exhibit G, p. 81-82; Claimant's Exhibit 8). Since surgical referral had been denied, the Claimant requested repeat rhizotomies.

40. Also on November 11, 2016, the Claimant again described herself as miserable. She had obtained prescriptions for Notriptyline, Cyclobenzaprine and Etodolac from her personal physician. Her personal physician referred her to the surgical department, but the Claimant was unable to make an appointment with a surgeon under her personal insurance because her injury was considered work-related.

41. Two months later, on January 20, 2017, the Claimant saw Dr. Kawasaki (Respondent's Exhibit G, p. 78-79; Claimant Exhibit 9). He wrote that she was frustrated and felt that she was not being treated appropriately. According to the Claimant, she felt she wasn't getting any help. She understood that Dr. Kawasaki could see that she was in pain. She needed to know if she could undergo surgery but she was not able to see a surgeon; she wanted to know about repeat rhizotomies but nothing had been done about that. At that point, Dr. Kawasaki requested repeat rhizotomies.

42. On February 13, 2017, the Claimant underwent a Functional Capacity Evaluation (FCE), at her request. The therapist concluded that the Claimant was unable to work at all due to variable and very short tolerances (See Claimant's Exhibit 3, p. 2 of 22, ¶ 5). The Claimant testified that her condition as documented by the FCE had been her condition for many months before that.

43. According to Dr. Kawasaki, the FCE was probably a valid reflection of her function at the time (T, p. 29:lns 22-25; p. 30: ln 1). He also stated that the 50-pound permanent restriction he imposed at MMI had no longer been operative, in that the Claimant's pain had gone up and her function declined (T, p. 40: lns 5-18). At no time after the Claimant's pain returned would he have approved a job for the Claimant lifting 50 pounds (T, p. 62: lns 2-7).

44. In his written reports, Dr. Kawasaki never changed the Claimant's permanent restrictions. The Claimant understood that the reason he believed he could not change them was because they were "permanent."

45. Repeat rhizotomies were done on each side on separate dates, with the second procedure done on May 12, 2017 (T, p. 25:lns 13-14). As of the second, August 21, 2017 hearing date, about three months after the last procedure, the Claimant was still doing well, but she could feel the pressure returning.

46. After the repeat rhizotomies, Dr. Kawasaki referred the Claimant for physical therapy (PT). His hope was to increase her function so that in the long run she may be able to return to lifting 50 pounds (T, p. 39: lns 1-10). According to the Claimant the PT was helping her. She had not yet began exercises to increase her lifting capacities.

47. According to Dr. Kawasaki, his final MMI date was contingent on whether or not the Claimant underwent the ACDF procedure (T, p. 41:lns 4-7).

48. The Claimant wanted the surgery recommended by DIME Dr. Morreale. She explained that the rhizotomies wear off, and she needs a more permanent solution.

Respondent's Independent Medical Examiner (IME), Brian Reiss, M.D.

49. At the request of Respondent, Dr. Reiss evaluated the Claimant twice, in 2014 and in 2016 (Respondent's Exhibit F).

50 Dr. Reiss did not agree with the surgical recommendation. He did not believe the Claimant had any myelopathy, or radiculopathy. He stated that the levels selected for surgery (C3-4 and C4-5) were arbitrary and speculative, in that the pain generators had not been identified, as required by the Medical Treatment Guidelines (MTG). He stated the opinion that the surgery would not help and could hurt. He recommended a better exercise and conditioning program and perhaps medication modification.

51. Dr. Reiss testified that Dr. Kawasaki's diagnosis of myelopathy was pure speculation, on the ground that Dr. Kawasaki relied solely on hyperflexia in support of his diagnosis. The ALJ finds that this is not correct. In addition to hyperflexia, in support of his diagnosis of myelopathy, Dr. Kawasaki also identified positive Hoffman's signs and upper extremity paresthesia (T, p. 67: lns 22-25; p. 68 : lns 1-11) as well as the MRI (T, p. 37: lns 10-13; also, Claimant's Exhibit 6).

52. According to Dr. Reiss, while it was appropriate for Dr. Kawasaki to perform rhizotomies at the C3-4 level, the rhizotomies at the C4-5 level were performed in the absence of adequate information. Specifically, Dr. Reiss testified that Dr. Kawasaki was missing diagnostic information regarding the C4-5 level, which he could have obtained had he performed facet injections or medial branch blocks at the C4-5 level alone (instead of at the same time as at the C3-4 level).

53. In fact, facet injections were done at C4-5 alone (Claimant's Exhibit 6). In rebuttal, after this information was presented, Dr. Reiss significantly revised his testimony. He then contended that facet injections are not sufficiently diagnostic. This is internally contradictory within Dr. Reiss' testimony. Dr. Kawasaki had been following Dr. Sabin's recommendation to perform facet injections at C4-5 to aid in diagnosis of the C4-5 level for surgery (Claimant's Exhibit 4). The ALJ finds that Dr. Reiss' testimony in this regard lacks credibility.

54. Dr. Reiss testified that it was somewhat speculative for anyone to chose C3-4 and C4-5 as the levels at which a surgical procedure would be appropriate. He was unwilling to state whether the recommendation and/or performance of "speculative" surgery was medical malpractice.

55. When asked specifically whether the identification of those two levels by treating surgeon Dr. Castro was "speculative or arbitrary," Dr. Reiss shifted his direction and claimed that the facts had changed after Dr. Castro's recommendations. Specifically, Dr. Reiss contended that at the time she was seen by Dr. Castro, the

Claimant was complaining of *right* upper extremity (RUE) symptoms, but that after her visits with Dr. Castro, her complaints switched to the *left.*

56. Again, Dr. Reiss' factual predicate is inaccurate. At each of the three appointments with Dr. Castro, the Claimant had complained of *left* upper extremity symptoms (Claimant's Exhibit 5). In addition, as stated, during the same time period, namely on February 20, 2015 and on March 10, 2015, Dr. Kawasaki performed procedures and testing on the **left** on account of **left**-sided upper extremity symptoms (Claimant's Exhibit 7).

57. Dr. Reiss wrote in his 2016 report that he would agree with Dr. Castro that surgical intervention is *not* indicated here (Respondent's Exhibit. F, p. 24). Dr. Castro's opinion, as stated in Dr. Castro's records, is that surgical intervention *is* indicated here. There is no documentation in any report written by Dr. Reiss that he had reviewed any of Dr. Castro's records. In rebuttal Dr. Reiss contended he had reviewed Dr. Castro's reports before his hearing testimony, even if his report does not mention he reviewed them at that time. The ALJ finds that this is one more anomaly detracting from dr. Reiss' overall credibility.

58. Similarly, Dr. Reiss stated that Dr. Sabin's identification of the C4-5 level as one of two levels for surgery was speculative. Dr. Reiss could not adequately support his opinion of "speculative."

59. As he had stated in his written report, in which he described Dr. Morreale's proposed surgery as "arbitrary" (Respondent's Exhibit F, p. 24), Dr. Reiss stated that DIME Dr. Morreale's selection of the C3-4 and C4-5 levels as the areas for surgery was speculative and arbitrary. It was his opinion that the surgery proposed by DIME Dr. Morreale was unlikely to improve the Claimant's condition and may well make her worse (*see also* Respondent's. Exhibit F, p. 24).

60. Dr. Reiss, however, was unwilling to characterize Dr. Morreale's opinion as so lacking in medical foundation so as to be beneath the medical standard of care. Instead, he claimed that Dr. Morreale saw the patient before she had had facet rhizotomies; but that, according to Dr. Reiss, after the DIME evaluation, the Claimant had left-sided rhizotomies which resolved her left-sided symptoms and left her with only right-sided symptoms. The implication was that Dr. Morreale's opinion was no longer operative, because the facts had changed. None of this after-the-fact theory appears in Dr. Reiss' written report.

61. The ALJ finds that Dr. Reiss' factual predicates are not accurate. In fact in his earlier testimony Dr. Reiss acknowledged that the Claimant had had rhizotomies before seeing DIME Dr. Morreale on May 6, 2016 (Respondent's Exhibit. G, p. 44). For example, Dr. Reiss agreed with Dr. Sabin's statement that the Claimant had had excellent relief from her first rhizotomies but the pain had worn off. Dr. Reiss' report

documented also the Claimant's history to that effect (Respondent's Exhibit F, p. 25). Dr. Reiss was also present when Dr. Kawasaki testified that at the time the Claimant saw DIME Dr. Morreale on May 6, 2016, the effects of those first rhizotomies had worn off (T, p. 63: lns 17-25; p. 64: lns 1-4).

62. In addition, on both occasions, rhizotomies were done on both sides. The first, August 2015 rhizotomies were done on both sides in the same procedure. The second rhizotomies were done on both the left and on the right, but on two separate dates–on the left on March 17, 2017, and then on the right, on May 12, 2017 (T, p. 25: lns 13-16).

63. In summary, there is no persuasive evidence supporting Dr. Reiss' testimony that rhizotomies were only performed on the left; or that they were done only after the DIME appointment; or that the Claimant persisted with right-sided pain.

64. Dr. Reiss also questioned the validity of Dr. Morreale's report of a positive Spurling's test on exam.

65. Dr. Reiss acknowledged that when he saw the Claimant in November 2016, she looked like she was in pain. Nonetheless he was only willing to acknowledge that it was possible the Claimant's function was diminished by pain; he maintained only that it was "possible," it would be appropriate, when a patient's function diminishes, to change her restrictions. The Claimant had testified that she had to push herself to get off the couch; that traveling to medical appointments left her "done" for the day.

66. Dr. Reiss stated that he administered the same psychological screening tests at each of his two appointments, in 2014 and again in 2016. He testified that his results were "odd" because they diverged from "concerning" in 2014 to "zero" in 2016. Dr. Reiss, however, nowhere documented in his 2016 report that he administered any psychological tests, as he had in 2014 (Respondent's Exhibit F, p. 33). The Claimant testified that Dr. Reiss had administered psychological tests on a tablet in 2014, but not in 2016. In this regard, the ALJ finds the Claimant more credible than Dr. Reiss.

67. Finally, Dr. Reiss testified that he doesn't recommend rhizotomies because they lose their effectiveness. He doesn't recommend them more than twice because they don't tend to work more than a couple of times. Instead he recommends a different and better rehabilitation program. He did not know whether the Claimant was at MMI because he didn't know how she was doing now.

Claimant's Independent Medical Examiner (IME), David Yamamoto, M.D.

68 At the request of the Claimant, Dr. Yamamoto evaluated the Claimant on March 15, 2017(Claimant's Exhibit 2).

69. Dr. Yamamoto testified that there was a concern by several physicians about myelopathy. In fact, Dr. Kawasaki was hesitant to even perform rhizotomies due to the concern that the instability associated with rhizotomies could worsen the Claimant's myelopathic findings. Dr. Sabin was also concerned about myelopathy. In his 2014 report, Dr. Sabin discussed the tingling and paresthesia which he had found on his exam, and the myelopathy shown on the MRI; these factors formed the basis of Dr. Sabin's 2014 recommendation of an ACDF procedure, initially at C3-4.

70. Dr. Yamamoto was of the opinion that the combination of the MRI evidence in conjunction with the clinical evidence of myelopathy–namely hyperflexia and positive Hoffman's test–were worrisome. A person who performs physical labor is more at risk for progression of her myelopathy. Dr. Yamamoto cited Dr. Kawasaki's concern that the Claimant should avoid any kind of manipulation to the neck because of her condition, as reflective of the proposition that any stress on the neck, by, for example, performing physical labor, put the Claimant at risk.

71. Dr. Yamamoto stated that the pattern of the Claimant's arm numbness would fit myelopathy, even though it did not fit radiculopathy.

72. Dr. Yamamoto was of the opinion that successful rhizotomies do not indicate that the Claimant does not have myelopathy because these are two separate issues. He noted that Claimant's arm numbness had persisted despite the rhizotomies.

73. Dr. Yamamoto stated the opinion that there is a relationship between Dr. Kawasaki's identification of C3-4 and C4-5 as pain generating levels for the purpose of rhizotomies, and Dr. Morreale's identification of the same levels for surgery. In this connection, Dr. Yamamoto noted that the predominant findings on the MRI were at those levels, and that all the authorized treating providers referred to those levels when discussing surgery.

74. Dr. Yamamoto testified that Dr. Sabin's error in believing that the Claimant's C4-5 level had never been treated–when it had been treated with facet injections, medial branch blocks, and rhizotomies–indicated either he had not been provided with the Claimant's records or he had not reviewed them. Dr. Yamamoto found it to be not believable when Dr. Sabin wrote that the Claimant's ROM was normal. This is because Dr. Sabin's evaluation occurred shortly after the DIME evaluation, when the Claimant had a marked decrease in cervical range of motion; and after it had been documented that the Claimant had a fairly high pain level and was not doing well at the time.

75. Dr. Yamamoto was of the opinion that Dr. Sabin's evaluation in 2016 was not adequate to answer the question as to whether the Claimant was a surgical candidate. He agreed with treating physician Dr. Kawasaki that the Claimant should be

referred for another surgical evaluation. He supported Dr. Kawasaki's referral to surgeon, Dr. Ghiselli.

76. When Dr. Yamamoto saw the Claimant in March 2017, she was not doing well. His own assessment matched that of the FCE evaluator one month earlier, in that, the Claimant was not able to work.

77. Dr. Yamamoto was of the opinion that the Claimant's condition was not stable when she was placed at MMI. She deteriorated quite quickly. Only three months after the MMI date, in March 2016, she asked for more treatment.

78. In response to the ALJ's question," Is it your ultimate opinion that the Claimant is not at MMI? Dr. Yamamoto testified, "My opinion is that she is not at MMI."

Ultimate Findings

79. For the reasons articulated herein above, the ALJ finds the opinions of DIME Dr. Morreale, IME Dr. Yamamoto, and ATP Dr. Kawasaki considerably more credible than the opinions of IME Dr. Reiss and referral physician, Dr. Sabin. The ALJ further rinds than any opinions contrary to DIME Dr. Morreale's opinion that the Claimant is not at MMI, amount to a mere difference of opinion which does **not** make it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Morreale's opinion concerning MMI is erroneous. Further, it is more likely than not that DIME Dr. Morreale's surgical recommendation is correct. Additionally, the ALJ finds the Claimant's testimony persuasive, straight-forward and credible,

80. Between conflicting medical opinions, the ALJ makes a rational decision, based on substantial evidence, to accept Dr. Morreale's DIME opinion on MMI and his surgical recommendation, as well as Dr. Yamamoto's opinions, and to reject all opinions to the contrary.

81. The Respondent has failed to prove that it is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Morreale's opinion concerning MMI is wrong. Therefore, Respondent has failed to carry its burden on this issue by clear and convincing evidence.

82. The Claimant has proven that it is more likely than not that the surgery recommended by DIME Dr. Morreale is reasonably necessary to cure and relieve the effects of her admitted injury; and, causally related thereto. Further, the Claimant has proven, by preponderant evidence that further medical treatment for the effects of her admitted injury is causally related thereto and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the opinions of DIME Dr. Morreale, IME Dr. Yamamoto, and ATP Dr. Kawasaki were considerably more credible than the opinions of IME Dr. Reiss and referral physician, Dr. Sabin. As found, any opinions contrary to DIME Dr. Morreale's opinion that the Claimant is not at MMI, amount to a mere difference of opinion which did **not** make it highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Morreale's opinion concerning MMI was erroneous. Further, as found, it is more likely than not that DIME Dr. Morreale's

surgical recommendation is correct. Additionally, as found, the Claimant's testimony was persuasive, straight-forward and credible,

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational decision, based on substantial evidence, to accept Dr. Morreale's DIME opinion on MMI and his surgical recommendation, as well as Dr. Yamamoto's opinions, and to reject all opinions to the contrary.

Overcoming DIME Dr. Morreale's Opinion on MMI

c. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable

or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, Respondent failed to prove that it is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Morreale's opinion concerning MMI is wrong. Therefore, Respondent has failed to carry its burden on this issue by clear and convincing evidence. The Claimant is **not** at MMI.

Surgical Recommendation of DIME Dr. Morreale

d. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the admitted injury of December 11, 2013. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of the admitted injury, including the surgery recommended by DIMEDr. Morreale.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir.

2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden, by a preponderance of the evidence with respect to the surgery recommended by DIME Dr. Morreale and continued medical care and treatment at the hands of her ATPs.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent having failed to overcome the Division Independent Medical Examination opinion of Joseph Morreale, M.D. that the Claimant is not at maximum medical improvement, the Claimant is entitled to continuing benefits to improve her condition.

B. Respondent shall pay the costs of medical care and treatment for the Claimant's admitted injury of December 11, 2013, including the surgery recommended by Dr. Morreale, subject to the Division of Workers' Compensation Medical Fee Schedule.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 6 day of October 2017.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Determination of Claimant's average weekly wage

2. Whether Claimant has overcome the opinion of division independent medical examination (DIME) physician John Sacha, M.D. on the date of maximum medical improvement (MMI).

3. Whether Claimant has overcome the opinion of DIME physician Dr. Sacha on her permanent partial disability (PPD) impairment rating.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from March 15, 2015 and ongoing.

5. Whether Claimant has established by a preponderance of the evidence an entitlement to continued medical benefits.

PRELIMINARY ISSUES

Claimant indicated at outset of hearing that she was not seeking permanent total disability and that issue was stricken without prejudice. Additionally, the issues of overpayment and offsets were also reserved for future determination.

FINDINGS OF FACT

1. Claimant worked for Employer as a housekeeper. Wage records show that at the time of her injury, and in the year leading up to her injury, Claimant consistently earned gross wages between $1,305 and $1,380 during each two week pay period. During the year leading up to her injury, there were seven pay periods (covering 14 weeks) where she earned slightly more than her average pay, with a maximum two week gross wage paid of $1,536.67. *See* Exhibit Z.

2. On December 14, 2011 Claimant sustained a compensable injury to her right shoulder when she was putting linen on a cart at work and felt the sudden onset of pain in her anterior shoulder. *See* Exhibit B.

3. On December 22, 2011 Claimant underwent an MRI of her right shoulder. The impression provided by Eric Handley, M.D. was: mild supraspinatus and infraspinatus tendinopathy with bursal surface fraying but no discrete tearing, mild

subacromial subdeltoid bursitis; mild intra-articular long head biceps tendinopathy versus strain; and minimal AC joint arthropathy. *See* Exhibit C.

4. Claimant treated conservatively, undergoing more than 30 physical therapy visits and several injections in her shoulder. Claimant reported in October of 2012 that the injections did not help her and that she believed they made her worse. She also reported that the physical therapy did not do anything to alleviate her symptoms. At an independent medical evaluation October 2, 2012, Steven Horan, M.D. noted that Claimant had persistent pain and discomfort in the shoulder, particularly the front and lateral aspect since her December 2011 injury. Dr. Horan noted that Claimant had undergone subacromial injections, bicep tendon injections, acromioclavicular joint injections, physical therapy, massage therapy, and activity modifications but that Claimant reported being no better since the injury. *See* Exhibit D.

5. On physical examination, Dr. Horan noted that Claimant was really guarding and noted her poor effort. Dr. Horan was surprised that Claimant was still in such pain after so many treatment modalities. Dr. Horan opined that Claimant's subjective complaints were somewhat out of proportion to his findings, and again noted the very poor effort during parts of his examination. Dr. Horan noted that the only modality of treatment that had not been tried was chiropractic manipulation and he recommended four treatments. Dr. Horan indicated that after four chiropractic treatments, he would consider Claimant at maximum medical improvement. *See* Exhibit D.

6. Approximately 1.5 years later, and on May 27, 2014, Claimant underwent right shoulder surgery performed by Thomas Hackett, M.D. Dr. Hackett noted that Claimant had continued tendinopathy of her rotator cuff and clinical signs of impingement as well as anterior shoulder pain at the site of her biceps. Dr. Hackett noted that Claimant had failed conservative management and elected to proceed with surgery. Dr. Hackett performed a right shoulder arthroscopy, open subpectoral long head biceps tenodesis, limited debridement of the glenohumeral joint, subacromial decompression with partial acromioplasty, and CA ligament release. *See* Exhibit E.

7. On November 6, 2014 Claimant was evaluated by Dr. Hackett's PA, Michael Stevenson. PA Stevenson noted that Claimant was five months status post a right shoulder surgery and that Claimant was getting great range of motion with physical therapy. PA Stevenson noted that Claimant was improving very well, had great recovered range of motion, but was still weak in the right shoulder. He noted that Claimant appeared to be getting some tone back in the right shoulder and right upper extremity. He planned for physical therapy to focus on work hardening and strengthening. *See* Exhibit F.

8. On January 29, 2015 Claimant was evaluated by Dr. Hackett. Claimant reported being markedly improved with some persistent pain worse with activity, that she did not believe her strength was back, and that she was not ready to return to work yet. Dr. Hackett noted that the reported pain with glenohumeral based exercises

seemed to be in contrast with Claimant's original injury. On physical examination, Dr. Hackett noted that Claimant had slightly decreased strength associated with her reported pain but that when he prompted her to work through the pain, she had 5/5 strength. Dr. Hackett noted that since Claimant was doing well, he did not anticipate Claimant following up with them further, and that the return to work would be left up to her workers' compensation doctor. Dr. Hackett noted that Claimant had no need for additional orthopedic intervention, surgical or otherwise and needed to give her shoulder time to slowly improve strength. Dr. Hackett noted that after an additional month of physical therapy Claimant would likely be able to continue with a home exercise program. *See* Exhibit H.

9. On March 11, 2015 Claimant was evaluated by Susan Lan, D.O. Claimant reported better with only 1/10 pain with movement. Claimant reported that her left shoulder had not improved. Dr. Lan noted the right shoulder had good strength when Claimant tried but with give way weakness. Dr. Lan opined that Claimant was overly sensitive to pain and that the fairly benign exam did not match Claimant's described pain or inability to perform tasks. Dr. Lan noted that Claimant was at maximum medical improvement for the right shoulder and that Claimant was not happy about it, but that there was nothing else to offer Claimant other than time. Dr. Lan opined that Claimant's underlying autoimmunity in combination with a downsloping acromion set Claimant up for inflammatory shoulder issues which could account for the delayed recover and the left shoulder pain. Dr. Lan opined that maintenance should include follow-ups and short courses of physical therapy for flares. Dr. Lan opined that permanent work restrictions should include lifting 15-20 pounds, 10 pounds reaching away from the body, and limited overhead work. Dr. Lan did not recommend surgery for the left shoulder given the minimal findings on left shoulder MRI but indicated Claimant would see Dr. Hackett one last time for an opinion on the left shoulder. Dr. Lan opined that Claimant had a ratable impairment per AMA Guides to the Evaluation of Permanent Impairment, 3rd Edition, Revised for her right shoulder with a 2% range of motion impairment that converted to a 2% upper extremity impairment and a 1% whole person impairment. *See* Exhibit I.

10. On March 26, 2015 Claimant was evaluated by Dr. Hackett. Claimant reported that her right shoulder was doing much better and felt much stronger. Dr. Hackett noted that Claimant reported symptoms in her left shoulder from possible overuse. Dr. Hackett performed a physical examination and reviewed a left shoulder MRI. Dr. Hackett opined that Claimant was at maximum medical improvement for the right shoulder and that she had left shoulder rotator-cuff tendinitis impingement. He recommended physical therapy with some rotator cuff strengthening and opined that Claimant did not need to return back for evaluation of the left shoulder. Dr. Hackett advised Claimant to continue a strengthening program for the left shoulder and opined that Claimant was at maximum medical improvement for the left as well. Dr. Hackett opined that he did not anticipate any significant disability in the future. *See* Exhibit H.

11. On April 16, 2015 Claimant was evaluated by Frederick Scherr, M.D. Claimant reported better with pain at 1/10 with movement. Dr. Scherr noted that Dr.

Hackett had opined that Claimant was at maximum medical improvement for both shoulders. Claimant reported continued discomfort in both shoulders. On examination, Dr. Scherr noted that Claimant was diffusely tender throughout examination on both shoulders. Dr. Scherr noted excellent range of motion in the left shoulder without difficulty of pain. Dr. Scherr noted inconsistent range of motion in the right shoulder that was worse than her March 11, 2015 visit and inconsistent provocative testing. Dr. Scherr noted that Claimant's subjective complaints had little objective basis. Dr. Scherr closed the case and noted impairment as per Dr. Lan's March 11, 2015 evaluation. Dr. Scherr recommended six physical therapy visits over the next six months. *See* Exhibit I.

12. On August 27, 2015 Claimant was evaluated by Dr. Scherr. Claimant reported she was due to attend a DIME in the near future and that she was not happy with her impairment rating on March 11, 2015. Claimant reported pain at a 6/10. Dr. Scherr noted that Claimant had positive SSA, underlying autoimmunity, which he opined may be contributing to ongoing pain and would of course not be a work related issued. Dr. Scherr noted no change in Claimant's examination from the exam in April. Dr. Scherr opined that Claimant was still at maximum medical improvement and that she needed to follow up with her primary care provider in regards to treatment for her SSA which may also benefit her shoulders. *See* Exhibit I.

13. On January 20, 2016 Claimant underwent a DIME performed by Scott Hompland, D.O. Claimant reported that while working and handling linens, she attempted to toss a 40-50 pound bag of linens six feet and felt a pop in both of her shoulders. Claimant reported that she did not feel that she was at maximum medical improvement, that she had a pain level of 7/10 that was constant and worse in the evening. Dr. Hompland noted that he did not understand on examination why Claimant would have intrinsic muscle weakness. On examination, Dr. Hompland noted palpation tenderness in the trapezius muscle, levitor scapular muscle, supraspinatus muscle, and rhomboid muscle of the right shoulder girdle. Dr. Hompland noted that the right shoulder range of motion on his examination was significantly different than the range of motion noted in September of 2015 by physical therapy. He opined that the significant decline in level of function and dramatic reduction in level of function could include development of a frozen shoulder, learned helplessness, increased pain, or a deliberate attempt to mislead him to enhance impairment rating. Due to the significant reduction and decline in functional ability, he found that Claimants was not at maximum medical improvement and needed a further evaluation with Dr. Hackett as well as four physical therapy visits. He noted that after the evaluation and four sessions of physical therapy, Claimant would be able to reach the ranges of motion documented previously and would be at maximum medical improvement. *See* Exhibit J.

14. On April 4, 2016 Claimant was evaluated by Dr. Scherr. Dr. Scherr noted that Claimant had seen Dr. Hackett and also underwent the recommended 4 sessions of physical therapy. Dr. Hackett injected Claimant's shoulder which only helped for a few days. Dr. Hackett did not offer surgery and also opined that physical therapy might be helpful. Claimant reported that the 4 sessions of physical therapy were not helpful and that she was no better. Dr. Scherr noted that Claimant's pain behaviors were

worse at this visit and that when trying to assist Claimant very gently through any range of motion she jumped and jerked throughout as if it was causing extreme pain. Dr. Scherr noted it was very difficult to examine Claimant due to her pain behaviors. *See* Exhibit K.

15. Dr. Scherr noted that he reviewed surveillance that showed someone that was not bothered with pain and that did not protect the arm like Claimant did while in the office for examination. Dr. Scherr opined that Claimant was still at maximum medical improvement and had been since March 11, 2015. Dr. Scherr opined that no additional care, procedure, or modality would improve the underlying condition and that he was at a loss to explain Claimant's continued pain and exam. Dr. Scherr opined that Claimant had a ratable impairment of 2% for the right upper extremity, that converted to a 1% whole person impairment. *See* Exhibit K.

16. On September 13, 2016 Claimant was evaluated by Dr. Scherr. He noted that Claimant had seen DIME physician Dr. Hompland in May and that Dr. Hompland again opined that Claimant was not at maximum medical improvement and needed a definitive answer from Dr. Hackett as to whether or not Claimant needed surgery. Dr. Hompland also opined that perhaps manipulation under anesthesia would be of benefit. Claimant then saw Dr. Hackett in June of 2016 and he did not like the idea of manipulation under anesthesia but offered an injection which Claimant underwent. Claimant reported to Dr. Scherr that the injection helped with some of the pain but not with her range of motion. Dr. Scherr indicated that Dr. Hackett did not state whether or not surgery was an option and Dr. Scherr indicated he would attempt to reach Dr. Hackett to get the question directly answered. Dr. Scherr noted that on examination there were again pain behaviors, jumping, and jerking and that Claimant was still very difficult to examine. *See* Exhibit K.

17. Dr. Scherr opined that Claimant was still at maximum medical improvement with impairment already calculated. Dr. Scherr was suspicious of some type of somatoform disorder or secondary gain due to Claimant's continued pain behaviors. Dr. Scherr opined that he was at a loss to explain Claimant's continued pain and exam and noted that he would return her to DIME physician Dr. Hompland for review and that he hoped to have a definite answer from Dr. Hackett about surgery before Claimant returned to DIME physician Dr. Hompland. *See* Exhibit K.

18. On December 13, 2016 Claimant was evaluated by Dr. Scherr. Dr. Scherr noted that he spoke with Dr. Hackett about additional surgery and that Dr. Hackett indicated Claimants might be a candidate for capsular release if her trouble with internal rotation was real and that it might be real but he wasn't sure. Dr. Scherr reviewed surveillance video and noted Claimant moving with no difficulty in her right shoulder internal or external rotation. Dr. Scherr noted that in surveillance, Claimant was able to reach behind with her right arm to remove a phone from her right back pocket and was also able to reach to the top of her head. He also observed Claimant lifting a large watermelon out in front of her and placing it in her cart without difficulty. *See* Exhibit K.

19. On examination, Dr. Scherr noted that Claimant was asked to reach to the top of her head and behind to her right back pocket (which she did on surveillance without difficulty and with fluidity) and that Claimant was tentative stating it caused pain of 7/10 reaching to the back pocket. Dr. Scherr noted Claimant did not perform the maneuvers as easily as she did in the surveillance video. He again noted give way weakness and pain behaviors. Dr. Scherr noted that Claimant had met the DIME physician's requirements. He noted that Dr. Hackett was unsure if Claimant's exam was real, and that Dr. Hackett had not reviewed the surveillance. Dr. Scherr noted that the only basis for the possible capsular release surgery would be because of difficulty with internal rotation but that the surveillance indicated no difficulty with internal rotation. Due to the surveillance and the exam where Claimant was not able to repeat motions that were done easily in the surveillance video, Dr. Scherr again opined that the was strongly suspicious for some type of somatoform disorder and/or secondary gain. He returned Claimant to full duty work as the permanent restrictions before were not based upon a functional capacity evaluation or an equivalent objective measure and because he felt the veracity of Dr. Lan's examination (where the restrictions were set) was suspect. *See* Exhibit K.

20. On January 4, 2017 Claimant underwent an additional DIME evaluation performed by John Sacha, M.D. Claimant reported fairly constant pain localized to the right anterior superior shoulder with radiation into the right trapezius and right neck and radiating down the arm. Dr. Sacha reviewed medical records and performed a physical examination. On examination, Dr. Sacha noted that Claimant had exceptionally good passive range of motion but with active range of motion, Claimant was self-limited and had minimal range of motion. Dr. Sacha provided the impression of: history of shoulder surgery; and non-physiologic presentation. *See* Exhibit A.

21. Dr. Sacha noted that he was concerned that Claimant had significant over treatment without any objective findings and with very non physiologic complaints. Dr. Sacha opined that, as a result, Claimant had years and years of therapy all without any benefit. Dr. Sacha noted only modest findings on any of the diagnostic tests despite the fairly vociferous complaints. Dr. Sacha noted that he agreed with the original independent medical examiner, Dr. Horan, who opined in October of 2012 that further care was not indicated and noted that Claimant's case should have been closed back then. *See* Exhibit A.

22. Dr. Sacha noted that Claimant, however, went forward and had surgery with no improvement as would be expected. Dr. Sacha strongly recommended against any further treatment or medical care and opined that Claimant was clearly at maximum medical improvement. He opined that the original maximum medical improvement date of March 11, 2015 was at the very least appropriate. He strongly agreed with prior DIME physician Dr. Hompland's prior findings that Claimant was not at maximum medical improvement and noted the only reason why Dr. Hompland provided that opinion was to try to find an explanation as to why Claimant was still symptomatic which was not appropriate. Dr. Sacha opined that maintenance care was not necessary and would be bad for Claimant as it would cause her to maintain her disabled state of mind.

Dr. Sacha opined that Claimant reached MMI on March 11, 2015, had no work restrictions and was okay for full duty, and needed no maintenance care but could do home exercises for strength and conditioning. Dr. Sacha opined that Claimant had no impairment rating. He noted that Claimant clearly had exceptional passive range of motion that was near full and that she feigned poor active range of motion which was intentional. He opined that a 0% impairment due to lost range of motion was appropriate. *See* Exhibit A.

23. On June 27, 2017 Dr. Hackett wrote a letter indicating that Claimant had last been seen in November of 2016 with continued complaints of discomfort and reduced range of motion of the right shoulder. Dr. Hackett noted that he discussed with Claimant the option of continued stretching and conservative management versus the potential option of a possible capsular release in an attempt to regain full range of motion. Dr. Hackett noted that since his evaluation, Claimant had several other evaluations including an evaluation by Dr. Sacha. Dr. Hackett noted that he did not entirely agree with all of the findings of Dr. Sacha's letter and stands by his original evaluation. *See* Exhibit 1.

24. Dr. Scherr testified at hearing. He indicated that on examination of Claimant, it was difficult to determine if certain maneuvers were positive or not due to her inconsistencies and that Claimant had more strength than she indicated on testing. He noted that after he reviewed surveillance in December of 2016 he saw that Claimant could use her arm much better and without discomfort. Dr. Scherr testified that he knew he wouldn't get true examination effort from Claimant after reviewing surveillance and that despite the significant treatment she had, nothing had helped her so there would be no benefit to any maintenance treatment. He noted that following her shoulder surgery, her internal rotation was the same as her left shoulder in January of 2015, and remained the same through March of 2015 at 60 degrees. However, he noted that at the DIME examination, the internal rotation was at 40 degrees which was inconsistent.

25. Dr. Scherr opined that DIME physician Dr. Sacha did not err in assigning March 11, 2015 as the date of MMI and that Dr. Sacha also did not err in assigning a 0% permanent impairment rating. Dr. Scherr could not explain why Claimant still reported pain.

26. Claimant testified at hearing that she has been struggling for many years with her shoulder and that Dr. Sacha was harsh with her and didn't consider what she was saying. Claimant testified that she still does not have complete range of motion and that the doctor can raise her arm but that she cannot raise it on her own. Claimant also testified that she believed her gross wages were $900 per week, but submitted no wage records to support this contention.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Average Weekly Wage

Section 8-42-102(2) C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of injury. The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997).

As found above, Claimant earned varied wages paid over two week pay periods at the time of her injury. After review of the wage evidence, the ALJ finds that Claimant's testimony that her gross wages were close to $900 per week is not credible or persuasive. Rather, her highest wage week at the time of her injury was slightly more than $750 per week and the majority of her wages were less than that. The

evidence establishes that a fair approximation of Claimant's wage loss and diminished earning capacity based on wage records is the admitted average weekly wage provided by Respondents of $680.37.

Overcoming the DIME opinion on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Claimant has failed to meet her burden to show by clear and convincing evidence that the DIME physician's finding of March 15, 2015 as the date of MMI is highly

probably incorrect. Rather, the DIME physician's opinion is consistent with the opinion of treating physician Dr. Scherr and is consistent with the overall medical records and evidence. Although Claimant disagrees with this MMI date, she has failed to meet her burden to show by clear and convincing evidence that any further treatment is reasonably expected to improve her condition. Rather, as shown above, despite extensive treatment in this case Claimant has not shown improvement. Claimant also has shown by surveillance that she is far more capable then she represents at medical evaluations.

Overcoming the DIME opinion on PPD

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. *See* § 8-42-101(3.7), C.R.S.; § 8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

In *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000), the court noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Here, Claimant has failed to establish that the DIME physician's rating of 0% permanent impairment was inconsistent with the AMA Guides or was in error. The rating of 0% has not been overcome by clear and convincing or preponderant evidence. DIME physician Dr. Sacha's opinion is consistent with authorized treating provider Dr.

Scherr's opinion and testimony. Further, the medical records and evidence establish at certain appointments that Claimant had range of motion similar and/or identical to her non injured left arm. Only after Claimant went for impairment rating did her range of motion seem to decline significantly. The decline was inconsistent with surveillance. Additionally, as found above, Dr. Sacha noted inconsistencies in passive and active range of motion that did not correlate. There have been numerous inconsistencies throughout Claimant's treatment noted by Dr. Sacha, Dr. Scherr, Dr. Hompland, Dr. Horan, Dr. Hackett, and Dr. Lan. The opinion of Dr. Sacha that there is 0% impairment is credible, persuasive, and consistent with notations from other providers and with the overall records. Claimant has failed to overcome DIME physician Dr. Sacha's opinion that she sustained 0% impairment.

Temporary Total Disability March 15, 2015 and Ongoing

As found above, Claimant reached MMI on March 15, 2015. Temporary total disability benefits are required to continue until an employee reaches MMI. *See* § 8-42-105(3)(a), C.R.S. Claimant has failed to establish a basis for TTD benefits that she is requesting from March 15, 2015 and ongoing as she is at MMI for her work related injury and termination of TTD benefits was appropriate under the statute.

Continued Medical Benefits

MMI exists when any medically determinable physical or mental impairment caused by the injury has become stable and no further treatment is reasonably expected to improve the claimant's condition. *See* § 8-40-201(11.5), C.R.S.; *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). In contrast post-MMI medical benefits are available to relieve the effects of the injury or prevent deterioration of the claimant's otherwise stable condition. *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

Claimant has failed to establish an entitlement to continued medical benefits. There are no reasonable medical benefits available to relieve the effects of the injury or to prevent deterioration. As opined by Dr. Sacha and other providers, Claimant's subjective complaints lack objective correlation and are inconsistent. Despite significant treatment, Claimant has remained the same whether undergoing treatment or not. Dr. Sacha is credible and persuasive that no further medical benefits are needed and that Claimant may continue with home stretching and exercises for strengthening. Claimant has failed to establish an entitlement to continued medical maintenance benefits.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage is $680.37.

2. Claimant has failed to overcome the opinion of DIME physician Dr. Sacha on the date of MMI. Claimant reached MMI on March 11, 2015.

3. Claimant has failed to overcome the opinion of DIME physician Dr. Sacha on her permanent partial disability impairment. Claimant has a 0% permanent impairment rating.

4. Claimant has failed to establish an entitlement to temporary total disability indemnity benefits from March 11, 2015 and ongoing. Her request for TTD is denied and dismissed.

5. Claimant has failed to establish an entitlement to continued medical benefits. Her request is denied and dismissed.

6. All other issues are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 9, 2017,

ISSUES

1. Whether Respondents have established by a preponderance of the evidence that they should be allowed to withdraw the general admission of liability filed in this case.

FINDINGS OF FACT

1. Claimant worked for Employer as a flight attendant.

2. Claimant alleges that on November 23, 2016 he was helping a customer lift a bag into the overhead compartment when he injured his back.

3. Claimant reported the injury to Employer and was referred for treatment. Claimant spoke to Insurer and adjuster Lindsey Williams on the phone. Ms. Williams asked Claimant questions about the injury and his medical history per normal protocol.

4. Claimant reported that he injured his back assisting a customer putting luggage into the overhead compartment. Claimant reported no prior injuries to his lower back. Claimant indicated that he had lumbar surgery at the age of 16 to correct a curvature in his spine but that he had no ongoing problems with his back and that everything had resolved as a youth and that he was fine leading up to the incident at work.

5. Ms. Williams accepted the claim based on the information Claimant provided to her and Respondents filed a general admission of liability. Claimant later contacted Ms. Williams asking to treat at a specific location, University Neuroscience, because of the rural location of his home. Ms. Williams advised Claimant that Concentra would need to make a referral to University Neuroscience. Claimant did not advise Ms. Williams that he had already been treating at University Neuroscience prior to the date of his alleged November 23, 2015 work injury.

6. Records show that Claimant presented to University Neuroscience with severe lower back pain prior to the alleged injury date and prior to speaking with Ms. Williams.

7. On November 15, 2016 Claimant was evaluated at University Neuroscience in Augusta, Georgia. Claimant reported worsening back pain. Claimant indicated that 10 days prior he was moving some furniture and had 8 days of intractable back pain that was worsening. Claimant reported pain in the lower back and bilateral legs, right worse than left. Claimant reported a prior lumbar surgery 10-15 years ago. Claimant reported that he had already been seen at urgent care, had x-rays performed,

and had been given a Medrol pack, Valium, and Naproxen that had not helped. Claimant reported a pain level of 9/10. *See* Exhibit D.

8. Claimant was noted to have gait problems. The x-rays that had been taken at urgent care were reviewed and showed decreased lumbar lordosis consistent with severe muscle spasm and interbody spacing preserved with an exception at L4/5, right greater than left. It was recommended that Claimant continue conservative care and start Medrol, add Robaxin 3-4 times daily, and use Lortab for breakthrough pain. It was recommended that Claimant continue to ambulate and stretch. It was noted that an MRI would be considered if Claimant did not improve. *See* Exhibit D.

9. On December 1, 2016 Claimant was evaluated at University Neuroscience. It was noted that he was there for follow up of his acute intractable low back pain and constant 9/10 pain with right L5 radiculopathy that Claimant felt was getting worse. Claimant reported initial relief with the Medrol therapy, but that the pain had compounded with the conclusion of therapy and extended sitting. It was noted that the physical exam continued to reflect acute right L5 radiculopathy and that Claimant was obviously uncomfortable. The provider indicated they would try to move up Claimant's MRI to that same day and provided a repeat Medrol pack. Claimant did not report any new incident or injury from November 23, 2016 to providers at this visit. *See* Exhibit D.

10. Later that day, Claimant underwent an MRI of his lumbar spine. The December 1, 2016 report from Brett Horgan, D.O. at American Health Imaging provided the impression of: no acute abnormality; postsurgical changes status post L4 laminectomy; and degenerative changes of the lower lumbar spine most pronounced at L5-S1 with moderate to severe narrowing of the bilateral lateral recesses with possible impingement of the descending S1 nerve roots, particularly the left. *See* Exhibit E.

11. On December 2, 2016 Claimant was evaluated at Concentra, the medical facility he was referred to by Employer. Claimant reported he had already seen his own neurologist and needed a referral to the neurologist to get workers' compensation to cover his visit and MRI. Claimant reported that the adjuster had approved the transfer of care to the neurologist. Claimant was assessed with lumbosacral sprain and referrals to neurology and for an MRI were planned. *See* Exhibit C.

12. The adjuster, Ms. Williams, became aware that Concentra had referred Claimant to University Neuroscience and she called University Neuroscience to make sure they had the correct insurance and claim information. At this time, she found out that Claimant had already been treating at University Neuroscience and that he was actively treating there prior to the date of the alleged work injury. Ms. Williams was concerned about the general admission of liability that had been filed based on the information previously given to her by Claimant. She requested records from University Neuroscience and referred the case to legal for review.

13. Claimant continued to treat with University Neuroscience.

14. On December 6, 2016 Claimant was evaluated at University Neuroscience. Claimant reported continued and constant 4/10 pain with right L5 radiculopathy that had significantly improved following the repeat Medrol therapy. The December 2, 2016 MRI was reviewed by Dr. Oetting and was noted to have broad based disc desiccation, central and rightward at L4/5 with mild associated foraminal stenosis on the right at this level which was noted to be potentially the cause of Claimant's current clinical symptoms. A referral for possible epidural steroid injections was made. *See* Exhibit D.

15. On December 16, 2016 Claimant was evaluated at University Neuroscience by Mark Stewart, M.D. Claimant reported low back pain that started more than one month ago that was gradually worsening with a 7/10 pain that radiated to the right foot. Claimant reported that two rounds of steroids had helped somewhat. Dr. Stewart noted that Claimant needed to be scheduled for an epidural steroid injection as soon as possible. A few days later, on December 20, 2016 Claimant underwent a left L4/L5/S1 transforaminal epidural steroid injection performed by Dr. Stewart. *See* Exhibit D.

16. On January 4, 2017 Claimant was re-evaluated. Claimant reported that he had 70% relief from the injections and Claimant wanted to discuss getting injections on the right side. On February 14, 2017 Claimant underwent right transforaminal epidural steroid injections performed by Dr. Stewart. *See* Exhibit D.

17. In March of 2017 at follow up evaluations, Claimant reported no relief from the right sided injections and that his pain had returned to both legs. It was noted that Claimant was uncomfortable on examinations. Claimant reported continued daily pain in his lower back and bilateral lower extremities. It was noted that Claimant had exhausted conservative measures and that his pain was controlled on current regimens. A plan to order bilateral lower extremity EMGs and schedule Claimant to see Dr. Oetting regarding intervention was made. *See* Exhibit D.

18. On April 20, 2017 Claimant was evaluated by Dr. Oetting. Dr. Oetting noted that the electro diagnostics of the left lower extremity demonstrated acute left L5/S1 radiculopathy consistent with imaging findings and that the lower facet joint arthritis spur was causing significant foraminal stenosis which Dr. Oetting believed was the source of radiculopathy in the leg pain. Dr. Oetting offered Claimant surgery to help the symptomatology which he opined would hopefully improve Claimant by 60-70%. *See* Exhibit D.

19. On April 26, 2017 Claimant underwent a left L5-S1 foraminotomy performed by Dr. Oetting. Dr. Oetting noted in his operative findings that there was severe compression of the S1 nerve root with a large facet spur off the L5/S1 joint and that once the facet spur was decompressed, he could see and pass the ball-tipped probe out the foramen. *See* Exhibit D.

20. On June 22, 2017 Claimant was evaluated in follow up and it was noted that Claimant was doing well with his pain and reported a 50-60% improvement in his leg pain. The plan was to refer Claimant for physical therapy. *See* Exhibit D.

21. At physical therapy on August 14, 2017 It was noted that Claimant was a flight attendant and that the mechanism of injury was that in November of 2016 a bag on an airplane fell on Claimant and his back started hurting. Claimant reported continued pain and difficulty with activities of daily living and work. Claimant reported he was approximately 50% back to his normal level of activity and was improving gradually. *See* Exhibit 1.

22. On September 26, 2017 Claimant was evaluated at University Neuroscience. It was noted that Claimant's pain level was at 4/10 and that he was five months status post surgery. It was noted that Claimant was a flight attendant but was not able to continue to do that work. *See* Exhibit 2.

23. Respondents in this case filed a petition to modify, terminate, or suspend compensation. They indicated on their petition that they were seeking to withdraw their improvidently filed general admission of liability. They further indicated that after filing the general admission of liability based on statements made by Claimant, they learned that Claimant had an identical non work injury just weeks prior for which he sought medical treatment and for which identical medical recommendations as post alleged injury were recommended. Respondents indicated their belief that the general admission of liability was improvidently filed and that all wage loss to this point was not causally related to an alleged work injury. *See* Exhibit A.

24. Respondents also retained a medical expert to perform a medical records review. Kathy McCranie, M.D. performed a medical records review on June 1, 2017. Dr. McCranie noted Claimant's significant history with his lumbar spine. She noted that 8 days prior to the alleged November 23, 2016 work injury Claimant had been seen with worsening low back pain, had already been to an urgent care and had x-rays, and had already been treated with a Medrol pack, Valium, and Naproxyn. Dr. McCranie opined that all of the treatment in this case had to do with Claimant's earlier incident and that the treatment was directed towards Claimant's lumbar radicular symptoms which pre-existed November 23, 2016. Dr. McCranie noted that symptoms from November 23, 2016 at work would be related to the expected lumbar symptoms with activity that can be noted following a lumbar injury and at most that Claimant sustained a lumbar strain on November 23, 2016 and that a lumbar strain is expected to resolve. *See* Exhibit B.

25. Dr. McCranie testified at hearing consistent with her report. Dr. McCranie noted that Claimant had treated 8 days prior to the alleged injury where he reported unrelenting back pain and pain down both legs. Dr. McCranie noted that the symptoms reported at Claimant's November 15, 2016 visit were the same symptoms that he had after the alleged November 23, 2016 incident. She also testified that the operative findings from Claimant's surgery showed that he had a large spur at the L5/S1 level narrowing the space and that a large spur is a degenerative finding that develops over

time and that Claimant's job duties would not cause a bone spur. She noted that the surgical procedure removed this degenerative spur to relieve pressure on the nerve and that the bony spur growth was degenerative. Dr. McCranie opined that Claimant did not sustain a work related injury and noted that Claimant was in severe pain prior to the alleged injury and that his symptoms were the same following the alleged injury.

26. Claimant testified at hearing that he went to an urgent care at the beginning of November, 2016 right after he hurt his back and received a Medrol pack, Valium, and Naproxyn. Claimant reported also that he did go to University Neuroscience on November 15, 2016, 8 days prior to the work incident with 9/10 pain in his back and down both legs. Claimant testified that they gave him another Medrol pack that helped him and that he was fine and went back to work. Claimant testified that on November 23, 2016 while at work he lifted a bag and got much worse. Claimant testified that he should have told the adjuster about the prior treatment but didn't because he thought that work on November 23, 2016 had made his back much worse. Claimant testified that the pain intensity after November 23, 2016 was much worse and was not the same as before.

27. Claimant testified that he was originally injured in October and should have made a claim earlier but that he believed he only had 3 days to do so and had missed the window.

28. Claimant, overall, is not found credible or persuasive. It appears that Claimant is alleging some type of incident in late October or early November of 2016 where he was initially injured. It is not credible or persuasive that Claimant was doing much better on November 23, 2016 until he lifted a bag into the overhead compartment at work, that he was acutely injured on November 23, 2016, or that his condition was aggravated or exacerbated on November 23, 2016.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw

plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Withdrawal of General Admission of Liability

Under § 8-43-201(1), C.R.S, a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order has the burden to prove by a preponderance of the evidence that such a modification should be made. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Here, Respondents have met their burden to establish that the general admission of liability filed for an alleged November 23, 2016 injury should be withdrawn. Claimant did not sustain an injury on November 23, 2016 and provided incorrect information to Insurer when questioned about prior injuries to his back. The credible evidence establishes that Claimant injured his back at some point either late October or early November. He treated for his injury both at an urgent care facility and at University Neuroscience prior to the alleged injury date of November 23, 2016.

When treating for the injury that occurred on an unknown date in late October or early November, Claimant had intractable lower back pain reported at a 9/10 with radiation. Claimant was provided with two Medrol steroid packs prior to the alleged injury date. Although they may have improved his pain for a period of time, the evidence establishes that his underlying condition remained unchanged. Insurer filed a general admission of liability based on Claimant’s statements about the mechanism of injury and the lack of prior back injuries or problems. These statements were false. Respondents have established that, in fact, Claimant sustained an injury prior to November 23, 2016 and that withdrawal of the admission is appropriate.

Claimant, in his own testimony, recognized that he should have told Insurer about his prior treatment and that he should have reported an injury earlier than the date of November 23, 2016. Claimant testified and inferred that he initially sustained an

injury in October of 2016. It is unclear what happened in October or whether it was work related. However, Claimant is not credible that the incident on November 23, 2016 made his back worse or intensified his pain. Rather, the records establish that prior to November 23, 2016 Claimant had the same symptoms of severe intractable back pain with radiation that he had after November 23, 2016 and that no acute injury or aggravation to an underlying condition was sustained on November 23, 2016. Claimant's false information to Insurer led to the filing of an improvident general admission of liability. Respondents have met their burden to establish that the admission should be withdrawn in this case.

ORDER

It is therefore ordered that:

1. Respondents have established by a preponderance of the evidence that withdrawal of the improvidently filed general admission of liability is appropriate and that Claimant did not sustain a compensable work related injury on November 23, 2016.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 6, 2017,

/s/ Michelle E. Jones

_____

1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant has produced clear and convincing evidence to overcome the opinion of Division Independent Medical Examination ("DIME") physician Kenneth Finn, M.D. that Claimant reached maximum medical improvement ("MMI") as of March 10, 2016.

II. If Claimant overcame the DIME physician's opinion as to MMI, whether Claimant established by a preponderance of the evidence that she is entitled to additional reasonable and necessary medical treatment related to her April 16, 2015 industrial injury.

III. If Claimant did not overcome the DIME physician's opinion as to MMI, whether Claimant has established by a preponderance of the evidence that she is entitled to post-MMI maintenance medical treatment.

IV. Determination of Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

1. Claimant is a 57-year-old student employee of Employer pursuing a doctorate in education. Claimant was employed as a women's studies coordinator in a work-study program.

2. Claimant sustained an admitted industrial injury on April 16, 2015. Claimant testified that she sustained the injury when she turned a corner carrying office materials and her dress got caught in a rolling chair. Claimant testified that she fell forward striking her right breast, neck, shoulder arm and left knee.

3. Claimant completed a First Report of Injury form on April 20, 2015, which noted Claimant fell to the floor and landed on her right breast and right shoulder. Claimant was referred to University of Colorado Health Urgent Care for treatment.

4. Claimant presented to Karen Hill, D.O. at University of Colorado Health Urgent Care on April 20, 2015. Claimant complained of right upper back, right shoulder and right elbow pain "and some feeling of fullness and decreased sensory in right hand." Claimant rated her pain at an 8/10. Dr. Hill suspected right shoulder and right elbow pain and closed radial head fracture on the right. Dr. Hill prescribed Claimant pain medication and referred Claimant to Occupational Health Services. Earlier that same day, Claimant attended an appointment with her psychiatrist, Jillian Busch, M.D. for psychological care related to home issues, post-traumatic stress disorder, and depression. Claimant testified that she did not discuss her injuries associated with her

work-related fall with Dr. Busch because she deemed it irrelevant to her psychological care and the purpose of her visit.

5. On April 22, 2015, Claimant presented to Tracey Stefanon, DO at University of Colorado Occupational Health Services Clinic. Claimant reported falling and landing on her right breast, right shoulder and right arm. The pain diagram completed by Claimant on April 22, 2015 indicated pain at the right shoulder, right arm, and right elbow. Claimant reported that the pain in her breast had completely resolved, and that the pain was mostly in her right shoulder and clavicular region, with pain also in her elbow. On physical examination, Dr. Stefanon noted fairly good range of motion in the neck, full left shoulder range of motion, limited right shoulder range of motion, and full range of motion of the elbow. Dr. Stefanon assessed neck and shoulder pain, most likely related to strain, elbow pain with questionable radial head fracture, and numbness and tingling in the hand with unclear etiology. Dr. Stefanon referred Claimant for an orthopedic evaluation.

6. On April 29, 2015, Claimant presented to Steven Seiler, M.D. for an orthopedic evaluation. Dr. Seiler assessed right upper extremity pain after a fall. Dr. Seiler opined that Claimant had a sprain of the elbow and maybe of the capsular portion of her shoulder. Claimant's exam was negative for carpal tunnel or cubital tunnel syndrome and no fractures or dislocations were noted in the radiographic studies. Dr. Seiler recommended that Claimant undergo an EMG and/or MRI if there was no improvement in Claimant's symptoms over time.

7. Dr. Stefanon reevaluated Claimant on May 7, 2015. Claimant continued to complain of neck and elbow pain and numbness and tingling in her right hand. Dr. Stefanon assessed the following: neck pain most likely related to a strain and possibly underlying disk injury, shoulder pain most likely related to a strain, elbow pain with an old healed radial head fracture, and numbness and tingling into the hand with possible cervical etiology. Dr. Stefanon recommended Claimant undergo an MRI to rule out disk pathology and referred Claimant for chiropractic care and physical therapy. Dr. Stefanon remarked, "She has quite a bit of stress at home related to nonwork issues, and I think that this is affecting her recovery from her injury."

8. Claimant underwent an MRI on May 15, 2015 which revealed the following: "Disk space narrowing with disk dessication and disk osteophyte complex noted at the C6-7 level. This extends greater to the right. There is moderate right and mild left-sided foraminal stenosis."

9. On May 18, 2015, Dr. Stefanon reviewed the May 15, 205 MRI and opined that the findings were chronic in nature, with bony osteophytes and foraminal stenosis. Dr. Stefanon opined that Claimant's chronic findings on MRI and psychosocial stressors contributed to Claimant's delayed recovery. Dr. Stefanon referred Claimant for a psychosocial evaluation.

10. Dr. Stefanon reevaluated Claimant on June 3, 2015. Claimant reported improved arm and neck pain with ongoing numbness in her right hand. Claimant reported

experiencing vertigo after her first chiropractic visit. Dr. Stefanon recommended Claimant continue with chiropractic care and physical therapy and use a cervical traction unit.

11. On July 30, 2015, Claimant underwent an EMG/nerve conduction study of her right upper extremity with Raymond van den Hoven, M.D. Claimant reported experiencing tingling and a "frost bite" sensation over her right thumb, index and middle fingers. Claimant reported that her right arm symptoms had subsided moderately over time. Dr. van den Hoven determined Claimant had mild to moderate right carpal tunnel syndrome, moderate left carpal tunnel syndrome, and mild right C7 cervical radiculopathy. Dr. van den Hoven opined that it is "highly likely" Claimant's right arm symptoms were due to cervical radiculopathy and not carpal tunnel syndrome. Dr. van den Hoven recommended continuing with conservative care with consideration of a right C6-7 transforaminal epidural steroid injection if Claimant's pain increased.

12. Claimant returned to Dr. Stefanon for a follow-up evaluation on August 17, 2015. On the pain diagram Claimant now indicated left knee symptoms in addition to ongoing neck, right arm, and right hand pain. Claimant had not previously indicated any left knee symptoms. Dr. Stefanon reviewed Dr. van den Hoven's report and noted that the bilateral carpal tunnel syndrome was not related to the work injury but that the right arm symptoms were likely due to the mild right C7 cervical radiculopathy. Dr. Stefanon commented that Claimant's behavioral health inventory confirmed her concerns regarding delayed recovery. She was concerned about symptom magnification, which she felt would fit with Claimant's behavioral health inventory profile. Dr. Stefanon returned Claimant to full duty and referred Claimant to Dr. Nieves for a second opinion for possible injection.

13. Claimant testified that she had reported her left knee symptoms to Dr. Stefanon prior to August 17, 2015 but that she was advised that her knee pain was not related to her compensable work related injury. Claimant further testified that her most significant pain complaints were related to her neck and right upper extremity and that as her left knee symptoms gradually worsened with time she became more insistent with her physicians that her left knee had been injured in the April 16, 2015 fall.

14. Dr. Stefanon referred Claimant to Gregory Reichhardt, M.D. for a physiatric consultation after it was determined Dr. Nieves was unavailable. Dr. Reichhardt first evaluated Claimant on September 21, 2015. Claimant reported falling and hitting the right side of her neck, her left breast, and her left knee. Claimant reported neck, arm and hand pain, as well as left knee pain, which Claimant related to the work injury. On physical examination, Dr. Reichhardt noted tenderness to palpation around the cervical and periscapular region and decreased cervical range of motion. Dr. Reichhardt gave an impression of neck and right upper extremity pain, left knee pain, and anxiety and depression. Dr. Reichhardt discussed the possibility of trigger point injections, epidural steroid injections and a surgical consultation. He further stated that he could not address the causality of the left knee and needed to discuss it with Dr. Stefanon.

15. On October 27, 2015, Claimant reported to Dr. Reichhardt that she was doing somewhat worse. Dr. Reichhardt once again recommended cervical injections, which the Claimant was not interested in pursuing at that time. Further, upon discussion with Dr. Stefanon, Dr. Reichhardt opined that Claimant's left knee symptoms were not related to the work injury. Dr. Reichhardt released the Claimant from his care.

16. Dr. Stefanon reevaluated Claimant on November 2, 2015. Claimant again reported left knee symptoms on her pain diagram in addition her right upper extremity and neck symptoms. Dr. Stefanon reviewed Claimant's medical records and noted that there was no documentation of any knee pain until August 17, 2015, over four months after the work injury. Dr. Stefanon further stated that Claimant had not indicated that her knee was "a point of contact for her fall." Dr. Stefanon concluded that the left knee pain was not related to the work injury. The report noted inconsistencies in motion and strength testing. Dr. Stefanon noted difficulty ascertaining a consistent answer regarding Claimant's symptomatology, function, and duration of her symptoms. Dr. Stefanon released Claimant to work full duty and referred Claimant to Dr. George Girardi for pain management consultation and possible injections.

17. On November 12, 2015, Claimant reported to the emergency room at Banner Fort Collins Medical Center complaining of right low back and right buttock pain which began the night before. She reported no obvious trauma, falls, or lifting and stated that she never had this type of pain before.

18. Claimant presented to George Girardi, M.D. on December 14, 2015. Dr. Girardi assessed neck pain with right arm pain in a C7 distribution due to neuroforaminal stenosis, and recommended a cervical epidural steroid injection at C6-7.

19. Dr. Stefanon reevaluated Claimant on December 28, 2015. Claimant was now reporting new complaints of lower back and right gluteal pain, which she related to the work injury. When questioned by Dr. Stefanon, Claimant was unable to give a concrete answer as to when she developed the pain in her back, but reported that she "had it all along." In her review of the chart, Dr. Stefanon found no mention of lower back pain in the initial evaluations or in the pain diagrams from her office. Dr. Stefanon also noted Dr. Girardi's initial evaluation from December 14, 2015, which made no mention of low back pain. Dr. Stefanon concluded that Claimant's low back symptoms were not related to the work injury. Dr. Stefanon again noted inconsistencies in strength and motion testing and difficulty trying to ascertain answers to direct questions. Dr. Stefanon's examination of Claimant's neck now revealed very limited flexion and extension and she was concerned that Claimant was not putting forth full effort.

20. Claimant testified that her lower back pain developed as her left knee pain worsened and her gait changed which is why, she believes, the onset was delayed and subsequent reporting was delayed.

21. On January 23, 2016, Claimant was seen at the emergency room at Banner Fort Collins Medical Center complaining of bilateral knee pain, left worse than right. The left knee was severely painful, making it difficult to walk. She attributed the pain in both

knees to her April 2015 fall, stating that the pain had gotten progressively worse over the previous week. Claimant reported that she did not fall on her left knee, but that it got "caught up in a chair." She was referred for a left knee MRI at McKee Medical Center on February 3, 2016, which revealed edema and an acute horizontal tear of the medial meniscus.

22. On February 23, 2016, Dr. Girardi administered a cervical epidural steroid injection at the C6-7 level. Following the injection Claimant reported more than an 80% improvement of her cervical symptoms.

23. Dr. Stefanon placed Claimant at MMI on March 10, 2016. Claimant reported feeling better following the epidural steroid injections performed at C6-7 on February 23, 2016 by Dr. Girardi. Dr. Stefanon diagnosed Claimant with 1) chronic neck pain with MRI evidence of multilevel disc degeneration and foraminal stenosis, 2) shoulder pain and 3) numbness and tingling consistent with a mild right C7 radiculopathy, noting that all were work-related with the exception of the chronic degenerative changes noted on the MRI. Dr. Stefanon assessed Claimant with a 4% right upper extremity rating for range of motion deficits to the shoulder, 6% whole person rating for specific disorder of the cervical spine, and 1% whole person rating for neurological system. She provided no impairment for range of motion deficits to the cervical spine due to inconsistent measurements which she did not believe represented Claimant's true level of function. Range of motion testing was completed on March 10 and again on March 15, 2016. Dr. Stefanon recommended no maintenance medical care.

24. Claimant returned to Dr. Girardi on April 14, 2016. It was noted that Claimant had 100% relief following her initial cervical injection but that her pain had returned and that she had headaches that were disrupting her sleep. It was recommended that Claimant undergo a right C6-7 selective nerve root block. Authorization was requested with the Respondent and was denied.

25. On April 15, 2016, Respondent filed a Final Admission of Liability in accordance with Dr. Stefanon's findings of MMI and impairment. Claimant timely objected to Respondent' April 15, 2016 Final Admission of Liability and requested a DIME. Kenneth Finn, M.D. was selected to perform the DIME and an appointment was scheduled for August 12, 2016.

26. Claimant continued to obtain medical treatment for her symptoms, paid for through Medicaid. Claimant continued to relate her left knee pain and symptoms to the work injury.

27. On August 2, 2016, Claimant returned to Dr. Girardi for a C6-7 selective nerve root block. Claimant testified that following the injection she had significant improvement in her cervical/upper right extremity symptoms.

28. Dr. Finn performed a DIME on August 12, 2016. Dr. Finn reviewed Claimant's medical records dated April 22, 2015 to March 15, 2016 and physically examined Claimant. Claimant reported neck pain radiating into the shoulder and scapular region,

as well as pain in her right upper arm, elbow and wrist. Claimant complained of constant numbness and tingling in her right hand. She also reported left knee symptoms. On physical examination, Dr. Finn found decreased range of motion of the cervical spine, which he noted was non physiologic compared to what he observed on his casual observation of Claimant. Dr. Finn also noted decreased range of motion of the right shoulder, mildly diminished range of motion in the left knee, and diffused lumbar, paravertebral and SI joint tenderness.

29. Dr. Finn diagnosed Claimant with chronic cervical spinal pain with radicular symptoms, chronic right shoulder pain, and right upper extremity numbness and tingling. Dr. Finn concluded that Claimant's carpal tunnel syndrome, left knee pain, and low back pain were not work-related. Dr. Finn agreed with Dr. Stefanon's MMI date of March 10, 2016 and assigned a 4% whole person impairment for specific disorders of the cervical spine and an 11% right upper extremity impairment for loss of range of motion. Dr. Finn recommended Claimant follow-up with Dr. Girardi for periodic cervical epidural steroid injections at her discretion, no more than three or four per year, and one year of ongoing medication management.

30. Respondent filed a Final Admission of Liability on September 21, 2016 admitting to permanent partial disability benefits corresponding with Dr. Finn's impairment rating based on an AWW of $146.37. Respondent denied liability for maintenance medical care.

31. On November 8, 2016, Claimant underwent an MRI of her cervical spine which revealed a broad-based disc bulge at C6-7 and moderately severe right and moderate left foraminal stenosis.

32. On January 3, 2017, Dr. van den Hoven conducted a second EMG/nerve conduction study of Claimant. Dr. van den Hoven noted the testing revealed mild right C7 cervical radiculopathy "old and/or possibly ongoing/chronic," and mild bilateral carpal tunnel syndrome which had mildly improved. Dr. van den Hoven remarked, "I think the majority of her right arm neurologic symptoms are from her cervical spine…I doubt that the carpal tunnel syndrome is a significant factor in that she did not have any of the right arm symptoms on the left side, other than the median numbness complaints in the hand." Dr. van den Hoven recommended that Claimant follow up with neurosurgeon Dr. Gibbons regarding further neurosurgical recommendations.

33. Dr. Stefanon testified by deposition on August 10, 2017 as an expert witness. Dr. Stefanon is board certified in occupational medicine and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Stefanon testified that she placed Claimant at MMI as of March 10, 2016 because Claimant had undergone a "reasonable amount of treatment" and had improved. At the time she placed Claimant at MMI, Dr. Stefanon believed no maintenance medical care was needed. Dr. Stefanon initially testified that she believed Claimant remained at MMI. Dr. Stefanon then acknowledged that Claimant's condition had worsened since her placement at MMI, and that Claimant continued to be symptomatic.

34. Dr. Stefanon further testified that Claimant could undergo additional testing to determine the etiology of her ongoing symptoms, stating:

> Q: As we sit here today, do you think [Claimant] needs maintenance care to maintain maximum medical improvement?
>
> A: I think that there's a possibility that she could need maintenance care. I am not necessarily convinced with Dr. Girardi's evaluation with ongoing injections for her cervical spine. I think that before that would be determined, that there could also be pursuit of getting a clearer picture of the etiology of her pain at this point and any radicular symptoms that she may be having in her hand and any contribution from other – other possibly modifying conditions that would affect her symptoms as well.

35. Dr. Stefanon further testified:

> I would find it difficult to recommend any ongoing maintenance care until, in my – if I – to be able to say that it would be related to her work-related injury as this point, unless I did an evaluation and made a determination about where the etiology of her symptoms were coming from…I would consider, possibly, again, seeing whether or not her symptoms of nerve – whether or not her symptoms were more pain, numbness and tingling, whether or not an injection into the carpal tunnel made any difference in those symptoms, so that that may be – give us some indication about whether or not the radicular symptoms into her fingers are actually related to , not her C7, but maybe her carpal tunnel. So to differentiate between those two things.

36. She stated that Dr. van den Hoven's assessment that Claimant should follow up with a neurosurgeon was a reasonable option considering her ongoing C7 problems reflected in his January 3, 2017 repeat EMG. She subsequently agreed that Dr. Finn's maintenance medical recommendations of periodic cervical injections with Dr. Girardi and one year of medication management was also a reasonable option in light of Claimant's ongoing need for care, repeat MRI results and EMG findings. Dr. Stefanon also subsequently testified that the injections Claimant received with Dr. Girardi up to that point were reasonable, necessary and related.

37. Dr. Stefanon continued to opine that Claimant's left knee and low back symptoms, and carpal tunnel syndrome were not related to the work injury.

38. Claimant's testimony regarding her continued cervical and cervical radicular symptoms is found credible and persuasive. Further, the post MMI EMG findings, cervical MRI pathology, Dr. Stefanon's testimony and Claimant's post MMI medical records establish that Claimant's condition worsened after her placement at MMI by Dr. Stefanon and the DIME with Dr. Finn.

39. Dr. Stefanon changed her opinion on MMI as evidenced by her testimony. Dr. Stefanon testified that the Claimant's condition had worsened since MMI and that she required additional cervical injections, that a neurosurgical consultation is appropriate and that additional diagnostic testing would confirm whether or not there was also a worsening of disc pathology at the C6-C7 level and the etiology of Claimant's pain. Dr. Stefanon's opinion that additional diagnostic procedures are appropriate, that a neurosurgical consult is reasonable, coupled with the post MMI diagnostic findings, cervical injections and medical care, establish that Claimant is not at MMI.

40. Claimant has overcome Dr. Kenneth Finn's DIME opinion regarding MMI by clear and convincing evidence based on with respect to the need for additional diagnostic treatment regarding what Dr. Finn determined to be her work-related conditions. The ALJ credits Dr. Stefanon's testimony regarding additional diagnostic procedures and treatment, which is supported by the medical records.

41. The ALJ credits the opinions of Drs. Finn, Stefanon and Reichhardt, which are supported by the medical records, and finds that Claimant's left knee and low back symptoms are not related to the April 16, 2015 work injury.

42. Claimant has established by a preponderance of the evidence that she is entitled to reasonably necessary and causally-related medical treatment to cure and relieve the effects of the April 16, 2015 industrial injury. The ALJ credits the opinions of Dr. Stefanon regarding the Claimant's worsening of condition and agreement that a neurosurgical consult, additional diagnostic testing and cervical injections with Dr. George Girardi as reasonably necessary and related medical treatment.

43. Claimant testified that there was a fixed rate of pay for the year for the work study program and that should would have been entitled to a minimum of "roughly $11,000" for the 2015 school year. No documentation or other evidence was submitted supporting Claimant's contention that she was entitled to a minimum of approximately $11,000 for the school year. Claimant further testified that she was not able to work during academic breaks. Claimant stated that she believes $239.13 is an accurate representation of her AWW, although it fluctuated.

44. Per the wage records submitted by Respondent, dduring two-week the pay period in which Claimant sustained the work injury, she worked 20.5 hours and earned $307.50. which equates to $153.75 per week. Claimant's hours varied significantly week by week. For the 52-week period from June 28, 2014 through June 26, 2015, Claimant earned $8,731.15. $8,8731.15 divided by 52 weeks equals $167.91, which the ALJ finds is an accurate representation of Claimant's AWW.

45. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Overcoming the DIME Physician's Opinion Regarding MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5),

C.R.S. Under the statute, MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007).

A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI.

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, *supra*. The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

As found, the ALJ was not persuaded that Dr. Finn erred in his assessment regarding the work-relatedness of Claimant's left knee and low back symptoms. The ALJ credits the medical records, which document that Claimant did not begin complaining of left knee and low back symptoms until several months after the work injury. Drs. Finn, Stefanon and Reichhardt all credibly opined that Claimant's left knee and low back symptoms are not related to the April 16, 2015 work injury. However, the ALJ concludes that it is highly probable Dr. Finn's opinion that Claimant reached MMI as of March 10, 2016 is incorrect with respect to Claimant's cervical and right upper extremity symptoms. Claimant credibly testified that her condition worsened shortly after being placed at MMI and that she has remained symptomatic. Claimant's testimony is supported by the medical records. Claimant's authorized treating physician, Dr. Stefanon, testified that further diagnostic testing is appropriate to confirm worsening of Claimant's condition and to determine the etiology of Claimant's continued symptoms.

Based on the totality of the evidence, the ALJ is persuaded that Claimant requires additional diagnostic procedures and medical care to cure or relieve the effects of the work injury, which is inconsistent with a finding of MMI.

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant has established by a preponderance of the evidence that she is entitled to additional reasonably necessary and casually-related medical treatment. The ALJ credited Dr. Stefanon's opinion that the Claimant's condition had worsened since MMI and that additional diagnostic testing, a neurosurgical evaluation and follow up injections with Dr. Girardi are reasonably necessary and related. Accordingly, Respondent are liable for reasonably necessary and causally-related medical treatment to cure or relieve the effects of Claimant's April 16, 2015 industrial injury, including the medical treatment as recommended by Drs. Stefanon, Finn, Reichhardt and van den Hoven.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3), C.R.S. establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

Claimant's contention that she was entitled to at least $11,000 for the school year was unsupported by other evidence. During two-week the pay period in which Claimant sustained the work injury, she worked 20.5 hours and earned $307.50, which equates to $153.75 per week. Per the wage records and Claimant's own admission, Claimant's hours fluctuated. Accordingly, the ALJ concludes that an AWW of $167.91 (Claimant's earnings over a 52-week period) is a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

It is therefore ordered that:

I. Claimant has overcome DIME physician Dr. Finn's opinion as to MMI by clear and convincing evidence. Claimant is not at MMI.

II. Claimant has proven by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment related to the April 16, 2015 industrial injury. Respondent shall pay the costs of causally-related and reasonably necessary medical care as recommended by Drs. Stefanon, Finn, Reichhardt and van den Hoven.

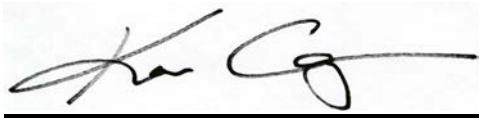
III. Claimant's AWW is $167.91.

IV. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

V. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 6, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Determination of Claimant's average weekly wage.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability benefits from November 4, 2016 through December 5, 2016.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits from December 6, 2017 through March 1, 2017.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability benefits from March 1, 2017 through March 23, 2017.

5. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits from March 24, 2017 and ongoing until terminated by statute.

STIPULATIONS

1. Claimant was hired by Employer to perform seasonal employment.

FINDINGS OF FACT

1. Claimant was hired by Employer on July 12, 2016 as an hourly seasonal employee to work during the "carrot season" at a rate of $8.31 per hour. Claimant's duties involved sorting and packing 5 pound bags of carrots. Claimant knew the job was seasonal and would continue until the ground froze. Employer's carrot season usually begins sometime in July and continues through October and can go occasionally into December, depending on when the ground freezes.

2. Employer has 26 full time employees who work year round. Annually, the 26 full time employees typically sort onions from January to March, plant from March to June, then work the carrot season from July until the ground freezes. During the carrot season, and from July until the ground freezes, Employer hires between 200-250 additional seasonal employees as carrots are their main product. After carrot season, Employer lets all the carrot workers go and returns to their 26 full time employees. Employer also hires 10-12 seasonal employees for the onion bulb season which goes from January to March. Employer indicated that they let all of the seasonal workers go at the end of every carrot season, but would hire them back the next year if the

employee came back again wanting seasonal work. Employees are told that their employment is seasonal and that they will be let go when the ground freezes and carrot season is over.

3. As carrots are Employer's main product, the seasonal carrot workers (200 to 250) work 50-60 hours per week during the peak season. The seasonal onion bulb employees (10-12) who work the onion season typically work between 10-40 hours per week.

4. In 2016, the carrot season continued until December 5, 2016. *See* Exhibit C.

5. Claimant attended required training for her seasonal carrot employment on July 12, 2016. At training Claimant was provided information about hours, attendance, and punctuality. Claimant was informed that the normal work week for seasonal carrot workers was 10 to 12 hour days from 7 a.m. to 6 p.m. with a one hour unpaid lunch break. Claimant was told the work would typically be Monday through Saturday but sometimes occasionally could include Sunday. *See* Exhibit 2.

6. On July 16, 2016 after she completed training, Claimant received her first paycheck paying her for 26.5 hours at $8.31 per hour. Claimant worked various hours per week until November when she was injured, with the least number of hours per week (outside of her initial hire/training week) being 44.5 and the highest number of hours per week being 62. *See* Exhibit B.

7. On November 4, 2016 Claimant sustained a compensable injury to her right hand after it got caught in a conveyor belt while she was sorting carrots.

8. On November 5, 2016 Claimant was evaluated by Daniel Bates, M.D. Claimant reported pain in the right 3rd and 4th digits radiating into her hand and wrist and up her whole right arm. Dr. Bates assessed: sprain of wrist and flexor tendons of the right hand; some laxity in the right TFCC; concern for tear. Dr. Bates put Claimant in a volar splint with restrictions of no use of the right hand at work for 72 hours. *See* Exhibit 1.

9. On November 7, 2016 at a follow up evaluation, Claimant was advised to continue to wear the splint and to not use her right arm at work for one week. Tufts fractures were noted in the 3rd and 4th fingers. *See* Exhibit 1.

10. At evaluations on November 15, 2016, November 16, 2016, and November 22, 2016 Claimant was diagnosed with tufts fractures and right arm strain. *See* Exhibit 1.

11. Following her injury, Claimant was paid for 57.25 hours of work in her November 5, 2016 paycheck, 59.75 hours of work in her November 12, 2016 paycheck, and for 48.75 hours of work in her November 19, 2016 paycheck. The paychecks for November 26, 2016, December 3, 2016, and December 6, 2016 show fewer hours paid with 28.75, 20.0, and 11.0 paid work hours respectively. *See* Exhibits 2, B.

12. On November 30, 2016 it was noted that Claimant had new symptoms of neck and back pain and no improvement in her right upper extremity pain. Claimant was noted to be able to work 6 hours per shift with the continued restriction of no use of right hand/arm. *See* Exhibit 1.

13. At an evaluation on December 19, 2016 Claimant reported that she was not working since the carrot season was over. It was recommended that Claimant continue physical therapy and an EMG was scheduled. *See* Exhibit F.

14. On January 10, 2017 Dr. Reichhardt noted that the EMG of Claimant's right upper extremity was normal. *See* Exhibit 1.

15. On April 17, 2017 Claimant reported no improvement, that she was still not working, and that it was the off season from her job. The assessment indicated that Claimant's ongoing pain was likely myofascial pain syndrome or brachial plexus injury and that it needed to be determined if it was indeed myofascial or neurologic. *See* Exhibit F.

16. On June 30, 2017 Claimant reported that she didn't feel able to go back to full duty work, but that her job was down seasonally at the time. It was noted in the assessment that Claimant had ongoing neck/shoulder and hand pain from a work injury in November and that they were awaiting a psych appointment, continuing physical therapy, and seeing pain management for trigger point injections. See Exhibit F.

17. On July 31, 2017 Claimant was evaluated by Dr. Bates. Dr. Bates noted that there was unclear definitive cause of Claimant's right arm and shoulder pain but that the jerking injury may have caused a brachial plexus lesion or cervical nerve root lesion resulting in continued neuropathic pain in the upper extremity. Dr. Bates noted intermittent and unpredictable improvement with physical therapy and massage therapy consistent with a non musculoskeletal origin of pain and opined that Claimant likely had some component of myofascial pain syndrome resulting from the injury. Dr. Bates opined that Claimant had likely reached maximum medical improvement but that a review by an independent medical evaluation was appropriate. *See* Exhibit F.

18. In addition to hiring seasonal carrot workers, Employer also employs seasonal onion packer workers. The onion season is usually between January and April and in 2016 it went from January 11, 2016 through April 1, 2016. Seasonal onion packing employees are paid at $9.31 per hour, slightly more than seasonal carrot workers. *See* Exhibit C.

19. On February 27, 2017 Respondents sent a letter to Claimant noting that her treating physician had released her to modified work and that they had a temporary position for her as an onion packer at $9.31 per hour. It advised her that she would begin the modified job on March 8, 2017 and that it was 35 paid hours per week with a schedule of Monday through Friday from 8 a.m. to 4 p.m. Claimant's doctor approved of the job noting that Claimant had to use her left hand only. *See* Exhibit D.

20. On March 20, 2017 Respondents sent a letter to Claimant noting that they had another temporary position as onion packer at $9.31 per hour that would begin on March 29, 2017. This position had similar duties as the position identified in the February 27, 2017 letter, but noted that beginning March 29, 2017 the paid hours per week would be 20 and the hours would be Monday through Friday from 8 a.m. to 12 p.m. *See* Exhibit D.

21. Respondents argue that Claimant's work was seasonal and she was not otherwise employed or anticipating employment. A record from August of 2015 indicates that Claimant reported to her primary care clinic that she was a homemaker. *See* Exhibit E.

22. Employer provided testimony at hearing that 2016 was a bad onion season and that Claimant was paid for 20 hours of work per week during the onion season that she worked not due to her injury but due to the bad crop season they had.

23. Claimant testified at hearing that she stopped working for Employer in December of 2016 and went back to work in March of 2017 when she was offered work again. Claimant testified that in March, she continued to work until March 24, 2017 when she was removed from all work by her doctor.

24. Claimant testified and responded in interrogatories that she had worked previously in seasonal work for Petrocco Farms, for the 2006 season and again seasonally in 2012, 2013, 2014, and 2015. Claimant also testified that during the off seasons, she had previously worked at a Chick-Fil-A, a Tortilleria, and also cleaning houses.

25. Claimant admitted that she had not disclosed work as a housecleaner in her answers to interrogatories and that she had no wage records from cleaning homes. Claimant, however, testified that she had cleaned homes for cash in 2016 prior to her work injury. Claimant's testimony that she cleaned homes for cash is not credible or persuasive. It was not disclosed on interrogatories and there are no wage records or tax records documenting any employment or income from cleaning homes whether self employed or through a cleaning service.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving by a preponderance of the evidence that he/she sustained an injury arising out of and within the course of his/her employment. *See* § 8-41-301(1), C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers'

compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. *See* § 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. *See* § 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Average Weekly Wage

Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon her AWW on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), *supra*, grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997).

As found above, Claimant was hired as a seasonal carrot worker at $8.31 per hour and was expected to work 50-60 hours per week until the ground froze and carrot season was over. As found above, her hours per week varied, but were consistently within the range expected. From her July 23, 2016 paycheck through her November 19, 2016 paycheck, Claimant worked a total of 1,002.25 hours. This was over a period of 18 weeks which averages out to an average number of hours worked per week during this period of 55.68. From the wage records it is clear that prior to her injury, Claimant was working the expected 50-60 hours per week anticipated at her hire for the carrot season. Had her injury not occurred, she would have continued to earn wages at that level and would have had that level of earning capacity. Physically, she was able to work 50-60 hour work weeks and she also had the ability to earn wages of $8.31 per hour. Although Claimant may have chosen either to work or not work for a different employer after the ground froze and after the carrot season ended, at the time she was injured her earning capacity was at the level of $8.31 per hour for 55.68 hours per week. The objective of determining Claimant’s average weekly wage is to arrive at a fair approximation of her wage loss and diminished earning capacity.

Claimant has established, by preponderant evidence, that her average weekly wage at the time of her injury was $462.70, which is 55.68 hours per week times her

hourly wage of $8.31. This is a fair approximation of her earnings at the time of her injury and of her diminished earning capacity due to her injury. Respondents' arguments are not found persuasive. Claimant was not employed in a job where her hours with Employer would fluctuate within the year so that she would have a busy time and a not busy time. Rather, Claimant understood that she would work 50-60 hours the entire time she was employed with Employer. Claimant did so. Claimant also, prior to her injury, had the capacity to work such hours. Claimant, had she not been injured, may have sought employment with a different employer after carrot season and would have had the capacity to continue to work 50-60 hour work weeks. Thus, she has established that her diminished earning capacity due to her injury is more appropriately based on her ability to work 50-60 hour weeks at the rate paid by Employer. The ALJ determines that Claimant's average weekly wage is $462.70.

Temporary Partial Disability (TPD) Benefits

An employee is entitled to receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly (AWW) wage during the continuance of the temporary partial disability. *See* § 8-42-106(1), C.R.S. As found above, Claimant was injured on November 4, 2016. Despite her injury, Claimant continued to be paid normal wages with hours paid similar to and within range of her normal hours prior to her injury through her November 19, 2016 paycheck. However, for her last 2.5 weeks of work (prior to the season ending), Claimant's paid hours were significantly lower. The week ending November 26, 2016 Claimant was paid $238.91 when her AWW was $462.70. During the week ending December 3, 2016 Claimant was paid $166.20 when her AWW was $462.70. For the pay period ending December 6, 2016, Claimant was paid $91.41 plus a $100 bonus for finishing the carrot season. This pay period covered two work days, December 5, 2016 and December 6, 2016. Claimant's AWW covered the six work days per week that she typically worked, as employees typically did not work on Sundays. Therefore, her AWW divided by six work days in a week results in an average daily wage of $77.12 and for the two work days she was paid for in her December 6, 2016 check, she made $91.41 total, when her normal AWW would have paid her $154.12.

Claimant has thus established an entitlement to sixty-six and two-thirds percent of the difference as outlined below:

11/26/16- normal AWW $462.70; paid $238.91; difference = $223.79

12/3/16 – normal AWW $462.70; paid $166.20; difference = $296.50

12/6/16 - normal AWW $154.12; paid $91.41; difference = $62.71

The total difference in her AWW prior to the injury, and her AWW following the injury and during the continuance of her temporary partial disability is $583.00. Had

Claimant not sustained an injury, she would have earned $583 more for this period of time. Multiplying this by sixty-six and two-thirds results in TPD benefits owed to Claimant in the amount of $388.67.

Temporary Total Disability (TTD) Benefits

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The loss of seasonal employment does not automatically disqualify a claimant from receiving subsequent disability benefits, but whether or not the wage loss was caused by the injury is a question of fact for determination by the ALJ. *City of Aurora v. Dortch,* 799 P.2d 461 (Colo. App. 1990). Inherent in the Dortch decision is the court's recognition that seasonal employment is a common fact of economic life, and that the conclusion of a particular period of seasonal employment should not automatically be viewed as the permanent end to the employment relationship or evidence of the claimant's "voluntary" decision to become unemployed. Termination of employment resulting from the conclusion of a contract for seasonal work does not automatically disqualify a claimant from receiving subsequent TTD benefits. *Cf. J.D. Lunsford v. Sawatsky*, 780 P.2d 76 (Colo. App. 1989). The fact that a claimant knows the seasonal employment will end at a fixed point in time does not necessarily lead to the conclusion that she is responsible for the termination. *City of Aurora v. Dortch*, supra. However, the result might be different if an ALJ were to find that claimant selected a fixed period of seasonal employment with the intent of the remaining unemployed throughout a portion of the year, or permanently. *El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1986).

Claimant has failed to establish an entitlement to TTD benefits from December 6, 2016 through July 1, 2017. The credible evidence establishes that even if Claimant had not been injured, Claimant would have been unemployed during this period of time in

between carrot seasons. Claimant was hired as a seasonal worker just for the carrot season. Claimant had no guarantee of future work with Employer, although likely would have been hired again in July of 2017 for the next year's carrot season. As found above, during the onion season, Employer has their 26 full time employees plus an additional 10-12 seasonal onion employees versus the 200-250 seasonal carrot employees they have from July to December. The evidence also establishes that, more likely than not, Claimant would not have worked during the off season and would not have worked again until the seasonal employment began again in July of 2017.

The records and credible testimony establish that Claimant has only worked seasonal jobs from 2012 until present. Although Claimant worked at a Chick-Fil-A during the off season in 2010 and worked at a tortilleria in 2011-2012, the credible evidence establishes that she had been working seasonally for a different farm and employer during 2012, 2013, 2014, and 2015. She then began what she knew was a seasonal job for Employer in 2016. Claimant's testimony at hearing that during the off season and earlier in 2016 she cleaned homes for cash is not found credible. Claimant did not report the home cleaning on her answers to interrogatories nor did she have any wage records, tax records, or other documents to support that she in fact worked during the off season between her seasonal employments. Rather, the evidence establishes that since 2012 she has only worked seasonal employment and there is no evidence of her intent to work during the off season. Therefore, any wage loss after the carrot season ended is due to the seasonal nature of Claimant's employment and not due to her injury. Claimant has failed to establish a causal connection between her injury and any wage loss until the 2017 carrot season began.

Claimant has established an entitlement to TTD benefits beginning in July of 2017 and ongoing until terminated by law. Claimant, as found above, worked seasonally in 2012, 2013, 2014, 2015, and in 2016. Claimant also would have been eligible for rehire with Employer. Beginning with the next year's season, Claimant would likely have been employed but for her work injury and she has established, more likely than not, that if not for her injury she again would have returned for seasonal employment in 2017 and thus would be entitled to TTD benefits at the beginning of the 2017 season and beginning in July. As found above, Claimant was evaluated on July 31, 2017 by Dr. Bates who opined that she was likely at MMI but than an independent medical evaluation first would be appropriate. There is no evidence that Claimant has undergone an IME or been placed at MMI. At her appointment with Dr. Bates, Claimant was still under work restrictions related to lifting, carrying, and pushing/pulling. Claimant had been released to modified duty work, but modified duty work had not been offered to her. Therefore, Claimant has established an entitlement to TTD benefits beginning July 1, 2017 when the 2017 carrot season began as she had not been placed at MMI, had not been released to regular employment, and had not been offered modified employment consistent with her doctor's restrictions. But for her injury, she would have been able to work the 2017 season without restrictions in a normal capacity and would have begun earning wages in July of 2017. Claimant has established that her injury caused her wage loss beginning July of 2017 and an entitlement to TTD benefits from July 1, 2017 and ongoing until terminated by law.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's average weekly wage is $462.70.

2. Claimant has established by a preponderance of the evidence an entitlement to TPD benefits from November 20, 2016 through December 6, 2016. Respondents shall pay Claimant owed TPD for this period as outlined above in the amount of $388.67.

3. Claimant has failed established by a preponderance of the evidence an entitlement to any temporary indemnity benefits from December 6, **2016** through July 1, 2017.

4. Claimant has established by a preponderance of the evidence an entitlement to TTD benefits from July 1, 2017 and ongoing until terminated by law.

5. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

6. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 10/10/2017

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-031-897-02

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he has sustained bilateral hearing loss arising out of, and during the course and scope of his employment?

II. If Claimant has proven a compensable hearing loss, is Claimant entitled to all reasonable, necessary and related treatment, to include bilateral hearing aids?

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 61-year old male who has worked as a concrete laborer for Employer since 1999, except for a layoff in 2004. On September 8, 2016, Employer filed a first report of injury indicating that Claimant was alleging bilateral, work related hearing loss from loud noise from equipment and tools with a date of onset of September 1, 2016.

2. Claimant denies any family history of hearing loss. This is confirmed on his initial intake form, wherein he *Denies* ear pain, drainage from ears, *family history of hearing loss,* and other abnormalities (Ex J, p 108)(emphasis added). Claimant denies having diabetes and testified he is "pre-diabetic."[i] On September April 18, 2012, available medical records first mention that Claimant's primary care provider documented that Claimant has "Type 2 diabetes mellitus". (Ex. L, p. 124).

Claimant's pre-employment hearing loss

3. Claimant's denies hearing loss or even being exposed to noise before his employment with Employer. However, shortly after being hired in 1999, Claimant underwent a hearing test which revealed bilateral hearing loss, worse in the left ear than the right. Claimant testified that he has never been exposed to noise of any kind from any source, other than traffic and noise from Employer. Claimant testified that he did notice he had hearing loss at all until sometime after 2016, when his wife had to start yelling at him so he could hear.

4. Dr. Teresa H. Small is an expert audiologist who spends 75 percent of her job reviewing records and determining whether or not hearing loss is work related. Dr. Smalls did an in-depth medical records review, consulted with the Employer regarding the level of noise Claimant was exposed to and considered Claimant's own testimony regarding his alleged work related exposure to noise. Dr. Smalls persuasively testified that prior to his employment with Employer, Claimant had noise related hearing loss that

had to be the result of an unknown noise source that only Claimant could specify, only only Claimant could specify, confirmed by audiogram. An audiogram measures hearing loss and the cause of that loss and the ALJ finds, that claimant had hearing loss from noise that pre-existed his employment with Employer.

Single use hearing protection 1999 through 2006

5. Claimant testified the ear protection he used in 1999 to 2006 was not sufficient because he could still hear noise and the protection was similar to a head set one would use to listen to music. However, according to Dr. Smalls, the level of protection Claimant used from 1999 to 2006 is the correct and appropriate level of protection that Claimant's job required for the entire length of his employment. It was not only sufficient; it was in compliance with OSHA mandated hearing protection.

6. Claimant also testified that for the years 1999 through 2006, occasionally, the protection in one side or the other of his ears would fall out and he would be exposed to noise. According to Claimant, he was either too busy or his hands were too dirty so that he would not immediately put the fallen ear plug back into his ear. Dr. Smalls testified in response to a hypothetical question, that if Claimant's right ear plug fell out while he was operating a chain saw, it would take an estimated 15 minutes of chain saw use with no ear plug to cause irreparable damage. This would continue to add up over time if Claimant continued to operate a chain saw for 15 minutes at a time after his ear plug fell out. Dr. Smalls also testified that she would not expect Clamant to continue to operate a chain saw for 15 minutes at a time after his ear plug fell out without stopping to put his ear plug back in.

7. Claimant was also required to document how often he used ear protection. He admitted that he reported to Employer each year that he used hearing protection 100% of the time (except for 2004 when claimant was laid off and did not work that year). Claimant himself did not testify that he worked for 15 minutes or more at a time on the rare occasion an ear plug would allegedly fall out; only that there were occasions (not corroborated) when he might not pick it right up and reinsert it. Dr. Smalls explained that even if this did occur on occasion, Claimant has too much hearing loss to attribute to such occasions from 1999 to 2006. She stated that Claimant's hearing loss worsened so severely after 2006 when double hearing protection was worn by Claimant, that Claimant's hearing loss continued to progress from a medical condition unrelated to noise.

8. The ALJ does not find that Claimant sustained permanent hearing loss due to the continued use of loud equipment for 15 minutes or more after one side or another of Claimant's hearing protection may have fallen out, but not promptly reinserted on occasion from 1999 to 2006. This is contrary to Claimant's employment records wherein Claimant himself documented that he used hearing protection for these years 100 percent of the time. It is also contrary to the conclusions of Dr. Smalls that the extent of Claimant's hearing loss was too severe and extensive to be explained by this possibility, and that the continued progression of Claimant's hearing loss was caused by something *other than noise*. Most importantly, Claimant himself did not testify that he

had these repeated exposures for over 15 minutes at a time. Beginning in 1999, Claimant has been required to wear hearing protection any time he was using loud equipment, power tools, grinders or torches. The ALJ finds that Employer took extensive and appropriate steps to assure compliance with all noise mitigation requirements.

Claimant's hearing loss from 2006 to the present

9. After the year 2006 and to the present, Claimant admittedly used dual hearing protection. This level of protection is recommended for a person exposed to 100 to 105 decibels of noise over eight consecutive hours or more. Claimant had more than adequate protection by using the double layered protection for the past 11 years. Such level of protection was not even required by OSHA. The single layer of protection Claimant wore from 1999 to 2006 was sufficient to protect claimant from the noise he was exposed to during the entire time he was employed at Employer. After 2005, Employer required Claimant to wear double hearing loss protection 100% of the time, regardless of whether or not he was operating loud equipment. Claimant also indicated to his employer he used this protection 100% of the time. There was no period of time during Claimant's entire employment with Employer where Claimant was exposed to 100 to 105 decibels of noise for an eight hour period of time, even according to Claimant's own testimony. Furthermore, Dr. Smalls credibly explained that Claimant's loss has changed over time, more than it would have if the sole reason was noise exposure from work. Dr. Smalls testified that the audiograms and the pattern of hearing loss demonstrate that "*something else is causing that hearing loss to worsen*" other than the level of noise Claimant himself alleged he was exposed to while at work.

10. Dr. Smalls also testified at hearing on behalf of Respondents consistently with her written report and as a doctor in Audiology. Dr. Smalls is not a medical doctor. She testified on direct that she was hired by the Employer to perform her analysis. Her analysis entailed reviewing Claimant's hearing loss tests for the duration of his employment, speaking to the employer about noise levels, and reviewing the dosimetry. She explained that dosimetry is an employee's personal noise exposure. An employee will wear a dosimeter, aka a sound level meter, for their entire shift to determine noise exposure. (Ex F, p. 25). Dr. Smalls acknowledged that the dosimetry she used was from March 18 of 2011, and she has no personal knowledge of what particular tasks the various employees were engaged in when the dosimetry was performed. Dr. Small also acknowledged that none of these dosimetry readings were ever performed for Claimant or his specific job duties directly.

11. Dr. Small testified that Claimant already had significant hearing loss in his left ear prior to his employment with the Employer; however, the hearing loss as of 1999 was only in the high frequencies of 4,000, 6,000, and 8,000 hertz. According to Dr. Small's report, such hearing loss at that time would not amount to any impairment rating pursuant to the AMA Guides. (Ex. 8, p. 39). By 2006, Claimant's hear loss amounted to a 9.38% impairment of the left ear and 0% of the right. By October 24, 2016, Claimant's impairment had worsened to 33.75% of the left ear and 26.25% for the right ear for a combined binaural impairment of 27.5%.

12. Dr. Small opined at hearing that she felt Claimant's hearing loss was more likely than not unrelated to his work activities. Dr. Small clarified that her opinion was based heavily on the Employer's indication that Claimant was exposed to only intermittent noise exposure at approximately 5% to 10% of his work shift. On cross-examination, Dr. Smalls agreed that more time exposed to noise would make the exposure more hazardous, though she would need more details about the length of the exposure and the actual decibels of the exposure to provide an alternate opinion. Dr. Smalls was not sure of the exact decibel levels of the equipment used by Claimant. She was able to estimate that a concrete grinder would range from 83 to 93 decibels, and that a chainsaw would be the loudest, operating at approximately 100 decibels. Dr. Small explained that decibels are measured on a logarithmic scale, and that the intensity of the sound is doubled with every 3 decibel increase. Dr. Smalls further explained that hearing loss is permanent. Once it is lost, it will not regenerate. Each time the ears are exposed to damaging levels of noise, there is incremental damage to the nerves in the ear that will accumulate over time.

13. The ALJ accepts the testimony of Dr. Smalls, that considering and crediting Claimant's testimony of the level of noise he was allegedly exposed to over the course of his employment with the Employer (which was different from the Employer's perception of the level of noise claimant was exposed to) Claimant's hearing loss was *still* not work caused or work aggravated.

14. After Claimant reported hearing loss in 2016, Employer sent Claimant to the company designated medical provider, Autumn Dean, M.D. Initially, Dr. Dean reported that Claimant's bilateral hearing loss was ">50% probability for causation" based upon Claimant's self report that he had started noticing hearing loss approximately one year prior, that he had been working with loud tools for the past 18 years, and that he denied having any exposures to loud noises outside of work. At that time, Dr. Dean had not reviewed Claimant's audiograms (Ex. I, p. 85).

15. According to Dr. Dean's initial Report of Injury, Claimant reached MMI on October 10, 2016, with no permanent impairment (?) with medical maintenance to include treatment with audiology to have hearing aids fitted (Ex. I, p. 100). *This is no longer the opinion of the treating physician*. On July 3, 2017, after reviewing Dr. Small's report which also summarizes the audiograms, Dr. Dean changed her opinion and opined that Claimant's hearing loss is not work related and that she agreed with Dr. Small's assessment that the hearing loss was not work caused or work aggravated.(Ex. I, p. 106)

16. After acknowledging that Claimant has a list of co-morbidities, including diabetes and hypertension, Dr. Smalls explained that she is not a medical doctor. As such, she cannot state the exact cause of Claimant's hearing loss. As an expert audiologist who specializes in specifically evaluation and diagnosing work related hearing loss, Dr. Smalls can state, with audiological certainty, that Claimant's hearing loss was not caused or aggravated by his employment. In fact, according to Dr. Smalls

"**there is no way** that his hearing loss is work caused or work contributed or work aggravated." (emphasis added).

17. The 2016 audiological evaluation establishes that "there's definitely a medical component to that hearing loss" according to Dr. Smalls who explained that:

> "Not only has that hearing changed quite a bit in the right ear in 2016 compared to 2015, but they also did tympanometry, which is the measurement of the ear drum. And that showed a retracted ear drum, so there was a negative pressure, that the ear drum sucked in a bit. That's usually a sign of medical condition. Plus the change of hearing, the pattern in hearing is affecting the low frequencies. So that is in combination with the retracted ear drum, it's a sign of something going on in that right ear medically.

Thus, claimant's continued progression of hearing loss was not due to noise exposure but some medical condition not related to claimant's work.

Claimant's work related noise exposures

18. There is a great difference between the noise levels Claimant alleges he was exposed to at work versus the noise the Employer says Claimant was exposed to at work. Claimant himself has not been consistent.

19. On direct examination, Claimant testified that he operated a chain saw and/or a sledge saw anywhere from 2-3 hours per day, to all day, to every day and all day, all week. Claimed testified that he operated a demo saw anywhere from 5 hours per day to all day and that he often operated noisy grinders and hammer drills. On cross-examination, Claimant clarified the testimony he gave on direct regarding how often he used a chain saw, demo saw and sledge saw. Claimant admitted he only uses a chain, sledge or demo saw for the purpose of fixing a mistake made on the job. Claimant also testified that he would use a sledge saw "2 to 3 times per year". Claimant rarely used a chain saw, a couple of times per month at most and a demo saw was used "only when the work asked for us to use that."

20. Rick Driver has been employed with Employer since August 1988. He is the Corporate Director of Environmental Health and Safety. Mr. Driver explained that Claimant worked on the patch and repair crew together with 12% of the company's 500 employees, none of whom have a claim for work related hearing loss. Claimant's job duties consisted of mixing and sponging grout and rubbing out holes. Employer has a hearing conservation program because there are noise levels above 80 decibels. Each employee is required to annually submit to a hearing test and hearing training, as required by OSHA. In 1999, OSHA required Employer to review the annual hearing tests which each employee. When Claimant was hired, his hearing test revealed that he had hearing loss below the 50 percentile. Mr. Driver is certain that each year, beginning in 1999, either he, or one of his 3 safety coordinators sat down with Claimant and reviewed his hearing test results. These meetings with Claimant were conducted in

English as Mr. Driver "always communicated with Raul in English. He understands English. I've never had a problem communicating with him . . . So, you know, just having the interpreter today is to make sure that he has full understanding I've never had a problem communicating with him." Mr. Driver worked with Claimant for 18 years and Claimant himself has not alleged that he had any problem communicating with anyone from Employer, including Mr. Driver, throughout those 18 years.

21. During Claimant's entire employment with Employer, he was never issued a written warning for violating the company hearing protection standards. Mr. Driver further stated that if ear protection rules were not being followed, a write-up would be issued and become part of the personnel file. No verbal warnings were issued. No such write-ups exist in Claimant's file.

22. Mr. Driver testified that Claimant was hired, even though he had pre-employment hearing loss, because the company would not discriminate against him because of his hearing issues. From 1999 until 2012, Mr. Driver would be out in the plant where Claimant worked upwards of 6 to 7 hours per day. While he did not personally stand and watch Claimant all day, every day, Mr. Driver credibly testified that he is familiar with Claimant's job, and for what purpose any tool or machine may be used, for and how often it may be needed.

23. Claimant rarely used a chain saw. Mr. Driver saw him use it one time but he admitted he may have used it more than one time but "it's a rarity." A demo saw may be used at most 20 minutes per day on the days it was used. It is not clear if a person could even hold onto a demo saw more than 15 minutes without stopping and resting.

24. The hand grinders and hammer drills were used somewhat more frequently but throughout the course of an 8-10 hour day, the actual hands-on cutting time is very limited. A peanut grinder may be purchased at Home Depot. The sledge or slab saw is something that the company would go years without using at all, as its purpose is very limited. On a daily basis Claimant may use a scraper, hammer or a chisel, none of which are noisy. Every time Mr. Driver saw Claimant "he was always using his hearing protection and then double protection during the – I think from 2005 on."

25. Mr. Driver personally sat down with claimant in 2005 to discuss his audiogram results. The test result from Sound Solutions stated that Claimant had hearing loss and instructed Mr. Driver to recommend that Claimant see his personal physician. Mr. Driver admitted he is not an audiologist so he does not know if Claimant's hearing loss had worsened in 2005 as compared to prior years. He simply did what he was instructed to do and told Claimant to see his personal physician. The testing document did not instruct Mr. Driver to send claimant to a Workers Comp physician but specifically instructed him to see his personal physician.

26. In September 2016, when Claimant first claimed his hearing loss was work related, Employer timely filed an Employer's First Report of Injury and provided claimant with a list of Workers Comp physicians to choose from. Claimant selected Dr. Dean,

who has since opined that Claimant's hearing loss is not work related. Before then, there was no reason to send Claimant to a Workers Comp physician, as neither the audiologists nor Claimant himself were suggesting that Claimant's hearing loss was work related.

27. Timothy Hall, M.D., evaluated Claimant on May 15, 2017, for "low back, left leg symptoms and buttocks pain." In his report, he references that the first note he reviewed about hearing loss is from September 19, 2016, where Claimant alleged that one year prior, he began having problems with hearing and intermittent ringing in his ears. Claimant told Dr. Hall he has been working with loud tools for 18 years. Dr. Hall noted that Dr. Dean opined that Claimant's hearing loss was work related. Dr. Hall reviewed one evaluation from Advantage ENT and Audiology dated October 24, 2016. Based on this data, Dr. Hall stated: "After reviewing the file and discussing with the patient this issue with his hearing, it is my opinion within a reasonable degree of medical probability that his sensorineural hearing loss bilaterally is a direct result of his exposure at work."

28. The ALJ does not find these conclusions of Dr. Hall persuasive. They are not based on a complete review of Claimant's medical records, including yearly hearing tests and audiograms, or any accurate understanding of the noise level Claimant was exposed to at work, nor claimant's use of hearing protection. Moreover, Dr. Hall does not reference that Claimant had pre-employment noise related hearing loss, nor that the medical record suggest that Claimant has diabetes and hypertension. Dr. Hall also does not seem to be aware that Dr. Dean later opined that Claimants' hearing loss is, in fact, not work-related, after reviewing Dr. Smalls' report and summary of audiograms.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or

respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

C. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

Credibility

D. In this case, the ALJ finds Mr. Driver to be far more persuasive than Claimant on the issue of ambient noise in the facility which Claimant may have been exposed to. It is Mr. Driver's responsibility to know who uses which tools, why, and how often they do so. He is in a far greater position to have this information, and to articulate it accurately. Likewise, while not standing over Claimant 24/7 while he works, Mr. Driver's testimony is persuasive, in that he is out on the shop floor a great deal, and monitors his employees for compliance with hearing protection. That's his job. While the possibility exists that on some occasion Claimant's spark plug earpiece fell out, the ALJ does not find that Claimant just would continue to work with that noise level for minutes at a time without reinserting it.

Compensability

E. Under the Workers' Compensation Act, an employee is entitled to compensation where the injury is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of "and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The

latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra.* Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2013; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

F. In this claim, Claimant alleges bilateral hearing loss that was caused or aggravated by the level of noise he was exposed to while at work, with a date of onset of hearing loss in the year 2016. Section 8-40-201(14), C.R.S. defines "occupational disease" as: “[A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.” This section imposes additional proof requirements beyond that required for an accidental injury. An occupational disease is an injury that results directly from the employment or conditions under which work was performed and can be seen to have followed as a natural incident of the work. Section 8-40-201(14), C.R.S.; *Climax Molybdenum Co. v. Walter*, 812 P.2d 1168 (Colo. 1991); *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). On the other hand, an accidental injury is traceable to a particular time, place and cause. *Colorado Fuel & Iron Corp. v. Industrial Commission*, 154 Colo. 240, 392 P.2d 174 (1964); *Delta Drywall v. Industrial Claim Appeals Office*, 868 P.2d 1155 (Colo. App. 1993). An occupational disease arises not from an accident, but from a prolonged exposure occasioned by the nature of the employment. *Colorado Mental Health Institute v. Austill*, 940 P.2d 1125 (Colo. App. 1997). The failure to satisfy each element by a preponderance of credible evidence is fatal to an occupational disease claim. *Kinninger v. Industrial Claim Appeals Office*, 759 P.2d 766 (Colo. App. 1988).

G. The ALJ credits and accepts the opinions of Dr. Smalls. Claimant used OSHA approved single hearing protection from 1999 to 2005, 100% of the time (or nearly so) he used any tools or equipment which made loud noise. He used double hearing loss protection from 2005 to the present, 100% of the time, regardless of what job duty he was performing. Assuming that Claimant’s testimony on direct examination regarding the level of work related noise exposure was true and accurate-that occasionally a hearing protection plug would fall out of one ear or the other- Claimant’s hearing loss is still not work related. Claimant’s audiograms and hearing tests, as explained by Dr. Smalls, show that Claimant’s pre-employment hearing loss, and progression of that hearing loss, was the result of a natural progression of hearing loss and a medical condition or conditions, *irrespective of work related noise exposure.* The actual progression of Claimant’s hearing loss was not noise-caused or noice-aggravated; it is the result of some other medical condition and is “in no way” related to or caused by or aggravated by or intensified by work related noise exposures.

H. The ALJ finds that the level of hearing loss Claimant currently has, as compared to this hearing loss in 1999, is substantial and *not noise related.* Even if the ALJ accepted Claimant's testimony regarding the level of noise he was exposed to operating saws all day, every day, for weeks at a time, (which the ALJ does not) there is "no way" that hearing loss is work related. It is not noise related. As Dr. Smalls explained, Claimant's audiograms and the level and severity of Claimant's current hearing loss establishes that Claimant's hearing loss is the result of a medical condition, and not from ambient noise.

I. Claimant denied that he has pre-existing hearing loss from noise in the left ear- worse than the right-at the time he was hired by Employer. The audiogram showed otherwise. Claimant did have noise related hearing loss that pre-existed his employment. Claimant asserts that his hearing loss was either caused by or aggravated by long term exposure to prolonged noise at work. Consequently, Claimant argues that he aggravated a pre-existing hearing loss condition (which he denies having) and/or that his bilateral hearing loss condition was caused by prolonged noise at work. He asserts his claim for benefits, including medical treatment, is compensable because the aggravation is fairly traced to her employment as a proximate cause, and did not come from a hazard to which he was equally exposed outside of the employment. Simply put, Claimant asserts that the conditions under which his work was performed aggravated, accelerated, and/or combined with her pre-existing conditions to cause his hearing loss, his disability and his need for medical treatment, for which benefits are sought. Based upon the totality of the evidence presented, the ALJ is not persuaded.

J. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Victory,* 805 P.2d 1167 (Colo. App. 1990). While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rita,* 717 P.2d 965 (Colo. App. 1995); *Cots v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). The totality of the evidence presented persuades the ALJ that Claimant's current bilateral noise related hearing loss, more probably than not, arose from the natural progression of his pre-existing bilateral noise related hearing loss; a loss which Claimant denied having. Claimant also denied being exposed to any type of noise outside of the noise he was exposed to while working for this Employer. Again, the ALJ is not persuaded.

K. Shortly after he was hired, claimant was diagnosed with bilateral hearing loss which could not possibly have been caused by noise from this Employer. Claimant had not worked for the Employer long enough to have that level of noise related hearing loss. Whatever source caused claimant's bilateral hearing loss-which pre-existed his

employment with Employer-is the more likely source of claimant's hearing loss. It is a natural progression of hearing loss and a medical condition, *irrespective of additional noise.* Claimant has not met his burden of proof as to either claim asserted: 1. that his hearing loss was allegedly caused, over time, during this employment for this Employer; or 2. that his injuries allegedly arose out of his employment and constitute a compensable occupational disease involving his bilateral noise related hearing loss.

ORDER

It is therefore ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 10, 2017

/s/ William G. Edie

Colorado Springs, Colorado 80906

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to withdraw their General Admission of Liability (GAL) that acknowledged Claimant sustained a compensable cervical spine injury during the course and scope of his employment with Employer on December 6, 2016.

2. Whether Claimant has demonstrated by a preponderance of the evidence that an anterior cervical discectomy and fusion (ACDF) at C7-T1 as recommended by Gary Ghiselli, M.D. is reasonable, necessary and causally related to his December 6, 2016 admitted industrial injury.

3. Whether Respondents have established by a preponderance of the evidence that they are entitled to recover an overpayment of Temporary Total Disability (TTD) benefits beginning May 11, 2017.

FINDINGS OF FACT

1. Claimant worked for Employer as a Truck Driver. He typically drove a truck from Denver to Grand Junction, Colorado five days each week to deliver mail.

2. On July 18, 2007 Claimant suffered a cervical spine injury that required an anterior cervical discectomy and fusion (ACDF) at C3-C4 and C5-C6. Gary Ghiselli, M.D. performed the procedure. Claimant reached Maximum Medical Improvement (MMI) on April 23, 2009 and received a 22% whole person impairment rating.

3. On November 22, 2014 Claimant suffered a second cervical spine injury while undergoing a chiropractic adjustment. Because of continuing pain and functional limitations Dr. Ghiselli performed an ACDF at C6-C7 on May 4, 2015.

4. On September 22, 2016 Claimant returned to Dr. Ghiselli and reported that he began to experience tingling and weakness in his left arm approximately 4-5 months earlier. Dr. Ghiselli noted that Claimant was having increasing symptoms at the C4-C5 level and ordered CT and MRI scans.

5. On October 5, 2017 Claimant underwent CT and MRI scans. In addition to expected post-surgical changes, the scans revealed anterior osteophytes at C7-T1, without stenosis, and dorsal paraspinal muscle atrophy with severe canal stenosis at C4-C5. The C4-C5 level also had a broad-based central left posterolateral and left larger than right foraminal protrusion with flattening and deformity of the cord.

6. Claimant testified that on December 6, 2016 he drove to Grand Junction to deliver mail. On his way back to Denver he encountered treacherous driving conditions

and placed chains on his tires in Vail. While applying the fourth set of chains he felt a "pop" in his neck but no immediate pain. Claimant remarked that he experienced "white knuckle driving" while returning towards Denver in the snow and was very tense because of the road conditions. He removed the chains in Georgetown and completed his drive to Denver.

7. On December 7, 2016 Claimant had the day off from work. He awoke with a stiff neck and minor pain. On the following day Claimant awoke with significant neck pain and told Employer he would be unable to report to work.

8. On December 10, 2016 Claimant visited the Rose Medical Center Emergency Room for an evaluation. He reported worsening neck and upper back pain since applying chains to his truck tires four days earlier. Claimant noted that for about two months he has suffered upper extremity tingling but had a significant evaluation and unremarkable MRI. He also mentioned that he underwent a cervical spinal fusion two years earlier and "note[d] current pain is similar to before surgery."

9. On December 12, 2016 Claimant reported his cervical spine injury to Employer. Employer directed him to Concentra Medical Centers for treatment. Claimant visited Concentra and reported increasing neck pain after applying chains and tense driving on December 6, 2016. He commented that his first spinal fusion involved C3-C4 and C5-C6 in 2007 and his second spinal fusion involved C6-C7 in 2015. Physicians diagnosed Claimant with a "repetitive strain injury of the cervical spine, prescribed medications and restricted him from working.

10. Claimant subsequently received physical therapy and diagnostic testing. On .December 21, 2016 Claimant underwent an MRI of his cervical spine. The MRI reflected post-operative changes at C3-C4 secondary to a prior anterior discectomy and solid fusion. At C4-C5 there was a broad-based posterior disc protrusion with canal stenosis and a possible mass effect on the spinal cord. There were also solid fusions at C5-C6 and C6-C7. At C7-T1 there were osteophytes but no stenosis.

11. On December 27, 2016 Insurer acknowledged that Claimant had suffered an injury on December 6, 2016 and completed a General Admission of Liability (GAL). The GAL recognized that Claimant was entitled to receive medical benefits and Temporary Total Disability (TTD) benefits beginning December 12, 2016 at an Average Weekly Wage (AWW) of $989.32.

12. On January 9, 2017 Claimant visited Robert W. Kawasaki, M.D. for an examination. Dr. Kawaski subsequently ordered diagnostic testing and provided medication management.

13. On March 21, 2017 Claimant visited Dr. Ghiselli for an evaluation. Claimant reported that on December 6, 2016 he suffered a "popping" sensation in his neck while placing chains on his truck tires. Although Claimant completed his shift, his symptoms worsened over the next two days. He noted significant pain and loss of grip strength in his left hand. Claimant also exhibited decreased cervical spine range of

motion. Dr. Ghiselli commented that Claimant had undergone a C3-C4 and C5-C6 ACDF in 2008 followed by a C6-C7 ACDF in 2015. He remarked that Claimant was now suffering an acute disc herniation at C7-T1 that was causing left arm weakness. Positive EMG findings also suggested an acute, severe left C8 radiculopathy. Dr. Ghiselli thus recommended an ACDF at the C7-T1 level.

14. On April 3, 2017 William J. Ciccone, Jr., M.D. performed a Rule 16-11 review of Dr. Ghiselli's surgical request. Dr. Ciccone concluded that Claimant was having increasing neck pain and nerve-related symptoms in his left upper extremity in the months preceding his December 6, 2016 work incident. He did not believe Claimant suffered a work injury that caused his current symptoms. Instead, Dr. Ciccone determined that Claimant's symptoms are the result of the progressive degeneration of cervical discs and had been causing increasing pain for months. Accordingly, Dr. Ciccone reasoned that any treatment for Claimant's cervical symptoms should not be covered by the Workers' Compensation system.

15. On May 2, 2017 Claimant returned to Dr. Kawasaki for an evaluation. After conducting a physical examination and considering diagnostic studies, Dr. Kawasaki assessed Claimant with postlaminectomy in the cervical region and brachial neuritis or radiculitis. Dr. Kawasaki noted that Dr. Ghiselli had recommended an ACDF at the C7-T1 level. He remarked that Claimant exhibited objective findings on MRI as well as "significant findings on EMG/nerve conduction study for C8 radiculopathy." Accordingly, Dr. Kawasaki concluded that the ACDF at C7-T1 constituted reasonable and necessary medical treatment.

16. On July 11, 2017 the parties conducted the pre-hearing evidentiary deposition of Bryan Counts, M.D. Dr. Counts explained that Claimant had undergone two previous cervical spinal fusions but "his symptoms had pretty much resolved other than some neck stiffness" prior to December 6, 2016. He commented that Claimant developed neck, upper shoulder and left arm symptoms after placing chains on his truck and driving through snow on December 6, 2016. Dr. Counts diagnosed Claimant with "underlying cervical disc disorder with radiculopathy." He commented that Claimant's cervical spine MRI reflected diffusely bulging discs and arthritic changes. Dr. Counts agreed with Dr. Ghiselli's recommendation for an ACDF at the C7-T1 level because Claimant's condition has continued to deteriorate. He summarized that the need for surgery is related to Claimant's December 6, 2016 work activities and he has failed conservative treatment. Dr. Counts specifically concluded that Claimant suffered an aggravation of his pre-existing cervical spine condition while performing his job duties on December 6, 2016.

17. On July 26, 2017 Claimant underwent an independent medical examination with Brian Reiss, M.D. After reviewing Claimant's medical records and conducting a physical examination, Dr. Reiss concluded that Claimant's December 6, 2016 work activities did not aggravate, accelerate or combine with his pre-existing cervical spine condition to produce a need for medical treatment. Although he acknowledged that Claimant may have experienced increased pain after his work activities on December 6, 2016, any effects would have quickly worn off "leaving

[Claimant] with his baseline level of symptomatology." Dr. Reiss specified that "the need for treatment would be related to his pre-existing condition 100% and not related to any effects of the work incident." He summarized that any need for surgical intervention or work restrictions was strictly related to Claimant's pre-existing condition.

18. On August 1, 2017 Claimant underwent an independent medical examination with David W. Yamamoto, M.D. Dr. Yamamoto reviewed Claimant's medical records and conducted a physical examination. He determined that Claimant's December 6, 2016 work activities aggravated his pre-existing cervical spine condition. Dr. Yamamoto explained that the critical inquiry is whether Claimant experienced the "natural progression of a pre-existing condition or if the condition is secondary to" his December 6, 2016 work activities. He reasoned that the proximate cause of Claimant's injury was placing the chains on his truck tires. Chaining the tires aggravated Claimant's pre-existing neck condition and created "significant radicular symptoms on the left involving the C8 nerve root." Dr. Yamamoto acknowledged that other physicians had determined Claimant did not suffer a compensable injury on December 6, 2016 based on imaging studies. However, he explained that Claimant's clinical presentation and ability to perform his job duties without difficulty prior to December 6, 2016 suggested that he suffered a compensable cervical spine injury. Dr. Yamamoto thus agreed with Dr. Ghiselli that the proposed ACDF surgery constituted reasonable and necessary medical treatment.

19. Dr. Reiss testified at the hearing in this matter. He maintained that Claimant's December 6, 2016 work activities did not aggravate, accelerate or combine with his pre-existing cervical spine condition to produce a need for medical treatment. Dr. Reiss explained that Claimant suffers degenerative changes in his cervical spine but there was no acute injury on December 6, 2016. Claimant's cervical symptoms simply constitute the natural progression of a pre-existing condition. He also commented that Claimant's activity of applying chains to his truck tires would not have caused a significant spinal injury.

20. Dr. Reiss explained that Dr. Ghiselli's proposed ACDF surgery at C7-T1 is not reasonable, necessary and causally related to Claimant's December 6, 2016 admitted industrial injury. He remarked that the proposed surgery would be the fourth fusion in Claimant's cervical spine and the pain generator has not been adequately identified. Finally, cervical spine surgery would be premature because other treatment options including injections and physical therapy remain available.

21. Respondents have failed to demonstrate that it is more probably true than not that they are entitled to withdraw their GAL that acknowledged Claimant sustained a compensable cervical spine injury during the course and scope of his employment with Employer on December 6, 2016. Initially, Claimant explained that he felt a "pop" in his neck area while applying chains to his truck tires when driving back to Denver from Grand Junction. Although he did not immediately experience symptoms, he developed significant neck pain and stiffness two days after the incident. The medical records reflect that Claimant has undergone two previous spinal fusions and diagnostic testing revealed degenerative changes in his cervical spine.

22. The persuasive medical evidence reflects that Claimant's work activities on December 6, 2016 aggravated his pre-existing cervical spine condition. Dr. Yamamoto persuasively explained that the critical inquiry is whether Claimant experienced the "natural progression of a pre-existing condition or if the condition is secondary to" his December 6, 2016 work activities. He reasoned that the proximate cause of Claimant's injury was placing the chains on his truck tires. Chaining the tires aggravated Claimant's pre-existing neck condition and created "significant radicular symptoms on the left involving the C8 nerve root." Furthermore, Dr. Counts specifically concluded that Claimant suffered an aggravation of his pre-existing cervical spine condition while performing his job duties on December 6, 2016. Finally, Dr. Ghiselli remarked that Claimant experienced an acute disc herniation at C7-T1 on December 6, 2016 that was causing left arm weakness.

23. In contrast, Dr. Reiss explained that Claimant's December 6, 2016 work activities did not aggravate, accelerate or combine with his pre-existing cervical spine condition to produce a need for medical treatment. He also determined that, although Claimant suffers degenerative changes in his cervical spine, there was no acute injury on December 6, 2016. Claimant's cervical symptoms simply constitute the natural progression of a pre-existing condition. He also commented that Claimant's activity of applying chains to his truck tires would not have caused a significant spinal injury. However, Dr. Yamamoto persuasively noted that, although other physicians had determined Claimant did not suffer a compensable injury on December 6, 2016 based on imaging studies, Claimant's clinical presentation and ability to perform his job duties without difficulty prior to December 6, 2016 suggested that he suffered a cervical spine injury while applying chains to his truck tires. Accordingly, Respondents have failed to demonstrate that Claimant's work activities on December 6, 2016 did not aggravate, accelerate or combine with his pre-existing cervical spine condition to produce a need for medical treatment.

24. Claimant has demonstrated that it is more probably true than not that an ACDF at the C7-T1 level as recommended by Dr. Ghiselli is reasonable, necessary and causally related to his December 6, 2016 admitted industrial injury. Dr. Ghiselli commented that Claimant had undergone a C3-C4 and C5-C6 ACDF in 2008 followed by a C6-C7 ACDF in 2015. He persuasively remarked that Claimant was now suffering an acute disc herniation at C7-T1 that was causing left arm weakness. Positive EMG findings also suggested an acute severe left C8 radiculopathy. Dr. Kawasaki remarked that Claimant exhibited objective findings on MRI as well as "significant findings on EMG/nerve conduction study for C8 radiculopathy." He thus concluded that the ACDF at C7-T1 constituted reasonable and necessary medical treatment. Moreover, Dr. Counts agreed with Dr. Ghiselli's recommendation for an ACDF at the C7-T1 level because Claimant's condition has continued to deteriorate. He summarized that the need for surgery is related to Claimant's December 6, 2016 work activities. Furthermore, Claimant has failed conservative treatment. Finally, Dr. Yamamoto also agreed with Dr. Ghiselli that the proposed ACDF surgery constitutes reasonable and necessary medical treatment.

25. In contrast, Dr. Reiss explained that Dr. Ghiselli's proposed ACDF surgery at C7-T1 is not reasonable, necessary and causally related to Claimant's December 6, 2016 admitted industrial injury. He remarked that the proposed surgery would be the fourth fusion in Claimant's cervical spine and the pain generator has not been adequately identified. Finally, cervical spine surgery would be premature because other treatment options, including injections and physical therapy, remain available. However, Claimant has undergone extensive conservative treatment and an EMG revealed a C8 radiculopathy. Furthermore, the persuasive medical records and opinions of Drs. Ghiselli, Kawasaki, Counts and Yamamoto reflect that Claimant's work activities on December 6, 2016 aggravated his pre-existing cervical spine condition and warrant fusion surgery. Accordingly, the ACDF at C7-T1 recommended by Dr. Ghiselli constitutes reasonable and necessary medical treatment designed to cure or relieve the effects of Claimant's December 6, 2016 cervical injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Withdrawal of General Admission of Liability

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any

compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2015), C.R.S. Because Respondents filed a GAL, they bear the burden of proof to establish that Claimant did not sustain a compensable cervical spine injury during the course and scope of her employment with Employer on December 6, 2016.

8. As found, Respondents have failed to demonstrate by a preponderance of the evidence that they are entitled to withdraw their GAL that acknowledged Claimant sustained a compensable cervical spine injury during the course and scope of his employment with Employer on December 6, 2016. Initially, Claimant explained that he felt a "pop" in his neck area while applying chains to his truck tires when driving back to Denver from Grand Junction. Although he did not immediately experience symptoms, he developed significant neck pain and stiffness two days after the incident. The medical records reflect that Claimant has undergone two previous spinal fusions and diagnostic testing revealed degenerative changes in his cervical spine.

9. As found, the persuasive medical evidence reflects that Claimant's work activities on December 6, 2016 aggravated his pre-existing cervical spine condition. Dr. Yamamoto persuasively explained that the critical inquiry is whether Claimant experienced the "natural progression of a pre-existing condition or if the condition is secondary to" his December 6, 2016 work activities. He reasoned that the proximate cause of Claimant's injury was placing the chains on his truck tires. Chaining the tires aggravated Claimant's pre-existing neck condition and created "significant radicular symptoms on the left involving the C8 nerve root." Furthermore, Dr. Counts specifically concluded that Claimant suffered an aggravation of his pre-existing cervical spine condition while performing his job duties on December 6, 2016. Finally, Dr. Ghiselli remarked that Claimant experienced an acute disc herniation at C7-T1 on December 6, 2016 that was causing left arm weakness.

10. As found, in contrast, Dr. Reiss explained that Claimant's December 6, 2016 work activities did not aggravate, accelerate or combine with his pre-existing cervical spine condition to produce a need for medical treatment. He also determined that, although Claimant suffers degenerative changes in his cervical spine, there was no acute injury on December 6, 2016. Claimant's cervical symptoms simply constitute the natural progression of a pre-existing condition. He also commented that Claimant's activity of applying chains to his truck tires would not have caused a significant spinal injury. However, Dr. Yamamoto persuasively noted that, although other physicians had determined Claimant did not suffer a compensable injury on December 6, 2016 based on imaging studies, Claimant's clinical presentation and ability to perform his job duties without difficulty prior to December 6, 2016 suggested that he suffered a cervical spine injury while applying chains to his truck tires. Accordingly, Respondents have failed to demonstrate that Claimant's work activities on December 6, 2016 did not aggravate, accelerate or combine with his pre-existing cervical spine condition to produce a need for medical treatment.

Medical Benefits

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

12. As found, Claimant has demonstrated by a preponderance of the evidence that an ACDF at the C7-T1 level as recommended by Dr. Ghiselli is reasonable, necessary and causally related to his December 6, 2016 admitted industrial injury. Dr. Ghiselli commented that Claimant had undergone a C3-C4 and C5-C6 ACDF in 2008 followed by a C6-C7 ACDF in 2015. He persuasively remarked that Claimant was now

suffering an acute disc herniation at C7-T1 that was causing left arm weakness. Positive EMG findings also suggested an acute severe left C8 radiculopathy. Dr. Kawasaki remarked that Claimant exhibited objective findings on MRI as well as "significant findings on EMG/nerve conduction study for C8 radiculopathy." He thus concluded that the ACDF at C7-T1 constituted reasonable and necessary medical treatment. Moreover, Dr. Counts agreed with Dr. Ghiselli's recommendation for an ACDF at the C7-T1 level because Claimant's condition has continued to deteriorate. He summarized that the need for surgery is related to Claimant's December 6, 2016 work activities. Furthermore, Claimant has failed conservative treatment. Finally, Dr. Yamamoto also agreed with Dr. Ghiselli that the proposed ACDF surgery constitutes reasonable and necessary medical treatment.

13. As found, in contrast, Dr. Reiss explained that Dr. Ghiselli's proposed ACDF surgery at C7-T1 is not reasonable, necessary and causally related to Claimant's December 6, 2016 admitted industrial injury. He remarked that the proposed surgery would be the fourth fusion in Claimant's cervical spine and the pain generator has not been adequately identified. Finally, cervical spine surgery would be premature because other treatment options, including injections and physical therapy, remain available. However, Claimant has undergone extensive conservative treatment and an EMG revealed a C8 radiculopathy. Furthermore, the persuasive medical records and opinions of Drs. Ghiselli, Kawasaki, Counts and Yamamoto reflect that Claimant's work activities on December 6, 2016 aggravated his pre-existing cervical spine condition and warrant fusion surgery. Accordingly, the ACDF at C7-T1 recommended by Dr. Ghiselli constitutes reasonable and necessary medical treatment designed to cure or relieve the effects of Claimant's December 6, 2016 cervical injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to withdraw the GAL acknowledging Claimant's December 6, 2016 cervical spine injury is denied and dismissed.

2. The ACDF surgery at C7-T1 as recommended by Dr. Ghiselli is reasonable, necessary and causally related to Claimant's December 6, 2016 admitted industrial injury.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That

you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

- Whether the surgery proposed by Dr. Jamrich for fusion at L5-S1 and disc replacement at L4-L5, is reasonable, necessary and related to Claimant's admitted September 3, 2015 injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On September 3, 2015, Claimant was injured in the course and scope of her employment for Employer. She was working as a server/bartender at Employer's restaurant when she slipped on a wet floor and fell on her buttocks. She had pain in her low back area with pain radiating down the left posterior leg a short time after the fall. The initial evaluation record from Concentra indicates that she attempted to continue to work, but was off work as of September 21, 2015. She was given restrictions and was able to return to work in a light duty capacity while undergoing treatment for her injury.

2. Claimant received conservative treatment at Concentra, but when that did not resolve her pain, her provider referred her to Dr. Primack for a complete evaluation. On November 24, 2015, Dr. Primack evaluated Claimant and after conducting his exam, ordered an MRI of her low back, and referred Claimant to Dr. Brian Castro for a surgical evaluation.

3. On December 7, 2015, after having undergone the MRI, Claimant saw Dr. Castro. Dr. Castro found that Claimant had "a large disc herniation at L5-S1 left sided compressing and displacing the traversing S1 nerve root consistent with left side radiculopathy."

4. On December 8, 2015, Claimant returned to Dr. Primack, who felt she was a candidate for a decompression laminectomy without further conservative treatment or diagnostics.

5. Later on December 8, 2015, Claimant continued to experience severe leg pain which resulted in an emergency room visit at Sky Ridge Medical Center. Neurosurgeon Dr. Michael Madsen evaluated Claimant and felt her condition was emergent and in need of surgery. On December 10, 2015, he performed a microdiskectomy at L5-S1. Claimant had a recurrent herniation at L5-S1 that resulted in a revision laminectomy, microdiskectomy, and foraminotomy done by Dr. Madsen on March 28, 2016.

6. Respondents filed a General Admission of Liability dated October 14, 2015. However they disputed the surgeries performed by Dr. Madsen as not

reasonable, necessary, or related. Claimant obtained counsel and filed for a hearing on that issue. Respondents ultimately agreed that the two surgeries were reasonable, necessary and related, and agreed that they were responsible for both. Dr. Madsen and his referrals were considered authorized treating physicians in the claim.

7. Claimant continued to work, and continued in physical therapy. However on April 20, 2016, Dr. Madsen reported that Claimant had suffered another setback and suggested more time and therapeutic exercise. Claimant continued physical therapy with Concentra. Despite undergoing frequent physical therapy treatments, Claimant's pain persisted.

8. On May 5, 2016, Claimant reported that she continued to be bothered by pain and indicated that it was somewhat worse with sitting, squatting, twisting, and bending. Additionally, she reported pain into her left leg with sitting or walking for prolonged periods of time. She continued on restrictions and was told to follow up with Dr. Madsen.

9. Claimant testified that she was frustrated with her lack of progress and requested another opinion. Dr. Madsen referred her to Dr. Jamrich whom she saw on September 15, 2016. In his report of that date Dr. Jamrich states:

> On MRI, there is an annular tear with circumferential protrusion, somewhat worse on the right than the left at the L4-5 level. At the 5-1 level, there is significant inflammation on the left side surrounding the L5-S1 area with significant inflammation in this area and also an annular tear.

At that point Dr. Jamrich was discussing the possibility of either an L5-S1 fusion or an L4-5/L5-S1 fusion. He recommended an L4-5 discogram be performed as diagnostically helpful in determining what course of treatment should be pursued.

10. On January 9, 2017, Dr. Jamrich requested authorization for a posterior lumbar inter-body fusion at L5-S1 and anterior disc replacement at L4-5. On January 12, 2017, Respondents denied the request by letter from Respondents counsel. In his deposition taken post hearing, Dr. Jamrich explained that on all the MRI's he has seen going back to the first one dated December of 2015, Claimant had a very large tear through the back of the annulus at the L4-5 level with a protrusion that goes out on the right side. He feels that the injury at the 4-5 level, which was present since before the Claimant's first surgery, was starting to become more symptomatic. He stated in part, "It will be more symptomatic as time goes on, whether or not she has the fusion simply because the 5-1 segment isn't moving normally now, that's putting greater stress on the level above, and if she doesn't have a fusion, that will continue to be painful from both 5-1 and 4-5." Additionally, he stated that "the disc is torn and damaged. That is a full thickness tear through the back of the disc with a disc protrusion on the right side . . . very few people taking care of their own patients would suggest doing a fusion adjacent to a level with a torn, protruding disc.

11. Dr. Brian Reiss saw the Claimant two times, both as a Respondents-sponsored IME, to give an opinion on the requests for authorization of surgeries by an authorized treating physician. He stated that he does three of these types of IME's a week, all for the insurance carriers and attorneys for Respondents. In his report of January 27, 2017, Dr. Reiss indicated that he believes Claimant would have a reasonable chance of improving her level of function if she got the L5-S1 fusion. He thought that the findings at L4-5 represented degenerative changes. However, in his deposition, Dr. Reiss admitted that he had only seen the actual films taken on August 2, 2016, and only the MRI reports on the others. As noted above, Dr. Jamrich testified that he looked at all the films himself, and that not looking at the films did a disservice to the patient. Dr. Jamrich opined that a single level fusion in this patient would be a mistake, and stated: "That would be a mistake because it would immediately make that 4-5 level more symptomatic, and that would necessitate the patient having a second surgery."

12. In his report dated November 29, 2016, Dr. Scott Primack stated that Claimant would benefit from a single level fusion at L5-S1, and did not recommend the L4-5 disc replacement. However, Dr. Primack is not a back surgeon. Dr. Primack stated in his January 10, 2017 report that he hoped that the single level fusion would be approved. Dr. Primack did not consult with Dr. Jamrich and did not issue a report from after January 10, 2017. Additionally, Dr. Primack did not offered his opinion after the Claimant's April MRI and Dr. Jamrich's explanation of why it would be a mistake to fuse one level without addressing the problem at the adjacent level at the same time. Dr. Jamrich stated:

> In my experience and the experience of most of my partners, doing a fusion at a level adjacent to a torn disc with a protrusion results in a very, very high increase in the symptoms of the level with the tear and the protrusion. None of the doctors in my practice would do that. Doing a two-level fusion is something that I would try to avoid in someone the patient's age. That is why I have recommended what I have recommended.

Dr. Primack indicates that Claimant has both significant leg pain and back pain in his reports. Dr. Jamrich testified that the two level procedure would address both issues.

13. On April 24, 2017 Claimant underwent an MRI done at her expense. Dr. Jamrich opined that Claimant's condition was worsening at L4-5. Dr. Reiss called it a new condition that was worsening at L4-5. Dr. Reiss referred to the April 2017 MRI, specifically that portion which addressed the L4-5 level, and said that without being able to see the MRI directly, he could not say if a surgical problem existed. Further, Dr. Reiss testified that the surgeon needs to look at the MRI before doing surgery to quantify the size or amount of the compression. Dr. Jamrich has evaluated the MRI himself, and all of the previous MRIs. Dr. Jamrich questions the opinions of Dr. Reiss because Dr. Reiss has not looked at the MRI films directly, specifically pointing out the worsening protrusion of the disc on the right side. Dr. Jamrich points out that Dr. Reiss had recommended a decompression at that level rather than a disc replacement, but

that would “add insult to injury” because you already have a torn disc that would be further damaged by the decompression.

14. Respondents’ witness Dr. Reiss opined that a fusion at one level and a disc replacement at the adjacent level was not the accepted use of an artificial disc according the Division of Workers Compensation Guidelines. Dr. Jamrich testified he was not familiar with the Guidelines, but he has testified twice in Workers’ Compensation hearings and explained why the procedure he recommended was preferable for this particular patient. While the Guidelines should be appropriately considered, the opinions expressed in the medical records or by the Claimant’s treating physician can provide sufficient rationale for deviation from the Guidelines.

15. Claimant testified that she has continued to work throughout this process at light duty for Employer. She has constant pain in her low back and down her legs that prevents her from full duty work, and also from engaging in any of her normal activities, like hiking. She testified that she had been an extremely active and athletic person prior to this injury and would like to be able to get back to that level of function if possible.

16. All of the physicians involved in Claimant’s care agree that she would benefit from a fusion at L5-S1. Dr. Jamrich also requested authorization for an L4-5 disc replacement. Dr. Primack is not a back surgeon, and there is no indication that he has seen the Claimant, or her recent MRI, since his examination on January 10, 2017. Dr. Reiss is a surgeon, but is not Claimant’s treating physician and has not seen the actual films of all four of Claimant’s MRIs. Dr. Reiss does not know if there is a worsening at L4-5, and believes only the fusion should be done. Dr. Jamrich has the most extensive and comprehensive experience with Claimant and her condition. He has viewed all four MRI films himself. He credibly and persuasively testified to Claimant’s reasonable need for this procedure. His testimony and explanations for the need for this treatment as the treating physician are well reasoned and make sense to try to avoid further treatment and surgery.

17. Dr. Jamrich specifically addressed the issue of whether the disc replacement was related to Claimant’s work injury. The ALJ finds persuasive Dr. Jamrich’s opinion that the disc replacement is related. Dr. Jamrich credibly opined that he had “seen the same torn, protruding, worsening disc” on every one of Claimant’s MRIs, and that he did not know how Dr. Reiss could testify that it wasThe record supports a finding that Dr. Jamrich reviewed all of the MRI films and that Dr. Reiss may not have seen the actual MRI films, but relied instead on the radiologists’ reports. The ALJ finds Dr. Jamrich’s opinion to be better supported and more persuasive than Dr. Reiss’ opinion on the issue of relatedness.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act (Act), § 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. *See* § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the right of the Claimant nor in favor of the rights of Respondents. *See* § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc., v. Indus. Claim. Apps. Office, 5 P.3d 385* (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline, 57 P.2d 1205, 1209* (Colo. 1936); CJI, Civ. 3:17 (2013).

The record contains ample support to find that Respondent's expert witness, Dr. Brian Reiss, is biased in favor of Respondents. He performs at least three Independent Medical Examinations a week, all on behalf of Respondents. By his own admission, many times the examinations relate to the denial of surgeries that have been proposed by an authorized treating physician. His opinion that the L4-5 disc replacement is not reasonably necessary is less persuasive due to his apparent bias in favor of Respondents.

Dr. Jamrich, as an authorized treating physician, is more familiar with Claimant's particular symptoms and responses to treatment. He is also the doctor most familiar with objective evidence of Claimant's condition having reviewed all of Claimant's MRI films. Dr. Jamrich's opinion that Claimant's condition warrants the fusion and disc replacement is persuasive.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office, 12 P.3d 844, 846 (Colo. App. 2000)*. A claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n, 491 P.2d 106* (Colo. App. 1971). A causal connection may be established by circumstantial evidence. Expert medical testimony is not necessarily required. *Id.* All results flowing proximately and naturally from an

industrial injury are compensable. *See Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970).*

Respondents have admitted liability for medical treatment to Claimant's lumbar spine and have provided treatment to the lumbar disc at L5-S1. The evidence reflects that after first denying the request for authorization from Dr. Castro, Respondents admitted liability for the first (and second) surgery performed by Dr. Madsen; this first surgery took place on December 10, 2015 and the second on March 23, 2016.

The issue before the ALJ is whether Dr. Jamrich's request for a repeat surgery at L5-S1 and a disc replacement at L4-5 is reasonable, necessary, and related to Claimant's admitted low back injury. Dr. Reiss opined the recommended L4-5 portion is not reasonable or necessary because Claimant did not have a diagnostic response to the discogram. Specifically, Dr. Reiss testified that Dr Jamrich did not show that this area was a generator of her pain. However, Dr. Jamrich opined that Claimant had a disc herniation at L5-S1 with two discectomies, bone on bone, and some residual disc pushing on the nerve on the left side. Dr. Jamrich also opined that she has a very large tear through the back of the annulus at the L4-5 level with a protrusion out the right side with low back and leg pain. He opined that if Claimant does not have a fusion that it will continue to be painful at L5-S1 and L4-5. If only the fusion is performed, Dr. Jamrich opined that the segment at L4-5 will become more painful.

Dr. Jamrich respectfully disagreed with the opinion of Dr. Reiss regarding a decompression at L4-5 and indicated it would add "insult to injury." Again, Dr. Reiss' opinion here is not found to be persuasive. Dr. Jamrich points out that Claimant is a young, active female that has had two surgeries already to that area. There is no question that the L5-S1 portion is reasonable, as even Dr. Reiss and Dr. Primack have stated that this portion of the surgery should be done. The two back surgeons differ on the L4-5 disc replacement. Regardless, Dr. Jamrich makes a compelling and persuasive argument that it would be a mistake to do one without the other. Dr. Reiss' arguments against the second part of the procedure are not found to be convincing.

Respondents have argued that the proposed surgery is not recommended under the Guidelines. While the Guidelines were appropriately considered, the weight of the opinions expressed in the medical records by the Claimant's medical treatment professionals provides sufficient rationale for deviation from the Guidelines.

Dr. Reiss has opined that the need for the L4-5 replacement is not related to this claim. Dr. Jamrich specifically addressed that issue and indicated that he has "…seen the same torn, protruding, worsening disc on every MRI" and consequently does not know how Dr. Reiss can say it is not related. Dr. Jamrich does point out that Dr. Reiss may not have seen the actual MRI films, only the reports. Given the persuasive testimony of Dr. Jamrich, the ALJ finds and concludes that Claimant has proven by a preponderance of the evidence that the L5-S1 fusion and the L4-5 disc replacement as proposed are reasonable, necessary, and related to Claimant's work injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Dr. Jamrich's proposed L5-S1 fusion and L4-5 disc replacement are reasonable, necessary, and related. Claimant may proceed with this procedure and Respondents shall be responsible for payment of all costs, per the Colorado Fee Schedule, associated with that treatment.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she sustained an injury arising out of and in the course of her employment.

STIPULATIONS

I. The parties stipulated at hearing that, should the claim be found compensable, Respondents shall be liable for Claimant's treatment with Dr. Dixon at CCOM on October 7, 2016.

FINDINGS OF FACT

1. Claimant has been employed by Employer since 2006 working in various capacities including, as of 2016, a Senior Leadership Development Specialist.

2. As a Senior Leadership Development Specialist, Claimant is responsible for developing leadership training for call center managers. Claimant testified that she is a salaried employee and that her usual work hours are from 9:00 a.m. to 5:00 p.m.

3. On September 30, 2016, Employer held its annual employee appreciation event, PAWtober Fest. "PAW" is an acronym for Employer's core values of pride, adventure, and winning. PAW is a part of Employer's corporate culture and is used to reinforce employer's overall business and employment ethos.

4. The event was held at Employer's headquarters and included live music, food trucks, games, and other activities. Alcoholic drinks were also available for purchase. Employees' families, including children, were invited to attend the event.

5. Aaron Groote, Senior Manager of Corporate Communications, testified at hearing on behalf of Respondents. Mr. Groote was the coordinator of the 2016 PAWtober Fest. Mr. Groote testified that the event was held outside of Employer's core business hours of 9:00 a.m. to 4:00 p.m. He stated that the event was recreational and attendance was optional. The messaging to employees about the event did not indicate attendance was mandatory. No training of employees occurred during the event. Volunteers signed up to work shifts and were not required to stay and attend the event upon completion of their volunteer shift. The event was paid for by Employer and some of Employer's programming partners.

6. Claimant volunteered to work the registration table at PAWtober Fest. Claimant testified that her understanding was that, as a Senior Leadership Development Specialist, she was expected to participate in PAWtober Fest. Claimant stated that, throughout her employment with Employer, employees in leadership positions always

participated in “making events happen.” Claimant’s motive in attending the event was to meet Employer’s perceived expectation and to promote Employer’s leadership values. Claimant was not training any employees at the event. Claimant acknowledged that she was free to leave after completing her volunteer shift, that she did not receive compensation for her participation, and that she was not told her performance evaluation relied on her attendance at the event.

7. During the day of September 30, 2016, Claimant attended two meetings regarding PAWtober Fest discussing details of her volunteer duties at the event. Claimant was responsible for ensuring that attendees were registered before entering into the event and distributing wristbands to attendees drinking alcohol.

8. Claimant was stationed at a registration table. Claimant’s volunteer shift was from 4:30 p.m. to 5:30 p.m. Claimant testified that she normally would have worked until 5:00 p.m.

9. Claimant testified that she completed her volunteer shift and began walking to her car to put items in her car. Claimant intended on then returning to the event to attend in a non-volunteer capacity. Claimant testified that, while walking on company premises on the way to the car, her foot slipped off of an uneven sidewalk. Claimant fell forward, injuring her right arm and shoulder. Claimant reported the incident to a security guard and then drove herself home. She went to an emergency room a few days later for treatment of her symptoms.

10. Claimant completed an Employee Accident/Injury Report on October 3, 2016.

11. Claimant subsequently presented to Robert Dixon, M.D. at CCOM on October 7, 2016. Claimant reported falling onto her right shoulder on September 30, 2016. On physical examination, Dr. Dixon noted swelling and bruising and limited range of motion in Claimant’s right upper arm Dr. Dixon noted that emergency room x-rays were negative for an acute bony injury. Dr. Dixon diagnosed Claimant with a work-related right shoulder contusion and rotator cuff strain. Dr. Dixon released Claimant to regular duty and recommended Claimant take Aleve, use ice and heat and begin physical therapy.

12. Claimant underwent an MRI of her right shoulder on October 15, 2016 which revealed a high-grade partial tear far anterior supraspinatus tendon, mild subcapularis tendinosis without tearing, and subacromial subdeltoid bursitis.

13. On October 27, 2016, Claimant presented to Thomas Mann, M.D. Dr. Mann assessed right shoulder pain with a high-grade partial supraspinatus tear and recommended operative intervention.

14. Claimant’s testimony is found credible and persuasive.

15. Claimant has established by a preponderance of the evidence that she sustained an industrial injury arising out of and in the course and scope of her employment. Claimant volunteered at the event based on a reasonable understanding

that, in her role as a Senior Leadership Development Specialist, she was expected to attend and assist with the operation of the event. Although the event itself was recreational, immediately preceding the injury, Claimant was not participating in a recreational or social capacity, but rather as a volunteer assisting Employer in operating the event.

16. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would

accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

In order to recover benefits a claimant must prove by a preponderance of the evidence that his or her injury was proximately caused by an injury arising out of and in the course of her employment. Section 8-41-301(1)(b) & (c), C.R.S*.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

Section 8-40-201(8), C.R.S., provides that the term “employment” shall not “include the employee’s participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program.” Similarly, § 8-40-301(1), C.R.S., defines the term “employee” to exclude any person employed by an employer “while participating in recreational activity, who at such time is relieved of and is not performing any duties of employment.”

In *White v. Industrial Claim Appeals Office,* 8 P.3d 621 (Colo. App. 2000), the court held that the statutory term “recreational activity” should be given its plain and ordinary meaning as an activity that “has a refreshing effect on either the mind or the body.” Determining whether an activity is “recreational” depends on consideration of the circumstances including whether the activity occurred during working hours, whether the injury occurred on the employer’s premises, whether the employer initiated the activity, whether the employer exerted control over the employee’s participation in the activity, and whether the employer stood to benefit from the employee’s participation in the activity. The question of whether an activity was “recreational” is one of fact for determination by the ALJ. *Lopez v. American Lumber Construction,* W.C. No. 4-434-488 (I.C.A.O. Oct. 29, 2003).

Determination of whether the claimant’s participation in a recreational activity was “voluntary” requires consideration of the claimant’s “motive” for participation in the activity. Compensability must be denied if participation in the activity was voluntary, even though the employer promoted, sponsored or supported the activity. When determining whether the claimant’s participation was voluntary the ALJ may consider various factors including whether the activity occurred during working hours, whether the activity occurred on or off the employer’s premises, whether the employer initiated, organized, sponsored or financially supported the activity, and whether the employer derived benefit from the activity. *Dover Elevator Co. v. Industrial Claim Appeals Office,* 961 P.2d 1141 (Colo. App. 1998). Ultimately, the question of whether the claimant’s

participation in the recreational activity was voluntary is one of fact for determination by the ALJ. *Kvale v. Infinity Systems Engineering,* W.C. No. 4-588-521 (I.C.A.O. March 23, 2005).

As found, Claimant has established by a preponderance of the evidence that she sustained an industrial injury arising out of and in the course of her employment. Pertinent to the ALJ's analysis is the capacity in which Claimant was present at the event and the timing of the injury. Although the event itself was recreational and attendance optional, Claimant's participated in a volunteer capacity in which she performed duties as instructed by Employer. Claimant signed up for a specific shift, which Claimant credibly testified began prior to the end of her normal work hours. Claimant attended two meetings throughout her work day to receive instructions and additional information regarding her volunteer duties. Claimant credibly testified that it was her understanding that she was expected to attend and assist with event, as she had observed other employees in leadership positions do on prior occasions. Claimant's motive to attend the event was to meet such expectation and demonstrate leadership. Claimant's assistance at the registration table benefitted Employer by facilitating the efficient operation of the event.

Although Claimant's intention was to subsequently participate in the event in a recreational capacity, at the time of the injury, Claimant had not participated in the social or recreational aspects. Claimant was in the process of walking to her car immediately after completing the volunteer shift when she fell on company premises. Based on the totality of evidence, Claimant has established that she sustained an injury on September 30, 2016 arising out of and in the course of her employment.

ORDER

It is therefore ordered that:

I. Claimant has established by a preponderance of the evidence that she sustained an industrial injury arising out of and in the course of her employment. Claimant's September 30, 2016 injury is compensable.

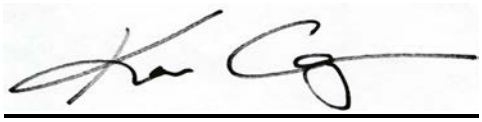
II. Respondents shall pay the cost of Claimant's treatment with Dr. Dixon at CCOM on October 7, 2016 according to the fee schedule.

III. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 10, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has demonstrated by a preponderance of the evidence that left shoulder surgery is reasonable, necessary and related to the industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On May 29, 2015, Claimant suffered a compensable injury when he fell approximately 10-12 feet off a roof.

2. Claimant suffered multiple injuries, including an injury to his left shoulder.

3. On June 11, 2015, due to ongoing shoulder complaints and symptoms, Claimant underwent an MRI of his left shoulder. According to Dr. Shah's December 11, 2015 report, the MRI revealed a complete tear of the rotator cuff as well as biceps tendonitis.

4. On December 11, 2015, Dr. Shah operated on Claimant's left shoulder. Dr. Shah noted in his operative report that Claimant suffered from a "complete rupture of the rotator cuff at the level of the supraspinatus." Therefore, Dr. Shah performed a "left shoulder arthroscopy, extensive debridement, rotator cuff repair of supraspinatus, open subpectoral biceps tenodesis, and subacromial decompression."

5. Claimant's pain complaints and symptoms were consistent with the MRI findings and Dr. Shah's operative findings. Therefore, this ALJ finds Claimant to be credible regarding his reporting of pain and symptoms.

6. Subsequent to this surgical procedure performed by Dr. Shah, Claimant showed some gradual improvement but it subsequently worsened. The worsening of his symptoms included both pain as well as popping in the left shoulder. It worsened to the point that he was unable to lift overhead and was unable to reach across his body. Given these symptoms and the fact that he was unable to sleep through the night because of the pain in his left shoulder, a referral was made by the primary treating physician, Dr. Hugh Macaulay, to Dr. Andrew Parker.

7. On November 21, 2016, Claimant was evaluated by Dr. Parker due to ongoing shoulder problems. Claimant had significant discomfort in his left shoulder and also felt that his left shoulder was weak. Dr. Parker noted Claimant had mild AC

joint tenderness on the left and positive impingement. He also noted significant subacromial crepitus and that Claimant hiked his shoulder with rotator cuff strength testing. He also noted fairly significant weakness with Jobe strength testing. Based on his findings on examination, Dr. Parker was of the opinion that Claimant had either a recurrent left rotator cuff tear or a failed repair. Dr. Parker also diagnosed Claimant with a failed biceps tenodesis. Therefore, Dr. Parker recommended an MRI to evaluate Claimant's rotator cuff and determine whether Claimant needed revision surgery.

8. On December 3, 2016, Claimant underwent an MRI of his left shoulder. The MRI report sets forth the following impression:

> i. Residual posterior para signal abnormality in the distal central supraspinatus tendon.
>
> ii. Fine, vertical tear at the distal supraspinatus myotendinous junction.
>
> iii. Biceps tenotomy with bicipital groove tenodesis.
>
> iv. Early but stable subscapularis and infraspinatus tendinosis.

9. On January 10, 2017, Dr. James Lindberg performed an IME. Dr. Lindberg reviewed the MRI and felt that the rotator cuff is mainly intact with a retracted partial undersurface supraspinatus tear with retraction. His physical examination confirmed that Claimant has some weakness with abduction of the left shoulder. Dr. Lindberg asked Claimant, who is 65, how much longer he plans on working before retiring. Claimant stated maybe another year. Based on his physical examination, and Claimant's desire to retire in about a year, Dr. Lindberg did not think shoulder surgery was reasonable and necessary. In essence, Dr. Lindberg did not think Claimant could return to work as an electrician based on all of the injuries sustained by Claimant in the fall. Therefore, he did not think another shoulder surgery would significantly improve his situation, his motion, his strength, and ability to work.

10. This ALJ does not find Dr. Lindberg's opinion to be persuasive. It appears that Dr. Lindberg based his opinion as to whether the surgery is reasonable and necessary based on Claimant's age and possible retirement in one year and Dr. Lindberg's assessment that repeat surgery may not allow Claimant to return to work as an electrician. Moreover, Dr. Lindberg did not address how a revision surgery might reduce Claimant's shoulder pain. Lastly, Dr. Lindberg also based his opinion that the surgery was not reasonable because he could not "guarantee" the surgery will make Claimant better or "significantly" improve Claimant's "situation."

11. On February 1, 2017, Claimant returned to Dr. Parker. Dr. Parker reviewed the MRI scan and evaluated Claimant. He concluded that Claimant's is suffering

from a recurrent partial rotator cuff tear. Dr. Parker Concluded that Claimant's partial thickness rotator cuff tear is 80%.

12. Dr. Parker stated that:

> Certainly the interpretation of the MRI per myself and Dr. Lindberg, both are within the realm of reasonable with regard to what the scan shows. In my mind, the bottom line is, however, he is still having rotator cuff generated pain historically and by exam, and in the setting of his work-related rotator cuff repair I think that this is probably still related to the accident, whether this has been a failure of repair or incomplete repair at the time of the original surgery. I think if he continues to have symptoms it would be worthwhile exploring it arthroscopically and considering revision rotator cuff repair. I have discussed this with him that as per Dr. Lindberg's note there is some unpredictability on what may be found, especially with the interpretative difference by MR.

13. This ALJ finds Dr. Parker's reports, and his opinions contained in such reports, to be credible and persuasive in finding that Claimant has a partial rotator cuff tear and that surgery is reasonable and necessary to cure and relieve Claimant from the effects of the injury.

14. On May 9, 2017, Claimant was evaluated by Dr. Macaulay. Dr. Macaulay noted that Claimant continues to have significant problems with his left shoulder. Dr. Macaulay noted that Claimant awakens from his sleep once or twice a night when he rolls over on his left shoulder. He also noted that Claimant has significant pain when he reaches overhead. Dr. Macaulay indicated that Claimant is not too old to have the surgery recommended by Dr. Parker. Dr. Macaulay indicated that Claimant should have the surgery if he wants it.

15. Claimant does want to have the surgery which has been recommended by Dr. Parker.

16. On June 1, 2017, Claimant was again evaluated by Dr. Macaulay. Claimant continued to complain of left shoulder symptoms. Dr. Macaulay concluded that Claimant's left shoulder continued to be significantly problematic. Claimant was unable to hold his granddaughter (about 7 pounds) in his left upper extremity. Claimant was also unable to assist his grandson, who weighs about 30 pounds, up from the floor. He was also unable to position the child. Claimant also had problems using his left upper extremity for any abduction or overhead work. Claimant also noted weakness and a catching sensation in his shoulder. His left shoulder pain also wakens him from his sleep. On examination, Dr. Macaulay noted that when the supraspinatus was challenged, Claimant had significant

weakness and pain. Claimant also had a palpable and audible clicking sensation with abduction.

17. This ALJ finds Dr. Macaulay's findings on physical examination to be consistent with the MRI findings which demonstrate Claimant has a partially torn rotator cuff. Dr. Macaulay's findings on physical examination are also consistent with Dr. Parker's findings. Therefore, this ALJ credits Dr. Macaulay's opinion that the surgery recommended by Dr. Parker is reasonable and necessary.

18. On June 28, 2017, Dr. Ciccone performed an IME. His impression was that Claimant was suffering from a rotator cuff tear. However, he did not think the surgery recommended by Dr. Parker was reasonable and necessary. Dr. Ciccone stated that:

> The patient's MRI scan in December 2016 reveals no recurrent full thickness tear. In my experience, it is common for postoperative imaging of rotator cuff repairs to reveal continued partial thickness defects. This is not an indication for surgery. On my examination the patient has some persistent stiffness in the left shoulder but had good rotator cuff strength in external rotation and supraspinatus strength testing. While I believe the patient may benefit from a home stretching program, I think it is unlikely that the patient has room for significant improvement in the function of the shoulder with revision cuff surgery. . . The patient may continue with the use of the shoulder as tolerated.

19. This ALJ does not find Dr. Ciccone's opinions as set forth in his report regarding the need for surgery to be persuasive for a number of reasons. First, Dr. Ciccone indicated that he does not anticipate the surgery will provide "significant improvement in the function of the shoulder." The test for whether a surgery is reasonable and necessary is not whether it will provide "significant improvement." Second, Dr. Ciccone does not address how the repair of the torn rotator cuff might reduce Claimant's pain complaints.

20. Dr. Ciccone also testified via deposition. Dr. Ciccone did expand on his opinion regarding the need for surgery. Dr. Ciccone testified that he did not think the surgery would change Claimant's symptoms "all that much." Dr. Ciccone did not, however, reconcile his difference of opinion in his report in which he stated he did not think the surgery would provide "significant improvement" and his opinion during his deposition in which he stated he did not think the surgery would change Claimant's symptoms "all that much." Therefore, this ALJ does not find Dr. Ciccone's opinion to be persuasive.

21. This ALJ finds that Claimant has a partially torn rotator cuff involving his left shoulder which is symptomatic. Due to the partially torn rotator cuff, Claimant

has weakness, limited function, and pain involving his left shoulder and upper extremity.

22. This ALJ finds that the surgery recommended by Dr. Parker is reasonable and necessary to evaluate and repair the partially torn rotator cuff and improve Claimant's left shoulder function and decrease his pain.

23. This ALJ finds that the surgery recommended by Dr. Parker is reasonable and necessary to cure and relieve Claimant from the effects of his industrial injury to his left shoulder.

24. This ALJ also finds that the need for surgery is related to Claimant's May 29, 2015 work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see*

also Heinicke v. ICAO, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

The Respondent is liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. C.R.S. § 8-42-101(1)(a). Claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990.)

Based upon the credible opinion of Dr. Parker, Claimant has a partially torn rotator cuff. As found, the cuff is approximately 80% torn. In addition, as found, and supported by the credible opinions of Dr. Macaulay and Dr. Parker, Claimant's torn rotator cuff is causing Claimant's left shoulder pain and limiting the function of Claimant's left shoulder and upper extremity. As found, Claimant has established by a preponderance of the evidence that the recommended medical treatment, left shoulder arthroscopy as recommended by Dr. Parker, is reasonable, necessary, and related to his May 29, 2015 industrial accident. The evidence credited demonstrates that the surgery is reasonable and necessary to evaluate Claimant's left shoulder and repair Claimant's partial rotator cuff tear in order to improve Claimant's function and pain complaints of his left shoulder and thereby cure and relieve Claimant from the effects of his industrial injury.

Accordingly, Claimant has demonstrated by a preponderance of the evidence, that the recommended medical treatment is reasonable, necessary, and related to his May 29, 2015 industrial accident.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for surgery as recommended by Dr. Parker is reasonably and medically necessary and is related to the underlying industrial accident of May 29, 2015.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 11, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-031-151-03

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

INDEMNITY INSURANCE COMPANY OF NORTH AMERICA,
SEDGWICK CMS, Third-Party Administrator (TPA),

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 20, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 9/20/17, Courtroom 1, beginning AT 8:30 AM, and ending at 10:15 AM).

Claimant relied on Respondents' Exhibits A through K, which were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ took the matter under advisement. The following decision is hereby issued.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable aggravation of her right knee in the course and scope of her employment: if so, is the Claimant entitled to medical benefits. At the commencement of the hearing, the parties agreed to reserve the issues of average weekly wage and temporary disability. The Respondents defend on the basis of an alleged "idiopathic

event," and the alleged natural progression of the Claimant's underlying right knee condition.

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues. The Respondents bear no burden in this matter.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (date-of-birth, April 5, 1962) started work for the Employer in August 2011 as an administrator.

2. On November 9, 2016, the Claimant, during a business trip, tripped over an uneven break on the sidewalk while she was walking from a van to a building where she was to train Employer's personnel. She landed on her right knee. The security personnel at the site came to her help and an ambulance was called. The Claimant was taken to the emergency room (ER). She complained of knee pain and shoulder pain. The Claimant was released the same day.

3. The Claimant is diabetic and has had two toes of her right foot amputated prior to the accident. The Claimant usually wears a boot on her right leg. She was wearing a boot on her right leg on the day of the accident. The Respondents contend that it was the boot that caused her to trip. The ALJ finds this contention to be without merit.

4. The Claimant has a history of falling accidents. On January 9, 2016, she fell on a tile floor in a hotel's bathroom while she was showering. Sometime in August/September of 2015, the Claimant fell twice during an unrelated-business trip--inside Disneyland and on a sandy beach in California. After both incidents, the Claimant complained of her knees among other parts of her body.

5. The ALJ finds that the Claimant's injury on November 9, 2016, was within the course and scope of her employment because she was traveling to conduct training for the Employer's personnel as part of her administrative responsibilities.

6. The ALJ further finds that the Claimant's tripping on the uneven break in the sidewalk on November 9, 2016, amounted to exposure to a special hazard of employment; and, it caused, or combined with her pre-existing condition, to aggravate and accelerate the pre-existing injury of her right knee.

7. Prior to the November 9, 2016 slip-and-fall injury, the Claimant had been released to full duty from a previous right knee injury.

Independent Medical Examination (IME) of Timothy O'Brien, M.D.

8. Dr. O'Brien performed an IME at Respondents' request on or about April 3, 2017. Dr. O'Brien's ultimate opinion was that the Claimant sustained a contusion of the right knee on November 9, 2016 with no evidence of substantial tissue breakage; and, the Claimant did not sustain any permanent partial disability as a result of the incident. Further, he was of the opinion that the Claimant needed no further medical treatment other than a home fitness regimen.

Medical

9. The Employer had the Claimant taken, by ambulance to the emergency room (ER) OF Parkland Medical Center; and, subsequently referred the Claimant to Concentra, were she was told that her injury was not work-related and Concentra would not treat the Claimant for non-medical reasons. Later, Concentra called her back for an MRI (magnetic resonance imaging), after which Concentra again told the Claimant that her injury was not work-related and it refused to further treat her for because the claim was denied by the insurance carrier.

10. Diane K. Adams, D.O., who treated the Claim ant t Parkland on November 15, 2016, was of the opinion that the Claimant sustained a work-related injury on November 9, 2016; and, she released the Claimant to return to modified duty from November 12 to November 14, 2016.

11. On November 24, 2016 Scott Richardson, M.D., released the Claimant to modified duty with the following restrictions: (1) sitting 90% of the time; (2) must use crutches; (3) weight bearing as tolerated; (4) no kneeling; and, (5) no climbing ladders (respondents' Exhibit G).

12. On May 17, 2017, Matthew Lugliani, M.D. was of the opinion that the Claimant sustained a work-related injury on November 9, 2016, sustaining an acute-on-chronic right knee pain. He indicated that the Claimant could not work until May 19, 2017. On June 6, 2017, Dr. Lugliani released the Claimant from his care because the insurance carrier was denying the claim.

Ultimate Findings

13. The Claimant's testimony was persuasive, credible and, essentially un-contradicted.

14. Between any conflicting versions of events and medical opinions, the ALJ makes a rational choice, based on substantial evidence to accept the Claimant's version of events, the medical opinions supporting an aggravation and acceleration of her underlying right knee condition on November 9, 2016, and to reject any testimony and/or opinions to the contrary.

15. The Claimant sustained a compensable aggravation and acceleration of her underlying right knee condition by virtue of her slip and fall on an uneven sidewalk on November 9, 2016; and, this arose out of the course and scope of her employment for the Employer.

16. All of the medical care and treatment to which the Respondents referred the Claimant was authorized, causally related, and reasonable necessary, at least until June 6, 2017, when Dr. Lugliani released the Claimant from further care. Beyond that point in time remains an open question.

17. The parties implicitly agreed to reserve the issues of medical benefits, average weekly wage, and temporary disability benefits, if the case was found to be compensable.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, this ALJ makes the following Conclusion of Law:

Idiopathic Injuries & Compensability

a. Where an off-premises injury occurs at a point which lies on the only route, or at least on the normal route, which employees must traverse to reach their employer's premises, special hazards of that route become hazards of the employment. *Matter of Welham*, 653 P.2d 760, 762 (Colo. App. 1982). When a claimant, at the time of an injury, is performing a duty with which the employee is charged as a part of the contract for service, or under the express or implied direction of his employer, the employee is within the course of his employment under the Workers' Compensation Act. *Colorado Civil Air Patrol v. Hagans*, 662 P.2d 194, 196, (Colo. App. 1983). An employee who is away from home on a business trip for his employer is under continuous workers' compensation coverage. *Maryland Casualty Co. v. Messina*, 860 P.2d 556, 558, (Colo. App. 1993). As found, the Claimant was on a business trip when she tripped on her way from a van to the building where she was to provide training to Employers' employees. The Claimant was away from home on a business trip for her employer and was under continuous worker's compensation. Further, she was exposed

to a special hazard of employment, *i.e.,* the uneven break in the sidewalk wherein she tripped, fell and was injured.

b. The [Aggravation] rule specifies that when "an employment injury worsens or combines with a preexisting impairment to produce a disability greater than that which would have resulted from the employment injury alone, the entire resulting disability is compensable." *Ortco Contractors, Inc. v. Charpentier*, 332 F.3d 283, 290 (5th Cir. 2003). "[i]t is well settled that a heart attack suffered in the course and scope of employment is compensable even though the employee may have suffered from a related preexisting heart condition." *Id*. An "unexplained fall" satisfies the "arising out of" employment requirement in § 8-41-301 (1) (c), C.R.S., if the fall would not have occurred but for the fact that the conditions and obligations of employment placed the employee in the position where he or she as injured. The phrase "arising out of" calls for an examination of the causal connection or nexus between the conditions and obligations of employment and the employee's injury. It is not essential, however, that an employee be engaged in an obligatory job function or in an activity resulting in a specific benefit to the employer at the time of injury. *City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** Employment risks are distinguished from entirely personal risks (which do not "arise out of" employment) , for instance, a preexisting idiopathic illness or medical condition that is completely unrelated to employment, such as fainting spells, heart disease, or epilepsy. *See, e.g., Irwin v. Indus. Comm'n,* 695 P.2d 763 (Colo. App. 1985); *Gates Rubber Co. v. Indus. Comm'n,* 705 P.2d 6 (Colo. App. 1985). As found, the Claimant tripped while she was walking from the a van to the building where she was going to provide training services for the Employer's personnel as part of her required work. The fact that she fell in a site that does not belong to the employer is irrelevant to the finding of injury.

c. An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, 805 p.2d 1167 (Colo.App. 1990). Even where the direct cause of an accident is the employee's preexisting idiopathic disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). Thus, even if the direct cause of an employee's fall is a preexisting idiopathic condition, any resulting injury caused by a special employment hazard is compensable, so long as the employment condition is not ubiquitous and generally encountered. *Gates Rubber Co. v. Industrial Commission*, 705 P.2d 6 (Colo.App. 1985); *Ramsdell v. Horn*, *supra*. In *Gates Rubber Co. v. Industrial Commission*, the court held that a level concrete floor is not a special hazard because it is a condition found in many non-employment locations. As found, regardless of the fact that whether the Claimant was wearing her boot or had a history of falling accidents, the Claimant tripped on November 9, 2016, because of the un-even concrete pad on the sidewalk.

d. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. §** 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health* 21 *Laboratories v. Indus. Claim Appeals* Office, 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals* Office, 942 P.2d 1337 (Colo. App. 1997). *Also see §* 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225334 (ICAO, April 7, 1998). As found, the November 9, 2017 incident aggravated and accelerated the Claimant's underlying right knee condition. The claimant's injury was causally related and reasonably necessary to work. She was exposed to a special hazard of employment, to wit, a break in the sidewalk over which she tripped, fell, and aggravated her right knee condition. Thus, the Claimant sustained a compensable injury to her right knee on November 9, 2017.

Credibility

e. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Apps. Office*, 183 P.3d 784 (Colo. App. 2008); *Kroupa v. Indus. Claim Apps. Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9TH Cir. 1977). The ALJ determines the credibility of witnesses. *Arenas v. Indus. Claim Apps. Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Apps. Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Apps. Office*, 297 p.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lat witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. 131, 134 P. 254 (1913); *also see Heinicke v. Indus Claim Apps. Office*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistently or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder

should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke*, 139 Colo. 305, 228 P.2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training, and education. *See* § 8-43-210, C.R.S.; *One Hour Cleaners v. Indus. Claim Apps. Office*, 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury*, 62 ALR 2d 1179, maintaining that the fact-finder is not free to disregard un-contradicted testimony. As found, Claimant's testimony that she tripped over the sidewalk is credible, persuasive and convincing. As found, the Claimant's testimony was credible, persuasive and, essentially, un-contradicted. Further, medical opinions supporting an aggravation and acceleration of her underlying right knee condition were more credible and persuasive than opinions to the contrary.

Substantial Evidence

f. An ALJ's factual findings must be supported by substantial evidence in the record. *Pain Connection Plus v. Indus. Claim Apps. Office*, 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Apps. Office*, 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Apps. Office*, 131 P.3d 1172 (Colo. App. 2005); *also see Martinez v. Indus. Claim Apps. Office*, 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by substantial evidence, which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact-finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus Claim Apps. Office*, 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made rational choices, based on substantial evidence and the admitted photo of the uneven break in the sidewalk, to accept the Claimant's testimony that she tripped because of the uneven break in the sidewalk, and, to reject the Claimant's testimony that the tripping was the only contributor to her knee injury. As found, between any conflicting versions of events and medical opinions, the ALJ made a rational choice, based on substantial evidence to accept the Claimant's version of events, the medical opinions supporting an aggravation and acceleration of her underlying right knee condition on November 9, 2016, and to reject any testimony and/or opinions to the contrary.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing his entitlement to benefits. §§ 8-43-201 & 8-43-210, C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Apps. Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Indus Claim Apps. Office*, 24 P.3d 29 (Colo. App. 2000); *Kieckkhafer v. Indus. Claim Apps. Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim. Apps. Office (ICAO), March 20, 2002]; *also see Ortiz v. Principi*, 274 P.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim App. Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained her burden of proving, by a preponderance of the evidence that she sustained a compensable injury on November 9, 2017; and is entitled to medical benefits to relief the effect of her compensable injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent shall pay all the costs of causally related and reasonably necessary medical care and treatment for the Claimant's compensable right knee injury of November 9, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of October 2017.

_____
Court Clerk

Wc.ord

At the conclusion of the hearing, the ALJ took the matter under advisement. The following decision is hereby issued.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable aggravation of her right knee in the course and scope of her employment: if so, is the Claimant entitled to medical benefits. At the commencement of the hearing, the parties agreed to reserve the issues of average weekly wage and temporary disability. The Respondents defend on the basis of an alleged "idiopathic event," and the alleged natural progression of the Claimant's underlying right knee condition.

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues. The Respondents bear no burden in this matter.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (date-of-birth, April 5, 1962) started work for the Employer in August 2011 as an administrator.

2. On November 9, 2016, the Claimant, during a business trip, tripped over an uneven break on the sidewalk while she was walking from a van to a building where she was to train Employer's personnel. She landed on her right knee. The security personnel at the site came to her help and an ambulance was called. The Claimant was taken to the emergency room (ER). She complained of knee pain and shoulder pain. The Claimant was released the same day.

3. The Claimant is diabetic and has had two toes of her right foot amputated prior to the accident. The Claimant usually wears a boot on her right leg. She was wearing a boot on her right leg on the day of the accident. The Respondents contend that it was the boot that caused her to trip. The ALJ finds this contention to be without merit.

4. The Claimant has a history of falling accidents. On January 9, 2016, she fell on a tile floor in a hotel's bathroom while she was showering. Sometime in August/September of 2015, the Claimant fell twice during an unrelated-business trip--

inside Disneyland and on a sandy beach in California. After both incidents, the Claimant complained of her knees among other parts of her body.

5. The ALJ finds that the Claimant's injury on November 9, 2016, was within the course and scope of her employment because she was traveling to conduct training for the Employer's personnel as part of her administrative responsibilities.

6. The ALJ further finds that the Claimant's tripping on the uneven break in the sidewalk on November 9, 2016, amounted to exposure to a special hazard of employment; and, it caused, or combined with her pre-existing condition, to aggravate and accelerate the pre-existing injury of her right knee.

7. Prior to the November 9, 2016 slip-and-fall injury, the Claimant had been released to full duty from a previous right knee injury.

Independent Medical Examination (IME) of Timothy O'Brien, M.D.

8. Dr. O'Brien performed an IME at Respondents' request on or about April 3, 2017. Dr. O'Brien's ultimate opinion was that the Claimant sustained a contusion of the right knee on November 9, 2016 with no evidence of substantial tissue breakage; and, the Claimant did not sustain any permanent partial disability as a result of the incident. Further, he was of the opinion that the Claimant needed no further medical treatment other than a home fitness regimen.

Medical

9. The Employer had the Claimant taken, by ambulance to the emergency room (ER) OF Parkland Medical Center; and, subsequently referred the Claimant to Concentra, were she was told that her injury was not work-related and Concentra would not treat the Claimant for non-medical reasons. Later, Concentra called her back for an MRI (magnetic resonance imaging), after which Concentra again told the Claimant that her injury was not work-related and it refused to further treat her for because the claim was denied by the insurance carrier.

10. Diane K. Adams, D.O., who treated the Claim ant t Parkland on November 15, 2016, was of the opinion that the Claimant sustained a work-related injury on November 9, 2016; and, she released the Claimant to return to modified duty from November 12 to November 14, 2016.

11. On November 24, 2016 Scott Richardson, M.D., released the Claimant to modified duty with the following restrictions: (1) sitting 90% of the time; (2) must use crutches; (3) weight bearing as tolerated; (4) no kneeling; and, (5) no climbing ladders (respondents' Exhibit G).

12. On May 17, 2017, Matthew Lugliani, M.D. was of the opinion that the Claimant sustained a work-related injury on November 9, 2016, sustaining an acute-on-chronic right knee pain. He indicated that the Claimant could not work until May 19, 2017. On June 6, 2017, Dr. Lugliani released the Claimant from his care because the insurance carrier was denying the claim.

Ultimate Findings

13. The Claimant's testimony was persuasive, credible and, essentially un-contradicted.

14. Between any conflicting versions of events and medical opinions, the ALJ makes a rational choice, based on substantial evidence to accept the Claimant's version of events, the medical opinions supporting an aggravation and acceleration of her underlying right knee condition on November 9, 2016, and to reject any testimony and/or opinions to the contrary.

15. The Claimant sustained a compensable aggravation and acceleration of her underlying right knee condition by virtue of her slip and fall on an uneven sidewalk on November 9, 2016; and, this arose out of the course and scope of her employment for the Employer.

16. All of the medical care and treatment to which the Respondents referred the Claimant was authorized, causally related, and reasonable necessary, at least until June 6, 2017, when Dr. Lugliani released the Claimant from further care. Beyond that point in time remains an open question.

17. The parties implicitly agreed to reserve the issues of medical benefits, average weekly wage, and temporary disability benefits, if the case was found to be compensable.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, this ALJ makes the following Conclusion of Law:

Idiopathic Injuries & Compensability

a. Where an off-premises injury occurs at a point which lies on the only route, or at least on the normal route, which employees must traverse to reach their employer's premises, special hazards of that route become hazards of the employment. *Matter of Welham*, 653 P.2d 760, 762 (Colo. App. 1982). When a claimant, at the time of an injury, is performing a duty with which the employee is charged as a part of the

contract for service, or under the express or implied direction of his employer, the employee is within the course of his employment under the Workers' Compensation Act. *Colorado Civil Air Patrol v. Hagans*, 662 P.2d 194, 196, (Colo. App. 1983). An employee who is away from home on a business trip for his employer is under continuous workers' compensation coverage. *Maryland Casualty Co. v. Messina*, 860 P.2d 556, 558, (Colo. App. 1993). As found, the Claimant was on a business trip when she tripped on her way from a van to the building where she was to provide training to Employers' employees. The Claimant was away from home on a business trip for her employer and was under continuous worker's compensation. Further, she was exposed to a special hazard of employment, *i.e.,* the uneven break in the sidewalk wherein she tripped, fell and was injured.

b. The [Aggravation] rule specifies that when "an employment injury worsens or combines with a preexisting impairment to produce a disability greater than that which would have resulted from the employment injury alone, the entire resulting disability is compensable." *Ortco Contractors, Inc. v. Charpentier*, 332 F.3d 283, 290 (5th Cir. 2003). "[i]t is well settled that a heart attack suffered in the course and scope of employment is compensable even though the employee may have suffered from a related preexisting heart condition." *Id*. An "unexplained fall" satisfies the "arising out of" employment requirement in § 8-41-301 (1) (c), C.R.S., if the fall would not have occurred but for the fact that the conditions and obligations of employment placed the employee in the position where he or she as injured. The phrase "arising out of" calls for an examination of the causal connection or nexus between the conditions and obligations of employment and the employee's injury. It is not essential, however, that an employee be engaged in an obligatory job function or in an activity resulting in a specific benefit to the employer at the time of injury. *City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** Employment risks are distinguished from entirely personal risks (which do not "arise out of" employment) , for instance, a preexisting idiopathic illness or medical condition that is completely unrelated to employment, such as fainting spells, heart disease, or epilepsy. *See, e.g., Irwin v. Indus. Comm'n,* 695 P.2d 763 (Colo. App. 1985); *Gates Rubber Co. v. Indus. Comm'n,* 705 P.2d 6 (Colo. App. 1985). As found, the Claimant tripped while she was walking from the a van to the building where she was going to provide training services for the Employer's personnel as part of her required work. The fact that she fell in a site that does not belong to the employer is irrelevant to the finding of injury.

c. An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, 805 p.2d 1167 (Colo.App. 1990). Even where the direct cause of an accident is the employee's preexisting idiopathic disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). Thus, even if the direct cause of an employee's fall is a preexisting idiopathic condition, any resulting injury caused by a special employment hazard is compensable, so long as the

employment condition is not ubiquitous and generally encountered. *Gates Rubber Co. v. Industrial Commission*, 705 P.2d 6 (Colo.App. 1985); *Ramsdell v. Horn*, *supra*. In *Gates Rubber Co. v. Industrial Commission*, the court held that a level concrete floor is not a special hazard because it is a condition found in many non-employment locations. As found, regardless of the fact that whether the Claimant was wearing her boot or had a history of falling accidents, the Claimant tripped on November 9, 2016, because of the un-even concrete pad on the sidewalk.

d. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. §** 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health* 21 *Laboratories v. Indus. Claim Appeals* Office, 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals* Office, 942 P.2d 1337 (Colo. App. 1997). *Also see §* 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225334 (ICAO, April 7, 1998). As found, the November 9, 2017 incident aggravated and accelerated the Claimant's underlying right knee condition. The claimant's injury was causally related and reasonably necessary to work. She was exposed to a special hazard of employment, to wit, a break in the sidewalk over which she tripped, fell, and aggravated her right knee condition. Thus, the Claimant sustained a compensable injury to her right knee on November 9, 2017.

Credibility

e. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Apps. Office*, 183 P.3d 784 (Colo. App. 2008); *Kroupa v. Indus. Claim Apps. Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9TH Cir. 1977). The ALJ determines the credibility of witnesses. *Arenas v. Indus. Claim Apps. Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Apps. Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Apps. Office*, 297 p.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lat witnesses apply to expert witnesses as well.

See Burnham v. Grant, 24 Colo. 131, 134 P. 254 (1913); *also see Heinicke v. Indus Claim Apps. Office*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistently or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke*, 139 Colo. 305, 228 P.2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training, and education. *See* § 8-43-210, C.R.S.; *One Hour Cleaners v. Indus. Claim Apps. Office*, 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury*, 62 ALR 2d 1179, maintaining that the fact-finder is not free to disregard un-contradicted testimony. As found, Claimant's testimony that she tripped over the sidewalk is credible, persuasive and convincing. As found, the Claimant's testimony was credible, persuasive and, essentially, un-contradicted. Further, medical opinions supporting an aggravation and acceleration of her underlying right knee condition were more credible and persuasive than opinions to the contrary.

Substantial Evidence

f. An ALJ's factual findings must be supported by substantial evidence in the record. *Pain Connection Plus v. Indus. Claim Apps. Office*, 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Apps. Office*, 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Apps. Office*, 131 P.3d 1172 (Colo. App. 2005); *also see Martinez v. Indus. Claim Apps. Office*, 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by substantial evidence, which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact-finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus Claim Apps. Office*, 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made rational choices, based on substantial evidence and the admitted photo of the uneven break in the sidewalk, to accept the Claimant's testimony that she tripped because of the uneven break in the sidewalk, and, to reject the Claimant's testimony that the tripping was the only contributor to her knee injury. As found, between any conflicting versions of events

and medical opinions, the ALJ made a rational choice, based on substantial evidence to accept the Claimant's version of events, the medical opinions supporting an aggravation and acceleration of her underlying right knee condition on November 9, 2016, and to reject any testimony and/or opinions to the contrary.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing his entitlement to benefits. §§ 8-43-201 & 8-43-210, C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Apps. Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Indus Claim Apps. Office*, 24 P.3d 29 (Colo. App. 2000); *Kieckkhafer v. Indus. Claim Apps. Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim. Apps. Office (ICAO), March 20, 2002]; *also see Ortiz v. Principi*, 274 P.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim App. Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained her burden of proving, by a preponderance of the evidence that she sustained a compensable injury on November 9, 2017; and is entitled to medical benefits to relief the effect of her compensable injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent shall pay all the costs of causally related and reasonably necessary medical care and treatment for the Claimant's compensable right knee injury of November 9, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this 12th day of October 2017.

/s/ Edwin L. Felter, Jr.
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable mental impairment under Section 8-41-301(2), C.R.S.

II. If Claimant established she suffered a compensable mental impairment, whether the January 2015 motor vehicle accident and December 2014 miscarriage were intervening events which severed the causal relationship between the work injury and Claimant's ongoing symptoms and need for treatment.

III. Who is the authorized treating physician ("ATP")?

FINDINGS OF FACT

1. Claimant worked as a personal banker for Employer since 2005. Claimant's job duties included providing service to customers, sales, and "stage-directing," which required Claimant to stand near the entrance of the bank and welcome customers.

2. On November 18, 2014, Claimant was working at the Wells Fargo bank located at 599 South Sable Boulevard. Claimant had been assigned to this branch approximately two months prior. Claimant was scheduled to work from approximately 8:30 a.m. to 6:00 p.m. Claimant arrived to work at approximately 8:15 a.m. or 8:30 a.m. and performed her normal duties throughout the day. Claimant was assigned to stage-direct at approximately 5:00 p.m. or 5:30 p.m.

3. On November 18, 2014, the bank at which Claimant worked was robbed. The perpetrator entered the bank while Claimant was stage-directing and approached Claimant.

4. Claimant testified the perpetrator told Claimant that he knew her and that he had a gun. Claimant testified she believed the perpetrator had her husband and daughter. Claimant did not actually see a gun. Claimant testified the perpetrator took something out of his pocket and struggled to unfold it. Claimant testified she was in a dark area and that she initially struggled to read the note, which asked for no less than $10,000. Claimant testified she started walking to the bank's back area, at which time the perpetrator said "One, two, three, I'm going to shoot." Claimant testified she proceeded to go to the back area of the bank and informed her co-workers of the robbery. Claimant then stayed in the back area while one of her co-workers provided the perpetrator money. Claimant testified she was subsequently in shock and did not know what to do. Claimant testified people were running around and she was worried for her husband and daughter because she did not know where they were.

5. The ALJ reviewed security footage of the robbery. Claimant is observed standing by the entrance of the bank. The perpetrator enters the bank, approaches Claimant and immediately pulls a piece of paper from his left pocket. The perpetrator appears to hand the paper to Claimant then steps backs from Claimant. Claimant appears to read the note and then walks off camera. The perpetrator follows Claimant and appears to have his hands in the pockets of his sweatshirt. The perpetrator is not observed grabbing Claimant. A second camera view shows a customer standing in the lobby area. The perpetrator walks over to the customer and places his left arm around the customer's shoulders while walking the customer to a teller window. The customer removes the perpetrator's arm from around his shoulder. The perpetrator is observed shortly thereafter exiting out of the bank's front entrance. Camera footage from the teller area shows Claimant in the back area with other tellers. A co-worker is observed hugging Claimant and brings Claimant a cup of water. Claimant briefly smiles at the co-worker. Claimant is not observed crying. No one is observed running or screaming.

6. Claimant testified that after the robbery her brain was not functioning, she was constantly afraid, and she continued to think the robber was going to come back and find her. Claimant testified she had panic attacks and anxiety attacks, lost interest in doing things, and lost the will to live.

7. Claimant was approximately three-months pregnant at the time of the robbery.

8. Claimant testified that, prior to the November 18, 2014 robbery, Claimant was not involved in a bank robbery at the 599 South Sable Boulevard branch.

9. Claimant testified she had a good experience working at the 599 South Sable Boulevard location prior to the November 18, 2014 robbery. Claimant testified she loved her job and was performing her job as required.

10. On November 19, 2014, Claimant reported her symptoms to her manager and contacted the Human Resources line. Employer referred Claimant to Karen Hauser, LCSW, through the employee assistance program for experiencing symptoms of trauma in connection with the robbery.

11. No evidence was entered at hearing establishing Claimant was provided a list of designated providers within seven days of Claimant's notification to Employer of her symptoms.

12. Ms. Hauser first evaluated Claimant on November 21, 2014. Ms. Hauser noted Claimant was very tearful, anxious, and worried about the health of her baby. Claimant continued to treat with Ms. Hauser on an almost weekly basis. As of April 2015, Claimant had attended a total of 19 sessions with Ms. Hauser. Ms. Hauser diagnosed Claimant with Posttraumatic Stress Disorder ("PTSD"). Regarding subsequent sessions in November 2014 and December 2014, Ms. Hauser noted Claimant struggled with feelings of fear and anxiety and felt traumatized by the thought of returning to work.

13. On December 2, 2014, Debra D. Baldwin, NP-C, PhD, recommended Claimant refrain from working for 21 days while undergoing counseling.

14. As of December 22, 2014, Claimant was requesting to return to work. Claimant testified she was ready to return to work at such time.

15. Dr. Baldwin recommended Claimant return to modified duty on January 12, 2015, while Claimant continued to undergo counseling.

16. Prior to returning to work, Claimant was involved in a minor motor vehicle accident on January 11, 2015.

17. Claimant was evaluated at Rose Medical Center on January 12, 2015. Claimant underwent an ultrasound which revealed Claimant had suffered a miscarriage at 14 weeks, which was approximately three to four weeks prior to the January 11, 2015 motor vehicle accident. Claimant underwent an ultrasound in December 2015 that was normal.

18. A cytogenetic analysis was performed on the fetal tissue and it was determined that there were no detectable abnormalities of chromosome number or structure.

19. Claimant testified she believes the miscarriage was influenced by the robbery. Claimant testified she let the robber break her. Claimant testified she continues to experience symptoms, that she constantly has images of the robbery, and that she fears the perpetrator is coming back to get her. Claimant testified she is triggered by people who look like the perpetrator and places that remind her of the robbery.

20. In a summary of therapy notes from January 13, 2015, Ms. Hauser noted, "Client learned yesterday her baby had no heartbeat. She is devastated. She will need a DNC. Client unable to cope with the reality of this new trauma. She blames herself for the death. She believes it is due to the stress and trauma she experienced as a result of the robbery."

21. Ms. Hauser noted subsequent counseling sessions with Claimant focused on "dealing with the loss of her baby and the inability to accept this loss." Ms. Hauser remarked, Claimant "continues to experience increased anxiety about the possibility of returning to work even at another branch, but also wants her life to return to normal."

22. In a letter dated January 26, 2015, Ms. Hauser stated, Claimant "was clearly traumatized by the robbery. She was not able to return to work and function effectively due to the trauma and her PCP recommended she take time off." Ms. Hauser also noted Claimant suffered a miscarriage and stated, "[Claimant] continues to be traumatized by all of these events. She has expressed an interest in returning to work but not to same (*sic*) location where the robbery occurred. She continues to struggle emotionally and physically…she continues to experience depression, anxiety, numbness and anger over these event (*sic*)."

23. In a subsequent letter Ms. Hauser remarked Claimant was "highly traumatized by the robbery." Ms. Hauser noted Claimant had been a victim of a robbery at a bank approximately five years earlier. Ms. Hauser stated, "Client continues to struggle with symptoms of trauma which increase significantly when she thinks about returning to

work, especially at the branch where she worked when the robbery occurred." Dr. Hauser further remarked, "She continues to feel traumatized by the robbery and of, course, the loss of her baby."

24. Claimant filed a workers' compensation claim on January 26, 2015, noting "trauma/loss of baby" as the nature of the injury/illness. Claimant indicated a date of injury of November 18, 2014.

25. Dr. Baldwin reevaluated Claimant on February 4, 2015 and noted Claimant continued to be emotionally upset regarding the bank robbery.

26. On February 17, 2015, Claimant's counsel faxed a letter to Insurer requesting the Claimant's workers' compensation claim file. The letter stated, in part:

> Also, it is our understanding that at the time of the injury, [Claimant] was not provided with a designated provider list pursuant to Rule 8-2. It is also our understanding that [Claimant] did not receive an authorized treating physician or designated provider list within seven days after she filed her Workers' Compensation claim form. As such, [Claimant] designates Dr. Caroline Gellrick as her authorized treating physician. In the event that [Claimant] was provided an authorize (sic) treating physician/designated provider list, then please accept this request to change her physician from any prior authorized treating physician to Dr. Caroline Gellrick, for all future medical treatment.

27. Respondents did not respond to the February 17, 2015 letter.

28. On March 16, 2015, Claimant's counsel faxed the same letter to Ms. Karen Sterns with Sedgwick CMS.

29. Samantha Long, Paralegal, testified on behalf of Claimant. Ms. Long credibly testified she received confirmation through a fax report indicating the February 17, 2015 and March 16, 2015 faxes were transmitted successfully.

30. On March 19, 2015, Respondents' counsel sent a letter to Claimant's counsel rejecting Claimant's request to designate Dr. Caroline Gellrick as Claimant's authorized treating physician and denying any request for a change of physician.

31. Respondents filed a Notice of Contest on March 27, 2015.

32. On April 14, 2015, Lupe Ledezma, Ph.D., performed a psychological evaluation of Claimant. Regarding Claimant's psychosocial history, Dr. Ledezma documented the following, among other things: Claimant was grazed by a gunshot during an attempted carjacking at age 15 or 16, Claimant suffered a miscarriage in May 2013, Claimant underwent gastric bypass surgery in December 2013 and, approximately three years prior, Claimant's daughter suffered an illness which led to significant emotional upset for Claimant. Claimant reported that, after the November 18, 2014 robbery, her primary concern was that her continued emotional distress could harm her unborn child.

Claimant reported that it was difficult for her to get up in the morning and, despite attempts to improve her emotional state, Claimant continued to feel fear and nervousness regarding returning to work. Claimant reported replaying the robbery in her mind and feeling unsafe in public and, since the robbery, experiencing anxiety, nervousness, irritability, and lethargy. Claimant also reported startling easily, having difficulty calming down, crying, and a decreased attention span and ability to concentrate. Dr. Ledezma diagnosed Posttraumatic Stress Disorder ("PTSD") and depression. Dr. Ledezma remarked,

> "[Claimant] is experiencing emotional distress related to the robbery that occurred at work on 11/18/14. While she was not physically injured, she did feel that her life was threatened. Also, she experienced sustained fear and apprehension because the robber was not caught for several days and she feared that he did know her." "She has intrusive memories of the incident and has difficulty talking about it without becoming highly emotionally upset."

Referencing the January 11, 2015 motor vehicle accident, Dr. Ledezma stated,

> "While I do not have access to Ms. Hauser's weekly progress notes, based on a treatment summary submitted by Ms. Hauser, there is indication that the motor vehicle accident and miscarriage exacerbated the psychological symptoms that were already present. Also, her primary care physician diagnosed PTSD and took her off work before the motor vehicle accident or miscarriage occurred."

Dr. Ledezma noted that Claimant suffered a prior miscarriage and previously used psychotropic medications, but that Claimant received treatment and stopped medication before the robbery such that she was able to work without incident or emotional reactivity. Dr. Ledezma concluded that "whatever issues" Claimant had from the prior miscarriage and the prior robbery were resolved. Dr. Ledezma noted Claimant had symptoms of PTSD "well after" the prior incidents of trauma, and before the January 2015 motor vehicle accident. Dr. Ledezma further noted Claimant reported being emotionally upset immediately after the robbery and had requested psychological counseling before the January 2015 motor vehicle accident or the miscarriage. Dr. Ledezma opined that, within a reasonable degree of medical probability, Claimant's psychological symptoms are related to the November 18, 2014 robbery. Dr. Ledezma recommended Claimant refrain from returning to work at the same location, and that Claimant receive, among other things, psychotherapy, and antidepressants. Dr. Ledezma reevaluated Claimant on January 11, 2016 and April 12, 2016, noting Claimant continued to experience problems with attention and concentration, significant anxiety at work, and frequent fear responses.

33. On May 28, 2015, Claimant returned to work for Employer at a different branch. Claimant testified that after she returned to work she was afraid to greet customers at the door because it triggered anxiety and panic attacks.

34. In a June 11, 2015 letter, Dr. Baldwin noted Claimant suffered from PTSD and recommended Claimant not perform stage-directing for six months.

35. Claimant testified her manager pushed her to work the door, stating, "You have to face those demons." Claimant testified that on one occasion, after being required to stage-direct, a customer came up behind her, grabbed her at the hips, and yelled in her ear, "I gotcha now!" Claimant testified that she "just lost it and started running like a crazy woman." Claimant testified that she was trying to recover from the robbery, however the incident accentuated her biggest fear: that the robber was going to come back and get her.

36. After the incident, Claimant's manager requested that she recount everything that had happened to her as a result of the robbery to her co-workers, because it would help her get better. Per Claimant's manager's request, Claimant shared her story with at a staff meeting. Claimant testified that she was nervous and scared, and that every time she talks about the robbery she feels it all over again.

37. Claimant worked from May 28, 2015 to July 8, 2016. Claimant subsequently went on short-term disability.

38. On May 28, 2016, Caroline M. Gellrick, MD conducted an Independent Medical Examination ("IME") at the request of Claimant. Dr. Gellrick conducted a medical records review and performed a physical examination of Claimant. Dr. Gellrick diagnosed work-related PTSD and ongoing depression and anxiety with panic attacks. Dr. Gellrick opined Claimant was not at MMI. Dr. Gellrick recommended Claimant undergo a "second opinion psychological evaluation with consideration for restarting medical management." Dr. Gellrick referred Claimant to Walter Torres, PhD for a full psychological evaluation.

39. Dr. Torres first evaluated Claimant on June 29, 2016. Regarding Claimant's background, Dr. Torres noted, in part, the following: Claimant's twin brother was murdered when she was 25 years old, Claimant was molested by an older brother at age eight or nine. Dr. Torres diagnosed Claimant with PTSD and Depression. Dr. Torres noted that psychological testing performed indicated Claimant was not exaggerating her symptoms. Dr. Torres opined that Claimant developed PTSD in reaction to the robbery. Dr. Torres noted Claimant's background suggests

> …that she may have some greater vulnerability than most others to developing posttraumatic stress disorder in reaction to significant stressors. That being said, there is no evidence that she was experiencing any significant ongoing symptomatology, or certainly any disabling psychological symptoms prior the robbery which was the turning point leading to her current state.

Claimant continued to treat with Dr. Torres for 13 sessions. Claimant reported being depressed. Claimant reported experiencing panic attacks in relation to returning to the workplace or talking to her manager, being afraid at work and resenting the workplace.

Claimant reported that she continued to be afraid of individuals who had the same physical appearance as the perpetrator. There is no mention of Claimant's miscarriage again in Dr. Torres' notes until January 3, 2017. Dr. Torres remarked, "Before the death, and prior to the accident, she was in a very deep depression with very pronounced negative symptoms, deeply dulled, not eating, consumed and oppressed by intensely intrusive post traumatic imagery."

40. Dr. Torres testified at hearing on behalf of Claimant as an expert in psychology. Dr. Torres is a licensed clinical psychologist. Dr. Torres opined that Claimant was not exaggerating her symptoms based on the validity scales of his psychological testing and other medical records he reviewed. Dr. Torres explained inconsistencies between Claimant's recollection of the robbery and the surveillance footage of the incident could be caused by Claimant entering into a state of dissociation resulting from the trauma event. Dr. Torres opined that the robbery caused Claimant's PTSD. Dr. Torres testified that losing a baby "per se is not something that we would recognize as an event that characteristically would lead to posttraumatic stress disorder." Dr. Torres testified that, prior to the robbery, Claimant was functioning fine and that the robbery was a "turning point into a degraded state of functioning." Dr. Torres testified that there was no evidence that, prior to November 18, 2014, Claimant had PTSD or suffered the kinds of dysfunction she currently suffers as a result of the PTSD caused by the robbery. Dr. Torres opined there was no reason to believe Claimant's prior traumatic events triggered Claimant's PTSD condition.

41. Regarding a diagnosis of PTSD, Dr. Torres explained that "the criteria requires that a certain amount of time has passed since the event for the diagnosis of post-traumatic stress disorder to kick in. During the first week or so – and I might be fuzzy on some of these details – you would be calling it acute stress disorder…But if it persists, then we go into post-traumatic stress disorder." Dr. Torres testified that PTSD is multifactorial and always "develops with some contribution from a person's basic dispositions."

42. Dr. Torres testified that women who are subjected to a threat while accompanied by their child are more likely to develop PTSD. Dr. Torres opined that Claimant's pregnancy during the robbery "is a relevant factor her with respect to the genesis of her condition and characteristics." Dr. Torres agreed with Dr. Moe that acute fear is expectable in a robbery like the robbery Claimant experienced. Dr. Torres opined that subsequent events of being grabbed from behind by a customer and being pressured by her manager to self-disclose at a staff meeting aggravated Claimant's condition. Dr. Torres testified Claimant's cognitive functioning continues to be poor due to the severity of Claimant's PTSD. Regarding additional treatment, Dr. Torres opined Claimant required a "clean break" from Employer.

43. On July 8, 2015 Stephen A. Moe, MD conducted an IME at the request of Respondents. Dr. Moe issued an IME Report on July 13, 2015. Dr. Moe conducted a psychiatric interview of Claimant and reviewed Claimant's medical records and security footage of the robbery. Claimant reported experiencing a high level of fear during the first six to eight weeks following the robbery, which significantly impacted her ability to

function. Claimant reported that the robbery continued to replay in her mind, and that she experienced panic episodes and crying. Claimant reported feeling nervous and anxious after returning to work. Claimant reported that the first two months post-robbery was when she was doing worse from a psychological perspective post-accident. Claimant reported that the only time she obtained psychiatric treatment was in the wake of her daughter's illness, where she underwent counseling and took an antidepressant. Claimant reported that she ceased taking the Celexa after her first miscarriage.

44. Dr. Moe remarked, "In reflecting on her mental state in the wake of the miscarriage, the patient described feeling different in comparison to the anxiety that had predominated previously. She depicted a grieving process following the miscarriage, starting with a state of disbelief and then processing through feelings of loss."

45. Dr. Moe noted, "[Claimant] was the first to encounter the man who robbed the bank where she worked. She reported the man informed her that he had a gun, and she described the various ways he implicitly threatened to harm her for others in the bank if his demands were not met. Such an experience would be **acutely** distressing to all but the rare individual." [emphasis not added]. Dr. Moe remarked, however, "the question of whether such a experience would cause enduring emotional distress is much less clear." Dr. Moe noted that, as evidenced on the security footage, Claimant did not have physical contact with the perpetrator and was not detained by the perpetrator. Dr. Moe further noted Claimant was not physically harmed, and was subject only to implicit threats by the perpetrator, doing little more than functioning in the role of a messenger. Dr. Moe noted Claimant did not appear severely distressed post-robbery. Dr. Moe opined, "Whereas acute fear is quite expectable, her enduring distress despite numerous benign elements of the incident suggests an important contribution from factors unique to her." Dr. Moe further opined that Claimant's subsequent miscarriage and the experience of employer's response to her symptoms influenced Claimant's symptoms.

46. Dr. Moe opined Claimant merited the diagnosis of PTSD, but questioned whether Claimant's condition was primarily driven by the robbery. Dr. Moe described PTSD as a psychiatric diagnosis included in the Diagnostic and Statistical Manual. Dr. Moe explained that Section 8-41-302(a), C.R.S. sets forth an objective standard in analyzing mental impairment claims stating, "…a potential claimant is barred from establishing an emotional stress Workers' Compensation claim if pre-incident personality traits or life experiences render her uncommonly vulnerable to develop psychiatric symptoms in the wake of a particular workplace event. A worker is also excluded from making a claim if personal stressors are judged to interfere with normal/expectable ways of coping with a particular workplace event."

47. Dr. Moe conducted a follow-up IME evaluation of Claimant and issued a second IME Report on December 12, 2016. Dr. Moe reviewed additional medical records and conducted a follow-up interview of Claimant. Dr. Moe again opined,

> "Establishing the clinical diagnosis of Posttraumatic Stress Disorder (PTSD) is not sufficient to meet the statutory requirement for a mental

> stress claim, given that the diagnosis of PTSD is based on the so-called 'subjective standard,' whereas the latter must meet an 'objective standard.' Consequently, in the wake of a potentially disturbing experience, the greater the extent to which a worker's psychiatric symptoms are due to idiosyncratic (personal) factors, the less likely it becomes that she will meet the statutory definition of a mental stress claim."

Dr. Moe opined Claimant's assessment of her risk remained "highly distorted" despite "abundant exposure to normalizing and symptom-reducing influences." Dr. Moe opined the elements observed in Claimant's case represented "an uncommon response to any trauma, and they are especially unexpected when the trauma involves the objectively mild features that were present in this case…"

48. Dr. Moe testified at hearing on behalf of Respondents as an expert in psychiatry. Dr. Moe is board certified in psychiatry and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Moe testified consistent with his IME Reports. Dr. Moe reiterated that, while acute fear is expected under the circumstances, Claimant's enduring emotional distress is not. Dr. Moe testified that a typical reaction would involve short-lived distress where an individual's normal defenses and coping mechanisms would subsequently "kick in." Dr. Moe opined that he would expect a person might need "a few days off to collect themselves" and "reassurances the event is being taken seriously." Dr. Moe opined that people would not seek psychotherapy for the features of the type of robbery Claimant experienced, reiterating that the robbery was not a violent or highly threatening situation typically associated with PTSD.

49. Dr. Moe testified that prior traumatic events experienced by Claimant are probably are important factors in Claimant's condition, in addition to her personality, which Dr. Moe described as "very dramatic, expressive, reactive." Dr. Moe opined that Claimant personality is, to him, probably the most important variable in Claimant's situation.

50. Dr. Moe opined that the December 2014 miscarriage caused a new trauma, which he characterized as "not a posttraumatic stress disorder trauma, [but] a loss trauma." Dr. Moe opined Claimant's miscarriage modified her view of the robbery, such that Claimant's "interpretation of the bank robbery [was] for the worse and further interfered with this normal recovery process that we would expect." Dr. Moe testified that there was no causal explanation establishing the robbery caused the miscarriage.

51. Claimant's testimony is found credible and persuasive.

52. The ALJ credits the opinions of Drs. Hauser, Ledezma, Gellrick and Torres over the contrary opinion of Dr. Moe and finds Claimant suffered a compensable mental impairment as a result of the November 18, 2014 robbery.

53. The ALJ finds the January 2015 motor vehicle accident and December 2014 miscarriage were not intervening events that severed the causal relationship between the work incident and Claimant's ongoing symptoms and need for treatment.

54. The right of selection of an authorized treating physician passed to Claimant due to Respondents' failure to provide Claimant a designated provider list within seven days of her notification to Employer of the work injury.

55. Although Claimant treated with Ms. Hauser for multiple sessions, Ms. Hauser is a licensed clinical social worker, and thus does not qualify as an ATP.

56. Claimant designated Dr. Gellrick as her ATP in the February 17, 2015 and March 16, 2015 letters to Insurer and Insurer's third party administrator. The ALJ credits Ms. Long's testimony that fax reports indicated both letters were transmitted successfully.

57. Respondent did not reply to the February 17, 2015 letter, thus waiving their right to deny Claimant's request to designated Dr. Gellrick as her ATP. Accordingly, Dr. Gellrick is Claimant's ATP.

58. Evidence and inferences to the contrary of these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846. The Workers' Compensation Act has authorized recovery for a broad range of physical injuries, but has "sharply limited" a claimant's potential recovery for mental injuries. *Mobley v. King Soopers*, WC No. 4-359-644 (ICAP, Mar. 9, 2011).

Enhanced proof requirements for mental impairment claims exist because "evidence of causation is less subject to direct proof than in cases where the psychological consequence follows a physical injury." *Davidson v. City of Loveland Police Department*, WC No. 4-292-298 (ICAP, Oct. 12, 2001), *citing Oberle v. Industrial Claim Appeals Office*, 919 P.2d 918 (Colo. App. 1996). A claimant experiencing physical symptoms caused by emotional stress is subject to the requirements of the mental stress statutes. *Granados v. Comcast Corporation*, WC No. 4-724-768 (ICAP, Feb. 19, 2010); *see Esser v. Industrial Claim Appeals Office*, 8 P.3d 1218 (Colo. App. 2000), affd 30 P.3d 189 (Colo. 2001); *Felix v. City and County of Denver* W.C. Nos. 4-385-490 & 4- 728-064 (ICAP, Jan. 6, 2009). Section 8-41-301(2)(a), C.R.S. imposes additional evidentiary requirements regarding mental impairment claims. The section provides, in relevant part:

> A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer.

The definition of "mental impairment" consists of two clauses that each contains three elements. The first clause requires a claimant to prove the injury consists of: "1) a recognized, permanent disability that, 2) arises from an accidental injury involving no physical injury, and 3) arises out of the course and scope of employment. *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023, 1030 (Colo. 2004). The second clause requires the claimant to prove the injury is: "1) a psychologically traumatic event, 2) generally outside a worker's usual experience, and 3) that would evoke significant symptoms of distress in a similarly situated worker." *Id.*

Recognized Permanent Disability Arising from an Accidental Injury Arising Out of and in the Course and Scope of Employment

Claimant established she sustained a recognized permanent disability from an accidental injury arising out of and in the course and scope of employment. Drs. Hauser, Ledezma, Gellrick and Torres diagnosed Claimant with PTSD and , in some cases, depression. As noted in Dr. Moe's IME Report, PTSD is recognized as a psychiatric diagnosis in the Diagnostic and Statistical Manual of Mental Disorders. In explaining the distinction between acute stress disorder and PTSD, Dr. Torres credibly testified that more persisting trauma results in PTSD. Claimant credibly testified to the persistent and disabling nature of her PTSD and depression, which is further evidenced in Claimant's records.

Drs. Ledezma, Gellrick and Torres credibly opined Claimant's PTSD was caused by the robbery. Claimant credibly testified she began experiencing symptoms of trauma soon after the incident, which is supported by Claimant notifying Employer of her symptoms the following day. Claimant continued to report anxiety and other symptoms of trauma in connection with the robbery, as evidenced in Claimant's records.

The robbery, which the ALJ infers was an unforeseen and unexpected event, occurred while Claimant was working her scheduled shift and performing her usual work duties. Claimant came into contact with the robber by virtue of being assigned to stage-direct during the time period in which the robber entered the bank. Claimant's mental injury occurred in the time and place limits of her employment while performing her normal work duties.

Psychologically Traumatic Event Generally Outside a Worker's Usual Experience That Would Evoke Significant Symptoms of Distress in a Similarly Situated Worker

Respondents assert a diagnosis of PTSD is insufficient to establish a mental stress claim because the diagnosis of PTSD is based on a subjective standard, while the statute requires an objective standard. Respondents further contend Claimant's symptoms are more attributable to idiosyncratic factors than to the robbery, and that the robbery would not evoke significant symptoms of distress in a similarly situated worker. The ALJ disagrees.

In *Davison*, the Colorado Supreme Court held that the statute requires an expert medical or psychological testimony to prove that the claimant suffered a psychologically traumatic event." However, the court also held that a claimant can use lay or expert testimony, or some combination of the two to prove the traumatic event would evoke significant symptoms of distress in a similarly situated worker. *Davison*, 84 P.3d at 1030. In *City of Loveland Police Depart*., the court found, "A compensable psychologically traumatic event under § 8-41-301(2)(a) must cause a significant, but not necessarily identical, reaction in similarly situated employees. Individual reactions of employees experiencing the same psychologically traumatic event will vary dramatically depending upon the physical and psychological makeup and resilience of the individuals affected." *City of Loveland Police Dep't v. Indus. Claim Appeals Office*, 141 P.3d 943, 953 (Colo. Ct. App. 2006).

Claimant established she suffered a psychologically traumatic event generally outside a worker's usual experience that would evoke significant symptoms of distress in a similarly situated worker. While Dr. Moe opined the robbery did not have the violent and highly threatening factors typically associated with PTSD, both Dr. Moe and Dr. Torres agreed acute fear would be expected in the circumstances. Moreover, as previously mentioned, Drs. Ledezma, Gellrick and Torres all credibly opined Claimant's symptoms were caused by the robbery.

Dr. Moe opined that the robbery would not evoke enduring stress in a similarly situated worker. Claimant is not required to establish the psychologically traumatic event would cause identical symptoms of distress in a similarly situated worker. As such, the pertinent issue is not whether a similarly situated worker would develop enduring distress, but rather the event itself is psychologically traumatic and would evoke *significant* symptoms of distress. "Significant" in the context of Section 8-41-301(2)(a), C.R.S. has not been legally defined. Dr. Moe's opinion effectively requires the ALJ to interpret the plain and ordinary meaning of "significant" as "enduring." The ALJ is not persuaded "significant" is solely defined by a period of duration. Thus, fear, while limited in time period, can constitute a significant symptom of distress. Claimant's enduring stress goes to the court's position in *City of Loveland Police Depart*. that individual reactions will vary dramatically.

The ALJ is not convinced Claimant's symptoms are more attributable to idiosyncratic factors than to the robbery. Claimant credibly testified she loved her job

and was performing her job as required prior to November 18, 2014. Dr. Ledezma credibly opined that "whatever issues" Claimant had from prior traumatic incidents were resolved and noted Claimant was able to work without incident prior to the November 18, 2014 robbery. Further, Dr. Torres credibly testified there was no evidence Claimant was experiencing ongoing symptomatology from prior traumatic events and the robbery was the "turning point" for Claimant.

The ALJ is convinced the robbery was generally outside of a worker's usual experience, as Claimant credibly testified that she had not experienced a robbery at the 599 South Sable Boulevard location prior to November 18, 2014. Records also indicate Claimant experienced only one prior bank robbery approximately five years prior.

Based on a totality of the evidence, Claimant has established by a preponderance of the evidence she suffered a compensable work injury in the form of a mental impairment.

Intervening Injury

All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. An unrelated medical problem may be considered an independent intervening cause even where an industrial injury impacts the treatment choices for the underlying medical condition. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002); *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934).

If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See Post Printing & Publishing Co. v. Erickson*, 94 Colo. 382, 384, 30 P.2d 327, 328 (1934); *Vargus v. United Parcel Service*, W.C. No. 4-325-149 at 3 (ICAO Aug. 29, 2002); *Vandenberg v. Ames Construction*, W.C. No. 4-388-883 at 4 (ICAO Dec. 5, 2007).

Respondents contend that, if Claimant sustained a compensable work-related injury on November 18, 2014, the January 2015 motor vehicle accident and December 2014 miscarriage constitute intervening events that severed the causal relationship between the work injury and Claimant's ongoing symptoms and need for treatment. The ALJ disagrees. Despite some trauma related to the miscarriage, Drs. Ledezma, Gellrick and Torres credibly opined Claimant's PTSD was caused by the robbery. Claimant credibly testified she constantly has images of the perpetrator, and is triggered by people who look like the perpetrator and places that remind her of the robbery. Claimant's records after the miscarriage continue to refer to Claimant reporting fear and anxiety in connection with the robbery and returning to the workplace. As such, the ALJ is not convinced the motor vehicle accident and miscarriage were intervening injuries sufficient to sever the causal relationship between Claimant's work injury, her ongoing symptoms and her need for medical treatment.

Change of Physician

Section 8-43-404(5)(a)(I)(A), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the respondents must provide injured workers with a list of at least four designated medical providers. §8-43-404(5)(a)(I)(A), C.R.S. The respondents must supply a copy of the written designated provider list to the injured worker "in a verifiable manner within seven (7) business days following the date the employer has notice of the injury." WCRP 8-2(A)(1). The list must include the insurer's contact information "including address, phone number and claims contact information." WCRP 8-2(A)(2).

Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the "services of a physician are not tendered at the time of injury, "the employee shall have the right to select a physician." WCRP 8-2(E) additionally provides that "[i[f the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of his choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

As found, the right of selection passed to Claimant because Respondents failed to provide Claimant a designated providers list within seven days of Claimant's notification to Employer of the injury. Employer was on notice that Claimant was suffering some symptoms in connection with the robbery and referred Claimant to the employee assistance program.

Although Claimant treated with Karen Hauser, LCSW, for multiple sessions, Ms. Hauser is not a physician pursuant to the Act. Per Section 8-42-101(3.5)(a)(I)(A), C.R.S. for purposes of the level I and level II accreditation programs, physician is defined as "a physician licensed under the Colorado Medical Practice Act." Licensed clinical social workers are licensed under the Colorado Mental Health Practice Act. As Ms. Hauser is not licensed under the Colorado Medical Practice Act, she cannot be considered an authorized treating physician.

Claimant designated Dr. Gellrick as her ATP in the February 17, 2015 letter. Dr. Gellrick is a medical doctor. Ms. Long credibly testified that she received confirmation that the February 17, 2015 letter was transmitted successfully. It is unrefuted that Respondents did not reply to the February 17, 2015 letter. Respondents did not reply until March 19, 2015. As Respondents neither granted nor refused Claimant's request to designate Dr. Gellrick as the ATP within 20 days of the February 17, 2015 letter, Respondents waived their objection to Claimant's request to designate Dr. Gellrick as the ATP. Accordingly, Dr. Gellrick is Claimant's ATP.

ORDER

It is therefore ordered that:

1. Claimant proved by a preponderance of evidence that she suffered a compensable work-related injury in the form of a mental impairment.

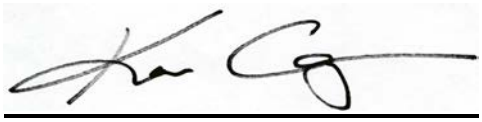
2. The January 2015 motor vehicle accident and December 2014 miscarriage did not constitute intervening events which severed the causal connection to the work injury and Claimant's symptoms and need for treatment.

3. Dr. Gellrick is Claimant's authorized treating physician. Respondents shall pay all reasonable, necessary and related medical treatment ordered by or through Dr. Gellrick.

4. Any and all matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 12, 2017



Kara R. Cayce

Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the total left knee arthroplasty recommended by Dr. Mitchell Copeland is reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury.

- Whether claimant has proven by a preponderance of the evidence that the urological treatment recommended by Dr. Craig Stagg and Dr. Amir Beshai is reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury.

FINDINGS OF FACT

1. Claimant began working for employer in June 2016 as a mechanic. On August 2, 2016, claimant was driving his vehicle on I-70 to pick up parts for employer. Another vehicle struck claimant's vehicle causing claimant to lose control, resulting in the vehicle rolling four or five times. This is an admitted claim. Claimant testified that at the time of the injury he knew that he had injured his back and ribs. In addition, claimant felt pain in his neck and left knee.

2. Immediately following the August 2, 2016 motor vehicle accident (MVA), claimant was transported by ambulance to St. Mary's Hospital for treatment. Claimant testified that he was informed that his left lung was punctured and that he had broken ribs. Claimant was initially hospitalized for five days.

3. The medical records entered into evidence identify claimant's injuries as left rib fractures on ribs 5-10; a left pulmonary contusion; left L2-L4 transverse process fractures; and abrasions. Elsewhere in the initial medical records, Dr. David Pettit identified "a tiny pneumothorax which does not need a chest tube at this time". Claimant was discharged from St. Mary's Hospital on August 7, 2016.

4. Thereafter, claimant began treating with his authorized treating physician (ATP), Dr. Michael Hughes. Claimant was first seen by James Haraway, NP with Dr. Hughes' practice on August 15, 2016. Mr. Haraway recorded that claimant was experiencing chest pain, shortness of breath, abdominal pain, low back pain with tingling and numbness in his lower extremities, neck pain, and bilateral shoulder pain. On that same date claimant completed a pain diagram.

5. Claimant credibly testified that he reported left knee pain to Mr. Haraway on August 15, 2016 and indicated such pain on the pain diagram of that date. The ALJ has reviewed the August 15, 2016 pain diagram and finds that claimant indicated pain in his left knee with an "x" on that knee in the diagram.

6. Claimant testified that after being seen by Mr. Haraway he continued to have difficulty breathing. When his breathing issues did not improve, claimant sought treatment at Community Hospital on August 25, 2016. At that time, claimant reported that he felt that he had a foreign body stuck in the back of his throat that was worsened with coughing. Claimant also reported that he was experiencing severe burning with urination.

7. A computerized tomography (CT) scan of claimant's chest was taken on August 25, 2016 and showed a large pleural effusion in claimant's left lung. Claimant was admitted to Community Hospital and underwent a thoracentesis in which 1700cc of bloody fluid was pulled from claimant's left lung. Claimant was discharged from Community Hospital on August 27, 2016. However, on August 30, 2016, claimant underwent a second thoracentesis and 460cc of fluid was pulled from claimant's left lung.

8. On August 30, 2016, claimant was seen by Dr. Hughes and reported that he was having difficulty emptying his bladder. Dr. Hughes determined that a referral to urology would be appropriate. On August 31, 2016, Mr. Haraway referred claimant to Dr. Amir Beshai to address claimant's urinary complaints. A second referral to Dr. Beshai was completed on November 9, 2016.

9. On September 14, 2016, claimant was seen at St. Mary's Neurosurgery Clinic and reported to Emily Godfrey, PA-C that he was experiencing knee pain, as well as trouble and burning with urination.

10. Respondents admitted for the August 2, 2016 injury and filed a General Admission of Liability (GAL) on November 21, 2016.

11. Claimant was successful in requesting a change of physician and on November 22, 2016, claimant was first seen by his ATP, Dr. Craig Stagg. At that time claimant reported that he had experienced left knee pain since the MVA. Claimant also reported pain in his neck, mid back, low back, as well as increased urinary frequency and urgency.

12. On December 9, 2016, a magnetic resonance image (MRI) of claimant's left knee showed a tear along the free edge of the body of the medial meniscus, a linear tear in the body of the lateral meniscus, and degenerative changes most significant in the medial compartment.

13. Dr. Stagg referred claimant to Dr. Mitchell Copland for an orthopedic consultation. Claimant was first seen by Dr. Copeland on December 14, 2016. At that time, claimant reported that he had pain, popping, and catching in his left knee and that his symptoms caused sleep disturbance. Claimant described his pain as sharp, aching, and burning. Dr. Copeland opined that although claimant has advanced arthritic changes in his left knee and tearing of his medial meniscus, that the August 2, 2016 MVA caused an exacerbation of a preexisting condition.

14. On December 14, 2016, Dr. Copeland recommended and administered a corticosteriod injection to claimant's left knee. Claimant returned to Dr. Copeland on January 17, 2017 and reported that the injection did not provide any pain relief. Dr. Copeland recommended that claimant undergo a left total knee arthroplasty and opined that claimant's left knee symptoms were related to the August 2, 2016 work injury. An authorization request for the recommended knee surgery was submitted to insurer on January 20, 2017.

15. Claimant was first seen by Dr. Beshai on December 20, 2016. Claimant reported to Dr. Beshai that since the August 2, 2016 MVA he had experienced urinary frequency and urgency. Dr. Beshai determined that it would be appropriate to evaluate claimant for possible neurogenic dysfunction and recommended that claimant undergo a urodynamic study. On December 29, 2016, the urodynamic study was conducted. Dr. Beshai reviewed the results and diagnosed claimant with bladder outlet obstruction and opined that claimant's low pressure bladder instability is related to that diagnosis. Dr. Beshai prescribed tamsulosin to treat the bladder outlet obstruction. On February 10, 2017, Dr. Beshai noted that claimant was responding well to the medication.

16. On January 25, 2017, Dr. Peter Weingarten reviewed the authorization request for left knee surgery and opined that the recommended surgery was reasonable treatment given the advanced degenerative osteoarthritis in claimant's left knee. However, Dr. Weingarten also opined that the need for surgery was not related to claimant's work injury. In support of his opinion Dr. Weingarten noted that claimant did not initially report left knee pain and first complained of left knee pain six weeks after the MVA. Based upon Dr. Weingarten's report, respondents denied the left knee surgery.

17. On March 15, 2017, Dr. Stagg indicated that he agreed with Dr. Copeland that claimant's need for a total left knee arthroplasty is related to claimant's August 2, 2016 work injury.

18. Dr. Stagg referred claimant to Dr. Ellen Price for chronic pain management. Claimant was first seen by Dr. Price on January 5, 2017. On that date, Dr. Price noted that claimant was experiencing pain in his back, left leg, and left knee. In addition, claimant reported to Dr. Price that he had bladder dysfunction, urinary frequency, and urgency. Dr. Price recommended and administered acupuncture. She also recommended that claimant continue with physical therapy.

19. On March 21, 2017, Dr. Michael Janssen reviewed the request for urology treatment and opined that the onset of claimant's urinary and bladder dysfunctions are not related to the August 2, 2016 work injury. Based upon Dr. Janssen's opinion, respondents have denied urology related treatment.

20. On May 10, 2017, claimant underwent surgery on his lumbar spine. Dr. John Prall performed partial laminectomy, medial facetectomy and foraminotomy at L3 and L4; a revision partial laminectomy, medial facetectomy and foraminotomy at L4-L5, removal of hardware; and posterior lateral fusion at L4-L5. Claimant testified that

following the May 10 2017 surgery he felt an 80% improvement in his back pain. However, claimant noted an increase in his left knee pain.

21. On May 26, 2017, respondents sent claimant for an independent medical examination (IME) with Dr. Carlos Cebrian. In connection with the IME, Dr. Cebrian reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. Following the IME, Dr. Cebrian issued a report in which he opined that claimant's left knee symptoms are not related to the work injury. Dr. Cebrian also opined that claimant's urinary and bladder symptoms are not related to the August 2, 2016 work injury.

22. Dr. Cebrian testified by deposition in this matter and confirmed his opinion that claimant's left knee pain is not related to the August 2, 2016 injury. In support of his opinion Dr. Cebrian testified that there were no immediate complaints of left knee pain and no documentation of swelling in claimant's left knee. Dr. Cebrian testified that while claimant may have suffered a soft tissue injury to his left knee at the time of the MVA, the degenerative condition necessitating surgery is unrelated to the August 2, 2016 injury.

23. Dr. Cebrian testified that it is his opinion that claimant's urinary issues are not related to the August 2, 2016 injury. Dr. Cebrian noted in his testimony that claimant's urinary issues are caused by an enlarged prostate, which is common for men claimant's age. Dr. Cebrian also opined that because claimant had responded to the medical prescribed by Dr. Beshai, the urinary and bladders issues were not related to the MVA.

24. Dr. Copeland testified by deposition in this matter. Dr. Copeland testified that his initial diagnosis was that claimant had an exacerbation of a preexisting condition and degenerative tear of the medial meniscus in his left knee. Dr. Copeland also testified it is his opinion that because claimant continues to have significant left knee pain a total knee arthroplasty is appropriate for claimant. In support of his opinion, Dr. Copeland noted that continued conservative treatment "such as injections, therapy or knee arthroscopy" would not alleviate claimant's left knee symptoms.

25. Dr. Stagg testified by deposition in this matter and stated that it is his opinion that claimant's left knee pain is related to the August 2, 2016 MVA. Dr. Stagg testified that he agrees with Dr. Copeland that the need for a total knee arthroplasty is related to claimant's work injury. Dr. Stagg also testified that it is his opinion that claimant's urological issues are related to the August 2, 2016 work injury.

26. Claimant testified that his current knee symptoms include popping, locking up, burning and numbness into his foot, and a loss of strength. Claimant testified that he did not have these symptoms prior to the August 2, 2016 MVA.

27. Claimant testified that his current urinary symptoms include loss of feeling in his bladder and bowels. As a result, claimant does not feel an urgency to eliminate his bladder or bowels. Claimant testified that he did not have these symptoms prior to the August 2, 2016 MVA.

28. Claimant credibly testified he has had previous treatment on his left knee. In 1992 or 1993 his left knee was "scoped" and he underwent a meniscus repair in 2010. Claimant testified that following the 2010 left knee surgery he was pain free and had no knee related medical treatment until after the August 2016 MVA.

29. Claimant testified that his punctured lung and the pain he was experiencing in his ribs and back initially took priority over his other injuries. As a result, he did not immediately report left knee pain and urinary issues. However, once he began to heal, claimant turned his attention to his left knee and urinary issues.

30. The ALJ credits claimant's testimony and the opinions of Drs. Copeland and Stagg over the contrary opinion of Dr. Cebrian and finds that claimant has demonstrated that it is more likely than not that his left knee was injured during the August 2, 2016 MVA. The ALJ finds that the August 2, 2016 MVA aggravated, accelerated, or combined with claimant's preexisting left knee condition resulting in the need for medical treatment.

31. The ALJ credits the opinions of Drs. Copeland and Stagg and finds that claimant has demonstrated that it is more likely than not that the total left knee arthroplasty is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

32. The ALJ credits claimant's testimony and the opinion of Dr. Stagg over the contrary opinion of Dr. Cebrian and finds that claimant has demonstrated that it is more likely than not that claimant's urinary issues are related to the August 2, 2016 MVA.

33. The ALJ credits the opinion of Dr. Stagg and finds that claimant has demonstrated that it is more likely than not that the urological treatment recommended by Drs. Stagg and Beshai is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

34. CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the

employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has demonstrated by a preponderance of the evidence that his left knee complaints are related to the August 2, 2016 work injury. As found, the August 2, 2016 MVA aggravated, accelerated, or combined with claimant's preexisting left knee condition resulting in the need for medical treatment. As found, claimant's testimony and the opinions of Drs. Copeland and Stagg are credible and persuasive.

6. As found, claimant has demonstrated by a preponderance of the evidence that the recommended total left knee arthroplasty is reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury. As found, claimant's testimony and the opinions of Drs. Copeland and Stagg are credible and persuasive.

7. As found, claimant has demonstrated by a preponderance of the evidence that his urological issues are related to the August 2, 2016 MVA. As found, claimant's testimony and the opinion of Dr. Stagg is credible and persuasive.

8. As found, claimant has demonstrated by a preponderance of the evidence that the urological treatment recommended by Drs. Stagg and Beshai is reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury. As found, claimant's testimony and the opinion of Dr. Stagg is credible and persuasive.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the recommended total left knee arthroplasty.

2. Respondents shall pay for claimant's urology treatment as recommended by Drs. Stagg and Beshai.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 13, 2017

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

The following issues were raised for consideration at hearing:

1. Whether Claimant proved by a preponderance of the evidence that she sustained a work injury in the course and scope of her employment;

2. What is Claimant's average weekly wage (AWW);

3. Whether Claimant proved by a preponderance of the evidence she is entitled to ongoing indemnity benefits;

4. Whether Respondents proved by a preponderance of the evidence Claimant was terminated for cause and is consequently not entitled to indemnity benefits;

5. Whether Claimant proved by a preponderance of the evidence she is entitled to reasonable, necessary and related medical benefits; and

6. Whether Claimant proved by a preponderance of the evidence she is entitled to penalties pursuant to the general penalty statute, Section 8-43-304 (1), C.R.S for failure to produce the claims file within 15 days of the date of the request for the file.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant started working as a cashier for Employer in September 2015. Claimant testified that on March 19, 2016, she was stocking canned tomatoes and was "taking them from the U boat to turn to put them on the shelf." Claimant testified she "was doing canned tomatoes and just heard a pop." Claimant completed her shift on March 19, 2016. Claimant did not seek treatment on the date of injury or the weeks following.

2. Claimant testified that she felt a pop while placing canned tomatoes on a shelf on March 19, 2016. Claimant testified that she did not feel pain at the time she felt a pop and Claimant testified that she finished her shift and overnight awakened feeling stiffness and soreness. Claimant testified that she completed her shift on March 20, 2016, but at some point she advised a person named Mary Beth that she injured her back the previous day while shelving tomatoes. Claimant testified that on March 20, Mary Beth assigned Claimant chair duty. Claimant testified that no one in the Employer's management could locate paperwork in order to have Claimant prepare a

first report of injury. Claimant concedes that she did not reappear for work, but she testified that she called Employer to report her absence for illness and that on these occasions she spoke to a person named Ruth.

3. Claimant's testimony was deemed less credible and persuasive than information contained in the medical records and testimony offered by Respondents' witness, Kristen Henderson.

4. The record reflects that Claimant completed her scheduled shifts March 20th, March 21st and March 22nd. On March 23, 2016, Claimant left her shift 50 minutes early. Claimant completed her scheduled shift on March 24th and Claimant also completed her next scheduled shifts on March 26th and March 27th. Claimant missed her shifts on March 28th and March 30th, but again completed her next scheduled shifts on April 2nd and April 3rd.

5. Claimant arrived for her April 7th shift as well, but testified she left early. Claimant did not return to work following the April 7th shift. Claimant's activities between April 8th and April 22nd are unknown. The medical records, however, reflect that Claimant did not seek medical treatment for her alleged work injury until a month after the alleged March 19th incident.

6. On April 22, 2016, Claimant presented to Lutheran Medical Center by ambulance with a complaint of "acute on chronic lower back pain. The patient states that 2 weeks ago she switched positions in her job from a cashier to stocker after which she developed acute lower back pain." According to information provided by Claimant during this visit and detailed in the record, Claimant's injury occurred on April 8, 2016. This would have been after Claimant's last shift worked at Employer.

7. Claimant was in severe enough pain on April 22, 2016, that medics gave her 100 mcg of Fentanyl on her way to the hospital.

8. Claimant also underwent a lumbar spine x-ray on April 22, 2016. It demonstrated multifactorial central canal stenosis with varying degrees of foraminal stenosis at L2-3 through L4-5, acute/subacute mild to moderate L3 compression fracture and an old moderate to severe L1 compression fracture.

9. Claimant's L3 compression fracture is not the first time Claimant has suffered a fracture in the past. On March 1, 2011, Claimant arrived via ambulance at Lutheran Medical Center reporting that she "awoke to go to the bathroom and stated she could not move, pt then rolled out of bed and scoot across the floor, calls EMS and c/o severe right hip pain." Claimant was diagnosed with a right femoral neck fracture. She did "not remember falling and was fine when she went to bed." Claimant reported having three drinks a day. Medical records reflected that hospital personnel attempted to discuss alcohol abuse without success.

10. In May 2012, Claimant suffered injury to her right tibia/fibula while working at a café.

11. Part of Claimant's treatment following diagnosis of a L3 compression fracture included a referral to a neurosurgeon for consultation. Claimant met with Dr. Richard Kim on May 24, 2016. At that visit Claimant reported she had injured herself six weeks ago. Six weeks prior to May 24, 2016, would have been April 12, 2016. The date given by Claimant would have again been after the date Claimant stopped working at Employer.

12. Kristen Henderson, Claimant's manager, testified at hearing. Ms. Henderson was not assigned to manage the store where Claimant worked on the alleged date of injury, but came in the weeks thereafter.

13. Ms. Henderson testified she started working at the store around April 5, 2016. She was uncertain of the exact date she started working but she believed it was near Easter. Easter in 2016 was on March 27th.

14. Claimant never reported a work injury to Ms. Henderson while working for Employer.

15. Ms. Henderson testified it was standard business practice at Employer to give new employees at Employer an employee handbook. Employees are expected to acknowledge receipt of the handbook by signature. Claimant electronically signed an acknowledgement of the employee handbook. Claimant acknowledged she received the employee handbook and understood the Employer's policies.

16. Ms. Henderson estimated she worked with Claimant for two weeks before Claimant abandoned her employment. During the period in which Ms. Henderson supervised at Employer, Claimant performed cashier duties. While supervised by Ms. Henderson, Claimant never handled freight.

17. Ms. Henderson testified that she did not notice Claimant demonstrating pain behaviors, Claimant did not ambulate with a walker while working and never saw Claimant working chair duty.

18. On April 7, 2016, the last day Claimant worked, Claimant asked to leave early, but did not report a work injury. Claimant reported her back hurt. Claimant did not appear for her next scheduled shift on April 9th.

19. After Claimant missed the first shift, Ms. Henderson telephoned Claimant with no response. Claimant also did not show for other scheduled shifts on April 12th, April 13th, or April 14th and April 15th.

20. After Claimant missed her second shift, Ms. Henderson called her again reminding Claimant that this is her second no-call no-show. Claimant was terminated on April 15, 2016, for job abandonment.

21. It was Ms. Henderson's testimony that the next communication with Claimant was when Ms Henderson learned that Claimant wanted to file a workers' compensation claim. When Ms. Henderson spoke to Claimant and asked about her claim, Claimant reported she injured her back and needed to see a doctor. When Ms. Henderson told Claimant she needed to contact her district manager, Claimant yelled at her and demanded the workers' compensation claim number. Claimant threatened legal action.

22. On April 15, 2016, Ms. Henderson completed the incident report regarding Claimant's alleged workers' compensation injury based upon the information provided by Claimant. Because Claimant failed to call-in for two shifts, Claimant was considered terminated for job abandonment.

23. Claimant presented no credible or persuasive evidence that she was restricted from working her scheduled shifts between March 19, 2016, and April 21, 2016. And, Claimant did not seek medical treatment between March 19, 2016, and April 21, 2016.

24. Dr. Tashof Bernton, an expert in internal and occupational medicine, evaluated Claimant in March 2017 at Respondents' request. Dr. Bernton opined Claimant suffered an acute compression fracture, however, the compression fracture did not occur on the March 19, 2016, date of injury. Dr. Bernton opined "it is not medically reasonable or probable that the patient in fact had an acute compression fracture on March 19 yet continued to work and then presented on April 22 to the emergency room with severe pain and disability as a result of a compression fracture which was presumed to have occurred on March 19, 2016."

25. Dr. Bernton based his opinions on numerous factors including Claimant's work history after March 19, 2016, Claimant's history of falling and injuring herself without recollection of how the fall occurred, and Claimant's current medical records. Dr. Bernton opined it was not medically reasonable Claimant would have continued to work her regular hours, with the exception of 2 days, from March 19, 2016, until April 7, 2016, with a compression fracture. Dr. Bernton opined that Claimant's history of symptoms is inconsistent with an acute fracture on March 19, 2016.

26. Claimant sought no medical care between March 19, 2016, and April 22, 2016. She continued to work nearly full duty and Ms. Henderson credibly testified Claimant did not work "chair duty," did not use an assistive device and Ms. Henderson was unaware of any back injury until she spoke with Claimant after Claimant abandoned her job.

27. Dr. Bernton opined that Claimant suffers from osteoporosis. Claimant suffered several prior fractures from falling, and most significantly a fall in 2011. Dr. John S. Hughes, an occupational medicine expert, agreed the prior compression fracture at the

L1 level is consistent with Claimant's complaints of back pain and documented use of Percocet in 2011.

28. Claimant underwent a Respondents sponsored IME with Dr. Hughes. Dr. Bernton disagreed with the views of Dr. Hughes'. Dr. Bernton did not believe that Claimant offered a plausible explanation for her compression fracture while Dr. Hughes opined that Claimant's symptom presentation was consistent with her explanation of the mechanism of injury.

29. Contrary to Dr. Hughes' reasoning, Dr. Bernton explained the March 19, 2016, alleged date of injury would not have resulted in an inevitable compression fracture. Dr. Bernton opined, "…April 22nd was an acute compression fracture, which we know because of the MRI. We also know because of the - - the severity of the pain, the need for Fentanyl, the fact the patient was on a walker that she had to call an ambulance for sudden severe pain." (T82:12-16)

30. The type of activities performed by Claimant on April 22, 2016, were unknown. However, Claimant was not working for Employer when she arrived at the emergency room in severe pain requiring an assistive device and strong narcotic medication. It is more probably true than not that the mechanism of Claimant's injury was suffered on or about April 22, 2016. Dr. Hughes' opinion she suffered the compression fracture on March 19, 2016, and it did not cause pain for over one month, requiring her to seek medical treatment, is inconsistent with Dr. Bernton's credible and persuasive opinion regarding the pain experienced following a broken bone and inconsistent with Claimant's ongoing work at Employer between March 19 and April 7, 2016.

31. Claimant presented credible and persuasive evidence that on September 6, and December 19, 2016, her attorney sent letters to the Insurer requesting the claims file. Respondents produced the claims file on January 6, 2017. Respondents did not produce evidence regarding the reasonableness of their actions in producing the claims file in excess of fifteen days after the September 6, 2016, request.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-43-201(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not

interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201(1), C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201(1), *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. In addition to determining the sufficiency of the evidence presented, the ALJ evaluates the credibility and probative value of conflicting evidence, including competing experts and inconsistencies in a particular witness' testimony. *Johnson v. ICAO*, 973 P.2d 624, 626 (Colo. App. 1997). The ALJ does not have to make findings about every piece of evidence. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

4. For credibility determinations, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Compensability

5. In order to recover benefits, a claimant must prove that he sustained a compensable injury. A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work-related functions. *Finn v. Indus. Comm'n,* 165 Colo. 106, 437 P.2d 542 (1968). It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

6. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, *supra* at 846.

7. Claimant failed to prove by a preponderance of the evidence, that she suffered a compensable compression fracture at L3 on March 19, 2016. The alleged mechanism of injury, medical history and work history are inconsistent with a compression fracture occurring on March 19, 2016. The medical records reflect a compression fracture occurring on or about April 22, 2016, when Claimant sought emergency medical treatment. Claimant, however, was not employed or working for Employer on or about

April 22, 2016, and, consequently, it is found that Claimant's injury did not arise from her employment with Employer.

8. Since Claimant failed to establish by a preponderance of the evidence that her injury arose in the course and scope of her employment, her claim for workers' compensation benefits, specifically, medical benefits, indemnity benefits and AWW, is not discussed here and is denied and dismissed.

Penalties

9. Claimant contends that she is entitled to an order awarding penalties under Section 8-43-304(1) for Respondents' failure to timely produce the claim file. Claimant offered as evidence in support of this claim letters dated September 6, 2016, and December 19, 2016, requesting the claim file from Mr. Jeffrey Barnard of Sedgwick. Claimant contends that Respondents ultimately produced the claim file on January 6, 2017. Claimant seeks a penalty of $10.00 per day for the period from September 21, 2016, or 15 days from the request for the claim file, to December 19, 2016, the date of the second letter requesting the claim file, and a penalty of $20.00 per day for the period from December 20, 2016, to January 6, 2017, the date the claim file was produced.

10. Respondents contend that Claimant failed to sustain her burden of proof to establish a basis for imposition of penalties. Respondents argue that Claimant was required to prove whether Mr. Barnard received the request for the claim file, whether Mr. Barnard knew of Insurer's duty to produce the claim file, the objective unreasonableness or negligence of Mr. Barnard's actions and the harm suffered by Claimant as a result of the alleged violation. Respondents contend that there was an absence of proof regarding these matters and thus the claim for penalties should be denied.

11. Whether statutory penalties may be imposed under Section 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…"

12. Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there

is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

13. The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. If the claimant makes such a prima facie showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra.*

14. In the present case, Section 8-43-203(4), C.R.S. provides that fifteen days after the mailing of a written request for a copy of the claim file, the employer or insured shall provide to the claimant the complete copy of the claim file. Claimant presented evidence her attorney's office sent correspondence to the adjuster, Jeffrey Barnard, on September 6, 2016 and December 19, 2016, requesting the claim file and the claim file was not produced until January 6, 2017.

15. Claimant has made a prima facie showing that Respondents failed to comply with the provisions of Section 8-43-203(4). Therefore, the burden of persuasion was on Respondents to make a rationale argument based on law or fact why Respondents did not comply with the statute. Respondents offered no reasonable explanation for its actions in failing to produce the claim file.

16. Accordingly, it is concluded that Respondents are liable for a penalty of $10.00 per day for the period from September 21, 2016, or 15 days from the September 6 request for the claim file, to December 19, 2016, the date of the second letter requesting the claim file, and a penalty of $20.00 per day for the period from December 20, 2016, to January 6, 2017, the date the claim file was produced. The penalty assessed against Respondents for failure to comply with Sections 8-43-203(4) and 8-43-304(1), C.R.S. and totals $1,260.00. The penalty shall be apportioned 75% paid to the aggrieved party, Claimant, and 25% paid to the uninsured employer fund created in Section 8-67-105, C.R.S.

ORDER

It is therefore ordered that:

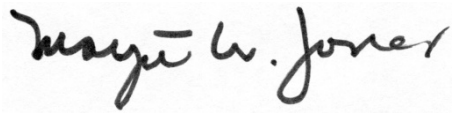
1. Claimant failed to prove by a preponderance of the evidence that she suffered a compensable work injury on March 19, 2016, therefore her claim for benefits under the Act is denied and dismissed.

2. Respondents shall be liable to Claimant for an award of penalties under Sections 8-43-203(4) and 8-43-304(1) in the amount of $1,260.00.

3. The penalty shall be apportioned 75% paid to the aggrieved party, Claimant, and 25% paid to the uninsured employer fund created in Section 8-67-105, C.R.S.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 12, 2017



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-030-044-02

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that she suffered a compensable injury to her left upper extremity.

- Whether Claimant is entitled to medical and compensatory benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for less than three years as an assembly line worker for Employer. Employer laid Claimant off effective February 10, 2017.

2. Claimant testified at hearing that she sustained an acute injury at work on September 11, 2016. Claimant testified she was working on an assembly line with five or six other employees. Claimant's boxed light fixtures and stacked the twenty pound boxes 12-high on a pallet. When Claimant threw a box on the stack, she felt immediate pain in her left arm. The pain extended down from her shoulder to her forearm. The next day Claimant's arm was swollen and she felt a lump under her armpit. Claimant did not report an injury.

3. On September 17, 2016, Claimant sought medical treatment at Green Valley Ranch Medical Center, an urgent care provider, for a respiratory infection and the lump under her left armpit. The medical provider prescribed antibiotics, which Claimant took for 10 days. Claimant did not report having been injured at work.

4. On September 21, 2016, Claimant sought medical treatment from her primary care provider, Arbor Family Medicine. Records from the appointment discuss Claimant's treatment for a respiratory infection and "swollen lymph nodes under left arm pitt [sic]." and her improvement with antibiotic treatment. Records noted that Claimant "had a gradual onset of muscle pain for months." The records further provide that Claimant's job that required repetitive left arm movement. Claimant described her pain as occurring in the muscle of her upper left arm and forearm, and as "a moderate dull aching, sharp stabbing and burning sensation."

5. On September 27, 2016, Employer referred Claimant to Concentra Advanced Specialists ("Concentra"). Natasha Deonarian, M.D., noted "pain on the left side of her arm from the posterior neck, trapezius, medial rhomboids, upper shoulder, elbow and forearm. She states that she did not have a specific trauma at work, however her work involves repetitive motion 8-10 hours per day." Claimant informed Dr. Deonarian of the lump under her left armpit. Dr. Deonarian assigned physical work restrictions which Employer accommodated. Claimant continued to work for Employed

in a restricted capacity. Claimant testified that no provider later placed her at maximum medical improvement.

6. On October 28, 2016, Concentra referred Claimant to John Sacha, M.D. Claimant reported she began experiencing pain in her left radial wrist and left thumb approximately six months earlier. The pain was mild at first but then extended to involve the left shoulder and elbow. Dr. Sacha diagnosed possible carpal tunnel syndrome related to repetitive job tasks, and some secondary lateral epicondylitis with shoulder impingement which was not work-related. Dr. Sacha ordered an electrodiagnostic evaluation.

- On December 13, 2016, Dr. Aschberger completed the electrodiagnostic evaluation with normal results. The normal results ruled out carpal tunnel syndrome as a possible diagnosis.

7. Also on October 28, 2017, "Genex" completed a jobsite assessment pursuant to Rule 17. The assessment concluded that Claimant's job duties included no primary or secondary risk factors.

8. Claimant testified that she treated at Concentra for her arm through April or May of 2017.

9. Claimant has a history of diffuse joint and muscle pain:

- On March 5, 2010, Claimant reported that her joint pain had "[i]mproved since taking the herbal calming drops." Claimant also reported that she "[f]eels like she is swollen on the chest and shoulder area." A provider diagnosed "Myalgia currently but suspect that she may have fibromyalgia as she had 18 trigger points."

- On August 11, 2010, Claimant reported numbness and tingling under her right arm. The sensation began six weeks earlier.

- Numerous records mention "polyarthralgia pain in joint, multiple sites" and "fibromyalgia unspecified myalgia and myositis."

- On January 5, 2011, Claimant reported pain in her left foot that radiated into her toes. She reported the onset of the pain a week prior without acute injury.

10. Despite extensive medical records to the contrary, Claimant testified that she had never been tested for or diagnosed with fibromyalgia.

11. On June 8, 2017, Allison Fall, M.D., performed a Respondents' sponsored Independent Medical Examination of Claimant. During that examination, Dr. Fall reviewed Claimant's medical records from Concentra, Claimant's physical therapy records, Dr. Sacha's October 28, 2016 report, and Dr. Aschberger's December 13, 2016

electrodiagnostic evaluation. Dr. Fall opined that Claimant had myofascial pain (muscle pain) or fibromyalgia.

12. Dr. Fall reviewed Claimant's Arbor Family Medicine records just prior to the hearing. Dr. Fall credibly testified that those records support her opinion that Claimant has myofascial pain or fibromyalgia. The records documented test results which excluded other diagnosis, such as rheumatoid arthritis, and Claimant's reports of other symptoms consistent with a fibromyalgia diagnosis such as a sleep disorders and other chronic pain. Further, Arbor Family Medical's records from 2010 established that Claimant had 18 trigger points when she was tested for fibromyalgia, and that a diagnosis of fibromyalgia has a threshold of only 14 trigger points. When Dr. Fall examined Claimant, she found 12 trigger points which supported a possible diagnosis of fibromyalgia.

13. In contrast to Claimant's allegation of an acute injury, Dr. Fall testified that the medical records she reviewed discussed a gradual cumulative injury, possibly caused by work of a repetitive nature. Claimant had not reported an acute injury to her medical providers, and had not described feeling pain when she lifted a box overhead on September 11, 2016. Claimant first mentioned that mechanism of injury on June 8, 2017, during Dr. Fall's examination.

14. On July 19, 2016, Dr. Sacha issued a Special Report after reviewing Dr. Fall's report. In light of Dr. Aschberger's EMG report, the Genex jobsite analysis, and Dr. Fall's report, Dr. Sacha retracted his previous diagnosis of carpal tunnel syndrome. Dr. Sacha noted that the only possible work-related injury Claimant could have experienced was carpal tunnel syndrome. Dr. Sacha opined that Claimant "clearly has multiple findings consistent with myofascial or fibromyalgia complaints." Further, Dr. Sacha opined that Claimant's job duties did not include primary or secondary risk factors for a cumulative trauma disease.

15. The ALJ finds that Dr. Fall's and Dr. Sacha's opinions are credible and persuasive. They are supported by persuasive medical histories, Dr. Aschberger's normal EMG results, and the Genex job site evaluation.

16. The ALJ finds Claimant to be a poor historian. For example, at hearing, when questioned about previously being diagnosed with fibromyalgia, Claimant responded that in 2010, she was experiencing anxiety and that she had a history of anxiety. Claimant also could not recall having experienced multiple instances of joint and muscle pain although they were consistently documented in her medical records.

17. Based on the totality of the evidence, the ALJ finds that Claimant did not meet her burden of proving by a preponderance of the evidence that she sustained a compensable injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,*

165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2017). *See City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Claimant must prove that an occupational disease is an injury that results directly from the employer or conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of employment. §8-40-201(14), C.R.S.; *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

The fact that a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the logical and recurrent consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

Claimant initially thought she had an infection and took anti-biotics for 10 days because she did not report any work injury. Claimant subsequently reported to her primary care physician, the Concentra physician, the physical therapist, and Dr. Sacha that her left arm and neck pain developed gradually over time. Given that Claimant reported to her treating physicians that she had a cumulative trauma injury, her physicians undertook a causation analysis under Rule 17 for a cumulative trauma injury.

To determine whether Claimant sustained a cumulative trauma injury under Rule 17, Claimant underwent a nerve conduction study and a jobsite analysis was performed. Claimant's EMG came back normal, which ruled out a cumulative trauma diagnosis. Furthermore, the jobsite analysis confirmed there were no primary nor secondary risk factors under Rule 17 for a cumulative trauma injury. With this information, both Dr. Sacha and Dr. Fall confirmed that Claimant did not sustain a cumulative trauma injury related to her work duties.

Consequently, once a cumulative trauma injury had been ruled out, Claimant changed her mechanism of injury and reported to Dr. Fall in June 2017 that she suffered an acute injury at work while lifting a box. Claimant's testimony that she suffered an acute injury while lifting a box is simply not credible as all the prior medical records from her treating physicians contain medical histories that Claimant's symptoms in her left arm, shoulder and neck developed gradually over time and Claimant was actually diagnosed with and effectively treated for an infection.

Even if Claimant had a lifting injury as she now claims, she did not suffer a compensable injury. According to Dr. Fall, a lifting injury would not have caused a lump in Claimant's armpit and Claimant likely would have sought medical treatment sooner than eleven days after the purported date of injury.

Dr. Fall opined that Claimant likely suffers from fibromyalgia. Furthermore, Dr. Fall persuasively testified that Claimant did not suffer an aggravation or exacerbation to her possible pre-existing non work-related fibromyalgia as the medical records do not contain any evidence that Claimant's work duties caused her general diffuse bodily complaints.

Finally, Claimant's testimony lacked credibility as she denied being diagnosed with fibromyalgia and could not remember important parts of her medical history.

The ALJ finds and concludes Claimant did not prove by a preponderance of the evidence that she experienced a compensable injury to her left upper extremity or neck.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to prove by a preponderance of the evidence that she suffered a compensable injury to her left upper extremity and neck.

2. Claimant's claim is denied and dismissed with prejudice.

3. Issues not expressly decided herein are reserved to the parties for future determination.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 13, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts

Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his left knee on April 17, 2017.

II. If Claimant has proven he sustained a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonably necessary and related medical treatment to cure and relieve the effects of the injury.

III. If Claimant has proven he sustained a compensable injury, whether he has proven by a preponderance of the evidence that he is entitled to temporary indemnity benefits.

IV. If Claimant has proven he sustained a compensable injury, what is Claimant's average weekly wage?

FINDINGS OF FACT

1. Claimant works as a glazier.

2. Claimant sustained a right knee injury in June 2016 while working for Prior Employer. Claimant underwent right knee surgery and returned to work. Claimant was subsequently terminated from his employment with Prior Employer in December 2016.

3. Claimant began working for Employer in approximately early to mid-April 2017.

4. Claimant testified that he sustained a left knee injury while working for Employer on April 17, 2017. Claimant alleges that his left knee twisted when the manlift on which he was working jostled.

5. Claimant reported the alleged incident to his supervisor, Cody Hodges on April 19, 2017. Mr. Hodges completed several documents in connection with Claimant's reported injury. Mr. Hodges testified that Claimant reported that his prior right knee injury caused him to alter his gait, which caused ongoing chronic pain in his left knee and back. Mr. Hodges testified, and employer records also demonstrate, that Claimant reported his left knee symptoms as a flare up from his prior right knee injury. Employer sent Claimant to Concentra for treatment.

6. Claimant presented to Keith Meier, FNP-C at Concentra on April 19, 2017. Claimant completed an Injury Care Patient Information Form. In response to the question, "How did the injury happen?" Claimant replied, "Injury to rt knee cause left knee to assume [illegible]. Injury was never addressed – stumbled on lift slight twist

caused flare up." Claimant reported having twisted his knee and experiencing constant knee pain. FNP-C Meier quoted the Claimant as saying the following:

> I had a knee injury 2016. I had surgery on my knee, but was never given therapy or put on light duty. I told the doctors at that time that because I was favoring my right knee so much that my left knee was hurting. Non [sic] of the doctors ever looked at my left knee. I was fired about 6 months ago. I just recently started a job with Tradesman. I have been having ongoing pain in my left knee like I was having along that I told the other doctors about. I was on a man lift the other day and as I was moving the lift I hit a small hole that caused me to be jarred around. At that time my left knee started to hurt more. I was sent here for evaluation. I don't think this should be on tradesman. It should be related to the prior injury.

7. Claimant acknowledged at hearing that he made such statements to FNP-C Meier. FNP--C Meier diagnosed Claimant with a sprain of his left medial collateral ligament and released Claimant to full duty. He opined that Claimant's left knee injury was related to his prior June 2016 right knee injury.

8. An Employer's First Report of Injury form dated April 24, 2017 notes that Claimant was on a manlift and noticed his knee bothering him, and there was no real mechanism of injury. It was further noted that Claimant did not want to file a workers' compensation claim and has stated that the issue was pre-existing.

9. FNP-C Meier reevaluated Claimant on May 4, 2017. FNP-C Meier noted that Claimant's left knee pain had been present since July 2016 after right knee surgery. FNP-C Meier further noted,

> Patient not able to identify any specific injury at his new job…Patient states that he had complained of left knee pain to the prior workman's compensation provider for several months, but that he was ignored and the left knee was never evaluated…Started new job with current employer in April 2017 pain in left knee returned within several weeks of staring new job.

10. FNP-C Meier diagnosed Claimant with left knee pain and again opined that Claimant's condition was not work-related.

11. FNP-C Meier testified at hearing that he holds Level I Certification with the Colorado Division of Workers' Compensation and is trained on determination causation for work-related injuries. Based on the combination of his physical examination of Claimant and the history provided by Claimant, FNP-C Meier concluded that Claimant had chronic bilateral knee pain and that his current condition was not the result of an injury sustained performing work for Employer, but instead a pre-existing condition sustained in his employment with Prior Employer. FNP-C Meier opined that Claimant's reported mechanism of injury on April 17, 2017 was not sufficient to cause a disabling injury.

12. X-rays of Claimant's left knee taken May 4, 2017 demonstrated no evidence of acute fracture, dislocation, osseous lesion or joint effusion.

13. Respondents filed a Notice of Contest on May 8, 2017.

14. On May 10, 2017, Claimant filed a Petition to Reopen his prior claim for workers' compensation against Prior Employer and Prior Insurer. Claimant attached his own Affidavit to the Petition to Reopen in which he stated that he had expressed to physicians on his prior right knee claim that he was favoring his left knee and experiencing symptoms in his left knee. Claimant further stated that, on April 17, 2017, he experienced a "sharp lateral movement" on a manlift and experienced worsening discomfort as the day progressed.

15. Banner Occupational Health Clinic medical records from June and August 2016 note Claimant reported left knee pain "secondary to 'favoring' the right knee throughout the healing process," and that Claimant attributed increased pain in his left knee and mid-to-low back due to walking with an antalgic gait.

16. Claimant subsequently entered into a full and final settlement with Prior Employer and Prior Insurer on June 22, 2017. Per the Full and Final Settlement Agreement and Order, Claimant settled not only his right knee injury, but any and all related injuries.

17. Claimant testified that he implicated Prior Employer and Prior Insurer in the alleged left knee injury because he was angry with Prior Employer regarding his termination. Claimant stated he entered into the settlement agreement because his left knee was not Prior Insurer's issue and it would be impossible to make it their issue.

18. Claimant acknowledged that he has osteoarthritis in both knees, and has experienced bilateral knee pain since 2015. Claimant testified that his left knee was in pain prior to his employment with Employer, which he attributed to favoring his right knee. However, Claimant alleged that twisting his knee on April 17, 2017 caused his left knee symptoms to worsen. Claimant stated that, prior to April 17, 2017, he did not have problems walking and or working.

19. Claimant underwent an MRI of his left knee on July 3, 2017 which revealed the following: extensive complex medial meniscal tearing, focal prominent chondral loss of mid weightbearing medial femoral condyle with underlying subchondral edema, and prominent chondral loss patellofemoral compartment cartilage.

20. The ALJ credits the testimony of FNP-C Meier and finds that Claimant's left knee condition is not related to his employment with Employer.

21. Claimant has failed to establish that it is more likely than not that he sustained a compensable industrial injury to his left knee on April 17, 2017.

22. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The

claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to establish by a preponderance of the evidence he sustained a compensable injury to his left knee on April 17, 2017. Claimant's history of prior left knee problems is well-documented in the medical records. Subsequent to his right knee injury in June 2016, Claimant continuously attributed his worsening left knee symptoms to the right knee injury. FNP-C Meier credibly testified that Claimant's reported mechanism of injury on April 17, 2017 was insufficient to result in a disabling injury. While Claimant experienced increased pain at work on April 17, 2017, there is insufficient persuasive evidence establishing that Claimant's work duties caused, aggravated, accelerated, or combined with a pre-existing condition to produce a disability or the need for medical treatment. Based on the totality of the evidence, Claimant has not met his burden to prove he sustained an injury arising out of and in the course of employment for Employer.

As the ALJ has determined Claimant did not sustain a compensable injury, the remaining issues of medical benefits, temporary indemnity benefits, and average weekly wage are moot.

ORDER

It is therefore ordered that:

I. Claimant did not sustain a compensable injury to his left knee. Claimant's claim is denied and dismissed.

II. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. DATED: October 13, 2017

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-534-505-06

ISSUES

- Whether Claimant proved by a preponderance of the evidence that medical benefits, specifically medication and acupuncture, requested by Claimant's authorized treating provider is reasonable, necessary, and related to the compensable workers' compensation claim.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant injured his bilateral upper extremities through repetitive motion while working at the glass plant and brewery owned and operated by Employer. On July 5, 2001, Claimant filed a workers' compensation claim and Respondents admitted liability.

2. Claimant's initial diagnosis was "basal joint disease." Claimant's treatment includes at least eight surgical procedures.

3. On December 18, 2003, Dr. Richard Gibson, the authorized treating provider at the time of maximum medical improvement, opined, "Again, I feel that Mr. Aden is pretty much static in his clinical evaluation and functional capacities. I do not have any reasonable expectation that his symptoms or functional status will improve over time." Dr. Gibson assessed "advanced degenerative and post-traumatic disease of bilateral upper extremities with chronic pain."

4. On June 16, 2003, Dr. Gibson opined that Claimant "will need his ongoing medications on an indefinite basis . . . I would also state that there may be a need in the indefinite future for further pain control measures including therapeutic interventions that have been used in the past, including massage/hand therapy."

5. The DIME report from Dr. Goldstein had a medical record review that stated in part, "The patient had been seen originally by Dr. Westerman and a rheumatology workup was performed. It was Dr. Westerman's feeling that due to the patient's 24-year history in the glass factory at the brewery, that he had degenerative arthritis that was related to his thumbs over the years."

6. Dr. Kathleen D'Angelo, Respondents' independent medical examiner, reviewed the extensive records and cited to a report by hand specialist, Dr. Mordick, stating, "Even relatively minor task involving the upper extremity tends to exacerbate or flare his symptoms. He does ha[ve] days where he is having flare ups of his pain which I feel would potentially cause frequent absences from work and would really ha[ve] to question at the present time whether he is gainfully employable."

7. Claimant currently receives prescription management and acupuncture with his authorized treating provider, Dr. Ellen Price, at Redrock Integrative Rehabilitation Medicine. Dr. Price's medical record from June 26, 2017 gives an updated diagnosis of, "Hand Pain, CRPS of right upper limb, carpal tunnel syndrome left upper limb, and CRPS syndrome of upper limb."

8. Claimant's current medication plan as prescribed by Dr. Price consists of Gabapentin, Ultram, Percocet, and a recommendation for Vimovo. Claimant is prescribed other medications, however, prior to hearing, the parties stipulated that medications prescribed for restless leg syndrome, hypothyroidism, and sleep apnea are not related to the claim.

9. Claimant has well documented gastrointestinal issues that arise from use of non-steroidal anti-inflammatory drugs ("NSAID"). Dr. Price testified that when on Vimovo, which is a combination of NSAID and gastrointestinal medication, Claimant does not experience those negative side effects. Dr. Price testified that Claimant currently takes two medications, an NSAID and an over-the-counter GI medication. Dr. Price opined that Vimovo would be more effective than the medication Claimant currently takes, and would be reasonable, necessary, and related to the claim.

10. Dr. Price testified that Claimant should use his hands despite the crippling impairment he has from the years of treatment and surgeries. Dr. Price testified that she anticipates Claimant will have pain that varies depending on the use of the hands, and that is why she prescribes him the various medications. Dr. Price testified that the Percocet is for breakthrough pain, and she does not prescribe it for regular use.

11. Claimant receives relief from acupuncture, and Dr. Price testified that she recommends such treatment once or twice a month. Dr. Price's record from June 26, 2017 states, "good relief. 70% for at least 1 week. The patient is doing activities at home and staying functional." Dr. Price cited the chronic pain treatment guidelines and opined that if there is objective improvement, the acupuncture can continue past the recommended amount of treatment.

12. Claimant testified at hearing that he experiences a constant low-level ache that worsens with use. Claimant discontinued his long-term use of prescribed narcotics and feels that his current medications plan, along with the acupuncture, are very beneficial to him, reducing/controlling his pain and increasing his functionality.

13. On November 6, 2016, Respondents sent Claimant to a Respondents sponsored independent medical examination with Dr. Kathleen D'Angelo. Claimant's subjective complaints on the questionnaire consisted of "crushing/burning in hands/wrists – ache that never goes away, feels like on-set of charlie horse." Claimant indicated that he is never pain free and has tingling sensations after light/moderate use of his hands.

14. Dr. D'Angelo examined Claimant finding, "significant bilateral abnormalities that are noted. . . bilateral ulnar deviation of he finders . . . swelling to the

PIP and DIP joints of both hands . . . early Boutonniere and Swan-neck deformities are also appreciated . . Synovial cists . . . swelling and inflammation of the DIP and PIP joints diffusely." Dr. D'Angelo's examination of Claimant's left wrist found, "diffuse abnormalities in small joints . . . minor swelling . . .Range of motion is decreased diffusely." Dr. D'Angelo also found relevant findings on the left and right hand.

15. Dr. D'Angelo stated in her initial report, "On the matter of Vimovo, it appears, Mr. Aden tolerates this medication better, despite the potential for increased expense. Given the patient's wean from narcotic medication, it is appropriate to utilize NSAIDs, which have the best GI tolerance. Given Mr. Aden's issues with other NSAIDs, I believe the use of Vimovo is appropriate in this patient." Dr. D'Angelo's initial report was silent on the appropriateness of the other medications and acupuncture.

16. On February 2, 2017, Dr. D'Angelo supplemented her report with another interrogatory from Respondents. In the addendum, Dr. D'Angelo stated that none of the medications, including Vimovo and acupuncture, are related to the claim. No information was changed or reevaluated in the report itself, but the supplement was added on to the end of the initial report.

17. Dr. D'Angelo testified at hearing that she went back and revisited the claim and found that there had not been a recent diagnosis, and therefore she could not recommend prescribing treatment or medication for non-diagnosed injuries. Dr. D'Angelo testified that the diagnoses from Claimant's treatment providers and the DIME doctor were all "out of date." Dr. D'Angelo explained she reversed her opinion because she changed her mind after reviewing the records again.

18. Dr. D'Angelo also opined that Claimant had exceeded the recommended amount of acupuncture treatment set forth in the Medical Treatment Guidelines.

19. The ALJ finds Dr. D'Angelo's opinions unpersuasive. They are contradicted by Claimant's extensive treatment history and persuasive opinions that Claimant would need indefinite medication to manage his pain and also other potential treatment modalities. The basis upon which she changed her opinions is not well founded, but rather appears arbitrary and more likely motivated by bias in favor of Respondents.

20. The ALJ finds Claimant's testimony credible and persuasive. Claimant's testimony about his symptoms and responses to treatment was both consistent and supported by his extensive medical records.

21. The ALJ finds that Claimant proved by a preponderance of the evidence that medical benefits, specifically medication and acupuncture, requested by Claimant's authorized treating provider is reasonable, necessary, and related to the compensable workers' compensation claim.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Rule 16-2(B)(1) of the Workers' Compensation Rules of Procedure defines an authorized treating provider as the treating physician designated by the employer and selected by the injured worker. Subsection (B)(2) of the same rule also designates, "a healthcare provider to whom an authorized treating physician refers the injured worker for treatment, consultation, or impairment rating."

In accordance with C.R.S. §8-43-404(9)(b), "[A] claimant shall not be liable for payment for treatment by the provider under this subsection (9) if the treatment is reasonably needed and related to the injury.

Medication

Testimony and medical records reflect Claimant's extensive impairment and chronic pain in his upper extremities. Claimant and his current authorized treating provider, Dr. Ellen Price, credibly testified that Claimant's pain stays in control using a variety of medications and acupuncture.

On November 16, 2016, Dr. D'Angelo wrote an initial report after performing an extensive medical record review and examination of Claimant. In the initial report, Dr. D'Angelo opined that the non-steroidal anti-inflammatory drug ("NSAID"), Vimovo, was

appropriate based on the gastrointestinal issues that arise from other NSAID medications. Dr. D'Angelo remained silent in regards to the other prescribed medications and acupuncture.

Without adding new information, or amending her report, Dr. D'Angelo wrote an addendum to her report, and changed her opinion on Vimovo and included the other medications and acupuncture as not work-related. At hearing, Dr. D'Angelo opined that Claimant does not have a "current" diagnosis for which she would recommend treatment, and essentially disregarded the years of diagnoses, surgical and other treatment, and prescription plans for pain management. Dr. D'Angelo essentially testified that she does not know what the current diagnosis is, and thus the medications and treatment are not necessary. This opinion contradicts Claimant's sixteen years of treatment and Dr. Price's testimony.

Claimant has admitted injuries to his upper extremities, with multiple surgeries, documented ongoing chronic pain, and a significant list of diagnoses. Dr. D'Angelo's opinion is not compelling when weighed against the extensive list of previous opinions and diagnoses. Claimant has chronic pain that needs to management through prescription medications.

Although several treating providers found Claimant permanently and totally disabled, Dr. Price testified that she does encourage Claimant to use his hands, despite the pain that Claimant testified follows. Claimant testified that it is impossible for him to go a whole day without using his upper extremities, and he has to find some way to cope with the varying levels of pain. Dr. Price testified that the medications assist in keeping the inflammation down, but also for breakthrough pain management. Dr. Price further testified that, in combination with the acupuncture, Claimant's pain levels have been steady for some time, and Claimant has less gastrointestinal issues when taking Vimovo.

Dr. D'Angelo's report states concern for an increase in cost with Vimovo, however, the cost of medication cannot contribute to the weight of the argument, assuming the medication provides relief for Claimant's industrial injuries.

Respondents' position is essentially that Claimant has been on medication for a long time and the diagnosis is out of date, and an out of date diagnosis does not warrant continued medication. However, the consensus of various treating providers determined Claimant would require lifetime pain management. Through the current prescription plan and acupuncture, Claimant was able to take himself off long-term narcotics, and uses Percocet for breakthrough pain only.

The ALJ finds and concludes that Claimant's current medication plan, including Vimovo, is reasonably necessary for Claimant to manage the chronic pain from his industrial injury and its treatment. Respondents are to authorize and pay for all medications prescribed by the treating provider, with the exception of the medication for sleep apnea, restless leg syndrome, and hypothyroidism discussed at the onset of hearing.

Acupuncture

Workers' Compensation Rule 17, Exhibit 9 Chronic Pain Disorder, F(1) states in part, "Acupuncture is recommended for chronic pain patients who are trying to increase function and/or decrease medication usage and have an expressed interest in this modality." Although the maximum duration of treatment is 15 treatments, the Guidelines also state, "Any of the above acupuncture treatments may extend longer treatments if objective functional gains can be documented or when symptomatic benefits facilitate progression in the patient's treatment program."

Dr. Price testified that acupuncture is beneficial for Claimant's pain management, stating up to 70% recovery for a week and "staying functional". With the current medications and acupuncture, Claimant reported a pain level of 2 out of 10 on his June 26, 2017 visit to Dr. Price.

In conformity with the Guidelines, if there is objective relief and the medication usage decreases with the treatment, the acupuncture can continue beyond the recommended amounts of visits. Based on the testimony of Claimant and Dr. Price, acupuncture improves Claimant's functionality and ability to remain off long-term narcotics.

Dr. Price and Claimant testified that acupuncture helped Claimant taper off long-term narcotics and eventually stop using the narcotics completely. There was some discussion about Claimant's usage of Percocet for break-through pain, however, Claimant credibly testified that he does not use it often, and is not dependent on Percocet for regular pain management. The value in functionality and remaining off long-term narcotics outweighs the cost of continued acupuncture beyond the recommended number of sessions, thus it is reasonable.

Dr. D'Angelo cited the treatment guidelines and the fact that Claimant is over the recommended amount of treatment. This argument is not compelling based on the guideline's allowance of continued acupuncture if objective improvement in functionality exists.

Until acupuncture no longer yields functional or pain management benefit, the treatment is reasonable. Acupuncture is a cost-effective method of controlling pain, and Claimant's testimony to its benefits far outweigh any argument regarding cost of treatment. The ALJ finds and concludes that acupuncture is reasonably necessary to allow Claimant to function at a higher level without resorting to long-term narcotic usage. Respondents shall reimburse Dr. Price for any unpaid acupuncture treatments and are to authorize any current prescriptions for further acupuncture.

ORDER

Based upon the foregoing Findings of Fact and Conclusions of Law, the ALJ enters the following order:

1. Claimant successfully proved by a preponderance of the evidence that the current medications related to the claim, specifically, voltaren, gabapentin, Percocet, and Vimovo, are reasonable, necessary, and related to Claimant's industrial injury. Respondents are ordered to continue paying for these medications as prescribed by the authorized treating physician.

2. Claimant successfully proved by a preponderance of the evidence that the acupuncture treatment recommended by authorized treating provider, Dr. Ellen Price, is reasonable, necessary, and related to Claimant's industrial injury. Respondents are to continue paying for acupuncture treatment as prescribed by the authorized treating physician.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-030-044-02

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that she suffered a compensable injury to her left upper extremity.

- Whether Claimant is entitled to medical and compensatory benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for less than three years as an assembly line worker for Employer. Employer laid Claimant off effective February 10, 2017.

2. Claimant testified at hearing that she sustained an acute injury at work on September 11, 2016. Claimant testified she was working on an assembly line with five or six other employees. Claimant's boxed light fixtures and stacked the twenty pound boxes 12-high on a pallet. When Claimant threw a box on the stack, she felt immediate pain in her left arm. The pain extended down from her shoulder to her forearm. The next day Claimant's arm was swollen and she felt a lump under her armpit. Claimant did not report an injury.

3. On September 17, 2016, Claimant sought medical treatment at Green Valley Ranch Medical Center, an urgent care provider, for a respiratory infection and the lump under her left armpit. The medical provider prescribed antibiotics, which Claimant took for 10 days. Claimant did not report having been injured at work.

4. On September 21, 2016, Claimant sought medical treatment from her primary care provider, Arbor Family Medicine. Records from the appointment discuss Claimant's treatment for a respiratory infection and "swollen lymph nodes under left arm pitt [sic]." and her improvement with antibiotic treatment. Records noted that Claimant "had a gradual onset of muscle pain for months." The records further provide that Claimant's job that required repetitive left arm movement. Claimant described her pain as occurring in the muscle of her upper left arm and forearm, and as "a moderate dull aching, sharp stabbing and burning sensation."

5. On September 27, 2016, Employer referred Claimant to Concentra Advanced Specialists ("Concentra"). Natasha Deonarian, M.D., noted "pain on the left side of her arm from the posterior neck, trapezius, medial rhomboids, upper shoulder, elbow and forearm. She states that she did not have a specific trauma at work, however her work involves repetitive motion 8-10 hours per day." Claimant informed Dr. Deonarian of the lump under her left armpit. Dr. Deonarian assigned physical work restrictions which Employer accommodated. Claimant continued to work for Employed

in a restricted capacity. Claimant testified that no provider later placed her at maximum medical improvement.

6. On October 28, 2016, Concentra referred Claimant to John Sacha, M.D. Claimant reported she began experiencing pain in her left radial wrist and left thumb approximately six months earlier. The pain was mild at first but then extended to involve the left shoulder and elbow. Dr. Sacha diagnosed possible carpal tunnel syndrome related to repetitive job tasks, and some secondary lateral epicondylitis with shoulder impingement which was not work-related. Dr. Sacha ordered an electrodiagnostic evaluation.

- On December 13, 2016, Dr. Aschberger completed the electrodiagnostic evaluation with normal results. The normal results ruled out carpal tunnel syndrome as a possible diagnosis.

7. Also on October 28, 2017, "Genex" completed a jobsite assessment pursuant to Rule 17. The assessment concluded that Claimant's job duties included no primary or secondary risk factors.

8. Claimant testified that she treated at Concentra for her arm through April or May of 2017.

9. Claimant has a history of diffuse joint and muscle pain:

- On March 5, 2010, Claimant reported that her joint pain had "[i]mproved since taking the herbal calming drops." Claimant also reported that she "[f]eels like she is swollen on the chest and shoulder area." A provider diagnosed "Myalgia currently but suspect that she may have fibromyalgia as she had 18 trigger points."

- On August 11, 2010, Claimant reported numbness and tingling under her right arm. The sensation began six weeks earlier.

- Numerous records mention "polyarthralgia pain in joint, multiple sites" and "fibromyalgia unspecified myalgia and myositis."

- On January 5, 2011, Claimant reported pain in her left foot that radiated into her toes. She reported the onset of the pain a week prior without acute injury.

10. Despite extensive medical records to the contrary, Claimant testified that she had never been tested for or diagnosed with fibromyalgia.

11. On June 8, 2017, Allison Fall, M.D., performed a Respondents' sponsored Independent Medical Examination of Claimant. During that examination, Dr. Fall reviewed Claimant's medical records from Concentra, Claimant's physical therapy records, Dr. Sacha's October 28, 2016 report, and Dr. Aschberger's December 13, 2016

electrodiagnostic evaluation. Dr. Fall opined that Claimant had myofascial pain (muscle pain) or fibromyalgia.

12. Dr. Fall reviewed Claimant's Arbor Family Medicine records just prior to the hearing. Dr. Fall credibly testified that those records support her opinion that Claimant has myofascial pain or fibromyalgia. The records documented test results which excluded other diagnosis, such as rheumatoid arthritis, and Claimant's reports of other symptoms consistent with a fibromyalgia diagnosis such as a sleep disorders and other chronic pain. Further, Arbor Family Medical's records from 2010 established that Claimant had 18 trigger points when she was tested for fibromyalgia, and that a diagnosis of fibromyalgia has a threshold of only 14 trigger points. When Dr. Fall examined Claimant, she found 12 trigger points which supported a possible diagnosis of fibromyalgia.

13. In contrast to Claimant's allegation of an acute injury, Dr. Fall testified that the medical records she reviewed discussed a gradual cumulative injury, possibly caused by work of a repetitive nature. Claimant had not reported an acute injury to her medical providers, and had not described feeling pain when she lifted a box overhead on September 11, 2016. Claimant first mentioned that mechanism of injury on June 8, 2017, during Dr. Fall's examination.

14. On July 19, 2016, Dr. Sacha issued a Special Report after reviewing Dr. Fall's report. In light of Dr. Aschberger's EMG report, the Genex jobsite analysis, and Dr. Fall's report, Dr. Sacha retracted his previous diagnosis of carpal tunnel syndrome. Dr. Sacha noted that the only possible work-related injury Claimant could have experienced was carpal tunnel syndrome. Dr. Sacha opined that Claimant "clearly has multiple findings consistent with myofascial or fibromyalgia complaints." Further, Dr. Sacha opined that Claimant's job duties did not include primary or secondary risk factors for a cumulative trauma disease.

15. The ALJ finds that Dr. Fall's and Dr. Sacha's opinions are credible and persuasive. They are supported by persuasive medical histories, Dr. Aschberger's normal EMG results, and the Genex job site evaluation.

16. The ALJ finds Claimant to be a poor historian. For example, at hearing, when questioned about previously being diagnosed with fibromyalgia, Claimant responded that in 2010, she was experiencing anxiety and that she had a history of anxiety. Claimant also could not recall having experienced multiple instances of joint and muscle pain although they were consistently documented in her medical records.

17. Based on the totality of the evidence, the ALJ finds that Claimant did not meet her burden of proving by a preponderance of the evidence that she sustained a compensable injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,*

165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2017). *See City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Claimant must prove that an occupational disease is an injury that results directly from the employer or conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of employment. §8-40-201(14), C.R.S.; *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

The fact that a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the logical and recurrent consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

Claimant initially thought she had an infection and took anti-biotics for 10 days because she did not report any work injury. Claimant subsequently reported to her primary care physician, the Concentra physician, the physical therapist, and Dr. Sacha that her left arm and neck pain developed gradually over time. Given that Claimant reported to her treating physicians that she had a cumulative trauma injury, her physicians undertook a causation analysis under Rule 17 for a cumulative trauma injury.

To determine whether Claimant sustained a cumulative trauma injury under Rule 17, Claimant underwent a nerve conduction study and a jobsite analysis was performed. Claimant's EMG came back normal, which ruled out a cumulative trauma diagnosis. Furthermore, the jobsite analysis confirmed there were no primary nor secondary risk factors under Rule 17 for a cumulative trauma injury. With this information, both Dr. Sacha and Dr. Fall confirmed that Claimant did not sustain a cumulative trauma injury related to her work duties.

Consequently, once a cumulative trauma injury had been ruled out, Claimant changed her mechanism of injury and reported to Dr. Fall in June 2017 that she suffered an acute injury at work while lifting a box. Claimant's testimony that she suffered an acute injury while lifting a box is simply not credible as all the prior medical records from her treating physicians contain medical histories that Claimant's symptoms in her left arm, shoulder and neck developed gradually over time and Claimant was actually diagnosed with and effectively treated for an infection.

Even if Claimant had a lifting injury as she now claims, she did not suffer a compensable injury. According to Dr. Fall, a lifting injury would not have caused a lump in Claimant's armpit and Claimant likely would have sought medical treatment sooner than eleven days after the purported date of injury.

Dr. Fall opined that Claimant likely suffers from fibromyalgia. Furthermore, Dr. Fall persuasively testified that Claimant did not suffer an aggravation or exacerbation to her possible pre-existing non work-related fibromyalgia as the medical records do not contain any evidence that Claimant's work duties caused her general diffuse bodily complaints.

Finally, Claimant's testimony lacked credibility as she denied being diagnosed with fibromyalgia and could not remember important parts of her medical history.

The ALJ finds and concludes Claimant did not prove by a preponderance of the evidence that she experienced a compensable injury to her left upper extremity or neck.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to prove by a preponderance of the evidence that she suffered a compensable injury to her left upper extremity and neck.

2. Claimant's claim is denied and dismissed with prejudice.

3. Issues not expressly decided herein are reserved to the parties for future determination.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 13, 2017

Denver, CO 80203

ISSUES

I. Whether Respondents have met their burden to prove that Claimant's injury resulted from the willful failure to use a safety device and/or a willful violation of a reasonable safety rule in contravention of C.R.S. §8-42-112(1)(a) and (b), thus entitling Respondents to reduce Claimant's compensation by fifty (50) percent.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer is a towing company that employs drivers to carry out towing operations in Colorado. Due to the dangerous nature of the duties associated with vehicle towing, Employer imposes and enforces safety rules in order to guard the wellbeing of their drivers, the public, and the vehicles being towed.

2. Employer's tow trucks are equipped with a winch and "v-chain" to load and unload vehicles. In order to load a vehicle, the driver tilts the tow-truck bed at an angle that allows the vehicle to be pulled onto the tow-truck with use of the winch. The v-chain is used to attach most vehicles to the winch which, as noted above, is used to pull the vehicle onto the tow-truck bed. Once a vehicle has been winched onto the truck, the driver secures it to the bed with four additional tie-down straps/chains and levels the bed so the truck can be driven with the car safely secured on top. This process is reversed to off-load vehicles. Specifically, the bed is tilted down, the straps removed, and the vehicle lowered down with the winch and v-chain. Controls for the winch are located on the side of the tow truck where the vehicle being towed has a low probability of striking the driver as it is lowered from the truck bed.

3. Certain vehicles, typically luxury cars of European manufacture, cannot be connected to the v-chain for subsequent winching. For these vehicles only, drivers are permitted to use an I-bolt rather than the v-chain to load and unload vehicles. Whether a vehicle is being loaded with the v-chain or I-bolt, Employer trains their driver's to use the winch to load and unload the vehicle.

4. Claimant began working for the Employer on October 3, 2016. On January 7, 2017, Claimant was assigned to transport a 2004 Jeep Wrangler to a pre-designated drop off point. Claimant proceeded to the pick-up point where he found the Jeep in question. He determined that it was drivable, so he loaded it onto his tow truck by driving it up onto the tilted truck bed, setting the emergency brake, and leaving it in gear. After Claimant got out of the Jeep, he tied the vehicle down in accordance with

how he was trained. Specifically, he secured the safety strap on the front driver's side, secured the two rear safety chains, and then secured the right front safety strap. He then raised the bed. Thereafter, he released the Jeep's emergency brake and put the jeep in neutral to "snug" it up. Claimant then reset the emergency brake, put the jeep back into gear, and drove it uneventfully to the drop off point. Claimant did not use the winch to load or assist in securing the vehicle to the truck bed.

5. Upon reaching his destination, Claimant tilted the bed of his tow truck to the ground. He then exited the truck and proceeded to disengage the emergency brake on the Jeep, allowing it to roll backward slightly. He then re-engaged the emergency brake, and began to release the tie-down straps and chains. While untying the last strap, the Jeep began to roll down the tilted truck bed. In an effort to prevent the Jeep from rolling backward, Claimant grabbed the strap and was forcefully pulled into the side of the tow truck injuring his back.

6. Scott Spurling testified as a former tow truck driver for Employer. Mr. Spurling was a driver for Employer for five years before he was promoted to a supervisory position as a team lead/foreman. Mr. Spurling was Claimant's direct supervisor at the time of the above described incident. He testified that he trained Claimant how to load and unload vehicles according to Employer's protocols with use of the winch and v-chain. According to Mr. Spurling, Claimant was taught to use the winch, at all times, when loading and unloading vehicles.

7. Mr. Spurling also testified that Employer takes the safety of its employees very seriously. Consequently, Employer has adopted a variety of oral and written safety rules which are routinely added to based upon the occurrence of specific events and which are enforced through a variety of mechanisms including written reprimands, fines and termination. A list of Employer's written "Rules & Regulations" was provided to Claimant. He acknowledged his understanding of the various rules and regulations by initialing and signing them. Mr. Spurling admitted that the written list of rules and regulations provided to Claimant are devoid of any reference to use of the v-chain and winch when loading and unloading a vehicle to be towed noting that not all safety rules are in written format.

8. In keeping with Employer's safety minded culture, Mr. Spurling testified he held regular safety meetings with Employer's tow truck drivers. According to Mr. Spurling, the safety meetings usually centered on various problems/situations the drivers encountered the week before. Mr. Spurling admitted that there were no records of what specific subjects were discussed at the safety meetings and he could not recall whether mandatory use of the v-chain and winch was ever discussed at any safety meeting. Nonetheless, he testified that Claimant was certified in use of the v-chain and winch, was aware that use of these items was Employer's required loading and unloading protocol and that failure to use them could result in discipline.

9. Regarding the incident in question, Mr. Spurling testified that if the v-chain and winch had been attached to the Jeep, it would not have rolled off the bed of the

truck because the winch would have supported the vehicle's weight. Claimant agreed that if the vehicle had not rolled down the truck bed, he would not have been injured. Claimant also testified that he was aware of the v-chain and winch, knew how to use them, and decided against their use when towing the Jeep in question. Claimant testified that he drove the Jeep up onto the truck because he had seen other drivers, including Mr. Spurling load and unload vehicles from the tow truck by driving them on/off the bed. According to Claimant, he was told that if a vehicle was drivable, he could load it by driving it onto the truck. Mr. Spurling testified that he never told Claimant it was acceptable to drive a vehicle on and off the towing lift. To the contrary, Mr. Spurling testified that he told Claimant to never drive vehicles on and off the truck. He testified that veteran drives could perform such loading but that all "rookie" drivers were specifically instructed to use the v-chain and winch. Claimant testified that he was never told that use the winch and v-chain was mandatory on every tow.

10. Scott Burdick, Employers current driver manager testified that he was taught that using the winch to load and unload vehicles is required by the Employer. He testified that use of the v-chain is stressed even though it is not included in the written safety rules adopted by Employer. As a previous driver for Employer, Mr. Burdick testified that Employer does not teach employees to drive vehicles on or off of trucks and any driver caught doing so is reprimanded.

11. Julian Cisneros has worked for the employer for fourteen and one-half years. For the past eight years, Mr. Cisneros has been Employer's general manager. Mr. Cisneros helped write the safety rules and regulations for the Employer. He testified that not every rule or policy is written and many rules are conveyed to employees through training, fleet meetings, ride-alongs, and individual training. He testified that the rules are generally a compilation of the aftermath of prior incidents/accidents. Even though some rules are verbal only, Mr. Cisneros testified that they are expected to be followed and are enforced in the same way as any written rule. Mr. Cisneros testified that using the winch was much safer than not using it due to the additional control it provides. When a car is loaded on a tilted truck bed and unsecured, the emergency brake can fail, gears can clip, and cars can simply slide down the ramp. The winch is the only way to control the vehicle at all times while loading and unloading it. Mr. Cisneros stated the purpose of the winch and v-chain rule is to protect operators, customers, and the vehicles themselves from circumstances where the vehicle may become out of control.

12. Mr. Cisneros testified that Claimant was aware that rules were enforced and discipline was imposed. While Claimant worked for Employer, two other drivers committed rule violations and disciplinary action was taken. Mr. Cisneros makes sure that all employees know there are consequences for failing to follow the safety rules. He testified that he spoke to Claimant over the phone but was unable to have a meeting with him regarding the incident because Claimant never returned to work. Had Claimant returned, Mr. Cisneros testified that he would have enforced a safety rule violation and disciplined him.

13. Claimant testified that he signed the written safety rules provided to him when he was initially hired. He also testified that he attended the safety meetings convened by Mr. Spurling wherein use of the winch and v-chain were discussed. He acknowledged that the winch and v-chain were important pieces of equipment; however, as noted above, denied that he was ever told he had to use them for every tow. Moreover, he testified that his pay was based on percentages: the more vehicles he towed, the more money he would earn. He admitted to feeling production pressure and testified that it is much slower to use the winch than it is to drive the vehicle on and off the tow-truck. Concerning the incident in question, Claimant testified that he was short on time and had backlogged calls to other jobs at the time of the injury. He admitted he was in a hurry to finish with the Jeep and move on to his next call because the owner of the Jeep had delayed him at the pick-up location, and he had to wait longer than normal. Consequently, Claimant testified that he made a deliberate decision to drive the Jeep up onto the truck rather than use the winch to load and unload it.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office,* 5 P.3d 385(Colo. App. 2000).

B. Section 8-42-112(1)(a), C.R.S. 2016, provides for a fifty percent (50%) reduction in benefits when an “injury is caused by the willful failure of the employee to use safety devices provided by the employer.” Section 8-42-112(1)(b) provides for a fifty percent (50%) reduction in benefits if the employee is injured due to a willful violation of “any reasonable rule adopted by the employer for the safety of the employee.” The term "willful" connotes deliberate intent. Mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard. *Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968). Moreover, Respondents bear the burden of proof to establish that the claimant's conduct was willful. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995); Johnson v. Denver Tramway Corp., 171 P.2d 410, 414(Colo.1946).

C. The elements of proving a violation under Section 8-42-112(1)(b) include the following: 1) There must be a safety rule adopted by the employer. 2) The safety rule must be reasonable. 3) The safety rule must be known by the employee; i.e. “brought home” to the employee, and diligently enforced. *Pacific Employers Insurance*

Co. v Kirkpatrick, 111 Colo. 470, 143 P.2d 267 (Colo. 1943). 4) The meaning and content of the safety rule must be specific, unambiguous and definite, clear and non-conflicting. *Butland v. Industrial Claim Appeal Office*, 754 P.2d 422 (Colo. App 1988). 5) The violation of the safety rule must be willful, done with deliberate intent by the employee. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App 1990).

D. It is Respondents' burden to prove every element justifying a reduction in compensation for willful failure to obey a reasonable safety rule." *Horton v. JBS Swift and Company*, W.C. No. 4-779-078 (2010); *Strait v. Russell Stover Candies*, W.C. No. 4-843-592 (2011). The question of whether the respondents carried the burden of proof was one of fact for determination by the ALJ. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). Here, the evidence presented persuades the ALJ that Respondents presented sufficient evidence to meet their burden of proof. Despite Claimant's concerns that the alleged safety-rule in this case was not reduced to writing, settled case law provides that a safety rule "does not need to be formally adopted, does not have to be in writing, and does not have to be posted for the reduction pursuant to § 8-42-112(1)(b) to apply. *Bennett Prop., Co. v. Indus. Comm'n*, 437 P.2d 548, 552 (1968). Rather, oral warnings, prohibitions, and directions are sufficient if heard and understood by the employee and if given by someone generally in authority." *Id.* Moreover, a safety rule, if sufficiently obvious to claimant, can be based solely on common sense without any direction by the employer to follow it. *See Indus. Comm'n v. Golden Cycle Corp.*, 126 Colo. 68, 246 P.2d 902, 905-06 (1952). Finally, a willful failure to use a safety device or a willful violation of a safety rule may be established without direct evidence of the claimant's state of mind at the time of the injury because "it is a rare case where the claimant admits that his conduct was the product of a willful violation of the employer's rule." *Gargano v. Metro Wastewater Reclamation Dist.*, W.C. No. 4-335-104 (ICAO Feb. 19, 1999). Instead, willfulness may be inferred from a variety of circumstantial evidence, including:

- The obviousness of the danger, *see Golden Cycle Corp.*, 246 P.2d at 906 ("The operator of a saw mill surely would not be held to liability for failure to post a notice reading, 'Keep your hands out of the buzz saw.'");

- The employee's knowledge of the safety rule and the deliberateness with which the employee performed an act prohibited by the rule, *see, e.g.*, *Salamanca v. Golden Aluminum Co.*, W.C. No. 4-416-802 (ICAO July 16, 2001).

E. In this case, the evidence presented persuades the ALJ that Claimant's Employer adopted a safety rule regarding use of the winch and v-chain to load and unload vehicles to be towed. The evidence, including the testimony of Claimant, convinces the ALJ that both the winch and v-chain are legitimate devices necessary to further Employer's business in a safe and conscientious manner. Moreover, the evidence presented persuades the ALJ that the rule regarding the use of the winch and v-chain, while not reduced to writing were well known to Claimant through safety meetings, training and ride alongs. Consequently, the ALJ concludes that the rule

requiring use of the v-chain and winch were "brought home to Claimant. Based upon the evidence presented the ALJ finds and concludes that the safety rule regarding use of the winch and v-chain to load and unload vehicles is unambiguous, reasonable and diligently enforced. Claimant's contrary assertions are not persuasive. Towing is inherently dangerous. While the truck bed is tilted, the angle is steep enough that perfectly operational cars can begin to slide. Inclement weather conditions only increase this risk. Without a secure support point, the winch, an unsecured vehicle may become out of control and cause injuries to anyone around it. Therefore, it is reasonable to require employees to utilize the winch to control vehicles while they are being loaded and unloaded. While the safety of customers and the public are major considerations, the safety rule is designed to protect the safety of the tow-truck drivers, like Claimant, that work for the Employer. The safety rule is also an application of common sense. The bed of the tow truck is tilted while loading and unloading. Once the four safety straps are removed, if the winch is not attached to the vehicle, there is nothing except the emergency brake of the vehicle preventing it from rolling away. Mr. Cisneros and Mr. Spurling both testified based on long experience in the industry that the emergency brakes are unreliable at such an angle. Even without that knowledge, common sense dictates that a vehicle parked at a steep angle poses a significant risk of rolling away if not properly secured.

F. Finally the evidence presented, including Claimant's own testimony, convinces the undersigned ALJ that his deliberate decision to ignore the loading and unloading protocols enjoined and enforced by Employer constitutes a willful violation of a reasonable safety rule adopted for his safety. Here, Claimant admitted that he had been delayed by the Jeep owner and that he had backlogged calls to answer. Claimant's income is ultimately determined by the number of tows he is able to complete. He had a financial incentive to complete his job as quickly as possible, and Claimant admitted that using the winch was much slower than driving the vehicle. The decision to drive the Jeep off of his truck, rather than use the winch, was one Claimant made willfully and deliberately in violation of a known safety rule and Claimant was injured as a direct consequence of this calculated decision.

G. Claimant is correct that an employee's violation of a safety rule and/or failure to use safety devices need not be considered willful if the employee had some plausible purpose to explain the violation, including the facilitation of the employer's business." *see e.g., City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). *Grose v. Riviera Electric*, W.C. No. 4-418-465 (2000). As noted in *Grose*, an employee's violation of a rule in an attempt to facilitate accomplishment of the employer's business generally does not constitute willful misconduct." Furthermore, evidence that a claimant possessed discretion to circumvent a safety rule might negate a finding of a 'willful' safety rule violation." *Triplett v. Evergreen Builders, Inc.*, W.C. No. 4-576-463 (2004). Finally, "the exercise of poor judgment within the realm of the claimant's legitimate discretion might well qualify as mere 'negligence' sufficient to preclude a finding of willfulness." *Id*. In this case, Claimant does not dispute that he was aware of the importance of the v-chain and winch. Nonetheless, relying on the above cited case law, he ostensibly asserts that there was a plausible reason for not using

them in this case because there was a backlog of calls and he felt pressure to get to the next call along with his claim that he was never informed that the v-chain and winch had to be used on every job. Accordingly, Claimant asserts that his decision to not use the winch and v-chain was not "willful." The ALJ is not persuaded. Based upon the evidence presented, the ALJ concludes that Claimant's conscious decision to ignore his training and not use the winch and v-chain was likely driven by his personal desire to take additional calls and make more money rather, than his desire to facilitate accomplishment of Employer's safety conscious business. Moreover, the evidence presented fails to support a conclusion that Claimant was ever given discretion by Employer to circumvent a known safety rule by failing to use the proper safety devices to catch up on calls. Consequently, the ALJ rejects Claimant's assertion that there was a plausible reason for not using the v-chain and winch at the time he was injured in this case.

ORDER

It is therefore ordered that:

1. Claimant's compensation for his injury in this claim shall be reduced fifty Percent (50%) for his failure to use safety equipment provided by the Employer and for violating the Employer's safety rule concerning the loading and unloading for vehicles from the bed of the tow truck as provided for by C.R.S. §8-42-112(1)(a) and (b).

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-045-124-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 27, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 9/27/17, Courtroom 3, beginning at 1:30 PM, and ending at 4:00 PM).

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondent's Exhibits A through J were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on October 4, 2017. On October 11, 2017, Respondent filed objections, consisting of yellow-lined additions and subtractions to the proposed decision. After a consideration of the proposed decision and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability of a right knee (RLE) injury of February 7, 2017; and, if compensable, medical benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant was employed as an Administrative Support IV worker with the Employer at the time of the February 7, 2017 incident.

2. Part of the Claimant's job duties with the Employer consisted of distributing mail.

3. On February 7, 2017, as the Claimant was distributing mail throughout the office, she tripped over a box on the floor.

4. As the Claimant fell, she caught herself with one hand on the shelving unit and one hand on a stack of plans but struck her right knee on the ground. She bruised her right knee.

5. There is conflicting evidence regarding whether or not the Claimant's right knee actually struck the ground and/or if she sustained a bruise on the right knee. The medical evidence in the record supports the proposition that a contusion does not always mean that there is a bruise. Whether or not the Claimant's right knee actually struck the ground or whether the Claimant bruised it while trying to catch herself is not germane because either situation supports the work-relatedness of the Claimant's present right knee injury. The contemporaneous medical records support the injury occurring when the Claimant "went to catch herself."

6. The Claimant reported the fall and sought medical care for her injuries that same day at Denver Health & Hospital Authority, the Employer's designated workers' compensation medical provider.

7. The February 7, 2017 report of injury (on Denver Health Form) states as follows:

"Employee was delivering mail and went around corner and tripped over box that was on floor and went to catch her and injured right knee…" (Claimant's Exhibit 1, p. 2).

8. The February 8, 2017 injury report of Claimant's supervisor, Tiffany Crank, states as follows:

A. "Tripped over box" (Claimant's Exhibit 2, p. 4).

B. "Box should have been stacked with the other boxes of copy paper and not further out in the walk way" (Claimant's Exhibit 2, p. 5).

C. "Witness Summary: It was reported to me by Ed Kocman on 2/8/17 that he witnessed [Claimant] coming around the corner of the log room, walking away from the permit counter, and tripped over a box of copy paper that was single stacked on the ground next to a stack of other copy paper boxes. Ed reported that she stumbled into the filing shelf but avoided falling completely by catching herself on the filing shelf" (Claimant's Exhibit 2, p. 6).

9. Claimant's medical records with Denver Health and Hospital Authority state as follows:

A. "Contusion to B/L hand B/L knees, neck strain LBP" (Claimant's Exhibit 3, p.7).

B. "It seems that most concerning to her is the pain in her right knee" (Claimant's Exhibit 3, p10).

C. "Given the MOI it seems that her right knee may have taken the brunt of injury" (Claimant's Exhibit 3, p. 10).

D. "R knee edema over patellar tendon and medial aspect of knee" (Claimant's Exhibit 3, p.15).

E. "Assessment…Suspect R medial meniscus dysfunction, possibly due to inflammation and irritation. Pt reports difficulty negotiating stairs, increased pain with WB, pain when turning. Positive pain with hyperextension and joint line tenderness" (Claimant's Exhibit 3, p16).

F. Sadie Sanchez, M.D., noted the following MRI results:

"Diagnostic Test Results…

MRI right knee 4/5/17:
1. Maceration and diminutive appearance involving the body of the medial meniscus which may reflect prior partial meniscectomy however there is complex signal extending to the inferior articular surface of the posterior horn of the medial meniscu[s] which is compatible with residual if not recurrent tearing" (Claimant's Exhibit 3, p. 36).

G. "R knee is swollen and sore in flexion" (Claimant's Exhibit 3, p. 50).

10. Claimant's April 5, 2017 MRI (magnetic resonance imaging) of the right knee revealed the following:

"IMPRESSION: 1. Maceration and diminutive appearance involving the body of the medial meniscus which may reflect prior partial meniscectomy however there is complex signal extending to the inferior articular surface of the posterior horn of the medial meniscux which is compatible with residual if not recurrent tearing" (Claimant's Exhibit 4, p. 62).

11. Claimant's medical records with Colorado Orthopedic Consultants state as follows:

"She complains of difficulty walking with medial and anterior knee pain as well as leg pain" (Claimant's Exhibit 6, p. 67).

12. Additional records from Denver Health & Hospital Authority state "H/o fall on 2/7/17 at City and County Building….Work up through workman's comp. Was told

she needs surgery but that it would have to be done through her doctor…" (Claimant's Exhibit 7, p. 69). The ALJ infers and finds that the Denver Health doctors ultimately were of the opinion that the Claimant's need for surgery was **not** work-related.

13. The Employer's expert witness, Henry Jules Roth, M.D., was of the opinion that surgical meniscectomy is no longer the treatment of choice for a torn meniscus, and that the Claimant had no residual effects from the February 7, 2017 incident. Dr. Roth corroborates the implied opinion of the Denver Health doctors that the Claimant's need for surgery is not work related.

14. Claimant had significant pre-existing problems in her right knee prior to the event of February 7, 2017.

15. Respondent has already paid for all treatment of the right knee as of the date of the hearing at COSH.

16. Dr. Sanchez, Claimant's authorized treating physician (ATP) and primary care doctor, has not yet rendered an opinion on maximum medical improvement (MMI) or additional treatment for the work-related aggravation of the Claimant's right knee. The ALJ finds that it would be appropriate to return the Claimant to Dr. Sanchez and/or COSH for a current opinion concerning the causal relatedness of additional medical treatment needed as a result of the February 7, 2017 injury; or, whether the Claimant has returned to the baseline of her pre-existing condition.

Ultimate Findings

17. The ALJ finds, for the most part, Claimant's history of the February 7, 2017 incident is credible; however, her overall theory that her need for right knee surgery should be attributable to the incident is not necessarily credible. Further, the ALJ finds the ultimate, implied opinions of the Denver Health doctors and Dr. Roth concerning the present, recommended surgery being non-work related and attributable to a pre-existing condition, are credible and persuasive. Further medical treatment for the work-related aggravation of the Claimant's right knee remains an open question.

18. Between conflicting medical opinions concerning recommended surgery for the right knee, the ALJ makes a rational choice to accept the ultimate opinions of the Denver Health physicians and Dr. Roth, based on substantial evidence, and to reject any opinions to the contrary.

19. The Claimant has proven, by a preponderance of the evidence that she sustained a work-related aggravation of her pre-existing right knee condition as a result of the incident of February 7, 2017; however, she has failed to prove, by preponderant evidence that the present need for the recommended surgery is causally related to the

aggravating injury of February 7, 2017. The need for further work-related medical treatment remains an open question.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, for the most part, Claimant's history of the February 7, 2017 incident was credible; however, her overall theory that her right knee surgery should be attributable to the incident is not credible or persuasive. Further, as found, the ultimate, implied opinions of the Denver Health doctors and Dr. Roth concerning the present, recommended surgery being non-work related and attributable to a pre-existing condition, was not credible and persuasive. Further medical treatment for the work-related aggravation of the Claimant's right knee remains an open question.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions concerning recommended surgery for the right knee, the ALJ made a rational choice to accept the ultimate opinions of the Denver Health physicians and Dr. Roth, based on substantial evidence, and to reject any opinions to the contrary.

Compensable Aggravation/Acceleration of Pre-Existing Condition

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App.

1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). A compensable injury is one that requires medical treatment or causes disability. *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967). As found, the Claimant sustained a work-related aggravation of her pre-existing right knee condition as a result of the incident of February 7, 2017 which required medical treatment; however, she failed to prove that the present need for the recommended surgery is causally-related to the work-related right knee aggravating injury. The need for further work-related medical treatment remains an open question.

Medical Treatment

d. The question of whether a particular medical treatment is causally related and reasonably necessary is one of fact to be determined by the ALJ. *Kroupa v. Indus. Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office,* 989 P. 2d 251, 252 (Colo. App. 1999). As found, the Claimant has established entitlement to authorized medical treatment at COSH that is causally related and reasonably necessary to cure and relieve the effects of the February 7, 2017 aggravation and acceleration of her right knee condition –before returning to the baseline of her pre-existing condition.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the injured worker bears the burden, by preponderant evidence of establishing the right to specific medical benefits. *HLJ Management group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven the compensability of the aggravating event of February 7, 2017, and, the causal relatedness and reasonable necessity of the work-related medical treatment to date at COSH. The Claimant has failed to prove that the need for the recommended right knee surgery is causally related to the aggravating incident of February 7, 2017.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondent shall pay the costs of causally related and reasonably necessary medical care and treatment for the aggravating, compensable injury of February 7, 2017, subject to the Division of Workers' Compensation Medical fee Schedule.

B. Any and all claims for the recommend right knee surgery are denied and dismissed unless Sadie Sanchez, M.D., or another COSH doctor, on the Claimant's return visit, expresses the opinion that the surgery is causally related to the aggravating injury of February 7, 2017.

C. The Claimant shall return to COSH for an opinion on the causal relatedness of additional medical treatment, including surgery, and/or whether the Claimant has reached maximum medical improvement from the aggravating injury of February 7, 2017.

D. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of October 2017.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that the lumbar MRI and physical therapy recommended by Robert Nystrom, D.O. are reasonable, necessary and causally related to his July 1, 2015 compensable industrial injuries.

2. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving Temporary Total Disability (TTD) benefits.

3. Whether Respondents have established by a preponderance of the evidence that they are entitled to an offset/credit based on Claimant's poker winnings.

FINDINGS OF FACT

1. Claimant worked for Employer as a Plant Laborer. On July 1, 2015 Claimant was unloading hot oil from a truck through a 400 pound steel braided hose. The hose was suspended from the ground by a cable and winch approximately 20-24 feet high. The cable broke and the large hose fell on Claimant's head. The impact knocked Claimant forcefully to the ground. Claimant suffered a concussion as well as neck and back symptoms as a result of the accident.

2. On October 3, 2015 Claimant approached Employer's Plant Manager and Supervisor Jim Chamberlain at a laundromat. Claimant testified that he sought to give Mr. Chamberlain an October 2, 2015 note from Dr. Weber stating that he should not lift at work. Mr. Chamberlain inquired about what he should do with the note. Claimant responded that he did not know what to do with the note other than give it to Mr. Chamberlain. Mr. Chamberlain responded by stating "do you know what this is going to do to me?" Claimant replied that Mr. Chamberlain could do whatever he wanted with the note.

3. Mr. Chamberlain also testified about the October 3, 2015 laundromat conversation. He stated that he was aware that Claimant had visited Dr. Weber because he had received a text message from Claimant. Although Mr. Chamberlain could not recall the precise words of the conversation, he told Claimant that he had "to turn [the note] in." Mr. Chamberlain explained that Claimant responded by telling him to tear up the note and pretend nothing happened. Mr. Chamberlain then reported the note and conversation to Employer's Safety Manager Dan Glowatz.

4. Mr. Glowatz testified at the hearing in this matter. He first spoke with Mr. Chamberlain about the laundromat encounter. On Monday, October 5, 2015 he discussed the incident with Claimant. Mr. Glowatz inquired as to why Claimant asked Mr. Chamberlain to "rip up the note." Claimant responded that he "didn't want any trouble."

5. On October 5, 2015 Mr. Glowatz terminated Claimant from employment. He explained that he fired Claimant for failing to report an injury. Employer's Personnel Action Form specifies that Claimant was fired for an "ethics violation" and "performance." The explanation for the personnel action mentions that Claimant provided a doctor's note stating that he had suffered a back injury three days earlier. When Mr. Chamberlain explained that he would have to report the incident to the Safety Department Claimant asked him to tear up the note.

6. Mr. Chamberlain and Mr. Glowatz also testified about Employer's Code of Conduct. Mr. Chamberlain explained that Claimant's action of providing and discussing the note at the laundromat violated "company policy." When asked about the Code of Conduct Mr. Chamberlain commented that Claimant violated number six. However, number six simply states "I will promptly report any illegal or unethical conduct to company management or other appropriate authorities." Mr. Glowatz testified that Claimant's conduct at the laundromat violated number five of the Code of Conduct. Number five provides that employees shall comply with the law including anti-bribery prohibitions. Mr. Glowatz remarked that Claimant's presentation of the note and the discourse about what to do with the note constituted bribery.

7. After initially receiving conservative care for his July 1, 2015 injuries Claimant was referred to Concentra Medical Centers for treatment. On October 8, 2015 Claimant presented to Authorized Treating Physician (ATP) Robert Nystrom, D.O. at Concentra with complaints of neck and back pain, numbness, vision problems, difficulty concentrating and fatigue. Review of systems demonstrated neck and back pain, headaches, dizziness, and numbness. Dr. Nystrom noted that Claimant appeared tired and had difficulty concentrating. A musculoskeletal exam revealed tightness and tenderness in his neck and back. Claimant also exhibited decreased cervical, thoracic and lumbar range of motion. Dr. Nystrom diagnosed Claimant with a concussion, cervical strain, thoracic strain and lumbar strain. He restricted Claimant from working.

8. Because Respondents denied compensability for the July 1, 2015 accident, the parties conducted a hearing before ALJ Margot Jones on August 26, 2016. Claimant specifically litigated the following issues: compensability; authorized providers; medical benefits; Average Weekly Wage (AWW); Temporary Total Disability (TTD) benefits and safety rule violation. In a September 16, 2016 Summary Order ALJ Jones ruled for Claimant on all issues. She specifically concluded that Claimant had sustained compensable injuries on July 1, 2015, was authorized to receive medical benefits and was entitled to receive TTD benefits beginning October 8, 2015 until terminated by statute.

9. Respondents subsequently paid Claimant TTD benefits in accord with ALJ Jones' September 16, 2016 Summary Order. However, Respondents only paid for certain medical benefits for a short period of time before denying authorization for physical therapy and a lumbar MRI.

10. Dr. Nystrom's medical records reflect that he has repeatedly requested physical therapy for Claimant. On May 3, 2016 Dr. Nystrom remarked that physical therapy had been benefitting Claimant. On September 27, 2016 he again noted that physical therapy was "very helpful." He commented that Claimant's function had regressed without physical therapy and thus referred Claimant for additional therapy on October 19, 2016. On November 23, 2016 Dr. Nystrom again referred Claimant for physical therapy. He noted that physical therapy "would be very appropriate" and approval of the treatment would help Claimant progress toward Maximum Medical Improvement (MMI).

11. Dr. Nystrom's notes reveal that he repeatedly requested a lumbar MRI to assess Claimant's lower back condition. On December 21, 2016 Dr. Nystrom commented that he had requested authorization for a lumbar MRI. However, the request was denied. Dr. Nystrom spoke with the peer reviewer about the request. The reviewer responded that further conservative care should be provided before an MRI would be authorized. Dr. Nystrom thus again referred Claimant for 10 more physical therapy visits.

12. On December 29, 2016 David H. Elfenbein, M.D. conducted a peer review of Dr. Nystrom's request for a lumbar MRI. He concluded that the request was not medically necessary. Dr. Elfenbein explained that conservative therapy should be considered for Claimant's lower back symptoms "before considering an MRI when there are no radicular signs or symptoms." Relying on the Colorado Division of Workers' Compensation *Rules of Procedure* Rule 17, Dr. Elfenbein reasoned that imaging studies are not supported in the absence of neuropathic signs or symptoms.

13. On January 12, 2017 James Hubbard Jr., M.D. conducted a peer review of Dr. Nystrom's request for additional physical therapy visits. He concluded that the request for 10 additional physical therapy visits for Claimant's lower back symptoms was not medically necessary and appropriate. He noted that the Colorado Division of Workers' Compensation therapy guidelines only permit up to 12 weeks of physical therapy. Dr. Hubbard explained that Claimant had already undergone 22 physical therapy visits and obtained improvement for both his neck symptoms and left hand paresthesias. Claimant has thus already exceeded the recommendations in the guidelines.

14. On January 30, 2017 Dr. Nystrom again sought a lumbar MRI. By March 1, 2017 Dr. Nystrom noted that Respondents had not responded to his request for a lumbar MRI or referral to Dr. Reichhardt. On May 10, 2017 Dr. Nystrom commented that he was still awaiting a response from Respondents regarding the requested MRI and noted that Dr. Blau had also recommended a lumbar MRI.

15. On June 21, 2017 Dr. Nystrom again remarked that he had requested a lumbar MRI and a referral to Dr. Blau. He also concurred with Dr. Blau that Claimant had not received adequate treatment for his back injury.

16. As of the date of the hearing in this matter Claimant has received $91,000 in Temporary Total Disability (TTD) benefits from Respondents. Respondents seek a credit against the TTD benefits based on Claimant's poker winnings. However, Claimant explained that he is not a professional poker player and only occasionally participates in tournaments. Claimant's 2016 Federal Tax Form W-2G pertaining to Gambling Winnings reflects that he had gross annual winnings of $9,358.00 from poker tournaments.

17. Claimant has demonstrated that it is more probably true than not that the lumbar MRI and physical therapy recommended by Dr. Nystrom are reasonable, necessary and causally related to his July 1, 2015 compensable industrial injury. On July 1, 2015 Claimant suffered a concussion as well as neck and back injuries when he was struck on the head by a large hose. In a Summary Order ALJ Jones determined that Claimant had suffered compensable injuries, awarded Claimant medical benefits and reasoned that he was entitled to receive TTD benefits. Although Claimant has received conservative medical treatment for his injuries, ATP Dr. Nystrom has repeatedly requested authorization for a lumbar MRI and additional physical therapy visits. He explained that a lumbar MRI and additional physical therapy sessions were reasonable and necessary because Claimant has not received adequate medical care for his back injury.

18. In contrast, peer reviewer Dr. Elfenbein reasoned that a lumbar MRI was not justified by the *Colorado Division of Workers' Compensation Rules of Procedure* Rule 17 because Claimant has not exhibited neuropathic signs or symptoms. Moreover, Dr. Hubbard explained that additional physical therapy sessions were not medically necessary based on the Colorado Division of Workers' Compensation therapy guidelines. However, both Dr. Elfenbein nor Dr. Hubbard only conducted medical record reviews and have not evaluated Claimant. Dr. Nystrom has examined Claimant and provided extensive treatment over a significant period of time. Accordingly, the lumbar MRI and additional physical therapy visits recommended by Dr. Nystrom constitute reasonable and necessary medical treatment designed to cure or relieve the effects of Claimant's July 1, 2015 lower back injury.

19. Respondents have failed to prove that it is more probably true than not that Claimant was responsible for his termination from employment and is thus precluded from receiving indemnity benefits. The record reveals that Employer terminated Claimant from employment based on a doctor's note he provided to Mr. Chamberlain on October 3, 2015 at a laundromat. The note from Dr. Weber addressed Claimant's lifting restrictions at work. Claimant remarked that he lacked a response to Mr. Chamberlain's inquiry about what to do with the note, but Mr. Chamberlain and Mr. Glowatz commented that Claimant desired to destroy the note and pretend nothing happened.

20. In specifically addressing Claimant's termination, Mr. Chamberlain explained that Claimant's action of providing the note and discussing it at the laundromat violated "company policy." When asked about the Code of Conduct Mr. Chamberlain commented that Claimant violated number six. However, number six simply states "I will promptly report any illegal or unethical conduct to company management or other appropriate authorities." Mr. Glowatz testified that Claimant's conduct at the laundromat violated number five of the Code of Conduct. Number five provides that employees shall comply with the law including anti-bribery prohibitions. Mr. Glowatz remarked that Claimant's presentation of the note and the discourse about what to do with the note constituted bribery. Finally, Employer's Personnel Action Form specifies that Claimant was fired for an "ethics violation" and "performance." The explanation for the personnel action mentions that Claimant provided a doctor's note stating that he had suffered a back injury three days earlier. When Mr. Chamberlain explained that he would have to report the incident to the Safety Department Claimant asked him to tear up the note.

21. Despite the testimony of Mr. Chamberlain and Mr. Glowatz, the record reveals that Claimant did not precipitate his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Claimant simply provided a doctor's note to Employer that addressed work restrictions based on a back injury that occurred three days earlier. Claimant's desire not to pursue the matter based on resistance from his supervisor did not constitute an action that would likely lead to his termination based on Employer's Code of Conduct. Accordingly, under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over his termination from employment. He is thus not precluded from receiving TTD benefits.

22. Respondents have failed to establish that it is more probably true than not that they are entitled to an offset/credit based on Claimant's poker winnings. Respondents seek an offset/credit against the $91,000 they have paid to Claimant in TTD benefits as a result of his July 1, 2015 industrial injuries. Respondents specifically seek an offset/credit in the amount of $9,358.00 based on Claimant's poker winnings as reflected in his 2016 Federal Tax Form W-2G pertaining to Gambling Winnings. However, because the winnings do not constitute offsets or wages under the Colorado Workers' Compensation Act, Respondents are not entitled to receive an offset/credit for Claimant's poker winnings.

23. Claimant explained that he is not a professional poker player and only occasionally participates in tournaments. His poker winnings thus do not constitute an overpayment or offset because he has not received duplicate benefits that he was not entitled to receive. Furthermore, Claimant's winnings do not constitute wages because he was not compensated for services based on a contract of hire. Accordingly, Respondents are not entitled to recover an overpayment or receive an offset/credit based on Claimant's poker winnings in the amount of $9,358.00.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Benefits

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has demonstrated by a preponderance of the evidence that the lumbar MRI and physical therapy recommended by Dr. Nystrom is reasonable, necessary and causally related to his July 1, 2015 compensable industrial injury. On July 1, 2015 Claimant suffered a concussion as well as neck and back injuries when he was struck on the head by a large hose. In a Summary Order ALJ Jones determined that Claimant had suffered compensable injuries, awarded Claimant medical benefits and reasoned that he was entitled to receive TTD benefits. Although Claimant has received conservative medical treatment for his injuries, ATP Dr. Nystrom has repeatedly requested authorization for a lumbar MRI and additional physical therapy

visits. He explained that a lumbar MRI and additional physical therapy sessions were reasonable and necessary because Claimant has not received adequate medical care for his back injury.

6. As found, in contrast, peer reviewer Dr. Elfenbein reasoned that a lumbar MRI was not justified by the *Colorado Division of Workers' Compensation Rules of Procedure* Rule 17 because Claimant has not exhibited neuropathic signs or symptoms. Moreover, Dr. Hubbard explained that additional physical therapy sessions were not medically necessary based on the Colorado Division of Workers' Compensation therapy guidelines. However, both Dr. Elfenbein nor Dr. Hubbard only conducted medical record reviews and have not evaluated Claimant. Dr. Nystrom has examined Claimant and provided extensive treatment over a significant period of time. Accordingly, the lumbar MRI and additional physical therapy visits recommended by Dr. Nystrom constitute reasonable and necessary medical treatment designed to cure or relieve the effects of Claimant's July 1, 2015 lower back injury.

Responsible for Termination

7. Respondents assert that Claimant is precluded from receiving temporary disability benefits because he was responsible for his termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAP Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAP Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

8. As found, Respondents have failed to prove by a preponderance of the evidence that Claimant was responsible for his termination from employment and is thus precluded from receiving indemnity benefits. The record reveals that Employer terminated Claimant from employment based on a doctor's note he provided to Mr. Chamberlain on October 3, 2015 at a laundromat. The note from Dr. Weber addressed Claimant's lifting restrictions at work. Claimant remarked that he lacked a response to Mr. Chamberlain's inquiry about what to do with the note, but Mr. Chamberlain and Mr.

Glowatz commented that Claimant desired to destroy the note and pretend nothing happened.

9. As found, in specifically addressing Claimant's termination, Mr. Chamberlain explained that Claimant's action of providing the note and discussing it at the laundromat violated "company policy." When asked about the Code of Conduct Mr. Chamberlain commented that Claimant violated number six. However, number six simply states "I will promptly report any illegal or unethical conduct to company management or other appropriate authorities." Mr. Glowatz testified that Claimant's conduct at the laundromat violated number five of the Code of Conduct. Number five provides that employees shall comply with the law including anti-bribery prohibitions. Mr. Glowatz remarked that Claimant's presentation of the note and the discourse about what to do with the note constituted bribery. Finally, Employer's Personnel Action Form specifies that Claimant was fired for an "ethics violation" and "performance." The explanation for the personnel action mentions that Claimant provided a doctor's note stating that he had suffered a back injury three days earlier. When Mr. Chamberlain explained that he would have to report the incident to the Safety Department Claimant asked him to tear up the note.

10. As found, despite the testimony of Mr. Chamberlain and Mr. Glowatz, the record reveals that Claimant did not precipitate his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Claimant simply provided a doctor's note to Employer that addressed work restrictions based on a back injury that occurred three days earlier. Claimant's desire not to pursue the matter based on resistance from his supervisor did not constitute an action that would likely lead to his termination based on Employer's Code of Conduct. Accordingly, under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over his termination from employment. He is thus not precluded from receiving TTD benefits.

Offsets/Credits

11. In 1997 the General Assembly amended §§8-43-303(1), C.R.S. and 8-43-303(2)(a), C.R.S. to permit the reopening of a claim on the grounds of "fraud" or "overpayment" in addition to the traditional grounds of error, mistake or change in condition. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011). The 1997 legislation is designated as an act "concerning the recovery from claimants of Workers' Compensation benefits to which such claimants are not entitled." *Id.* The statutes provide that reopening may not "affect moneys already" paid except in cases of fraud or overpayment. *In Re Stroman,* W.C. No. 4-366-989 (ICAP, Aug. 31, 1999). The statute contemplates that in the case of an overpayment the ALJ has the authority to remedy the situation. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

12. Section 8-40-201(15.5), C.R.S, defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." There are

thus three categories of possible overpayment pursuant to §8-40-201(15.5). *In Re Grandestaff,* No. 4-717-644 (ICAP, Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

13. Offsets as delineated in the Colorado Workers' Compensation Act are specific and apply only to disability, pension and unemployment benefits. *See* §8-42-103(1)(c)-(f), C.R.S. Wages are defined as "the money rate at which the services rendered are compensated under the contract of hire in force at the time of the injury." *See* §8-40-201(19)(a), C.R.S.

14. As found, Respondents have failed to establish by a preponderance of the evidence that they are entitled to an offset/credit based on Claimant's poker winnings. Respondents seek an offset/credit against the $91,000 they have paid to Claimant in TTD benefits as a result of his July 1, 2015 industrial injuries. Respondents specifically seek an offset/credit in the amount of $9,358.00 based on Claimant's poker winnings as reflected in his 2016 Federal Tax Form W-2G pertaining to Gambling Winnings. However, because the winnings do not constitute offsets or wages under the Colorado Workers' Compensation Act, Respondents are not entitled to receive an offset/credit for Claimant's poker winnings.

15. As found, Claimant explained that he is not a professional poker player and only occasionally participates in tournaments. His poker winnings thus do not constitute an overpayment or offset because he has not received duplicate benefits that he was not entitled to receive. Furthermore, Claimant's winnings do not constitute wages because he was not compensated for services based on a contract of hire. Accordingly, Respondents are not entitled to recover an overpayment or receive an offset/credit based on Claimant's poker winnings in the amount of $9,358.00. *Compare In Re Scruggs* W.C. No. 4-490-474 (ICAP, Jan. 27, 2004) (concluding that the respondents were entitled to recover an overpayment of TTD benefits from the claimant where he earned seasonal wages for approximately three months).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. The lumbar MRI and physical therapy recommended by Dr. Nystrom are reasonable, necessary and causally related to Claimant's July 1, 2015 compensable industrial injuries.

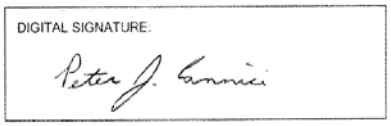
2. Claimant was not responsible for his termination from employment under the termination statutes.

3. Respondents' request for an offset/credit based on Claimant's poker winnings in the amount of $9,358.00 is denied and dismissed.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: October 17, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-014-613-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

GUARANTEE INSURANCE
c/o PATRIOT RISK SERVICES,

Third Party Administrator (TPA),

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 27, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 9/27/17, Courtroom 3, beginning at 8:30 AM, and ending at 11:45 AM).

Claimant's Exhibits 1 through 18 and 20 were admitted into evidence, without objection. Respondents' Exhibits A through W were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents. The proposed decision was filed, electronically, on September 28, 2017. No timely objections to the proposal were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether or not the Claimant sustained a compensable injury to his right shoulder, arising out of the admitted left shoulder injury of March 8, 2016; if so, whether the recommended right shoulder surgery is causally related and reasonably necessary to cure and relieve the effects thereof.

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On March 8, 2016, the Claimant participated in a training exercise. consisting of "employees role played different scenarios." The Claimant was a videographer.

2. According to the Claimant, Ruben Hogan ran up and struck him with an open hand on the Claimant's right shoulder, grabbed the Claimant's jacket, and pushed the Claimant who started to fall backwards. At the same time, Anthony Hodges and Erma Moss came upon Claimant. Moss slapped at the Claimant's hands which were holding a camera, her feet tangled with the Claimant's feet, and they both fell to the ground. As he fell, the Claimant closed the lid on the camera and cupped the camera to protect it. The Claimant testified he fell to the left and crashed into his left shoulder. He claimed he got up by himself without help. Subsequently, the Claimant testified he flipped in the air, landed on his left shoulder, and rolled onto his right shoulder. The Claimant thereupon experienced some pain in both shoulders, but the next day his left shoulder pain became excruciating;" like it was on fire." According to the Claimant, he did not resume work after the incident occurred. Two days later, on March 10, 2016, the Claimant requested medical care and prepared an injury report in which he reported that he flipped in the air, landed on his left shoulder and arm and rolled onto the right shoulder (Respondents' Exhibit T, pp. 103, 104.) According to the Claimant, he has experienced right shoulder pain continuously since March 8, 2016.

3. Anthony Hodges participated with the Claimant in the exercise. He prepared a witness statement and noted that he and Emma Moss surprised the Claimant when they approached him from behind. Hodges and Moss reached to block the camera, the Claimant stepped back, and began to fall. The Claimant landed on his back and Moss tumbled beside him still holding the camera. Hodges helped the Claimant and Moss up. Hodges verified that everyone was okay, they laughed about

the incident, and they all continued with the next exercise; no injury detected (Respondents' Exhibit T, pp. 105, 106.)

4. Erma Moss participated with the Claimant in the exercise. She prepared a witness statement (*see* Respondents' Exhibit T pp. 107, 108). Moss testified at the hearing. According to Moss, she and Hodges approached the Claimant from behind and surprised him. Moss reached for the camera. The Claimant attempted to back away and the Claimant and Moss had a light tumble to the ground. The Claimant fell to the left and Moss fell to the right. The Claimant held onto the camera with both hands and did not let go when he fell onto his back. Hodges gave Moss and the Claimant a hand and helped them up off the ground. The Claimant did not appear injured, or mention he was hurt or injured and they laughed about the incident. All of three individuals resumed work activities. The next day, the Claimant and Moss laughed about the incident and, once again, the Claimant did not mention he was hurt or injured. Two days after the incident, employees were called to a meeting and Moss learned that the Claimant reported he was injured. Moss was surprised. **She apologized to the Claimant but the Claimant responded that Moss did not injure him; that he was hurt at a different time.** Moss testified that Ruben Hogan was not involved in the incident.

5. Two days earlier, on March 6, 2016, the Claimant reported to co-employee, Tyler Seaman (who was also a paramedic), that he experienced pain and swelling in his left lower arm and wrist. The Claimant iced his wrist but otherwise declined medical attention. Seaman prepared a witness statement about the event. (Respondents' Exhibit T, p. 110).

6. Ronald Shumate prepared a witness statement regarding the March 6, 2016, and the March 8, 2016, incidents (Respondents' Exhibit T, p. 109.)

7. Two months later, on May 11, 2016, the Claimant prepared and filed a Worker's Claim for Compensation. He identified his left shoulder as the body part injured after he was pushed to the ground and he landed on his left shoulder. He did not reference right upper extremity (RUE) problems (Respondents' Exhibit U)

8. The Respondents admitted the left shoulder claim and temporary total disability benefits remain ongoing. The latest General Admission of Liability (GAL), dated January 23, 2017, admits for matters related to the left shoulder, including medical benefits, an average weekly wage (AWW) of $1,140; and temporary total disability (TTD) benefits of $760 per week ongoing –related to the left shoulder.

Medical

9. From March 10, 2016, to April 11, 2016, the Claimant treated with Raewyn Shell, D.O., Amanda Cava, D.O. and Mark Fallinger, M.D. and at Concentra. All of the

medical providers noted complaints and treatment of left arm/shoulder symptoms. There were no references to right upper extremity symptoms (Respondents' Exhibits E, F, G, H, I, J, K, L.)

10. On March 14, 2016, Claimant followed up at Concentra with Dr. Cava. The Claimant completed and signed a Patient Information form on which he checked the box that he injured his **left** side and he wrote that he sprained **left** rotator cuff and strained trapezius muscle. He completed and signed a pain diagram that limited pain complaints to the **left** shoulder. Dr. Cava noted a history of "hurt **left** (emphasis supplied) shoulder". Neither the Claimant not the medical provider referenced a **right** shoulder complaint or problem (Respondents' Exhibit F).

11. On March 25, 2016 and April 4 and 8, 2016, the Claimant completed and signed pain diagrams that limited pain complaints to the **left** shoulder (Respondents' Exhibits H, I, K).

Claimant's Move to New York

12. The Claimant moved to New York and medical care was transferred to Joshua Steinvurzel, M.D.

13. On June 2, 2016, the Claimant presented to Dr. Steinvurzal for evaluation of left shoulder problems. Dr. Steinvurzel performed a full examination that included Claimant's head and face, respiratory, skin, neurologic, psychiatric, cervical, right upper extremity, and left upper extremity. Dr. Steinvurzal noted that the Claimant's right upper extremity reflected "no tenderness, swelling or deformities, rounded shoulder posture", strength 5/5 and normal range of motion (Respondents' Exhibit M).

14. Physical therapy notes on June 20, 22, 27, 29, July 1, 6, 8, 11, 13, 15, 18, 20, 25, 27, 2016, indicated that the Claimant complained of and treated for left shoulder problems (Respondents' Exhibit N).

15. On July 1, 2016, the Claimant presented to Dr. Steinvurzel for left shoulder complaints but, for the first time, medical records reflect right shoulder symptoms of localized tenderness. Dr. Steinvurzel recommended an MRI (magnetic resonance imaging) of the right shoulder (Respondents' Exhibit O). On July 8, 2016, Dr. Steinvurzel diagnosed impingement syndrome of the right shoulder (Claimant's Exhibit 15, p. 8).

16. On October 26, 2016, Dr. Steinvurzel performed **left** shoulder arthroscopic surgery (Claimant's Exhibit 15, pp. 12 – 15).

17. On May 16, 2017, a right shoulder MRI reflected severe posterior glenohumeral osteoarthritis with adjacent degenerative tearing of the labrum and a

subcentimeter paralabral cyst; moderate supraspinatus tendinosis with small interstitial tear; no full-thickness tear or retraction; mild infraspinatus tendinosis; moderate to severe acromioclavicular DJD (Claimant's Exhibit 16).

Independent Medical Examination (IME) by Barry Ogin, M.D.

18. On August 24, 2016, Dr. Ogin performed an IME at the request of the Respondents. Dr. Ogin reviewed medical records, took a history from the Claimant and examined him. Dr. Ogin prepared reports dated August 24, 2016, January 5, 2017, August 24, 2017, and September 1, 2017. Also, Dr. Ogin also testified at hearing. Dr. Ogin concluded that the Claimant did not suffer a work-related injury, aggravation, acceleration, or exacerbation to his right shoulder on March 8, 2016. Dr. Ogin based his opinion on multiple factors including but not limited to: Claimant's history of right shoulder injury after he fell and landed on his left shoulder and/or after a co-employee hit Claimant with an open hand, did not support a mechanism sufficient to cause his right shoulder problems; MRI results reflected long-standing chronic degeneration and not an acute injury; medical records did not mention any right shoulder pain or problems for four months after the incident; medical records reflect normal range of motion and strength in Claimant's right shoulder; Claimant's own pain diagrams during that time did not reflect any right shoulder problems; on examination, Claimant admitted he had minimal to no right shoulder pain; Claimant reported occasional right shoulder popping that was consistent with non-work related osteoarthritis reflected on the MRI. Dr. Ogin testified that had the Claimant sustained an injury to the right shoulder on March 8, 2016, to cause the damage identified in the MRI, the Claimant would have presented with prominent symptoms that would not be masked by left shoulder problems. Also, the Claimant showed signs of diabetes and diabetes may be associated with insidious onset of shoulder discomfort and adhesive capsulitis (Respondents' Exhibits A, B, C, D). The ALJ finds r. Ogin's opinions highly persuasive and credible.

Ultimate Findings

19. Insofar as the Claimant attributes his right shoulder problems and need for surgery to the admitted left shoulder injury, the ALJ finds the Claimant's testimony in this regard lacking in credibility. It is not supported by the aggregate medical histories he gave to providers. Further, the ALJ finds the opinions of Dr. Ogin more credible and persuasive than the opinions of Dr. Steinvurzel and any other opinions to the contrary.

20. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Ogin and to reject the opinions of Dr. Steinvurzel and any other opinions to the contrary –insofar as the right shoulder is concerned.

21. The Claimant has failed to prove, by a preponderance of the evidence that he sustained a compensable right shoulder injury, arising out of the admitted left

shoulder injury, on March 8, 2016. It follows that the recommended right shoulder surgery is not causally related to the admitted injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, insofar as the Claimant attributes his right shoulder problems and need for surgery to the admitted left shoulder injury, his testimony in this regard is lacking in credibility. It was not supported by the aggregate medical histories he gave to providers. Further, as found, the opinions of Dr. Ogin were more credible and persuasive than the opinions of Dr. Steinvurzel and any other opinions to the contrary.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Ogin and to reject the opinions of Dr. Steinvurzel and any other opinions to the contrary –insofar as the right shoulder was concerned.

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to meet his burden with respect to the right shoulder and the recommended surgery thereto.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The latest General Admission of Liability, dated January 22, 2017 is adopted, approved and remains in full force and effect until modified according to law.

B. Any and all claims for the compensability of the right shoulder and recommended surgery thereto are hereby denied and dismissed.

DATED this_____day of October 2017.

_____
Court Clerk

Wc.ord

Claimant's Exhibits 1 through 18 and 20 were admitted into evidence, without objection. Respondents' Exhibits A through W were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents. The proposed decision was filed, electronically, on September 28, 2017. No timely objections to the proposal were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether or not the Claimant sustained a compensable injury to his right shoulder, arising out of the admitted left shoulder injury of March 8, 2016; if so, whether the recommended right shoulder surgery is causally related and reasonably necessary to cure and relieve the effects thereof.

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On March 8, 2016, the Claimant participated in a training exercise. consisting of "employees role played different scenarios." The Claimant was a videographer.

2. According to the Claimant, Ruben Hogan ran up and struck him with an open hand on the Claimant's right shoulder, grabbed the Claimant's jacket, and pushed the Claimant who started to fall backwards. At the same time, Anthony Hodges and Erma Moss came upon Claimant. Moss slapped at the Claimant's hands which were holding a camera, her feet tangled with the Claimant's feet, and they both fell to the ground. As he fell, the Claimant closed the lid on the camera and cupped the camera to protect it. The Claimant testified he fell to the left and crashed into his left shoulder. He claimed he got up by himself without help. Subsequently, the Claimant testified he flipped in the air, landed on his left shoulder, and rolled onto his right shoulder. The Claimant thereupon experienced some pain in both shoulders, but the next day his left shoulder pain became excruciating;" like it was on fire." According to the Claimant, he did not resume work after the incident occurred. Two days later, on March 10, 2016,

the Claimant requested medical care and prepared an injury report in which he reported that he flipped in the air, landed on his left shoulder and arm and rolled onto the right shoulder (Respondents' Exhibit T, pp. 103, 104.) According to the Claimant, he has experienced right shoulder pain continuously since March 8, 2016.

3. Anthony Hodges participated with the Claimant in the exercise. He prepared a witness statement and noted that he and Emma Moss surprised the Claimant when they approached him from behind. Hodges and Moss reached to block the camera, the Claimant stepped back, and began to fall. The Claimant landed on his back and Moss tumbled beside him still holding the camera. Hodges helped the Claimant and Moss up. Hodges verified that everyone was okay, they laughed about the incident, and they all continued with the next exercise; no injury detected (Respondents' Exhibit T, pp. 105, 106.)

4. Erma Moss participated with the Claimant in the exercise. She prepared a witness statement (*see* Respondents' Exhibit T pp. 107, 108). Moss testified at the hearing. According to Moss, she and Hodges approached the Claimant from behind and surprised him. Moss reached for the camera. The Claimant attempted to back away and the Claimant and Moss had a light tumble to the ground. The Claimant fell to the left and Moss fell to the right. The Claimant held onto the camera with both hands and did not let go when he fell onto his back. Hodges gave Moss and the Claimant a hand and helped them up off the ground. The Claimant did not appear injured, or mention he was hurt or injured and they laughed about the incident. All of three individuals resumed work activities. The next day, the Claimant and Moss laughed about the incident and, once again, the Claimant did not mention he was hurt or injured. Two days after the incident, employees were called to a meeting and Moss learned that the Claimant reported he was injured. Moss was surprised. **She apologized to the Claimant but the Claimant responded that Moss did not injure him; that he was hurt at a different time.** Moss testified that Ruben Hogan was not involved in the incident.

5. Two days earlier, on March 6, 2016, the Claimant reported to co-employee, Tyler Seaman (who was also a paramedic), that he experienced pain and swelling in his left lower arm and wrist. The Claimant iced his wrist but otherwise declined medical attention. Seaman prepared a witness statement about the event. (Respondents' Exhibit T, p. 110).

6. Ronald Shumate prepared a witness statement regarding the March 6, 2016, and the March 8, 2016, incidents (Respondents' Exhibit T, p. 109.)

7. Two months later, on May 11, 2016, the Claimant prepared and filed a Worker's Claim for Compensation. He identified his left shoulder as the body part injured after he was pushed to the ground and he landed on his left shoulder. He did not reference right upper extremity (RUE) problems (Respondents' Exhibit U)

8. The Respondents admitted the left shoulder claim and temporary total disability benefits remain ongoing. The latest General Admission of Liability (GAL), dated January 23, 2017, admits for matters related to the left shoulder, including medical benefits, an average weekly wage (AWW) of $1,140; and temporary total disability (TTD) benefits of $760 per week ongoing –related to the left shoulder.

Medical

9. From March 10, 2016, to April 11, 2016, the Claimant treated with Raewyn Shell, D.O., Amanda Cava, D.O. and Mark Fallinger, M.D. and at Concentra. All of the medical providers noted complaints and treatment of left arm/shoulder symptoms. There were no references to right upper extremity symptoms (Respondents' Exhibits E, F, G, H, I, J, K, L.)

10. On March 14, 2016, Claimant followed up at Concentra with Dr. Cava. The Claimant completed and signed a Patient Information form on which he checked the box that he injured his **left** side and he wrote that he sprained **left** rotator cuff and strained trapezius muscle. He completed and signed a pain diagram that limited pain complaints to the **left** shoulder. Dr. Cava noted a history of "hurt **left** (emphasis supplied) shoulder". Neither the Claimant not the medical provider referenced a **right** shoulder complaint or problem (Respondents' Exhibit F).

11. On March 25, 2016 and April 4 and 8, 2016, the Claimant completed and signed pain diagrams that limited pain complaints to the **left** shoulder (Respondents' Exhibits H, I, K).

Claimant's Move to New York

12. The Claimant moved to New York and medical care was transferred to Joshua Steinvurzel, M.D.

13. On June 2, 2016, the Claimant presented to Dr. Steinvurzal for evaluation of left shoulder problems. Dr. Steinvurzel performed a full examination that included Claimant's head and face, respiratory, skin, neurologic, psychiatric, cervical, right upper extremity, and left upper extremity. Dr. Steinvurzal noted that the Claimant's right upper extremity reflected "no tenderness, swelling or deformities, rounded shoulder posture", strength 5/5 and normal range of motion (Respondents' Exhibit M).

14. Physical therapy notes on June 20, 22, 27, 29, July 1, 6, 8, 11, 13, 15, 18, 20, 25, 27, 2016, indicated that the Claimant complained of and treated for left shoulder problems (Respondents' Exhibit N).

15. On July 1, 2016, the Claimant presented to Dr. Steinvurzel for left shoulder complaints but, for the first time, medical records reflect right shoulder symptoms of localized tenderness. Dr. Steinvurzel recommended an MRI (magnetic resonance imaging) of the right shoulder (Respondents' Exhibit O). On July 8, 2016, Dr. Steinvurzel diagnosed impingement syndrome of the right shoulder (Claimant's Exhibit 15, p. 8).

16. On October 26, 2016, Dr. Steinvurzel performed **left** shoulder arthroscopic surgery (Claimant's Exhibit 15, pp. 12 – 15).

17. On May 16, 2017, a right shoulder MRI reflected severe posterior glenohumeral osteoarthritis with adjacent degenerative tearing of the labrum and a subcentimeter paralabral cyst; moderate supraspinatus tendinosis with small interstitial tear; no full-thickness tear or retraction; mild infraspinatus tendinosis; moderate to severe acromioclavicular DJD (Claimant's Exhibit 16).

Independent Medical Examination (IME) by Barry Ogin, M.D.

18. On August 24, 2016, Dr. Ogin performed an IME at the request of the Respondents. Dr. Ogin reviewed medical records, took a history from the Claimant and examined him. Dr. Ogin prepared reports dated August 24, 2016, January 5, 2017, August 24, 2017, and September 1, 2017. Also, Dr. Ogin also testified at hearing. Dr. Ogin concluded that the Claimant did not suffer a work-related injury, aggravation, acceleration, or exacerbation to his right shoulder on March 8, 2016. Dr. Ogin based his opinion on multiple factors including but not limited to: Claimant's history of right shoulder injury after he fell and landed on his left shoulder and/or after a co-employee hit Claimant with an open hand, did not support a mechanism sufficient to cause his right shoulder problems; MRI results reflected long-standing chronic degeneration and not an acute injury; medical records did not mention any right shoulder pain or problems for four months after the incident; medical records reflect normal range of motion and strength in Claimant's right shoulder; Claimant's own pain diagrams during that time did not reflect any right shoulder problems; on examination, Claimant admitted he had minimal to no right shoulder pain; Claimant reported occasional right shoulder popping that was consistent with non-work related osteoarthritis reflected on the MRI. Dr. Ogin testified that had the Claimant sustained an injury to the right shoulder on March 8, 2016, to cause the damage identified in the MRI, the Claimant would have presented with prominent symptoms that would not be masked by left shoulder problems. Also, the Claimant showed signs of diabetes and diabetes may be associated with insidious onset of shoulder discomfort and adhesive capsulitis (Respondents' Exhibits A, B, C, D). The ALJ finds r. Ogin's opinions highly persuasive and credible.

Ultimate Findings

19. Insofar as the Claimant attributes his right shoulder problems and need for surgery to the admitted left shoulder injury, the ALJ finds the Claimant's testimony in this regard lacking in credibility. It is not supported by the aggregate medical histories he gave to providers. Further, the ALJ finds the opinions of Dr. Ogin more credible and persuasive than the opinions of Dr. Steinvurzel and any other opinions to the contrary.

20. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Ogin and to reject the opinions of Dr. Steinvurzel and any other opinions to the contrary –insofar as the right shoulder is concerned.

21. The Claimant has failed to prove, by a preponderance of the evidence that he sustained a compensable right shoulder injury, arising out of the admitted left shoulder injury, on March 8, 2016. It follows that the recommended right shoulder surgery is not causally related to the admitted injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions

(this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, insofar as the Claimant attributes his right shoulder problems and need for surgery to the admitted left shoulder injury, his testimony in this regard is lacking in credibility. It was not supported by the aggregate medical histories he gave to providers. Further, as found, the opinions of Dr. Ogin were more credible and persuasive than the opinions of Dr. Steinvurzel and any other opinions to the contrary.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Ogin and to reject the opinions of Dr. Steinvurzel and any other opinions to the contrary –insofar as the right shoulder was concerned.

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App.

2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to meet his burden with respect to the right shoulder and the recommended surgery thereto.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The latest General Admission of Liability, dated January 22, 2017 is adopted, approved and remains in full force and effect until modified according to law.

B. Any and all claims for the compensability of the right shoulder and recommended surgery thereto are hereby denied and dismissed.

DATED this 18 day of October 2017.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Did Claimant prove by a preponderance of the evidence that the right hip arthroscopy recommended by Dr. White is reasonable, necessary, and causally related to her December 27, 2013 admitted work injury?

FINDINGS OF FACT

1. Claimant works as a server at Employer's restaurant. She suffered an admitted industrial injury on December 27, 2013 due to a slip and fall accident. Claimant's feet slipped out from under her, and she fell with the most of her weight on her left side.

2. Employer did not refer Claimant to an authorized provider, so she treated with her chiropractor, Dr. David Pool.

3. In early January 2014, Claimant received a call from a "Worker's Compensation Representative" directing Claimant to the emergency room because "there was no actual provider associated with" her workers' compensation claim. Claimant went to the St. Mary Corwin Hospital ER on January 9, 2014, and stated that she "injured her left shoulder and arm, left elbow and left side." She described pain "in her left buttock that radiates to her left lateral thigh." Examination of the left hip was reported as normal except for "mild tenderness about the lateral aspect."

4. Claimant treated with Dr. Pool for almost three years after her work injury. The first six months of Dr. Pool's records are handwritten and difficult to interpret, but typewritten notes starting on July 29, 2014 reference "left hip" pain, and later notes document pain and spasm in the "left pelvic" area.

5. Respondent sent Claimant for an Independent Medical Examination (IME) with Dr. Raschbacher on November 30, 2015. Claimant explained she felt "stuck" regarding recovery from the injury. She reported pain in the left hip, left thigh and buttock. She told Dr. Raschbacher that "since this occurred, her symptoms are in the same location and of the same type." Dr. Raschbacher noted Claimant presented "in a straightforward manner." Physical examination revealed left SI joint tenderness and tenderness to palpation of the left groin, aggravated with adduction of the left hip. She also had localized tenderness of the lateral left hip over the greater trochanter. Dr. Raschbacher opined that greater trochanteric bursitis was the most likely primary diagnosis. He recommended discontinuation of chiropractic treatment because Claimant had gone well beyond the "limit" suggested by the Medical Treatment Guidelines, without appreciable long-term benefit. Dr. Raschbacher recommended an orthopedic evaluation with consideration of a left trochanteric bursa injection. He further opined that "her examination was not very suggestive of intrinsic hip joint pathology, but if a trochanteric bursa injection is done and there is persistent symptomatology, then imaging in the form

of MRI arthrogram of the left hip would not be unreasonable to consider, given her reported mechanism of injury."

6. Claimant started treating with Dr. Kenneth Danylchuk, an orthopedic surgeon, on February 16, 2016. Her most significant complain related to her low back, but she also reported left hip pain. On physical examination, she had tenderness on the left lumbar/sacral area, reduced lumbar ROM and "mild to moderate" pain in the left hip. X-rays of the left hip and lumbar spine were normal, so Dr. Danylchuk ordered a lumbar MRI.

7. Claimant returned to Dr. Danylchuk on March 22, 2016 to review the lumbar MRI, which he described as "completely normal." Claimant was frustrated that the focus was on her lumbar spine because she was more concerned about her left hip.

8. Claimant had an MRI of the left hip on April 8, 2016, which revealed a mildly displaced anterior superior labral tear.

9. Claimant followed up with Dr. Danylchuk on April 19, 2016. She reported pain globally around of the left hip joint, over the greater trochanter, and into the left buttock. Dr. Danylchuk administered a left greater trochanteric bursa injection. He noted "she asked me if this will stop her hip from dislocating. I told her I hope so. However, I think she has a poor understanding of her pain generator around the left hip and back."

10. At her next appointment on May 19, Claimant reported no benefit from the trochanteric injection. She continued to complain of pain "all over" her left hip. She said, "the pain moves around from place to place. Sometimes in the buttocks, sometimes in the lateral aspect of the hip and sometimes in the groin. She relates that her hip goes out of socket." Dr. Danylchuk recommended an intra-articular anesthetic injection of the left hip for diagnostic purposes. Claimant declined the injection and stated "if this is not going to fix the problem, she is not interested [in] doing this and wants her hip fixed. Therefore, we will make arrangements for her to be seen by Bryan White, MD for further evaluation and treatment as indicated."

11. Respondents did not authorize the referral to Dr. White but instead sent Claimant back to Dr. Raschbacher for a second IME. When discussing the intra-articular hip injection, Dr. Raschbacher noted "she did not understand what the hip injection was. It appears she understood that this might be essentially the same as a bursa injection." Dr. Raschbacher explained that "an intra-articular hip injection is quite a bit different than a bursa injection and the two are not 'comparable.' " Claimant described difficulty with various activities and motions, such as separating her legs. Her symptoms were "constant" and "not changing." Periodic chiropractic treatment was giving only "temporary" relief. Dr. Raschbacher felt Claimant presented "in a straightforward manner." Significant physical examination findings included tenderness to palpation of the left buttock and left SI joint, the lateral left hip over the greater trochanter area, and the left pelvic are above the hip joint.

12. Since Claimant had declined the intra-articular hip injection, Dr. Raschbacher opined she was at MMI with 11% lower extremity impairment for hip range of motion. Dr. Raschbacher further opined:

> I do not recommend any further treatment of any type unless [Claimant] wishes to have an intra-articular left hip injection for diagnostic and possibly therapeutic purposes. Depending on her response to that, the issue of surgery on the left hip labrum could be addressed. A diagnostic arthroscopy and possibly therapeutic arthroscopy may be in order depending on if she does an intra-articular left hip injection and what result she has with this. It appears she would possibly benefit from returning to the orthopedic physician to discuss in detail and obtain an understanding of left hip intra-articular injection.

13. Claimant returned to Dr. Danylchuk in December 2016 and expressed "frustration" that Respondents had not authorized the referral to Dr. White. Dr. Danylchuk noted the MRI had revealed a labral tear and opined "her symptoms consisting of a feeling of instability and the feeling that the hip is popping out of place certainly could be due to this abnormality." Dr. Danylchuk again referred Claimant to Dr. White, but noted treatment was "at a standstill" without authorization.

14. Claimant saw Dr. White on February 1, 2017. She described the December 2013 accident and stated: "since then, she has had deep pain in the groin, to the point now where she does feel very limited with her function and activity." On physical examination, she had "significant discomfort with the anterior impingement maneuver in this does re-create the pain she typically feels." Dr. White noted X-rays showed "significant over coverage of the acetabulum," and the MRI confirmed a labral tear on multiple sequences. He diagnosed "combined impingement with a labral tear resulting from injury on December 27, 2013." Dr. White recommended a left hip arthroscopy and a labral reconstruction as "the most predictable route to get her better."

15. Dr. Timothy O'Brien performed an IME for Respondents on March 31, 2017. The reported physical examination showed no significant findings other than pain with palpation of the mid-buttock/posterior femoral acetabular articulation. Dr. O'Brien concluded Claimant suffered only "minor" injuries as a result of the accident at work, which were limited to the neck, left arm, and left lateral thigh. He noted that she continued to work after the accident, which he opined "is the behavior of a person who has not sustained a significant injury." He opined all abnormalities shown on imaging studies were chronic, degenerative, age-related changes with "no evidence of any cause related to the work incident." Dr. O'Brien opined the chiropractic records showed "migratory" and "nonorganic" pain complaints. Dr. O'Brien noted he has treated "hundreds of patients" with hip contusions and has "never" treated a patient with a hip contusion "whose injury did not heal." Dr. O'Brien opined Claimant reached "end of healing" by January 9, 2014, and required no further treatment after that date.

16. Dr. O'Brien also disagreed with Dr. White's surgical recommendation, irrespective of causation. He noted there were no findings on his physical examination to

support a diagnosis of femoroacetabular impingement (FAI). Since he believed her pain was nonphysiologic, he did not expect it to respond to surgery.

17. Claimant saw Dr. Jack Rook for an IME at her counsel's request on April 3, 2017. In contrast to the physical examination documented by Dr. O'Brien three days earlier, Dr. Rook's exam showed left hip pain with flexion, abduction, and internal rotation of the joint, and tenderness to palpation of the hip joint anteriorly. She also had severe tenderness with palpation of the left gluteus medius muscle, trochanteric bursa, and the iliotibial band. Finally, she exhibited moderate to severe tenderness of the left sacroiliac joint. Dr. Rook diagnosed femoral acetabular impingement, possible instability, a labral tear, surrounding myofascial pain, left trochanteric bursitis, and left iliotibial band tightness. Dr. Rook thought Claimant was not at MMI and required further treatment relating to the left hip condition. He opined the hip problems and proposed surgery were causally related to the December 27, 2013 accident.

18. Dr. Rook testified at the May 26, 2017 hearing to reiterate and elaborate on the opinions expressed in his IME report. He opined the mechanism of injury was consistent with the labral tear shown on the MRI. Given that Claimant's hip was "completely asymptomatic" before the accident, he believed the fall likely caused the labral tear. He summarized the basis for his causation opinion as:

> [T]he patient was not having any hip problems prior to [the accident]. She sustained a traumatic event with significant mechanical forces applied to her hip. She developed immediate hip problems which have persisted to this day. She has had a sensation of instability which is consistent with the finding of the labral tear.

19. Dr. White testified for Claimant in a post-hearing deposition on August 2, 2017. He explained Claimant's physical examination findings were consistent with FAI, namely pain with flexion and internal rotation of the hip. He testified we cannot determine the acuity of the labral tear from the MRI. He opined the tear was either caused by the fall or was pre-existing but asymptomatic before being aggravated by the fall. Regarding the typical distribution of symptoms from a labral tear, Dr. White testified

> labral tears typically cause pain in the groin, down the front of the thigh to the knee, on the side of the hip and into the buttock. Those are the four locations that labral tears can create pain.

20. Dr. White reviewed some of Claimant's pain diagrams and opined they were consistent with a labral tear. Dr. White outlined his rationale for surgery and opined Claimant fits the metrics he typically uses when deciding whether to recommend surgery. He did not think an intra-articular injection was a necessary prerequisite to surgery.

21. Dr. O'Brien testified on behalf of Respondents in a post-hearing deposition on August 17, 2017. Dr. O'Brien agreed with Dr. White that a fall could cause an asymptomatic labral tear or FAI to become symptomatic, but did not believe that happened in this case. He emphasized the lack of any explicit reference to "groin" pain

until well after Claimant's injury. Dr. O'Brien opined that when FAI or a labral tear causes pain, it "always" causes pain in the hip joint, and if Claimant had a labral tear from the outset, she would have identified groin pain "with 95 percent certitude."[1] He also reiterated that surgery is unlikely to help Claimant due to the "diffuse" nature of her symptoms. He felt there was "zero percent" chance Claimant's symptoms can be explained by FAI or a labral tear.

22. Claimant's description of her post-injury course of symptoms is credible.

23. The opinions of Dr. White, Dr. Rook, and Dr. Raschbacher are more persuasive than the contrary opinions expressed by Dr. O'Brien.

24. Claimant proved by a preponderance of the evidence that the left hip arthroscopy recommended by Dr. White is reasonable, necessary, and causally related to the admitted injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even after an admission of liability is filed, the respondents retain the right to dispute the relatedness of any particular treatment, because the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonable and necessary." Section 8-42-101(1)(a). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201, C.R.S.

As found, Claimant proved that the proposed hip surgery is more likely than not related to the December 2013 accident. Claimant's mechanism of injury was sufficient to cause or aggravate a labral tear, and she has complained of left hip pain throughout her course of treatment. The ALJ is not persuaded by Dr. O'Brien's opinion that a patient with a labral tear would invariably report groin pain. Rather, the ALJ credits Dr. White's opinion that, although groin pain is the "classic" symptom of a labral tear, it can also cause pain

[1] Dr. O'Brien conceded FAI or labral tears can manifest as buttock pain, but opined that presentation is "not quite as common."

on the side of the hip and into the buttock. Those symptoms are well-documented throughout the medical record.

Furthermore, Dr. Pool repeatedly documented pain and spasm in the left pelvic area, which could reasonably be interchanged with left "groin" pain. Claimant has no known diagnosis that relates to the pelvis *per se*, and Dr. Pool's repeated references to left pelvis pain support Claimant's testimony that she has experienced pain in an area that can fairly be describe as the "groin" since the accident. To deny a causal connection simply because Claimant did not explicitly refer to "groin" pain, despite repeated documentation of "left pelvis" pain, puts too fine a point on terminology used by providers and patients.

Nor is the ALJ persuaded by Dr. O'Brien's assertion that Claimant's physical examination was essentially normal, given the abnormal exams documented by Dr. Raschbacher in November 2016, Dr. White in February 2017 and Dr. Rook in April 2017.

Dr. Raschbacher performed two IMEs at Respondents' request. Although he initially thought greater trochanteric bursitis was the most likely diagnosis, he also recognized the possibility that her symptoms were due to intra-articular pathology. Claimant has essentially followed the path outlined in Dr. Raschbacher's IME report and is now pending the surgery he suggested. Coupled with the opinions of Dr. White and Dr. Rook, the ALJ is persuaded the proposed hip surgery is more likely than not related to Claimant's admitted December 2013 injury.

The ALJ has also credited Dr. White's opinions in finding the proposed surgery is reasonably necessary.

ORDER

It is therefore ordered that:

1. Insurer shall pay for all reasonable and necessary medical treatment to cure and relieve the effects of the injury to Claimant's left hip, including the surgery recommended by Dr. White.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 19, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant sustained a compensable injury on January 5, 2017.

II. Whether Claimant is entitled to reasonable, necessary, and related medical benefits.

III. Claimant's average weekly wage ("AWW").

IV. Whether Dr. Neville is an authorized treating provider.

V. Whether Claimant is entitled to temporary total disability ("TTD") benefits and/or temporary partial disability ("TPD") benefits.

VI. Whether Respondents are subject to penalties for allegedly violating Section 8-43-503(3), C.R.S.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is an employee of Respondent-Employer, EmployBridge, a temporary employment agency. **Hearing Tr. 57:15-21.** Claimant was assigned to work for Pro Mold in July 2016. **Hearing Tr. 58:17-25.**

2. While working at Pro Mold, on January 5, 2017, Claimant sustained a laceration to her forehead when she walked into a stationary backhoe in Pro Mold's parking lot.

3. Pro Mold owns and maintains the parking lot which is contiguous to its building. It is a private parking lot closed each night by blocking the entrance with a locked gate. The parking was provided for the benefit of Pro Mold's employees, including Claimant, and its customers. The parking lot is a portion of Employer's premises.

4. Most Pro Mold employees drive to and from work, and park in the parking lot owned and maintained by Pro Mold.

5. Pro Mold is located in Berthoud Colorado. **Hearing Tr. 58:23**.

6. Claimant lived in Johnstown Colorado and her residence was approximately 11 to 11 ½ miles from Pro Mold. **Hearing Tr. 38:5-10.**

7. Claimant had to drive to Pro Mold to get to work. Claimant could not get to Pro Mold via a public bus or light rail. **Hearing Tr. 38:11-19.**

8. Both Claimant and Pro Mold benefited from Claimant's use of the parking lot.

9. On January 5, 2017, Claimant parked her car in the Pro Mold parking lot at approximately 7:45 a.m. and walked into Pro Mold to start work. **Hearing Tr. 62:19-21.** The parking lot is contiguous to the building in which Claimant worked. It had been snowing and the parking lot was covered with snow and was icy. **Hearing Tr. 62:16-17.** Claimant clocked in and began working at 8:00 a.m. At approximately 8:45 a.m., Chris Ensely of Pro Mold, and Claimant's supervisor, asked Claimant to move her car to a different parking space to allow the owner of Pro Mold, Jerry Campbell, to plow the Pro Mold parking lot with a backhoe. **Hearing Tr. 62:22-25.** Allowing the parking lot to be plowed was a benefit to Pro Mold as well as its customers, employees, and Claimant. Claimant, while she was on the clock, went to move her car as requested. After Claimant moved her car, she started walking back into Pro Mold and saw the bucket of the backhoe. **Hearing Tr. 63:17-21, 64:6-8.** Claimant testified that she thought she was going to clear the bucket but instead walked into it and hit her head. **Hearing Tr. 64:18-23, 65:5-9.**

10. Mr. Campbell witnessed Claimant walk into the bucket of the backhoe while in the parking lot. **Hearing Tr. 128:13-23, 129:12-20.** Mr. Campbell jumped off the backhoe and noticed Claimant's head was bleeding. **Hearing Tr. 130:22-131:5.** Mr. Campbell was able to communicate with Claimant. **Hearing Tr. 131:17-22.** Another employee of Pro Mold, Christine Lebeda, took her to the E.R. **Hearing Tr. 132:11-17.**

11. Claimant moving her car at the direction of her supervisor so the parking lot could be plowed, and being in the parking lot at the time of the accident, was sufficiently incidental to her work and employment. Moreover, had Claimant not moved her car at the direction of her supervisor, she would have not walked into the backhoe and been injured.

12. Matthew Lebeda, Pro Mold's Maintenance and Set up Technician, testified Pro Mold's parking lot is open to the public during business hours and that Claimant was allowed to park anywhere in Pro Mold's parking lot as there were no assigned parking spaces. **Hearing Tr. 103:14-16, 106:8-107:3.** However, only Pro Mold's employees, including Claimant, and its customers, use the parking lot on a regular basis. The parking lot is not shared with other businesses. And, although the parking lot could be used by the general public during the day, there is no reason for the general public to use the parking lot.

13. Ms. Lebeda was Pro Mold's Office Manager. Claimant was not required to have her personal vehicle at Pro Mold or drive for Pro Mold. **Hearing Tr. 112:25-113:5.** Claimant was hired as a temporary, full-time machine operator. **Hearing Tr. 113:5-8, 114:6-9.** Claimant was earning $10.00 per hour. **Hearing Tr. 29:23.** Claimant's job duties included sorting, trimming, and putting parts into cartons. **Hearing Tr. 113:14-114:5.** As a full time machine operator, Claimant frequently worked 40 hours per week while working for Pro Mold. **Ex 16.**

14. While Ms. Lebeda was driving Claimant to the E.R. on January 5, 2017, Claimant appeared to be relatively normal. **Hearing Tr. 117:20-118:4.** When Claimant was questioned by the medical providers, Claimant had no problems understanding their questions or providing them with responses. **Hearing Tr. 115:22-24, 116:22-25, 117:1-7.** From January 9, 2017 to January 24, 2017, Claimant told Ms. Lebeda that she was feeling good. **Hearing Tr. 119:10-23, 121:2-4.** Claimant worked up until February 21, 2017. **Hearing Tr. 121:2-4.** Ms. Lebeda was not aware as to why Claimant did not return to Pro Mold after February 21, 2017 even though there was work available for her. **Hearing Tr. 121:2-5, 13-25.**

15. During her initial evaluation at MCR's E.R. on January 5, 2017, Claimant recollected everything fairly well and denied dizziness, syncope, or light-headedness. **Ex. A:4-5.** A CT of the brain was normal and revealed no acute intracranial abnormality. **Ex. A:6, 11-13.** On exam, Claimant had a laceration on the top of her head but her head was otherwise atraumatic. **Ex. A:5.** Claimant also displayed a full range of motion of her neck and was non-tender to palpation of the cervical spine. **Ex. A:5-6.** Claimant was diagnosed with a scalp laceration, concussion without loss of consciousness, and neck strain. **Ex. A:3.** The laceration was repaired with suture staples and Claimant was discharged the same day. **Ex. A:3.**

16. On January 10, 2017, Claimant returned to MCR due to some headaches and nausea. **Ex. A:14.** Claimant, however, had a normal neurologic exam. **Ex. A:14.** Claimant denied vomiting, visual changes, or confusion. **Ex. A:14.** Claimant was also negative for neck pain and stiffness as well as dizziness and weakness. **Ex. A:15.** Following the evaluation, the medical records document that no further workup was needed. **Ex. A:14.**

17. On January 12, 2017, Claimant presented to James Hebard, M.D., at Banner Occupational Health Clinic ("Banner") and began treating with Dr. Hebard. **Ex. B:24-28.** Claimant reported a history of thyroid disease and high blood pressure and denied a history of loss of consciousness. **Ex. B:25.** Claimant reported that she struck the top of her head on January 5, 2017 and noticed left jaw pain about two days after the injury. **Ex. B:27.** Following the injury, Dr. Hebard noted that Claimant had returned to full duty on January 9, 2017. **Ex. B:27.** During the evaluation, Claimant was negative for blurred vision and light sensitivity; however, she was positive for complaints of dizziness, headache, numbness and

neck pain. **Ex. B:26.** On exam, Claimant was not in acute distress, Claimant's left jaw was not sore and not tender to palpation, and her eyes, ears, nose, and throat were unremarkable. **Ex. B:27.** Dr. Hebard removed the suture staples. Following his exam, Dr. Hebard referred Claimant to physical therapy and released Claimant to full duty. **Ex. B:24, 27-28.**

18. On January 17, 2017, due to subjective complaints of ongoing headaches and neck pain, Claimant had a second CT of the brain at MCR, which was normal. **Ex. A:19-20.** Claimant also had a CT of the cervical spine, which revealed no acute bony abnormality and potentially significant C5-6 foraminal narrowing. **Ex. A:19.** Claimant denied having any cervical radiculopathy or any other associated symptoms. **Ex. A:20.** On exam, Claimant had no focal deficits, paresthesias, or vision changes. **Ex. A:17.** Claimant also displayed a normal range of motion of the neck and normal gait. **Ex. A:17-18.** Claimant was discharged in good and improved condition. **Ex. A:20.**

19. On January 24, 2017, Claimant's physical therapist called Dr. Hebard and advised him that Claimant was experiencing increasing headaches. Therefore, Dr. Hebard referred Claimant for a neurology consult. **Ex. 8:84.**

20. On February 2, 2017, Claimant returned to Dr. Hebard for additional treatment. **Ex. 8:84-85.** Claimant complained of increasing headaches, nausea and vomiting. Dr. Hebard indicated Claimant's neurology evaluation was set for February 21, 2017. However, due to Claimant's complaints and contention of increasing headaches, 10/10 pain, nausea and vomiting, Dr. Hebard referred Claimant back to the MCR Emergency Room for evaluation. **Ex. 8:84-85.**

21. On February 2, 2017, Claimant returned to MCR's Emergency Room. Despite her complaints, she had a normal neurological exam. **Ex. A:21.** Claimant denied visual disturbance, neck stiffness, speech difficulty, weakness, or numbness. **Ex. A:22.** On exam, Claimant's neck was supple and had normal reflexes. **Ex. A:22.** Although part of the reason Dr. Hebard referred Claimant back to MCR's Emergency Room was Claimant's contention that she had nausea and was vomiting, Claimant denied nausea and vomiting at the MCR Emergency Room. **Ex A:21**. Thus, Claimant's subjective report of symptoms was not consistent on the same day.

22. Although Claimant was already treating with Dr. Hebard for her work related accident, Claimant went to her primary care doctor, Thomas Neville, M.D., on her own on February 14, 2017. **Hearing Tr. 79:12-14.**

23. Based on a referral from Dr. Hebard, Claimant presented to Reena Dhakal, N.P., from February 21, 2017 to May 2, 2017. **Ex. F:115.** Ms. Dhakal is a nurse practitioner specializing in neurology. Ms. Dhakal testified that she did not staff Claimant's case with medical doctors. **Ex. F:121.** Other than the slight tenderness and scalp laceration, Claimant had a normal physical examination on

January 5, 2017. **Ex. F:118.** Claimant's scalp laceration had resolved by the date of her initial evaluation on February 21, 2017. **Ex. F:121.** On February 21, 2017, Claimant reported to Ms. Dhakal that she was having daily headaches and that narcotics did not relieve her symptoms. **Ex. F:116.** Other than documenting Claimant had a tandem gait, Claimant had a normal physical examination on February 21, 2017. **Ex. F:119.** Ms. Dhakal placed Clamant off work due to Claimant's subjective complaints of a headache. **Ex. F:119-120.** Ms. Dhakal also saw Claimant on March 21, 2017 and May 2, 2017 and that her physical examinations were within normal limits and there was no reason Claimant could not have returned to work. **Ex. F:120.** On May 2, 2017, there was no objective evidence of vertigo/balance issues. **Ex. F:120.**

24. On March 6, 2017, Claimant presented to Kevin A. Tanner, O.D., for an annual eye exam. **Ex. C:30-31.** During the evaluation, Dr. Tanner noted that Claimant was not experiencing headaches, double vision, or blurred/uncomfortable vision. **Ex. C:30.** Claimant denied treatment for musculoskeletal or neurologic issues. **Ex C:30.** Claimant's presentation to Dr. Tanner is inconsistent with her presentation to other medical providers.

25. Claimant continued to treat with Dr. Hebard in April and May 2017. **Hearing Tr. 79:15-17.** According to Dr. Hebard, Claimant's scalp laceration, left jaw contusion, and right hip contusion were at MMI as of February 2, 2017. **Dr. Hebard's Deposition Tr. Tr. 29:15-30:7, 57:7-14.** According to Dr. Hebard, Claimant's musculoskeletal complaints had reached MMI with no impairment as of April 10, 2017. **Dr. Hebard's Deposition Tr. 39:1-17.**

26. On June 14, 2017, Kathleen D'Angelo, M.D., conducted an Independent Medical Examination ("IME") at the request of Respondents. **Ex. D:32-81.** Despite the medical records to the contrary, Claimant reported to Dr. D'Angelo that she did not walk into the backhoe but instead the backhoe drove into her and that she was knocked out. **Ex. D:35-36, 44-45.** Additionally, although there is no mention of hip or jaw pain in the January 5, 2017 medical record, Claimant reported that she hit her jaw and also experienced hip pain following the incident. **Ex. D:37, 47.** Despite driving from January 9, 2017 to May 11, 2017 **(Hearing Tr. 67:8-14, 92:8-10, 14-17)**, Claimant told Dr. D'Angelo that she was not able to drive. **Ex. D:37.** Claimant also reported that she had short-term memory loss, which was not reported by Claimant or mentioned in the medical records until February 21, 2017. **Ex. D:40, 50.** Similarly, Claimant complained of cervical radiculopathy, which was not reported by Claimant or mentioned in the medical records until March 31, 2017. **Ex. D:51.** Dr. D'Angelo noted that Claimant readily confirmed pain to just about any area she mentioned. **Ex. D:38.** Claimant reported that she was taking various pain medications including Gabapentin, which Claimant admitted to being on prior to the date of injury. **Ex. D:39.**

27. When Claimant was evaluated by Dr. DAngelo, her chief complaints were headaches, dizziness, neck pain, right leg pain, memory loss, problems thinking, insomnia, depression, shoulder pain, and hip pain**. Ex. D:33.**

28. On exam, Dr. D'Angelo noted that although Claimant had marked complaints of diffuse pain, and indicated she avoided bright lights, Claimant was in no apparent distress – even with the bright lights in the room. **Ex. D:40-41.** Dr. D'Angelo opined that Claimant was an unreliable historian and her reports of pain are a consequence of conscious malingering or factitious, somaticizing disorder. **Ex. D:54.**

29. Based on her examination and review of the medical records, Dr. D'Angelo opined that Claimant did not suffer a mild traumatic brain injury, also known as a concussion, as a result of the January 5, 2017 incident because she had no findings on physical examination consistent with mild traumatic brain injury during her initial E.R. visit at MCR. **Ex. D:54.** Dr. D'Angelo noted Claimant's symptoms expanded and worsened following her initial E.R. visit, which is inconsistent with either a traumatic brain injury or spinal trauma. **Ex. D:55.** Dr. D'Angelo opined that it is not medically probable for neurological complaints to worsen as time passes following a head injury. **Ex. D:55.**

30. Dr. D'Angelo opined that Claimant's cervical, thoracic, and lumbar spine and cervical radicular complaints are not a result of the January 5, 2017 incident. **Ex. D:63.** Dr. D'Angelo opined that the cervical MRI revealed chronic degeneration anticipated in a 52-year-old like Claimant. **Ex. D:59.** Dr. D'Angelo opined that Claimant's physical examination findings and complaints were not consistent with cervical radiculopathy. **Ex. D:62.** Dr. D'Angelo diagnosed Claimant with a work-related head contusion, myofascial/cervical spine irritation, and head laceration, which were all at MMI. **Ex. D:63.**

31. Following the IME, Dr. D'Angelo testified consistent with her IME report on July 20, 2017. **Ex. E:82-110.** Additionally, Dr. D'Angelo criticized Ms. Dhakal for opining that memory loss and dizziness can have a later onset as that is inconsistent with the medical literature and guidelines. **Ex E:89-90.** In sum, Dr. D'Angelo opined that Claimant was at MMI with no impairment and that Claimant did not require future treatment. **Ex. E:90-91.**

32. Dr. D'Angelo also credibly testified that the January 5, 2017 accident and injury did not cause any disability which precluded Claimant from performing her regular job. **Ex. E:27.**

33. This ALJ finds Dr. D'Angelo's report and testimony to be credible and persuasive as it relates to the extent of Claimant's injuries due to the January 5, 2017, accident and lack of any disability.

34. This ALJ finds Claimant is not credible for the following reasons. First, Claimant specifically told the emergency room personnel that the backhoe was stationary and she walked into it at the time of the accident. However, Claimant told Dr. D'Angelo that the backhoe ran into her. This ALJ finds that Claimant's embellishment of the extent of the accident is an attempt to substantiate the extent of Claimant's subjective complaints.

35. Second, Claimant initially stated that she was not sure if she lost consciousness at the time of the accident. However, as time went on, Claimant started telling providers that she lost consciousness due to the accident. Again, this ALJ finds Claimant's change regarding whether she lost consciousness is an attempt to exaggerate the extent of the accident and substantiate her subjective complaints.

36. Third, according to Dr. D'Angelo, true head injury symptoms are worse at first, and then get better over time. In this case, Claimant's subjective symptoms worsened over time. Claimant's worsening of subjective symptoms is inconsistent with a concussion or mild traumatic brain injury. As stated by Dr. D'Angelo, "Despite this medical understanding of the clinical course of MTBI [mild traumatic brain injury], [Claimant] and her providers, continued to ascribe the patient's increasing number of subjective complaints to her mild brain injury; this included an expanding list of symptoms that progressed and worsened over time, which is not a medically anticipated outcome of mild brain injury."

37. Fourth, Claimant's physical presentation to Dr. D'Angleo was inconsistent with her physical complaints. For example, Claimant complained of severe neck pain which prohibited her from range of motion testing during the examination. However, Claimant was able to move her neck freely and without apparent discomfort during the discussion phase of the evaluation with Dr. D'Angelo. In addition, Claimant complained of 10/10 headache pain. Claimant, however, did not exhibit any signs of suffering from a severe headache during her examination with Dr. D'Angelo.

38. Fifth, Claimant also complained of cervical radiculopathy to both upper extremities as well as thoracic, lumbar, right hip and jaw pain. However, Claimant's physical findings were devoid of hypertonicity, neurological deficits, or appropriate pain behaviors which could have supported such symptoms. Moreover, Claimant's cervical MRI displayed findings of chronic degeneration anticipated in a 52-year-old patient rather than evidence of acute traumatic injury.

39. Sixth, this ALJ had the opportunity to observe Claimant testify at the hearing and observe her demeanor, which included Claimant's intonations, facial expressions, gestures, fluid movements, and the like. Such observations contradicted Claimant's testimony and physical complaints to the various medical providers regarding the extent of her symptoms which she contends flow from the accident.

40. Therefore, this ALJ Finds Claimant is not a reliable or consistent historian regarding how the accident occurred. This ALJ also finds that Claimant is not a reliable or accurate historian regarding the extent of her symptoms due to the work accident. This ALJ further finds that Claimant's subjective complaints to her medical providers are not reliable and are not accurate. Therefore, Claimant is found to not be credible.

41. This ALJ does not find Dr. Hebard's reports and testimony to be persuasive regarding the extent of Claimant's January 5, 2017, injury and any disability caused by the accident because Dr. Hebard relied upon Claimant's subjective complaints which this ALJ does not find credible.

42. This ALJ also does not find Reena Dhakal's, N.P., reports or testimony to be persuasive regarding the extent of Claimant's January 5, 2017, injury, and any disability caused by the accident because Ms. Dhakal also relied upon Claimant's subjective complaints which this ALJ does not find credible.

43. This ALJ is aware that numerous physicians have diagnosed Claimant with a concussion and/or post concussive syndrome. However, each physician based their diagnosis on Claimant's subjective complaints which this ALJ has found to not be reliable or credible. Therefore, this ALJ does not find the diagnosis of a concussion or post concussive syndrome made by numerous physicians to be reliable or accurate.

44. Claimant did suffer an injury due to the January 5, 2017 accident. Claimant's injury is limited to the laceration on the top of her head.

45. Claimant is entitled to medical treatment to cure and relieve her from the effects of her head laceration.

46. The January 5, 2017 accident and injury, which consisted of a head laceration, did not cause any disability and did not preclude Claimant from performing her regular job. Therefore, Claimant did not miss more than three days of work due to her head laceration.

47. Claimant was hired to work full time, 40 hours per week and was paid $10.00 per hour. Claimant frequently earned $400.00 per week. Therefore, Claimant's average weekly wage is $400.00.

48. Respondents denied liability for Claimant's claim.

49. Respondents did not provide Claimant a designated provider list. Therefore, the right of selection passed to Claimant. On January 12, 2017, Claimant exercised her right of selection by going and treating with Dr. Hebard at Banner beginning on January 12, 2017. In addition, Claimant continued treating with Dr. Hebard at

Banner through May 11, 2017. Thus, Claimant's actions evidenced her selection of Dr. Hebard at Banner. Dr. Hebard is an authorized provider.

50. Claimant did not request permission to treat with Dr. Neville. Dr. Hebard, who is Claimant's authorized treating physician, did not refer Claimant to Dr. Neville. Dr. Neville is not an authorized provider.

51. Respondents did not dictate to any of Claimant's treating physicians the type or duration of treatment regarding her work related accident or the degree of physical impairment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant sustained a compensable injury on January 5, 2017.

Compensability

In Colorado, only those injuries "arising out of" and "in the course of employment," are compensable under the Workers' Compensation Act. Section 8-41-301(l)(b), C.R.S. The course of employment requirement is satisfied when the claimant shows that the injury occurred within the time and place limits of the employment. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991).

It is now practically universally accepted that a parking lot adjacent to an employer's business is a part of the employer's premises. *See Rodriguez v. Exempla Healthcare, Inc*., W.C. No. 4-705-673 (April 30, 2008). In support of this holding, the Panel in *Rodriguez v. Exempla Healthcare* quoted Professor Larson as follows:

> As to parking lots owned by the employer, or maintained by the employer for its employees, practically all jurisdictions now consider them part of the "premises," whether within the main company premises or separated from it. This rule is by no means confined to parking lots owned, controlled, or maintained by the employer. The doctrine has been applied when the lot, although not owned by the employer, was exclusively used, or used with the owner's permission, or just used, by the employees of this employer. Thus, if the owner of the building in which the employee works provides a parking lot for the convenience of all tenants, or if a shopping center parking lot is used by employees of businesses located in the center, the rule is applicable, (emphasis in original).

Larson's Workers' Compensation Law, § 13.04 [2] [a] [b] (footnotes omitted); see also *State Compensation Insurance Fund v. Walter*, 354 P.2d 591 (Colo. 1960) (upholding award of compensation to claimant injured while crossing public street between employer's parking lot and employer's shop); *Woodruff World Travel, Inc. v. Industrial Commission*, 554 P.2d 705 (Colo. App. 1976) (parking lot was provided for use by employer's employees, employer was aware its employees used the lot, and lot constituted "an obvious fringe benefit to claimant"); *Friedman's Market, Inc. v. Welham*, 653 P.2d 760 (Colo.App. 1982) (fact that respondent did not own or control the parking lot does not, as a matter of law, mandate a different result); *Seltzer v. Foley's Department Store*, W. C. No. 4-432-260 (September 21, 2000) (claimant's parking lot

injury compensable even though it occurred while claimant was off the clock, and at a place where the risk was shared by the general public). Additionally, once a parking lot has achieved the status of "a portion of the employer's premises, compensation coverage attaches to any injury that would be compensable on the main premises." Larson's Workers' Compensation Law, § 13.04 [2] [b].

In this case, the parking lot where Claimant walked into the backhoe was situated contiguous to the building where Claimant worked. In addition, the parking lot belonged to Pro Mold, was controlled by Pro Mold, and was used primarily by its customers, employees, and Claimant. The parking lot was for the benefit of Pro Mold's employees and Claimant. The parking lot was a portion of Pro Mold's premises. In addition, Claimant was "on the clock" at the time of the accident. Therefore, Claimant's accident occurred within the course of her employment.

The inquiry does not stop there, however, and Claimant must also satisfy the "arising out of" requirement for compensability. The "arising out of" element is narrower than the "course" element and requires the claimant to prove that the injury had its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando, supra*. The "arising out of test is one of causation. *See Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *City of Brighton v. Rodriquez*, supra.

In order to satisfy the arising out of requirement, it is not necessary that the claimant actually be engaged in performing job duties at the time of the injury. *See Employers' Mutual Ins. Co. v. Industrial Commission*, 76 Colo. 84, 230 P. 394 (1924). Our courts have recognized that it is not essential for the compensability determination that the activities of an employee emanate from an obligatory job function or result in some specific benefit to the employer so long as the employee's activities are sufficiently incidental to the work itself as to be properly considered as arising out of and in the course of employment. *See also Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996) (an activity arises out of employment if it is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment"). It is sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo.App. 1995). Moreover, injuries sustained in parking lots which are provided by the employer for the benefit of employees arise out of the employment because they are a normal incident to the employment relationship. *Seltzer v. Foley's Department Store*, W. C. No. 4-432-260 (September 21, 2000) (claimant's parking lot injury compensable even though it occurred while claimant was off the clock, and at a place where the risk was shared by the general public).

In this case, Claimant, while on the clock, was specifically asked by her supervisor to move her car in the parking lot so Pro Mold's owner, Jerry Campbell, could plow the parking lot for the benefit of their employees, customers, and Claimant. The parking lot was provided for the benefit of Pro Mold's employees, customers, and Claimant. While walking back inside, after moving her car, Claimant walked into and hit the bucket of the backhoe which was in the parking lot. This ALJ concludes that Claimant's actions of moving her car and then trying to return to work, when she walked into the bucket of the backhoe while in the parking lot, was sufficiently incidental to the work itself to be properly considered as arising out of and in the course of her employment.

Therefore, this ALJ concludes Claimant has proven by a preponderance of the evidence that she suffered a compensable injury on January 5, 2017 when she hit her head on the bucket of the backhoe in the parking lot.

Compensable Conditions

Claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. No benefits flow to the victim of an industrial accident unless the accident causes an injury. See *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

In this case, Claimant has established by a preponderance of the evidence that she suffered a compensable accident on January 5, 2017. However, this ALJ concludes that the condition, or injury, suffered by Claimant is limited to the laceration on her head.

As found, Claimant is not a reliable historian regarding the extent of her symptoms. Claimant was not found to be credible for the following reasons. First, Claimant specifically told the emergency room personnel that the backhoe was stationary and she walked into it at the time of the accident. However, Claimant told Dr. D'Angelo that the backhoe ran into her. This ALJ concludes that that Claimant's embellishment of the extent of the accident is an attempt to substantiate Claimant's subjective complaints.

Second, Claimant initially stated that she was not sure if she lost consciousness at the time of the accident. However, as time went on, Claimant started telling providers that she lost consciousness due to the accident. Again, this ALJ concludes Claimant's change in history regarding whether she lost consciousness is an attempt to exaggerate the extent of the accident and substantiate her subjective complaints.

Third, according to Dr. D'Angelo, true head injury symptoms are worse at first and then get better over time. In this case, Claimant's subjective symptoms worsened over time. Claimant's worsening of subjective symptoms is inconsistent with a concussion or mild traumatic brain injury. As stated by Dr. D'Angelo, "Despite this medical understanding of the clinical course of MTBI [mild traumatic brain injury], [Claimant] and her providers, continued to ascribe the patient's increasing number of subjective complaints to her mild brain injury; this included an expanding list of symptoms that progressed and worsened over time, which is not a medically anticipated outcome of mild brain injury."

Fourth, Claimant's physical presentation to Dr. D'Angleo was inconsistent with her physical complaints. For example, Claimant complained of severe neck pain which prohibited her from range of motion testing during the examination. However, Claimant was able to move her neck freely and without apparent discomfort during the discussion phase of the evaluation with Dr. D'Angelo. In addition, Claimant complained of 10/10 headache pain. Claimant however, did not exhibit any signs of suffering from a severe headache during her examination with Dr. D'Angelo.

Fifth, Claimant also complained of cervical radiculopathy to both upper extremities as well as thoracic, lumbar, right hip and jaw pain. However, Claimant's physical findings were devoid of hypertonicity, neurological deficits, or appropriate pain behaviors which could have supported such complaints. Moreover, Claimant's cervical MRI displayed findings of chronic degeneration anticipated in a 52-year-old patient rather than evidence of acute traumatic injury.

Sixth, this ALJ had the opportunity to observe Claimant testify at the hearing and observe her demeanor, which included Claimant's intonations, facial expressions, gestures, fluid movements, and the like. Such observations contradicted Claimant's testimony and physical complaints to the various medical providers regarding the extent of her symptoms which she contends flow from the accident.

Therefore, this ALJ concludes that Claimant's injury is limited to the laceration on the top of her head. This ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that she suffered any other injuries. Thus, this ALJ concludes that Claimant did not suffer a concussion or traumatic brain injury due to the January 5, 2017 accident and Claimant's numerous alleged neurological symptoms are not due to the accident. In addition, this ALJ also concludes that Claimant failed to establish by a preponderance of the evidence that she injured her jaw, neck, shoulders, back, right hip, leg, or any other body part due to the January 5, 2017 accident.

II. Whether Claimant is entitled to reasonable, necessary, and related medical benefits.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, and set forth above, Claimant's injury is limited to the laceration to her head. Therefore, this ALJ concludes that Claimant is entitled to reasonable, necessary, and related medical treatment to cure and relieve Claimant from the effects of the January 5, 2017 laceration to her head. This includes the January 5, 2017 medical treatment provided by the emergency department and the January 12, 2017 treatment provided by Dr. Hebard when he evaluated Claimant's laceration and removed the suture staples.

As found, and set forth above, Claimant's other conditions and complaints were not caused by the January 5, 2017 accident. Therefore, this ALJ concludes that Claimant is not entitled to medical treatment for her other alleged conditions and alleged symptoms including, but not limited to, concussion, post concussive syndrome, traumatic brain injury, headaches, memory loss, problems thinking, dizziness, vertigo, insomnia, depression, jaw pain, leg pain, neck pain with radiculopathy, back pain, shoulder pain, and right hip pain.

III. Claimant's Average Weekly Wage.

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

As a full time machine operator, Claimant frequently worked 40 hours per week while working for Pro Mold and was paid $10.00 per hour. Claimant frequently earned $400.00 per week. Thus, her earning capacity at the time of the injury was $400.00 per week. Therefore, this ALJ concludes that Claimant's average weekly wage is $400.00.

IV. Whether Dr. Neville is an authorized provider.

The insurer or employer has the right in the first instance to select the physician to attend the injured employee. Section 8-43-404(5)(a), C.R.S. Once the insurer or employer has exercised its right to select the treating physician, the claimant may not change physicians without permission from the insurer, employer, or an ALJ. *See Gianetto Oil Co. v. Indus. Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996); *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, if the employer fails timely to tender the services of a physician, the right of selection passes to the claimant and the claimant is entitled to have the physician she selects be an authorized treating provider. *Rogers v. Indus. Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Once the claimant selects an authorized treating physician, she is not free to retain additional physicians without procuring permission from the employer, insurer, or an ALJ. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Pickett v. Colo. State Hosp.*, 513 P.2d 228 (Colo. 1973). The Panel has previously held that where a claimant has signified "by words or conduct that she has chosen a physician to treat the industrial injury" she has made a physician selection. *Williams v. Halliburton Energy Servs.*, W.C. 4-995-888-01 (ICAO Oct. 28, 2016).

Claimant has failed to establish by a preponderance of the evidence that Dr. Neville is an authorized provider. This ALJ concludes that Dr. Hebard at Banner is Claimant's authorized treating provider and not Dr. Neville. Respondents did not timely provide Claimant a designated provider list consistent with W.C.R.P. 8. Thus, the right of selection passed to Claimant. Then, on January 12, 2017, Claimant exercised her right of selection by going and treating with Dr. Hebard at Banner beginning on January 12, 2017. Claimant continued treating with Dr. Hebard at Banner through May 11, 2017. Claimant never requested permission to treat with Dr. Neville. Dr. Hebard did not refer Claimant to Dr. Neville. Therefore, Claimant's actions evidenced her selection of Dr. Hebard at Banner and Dr. Neville is not an authorized provider.

V. Whether Claimant is entitled to temporary total disability ("TTD") benefits and/or temporary partial disability ("TPD") benefits.

To establish an entitlement to temporary disability benefits, Claimant must prove that the industrial injury caused a disability, that she left work as a result of the disability, that she was disabled for more than three regular work days and that she suffered an actual wage loss. Section 8-42-103(1)(b), C.R.S. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). In this context, the term "disability" refers to the claimant's inability to perform her regular employment. *McKinley v. Bronco Billy's*, 903 P.2d 1239 (Colo. App. 1995).

As found, Dr. D'Angelo credibly testified that Claimant's January 5, 2017 work accident and injury did not preclude Claimant from performing her regular job. The only reason Claimant was taken off of work by various medical providers was due to Claimant's subjective complaints which this ALJ has found to not be credible. This ALJ

concludes that Claimant has failed to establish by a preponderance of the evidence that her injury caused any disability which caused her to miss work. Therefore, Claimant is not entitled to temporary disability benefits.

VI. Whether Respondents are subject to penalties for allegedly violating Section 8-43-503(3), C.R.S.

The imposition of penalties under § 8-43-304(1), C.R.S., is a two step process. The ALJ must first determine whether the disputed conduct constituted a violation of the Act, of a duty lawfully enjoined, or of an order. If the ALJ finds such a violation, he may impose penalties if he also finds that the actions were objectively unreasonable. *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003).

Claimant contends Respondents dictated medical care in violation of Section 8-43-503(3) and are subject to penalties. Section 8-43-503(3), C.R.S. provides in pertinent part as follows:

> Employers, insurers, claimants, or their representatives shall not dictate to any physician the type or duration of treatment or degree of physical impairment.

The ICAO has held that § 8-43-503(3), C.R.S., precludes an insurer or its representative from "issuing commands to a treating physician concerning the type or duration of treatment to be provided to Claimant." *Williams v. City of Colorado Springs,* W.C. No. 4-565-576 (ICAO February 15, 2008).

There was no credible evidence presented by Claimant which demonstrated Respondents issued any commands to any of Claimant's treating physicians regarding the type or duration of Claimant's treatment or impairment. Instead, Claimant argued through her post hearing filing the following argument in support of her position that Respondents dictated medical care:

> Respondent did not provide Claimant with a Designated Provider List and refused to allow Claimant to change her physician to Dr. Thomas Neville, a provider of her choosing as permitted by § 8-43-404(5)(a)(I)(A). Respondent then refused to furnish a designated provider list so Claimant could make a 90 day one-time change of physician permitted by § 8-43-404(5)(a)(III). Although a denied claim, Respondent maintained control over Claimant's medical care and thus must abide by the Act and WCRP.

Claimant's argument cannot support a penalty claim for dictating medical care for a number of reasons. First, such argument does not demonstrate Respondents issued any commands to any of Claimant's treating physicians regarding the type or duration of Claimant's treatment or impairment. Second, this was a denied claim. Therefore,

Respondents did not have a legal obligation to allow Claimant to treat with a physician of her choosing for their failure to provide Claimant a Designated Provider List pursuant to §8-43-404(5)(a)(I)(A) while liability was being denied. Third, Claimant did not provide any credible evidence that she asked to treat with a physician of her choice, Dr. Neville. Fourth, as found, Claimant, by her actions, chose to treat with Dr. Hebard at Banner and treated with Dr. Hebard.

In addition, Claimant's argument pursuant to §8-43-404(5)(a)(III) cannot support a penalty claim for dictating medical care under the facts of this case for many of the same reasons. First, Respondents did not issue any commands to any of Claimant's treating physicians regarding the type or duration of Claimant's treatment or impairment. Second, this was a denied claim. Therefore, Respondents did not have to allow Claimant a change of physician pursuant to § 8-43-404(5)(a)(III). Third, §8-43-404(5)(a)(III) only allows a Claimant to change physicians within 90 days of the date of injury to another physician on the Designated Provider List. When a Designated Provider List is not provided, § 8-43-404(5)(a)(III) does not apply.

Claimant has failed to establish by a preponderance of the evidence that Respondents violated the Act, a duty lawfully enjoined, or an Order. Therefore, this ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that Respondents are subject to penalties.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury on January 5, 2017.

2. Claimant's injury is limited to the laceration on the top of her head.

3. Claimant is entitled to reasonable and necessary medical treatment to cure and relieve her from the effects of the laceration on the top of her head

4. Claimant is not entitled to medical treatment for her other alleged conditions and alleged symptoms including, but not limited to, concussion, post concussive syndrome, traumatic brain injury, headaches, dizziness, vertigo, problems thinking, memory loss, insomnia, depression, jaw pain, leg pain, neck pain with radiculopathy, back pain, bilateral shoulder pain, or hip pain.

5. Claimant's average weekly wage is $400.00.

6. Dr. Neville is not an authorized treating physician.

7. Claimant's claim for temporary disability benefits is denied and dismissed.

8. Claimant's claim for penalties is denied and dismissed.

9. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 10-19-17

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury on January 11, 2017.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to a general award of reasonable and necessary medical benefits to treat her January 11, 2017 injury.

3. Determination of authorized treating physician.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from January 11, 2017 through January 29, 2017.

STIPULATIONS

1. Claimant's average weekly wage is $445.00.

FINDINGS OF FACT

1. Claimant was employed by Employer as a stocker in the clothing department. Claimant was hired on October 7, 2016 as a seasonal worker with an expected end date of employment following the holidays and on January 14, 2017.

2. Claimant is also a journalist and obtained a full time job working for Major League Baseball Advanced Media, which was set to begin on January 30, 2017. She also worked part time editing.

3. On January 11, 2017 Claimant was called to assist a cashier with checking out a customer. Claimant squatted down to retrieve an item from a customer's shopping cart and when she stood up she alleges that she struck the top of her head on the handle bar of the shopping cart.

4. Claimant alleges that she felt pain on her head and felt dizzy. She continued to work the last 30 minutes remaining of her shift and then went home. She did not report an injury.

5. Claimant indicated that by that night she had a knot on her head and that her left neck, shoulder, and back ached. Claimant also indicated that she had a headache. The next day she indicated that she had difficulty making the bed, felt faint, felt like she was going to throw up, had a headache, and felt unbalanced.

6. On January 12, 2017 Claimant was scheduled to work an afternoon shift for Employer. Claimant arrived to work at approximately 3:00 p.m. and reported the injury from the day before. Claimant was referred to Nextcare Urgent Care Center (Nextcare) for treatment.

7. On January 12, 2017 Claimant was evaluated at Nextcare by Erick Gomer, M.D. Claimant reported aching pain in her head with headache, nausea, stiff neck, blurry vision, and mental fogginess. Claimant reported that she stood up really fast while unloading customer items from under cart and hit her head on the cart. On examination, Dr. Gomer found that claimant was tender to palpation along the left paracervical greatest at the base of the neck with palpable spasm, and tender to palpation along the proximal to mid left trapezius. Claimant had full range of motion in the cervical spine and mild pain with right lateral flexion. Dr. Gomer assessed mild concussion without loss of consciousness, and closed head injury. He recommended mental and physical rest until the evening of January 13, then limited use of computers, reading small text, or calculating. He indicated that per concussion protocols, Claimant needed mental rest for 24 hours and then a gradual increase in the use of computers, keypad, texting, and social interactions. He anticipated she would be able to return to work after follow up and 6-7 days maximum time needed away. *See* Exhibits 8, L.

8. On January 13, 2017 Claimant was evaluated at Nextcare by Patricia Keller, NP. Claimant reported her symptoms had not changed and that her head felt pulsing and that she couldn't see as well or read signs while driving. Claimant reported a headache at a pain level of 4-5/10. NP Keller discussed the case with Dr. Gomer and recommended Claimant follow up with a CT scan. NP Keller noted that maximum medical improvement date was unknown as Claimant was "pending CT." *See* Exhibit 8.

9. On January 16, 2017 Claimant was evaluated at the emergency department of Lutheran Medical Center by Klementyna Breyer, M.D. Claimant reported that she was at work unloading grocery carts when she hit the top of her head on a cart handle as she was standing up. Claimant reported the next day she developed lightheadedness and mild neck pain and that she later developed a headache, nausea, and left upper and lower extremity paresthesias. Claimant reported she was at the emergency department because she wanted a CT for further evaluation. On examination of Claimant's neck, Dr. Breyer found normal range of motion and mild diffuse tenderness. *See* Exhibit 9.

10. On January 16, 2017 Claimant underwent a CT of her head at Kaiser Permanente ordered by Dr. Breyer. It was unremarkable with no evidence of acute intracranial hemorrhage, mass, midline shift, or acute cortical infarction or hydrocephalus. There was no evidence of skull base fracture and the sinuses and orbits were unremarkable. *See* Exhibits 9, F.

11. On January 16, 2017 Claimant also underwent a CT of her cervical spine ordered by Dr. Breyer. The findings were: no acute fracture or malalignment;

transverse foramina and neural arches intact; odontoid intact; lateral masses well aligned; no evidence of facet subluxation or dislocation; multilevel facet arthrosis and uncovertebral joint spurring resulting in multilevel neural foraminal stenosis, greatest on the right at C6-C7; no prevertebral soft tissue swelling; and disc space narrowing at C5-6 and C6-7. Lower cervical degenerative disc disease and multilevel facet arthrosis and uncovertebral spurring was found that resulted in multilevel neural foraminal narrowing. *See* Exhibits 9, F.

12. On January 18, 2017 Claimant was evaluated at Nextcare by NP Keller. Claimant reported that she was starting to have back pain above a prior fusion, that her left neck was sore, that she was having vertigo, and that her headache was constant in the left frontal area. Claimant also reported that her vision was fuzzy on the edges more in the left eye and that her memory was foggy. Claimant reported having a normal CT scan and that she wanted an MRI. Claimant was referred to neurology for evaluation. *See* Exhibits 8, L.

13. On February 14, 2017 Claimant was evaluated by John Ogrodnick, M.D. Claimant reported that on January 11, she stood up while lifting a package from the floor and knocked her head on a grocery cart handle while assisting a cashier. Claimant reported that she hit the left parietal region, saw stars, and believed that she gave herself a concussion. Claimant reported that on the 14th she felt low back tingling and left foot tingling and that she had a persistent left side neck pain and a knot. Claimant reported that her private chiropractor Dr. Malpiede performed a gentle adjustment with traction and massage which helped quite a bit and that Dr. Malpiede believed she had a disc out of place. Claimant reported about 50% overall improvement but with left sided neck pain of 5/10 at rest that increased with rotation, extension, and flexion. Claimant reported that when editing/reading, she would become dizzy and off balance, that she felt more irritable, that she lacked concentration and that too much noise/people bothered her, and that she could not drive at night. Dr. Ogrodnick assessed concussion without loss of consciousness and cervical strain. He noted the plan would be return to work with restrictions of 25 pounds lifting and that if the MRI was without contraindications, further chiropractic care may be appropriate. *See* Exhibits 11, H.

14. Claimant did not report to Dr. Ogrodnick her prior history of cervical degenerative disc disease or her significant history of left sided neck pain. Claimant also failed to report her significant history of dizziness, vertigo, irritability, lack of concentration or that her current symptoms were similar to symptoms she had in the past.

15. On February 17, 2017 Claimant was evaluated by Shane Steadman, D.C. Dr. Steadman had treated Claimant for several years prior to this visit. Claimant reported that she sustained a concussion at work on January 11th. Claimant reported foggy vision, lack of concentration, light sensitivity, dizziness and balance issues, forgetfulness, occasional nausea, left neck tightness and knots, tingling in the 3-5th digits on the left, tingling in the left foot, and difficulty driving at night. Dr. Steadman

assessed: dizziness and giddiness; paresthesia of skin; and myalgia. He provided an exercise program for Claimant and indicated that she had dysfunction related to the midline cerebellum, instability of the spine, and nystagmus at rest and with movement. He noted that the nystagmus would cause dizziness and occasional nausea. He recommended brain-based exercises similar to ones that he had recommended to Claimant in July of 2016. *See* Exhibit 12.

16. On February 25, 2017 Claimant underwent an MRI of her cervical spine. The impression was: mild canal stenosis and bilateral foraminal stenosis at the C6-7 level due to posterior disc and osteophyte complex and uncovertebral joint hypertrophy; posterior disc and osteophyte complex causing mild central stenosis and bilateral neural foraminal narrowing at the C5-6 level; small central disc protrusion at the C4-5 level with left foraminal stenosis due to uncovertebral joint hypertrophy and facet arthropathy; and left facet arthropathy at C3-4 with no significant stenosis. *See* Exhibits 13, M.

17. On March 6, 2017 Claimant was evaluated by Dr. Ogrodnick. Claimant reported having difficulty walking one day, having constant muscle pain in her neck when at rest with cramping on the left side as well as tingling in her left 2nd and 3rd fingertips. Claimant also reported a headache over her left eye and balance issues. Dr. Ogrodnick noted that Claimant could continue to work with a 25 pound lifting restriction and he referred Claimant to a vestibular therapist. *See* Exhibits 11, H.

18. On March 20, 2017 Claimant was evaluated by Dr. Ogrodnick. Claimant reported horrible nausea and dizziness on March 15th while out running errands. Claimant reported that her memory was getting better but that she still had issues. Dr. Ogrodnick noted that Claimant was diffusely tender over the thighs, calves, and arms bilaterally and that she had spotty tenderness over the thoracic and lumbar regions. He noted tenderness over the left scalenes and trapezius. He encouraged Claimant to attend therapy more regularly. *See* Exhibits 11, H.

19. On April 18, 2017 Claimant was evaluated by Dr. Ogrodnick. It was noted that Claimant had only completed five therapy sessions since referral six weeks prior and that Claimant was traveling frequently. Dr. Ogrodnick noted that Claimant was functioning on a very high level and he returned her to full duty work. Claimant reported 60-70% overall improvement. Claimant reported 4-5/10 neck pain while at rest and that in the past month she had only one headache that resolved in half an hour without medication. Claimant reported speech issues with words not coming out right, having had two episodes of "manic anger," and that she strained her neck while looking up at a bird. Claimant also reported some feelings of being off balance. *See* Exhibits 11, H.

20. On May 16, 2017 Claimant was evaluated by neurologist Bennett Machanic, M.D. Claimant reported that she worked part time as an editor and web producer for major league baseball, working 16 hours per week. Claimant reported head trauma on January 11th. Claimant reported problems with dizziness and disequilibrium, memory, focus, concentration, emotional control, neck pain, low back pain, headaches, and tingling over the left side of her body. Claimant reported that she

previously underwent an L3-4 lumbosacral fusion due to spinal stenosis five years prior. Claimant reported that she had gluten insensitivity and that too much gluten results in vertigo so she has attempted to be gluten free for 8-10 years. Dr. Machanic found no nystagmus on exam of extraocular muscle movements. Dr. Machanic noted that based on Claimant's reports and the review of records, it appeared that Claimant did suffer closed head trauma on January 11th but that it was not clear that she actually sustained a cerebral concussion and that it was not fully clear that Claimant possesses significant posttraumatic encephalopathy. He suspected that Claimant did sustain a low grade vestibular concussion and he noted cervical strain patterns. He also believed there were signs to question left thoracic outlet syndrome. He recommended an EMG nerve conduction study, PT focusing on the neck, left brachial plexus, and vestibular dysfunction. He also noted that Claimant was scheduled for an IME with a psychiatrist, Dr. Striplin and that although Claimant did not feel she had a reason to see a psychiatrist, he suggested that Claimant could benefit from the IME and urged her to attend. Dr. Machanic opined that the prognosis was somewhat unclear and guarded. See Exhibits 15, G.

21. Claimant did not report to Dr. Machanic her significant history of cervical left sided neck pain. Although she reported that eating too much gluten resulted in vertigo, Claimant did not tell Dr. Machanic about issues prior to her work injury including prior neck pain, low back pain, headaches, tingling into her left side, memory issues, mood issues, or dizziness.

22. On June 2, 2017 Claimant was evaluated by Dr. Ogrodnick. Claimant reported improvement in the tingling in her left hands and feet, that her back pain was less frequent, and that her headaches were gone. Claimant reported that she still had 4/10 left sided neck pain. She reported concern about her inability to focus and her balance issues and that she was "depressed" because she could not edit and that she believed her hours were cut back because she was not getting the job done. She indicated that her ability to focus "comes and goes" and that she was veering to the right while walking and stumbling. Dr. Ogrodnick assessed cervical strain and head contusion. *See* Exhibits 11, H.

23. On July 14, 2017 Claimant was evaluated by Dr. Ogrodnick. Claimant reported being so excited as she was so much better. Claimant reported 75% improvement in the neck muscles/neck issue with on 2-3/10 left sided neck pain that was intermittent. Claimant indicated she felt that she had made huge strides in her balance and memory but that 4-7 times per week she felt as if she were on a boat. Dr. Ogrodnick noted her history back to 2011 of cervical spine pain and being diagnosed with cervical degeneration. Dr. Ogrodnick noted that one half hour was spent discussing her detailed history and her Kaiser records. It appears this is the first that Dr. Ogrodnick was aware of her prior history and he noted earlier in this visit that Claimant would not sign any medical releases. *See* Exhibits 11, H.

24. On July 17, 2017 Claimant underwent an EMG performed by Dr. Machanic. Dr. Machanic noted that the results and the clinical correlation from the test

was for the presence of bilateral carpal tunnel syndrome, more advanced on the right than on the left. Dr. Machanic also noted an emerging mechanical compression on the right at the cubital tunnel. Dr. Machanic found no sign of pathology due to a cervical radiculopathy, brachial plexopathy, or thoracic outlet syndrome. *See* Exhibits 15, G.

25. On August 7, 2017 Claimant was evaluated by Dr. Machanic. Dr. Machanic explained the results of her EMG study and Claimant indicated she did not want surgery or injections for her bilateral carpal tunnel and unilateral cubital tunnel but that she just wanted to see her chiropractor. Dr. Machanic recommended seeing a hand surgeon. Dr. Machanic noted that the cognitive behavioral consequences from January 11th would be addressed by Dr. Keatley. Dr. Machanic recommended continued chiropractic care and a visit to a hand surgical specialist if Claimant agreed. *See* Exhibits 15, G.

26. Claimant underwent two separate independent medical examinations related to this case. On June 20, 2017 Claimant underwent an independent medical examination performed by Michael Striplin, M.D. Claimant reported that she used to treat her thyroid problems with medications but was now managing it through chiropractic care with diet and natural supplements. Dr. Striplin reviewed medical records and performed a physical examination. Dr. Striplin assessed: head injury; neck pain; and paresthesias. Dr. Striplin noted the cervical spine imaging studies performed in this case showed multilevel degenerative disease which did not appear to be acute and was most compatible with her age. Dr. Striplin also noted prior medical records showing spine surgery and vertigo. Dr. Striplin noted that Claimant had no focal or lateralizing neurological signs suggesting brain trauma. He noted that findings at the left and right wrist were unrelated to the January 11, 2017 incident. He also noted that Claimant's history of thyroid disease may lead to peripheral nerve symptoms. *See* Exhibit D.

27. Dr. Striplin opined that mild head trauma from January 11, 2017 would not be anticipated to lead to long-term problems. Dr. Striplin also opined that Claimant may have suffered a mild cervical strain but that he would have expected that to resolve. He noted that he could not address causality without further records. *See* Exhibit 17.

28. On August 1, 2017 Claimant underwent an independent medical examination performed by John Hughes, M.D. Dr. Hughes reviewed medical records and performed a physical examination. Dr. Hughes opined that Claimant sustained a closed head injury as well as a cervical spine sprain/strain on January 11, 2017 and that she probably also had at least reactive mechanical low back pain as a result of the injury. He opined that the lumbar spine symptoms had resolved and the cervical spine symptoms were greatly improved. He opined that the medical evaluation and treatment all appeared to be reasonable, necessary, and related to her work injury. Dr. Hughes opined that Claimant was not yet at maximum medical improvement with respect to either her closed head injury or cervical spine injury, but that she was nearly at MMI for her cervical spine. For the closed head injury, Dr. Hughes recommended neuropsychological evaluation. *See* Exhibit 16.

29. On August 30, 2017 Dr. Striplin provided additional information in response to questions asked of him following his receipt of additional medical records. Dr. Striplin noted that he had reviewed patient questionnaires completed by Claimant in 2010 that documented moodiness, low energy, irritability, sleep changes, forgetfulness, poor concentration, distractibility, memory problems, spaciness or confusion, and dizziness when standing quickly. He also noted medical records showing complaints of nystagmus from 2015 after consuming gluten that persisted into 2016. *See* Exhibit D.

30. Dr. Striplin opined that based on Claimant's history and medical records including the normal imaging of her head and brain and the lack of evidence of head trauma, Claimant may have suffered a mild scalp contusion along with a possible mild cervical strain and lumbar strain. He noted that these possible diagnoses were based entirely on Claimant's subjective complaints and that there was no objective evidence of injury related to the January 11, 2017 incident. Dr. Striplin noted that similar complaints of neck pain, vertigo, and low back pain predated the January 11, 2017 incident. Dr. Striplin opined that it was not medically probable that the January 11, 2017 incident would produce a concussion or traumatic brain injury, that a possible lumbar strain would have resolved, and that he would not anticipate any prolonged cervical symptoms or any significant aggravation of Claimant's pre-existing cervical spine degenerative disease from the incident. *See* Exhibit D.

31. Dr. Striplin noted that Claimant had a past history of neck injury in a motor vehicle accident that resulted in chiropractic treatment several years prior to this work incident. Dr. Striplin also noted that Claimant had been previously diagnosed with benign positional vertigo with symptoms into 2016 and that in December of 2016 Claimant indicated by an internet "gofundme" posting that she was still having interference with her ability to work full time due to her vertigo. Dr. Striplin also pointed out that numerous cognitive and psychological symptoms had been noted by Dr. Steadman back in 2010. *See* Exhibit D.

32. Dr. Striplin opined that all of Claimant's current symptoms were chronic and unrelated to the January 11, 2017 incident and that Claimant reached maximum medical improvement on August 7, 2017 when Dr. Machanic reviewed the electro diagnostic studies and noted no evidence of cervical radiculopathy, brachial plexopathy, or thoracic outlet syndrome. He opined that Claimant required no further treatment related to the January 11, 2017 injury. Dr. Striplin opined that the continued subjective symptoms were chronic and pre-existing and that Claimant had no permanent impairment from a January 11, 2017 incident. *See* Exhibit D.

33. Dr. Striplin noted that Dr. Hughes did not reference records documenting cognitive complaints back in 2010 and did not reference records documented continued vertigo symptoms extending into 2016. *See* Exhibit D.

34. Medical records show that Claimant has a significant prior treatment and complaints including a history of left sided neck complaints, history of vertigo, and history of cognitive complaints and problems.

35. Records show that Claimant has been undergoing chiropractic care with Dr. Steadman going back at least until June 9, 2010, when she reported she most always felt dizziness when standing up quickly and had mental fogginess. She had some issues with: agitation, becoming easily upset, poor memory, blurred vision, difficulties with staying asleep, waking up tired, depression, lack of motivation mental sluggishness, nervousness/emotional issues, spells of mental fatigue, inability to concentrate, episodes of depression, muscle soreness, decrease in physical stamina, mental fogginess, mood swings and depression. *See* Exhibit I.

36. On July 13, 2010, Claimant reported to Dr. Steadman "brain fog" and mood instability. She reported most always having difficulties with remembering names and phone numbers. She reported some problems with her: memory noticeably declining; focus noticeably declining; temperament, in general, getting worse; losing her attention span endurance; feeling sad; feeling fatigued when reading, walking in to rooms and forgetting why; loosing pleasure in hobbies, and interests, feeling overwhelmed with ideas to manage; feelings of inner rage/anger; feeling sad for no reason; lack of enjoyment of life; losing enthusiasm for her favorite activities, friendships and relationships; feeling more susceptible to pain; feeling hopelessness; inability to handle stress; anger and aggression while under stress; not feeling rested; preferring to isolate herself from others; distraction from her tasks; inability to finish tasks; feelings of being overwhelmed; disorganized attention; worrying; decreased verbal memory; memory lapses; diminished comprehension; and difficulty calculating numbers. *See* Exhibit I.

37. On July 13, 2010, Claimant also reported frequent problems with: low energy; forgetfulness; poor concentration; poor planning skills; lack of clear goals or forward thinking; and difficulty with expressing feelings, and following through or finishing things; memory problems; periods of forgetfulness; and making repetitive mistakes; and, occasional difficulty with: moodiness, irritability, sleep changes, poor concentration, low motivation, distractibility, lethargy, lack of motivation, negative sensitivity to smells and odors, feeling dizzy, faint or unsteady on her feet, trouble sustaining attention in routine situations, restlessness, impulsivity, senseless worrying, spaciness confusion, feelings of being in a fog, being argumentative or oppositional, having a short fuse or periods of extreme irritability. Also, she reported a history of a head injury or trauma that predated her alleged work injury. *See* Exhibit I.

38. Claimant was seen by Dr. Ruby on December 3, 2010, January 5, 2011, July 27, 2011, and March 6, 2012, with cervical spine complaints. She did report that both of her hands tingled, occasionally at the July 27, 2011, visit. *See* Exhibit I.

39. Clamant was seen at Berkeley Community Acupuncture on January 19, 2013. She complained of allergies, numbness, arthritis, low back pain, neck pain, neck stiffness, near sightedness, pain in her hands, hips, legs, knees, feet and

swollen joints. She reported a previous history of dizziness, depression eye pain, and thyroid problems. Her pain intensity diagram indicated neck pain at the level of 2 and shoulder pain at the level of a 3. *See* Exhibit I.

40. Claimant had a motor vehicle accident when she braced her left arm on the dash 3 weeks before being seen by Dr. Becky on October 31, 2013. She was assessed with a cervical spine strain with some C7-8 radicular symptoms on the left, admitting tingling in the 3rd, 4th, and 5th fingers on that side and a cervical spine strain. She was tender to palpation at the C6-7 spinous process. *See* Exhibit F.

41. Claimant was seen at Five Horses Acupuncture and Oriental Medicine between August of 2013, and October of 2015. On November 2, 2012, she reported that a medical doctor had confirmed a problem with whiplash after surgery. She had neck problems at C7-8 on the left side and that she was getting numbness and tingling in her left hand and fingers. On October 13, 2013, she complained that the C7-8 dermatome was giving her numbness to her left fingers. On February 2, 2014, she complained of tightness and stiffness in her neck, her left side was worse. She continued to report right hand tingling and numbness, scapula, neck, and shoulder complaints. She reported neck pain on May 16, 2015, from being rear-ended on May 5, 2015, noting that her chiropractor took x-rays. She was worse after her last chiropractic treatment. She continued to complain of neck pain, upper back, lower back pain and stiffness. Throughout her treatments there in May through September, 2015. She also reported fatigue at her July 30, 2015, visit. At her October 9, 2015, visit, Claimant reported vertigo and nausea. She had been given anti-nausea, ondansetron, valium, and a Meclizine-Antivert. *See* Exhibit I.

42. Claimant had a fall on her outstretched hand on or about September 12, 2015. She was referred to orthopedics for a fracture of her right distal radius. *See* Exhibit F.

43. Claimant was hospitalized for severe vertigo, dizziness, nystagmus, nausea and vomiting from September 27, to 29, 2015, in Virginia. She admitted to drinking one or two bottles of wine in their entirety the previous day. She was experiencing horizontal nystagmus. She was kept overnight to participate in physical therapy and for maneuvers (the Eply maneuver for benign positional vertigo) to reduce her symptoms. Claimant was diagnosed with vertigo. She was to follow-up with her primary care physician and with an ear nose and throat physician if her symptoms did not improve. *See* Exhibit K.

44. Claimant contacted Dr. Steadman on October 5, 2015, from the event in September, in Virginia, reporting a possible gluten reaction from eating wheat. She was given anti-nausea, anti-vertigo and other medications. She felt the Eply's maneuver helped a little. She was doing some exercises for this. According to what she told Dr. Machanic she had been seeing him for approximately 8 years. According to her report he is an endocrinologist and also a chiropractor who runs a brain clinic for concussion. Dr. Steadman records reflect only DC after his name. *See* Exhibit I.

45. Claimant saw Dr. Becky her PCP at Kaiser on October 20, 2015, for complaints of ongoing vertigo. She did Semont exercises and felt somewhat better. She was referred for physical therapy and was sent to be screened for hearing loss. She was diagnosed with vertigo. She was also screened for hearing loss. Claimant next returned to see Dr. Becky on November 3, 2015, for complaint of left ear pain and swelling of her face that had been ongoing for 6 weeks. She had a history of recurrent sinusitis. She reported her incident in Virginia as the onset of her symptoms. She noticed that both eyelids drooped and swelled. She attributed all of her symptoms to exposure to gluten at a barbeque. *See* Exhibit F.

46. Claimant saw Dr. Steadman on November 3, 2015, she was wondering if her vertigo was a reaction to gluten, or if she was sick and it had affected her inner ear. Visualization of each ear revealed cloudiness behind the eardrum. Visualization of the ossicles was decreased. Dr. Steadman assessed neurological findings of decreased left cerebellum function and possible inner ear infection. He gave her brain-based therapy exercises to include ankle sways, left leg balance, and chair turns. He also recommended she follow up with an ear nose and throat doctor. *See* Exhibit I.

47. Claimant saw Dr. Steadman on November 12, 2105, for her vertigo complaint. Her blood pressure was also low, so the plan was to try adrenal support herbs and sea salt to boost her adrenal function and blood pressure, to see if it helped with her dizziness. R. Ex. pp 151- 153. He saw her again on November 25, and December 9, 2015, for her vertigo complaints. *See* Exhibit I.

48. On November 18, 2015, Claimant e-mailed Dr. Becky her PCP at Kaiser advising him that her dentist found her TMJ muscles were sore from clenching her teeth because of her vertigo, as she concentrated on keeping her balance. She was assessed with left ear pain, swelling on the left side of her face and vertigo for the past 6 weeks. *See* Exhibit F.

49. On December 28, 2015, Claimant again emailed Dr. Becky requesting methocarbamol or other muscle relaxant for when her upper back and neck cramped up as it had the previous day from working out and shoveling. She noted her vertigo was slowly getting better. *See* Exhibit F.

50. In October/December, 2015, Claimant was referred to physical therapy for vertigo, neuromuscular reeducation, movement, balance, coordination, kinesthetic sense, posture and proprioception. *See* Exhibit F.

51. On July 26, 2016 Claimant saw Dr. Steadman for continued complaints of dizziness. Visualization of each ear revealed cloudiness behind the eardrum. Visualization of the ossicles was decreased. He again prescribed brain-based exercises. In the objective portion of the visit note, directly above the clinical instructions and plan, Dr. Steadman noted that chair turns revealed left post rotary nystagmus. *See* Exhibit I.

52. Claimant spoke with Dr. Steadman on or about July 28, 2016, with complaints of low energy. She was to continue with her supplements. *See* Exhibit I.

53. In addition to treating extensively with Dr. Steadman, Claimant also treated extensively with Dr. Malpiede from 2011 through 2016. According to Dr. Malpiede records Claimant began treating with him for cervical, thoracic, and lumbar chiropractic manipulation. On October 8, 2011, Dr. Malpiede recorded complaint of cervical spine pain with secondary lumbosacral pain. A few days later upon return visit degeneration of cervical and lumbar intervertebral discs were added to her diagnosis. Claimant continued to receive cervical, thoracic, and lumbar chiropractic treatment from him on November 14, 23, December, 12, 21, 28, and 30, **2011**; January 18, February 13, 24, 29, March 16, April 11, 27, May 18, June 1, 15, 27, July 25, August, 8, September 21, October 5, 12, 24, November 7, 28, December 12, 19, **2012**; January 9, 16, 30, February 13, March 15, 25, April 24, May 13, June 19, 28, July 8, 19, August 5, 23, 30, September, 13, **2013**. Then she had an L2-3 fusion on September 27, 2013. *See* Exhibit N.

54. Claimant returned for treatment with Dr. Malpiede for her cervical, thoracic, and lumbar spine on June 18, 30, August 6, 8, and October 20, **2014**. *See* Exhibit N.

55. Claimant resumed treatment with Dr. Malpiede on March 3, and May 1, **2015**. Claimant then had a motor vehicle accident on May 5, 2015; wherein she injured her neck, back, hip, shoulder, and sustained tingling in her fingers, and cramps in her feet. Claimant was unemployed at the time of her motor vehicle accident. She reported headaches, neck pain, neck stiffness, irritability, lightheadedness, sleeping problems and mid and low back pain. *See* Exhibit N.

56. Claimant continued to treat with Dr. Malpiede and receive cervical, thoracic and lumbar chiropractic treatment specifically, as a result of her motor vehicle accident until September 30, 2016. Specifically, she treated with him on May 8, 11, 13, 15,18, 20, 22, 27, 29, June 1, 3, 5, 8, 10, 17, 19, 22, 24, 29, July 1, 6, 13, August, 3, 12, 19, 26, 31, September 9, December 9, and 21, **2015** ; and January, 6, 18, February 3, 19, 29, March 7, 21, 28, April 4, May 4, 16, August 1, and September 30, **2016**. *See* Exhibit N.

57. In December, 2016, around Christmas time, Claimant posted a "Go Fund Me" page on the internet. She indicated that she was hospitalized with severe vertigo because of a wheat allergy and she could not work for several months as a result. Consuming gluten at the barbeque caused her to be hospitalized in September of 2015, in Virginia. Claimant posted that due to an autoimmune thyroid condition she has, when she consumes gluten, it causes her body to attack itself. It was her belief that after consuming the gluten, her body attacked her brain and inner ear. She posted that after being discharged from the hospital, she had to use a walker to get around and could not drive for several months. As a result, she could not look for work. She indicated in her post that she had just begun driving on the highway in August, 2016. At the time of her post, she was in between jobs, and had to take money out of her 401K just to pay her

bills. Claimant requested money noting anything, even $5.00, would help. *See* Exhibit C.

58. Claimant testified at hearing. She indicated that she sustained a concussion and cervical strain from the January 11, 2017 incident when she struck her head on a shopping cart and that the injury caused symptoms of vertigo, headaches, vision issues, forgetfulness, sleep disturbance, fatigue, dizziness, lack of balance, concentration problems, anger issues, and brain fogginess. However, the medical records all document the same symptoms on multiple occasions going back to 2010.

59. The conclusions and opinions from medical providers in this case rely significantly on Claimant's subjective reports. Her reports are not found to credible and persuasive. Claimant failed to report to many providers that she had a lengthy treatment history with prior cognitive and cervical complaints and symptoms similar to the symptoms she is alleging are related to this incident. Dr. Machanic does not reference nor does he seem to be aware of her significant prior history. Similarly Dr. Hughes does not reference her significant prior history. The persuasive evidence combined with the credible opinion of Dr. Striplin leads to the conclusion that Claimant did not sustain any new symptoms or injury even if she hit her head on the shopping cart as she claims. Rather, she continued to have the same problems she reported in treatment in 2016 and on an internet posting in late 2016. Claimant's testimony that she was fine leading up to this incident is not credible given her extensive and significant treatment history. Any opinions to the contrary are not found credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the

testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the alleged injury she was performing service arising out of and in the course of the employment, and that the alleged injury or occupational disease was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO February 15, 2007).

Claimant has failed to establish by a preponderance of the evidence that she sustained an injury on January 11, 2017. Even if she struck her head on a grocery cart, Claimant has failed to establish that that accident or incident caused injury. Rather, the persuasive and credible evidence demonstrates that at the time of this alleged injury Claimant had several pre-existing conditions and pain complaints related to her neck, head, cognitive function, vertigo, dizziness, etc and head for which she had actively and extensively sought treatment over many years prior to her alleged work injury.

There is no objective evidence to support that an acute injury was sustained on January 11, 2017 and many opinions rely on Claimant's subjective reports. As found above, Dr. Machanic, even without knowing of Claimant's significant history of cognitive issues, opined that it was not clear that Claimant actually sustained a cerebral concussion and opined that it was not fully clear that she possessed significant posttraumatic encephalopathy. Without knowing of her significant history, he suspected a low grade vestibular concussion and cervical strain patterns. Claimant, as found above, has a significant prior history of both cervical and cognitive problems dating back

several years. Claimant failed to advise Dr. Machanic and Dr. Ogrodnick, her treating providers, of her significant and extensive prior history. Any subjective reports and claim that she was fine prior to the injury and that the symptoms were new and caused by hitting her head on a grocery cart cannot be credited. The opinions of Dr. Machanic and Dr. Hughes rely heavily on Claimant's subjective reports and thus also cannot be credited.

Although Claimant may have bumped her head, none of the diagnostic studies reflected an acute injury, there was no loss of consciousness, there was no and documentation of a bump or abrasion following the event. In addition, the complaints reported after the incident were not new or different from the past problems noted in the medical records of pain in the neck, problems with memory, vision, balance, dizziness, vertigo, concentration, sleep, and fatigue. Claimant has had ongoing and extensive complaints for which she has been receiving treatment for the past six years, predating her alleged injury. Her continued symptoms went into 2016 and just prior to her alleged work related injury. Claimant has failed to meet her burden and has failed to establish by a preponderance of the credible evidence that she sustained an injury to her neck or head on January 11, 2017, while in the course and scope of her employment.

The Claimant's claim for workers' compensation is, therefore, denied and dismissed and the remaining issues need not be addressed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that she sustained a compensable work related injury on January 11, 2017.

2. Claimant is therefore not entitled to an award of any medical or temporary indemnity benefits. Her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 19, 2017

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant has overcome the Division-sponsored independent medical examiner's (DIME) opinion regarding maximum medical improvement (MMI) and permanent impairment by clear and convincing evidence.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 58 year old female employed with Aurora Public Schools as a substitute teacher. On January 14, 2016, Claimant was walking to her car in the school parking lot when she slipped on ice and fell. Claimant began treating at HealthOne Occupational Medical Centers with Dr. Matthew Lugliani.

2. On January 15, 2016, a First Report of Injury was completed. The Report indicates Claimant injured her right knee, left leg, both shoulders, and left lower back side. *(Claimant's Exhibit, A)*

3. On January 22, 2016, Claimant was evaluated by Dr. Lugliani for an initial evaluation. It was noted that she stated she was walking to her car in the parking lot and slipped on ice. The report also indicates Claimant was "extremely vague about details, stating only that she fill directly onto her right knee." The report goes on to state that "Her knee began to hurt. Her other body parts only began to hurt hours later." (Claimant's Exhibit, F). Claimant also completed a pain diagram. In her pain diagram she noted that she had bilateral shoulder pain. *(Claimant's Exhibit, A)*

4. Claimant did not have the immediate and acute onset of pain in either shoulder at the time of the accident. *(Claimant's Exhibit, F.)*

5. On February 8, 2016, Claimant was evaluated by Dr. Lugliani. Claimant did have some complaints of ongoing bilateral shoulder pain. *(Respondent's Exhibit, P.32)*

6. By March 3, 2016, there was documentation by the physical therapist that there was full active range of motion at the right shoulder, both full active range of motion post manual and exercise at the shoulder. By her 12th physical therapy visit, Claimant was having some bilateral shoulder soreness, but she was able to complete full active range of motion without pain. *(Respondent's Exhibit, p.32)*

7. Claimant was seen by Dr. Lugliani back in follow up. By that time, Claimant's bilateral shoulder pain was stable. Claimant's shoulder range of motion was full and normal against resistance. *(Respondent's Exhibits, p.32)*

8. On April 15, 2016, Claimant came under the care of Dr. Primack for complaints of right knee and lumbar pain. On April 15, 2016, Dr. Primack also evaluated Claimant's shoulders. According to Dr. Primack's report, the Hawkin's maneuver was negative. The supraclavicular compression tests were negative. There was also good strength within the rotator cuff musculature bilaterally. According to Dr. Primack, there was no area of upper extremity/shoulder compromise. (*Respondent's Exhibits, p.32-33.)*

9. On April 22, 2016, Claimant presented to emergency room at the Medical Center of Aurora. Claimant was having chest pain and back pain. There was documentation that there was no extremity pain or swelling. It was also noted that she had full range of motion during her musculoskeletal examination and no tenderness at the extremities. It was felt that she had basilar atelectasis involving her lungs and was advised to follow up with her primary care physician. *(Respondent's Exhibits, p.33)*

10. On April 28, 2016, Dr. Lugliani noted Claimant's shoulder range of motion was full and normal against resistance. *(Respondent's Exhibits, p.11)*

11. On May 4, 2016, Claimant returned to Dr. Primack. There were no complaints of shoulder pain. At that time, Claimant complained of pain in her thoracic region of her spine, which was new. *(Respondent's Exhibit, p.33)*

12. On May 12, 2016, Claimant presented to Kelvin Washington, chiropractor. Claimant complained of pain in her upper back, lower back, neck, and tension headaches. Claimant did not complain of shoulder issues. *(Respondent's Exhibits, p.44)*

13. On May 17, 2016, Claimant returned to Dr. Washington, who wrote, "Velma is much improved in her neck, upper back and with headaches, however her lower back is still somewhat restricted in motion with muscle pain." The report does not note concerns regarding bilateral shoulder issues. *(Respondent's Exhibits, p.43)*

14. On May 19, 2016, Claimant returned to Dr. Washington. He discussed with Claimant that she was approaching MMI. Claimant complained of upper back, lower back, and neck pain, along with headaches. Her pain complaints did not exceed 3/10. Claimant did not complain of shoulder symptoms. *(Respondent's Exhibits, p.42)*

15. On May 24, 2016, Claimant returned to Dr. Washington. Claimant reported being about the same with the following pain complaints: upper back 1/10, lower back 3/10, neck 1/10, and tension headaches 1/10. Claimant did not complain of bilateral shoulder issues. *(Respondent's Exhibits, p.41)*

16. On May 25, 2016, Claimant presented to Dr. Lugliani. Dr. Lugliani assessed Claimant with right knee pain, with osteoarthritic changes seen on MRI, and bilateral shoulder/back pain. Dr. Lugliani wrote that at the time of her accident, Claimant complained of bilateral shoulder pain, but denied acute injury to those body parts. She complained of diffuse body pain involving her bilateral shoulders, mid and low back, as well as right knee pain. This is inconsistent with what she described to Dr. Washington. Dr. Lugliani concluded that the majority of Claimant's symptoms were osteoarthritic in nature and longstanding, which may have been exacerbated by the fall. Dr. Lugliani opined that Claimant reached MMI and assigned an 18% right lower extremity rating. Further, Dr. Lugliani opined that Claimant could return to work at full duty with no restrictions. He noted that he would be willing to let Claimant continue to follow up with Dr. Primack, but she refused. *(Respondent's Exhibit F)*

17. On June 23, 2016, Claimant underwent an MRI of her left shoulder. The MRI did demonstrate a full-thickness partial width tear of the anterior fibers at the distal supraspinatus. There was also a SLAP tear extending into the biceps tendon anchor. On the same date, Claimant also underwent an MRI of her right shoulder. This demonstrated tendinosis. There was also a 50-75% thickness tear of the articular surface fibers of the distal anterior supraspinatus tendon. *(Claimant's Exhibit E.)*

18. The MRI reports were sent to Dr. Lugliani, who upon review retracted his opinion regarding MMI. *(Respondent's Exhibit D)*

19. On November 3, 2016, Dr. Scott Primack prepared a record review. Dr. Primack is an authorized treating physician. Dr. Primack reviewed Claimant's medical records, including the shoulder MRIs, and concluded, "After reviewing all of the medical records and specifically the clinical examinations done by Dr. Lugliani as well as myself, I do not believe that she requires intervention to the left shoulder. Although she may have fallen, the functional impairment at least by May 2016 was not at the shoulders. It was at the level of the right knee, and she had a history of chronic pain. She had also maximized her function. Therefore, if she necessitates care at the shoulders, it would not be considered work related. Clearly, shoulder surgery would not be work related in this case, given the medical records and her inconsistency of progressive pain. I can state my opinions as to within a reasonable degree of medical probability." *(Respondent's Exhibit E)*

20. On December 13, 2016, Respondent sent Dr. Primack's report to Dr. Lugliani and asked him to opine regarding relatedness of Claimant's shoulder symptoms. Dr. Lugliani agreed with Dr. Primack that Claimant reached MMI for all symptoms and conditions related to the industrial injury. Additionally, he agreed that Claimant did not require an impairment rating in relation to the left shoulder. Finally, Dr. Lugliani agreed that any future treatment in relation to the left shoulder is not work related. *(Respondent's Exhibit D)*

21. Claimant underwent a DIME with Dr. Allison Fall. The DIME agreed with Dr. Lugliani's determination of MMI. Regarding permanent impairment, the DIME physician assigned a 20% scheduled rating for the right lower extremity. Claimant asked the DIME physician to address Claimant's bilateral shoulders. (Respondent's Exhibits, p.21) The DIME physician wrote, "She has complained of shoulder pain; however, her examinations were inconsistent with, at times, showing full range of motion. Her shoulders have been evaluated numerous times. Now, her shoulder range of motion is quite different than what was depicted in the medical records. Therefore, at this time, I am unable to state that her current right shoulder complaints are directly related to the work injury. The MRI findings are most likely chronic, given that she did not have acute pain associated with acute tearing at the moment her hands hit the ground." The DIME physician went onto note that Claimant did not require permanent work restrictions or further maintenance care. *(Respondent's Exhibit C)*

22. At hearing, Claimant testified she injured her bilateral shoulders and the need for treatment relates to this injury. In support, Claimant presented a written report from Dr. Benjamin Sears, who recently performed surgery on Claimant's left shoulder. Dr. Sears wrote that the MRIs showed a full thickness rotator cuff tear on the left as well as "essentially" a full tear or a very high grade partial tear on the right. Regarding causation, Dr. Sears writes, "This patient did tell me she had absolutely no shoulder issues prior to her fall on January 14, 2016. These injuries identified by the MRI could certainly be as a direct result of the fall. This is especially true, as the patient had no injuries prior to this fall, and based on this patient's age and her activities, these did appear to be more acute type tear from a direct fall." *(Claimant's Exhibit A)*

23. Dr. Sears does not indicate he reviewed Dr. Washington's notes, or the reports from Drs. Lugliani, Dr. Primack, or the DIME. At best, Dr. Sears opines that Claimant's bilateral shoulder issues are consistent with an injury in January 2016. He does not opine that a contrary opinion would be erroneous.

24. The evidence presented does not establish that the DIME physician's opinions regarding MMI and impairment are incorrect. The DIME physician's opinion is supported by the opinions of Drs. Primack and Lugliani. Further, the reports of Dr. Washington issued the same month as the original determination of MMI do not reference significant shoulder issues. Accordingly, the evidence credited does not establish the DIME physician erred.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The ALJ's factual findings concern only evidence and inferences found dispositive of the issues; the ALJ has not addressed all evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility of evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 134 P. 254 (Colo. 1913). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

If a DIME physician renders an opinion regarding MMI or medical impairment, those opinions must be overcome by clear and convincing evidence. Section 8-42-107(8)(b)(iii) – 107(8)(c); *Leprino Foods, Co. v. ICAO*, 134 P.3d 475, 482 (Colo. App. 2005), ("DIME physician's opinions concerning MMI and permanent medical impairment are given presumptive affects … [and] are binding and must be overcome by clear and convincing evidence.")

"Clear and convincing evidence means evidence which is stronger than a mere 'preponderance'; it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving Storage v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). The party challenging a DIME physician's conclusion must demonstrate that it is "highly probable" that the DIME impairment rating or MMI finding are incorrect. *Qual-Med, Inc. v. ICAO*, 961 P.2d 590, 592 (Colo. App. 1998). A party meets this burden if it demonstrates the evidence contradicting the DIME is "unmistakable and free from serious or substantial doubt." *Lemming v. ICAO*, 62 P.3d 1015, 1019 (Colo. App. 2002).

As found, Claimant has failed to demonstrate by clear and convincing evidence that it is highly probable the DIME physician erred. First, Dr. Primack's opinion is consistent with the DIME's. Second, Dr. Lugliani's opinion is consistent with the DIME. Third, the chiropractic notes failed to demonstrate any significant shoulder pathology. Fourth, Dr. Sears' opinion that Claimant's need for shoulder treatment could have

resulted from the fall in January 2016 does not rise to the level of it being "highly probable" that the DIME physician erred. There is no indication Dr. Sears reviewed the prior medical records, or the DIME physician's report. Additionally, Dr. Sears did not opine that the DIME physician erred. At best, as found, it shows only a disagreement among physicians, which does not rise to the level of clear and convincing evidence.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome the DIME physician's opinion regarding MMI and permanent impairment.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 10/19/17

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven entitlement to temporary total disability ("TTD") benefits from March 4, 2017 and ongoing.

II. Whether Respondents are entitled to an offset against TTD benefits for State Disability Insurance benefits paid by the State of California.

III. What is Claimant's average weekly wage ("AWW")?

FINDINGS OF FACT

1. Claimant is 58 years of age. Claimant worked in the oil industry and performed maintenance work for different refineries in various cities. Claimant testified that the work was "turn-around work" such that he moved to a different refinery upon completion of work at another refinery. The jobs typically lasted for approximately six weeks. Claimant did this on a regular basis.

2. Claimant began working for Employer in March 2016 as a mechanical engineer. Claimant testified that he expected the particular job last for approximately six or seven weeks and upon completion Employer would place him on another job.

3. Claimant testified that he earned $31.50 per hour and worked 10-12 hours per day, with time-and-a-half for overtime. Claimant stated that he worked 13 days on and one day off. Employer's Report of Injury from Claimant's personnel file indicates Claimant earned $31.50 per hour and worked an average of 70 hours weekly.

4. On March 26, 2016, Claimant suffered an admitted industrial injury when a wall of salt deposits collapsed on him while working inside of a large tank. Claimant was assisted out of the tank by co-workers.

5. Claimant was taken by ambulance to North Suburban Medical Center for treatment. Claimant presented with right shoulder pain. Claimant denied any head injury or loss of consciousness. The medical record from the hospital visit note that Claimant had no evidence of any other injuries and that Claimant denied neck pain, chest pain, thoracic pain, lumbar pain, and lightheadedness. On physical examination, it was noted that Claimant was non-tender with full range of motion in the neck, no respiratory distress, and tender in the arm/shoulder with limited range of motion. Claimant had full range of motion in back. Claimant was diagnosed with a shoulder contusion and discharged with no restrictions.

6. Claimant returned to light duty the following day. Claimant testified that while on light duty he just sat around in the office for a couple days.

7. On March 29, 2016, Claimant treated at Concentra with Amanda Cava, M.D. Dr. Cava diagnosed Claimant with a right shoulder strain and referred Claimant for physical therapy. Dr. Cava also advised Claimant to ice his shoulder 20 minutes a few times per day as needed and take pain medication as needed.

8. On March 31, 2016, Claimant presented to Michael V. Ladwig at Aviation & Occupational Medicine. On physical examination, Dr. Ladwig noted tenderness over the right shoulder blade, 90 degrees flexion and 45 degrees abduction. Dr. Ladwig noted normal inspection of the rib cage with tenderness in the posterior right rib and "cage below shoulder blade." Dr. Ladwig assessed a contusion of the right front wall of the thorax, abdomen strain, and right arm shoulder strain. He noted there were no acute findings on the x-ray of right ribs/chest and right shoulder injury. Dr. Ladwig ordered Claimant to take ibuprofen and Tylenol and dispensed an arm sling and rib binder. Dr. Ladwig released Claimant to work fully duty. Claimant was scheduled to return on April 5, 2016 for a follow-up visit.

9. Claimant testified that he was laid off by Employer on April 1, 2016. Claimant subsequently returned to his home in California and continued seeking medical treatment. Claimant testified that he has not worked since his separation from Employer.

10. On April 11, 2016, Claimant presented at CareOnSite in Long Beach, California. Claimant was diagnosed with a right shoulder contusion and right rib contusion and released to return to regular work on as of April 14, 2016.

11. On April 12, 2016, Claimant underwent a CT of his right shoulder and chest. The CT revealed no fractures, dislocation or acute pulmonary pathology.

12. On April 15, 2016, Dr. Ladwig revised his report and placed Claimant on modified duty. Dr. Ladwig stated that Claimant should wear a sling as needed and perform activities with the right arm as tolerated.

13. Respondents filed a General Admission of Liability on April 22, 2016, admitting for medical benefits and TTD benefits from April 2, 2016 through April 13, 2016 at a rate of $320.00 per week and an AWW of $480.00.

14. Claimant sought legal counsel in California and applied for State Disability Insurance benefits (also known as Unemployment Compensation Disability ("UCD")), which he received from May 25, 2016 to February 2017. Claimant also filed a workers' compensation claim in California. Claimant's California claim for workers' compensation was denied because California lacked jurisdiction over the Colorado injury.

15. A Notice of Lien Claim from the State of California dated June 30, 2016 states, "An individual is not eligible to receive UCD benefits for the same period he/she receives or is entitled to receive Workers' Compensation benefits…" No evidence was presented at hearing that Claimant received or is requesting TTD benefits for a time period during which he received UCD benefits from California.

16. On June 6, 2016, Claimant presented to Michele Van Dyke, D.C. with right hip, right knee, right rib, right arm/shoulder, mild neck and right lower back pain. Dr. Van Dyke diagnosed Claimant with a cervical spine sprain/strain, right shoulder sprain/strain/contusion, thoracolumbar sprain/strain, right rib contusion, right knee sprain/strain, and right hip/leg contusion resulting from the work injury. Dr. Van Dyke opined that Claimant is not at maximum medical improvement ("MMI") and required further diagnostic work-up and treatment. She recommended Claimant undergo an MRI, x-rays, chiropractic treatment and pain management.

17. On August 31, 2016 Claimant, Dr. Van Dyke noted that x-ray and radiographic evidence obtained revealed discogenic spondylosis, degenerative changes, and mild compression fracture deformities in the cervical spine. Dr. Van Dyke requested authorization for a cervical and lumbar spine MRI and an EMG/nerve conduction study. She further noted that Claimant was temporary totally disabled through October 20, 2016.

18. Dr. Ladwig reevaluated Claimant on March 14, 2017. Dr. Ladwig determined Claimant was not at MMI and placed Claimant on sedentary duty only. No evidence was presented at hearing that Claimant was subsequently determined to be at MMI. No evidence was presented at hearing establishing Employer offered Claimant work within his restrictions.

19. Claimant has not worked since his separation from Employer as a result of the industrial injury.

20. The ALJ credits Claimant's testimony and the opinions of Drs. Ladwig and Van Dyke.

21. Claimant has proven by a preponderance of the evidence that he is entitled to TTD benefits from March 4, 2017 and ongoing.

22. Claimant's AWW is $2,441.25, which represents 40 hours per week at $31.50 and 25 hours of overtime per week at $47.25 per hour.

23. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence.

Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Temporary Total Disability Benefits

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage

loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

Respondents contend that Claimant is not entitled to TTD as Claimant was cleared for full duty by two medical providers. Respondents acknowledge they do not deny compensability, but do deny "the range of maladies that Claimant has claimed since being deemed able to return to work full duty." Respondents also allege Claimant was forum shopping to get benefits from both Colorado and California.

Claimant separated from Employer and has not worked since April 1, 2016. Claimant's testimony and the medical records establish that Claimant continued to suffer from symptoms deemed by his physicians to be related to the industrial injury. Claimant's condition has resulted in his inability to resume his prior work, resulting in actual wage loss. While, at one point, Claimant was released to return to full duty, Dr. Ladwig subsequently revised his report to place Claimant on modified restrictions and, as of March 14, 2017, sedentary duty. Both Drs. Ladwig and Van Dyke opined that Claimant is not at MMI.

Claimant has not returned to regular or modified employment. There was no evidence that Claimant of modified job offer to Claimant. No affirmative defense of termination for cause being asserted by Respondents. Based on the totality of the evidence, Claimant has established by a preponderance of the evidence that he is entitled to TTD benefits beginning March 4, 2017 and ongoing.

Average Weekly Wage and TTD Award

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3), C.R.S. establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

Claimant credibly testified he was expected to continue working for Employer for several more weeks on his particular job and then other jobs for Employer. Claimant's testimony and the Employer Injury Report establish that Claimant earned $31.50 per hour, $42.75 for overtime, and averaged approximately 65-70 hours per week. Thus, the ALJ determines that a fair approximation of Claimant's wage loss and diminished earning capacity is $2,441.25, which represents 40 hours per week at $31.50 and 25 hours of overtime per week at $47.25 per hour. Based on this AWW, Claimant would be entitled to a maximum TTD rate for his date of injury of $914.27 per week.

Offsets

Regarding allowable liens on benefits, Section 8-42-124, C.R.S. provides:

> Except for amounts due under court-ordered support or for a judgment for a debt for fraudulently obtained public assistance, fraudulently obtained overpayments of public assistance, or excess public assistance paid for which the recipient was ineligible, claims for compensation or benefits due, or any proceeds thereof, under articles 40 to 47 of this title shall not be assigned, released, or commuted except as provided in said articles and shall be exempt from all claims of creditors and from levy, execution, 33 and attachment or other remedy or recovery or collection of a debt, which exemption may not be waived.

Respondents request an offset and credit for the payment of $24,105 of State Disability benefits paid by the State of California. It is undisputed that the State Disability benefits Claimant received from the State of California ended in February 2017. Claimant is not claiming TTD for any period prior to March 4, 2017. No evidence was presented of a judgment for fraudulently obtained benefits or of excess public assistance. No evidence was presented establishing that Claimant was not entitled to the disability benefits paid by the State of California. As such, Respondents have failed to establish entitlement to an offset for State Disability benefits paid by the State of California.

ORDER

It is therefore ordered that:

I. Claimant's AWW is $2,441.25.

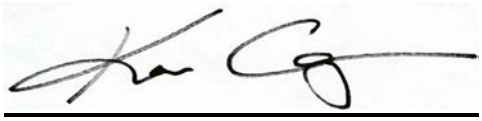
II. Respondents shall pay TTD benefits at the rate of $914.27 from March 4, 2017, ongoing until terminated by operation of law, subject to any applicable offsets. Respondents are not entitled to an offset for State Disability benefits paid by the State of California as such benefits ended prior to March 2017.

III. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

IV. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 19, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable injury on October 12, 2016 arising out of and in the course of his employment.

- Whether Claimant is entitled to reasonable and necessary medical treatment as a consequence of his injury sustained on October 12, 2016 in the form of a recommended right hip arthroplasty.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is employed with the City of Boulder Police Department as a Patrol Sergeant. Claimant has been a Boulder police officer for approximately 34 years. In that time Claimant has served as a defensive tactics instructor; a health and fitness instructor; and patrol training instructor. Over last 18 years Claimant has been a Detective Sergeant, Patrol Sergeant, K9 Sergeant and a Supervisor Sergeant in the training program.

2. On October 12, 2016, Claimant participated in a mandatory 10-hour training involving dynamic live scenarios with active shooters. The training was intense by design and involved heavy physical exertion and dynamic response. The training required running, obtaining cover, concealment, and advancing through many types of terrain. The training required running up and down staircases; as well as advancing through doors and hallways. During the training Claimant extracted a downed officer and drug out actors who played victims.

3. Claimant was unable to identify the particular maneuver that caused his injury, which, given the circumstances of the training is not unreasonable. Before lunch he began feeling a pulling type of pain in his right groin and hip. The symptoms worsened after work, and Claimant applied ice to that general area when he returned home.

4. Claimant reported the injury the next morning. On October 13, 2016, Employer completed and filed a corresponding first report of injury which states "injury occurred during the day long advanced in-service department training involving active scenarios."

5. On October 24, 2016, Claimant sought medical care at US Healthworks. On the patient questionnaire Claimant stated, "On 10-12-16 during a day-long active practical training scenarios, my upper right thigh/hip area began to tighten. Later that

night the tightness increased. After ice/heat for the next 10 days the tightness + pain remained when I walk (normal gate) turning and walking down stairs." Claimant testified that initially, he thought he suffered a muscle strain or pull. However, when his pain increased over the next several days he made an appointment.

6. The October 24, 2016 medical records from US Healthworks state under Causation: "In reviewing the patient's history and medical records and examination today, it appears that the patient did sustain an injury to the right thigh and hip arising out of and caused by the industrial exposure of 10/12/16." The corresponding M164 worksheet from Claimant's initial medical visit was marked "yes" when asked "are your objective findings consistent with history and/or work-related mechanism of injury/illness?"

7. Claimant's provider at Healthworks prescribed physical therapy, massage therapy, and a TENS unit. Claimant's initial physical therapy visit records provide: "10/12/16 [Claimant] was doing some intense training + he felt groin tightening pain (increased) over next couple of days." Claimant returned to Healthworks on October 28, 2016, reporting "soreness of a 5/10 and cites his main difficulty is getting in and out of his patrol car."

8. On October 31, 2016, Claimant returned to Healthworks for further evaluation. Dr. Long Miller's notes express concern that Claimant may have torn something in his hip. Dr. Long Miller ordered an MRI arthrogram of Claimant's hip to rule out a labral tear or any type of muscle dysfunction to the hip itself. As mentioned, he was seen in therapy and has had no previous problem with his hip before and it is worse with any type of aggressive activity."

9. Following Claimant's MRI study, Dr. Long referred Claimant to orthopedic surgeon Dr. Blackwood for evaluation. Dr. Long's corresponding M164 form again states that Claimant's condition is work related.

10. Dr. Long Miller's notes from December 5, 2016 discuss Claimant's improvement with physical therapy, and note continued pain with hip abduction and hip pain sometimes waking him from sleep.

11. Claimant returned to Dr. Long on December 15, 2016. Dr. Long stated, "I do not have the report from Dr. Blackwood, but his conclusion was that Dave needs a total hip replacement. I am not surprised to hear this. He certainly had some preexisting degenerative changes; however, it appears that the labral tear, which occurred during defensive tactics training, is an acute injury. Dave was told by Dr. Blackwood that he will not get any better; that his pain will continue to worsen as the labral tear progresses." Dr. Long then referred Claimant to Dr. Dolbeare for a second opinion.

12. On January 23, 2017, Dr. Dolbeare evaluated Claimant. Claimant testified that he explained to Dr. Dolbeare the nature of his October 12, 2016 training. Dr. Dolbeare's report states Claimant "reports back in October he was doing a training

exercise with police department and developed pretty severe pain the day after." Dr. Dolbeare then stated "I think the best course of action would be to proceed with a total hip arthroplasty through an anterior approach." On January 30, 2017, Dr. Dolbeare submitted the surgical authorization request.

13. In her report of January 24, 2017 Dr. Long stated, "Dr. Dolbeare concurred with Dr. Blackwood in that there was no other option than to provide a total hip replacement for Dave." On the corresponding M164 form, Dr. Long states that MMI is unknown at this time because "surgery."

14. Claimant's massage therapy report of January 24, 2017 stated "Pt reports sharp P when internally rotating R hip; P in TFI as well as overcompensating w/ L; having surgery."

15. On February 14, 2017, Dr. Long issued a report stating, "On 2/09/17, I received an [sic] in the mail, letter of denial from CCMSI based on the review of Dr. Timothy O'Brien. In reading Dr. O'Brien's review, he is basing it purely upon osteoarthritis. Let me be clear, no one is disputing the fact that Dave has right hip osteoarthritis. The CURRENT diagnosis is work related; it is a traumatic labral tear of the right hip that occurred during defensive tactics training for the Police Force. If Dave's labrum had not torn, he would not need [a] hip replacement." In the corresponding M164 report, Dr. Long wrote, "appeal denial hip replacement" and "Dr. Dolbeare is submitting appeal." Dr. Long further diagnosed "Hip labral tear – work related."

16. In response to the surgery denial, Dr. Dolbeare issued an appeal letter dated February 15, 2017. Dr. Dolbeare states:

> I am writing this letter to request an appeal to Mr. Seper's denial for his total hip replacement. As you know, he injured his hip during a police training. MRI findings indicate an acute labral tear. He does have existing osteoarthritis that was non-symptomatic prior to the injury. The mechanism of injury acutely flared up his existing arthritis. Conservative management of labral tear and osteoarthritis would only be temporizing measures at this point. I have requested a total hip arthroplasty as means of solving both the osteoarthritis issue as well as the labral tear. I am doubtful that any other treatment will resolve patient's symptoms. Please reconsider your denial of his total hip arthroplasty.

17. On February 2, 2017, Respondents filed a Notice of Contest. The Notice of Contest was filed subsequent to the denial of recommended total hip replacement. Respondents had authorized all treatment to the date of the Notice of Contest.

18. Respondents denied Dr. Dolbeare's surgical request based on Dr. Timothy O'Brien's records review. Dr. O'Brien stated that Claimant "did not sustain an

isolated injury such as a twist, a fall or a direct blow resulting in any type of extreme positioning of the hip." However, Dr. O'Brien never interviewed Claimant about his activities related to the 10 hour active shooter training.

19. On February 23, 2017, Dr. O'Brien issued a second records review report. In this report Dr. O'Brien stated that "it would be exceedingly rare for an MRI scan to demonstrate an intact labrum, and I can submit that based on the empirical evidence available to me, there is no such thing as an intact labrum in a patient who has end-stage osteoarthritis of the hip." Dr. O'Brien further concluded that Claimant "has bilateral hip osteoarthritis."

20. Claimant, however, does not have a labral tear in his left hip even though Dr. O'Brien indicated that Claimant had symmetrical bilateral hip osteoarthritis. This fact is contrary to Dr. O'Brien's conclusions as stated above. Claimant further testified that he has never had symptoms in his left hip; has never received medical treatment to his left hip; and that his left hip is fully functional.

21. Dr. O'Brien further opined that "Episodic and waxing and waning pain is not unusual or unexpected in the osteoarthritic population but rather these episodic symptoms define the arthritic population." Dr. O'Brien later stated that "the progression of osteoarthritis to the point that a total hip arthroplasty is necessary is always fraught with episodic pain that becomes more significant as the disease process progresses."

22. Claimant testified that prior to October 12, 2016 he had never experienced "episodic waxing and waning" of symptoms in his right hip. In fact, Claimant testified that prior to October 12, 2016 he had never experienced any symptoms or functional loss in his right hip. This fact is contrary to Dr. O'Brien's opinions.

23. Even Respondent's IME, Dr. James Lindberg, testified that prior to October 12, 2016, Claimant did not experience any episodic waxing or waning of symptoms in his right hip.

24. Dr. O'Brien concluded "the pain that [Claimant] noted on the date in question was due to his personal health, and a long-standing pre-existing arthritic condition that had been symptomatic for years prior to this date." This conclusion is contradicted by Claimant's credible and persuasive testimony, the opinions of other medical providers, and Claimant's medical records.

25. Dr. James Lindberg conducted an IME of Claimant and issued a corresponding report dated July 15, 2017. Dr. Lindberg conceded that Claimant's hip "had been asymptomatic for years." However, Dr. Lindberg stated, "I completely agree with Dr. O'Brien's assessment. I could not have stated it any better and do not need to restate it again in this IME." The ALJ credits Dr. Lindberg's opinion that Claimant had been asymptomatic for years before his injury. However , the ALJ is not persuaded by Dr. Lindberg's agreement with Dr. O'Brien's assessment because it shows no independent analysis.

26. Dr. Lindberg testified that he stopped performing surgeries in 2012, and currently only conducts IMEs and testifies for Respondents.

27. Regarding Claimant's right hip, Dr. Lindberg testified that prior to October 12, 2016, Claimant had never been diagnosed with arthritis; had never been diagnosed with a labral tear; had never received work restrictions; was fully functional; had never sustained an injury; had never received a MRI; had never been prescribed physical therapy; had never been prescribed massage therapy; had never been prescribed a TENS unit; had never been prescribed injections; had never been referred to a hip specialist; had never been prescribed a hip replacement; had never been prescribed any surgical recommendation; had never been prescribed any treatment; had never seen a doctor; and never had any symptoms.

28. Claimant testified that he currently experiences constant pain of 3-4/10. His pain spikes when he walks with a normal gait and when he turns with his right foot while walking. As a result, Claimant takes shorter steps when walking. Claimant's symptoms wake him from sleeping depending on the position of his right leg. Claimant also has symptoms while driving when moving his right foot from accelerator to the brake. Claimant's symptoms improve with physical therapy and massage therapy. However, his hip symptoms remain constant and increase with activity.

29. Prior to October 12, 2016, Claimant has never received a MRI; never had been prescribed physical therapy; never had been prescribed massage therapy; had never been prescribed a TENS unit; had never seen a specialist; had never received a recommendation for a hip replacement; had never received any surgical recommendation; had never received any treatment; had never seen a doctor; and never had any symptoms.

30. Claimant testified that he has no doubt that his right hip injury occurred on October 12, 2016, as his hip symptoms and functionality changed on that date. Claimant testified that he wants to proceed with the recommended total hip arthroplasty to help improve his functionality and pain levels in order to restore his pre-injury quality of life.

31. Regarding the onset of his symptoms, the ALJ finds Claimant's testimony to be credible and persuasive. Claimant's testimony is supported by the medical records regarding the onset of symptoms associated with his training of October 12, 2016. Claimant's description of the symptoms and the activities he conducted on that date are stated repeatedly throughout his medical records. Claimant's testimony is further corroborated by the first report of injury which was filed on October 13, 2016.

32. The ALJ finds credible and persuasive Claimant's testimony regarding his condition prior to October 12, 2016. Claimant testimony is supported by Respondents' IME Dr. Lindberg, who testified that Claimant had no prior medical treatment or symptoms in his right hip prior to October 12, 2016. Claimant's testimony that prior to the date of injury he was asymptomatic and had never required medical treatment for his right hip is undisputed.

33. The ALJ finds credible and persuasive the opinions of Dr. Dolbeare. Dr. Dolbeare's opinions, as outlined in his letter of February 15, 2017 are supported by Claimant' testimony and the medical record. Dr. Dolbeare concluded that Claimant's pre-existing arthritis was asymptomatic prior to the date of injury, which is an undisputed fact. Claimant's October 12, 2016, training resulted in a clear change in Claimant's condition, which according to Dr. Dolbeare resulted in an acute labral tear and acutely flared Claimant's arthritis. The opinions of Dr. Dolbeare are corroborated by the medical record, Claimant's testimony, and the undisputed facts surrounding the claim.

34. The ALJ finds credible and persuasive Dr. Dolbeare's opinions regarding Claimant's need for the total hip arthroplasty. Dr. Dolbeare's opinions are corroborated by those of Dr. Blackwood, in which both doctors concur that the appropriate treatment modality is for Claimant to receive the recommended total hip arthroplasty. Dr. Dolbeare has credibly stated in his letter of February 15, 2017 that conservative management of Claimant's symptoms and labral tear will not resolve Claimant's symptoms as the total hip arthroplasty is the only option.

35. The ALJ finds credible and persuasive the opinions of Dr. Long. Dr. Long is Claimant's authorized treating provider and has evaluated Claimant consistently throughout the claim. Dr. Long's opinions are supported by the medical record, including the opinions of Dr. Dolbeare. Dr. Long's conclusions are also supported by Claimant's testimony regarding the onset of his symptoms and change in condition following the events of October 12, 2016.

36. The ALJ is not persuaded by the opinions of Dr. O'Brien. First, Dr. O'Brien is incorrect in stating that Claimant had been "symptomatic for years." Dr. Lindberg agrees that this was not an accurate statement. Second, Dr. O'Brien repeatedly stated that the progression of arthritis is characterized by "episodic waxing and waning" of symptoms. However, it is undisputed that prior to October 12, 2016, Claimant had never experienced any symptoms in either his right or left hip, much less any episodic waxing and waning. Last, Dr. O'Brien states "there is no such thing as an intact labrum in a patient who has end stage osteoarthritis." Dr. O'Brien and Dr. Lindberg have stated that Claimant has symmetrical bilateral osteoarthritis in his hips. However, Claimant does not have a labral tear in his left hip which renders Dr. O'Brien's conclusion to be false. Therefore, Dr. O'Brien's opinions are not found credible.

37. The ALJ finds the opinions of Dr. Lindberg are not credible or persuasive. Dr. Lindberg states that he "completely agrees with Dr. O'Brien's assessment." As stated in the previous paragraph, Dr. O'Brien's opinions are deeply flawed and are not credible or persuasive. Regarding Claimant's right hip, Dr. Lindberg has testified that Claimant had no prior treatment, symptoms, diagnosis, nor episodic waxing or waning of symptoms prior to October 12, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (1971). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 293 (1951).

Compensable injuries are those which require medical treatment or cause disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). In order to prove

causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a “significant” cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment.

A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. Joslins *Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

As found, Claimant has proven by a preponderance of the evidence that he sustained a compensable work related injury on October 12, 2016. Claimant timely reported his injury and the medical records corroborate his testimony regarding his symptoms. Prior to October 12, 2016 Claimant had never received any medical treatment to his right hip, was asymptomatic, and was fully functional.

Medical Benefits

Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002) (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411, 415 (Colo. App. 1995).

In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a

preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

Claimant has proven by a preponderance of the evidence that the need for a total hip replacement is reasonable, necessary, and related to the compensable claim. Dr. Dolbeare's opinions are corroborated by those of Dr. Blackwood in that Claimant's only option to resolve his symptoms is to proceed with the total hip replacement. The need for the surgery is related to the injury of October 12, 2016 as prior to that date Claimant had never received any medical treatment to his right hip, was asymptomatic, and was fully functional.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has proven by a preponderance of the evidence that he sustained an injury in the course and scope of his employment on October 12, 2016.

2. Claimant is entitled to receive reasonable necessary medical benefits including the recommended total right hip arthroplasty.

3. Issues not expressly decided herein are reserved to the parties for future determination.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 20 October 2017

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable injury on October 12, 2016 arising out of and in the course of his employment.

- Whether Claimant is entitled to reasonable and necessary medical treatment as a consequence of his injury sustained on October 12, 2016 in the form of a recommended right hip arthroplasty.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is employed with the City of Boulder Police Department as a Patrol Sergeant. Claimant has been a Boulder police officer for approximately 34 years. In that time Claimant has served as a defensive tactics instructor; a health and fitness instructor; and patrol training instructor. Over last 18 years Claimant has been a Detective Sergeant, Patrol Sergeant, K9 Sergeant and a Supervisor Sergeant in the training program.

2. On October 12, 2016, Claimant participated in a mandatory 10-hour training involving dynamic live scenarios with active shooters. The training was intense by design and involved heavy physical exertion and dynamic response. The training required running, obtaining cover, concealment, and advancing through many types of terrain. The training required running up and down staircases; as well as advancing through doors and hallways. During the training Claimant extracted a downed officer and drug out actors who played victims.

3. Claimant was unable to identify the particular maneuver that caused his injury, which, given the circumstances of the training is not unreasonable. Before lunch he began feeling a pulling type of pain in his right groin and hip. The symptoms worsened after work, and Claimant applied ice to that general area when he returned home.

4. Claimant reported the injury the next morning. On October 13, 2016, Employer completed and filed a corresponding first report of injury which states "injury occurred during the day long advanced in-service department training involving active scenarios."

5. On October 24, 2016, Claimant sought medical care at US Healthworks. On the patient questionnaire Claimant stated, "On 10-12-16 during a day-long active practical training scenarios, my upper right thigh/hip area began to tighten. Later that

night the tightness increased. After ice/heat for the next 10 days the tightness + pain remained when I walk (normal gate) turning and walking down stairs." Claimant testified that initially, he thought he suffered a muscle strain or pull. However, when his pain increased over the next several days he made an appointment.

6. The October 24, 2016 medical records from US Healthworks state under Causation: "In reviewing the patient's history and medical records and examination today, it appears that the patient did sustain an injury to the right thigh and hip arising out of and caused by the industrial exposure of 10/12/16." The corresponding M164 worksheet from Claimant's initial medical visit was marked "yes" when asked "are your objective findings consistent with history and/or work-related mechanism of injury/illness?"

7. Claimant's provider at Healthworks prescribed physical therapy, massage therapy, and a TENS unit. Claimant's initial physical therapy visit records provide: "10/12/16 [Claimant] was doing some intense training + he felt groin tightening pain (increased) over next couple of days." Claimant returned to Healthworks on October 28, 2016, reporting "soreness of a 5/10 and cites his main difficulty is getting in and out of his patrol car."

8. On October 31, 2016, Claimant returned to Healthworks for further evaluation. Dr. Long Miller's notes express concern that Claimant may have torn something in his hip. Dr. Long Miller ordered an MRI arthrogram of Claimant's hip to rule out a labral tear or any type of muscle dysfunction to the hip itself. As mentioned, he was seen in therapy and has had no previous problem with his hip before and it is worse with any type of aggressive activity."

9. Following Claimant's MRI study, Dr. Long referred Claimant to orthopedic surgeon Dr. Blackwood for evaluation. Dr. Long's corresponding M164 form again states that Claimant's condition is work related.

10. Dr. Long Miller's notes from December 5, 2016 discuss Claimant's improvement with physical therapy, and note continued pain with hip abduction and hip pain sometimes waking him from sleep.

11. Claimant returned to Dr. Long on December 15, 2016. Dr. Long stated, "I do not have the report from Dr. Blackwood, but his conclusion was that Dave needs a total hip replacement. I am not surprised to hear this. He certainly had some preexisting degenerative changes; however, it appears that the labral tear, which occurred during defensive tactics training, is an acute injury. Dave was told by Dr. Blackwood that he will not get any better; that his pain will continue to worsen as the labral tear progresses." Dr. Long then referred Claimant to Dr. Dolbeare for a second opinion.

12. On January 23, 2017, Dr. Dolbeare evaluated Claimant. Claimant testified that he explained to Dr. Dolbeare the nature of his October 12, 2016 training. Dr. Dolbeare's report states Claimant "reports back in October he was doing a training

exercise with police department and developed pretty severe pain the day after." Dr. Dolbeare then stated "I think the best course of action would be to proceed with a total hip arthroplasty through an anterior approach." On January 30, 2017, Dr. Dolbeare submitted the surgical authorization request.

13. In her report of January 24, 2017 Dr. Long stated, "Dr. Dolbeare concurred with Dr. Blackwood in that there was no other option than to provide a total hip replacement for Dave." On the corresponding M164 form, Dr. Long states that MMI is unknown at this time because "surgery."

14. Claimant's massage therapy report of January 24, 2017 stated "Pt reports sharp P when internally rotating R hip; P in TFI as well as overcompensating w/ L; having surgery."

15. On February 14, 2017, Dr. Long issued a report stating, "On 2/09/17, I received an [sic] in the mail, letter of denial from CCMSI based on the review of Dr. Timothy O'Brien. In reading Dr. O'Brien's review, he is basing it purely upon osteoarthritis. Let me be clear, no one is disputing the fact that Dave has right hip osteoarthritis. The CURRENT diagnosis is work related; it is a traumatic labral tear of the right hip that occurred during defensive tactics training for the Police Force. If Dave's labrum had not torn, he would not need [a] hip replacement." In the corresponding M164 report, Dr. Long wrote, "appeal denial hip replacement" and "Dr. Dolbeare is submitting appeal." Dr. Long further diagnosed "Hip labral tear – work related."

16. In response to the surgery denial, Dr. Dolbeare issued an appeal letter dated February 15, 2017. Dr. Dolbeare states:

> I am writing this letter to request an appeal to Mr. Seper's denial for his total hip replacement. As you know, he injured his hip during a police training. MRI findings indicate an acute labral tear. He does have existing osteoarthritis that was non-symptomatic prior to the injury. The mechanism of injury acutely flared up his existing arthritis. Conservative management of labral tear and osteoarthritis would only be temporizing measures at this point. I have requested a total hip arthroplasty as means of solving both the osteoarthritis issue as well as the labral tear. I am doubtful that any other treatment will resolve patient's symptoms. Please reconsider your denial of his total hip arthroplasty.

17. On February 2, 2017, Respondents filed a Notice of Contest. The Notice of Contest was filed subsequent to the denial of recommended total hip replacement. Respondents had authorized all treatment to the date of the Notice of Contest.

18. Respondents denied Dr. Dolbeare's surgical request based on Dr. Timothy O'Brien's records review. Dr. O'Brien stated that Claimant "did not sustain an

isolated injury such as a twist, a fall or a direct blow resulting in any type of extreme positioning of the hip." However, Dr. O'Brien never interviewed Claimant about his activities related to the 10 hour active shooter training.

19. On February 23, 2017, Dr. O'Brien issued a second records review report. In this report Dr. O'Brien stated that "it would be exceedingly rare for an MRI scan to demonstrate an intact labrum, and I can submit that based on the empirical evidence available to me, there is no such thing as an intact labrum in a patient who has end-stage osteoarthritis of the hip." Dr. O'Brien further concluded that Claimant "has bilateral hip osteoarthritis."

20. Claimant, however, does not have a labral tear in his left hip even though Dr. O'Brien indicated that Claimant had symmetrical bilateral hip osteoarthritis. This fact is contrary to Dr. O'Brien's conclusions as stated above. Claimant further testified that he has never had symptoms in his left hip; has never received medical treatment to his left hip; and that his left hip is fully functional.

21. Dr. O'Brien further opined that "Episodic and waxing and waning pain is not unusual or unexpected in the osteoarthritic population but rather these episodic symptoms define the arthritic population." Dr. O'Brien later stated that "the progression of osteoarthritis to the point that a total hip arthroplasty is necessary is always fraught with episodic pain that becomes more significant as the disease process progresses."

22. Claimant testified that prior to October 12, 2016 he had never experienced "episodic waxing and waning" of symptoms in his right hip. In fact, Claimant testified that prior to October 12, 2016 he had never experienced any symptoms or functional loss in his right hip. This fact is contrary to Dr. O'Brien's opinions.

23. Even Respondent's IME, Dr. James Lindberg, testified that prior to October 12, 2016, Claimant did not experience any episodic waxing or waning of symptoms in his right hip.

24. Dr. O'Brien concluded "the pain that [Claimant] noted on the date in question was due to his personal health, and a long-standing pre-existing arthritic condition that had been symptomatic for years prior to this date." This conclusion is contradicted by Claimant's credible and persuasive testimony, the opinions of other medical providers, and Claimant's medical records.

25. Dr. James Lindberg conducted an IME of Claimant and issued a corresponding report dated July 15, 2017. Dr. Lindberg conceded that Claimant's hip "had been asymptomatic for years." However, Dr. Lindberg stated, "I completely agree with Dr. O'Brien's assessment. I could not have stated it any better and do not need to restate it again in this IME." The ALJ credits Dr. Lindberg's opinion that Claimant had been asymptomatic for years before his injury. However , the ALJ is not persuaded by Dr. Lindberg's agreement with Dr. O'Brien's assessment because it shows no independent analysis.

26. Dr. Lindberg testified that he stopped performing surgeries in 2012, and currently only conducts IMEs and testifies for Respondents.

27. Regarding Claimant's right hip, Dr. Lindberg testified that prior to October 12, 2016, Claimant had never been diagnosed with arthritis; had never been diagnosed with a labral tear; had never received work restrictions; was fully functional; had never sustained an injury; had never received a MRI; had never been prescribed physical therapy; had never been prescribed massage therapy; had never been prescribed a TENS unit; had never been prescribed injections; had never been referred to a hip specialist; had never been prescribed a hip replacement; had never been prescribed any surgical recommendation; had never been prescribed any treatment; had never seen a doctor; and never had any symptoms.

28. Claimant testified that he currently experiences constant pain of 3-4/10. His pain spikes when he walks with a normal gait and when he turns with his right foot while walking. As a result, Claimant takes shorter steps when walking. Claimant's symptoms wake him from sleeping depending on the position of his right leg. Claimant also has symptoms while driving when moving his right foot from accelerator to the brake. Claimant's symptoms improve with physical therapy and massage therapy. However, his hip symptoms remain constant and increase with activity.

29. Prior to October 12, 2016, Claimant has never received a MRI; never had been prescribed physical therapy; never had been prescribed massage therapy; had never been prescribed a TENS unit; had never seen a specialist; had never received a recommendation for a hip replacement; had never received any surgical recommendation; had never received any treatment; had never seen a doctor; and never had any symptoms.

30. Claimant testified that he has no doubt that his right hip injury occurred on October 12, 2016, as his hip symptoms and functionality changed on that date. Claimant testified that he wants to proceed with the recommended total hip arthroplasty to help improve his functionality and pain levels in order to restore his pre-injury quality of life.

31. Regarding the onset of his symptoms, the ALJ finds Claimant's testimony to be credible and persuasive. Claimant's testimony is supported by the medical records regarding the onset of symptoms associated with his training of October 12, 2016. Claimant's description of the symptoms and the activities he conducted on that date are stated repeatedly throughout his medical records. Claimant's testimony is further corroborated by the first report of injury which was filed on October 13, 2016.

32. The ALJ finds credible and persuasive Claimant's testimony regarding his condition prior to October 12, 2016. Claimant testimony is supported by Respondents' IME Dr. Lindberg, who testified that Claimant had no prior medical treatment or symptoms in his right hip prior to October 12, 2016. Claimant's testimony that prior to the date of injury he was asymptomatic and had never required medical treatment for his right hip is undisputed.

33. The ALJ finds credible and persuasive the opinions of Dr. Dolbeare. Dr. Dolbeare's opinions, as outlined in his letter of February 15, 2017 are supported by Claimant' testimony and the medical record. Dr. Dolbeare concluded that Claimant's pre-existing arthritis was asymptomatic prior to the date of injury, which is an undisputed fact. Claimant's October 12, 2016, training resulted in a clear change in Claimant's condition, which according to Dr. Dolbeare resulted in an acute labral tear and acutely flared Claimant's arthritis. The opinions of Dr. Dolbeare are corroborated by the medical record, Claimant's testimony, and the undisputed facts surrounding the claim.

34. The ALJ finds credible and persuasive Dr. Dolbeare's opinions regarding Claimant's need for the total hip arthroplasty. Dr. Dolbeare's opinions are corroborated by those of Dr. Blackwood, in which both doctors concur that the appropriate treatment modality is for Claimant to receive the recommended total hip arthroplasty. Dr. Dolbeare has credibly stated in his letter of February 15, 2017 that conservative management of Claimant's symptoms and labral tear will not resolve Claimant's symptoms as the total hip arthroplasty is the only option.

35. The ALJ finds credible and persuasive the opinions of Dr. Long. Dr. Long is Claimant's authorized treating provider and has evaluated Claimant consistently throughout the claim. Dr. Long's opinions are supported by the medical record, including the opinions of Dr. Dolbeare. Dr. Long's conclusions are also supported by Claimant's testimony regarding the onset of his symptoms and change in condition following the events of October 12, 2016.

36. The ALJ is not persuaded by the opinions of Dr. O'Brien. First, Dr. O'Brien is incorrect in stating that Claimant had been "symptomatic for years." Dr. Lindberg agrees that this was not an accurate statement. Second, Dr. O'Brien repeatedly stated that the progression of arthritis is characterized by "episodic waxing and waning" of symptoms. However, it is undisputed that prior to October 12, 2016, Claimant had never experienced any symptoms in either his right or left hip, much less any episodic waxing and waning. Last, Dr. O'Brien states "there is no such thing as an intact labrum in a patient who has end stage osteoarthritis." Dr. O'Brien and Dr. Lindberg have stated that Claimant has symmetrical bilateral osteoarthritis in his hips. However, Claimant does not have a labral tear in his left hip which renders Dr. O'Brien's conclusion to be false. Therefore, Dr. O'Brien's opinions are not found credible.

37. The ALJ finds the opinions of Dr. Lindberg are not credible or persuasive. Dr. Lindberg states that he "completely agrees with Dr. O'Brien's assessment." As stated in the previous paragraph, Dr. O'Brien's opinions are deeply flawed and are not credible or persuasive. Regarding Claimant's right hip, Dr. Lindberg has testified that Claimant had no prior treatment, symptoms, diagnosis, nor episodic waxing or waning of symptoms prior to October 12, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (1971). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 293 (1951).

Compensable injuries are those which require medical treatment or cause disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). In order to prove

causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a “significant” cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment.

A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. Joslins *Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

As found, Claimant has proven by a preponderance of the evidence that he sustained a compensable work related injury on October 12, 2016. Claimant timely reported his injury and the medical records corroborate his testimony regarding his symptoms. Prior to October 12, 2016 Claimant had never received any medical treatment to his right hip, was asymptomatic, and was fully functional.

Medical Benefits

Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002) (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411, 415 (Colo. App. 1995).

In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a

preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

Claimant has proven by a preponderance of the evidence that the need for a total hip replacement is reasonable, necessary, and related to the compensable claim. Dr. Dolbeare's opinions are corroborated by those of Dr. Blackwood in that Claimant's only option to resolve his symptoms is to proceed with the total hip replacement. The need for the surgery is related to the injury of October 12, 2016 as prior to that date Claimant had never received any medical treatment to his right hip, was asymptomatic, and was fully functional.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has proven by a preponderance of the evidence that he sustained an injury in the course and scope of his employment on October 12, 2016.

2. Claimant is entitled to receive reasonable necessary medical benefits including the recommended total right hip arthroplasty.

3. Issues not expressly decided herein are reserved to the parties for future determination.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 20 October 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable industrial injury on October 17, 2016.

II. If Claimant has established a compensable injury, whether he is entitled to reasonably necessary and related medical benefits.

STIPULATIONS

I. The parties reserved the issues of average weekly wage, temporary disability benefits, and authorized treating provider.

FINDINGS OF FACT

1. Claimant is 63 years of age and works for Employer processing eggs.

Prior Left Shoulder Injury

2. Claimant sustained an admitted injury to his left shoulder on November 13, 2014.

3. Underwent left shoulder rotator cuff repair surgery on August 12, 2015.

4. Lloyd Thurston, M.D. placed Claimant at maximum medical improvement ("MMI") for his left shoulder injury on June 21, 2016 with a 10% upper extremity (6% whole person) permanent impairment rating. Dr. Thurston determined Claimant did not have any restrictions or require medical maintenance care.

5. In approximately July 2016, Claimant returned to work on light duty. Claimant's light duty work involved packaging eggs. Claimant retrieved eggs from a conveyor belt located at chest level, filled a box with approximately 12-15 cartons of eggs, and then pushed the box onto a conveyor belt. Claimant's light duty did not involve lifting. Claimant filled a box approximately every 48 seconds.

6. On October 12, 2016, Brian Mathwich, M.D. performed a Division Independent Medical Examination ("DIME") for Claimant's left shoulder injury. Claimant reported increased left shoulder pain after returning to work. Dr. Mathwich noted, "He is also having some pain on the right side now as well." On physical examination, Dr. Mathwich noted,

> Visual examination of the shoulders reveals he actually carries his left shoulder slightly lower than the right…Palpation of the left trapezius muscle reveals large trigger point in the mid trapezius body which are very

> tender on palpation. Patient actually has a larger more tender trigger point on the right trapezius. He also has very specific point tenderness over the anterior glenohumeral joint.

7. Dr. Mathwich did not further address Claimant's right shoulder in his report. Dr. Mathwich placed Claimant at MMI for the left shoulder injury, pending a left shoulder MRI confirming no re-injury to the left shoulder.

Right Shoulder Injury

8. Claimant sustained an industrial injury to his right shoulder on October 17, 2016. Claimant testified that he felt a pain in his right shoulder while pushing a box of eggs onto a conveyor belt. Claimant testified that the oil on the conveyor belt had worn off, causing friction between the conveyor belt and the box when pushed.

9. Claimant reported the injury to Employer soon thereafter. On the Supervisor Accident/Investigation Report form dated October 18, 2016, it was noted that Claimant reported that he "Pushed boxes onto belt with too much force and it hurt his right shoulder." Claimant reported that the boxes piled up too quickly causing him to work at a faster pace. Employer sent Claimant to Injury Care of Colorado.

10. On October 18, 2016, Claimant presented to Megan Hubbard, PA-C at Injury Care of Colorado. Regarding the mechanism of injury, PA-C Hubbard noted, "Pt states he was pushing a box, he had to push it even harder the second time and instantly felt pain." On physical examination, PA-C Hubbard noted limited range of motion of the right shoulder and tenderness over the AC joint. Impingement and empty can tests were positive. PA-C Hubbard assessed a work-related right shoulder strain and recommended resting, icing, taking ibuprofen as needed. Claimant was released to work full duty without restrictions and instructed to follow up with Julie Parsons, M.D.

11. X-rays of Claimant's right shoulder taken October 18, 2016 shoulder revealed` no fracture, dislocation or acute bony abnormality.

12. Dr. Parsons evaluated Claimant on October 19, 2016. Claimant presented with right shoulder pain. On physical examination, Dr. Parsons noted tenderness and limited range of motion. Dr. Parsons diagnosed Claimant with a work-related right shoulder strain and referred Claimant for physical therapy. She released Claimant to return to light duty, restricting lifting, carrying, and pushing/pulling to 15 pounds or less.

13. Claimant returned to work and Employer accommodated his restrictions.

14. On February 24, 2017, Linda Mitchell, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Mitchell issued an IME Report dated March 2, 2017. Claimant denied a specific injury to his right shoulder and reported experiencing a gradual onset of right shoulder pain since July 2016, which he attributed to favoring his left shoulder. Claimant reported that his pain worsened with working fast. Claimant denied any prior right shoulder problems. On physical examination, Dr. Mitchell noted a ruptured right biceps muscle, tenderness along the

glenohumeral joint and of the right biceps tendon and limited range of motion. Dr. Mitchell also noted give-way weakness and moderately severe pain behaviors. Dr. Mitchell diagnosed Claimant with longstanding right bicipital tendon and probable rotator cuff tears with no specific work injury. Dr. Mitchell concluded that Claimant's modified work duties did not cause or significantly exacerbate his pre-existing bicipital tendon and rotator cuff tears. Dr. Mitchell recommended Claimant limit lifting and reaching with the right upper extremity.

15. Dr. Mitchell subsequently reviewed video footage of workers performing Claimant's job duties and continued to opine that Claimant's work did not cause or significantly exacerbate his pre-existing bicipital tendon and rotator cuff tears, noting, "Videos show only infrequent reaching away from body or overhead to get labels. No heavy lifting. Lifting is generally below chest level, close to body, & not heavy."

16. Dr. Mitchell testified at hearing on behalf of Respondents as an expert in occupational medicine. Dr. Mitchell testified consistent with her IME Report. Dr. Mitchell stated that her examination of Claimant revealed a Popeye deformity of the right bicep and high-riding right shoulder. She testified that such findings were indicative of chronic bicipital and rotator cuff tears, as the upper trapezius tends to overcompensate, resulting in shoulder shrugging. Dr. Mitchell stated that such deformities generally do not occur with acute tears and, if Claimant had sustained an acute tear, there would be more pain, weakness and limited range of motion. Dr. Mitchell stated that her exam findings were consistent with Dr. Mathwich's findings regarding the right shoulder. Dr. Mitchell stated that the vast majority of chronic tears are degenerative and not uncommon for someone of Claimant's age. Dr. Mitchell stated that it was not outside of the realm of possibility that Claimant suffered a right shoulder sprain, although that was not her most probable diagnosis.

17. Dr. Mitchell again opined that Claimant's modified work duties did not cause the bicipital tendon or rotator cuff tears, or significantly exacerbate his condition. Dr Mitchell testified, "I look at it as I think this gentleman had chronic bicipital tendinitis, tears to his rotator cuff. And very simple basic motions might cause discomfort, but I don't see that there's a mechanism for causing tissue damage or structural anatomical changes from that motion."

18. Dr. Mitchell acknowledged that Claimant's work duties could cause pain or discomfort, but not a change to the pathology of his shoulder. Dr. Mitchell testified:

> Q: …So is it now that working fast would reasonably lead to increased symptomatology?
>
> A: I think he would – his shoulder was bad enough that really any activities moving the arm fast would cause discomfort.
>
> Q: Okay.
>
> A: But, again, I'll get back to my point that I don't think that's causing tissue damage or – or alteration of anatomy.

Q: I understand that. In other words, not changing the underlying pathology?

A: Right.

Q: Okay. But you would agree that the work would aggravate – aggravate the pain complaints?

A: Sure.

19. Claimant first testified that he experienced right shoulder pain prior to the October 17, 2016 injury, then later testified that his right shoulder pain began with the October 17, 2016 injury. Claimant also testified that he did not have any treatment for his right shoulder prior to the October 17, 2016 injury. No evidence was introduced at hearing establishing that Claimant sought or received treatment for his right shoulder prior to October 17, 2016.

20. David Valdez, Processing Lead, testified at hearing on behalf of Respondents. Mr. Valdez stated that Claimant was placed on modified duty upon his return from the left shoulder injury and was solely responsible for packing boxes, which weighed approximately 27.5 pounds. Mr. Valdez testified that mineral oil is applied to the conveyor belts throughout the day and the oil can wear off towards the end of the day.

21. Claimant's testimony is found credible and persuasive.

22. Claimant has established that it is more probably true than not that he sustained a compensable injury to his right shoulder on October 17, 2016 in the form of an aggravation of a pre-existing condition. The ALJ also credits Dr. Mitchell's opinion as to the pre-existing nature of Claimant's bicipital tendon and rotator cuff tears. The ALJ credits Claimant's testimony regarding the mechanism of injury and having no prior medical treatment to his right shoulder.

23. Claimant is entitled to reasonably necessary and related medical treatment to cure and relieve the effects of the October 17, 2016 industrial injury.

24. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders

the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical

treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes Claimant has proven by a preponderance of the evidence that he sustained a compensable industrial injury to his right shoulder on October 17, 2016. The ALJ is persuaded by Dr. Mitchell's testimony that Claimant's bicipital tendon and rotator cuff tear were pre-existing conditions. The ALJ is further persuaded Claimant suffered some right shoulder pain prior to October 17, 2016, as such pain is noted in the October 2016 DIME report, Dr. Mitchell's report, and Claimant's initial testimony, which he later changed.

Nonetheless, an aggravation of a pre-existing condition, even if temporary, is compensable if the employment is the proximate cause of the claimant's temporary disability or need for medical treatment. *In the Matter of the Claim of Earnest Clemons*, W.C. No. 4-311-981 (Indus. Claim Appeals Office, 2000), citing *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949); *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988); and *Conry v. City of Aurora*, W.C. No. 4- 195-130, April 24, 1996. Pain is a typical symptom from the aggravation of a pre-existing condition. The claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *In the Matter of the Claim of Earnest Clemons*, *supra,* citing *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949).

No evidence was introduced establishing that Claimant received any treatment for his right shoulder prior to the October 17, 2016 industrial injury. The ALJ is persuaded that the mechanism of injury aggravated Claimant's pre-existing condition, producing pain and the need for medical treatment. While Dr. Mitchell opined that Claimant's modified work duties would not alter Claimant's anatomy or cause structural damage, she acknowledged that Claimant's modified work duties would cause pain and aggravate his pain complaints. Based on the totality of the evidence, has established that it is more probably true than not that he suffered a compensable injury on October 17, 2016.

Medical Benefits

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

Claimant has established that he suffered a compensable injury. As such, Claimant is entitled to receive reasonably necessary and related medical treatment to cure and relieve the effects of the October 17, 2016 injury.

ORDER

It is therefore ordered that:

I. Claimant established by a preponderance of the evidence that he suffered a compensable injury on October 17, 2016.

II. Respondents shall pay for reasonably necessary and related medical treatment to cure and relieve the effects of Claimant's October 17, 2016 industrial injury.

III. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUE

The issue raised for consideration at hearing is whether Respondents' proved by clear and convincing evidence that the Division Independent medical examiner's (DIME) report regarding Claimant's impairment rating was most probably incorrect.

FINDINGS OF FACT

Having considered the evidence presented at hearing, and the deposition testimony of Dr. John T. Sacha, the Judge makes the following findings of fact:

1. Claimant sustained an admitted injury to his neck on July 7, 2017, in the course and scope of his employment with the Employer.

2. Claimant was placed at maximum medical improvement on February 3, 2016, by Dr. Sacha and given a 0% impairment rating.

3. Dr. Sacha was aware that the Claimant had a pre-existing cervical fusion that was not work-related in 2001. Dr. Sacha therefore apportioned out a range of motion impairment and Table 53 impairment which resulted in 0% permanent impairment after apportionment.

4. Claimant objected to the final admission of liability and requested a DIME which was performed by Dr. Goldman on September 19, 2016. In his impairment rating, Dr. Goldman states, "[Claimant's] case represents, at least from an impairment rating perspective, the incongruencies between the statutory revisions that occurred back in 2007 (as I recall) as articulated through Rule XII versus the AMA Guides, third edition, revised methodology. The patient clearly would qualify for a pre-existing table 53 IID or IIE (depending on how one interprets the October 2014 MRI of the neck indications), as well as would be expected to have range of motion deficits from his prior cervical fusion." Based upon his understanding of range of motion apportionment, he determined that the Claimant had 13% whole person impairment.

5. Following the DIME impairment rating from Dr. Goldman, Respondents took the evidentiary deposition of Dr. Sacha. Dr. Sacha is level 2 accredited and did his last re-accreditation two to three months before his deposition on June 20, 2017. Dr. Sacha noted that both he and Dr. Goldman train other doctors for Level 2 accreditation. Dr. Sacha was not qualified as an expert at hearing.

6. Subsequent to the 0% impairment rating that Dr. Sacha provided at the time of MMI, the doctor received additional training with respect to specific issues regarding apportionment. He testified that based upon a new methodology for interpretation of the *AMA Guides*, Dr. Goldman's interpretation is incorrect. So both Dr. Sacha's initial 0% rating as well as Dr. Goldman's rating was incorrect.

7. Dr. Sacha testified that Claimant's impairment rating should have been 6% whole person based on his proper calculation methodology.

8. Dr. Sacha expressed his vehement opinion that Dr. Goldman's impairment rating was incorrect. However, his testimony regarding Dr. Goldman's impairment rating and why it is most probably incorrect was not made clear. Dr. Sacha's revised rating of 6% whole person is based on his recent training with the Division of Workers' Compensation. Dr. Sacha testified that he relies upon "State of Colorado rulemaking," the Level II accreditation coursebook, interpretation of "work comp pearls" and discussions with the Division of Workers' Compensation Medical Director at a recent accreditation course in support of his assertion regarding the impairment rating.

9. These sources as support for Dr. Sacha's 6% impairment rating, the "State of Colorado rulemaking," the Level II accreditation coursebook, interpretation of "work comp pearls" and discussions with the Division's Medical Director, do not establish clear and convincing evidence that Dr. Goldman's DIME opinion is incorrect. Dr. Sacha's testimony did not clearly illuminate why Dr. Goldman's impairment rating was most probably incorrect.

10. As such, it cannot be concluded that the DIME opinion is incorrect and thus Dr. Goldman's 13% whole person impairment will stand.

CONCLUSIONS OF LAW

Having entered the foregoing findings of fact, the following conclusions of law are reached.

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-43-201(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-

201(1), C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201(1), *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. In addition to determining the sufficiency of the evidence presented, the ALJ evaluates the credibility and probative value of conflicting evidence, including competing experts and inconsistencies in a particular witness' testimony. *Johnson v. ICAO*, 973 P.2d 624, 626 (Colo. App. 1997). The ALJ does not have to make findings about every piece of evidence. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

4. For credibility determinations, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

5. Section 8-42-107(8)(c), C.R.S., provides that the DIME physician's finding of MMI and impairment rating is binding unless overcome by clear and convincing evidence. "Clear and convincing evidence" is defined as evidence which is stronger than preponderance, is unmistakable and is free from serious or substantial doubt. *DiLeo v. Koltnow*, 200 Colo. 119, 613 P. 2d 318 (1980). In other words, in order to overcome the DIME report, there must be evidence which proves that it is highly probable that the DIME physician's opinions are incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

6. The question whether the party challenging the DIME physician's opinion has overcome the report by clear and convincing evidence is one of fact for determination by the ALJ. *McLane Western Inc. v. Industrial Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999); *Metro Moving and Storage Co. v. Gussert*, supra.

7. The Administrative Law Judge finds that Dr. Sacha's medical report and deposition testimony did not rise to the level of clear and convincing evidence supporting the conclusion that the DIME opinion is most probably incorrect. The Administrative Law Judge finds that Dr. Sacha's testimony is not persuasive since Dr. Sacha's opinion relies on conversations with the Division's medical director, information obtained from a Level II accreditation coursebook, and unspecified State of Colorado regulations.

8. The Administrative Law Judge concludes that Respondents did not overcome Dr. Goldman's DIME impairment rating of 13% whole person by clear and convincing evidence.

ORDER

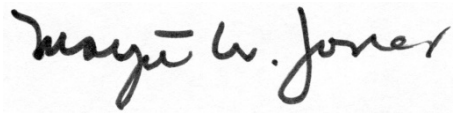
It is therefore ordered that the Respondents shall be liable to Claimant for workers' compensation benefits based on a Dr. Goldman's DIME report and his 13% whole person impairment rating.

The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 23, 2017



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-041-234-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

EMPLOYERS PREFERRED INSURANCE COMPANY,

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 3, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 10/3/17, Courtroom 1, beginning at 8:30 AM, and ending at approximately 12:00 PM).

Claimant's Exhibits 1 through 12 were admitted into evidence, without objection. Respondents' Exhibits A through X were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ took the matter under advisement. The following decision is hereby issued.

ISSUES

The issues to be determined by this decision is whether Claimant's fall at work on February 24, 2017 was the cause of Claimant's seizure and fall on February 25, 2017, thus, resulting in medical care Claimant received from those injuries, up until the present date. If the claim is compensable, average weekly wage (AWW) and temporary total disability (TTD) are additional issues. Respondents position is that the Claimant's seizure on February 25, 2017, is **not** within the proximate chain of causation from his

fall down the stairs on February 24, 2017. Nonetheless, the Claimant bears the burden of proof, by preponderant evidence, on all issues including causal relatedness of the February 25, 2017, seizure.

FINDINGS OF FACT

Based on the evidence presented at the hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated that the Claimant's AWW is $364.00, and the ALJ so finds, however, if the claim is not compensable the AWW issue is moot.

2. Respondents stipulated that if Claimant's injury is compensable, then he is owed TTD benefits, however, this stipulation is moot.

3. The Claimant (date-of-birth, October 7, 1983) worked as a cook for the Employer on February 24, 2017.

4. Laura Sosnowski (hereinafter "Sosnowski"), the General Manager of the Employer's restaurant, testified that the Claimant was a good worker. On an unknown date, however, she and Executive Chef Patrick McCready (hereinafter "McCready") met with the Claimant for a coaching session in which they discussed the Claimant showing up to work intoxicated. Sosnowski stated that she was trained to recognize symptoms of intoxication, and she observed the Claimant with slurred speech, flushed cheeks, and acting unfocused and clumsy. Sosnowski informed the Claimant that the Employer had a zero tolerance policy for workers intoxicated on the job. She further told Claimant that this was his last chance; he would be fired if she suspected him of drinking in the future.

5. According to. McCready, the Claimant was "a drinker". McCready personally observed the Claimant shaking while at work. When this occurred, McCready watched the Claimant go to the bathroom. When the Claimant came out of the bathroom, McCready smelled mouthwash on the Claimant's breath, and the Claimant no longer shook. Additionally, the Claimant's speech was slurred and he repeated questions. McCready further testified that during the coaching meeting with Sosnowski, the Claimant admitted he was intoxicated at work. Claimant said, "Yeah, you got me."

6. According to the Claimant, he generally drinks beer 2 to 3 times per week with friends. He explained that he consumes 2 to 3 beers on each occasion. Based on the totality of the evidence, the Claimant's version of his drinking habits stretches credulity. He admitted that his birthday was the only time he was on a drinking binge.

That binge consisted of 2 to 3 beers and 2 to 3 shots of Jim Beam whisky. The Claimant disagreed with the note in his records from Denver Health Medical Center that stated he said that he consumed a fifth of whisky.

7. According to the Claimant, on February 24, 2017, the only events he remembered were waking up, getting dressed, and going to work. He remembered that he entered work through the back door of the restaurant, but he did not recall anything else from that day.

8. Sous Chef and the Claimant's coworker, Hannah McGowen (hereinafter "McGowen"), reported that the Claimant arrived at work at approximately 8:30 AM on February 24, 2017 (Respondent's Exhibit F, p. 10). The Claimant was supposed to arrive at 9:00 AM. *Id*. When McGowen confronted the Claimant about his time, "he believed the time to be twenty minutes later than it actually was." *Id*. While talking to the Claimant, McGowen noticed that the Claimant's speech was labored and slow. The Claimant had difficulty choosing words and forming full sentences. While McGowen and the Claimant were beginning their prep work, the Claimant asked McGowen the same question, three different times. McGowen answered the Claimant with a direct answer each time.

The Stairs Incident of February 24, 2017

9. McCready testified that on February 24, he arrived at work, spoke to McGowen about the Claimant's appearance of intoxication, and went to the basement locker room to change into his work clothes. While in the basement, McCready observed the Claimant come down the stairs to the basement, grab a box of red potatoes (weighing approximately 50 pounds), and continue up the stairs. The Claimant stopped a couple steps from the top of the stairway for a few seconds, and then he fell backwards. The Claimant landed mostly on the back of his head and his upper shoulders. McCready observed that the Claimant did not reach out for the railing (although there was a railing present) and the Claimant did not slip on the stairs. McCready also observed that Claimant did not hit his head on anything prior to hitting the floor.

10. After the fall, McCready went over to the Claimant and observed that the Claimant's eyes were watery and he smelled of alcohol. The Claimant never lost consciousness after the fall. McCready asked to see the Claimant's head, but the Claimant said no and insisted that he was fine. The Claimant started to pick up the potatoes that had spilled, but McCready told him to sit down and rest. At that point, McCready sent the Claimant home for the day. When McCready picked up the potatoes that had fallen, he did not see any blood on the floor.

11. The next day, February 25, 2017, the Denver Fire Department and Denver Health Paramedics responded to the Claimant's address at 2744 Champa St., Denver,

CO 80205 at approximately 12:36 PM. The Claimant suffered a seizure and had fallen. His roommates, who were intoxicated when they spoke with emergency personal, indicated that the Claimant drank alcohol and smoked marijuana the night before. The Fire Department's report stated "[h]is roommates stated he is a heavy drinker." (Respondents' Exhibit K, p. 21). The Paramedic's report noted that the Claimant had "[a]pprox. 10 cm diameter hematoma to left parietal aspect of scalp. Quarter-sized abrasion to occipital aspect of scalp. Quarter-sized hematoma to right orbital, lateral to eye" (Respondents' Exhibit L, p. 22).

Medical

12. The paramedics transported the Claimant to Denver Health Medical Center. The Claimant stayed in the hospital from February 25 to March 23, 2017 due to an epidural hematoma and skull fracture on the right side of his head, a subdural hematoma on the left side of his head, and he underwent two craniotomies for these hematomas. The first craniotomy was on February 25, 2017 on the right side of Claimant's head (Claimant's Exhibit 6, p. 28). The second craniotomy was on February 26, 2017 on the left side of Claimant's head (Claimant's Exhibit 6, p. 42).

13. A drug test was conducted upon the Claimant's arrival at the hospital. The results of the drug test gave a negative indication for alcohol (Claimant's Exhibit 6, p. 25). This occurred more than twelve hours after the Claimant had anything to drink and it is consistent with a seizure from alcohol withdrawal, according to L. Baron Goldman, M.D., the Respondents' Independent Medical Examiner (IME).

14. The Claimant was in Denver Health Acute Rehabilitation Unit from March 23 to April 5, 2017 (Claimant's Exhibit 8, p. 234).

15. The Claimant visited the emergency room (ER) at Memorial Health University Medical in Savannah, Georgia on May 7, 2017 for a headache. He was referred for occupational therapy at The Neurological Institute of Savannah and Center for Spine which he visited on May 16, 2017 (Claimant's Exhibits 9-10).

Independent Medical Examination (IME) of Bennett I Machanic, M.D.

16. Dr. Machanic performed an IME at the Claimant's request on or about September 6, 2017. Dr. Machanic's ultimate opinion was that Claimant sustained a work-related injury on February 24, 2017 by falling down the stairs at work. Dr. Machanic found the two fractures to Claimant's skull to be significant. According to Dr. Machanic, the Claimant likely sustained the first fracture to the left side of his skull and a subdural hematoma at the fall at work. He then had subsequent superimposed complications on February 25, 2017, that caused the fracture on the right side of his head along with the epidural hematoma requiring critical care at Denver Health Medical Center (Claimant's Exhibit 12, p. 276). Although Dr. Mechanic noted that the Claimant's

medical records from Denver Health suggested heavy drinking, he also noted that there was suggestion that Claimant "had a very modest social alcohol situation." *Id*. That coupled with the fact that the toxic screen came back negative, led Dr. Machanic to conclude that an alcohol abstinence seizure was unlikely. The ALJ infers and finds that Dr. Machanic's underlying assumptions with regard to the Claimant's alcohol usage are inconsistent with the totality of the evidence and, therefore, seriously undercuts Dr. Machanic's ultimate opinions regarding "causation."

IME of L. Barton Goldman, M.D.

17. Dr. Goldman performed an IME at Respondents' request on or about August 9, 2017. Dr. Goldman's ultimate opinion was that Claimant sustained a "non-work-related traumatic brain injury as a result of alcohol abstinence seizures and complications thereof including a fall fracturing his temporal bone occurring February 25, 2017" (Claimant's Exhibit 11, p. 270). Also, Dr. Goldman concluded that it was unlikely that the Claimant's alcohol-induced fall at work on February 24, 2017, and the accompanying occipital abrasion, were predisposing factors to the Claimant's seizure on February 25th, which caused the substantial injuries required lengthy hospitalization..

18. Dr. Goldman was of the opinion that the doctors at Denver Health recorded the Claimant having a right temporal fracture with an epidural hematoma and a left subdural hematoma. Dr. Goldman stated that these injuries on the sides of the head were consistent with head shaking during a seizure and fall on the floor. Dr. Goldman also stated that the CT scan from February 27, 2017 was the only CT scan that mentioned a fracture on the left side of Claimant's head. Dr. Goldman explained that when a craniotomy is performed, the surgery involves breaking open the skull and small fractures can be incidental from that procedure.

19. Additionally, Dr. Goldman was of the opinion that the occipital abrasion described in the paramedic's report is a scrape-like injury to the back of the head. Dr. Goldman was of the opinion that this abrasion was caused by the Claimant's fall at work on February 24, 2017 and would unlikely be the cause of a seizure. Because the Claimant's fall on the 24th was described as the Claimant falling directly on the back of his head and not hitting his head on anything during the fall, it is unlikely that the severe injuries sustained to the sides of Claimant's head were caused by the alcohol-induced fall on the 24th. Dr. Goldman explained that the occipital bone is a thicker bone of the skull, and a safer area of the head to hit. He further was of the opinion that if this was the cause of the Claimant's seizure, the seizure would have been immediate and there would have been much more blood in this area of the skull in the CT scans the following day. Although the CT scans from Denver Health showed some blood pooling in Claimant's occipital region, Dr. Goldman explained that the primary pooling was in the temporal lobes (sides of Claimant's head).

20. Finally, Dr. Goldman's IME states that "[a]lcohol abstinence symptoms can actually occur within 2 – 12 hours of alcohol abstinence" (Respondents' Exhibit T, p. 170). The IME continues by stating that predisposed individuals and those utilizing marijuana can experience seizures within 8 hours of alcohol abstinence. *Id*. Dr. Goldman concluded that the records he reviewed supported the diagnosis of the Claimant sustaining an alcohol abstinence seizure on February 25, 2017.

Analysis of the Evidence

21. Claimant's February 24, 2017 fall at work was not the cause of Claimant's subsequent seizure, fall, and medical care that occurred 28 hours later on February 25, 2017. Although the fall on the 24th occurred at Claimant's place of work, Claimant had no need for medical treatment until after his seizure and fall on the 25th. This was explained by Dr. Goldman's IME and credible testimony. Because Claimant's fall on the 24th did not cause the seizure and fall on the 25th, Claimant did not sustain a compensable injury requiring compensability and medical benefits.

22. Claimant's testimony that he is a moderate drinker is unpersuasive and contradicted by testimony of Sosnowski and McCready. Both Sosnowski and McCready testified that Claimant was intoxicated while at work on a previous occasion. Macready also testified to Claimant's intoxication at work the morning of February 24, 2017.

23. Claimant's testimony about his drinking habits is further contradicted by the Denver Fire Department's report, Denver Health Paramedic's report, and his medical records from Denver Health Medical Center. The Fire Department and Paramedic's reports noted that Claimant had been drinking and smoking marijuana prior to his seizure and was known as a "regular drinker". Doctors at Denver Health Medical Center noted that Claimant admitted to drinking a fifth of whiskey per day. This ALJ has no reason to believe that there is not some truth and credibility to these statements made to medical personal. Medical information given in an emergency situation is for the purpose of assessing and treating a patient. Although, Claimant pointed out in closing that he received a traumatic brain injury and could have been incoherent upon making statements to doctors, there are additional statements supporting Claimant's heavier drinking habit, not just his comment to doctors that he drinks a fifth of whisky each day.

24. Both McCready's and Sosnowski's testimonies were credible and persuasive. As they both mentioned in their testimonies, the Employer's restaurant closed shortly after the incident in this case. Neither Sosnowski nor McCready have incentives to lie in their testimony as they no longer work for the Employer. Further, both their testimonies are consistent to each other's; particularly in regards to their counseling meeting with the Claimant when he was found intoxicated at work on a prior occasion.

25. Dr. Goldman's testimony was credible and more persuasive than Dr. Machanic's IME Report. Dr. Goldman's testimony and medical evaluation was supported by the Claimant's medical record, his review of the facts of the Claimant's fall on February 24th; and, the seizure and fall on February 25th, and the history given by the Claimant, Sosnowski, and McCready on October 3, 2017. Although Dr. Machanic's IME was also supported by Claimant's medical records and facts of both falls, Dr. Machanic did not offer any opinions concerning Claimant's drinking habits on either incident of February 24th or 25th. Dr. Machanic noted the medical records contained contradictory findings of Claimant being a heavy drinker, but it does not appear that Dr. Machanic was aware of the Claimant's drinking issues at work nor the reports from Denver Fire Department or Denver Health Paramedics. Further, Dr. Machanic's opinion as to the causes of Claimant's temporal skull fractures was not as persuasive as Dr. Goldman's opinion concerning their cause. Thus, this ALJ finds Dr. Goldman's testimony and opinion more persuasive than Dr. Machanic's contradictory IME opinions.

26 The ALJ makes the rational choice, based on substantial evidence, to accept Dr. Goldman's expert testimony that the Claimant's medical care, which began on February 25, 2017, was caused by an alcohol abstinence seizure and subsequent complications; not a work-related injury. There is substantially more evidence in the record supporting Dr. Goldman's medical opinion over that of Dr. Mechanic's IME. Claimant's fall down the stairs at work the morning of February 24th did not cause the seizure, fall, and subsequent medical care from February 25th. Further, this ALJ rejects any testimony and/or opinions to the contrary.

27. Claimant failed to establish his burden of proof. As found herein above, his testimony about his alcohol consumption was contradicted by testimony of other witnesses and evidence presented in the record--other witnesses who were more credible than the Claimant. It is more reasonably probable that the Claimant's medical care beginning on February 25, 2017 and continuing to the present were from an alcohol abstinence seizure and subsequent complications, not from his fall at work on February 24, 2017. It is not reasonably probable that Claimant's seizure from February 25th was caused from a work-related injury.

Ultimate Findings

28. The Claimant's testimony regarding his moderate alcohol consumption was contradicted by Sosnowski and McCready's observations of him in the workplace; Claimant's roommates' statements to the Denver Fire Department and Denver Health Paramedics; and his medical reports from Denver Health Medical Center. The ALJ finds that the Claimant's testimony lacks credibility, whereas Sosnowski's and McCready's testimony is persuasive and credible. They have less of a stake in the outcome; their testimonies are consistent; and, their testimonies outweigh the Claimant's version of events.

29. The ALJ makes a rational choice between any conflicting versions of events and medical opinions based on substantial evidence in accepting Dr. Goldman's medical opinion that Claimant's seizure and fall on February 25, 2017 was a non-work related traumatic brain injury, and rejects any testimony and/or opinions to the contrary.

30. The Claimant did not prove by a preponderance of the evidence that his fall at work on February 24, 2017 caused the subsequent seizure and fall on February 25, 2017 and the ensuing, ongoing medical treatments.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, this ALJ makes the following Conclusion of Law:

Compensability

a. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1)(b), C.R.S. When a claimant, at the time of an injury, is performing a duty with which the employee is charged as a part of the contract for service, or under the express or implied direction of his employer, the employee is within the course of his employment under the Workers' Compensation Act. *Colorado Civil Air Patrol v. Hagans*, 662 P.2d 194, 196, (Colo. App. 1983). "An employer is responsible for the direct and natural consequences which flow from a compensable injury." *Hembury v. Indus. Claim Apps. Office*, 878 P.2d 114, 115 (Colo. App. 1994). It is a question of fact if the subsequent injury is the direct and natural consequence of the compensable injury. *Id*. As found, the Claimant did **not** sustain a compensable injury on February 24, 2017, when he fell down the stairs at work.

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Apps. Office*, 183 P.3d 784 (Colo. App. 2008); *Kroupa v. Indus. Claim Apps. Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Apps. Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Apps. Office*, 297 p.3d 964, 2012 COA 85. The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon

appropriate research); the motives of a witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil, 3:16 (2005). As found, the Claimant's version of matters was not credible because it was contradicted by the weight of the evidence. The testimonies of Sosnowski and McCready were credible.

c. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. 131, 134 P. 254 (1913); *also see Heinicke v. Indus Claim Apps. Office*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof) when determining credibility. *See Young v. Burke*, 139 Colo. 305, 338 P.2d 284 (1959). As found, the expert opinions of Dr. Goldman were more credible and persuasive than the opinions of Dr. Machanic.

Substantial Evidence

d. An ALJ's factual findings must be supported by substantial evidence in the record. *Pain Connection Plus v. Indus. Claim Apps. Office*, 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Apps. Office*, 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Apps. Office*, 131 P.3d 1172 (Colo. App. 2005); *also see Martinez v. Indus. Claim Apps. Office*, 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). It is the sole province of the fact-finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus Claim Apps. Office*, 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Goldman and to reject the opinions of Dr. Machanic.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing his entitlement to benefits. §§ 8-43-201 & 8-43-210, C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Apps. Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Indus Claim Apps. Office*, 24 P.3d 29 (Colo. App. 2000); *Kieckkhafer v. Indus. Claim Apps. Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim. Apps. Office (ICAO), March 20, 2002]; *also see Ortiz v. Principi*, 274 P.3d 1361 (D.C.

Cir. 2001). “Preponderance” means “the existence of a contested fact is more probable than its nonexistence.” *Indus. Claim App. Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain his burden on compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers’ compensation benefits are hereby denied and dismissed.

DATED this_____day of October 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of October 2017, electronically in PDF format, addressed to:

Division of Workers' Compensation
cdle_wcoac_orders@state.co.us

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury as a result of a fall at work which occurred on April 4, 2017?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related medical treatment stemming from this work injury?

III. Is Concentra the Authorized Treatment Provider for Claimant?

IV. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability payments, beginning May 4, 2017?

V. Have Respondents shown, by a preponderance of the evidence, that Claimant voluntarily resigned her position with Employer on August 28, 2017?

STIPULATION

I. The parties have stipulated that Claimant's Average Weekly Wage is $371.30. This Stipulation was accepted by the ALJ.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant began working for Employer on April 3, 2017. Employer, operating under the name Target CW as an employee placement service, placed Claimant at a company called Microchip. Claimant was to begin training on that date.

2. Claimant testified at hearing that on April 4, 2017, she arrived at work around 6:50 A.M. It had snowed the night before, so Claimant stopped inside the front doors to wipe her feet on the mat just inside the doors. As she was doing so, she slipped and fell, landing in an awkward position. Claimant described this fall to medical providers as a "hurdling" or "splits" position, with her right foot forward. In so doing, she twisted her left knee and was unable to rise from the floor under her own power. A coworker who was looking for Claimant soon arrived and helped her up from the ground.

3. Claimant did not seek immediate medical attention for her injury. She explained that she hoped her condition would improve without the need for medical treatment, and so put off medical attention until it became clear the condition would not improve on its own. She testified that on April 18, 2017 she notified Employer's Human

Resources representative that she sustained an injury and would need a workers' compensation referral. Employer provided Claimant with a list of providers the following day.

4. Claimant first sought medical treatment with Concentra Medical Centers ("Concentra") on April 20, 2017. (Ex. B, pp. 18-30). Her intake form reports a mechanism of injury similar to her testimony at hearing. An x-ray was performed that revealed no fractures or dislocations, and she was given an initial diagnosis of a left knee sprain. At Claimant's request, she was released at that time *without restrictions* as Claimant expressed concern about being fired from her job, as she was a new hire. Randall Jones, D.O. referred Claimant for six sessions of physical therapy. At the time of her visit with Dr. Jones on April 20, 2017, he noted that Claimant's left knee exam showed "No tenderness except over the medial joint line, over the medial collateral ligament and the *medial* tibial plateau" (Ex. B, p. 56)(emphasis added).

5. Claimant reported to her physical therapist that following the alleged April 4, 2017 injury, she walked two miles**.** (Ex. D, p.68). On exam, Claimant was positive for medial meniscus involvement and irritation. Claimant continued to participate in physical therapy and reported feeling better on May 1, 2017. (Ex. D., p. 72). On May 2, 2017, Claimant reported that her knee pain "really didn't hurt or anything". (Ex. D, p. 75). Due to reports of joint tenderness and clicking, Claimant was also referred for an MRI. The medical history Concentra obtained from Claimant did not include her prior treatment for left knee pain in 2014.

6. Charles Wennogle, M.D. performed an MRI on Claimant's left knee on May 1, 2017. (Ex. 9, pp. 252-253). Dr. Wennogle noted the presence of a "nondisplaced likely impaction fracture, nondepressed, . . . of the *lateral* tibial plateau" and "a high-grade partial but near complete tear of the ACL . . . and only a few fibers remaining intact. *No effusion* or loose body is seen". *(emphasis added)*

7. Claimant returned to Concentra on May 2, 2017. (Ex. 12, pp. 288-302). On that date Claimant provided a more detailed history of her April 4, 2017 injury to Michael Simpson, M.D., an orthopedic surgeon. She then noted that she noticed immediate discomfort and swelling after the injury, with the swelling becoming progressively worse over a period of 12 hours. She additionally reported instability in her left knee, although the use of a hinged knee brace helped this condition to some extent. Dr. Simpson confirmed the MRI findings, including "a *near* complete rupture of the anterior crucial ligament", as well as "significant bone contusions to the *lateral* tibial plateau". Dr. Simpson recommended against immediate surgical intervention, although he stated that "[i]f she is having issues with instability at some point down the road, whether it be in the near future or the distant future, then an anterior cruciate ligament reconstruction . . . would be appropriate." (emphasis added). At this visit, Claimant did not disclose to Dr. Simpson that she had been diagnosed with a partial ACL tear in 2014, nor was any mention made of her constellation of symptoms from that time period.

8. Claimant saw Dr. Nicholas Kurz, DO with Concentra on May 4, 2017 for a follow-up. She was still diagnosed with a left knee sprain, but was still cleared to return to work full time. At this visit, Claimant was placed on work restrictions, to include sitting 80% of the time, no climbing of any sort, limited lifting, no kneeling or squatting, and wearing a brace. (Ex. B, p. 78). Payroll records show that Claimant was last paid for one 8-hour shift for the week ending May 7, 2017, but the actual date Claimant worked is unclear. The ALJ finds that this final shift could have been worked as early as May 1, 2017. (Ex. J, p. 149).

9. Claimant returned to Dr. Simpson on May 9, 2017. (Ex. 12, pp. 306-307). Dr. Simpson reported that "unfortunately, [Claimant] returned to work" and that her condition had worsened with significant pain, swelling, and instability in her left knee. Because Claimant was "no longer able to work because of pain in her knee and sensation of the knee giving out," Dr. Simpson decided that Claimant had become an appropriate surgical candidate for an arthroscopic anterior cruciate ligament reconstruction. Dr. Simpson scheduled Claimant for this surgery on May 18, 2017.

10. On May 17, 2017, Respondents told Claimant that her surgery was cancelled, and that they were investigating her claim. Claimant returned to Concentra for her follow up appointments on May 23, 2017, June 20, 2017, and July 18, 2017. (Ex. 12, pp. 311-319.). During this period she was restricted to sedentary work. On the May 23, 2017 visit with Dr. Kurz, it was noted that his impression that she had a "closed fracture of left tibial plateau *with routine healing*". (Ex B, p. 50). On the June 20, 2017 visit, Dr. Jones noted that "she is frustrated, as *no prior hx (history) of left knee* problems." (emphasis added). The ALJ notes that the medical records from 2017 are devoid of any mention of her 2014 problems with either her left *or* her right knee.

11. The latest Concentra record indicates that Claimant continued to remain on modified or restricted duty by various physicians up through her last noted visit of August 17, 2017.

12. Claimant attended Respondents' Independent Medical Examination with Dr. Timothy O'Brien on August 16, 2017. (Ex. 15, pp. 330-48). Dr. O'Brien reviewed Claimant's medical record, performed a physical examination, and took an oral history from Claimant. Dr. O'Brien concluded that Claimant's diagnosed anterior cruciate ligament tear stemmed from a prior injury which had occurred in 2014. Dr. Waskow had also diagnosed Claimant with patellofemoral syndrome in 2014. Dr. O'Brien noted that the changes documented on Claimant's 2014 MRI were identical to the changes documented on Claimant's 2017 MRI; however, Claimant's 2017 MRI showed no effusion, which further establishes that Claimant's partial ACL tear is chronic. Dr. O'Brien criticized Dr. Simpson for his representation that Claimant had a large effusion as multiple other doctors and the 2017 MRI showed no effusion, and for recommending surgery without exhausting non-operative treatment. He testified that had Claimant experienced the injury as alleged, one would expect the bloody effusion to last in the MRI from 6 to 12 weeks. He further concluded that although Claimant did fall on April 4, 2017, such fall resulted in only a minor knee sprain.

13. Dr. O'Brien opined that if Claimant had sustained an acute ACL tear and lateral tibial plateau fracture, she would not have been able to walk, as it would have produced massive swelling and bleeding into the joint almost immediately. Dr. O'Brien noted that several weeks after the alleged April 4, 2017 injury, Claimant sought treatment with Dr. Ripp, who referred to Claimant's injury as a "superficial knee injury" and he did not note any swelling or bleeding into the joint. Claimant had then presented to Concentra on April 20, 2017 with no swelling or bleeding into the joint. Further, Claimant did not present with *lateral* joint line tenderness, which is what she should have demonstrated if she had an acute lateral tibial plateau fracture. Instead, Claimant was tender on the *medial* side only.

14. Dr. O'Brien further opined that Claimant's ACL tear and lateral tibial plateau fracture are not work-related, as they are chronic, pre-existing conditions that were not aggravated or accelerated by this fall. Dr. O'Brien testified that there was no special hazard of employment. Dr. O'Brien opined that Claimant sustained a minor non-disabling left knee strain/sprain, which resolved with no impairment and no need for future medical care, and that there was no reason that Claimant cannot work without restrictions.

15. Prior to her April 4, 2017 fall, Claimant had treated at Colorado Springs Health Partners for left knee pain on June 26, 2014. Catherine Hayes, PA-C, documented that Claimant reported left knee pain since June 2013. PA-C Hayes reported that Claimant previously had a steroid shot which had improved her pain. The pain returned in April 2014, and a MRI was ordered, which showed a large knee joint effusion, soft tissue edema, a popliteal cyst (possible cyst rupture), possible ACL tear, and mild osteoarthritis changes. At the time of this exam, Claimant denied any specific injury to her left knee. Claimant was referred to physical therapy and later to an orthopedist on July 28, 2014. (Ex. G, pp. 84-85).

16. On July 9, 2014, Claimant presented for physical therapy at UC Health for left knee pain, which she reported had been ongoing for at least one year. Claimant told her physical therapist that she had an MRI of the left knee, which showed a partial ACL tear. Claimant was on Vicodin for pain, using crutches, and wearing a brace. Claimant reported that descending stairs increased her left knee pain, which had worsened since April, 2014. On July 15, 2014, Claimant returned to physical therapy and reported her left knee had been swelling at work. Two days later, on July 17, 2014, Claimant reported that her left knee was very painful and waking her up at night. Claimant denied doing anything strenuous outside of physical therapy that day. (Ex. H, pp. 132-137).

17. Claimant returned to Colorado Springs Health Partners and saw Steven Waskow, M.D. on August 21, 2014 for left knee pain, which had been ongoing for at least one year. (Ex. G, p. 86-87). Dr. Waskow diagnosed Claimant with left patellofemoral syndrome, metatarsal facture, and left knee pain. He did not recommend a repair of her partially torn ACL.

18. On August 25, 2014, Claimant presented to Marc Conner, D.P.M., a podiatrist, who also diagnosed Claimant with left patellofemoral syndrome and left knee pain. Claimant presented to Dr. Conner eleven times with left patellofemoral syndrome and left knee pain from August 25, 2014 to July 7, 2016. (Ex. G, pp. 94-129). On December 30, 2016, Claimant saw Charles Ripp, M.D., with leg pain that she reported only went away if she props her legs up. She was noted at this time to be "in acute distress due to pain noted" (Ex. E pp. 79-80).

19. Dr. O'Brien placed significant weight upon the 2014 MRI reading by Steven Waskow, M.D. that found "[t]hickening and increased T2 signal within the anterior cruciate ligament, raising the possibility of partial tear or ligament sprain. Large knee joint effusion is present" (Ex. 4, p. 9). On this basis, Dr. O'Brien concluded that Claimant's anterior cruciate ligament tear pre-dated her April 4, 2017 injury, and that Claimant had reached maximum medical improvement for any injuries she may have sustained on that date. Dr. O'Brien also found Claimant to be an unreliable historian, as she was unable to recall all the details of her prior left knee injury.

20. Claimant subsequently attended an Independent Medical Exam with Timothy Hall, M.D. (Ex. 16, pp. 349-53). Dr. Hall reviewed the medical record, performed a physical exam, and took an oral history from Claimant. He also reviewed Dr. O'Brien's IME report. Dr. Hall disagreed sharply with Dr. O'Brien's conclusions, noting particularly that Dr. O'Brien's interpretation of the 2014 MRI was inconsistent with the actual language of the report. Dr. Hall noted that, although Claimant did not recall her prior left knee problems, she had an extensive medical history and it would be reasonable to forget details of a particular visit years after the fact. Moreover, he noted that despite her extensive medical history, Claimant did not have a history of acute complaints of left knee pain and thus the record did not support a conclusion that Claimant's left anterior cruciate ligament tear was a chronic condition predating her April 4, 2017 injury.

21. Claimant testified at hearing that after she was referred for surgery by Dr. Simpson, Employer told her that they would be unable to schedule her for work until she was able to work without physical restrictions. She explained that once she could return to work at full duty, she could be scheduled to work as normal. As a result, she took up additional hours with Current Catalog, a concurrent employer. She explained that Current Catalog was able to accommodate her sedentary work restriction. Claimant testified that she began working full time at Current Catalog on August 28, 2017 after last working for Employer on May 3, 2017 due to their inability to accommodate her work restrictions. The ALJ finds that Claimant made a rational choice and voluntarily left her employment with Employer on August 28, 2017. She then accepted a full-time position with Current, which was simply more suited to Claimant's wants and needs.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. § 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201.

3. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

Compensability

4. Claimant must prove by a preponderance of the evidence that she is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); S*ee*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

5. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract.

6. The ALJ concludes that Claimant has established by a preponderance of the evidence that she sustained a compensable injury while working for the Employer on April 4, 2017. The extent of said injury is a factual issue to be resolved.

Medical Benefits

7. The claimant has the burden to prove her entitlement to medical benefits by a preponderance of the evidence. C.R.S. §8-43-201. The respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. C.R.S. §8-42-101(1)(a).

8. The claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is *causally related* to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

9. "[I]f a disability were 95% attributable to a pre-existing, but stable condition, and 5% attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling." *Seifried v. Industrial Com'n of State of Colo.*, 736 P.2d 1262, 1263 (Colo. App. 1986). The ALJ finds that Claimant has not met her burden of showing that this fall caused the dormant (if it truly was dormant), pre-existing condition of her partial ACL tear to now become disabling.

10. The ALJ concludes that Claimant is entitled to all reasonable, necessary, *and related* medical treatment as it relates to the April 4, 2017 fall. Some of the treatment Claimant received in the weeks following the fall was a direct result of the injury she sustained when she twisted her knee in falling to the ground that morning. Claimant subsequently had to modify her work in order to accommodate the pain and swelling in her left knee.

11. However, this does not extend to the repair of Claimant's pre-existing partial ACL tear. The medical records and Dr. O'Brien's report and testimony are more persuasive than Dr. Hall's report, and Concentra's initial conclusions- which had been

reached without complete information. While Claimant now states that she did not feel the need to disclose her prior knee issues from 2014, since she thought it was her *right* knee, the ALJ is not persuaded. These issues were serious, involving a partial ACL tear as revealed on her MRI less than three years prior. Further, Claimant did not disclose issues in *either* knee in 2017. Thus, while reasonable minds might differ whether the proposed surgery by Dr. Simpson is now reasonable and necessary, the Claimant has failed to show that such surgery is *causally related* to her fall from April 4, 2017. It is further noted that even with the acute partial ACL tear in 2014, Dr. Waskow did not recommend a surgical repair. No further surgical intervention in 2017 was recommended to address the lateral tibial plateau nondisplaced fracture (regardless of when it may have occurred), since by all accounts it has been healing routinely.

12. The ALJ finds that obtaining the MRI for diagnostic purposes was reasonable, necessary, and related to her fall. This has now been accomplished. Further, and as recommended by Concentra, her physical therapy was also reasonable, necessary, and related to treat her sprained knee. Beyond those modalities and office visits to address the sprain, culminating in a final visit on July 18, 2017, nothing further is warranted.

Authorized Treatment Provider

13. The insurer or employer has the right in the first instance to select the physician to attend the injured employee. Section 8-43-404(5)(a), C.R.S. Once the insurer or employer has exercised its right to select the treating physician, the claimant may not change physicians without permission from the insurer, employer, or an ALJ. *See Gianetto Oil Co. v. Indus. Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996); *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, if the employer fails timely to tender the services of a physician, the right of selection passes to the claimant and the claimant is entitled to have the physician she selects be an authorized treating provider. *Rogers v. Indus. Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Once the claimant selects an authorized treating physician, she is not free to retain additional physicians without procuring permission from the employer, insurer, or an ALJ. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Pickett v. Colo. State Hosp.*, 32 Colo. App. 282, 513 P.2d 228 (1973). Because Respondents did not timely provide a designated provider list consistent with W.C.R.P. 8, the right of selection passed to Claimant. On April 20, 2017, Claimant treated with Concentra, and she continued to do so. Because Claimant chose to treat with Concentra, Concentra is the authorized treating provider.

Temporary Total Disability Benefits

14. To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a

work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998)

15. The ALJ concludes that the April 4, 2017 fall caused a disability resulting in more than three days of wage loss to Claimant. Claimant testified that her job duties both during and after the completion of training would involve significant standing without the opportunity for sedentary work. Claimant testified, and the medical records document, that she had ongoing symptoms of knee pain and instability that prevented her from standing or walking to the extent required for her position with Employer. Indeed, Employer informed Claimant that she could not receive hours until her restrictions on standing were lifted. Claimant was impaired from performing her job duties from May 4, 2017 until August 28, 2017, the date Claimant testified she started working full time with a different employer.

16. A claimant found to be responsible for his or her own termination is barred from recovering temporary disability benefits under the Act. §§ 8-42-103(1)(g), 8-42-105(4). *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). Because the termination statutes constitute an affirmative defense to an otherwise valid claim for temporary disability benefits, the burden of proof is on the Respondents to establish the Claimant was "responsible" for the termination from employment. *Henry Ray Brinsfield v. Excel Corporation,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). Whether an employee is at fault for causing a separation of employment is a factual issue for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008). In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term “responsible” as used in the termination statutes reintroduces the concept of “fault” as it was understood prior to the Supreme Court’s decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995).

17. Thus, a finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to the termination. *Gilmore v. Industrial Claim Appeals Office*, supra; *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.*

18. While the Claimant is a poor medical historian, she testified that she was told by Employer that they could not accomodate her working with restrictions. She was to contact Employer when said restrictions were removed. While the restrictions imposed vary with the medical provider and the date of service, up through the last visit noted of July 18, 2017, Claimant was under some work restriction. This remained in effect until Claimant took other work on August 28, 2017. There is no evidence in the record that Claimant was ever offered modified work by Employer.

19. The ALJ concludes that Claimant did voluntarily resign from her employment on August 28, 2017 when she took her job with Current. Her Temporary Total Disability benefits ended on that date.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury to her left knee on April 4, 2017.

2. Concentra is Claimant's Authorized Treatment Provider.

3. Claimant's request for ACL surgery as proposed by Dr. Simpson is denied and dismissed.

4. Claimant is entitled to all other reasonable, necessary, and related medical treatment to treat her sprained left knee, including treatment occurring to date.

5. Respondents shall pay TTD benefits to Claimant from May 4, 2017 through August 27, 2017.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

1. Did Claimant prove entitlement to TTD benefits from April 10, 2015 to December 29, 2016?

2. Did Respondents prove Claimant is ineligible for TTD benefit after April 29, 2016 because Dr. Hattem released him to regular employment?

3. Did Respondents prove TTD benefits should be denied or reduced due to earnings from work?

FINDINGS OF FACT

1. Claimant worked as a pilot and aircraft mechanic for Employer. He sustained an admitted industrial injury on February 25, 2014 when he was struck by a propeller. Claimant sufferd multiple injuries, the most significant of which involved his right shoulder and neck.

2. Employer referred Claimant to Emergicare for authorized treatment, where he came under the care of Dr. Cynthia Lund. Claimant reported improvement with a few weeks of physical therapy and Dr. Lund discharged him on March 13, 2014.

3. Claimant returned to Dr. Lund on August 21, 2014 due to persistent right shoulder/trapezius pain and neck pain radiating into his right arm. Dr. Lund sent Claimant back to physical therapy. He also received dry needling and trigger point injections.

4. Claimant saw Dr. Dwight Leggett on December 11, 2014 for consideration of injections. He reported pain primarily on the right side of his neck into the right shoulder and a large "knot" in the trapezius. His symptoms were aggravated by bending to the right, repetitive motions, lifting and carrying objects. The level of pain varied depending on his activity level. Physical examination showed a large fibrocystic nodularity in the upper trapezius and significant myofascial tightness and tenderness in the mid trapezius, levator scapulae, scalenes and cervical paraspinal musculature. He also had pain at the right C3-C6 facet joints. Dr. Leggett recommended facet joint injections with the possibility of medial branch blocks and rhizotomies.

5. Claimant saw Dr. Gretchen Brunworth for a second opinion on January 22, 2015. He reported ongoing pain in his neck, right shoulder, and right arm. Dr. Brunworth opined Claimant's presentation suggested cervical radiculopathy and recommended a cervical epidural steroid injection.

6. Claimant continued to follow up with Dr. Leggett and received several sets of trigger point injections, which provided temporary relief.

7. Claimant saw Dr. Albert Hattem on February 18, 2015 for an Independent Medical Examination (IME) at Respondents' request. Dr. Hattem diagnosed cervical facetogenic pain and opined the industrial injury likely aggravated an underlying pre-existing cervical condition. He thought the right shoulder pain was probably referred myofascial pain from the cervical spine rather than intrinsic shoulder pathology. He opined Claimant was approaching MMI pending additional injections with Dr. Leggett, and could return to work at a "light to medium" physical demand level.

8. Claimant underwent an FCE on April 8, 2015, which showed light-medium lifting abilities and a maximum carrying capacity of 35 pounds.

9. Dr. Lund placed Claimant at MMI on April 10, 2015 with a 15% cervical whole person impairment. She recommended ongoing maintenance care with Dr. Leggett, and assigned permanent work restrictions based on the FCE.

10. Claimant saw Dr. Caroline Gellrick for a DIME on October 2, 2015. His main complaints were neck pain and shoulder pain "to the point that the pain at night in the shoulder keeps him awake and causes insomnia." Dr. Gellrick noted Claimant had received no treatment specifically directed to the shoulder. Examination of his neck showed pain in the paraspinal musculature, right trapezius, and right shoulder. Examination of the right shoulder revealed a positive impingement test, positive supraspinatus testing, and positive Spurling/Weber testing. Dr. Gellrick opined the exam suggested a possible rotator cuff tear.

11. Dr. Gellrick opined Claimant was not at MMI and recommended an MR arthrogram of the right shoulder, followed by evaluation with an orthopedic shoulder specialist. She also recommended a right upper extremity EMG and a cervical ESI. Once those were done, she recommended Claimant see an orthopedic spine surgeon or a neurosurgeon to further evaluate treatment options for the neck.

12. Claimant had the right shoulder MRI arthrogram on February 10, 2016. It was interpreted as showing mild supraspinatus and infraspinatus insertional tendinosis, but no rotator cuff tear. The inferior labrum was partially detached from the underlying glenoid with an adjacent glenoid chondral defect. The AC joint was widened with associated synovitis suggesting a chronic AC ligament tear.

13. Claimant saw Dr. Lund on March 10, 2016 to review the MRI arthrogram. She referred Claimant to Dr. David Walden for evaluation of his shoulder and restricted him to modified duty with a maximum 20 pounds lift/carry and no more than 10 pounds overhead.

14. The parties agreed to a change of physician to Dr. Hattem, who took over as Claimant's primary ATP on April 29, 2016. Dr. Hattem reviewed the DIME report and the MR arthrogram report. Examination of Claimant's right shoulder showed a positive Hawkins impingement maneuver and a positive cross-arm adduction sign. Dr. Hattem noted neither the evaluation with Dr. Walden nor the EMG had been scheduled. He referred Claimant to Dr. Weinstein for a surgical evaluation and Dr. Jenks for the EMG.

Claimant declined the cervical ESI recommended by Dr. Gellrick because he did not feel the previous injections had helped him. Without explanation, Dr. Hattem stated Claimant could work "full duty."

15. Dr. Weinstein performed an arthroscopic subacromial decompression and rotator cuff repair on December 29, 2016. Intraoperative inspection revealed significant inflammation and fraying of the rotator cuff but no discrete tear. The right biceps tendon was torn with significant synovitis. Dr. Weinstein debrided the rotator cuff and performed a biceps tenodesis.

16. Dr. Hattem took Claimant "off work" on January 30, 2017 and Respondents commenced TTD benefits as of that date.

17. Besides his work for Employer, Claimant and his wife own an aircraft-related business, Lamina, Inc. Claimant is the President and his wife is the Secretary. Claimant provides periodic services as a charter pilot, aerial photographer, flight instructor, and aircraft mechanic. He is also certified to perform biannual flight reviews for other pilots. When working as a charter pilot or aerial photographer, Claimant earns $250 per day plus a $50 per diem. All payments for services are made to the corporation and balanced against normal business expenses.

18. Claimant owned Lamina before his date of injury and continues to own the company with his wife. Claimant provided services through Lamina on a sporadic basis, with no regular schedule.

19. Since October 2014, use of Lamina's aircraft has been limited by mechanical and avionics issues.

20. There is no persuasive evidence that Claimant worked or performed any income-generating services for Lamina in 2015.

21. Claimant performed services in May 2016 that generated income for Lamina. He flew as a passenger on an aircraft in Canada which required a U.S. licensed pilot on board. The tasks involved no significant physical exertion or use of the right upper extremity. He received $250 per flight. Claimant did not identify specific dates in May 2016 during which he performed this work, but said it lasted approximately one month.

22. Aside from the work activity in May 2016, Claimant performed no work or services for Lamina that generated income between April 10, 2015 and December 29, 2016.

23. In his hearing testimony, Claimant persuasively described numerous ways that the injury would have interfered with his ability to perform his regular job duties, particularly activities that involved use of his dominant right upper extremity.

24. Employer offered Claimant no work after his injury.

25. Claimant has been disabled from his regular job with Employer since at least April 10, 2015, and lost wages as a direct and proximate consequence of the industrial injury.

26. Dr. Lund and Dr. Hattem issued conflicting opinions in 2016 regarding Claimant's ability to work. Both physicians were "attending physicians" when they issued their respective opinions.

27. When multiple attending physicians give conflicting opinions regarding a Claimant's ability to work, the ALJ must resolve the conflict. Dr. Lund's opinion regarding Claimant's work capacity is more persuasive than the contrary opinion of Dr. Hattem.

28. Claimant's testimony is credible.

29. Claimant proved by a preponderance of the evidence he is entitled to TTD benefits from April 10, 2015 through April 30, 2016.

30. Claimant proved by a preponderance of the evidence he is entitled to TTD benefits from June 1, 2016 to December 29, 2016.

31. Respondents proved Claimant is not entitled to TTD from May 1, 2016 through May 31, 2016, because he was performing modified employment for Lamina.

32. The parties did not try the issue of TPD.

33. Claimant's admitted average weekly wage is $1,242.69, with a corresponding TTD rate of $828.46 per week.

CONCLUSIONS OF LAW

A. Claimant is entitled to TTD benefits commencing April 10, 2015.

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by the inability to resume prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Claimant has been unable to perform his regular job, and therefore "disabled" for purposes of temporary disability benefits, since at least April 10, 2015. Employer was unable or unwilling to accommodate his restrictions and never offered him work after the injury. As found, Claimant sustained a total wage loss since at least April 10, 2015 as a

direct and proximate consequence of his industrial injury. Therefore, Claimant is entitled to TTD benefits commencing April 10, 2015.

B. Dr. Hattem's full duty release does not bar TTD benefits after April 29, 2016.

Once commenced, TTD benefits continue until the occurrence of one of the four terminating events specified in § 8-42-105(3). Termination of TTD under § 8-42-105(3) is an affirmative defense, so Respondents must establish the requisite factual predicates. *Witherspoon v. Metropolitan Club of Denver*, W.C. No. 4-509-612 (December 16, 2004); *Schuldies v. United Sporting Good Wholesale*, W.C. No. 4-413-232 (January 7, 1999).

Respondents argue that Dr. Hattem's April 29, 2016 report releasing Claimant to "full duty" bars TTD after that date under § 8-42-105(3)(c)(3). The ALJ disagrees with Respondents' argument for two reasons.

First, § 8-42-105(3)(c)(3) only addresses the termination of TTD benefits, and Claimant was not receiving any TTD benefits when Dr. Hattem issued his report. Under *Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374 (Colo. App. 2016), "a medical return to work order that predates the commencement of TTD benefits cannot trigger the benefits cessation provisions of section 8-42-105(3) because there are no benefits in place to 'continue until' one of the listed circumstances occurs."

Second, Dr. Lund and Dr. Hattem issued conflicting opinions regarding Claimant's ability to perform regular employment. Dr. Lund had Claimant on restrictions as of her last appointment on March 16, 2016, but Dr. Hattem opined Claimant was at "full duty" when he took over treatment on April 29, 2016.

As a general rule, an attending physician's full-duty release is conclusive regarding a claimant's entitlement to ongoing TTD benefits. *Burns v. Robinson Diary*, 911 P.2d 661 (Colo. App. 1995). But one attending physician's release to regular work is not conclusive if multiple attending physicians give conflicting opinions. *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999).

The ALJ credits Dr. Lund's opinions over Dr. Hattem's in finding that Claimant has been disabled from performing his regular job throughout the requested period of disability. Dr. Lund's restrictions were based on objective data obtained from an FCE, whereas Dr. Hattem gave no explanation for releasing Claimant to "full duty." Dr. Hattem's decision to release Claimant to full duty on April 29, 2016 was curious since he previously opined Claimant was limited to "light to medium" work activities, consistent with the FCE. He had also reviewed the MRI report showing significant pathology and referred Claimant to Dr. Weinstein for a surgical consult. Claimant ultimately had surgery to debride the rotator cuff and repair a torn biceps. Claimant's persuasive testimony also supports a finding he could not have done his regular work. It is not plausible that Claimant could do his pre-injury job without limitation on April 29, 2016.

Accordingly, Dr. Hattem's full duty release does not preclude an award of TTD benefits after April 29, 2016.

C. Claimant is not entitled to TTD benefits between May 1, 2016 and May 31, 2016 because he worked modified employment.

Respondents argue Claimant is not eligible for TTD because he has been concurrently employed by Lamina, Inc. But the mere fact that Claimant owns a partial interest in Lamina does not preclude receipt of TTD benefits. Rather, the dispositive question is whether he performed any services that resulted in remuneration for himself or the corporation, or otherwise earned income as a result of his activities for Lamina. As found, Claimant did not generate any income for or receive any income from Lamina between April 10, 2015 and December 29, 2016, except during May 2016.

Claimant conceded he worked for Lamina in May 2016, but presented no persuasive evidence to prove the exact dates he worked or exactly what he earned. His testimony suggests he performed these activities for most of the month. Therefore, the ALJ has excluded the entire month of May from the period during which Claimant is eligible for TTD benefits.

In reaching this result, the ALJ found instructive the ICAO's decision in *Clemonson v. Lovern's Painting*, W.C. No. 4-503-762 (January 27, 2004), which involved a similar fact pattern. In *Clemonson*, the ALJ awarded approximately six months of TTD benefits. But the claimant had worked for approximately two weeks during that six month period. Specifically, the ALJ found that the claimant "began to run his own painting business again. He did this for approximately two weeks, and had to stop due to pain." The ICAO reversed the award of TTD benefits, reasoning the ALJ should only have awarded *TPD* benefits during that two-week period. The ICAO held

> [T]he claimant worked as a painter in the fall of 2001 and earned wages. Thus . . . claimant was less than totally disabled for at least a brief period . . . . Under these circumstances, the ALJ erred in awarding temporary *total* disability benefits for the entire period . . . . (Emphasis in original).
>
> On remand the ALJ shall determine the period of time the claimant was self-employed as a painter after the industrial injury. The ALJ shall also determine the wages earned by the claimant during this employment. Based upon those determinations, the ALJ shall adjust the award of temporary disability benefits.

Although Claimant has been continuously disabled from a physical standpoint since at least April 10, 2015, his injury-related total wage loss was interrupted by work in May 2016. The modified work was only available through May 31, 2016, after which Claimant's total wage loss resumed. There is no persuasive evidence he performed any other work for pay during the requested period of disability. As in *Clemonson*, Claimant's performance of modified employment rendered him ineligible TTD benefits in May 2016. Consequently, the ALJ concludes Claimant is entitled to TTD benefits from April 10, 2015 through April 30, 2016, and from June 1, 2016 to December 29, 2016.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant TTD benefits at the rate of $828.46 per week from April 10, 2015 through April 30, 2016.

2. Insurer shall pay Claimant TTD benefits at the rate of $828.46 per week from June 1, 2016 to December 29, 2016.

3. Claimant's request for TTD benefits from May 1, 2016 through May 31, 2016 is denied and dismissed.

4. Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. Office of Administrative Courts

ISSUES

I. Whether Claimant has proven a preponderance of the evidence that her workers' compensation claim should be reopened based on a worsening of condition as of February 16, 2017.

II. If the claim should be reopened, whether Claimant is entitled to temporary partial disability (TPD) benefits commencing February 16, 2017 and ongoing.

FINDINGS OF FACT

1. Claimant worked for Employer as a ski instructor. Claimant sustained an admitted industrial injury to her right knee on April 6, 2013 during a ski lesson.

2. Claimant underwent four knee surgeries resulting from the April 2013 industrial injury. Claimant's first surgery occurred on June 10, 2013 with Dr. Thomas Hackett. This right knee surgery involved seven different procedures, including medial and lateral meniscectomies and ACL revision/reconstruction.

3. Claimant's second surgery occurred on August 26, 2014 with orthopedic surgeon Dr. Robert. LaPrade. This surgery included nine documented procedures, one of which was a repair to the failed ACL graft.

4. Claimant's third right knee surgery was performed by Dr. LaPrade on March 12, 2015. This surgery included six procedures, again targeting Claimant's failed ACL graft among other problems.

5. On May 20, 2015, Dr. LaPrade began a workup for evaluation of the etiology of the ACL graft absence. It was determined that Claimant suffered from an infection in the knee known as Propionibacterium acnes. She was referred to Western Infectious Diseases and Dr. Brent Weiland for treatment of the infection. Claimant underwent a course of IV antibiotics, followed by a transition to oral antibiotics.

6. Claimant's fourth knee surgery was performed by Dr. LaPrade completed on December 10, 2015. Seven procedures, including hardware removal, were performed at that time.

7. On March 3, 2016, Claimant presented to her authorized treating physician (ATP), Dr. Brian McIntyre. Claimant reported moderate aching pain at a 4/10, which varied with her activity level. Claimant described increased chronicity and aching in the right knee. Physical examination revealed tenderness above the joint with palpation, including the proximal tibia.

8. On April 18, 2016, Claimant reported to Dr. LaPrade that she was experiencing a continuing feeling of instability and pain in her right knee. The physical examination revealed range of motion of the right knee from 0 to 140 degrees.

9. Dr. McIntyre reevaluated Claimant on April 28, 2016. Claimant rated her pain at a 4/10 and reported continued difficulty with strength, pain and functional activities. Physical examination revealed pain on palpation to the proximal tibia. Dr. McIntyre noted, "She has AMA AROM with PT-Bill Lerch, but good flexion is present and grossly Intact extension to 0°. There is some crepitus present with range of motion." Dr. McIntyre placed Claimant at maximum medical improvement (MMI) with no permanent restrictions. As medical maintenance care, Dr. McIntyre recommended two follow-up visits with Dr. LaPrade within the following year. Dr. McIntyre noted, "She will likely need a full right TKA, at some point in the future."

10. Claimant returned to Dr. McIntyre for an impairment rating on May 17, 2016. Dr. McIntyre assigned a 36% lower extremity (14% whole person) impairment rating. Dr. McIntyre noted Claimant "remained with limited ability and function of the knee for many of the higher level activities she had prior to this long injury course." He further stated, "Multiple second opinions ultimately opine that she will resultantly need a Total knee arthroplasty as (*sic*) some time in the future. This was documented extensively at times with Dr. LaPrade as well as second opinion orthopedics by Dr. James Johnson on 11/23/15."

11. Claimant returned to Dr. McIntyre on June 7, 2016, reporting 3/10 pain. Dr. McIntyre noted, "She presents today with complaint of pain affecting the right knee, variable, with a feeling of looseness and instability – slightly worse than at closing [MMI], but mostly similar." Claimant reported having several episodes of her knee buckling. On examination, Dr. McIntyre noted tenderness to palpation, trace effusion, crepitus on active range of motion, and continued instability of the ACL region. Dr. McIntyre advised that Claimant remained at MMI with no work restrictions.

12. On June 10, 2016, Respondent filed a Final Admission of Liability (FAL), admitting consistent with the ATP's opinion regarding MMI and permanent impairment. Additionally, Respondent admitted liability for post-MMI medical treatment. As stipulated at hearing, Claimant did not request a Division-sponsored Independent Medical Examination (DIME).

13. On August 24, 2016, Claimant presented to orthopedic surgeon Dr. William Sterett. Claimant described right knee pain and instability for "many months." Claimant reported being able to walk and bike. Physical examination revealed mild effusion and passive range of motion of 0/0/140. Dr. Sterett recommended that Claimant undergo repeat blood work and an updated right knee MRI and CT scan.

14. Claimant returned to Dr. LaPrade for a follow-up visit on August 31, 2016. Claimant reported mild pain. Physical examination revealed no significant effusion and a range of motion from 0 degrees down to 140 degrees of flexion. Claimant suspected she might have an infection. Dr. LaPrade aspirated Claimant's knee.

15. Dr. LaPrade reevaluated Claimant on October 12, 2016. Dr. LaPrade noted that recent cultures were negative for infection. Claimant complained of continued right knee pain and swelling. Claimant reported remaining active, "taking care of her children and working part time at a friend's ice cream shop; however, she still has been restricted due to the pain and swelling in the knee." Claimant also reported being able to ride her bike as tolerated. Dr. LaPrade noted that findings of an October 5, 2016 MRI were consistent with what would be expected in Claimant's postoperative state. On physical examination, Dr. LaPrade noted -1 to 130 degrees range of motion, mild swelling which had improved from the last visit, diffuse tenderness, and the ability to straight leg raise with no difficulty. He recommended a one-month course of doxycycline, allergy testing for stainless steel and titanium, and referred Claimant back to her workers' compensation physician.

16. Claimant returned to Dr. McIntyre on November 14, 2016. Claimant rated her pain as a 3/10 and described intermittent but regular swelling with prolonged standing activities. Dr. McIntyre noted some swelling and possibly joint effusion. Dr. McIntyre stated that, with the "high level concerns with Ongoing (sic) and changing/worsening symptomatology, I feel it warranted to have a DIME help with the next best steps forward in care." Dr. McIntyre continued to opine that Claimant remained at MMI with no restrictions.

17. Claimant began work on a part-time basis at a frozen yogurt and coffee shop in late 2016. Her first earnings statement reflects a pay period beginning December 9, 2016.

18. Claimant presented to Dr. Thomas Eickmann on February 16, 2017. Claimant rated her knee pain at a 5/10 and complained of decreased mobility, joint instability, joint tenderness, popping and weakness. On physical examination, Dr. Eickmann noted moderate effusion, diffuse tenderness, and no swelling or crepitation. Active range of motion was 120 degrees flexion and 0 degrees extension. Dr. Eickmann assessed traumatic right knee arthritis and recommended a total knee arthroplasty. Dr. Eickmann opined that Claimant's condition was work-related stating, "Considering her original cartilage injury combined with years of being ACL deficient before and between ACL surgeries as well as a P. Acnes infection as a result of surgery, it appears that her arthritis is all related to her original injury." Dr. Eickmann requested prior authorization for a right knee arthroscopy.

19. Respondents did not deny the total knee arthroplasty recommended by Dr. Eickmann.

20. On April 28, 2017, Claimant underwent an Independent Medical Examination (IME) with Dr. Timothy O'Brien at the request of Respondents. Claimant reported pain at a 4-7/10. Physical examination revealed range of motion of negative 5 degrees to 115 degrees versus 0 degrees to 135 degrees with no medial or lateral instability. Dr. O'Brien concluded that the multiple operations in the workers' compensation claim and those prior "ravaged" whatever remaining cartilage was present in Claimant's knee and accelerated Claimant's underlying osteoarthritis beyond its normal rate of progression.

He opined that Claimant was a candidate for a right total knee arthroplasty. In addition, he opined that Claimant remained at MMI.

21. Dr. McIntyre reevaluated Claimant on May 31, 2017. Claimant reported aching, soreness, looseness, grinding and moderate but worsening pain, which she rated at a 4/10. On physical examination, Dr. McIntyre noted swelling and slight increased warmth. He continued to opine that Claimant was at MMI as of April 28, 2016 without restrictions.

22. On June 22, 2017 Claimant was evaluated by Dr. Eric Richards of Rocky Mountain Infectious Disease Specialists to rule out infection prior to surgery.

23. On July 24, 2017, Claimant underwent an evaluation with orthopedic surgeon Dr. Jason Jennings. Claimant testified that she desired a second opinion with regards to the TKR and she did not want to undergo such a procedure without being thorough. Claimant reported that her pain increased with activity and decreased with rest. Dr. Jennings performed a physical examination which showed range of motion up to 125 degrees. He advised that Claimant was a candidate for a right total knee replacement upon completion of testing for potential infection.

24. Claimant testified that since being placed at MMI, she has experienced more frequent pain, the swelling “is a little bit worse,” and her knee gives out more often than it did in April 2016. Claimant testified that the worsening of her symptoms was a slow progression over time. Claimant stated that by the end of the day, her knee is significantly swollen after working, and that activities have become more difficult due to pain and discomfort.

25. The ALJ credits the opinions of Drs. McIntyre, LaPrade, Eickmann and O’Brien over Claimant’s testimony, and finds that Claimant remains at MMI with ongoing, but not worsening, symptomatology resulting from the April 2013 industrial injury.

26. Claimant has failed to establish by a preponderance of the evidence that her workers’ compensation claim should be reopened based on a change of condition.

27. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence.

Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Petition to Reopen

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the grounds of fraud, an overpayment, an error, a mistake, or change in condition. A change in condition refers either "to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that can be causally connected to the original compensable injury." *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323, 330 (Colo. 2004). The party seeking to reopen an issue or claim bears the burden of proof as to any issues sought to be reopened. Section 8-43-

303(4), C.R.S. A claimant has the burden of proof in seeking to reopen a claim for a worsened condition. *Richards v.Indus. Claim Appeals Office*, 996 P.2d 756, 758 (Colo. App. 2000). 7. The reopening authority granted to an ALJ by Section 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ." *Renz v. Larimer County Sch. Dist. Poudre R-1*, 924 P.2d 1177, 1181 (Colo.App.1996). Moreover, whether the claimant's condition is due to the natural progression of a pre-existing condition or a new industrial accident is one of fact for resolution by the ALJ. *Pavelko v. Southwest Heating and Cooling, LLC*, W.C. No. 4-897-489-02 (ICAO September 4, 2015) (citing *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999)). Further, whether the claimant proved a worsened condition, and whether the worsening was causally related to the industrial injury, are factual issues for resolution by the ALJ. *Id.*

As found, Claimant has failed to establish that it is more probably true than not that she should be permitted to reopen her workers' compensation claim based on a change of her condition. Although Claimant purports that her condition has worsened, the medical records indicate that Claimant's reported pain levels and range of motion have remained relatively stable since being placed at MMI. Claimant continues to suffer from pain, swelling and instability, which were present leading up to and at the time of MMI. While it has been recommended that Claimant now undergo a total knee arthroplasty, Claimant's ATP and Dr. O'Brien opine that Claimant remains at MMI. There has been no change to Claimant's work restrictions. At the time Claimant was placed at MMI, Dr. McIntyre acknowledged that Claimant would be a candidate for total knee arthroplasty in the future. As such, the additional medical treatment now being recommended was contemplated at the time of MMI. Respondents have not denied authorization for such treatment. Based on the totality of the evidence, Claimant has failed to sustain her burden that her petition to reopen should be granted at this time.

As Claimant failed to establish by a preponderance of the evidence that her petition to reopen should be granted, the issue of temporary partial disability benefits is moot.

ORDER

It is therefore ordered that:

I. Claimant's petition to reopen her workers' compensation claim based on a change of condition is denied and dismissed.

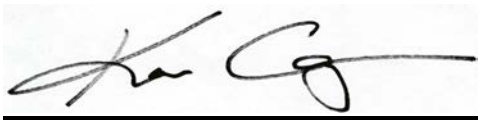
II. The issue of temporary partial disability is denied and dismissed as moot based on Claimant's failure to establish that her petition to reopen should be granted.

III. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 26, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Respondents overcome the DIME's impairment determination by clear and convincing evidence?

2. Disfigurement.

3. Claimant's Response to Application for Hearing endorsed medical benefits after MMI. Claimant's counsel indicated there are no specific medical benefits in dispute, and Claimant is merely seeking a general award of *Grover* benefits. Respondent's counsel stated once permanency is resolved Respondents will file a Final Admission of Liability (FAL) admitting for reasonable, necessary, and related medical benefits after MMI. Claimant's counsel accepted Respondents' representation, so the ALJ need not address *Grover* medical benefits.

4. Claimant withdrew the endorsed issue of average weekly wage.

FINDINGS OF FACT

1. Claimant sustained an admitted injury to her low back on July 9, 2014 while carrying books. She developed intense back pain and lower extremity radicular symptoms. Employer referred Claimant to Dr. Terrence Lakin for authorized treatment.

2. A lumbar MRI on September 10, 2014 showed spondylolisthesis at L4-5 with stenosis and bilateral neural foraminal encroachment, and a small disc/osteophyte at L5-S1 effacing the thecal sac with encroachment on the left S1 nerve root.

3. A nerve conduction study on September 23, 2014 showed mild left S1 radiculopathy.

4. Claimant had a surgical consultation with Dr. Joseph Illig on October 8, 2014, who recommended nonsurgical treatment including epidural steroid injections (ESIs).

5. Dr. Scott Ross administered two lumbar ESIs, which led to some improvement and allowed Claimant to return to work. At that point, Claimant felt she could manage her symptoms with medications and periodic injections, if necessary.

6. Dr. Lakin put Claimant at MMI on March 6, 2015 with a 12% whole person impairment. Respondents filed an FAL admitting for Dr. Lakin's rating and *Grover* medical benefits.

7. Claimant's condition progressively worsened over the next several months, and Respondents voluntarily reopened the claim. On December 15, 2015, she underwent a multilevel decompression and an L3-S1 fusion with Dr. Oderia Mitchell and Dr. Illig.

8. Respondents reinstated TTD benefits as of the surgery date and noted on the GAL they would take credit for PPD previously paid.

9. The surgery was helpful, but Claimant continues to suffer residual back pain with lower extremity weakness and sensory deficits.

10. Dr. Lakin placed Claimant at MMI on January 12, 2017 with a 27% whole person impairment. He did not apportion the prior 12% rating because he was unsure of the legal status of the claim, but he noted "appropriate adjustment may be necessary if the claim was concluded." Dr. Lakin also recommended maintenance care to include periodic follow-up with the surgeons, massage, and acupuncture.

11. Respondents requested a DIME, which was performed by Dr. Richard Stieg on May 2, 2017.

12. At the outset of his report, Dr. Stieg noted he was "confused about this case since I have received two different sets of paperwork from the Division of Workers' Compensation IME Examiner's Summary Sheet." The Division had sent Dr. Stieg a summary sheet relating to Claimant but did not attach the DIME Application. The Division also sent a summary sheet and a DIME Application relating to a different claimant with a 2016 date of injury.[1] Dr. Stieg had the DIME medical records packet with a cover letter from Respondents' counsel. He stated:

> From review of the records (see below) it appears that this woman first filed a claim in 2014 which was closed and then reopened again and I'm going to proceed with this report on the assumption that I am to respond to the inquiry with date of injury of 2016 and respond to Mr. Dworkin, the respondent's attorney, with a copy to [Claimant's] attorney. If that is not the correct response I will need some further direction from both attorneys and the division regarding the enclosed paperwork.

13. Dr. Stieg had no records or information regarding the other claimant besides the forms sent by the Division.

14. Dr. Stieg examined Claimant and reviewed the medical records he received from Respondents' counsel. His report accurately summarizes Claimant's injury and medical history.

15. On physical examination, Claimant exhibited mild to moderate paralumbar muscle spasm and "nearly complete absence of range of motion of the spine," consistent with the multilevel lumbar fusion. She had 4+/5 weakness bilaterally in an L4 and L5

[1] The other claimant's name is very close alphabetically to Claimant's name, so it is likely the clerk in the DIME Unit inadvertently included all the documents in the envelope addressed to Dr. Stieg.

distribution, and mild sensory loss in an L5 distribution in the left leg. She also reported symptoms of weakness and cramping in the calf and thigh muscles, and burning paresthesias in the left lower extremity in an L5 distribution.

16. Dr. Stieg agreed Claimant reached MMI as of January 12, 2017. He calculated a 40% whole person impairment based on specific disorders, range of motion loss, and lower extremity neurological deficits. Dr. Stieg noted, "absent any specific data about claim closure and awards, there is no apportionment appropriate on this current impairment rating." He also agreed with Dr. Lakin's recommendations regarding maintenance care and permanent work restrictions.

17. On June 6, 2017, the Division issued a Notice that it had received the DIME report and considered the DIME "concluded." Respondents timely requested a hearing to challenge the DIME rating.

18. Respondents failed to overcome the DIME rating by clear and convincing evidence.

19. Claimant has a 10-inch long by 1/8 inch wide, irregular, indented and discolored surgical scar on the center of her lumbar spine. The primary scar is flanked along its length by at least 16 pairs of staple/suture scars. The ALJ finds that Claimant should be awarded $3,000 for this disfigurement.

CONCLUSIONS OF LAW

A. Permanent Impairment

The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). This is a higher standard of proof than the typical "preponderance" standard. Clear and convincing evidence is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As found, Respondents failed to overcome the DIME rating by clear and convincing evidence. Respondents have not pointed to any specific error in the DIME's methodology or final rating, but primarily focused on his admitted "confusion" regarding the documents he received from the Division.

Although Dr. Stieg was confused by the paperwork, he was not confused regarding Claimant's injury, her course of treatment, or the nature and extent of her impairment. Dr. Stieg evaluated Claimant and considered her records, and there is no indication he relied on any information relating to the other individual. His report accurately describes Claimant's injury and recounts the treatment she received. There are no readily apparent errors regarding Dr. Stieg's application of the rating protocols outlined in the *AMA Guides*

for spinal impairment. Thus, the paperwork error had no substantive effect on the outcome of the DIME.

B. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if she is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has a 10-inch long by 1/8 inch wide, irregular, indented and discolored surgical scar on the center of her lumbar spine. The scar is flanked along its length by at least 16 pairs of staple/suture scars. The ALJ finds that Claimant should be awarded $3,000 for this disfigurement.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD benefits based on the 40% whole person rating calculated by the DIME. Insurer may take credit for any PPD previously paid to Claimant on this claim.

2. Insurer shall pay Claimant $3,000 for disfigurement. Insurer may take credit for any disfigurement previously paid on this claim.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 27, 2017

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-937-396-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF RESPONDENTS

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for December 15, 2017, in Greeley, Colorado. On September 27, 2017, Respondents filed a Motion for Summary Judgment on the issue of statute of limitations barring the Claimant's claim. On October 16, 2017, Claimant filed a Response to Respondents' Motion for Summary Judgment (consisting of 29 pages, with no attachments, however, referring to exhibits. The matter was referred to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) for a ruling on October 18, 2017.

ISSUE FOR SUMMARY JUDGMENT

The issue to be determined by this decision concerns whether there are genuine issues of disputed material fact concerning the applicability of the statute of limitations to this claim, thus, barring the Claimant's claim. The Statute of Limitations is an affirmative defense which the respondents have raised.

The Respondents bear the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. A hearing is currently set in this matter for December 15, 2017 at 1:00 PM,. in Greeley, pursuant to the Claimant's Application for Hearing. The hearing issues include compensability, medical benefits, average weekly wage (AWW), Petition to Re-open claim, temporary total disability (TTD), and permanent total disability (PTD) benefits and penalties, specifically "Claimant alleges that W.C. No.3-732-757 was filed fraudulently on December 6, 2013 by her Employer in this claim. Respondents raise the affirmative defense of the Statute of Limitations, and assert that the Claimant has not alleged a penalty stated in specificity as required.

2. The Claimant alleges an occupational disease of exposure resulting in lung and dermatologic conditions. She has filed 61 pages of explanation along with her Application for Hearing explaining her position.

3. An Employer's First Report of Injury was filed on December 4, 2013. The First Report notes that the Claimant was a regular employee working as a technical designer for the Employer. It reflects that Claimant informed the Employer that, during desk work activity, while using cloth, the Claimant alleged respiratory disorders of the lung. The form notes that the time of occurrence cannot be determined. It uses April 9, 2013 as the date of onset and the date of reporting.

4. A Notice of Contest was filed by Pinnacol on behalf of Respondents on December 24, 2013. The Division of Workers' Compensation (DOWC) sent the Claimant a letter on December 26, 2013, informing her of her right to file an Application for Hearing to pursue her claim. This letter states, "If you have not filed a Workers' Claim for Compensation, you may wish to do so." No workers' claim for compensation was filed by the Claimant for over 3 ½ years.

5. The Claimant filed an Application for Hearing and 61 pages of argument, along with exhibits, on September 6, 2017, which she refers to as "Request for Hearing." Her alleged work-related occupational disease is "occupational asthmas and contact dermatitis." She states that "this request for hearing is her notice claiming compensation." From page 60 of her filing:

> The Claimant requests a hearing to be set to review Workers' Compensation claim #37332757 filed Dec. 6, 2013 with one DOI of 4/9/2013 for benefits for the Claimant and

> penalties for [Employer] and Pinnacol Assurance. The Claimant notes statute C.R.S. § 8-43-103 (3) "the right to compensation and benefits shall be barred unless, within five years after the commencement of disability or death, a notice claiming compensation is filed with the Division., this request for hearing is her notice claiming compensation. This request for a hearing is within five years of the date of the Workers' Compensation claim filing date of Dec. 6, 2013; of the date of April 11, 2013.

6. Claimant's claim is not for disability or death resulting from exposure to radioactive materials, substances, or machines or to fissionable materials, or any type of malignancy caused thereby, or from poisoning by uranium or its compounds or from asbestosis, silicosis, or anthracnose.

7. As noted by the Claimant in her 61 page filing, there has been a significant amount of correspondence and activity on the part of Claimant since December 26, 2013. Among other things, claimant filed FMLA (Family Medical Leave Act) paperwork, dated July 27, 2014, requesting leave for her serious health condition, signed by Dr. Scott Price. In this document, Dr. Price notes Claimant's condition prevents her from performing her job functions. He states it is medically necessary for Claimant to be absent from work because of "Airway exacerbations worsen at the work place." And that flare ups are "ongoing at the work place." The Claimant wrote the Employer on January 26, 2014 about her condition and her suspicion that it was work related. On June 24, 2014, the Claimant wrote the Employer stating, "I continue to have increasing sickness when at work" Although she acknowledged that testing by both the Employer and Pinnacol Assurance had not supported her claim, she stated that she disagrees, and "I know it is in the building by my sickness and symptoms I continue to have." The Claimant wrote the Employer on August 15, 2014, informing it that she would not be returning to work because, in her opinion, "the building has made me sick and my conditions worsen when in the building." The Claimant's correspondence includes details of Claimant's belief that exposure to something in her workplace had caused her respiratory and dermatological conditions.

8. The Claimant's Request for Hearing admits to knowledge of her condition and claim that that condition was work related as far back as 2012. In her Request for Hearing, the Claimant mistakenly refers to the First Report of Injury as the "Workers' Compensation claim." December 6, 2013 was the date of the First Report of Injury. In her Request for Hearing, the Claimant refers to her Request for Hearing being filed within 5 years of "April 11, 2013, when the Claimant spoke to her supervisor about workplace triggers; of the date of April 12, 2013 when the Claimant had an incident (asthma attack) in the restroom at work; and the date of December 6, 2012 when the Claimant had a Mathacholine Challenge asthma test that showed she had asthma at age 61 with no prior history."

Penalty Request

9. The Claimant has included penalties in her Application for Hearing. Her Request for Hearing and her Application for Hearing indicate that this penalty allegation is that [Employer's] filing of a First Report of Injury on December 4, 2013 was "fraudulent." She states, "[Employer's] fraudulent filing of the Workers' Compensation claim # 3732757 is evident by the filing date of December 6, 2013 being one month after [Employer]. received Dr. Mayer's letter dated 10/21/2013 asking for further information about the workplace and indicating the possibility the building may be to blame." Her accusation centers upon the use of a single date on onset within the First Report of Injury in response to the prompt, "Date of injury/illness" (Exhibit A, Exhibit H).

Analysis

10. It is undisputed that the Claimant has made clear that her suspicions about the connection between her symptoms and complaints and alleged work exposure date back to 2012. She uses April 11, 2013 as the date that she "spoke to her supervisor about workplace triggers." The Claimant stopped working because of her suspicion and filed for FMLA leave. Her Request for Hearing makes it clear that the "discovery" of her workers' compensation claim goes back to at least 2013. It is undisputed that there is no reasonable excuse for extension of the two year statute of limitations, other than the Claimant's mistaken belief that the 5-Year Statute (which applies to fissionable matter, etc.) applied. Even if there was a reasonable excuse,, the Claimant's September 6, 2017 Application for Hearing falls outside of a three year timeframe from her discovery.

11. Section 8-43-103(2), C.R.S. provides that the statute of limitations does not begin to run if the "employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division" as required by the Workers' Compensation Act. An employer has notice of an occupational disease or lost-time injury when it obtains some knowledge of facts connecting a claimant's injury or condition with the employment, and indicating to a reasonably conscientious manager that a the case may involve a potential claim for benefits. A First Report of Injury was filed in this matter on December 4, 2013. The Claimant first gave notice of her claim on September 6, 2017, more than three-years after the Employer filed the First Report of Injury.

Ultimate Findings

12. The Respondents have established, by preponderant evidence that there is no genuine issue of any material fact upon which the Claimant can avoid application of the statute of limitations. A First Report of Injury was filed on December 4, 2013. The Claimant had the required knowledge of a work-related claim by at least that date. She has filed no claim for compensation. She did not file an Application for Hearing until September 7, 2017, more than three-years after she reasonably knew that she had a

workers' compensation claim.

13. It is undisputed that the Employer did not pay the Claimant compensation before her filing of the Application for Hearing (her first notice of a claim); and, it is undisputed that no tolling circumstances existed to stop the statute of limitations from running.

14. It is undisputed that no reasonable excuse existed for the Claimant not timely filing her claim.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, the Motion for Summary Judgment is supported by documents. The Claimant's Response and Cross-Motion for Summary Judgment consists of over 60-pages with no attachments. Nonetheless, it reveals the lack of a genuine issue of disputed material fact concerning the applicability of the statute of limitations.

b. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the documentary evidence establishes that it is undisputed that the Claimant's first written notice of a claim occurred more than three years after she reasonably knew that she had a claim against the Employer.

c. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that

there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Respondents' Motion for Summary Judgment fails to show specific facts probative of their right to summary judgment. The Claimant's Response, however, shows that there is no genuine issue of disputed material fact concerning the filing of the Application for Hearing being more than three years after she reasonably knew that she had a claim.

No Tolling of the Statute of Limitations

d. There are exceptions to the two-year statute of limitations under § 8-43-103(2), but they do not apply in this case. For instance, § 8-43-103(2), C.R.S. provides that: "In all cases in which the employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division as required by the provisions of [the Workers' Compensation Act], this statute of limitations shall not begin to run against the claim of the injured employee … until the required report has been filed with the division." *Likens v. Dep't of Corrs*, W.C. No. 4-560-107 (ICAO Feb. 10, 2004). As found, the Employer filed its First Report of Injury on December 4, 2013, at which time the clock began running.

e. Section 8-43-103(2), C.R.S. further states that the two-year statute of limitations for filing a claim is tolled if the employer pays "compensation" to the claimant. *Bonazzo v. J.A. Jones Const.*, W.C. No. 4-241-121 (Sept. 24, 1998). Finally, § 8-43-103(2), C.R.S. indicates that the statute of limitations will not apply to a claimant "if it is established to the satisfaction of the director within three years after the injury…that a reasonable excuse exists for the failure to file such notice claiming compensation and if the employer's rights have not been prejudiced."' As found, no "reasonable excuse" or any other tolling exception to the statute of limitations has been established.

f. The statutory reporting requirements are set out in § 8-43-101, C.R.S. *See Grant v. Indus. Claim Appeals Office*, 740 P.2d 530 (Colo. App. 1987). § 8-43-101(1), C.R.S. requires that the within ten days after notice of knowledge that an employee had contracted a permanently physically impairing injury or lost-time injury, the employer shall file a report with the division. *Pierce-Kouyate v. Wilson's of Colo. Ltd.*, W.C. No. 4-717-784 (ICAO Nov. 21, 2007). A "lost time injury" is defined as one that causes the claimant to miss more than three work shifts or three calendar days of work, and the employer's notice is measured by the "reasonably conscientious manager" standard. *Grant,* 740 P.2d at 531. The Claimant bears the burden of establishing that there was a tolling of the statute of limitations. *Grant*, 740 P.2d at 532. As found, the Employer filed the First Report of Injury on December 4, 2013; and, the Claimant filed her first written notice of her claim by Application for Hearing, dated September 7, 2017, more than three years after which she reasonably knew about her claim.

Burden of Proof

f. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Respondents have sustained their burden on the applicability of the statute of limitations. The Claimant has failed to sustain her burden on the tolling of the statute.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Summary Judgment is hereby granted in favor of the Respondents.

B. Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this_____day of October 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Claimant suffered a compensable injury on January 20, 2016.

II. Whether Dr. Zuehlsdorff is an authorized provider.

III. Whether the medical treatment provided by Dr. Zuehlsdorff is reasonable, necessary, and related.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was employed by Employer as a paraprofessional and works with students.

2. On October 25, 2015, Claimant went out on medical leave to have heart surgery.

3. On October 27, 2015, Claimant underwent heart valve replacement surgery. The surgery required a thoracotomy. Claimant was ultimately released to full duty.

4. On January 18, 2016, Claimant returned to work with Employer. When Claimant returned to work, she was not having any chest pain.

5. On January 20, 2016, Claimant was working for Employer at Westlake School as a paraprofessional. Claimant was in the hallway talking to one of her students when another male student, who was running down the hallway, ran into the backside of Claimant. Claimant did not fall down, but she was shaken up. After the incident, Claimant had the onset of chest pain across the incision of her heart surgery.

6. On January 21, 2016, the following day, Claimant noticed two lumps in the center of her chest which were very sensitive to touch.

7. On January 21, 2016, Claimant completed a Workers' Compensation Employee's Accident Worksheet which included a pain diagram. Claimant marked the areas of her body that were hurt. Claimant marked the back side of her left arm, the left side of her mid-back, and her left calf. Claimant did not mark her chest. Claimant also stated that: "I was hit by the body of a student in my left arm, ribs, and calve. It left a huge red mark and bruise, fingers were numb most of the day."

8. Claimant was referred by Employer to OccMed Colorado where she was evaluated by Dr. Zuehlsdorff.

9. On February 3, 2016, Claimant was evaluated by Dr. Zuehlsdorff. Dr. Zuehlsdorff's report provides the following history:

> She was on leave of absence from October 25th through January 18th. She did go back to work on January 19th, but on January 20th, she was in the hallway and a male child ran into her, who is a sixth grader and apparently large, and hit her from the left side and jarred her hard to the right and made her twist. She did not fall, but she was shaken up. She noticed later that day that her chest started to ache and had a bump in the mid area where the surgery was performed, as she did have an open thoracotomy due to the recent surgery. She went in and saw Dr. Eysts, her cardiologist, and saw his PA two to three days later, and while an x-ray was not done or any studies, he noted that he felt one of the surgical loop wires may have come loose during the incident in the hallway, and he referred the patient to see the surgeon, who she sees this Friday the 5th. . . . It just hurts there. When sitting, she can feel it lightly, maybe 2-3/10, but when she moves, it is more like 6/10.
>
> She also notes that initially she hurt her left calf and her left arm and flank, but those have pretty much resolved, and she is not worried about them.

10. Dr. Zuehlsdorff's February 3, 2016, assessment included "Chest pain status post collision in hallway with student, possibly impacting a suture wire from recent aortic valve replacement in October of 2015." Dr. Zuehlsdorff indicated Claimant was going to follow up with her cardiologist, Dr. Miller, on February 5, 2016, and return to see Dr. Zuehlsdorff in a week.

11. On February 5, 2016, Claimant went to Dr. Miller's office and was evaluated by Heather Austin, P.A.-C. (Physician's Assistant.) P.A. Austin noted Claimant's subjective complaints as follows:

> [Claimant] is here today for a wound check. She states that a middle school child "hit" her in the back and now she is having point tender pain between her breasts. The AVR surgery was in October 2015-redo sternotomy.

12. P.A. Austin provided the following assessment:

> All wounds well approximated with no evidence of infection. The scar is healing well. The sternum is very stable. There is no shifting or pain with compression. There is some

> tenderness right between the breasts but I don't feel anything out of the ordinary. . . I explained to her that until I have the results of the CXR I can't give her an answer about why she might be having pain there, i.e. wire pain. I also explained that her sternum is stable and that I am not worried about her going back to work. We discussed the possibility of a wire that may need to be removed if the pain continues. I reassured her that this would not compromise the stability of the sternum and she could return to work without restrictions like she had post op.

13. On February 18, 2016, Claimant was evaluated by Dr. Eyster for ongoing chest pain. Dr. Eyster noted that Claimant has been feeling unwell since the accident at school. Dr. Eyster noted that Claimant had the sudden onset of pain after accident in the midsternum wire sites. Dr. Eyster also stated that although the CXR did not show wire breakage, "I do not doubt that a 6th grader running full tilt into a partially healed sternum could cause pain and injury." Dr. Eyster's opinion regarding the cause of Claimant's chest pain and injury is found to be credible and persuasive.

14. On February 19, 2016, Claimant returned to Dr. Zuehlsdorff. His report indicates that Claimant saw the cardiac surgeon a while back and that x-rays were negative and that they were not too concerned. The report also indicates that the cardiologist indicated that they could take out the suture wire, but they probably will not have to. Claimant was still a little tender when she touched her chest, but otherwise there was no pain. Dr. Zuehlsdorff indicated Claimant should return in one month. He also indicated that Claimant might require a minor office surgical procedure to take out the metal suture or sternal wire.

15. In December of 2016, Claimant underwent surgery to have the sternal wire removed. The removal of the sternal wire did not get rid of Claimant's chest pain.

16. Claimant testified at hearing that she did not have chest pain when she returned to work and that she developed chest pain the day of the work accident and continues to have chest pain. Claimant's testimony regarding the onset of her chest pain following the accident at work and the duration of her chest pain is found to be credible and persuasive.

17. The January 20, 2016, accident at work caused Claimant to develop chest pain at her sternum - the site of her heart surgery.

18. The January 20, 2016, accident, which caused Claimant to develop chest pain, triggered Claimant's need for medical treatment.

19. Claimant was referred by Employer to OccMed Colorado - Dr. Zuehlsdorff - so Dr. Zuehlsdorff could evaluate and treat Claimant's chest pain which was caused by the accident.

20. Dr. Zuehlsdorff evaluated and assessed Claimant for her chest pain which was caused by the January 20, 2016 accident.

21. Dr. Zuehlsdorff became an authorized provider.

22. Claimant suffered an injury on January 20, 2016, while working.

23. Claimant's injury arose out of and in the course of her employment.

24. The medical treatment provided by Dr. Zuehlsdorff – in which he evaluated and treated Claimant's chest pain - was reasonable, necessary, and related to the industrial injury of January 20, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of Claimant nor in favor of the rights of Respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert

witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant suffered a compensable injury on January 20, 2016.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

A "compensable" industrial accident is one which results in an injury requiring medical treatment or causing disability. *H and H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988). Where pain triggers Claimant's need for medical treatment, Claimant has established a compensable injury if the industrial injury is the cause of the pain. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949). The term medical treatment includes diagnostic procedures required to ascertain the extent of the industrial injury. See *Merriman v. Industrial Commission, supra*; *Villela v. Excel Corp*., W.C. No. 4-400-281 (February 1, 2001); *Hatch v. John H. Harland Co*., W.C. No. 4-368-712 (August 11, 2000).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990)

In this case, Claimant had just returned to work after being out for heart surgery. As part of her heart surgery, Claimant underwent a thoracotomy in which they had to cut through her sternum in order to gain access to her heart. On January 20, 2016, Claimant was working at Westlake School and talking to one of her students in the hallway when another student ran into her. The accident caused Claimant to develop chest pain in the area of her thorocotomy – her chest.

In order to evaluate and treat her chest pain, which was caused by the accident that occurred while Claimant was working, Claimant was referred by Employer to Dr. Zuehlsdorff. Dr. Zuehlsdorff evaluated Claimant for her chest pain on February 3, 2016, and February 19, 2016. Claimant was also evaluated for her chest pain by Dr. Eyster and Dr. Miller's physician assistant, Heather Austin. The medical treatment was to determine the extent of the work injury and to pinpoint the underlying source of the pain.

Claimant has established by a preponderance of the evidence that her accident and injury arose out of and occurred within the course of her employment and caused the need for medical treatment. Therefore, this ALJ concludes that Claimant suffered a compensable injury on January 20, 2016.

II. Whether Dr. Zuehlsdorff is an authorized provider.

Authorized providers include those medical providers to whom Claimant is directly referred by Employer, as well as providers to whom an ATP refers Claimant in the normal progression of authorized treatment. *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997).

As found, Employer referred Claimant to OccMed Colorado - Dr. Zuehlsdorff. Claimant treated with Dr. Zuehlsdorff on February 3, 2016 and February 19, 2016. Therefore, this ALJ concludes that Dr. Zuehlsdorff is an authorized provider.

III. Whether the medical treatment provided by Dr. Zuehlsdorff is reasonable, necessary, and related.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In this case, Claimant was injured on January 20, 2016. Due to the injury, Claimant developed chest pain. Claimant was referred to OccMed Colorado – Dr. Zuehlsdorff - to be evaluated and treated for her chest pain which was caused by the accident. Dr. Zuehlsdorff evaluated Claimant's chest pain on February 3, 2016 and February 19, 2016 in order to cure and relieve Claimant from the effects of her injury. Therefore, this ALJ concludes that that the treatment provided by Dr. Zuehlsdorff was reasonable and necessary to treat Claimant's January 20, 2016, injury and was also related.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury on January 20, 2016.

2. Dr. Zuehlsdorff is an authorized provider.

3. The medical treatment provided by Dr. Zuehlsdorff on February 3, 2016 and February 19, 2016 is found to be reasonable, necessary, and related to the January 20, 2016 work injury. Therefore, Respondents shall pay for such treatment pursuant to the Colorado Workers' Compensation Fee Schedule.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

I. Whether Claimant suffered a compensable injury on September 28, 2016.

II. Whether Claimant is entitled to medical benefits, including the surgery performed on May 1, 2017, by Lonnie E. Loutzenhiser, M.D.

III. Whether Claimant is entitled to temporary total disability benefits.

EVIDENTIARY RULING REGARDING POST HEARING SUBMISSION

Respondents were allowed to submit, post hearing, a certified copy of the Division of Workers' Compensation file regarding Claimant's prior workers' compensation claims, subject to any objection by Claimant. Respondents filed a certified copy of the Division of Workers' Compensation file regarding Claimant's prior claims. The submission – Division File - contained the partial deposition of Dr. Anthony Euser. Claimant objected to the admission of Dr. Euser's deposition based on hearsay.

This ALJ finds that that the deposition of Dr. Euser is hearsay and not admissible. The mere fact that the deposition was filed with the Division of Workers' Compensation does not make it admissible via a certified copy of the Division file which happens to contain the deposition. See *Leiting v. Mutha*, 58 P.3d 1049, (Colo. App. 2002) *See also Rodriguez v. Suzuki Motor Corp.*, 996 S.W.2d 47, (Mo. 1999) (A document which contains hearsay is not automatically admissible as a public record merely because it is authenticated as an official record or is kept in the working file of a governmental agency.)

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On April 31, 2016, Claimant was hired by Employer as a truck driver. **Ex. MM, Bates 225.** Claimant drove a semi-truck with a side-dumping trailer.

2. On Wednesday, September 28, 2016, at approximately 3:00 p.m., Claimant was involved in an incident at a jobsite. Claimant had a full load of dirt in his side-dumping trailer. The trailer, however, had been over loaded and was loaded unevenly. When Claimant went to dump the dirt, the trailer turned over onto its left side. The cab of the truck, which was attached to the trailer, did not tip over.

However, the trailer twisted the cab and caused the right back wheels of the cab to lift up off the ground. This caused the cab of the semi-truck to lean to one side. **Ex. Q, Bates 158.** Claimant got out of the cab of the semi-truck and took the photos which were submitted into evidence. **Ex. 7 and Q.**

3. Juan Ramirez, owner of Ramco Trucking, came to the jobsite after the incident. By the time Mr. Ramirez arrived at the jobsite, the trailer had been righted back onto its wheels using other equipment on the scene. Mr. Ramirez asked Claimant if he was hurt. Claimant denied he was hurt. Claimant stayed at the jobsite and worked on another trailer that needed some minor mechanical work.

4. After the incident, Claimant returned to the Employer's shop. Ms. Denise Tolmich, who is also an owner of Ramco Trucking, met Claimant at the Employers' shop after the incident. She asked Claimant about the incident and asked Claimant whether he was hurt. In response to several Employer inquiries that day and the day after, Claimant said he was not hurt. Claimant did, however, describe the action or motion of the truck cab as moving in "slow motion" during the incident when the wheels on the right side came off the ground. Claimant did not tell either Mr. Ramirez or Ms. Tolmich that the truck cab rolled completely over and onto its side. After returning to the shop, Claimant worked until 7:48 p.m.

5. Mr. Ramirez testified that there was only minor damage to the cab of the semi-truck. He testified that he believed the minor damage was caused when the trailer was righted after the incident. He explained that there was nothing to stop the fall of the wheels to the ground when it was righted, as opposed to the dirt that was on the drivers' side of the trailer which slowed the tip of the trailer during the incident.

6. On Thursday, September 29, 2016, the following day, Claimant worked 12.36 hours. **Ex. R, Bates 166.** Mr. Ramirez testified that he saw Claimant work in the shop. This included Claimant crawling under the truck checking for and repairing the damage done in the September 28, 2016 incident. Mr. Ramirez did not observe Claimant behaving in any way that indicated he was injured in any way. He asked Claimant repeatedly if he was injured during the incident and Claimant stated he was not.

7. On Friday, September 30, 2016, Claimant worked 10:21 hours. **Ex. R, Bates 166.**

8. Claimant did ask for Monday, October, 3, 2016, off in order to meet with his attorney for his upcoming divorce proceeding.

9. Claimant spoke with Mr. Ramirez on or about Wednesday October 5, 2016, to discuss payment of his wages. Claimant also stated that he was experiencing problems with his back. The conversation seemed peculiar. Therefore, Mr.

Ramirez and Ms. Tolmich purchased a recording device to record their next conversation with Claimant.

10. On October 5, 2016, Ms. Tolmich called Claimant and recorded the conversation. The recorded conversation was played at hearing. In this recording, Claimant began the conversation by asking Ms. Tolmich to hide his wages from his wife in order to prevent her from obtaining money in the divorce proceeding. Claimant stated that he wanted his wages to be "on the down low" and asked her to only show his earnings to be $1,100 per month. He asked for this with the express purpose of hiding his wages from his wife and the court in his divorce proceeding. Ms. Tolmich asked Claimant about the work incident and about his back. Claimant stated that he didn't know if he hit the driver's side door or not during the incident, and described the motion of the truck cab as slow motion, like one feels when driving around a corner in a car. When asked about his back complaints, Claimant said that he had aches and pains that he thought were from old age. He said that he historically took over the counter medication every morning and every night for his back. Claimant was asked directly by Ms. Tolmich if he wanted her to file a workers' compensation claim. Claimant said that he did not want to do that. Ms. Tolmich told Claimant that she would not agree to alter records regarding his wages. She offered to reduce Claimant's hours. He refused this, and again indicated that he wanted money owed to him for working to be hidden. Ms. Tolmich told Claimant that she could not do that, and told Claimant that she either needed to file a workers' compensation claim or have Claimant sign a waiver saying he did not wish to file a worker's compensation before she allowed him back to work. Claimant ended the conversation saying that he would meet with his attorney and then call back and let them know if he wanted a workers' compensation claim filed. Claimant did not call back, and Ms. Tolmich called him, again recording the conversation. Claimant told her at that time that he wanted her to file a workers' compensation claim for the incident of September 28, 2016.

11. A first report of injury was filed by the employer the next day on October 6, 2016, and Claimant was provided a choice of provider. **Ex. MM.**

12. Claimant was seen on October 7, 2016, by Advanced Urgent Care. Although Claimant first denied any injuries, and then only made reference to his back when he discussed the matter with Employer, an M164 was completed by Anita Burge, NP, showing complaints of right knee pain, back pain, c-spine, t-spine and L-spine. **Ex. NN, Ex. 1, p. 6.** Claimant was provided no work restrictions. Claimant testified that he brought this form to his employer and left it with them. Claimant did not return to work with Employer.

13. On October 21, 2016, a notice of contest was filed. **Ex. LL.**

14. On October 21, 2016, Claimant appeared in the emergency department of Platte Valley Medical Center. He complained of low back and mid back pain, and noted

that he had fallen twice that morning. He described the incident of September 28, 2016 as a motor vehicle collision ("Patient post MVC 09/28/16" "Truck roll over.") **Ex. 1, Bates. 44, 48, 50.** This characterization of the incident by Claimant continued from this point in his treatment. ("Patient was in a tractor and it flipped.") **Ex. P, Bates 135.** CT Scans of the lumbar, cervical, and thoracic spine were taken during the October 21, 2016 emergency room visit. **Ex. 1, Bates. 46-47.** Medical treatment continued with Dr. Julie Parsons, M.D. Julie Parsons, M.D. referred to Ryan Mansholt PAC on November 17, 2016, for treatment of "low back strain." **Ex. 1, Bates. 73.**

15. Claimant testified that the incident caused the cab of the semi-truck to completely roll over on its side and then roll or bounce back up. Claimant said the incident caused him to be slammed against the door. Claimant likened it to being in a roll-over accident. Claimant also gave a similar history to Dr. Fall. **Ex. A.**

16. Claimant did not tell either Mr. Ramirez or Ms. Tolmich that the truck cab rolled completely over and onto its side or "flipped." In addition, the photographs of the truck taken after the incident show the left side view mirror and left side door are not damaged. Had the truck flipped over onto its side as contended by Claimant, the mirror and door would have been damaged. Therefore, this ALJ finds that the truck did not flip over onto its side. This ALJ finds that at the time of the incident, the right back wheels of the cab came up off the ground slowly and caused the cab to tilt slightly. This did not cause Claimant to be jolted around in the cab or thrown into the driver's side door.

17. This ALJ finds that Claimant's description of the work incident to his medical providers, and testimony to this court, is not credible. This ALJ finds that Claimant overstated what occurred during the incident in an attempt to support his contention that he suffered an injury and that the injury is the cause of his pain complaints and symptoms.

18. Claimant testified that prior to the incident of September 28, 2016, he did not have problems with his back. Later, upon questioning, he testified that he had a remote car accident in 2002, but that his injuries had resolved. Claimant's testimony, however, is in direct conflict with the record. As set forth in the findings below, Claimant has had chronic and progressively worsening low back pain since 2002, was evaluated for back surgery at the end of 2014, and was on social security disability due to his back pain at the time of the September 28, 2016 incident.

19. While working for Employer, Claimant was receiving social security disability income (SSDI) benefits due to a prior back injury. **Ex. S. Ex. I, Bates 67.**

20. On August 24, 2016, just prior to the work incident, Claimant went to see Dr. Lutt at the Colorado Center for Arthritis and Osteoporosis. Claimant was treating with Dr. Lutt for the ongoing management of his psoriasis. Although Dr. Lutt was

managing Claimant's psoriasis, Claimant noted that his "left lower back still hurts." **Ex. O, Bates 125.**

21. On January 27, 2016, prior to the alleged work accident, a medical report from Martin McDermott, M.D., includes in the medical history "lumbar and cervical spinal stenosis for which he [is] on SS disability." **Ex. I, Bates 62.** That provider also noted, "old back injury for which he is on disability." **Ex. I, Bates 67.**

22. On December 29, 2014, Claimant was evaluated by Dr. Joseph Morreale at the Center for Spine & Orthopedics, for a surgical consultation due to his low back pain. Claimant was complaining of:

> [L]ow back pain since approximately 2002 when he was injured in a car accident. Since then he has had episodic low back pain which has been getting progressively worse and his last appointment when he was last seen in June. Really everything, sitting, standing, walking and extension, seems to bother things. He also has some bilateral lower extremity pain down to his knee. He had recently had to use a cane for support. He has been taking Norco and Flexeril as well as a steroid dose pack which has helped relive his pain mildly…He occasionally gets some balance issues.

23. Dr. Morreale's diagnosis of Claimant, on December 29, 2014, was spondylolisthesis, lumbar spondylosis with radiculopathy, degenerative disc disease, disc narrowing, and low back pain. Dr. Morreale's plan was to proceed with a new MRI of the lumbar spine and physical therapy, and to check in after a month, to discuss options. Dr. Morreale noted that: "He will most likely be looking at an L4-5 and L5-S1 anterior-posterior lumbar fusion." **Ex. K, Bates 87-89.**

24. On December 19, 2014, just prior to the visit with Dr. Morreale when he indicated Claimant will most likely need a lumbar fusion, Dr. Ruff wrote a letter describing Claimant's disability due to his back condition, recommending a stationary work situation where Claimant could stand or sit as needed. **Ex. J, Bates 90.** Claimant had requested "light duty" and was complaining that his back was making getting in and out of his tractor trailer very difficult, along with moving heavy hoses and sitting for long periods of time. **Ex. J, Bates 91.**

25. On December 10, 2014, Dr. Ruff ordered a lumbar and pelvis MRI because of Claimant's "severe low back pain not responding to treatment," **Ex. J, Bates 93.**

26. On February 12, 2014, Claimant was evaluated by Dr. Ruff. Claimant, among other things, complained of neck and back problems. Claimant's symptoms were

so severe he had problems walking over a block to get his mail. **Exhibit L, Bates 94.**

27. On May 16, 2013, Dr. Ruff indicated Claimant was suffering from chronic neck pain, chronic back pain, and that Claimant had been told in the past that he had cervical and lumbar degenerative disc disease. **Ex. J, Bates 97.**

28. On March 25, 2013, Claimant was evaluated by Dr. Lutt. Claimant complained of back pain due to a work related accident.

29. On January 31, 2013, back pain was included in Claimant's problems in his visit to the Colorado Center for Arthritis & Osteoporosis. At such visit, Dr. Lutt, noted: "He injured his left ankle, knee, elbow and back at work a few years ago. Workman's comp is fighting him about surgery on his knee and checking out his back." **Ex. O, Bates 111.** Claimant reported taking Vicodin and Flexeril as needed. **Ex. O, Bates 117.**

30. On November 17, 2012, Claimant underwent a comprehensive disability examination. The examination was performed by Dr. Traister of Colorado Disability Exam Services. During the evaluation, Claimant complained of right knee, right elbow, and back pain. Claimant reported that he walked with a cane 100% of the time. The report also provides that "he also continues to have back pain from his neck all the way down to his spine. He reports that that pain is constant as well." Things that worsen the back pain were reported to be sitting for too long and walking longer than a block or two. During the examination, Claimant reported significant limitations in his daily living. Functional limitations were discussed in this report, including weight limitations, standing and sitting limitations. **Ex. M, Bates 101.**

31. On August 18, 2011, Claimant was injured when a "stand-alone pipe" fell on him. Claimant injured his right knee at first, but proceeded to complain of elbow, neck, and back pain. Claimant stated his pain from his neck to his back was constant. **Ex. M, BS 101.**

32. On December 21, 2009, Claimant was seen at Salud Family Health Center complaining of lower back pain, with history of "MVA in 2002 with severe back pain" and neck pain. He was provided Vicodin, Flexeril, and Ketorolac Tromethamine, and provided with a Toradol injection.

33. It is found that Claimant has had progressively worsening back pain since his 2002 motor vehicle accident. It is also found that on December 29, 2014 it was anticipated that Claimant would require a L4-5 and L5-S1 anterior-posterior lumbar fusion.

34. It is found that Claimant attempted to minimize the extent of his pre-existing back problems to the court.

35. Claimant is found to not be credible regarding his contention that the work incident caused his back pain or any other symptoms.

36. This ALJ finds that Claimant's back pain and other symptoms are due solely to preexisting conditions.

37. Claimant also testified at hearing that he did not remember filing a workers' compensation claim for a back injury occurring on October 18, 1995. Claimant also denied remembering settling that claim. The records from the Division of Workers' Compensation indicate Claimant filed a workers' compensation claim for "back pain" with a date of injury of October 18, 1995. The records further demonstrate that the claim was denied and Claimant settled the claim for $60,000. **Ex. OO, Division Files, W.C. #4-273-873.**

38. Claimant's contention that he does not remember filing a claim for a back injury in 1995 and settling the claim for $60,000 is not credible. Although the alleged injury was over 20 years ago, the fact that it settled for $60,000 makes it highly unlikely that Claimant does not remember the claim and the settlement. Therefore, Claimant is again found to not be credible.

39. On January 10, 2017, Claimant presented to Dr. Lonnie E. Loutzenhiser, M.D. a surgeon at Panorama Orthopedics & Spine Center. Claimant told Dr. Loutzenhiser after the work incident he woke up the next morning and was experiencing low back pain radiating down into his legs. Claimant stated that he notified his boss and told him that he was unable to go to work due to the pain. **Ex. J, Bates 76.** Again, Claimant's contention to Dr. Loutzenhiser is not accurate. After the incident at work on Wednesday, September 28, 2016, Claimant worked over 12 hours on Thursday September 29th, and over 10 hours on Friday, September 30, 2016. **Ex. R.** Claimant's statements to Dr. Loutzenhiser regarding his alleged injury and the onset of his symptoms is not consistent with Claimant's timesheets which show he worked the two days, Thursday and Friday, following the incident.

40. On January 10, 2017, Dr. Loutzenhiser proposed an anterior and posterior fusion at the L4-S1 levels. **Ex. J.** This is basically the same procedure Dr. Morreale indicated, on December 29, 2014, Claimant would most likely require.

41. Claimant testified that after the incident at work, he started to have bowel and bladder problems and such symptoms, combined with his back pain, necessitated the need for back surgery.

42. On May 1, 2017, Claimant underwent an L-4-L5 and L5-S1 bilateral posterolateral fusion surgery which was performed by Dr. Loutzenhiser. In his operative note, Dr. Loutzenhiser noted "Due to the fact that his Worker's Compensation insurance was denying paying for his surgical fixation and due to the patient's life-limiting symptoms, he did wish to proceed with operative

intervention through his normal insurance rather than Worker's Compensation insurance which was not providing him the care that he needed," There is no description of cauda equina syndrome, loss of bowel or bladder control or sexual dysfunction in the "indications for procedure" section of the operative report. **Ex. J, Bates 71.** Dr. Loutzenhiser provided the diagnosis as spondylolisthesis, L5/S1, lumbar stenosis, bilateral, radiculopathy, and bilateral pars fracture L5. **Ex. J, Bates 76.** Therefore, this ALJ finds that Claimant was not having bowel and bladder problems. Thus, such problems did not necessitate the need for surgery.

43. Dr. Allison Fall testified as an expert at hearing. She evaluated Claimant on March 2, 2017. She had also evaluated Claimant in relation to a prior workers' compensation claim in December 12, 2012. Her reports were submitted into evidence. **Ex. A.** Dr. Fall was present during Claimant's testimony at hearing. She also reviewed the photographs of the incident. Dr. Fall concluded that Claimant did not sustain any injuries as a result of the incident of September 28, 2016.

44. There are several diagnostic studies of claimant's back in the record. X-rays, November 17, 2012, **Ex. P, Bates 127**; Lumbar X-rays, December 10, 2014, **Ex. P, Bates 129**; ("Severe lower back pain. Motor vehicle trauma in 2002" **Ex. P, Bates 131**); Lumbar MRI January 5, 2015, **Ex. P, Bates 133**; X-rays, cervical, thoracic, lumbosacral, right knee, October 7, 2016, **Ex. P, Bates 135**; MRI and x-rays, 12/21/2016, **Ex. J, Bates 80.** Dr. Fall testified that these diagnostic tests did not show evidence of an acute injury occurring on September 28, 2016. Dr. Fall stated that the diagnostics reflected pre-existing degenerative changes and that the records showed chronic and severe pain predating the work incident. She explained that the 2017 surgery was aimed at the degenerative condition, and that condition was unchanged from the recent 2015 MRI to the MRI taken after the work incident.

45. Dr. Fall noted that it was significant to her that Dr. Parsons had documented Waddell signs. She testified that this indicated that there are issues other than organic pathology that were playing a role in Claimant's presentation. She indicated that Claimant's initial examination of October 7, 2016, showed complaints greatly out of proportion to the physical exam findings and the mechanism of injury. In reviewing her 2012 encounter with Claimant, she noted that subjective complaints were greater than objective findings at that time as well. Dr. Fall is found credible and persuasive. Although Claimant testified that his May 1, 2017, surgery was urgent because he was uncontrollably defecating and urinating, and was experiencing sexual dysfunction, Dr. Fall explained that there was nothing in the medical records that showed these complaints as a reason for surgery. She explained that if these types of symptoms were associated with a spinal injury, that would be because of cauda equina syndrome. That condition was not shown on MRI and was not discussed by

Claimant's surgeon. She explained that this would not be inadvertently left out of the records. Dr. Fall opined that the surgery undergone by Claimant was not urgent and was not emergent.

46. Dr. Fall's opinions as set forth in her testimony and reports are found to be credible, persuasive, and consistent with the medical records.

47. Claimant's treating provider Dr. Anderson-Oeser stated, "the spinal stenosis, lumbar spondylosis and degenerative disk changes are all preexisting and therefore would not be considered part of this work injury." His surgery, therefore in her opinion, was not work related. **Ex. B, Bates 17.**

48. Mr. Ramirez and Ms. Tolmich are found credible.

49. Claimant is found not credible. Claimant's testimony at hearing, and statements he made to his providers, including but not limited to his statements regarding the extent of the incident of September 28, 2016, his medical history, his symptoms, complaints and function, and the timeline of his reporting of his alleged injury to the employer are found not credible.

50. The September 28, 2016, incident did not cause any disability or need for any medical treatment.

51. The September 28, 2016, incident did not aggravate, accelerate, or combine with any of Claimant's pre-existing conditions and cause any disability or need for any medical treatment.

52. This ALJ finds that Claimant did not suffer an injury on September 28, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. (2007), et seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a

workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. Section 8-43-201, C.R.S.

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P. 3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

I. Whether Claimant suffered a compensable injury on September 28, 2016.

For a claim to be compensable under the Act, Claimant has the burden of proving that he suffered a disability or need for medical treatment that was proximately caused by an injury arising out of and within the course and scope of employment. Section 8-41-301(1) (c), C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for the determination of the Judge. *Faulkner*, 12 P.3d. at 846.

The Act distinguishes between the terms "accident" and "injury." The term "accident" refers to an unexpected, unusual, or undesigned occurrence. Section 8-40-201(1), supra. By contrast, an "injury" refers to the physical trauma caused by the accident. Thus, an "accident" is the cause and an "injury" the result. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable injury. A compensable industrial accident is one, which results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

Claimant has not carried his burden to prove by a preponderance of the evidence that the incident of September 28, 2016, resulted in a compensable work injury for a number of reasons.

First, Claimant was found to not be credible. Claimant was found to not be credible regarding the September 28, 2016, incident. As found, Claimant misrepresented the extent of the incident to his medical providers and during his testimony. Claimant alleged the cab of the semi-truck rolled over onto its side during the incident. However, as found, the cab of the semi-truck did not roll over onto its side. As found, the cab of the truck merely tilted when the back right wheels came off the ground during the incident. Therefore, Claimant did not get slammed into the door or jarred around during the incident.

Claimant was also found to not be credible regarding the extent of his pre-existing back problems. Claimant misrepresented the extent of his prior back problems during his testimony. Claimant first said he did not have any prior back problems. Then, he stated that he had a prior back injury in 2002 due to a motor vehicle accident, but that it basically resolved. As found, Claimant has had extensive, chronic worsening back pain and symptoms since 2002. In addition, Claimant had been on SSDI since 2013 due to his prior back injury. Then, in December of 2014, Dr. Morreale indicated Claimant would most likely need a two-level posterior and anterior lumbar fusion due to his worsening back pain and symptoms.

Claimant was also found to not be credible regarding his prior workers' compensation claim regarding his back. Claimant denied filing a prior workers' compensation claim for his back in 1995 and settling it for $60,000. As found, Claimant did file a claim for an alleged 1995 back injury and settled the claim for $60,000. Although the alleged injury was over 20 years ago, this ALJ found that the likelihood of Claimant not remembering this claim is unlikely due to the amount of the settlement.

Claimant was also found to not be credible in light of his attempt to conceal his income in his divorce proceedings. Claimant requested Employer to conceal his income so Claimant could deceive his wife and the court in his divorce proceedings in order to reduce his support obligation to his wife.

All in all, this ALJ did not find Claimant's testimony to be persuasive. Aspects of his testimony went well beyond having a poor memory. Here, Claimant sought to mislead and to create a history that is not truthful.

Second, Dr. Fall credibly and persuasively testified, and set forth in her report, that Claimant did not sustain an injury in the September 28, 2016, event. She credibly testified that nothing that occurred on that day caused disability or the need for medical treatment. Dr. Fall testified that Claimant's diagnostic tests did not show evidence of an acute injury occurring on September 28, 2016. Dr. Fall stated that the diagnostics reflected pre-existing degenerative changes and that the records showed chronic and severe pain predating the work incident. She explained that the 2017 surgery was

aimed at the degenerative condition, and that condition was unchanged from the recent 2015 MRI to the MRI taken after the work incident.

Third, Claimant's medical records demonstrated that Claimant had chronic and progressively worsening back pain since 2002. The records also demonstrated that Claimant was awarded SSDI in 2013 due to his back condition. Moreover, Claimant's back pain and symptoms progressed to the point where he underwent a surgical evaluation in December of 2014 and the surgeon determined that Claimant would most likely need a L4-5 and L5-S1 (2 level) anterior-posterior lumbar fusion. In addition, on August 24, 2016, about one month before the work incident, Claimant was evaluated by Dr. Lutt and complained of back pain.

The incident that occurred on September 28, 2016, did not cause, aggravate, or accelerate Claimant's back condition or any other condition. The September 28, 2016, incident did not cause any disability or need for medical treatment. Therefore, this ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable injury.

II. Whether Claimant is entitled to medical benefits, including the surgery performed on May 1, 2017, by Lonnie E. Loutzenhiser, M.D.

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

Claimant failed to establish by a preponderance of the evidence that he suffered a compensable injury on September 28, 2016. The incident that occurred on September 28, 2016, did not cause the need for any medical treatment. Therefore, this ALJ concludes that Claimant is not entitled to any medical benefits and Respondents are not responsible for the surgery performed by Dr. Loutzenhiser on May 1, 2017, or any other medical benefits.

III. Whether Claimant is entitled to temporary total disability benefits.

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*.

Claimant failed to establish by a preponderance of the evidence that he suffered a compensable injury on September 28, 2016. The incident that occurred on September 28, 2016, did not cause any disability. Therefore, this ALJ concludes that Claimant is not entitled to temporary total disability benefits.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 30, 2017

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

Did Respondent overcome the DIME's determination Claimant is not at MMI?

STIPULATIONS

The parties stipulated to an average weekly wage (AWW) of $1,004.70.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his left knee on September 30, 2015 while working for Employer as a firefighter. He was walking down a ramp while wearing 80+ pounds of firefighter. He turned to the left at the bottom of the ramp and felt a painful pop in his left knee.

2. Claimant had a prior work-related injury to the left knee in 2006. Dr. Michael Hewitt performed an arthroscopic partial medial meniscectomy (40% of the posterior horn) and a patellar chondroplasty in August 2006. After surgery, Claimant continued to have symptoms consistent with patellofemoral syndrome. On April 19, 2007, Dr. Brian Beatty assigned a 22% lower extremity impairment rating and released him to full duties, with allowance for up to three cortisone injections over the next year.

3. The last documented treatment to the left knee was August 17, 2007, when Dr. Hewitt gave Claimant a cortisone injection. Dr. Hewitt indicated Claimant could "return to full running activities in the next three to four days. He will otherwise follow up in this clinic on an as needed basis." There are no subsequent treatment records until the September 30, 2015 injury.

4. Claimant worked as a firefighter without difficulty or limitation from at least 2008 until the injury in September 2015. He also regularly participated in physically demanding avocational activities such as golfing, mountain biking, and waterskiing.

5. Employer referred Claimant to Concentra for authorized treatment of the September 2015 injury. He initially saw Dr. Carlos Guerrero on September 30. The physical examination suggested a medial meniscus tear, so Dr. Guerrero ordered an MRI.

6. Claimant had an MRI of the left knee on October 7, 2015 which showed complex multidirectional tearing of the medial meniscus. The radiologist opined some of the findings could be related to the 2006 surgery but "given the complexity and appearance of the meniscus this is highly concerning for a recurrent tear." The MRI also slowed advanced osteoarthritis, primarily in the medial compartment.

7. Claimant saw Dr. David Walden, an orthopedic surgeon, on October 27, 2015. Dr. Walden referenced Claimant's 2006 injury and remarked "reportedly he had no

problems with regard to this knee following that procedure and was completely able to perform all elements of his firefighting job." Dr. Walden diagnosed an acute medial meniscus tear and left knee osteoarthritis. Dr. Walden opined "although the patient had prior knee surgery, he had been doing well for [a] number of years without any significant limitations (nine years)."

8. On November 11, 2015, Dr. Walden performed an arthroscopic partial medial meniscectomy to address a "substantial avascular tear of the posterior horn and body of the medial meniscus." He also observed "rather significant osteoarthritis" of the femoral trochlea, grade 2 and 3 osteoarthritic changes of the weight-bearing surface of the medial femoral condyle. He performed chondroplasties of the femoral trochlea, the medial femoral condyle, and medial tibial plateau.

9. Claimant progressed relatively well after surgery and was released to work without restrictions on January 26, 2016.

10. Unfortunately, Claimant had ongoing problems with his knee after going back to work. He returned to Dr. Walden's office in April 2016 complaining of "buckling, difficulty going down stairs, and stiffness after being seated for long periods of time or first thing in the morning." Dr. Walden recommended Orthovisc injections, which were completed in May 2016.

11. Dr. Steve Danahey at Concentra put Claimant at MMI on September 13, 2016. Claimant reported the Orthovisc "has worn off. He is feeling the same constant pain. Walking downstairs is high pain for the patient as well as just walking. He was told he may need to consider a knee replacement." Dr. Danahey assigned a 10% lower extremity rating after apportionment of the 2007 rating. Regarding permanent restrictions, Dr. Danahey opined:

> [Claimant] has a new permanent position, which is primarily sit-down work. I do not think he should doing repetitive kneeling, squatting or jumping. If my understanding of his position is wrong then I would be happy to assigned permanent work restrictions, as I do not think he can perform the regular duties of a firefighter.

12. Claimant was considering a knee replacement, but Dr. Danahey deferred the decision regarding the procedure to an orthopedic specialist. He gave no definitive opinion regarding causation of any potential knee replacement, but noted the 2006 injury and surgery "likely contributed significantly to the resultant arthritic changes in the left knee joint."

13. Claimant followed up with Dr. Walden on January 17, 2017. He reported the Orthovisc injections were "helpful and he was able to move around a great deal more with the help of those. They have gradually worn off, and he felt pain and stiffness in the knee and difficulty moving including kneeling, squatting, and pivoting motions." Dr. Walden gave Claimant a steroid injection and requested authorization for another series of Orthovisc injections.

14. Dr. John McBride, an orthopedic surgeon, performed a record review for Respondent on January 25, 2017. Dr. McBride noted Claimant's extensive osteoarthritis undoubtedly preexisted the September 2015 injury. He opined that the July 2006 surgery, which removed 40 percent of the medial meniscus, ultimately caused Claimant to develop medial joint osteoarthritis. He cited the Lower Extremity Medical Treatment Guidelines which state individuals with an intra-articular meniscus injury and/or surgery are at risk for subsequent osteoarthritis. He opined the surgery by Dr. Walden was reasonable and related to the September 2015 injury, but ongoing treatment directed at symptoms of osteoarthritis was not causally related to the admitted injury.

15. Dr. McBride issued a supplemental report on February 1, 2017 addressing the request for preauthorization of additional Orthovisc injections. He opined:

> I agree with Dr. Walden that the arthroscopy was reasonable and necessary for the acute degenerative meniscus tear, but his ongoing symptoms *at this time* are related to his ongoing osteoarthritis, which is what viscosupplementation is used for. The *potential* for a total knee replacement is related to his previous 40% partial medial meniscectomy in 2006. The bottom line is that the viscosupplementation, while it is reasonable and necessary with regards to his arthritis, is ***not related*** to the September 30, 2015 injury. (Emphasis in original).

16. Claimant saw Dr. Jack Rook for an Independent Medical Examination (IME) at the request of his counsel on March 13, 2017. Claimant recounted the history of the 2006 injury and told Dr. Rook he was having no problems with his left knee immediately before the September 2015 injury. After recovering from the 2006 surgery, Claimant returned to work as a firefighter with no restriction or limitation. Additionally, he "engaged in multiple sporting activities without any problems, including basketball, skiing, hiking, mountain biking, and golfing."

17. On physical examination, Claimant ambulated with a slight antalgic gait. There was mild atrophy of the left quadriceps but no appreciable swelling or effusion. He had moderate tenderness to palpation along the medial tibial plateau and crepitus with flexion and extension of the knee. He demonstrated significant range of motion loss.

18. Dr. Rook disagreed with Dr. McBride that further treatment was not injury-related. He agreed the osteoarthritis was pre-existing but noted Claimant was "completely asymptomatic" before the September 2015 injury and engaged in physically demanding vocational and avocational activities without limitation. By contrast, "[s]ince he injured his left knee, he has been unable to engage in these activities due to ongoing and persistent left knee pain." Dr. Rook opined Claimant satisfies the criteria in the Lower Extremity MTGs for aggravated osteoarthritis. Dr. Rook opined Claimant was not at MMI and needed further treatment to address ongoing left knee pain and significant functional limitations, including a possible knee replacement.

19. Claimant saw Dr. John Tyler for Division IME on March 22, 2017. Claimant described a constant, dull ache "deep inside" the knee, aggravated by prolonged walking

and going up and down stairs. On physical examination, Dr. Tyler noted slight atrophy of the left quadriceps muscles and tenderness to palpation along the medial joint line. There was "audible and tactilely noted crepitation that appears to be generated primarily if not completely in the medial joint space."

20. Dr. Tyler determined Claimant was not at MMI. He noted Claimant "was not having difficulties with any pre-existing osteoarthritic changes within the left knee until after the trauma suffered on September 30, 2015." Dr. Tyler opined

> "But if for the" injury of September 30, 2015, I believe this patient would continue to be able to work as a firefighter performing all the heavy lifting, climbing, crawling, etc. and responsibilities of that job and "if but for the" injury suffered, he would not have ongoing pain in the knee from pre-existing osteoarthritis. Secondary to same, though the arthritis did indeed build up over the years from his earlier medial meniscectomy, it was not a symptomatic factor in the level of this patient's functioning and quality of life, both vocationally and non-vocationally, until the injury of September 30, 2015. Secondary to same, surgical intervention toward the knee including the possibility of a total knee replacement at this time, should be entertained and I feel would be related directly to the injury of September 30, 2015.

21. Dr. Tyler further opined:

> I cannot state categorically that a total knee arthroplasty versus a partial knee arthroplasty is required at this time, as I am not a trained orthopedic surgeon and I will defer entirely to the judgment of Dr. Walden and Dr. Walden's partner who performs total knee arthroplasties and partial knee arthroplasties. If Dr. Walden and/or his partner feel that an arthroplasty is required, that arthroplasty would be directly related to the injury suffered in his September 30, 2015 injury.

22. No final decision or formal request for authorization of surgery had been completed as of the hearing date. Therefore, Claimant did not ask the ALJ to address or award any specific surgery.

23. Dr. McBride performed a third record review for Respondent on June 29, 2017. In addition to Dr. Rook's report and Dr. Tyler's DIME report, he viewed several hours of video surveillance Respondents obtained in April 2017. Dr. McBride disagreed with Dr. Rook and Dr. Tyler regarding MMI. He maintained his opinion that the osteoarthritis "indisputably" pre-existed the September 2015 injury. He also opined Claimant's activities on the video contradicted his reported limitations and undermined the DIME's conclusion that the injury aggravated his underlying arthritis.

> Dr. Tyler and Dr. Rook are basing their change in baseline on [Claimant's] **reported history** that he is unable to stand on his left leg, that he is unable to go up and down stairs, that he is unable to walk greater than 1 block, and that he cannot stand for long periods of time. These videos dispute that, so

his change in baseline is **subjective**, which is why the guidelines **require objective evidence**. (Emphasis in original).

24. Respondents deposed Dr. Tyler on August 16, 2017. Dr. Tyler reviewed the video surveillance before the deposition. He noted Claimant appeared to stand for longer than he would have expected. He stated the video changed his mind regarding Claimant's ability to stand for prolonged periods but did not otherwise impact his assessment. Dr. Tyler did not retract or change his opinion that Claimant is not at MMI.

25. Dr. McBride testified at hearing on behalf of Respondent to reiterate and expound on the opinions expressed in his reports. He testified the injury neither aggravated nor exacerbated the pre-existing condition. Dr. McBride thought it "unlikely" Claimant was asymptomatic immediately before September 30, 2015 given the extensive level of "end-stage" osteoarthritis. He opined Dr. Tyler did not to properly apply the MTGs regarding aggravated osteoarthritis and there is no objective evidence that the September 2015 injury changed Claimant's underlying pre-existing baseline condition. He opined Claimant's knee likely would have become symptomatic "eventually" irrespective of the work injury, but admitted he could offer no definitive opinion as to when it would have become so.

26. Dr. Tyler and Dr. Rook's opinions regarding causation are more persuasive than Dr. McBride's opinions.

27. Respondents failed to overcome the DIME's MMI determination by clear and convincing evidence.

CONCLUSIONS OF LAW

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if there is a course of treatment that has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990).

The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). This is a higher standard of proof than the typical "preponderance" standard. Clear and convincing evidence is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The DIME's determination regarding the cause of the claimant's condition is an "inherent" part of the diagnostic assessment which attends the determination of MMI.

Egan v. Industrial Claim Appeals Office, 971 P.2d 664 (Colo. App. 1988). Therefore, the party disputing the DIME must overcome the DIME's causation opinion by clear and convincing evidence.

It is well established that "mere differences of medical opinion" do not constitute clear and convincing evidence that the DIME's determination is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016); *Javalera v. Monte Vista Head Start, Inc.*, W.C. No. 4-532-166 (July 19, 2004); *see also Gonzales v. Browning-Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

The mere existence of a pre-existing condition does not disqualify a claim for compensation or medical benefits. A claimant with a pre-existing condition may recover benefits if an industrial accident "aggravates, accelerates, or combines with" the pre-existing condition to cause disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom caused by the aggravation of a pre-existing condition, but an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *Witt v. James J. Keil, Jr.*, W.C. No. 4-225-334 (ICAO, April 7, 1988). Rather, a claimant is entitled to medical benefits for treatment of pain only if the pain is proximately caused by the work-related activities or accident, rather than the underlying pre-existing condition. *F. R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985)*; Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

As found, Respondents failed to overcome the DIME's MMI determination by clear and convincing evidence. All the experts agree Claimant needs additional treatment for his left knee; the primary dispute is over causation. There is no doubt Claimant suffers from significant pre-existing osteoarthritis in his left knee. But the Respondent is liable if an accident "aggravates, accelerates, or combines with" the pre-existing condition to produce a need for medical treatment. The ALJ is persuaded that the September 2015 accident substantially aggravated Claimant's underlying osteoarthritis and caused it to become symptomatic. Claimant had advanced "bone-on-bone" osteoarthritis the day before the injury but had no symptoms, required no medical treatment, and could participate in a wide range of physically demanding activities. By contrast, since the date of injury he has been continuously symptomatic, with attendant limitations and need for treatment. Although the prolonged standing depicted in the surveillance footage is somewhat inconsistent with Claimant's description of his symptoms, it is unlikely Claimant would pursue a major surgery if he were not genuinely limited by a painful knee.

ORDER

It is therefore ordered that:

1. Respondent's request to overcome the DIME's determination of MMI is denied and dismissed.

2. Per the parties' stipulation, Claimant's AWW is $1,004.70.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that a Dorsal Root Ganglion (DRG) stimulator implant to address his ilioguinal/iliohypogastric neuropathy is reasonable, necessary and causally related to his March 23, 2015 admitted right groin injury.

FINDINGS OF FACT

1. Claimant is a 64 year old male who works for Employer as a Project Supervisor. On March 23, 2015 Claimant was installing a fence with three crew members. As he was kneeling to cut off the bottom of the fence pickets a road grader quickly approached him from behind. The other crew members moved out of the way and shouted to Claimant about the approaching road grader. Claimant noticed the road grader getting closer and dove out of the way. He landed on a concrete curb on his left elbow. Claimant immediately experienced sharp and stabbing right groin pain.

2. On April 9, 2015 Insurer filed a General Admission of Liability (GAL). The GAL acknowledged that Claimant had suffered an industrial injury while working for Employer on March 23, 2015. The GAL noted that Claimant had not missed any time from work and the matter only involved medical benefits.

3. On April 17, 2015 Claimant visited Authorized Treating Physician (ATP) Jeffry Gerber, M.D. and Physician's Assistant (PA-C) Erynn E. Kay for an evaluation. Claimant reported that approximately three weeks earlier while at work he was crouching down while constructing a fence and noticed a road grader approaching. He quickly moved out of the way by lying flat on the ground and immediately experienced sharp, stabbing pain in the right groin area. Claimant noted that over the following couple of weeks his condition failed to improve. He noticed significant pain while driving that radiated from his right groin area to his right lower back region. Dr. Gerber remarked that Claimant's injuries were "more muscular than anything." He ordered x-rays of the lumbar spine, right hip and pelvis. Dr. Gerber also prescribed physical therapy twice per week.

4. On May 8, 2015 Claimant returned to Dr. Gerber for an evaluation. Claimant reported continuing pain that radiated "into the right lower extremity anteriorly in the thigh." He assessed Claimant with lower back and right groin pain and strains. Dr. Gerber prescribed medications and continued physical therapy.

5. On May 29, 2015 Claimant again presented to Dr. Gerber. Dr. Gerber recommended that Claimant visit a physiatrist because his symptoms had not improved. He remarked that Claimant's symptoms were unusual.

6. On June 9, 2015 Claimant visited Levi Miller, D.O. at Colorado Rehabilitation and Occupational Medicine. Claimant reported that he jumped out of the way of a road grader at work and developed constant right lower back pain as well as intermittent shooting pain in his right groin area. Dr. Miller commented that Claimant's right lower back and groin pain was consistent with a lumbar strain. He remarked that physical therapy had provided little benefit and ordered a lumbar MRI.

7. On July 7, 2015 Claimant returned to Dr. Miller for an evaluation. Claimant reported minimal changes in his right lower back and right groin symptoms. After reviewing rhe lumbar MRI Dr. Miller remarked that Claimant had suffered an acute onset of right lower back and right groin symptoms as a result of the March 23, 2015 work incident. He explained that Claimant's symptoms were "most consistent with referred pain from lumbar strain, lumbar facet syndrome from the right L3-4, L4-5 levels, also possibly right L5-S1. MRI does show a facet arthritis at these levels." Dr. Miller continued medications and noted that Claimant had undergone "extensive physical therapy with limited benefit."

8. On October 2, 2015 Claimant again visited Dr. Miller for an evaluation. Dr. Miller reported that Claimant continued to suffer "constant pain in the anterior groin and point[ed] to the inguinal ligament in the middle." Claimant was uncertain about the activities that increased his symptoms but commented that they were worse in the morning and when he had cooled down or been inactive. Dr. Miller explained that Claimant had suffered the acute onset of right lower back and groin pain when he jumped away from a road grader at work on March 23, 2017. He reviewed Claimant's right hip MRI and remarked that Claimant had received minimal benefit from medications.

9. On November 16, 2015 Claimant visited Scott J. Primack, D.O. at Colorado Rehabilitation and Occupational Medicine for an evaluation. Dr. Primack remarked that Claimant had undergone a right hip MRI that revealed "thickening at the level of the inguinal ligament." He remarked that when he compared the left hip to the symptomatic right hip "the iliopsoas was actually quite thickened." Dr. Primack concluded that "[t]he problem might be at the thickening of the rectus abdominus at the level of the inguinal ligament or perhaps the iliopsoas tendon."

10. On November 18, 2015 Claimant visited D. Craig Loucks, M.D. at Peak Orthopedics and Spine for an examination. Dr. Loucks commented that Claimant had undergone a "fairly extensive workup" after his March 23, 2015 work accident. He remarked that Claimant had received an intraarticular hip injection with "some short-term relief." Based on a review of Claimant's medical records and a physical examination Dr. Loucks determined that Claimant likely suffered an "aggravation or partial tearing of his rectus femoris and iliopsoas."

11. On February 22, 2016 Claimant returned to Dr. Primack for an evaluation. Dr. Primack noted that Claimant had been seen for a "diagnostic ultrasound-guided iliopsoas injection." The injection "confirm[ed] the fact that the problem is within the iliopsoas myotendinous junction." Dr. Primack remarked that Claimant could undergo

another injection and was "a candidate for PRP." However, Claimant chose to wait on any additional interventional treatment.

12. On May 4, 2016 Dr. Primack drafted a letter addressing Insurer's denial of PRP injections for Claimant. He explained that Claimant was a candidate for PRP but Allison M. Fall, M.D. had determined that the procedure would not be appropriate under the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). Dr. Primack explained that the *Guidelines* were not determinative and Claimant's case constituted an "outlier." He renewed his request for the PRP procedure because Claimant had no problems in his right hip area prior to his March 23, 2015 industrial injury. Dr. Primack explained that using plasma-rich proteins in the PRP procedure is not quite common, but Claimant's condition of iliopsoas tendinopathy is "not exceedingly common." He summarized that PRP injections constituted a reasonable procedure and Claimant had a "high potential ability to recover."

13. On June 6, 2016 Claimant returned to Dr. Primack for an examination. Dr. Primack acknowledged that Dr. Fall correctly determined the PRP procedure was not within the *Guidelines*. However, he explained that "[g]iven the fact that there are no side significant psychosocial factors surrounding this case, his recovery from a diagnostic injection, his willingness to keep pushing himself through his job to continue to work, I do believe it would be considered reasonable and appropriate for [Claimant] to undergo the procedure."

14. On August 3, 2016 Claimant again visited Dr. Primack for an evaluation. Dr. Primack commented that Claimant had received "two-to-four days of pain control following his ultrasound-guided iliopsoas tendon injection." Claimant noted that he wanted a "more definitive procedure." Dr. Primack recommended a PRP injection that would improve Claimant's function.

15. On November 30, 2016 Claimant returned to Dr. Primack. Dr. Primack commented that Claimant had undergone a right PRP injection at the level of the iliopsoas tendon. At the time of the examination Claimant's hip pain had worsened.

16. On February 6, 2017 Claimant visited Kathryn Bird, D.O. at Colorado Rehabilitation and Occupational Medicine for an examination. Dr. Bird remarked that Claimant had returned to work without restrictions. He had undergone a right-sided ultrasound-guided ilionguinal/iliohypogastric injection on December 30, 2016 that provided one week of pain relief. Dr. Bird recommended a visit to an interventional anesthesiologist for "potential cryotherapy or DRG stimulation." She referred Claimant to Giancarlo Checa, D.O. for an evaluation.

17. On February 22, 2016 Claimant returned to Dr. Primack for an examination. Dr. Primack explained that Claimant had done well after receiving an ilionguinal/iliohypogastric injection. Claimant reported much less groin pain after the procedure and he could push, pull, walk and descend stairs. Dr. Primack commented that Claimant's positive response "confirm[ed] the fact that the problem [was] within the iliopsoas myotendinous junction."

18. On March 20, 2017 Claimant visited Dr. Checa for an examination. Dr. Checa noted that Claimant had received physical therapy, PRP injections and an Il/IH nerve block for his right groin pain. He remarked that, although Claimant's pain originated in the right groin area, it radiated through the abdomen into the right lower back. Dr. Checa commented that Claimant's pain was caused by neuritis. Claimant had received 100% pain relief from the Il/IH nerve block on December 30, 2016. Dr. Checa determined that Claimant would benefit from a spinal cord stimulator implant because he had failed multiple conservative therapies aside from the Il/IH nerve block. He summarized that a spinal cord stimulator would be more cost effective than other treatment and the goal of the procedure would be to reduce pain, improve function and reduce medication usage.

19. On March 24, 2017 Claimant returned to Dr. Primack for an evaluation. He noted that Dr. Checa had agreed that Claimant was a candidate for "a right DRG for the ilioinguinal/iliohypogastric neuropathy." Dr. Primack remarked that Insurer had denied the procedure. He explained that a DRG implant was a "reasonable and appropriate 'next procedure.'"

20. On April 12, 2017 Claimant visited Glenn M. Kaplan, Ph.D. for a psychological evaluation. Dr. Kaplan concluded that Claimant was an appropriate candidate for a DRG implant for chronic pain management. He noted that Claimant was not suffering "any significant depression or anxiety." Dr. Kaplan commented that Claimant had "reasonable and rational expectations from the procedure" and sought to reduce pain and improve his quality of life.

21. On May 12, 2017 Claimant returned to Dr. Gerber for an evaluation. After conducting a physical examination Dr. Gerber noted that Claimant continued to suffer right groin pain due to tendonitis. In addressing the necessity for a DRG implant Dr. Gerber explained:

> [Claimant] is good candidate for a DRG implant and is trying to work with physiatry on this. Unfortunately he needs to have further evaluation by work comp provider to see if they really feel that he is a candidate. [Claimant's] physiatrist feels that he is a perfect candidate for this procedure and that this would allow him pain relief for up to 10 years. This would also avoid more complex and more expensive surgical procedures. Ultimately I think this is a great option for this patient.

22. On June 23, 2017 Claimant returned to Dr. Gerber for an evaluation. Dr. Gerber maintained that Claimant was an excellent candidate for a DRG implant. He detailed that the procedure would provide significant chronic pain relief and eliminate office visits.

23. On July 26, 2017 Claimant underwent an independent medical examination with Allison M. Fall, M.D. Dr. Fall reviewed Claimant's medical records and conducted a physical examination. She determined that there was a causal relationship between Claimant's March 23, 2015 industrial injury and his iliopsoas tendon symptoms

but not between the accident and the ilioinguinal and iliohypogastric neuritis diagnosed by Dr. Primack. Dr. Fall concluded that proposed surgical intervention in the form of a spinal cord stimulator was not appropriate because Claimant lacks a diagnosis that can be treated with a spinal cord stimulator. She detailed that Claimant only suffered an iliopsoas tendon injury and did not experience any injury to the ilioinguinal and iliohypogastric nerves. Claimant simply lacks a "work-related diagnosis that is treated by a spinal cord stimulator" and does not have symptoms that are consistent with injuries to the ilioinguinal and iliohypogastric nerves. Finally, Dr. Fall commented that the requested DRG implant is not reasonable, necessary or related to Claimant's March 23, 2015 work injury for the same reasons that the spinal cord stimulator was not appropriate.

24. Claimant has demonstrated that it is more probably true than not that a DRG stimulator implant to address his ilioguinal/iliohypogastric neuropathy is reasonable, necessary and causally related to his March 23, 2015 admitted right groin injury. Initially, on March 23, 2015 Claimant dove out of the way of a road grader while working for Employer. He immediately experienced sharp, stabbing right groin pain. Claimant received conservative treatment in the form of medications, physical therapy and PRP injections for his right groin pain. On December 30, 2016 Claimant received 100% pain relief from an ilioguinal/iliohypogastric nerve block. Dr. Primack commented that Claimant's positive response "confirm[ed] the fact that the problem [was] within the iliopsoas myotendinous junction." Dr. Checa remarked that, although Claimant's pain originated in the right groin area, it radiated through the abdomen into the right lower back. He noted that Claimant's pain was caused by neuritis. Although Dr. Checa suggested that Claimant might benefit from a spinal cord stimulator, he nevertheless acknowledged that Claimant's pain originated in the right groin area.

25. Dr. Primack persuasively explained that Claimant was a candidate for a right DRG implant for his ilioinguinal/iliohypogastric neuropathy. He noted that a DRG implant was a "reasonable and appropriate 'next procedure.'" Dr. Gerber agreed that Claimant was a good candidate for a DRG stimulator implant. He remarked that Claimant would receive pain relief for a significant period of time and avoid more complex and expensive surgical procedures. Dr. Gerber concluded that "[u]ltimately I think this is a great option for [Claimant]." Finally, after conducting a psychological evaluation Dr. Kaplan determined that Claimant was an appropriate candidate for a DRG implant. He commented that Claimant had reasonable expectations, sought to reduce pain and try to improve his quality of life through the procedure.

26. In contrast, Dr. Fall determined that a DRG implant was not reasonable, necessary and related to Claimant's March 23, 2015 accident. She detailed that Claimant only suffered an iliopsoas tendon injury and did not experience any injury to the ilioinguinal and iliohypogastric nerves. Dr. Fall summarized that Claimant simply lacks a work-related diagnosis that can be treated by a spinal cord stimulator or a DRG implant and does not have symptoms that are consistent with injuries to the ilioinguinal and iliohypogastric nerves. However, the medical records reveal that Claimant suffered a right groin injury that caused ilioguinal/iliohypogastric neuropathy. Claimant received significant conservative treatment and an ilioguinal/iliohypogastric nerve block provided

100% pain relief. Based on the persuasive reports of Drs. Primack, Checa and Kaplan, the proposed DRG implant constitutes reasonable, necessary and causally related treatment for Claimant's March 23, 2015 right groin injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has demonstrated by a preponderance of the evidence that a DRG stimulator implant to address his ilioguinal/iliohypogastric neuropathy is reasonable, necessary and causally related to his March 23, 2015 admitted right groin injury. Initially, on March 23, 2015 Claimant dove out of the way of a road grader while working for Employer. He immediately experienced sharp, stabbing right groin pain.

Claimant received conservative treatment in the form of medications, physical therapy and PRP injections for his right groin pain. On December 30, 2016 Claimant received 100% pain relief from an ilioguinal/iliohypogastric nerve block. Dr. Primack commented that Claimant's positive response "confirm[ed] the fact that the problem [was] within the iliopsoas myotendinous junction." Dr. Checa remarked that, although Claimant's pain originated in the right groin area, it radiated through the abdomen into the right lower back. He noted that Claimant's pain was caused by neuritis. Although Dr. Checa suggested that Claimant might benefit from a spinal cord stimulator, he nevertheless acknowledged that Claimant's pain originated in the right groin area.

6. As found, Dr. Primack persuasively explained that Claimant was a candidate for a right DRG implant for his ilioinguinal/iliohypogastric neuropathy. He noted that a DRG implant was a "reasonable and appropriate 'next procedure.'" Dr. Gerber agreed that Claimant was a good candidate for a DRG stimulator implant. He remarked that Claimant would receive pain relief for a significant period of time and avoid more complex and expensive surgical procedures. Dr. Gerber concluded that "[u]ltimately I think this is a great option for [Claimant]." Finally, after conducting a psychological evaluation Dr. Kaplan determined that Claimant was an appropriate candidate for a DRG implant. He commented that Claimant had reasonable expectations, sought to reduce pain and try to improve his quality of life through the procedure.

7. As found, in contrast, Dr. Fall determined that a DRG implant was not reasonable, necessary and related to Claimant's March 23, 2015 accident. She detailed that Claimant only suffered an iliopsoas tendon injury and did not experience any injury to the ilioinguinal and iliohypogastric nerves. Dr. Fall summarized that Claimant simply lacks a work-related diagnosis that can be treated by a spinal cord stimulator or a DRG implant and does not have symptoms that are consistent with injuries to the ilioinguinal and iliohypogastric nerves. However, the medical records reveal that Claimant suffered a right groin injury that caused ilioguinal/iliohypogastric neuropathy. Claimant received significant conservative treatment and an ilioguinal/iliohypogastric nerve block provided 100% pain relief. Based on the persuasive reports of Drs. Primack, Checa and Kaplan, the proposed DRG implant constitutes reasonable, necessary and causally related treatment for Claimant's March 23, 2015 right groin injury.

ORDER

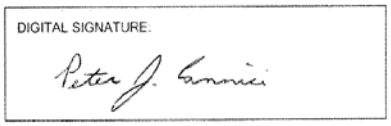
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a DRG stimulator implant to address his ilioguinal/iliohypogastric neuropathy is reasonable, necessary and causally related to his March 23, 2015 admitted right groin injury.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 2, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Respondents have overcome the opinion of the Division Independent Medical Examination (DIME) physician that Claimant is not at maximum medical improvement (MMI) by clear and convincing evidence.

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to medical benefits in form of ongoing prescriptions for Percocet and Flexeril.

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury to his low back while lifting plastic totes on July 7, 2015.

2. Claimant sought treatment at Swedish Medical Center where he reported feeling a sharp lumbar pain that radiated into his legs. On physical examination, Claimant was noted to have tenderness in the right perisacral and perilumbar areas and a normal neurologic exam. Claimant was diagnosed with an acute lumbosacral strain on the right and prescribed Percocet and Flexeril.

3. On July 20, 2015, Claimant presented to Kalinda Batra, M.D. at Denver Spine & Extremity LLC. Claimant reported right lumbar spinal and lumbosacral junction pain. He denied symptomatology into the lower extremities. Dr. Batra gave an impression of acute back pain, lumbar spinal/lumbosacral junction strain/sprain, compensatory mechanical dysfunction primarily at right L4-5 and L5-S1, pelvic unleveling and, and compensatory myalgia. Dr. Batra ordered an MRI and referred Claimant to Dr. Zimmerman for additional conservative care.

4. On August 5, 2015, Claimant underwent an MRI which revealed diffuse mild degenerative changes throughout the lumbar spine and, at L5-S1, a mass effect upon the descending S1 nerve roots, right greater than left, secondary to diffuse eccentric disc bulging.

5. Claimant first presented to Rick D. Zimmerman, D.O. on August 21, 2015. Claimant reported constant lumbosacral pain primarily in the right lower quadrant/upper buttock area with symptoms radiating into his hamstring, calf and lateral ankle. On physical examination, Dr. Zimmerman noted reduced lumbar range of motion with positive straight leg raise and neural tension findings on the right. Dr. Zimmerman gave an impression of lumbosacral displaced disc, right lower extremity radiculitis in the S1 distribution, and history of anxiety/depression disorder. Dr. Zimmerman prescribed Claimant chiropractic treatment, physical therapy, Percocet and cyclobenzaprine, and

scheduled a right L5 and S1 epidural steroid injection (ESI) for diagnostic and therapeutic purposes.

6. On September 4, 2015, Claimant presented to orthopedic surgeon Bryan Andrew Castro, M.D. Claimant reported that his leg pain was greater than his back pain. Dr. Castro noted that x-ray and MRI findings were consistent with S1 radiculopathy and assessed work-related lumbar radiculopathy secondary to disc herniation at L5-S1. Dr. Castro recommended Claimant undergo injection and physical therapy and, if no improvement, a possible lumbar microdiscectomy decompression.

7. Claimant saw Dr. Zimmerman for a follow-up evaluation on October 12, 2015. Claimant reported that his symptoms had returned after experiencing two days of 75% relief from an ESI performed September 16, 2015. Physical examination revealed positive straight leg raise and neural tension findings on right side and improved lumbar range of motion. Dr. Zimmerman scheduled a repeat ESI, which was performed on October 28, 2015.

8. On November 20, 2015, Dr. Zimmerman noted Claimant had a diagnostic response to the October 28, 2015 ESI, with two weeks of near-complete relief of back and leg pain. Dr. Zimmerman recommended Claimant undergo a third ESI, and continue his medications, physical therapy and massage therapy. The third ESI was performed on December 16, 2015.

9. Dr. Zimmerman reevaluated Claimant on January 8, 2016. Claimant reported insignificant relief from the third ESI for the first eight days, then a reduction in pain from 7/10 to 3/10 for two to three weeks. Dr. Zimmerman noted very restricted lumbar range of motion and recommended Claimant undergo an EMG/nerve conduction study and return to Dr. Castro to discuss surgical options.

10. Claimant underwent an EMG/nerve conduction study on January 18, 2016. Dr. Zimmerman noted that the results were normal with no evidence of radiculopathy, myopathy or neuropathy.

11. On January 20, 2016, Stephen Danahey, M.D. at Concentra Medical Center noted Claimant was still experiencing difficulties and referred Claimant to delayed recovery specialist Dr. John Burris.

12. Dr. Castro reevaluated Claimant on February 22, 2016 and noted Claimant had ongoing lumbar radiculopathy with short-term relief from injections. Dr. Castro recommended Claimant undergo a new MRI, noting Claimant may be possible candidate for surgical intervention.

13. Claimant underwent a second MRI on February 28, 2016 which revealed a small annular fissure at L5-S1 “not definitively seen on prior exam.” The otherdegenerative findings had not significantly changed.

14. Claimant attended a follow-up evaluation with Dr. Zimmerman on February 29, 2016. Dr. Zimmerman noted that the MRI demonstrated stable and essentially

unchanged right-sided L5-S1 disc protrusion causing encroachment on the right S1 nerve root. Dr. Zimmerman noted Claimant had minimal therapeutic relief after three ESIs and that his history of depression and anxiety were complicating his recovery. Dr. Zimmerman recommended Claimant follow up with Dr. Castro, as well as start OxyContin, reduce his dosage of Percocet, and continue taking his other medications.

15. On April 11, 2016, Dr. Zimmerman noted that Claimant was no longer having referred pain down the right lower extremity and no neuropathic radicular symptoms. On physical exam, Dr. Zimmerman noted self-limited lumbar range of motion and negative straight leg raise and neural tension findings bilaterally. Dr. Zimmerman recommended Claimant undergo diagnostic right L4-5 and L5-S1 medial branch blocks of facet joint to rule out facet-mediated pain.

16. Claimant underwent a medial branch block of the facet joint on May 4, 2016 and reported five to six days of relief during which his pain decreased from 6/10 to 2/10. Dr. Zimmerman recommended Claimant undergo a repeat medial branch block, which was performed on June 8, 2016. Claimant reported a decrease in pain from 5/10 to 0-1/10. Dr. Zimmerman noted a diagnostic response to the block. Dr. Zimmerman recommended Claimant undergo right L4-L5 and L5-S1 radiofrequency neurotomies, which were performed on July 13, 2016.

17. Claimant attended a follow-up examination with Dr. Burris on August 9, 2016 at which he reported that a rhizotomy procedure provided no relief of his low back pain. Dr. Burris noted Claimant was neurologically intact and referred Claimant back to Dr. Castro for further recommendations in light of the failed rhizotomy stating, “If Dr. Castro offered surgery and he wishes to pursue this, then they should move forward with the treatment. If Dr. Castro does not offer surgery, then the patient is at maximum medical improvement.”

18. Dr. Zimmerman reevaluated Claimant on September 26, 2016. Claimant reported that the radiofrequency neurotomy provided relief for the majority of his right lower extremity and buttock symptoms and some relief for his low back pain. Dr. Zimmerman noted that the September 7, 2016 MRI was unchanged overall from February 28, 2016 MRI. He recommended Claimant continue tapering his medication but remain on Percocet to maintain his activity level.

19. Claimant returned to Dr. Zimmerman for a follow-up evaluation on October 17, 2016. Dr. Zimmerman noted that the results of a recent urine analysis were complaint and recommended Claimant continue his current medications. Dr. Zimmerman noted that Claimant lived with his sister and would be assisting her after her own psurgical procedure, and “would not be able to consider surgery for himself until after she has become functionally independent again.”

20. Dr. Burris placed Claimant at MMI on November 1, 2016. Claimant reported 5/10 low back pain. On examination, Dr. Burris noted Claimant was neurologically intact with negative seated straight leg raising bilaterally and self-limited range of motion. He noted that there had been no change in Claimant’s subjective complaints or functional

status over the last seven months. Dr. Burris noted that, per Dr. Zimmerman's October 17, 2016 report, it was not clear if Claimant would avail himself of any further treatment. Dr. Zimmerman further stated that there was secondary gain involved and it was unclear if Dr. Castro would offer surgical intervention. Dr. Burris did not assign an impairment rating at the time stating that doing so would be "premature" in the event Claimant "ever elects to press forward with additional treatment. If and when he avails himself to further treatment and further treatment is offered by Dr. Castro, then I would have the patient return to pursue that treatment."

21. Dr. Castro reevaluated Claimant on November 28, 2016. Claimant reported ongoing low back pain with improved intermittent leg pain. Dr. Castro recommended Claimant undergo a repeat ESI for his low back pain before any surgical intervention stating,

> I did inform him that lumbar radiculopathy as a symptom is more appropriately and effectively treated with microdiscectomy decompression. Lumbago itself is not as effective as a surgical consideration with a microdiscectomy. If his pain is predominantly low back pain, I would favor repeating the epidural injection prior to considering any surgical intervention.

22. Insurer filed a Final Admission of Liability on December 14, 2016 consistent with Dr. Burris' opinions on MMI, impairment and medical treatment post-MMI. Claimant objected and sought a DIME.

23. On December 23, 2016, Dr. Zimmerman noted that Claimant requested an ongoing tapering schedule for Percocet, "as he is concerned the pain medication is masking much of his pain symptoms and allowing him additional function. He states his pain is typically 5/10 in the morning, and it improves with pain medication that he takes in the afternoon." On exam, Dr. Zimmerman noted very limited lumbar range of motion and positive straight leg raise findings on the right. Dr. Zimmerman determined it was reasonable and "diagnostically important" to proceed with a repeat ESI to make further surgical decisions. If surgical options were not recommended, Claimant would be at MMI.

24. Claimant underwent a repeat right ESI on January 4, 2017. On January 10, 2017, Dr. Burris noted that he was awaiting the results of the ESI and opined that, unless surgical intervention is recommended, Claimant remained at MMI and further treatment would be maintenance care.

25. On January 23, 2017, Claimant reported to Dr. Zimmerman experiencing 65-75% relief after the ESI, which lasted three to four hours before returning to baseline. Dr. Zimmerman determined Claimant had a diagnostic response to the ESI and recommended Claimant follow up with Dr. Castro to determine if surgical intervention is indicated stating, "We will move towards MMI if surgical options not recommended."

26. On March 6, 2017, John S. Hughes, M.D. performed an Independent Medical Examination at the request of Claimant. Dr. Hughes reviewed Claimant's medical records dated July 7, 2015 through January 10, 2017 and noted that he did not have records from Dr. Mike Wells regarding Claimant's depression and anxiety. Claimant reported constant 6/10 right-sided stabbing low back pain with shooting pain down his leg. On physical examination, Dr. Hughes noted "highly limited" lumbar range of motion and positive seated straight leg raise findings. Dr. Hughes assessed a lumbar spine sprain/strain with development of a right lateralizing disc protrusion at L5-S1 and emerging S1 radiculopathy. Dr. Hughes opined that Claimant was not at MMI and endorsed Dr. Burris' January 2017 recommendations to follow up with Drs. Zimmerman and Castro. Dr. Hughes assigned a provision 7% whole person impairment under Table 53 (II)(C) of the AMA Guides. He recommended Claimant undergo a repeat EMG/nerve conduction study and a presurgical psychological screening if surgery is contemplated.

27. Dr. Castro reevaluated Claimant on April 3, 2017. Claimant continued to report ongoing pain low back with occasional leg pain. Claimant reported that the injections provided two to three hours of relief. On physical examination, Dr. Castro noted that Claimant was neurologically intact with diminished forward bending range of motion and negative straight leg raising bilaterally. Dr. Castro noted that the MRI revealed some disc bulging at L4-5 and other mild to moderate degenerative changes, with no severe neural impingement. He remarked that it was unclear what was causing Claimant's symptoms and stated, "It is unclear to this provider whether surgical intervention is the best option for him. His symptoms do not seem to be purely radicular in nature. He does not have any positive tension signs and, as such, I think I would want to use surgery as a very last resort…" Dr. Castro indicated he was awaiting the results of other IMEs.

28. On April 17, 2017, Claimant reported to Dr. Zimmerman that he had ceased taking all of his pain medications for four days and lost some ability to tolerate activities of daily living. Claimant reported being in too much pain to completely stop taking the Percocet. Dr. Zimmerman recommended that Claimant continue taking Percocet and noted that he was awaiting the results of other IMEs.

29. On April 28, 2017, Carlos Cebrian, M.D. performed an IME at the request of Respondents. Dr. Cebrian issued an IME report dated June 1, 2017. Claimant reported experiencing constant low back pain with more symptoms in his back than in his leg. Dr. Cebrian reviewed Claimant's medical records, including mental health records dating back to 2013, and physically examined Claimant. On physical examination, Dr. Cebrian noted the following lumbar range of motion measurements: flexion 5 degrees, extension 5 degrees, right lateral flexion 10 degrees, and left lateral flexion 15 degrees. Straight leg raise was negative bilaterally. Dr. Cebrian assessed a work-related lumbar strain with aggravation of L5-S1 disc herniation with S1 radiculopathy.

30. Dr. Cebrian opined that Claimant was at MMI. Dr. Cebrian noted that, although Claimant has lumbar spine pathology, he was concerned that Claimant's psychiatric history affected his subjective presentation. Dr. Cebrian recommended that Claimant return to Dr. Burris for a referral to a neurosurgeon of his choice, stating that Dr. Rauzzino was an option. He noted that, if surgery was then recommended, a

psychological consultation would be required. Dr. Cebrian opined that such steps could be performed as maintenance and, "If [Claimant] is an appropriate surgical candidate with psychological clearance he would no longer be at MMI." Dr. Cebrian further opined that Claimant is not a surgical candidate as the clinical indications in the MTG have not been met for nerve root compression surgery.

31. Referring to the MTG for Chronic Pain and the CDC Guidelines for Prescribing Opioids for Chronic Pain, Dr. Cebrian recommended discontinuation of the opioids over 90 days and of the muscle relaxer over 30 days, contending that the medication was not increasing Claimant's function and had potential side effects. Dr. Cebrian assigned a 7% permanent impairment rating under Table 53(II)(C) of the AMA Guides with possible range of motion impairment.

32. Claimant underwent a DIME with Clarence E. Henke, M.D. on May 4, 2017. Claimant reported 4/10 pain radiating over the right posterior buttock and aching down the right lower extremity. Dr. Henke reviewed Claimant's medical records dated July 9, 2015 to March 6, 2017 and physically examined Claimant. Dr. Henke did not review Claimant's mental health records. On physical examination, Dr. Henke noted tenderness to palpation over the lower lumbar spine with radiation over the right posterior buttocks and down the right lower extremity to the heel. Claimant's active range of motion measurements were as follows: 20 degrees flexion, 10 degrees extension, 10 degrees bilateral flexion, and 15 degrees bilateral rotation, all with pain. Seated straight leg raise was positive on the right at 30 degrees and positive on the left at 50 degrees. Dr. Henke diagnosed Claimant with L5-S1 disc herniation with bilateral S1 nerve root compression more pronounced on the right, causing right lower extremity radiculopathy symptoms. He opined that Claimant had not reached MMI and recommended Claimant undergo a second surgical consultation with a board-certified neurosurgeon. Dr. Henke restricted Claimant from lifting more than 10 pounds, bending, squatting and kneeling. Dr. Henke recommended that Claimant continue taking Flexeril and Percocet.

33. On May 22, 2017, Dr. Zimmerman noted that Claimant was stable on his medications stating, "He successfully tapered his medications and appears to be at the lowest amount of narcotic analgesics to maintain his activities of daily living." Dr. Zimmerman reviewed the IME reports of Drs. Hughes and Henke. Claimant reported pain at a 6/10 and said he was not comfortable accepting his current condition. Dr. Zimmerman recommended Claimant continue his current medications, scheduled a repeat EMG/nerve conduction study, and referred Claimant for a psychological screening with Dr. Ron Carbaugh. Dr. Zimmerman stated that Claimant would then be referred for a second surgical opinion with neurosurgeon Dr. Michael Rauzzino.

34. Dr. Cebrian testified at hearing as an expert in occupational medicine. Dr. Cebrian is board certified in occupational medicine and Level II accredited by the Colorado Division of Workers' Compensation. Dr. Cebrian testified consistent with his June 1, 2017 IME report that, while Claimant suffered a work-related lumbar strain with aggravation of L5-S1 disc herniation with S1 radiculopathy, Claimant was at MMI as of

the date of the April 28, 2017 IME. Dr. Cebrian opined that Claimant's psychiatric history is likely affecting his subjective presentation and recovery.

35. Dr. Cebrian testified that Claimant is not a surgical candidate as the clinical indications outlined in the MTG for Low Back Pain have not been met. Dr. Cebrian stated that, per the MTG on Low Back Pain, in order to qualify for surgery for nerve root compression, the patient should exhibit the following signs of radiculopathy before invasive procedures are considered: (i) pain in the legs greater than the low back which interferes with function, return to work and/or active therapy; (ii) physical exam findings of abnormal reflexes, motor weakness or radicular sensation deficits; and (iii) findings on MRI which indicate impingement of the nerve. Dr. Cebrian testified that because Claimant does not meet the clinical indications for surgery, and he has already been reevaluated by a surgeon, the recommendation for a surgical evaluation prior to MMI is not reasonable and necessary.

36. Dr. Cebrian opined that Dr. Burris appropriately placed Claimant at MMI. Dr. Cebrian stated that Dr. Henke failed to review all medical records submitted to him for review and was unaware of Claimant 's surgical consultation with Dr. Castro one month prior to the DIME appointment.

37. Dr. Cebrian further testified that the ongoing prescription of Percocet and cyclobenzaprine (Flexeril) are not appropriate per the MTG. Dr. Cebrian testified that the treating providers notes do reflect knowledge of Claimant 's substance abuse history or current anti-psychotic medications. Dr. Cebrian testified that Claimant meets several contraindications for continued use of Percocet and cyclobenzaprine, including that Claimant has not demonstrated increased functionality while using opioids and a history of substance abuse as reflected in a medical record reporting that at age 21, Claimant was using cocaine and heroin daily.

38. Dr. Cebrian testified nothing in the medical record justifies deviating from the MTG in this claim.

39. Dr. Henke testified at hearing consistent with his DIME report. Dr. Henke acknowledged that he did not review Claimant's mental health records and, at the time of his DIME, he was unaware of Claimant's psychiatric history. Dr. Henke also acknowledged that he did not have Dr. Castro's April 3, 2017 surgical opinion at the time of his examination of Claimant. Dr. Henke testified that Dr. Castro's opinion "didn't confirm or deny anything." When asked if Claimant's psychological history could be affecting his subjective pain complaints, Dr. Henke stated he had no comment.

40. Dr. Henke testified that his examination of Claimant revealed Claimant's pain was in his back and lower extremity. Dr. Henke testified that Claimant has a herniated disc which could completely disrupt and lead to further nerve damage. Dr. Henke stated that the pain that Claimant's low back pain is different than his leg pain because there is more than one pain generator.

41. Dr. Henke stated that, to the extent that Claimant used substances in the past or is currently taking medications, they do not affect the anatomical changes of Claimant's spine demonstrated by the diagnostic findings. Dr. Henke testified that while a person's psychiatric history can affect his or her perception of pain, it would not affect the cause of such pain.

42. Dr. Henke continued to opine that Claimant is not at MMI and recommended that a second neurosurgical opinion be performed prior to Claimant being placed at MMI.

43. Claimant testified at hearing that his right leg radicular pain extends from his lower back, through the buttock and into his ankle, and that the radicular leg pain is greater than his back pain with increased activity. Claimant stated that his symptoms prevent him from running, sitting and standing for longer than 20 minutes without increasing pain, doing household chores like laundry, cleaning under his bed, and vacuuming, and traversing stairs. Claimant testified that he wants to get better and is eager and willing to participate in his recovery to his full ability.

44. Claimant testified that he has only received surgical consultations from Dr. Castro and has not followed up with Dr. Castro since the April 3, 2017 appointment and after the completion of the DIME and IMEs. Claimant testified that his sister's surgical procedure and post-operative care would not have and did not interfere in any way with his ability to continue to receive medical treatment for his work-related injury.

45. Claimant's current pain medications of Percocet and Flexeril are being prescribed by Dr. Rick Zimmerman. Claimant testified that he disclosed to Dr. Zimmerman all his prior health conditions, including his depression and anxiety. Claimant stated he did not disclose his mental health medications to Dr. Castro because he was under the impression Dr. Castro's questionnaire was only asking for his pain medications.

46. Claimant testified that he has been on other medications that were not as effective as Percocet and Flexeril in addressing his symptoms. Claimant stated that the Percocet and Flexeril medications help improve his physical functionality by limiting the effects of his pain symptoms.

47. Claimant further testified that Dr. Zimmerman put him on a rotation of different types of medications to guard against negative effects like dependency and decreasing effectiveness. Claimant testified that he makes sure to follow the administration instructions of his medications and will take the minimum amount needed in order to function.

48. Claimant testified that he did use cocaine on a daily basis for about two or three months nearly sixteen years ago, and that he has not used cocaine in the past sixteen years. Claimant testified that he used heroin during one isolated incident and believes the medical record to be incorrect in asserting he was using heroin daily.

49. Claimant's testimony is found credible and persuasive.

50. The ALJ credits the opinions of Dr. Henke and Hughes over the contradictory opinion of Dr. Cebrian and finds Claimant is not at MMI.

51. Respondents have failed to overcome the DIME opinion on MMI by clear and convincing evidence.

52. The ALJ credits the opinions of Drs. Henke and Zimmerman over the opinion of Dr. Cebrian and finds that Claimant has met his burden in establishing that the ongoing prescription of Percocet and Flexeril is reasonable and necessary to cure and relieve the effects of Claimant's industrial injury.

53. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Overcoming the DIME on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI.

A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The ALJ concludes Respondents have failed to establish that it is highly probable Dr. Henke's finding concerning MMI is incorrect. When placing Claimant at MMI, one of the factors Dr. Burris clearly relied upon was Claimant allegedly not availing himself of

any future treatment. Dr. Burris declined to assign an impairment rating at the time, noting that doing so would be premature if Claimant elected to move forward with additional treatment. Claimant credibly testified that he continues to experience symptoms and that his radicular leg pain increases with activity. Claimant's MRIs demonstrate objective evidence of nerve root compression and an annular fissure.

Subsequent to becoming aware of Claimant's psychiatric history and reviewing Dr. Castro's April 3, 2017 report and Dr. Cebrian's IME report, Dr. Henke continued to opine at hearing that Claimant is not at MMI and requires a second surgical opinion. No evidence was introduced at hearing indicating Claimant has, in fact, obtained a second surgical opinion since the DIME. While Dr. Cebrian opined that Claimant is at MMI and is not a surgical candidate, Dr. Cebrian also recommended Claimant return to Dr. Burris for a referral to a neurosurgeon. Based on the totality of the evidence, the ALJ concludes that Dr. Cebrian's disagreement with Dr. Henke's opinion on MMI represents a mere difference of opinion, which is insufficient to overcome the DIME.

Medical Benefits

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

The ALJ further concludes that Claimant has proven by a preponderance of the evidence that ongoing prescriptions for Percocet and Flexeril are reasonable and necessary to cure and relieve Claimant of the effects of the July 7, 2015 industrial injury. Claimant credibly testified that the Percocet and Flexeril medications provide some relief for his symptoms and allow him to function in activities of daily living. To the extent Claimant has psychological conditions that may interact with the prescribed medications, such conditions have been disclosed to Dr. Zimmerman. As noted in the medical records, Claimant successfully tapered his medications to the minimal amount needed for function. Drs. Zimmerman and Henke continue to opine that Claimant should continue on his current medications. Based on the totality of the evidence, Claimant has met his burden to establish entitlement to ongoing prescriptions for Percocet and Flexeril.

ORDER

It is therefore ordered that:

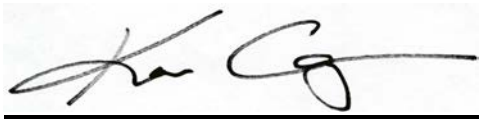
1. Claimant is not at MMI for his July 7, 2015 industrial injury.

2. Respondents shall pay for ongoing prescriptions of Percocet and Flexeril as prescribed by Dr. Zimmerman or other authorized providers.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 1, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence a worsening of condition pursuant to § 8-43-303, C.R.S., and that his case should be reopened.

II. If Claimant's case is reopened, whether Claimant is entitled to reasonable, necessary, and related medical benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, who is currently a 58-year-old male, sustained an admitted injury on June 25, 2008 to his right shoulder. **Ex. B:2, Ex. I:151-164, Ex. J:165-168, Ex. K:169-170, Ex. L:171-191, Ex. M:192-198, Ex. N:199-201.**

2. Claimant was initially diagnosed with a right shoulder impingement and treated conservatively. **Ex. G:75.** Despite conservative care, Claimant's pain continued to increase and he was referred to Mark Failinger, M.D., an orthopedic surgeon. **Ex. G:75.**

3. On August 14, 2008, Claimant presented to Dr. Failinger, who diagnosed Claimant with a rotator cuff tear and recommended an MRI. **Ex. G:75.**

4. A MRI of the right shoulder, completed on August 28, 2008, revealed a near full-thickness bursal-sided tear involving the supraspinatus tendon with severe tendinopathy. **Ex F:39-41.**

5. Following the MRI, Dr. Failinger performed a right shoulder arthroscopic decompression and open rotator cuff repair on October 14, 2008. **Ex. E:30-31.**

6. Claimant had a post-surgery MRI of the right shoulder on January 20, 2009, which demonstrated an intact rotator cuff repair. **F:35-38.**

7. On June 29, 2009, Dr. Hattem placed Claimant at maximum medical improvement with a 9% upper extremity rating. At the time of MMI, Claimant was complaining of intermittent shoulder pain. **Ex. G:75-78.**

8. Following Dr. Hattem's MMI report, Respondents filed a Final Admission of Liability ("FAL") on July 13, 2009, admitting to a 9% scheduled impairment rating and post-MMI benefits. **Ex. M:192-197.** Claimant objected to the FAL and requested a Division Independent Medical Examination ("DIME").

9. Jefferson Parks, M.D., completed the DIME on January 26, 2010. **Ex. L:175-191.** Dr. Parks opined that since Claimant was placed at MMI, his condition had worsened and that Claimant was not at MMI. Therefore, Dr. Parks referred Claimant for a repeat right shoulder MRI. **Ex. L:191.**

10. A MRI of the right shoulder completed on December 16, 2010, showed no evidence of rotator cuff disruption. **Ex. F:32-34.**

11. Following the MRI, Claimant presented to Dr. Failinger in February 2011, who referred him to a second orthopedic surgeon, Cary Motz, M.D. **G:70.**

12. Ultimately, and due to ongoing pain complaints, on January 23, 2012, Dr. Motz performed a right shoulder arthroscopy with distal clavicle resection and biceps tenodesis. **Ex. D:27-29.**

13. After the January 23, 2012, surgery, Claimant underwent physical therapy. Claimant contends that during physical therapy, around June of 2012, his shoulder was reinjured.

14. A post-surgery MRI of the right shoulder, dated July 27, 2012, showed no recurrent tear and some bone reaction around the biceps tenodesis. **Ex. F:24-25.**

15. On January 22, 2013, Claimant returned to Dr. Parks for a follow-up DIME. **Ex. B:12-22**. Claimant continued to complain of ongoing shoulder pain. **Ex. B:12-22.** Due to complaints on ongoing shoulder pain, Dr. Parks opined a repeat right shoulder MRI was needed to assess the anchor screw sites. **Ex. B:19.**

16. A right shoulder MRI, completed on April 23, 2013, demonstrated an intact rotator cuff repair and bone healing around the anchor screw with no evidence of displacement. **Ex. C:23.**

17. Claimant testified that this April 2013 MRI scan took place after he completed his physical therapy.

18. Following the MRI, Claimant saw a third orthopedic surgeon, Michael Hewitt, M.D., on July 15, 2013, due to persistent complaints of shoulder pain. **Ex: G:57-58.** Dr. Hewitt evaluated Claimant due to ongoing pain complaints and advised against surgery and recommended that claimant be evaluated by his partner, Craig Davis, M.D. **Ex G:48.**

19. On March 4, 2014, Claimant saw Dr. Davis for persistent right shoulder pain. Dr. Davis stated that Claimant almost certainly has some irregularities of the rotator cuff in the area of his repair, but trying to repair this can sometimes result in more

pain rather than improvement. Therefore, Dr. Davis advised against surgery. **Ex. G:46-47.**

20. On May 20, 2014, Claimant presented to Dr. Hattem, who noted that Claimant still wanted to undergo surgery even though multiple orthopedic surgeons advised against it. **Ex. G:42.** Claimant stated that his pain was 8/10. Although Claimant continued to complain of pain, there was nothing further that could be done. Therefore, Dr. Hattem placed Claimant at MMI and assigned a 22% upper extremity rating. **G:44.** Dr. Hattem recommended no further maintenance medical treatment. **Ex. G:44.**

21. Claimant returned to Dr. Parks for a follow-up DIME on July 13, 2014. **Ex. B:2-11.** Claimant stated that his shoulder pain was 8-10/10 all the time. **Ex. B:6**. Dr. Parks noted that Claimant underwent three right shoulder orthopedic evaluations with Dr. Failinger, Dr. Hewitt, and Dr. Davis, who all opined that surgery was not clinically indicated. **Ex. B:7**. Dr. Parks also agreed that additional surgery was not reasonable. **Ex. B:7.** Dr. Parks agreed with Dr. Hattem's MMI date of May 20, 2014, and assigned a 23% upper extremity rating. **Ex. B:7.** Dr. Parks recommended no further maintenance medical treatment. **Ex B:7.**

22. On August 29, 2014, Respondents filed a Final Admission of Liability consistent with DIME Dr. Park's July 1, 2014 report, admitting for a 23% scheduled impairment rating and denying post-MMI benefits. **Ex. J:165-168.** On December 1, 2014, Respondents filed a subsequent FAL to reflect a corrected average weekly wage, and denying post-MMI benefits, **(Ex. I:151-164)** to which Claimant objected to on December 29, 2014. Claimant filed an Application for Hearing on January 15, 2015 to which Respondents timely filed a Response to Claimant's Application for Hearing on February 13, 2015. A hearing was set then subsequently vacated.

23. On May 6, 2015, Claimant filed an Application for Hearing on the issue of petition to reopen. On June 5, 2015, Respondents timely filed a Response to Claimant's Application for Hearing. On September 1, 2015, the parties attended a hearing before ALJ Cain on Claimant's Application for Hearing. **Ex. P: 206-207.** Before the hearing commenced, the parties agreed that Respondents would authorize a one-time evaluation to evaluate Claimant's right shoulder condition with authorized orthopedist Dr. Failinger. **Ex. P:206-207.**

24. On September 9, 2015, Claimant presented to Dr. Failinger for a one-time evaluation. **Ex. O:202-205.** Dr. Failinger did not find Claimant's condition had worsened and recommended no further treatment. **Ex. O:202-204.** This ALJ finds Dr. Failinger's opinion to be credible and persuasive. Dr. Failinger referred Claimant to authorized Dr. Motz for an orthopedic evaluation at Claimant's request. **Ex.O:204-205.**

25. Following Dr. Failinger's one-time evaluation, Claimant did not show for the scheduled evaluation with Dr. Motz. Thus, on May 4, 2016, Respondents filed a Motion to Close the File for Failure to Prosecute, to which the Division issued a Show Cause Order to Claimant on May 19, 2016. **Ex. V:221-222.**

26. Following the Show Cause Order, the parties attended a hearing before ALJ Felter on October 12, 2016. **Ex U:219-220, Ex. V:222.** ALJ Felter entered a Procedural Order, ordering Respondents to schedule another appointment with Dr. Motz for Claimant and holding the case in abeyance pending completion of Dr. Motz's evaluation. **Ex. U:219-220.**

27. Pursuant to ALJ Felter's Procedural Order, Respondents scheduled an appointment with Dr. Motz. Claimant presented to Dr. Motz on November 3, 2016, and complained of 7-8/10 shoulder pain. **Ex. Q:208-212.** Dr. Motz evaluated Claimant and opined that Claimant did not need any additional medical treatment due to his work related injury, such as another MRI as recommended by Dr. Robinson, as there was no change in his symptoms or status since the MRIs Claimant underwent in 2012 and 2013. **Ex. Q:208-212.** This ALJ finds Dr. Motz' opinion to be credible and persuasive.

28. After granting an Extension of Time to Show Cause, the Division entered an Order Granting Respondents' Motion to Close on June 1, 2017. **Ex. V:222.** The Order Granting the Motion to Close did not preclude a claim to reopen.

29. On June 13, 2017, Claimant filed a Petition to Reopen and an Application for Hearing endorsing his petition to reopen the claim and medical benefits **(Ex. R:213-214, Ex. V:222)** to which Respondents timely filed a Response to Application for Hearing on July 13, 2017. **Ex. S:215-216.**

30. Claimant testified that since being placed at MMI, he did not undergo treatment for his right shoulder until he sought an evaluation with Mitchell Robinson, M.D., on his own. Claimant testified that no treating physician referred him to Dr. Robinson. Claimant testified that Dr. Robinson indicated that the 2013 MRI of the right shoulder showed his shoulder had healed post-surgery. Claimant admitted that no treating physician opined that his condition had worsened since being placed at MMI. Additionally, Claimant admitted that he saw Drs. Failinger and Motz post-MMI and neither recommended additional treatment, including shoulder surgery.

31. Claimant had shoulder pain when he was placed at MMI on May 20, 2014, and when he was evaluated by Dr. Parks on July 13, 2014, pursuant to his follow up DIME. Claimant still has shoulder pain. However, his pain complaints and underlying shoulder condition have not worsened since being placed at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence a worsening of condition pursuant to § 8-43-303, C.R.S., and that his case should be reopened.

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. Claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if Claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). However, no compensability exists if the disability and need for treatment were caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002).

The question of whether Claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

Claimant has failed to establish by a preponderance of the evidence that he sustained a worsening of his underlying condition since being placed at MMI on May 20, 2014.

Claimant injured his right shoulder on June 25, 2008. Claimant initially underwent shoulder surgery, which was performed by Dr. Failinger, on October 14, 2008. Claimant was placed at MMI by Dr. Hattem on June 29, 2009. On January 26, 2010, Claimant underwent a Division Independent Medical Examination ("DIME"), which was performed by Dr. Parks. Claimant complained of increasing shoulder pain since

being placed at MMI. Dr. Parks opined that Claimant was not at MMI. After being found not at MMI, Claimant returned to Dr. Failinger in February 2011. Dr. Failinger referred Claimant to Dr. Cary Motz.

On January 23, 2012, Dr. Motz performed a right shoulder arthroscopy with distal clavicle resection and bicepts tenodesis. After having his second shoulder surgery on January 23, 2012, Claimant underwent physical therapy. Claimant contended that his right shoulder was reinjured during physical therapy in June of 2012. Due to ongoing pain complaints, Claimant underwent an MRI of his right shoulder on July 27, 2012, which showed no recurrent tear and some bone reaction around the biceps tenodesis.

On January 22, 2013, Claimant returned to Dr. Parks for a follow-up DIME and complained on ongoing shoulder pain. Dr. Parks opined a repeat right shoulder MRI was needed to assess the anchor screw sites. Another right shoulder MRI, completed on April 23, 2013, demonstrated an intact rotator cuff repair and bone healing around the anchor screw with no evidence of displacement.

Following the MRI, Claimant continued to complain of shoulder pain. Therefore, Claimant saw another orthopedic surgeon, Michael Hewitt, M.D., on July 15, 2013. Dr. Hewitt evaluated Claimant and advised against surgery and recommended Claimant be evaluated by his partner, Craig Davis, M.D.

On March 4, 2014, Claimant was evaluated by Dr. Davis for ongoing shoulder pain. Dr. Davis evaluated Claimant and advised against surgery.

On May 20, 2014, Claimant presented to Dr. Hattem, who noted that Claimant still wanted to undergo surgery even though multiple orthopedic surgeons advised against it. Claimant complained of 8/10 shoulder pain. Despite Claimant's complaints of ongoing shoulder pain, Dr. Hattem placed Claimant at MMI and recommended no further maintenance medical treatment.

Claimant returned to Dr. Parks for a follow-up DIME on July 13, 2014. Claimant complained of 8/10 shoulder pain. Dr. Parks noted that Claimant underwent three right shoulder orthopedic evaluations with Dr. Failinger, Dr. Hewitt, and Dr. Davis, who all opined that surgery was not clinically indicated. Dr. Parks also agreed that additional surgery was not reasonable. Dr. Parks agreed with Dr. Hattem's MMI date of May 20, 2014. Dr. Parks recommended no further maintenance medical treatment.

After being placed at MMI as of May 20, 2014, Claimant continued to complain of shoulder pain. Therefore, on September 9, 2015, Claimant presented to Dr. Failinger for a one-time evaluation due to ongoing shoulder pain. Dr. Failinger did not find Claimant's condition had worsened and recommended no further medical treatment. Dr. Failinger referred Claimant to Dr. Motz for an orthopedic evaluation at Claimant's request. Claimant presented to Dr. Motz on November 3, 2016, due to ongoing shoulder pain. Claimant complained of 7-8/10 shoulder pain. Despite Claimant's pain complaints, Dr. Motz opined that Claimant did not need any additional medical

treatment due to his work injury, such as another MRI, as there was no change in his symptoms or status since the MRIs Claimant underwent in 2012 and 2013.

This ALJ credits the opinions of Dr. Failinger and Dr. Motz that Claimant's underlying condition has not worsened and that Claimant is not in need of additional medical treatment due to his work related injury. In addition, Claimant's pain complaints have remained the same since being placed at MMI. Therefore, this ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that his underlying condition has worsened, that he is in need of additional medical treatment, and that his case should be reopened based upon a change of condition.

II. If Claimant's case is reopened, whether Claimant is entitled to reasonable, necessary, and related medical benefits.

Claimant's case has not been reopened. Claimant's condition has not worsened since being placed at MMI. Therefore, Claimant is not entitled to additional medical benefits.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's petition to reopen is denied.

2. Claimant is not entitled to additional medical benefits.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 3, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable right knee injury while ascending a flight of stairs with construction supplies while working for Respondent-Employer on July 6, 2016; and if so,

II. Whether he proved, by a preponderance of the evidence, that respondents are liable for the diagnostic testing and treatment provided by Dr. Michael Ramos and Dr. Robert Thomas following his release from care by Centura Centers for Occupational Medicine (CCOM).

Because this order determines that Claimant failed to establish that he suffered a compensable right knee injury, the claim for additional medical treatment is not addressed below.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as correctional officer for Respondent-Employer. On July 6, 2016, he was charged with supervision of an inmate maintenance work crew which was remodeling part of the prison facility. The job entailed the mudding, priming and painting of newly installed dry-wall.

2. Prior to taking lunch, standard protocol at the facility requires that Claimant and his crew clean up the designated work area and return all tools and supplies to the designated secured storage area. After the work area is cleaned and all supplies and tools secured, Claimant is responsible for escorting the inmates assigned to his crew to a selected location for count.

3. As Claimant and his crew began clean-up duties in preparation for lunch count, Claimant picked up a five gallon bucket of dry-wall primer and proceeded to carry it up a flight of stairs to the pre-selected storage area. As he was ascending the stairs, Claimant heard/felt a pop and pain in his right knee. He did not slip, trip, stumble or twist his knee while climbing the stairs. Indeed, Claimant testified that nothing about the stairs caused his injury.

4. Claimant limped back to an administrative building where he reported the injury to his supervisor, Lt. Zupan. He was provided with a list of "Designated Providers" and acknowledged receipt of the same by signing the list on July 6, 2016.

5. Claimant was able to limp through the remainder of his shift and depart for home for the evening. He returned to work the next day. His knee was swollen and painful. Consequently, he asked to be evaluated at CCOM; one of the designated providers contained on the list given to him. A "First Report of Injury or Illness" was completed on July 7, 2016 and Claimant was directed to CCOM where was evaluated by nurse practitioner (NP) Theresa Kuhn.

6. Prior to his evaluation on July 7, Claimant completed a pain diagram/questionnaire. According to Claimant's completed pain diagram/questionnaire he had 8/10 aching pain, 40% of the time in the lateral aspect of the right knee.

7. During his initial evaluation with NP Kuhn, Claimant reported that while in midstep, as he was ascending the stairs, he felt a "pop in his right lateral knee with instant pain." While Claimant demonstrated full extension and flexion along with stable collateral ligaments and negative provocative test results, physical examination revealed "Grade I joint effusion" of the right knee. X-ray imaging was not felt to be necessary given the lack of trauma. Claimant was diagnosed with a right knee sprain and instructed to take ibuprofen and ice the knee for 20 minutes, three times a day. He was placed on modified duty for one week with the following restrictions: no stooping, bending, crawling, kneeling, squatting or twisting. He was also limited to 30 minutes of standing per hour. At the conclusion of his initial visit, Claimant was directed to return for a follow-up visit on July 14, 2016.

8. Claimant returned to NP Kuhn on July 14, 2016. Once again, Claimant completed a pain diagram and questionnaire. Claimant's July 14, 2016 pain diagram is devoid of any markings depicting pain anywhere on the body. Moreover, Claimant answered the question regarding the percentage of time he had pain and the level of any such pain as 0% and 0. The content of Claimant's July 14, 2016 pain diagram/questionnaire persuades the ALJ that he intended his diagram and questionnaire responses to indicate that his pain had completely resolved.

9. According to NP Kuhn's July 14, 2016 report, physical examination of the knee was "normal." Moreover, the effusion which was documented following Claimant's July 7, 2016 examination had resolved. Claimant purportedly told NP Kuhn that he "applied ice to the right knee, elevated it, and took ibuprofen as directed over the weekend." The report goes on to reflect that by Monday the knee was "back to normal." NP Kuhn also documented that Claimant denied pain in the right knee and supposedly reported the condition of the knee as "excellent." Finally, the report indicates that Claimant requested to be released from care. NP Kuhn placed Claimant at maximum medical improvement (MMI) and released him to unrestricted full duty work.

10. Claimant denies ever telling NP Kuhn on July 14, 2016 that the condition of his knee was "excellent" or "back to normal." To the contrary, Claimant testified he simply informed NP Kuhn that he was capable to returning to full duty work. According to Claimant, his knee never fully healed and he only indicated that he had no pain on his pain diagram/questionnaire because he wanted to return to full unrestricted duty.

Claimant testified that he was afraid that he would be terminated if he lost time from work. Consequently, he requested a full duty work release and never sought temporary disability benefits.

11. The evidence presented as a whole, persuades the ALJ that, despite his protestations otherwise, Claimant likely reported to NP Kuhn that his knee was "back to normal" and/or in "excellent" condition as documented in the July 14, 2016 report. The reports of "normal" and "excellent" are in direct quotations and in the section of the report attributable to Claimant. Moreover, such reports are consistent with the content of his pain diagram/questionnaire as well as Claimant's request to be released to full duty work. The weight of this evidence convinces the ALJ that Claimant probably reported that he was capable of returning to full duty work because his knee was "back to normal" and in "excellent" physical condition.

12. Claimant testified that after his release from treatment at CCOM, he sought further care through the Worker's Compensation System. In conjunction with his request for additional care, Claimant testified that he was telephonically informed either by a representative of Broadspire, Respondent-Employer's third party claims administrator or CCOM that too much time had elapsed for him to seek additional treatment. Claimant presented no independent verification of the telephone conversation he asserts took place and as noted; he could not recall whether he spoke to someone at Broadspire or CCOM. Based upon the evidence presented, the ALJ is not persuaded that CCOM refused to treat Claimant for non-medical reasons. Furthermore, assuming that CCOM did refuse to treat Claimant for the reason(s) he alleged, the evidence presented fails to convince the ALJ that Respondent-Employer knew of such refusal.

13. On November 14, 2016, the Claimant sought treatment for his knee from his primary care physician, Dr. Michael Ramos at Parkview Family Medicine. Claimant acknowledged that he was not referred by anyone at CCOM to Dr. Ramos. Dr. Ramos advised that Claimant had presented to his office to "get a referral for orthopedic evaluation." Dr. Ramos discussed with Claimant that he was not a Worker's Compensation physician and indicated further that he would make a referral to orthopedics. Claimant was referred to Dr. Robert Thomas at Parkview Orthopedics.

14. Claimant was evaluated by Dr. Thomas on December 5, 2016 where weight bearing x-rays were obtained. X-ray imaging demonstrated "slight medial joint space narrowing" prompting Dr. Thomas to request an MRI to evaluate the potential for meniscal tearing.

15. MRI of the right knee was performed on December 29, 2016. Imaging revealed a "complex tear involving the posterior horn of the medial meniscus with possible full-thickness tear of the posterior horn anchor" along with intrasubstance degeneration of the posterior horn of the lateral meniscus without definable tear and "osteoarthritic degeneration with medial and pattellofemoral compartment predominate chrondromalacia."

16. Claimant returned to Dr. Thomas following his MRI. During his follow-up appointment on January 16, 2016, Dr. Thomas noted that the MRI demonstrated "degenerative signals in the posterior horn of the medial meniscus." Regarding these degenerative signals, Dr. Thomas noted as follows: "The radiologist thought that might be consistent with a tear. My view of it is it looks to be more of a significant mucoid degeneration." I am not actually convinced there is a significant tear in the posterior horn." Dr. Thomas recommended trying a cortisone injection and if symptoms persisted, surgical intervention. Claimant elected to "hold off on doing anything" according to Dr. Thomas' January 16, 2017 report.

17. Respondents sought an opinion regarding the nature of the changes noted on Claimant's right knee MRI. On June 28, 2017, Dr. Wallace Larson performed an independent medical examination (IME). Following a records review and benign physical examination, Dr. Larson opined that Claimant had "evidence of early osteoarthritis of the right knee and a degenerative medial meniscus tear." He noted further that Claimant remained at MMI and did not have maintenance treatment needs.

18. At hearing, Dr. Larson explained that the December 29, 2016 coronal and saggital MRI images, which were projected onto a video screen at hearing, demonstrate thinning of the articular cartilage and a degenerative meniscal tear in the right knee. According to Dr. Larson, nothing about Claimant's physical examination(s) or the MRI images support Claimant's assertion that he suffered an acute right knee injury while climbing a flight of stairs. To the contrary, Dr. Larson testified that the MRI images support the conclusion that Claimant likely had a pre-existing degenerative meniscal tear in the right knee at the time of his alleged injury. According to Dr. Larson, the degenerative changes in the right knee were not caused by the stair climbing incident. On cross examination, Dr. Larson admitted that pre-existing conditions, such as degenerative arthritis and degenerative meniscal tears can be aggravated by activity.

19. The ALJ credits the opinions of Dr. Larson to find that Claimant's meniscal tear is, more probably than not, degenerative in nature and caused by the progression of an underlying degenerative process rather than ascending a flight of stairs with a five gallon bucket of primer as he claims. This is especially true when one considers that Claimant did not slip, trip, stumble or twist his knee and he described the popping as occurring in "midstep." Consequently, Claimant has failed to prove by a preponderance of the evidence that he sustained a work related injury arising out of his employment on July 6, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et*

seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). As found, the ALJ resolves the inconsistencies in the record in favor of Respondents and credits the testimony of Dr. Larson regarding the cause of Claimant's knee pain more persuasive than that of Claimant.

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

D. To recover benefits under the Worker's Compensation Act, the Claimant's injury must have occurred "in the course of" and "arise out of" employment. *See* § 8-41-301, C.R.S.*; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements to establish compensability. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and

place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.*, 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Based upon the evidence presented, the ALJ finds that Respondents are not contending that Claimant's alleged injury did not occur in the course of his employment. Rather, based principally on the testimony of Dr. Larson and the medical records presented, the undersigned ALJ understands Respondents contention to be that Claimant's knee pain and need for medical treatment did not "arise out" of his employment. Specifically, Respondents assert that Claimant's pre-existing right medial meniscus tear precipitated the popping and pain Claimant experienced as he was ascending a flight of stairs. Accordingly, Respondents contend that a pre-existing condition (a degenerative meniscal tear), and not an activity or condition distinctly associated with Claimant's employment, caused his pain and need for treatment. Given the evidence presented, the argument is persuasive.

E. The term "arises out of refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* As noted above, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2014. Here, Dr. Larson persuasively testified that Claimant's MRI did not correlate with an acute injury but rather demonstrated chronic degenerative changes and a degenerative meniscal tear. The record evidence supports Dr. Larson's opinions. Indeed, Claimant's MRI specifically notes that there was evidence of "intrasubstance degeneration of the posterior horn of the lateral meniscus without definable tear and "osteoarthritic degeneration with medial and pattellofemoral compartment predominate chrondromalacia." Based upon the evidence presented, including Dr. Larson's testimony, the ALJ concludes that what Claimant experienced on July 6, 2016 was the predictable manifestation, i.e. popping and pain caused by the natural progression of his underlying pre-existing osteoarthritic degeneration and degenerative meniscal tear.

F. The question of whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and his need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that he sustained a work-related injury or occupational disease. An incident which merely elicits pain symptoms without a causal connection to industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988); *Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). Moreover, while a pre-existing condition "does not disqualify

a claimant from receiving workers compensation benefits"[1], the fact that a claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). Here, the origin and cause of Claimant's pain and need for treatment, more probably than not, was the significant pre-existing degenerative changes within the knee, particularly his pre-existing degenerative meniscal tear. While the ALJ is convinced that the treatment Claimant obtained through Dr. Ramos and Thomas was reasonable and necessary given his ongoing symptoms, the ALJ is not persuaded that the need for this treatment was "related" to Claimant's work duties on July 6, 2016, either as a consequence of an acute trauma or an industrially based aggravation of a pre-existing condition. Accordingly, Claimant has failed to establish a causal connection between his employment related duties on July 6, 2016 and the resulting condition for which medical treatment benefits are sought. Consequently, his claim must be denied and dismissed. *See Horne v. St. Mary-Corwin Hospital*, W.C. No. 4-205-014 (April 14, 1995); *Crass v. Cobe Laboratories,* W.C. No. 3-960-622 (October 10, 1991); *Gutierrez v. Wal-Mart Stores, Inc.*, W.C. No. 4-432-838 (November 30, 2000).

G. Although Claimant is not alleging that his pain and need for treatment was "precipitated" by a pre-existing condition and instead by a discrete injury, i.e. an acute meniscal tear and/or aggravation of a pre-existing tear, the ALJ finds that Respondents are contending, that Claimant's pain and need for treatment is a consequence of a pre-existing degenerative meniscal tear brought by Claimant to the workplace. Consequently, the ALJ has also analyzed the compensable nature of this case pursuant to the decision announced by the Colorado Supreme Court in *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014) and the "special hazard" rule announced by the Court of Appeals in *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

H. In *City of Brighton*, the Colorado Supreme Court identified three categories of risk that cause injuries to employees: (1) employment risks directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment related nor personal. 318 P.3d 496 (Colo. 2014). The second category includes risks that are entirely personal or private to the employee. Such risks would include an employee's pre-existing or idiopathic condition that is completely unrelated to her employment. Such personal conditions generally are not compensable unless an exception applies. *Id.* at 503. One exception is when a pre-existing or idiopathic condition precipitates an accident and combines with a hazardous condition of employment to cause an injury. Referred to as the "special hazard rule", the Colorado Court of Appeals held that a claimant may be compensated if a preexisting injury, infirmity, or disease is exacerbated by "the concurrence of a pre-existing weakness and a hazard of employment." *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Gates*

[1] *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004).

Rubber Co. v. Industrial Comm'n., 705 P.2d 6, 7 (Colo. App. 1985). The rationale for this rule is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of the employment. *Gates Rubber Co. V. Industrial Commission, supra; Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999). In such cases, the existence of a special hazard, which elevates the probability of injury or the extent of the injury incurred, serves to establish the required causal relationship between the employment and the injury. *See Ramsdell v. Horn, supra.* In order to be considered a special hazard, the employment condition cannot be a ubiquitous one; it must be a special hazard not generally encountered. *Id.* The rationale for this exception is that unless a special hazard of employment increases the risk or extent of injury, an injury due to a claimant's personal or idiopathic condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. *Gates, supra* at 7. Courts have previously held that hard level concrete floors, concrete stairs, and a sidewalk curbs are not special hazards of employment. *Id.; Alexander v. ICAO*, No. 14CA2122 (Colo. App. June 4, 2015); *Gaskins v. Golden Automotive Group, LLC*, W.C. No. 4-374-591 (ICAO Aug. 6, 2009). Here, Claimant did not testify that any particular flaw in stairs he was ascending caused his right knee injury. Based upon the evidence presented, the ALJ concludes that the stairs in this case do not constitute a special hazard of employment but rather a ubiquitous condition which Claimant could have encountered off the job. Moreover, the record evidence supports a conclusion that Claimant's pain and need for treatment was precipitated by his pre-existing osteoarthritic degeneration and degenerative meniscal tear rather than carrying a bucket of primer up a flight of stairs, especially when the fact that the pop and pain occurred "midstep" is considered. Consequently, the ALJ concludes that Claimant bore the burden to establish that there was a concurrence of a pre-existing weakness and a hazard of employment to result in a compensable work injury to Claimant's right knee. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); See *also Ramsdell v. Horn, supra.* Here Claimant failed to establish that a special hazard of employment combined with his pre-existing condition to cause the injury in question. Accordingly, he had failed to establish that he suffered a compensable injury to his right knee while carrying a five gallon bucket of primer up a flight of stairs on July 6, 2016. As claimant failed to carry his burden to prove that he suffered a compensable injury, his claim for medical benefits must be denied and dismissed. Consequently, this order does not address whether the treatment rendered to Claimant by Dr. Ramos and Dr. Thomas should be considered authorized.

ORDER

It is therefore ordered that:

1. Claimant's claim for worker's compensation benefits, including the medical treatment rendered by Dr. Ramos and Dr. Thomas is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 6, 2017

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive permanent total disability (PTD) benefits as a result of admitted industrial injuries she sustained during the course and scope of her employment with Employer on October 24, 2013.

II. Whether Claimant sustained a serious and permanent disfigurement to areas of his body normally exposed to public view.

FINDINGS OF FACT

1. Claimant is a 44-year-old woman who graduated high school in 1991. She attended two or three semesters at Arapahoe Community College and did not obtain a degree or pursue any other academic training.

2. Prior to her employment with Employer, worked in various capacities performing mailroom clerk, retail and clerical duties.

3. Claimant had a prior history of pulmonary emboli and complaints of shortness of breath, chronic fatigue and anxiety.

4. Claimant worked for Employer as a senior cook/cashier.

5. Claimant suffered a compensable industrial injury to her right leg on October 24, 2013 when she slipped and fell on a wet floor. Her initial treating provider, Dr. Gary Zuehlsdorff, diagnosed Claimant with an anterior lateral subluxation dislocation of the proximal tibia-fibula joint and a contusion along the medical plateau.

6. Claimant transferred care to Dr. Jeffrey Hawke on October 30, 2013. Claimant began seeing Dr. Roberta P. Anderson-Oeser on October 31, 2013 in consultation with Dr. Hawke.

7. Claimant was evaluated at St. Anthony North Hospital on November 8, 2013 with complaints of right leg swelling, chest tightness, and shortness of breath. Claimant was diagnosed with deep venous thrombosis (DVT) and pulmonary embolism related to the work injury.

8. On November 26, 2013, Claimant underwent an EMG/nerve conduction study of her right lower extremity. Dr. Anderson-Oeser subsequently diagnosed Claimant with right peroneal neuropathy of the fibular head.

9. On December 10, 2013, Dr. Robert LaPrade performed a placement of a inferior vena cavogram and filer in the infrarenal inferior vena cava, which was removed on March 5, 2014 by Dr. Joseph Leoni.

10. On April 30, 2014, Dr. George Schakaraschwili performed an autonomic testing battery, including QSART, to test for possible complex regional pain syndrome (CRPS). Dr. Schakaraschwili noted that Claimant's right lower extremity had a reddish discoloration with some shininess to the skin and dysethesias to touch. He further noted that Claimant's right foot was cold and clammy. Dr. Schakaraschwili assessed pain and temperature abnormalities in the right lower extremity and stated, "The autonomic testing battery is high probability for complex regional pain syndrome. She had a positive response to a lumbar sympathetic block. She has therefore met Colorado Division of Workers' Compensation Diagnostic Criteria for diagnosis of complex regional pain syndrome, as she has had two positive diagnostic tests."

11. On May 1, 2014, Dr. Anderson-Oeser diagnosed Claimant with probable right lower extremity regional CRPS and referred Claimant for a lumbar sympathetic block with Dr. Floyd Ring. Claimant underwent lumbar sympathetic blocks with Dr. Ring on sixteen occasions between 2014 and 2017.

12. Dr. Hawke released Claimant to light-duty work as of May 12, 2014, restricting Claimant to performing seated tasks in her own footwear with no lifting or carrying over five pounds, and no working on slippery or cluttered surfaces. Dr. Hawke noted that the QSART test was consistent with CRPS and diagnosed Claimant with CRPS type 1 of the lower extremity.

13. On May 16, 2014 Claimant reported to Dr. Hawke that it was difficult to sit for four hours at work and that she was experiencing a burning pain in her leg. Dr. Hawke modified her work restrictions to working three hours a day, with accommodations for Claimant to attend appointments and therapies.

14. On May 30, 2014, Dr. Alan Burgess concluded that Claimant's symptoms and signs of acute pulmonary embolism had resolved and Claimant had no symptoms or consequences of pulmonary embolism that were not present before the work injury.

15. On June 3, 2014, Dr. Anderson-Oeser noted Claimant had a positive response to the lumbar sympathetic blocks and diagnosed Claimant with CRPS. She recommended Claimant continue receiving lumbar sympathetic blocks.

16. Claimant attended a six-month post-operation appointment with Dr. LaPrade on June 23, 2014. Dr. LaPrade noted that on examination Claimant's right knee revealed a full range of motion, the proximal tibia-fibular joint was stable, and the subluxation scar was completely healed.

17. Claimant returned to work on August 20, 2014 after being off for summer break. Claimant reported an increase in pain upon returning to work. Her work restrictions at the time included no lifting/carrying over 10 pounds, no kneeling or squatting, being able

to sit/stand/walk as needed, no walking on slippery or cluttered surfaces, using her own footwear, and being excused from work for all appointments and therapies.

18. Claimant reported to Dr. Hawke increased pain and difficulty concentrating at work. On October 7, 2014, Dr. Hawke removed Claimant from work for five days. Claimant also saw Dr. Anderson-Oeser who noted, "She is also having increasing anxiety and possibly depression related to return to work issues and her chronic pain." Dr. Anderson-Oeser recommended Claimant undergo a psychological evaluation with Dr. William Boyd.

19. Claimant underwent a pain psychological evaluation with Dr. Boyd on October 23, 2014. Dr. Boyd gave the following impression: somatic symptom disorder, adjustment disorder with mixed anxiety and depressed mood, and psychological or personality factors affecting medical condition. Dr. Boyd opined that Claimant's physical symptoms may be multiple and magnified.

20. In October and November 2014, Claimant continued to report pain and difficulty concentrating at work. Claimant reported that the cold weather caused flare-ups of her symptoms. Dr. Hawke removed Claimant from work on November 18, 2014 due to a flare-up.

21. On December 16, 2014, Dr. Thomas M. Horiagon performed an Independent Medical Examination (IME) regarding Claimant's pulmonary issues at the request of Claimant. Upon a physical examination of Claimant and review of her medical records, Dr. Horiagon diagnosed Claimant with, *inter alia*, work-related CRPS Type 2.

22. Claimant last saw Dr. Hawke on December 29, 2014. Dr. Hawke noted,

> [Claimant] has spoken to the "CRPS people" and they told her to report me to the medical board if I did not take her off work when she has a flare up of pain. I was stern and steadfast with her that I would not change her current work restrictions, and that she needs to continue the four hours of very light duty as part of her treatment. We discussed this at length the last visit that I felt strongly that this was in her best interest, in my opinion…

23. Claimant continued to treat with Dr. Anderson-Oeser, who kept Claimant on Dr. Hawke's modified work duty restrictions.

24. On March 26, 2015, Dr. Sander Orent performed an IME at the request of Claimant. Dr. Orent reviewed medical records and physically examined Claimant. Dr. Oren diagnosed Claimant with CRPS, worsening pulmonary hypertension and depression and anxiety related the work-related injury. Dr. Orent stated,"…I do strongly believe that she has CRPS. I think that the data is quite clear. The response to injection is quite clear. She has had a series of lumbar sympathetic blocks which do relieve her pain but only for relatively short periods of time." Dr. Orent opined that Claimant was not at maximum medical improvement (MMI) and placed Claimant in a sedentary work capacity.

25. Claimant continued to work modified duty and continued to report pain, memory problems and fatigue.

26. During a follow-up evaluation with Dr. Anderson-Oeser on August 11, 2015, Claimant reported experiencing severe flare-up of pain and swelling. Dr. Anderson-Oeser noted, "Apparently she had a meeting at work with nutrition services on Friday. She states that the meeting was 'overwhelming' and quite stressful. She states that during the meeting, her chest became heavy and she was shortness of breath." Dr. Anderson-Oeser attributed Claimant's flare-up to increased stress at work.

27. On March 10, 2016 Dr. Annyce Mayer performed a Respiratory Impairment Evaluation. Dr. Mayer assessed, *inter alia*, work-related right lower extremity DVT and pulmonary embolism, as well as pulmonary hypertension that worsened since the work injury. Dr. Mayer assessed a 20% whole person impairment of the respiratory system and recommended Claimant should perform work in the medium work category or less.

28. Dr. Anderson-Oeser placed Claimant at MMI on April 12, 2016. She noted Claimant continued to be symptomatic, but was hopeful Claimant would remain stable with maintenance treatment and home exercise. Dr. Anderson-Oeser assigned a 44% total whole person impairment rating under the AMA Guides, which consisted of 20% whole person impairment of the respiratory system calculated by Dr. Mayer and 30% impairment for CRPS of the right lower extremity under Table 1A of the AMA Guides.

29. Regarding permanent restrictions, Dr. Anderson-Oeser stated,

> [Claimant] is being placed on permanent work restrictions in which she is to avoid any crawling, kneeling, or squatting. She is to perform sedentary work only. She should alternate sitting with standing and walking as needed for comfort. She is to elevate her right leg when sitting and wear her own footwear. She is to avoid walking on slippery or cluttered surfaces.

30. On June 2, 2016, Dr. Anderson-Oeser took Claimant off of all work due to a severe flare-up of CRPS. Dr. Anderson-Oeser noted, "She states that while she is at work, she feels pressured to work faster and this is causing her physical and mental stress…She currently works about 4 hours per day – her pain increases as the day progresses. She functions better when she works a shift from 8am-12pm." Dr. Anderson-Oeser limited Claimant's work hours from 8:00 a.m. to 12:00 p.m. Claimant remained off of work until June 23, 2016.

31. During a follow-up evaluation with Dr. Anderson-Oeser on June 23, 2016, Claimant reported improvement of symptoms after undergoing a sympathetic nerve block. Claimant continued to report pain when walking and sitting, and trouble working in the afternoon. Dr. Anderson-Oeser again remarked that she suspected Claimant's stress at work was contributing to her flare-ups and recommended Claimant limit her work hours from 8:30 a.m. to 12:30 p.m. Claimant remained on sedentary work duties.

32. On July 18, 2016, Dr. John S. Hughes performed an IME the request of Claimant. Dr. Hughes reviewed Claimant's medical records and physically examined Claimant. Dr. Hughes assessed, *inter alia*, right peroneal neuropathy, CRPS, increased severity of chronic thromboembolic pulmonary hypertension, adjustment disorder with features of depression, and long-term antalgia of gait with development of mechanical low back pain. Dr. Hughes opined that Claimant was not at MMI if the inferior vena cava filter had not yet been removed, and also recommended Claimant undergo a psychiatric consultation. Dr. Hughes estimated that Claimant sustained 20% CRPS impairment and 40% total whole person impairment. Dr. Hughes opined that Claimant sustained losses in her residual functional capacities as a result of the work injury and recommended a functional capacity evaluation.

33. On August 9, 2016, Dr. Douglas Scott performed a Division Independent Medical Examination ("DIME"). Dr. Scott reviewed Claimant's medical records and physically examined Claimant. Dr. Scott determined Claimant sustained a peripheral nerve injury and CRPS Type 2 as a result of the work injury. Dr. Scott assigned a total combined whole person impairment of 25%, consisting of an 18% whole person respiratory impairment and 20% lower extremity impairment (8% whole person) for Claimant's common peroneal nerve stretch injury, range of motion, and decreased sensation. Dr. Scott opined that Claimant did not have any work-related psychological, hip or lumbar spine impairments. He further opined that there was insufficient information available to him to identify or determine the prior apportionment regarding Claimant's DVT and pulmonary emboli.

34. Dr. Gary S. Gutterman conducted psychiatric examinations of Claimant on September 12 October 24, 2016. Dr. Gutterman diagnosed Claimant with work-related adjustment disorder with symptoms of anxiety.

35. On September 20, 2016, Claimant reported to Dr. Anderson-Oeser a decrease in pain from the sympathetic block, and that she had since been able to "get up and get dressed, perform light cooking and cleaning, and leave the house to perform small errands." Claimant nonetheless continued to experience pain, paresthesias and spasming in her right lower extremity. Dr. Anderson-Oeser ordered Claimant to remain off of work to ongoing high level of stress and anxiety.

36. Dr. Anderson-Oeser has restricted Claimant from working since September 2016 due to increased symptoms resulting from ongoing high levels of stress and anxiety at work. Dr. Anderson-Oeser has not released Claimant back to work.

37. Claimant underwent a psychological assessment performed by Dr. Ed Cotgageorge on December 23, 2016. Dr. Cotgageorge opined, that psychological factors contributed to Claimant's pain perception.

38. On March 21, 2017, Dr. Lawrence Lesnak performed an IME of Claimant at the request of Respondents. Dr. Lesnak reviewed Claimant's medical records and physically examined Claimant. On physical examination, Dr. Lesnak noted no evidence of muscle atrophy, abnormal skin color, skin temperature, or skin integrity in Claimant's

right lower extremity. Dr. Lesnak further noted full seated range of motion in the knee and ankle and some hypersensitivity to light touch over the right foot. Dr. Lesnak concluded that Claimant sustained a right proximal fibular head subluxation with a probable concomitant right peroneal nerve stretch injury and, most likely, an acute right leg DVT subsequently. Dr. Lesnak questioned if Claimant sustained any pulmonary emboli. He opined that Claimant did not have CRPS, as there were no clinical physical findings supporting a CRPS diagnosis, multiple inconsistencies in Dr. Schakaraschwili's report, and no significant documented evidence of improvement. Dr. Lesnak concluded that Claimant's subjective complaints were unreliable, and that her significant psychosocial issues played a significant role in her symptomatology, recovery and perceived function.

39. Dr. Lesnak disagreed with Dr. Anderson-Oeser's work restrictions, contending that there was no evidence Claimant cannot work full-time and could only perform sedentary work. Dr. Lesnak assigned the following permanent restrictions: refrain from frequent or excessive kneeling or squatting and repetitive or continuous stair climbing activities. He did not assign any specific restrictions in standing, walking, sitting or lifting.

40. Dr. Lesnak reviewed Claimant's responses to interrogatories and issued an addendum to his IME report on April 4, 2017. Dr. Lesnak opined that Claimant's reported inability to work any job was not supported by the medical records or his clinical examination.

41. Dr. Lesnak testified at hearing as an expert in physical medicine and rehabilitation. Dr. Lesnak is board certified in physical medicine and rehabilitation and Level II accredited. Dr. Lesnak testified consistent with his IME report. Dr. Lesnak opined that Claimant did not have CRPS Type 2. Rather, he diagnosed Claimant with a peroneal stretch injury. As a basis for that conclusion, Dr. Lesnak explained Claimant did not have a positive sweat test. Dr. Lesnak further stated, that the peroneal stretch injury better explained Claimant's symptoms than a CRPS type 2 diagnosis, and that a finding that Claimant did not have CRPS was also consistent with the medical treatment guidelines.

42. Dr. Lesnak further opined that Claimant had a somatoform disorder that manifested Claimant's psychological condition as a physical complaint. Specifically, he testified that when people are depressed and anxious, and having other psychological conditions, that can sometimes manifest as physical pain. Further, individuals with a somatoform disorder would also exaggerate their disabilities. Dr. Lesnak stated that physicians should not base their treatment and restrictions on solely subjective pain and impairment complaints from Claimant. Dr. Lesnak concluded that Claimant's pre-existing somatoform disorder was not caused or exacerbated by the work injury.

43. Dr. Lesnak also opined that the estimated time of five to ten days off of work per month was not based on any objective findings and was not a reasonable restriction for Claimant's chronic peroneal neuropathy. He further stated that there was no objective evidence of concentration or memory difficulties.

44. On April 14, 2017, Dr. Jeffrey S. Schwartz performed an IME at the request of Respondents. Dr. Schwartz issued an IME report on May 9, 2017. Dr. Schwartz reviewed medical records and opined that Claimant sustained a work-related pulmonary embolism around November 8, 2013 that resolved without sequelae by December 16, 2013. Dr. Schwartz opined that Claimant did not have any ongoing work-related pulmonary diagnosis and no restrictions based on her pulmonary status.

45. Dr. Schwartz testified at hearing as an expert in pulmonary and critical care medicine. Dr. Schwartz testified consistent with his IME report, and maintained that Claimant's work-related pulmonary emboli and DVT have resolved and there is no impairment of functioning. Dr. Schwartz opined that Claimant does not have pulmonary hypertension and does require ongoing anticoagulation medication.

46. On May 17, 2017, Dr. Brent Van Dorsten performed a Health and Behavior Assessment Evaluation of Claimant. Dr. Van Dorsten noted that Claimant is "likely prone to developing physical symptoms in response to stress." He noted identification of "a variety of significant mood, personality and behavioral factors which are likely strong contributors to the patient's clinical presentation at this time," and high levels of somatic complaints.

47. At the request of Respondents, Donna Ferris performed a Vocational Evaluation of Claimant and issued a report dated June 5, 2017. Ms. Ferris reviewed Claimant's medical records and met with Claimant on two occasions. Claimant reported right leg pain, muscle spasms, intermittent discoloration and coolness, weakness, low back pain, chest tightness and shortness of breath with stress and weather changes, headaches, nausea, fatigue, dizziness, and difficulty with memory and concentration. Per Ms. Ferris' labor market research based on Claimant's education, work history, skills, and the restrictions assessed by Drs. Anderson-Oeser, Orent, Schwartz and Lesnak, Ms. Ferris determined that there are full-time and part-time telephone customer services positions in a variety of industries within Claimant's functional abilities. Ms. Ferris noted that there are companies offering work from home options with schedule and work environment flexibility.

48. On June 6, 2017, Katie Montoya performed a Vocational Assessment at the request of Claimant. Ms. Montoya reviewed Claimant's medical records and interviewed Claimant. Claimant reported feeling overwhelmed, tired and in constant pain with difficulty concentrating and remembering things. Ms. Montoya noted that Dr. Anderson-Oeser had opined that Claimant was not presently able to return to work and, "therefore it cannot be recommended that she return to work with consideration of this opinion." Ms. Montoya noted that if she were only considering the opinions of Drs. Schwartz and Lesnak, Claimant could return to work in a number of capacities.

49. On June 8, 2017, Claimant's counsel sent a letter to Dr. Anderson-Oeser clarifying Claimant's restrictions. In response, Dr. Anderson-Oeser stated that, within a high degree of medical probability, Claimant continued to have the same permanent restrictions she assigned on April 12, 2016. She noted that Claimant experiences frequent pain flare-ups and foresees Claimant missing three days of work per month in

the winter and one day per month in the summer, and needing to take unscheduled breaks during the work day. Dr. Anderson-Oeser noted that Claimant's work-related CRPS symptoms are increased and/or aggravated in stressful work environments, and that Claimant should avoid working in stressful work environments. Dr. Anderson-Oeser also noted that Claimant needs to elevate her leg 12 inches while seated.

50. Dr. Anderson-Oeser testified at hearing as an expert in physical medicine and rehabilitation and occupational medicine. Dr. Anderson-Oeser is board certified in physical and rehabilitation medicine and is Level II accredited. Dr. Anderson-Oeser testified consistent with her prior opinions. She maintained that Claimant's work-related diagnosis is CRPS of the right-lower extremity, right peroneal neuropathy, chronic pain syndrome, depression and anxiety, muscle spasms, pulmonary embolis and pulmonary hypertension.

51. Dr. Anderson-Oeser disagreed with Dr. Lesnak's opinion that Claimant's exam findings were inconsistent and that there was a low probability that her diagnosis is CRPS. Dr. Anderson-Oeser interpreted Dr. Schakaraschwili's QSART testing results from both the laboratory and clinical sections and agreed with Dr. Schakaraschwili that the test confirmed a "high probability of CRPS." Dr. Anderson-Oeser contended that, within the MTG, Claimant meets the CRPS diagnosis criteria because two out of the four CRPS tests Claimant underwent (QSART and sympathetic blocks) were deemed positive.

52. Dr. Anderson-Oeser stated that the sympathetic blocks were helpful and allowed Claimant to get out of bed, dress herself, do simple chores and light shopping. Without the injections Claimant was bed-bound. She foresees Claimant needing the sympathetic blocks indefinitely. Dr. Anderson-Oeser opined that Claimant should not work the day of an injection, and possibly the day after an injection depending on Claimant's response to the injection.

53. Dr. Anderson-Oeser testified that stress and weather can cause CRPS flare-ups, the frequency of which varies. She estimated that Claimant's activity during a flare-up is approximately 0-1. Claimant can have five or six flare-ups in a "bad" winter, and it is foreseeable that Claimant will average three days of flare-ups in winter months and one day of flare-ups in spring and summer where she will be unable to perform any activity. If working, Claimant would need likely need 5-10 minute unscheduled breaks, estimated at one per hour on a "bad" day.

54. Dr. Anderson-Oeser stated that when Claimant returned to work she had increased pain symptoms and that her work-related psychological condition interfered with her daily activities. She stated that she does not think Claimant's subjective complaints are unreliable, and that there are clear, reproducible objective symptoms in Claimant's case. She further stated that Claimant's condition "…changes rather frequently and so she'll have a day maybe she could do an eight-hour day one day, but then the next day two."

55. Dr. Anderson-Oeser testified that Claimant remains subject to the same permanent restrictions she assigned, and that the June 8, 2017 restrictions likely would have applied at MMI.

56. Dr. Anderson-Oeser further testified that the medications prescribed to Claimant can cause cognitive problems, fatigue and memory loss, which Claimant has reported as side effects. She indicated that work requiring a significant amount of focus could be difficult for Claimant.

57. Kristy Riccio, Human Resources Director, testified at hearing that Claimant performed various clerical tasks in the Human Resources Department from approximately fall 2014 to June 2016. Ms. Riccio did not directly supervise Claimant. She stated that Claimant was able to successfully complete her tasks which required attention to detail and an ability to focus and concentrate. Ms. Riccio further stated that Claimant did not request to take unscheduled breaks and that she did not know how many days of work Claimant missed while on modified duty.

58. Claimant testified at hearing that she experiences burning and aching pain on a daily basis, as well as numbness, tingling, shortness of breath, chest tightness, headaches, nausea, dizziness, muscles spasms, and restlessness. She stated the pain affects her ability to function and that she tires easily. Weather and stress, including loud and chaotic environments and deadlines, increase her pain, which then decreases her ability to function and concentrate.

59. Claimant stated that her medications cause fatigue, grogginess, nausea, dizziness, headaches and difficulties with memory, concentration and comprehension. Claimant testified that the sympathetic blocks increased her ability to function, although she needs to rest the day after an injection due to the effects of the medication.

60. Claimant testified that she experienced an increase in symptoms during the modified duty and was unable to work. Claimant testified that her prior conditions did not prevent her from doing her work. Claimant stated that she cannot work now because she is in significant pain which causes an inability to think clearly and meet deadlines.

61. Claimant stated that she continues to treat with several doctors and, on average, seeks treatment four to six times per month. Most of her medical appointments occur between 8:00 a.m. and 5:00 p.m. During the year and a half of modified duty, Claimant contends she took “quite a few days off” due to medical appointments.

62. Katie Montoya testified at hearing as an expert in vocational rehabilitation and placement. Ms. Montoya opined that Claimant had limited transferable skills and both physical and psychological issues. Ms. Montoya considered the permanent restrictions put in place by Dr. Anderson-Oeser, as well as the amount of anticipated absenteeism for medical treatment and flare-ups. Ms. Montoya stated,

> “…when you’re talking about new work, it’s not likely that an employer is going to accommodate on any kind of prolonged bases expected absenteeism, if you will. So certainly everybody has periodic sick days, but

> something that potentially is unexpected in its timing, unexpected in its duration, unexpected in the way that it presents in the working and if there's other implications like the cognitive that we've talked about, and that she's having functioning issues at work before she even departs. All of that are issues- of those- excuse me – are issues with maintaining work."

63. Ms. Montoya further stated that it did not appear that Ms. Ferris's opinion considered Claimant's need for leg elevation, footwear, or anticipated absenteeism. Ms. Montoya opined that Claimant would not be competitive in finding and maintain employment and that there would not be an employer who would accommodate Claimant missing even two days of work per month.

64. Ms. Ferris testified at hearing as an expert in vocational rehabilitation. Ms. Ferris testified that, based on Claimant's restrictions in place at MMI and her transferrable skills, full-time and part-time customer service positions are available to Claimant, including work-at-home opportunities. Ms. Ferris stated that Claimant was competent when she was on modified duty.

65. Ms. Ferris subsequently testified that, if it is indeed the case that Claimant requires five to ten days off of work per month,

> …she would not be able to maintain employment. She may be able to secure a position, but if, in fact, you're missing – what was it – five to ten days a month of work – there's no, you're not going to be able to – you're not going to be able to maintain a position.

However, Ms. Ferris stated that there was nothing in the medical records indicating Claimant was bedridden for a number of days every week or every month.

66. Claimant's testimony is found credible and persuasive.

67. The ALJ credits the opinions of Dr. Anderson-Oeser and Ms. Montoya, which are supported by the medical records, over the conflicting opinion of Dr. Lesnak and Ms. Ferris, and finds that Claimant is unable to earn any wages in the same or other employment. Claimant's industrial injury is a significant causative factor in her current physical and mental limitations and expected absenteeism, which have rendered Claimant unable to obtain and maintain employment. Employment is not reasonably available to Claimant under her particular circumstances.

68. Claimant has established by a preponderance of the evidence that she is entitled to PTD benefits.

69. As a result of the industrial injury, Claimant has a visible disfigurement to the body consisting of the following: (1) a discolored scar on Claimant's right leg measuring approximately six inches in length and less than 1/8th inches in width, (2) two discolored incision scars on Claimant's right leg, each measuring less than one centimeter in length, and (3) a moderate limp.

70. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S. (the "Act"), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Permanent Total Disability Benefits

To establish a claim for PTD, the claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. Sections 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003); *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995).

In weighing whether the claimant is able to earn any wages, the ALJ may consider various human factors, including the claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). The ALJ may also consider the claimant's ability to handle pain and the perception of pain. *Darnall v. Weld County,* W.C. No. 4-164-380 (I.C.A.O. April 10, 1998). The critical test is whether employment exists that is reasonably available to claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. The question of whether the claimant proved inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995).

As a matter of public policy, PTD benefits may be awarded even if the claimant has held, or currently holds, some type of post-injury employment where the evidence shows that claimant is not physically able to sustain the post-injury employment, or that such employment is unlikely to become available to claimant in the future in view of the particular circumstances. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001).

Claimant has been diagnosed with, *inter alia*, CRPS, depression and anxiety resulting from the industrial injury. Claimant credibly testified that she continues to experience various symptoms as a result of her work-related conditions, which have decreased her functionality and ability to work. Objective findings throughout the medical records corroborate Claimant's reports of ongoing symptomatology. Although Claimant returned to modified work for a period of time post-injury, Dr. Anderson-Oeser subsequently removed Claimant from work as of September 2016.

Dr. Anderson-Oeser credibly opined that Claimant is restricted to sedentary work and will require, on average, one to three days of work off per month due to flare-ups. Claimant credibly testified that she continues to seek medical treatment on approximately four to six occasions per month. Both Ms. Montoya and Ms. Ferris agreed that such absenteeism would hinder Claimant's ability to maintain employment. Furthermore, Claimant also suffers from mental limitations with respect to concentration, memory focus and comprehension as a result of her pain and medications. Claimant

functions poorly in stressful environments, which aggravates her symptoms and affects her ability to function.

Although Claimant had pre-existing conditions, the medical records and testimony persuasively establish that Claimant's continued symptoms, restrictions and limitations were substantially caused by the industrial injury and subsequent treatment. Based on the totality of the evidence, Claimant has established that it is more likely than not that she is unable to earn any wages in the same or other employment.

Disfigurement

As found, as a result of the industrial injury, Claimant has a visible disfigurement to the body consisting of the following: (1) a discolored scar on Claimant's right leg measuring approximately six inches in length and less than 1/8th inches in width, (2) two discolored incision scars on Claimant's right leg, each measuring less than one centimeter in length, and (3) a moderate limp. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation under Section 8-42-108 (1), C.R.S.

ORDER

It is therefore ordered that:

I. Claimant is permanently and totally disabled. Respondents shall pay Claimant PTD benefits from the date of MMI and continuing until terminated by law, subject to any applicable offsets.

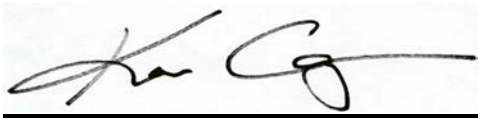
II. Insurer shall pay Claimant $3,000.00 for her disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

III. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

IV. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 3, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Respondents prove entitlement to a 50% reduction in Claimant's compensation for willful violation of a safety rule?

PRELIMINARY EVIDENTIARY ISSUE

Respondents have requested reconsideration of the ALJ's ruling excluding Exhibits P and R. Specifically, Respondents renew their argument made at hearing that the exhibits are "records of the employer" within the meaning of § 8-43-210. Alternatively, Respondents argue the exhibits are admissible as business records under CRE 803(6).

Exhibit P is an "Accident/Incident Investigation Report" prepared by Jeff Sherrod on February 3, 2017. Attached to the report are handwritten statements of two co-workers, Kevin Molina and Israel Gonzales, and a typewritten report from Bill Christie. Exhibit R contains email conversations among Employer's risk management personnel and the claims adjuster recounting their investigation and determinations regarding whether Claimant violated a safety rule.

After giving the matter additional consideration, the ALJ disagrees that the documents are admissible as "records of the employer." Rather the documents are inadmissible hearsay not contemplated by § 8-43-210.

Section 8-43-210 provides that "medical and hospital records, physicians' reports, vocational reports, and ***records of the employer*** are admissible as evidence and can be filed in the record as evidence without formal identification if relevant to any issue in the case." (Emphasis added). Section 8-43-210 as an exception to the general rule that hearsay is not admissible. *Chambers v. CF&I Steel Corp*., 757 P.2d 1171 (Colo. App. 1988). But the exception is limited to the types of documentary evidence explicitly enumerated in the statute.

In *Ackerman v. Hilton's Mechanical Men, Inc*., 914 P.2d 524 (Colo. App. 1996), the court emphasized the distinction between "records" and "reports." The court noted the statute allows admission of vocational and physician "reports" but limits employers to offering "records." The court held the term "report" refers to "a formal statement or account of the results of an investigation" which fairly describes Respondents' Exhibit P and at least some emails contained in Exhibit R.

The ICAO addressed a very similar situation in *Braden v. Integrated Health Services*, W.C. No. 4-406-349 (December 21, 1999). The respondents had offered handwritten statements from the claimant's co-workers regarding the alleged injury. The ICAO affirmed the ALJ's determination that the witness statements did not qualify as "records of the employer." The ICAO reasoned:

> [Section 8-43-210] reflects the General Assembly's implicit determination that physician and vocational "reports" have indicia of reliability stemming from the author's professional status, which do not apply to employer "reports" of investigation. In our view, employer "records" constitute a statutory exception to the hearsay rule because they are presumed to be created in the regular course of business operations, and not generated for the sole purpose of defending workers' compensation claims. … [T]he General Assembly was not confident that "reports" generated by an employer concerning the results of an investigation contain the same indicia of reliability as "reports" generated by third-party medical and vocational experts. Thus, in the absence of formal identification, § 8-43-210 does not allow employers to introduce written "reports" of witnesses as a substitute for testimony under the guise of "employer records."

The purpose of the hearsay rule is to ensure substantive issues are not decided based on witness statements the opposing party has no opportunity to cross-examine. Respondents offered the documents as substantive evidence on the issue of whether Claimant violated a safety rule. As such, they are hearsay and not covered by the exception in § 8-43-210.

Nor is the ALJ persuaded by Respondents' argument that CRE 803(6) provides an independent basis to admit the exhibits. Even if the ALJ accepted the premise that CRE 803(6) creates a broader exception than § 8-43-210, the rules of evidence only apply in workers' compensation hearings to the extent they are consistent with the Act. *Chambers v. CF&I Steel Corp*., 757 P.2d 1171 (Colo. App. 1988). In the event of a conflict, the rules must yield to the statute. Because the Act contains a specific provision regarding the admissibility of employer records, it would be inappropriate to apply Rule 803(6) to admit evidence otherwise excluded by the statute.

Respondents' Motion for Reconsideration is denied.

FINDINGS OF FACT

1. Claimant worked for Employer for approximately 11 years as an insulation installer. Due to his tenure and experience, he worked as a "lead man." Occasionally, Claimant had to wear stilts to complete insulation jobs.

2. Claimant suffered an admitted injury on February 3, 2017 after falling down a flight of stairs while wearing stilts. The staircase consisted of approximately 6-7 stairs down to a landing, a 90-degree turn to the left, and another six or seven steps down to the first floor. Claimant suffered multiple injuries, including a significant head injury with a subarachnoid and subdural hematoma. He has no reliable recollection of the accident.

3. Employer has an established policy that employees are not to wear stilts on uneven surfaces, including stairs. Employer conducts frequent safety meetings to review and emphasize various safety issues. In January 2017, Claimant attended a safety meeting regarding the use of stilts. Although there is some disagreement regarding the

specific materials Claimant received or reviewed, that is immaterial because Claimant acknowledged awareness of Employer's policy prohibiting using stilts on stairs. Claimant agreed with that policy because he knows using stilts on stairs is dangerous.

4. Claimant testified he always removed his stilts before ascending or descending stairs.

5. After the accident, the Colorado Springs Fire Department arrived on scene and found Claimant standing and talking. The CSFD records indicate, "Co-workers stated the pt stumbled on staircase wearing stilts and fell approximately 8-10 feet while installing insulation in interior of new home construction."

6. Shortly after that, EMTs from American Medical Response arrived. Claimant was alert and complaining of back pain. The AMR note states "CSFD stated the patient was wearing drywall stilts and standing on a landing when he fell."

7. Approximately one hour after the accident, Employer's warehouse supervisor, Jon Goff, arrived on the scene to investigate. Mr. Goff took several photographs depicting the staircase from different angles and several individual stair treads. One photograph shows black scuff marks, which Mr. Goff believes were caused by the rubber padding on the bottom of the stilts. Mr. Goff also acknowledged numerous workers wearing boots used that staircase during the construction project. Another photograph shows a wing bolt from Claimant's stilts on the first step up from the first floor.

8. Respondents admitted liability for Claimant's accident and commenced payment of TTD benefits effective February 4, 2017. Respondents reduced Claimant's TTD benefits by 50% based on their determination Claimant's injury resulted from a safety rule violation.

9. Claimant does not dispute the admitted average weekly wage (AWW) of $1,003.92.

10. Respondents proved the existence of a safety rule prohibiting employees from wearing stilts on stairs.

11. Respondents proved Claimant knew of the safety rule.

12. Respondents failed to prove Claimant's injury resulted from willful violation of the safety rule. Specifically, Respondents did not prove Claimant was on the stairs when he fell.

CONCLUSIONS OF LAW

Section 8-42-112(1)(b) provides for a fifty percent reduction of indemnity benefits "where injury results from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule need not be formally adopted or reduced to writing to be effective. *Bennett Properties Co. v. Industrial Commission,* 437 P.2d 548 (Colo. 1968). The term "willful" means "with deliberate intent,"

and mere "carelessness, negligence, forgetfulness, remissness or oversight" does not satisfy the statutory standard. *Id*. The respondents do not have to present evidence about the claimant's state of mind or prove he had the rule "in mind" when he did the prohibited act. Rather, a "willful" violation may be inferred from evidence the claimant knew the safety rule and did the prohibited act. *Id*.

The respondents have the burden to prove the requisite elements for the penalty, including the existence of a safety rule, the willfulness of the claimant's conduct, and that violation of the safety rule caused the injury. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995).

As found, Respondents failed to prove Claimant's injury resulted from willful violation of a safety rule. There is insufficient credible evidence to establish Claimant was on the stairs when he fell. There are no direct witnesses to the fall, and Claimant does not remember the incident. Although co-workers apparently told the EMTs Claimant was on the staircase when he fell, the ALJ cannot ascertain if the statements were based on first-hand observation or mere assumptions and supposition. The circumstantial evidence such as scuff marks on the stair treads, the wing bolt, and 90-degree turn in the staircase does not prove Claimant's injury more likely than not resulted from violation of a safety rule. It is at least equally likely Claimant was at the top of the staircase when the set screw came loose, causing him to tumble down the stairs. Although it is *possible* he was on the stairs when his stilts gave way, the persuasive evidence does not show it to be *probable.*

ORDER

It is therefore ordered that:

1. Respondents' request to reduce Claimant's indemnity benefits by 50% due to a safety rule violation is denied and dismissed.

2. Insurer shall pay Claimant TTD benefits at the weekly rate of $669.28, commencing February 4, 2017 and continuing until terminated according to law. Insurer may take credit for any TTD benefits previously paid to Claimant in this claim.

3. Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 7, 2017

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Caroline Gellrick M.D. regarding Claimant's maximum medical improvement (MMI) date.

2. Whether Respondents have overcome by clear and convincing evidence the opinion of DIME physician Dr. Gellrick regarding Claimant's permanent impairment rating.

3. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant is a 36 year old employed by Employer as a mechanical broom operator and has been so employed since approximately September 29, 2016.

2. Claimant's duties include driving a vehicle and sweeping and cleaning construction sites with a mechanical broom attached to a truck.

3. Claimant was paid $15.00 per hour. His gross wages from his date of hire September 29, 2016 through the day prior to his injury and through November 7, 2016 were $4,286.53. This was for a period of 5.7143 weeks. *See* Exhibits 9, M.

4. On November 8, 2016 while so employed, Claimant was involved in a motor vehicle accident. On this date, he was traveling southbound on Interstate 25 when he was cut off by a semi-truck. His vehicle crashed into the wall barrier dividing I-25, spun across multiple lanes of traffic, and then crashed into the outside median before coming to a stop. The vehicle did not roll over. Claimant was traveling approximately 55-60 miles per hour at the time of the accident.

5. Claimant immediately reported the injury to his supervisor and to the Northglenn Police Department.

6. Claimant was transported by paramedics from the scene of the accident to Denver Health Medical Center (DHMC).

7. At DHMC, Claimant complained of a headache and left face pain. On physical examination, Claimant was noted to have ecchymosis and swelling over the left side of his face, tenderness on his right knee over an abrasion site, and a non-suturable laceration to his upper right back. X-rays taken of his chest and pelvis revealed no displaced fracture and a CT of his head and facial bones revealed no intracranial

abnormality or facial fracture. Claimant denied neck or back pain. It was noted that Claimant was morbidly obese. It was also noted that Claimant had no cervical, thoracic, or lumbar midline tenderness to palpation and that he was ambulatory with a steady gait. The clinical impression from DHMC was facial pain, and knee pain. Claimant was discharged that day with instructions to follow up with a workers' compensation doctor. *See* Exhibits 5, I.

8. Claimant testified at hearing that the most pronounced pain following the motor vehicle accident was to his face but that he was bruised up all over and had general soreness throughout his entire body.

9. Claimant was referred by Employer to Concentra Medical Center.

10. On November 10, 2016 Claimant was evaluated at Concentra by Rammohan Naidu, PA-C. Claimant reported his chief complaint as a car accident injury to his right knee, back, and bilateral hands. Claimant's body mass index was noted to be 52.77. Claimant reported he had a motor vehicle collision two days prior when he got cut off by a semi truck, had possible loss of consciousness, went to the ER and had negative scans, had a laceration on his back that had healed, and that he was at Concentra for work clearance. On review of symptoms Claimant reported chest pain, joint pain, muscle pain, back pain, joint swelling, joint stiffness, bruising, and lacerations on his back. On examination, PA Naidu found a normal examination with no tenderness or swelling, and normal range of motion and muscle strength and tone. PA Naidu assessed: motor vehicle collision, laceration of back, and bilateral knee pain. PA Naidu released Claimant from care and noted that he had reached maximum medical improvement with no permanent impairment. PA Naidu opined that Claimant could return to full work/activity that day. *See* Exhibits 6, H.

11. On November 22, 2016 Daniel Peterson, M.D. issued a physician's report of worker's compensation injury. Dr. Peterson noted work related medical diagnoses of pain in right knee, pain in left knee, and laceration without foreign body of unspecified back wall of thorax without penetration into thoracic cavity, initial encounter. Dr. Peterson opined that Claimant reached MMI on November 10, 2016, and that Claimant sustained no permanent impairment. *See* Exhibit 6.

12. On November 29, 2016 Respondents filed a Final Admission of Liability (FAL). The FAL noted a maximum medical improvement (MMI) date of November 10, 2016 and a zero percent impairment. Respondents admitted to medical benefits only and noted that they admitted to reasonable and necessary medical treatment after MMI for the right knee, back, and bilateral hands. Respondents noted that temporary disability benefits were denied as Claimant had not had any compensable lost time from work. Respondents attached the November 22, 2016 report from Dr. Peterson and the November 10, 2016 evaluation from PA Naidu to the FAL. *See* Exhibits 4, B.

13. Claimant objected to the FAL and sought a Division Independent Medical Evaluation (DIME).

14. On February 28, 2017 Claimant underwent a DIME performed by Caroline Gellrick, M.D. Claimant reported continued back pain and subscapular shoulder pain. Claimant reported that the low back pain was present at the emergency room but that he was aching all over at that time and had bruises all over his body which slowly subsided. Claimant reported particularly that he had bruises on his back, flanks, and facial region and that as the bruises healed his low back pain continued and did not go away. Claimant reported that he went back to work after several days and continued to work full duty. Claimant reported no new injuries and that he did not have prior problems with his low back. Claimant reported pain at a level of 6-7/10 in his low back and that his pain was increased with prolonged standing, walking, and sleeping. *See* Exhibits 7, G.

15. Dr. Gellrick noted a prior medical history of osteotomy of the left leg in April of 1996 and that due to the leg shortening, Claimant wore shoe inserts or prosthetic shoes on the left and had accommodated his problem with shoe wear. Claimant's gait was noted to be broad based due to body habitus. On physical examination, Dr. Gellrick noted that Claimant's left lower extremity was shorter than the right and produced an abnormal alignment of the entire spine. Dr. Gellrick noted a visualized scar over the posterior right scapula. Claimant was found to have tenderness in the lumbar spine, and a positive straight leg raise on the left with vague discomfort in the left lower lumbar spine. Claimant's range of motion of the lumbar spine was found to be remarkably agile and entirely normal with flexion and extension. Claimant had tenderness on the left lateral side bend. *See* Exhibits 7, G.

16. Dr. Gellrick provided the diagnoses of: status post motor vehicle collision; ecchymosis left facial region along with headaches and positive loss of consciousness, resolved with a scar on the left face; abdominal pain, resolved; bilateral knee pain, resolved; laceration of the right scapula with residual scarring visible; and residual back pain in the area of the lumbar spine which persisted and did not resolve in the first three weeks post accident with persistent discomfort and tenderness, untreated. Dr. Gellrick also provided non work related diagnoses of: morbid obesity and de-conditioning; and status post left osteotomy resulting in the pelvis to be lower on the left side producing an external scoliosis effect on the spine. *See* Exhibits 7, G.

17. Dr. Gellrick noted that Claimant was functional despite the residual problems of lumbar spine strain with pre-existent left leg shortening phenomenon. Dr. Gellrick indicated that she agreed with the date of MMI of November 10, 2016 but that she recommended further diagnostic studies and x-rays of the lumbar spine, 3-4 sessions of chiropractic treatment, and six sessions of physical therapy for conditioning and exercise program to alleviate residual symptoms of back pain. Dr. Gellrick noted that the weight and body habitus would produce chronic effects on Claimant's lumbar spine and would not allow it to totally heal although it was previously totally asymptomatic. Dr. Gellrick opined that there was no invasive treatment warranted on the lumbar spine that she could determine as Claimant had a normal neurologic exam and no evidence of radiculopathy. *See* Exhibits 7, G.

18. Dr. Gellrick opined that Claimant had a ratable impairment of the lumbar spine which was previously asymptomatic prior to the accident. She opined that Claimant warranted a 5% whole person rating under IIB and that he had amazingly normal range of motion with no ratable range of motion impairment. Dr. Gellrick opined that the 5% whole person impairment was related to the injury and was not apportionable. She also noted he merited consideration for his scar formation and disfigurement. *See* Exhibits 7, G.

19. On March 27, 2017 F. Mark Paz, M.D. performed an independent medical record review of Claimant's case. Dr. Paz opined that Dr. Gellrick erred in her permanent impairment rating and application of the Level II Physician Accreditation Curriculum and the AMA Guides to Evaluation of Permanent Impairment, Third Edition Revised. Dr. Paz noted that the medical record and findings on physical examination do not document rigidity of the lumbar spine and note full range of motion of the lumbar spine. Dr. Paz opined that the requirements for a rating under Table 53 IIB require intervertebral disc or soft tissue lesion, un-operated with medically documented injury and a minimum of 6 months of medically documented pain and rigidity with or without muscle spasm. Dr. Paz noted that the motor vehicle accident was on November 8, 2016 and that the DIME was on February 28, 2017, approximately 3.5 months later and that Claimant also did not meet the requirements of 6 months under Table 53. Dr. Paz also noted that there was a need for an injury related diagnosis for a rating and that Claimant had only low back pain, a subjective complaint, not supported by objective findings. Dr. Paz opined that Claimant had subjective complaints without objective findings and that there was no documentation to support an axial spine injury in the medical records. Dr. Paz noted the findings of pelvic tilt due to Claimant's lower extremity osteotomy, scoliosis, and morbid obesity and de-conditioning as more likely etiologies of Claimant's chronic low back pain. *See* Exhibit F.

20. Dr. Paz opined that Claimant had no permanent impairment of the lumbar spine and that Claimant reached MMI on November 10, 2016. Dr. Paz opined that the injuries were clinically stable with no reasonable expectation of improvement with additional treatment. Dr. Paz opined that no further treatment would be required as reasonable, necessary, or related to the November 8, 2016 work injury and that the etiology of Claimant's low back pain based on reasonable medical probability was attributable to pelvic tilt, lower extremity osteotomy, scoliosis, morbid obesity, and de-conditioning which were all conditions unrelated to the November 8, 2016 motor vehicle accident. *See* Exhibit F.

21. On June 19, 2017 Timothy Hall, M.D. performed an independent medical evaluation. Claimant reported continued thoracolumbar/lumbar pain in the left side radiating laterally with no buttock or leg symptoms that was worse with activity. Dr. Hall reviewed medical records and performed a physical examination. On examination, Dr. Hall found muscle tightness through the thoracolumbar area on the left with some local trigger points through the lower trapezius and lower latissimus dorsi. Dr. Hall also found tightness through the left quadratus lumborum with active trigger point locally. Dr. Hall provided the impressions of: work related motor vehicle accident with ongoing myofascial

pain in the thoracolumbar area; improved/resolved issues involving facial laceration and knee trauma; and post-traumatic stress issues. *See* Exhibit 8.

22. Dr. Hall disagreed with Dr. Gellrick's conclusion that Claimant was at MMI. Dr. Hall noted that Claimant was still symptomatic, had received no treatment, and that there was treatment likely to improve Claimant's situation, reduce Claimant's pain, and increase Claimant's level of functioning. Dr. Hall opined that Claimant did not meet the definition of MMI and that Dr. Gellrick suggested further treatment, which could not be defined as maintenance. Dr. Hall opined that Claimant was not at MMI. *See* Exhibit 8.

23. Dr. Paz and Dr. Hall both testified at hearing consistent with their written reports.

24. Dr. Paz testified that the 5% impairment rating provided by DIME physician Dr. Gellrick was in error given that the DIME took place less than six months following the date of injury and the rating requires a minimum of six months. Dr. Paz also testified that Claimant did not have rigidity which was required for a rating.

25. Dr. Hall agreed that the 5% impairment rating was in error given the timing and that the DIME took place less than six months following the date of injury. Dr. Hall, however, opined that at the time of hearing, Claimant had six months or more of the pain and rigidity and that Claimant would as of the time of hearing qualify for a 5% impairment.

26. Dr. Paz testified that Dr. Gellrick had made the assessment that Claimant was clinically stable which is a requirement of MMI and that the DIME's clinical assessment is supposed to be abided by. Dr. Paz testified that Dr. Gellrick did not err and was allowed to recommend treatment after MMI as maintenance. Dr. Paz agreed that the treatment recommended by Dr. Gellrick was likely to improve Claimant's symptoms and to alleviate back pain.

27. Dr. Hall testified that Dr. Gellrick erred in the determination of MMI because, by definition, if there was a treatment plan that could lead to the resolution or significant improvement of symptoms, a patient would not be at MMI. Dr. Hall opined that there was a good probability that Claimant would be symptom free after undergoing additional curative treatment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence,

to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." *See* § 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. *See* § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A finding that the claimant needs additional medical treatment to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment

is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Here, Claimant has met his burden to overcome the opinion of the DIME physician regarding MMI by clear and convincing evidence. As found above, Claimant was placed at MMI in this case two days after his work related motor vehicle accident. The DIME physician recommended diagnostic studies to better define Claimant's condition. The DIME physician also recommended chiropractic care and physical therapy to alleviate Claimant's back pain. The diagnostic procedures and the treatment recommendations made by Dr. Gellrick are inconsistent with a finding of MMI. Dr. Hall is found persuasive that the recommended treatment is treatment likely to improve Claimant's condition and that Claimant is not stable or at baseline as argued. Even Dr. Paz, as found above, admitted that the treatment recommended by the DIME physician was to improve and help alleviate Claimant's back pain. The ALJ concludes that Claimant has met his burden to show that Dr. Gellrick erred and that Claimant is not at MMI for his work related injury.

As Claimant is not at MMI, the correctness of the permanent impairment rating is not at issue at this time. However, it is worth noting that the evidence presented by both Claimant and Respondent shows that Dr. Gellrick also clearly erred in assigning a 5% rating at the time of the DIME, which occurred less than six months from the date of injury.

AVERAGE WEEKLY WAGE (AWW)

Section 8-42-102(2) C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon her AWW on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997).

As found above, Claimant worked for Employer for a very short period of time prior to his date of injury. From September 29, 2016 through November 7, 2016 (the day prior to his injury), Claimant earned $4,286.53. This was for a period of 5.7143 weeks. The ALJ agrees with Respondents calculation that these total wages, divided by the weeks

worked, results in an AWW of $750.14. The ALJ concludes that this is a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

It is therefore ordered that:

1. Claimant has overcome by clear and convincing evidence the MMI opinion of DIME physician Dr. Gellrick. Claimant is not at MMI for his November 8, 2016 work injury.

2. Claimant's average weekly wage is $750.14.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 7, 2017,

/s/ Michelle E. Jones

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Respondent has overcome the DIME opinion of Dr. Caroline Gellrick on permanent impairment by clear and convincing evidence.

FINDINGS OF FACT

1. Claimant suffered a compensable industrial injury on July 28, 2014 when he snowboarded over the edge of a catwalk and struck a tree.

2. Claimant's authorized treating physician, Brian K. McIntyre, D.O., diagnosed Claimant with a C1 and C2 fracture with spinal fusion at C2-3, lumbar fractures – traverse processes, multiple: left L2-5, sacrum fractures, left scapular fracture, spleen laceration, pneumothorax, multiple fractures of ribs, and concussion.

3. Dr. McIntyre placed Claimant at maximum medical improvement (MMI) on August 15, 2016. Dr. McIntyre assigned a 23% whole person impairment rating, consisting of a 14% whole person impairment for the lumbar spine, and an 11% whole person impairment for the cervical spine.

4. Respondent filed a Final Admission of Liability on September 21, 2016 admitting consistent with Dr. McIntyre's 23% whole person impairment rating.

5. Claimant subsequently requested a Division-sponsored Independent Medical Examination (DIME). Caroline M. Gellrick, M.D. performed the DIME on February 14, 2017. Dr. Gellrick performed a medical records review and physically examined Claimant. Claimant reported worsening pain with walking, coughing, exercising, sneezing, bending, working and lifting.

6. On physical examination, Dr. Gellrick noted the following dual inclinometer cervical range of motion measurements: flexion of 66 degrees, extension of 51 degrees, right lateral flexion of 45 degrees, left lateral flexion of 45 degrees, right rotation of 71 degrees, and left rotation of 76 degrees. Dr. Gellrick further noted lumbar flexion of 35 degrees, extension of 14 degrees, right lateral flexion of 25 degrees, and left lateral flexion of 26 degrees.

7. Dr. Gellrick determined Claimant reached MMI as of September 19, 2016. She assigned a total combined 30% whole person impairment rating under the AMA Guides, consisting of 14% whole person lumbar spine impairment (8% under Table 53 and 7% range of motion deficits), and 19% whole person cervical spine impairment (16% under Table 53 and 3% for range of motion deficits). Specifically regarding the cervical range of motion, Dr. Gellrick noted a 2% impairment for cervical extension deficits, and 0.5%

impairment for cervical right rotation, totaling 2.5%. Dr. Gellrick then rounded the impairment rating up to 3%.

8. Dr. Gellrick noted Claimant was not on any medications and had been working in a tire shop as a foreman stating, “His current job involves changing oil in cars, new tires, using a machine to take old tires off, inspecting vehicles, and performing basic maintenance. He has been on this job for 11 months and works typically about 50 hour weeks.” Dr. Gellrick further noted, “On his job with the tire company he is required to do heavy lifting including up to 80 pounds with tires which he will do and work his way through the pain.” In the discussion portion, Dr. Gellrick remarked, “This patient has had an amazing recovery from multiple traumatic injuries resulting from a ski accident at the job. Despite this the patient has rehabbed and considers his exercise program his job where he has to do heavy lifting and has been to return to the sport of skiing despite the above.” She also stated, “He has forced himself to go back to baseline.” Dr. Gellrick did not recommend any maintenance treatment.

9. On July 5, 2017, Carlos Cebrian, M.D. performed an Independent Medical Examination (IME) at the request of Respondent. Dr. Cebrian issued an IME Report dated September 5, 2017. Dr. Cebrian performed a medical records review and physically examined Claimant. Dr. Cebrian noted the following dual inclinometer range of motion measurements for the cervical spine: flexion of 58 degrees, extension of 65 degrees, right lateral flexion to 45 degrees, left lateral flexion of 48 degrees, right rotation of 78 degrees and left rotation of 80 degrees. Dr. Cebrian noted the following lumbar range of motion measurements: flexion of 65 degrees, extension of 28 degrees, right lateral flexion of 30 degrees, and left lateral flexion of 28 degrees.

10. Dr. Cebrian concluded Claimant had reached MMI and had been appropriately released to work with no restrictions. Dr. Cebrian assigned a total combined 24% whole person impairment rating, consisting of 17% whole person rating for the cervical spine (16% under Table 53 and 1% for range of motion deficits) and an 8% whole person impairment for the lumbar spine under Table 53. Dr. Cebrian determined there is no lumbar for range of motion impairment.

11. Dr. Cebrian opined that the DIME physician erred assigning a 1% impairment for the 71 degree cervical right rotation. Additionally, Dr. Cebrian noted that according to the AMA Guides, pain, fear of injury or neuromuscular inhibition may limit mobility by diminishing effort. Dr. Cebrian opined that the DIME physician erred by not addressing inconsistencies between the range of motion impairment and Claimant's functional abilities of working regular duty and lifting up to 80 pounds.

12. Dr. Cebrian testified at hearing on behalf of Respondent as an expert in occupational medicine. Dr. Cebrian is Level II accredited by the Division and testified consistent with his IME Report. Regarding Dr. Gellrick’s impairment rating for cervical range of motion, Dr. Cebrian referred to Table 57 of the AMA Guides and explained that the measurements on the far left include 60 degrees and 80 degrees. Dr. Gellrick measured Claimant's maximum cervical right rotation at 71 degrees and noted that the percent of impairment for cervical right rotation is one-half. Dr. Cebrian purported that,

for mathematical reasons, this is incorrect. Dr. Cebrian testified that 71 is not the mid-point between 60 degrees and 80 degrees and thus, does not equal a.50% impairment but, rather, a .45% impairment.

13. Dr. Cebrian explained that the Impairment Rating Tips issued by the Division provide, in part, that numbers ending in .50 should be rounded up. Dr. Cebrian contended that if numbers ending in .50 should be rounded up, then numbers less than .50 should be rounded down. Dr. Cebrian explained that the AMA Guides do not provide an instance where the "degree" of rotation is rounded. Dr. Cebrian contended that the 71 degrees should not be rounded down. Rather, the 71 degrees should be converted to an impairment rating which is then rounded. Dr. Cebrian opined that because the impairment rating would equal .45, pursuant to the Impairment Rating Tips, this would be rounded down to 0% impairment rating.

14. Regarding the lumbar spine, Dr. Cebrian explained that Claimant did not have surgery as the result of the lumbar spine injuries. Additionally, Claimant suffered from a preexisting condition which caused back pain. Accordingly, Dr. Cebrian explained that there is no affirmative correlation between Claimant's current lumbar pain and the work incident. Additionally, Dr. Cebrian noted that the AMA Guides provides that an individual's function should be considered when addressing impairment, referring to section 2.1 of the AMA Guides which provides,

> If the current findings are not in substantial accordance with the information of record, the appropriate course is to undertake further clinical evaluation to resolve disparities and determine the individual's present status. The second step in assessing the impairment is analyzing the history and the clinical and laboratory findings to determine the nature and extent of the loss, the loss of use of, or derangement of the effected body part, system, or function.

15. Dr. Cebrian stated that this provision requires a DIME physician conducting impairment to correlate the clinical findings with function and that if there is inconsistency, the DIME physician must explain the discrepancy or perform a separate set of range of motion measurements. Dr. Cebrian opined that Dr. Gellrick erred in not doing so. He testified that in Dr. Gellrick's report there is an inherent inconsistency with her description of Claimant's current function and the loss of range of motion demonstrated by her lumbar measurements. Absent such an explanation of this discrepancy as required by the AMA Guides, the impairment rating lacks validity.

16. Ronald Swarsen, M.D., testified at hearing on behalf of Claimant as an expert in occupational medicine. Dr. Swarsen is Level II accredited by the Division. Dr. Swarsen reviewed Claimant's medical records, Dr. Gellrick's DIME Report and Dr. Cebrian's IME Report. Dr. Swarsen opined that Dr. Gellrick performed her impairment analysis consistent with the requirements of the AMA Guides and the directives of the Division. He disagreed with the opinion of Dr. Cebrian concerning both Dr. Gellrick's 3% cervical range of motion rating and her lumbar range of motion findings.

17. Dr. Swarsen opined that Dr. Gellrick's 3% impairment for cervical range of motion loss was appropriate under the AMA Guides. Dr. Swarsen testified that Dr. Gellrick appropriately rounded the cervical right rotation measurement of 71 degrees down to 70 degrees, as such practice is standard. Dr. Swarsen further testified that Dr. Gellrick also appropriately rounded the corresponding .50% impairment up to 1%.

18. Dr. Swarsen testified that Dr. Gellrick was correct in providing a lumbar spine loss of range of motion impairment based on her findings at the time of her evaluation. Dr. Swarsen stated that the determination of the loss of range of motion under the DIME process is established on the date of the DIME. He opined that Claimant's loss of range of motion was not inconsistent with his functioning on the MMI date. He opined that it was reasonable, and consistent with the AMA Guides for the Claimant to have retained functional ability despite having a range of motion loss. He explained that the concepts of impairment and disability are defined separately under the AMA Guides.

19. Dr. Swarsen testified that Dr. Gellrick's range of motion testing was performed consistent with the requirements of the AMA Guides rating charts and were valid measurements.

20. Section 2.2 of the AMA Guides states, in relevant part, "A final impairment percentage, whether the result of single or combined impairments, may be rounded to the nearer of the two nearest values ending in '0' or '5.'"

21. The Division's Impairment Rating Tips states, in relevant part, the following regarding rounding: "Although the AMA Guides allows rounding of an impairment rating to the nearest whole number ending in 0 or 5, the Division recommends rounding up or down to the nearest whole number when presenting the final rating. A number ending in .50 should be rounded up."

22. Neither the AMA Guides nor the Impairment Rating Tips address rounding range of motion measurements.

23. The ALJ credits the opinions of Drs. Gellrick and Swarsen over the conflicting opinion of Dr. Cebrian and finds that it is not highly probable that Dr. Gellrick's DIME opinion is incorrect.

24. Respondent failed to overcome the DIME physician's impairment rating by clear and convincing evidence.

25. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and

medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Physician's Opinion on Permanent Impairment

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; Section 8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing that it is highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result

from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003).

Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence, present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As found, Respondent failed to overcome the DIME opinion by clear and convincing evidence. Dr. Swarsen credibly testified that Dr. Gellrick performed her range of motion measurements consistent with AMA Guide requirements, and that her measurements were valid. Regarding the cervical range of motion impairment, Dr. Cebrian contends that Dr. Gellrick erred in rounding the 71 degree cervical right range of motion to 70 degrees. The AMA Guides and the Impairment Rating Tips do not address rounding range of motion measurements. As such, there is nothing contained in either text specifically encouraging or discouraging such practice. Dr. Swarsen credibly testified that it is standard practice to round the range of motion measurement in circumstances such as Claimant's, and that Dr. Gellrick did not err her calculations.

Regarding the impairment for lumbar range of motion deficits, Dr. Cebrian contends that Claimant was not entitled to a lumbar range of motion loss because it was inconsistent with his functional impairment. Dr. Swarsen credibly testified that Dr. Gellrick was correct in providing a lumbar impairment for range of motion deficits based on her findings at the time of her evaluation. Based on the totality of the evidence, the ALJ concludes that Dr. Cebrian's opinion represents a mere difference of opinion, which is insufficient to overcome the DIME.

ORDER

It is therefore ordered that:

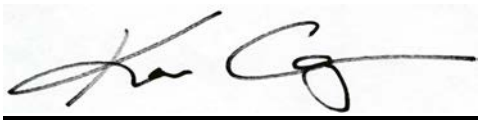
1. Respondent failed to overcome the DIME physician's opinion by clear and convincing evidence that Claimant is entitled to a 30% whole person impairment rating.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 7, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right knee injury during the course and scope of his employment with Employer on August 24, 2015.

2. Whether Claimant has established by a preponderance of the evidence that a total right knee replacement is reasonable, necessary and causally related to his August 24, 2015 injury.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $1,404.00.

FINDINGS OF FACT

1. Claimant worked for Employer as a Lead Vendor Manager or Engineer. His job duties involved the deployment of Direct TV equipment for voice, video and data to customers in all of Employer's areas throughout the United States from New Jersey to Washington.

2. Claimant acknowledged that he has suffered significant prior knee problems and undergone orthopedic surgeries. He specifically recognized that he underwent four right knee surgeries in the 1980's, 1990's, 1998 and 2007. Thomas A. Mann, M.D. performed the May 2, 2007 right knee arthroscopy. The procedure addressed Claimant's torn medial meniscus, extensive chrondomalacia of the femoral condyle and chrondromalacia of the femoral trochlea.

3. On February 1, 2010 Claimant suffered an injury at work when he slipped and fell on ice. Claimant landed on his right knee.

4. On February 16, 2010 Claimant underwent a right knee MRI. The MRI revealed the following: (1) severe articular cartilage pathology throughout the medial compartment; (2) evidence of prior surgical resection at the body of the medial meniscus; and (3) mild chondromalacia of the patella.

5. Dr. Mann evaluated Claimant for possible right knee surgery. He noted that the right knee MRI reflected "clearly" long-standing degenerative changes. Dr. Mann recommended a cortisone injection.

6. On June 10, 2010 Dr. Mann remarked that Claimant had experienced continued pain despite the cortisone injection and a course of physical therapy. He

recommended that Claimant continue with "symptomatic" treatment that included activity modification, anti-inflammatories, ice and possible additional injections. Dr. Mann remarked that Claimant would require a future total right total knee replacement.

7. By September 16, 2010 Claimant visited Concentra Medical Centers for treatment. He was diagnosed with right knee degenerative joint disease. Claimant reported that he had not heard anything about whether a total right knee replacement would be authorized.

8. On November 3, 2010 Claimant returned to Concentra and visited James D. Fox, M.D. for an examination. Claimant had been informed that the insurance company had denied his request for a total right knee replacement. He recognized that his knee problems originated with old injuries that occurred more than 10 years earlier. Dr. Fox noted that an independent medical examination physician determined that Claimant's right knee pathology could be attributed to the February 1, 2010 industrial incident. He agreed with the independent medical examination physician. Dr. Fox explained that Claimant had returned to "pre-2/10 baseline and has not sustained any new impairment as a consequence of that injury." He commented that Claimant had suffered extensive prior knee problems and would likely need a total right knee replacement in the future through his private health insurance. Dr. Fox released Claimant from care.

9. On August 24, 2015 Claimant attended a property meeting with a general contractor, the property owner and city manager Oscar Villa to discuss the location of Direct TV equipment at a job site. As Claimant was walking around a building with Mr. Villa he stepped on a rock, twisted his right knee and heard a pop. Because he began limping he was unable to ascend stairs to the third floor of the building.

10. Claimant explained that he walked out to his car and told Mr. Villa he was going home. He noted that he planned to stop by a store to obtain ice because his right knee had started to swell. When Claimant arrived home he was unable to remove his pants because of his right knee swelling.

11. On September 2, 2015 Claimant visited Concentra for an evaluation. Claimant reported that he stepped on a rock and twisted his right knee while at work on August 24, 2015. The medical provider referred Claimant for physical therapy.

12. On September 28, 2015 Claimant underwent a right knee MRI. The MRI revealed grade 4 chondromalacia of the patellar and trochlear groove, low grade acute on chronic sprains of the ligaments and a possible intracondylar bleed.

13. On September 29, 2015 Claimant returned to Concentra and visited Lloyd Thurston, M.D. for an examination. He diagnosed Claimant with "primary osteoarthritis of the right knee" and a right knee sprain. Dr. Thurston remarked that Dr. Mann had sought referral to a specialist to determine whether "any of the issues are acute or this is a flare of severe pre-existing osteoarthritis." He released Claimant to modified duty employment.

14. On October 29, 2015 Claimant returned to Dr. Thurston for an evaluation. Dr. Thurston agreed with Dr. Mann "that a total knee replacement is warranted and appropriate for this minor work related aggravation of chronic underlying osteoarthritis of the right knee." He noted that "I feel this surgery should be covered under W/C and the sooner the better."

15. By January 7, 2016 Dr. Mann continued to recommend a total right knee replacement. He remarked that the surgery was necessary due to ""right knee pain w/ advanced medial compartment [degenerative joint disease], given failure of extensive conservative treatment, and appearance of knee on radiographs."

16. On April 28, 2017 Claimant underwent an independent medical examination with John T. McBride, Jr., M.D. Dr. McBride recounted that on August 24, 2015 Claimant stepped on a rock or clump of dirt and twisted his right knee while performing a site survey for Employer. Claimant heard a loud "pop" and suffered immediate right knee swelling. Dr. McBride commented that Claimant has suffered a significant history of pre-existing right knee issues. He specifically noted that Claimant suffers from "end-stage osteoarthritis of the right knee." Dr. McBride explained that in 2010 Claimant's right knee MRI revealed "significant osteoarthritis of his medial joint space. He had edema in the tibial plateau, subchondral sclerosis and cystic changes consistent with advanced osteoarthritis in 2010." Dr. McBride commented that the September 28, 2015 right knee MRI revealed findings similar to the 2010 MRI. The similar findings were consistent with severe end-stage osteoarthritis. He summarized that the August 24, 2015 twisting incident did not cause right knee end-stage osteoarthritis or require a total knee replacement.

17. On May 20, 2017 Michael R. Striplin, M.D. conducted a records review of Claimant's case. He specifically addressed whether Claimant's August 24, 2015 work accident warranted a total right knee replacement. Dr. Striplin noted that Claimant has suffered long-standing "severe chronic degenerative disease of the right knee." He explained that the chronic, degenerative disease was not caused by the August 24, 2015 work incident. Furthermore, the incident did not cause an aggravation of Claimant's right knee condition because the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*) require a two-year lapse from the date of injury. Nevertheless, the September 28, 2015 right knee MRI "revealed evidence of acute and chronic sprains of the cruciate ligament and evidence of an intracondylar bleed." The findings suggested that Claimant suffered an acute injury on August 24, 2015 that was "superimposed on the chronic underlying disease." Dr. Striplin explained that, because conservative treatment had failed, a total right knee replacement "appear[ed] to be the only reasonable treatment option given the extensive nature of [Claimant's] underlying degenerative disease."

18. On June 12, 2017 Claimant underwent a total right knee replacement with Dr. Mann's colleague Thomas Eickmann, M.D. The pre-operative diagnosis was osteoarthritis of the right knee. The procedure was performed because there was "x-ray evidence of end-stage arthritis of the knee."

19. On August 28, 2017 Dr. McBride issued an addendum report to his independent medical examination. After reviewing additional medical records Dr. McBride reiterated that Claimant suffers from right knee osteoarthritis that pre-existed the August 24, 2015 industrial accident. He emphasized that the need for Claimant's total right knee replacement was pre-existing osteoarthritis. Dr. McBride summarized that Claimant's end-stage osteoarthritis was unrelated to his August 24, 2015 accident.

20. Dr. McBride testified at the hearing in this matter. He maintained that Claimant suffers from chronic right knee degenerative arthritis. Claimant simply suffered a ligament sprain on August 24, 2015 that resolved on its own. The sprain was unrelated to the total right knee replacement because the surgical request was designed to address Claimant's underlying degenerative disease. Accordingly, Claimant's August 24, 2015 work activities did not cause, aggravate or accelerate his need for a total right knee replacement.

21. On October 4, 2017 the parties conducted the pre-hearing evidentiary deposition of Dr. Striplin. Dr. Striplin explained that Claimant's need for a total right knee replacement was not related to underlying osteoarthritis but rather to the acute findings of a right knee sprain and suspected blood on Claimant's 2015 MRI. However, he acknowledged that the acute findings on the 2015 MRI could have resolved on their own prior to the June 12, 2017 surgery. He specifically recognized that the surgery "was directed at the underlying disease." Nevertheless, Dr. Striplin explained that after Claimant strained his knee "if you're going to treat it surgically, you had no choice but to do the total knee replacement."

22. Claimant has demonstrated that it is more probably true than not that he suffered a compensable right knee injury during the course and scope of his employment with Employer on August 24, 2015. The record reveals that Claimant has suffered significant, pre-existing right knee problems. However, Claimant credibly explained that while attending a property site inspection for Employer on August 24, 2015 he stepped on a rock and twisted his right knee. He immediately experienced right knee pain and swelling.

23. After the August 24, 2015 incident Dr. Thurston at Concentra diagnosed Claimant with "primary osteoarthritis of the right knee" and a right knee sprain. Dr. Striplin persuasively noted that the September 28, 2015 right knee MRI "revealed evidence of acute and chronic sprains of the cruciate ligament and evidence of an intracondylar bleed." The findings suggested that Claimant suffered an acute injury on August 24, 2015 that was "superimposed on the chronic underlying disease." Furthermore, Dr. McBride commented that Claimant simply suffered a ligament sprain on August 24, 2015 that resolved on its own. The consistent medical evidence, in conjunction with Claimant's credible testimony, reflects that Claimant suffered an acute sprain of his right knee on August 24, 2015. The acute sprain resolved on its own with minimal, conservative medical treatment.

24. Claimant has failed to establish that it is more probably true than not that a total right knee replacement is reasonable, necessary and causally related to his August

24, 2015 injury. The record reflects that Claimant suffers from chronic, degenerative osteoarthritis in his right knee. In fact, in 2010 Dr. Mann remarked that Claimant would require a future total right total knee replacement. In addressing the August 24, 2015 incident, Dr. Mann and Dr. Thurston agreed "that a total knee replacement is warranted and appropriate for this minor work related aggravation of chronic underlying osteoarthritis of the right knee." However, the bulk of the persuasive medical evidence demonstrates that the August 24, 2015 twisting incident was a minor strain injury that did not cause Claimant's need for a total right knee replacement.

25. Dr. McBride explained that Claimant suffers from right knee osteoarthritis that pre-existed the August 24, 2015 industrial accident. He commented that the September 28, 2015 right knee MRI revealed severe end-stage osteoarthritis that was similar to the findings on the 2010 MRI. He thus emphasized that the need for Claimant's total right knee replacement was pre-existing osteoarthritis. Dr. McBride noted that Claimant's August 24, 2015 sprain was unrelated to his June 12, 2017 total right knee replacement because the surgical request was designed to address Claimant's underlying degenerative disease.

26. In contrast, Dr. Striplin maintained that Claimant's need for a total right knee replacement was not related to underlying osteoarthritis but rather to the acute findings of a right knee sprain and suspected blood on Claimant's 2015 MRI. However, he acknowledged that the acute findings on the 2015 MRI could have resolved on their own prior to the June 12, 2017 surgery. He specifically recognized that the surgery "was directed at the underlying disease." Nevertheless, Dr. Striplin explained that there were no alternatives to a total right knee replacement. However, based on Claimant's long history of right knee degenerative osteoarthritis, the recommendation for a total knee replacement by 2010, the surgical request to address the underlying osteoarthritis and the persuasive testimony of Dr. McBride, Claimant's need for a total right knee replacement is not causally related to the August 24, 2015 right knee sprain. Claimant's need for a total right knee replacement constituted the natural progression of a pre-existing condition. Accordingly, Claimant's August 24, 2015 work activities did not cause, aggravate or accelerate his need for a total right knee replacement. Claimant's request for Respondents to cover the cost of his June 12, 2017 total right knee replacement is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either

the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a

coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right knee injury during the course and scope of his employment with Employer on August 24, 2015. The record reveals that Claimant has suffered significant, pre-existing right knee problems. However, Claimant credibly explained that while attending a property site inspection for Employer on August 24, 2015 he stepped on a rock and twisted his right knee. He immediately experienced right knee pain and swelling.

8. As found, after the August 24, 2015 incident Dr. Thurston at Concentra diagnosed Claimant with "primary osteoarthritis of the right knee" and a right knee sprain. Dr. Striplin persuasively noted that the September 28, 2015 right knee MRI "revealed evidence of acute and chronic sprains of the cruciate ligament and evidence of an intracondylar bleed." The findings suggested that Claimant suffered an acute injury on August 24, 2015 that was "superimposed on the chronic underlying disease." Furthermore, Dr. McBride commented that Claimant simply suffered a ligament sprain on August 24, 2015 that resolved on its own. The consistent medical evidence, in conjunction with Claimant's credible testimony, reflects that Claimant suffered an acute sprain of his right knee on August 24, 2015. The acute sprain resolved on its own with minimal, conservative medical treatment.

Medical Benefits

9. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

10. As found, Claimant has failed to establish by a preponderance of the evidence that a total right knee replacement is reasonable, necessary and causally related to his August 24, 2015 injury. The record reflects that Claimant suffers from chronic, degenerative osteoarthritis in his right knee. In fact, in 2010 Dr. Mann remarked that Claimant would require a future total right total knee replacement. In addressing the August 24, 2015 incident, Dr. Mann and Dr. Thurston agreed "that a total knee replacement is warranted and appropriate for this minor work related aggravation of chronic underlying osteoarthritis of the right knee." However, the bulk of the persuasive medical evidence demonstrates that the August 24, 2015 twisting incident was a minor strain injury that did not cause Claimant's need for a total right knee replacement.

11. As found, Dr. McBride explained that Claimant suffers from right knee osteoarthritis that pre-existed the August 24, 2015 industrial accident. He commented that the September 28, 2015 right knee MRI revealed severe end-stage osteoarthritis that was similar to the findings on the 2010 MRI. He thus emphasized that the need for Claimant's total right knee replacement was pre-existing osteoarthritis. Dr. McBride noted that Claimant's August 24, 2015 sprain was unrelated to his June 12, 2017 total right knee replacement because the surgical request was designed to address Claimant's underlying degenerative disease.

12. As found, in contrast, Dr. Striplin maintained that Claimant's need for a total right knee replacement was not related to underlying osteoarthritis but rather to the acute findings of a right knee sprain and suspected blood on Claimant's 2015 MRI. However, he acknowledged that the acute findings on the 2015 MRI could have resolved on their own prior to the June 12, 2017 surgery. He specifically recognized that the surgery "was directed at the underlying disease." Nevertheless, Dr. Striplin explained that there were no alternatives to a total right knee replacement. However, based on Claimant's long history of right knee degenerative osteoarthritis, the recommendation for a total knee replacement by 2010, the surgical request to address the underlying osteoarthritis and the persuasive testimony of Dr. McBride, Claimant's need for a total right knee replacement is not causally related to the August 24, 2015 right knee sprain. Claimant's need for a total right knee replacement constituted the natural progression of a pre-existing condition. Accordingly, Claimant's August 24, 2015 work activities did not cause, aggravate or accelerate his need for a total right knee replacement. Claimant's request for Respondents to cover the cost of his June 12, 2017 total right knee replacement is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable right knee injury on August 24, 2015 while working for Employer.

2. Claimant's request for Respondents to cover the cost of his June 12, 2017 total right knee replacement is denied and dismissed.

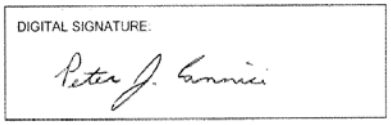
3. Claimant earned an AWW of $1,404.00.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review

by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 8, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

STIPULATION

I. Prior to the commencement of hearing, the parties stipulated that Claimant was properly placed at maximum medical improvement (MMI) per the Division Independent Medical Examiner, Dr. Frank Polanco and the only issue on overcoming the Division Independent Medical Examination (DIME) involved the calculation of Claimant's permanent impairment.

REMAINING ISSUES

I. Whether Claimant established by clear and convincing evidence that Dr. Polanco, as the Division IME physician, erred in calculating Claimant's impairment rating.

II. Whether Claimant proved, by a preponderance of the evidence, that his average weekly wage (AWW) should be increased to $1,415.61 or some other figure.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a 54-year-old freight truck driver for UPS who suffered a work-related injury to his cervical and lumbar spine on February 18, 2016, arising out of a motor vehicle accident. Respondents' Hearing Exhibits ("RHE") D at 29. The accident occurred in Wyoming. Hearing Transcript ("Tr.") at 12. Claimant was "off duty" in the sleeper of his cab while another UPS driver, who was on duty driving the truck, swerved off of the road to avoid a vehicle which had veered into oncoming traffic. Tr. at 12-13. Claimant's vehicle was struck by the oncoming vehicle and he was thrown about the sleeper cab. Tr. at 13-14. Claimant did not treat immediately because he was in Wyoming but was transported back to Colorado for treatment, which he received the following day. Tr. at 14.

2. Claimant began treatment through Concentra Medical Centers and first saw Dr. Randall Jones on February 19, 2016. Claimant's Hearing Exhibits ("CHE") 4 at 23. Claimant presented with pain in his low back, neck and [left] shoulder. *Id*. It was noted that Claimant had a history of moderate scoliosis all of his life and saw a chiropractor twice per month for this condition. *Id*. Claimant complained of moderate neck and low back pain and stiffness without radiation. *Id*. Dr. Jones reviewed x-rays performed of the left shoulder, lumbar spine, and cervical spine. CHE 4 at 25; CHE 4 at 29-32. It is noted that the x-ray of the lumbar spine showed moderate degenerative joint disease

("DJD") with no acute fracture. CHE 4 at 25. Dr. Jones diagnosed Claimant with a cervical strain and lumbosacral strain and referred him to Dr. Kenneth Ginsburg for medication prescriptions. *Id*.

3. Claimant had a brief course of physical therapy, from February 19 through February 26, 2016. CHE 5.

4. Claimant returned to see Dr. Jones no March 4, 2016, after having been examined by Dr. Ginsburg (for pain management). CHE 4 at 40. It was noted that, per Dr. Ginsburg, the radiology reports showed severe scoliosis and DJD of the spine. *Id*. It is noted on this visit that Claimant had complaints of severe low back pain with activity and pain radiating down the right leg. *Id*. Dr. Jones included acute lumbar radiculopathy as part of the ongoing diagnoses. CHE 4 at 42.

5. It is noted during a follow-up appointment with Dr. Ginsburg on March 18, 2016 that Claimant's neck and upper back symptoms had completely resolved with physical therapy but that he still had low back pain radiating down the left leg to the knee with strenuous activities. CHE 4 at 46. Dr. Ginsburg measured full range of motion in the lumbar spine on this visit. CHE 4 at 49.

6. On April 1, 2016, Dr. Jones noted that Claimant only had low back pain after prolonged strenuous activity and was close to his baseline chronic low back pain state. CHE 4 at 50. It is indicated that Claimant's attorney wanted him to do chiropractic treatments and requested a referral. *Id*. However, Dr. Jones advised that he was not comfortable with this, given the findings on the x-ray studies, including scoliosis and spondylolisthesis. *Id*. Consequently, Dr. Jones referred Claimant for examination by a physiatrist. Id. Claimant indicated that he felt he could return to full duty, as his job did not require much heavy lifting. *Id*. Dr. Jones gave work restrictions of 50 pounds lifting. CHE 4 at 53.

7. Claimant saw Dr. Shimon Blau for physiatry evaluation on April 11, 2016. CHE 4 at 55. Dr. Blau noted that the x-rays showed severe reversed curvature of the thoracolumbar spine. *Id*. Claimant complained of pain radiating into the medial and sometimes posterior aspect of his left lower extremity down to the knee. *Id*. Dr. Blau ordered an MRI study of the lumbar spine. CHE 4 at 57. Physical examination revealed "good range of motion" and 5/5 muscle strength in the extremities. Additionally, straight leg raise (SLR) testing, neural tension testing and bowstring testing were all negative. Specific neurologic testing revealed no atrophy, normal tone and intact sensation in the lower extremities bilaterally. Dr. Blau recommended a lumbar MRI and follow-up. CHE 4 at 56-57.

8. The recommended lumbar MRI was performed on April 21, 2016. CHE 6 at 118. The MRI revealed:

> [An] S-shaped thoracolumbar scoliotic curvature and diffuse lumbar degenerative disc disease and facet joint osteoarthritis. These changes

include small cranial left lateral recess to foraminal disc extrusion at L2-L3. There is moderate central canal and left lateral recess stenosis at L3-L4 with contact of the descending left L4 nerve root. There is mild to moderate left lateral recess stenosis at L2-L3 with contact of the descending left L3 nerve roots. There is also mild central canal stenosis at L1-L2 and L2-L3. There is diffuse neural foraminal stenosis which is moderate to severe on the left at L2-L2 and L3-L4 and moderate on the right at L3-L4 and L4-L5. There is contact of the respective exiting nerve roots at these levels. . .

Id.

9. Dr. Blau reviewed the findings on April 25, 2016 and recommended left L2 and L3 spinal nerve root blocks. CHE 4 at 62.

10. Dr. Jones noted in a follow-up visit on April 29, 2016 that Claimant reported feeling 95% better and capable of driving a truck and chaining up. CHE 4 at 66. Dr. Jones released Claimant to full duty and anticipated MMI on July 1, 2016. CHE 4 at 68.

11. On June 6, 2016, Dr. Ginsburg referred Claimant to Dr. Albert Hattem, for delayed recovery evaluation. CHE 4 at 74. Prior to his appointment with Dr. Hattem, Dr. Blau performed the nerve root blocks at L2 and L3 on June 14, 2016. CHE 7 at 125. Claimant then saw Dr. Hattem on June 24, 2016. CHE 4 at 77. During this appointment, it was noted that the June 14 injections had reduced Claimant's pain by 60%. Id. Claimant indicated that he had been working on full, unrestricted duty. CHE 4 at 78. Dr. Hattem noted that Claimant had a preexisting history of chronic low back pain and that the lumbar MRI demonstrated diffuse spondylosis. *Id*. Dr. Hattem opined that it was not clear if the current condition was any different than it was prior to the work injury and indicated that the problem was approaching MMI. *Id*. Dr. Hattem opined that, if Dr. Blau had nothing further, he would discharge Claimant. *Id*.

12. Dr. Blau recommended repeat injections at L2 and L3 during a June 27, 2016 follow-up visit. CHE 4 at 85. On August 1, 2016, Claimant still estimated 60% improvement from his injections. Consequently, Blau referred Claimant for evaluation with Dr. Michael Rauzzino. CHE 4 at 89.

13. Claimant saw Dr. Rauzzino on August 16, 2016. CHE 8 at 143. Dr. Rauzzino indicated that, since the injections were helping, it was recommended that he proceed with another set of injections with Dr. Blau. CHE 8 at 144. Dr. Rauzzino noted that he covered all conservative and surgical options with Claimant and that he did not recommend a fusion surgery, but that Claimant may benefit from a small decompression procedure. *Id*. However, Dr. Rauzzino indicated that he would hold off on that and would need a CT scan prior to any type of surgery. *Id*. Dr. Rauzzino indicated that, once the injections were complete, Claimant could follow-up on an as-needed basis. *Id*.

14. Claimant underwent additional nerve root blocks at L2 and L3 with Dr. Blau on

September 20, 2016. CHE 4 at 94. Claimant saw Dr. Blau on September 26, 2016 and reported 65% to 70% improvement. *Id*.

15. Dr. Nicholas Kurz at Concentra placed Claimant at MMI on October 3, 2016. RHE D at 28. Claimant denied any loss of range of motion, strength, or sensation at the time of this visit. *Id*. Claimant reported only intermittent discomfort with overuse. *Id*. It was indicated that Claimant had long since returned to work on full duty. *Id*. Dr. Kurz documented that the results of Claimant's physical examination revealed no tenderness of the lumbar spine and that Claimant had full range of motion. RHE D at 30. Dr. Kurz indicated that there were no new or acute findings and that there were chronic degenerative changes that were non-work-related with progressive degenerative scoliosis that should be addressed through private insurance with chiropractic treatment. *Id*. Dr. Kurz indicated that Claimant reached his pre-exacerbation baseline and released Claimant from care with no permanent restrictions or impairment. *Id*.

16. Dr. Eric Ridings performed an independent medical examination (IME) for Respondents on October 25, 2016. CHE 9. Of note, Dr. Ridings indicated in his report that he had discussed the apparent visit with Dr. Rauzzino with Claimant and that Claimant indicated that he had not actually seen Dr. Rauzzino. CHE 9 at 150. Rather, Claimant indicated that he had seen the "physician extender," Stephen Ladd. *Id*. Dr. Ridings opined that Claimant had sustained an aggravation of degenerative disc disease at L2-3 and L3-4 as a result of the accident with resultant radiculitis or radiculopathy at the L2 and L3 nerve roots. CHE 9 at 151. Physical examination revealed "4+/5 strength in left hip flexion but otherwise intact in the bilateral lower extremities." Sensation was noted to be intact with the exception of pin-prick sensation which Dr. Ridings noted was "decreased" in the left L3 dermatone only. SLR testing was negative and there were no Babinski signs present. Dr. Ridings attributed Claimant's mild hip flexor weakness and decreased L3 dermatone sensation to an L3 radiculopathy. Dr. Ridings concluded that Claimant was not at MMI noting that there was a good chance that the "proposed surgery" would alleviate Claimant's thigh condition and bring him to baseline, possibly impacting permanent impairment. CHE 9 at 152.

17. Dr. Ridings assigned an advisory impairment rating of 22% whole person. *Id*. At 253. Dr. Ridings broke down the 22% whole person impairment as follows:

- Under Table 53, Dr. Ridings assigned an 8% under Table 53 II (c) and (f) for specific disorders secondary to an aggravation of Claimant's degenerative disc disease at L2-L3 and L3-L4.

- 13% for range of motion impairment.

- 6% for lower extremity neurologic impairment based off Table 11 and Table 46 for sensory impairment of the L3 nerve root. This impairment is broken down as 2% sensory and 4% motor loss.

18. The above referenced impairments combine to yield an overall 22% whole person impairment rating. *Id*. at 152.

19. Respondents filed a Final Admission of Liability (FAL) in accordance with Dr. Kurz's MMI report on November 2, 2016. RHE A at 1. Respondents denied maintenance care on the basis of the report.

20. Claimant objected to the FAL and sought a DIME. Dr. Frank Polanco was selected as the DIME physician and performed the requested DIME on February 9, 2017. RHE C at 20. Dr. Polanco issued his report on March 1, 2017. *Id*.

21. Dr. Polanco found that Claimant had reached MMI on October 3, 2016. He assigned Claimant 13% whole person impairment rating. *Id*. Dr. Polanco noted that Claimant had preexisting scoliosis for which he attended monthly chiropractic visits. RHE C at 22. Dr. Polanco noted that Claimant's complaints at the time of the DIME included back pain and radiating pain into the knee with more than 20 minutes of activity and "pins and needles sensation with aching that does not interfere with activities." *Id*. Claimant was noted to be working full duty. *Id*. Dr. Polanco performed a physical examination and range of motion measurements. Examination of the thoracolumbar spine revealed limited lumbar flexion and extension; however, directed examination of the lower extremities demonstrated "normal range of motion in the hips, knees, and ankles. Moreover, Dr. Polanco documented symmetrical muscle mass, 5/5 strength, intact sensation and a negative SLR in the lower extremities. RHE C at 23. Dr. Polanco reviewed all pertinent records, including the Concentra records, the MMI report of Dr. Kurz, and the IME report prepared by Dr. Ridings. Dr. Polanco listed the diagnoses as lumbar strain, aggravation of preexisting multilevel degenerative disc disease, and lumbar impairment. RHE C at 24. Dr. Polanco opined that Claimant did not need further active medical care or maintenance care and could continue on full-duty. *Id*. Finally, Dr. Polanco performed an impairment rating *Id.* Dr. Polanco assigned Claimant a Table 53 diagnosis and impairment for degenerative disc disease aggravation of 7% whole person. RHE C at 25. Dr. Polanco gave an additional 6% whole person impairment for measured range of motion loss of the lumbar spine. *Id*. As noted above, when the specific disorders rating was combined with the impairment for range of motion loss, Claimant was assigned 13% whole person impairment. Dr. Polanco also assessed neurological impairment and gave Claimant 0%. *Id*. Dr. Polanco completed and supplied impairment rating worksheets with the correct measurements and calculations corresponding to his given impairment rating(s).

22. Respondents filed an FAL on April 28, 2017, admitting for 13% whole person impairment consistent with Dr. Polanco's DIME opinion. RHE at 3

23. In the April 28, 2017 FAL, Respondents admitted for an AWW of $1,286.43. This corresponds to a weekly temporary total disability benefit rate of $857.62. Claimant admitted AWW was based upon the calculated AWW from April 19, 2015 through February 13, 2016, according to a Schedule of Weekly Earnings Employer provided to Insurer. RHE B at 19. This weekly earning schedule did not include wages dating one

year (52 weeks) prior to the date of injury, but rather 43 weeks prior to the last pay period before the injury, because Claimant's wage records reflect that he was not working for several weeks prior to April 19, 2015.

24. Claimant underwent an IME with Dr. Timothy Hall on August 10, 2017. CHE 11. Dr. Hall also reviewed the pertinent records from Concentra, Dr. Kurz's MMI report, Dr. Ridings' IME opinion, and Dr. Polanco's DIME report. Dr. Hall made a notable error in listing Dr. Polanco's measured range of motion as being 8% of the whole person, as opposed to 6%. CHE 11 at 166. Dr. Hall agreed that Claimant was at MMI and opined that, though he should have upkeep for equipment for a TENS unit, he recommended no treatment going forward. *Id*. Dr. Hall did not supply impairment worksheets or calculations of impairment. Dr. Hall likewise did not give an advisory impairment rating. Instead, Dr. Hall simply stated that he agreed with Dr. Ridings' range of motion measurements over those of Dr. Polanco's, without supplying his own calculations and measurements. CHE 11 at 167. Dr. Hall indicated further that he believed the 8% for specific disorders given by Dr. Ridings was more appropriate that the 7% given by Dr. Polanco, apparently due to an additional level but with no further explanation. *Id*. Dr. Hall also indicated that Dr. Polanco erred in not giving Claimant a neurological impairment, without further explanation. *Id*.

25. Claimant testified at hearing that he believed his symptoms were slightly worse at the time of testimony than at the time of MMI. Tr. at 16. Claimant acknowledged at hearing that he had preexisting scoliosis and regular "maintenance" chiropractic care but that he had some different symptoms after the February 18, 2016 work injury. Tr. at 16; Tr. at 20-22. According to Claimant, his condition had improved by the time he was placed at MMI; nonetheless, he testified that he continues to have increased back, hip and leg pain with activity greater than 10-15 minutes in duration.

26. Claimant testified that he was not paid hourly or by salary, but rather by mileage. Tr. at 17. Claimant testified that he made 26 cents ($0.26) per mile. *Id*. Claimant testified that he received an increase in his mileage rate to 26 cents before the accident, in approximately mid-2015. Tr. at 18. Claimant testified that this rate has not changed since that time. Tr. at 22. Claimant testified that he had driven the same route since July 2012. Tr. at 17-18. Claimant testified that his mileage pay varies, despite driving the same route. Tr. at 17; Tr. at 22-23. Claimant testified that he takes vacations every year and sometimes takes holidays off, as well. Tr. at 22-23. Claimant testified that he does not work consistently throughout the year without taking time off. Tr. at 23. Based upon the evidence presented, the ALJ finds Claimant's AWW to equal $1,400.58.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure

the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME Opinion of Dr. Polanco Regarding Permanent Impairment

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by “clear and convincing evidence.” Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's opinion concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding impairment the party challenging the DIME must demonstrate that the physicians determinations in this regard is highly probably incorrect and this evidence must be “unmistakable and free from serious or substantial doubt.” *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert, supra*; *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The determination of impairment under the AMA Guides inherently requires the rating physician, when diagnosing the claimant's condition, to evaluate and identify all losses caused by the industrial injury.

F. The AMA Guides, Section 1.2 provides as follows: "The key to an effective and reliable evaluation of impairment is review of the office and hospital records maintained by the physicians who have provided care since the onset of the medical condition." Section 2.1 further states that, "When a medically sufficient evaluation is carried out, the current clinical status of the individual will be documented accurately."

G. The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). In the present matter, Dr. Frank Polanco reviewed the claimant's medical treatment records, obtained his own personal history from the claimant, and performed his own physical examination, which included range of motion testing. Dr. Polanco very specifically documented in his DIME report that examination of the thoracolumbar spine and lower extremities was performed. While he did not separately indicate that a neurological examination was conducted, the DIME report indicates that soft tissue palpation reflected normal muscle tone and 5/5 lower extremity strength. Moreover, the sensation of Claimant's legs was found to be intact and SLR testing was found to be negative. These findings comport with the findings of examination of Claimant's treating physicians, including Dr. Blau who performed specific neurologic testing which revealed 5/5 muscle strength, no atrophy, normal tone and intact sensation in the lower extremities bilaterally. While Dr. Polanco's DIME report does not contain a separate section entitled "Neurologic Examination", the evidence presented persuades the ALJ that a neurologic evaluation was completed as part of the Division IME and the results of that evaluation documented in the DIME report under the sections entitled "Thoracolumbar Spine" and "Lower Extremity" examination. Based upon that evaluation, Dr. Polanco acknowledged that possible neurological symptoms could exist but specifically concluded that there is no ratable permanent impairment for such complaints.

H. While this is in opposition to Dr. Ridings, the evidence presented fails to persuade the undersigned ALJ that Claimant is actually suffering from a radiculopathy. Indeed, careful review of the medical evidence suggests that the assessment that Claimant has a radiculopathy is based solely upon his subjective reports of leg pain. The record evidence is devoid of any diagnostic testing revealing objective evidence that Claimant suffers from a neurologically impairing condition, i.e. a radiculopathy. To the contrary, the results of multiple physical examinations from Claimant's treating physicians in addition to Dr. Polanco's examination reveal Claimant to have normal lower extremity muscle tone, strength and sensation. Dr. Ridings' contrary assessment

regarding Claimant's strength and sensation is the notable outlying opinion in this regard. After considering the totality of the evidence presented, the ALJ concludes that Claimant has failed to establish that Dr. Polanco's decision to not provide impairment for L3 sensory and motor nerve symptoms was highly probably incorrect. The fact that Dr. Hall disagrees with Dr. Polanco, based upon his interpretation of the medical records, including the IME report of Dr. Ridings does not rise to the level of clear and convincing evidence to overcome Dr. Polanco. For similar reasons, the fact that Dr. Polanco obtained different range of motion values than did Dr. Ridings does not rise to the level of clear and convincing evidence to prove that Dr. Polanco's range of motion readings are highly probably incorrect. Finally, the ALJ is not convinced that Dr. Polanco erred by not including additional impairment for multiple levels intervertebral disc or other soft tissue lesions as provided for under Table 53(II)(F). In this case, the MRI imaging reflects that Claimant suffers from a scoliotic curvature and diffuse degenerative change and facet joint osteoarthritis in the lumbar spine. Even so, the only level of identified intervertebral disc extrusion rests at L2-L3 which was effectively treated through injections provided by Dr. Blau. Consequently, the ALJ concludes that this level was the probable pain generator for Claimant and it was appropriate for Dr. Polanco to rate him for this one level rather than include the L3-L4 level where MRI imaging reflected diffuse central and lateral recess stenosis, without reference to intervertebral disc or other soft tissue involvement.

I. Based upon the evidence presented, the ALJ finds that the opinions expressed by Dr. Polanco in his DIME report are generally supported by the content of the medical records presented to him for review. Moreover, the ALJ finds a paucity of evidence to suggest that Dr. Polanco erred in the methodology he employed to complete the DIME in this case. Rather, the ALJ finds that Dr. Polanco performed a physical examination, the findings of which are consistent with the findings of other providers who also failed to discern evidence of decreased strength and sensation on the left leg to support a finding that claimant is entitled to an impairment rating for sensory and/or motor nerve involvement. Despite Dr. Ridings' and Hall's opinions to the contrary, the evidence presented persuades the ALJ that Dr. Polanco performed proper range of motion measurements. To the extent that Drs. Ridings' and Hall's opinions concerning impairment vary from those expressed by Dr. Polanco, the ALJ concludes that those divergences constitute a professional difference of opinion. A mere difference of opinion between physicians fails to constitute error. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). Consequently, Claimant has failed to prove that Dr. Polanco's opinion regarding permanent impairment is highly probably incorrect.

Claimant's Average Weekly Wage

J. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).* The ALJ concludes that Claimant's wage records constitute the best evidence concerning his earnings around

the time he was injured. The wage records support that Claimant's earnings varied during his employment. Claimant explained that when he is off work due to sick time or vacation he gets paid at a flat rate much less than when he is working. Respondents calculated Claimant's AWW based on 43 weeks of wages prior to the motor vehicle accident. The ALJ agrees with Claimant that Respondents admitted AWW of $1,286.43 is not a fair representation of his average earnings because it accounts for periods of time that Claimant was out for sick time or vacation. The ALJ concludes that Claimant's average weekly wage (AWW) is best calculated using a 24 week average of earnings given the fluctuating nature of his pay because it minimizes those weeks where Claimant was not actually working due to being sick or out on vacation. Over the said 24 week time frame, Claimant earned anywhere from $643.76 to $1,838.34 for any given one week period. As found above, Claimant's AWW is $1,400.58; arrived at by taking the full amount of wages earned over the 24 week time frame extending from 8/30/2015 to 2/13/2016 (33,613.96 ÷ 24 = $1,400.58)

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the Division IME opinion of Dr. Polanco regarding impairment is denied and dismissed.

2. Claimant's AWW is $1,400.58.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

DATED: November 8, 2017

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the surgery recommended by Dr. Wong is reasonable, necessary, and related to her January 5, 2017, industrial accident.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Respondent Employer hired Claimant as a cleaner on October 23, 2015. [Ex. A, p. 1]. At hearing, Claimant testified that her job duties required her to clean appliances.

2. Claimant suffered an admitted strain injury to her lower back while working for Employer on January 5, 2017. [Ex. A, p.1; Ex. 1, p. 1.] Claimant testified at hearing that her injury occurred while lifting three to five gallons of Windex.

3. Claimant initially treated with Dr. Michael Striplin, and continued working during the initial months of her treatment. [Ex. D, p. 1; Ex. 7, p. 20]. Claimant continued to work until she was terminated in June of 2017. [Ex. 8, p. 42].

4. Early in Claimant's treatment, she was referred to Dr. Franklin Shih, who at his initial appointment January 25, 2017, explained the anatomy and potential pathology issues of "multiple potential pain generators and the frequent difficulty in identifying a specific pain generator." [Ex. D p. 2; Ex. 7, p. 21].

5. Claimant underwent a lumbar MRI on March 2, 2017. The MRI study was reviewed by Dr. Brian Reiss who found mild thinning of the L1-2 disc, mild to moderate degenerative changes from L-2 to L-4 with no protrusion or compression. At L5-S1, the MRI showed some loss of height and moderate degenerative changes. The L5-S1 level also showed some bulging and osteophyte formation in the foramina. [Ex. C; Ex. 13, p. 79].

6. In order to identify the pain generator, Claimant underwent a course of injections at the L4-5 and L5-S1 levels with Dr. Nicholas Olson from April 2017, through June of 2017. The injections were non-diagnostic**.** [Ex. E; Ex. 10, p. 52].

7. Records reflect that Claimant underwent a limited course of physical therapy and was prescribed six pool therapy sessions. [Ex. C, p. 2-3; Ex. 13, p. 80-81]. Claimant testified at hearing that she did some limited physical therapy with some passive manipulation and ball work with a physical therapist.

8. On June 7, 2017, Claimant attended an appointment with Dr. Douglas Wong, an orthopedic surgeon. After reviewing Claimant's MRI findings, Dr. Wong equivocally stated, "If surgery is considered, it would be a (sic) Anterior spinal fusion L5-S1. I feel this can help but not cure her back pain, not sure how much it can help her chronic L5 radiculopathy." Dr. Wong also indicated, "I can not explain her L5 radiculopathy." [Ex. H, p. 1; Ex. 11, p 55].

9. The day after Claimant saw Dr. Wong, she attended an appointment with Dr. Olsen. In his report of June 8, 2017, Dr. Olsen provided the following statement:

> Given reports of an anterior approach, it likely appears that she has been offered consideration for a lumbar interbody fusion. I discussed rates of a lumbar interbody fusion in a Workers' Compensation setting. Specifically, I reviewed Nguyen's study referenced in the medical treatment guidelines. I explained to her that in this study, 75% of the patients were unable to return to work and 25% were able to return to some kind of occupational duty. Forty percent of the patients required more opioids after the surgical procedure than they took before. An additional 25% of these patients required a second surgery within a year of the initial procedure.
>
> **Overall, I stated that the chances of success with the procedure are poor**, **particularly if she wants to return to work.** I advised her that she consider her choice carefully. I have recommended that she continue her core strengthening and respects correct lifting mechanics.

[Ex. E, p. 5; Ex. 10, p. 52, *emphasis added*].

10. Dr. Olsen's opinion that the chance of the surgery improving Claimant's condition is poor is found to be credible and persuasive.

11. In advance of the hearing, Claimant attended an IME with Dr. Brian Reiss on July 26, 2017. In conjunction with performing a physical examination of the Claimant, Dr. Reiss conducted a thorough review of Claimant's available medical records and diagnostic imaging. [Ex. C; Ex. 13].

12. Dr. Reiss concluded his examination and records review finding that Claimant's MRI exhibits degenerative changes throughout the spine and determining that "it would be quite speculative to suggest that the L5-S1 disc is her pain generator." [Ex. C, p. 2; Ex. 13, p. 80].

13. Therefore, Dr. Reiss concluded "A fusion at L5-S1 would not meet the Workers Compensation guidelines as the pain generator is not clearly identified." Dr. Reiss further agreed with Dr. Olsen's conclusion that the chances of a successful fusion were poor in finding that, "a localized fusion of that sort . . . is unlikely to

resolve her pain, and for that matter even lessen her pain in my opinion." [Ex. C. p. 2, Ex. 13, p. 80].

14. Dr. Reiss ultimately stated in summary of his conclusions:

> The likely injury was a simple lumbar strain with pain and now she has significant deconditioning. With multiple levels of degenerative change in her lumbar spine a single level fusion is unlikely to be successful at decreasing her pain and increasing function and may actually worsen her pain, decrease her function and preclude her from returning to work.

[Ex. C, p. 4; Ex. 13, p. 82].

15. In lieu of surgery, similar to the recommendations of Dr. Olsen, Dr. Reiss recommended an active exercise program emphasizing core strengthening, aerobic conditioning and some stretching. [Ex. C, p. 4; Ex. 13, p. 82].

16. Ms. Ortiz went on to describe her treatment through the date of hearing including acupuncture, injections, pool therapy and some physical therapy.

17. Ms. Ortiz stated that she was in pain and wanted to go forward with surgery.

18. When asked to describe the extent of her physical therapy, Ms. Ortiz provided a vague description of primarily passive treatment modalities, and did not state that she performed active core strengthening and aerobic conditioning.

19. Claimant did not present testimony of a medical provider.

20. In support of their challenge to the surgery recommendation, Respondents put forth the testimony of Dr. Brian Reiss as an expert in orthopedics and spinal surgery.

21. Dr. Reiss' testimony closely followed his findings noted in his report and provided further clarity as to the basis of his conclusions.

22. Dr. Reiss testified that it was undisputed that Claimant suffered an injury to her back and that she was in pain.

23. Dr. Reiss stated that because a specific pain generator was not identified, the recommendation for surgery at the L5-S1 level was not in accordance with the Colorado Workers Compensation Medical Treatment Guidelines. He noted that without such identification, the recommendation was not reasonable and necessary to cure or relieve the effects of Claimant's injury.

24. Additionally, Dr. Reiss noted that in light on the multiple levels of degenerative changes, the proposed surgery did not meet the treatment guidelines as it was not reasonably calculated to relieve pain and improve function.

25. Dr. Reiss echoed the early statements of Dr. Shih in noting that identifying the pain generator in back pain was difficult. In this matter, he indicated that proceeding with surgery on mere speculation that the L5-S1 location was the pain generator was not in compliance with applicable guidelines and training.

26. Dr. Reiss also indicated that Claimant has degenerative changes at more than two levels. According to Dr. Reiss, Claimant has degenerative changes at L2 through S1. The most degeneration is at the L5-S1 level. However, Dr. Reiss also indicated that mere degeneration does not equate to pain. Therefore, merely attributing pain to the most degenerative level, and deciding to operate at that level, does not make sense because you do not know if the degeneration is causing any pain.

27. Dr. Reiss interpreted Dr. Wong's statement that the requested surgery "can help but not cure her back pain" as providing a 50-50 chance of providing some pain relief. Dr. Reiss did not agree that the chances were that high, and instead echoed the report of Dr. Olsen which stated that the chances of success for the surgery were poor.

28. As a Level II accredited physician, Dr. Reiss also noted that under the guides improved functionality must also be an expected outcome. In this case, Dr. Reiss testified and stated in his report that improved functionality was unlikely. Dr. Wong's report does not address functionality, and merely states a possible reduction in some pain.

29. In light of Claimant's multiple levels of degenerative changes, Dr. Reiss testified that there was a risk of cascading failures at spinal levels adjacent to the fusion.

30. However, Dr. Reiss did agree with Dr. Wong in noting that the requested surgery was unlikely to have any impact on Claimant's radicular symptoms causing pain and numbness in her right leg.

31. In discussing Claimant's prior physical therapy, Dr. Reiss noted that Claimant had previously undergone passive treatment modalities, which were less than the active exercise and core strengthening program he recommended.

32. In closing his testimony, Dr. Reiss stated that due to the Claimant's multiple levels of degenerative changes and the inability to specifically pinpoint a pain generator, Claimant is not a candidate for surgery.

33. The opinions of Dr. Reiss, as set forth in his report and testimony, are found to be credible and persuasive.

34. Claimant's has degenerative disc disease – spine pathology - in her lumbar spine from L2 through S1, which is more than 2 levels.

35. The mere degeneration of a lumbar disc does not equate to pain.

36. The medical providers have not identified the pain generator which is causing Claimant's low back pain and symptoms into her right leg.

37. The surgery recommended by Dr. Wong is not likely to decrease Claimant's pain or increase her functioning.

38. The surgery recommended by Dr. Wong is not reasonable and necessary.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles

concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has proven by a preponderance of the evidence that the surgery recommended by Dr. Wong is reasonable, necessary, and related to her January 5, 2017 industrial accident.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines ("MTG") because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

W.C.R.P. Rule 17, Exhibit 1, of the MTG, sets forth the treatment guidelines for low back conditions. Rule 17 sets forth care that is generally considered reasonable for most injured workers. Further, while an ALJ is not required to utilize Rule 17 as the sole basis for making determinations as to whether medical treatment is reasonable, necessary and related to an industrial injury, it is appropriate for the ALJ to consider Rule 17 in making such determinations. § 8-43-201(3), C.R.S.

The ALJ credits the testimony and report of Dr. Reiss which indicates that the requested surgery would not meet the requisite criteria of the MTG as the Claimant's specific pain generator cannot be identified. The difficulty in identifying a pain generator was discussed early in Claimant's treatment by Dr. Shih. W.C.R.P. Rule 17, Exhibit 1, Section G (4)(e), sets forth a number of requirements that must be met before a spinal fusion is deemed to be reasonable and necessary. One of the requirements is that all

pain generators must have been adequately defined and treated. As Claimant's pain generator cannot be specifically identified as coming from the L5-S1 level, surgery at the L5-S1 level is not reasonable and necessary. See W.C.R.P. Rule 17, Exhibit 1, Section G (4)(e)(i).

In addition, W.C.R.P. Rule 17, Exhibit 1, Section G (4)(e)(iv) indicates that in order for a spinal fusion to be reasonable and necessary, the spinal pathology must be limited to two levels. In this case, Claimant's spinal pathology, which exists at L2 through S1, exceeds two levels. Therefore, pursuant to W.C.R.P. Rule 17, Exhibit 1, Section G (4)(e)(iv), the spinal fusion is not reasonable and necessary.

Moreover, W.C.R.P. Rule 17, Exhibit 1, Section G, indicates that in order to justify operative interventions, there must be a reasonable likelihood of at least a measurable and meaningful functional and symptomatic improvement. Dr. Reiss and Dr. Olsen have provided credible evidence and opinion testimony that there is not a reasonable likelihood that the proposed surgery will provide measurable, meaningful, functional, and symptomatic improvement. Quite to the contrary, Dr. Reiss and Dr. Olsen have provided credible evidence and opinion testimony that the surgery is more likely to reduce functionality and could reasonably result in increased pain.

In addition, the ALJ concludes that Dr. Wong's recommendation for surgery is equivocal in stating that the surgery "can help but not cure her back pain." This equivocal statement, in conjunction with the report of Dr. Nicholas Olsen noting that the recommended surgery has a 75% chance of resulting in diminished functionality does not meet the requirement of the Medical Treatment Guidelines that the proposed treatment must provide a reasonable likelihood of measurable and meaningful functional and symptomatic improvement.

Although the ALJ has found the MTG to be persuasive, the ALJ has not relied solely upon the MTG. The ALJ concludes that based upon a totality of the evidence, Claimant has failed to establish by a preponderance of the evidence that an anterior lumbar fusion surgery at L5-S1 is reasonable and necessary to cure or relieve the effects of Claimant's admitted lower back injury. The ALJ concludes that the surgery is not reasonably expected to provide pain relief or improve Claimant's functionality. As such the ALJ determines and finds that Claimant has not met her burden of proof in establishing the reasonableness and necessity of the L5-S1 anterior lumbar fusion surgery.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for medical benefits in the form of an anterior lumbar fusion surgery at L5-S1 is denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 8, 2017

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has overcome the Division Independent Medical Examination (DIME) opinion of Dr. John Sacha on causation, maximum medical improvement (MMI) and permanent impairment by clear and convincing evidence.

II. Whether Claimant sustained a serious and permanent disfigurement as a result of his March 9, 2016 industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a warehouse employee. Claimant sustained a compensable industrial injury on March 9, 2016 when he tripped over a tote while carrying a metal table base and fell.

2. Claimant reported the injury to Employer on March 11, 2016 and completed an Employee's Report of Work Related Injury. Claimant reported that he tripped and fell, hitting his chest and knee on the concrete. Claimant wrote that he sustained injuries to his right hand, left knee and low back. Employer's First Report of Injury, dated March 15, 2016, notes that Claimant reported injuries to his right rib, left knee, lower back, and third and fourth right fingers.

3. Claimant presented to Amanda Cava, M.D. at Concentra Health Services (Concentra) on March 11, 2016. Claimant reported that he fell, landing on his right hand and left knee. Claimant complained of lower back pain, left knee pain and right thumb/wrist pain. Dr. Cava noted normal musculoskeletal, spine, neurologic and psychiatric findings. X-rays of Claimant's right hand demonstrated no fractures. Dr. Cava diagnosed Claimant with a lumbar strain, wrist strain and knee contusion. She released Claimant to modified duty and recommended medication and occupational therapy.

4. Claimant continued to treat at Concentra with complaints of pain in his low back, abdomen, knees, and right thumb/wrist, as well as numbness in his left leg. On March 21, 2016, all other systems were reviewed and found to be negative. Claimant was released to regular duty.

5. On March 25, 2016, Claimant reported to Dr. Cava complaints of pain in his back and left side/ribs. X-rays of Claimant's chest revealed no acute fracture, infiltrates, or pneumothorax.

6. On March 29, 2016, Claimant was admitted to the emergency department at the University of Colorado Hospital complaining of pain in his low back, groin, and ribcage.

Claimant was diagnosed with left-sided low back pain and left-sided sciatica and was referred for physical therapy.

7. Claimant underwent a lumbar spine MRI on April 8, 2016 which revealed the following: (1) disc degeneration at L3-L4, L4-L5 and L5-S1, (2) L3-L4 mild bilateral lateral recess and foraminal stenosis without nerve root deformity, and (3) L5-S1 mild bilateral lateral recess and moderate to severe bilateral foraminal stenosis with compression of bilateral exiting L5 nerve roots.

8. Dr. Cava reevaluated Claimant on April 12, 2016 and assessed a lumbar strain, bilateral lumbar radiculopathy, muscle spasm of the back, and weakness of both lower extremities. She reviewed the lumbar MRI with Claimant and referred Claimant to Michael Rauzzino, M.D., an orthopedic spine specialist.

9. Claimant presented to Dr. Rauzzino on May 3, 2016. Claimant reported falling on his right hand and left knee. Claimant complained of pain in his back, sides and abdomen, numbness and tingling in his lower extremities, tingling in his neck, right shoulder and hand, neck stiffness, and trouble breathing. Dr. Rauzzino noted no acute sensory deficits on physical examination. He remarked,

> [Claimant] has very diffuse complaints of abdominal pain, headache, arm and hand numbness, low back pain, and leg numbness. It is difficult to put this together anatomically. This lumbar MRI spine does not account for symptoms. I do not see an acute structural change from his low back pain standpoint, therefore, I think he may have had a muscle strain and would benefit from physical therapy.

Dr. Rauzzino recommended Claimant undergo an MRI of his cervical and thoracic spine and consider a referral for psychiatric evaluation due to the possibility of delayed recovery resulting from psychological issues. He did not recommend any surgery for Claimant's low back injury.

10. On May 10, 2016, Claimant reported to Dr. Cava experiencing difficulty with is speech over the last two weeks. She remarked that Claimant's subjective complaints were greater than the objective exam findings. Dr. Cava diagnosed Claimant with bilateral lumbar radiculopathy, spondylolisthesis at L5-S1, thoracic strain, anxiety reaction, and dysarthria. Dr. Cava recommended a head CT scan, which was negative for bleed, stroke, or other acute findings.

11. On May 31, 2016 Claimant sought treatment at the emergency department of Providence Health Center with complaints of pain in his abdomen, back and leg, as well as a difference in his voice and a pulling sensation on the right side of his face. Jason Smith, D.O. noted, "He also states that he had a seizure-like episode yesterday in which he was shaking. Since then his voice has been dramatically changed, he has had tingling of both legs, and has had jaw pain." A CT scan of Claimant's head demonstrated no hemorrhage, mass or acute infarct. A CT scan of Claimant's

abdomen/pelvis revealed questionable enlargement of the prostate gland and a pars defect at L5 with grade 1 anterolisthesis. Dr. Smith noted,

> [Claimant had] a very odd presentation, complains of slight shaking yesterday evening that was then associated with difficulty speaking but it is more accent development than true difficulty speaking seems to speak in a Haitian accent at this time he has no trouble making words he has no hoarseness of his voice just a change in the Tono-Pen in flexion…

12. Dr. Smith further noted that the left side of Claimant's soft palate was not elevating symmetrically and stated, "this may represent a cranial nerve deficit secondary to occult stroke, patient's seizure history also seems to be consistent with simple partial seizure last night this is way too long for the patient to be postictal or Todd's paralysis." Dr. Smith assessed a neuro deficit possible stroke, with simple partial seizure and pars defect lower back as other diagnoses/complicating factors. Dr. Smith noted that he also discussed "the pars intra-reticularis fracture with the patient." There is nothing in the records admitted into evidence that Dr. Smith included an analysis opining that Claimant's symptoms were work-related.

13. Claimant underwent an MRI of his thoracic spine on June 9, 2016 which revealed minimal disc bulges with no evidence of stenosis. Claimant also underwent an MRI of the cervical spine which demonstrated mild degenerative changes and disc bulging at multiple levels, with no acute abnormalities and no evidence of neural impingement.

14. Claimant relocated from Colorado to Texas in approximately June 2016. Claimant's medical care was transferred to Concentra in Waco, Texas.

15. Claimant presented to Kathryn Wright, M.D. at Concentra on June 24, 2016. Claimant reported having gone to the emergency room on June 15, 2016 with abdominal pain, back pain, leg pain, "his voice sounding different and a pulling on R side of face. He also said he had a seizure-like episode on 6/14/16." Dr. Wright physically examined Claimant and assessed bilateral lumbar radiculopathy, lumbar strain, spondylolisthesis at L5-S1, muscle spasm of back, thoracic strain, cervical sprain, and diffuse abdominal pain. She remarked, "I spent close to an hour with this patient going over every work of all of his MRIs, x-rays and ER visits. He is under the impression that since he never had any health issues before except a fracture to his R hand, all of his pain sites and changes are related to this fall injury." Dr. Wright referred Claimant to a neurosurgeon.

16. Claimant presented to Stephanie Roth, M.D. at Concentra on July 20, 2016. Claimant advised Dr. Roth that he had done extensive reading and research on his condition and that he was concerned he has foreign language syndrome. Claimant attributed all of his problems to the work injury. Dr. Roth noted that Claimant demonstrated only 30 degrees of lumbar flexion on examination, but that on the exam table "he goes from supine to sitting up with legs out straight in full extension and able to quickly spin around 180 degrees to put legs at the other end of the table to exam is

(*sic*) L knee." Dr. Roth further noted a normal neurologic and psychiatric exam, with speech appropriate in content and delivery. Dr. Roth assessed lumbar strain, muscle spasm of back, spondylolisthesis at L5-S1, and thoracic strain. She referred Claimant to a neurologist, physiatrist, and psychologist.

17. Claimant was seen by a second neurosurgeon, James Cooper, M.D., on July 28, 2016. Dr. Cooper ordered x-rays of Claimant's lumbar spine, which demonstrated L5 pars defects with grade 1 anterolisthesis of L5 on S1 and no significant abnormal translational motion. Dr. Cooper documented a normal examination and normal x-rays with no evidence of instability. Dr. Cooper opined Claimant was not a surgical candidate.

18. Dr. Wright reevaluated Claimant on August 9, 2016. Dr. Wright remarked that she spent extensive time with Claimant regarding all of his complaints and did a thorough examination. She stated Claimant had no neurological deficits and she found no tenderness to palpation on his body from head to toe. Dr. Wright listed Claimant's complaints of pain, paresthesias, voice changes, sore throat, chest wall pain, abdominal pain, and decreased sensation of scalp. She confirmed that multiple imaging studies had been performed without identification of brain injury, abdominal pathology, or anything other than degenerative discs with mild stenosis.

19. On September 7, 2016, Claimant presented to Martin Solomon, M.D. Only page two of Dr. Solomon's five page provider note was offered into evidence by Claimant. Dr. Solomon stated,

> This patient reports a history of a work-related injury with resultant neck and low back pain. The patient does report pain in his low back moving down his lower extremities, which may be due to S1 radiculopathies, based on the results of the MRI scan. He also has intermittent speech with a foreign accent. This suggests a possible traumatic brain injury.

Dr. Solomon recommended Claimant be referred to pain management for further treatment of his low back pain. There is nothing in the records admitted into evidence that Dr. Solomon included an analysis opining that Claimant's symptoms were work-related.

20. Claimant was placed at MMI by Murray Duren, M.D. at Concentra on September 12, 2016. Claimant continued to complain of back, knee, wrist, abdominal pain and seizure or stroke. Dr. Duren documented, "After lengthy discussion by [Claimant] regarding his problems including his preexisting conditions and subsequent health issues not supported by the mechanism of injury nor initial presenting complaints, the recommended Physical Examination was refused by [Claimant]." Dr. Duren assessed a lumbar strain, left knee contusion and right wrist sprain and released Claimant to regular duty with no restrictions.

21. John Burris, M.D. at Concentra performed an impairment assessment on October 21, 2016. Dr. Burris remarked, "Clear psychosomatic overlay presented

throughout today's encounter. He is tearful at times when discussing his claim. He is a very poor historian with bizarre symptomatology described." Dr. Burris reviewed Claimant's medical records and performed a full physical examination. The diagnostic work up was negative and Claimant's pain diagram did not follow a neuro-anatomical pattern. Dr. Burris found Claimant's examination to be benign with no objective findings. He noted that no pain generator had been identified and Claimant was seen by two neurosurgeons who had not recommended any type of surgery. Dr. Burris agreed that Claimant was at MMI. He found no evidence of residual deficits and concluded that Claimant did not sustain any permanent impairment. Dr. Burris did not recommend any permanent work restrictions or maintenance care.

22. Respondents filed a Final Admission of Liability (FAL) based on the opinion of Dr. Burris. Claimant's counsel at the time filed a timely Objection to the Final Admission of Liability and requested a DIME.

23. John Sacha, M.D. performed the DIME on April 18, 2017. He noted that he was asked to review for Claimant's left-side, which he deemed not work-related, and for "any other areas deemed work related by the examiner." Dr. Sacha noted that he reviewed all of Claimant's medical records in detail. Dr. Sacha performed a physical examination, including cognitive, cutaneous, neurologic and musculoskeletal exams. Claimant complained of, among other things, low back pain with radiation to the left abdominal and groin area and lower extremities, neck pain, mid-back pain, numbness and tingling in in his arms and thumbs, seizures, anxiety and shakiness. On physical examination, Dr. Sacha noted marked pain behaviors and a normal gait pattern with free and easy movement onto and off of the exam table. Dr. Sacha further noted some paraspinal spasm and pain with range of motion, negative straight leg raise and neural tension tests bilaterally, full neck range of motion, and minimal crepitus with range of motion in knees bilaterally. He remarked that Claimant had a non-physiologic presentation.

24. Dr. Sacha determined that the majority of Claimant's complaints were not work-related, including personality disorder, cervical complaints, shoulder complaints, brain and shakiness complaints, and knee complaints. He opined that Claimant's low back injury was work-related and ratable. He further stated, "I do feel that he also qualifies for a small impairment form a psychiatric dysfunction because of his poor coping skills and poor people skills."

25. Dr. Sacha agreed Claimant reached MMI as of October 21, 2016. He assigned a total combined 8% whole person impairment under the AMA Guides, consisting of a 7% whole person lumbar impairment (5% under Table 53 and 2% for range of motion deficits), and a 1% whole person impairment for psychiatric dysfunction. Dr. Sacha agreed Claimant could work full duty without any restrictions. As maintenance care, Dr. Sacha recommended six visits to a pool therapist and six-months of a psychiatric medication regimen.

26. Claimant underwent a psychosocial evaluation with a Dr. Frensley on March 21, 2017. Claimant only submitted page two of five of the clinical interview as an exhibit. Claimant alleged to Dr. Frensley that he hit his head on the ground during the fall at

work in March 2016, but did not know if he lost consciousness. Claimant reported that his speech changed in April 2016, which he described as "It felt like a strain coming from my stomach to my throat. It felt like an octopus grabbing my stomach." Dr. Frensley remarked that Claimant's "speech is decidedly a Jamaican accent and seems consistent with Foreign Accent Syndrome," which he noted is most often caused by damage to the brain or a stroke.

27. Respondents filed a FAL on May 26, 2017 admitting to the impairment rating provided by Dr. Sacha. One of Claimant's prior attorneys filed an Objection to the Final Admission of Liability and an Application for Hearing. A Prehearing Conference Order was entered holding the issue of permanent total disability benefits in abeyance and allowing the parties to proceed on the sole issue of overcoming the DIME.

28. Claimant testified at hearing that at the time of the industrial injury he had a swollen right hand, injured left knee and lower back pain, but also alleges that he "blacked out." According to Claimant, after he finished work on the date of the accident, he went home and felt like his "chest fell down to the bottom of his stomach." He worked modified duty for a period of time but "couldn't lift his arms." Claimant stated that he continues to experience pain, paralysis, an inability to walk, blurred vision and a change in his voice. Claimant testified that he sustained spine damage, traumatic brain injury, foreign language syndrome and a stroke or seizure due to the industrial injury.

29. Claimant stated that he was dissatisfied with the medical treatment he has received and believes he has been "mistreated" by the physicians at various medical facilities. Claimant believes that the physicians that have treated him have committed "malicious acts" and "malpractice."

30. Claimant alleged during his testimony that multiple physicians, including Dr. Sacha, failed to consider his "neurological findings." Claimant specifically referred to Dr. Smith's May 31, 2016 provider note which states that Claimant's soft palate issues "may represent a cranial nerve deficit secondary to occult stroke," and Dr. Solomon's September 7, 2016 provider note which states that Claimant's speech and accent suggest a possible traumatic brain injury.

31. Claimant testified that Dr. Sacha erred by failing to address those medical records, and also alleged that Dr. Sacha failed to address Dr. Rauzzino's May 3, 2016 record and the May 10, 2016 CT scan, which he believes contain evidence neurological findings supporting his position. Dr. Sacha specifically refers to Dr. Rauzzino in the DIME report, noting that Dr. Rauzzino did not feel Claimant was a surgical candidate. Moreover, Dr. Rauzzino's May 3, 2016 note specifically states that he did not document any acute sensory deficits or acute low back structural change. The DIME report does, in fact, reference the CT scan of Claimant's head, which was negative.

32. Claimant acknowledged that he had seven different attorneys representing him on his claim and that, at the time of the DIME with Dr. Sacha, he was given a copy of the DIME packet by one of his prior attorneys. Claimant then provided a supplemental DIME packet to Dr. Sacha.

33. Claimant asserted that he sustained a disfigurement to his voice as a result of the industrial injury. Claimant testified that, subsequent to the industrial injury, he developed a foreign accent and strains when he talks.

34. The ALJ credits the opinion of Dr. Sacha, which is supported by the opinions of the treating physicians and objective medical evidence, over the conflicting testimony of Claimant.

35. The ALJ finds that the lack of specific reference to Dr. Smith's May 31, 2016 and Dr. Solomon's September 7, 2016 provider notes in the DIME report does not rise to the level of clear error. While Claimant interprets such documents as definitive evidence of a traumatic brain injury and other neurological findings, both reports use speculative terms and, more importantly, do not contain sufficient, if any, analysis establishing that the cause of such symptoms are work-related.

36. Dr. Sacha fully reviewed Claimant's medical records, physically examined Claimant, and considered the objective findings in making his determination as to Claimant's work-related condition, MMI and impairment, consistent with the requirements of the AMA Guides.

37. Claimant's allegations that he sustained a spine injury, traumatic brain injury, foreign accent syndrome, and stroke as a result of the March 9, 2016 industrial injury are not credible or persuasive. In multiple reports to Employer and physicians over the course of several months, Claimant reported falling and hitting his chest, knee and hand. There are no records prior to March 21, 2017 with the history of Claimant hitting his head, and such allegation has not been confirmed by any of the treating physicians.

38. Claimant has failed to overcome the DIME opinion of Dr. Sacha on causation, MMI and permanent impairment by clear and convincing evidence.

39. Claimant has not sustained a serious and permanent disfigurement to his voice as a result of the industrial injury. Claimant is not entitled to a disfigurement award.

40. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case

must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Physician's Opinion

The finding of a DIME physician concerning MMI and the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S.

The questions of whether the DIME physician properly applied the AMA Guides and whether the DIME physician's findings of MMI and medical impairment rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As found, Claimant failed to overcome the DIME physician's opinion on causation, MMI and impairment by clear and convincing evidence. Dr. Sacha was asked to address which conditions were considered to be work-related and "any other areas deemed work-related by the examiner." Dr. Sacha specifically opined as to Claimant numerous medical complaints and which conditions were in fact non-work-related. Neither Dr. Sacha, nor Claimant's treating physicians opined that Claimant requires additional medical treatment to improve his condition or additional diagnostic procedures. Throughout the course of his claim, Claimant has undergone multiple physical examinations and extensive testing, including x-rays, MRIs and CT scans. Multiple physicians determined Claimant's subjective complaints outweighed the objective findings, and that the objective findings did not account for Claimant's myriad and "bizarre" symptoms.

To the extent the opinions of Drs. Simpson, Solomon and Frensley can be construed as differing from Dr. Sacha's determinations on causation, MMI and impairment, the opinions constitute mere differences of opinion and are insufficient in overcoming the DIME. There is insufficient credible or persuasive evidence establishing that Dr. Sacha deviated from the AMA Guides or committed other error in making his determinations. Claimant failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Sacha's determinations on causation, MMI and impairment are incorrect.

Disfigurement

Section 8-42-108(1), C.R.S provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view."

As found, Claimant did not overcome Dr. Sacha's DIME opinion as to causation. There is insufficient credible and persuasive evidence establishing that Claimant's alleged voice issues are a result of the March 9, 2016 industrial injury. Accordingly, Claimant is not entitled to an award for disfigurement.

ORDER

It is therefore ordered that:

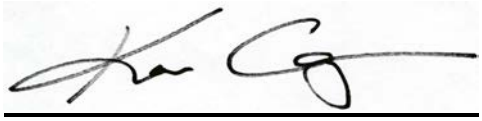
1. Claimant failed to overcome the DIME opinion of Dr. Sacha on causation, MMI and impairment by clear and convincing evidence.

2. Claimant failed to establish that he sustained a serious and permanent disfigurement as a result of the March 9, 2016 industrial injury. Claimant's request for a disfigurement award based on alleged voice issues is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 9, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the left ring finger thenar flap surgery as proposed by Dr. Marin is reasonable and necessary to cure and relieve him from the effects of his industrial injury of October 9, 2015?

II. Has Claimant shown, by a preponderance of the evidence, that his carpal tunnel syndrome is causally related to this work injury?

III. If his carpal tunnel syndrome is causally related, has Claimant shown, by a preponderance of the evidence, that the carpal tunnel decompression surgery as proposed by Dr. Marin is reasonable and necessary?

IV. Has Claimant shown, by a preponderance of the evidence, that his cubital tunnel syndrome is causally related to this work injury?

V. If his cubital tunnel syndrome is causally related, has Claimant shown, by a preponderance of the evidence, that the cubital tunnel decompression surgery as proposed by Dr. Marin is reasonable and necessary?

STIPULATIONS

The parties reached two stipulations on the record, both of which were accepted by the ALJ:

I. Claimant is proceeding only under the theory that his carpal and cubital tunnel syndromes were caused by a traumatic event, and not as the result of an occupational disease.

II. The ALJ will take administrative notice of the prior decision entered by Judge Lamphere in companion case WC 4-996-146-02.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant works as a packer for a potato packing facility. On October 9, 2015, while standing at his assigned station in front of a conveyor belt, Claimant reached for a small bag of potatoes. His left ring finger got caught under this belt, which carried it quickly under some pulleys to his immediate left. At this pinch point, Claimant felt a "bite", and a portion of the last digit of his left ring finger was amputated. It was not reattached.

2. Claimant went to the emergency department at San Luis Valley Health Regional Medical Center on the day of the accident. (Ex. C, p. 40). He was instructed to follow up with his workers' compensation physician for additional treatment.

3. On October 12, 2015, Claimant went to an occupational medicine clinic where he was evaluated by Howard Cox, PA-C. (Ex. D, p. 56). Mr. Cox reviewed Claimant's x-ray from San Luis Valley Health Regional Medical Center and diagnosed Claimant with a left ring finger avulsion with open fracture. Mr. Cox also referred Claimant for an orthopedic consultation. *Id.* at 057.

4. On October 13, 2015, Claimant consulted with Botond Vita, PA-C. (Ex. E, pp. 62-64). Mr. Vita noted Claimant's finger was healing well, and showed no signs of infection. Mr. Vita reported Claimant had no flexion of the DIP joint, and that his extensor tendon appeared to be grossly intact.

5. Also on October 13, 2015, Claimant filled out an employee accident report. (Ex. N, p. 143). Claimant explained his injury as follows: "Not sure what happen. I felt my hand get bit. looked at my finger it was cut past my nail on my ring finger." Claimant reported that the only affected body part was his left ring finger.

6. Claimant completed an employee statement on October 30, 2015, in which he stated …."Then im not sure what happened. I felt it bite me. So I looked at my hand. And noticed i was missing the top of my ring finger"….. (Ex N, p. 141A).

7. Claimant testified at hearing about how his injury occurred. Claimant initially testified that his finger hit the conveyor belt rollers, which caused his arm to rotate around the roller. Later, Claimant testified that the injury happened so quickly that he did not feel his arm rotate around the rollers. Claimant also admitted that his injury happened so fast that he did not know he twisted his arm. Claimant indicated credibly that he has had no prior accidents, injuries, or treatment to his left hand or arm prior to this work injury.

8. Claimant testified at hearing that he does not want an amputation. He wants to try the thenar flap procedure first. He would like to have the carpal and cubital tunnel surgeries performed as well, either before, or concurrent with, the thenar flap procedure.

9. ALJ Lamphere's Finding of Fact, Conclusions of Law and Order dated August 5, 2016 found Claimant's injury occurred as follows: "The finger had been grabbed and yanked into the machine, twisting it and amputating a portion of it."

10. Claimant continued to treat with providers at the occupational medicine clinic and the orthopedic office on several more occasions before changing physicians to Kent Lofley, D.O. on November 25, 2015. (Ex. F, p. 77). Claimant told Dr. Lofley that he was concerned that he could not make a complete fist with his left hand. Claimant described to Dr. Lofley that he experienced a sudden shocking sensation whenever he bumped his left ring finger. Claimant testified at hearing to a similar sensation.

11. On January 19, 2016, Dr. Lofley referred Claimant to a hand surgeon. (Ex. F, p. 82).

12. Based on this referral, Claimant saw Philip Marin, M.D. on March 7, 2016. (Ex. G, pp. 95-99). Claimant complained to Dr. Marin that he could not bend his ring or small finger. Claimant's finger continued to be sensitive to the touch. Dr. Marin believed at this time that Claimant had some degree of complex regional pain syndrome ("CRPS") present. Dr. Marin referred claimant for a nerve conduction study and an MRI to confirm Claimant did not also injure his tendons.

13. Dwight Caughfield, M.D. performed an EMG/NCV on March 16, 2016. Dr. Caughfield concluded the findings were consistent with mild left carpal tunnel syndrome and mild left ulnar neuropathy at the elbow. (Ex. H, p. 105).

14. Claimant also underwent an MRI of his left hand on March 16, 2016. (Ex. K, p. 127B). The MRI found Claimant's flexor and extensor tendons were normal. The radiologist recommended considering reflex sympathetic dystrophy, or CRPS, due to Claimant's ongoing pain complaints.

15. Claimant returned to Dr. Marin on April 5, 2016. (Ex. G, p. 97). Dr. Marin noted the electrodiagnostic studies demonstrated left mild carpal tunnel syndrome and left mild cubital tunnel syndrome. He recommended a thenar flap surgery, but he believed that before proceeding with surgery, Claimant's CRPS (aka RSD, or Reflex Sympathetic Dystrophy) needed to be addressed. Dr. Marin also noted that "He [Claimant] is aware that any surgical intervention of the carpal tunnel or the cubital tunnel could make his symptoms worse."

16. Dr. Marin did not perform any testing himself to support his hypothesis that Claimant had CRPS/RSD. During his deposition, Dr. Marin agreed that, according at least to the Medical Treatment Guidelines, Claimant did not have CRPS. (Marin Depo. p. 40).

17. On September 19, 2016, George Schakaraschwili, M.D., performed an independent medical examination to evaluate whether Claimant had CRPS. (Ex. J, pp. 110-125). Dr. Schakaraschwili performed an infrared stress thermogram and a QSART test, which were both negative. Based on these negative findings, Dr. Schakaraschwili recommended a three-phase bone scan to affirmatively rule out CRPS. He noted that if this test was negative, Claimant would not have CRPS. Instead of CRPS, Dr. Schakaraschwili opined that Claimant had neuropathic pain at the tip of his finger. Dr. Schakaraschwili reviewed Dr. Caughfield's electrodiagnostic studies and concluded that it was "highly unlikely" that either the mild carpal tunnel syndrome or the mild cubital tunnel syndrome were work-related. *Id.* at 119.

18. Claimant had the triple phase bone scan as recommended by Dr. Schakaraschwili on February 23, 2017. (Ex. K, p. 126). The triple phase bone scan was normal, which ruled out CRPS as a diagnosis. (Ex. J, pp. 118 and 120).

19. Claimant returned to Dr. Marin on March 27, 2017. (Ex. G, p. 98). Dr. Marin stated Claimant had been unresponsive to conservative treatments. Dr. Marin recommended a left carpal tunnel decompression, a left cubital tunnel decompression, and a left ring finger thenar flap surgery. Dr. Marin requested authorization for the decompression surgeries. *Id.* at 099. His request was denied after Jason Rovak, M.D. determined that Claimant's carpal tunnel syndrome and cubital tunnel syndrome were not work-related. (Ex. L, p. 128).

20. Dr. Marin recommended the thenar flap surgery to provide Claimant's left ring finger with some cushion to protect the nerves in the finger. To perform a thenar flap surgery, a surgeon makes an incision in the thenar region of the palm near the base of the thumb, and lifts the flap from the incision to provide a space to attach the injured finger. The injured finger is sutured to the thenar region for approximately two weeks. After approximately two weeks, a second procedure is performed to detach the finger from the thenar region of the palm. Finally, a surgeon performs a skin graft from another part of the body to cover up the wound on the thenar region of the palm.

21. On March 7, 2016, Dr. Marin had recorded Claimant had 5 degrees of DIP joint flexion and about 45 degrees of PIP joint flexion. The tendons of the small finger were likely intact. He also noted that "The ***ring*** finger is exquisitely sensitive to the touch. The ***small*** *finger is also sensitive* but to a lesser degree." (Ex. G, p. 96). (emphasis added).

22. Based on these measurements, Dr. Marin thought Claimant's left ring finger had sufficient movement to reach the thenar region. He would need to perform active therapy in the operating room to ensure Claimant's ring finger could touch the thenar region before operating.

23. Dr. Jonathan Sollender, MD, performed an independent medical examination on Claimant on June 22, 2017. (Ex. B, pp. 22-39). Dr. Sollender disagreed that a thenar flap surgery was reasonable and necessary. Dr. Sollender explained that thenar flap surgeries are only performed on the index and middle fingers because those are the only fingers that naturally come to rest on the thenar region. In addition to being the wrong finger, Claimant's left ring finger had a limited range of motion. Dr. Sollender measured the range of motion of Claimant's left ring finger DIP, PIP, and MP joints during his physical examination. *Id* at 33. Dr. Sollender noted that Claimant had reduced range of motion at each of these joints.

24. According to Dr. Sollender, the combination of performing the thenar flap surgery on the ring finger with Claimant's reduced range of motion in that finger greatly increased the failure rate of the thenar flap surgery because the flap may not take, the flap may rip, and the blood vessels may stretch out, causing less blood flow. Even though Dr. Marin recommended splinting Claimant's finger to the thenar region of his palm, Dr. Sollender disagreed that this could compensate for the reduced range of motion in Claimant's left ring finger. He noted that Claimant might not be able to tolerate the pain of having his finger in an unnatural position for two weeks, and he may not be able to actively extend his finger once the splint is removed.

25. Dr. Sollender concluded the thenar flap surgery was not reasonable and necessary because the surgery would not resolve the hypersensitive nerve endings in Claimant's left ring finger. Dr. Marin's proposed thenar flap surgery only adds padding on top of Claimant's finger. Without addressing the underlying nerves that cause Claimant pain, Claimant could still experience hypersensitive responses in his left ring finger if those nerves were stimulated.

26. Instead, Dr. Sollender recommends amputating Claimant's left ring finger through the DIP joint. (Ex. B, p. 26). The amputation would also resect the nerves in Claimant's finger, which would cut them further back from the tip of the finger and provide the nerves with more protection. The amputation would remove damaged tissue, which Dr. Sollender believes is the primary basis for Claimant's pain. And, unlike the thenar flap surgery, the amputation would not require multiple incisions and procedures.

27. Alternatively, Dr. Sollender suggested a flap surgery using skin from another part of the body coupled with a nerve resection, although Dr. Sollender clarified that he still recommends an amputation.

> Yeah, it's part of the reconstructive ladder that hand surgeons and plastic surgeons should be thinking about. But again, *it's up to the patient* whether that kind of an operation that would create scars elsewhere is something that he's interested in. So in general, Ms. Brewer, yes, a distant flap has appeal. But again, it also *should be coupled with nerve resection*. The patient should also be aware that it would not provide any sensation. And *if these things are attractive to him,* then I would have no objections to a distant flap source (Sollender depo, p. 71)(emphasis added).

28. Dr. Sollender pointed out that Dr. Marin did not recommend anything but a thenar flap surgery, and did not specifically recommend nerve resection as part of the surgery.

29. Claimant testified at hearing that he was concerned about how the amputation could affect his ability to work as a manual laborer. Dr. Sollender addressed this concern at his deposition, and noted that he had performed partial amputations on hundreds of laborers who were able to return to work without pain quickly.

30. Dr. Marin testified at his deposition about the basis for his request for authorization for a carpal tunnel decompression. Dr. Marin testified that he believed Claimant's left carpal tunnel syndrome is causally related to the October 9, 2015 injury, in that Claimant's injury may have caused swelling in the ring finger which may have led to swelling that migrated to tendons in the carpal tunnel. (Marin Depo, p. 68: ll.10-23). However, On April 5, 2016, when Dr. Marin diagnosed Claimant with carpal tunnel syndrome based on the EMG/NCV findings, he did not perform any other physical examination to confirm the diagnosis. Specifically, he did not perform a Tinel's test, a Phalen's test, a closed fist test, or a compression test. Records from the Monte Vista

Health Clinic do indicate, however, that there was a positive Tinel's test on the left wrist on July 11, 2017. (Ex. F, p. 92).

31. Dr. Sollender disagreed with Dr. Marin's assessment that Claimant's left carpal tunnel syndrome is work-related. Dr. Sollender reviewed the March 16, 2016 MRI of Claimant's left hand, which showed normal flexor and extensor tendons. (Ex. K, p. 127B). He observed that the normal MRI findings disprove Dr. Marin's theory of carpal tunnel syndrome, since if Claimant had swollen tendons, the MRI would have shown that these tendons were swollen. Dr. Sollender also noted that Claimant did not exhibit any physical conditions consistent with swollen tendons. For example, patients with swollen tendons in a finger often present with a condition known as trigger finger. Trigger finger is a condition in which a patient's inflamed tendons prevent a finger from moving. Based on his physical examination of Claimant and his review of the medical records, Dr. Sollender did not notice any evidence of trigger finger. Finally, Dr. Sollender testified that even if Claimant's injury to his left ring finger caused his tendons in that finger to swell, the inflammation of a single tendon would not cause carpal tunnel syndrome. Nine tendons travel through the carpal tunnel. There is enough room in the carpal tunnel to accommodate the swelling of a single tendon. (Sollender Depo, pp. 65-66)

32. In his deposition, Dr. Sollender further noted that if Claimant's finger injury caused the carpal tunnel syndrome, then:

> You would have complaints of numbness and tingling of specific fingers rather than just a single finger. I think his complaints were numbness and tingling of the *ring and small finger,* which is totally the wrong nerve. It's the *ulnar* nerve that gives those types of symptoms. The *median* nerve will give numbness of the thumb, the index and middle finger and part of the ring finger. (emphasis added).

33. Dr. Sollender and Dr. Marin agreed that Claimant's cubital tunnel syndrome is not causally related to his October 9, 2015 injury. Dr. Sollender initially doubted whether Claimant even has cubital tunnel syndrome. Although the EMG/NCV recognized that Claimant had mild cubital tunnel syndrome, Dr. Sollender explained that it is improper to rely exclusively on electrodiagnostic testing because they often produce false positives. The findings of electrodiagnostic testing must be confirmed by physical examination. Dr. Sollender performed an elbow flexion test on Claimant during his examination. This test was negative, which led Dr. Sollender to question the diagnosis of cubital tunnel syndrome. But, even assuming Claimant had cubital tunnel syndrome, Dr. Sollender concluded that the condition is not work-related because there is no evidence Claimant sustained any injury to his left elbow.

34. In his deposition, Dr. Marin acknowledged that the cubital tunnel syndrome was likely not related to the industrial injury. (Marin Depo., p. 34 and 36).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); Robinson v. Youth Track, 4-649-298 (ICAO May 15, 2007).

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits Generally

D. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); Faulkner v. Indus. Claim Appeals Office, 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. Ringsby Truck Lines, Inc. v. Industrial Commission, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); Industrial Commission v. Royal Indemnity Co., 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. Industrial Commission of Colorado v. Jones, 688 P.2d 1116 (Colo. 1984). Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. Kroupa v. Industrial Claim Appeals Office, 53 P.3d 1192 (Colo. App. 2002).

Cubital Tunnel Surgery

E. Both Dr. Marin and Dr. Sollender testified credibly that Claimant's mild cubital tunnel syndrome is likely not work related, and the ALJ so finds. Regardless of the reasonableness or necessity of such procedure, a cubital tunnel decompression surgery is not reasonable and necessary to cure and relieve Claimant *from the effects of his October 9, 2015 work injury.*

Carpal Tunnel Surgery

F. Dr. Marin testified that the only reason he believed Claimant's October 9, 2015 injury caused carpal tunnel syndrome was that a traumatic accident to a finger can cause tendons to swell in the carpal tunnel. This testimony is not persuasive, since there is insufficient evidence that Claimant's injury caused any tendons to swell. The MRI taken on March 16, 2016 showed that Claimant's flexor and extensor tendons were normal, indicating that they were not swollen. Dr. Sollender persuasively explained that if Claimant's tendons were in fact inflamed, the MRI would show inflammation, fluid accumulation, or edema. None of these symptoms were present on the MRI, leading to the conclusion that Claimant's tendons were not inflamed.

G. Further, Claimant has been consistent in describing his abnormal symptoms in his hand as coming from his *ring and small fingers.* As noted by Dr. Sollender (and the ALJ so concurs), these two fingers are innervated by the *ulnar* nerve, and not the *median* nerve which is the nerve implicated in *carpal* tunnel syndrome. The ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that his carpal tunnel syndrome is *causally related* to his work injury. While Claimant apparently has both mild cubital and carpal tunnel syndrome, and might arguably

benefit from surgery to address it, neither of those conditions are related to his work injury at issue here.

Thenar Flap Surgery

H. The ALJ finds that Claimant has shown, by a preponderance of the evidence, that the injuries to his left ring finger are directly *related* to his work injury which occurred on October 9, 2015.

I. Further, the ALJ credits Claimant's testimony regarding the symptoms he has experienced, his cooperation with all medical professionals involved, and his reasonable desire to undergo a flap surgery (of whatever sort) in an effort to save the bottom half of his affected digit, before going straight to an amputation.

J. Since the date of injury, October 9, 2015, Claimant continues to have extreme sensitivity when the end of his ring finger is touched. He also has stiffness in both the left ring finger and left little finger. To resolve those issues, Claimant's authorized treating hand surgeon, Dr. Philip Marin, has recommended thenar flap surgery. Respondents' independent medical examiner, also a hand surgeon, Dr. Jonathan Sollender, recommends surgery for Claimant's left ring finger, as well. His first recommendation is a partial amputation. However, he also has acknowledged that flap surgery with a donor site at a more distant location than the palm of Claimant's hand would be a viable alternative. Dr. Sollender also opines that a nerve resection should be done, to address the pain Claimant experiences when he strikes this finger, since the additional padding afforded by the flap surgery might not be sufficient.

K. While both surgeons are both capable and sincere in rendering their opinions, the ALJ is persuaded that the most reasonable and necessary alternative is a flap surgery, to be performed by Dr. Marin. Once more reflection can be given to all the details, Dr. Marin is to be afforded the option of resecting the nerves of this finger, if warranted in his professional judgment. Likewise, Dr. Marin, in consultation with Claimant, is to be afforded the opportunity to use a donor flap from the location of his professional choosing, in case further testing indicates a more desirable donor site.

ORDER

It is therefore ordered that:

1. Claimant's request for cubital decompression surgery as proposed by Dr. Marin is denied and dismissed.

2. Claimant's request for carpal decompression surgery as proposed by Dr. Marin is denied and dismissed.

3. Claimant's request for thenar flap surgery as proposed by Dr. Marin is granted. Further, if agreed between Claimant and Dr. Marin, an alternative flap site may be

chosen, and a nerve resection performed. Respondents shall pay for such procedure pursuant to the fee schedule as set by the Division of Workers Compensation.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 14, 2017

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-004-715-02

ISSUES

- Whether Property Cousins demonstrated by a preponderance of the evidence that Claimant was not an employee.

- Whether Claimant established by a preponderance of the evidence, that he sustained a compensable injury arising out of and in the course and scope of his employment on December 14, 2015.

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable, necessary, and medical treatment stemming from the December 14, 2015 injury.

- Whether the Claimant established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) from December 14, 2015 until June 21, 2016.

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to permanent partial disability (PPD) benefits from the December 14, 2015 injury.

- Whether Property Cousins have proven by a preponderance of the evidence that they are entitled to reduced compensation benefits by fifty percent for willful violation of a safety rule pursuant to C.R.S. section 8-42-112(1)(b).

- Whether Claimant has proven by a preponderance of the evidence that he entitled to a fifty percent (50%) penalty as a result of Property Cousins, LLC not having workers compensation insurance at the time of his injury pursuant to C.R.S. CRS 8-43-408.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer hired Claimant, a carpenter's assistant, to perform renovation work on properties Employer owned.

2. Clamant assisted Rosendo Salazar, a master carpenter, who Employer also hired to perform renovation work on properties Employer owned.

3. Claimant speaks Spanish and no English. Brian Moore, Employer's owner, speaks English and almost no Spanish. Mr. Salazar would translate for Mr. Moore to Claimant regarding Claimant's job responsibilities and which jobsite to report to. Mr. Salazar also translated for Claimant whatever Mr. Moore needed to convey to Claimant

about timekeeping, limits on what work Claimant could not perform, and other job related duties.

4. Levi Maes, a cousin of Mr. Moore's, also spent limited time on the jobsite. When he was there, he would also supervise Claimant and Mr. Salazar. Mr. Maes testified that Mr. Salazar provided Claimant with the day-to-day direction of his work because Claimant was Mr. Salazar's assistant/helper.

5. During the four to five months before he was injured, Claimant only worked for Employer and was not allowed to leave without permission to work another job.

6. Mr. Moore told Claimant when to arrive at work and when to leave. Claimant testified that if he needed to leave work early, he was required to have Mr. Moore's permission. However, he also testified that he and Mr. Salazar could leave at 3:00 or 4:00 p.m., they never did.

7. Employer required Claimant to use a time-clock to punch in and out of work for the majority of the time he worked for Employer. Both Claimant and Mr. Salazar testified that they used the time-clock the entire time they worked for Employer. Mr. Moore acknowledged that he required his workers to use the time clock because he did not trust them to accurately report their hours.

8. Employer did not allow Claimant to work on electrical and plumbing projects, and on "more dangerous aspects of construction."

9. Claimant provided his own hand tools but also used a circular saw, table saw, and other large tools Employer provided.

10. Claimant testified that he often worked with Mr. Salazar and two other workers (Roberto and Omar) at the jobsite, while Mr. Moore was often not there. When Mr. Moore was present, he supervised Claimant.

11. Claimant and Mr. Salazar had the combination to the lock box at the Elizabeth property and could let themselves in to begin work. They would lock the house when leaving. Mr. Maes testified that Claimant could come and go from work as he pleased so long as "the project was progressing." However, he also testified that he and Mr. Moore made Claimant use the time clock to track his hours.

12. Mr. Moore paid Claimant weekly based on the number of hours he worked at the rate of $15 per hour, using Employer's company checks. Claimant worked approximately fifty hours per week. Claimant's average weekly wage was $750.

13. Employer made checks out to Claimant personally.

14. Claimant has never owned any type of contracting business.

15. Claimant did not have a written contract while he worked for Employer.

16. Claimant did not work for Mr. Salazar, was never paid by him, and never had a contract to work for him. Mr. Salazar also did not have a contract with Employer.

17. Claimant previously worked for Levi Maes who told Claimant at Mr. Maes' project that he was not an employee and would be given a 1099 tax form. No persuasive evidence supports a finding that Mr. Moore told Claimant similar information about working for Employer.

18. Mr. Moore testified that he did not have employees because it was what he was taught as a general contractor. As the general contractor Mr. Moore oversaw and managed the project. However, he also testified that because he had another full-time job, he would "go in, see if they need anything, and then go about my day and get ready for work." When asked specifically about overseeing the workers, he testified, "I didn't have time for that." Further, Mr. Moore testified that because he was relatively new at flipping houses, he "relied on his workers for a lot of direction." "They would usually tell me what they were going to accomplish during the week, and I'd be like, okay, that sounds great."

19. Mr. Moore testified that he installed the time clock because he did not trust the workers to accurately report their hours. In particular, he found Roberto to be difficult to work with and not trustworthy. After four or five weeks the workers would kick the time clock around and they eventually destroyed it.

20. The ALJ finds it unlikely that Mr. Moore relied on his workers to direct their own work given that he did trust them enough to rely on their time reports. The ALJ also finds it unlikely that Employer, whose business was to flip houses for profit, would ask his workers what they wanted to accomplish in a week of work and that he would simply agree.

21. Mr. Moore testified that he paid Claimant by the hour at the end of the week. He testified that he did not set Claimant's hours, and he did not withhold FICA from Claimant's pay.

22. Claimant worked for Employer for approximately four or five months when, on December 14, 2015, Claimant was assisting Mr. Salazar install bars on a stair rail at Employer's property located at the corner of 13th and Elizabeth in Denver, Colorado. Mr. Salazar was using a pneumatic nail gun to install the stair rails. As he was nailing one of the bars on to the stair rail, a nail ricocheted and penetrated Claimant's right eye.

23. Mr. Salazar immediately reported the injury to Mr. Moore.

24. Claimant pulled the nail out of his eye and a coworker gave Claimant a roll of toilet tissues to cover his eye. Claimant's daughter arrived within minutes and transported Claimant to Rose Medical Center seeking emergent care to evaluate the extent of and to stabilize Claimant's eye injury.

25. Rose Medical Center then referred Claimant to Porter Surgery Center/Harvard Park Surgery Center where Dr. Holly Kent, a specialized ophthalmologist

performed emergency surgery. The procedures performed included repair of a corneal laceration, brief exam under anesthesia, and repositioning of the right iris.

26. Claimant received follow-up evaluation and treatment at Denver Health Medical Center Eye Clinic. Claimant underwent further surgery with Richard Hwang, MD, at the Eye Clinic on December 22, 2015, which included the following procedures: a 23-guage pars plana vitrectomy; a pars plana lensectomy; Endolaser photocoagulation; anterior chamber intraocular lens placement; and Subtenon Kenalog. Claimant's post-surgical diagnoses included traumatic cataract, vitreous debris versus vitreous hemorrhage, and history of open globe repair due to penetrating nail injury.

27. On March 30, 2016, Frank Seringo, MD, evaluated Claimant, and on April 12, 2016, he prepared a Physician's Report of Worker's Compensation Injury report. Dr. Seringo ultimately placed Claimant at MMI on June 1, 2016.

28. On November 1, 2016, Ronald Wise, MD, performed a Claimant-sponsored IME. He reported that subsequent to his December 22, 2015 surgery, Claimant experienced a traumatic and glaucomatous optic neuropathy of his right eye.

- Impairment rating: After performing a physical examination, Dr. Wise used the AMA Guides to arrive at a combined rating of 99% for Claimant's right eye. This equated to a 25% visual system impairment rating and a 24% whole person impairment rating.

- Maintenance Care: Dr. Wise determined that Claimant required maintenance including an ophthalmic examination every six months for life to monitor his macula and glaucoma status. And also that Claimant should remain on timolol and brimonidine twice a day in his right eye for life.

- MMI: Dr. Wise agreed with Dr. Siringo's MMI date of June 1, 2016.

- Permanent Restrictions: Dr. Wise restricted Claimant from driving commercial vehicles and operating heavy machinery. He provided, "[Claimant] should work at heights above the ground and use power tools with extreme caution due to his monocular status." Claimant should undergo a performance evaluation before performing any work activity that might be limited by his monocular status. And finally, he required Claimant to use corrective and protective eyewear at all times.

29. To date Employer has not paid for any of Claimant's medical care and treatment.

30. Claimant's daughter transported Claimant to his medical appointments, including to his initial emergency care. Because Claimant does not speak or read English, his daughter filled out intake forms and provided translation services. Claimant did not direct his daughter how to fill out the forms and she acted at her own discretion in providing information.

31. Claimant testified that Employer did not provide him with any safety equipment, including goggles. And that he never noticed Mr. Moore bring a box of goggles to the jobsite. Claimant testified that Mr. Salazar never told him that there were glasses and to wear them. Further, Mr. Moore did not lecture him about wearing goggles when doing dangerous work.

32. Mr. Salazar testified that on the date of Claimant's injury Employer did not provide Claimant with safety goggles. However, Employer had provided Mr. Salazar with protection glasses on another job. Mr. Salazar did not know whether Employer had provided Claimant with protection glasses on another job. Mr. Salazar testified further that Mr. Moore would bring safety glasses to the jobsite "whenever we asked him to." But that he was not aware of o box of safety glasses being on the jobsite.

33. Mr. Salazar testified that Mr. Moore "sometimes" told him to use safety glasses when he and Claimant were working around dangerous machinery. But he did not know whether Mr. Moore told Claimant the same thing. Mr. Maes testified that he and Mr. Moore would ask Claimant and Mr. Salazar what they needed and then would supply the requested safety items.

34. Mr. Moore testified that he bought a box of safety goggles for Claimant and Mr. Salazar. Mr. Moore testified that many times he would say, "You guys need to wear safety glasses," but they "would just not listen to me." Instead of reprimanding or firing them, Mr. Moore bought a box of safety glasses and told them, "No more excuses. Please use the safety goggles." Mr. Moore testified that he gave Claimant and Mr. Salazar the "safety goggle speech" "more times than he could count." The ALJ finds this testimony inconsistent with Mr. Moore's testimony that he did not have the time to oversee the work being done on the project and that he would just stop in at the jobsite to see if the workers needed anything.

35. While Mr. Maes testified that he told Claimant to wear goggles, from context the ALJ finds that he did so when Claimant was working for him; not for Employer. In addition, Mr. Maes testified that at times there was a box of goggles at the Elizabeth street jobsite, but he did not know if it was there the day Claimant was injured.

36. Mr. Salazar was not wearing safety goggles at the time Claimant was injured. No persuasive evidence was offered that Employer took any negative employment action against Mr. Salazar for failing to use protective eyewear.

37. Based on the totality of the evidence, the ALJ finds that Employer did not have a safety rule about safety glasses or that any such policy was enforced.

38. Mr. Maes has no ownership interest in Employer. He testified inconsistently that he gave no direction at the Elizabeth street project, but rather acted as a "resource;" and that when he supervised Claimant when Mr. Moore was not on site.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. §8-40-102(1). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-42-101.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The question of whether the claimant met his burden of proof is one of fact for determination by the ALJ. See *Jefferson County Public Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. C.R.S. §8-43-201. A Workers' Compensation case is decided on its merits. C.R.S. §8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence/or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). This decision does not specifically address every item contained in the record; instead,

incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Status of Claimant: Employee or Independent Contractor

C.R.S. section 8-40-202(2)(a), sets forth a statutory presumption that "any individual who performs services for pay for another shall be deemed to be an employee, irrespective of whether the common-law relationship of master and servant exists, unless such individual is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed."

The parties do not dispute that no contract existed between Employer and Claimant. Therefore Claimant is presumed to be Employer's employee. To overcome this presumption, Employer must prove by a preponderance of the evidence that the conditions set forth in C.R.S. section 8-40-202 (2)(b)(II)(A)-(I) have been satisfied to establish Claimant was an independent contractor. To prove independence from the employee-employer relationship Employer must show that it did not:

> (A) Require the individual to work exclusively for the person for whom services are performed; except that the individual may choose to work exclusively for such person for a finite period of time specified in the document;
>
> (B) Establish a quality standard for the individual; except that the person may provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed;
>
> (C) Pay a salary or at an hourly rate instead of at a fixed or contract rate;
>
> (D) Terminate the work of the service provider during the contract period unless such service provider violates the terms of the contract or fails to produce a result that meets the specifications of the contract;
>
> (E) Provide more than minimal training for the individual;
>
> (F) Provide tools or benefits to the individual; except that materials and equipment may be supplied;
>
> (G) Dictate the time of performance; except that a completion schedule and a range of negotiated and mutually agreeable work hours may be established;
>
> (H) Pay the service provider personally instead of making checks payable to the trade or business name of such service provider; and

(I) Combine the business operations of the person for whom service is provided in any way with the business operations of the service provider instead of maintaining all such operations separately and distinctly.

The ALJ finds and concludes that Employer has not meet its burden in regard to proving Claimant was an independent contractor rather than an employee. Claimant and Mr. Salazar both testified in detail about their working relationship with Employer. The ALJ finds both Claimant and Mr. Salazar to be credible witnesses. Both testified to the following: 1) they were told what to do on the jobsite on a given day by Mr. Moore or Mr. Maes; 2) they could not work for another employer other than Employer; 3) their work was supervised by Mr. Moore or Mr. Maes; 4) they were told when to arrive at work and when they could go home; 5) Employer required them to keep track of their hours worked by using a time clock located at the job site; 6) they could not leave the jobsite during the day without getting permission from Mr. Moore or Mr. Maes to do so; 7) they were paid an hourly wage based upon the number of hours worked in a week; 8) their paychecks were made to each of them individually and not to a company; 9) they did not have a contract with Employer; and 10) they brought many of their own small tools to the job site, but Employer furnished certain larger pieces of equipment.

Mr. Moore, owner of Employer, testified that Claimant and Mr. Salazar came to the jobsite as a team and that due to Claimant not speaking English, directions on what Claimant was to do on the jobsite came through Mr. Salazar. Mr. Moore testified that he hired Claimant and Mr. Salazar on a time and material basis but offered no other evidence of Claimant's status as an employee versus an independent contractor. Mr. Moore also testified that he could have fired Mr. Salazar for poor performance, which in turn, since they were viewed as a team, would have terminated Claimant's employment relationship.

In addition, the ALJ is guided by apply the analysis used by the Colorado Supreme Court in *Industrial Claim Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014), pertinent to the issue of whether the claimant was engaged in an independent trade or business.

To that end, the Supreme Court, in *Softrock*, revised the standard previously used by the Panel and the Court of Appeals when analyzing whether or not an employee "is customarily engaged" in an independent trade or business. That previous standard had sought to simply ask if the employee had customers other than the employer. If not, it was reasoned the employee was not "engaged" in an independent business and would necessarily be a covered employee. However, in *Softrock* the Court declared, "we also reject the ICAO's argument that whether the individual actually provided services for someone other than the employer is dispositive proof of an employer-employee relationship." 325 P.3d at 565.

Instead, the fact finder was directed to conduct "an inquiry into the nature of the working relationship." Such an inquiry would consider not only the nine factors listed in § 8-202(2)(b)(II), but also any other relevant factors. The Court pointed as an example to the decision in *Long View Systems Corp. v. Industrial Claim Appeals Office*, 197 P.3d 295 (Colo. App. 2008). In *Long View* the Panel was asked to consider whether the

employee "maintained an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance." 325 P.3d at 565. This analysis of "the nature of the working relationship" also avoided a second problem presented by the single-factor test disapproved by the *Softrock* decision. That problem involved a situation where, based on the decisions of the employee whether or not to pursue other customers, the employer could be subjected to "an unpredictable hindsight review" of the matter which could impose benefit liability on the employer. 325 P.3d at 565.

The ALJ must conduct an inquiry into the "nature of the working relationship." A review of the record in this matter reveals there is no persuasive evidence that Claimant had an independent business card, phone listing, and business address, had any financial investment subject to a risk of loss, set the price for performing the project or employed others. There was no evidence he carried liability insurance. There was also evidence in the form of Mr. Moore's acknowledgement that Claimant was working approximately fifty hours per week for Employer which suggested Employer knew Claimant was working full time and exclusively for Employer. The ALJ finds Employer would reasonably be aware that Claimant was not engaged in an independent business, based on the working relationship it had with Claimant.

The Court concludes that Employer failed to meet its burden of establishing by a preponderance of the evidence that the conditions set forth in C.R.S. section 8-40-202 (2)(b)(II)(A)-(H) and in *Softrock* have been satisfied, and further finds and concludes that Clamant was an employee of Employer on December 14, 2015.

Claimant's Entitlement to Benefits

Having determined that Claimant was an employee on the date of his injury, the ALJ next must determine whether Claimant was injured while performing an activity arising out of and in the course and scope of that employment. Arising out of and in the course of an employee's employment means that there must be a nexus between the claimant's injury and the conditions of his employment. *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989). Whether an employee is acting within the course and scope of his employment depends on the facts surrounding the incident in question. *Bennett v. Furr's Cafeterias,* 549 F. Supp 847 (D. CO. 1982). The testimony at the hearings was uncontroverted that on December 14, 2015, while working at a property owned by Employer, Claimant was struck in the right eye by a nail discharged from a nail gun operated by a co-worker. Claimant and his co-worker were installing bars in a stair rail at the direction of Employer's owner. Carpentry work such as installing bars on a stair rail were part of Claimant's normal day-to-day responsibilities. The mechanism of Claimant's injury, being struck in the eye by a nail fired from a nail gun, is unquestionably a result of the conditions of his employment. The ALJ therefore finds and concludes that Claimant sustained an injury on December 14, 2015 while performing an activity arising out of and in the course and scope of that employment.

Claimant contends that he is entitled to medical benefits, temporary total disability benefits, and permanent partial disability benefits as a result of the December 14, 2015 accident. Claimant bears the burden of proving his entitlement to benefits by a preponderance of the evidence. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo.1985).

Medical Benefits

C.R.S. 8-42-101 (1)(a) provides:

> Every employer, regardless of said employer's method of insurance, shall furnish such medical, surgical, dental, nursing, and hospital treatment, medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee from the effects of the injury.

Claimant received medical care as a result of his injury. While the reasonableness and necessity of his medical care was not contested, a review of Claimant's Exhibits 1-6 as well as Claimant's testimony convinces the ALJ that Claimant received extensive medical treatment for the injury to his right eye. The ALJ finds and concludes that Claimant has demonstrated by a preponderance of the evidence that his medical care was reasonable and necessary and the need for those medical services arose directly from his accident of December 14, 2015.

Employer is therefore ordered to pay Claimant's medical expenses arising from this accident.

Claimant also presented persuasive and uncontroverted evidence that he requires medical maintenance benefits including prescriptions for medications Timolol and Brimonidine and ophthalmic examinations every six months to monitor his macula and glaucoma status. Claimant will require these benefits for his lifetime.

Employer is ordered to provide such medical maintenance care.

Temporary Total Disability Benefits

To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between his work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace*

Electric, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Claimant was injured on December 14, 2015, sought medical attention immediately thereafter, was restricted from returning to work by Dr. Siringo, and was found to be at MMI and released to return to work on June 1, 2016. The ALJ finds and concludes that Claimant has demonstrated by a preponderance of the evidence that as a result of Claimant's December 14, 2015 injury, he was unable to perform his normal occupation from December 14, 2015 until the date he was released to work on June 1, 2016. Claimant is entitled to temporary total disability benefits for the period of December 14, 2015 to June 1, 2016.

Employer is ordered to pay Claimant temporary total disability benefits at the rate of $500.00 per week from December 14, 2015 until June 1, 2016.

Permanent Partial Disability

C.R.S. section 8-42-107 provides that permanent partial disability benefits shall be awarded to an injured worker at such time as he or she reaches maximum medial improvement and has had a determination of his or her medical impairment performed by a physician accredited by the Division of Workers Compensation. Claimant was found to be at maximum medical improvement on June 1, 2016. Dr. Ronald Wide, a workers' compensation accredited physician, found Claimant sustained a permanent impairment of 99% loss of his right eye which converts to a 24% whole person rating. Employer offered no persuasive or contradictory medical evidence. The ALJ finds and concludes that Claimant has proven by a preponderance of the evidence that he is entitled to permanent partial disability benefits.

Employer shall pay to Claimant permanent partial disability benefits based upon Dr. Wise's 24% whole person impairment.

Safety Rule Violation

C.R.S. section 8-42-112(1)(b) provides for a fifty percent reduction in compensation to a claimant where a respondent proves that the claimant's injury was caused by his or her willful failure to obey any reasonable rule adopted by the employer for the claimant's safety. *See In re Claim of Bromirski, 082113 COC, 4-882-047-01.*

Under section 8-42-112(1)(b), respondents bear the burden to prove every element justifying a reduction in the claimants' compensation for the willful failure to obey a reasonable safety rule. *Triplett v. Evergreen Builders*, Inc., W. C. No. 4-576-463 (May 11, 2004).

The question of whether the respondent proved willful violation of a safety rule by a preponderance of the evidence is one of fact for the ALJ. *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Violation of a rule is not

willful unless the claimant did the forbidden act with deliberate intent. A violation which is the product of mere negligence, carelessness, forgetfulness or inadvertence is not willful. *Bennett Properties Co. v. Indus. Commission*, 437 P.2d 548 (Colo. 1968); *Johnson v. Denver Tramway Corp.*, 171 Colo. 214, 171 P.2d 410 (1946). Conduct which might otherwise constitute a safety rule violation is not willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). A violation of a safety rule will not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

Employer must prove the following elements: 1) There must be a specific, unambiguous and definite safety rule adopted by the employer; 2) The safety rule must be reasonable; 3) The safety rule must be "brought home" to the employee and diligently enforced; 4) Violation of the safety rule must be willful; and 5) The violation of the safety rule must be a cause of the claimant's injury. C.R.S. § 8-42-112(1)(b)(2015); *L.B. Cole Produce Co. v. Indus. Com'n.*, 228 P.2d 808, 809 (1951); *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995).

The first step is to determine whether or not Employer adopted a reasonable "safety rule." A safety rule does not have to be formally adopted, does not have to be in writing, and does not have to be posted. Rather, it is necessary that the safety rule was heard and understood and given by someone generally in authority. *Indus. Commission v. Golden Cycle Corp.*, 126 Colo. 68, 246P.2d 902 (Colo. 1952); *McCulloch v. Industrial Commission*, 109 Colo. 123, 123 P.2d 414 (Colo. 1942)

Employer alleges Claimant violated a safety rule on December 14, 2015, when he did not wear safety glasses while working with or around a nail gun. Claimant testified that Employer did not provide him with safety goggles; Mr. Moore did not tell him to wear safety goggles; Mr. Salazar did not tell him to wear safety goggles; and Mr. Moore did not lecture or reprimand him for not using safety goggles.

Mr. Moore testified that he bought an entire box of safety goggles for "the guys" working on site. He further testified that after he bought the box of safety goggles, he told them to please use safety goggles.

The ALJ finds that Employer did not have a specific, unambiguous and definite safety rule in place with regard to the use of safety goggles on December 14, 2015. Further, the evidence supports a conclusion that even if there were a safety rule, Employer did not enforce it. Analysis of the other elements of a safety rule violation are unnecessary.

The ALJ finds that Employer failed to prove by a preponderance of the evidence that it is entitled to reduce compensatory benefits by fifty percent for a willful violation of a safety rule pursuant to C.R.S. section 8-42-112(1)(b).

Penalty for Employer's Failure to Have Complying Workers' Compensation Insurance

C.R.S. section 8-43-408(4) provides a fifty percent (50%) penalty against any employer who fails to comply with the insurance provisions of the Colorado Workers Compensation Act. Employer admitted during the June 7, 2017 hearing that it was not insured at the time of Claimant's injury. This Court has no discretion in imposing the penalty. *See Kamp v. Disney,* 135 P.2d 1019 (Colo. 1943). Employer is therefore assessed a 50% penalty on all of the amounts due Claimant for temporary total disability and permanent partial disability.

In addition, C.R.S. section 8-43-408(5) provides that a defaulting employer shall pay an amount equal to twenty-five percent (25%) of the compensation or benefits due to the employee to the Colorado Uninsured Employer Fund created by C.R.S. section 8-67-105. The ALJ finds and concludes that Employer, having failed to have complying workers compensation insurance, is liable to the Colorado Uninsured Employer fund in an amount equal to twenty-five (25%) of the benefits due Claimant.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's AWW is $750.00 with an equivalent TTD rate of $500.00 per week.

2. Employer shall pay the costs of Claimant's medical care and treatment for his compensable injury of December 14, 2015, subject to the Division of Workers' Compensation Medical Fee Schedule.

3. Employer shall pay the costs of Claimant's maintenance medical care.

4. Employer shall pay Claimant temporary total disability in the amount of $500.00 per week, or $100.00 per day from December 14, 2015 until June 1, 2016, both dates inclusive, in the aggregate amount of $12,100.00, which is payable retroactively and forthwith.

5. Employer shall pay Claimant permanent partial disability benefits based upon an impairment rating of 24% whole person.

6. Employer's claim for a safety rule offset is denied and dismissed.

7. Employer shall pay Claimant an additional fifty (50%) of the temporary total disability and permanent partial disability benefits to which he is entitled.

8. Employer shall pay the Colorado Uninsured Employer Fund an amount equal to twenty-five (25%) of the benefits due Claimant.

9. Employer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

10. Issues not expressly decided herein are reserved to the parties for future determination.

11. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 14, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Kenneth Finn, M.D. that she suffered an 8% whole person impairment rating as a result of her April 25, 2015 admitted lower back injury.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of an epidural steroid injection that is designed to relieve the effects of her April 25, 2015 industrial injury or prevent further deterioration of her condition.pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. Claimant worked for Employer as a Dialysis Technician. On April 25, 2015 Claimant suffered an admitted lower back injury during the course and scope of her employment with Employer. Claimant slipped on a wet spot, twisted to the right and strained her lower back.

2. Claimant underwent a course of physical therapy for approximately three months. She reported no significant improvement.

3. During September 2015 Claimant was referred to Authorized Treating Physician (ATP) John Burris, M.D. for treatment. After a negative x-ray of her lumbar spine Claimant was referred to a chiropractor and massage therapist. After six treatments Claimant obtained temporary relief of her lower back pain.

4. In November 2016 Claimant was referred to Samuel Chan, M.D. for an examination. Dr. Chan recommended an MRI of Claimant's lower back.

5. On February 9, 2016 Claimant visited Dr. Chan for an evaluation. Dr. Chan commented that the MRI revealed a "disc protrusion lateralizing to the right side and there is abutment against the right S1 nerve root." Although Dr. Chan recommended an epidural steroid injection Claimant first sought to pursue her own research on the procedure.

6. On February 18, 2016 Claimant visited Dr. Burris for an examination. Dr. Burris remarked that Claimant's MRI had revealed "a right paracentral disc protrusion at L5-S1 abutting the right S1 nerve root." However, Dr. Burris commented that Claimant had an essentially normal neurologic examination. He determined that Claimant had reached Maximum Medical Improvement (MMI) for her April 25, 2015 lower back injury. Dr. Burris did not assign any impairment rating and noted that Claimant did not require

any work restrictions. In addressing medical maintenance treatment Dr. Burris explained that Claimant "does have one more follow-up with Dr. Chan. This can be provided through maintenance. I would also add a consideration of an epidural steroid injection within the next 6 months if she changes her mind through maintenance. Otherwise, no formal maintenance is required."

7. On March 29, 2016 Claimant visited Samuel Chan, M.D. for an examination. Dr. Chan remarked that Claimant "would like to pursue the epidural steroid injection. I do feel that this is reasonable. Even though the patient has been placed [at MMI] by Dr. Burris, [the] epidural steroid injection can be performed under maintenance care." He also noted that Claimant's lumbar range of motion in flexion was still limited because of pain. Dr. Chan commented that Claimant's "straight leg raising [was] positive on the right side at about 80 degrees."

8. On July 24, 2016 Dr. Burris responded to a questionnaire about Claimant's MMI status and medical maintenance care. He stated that Claimant remained at MMI. However, he commented that he "outlined an ESI under maintenance care within 6 months if she elected to pursue." He further stated, "I agree with Dr. Chan and this can be provided under maintenance."

9. After Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Burris' MMI and impairment determinations, Claimant sought a Division Independent Medical Examination (DIME). On August 5, 2016 Claimant underwent a DIME with Kenneth Finn, M.D. Dr. Finn diagnosed Claimant with lower back pain as well as unspecified neuralgia and neuritis. He noted that Claimant's lumbar spine x-ray was normal but her MRI reflected disc bulging on the right side at L5-S1. Dr. Finn agreed with Dr. Burris that Claimant had reached MMI on February 18, 2016 but assigned an 8% whole person impairment rating.

10. Dr. Finn assigned Claimant a 5% whole person impairment for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). However, he determined that Claimant was unable to meet the validity criteria for straight leg raises and her lumbar flexion was non-physiological. Dr. Finn thus did not assign an impairment rating for lumbar range of motion. He recommended repeat range of motion testing. Dr. Finn also assigned Claimant a 1% whole person impairment rating for decreased range of motion for left and right lateral bending for a total 2% range of motion impairment. He also assigned Claimant a 3% lower extremity rating that converted to an additional 1% whole person impairment. Combining the ratings yields an 8% whole person impairment. He remarked that "[t]here is no maintenance care recommended as she is not interested in any intervention at this time."

11. On September 7, 2016 Respondents filed a FAL consistent with Dr. Finn's February 18, 2016 MMI determination and 8% whole person impairment rating. Respondents denied medical maintenance treatment.

12. On March 9, 2017 Claimant returned to Dr. Finn for repeat range of motion testing. Claimant was again unable to meet validity criteria for straight leg raises and lumbar flexion. Dr. Finn considered lumbar extension to be non-physiological. He thus reiterated that Claimant suffered an 8% whole person impairment rating as a result of the April 25, 2015 industrial incident.

13. On September 11, 2017 Claimant underwent an independent medical examination with David Yamamoto, M.D. Dr. Yamamoto agreed that Claimant reached MMI on February 18, 2016. However, he reasoned that Dr. Finn erred in assigning Claimant an 8% whole person impairment rating and instead concluded that Claimant warranted a 21% whole person rating for the April 25, 2015 accident. Dr. Yamamoto explained that Claimant was entitled to receive a 7% whole person rating for a specific disorder of the lumbar spine pursuant to Table 53 II.C of the *AMA Guides*. He also assigned Claimant a 15% whole person impairment rating for range of motion limitations. Dr. Yamamoto thus assigned Claimant a 21% whole person rating for her April 25, 2015 lower back injury.

14. Claimant testified at the hearing in this matter. She explained that she would like to pursue an epidural steroid injection to alleviate her continuing lower back pain.

15. The Colorado Division of Labor and Employment *Impairment Rating Tips* (*Rating Tips*) under the section entitled "Spinal Rating" provide guidance for physicians assigning impairment ratings. Specifically, section 7 addresses the differentiation between subsections 53.II.B,C and F regarding x-ray findings. Section 7 provides that "[s]ymptomatic disk extrusion/herniation is rated under II.C" of the *AMA Guides*.

16. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Finn that she suffered an 8% whole person impairment as a result of her April 25, 2015 admitted lower back injury. Initially, Claimant suffered a lower back injury while working for Employer on April 25, 2015. She underwent a course of conservative treatment and obtained minimal improvement. A lumbar MRI revealed "a right paracentral disc protrusion at L5-S1 abutting the right S1 nerve root." ATP Dr. Burris determined that Claimant reached MMI on February 18, 2016 with no permanent impairment.

17. Claimant subsequently underwent a DIME with Dr. Finn. Dr. Finn diagnosed Claimant with lower back pain as well as unspecified neuralgia and neuritis. He noted that Claimant's lumbar spine x-ray was normal but her MRI reflected disc bulging on the right side at L5-S1. Dr. Finn agreed with Dr. Burris that Claimant had reached MMI on February 18, 2016 but assigned an 8% whole person impairment rating. He provided Claimant a 5% whole person impairment for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides*. However, he determined that Claimant was unable to meet the validity criteria for straight leg raises and her lumbar flexion was non-physiological. Dr. Finn thus did not assign an impairment rating for lumbar range of motion deficits. He determined that Claimant warranted a 1% whole person impairment rating for decreased range of motion for left and right lateral bending for a total 2% range

of motion impairment. Dr. Finn also assigned Claimant a 3% lower extremity rating that converted to an additional 1% whole person impairment. Combining the ratings yields an 8% whole person impairment.

18. In contrast, Dr. Yamamoto reasoned that Dr. Finn erred in assigning Claimant an 8% whole person impairment rating and instead concluded that Claimant warranted a 21% whole person rating for her April 25, 2015 accident. Dr. Yamamoto explained that Claimant was entitled to receive a 7% whole person rating for a specific disorder of the lumbar spine pursuant to Table 53 II.C of the *AMA Guides*. He also assigned Claimant a 15% whole person impairment rating for range of motion deficits. The *Rating Tips* specify that a "[s]ymptomatic disk extrusion/herniation is rated under II.C" of the *AMA Guides* and Claimant would thus receive a 7% whole person rating instead of a 5% rating for her specific disorder of the lumbar spine. However, Claimant's lumbar MRI only reflected "a right paracentral disc protrusion" or "disc bulging" at the L5-S1 level. Dr. Finn thus properly assigned a 5% whole person impairment under Table 53.II.B of the *AMA Guides*. Furthermore, Dr. Yamamoto did not outline any other errors in Dr. Finn's application of the *AMA Guides*. Dr. Finn therefore properly applied the *AMA Guides* and exercised his discretion in assigning Claimant a total 8% whole person impairment rating as a result of her April 15, 2015 industrial injury. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Finn's impairment determination was incorrect.

19. Claimant has failed to demonstrate that it is more probably true than not that she is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of an epidural steroid injection that is designed to relieve the effects of her April 25, 2015 industrial injury or prevent further deterioration of her condition. Initially, Dr. Chan recommended an epidural steroid injection that would constitute maintenance care, but Claimant first sought to pursue her own research on the procedure. ATP Dr. Burris agreed that the injection could be covered under maintenance treatment if Claimant pursued the procedure within six months. Dr. Finn did not recommend maintenance care because Claimant was "not interested in any intervention at this time." Although Claimant sought to pursue an epidural steroid injection at the hearing in this matter, the request occurred more than 18 months after she reached MMI. Furthermore, the record reveals that Dr. Burris' recommendation for the procedure expired after six months and Dr. Finn noted at the time of the DIME that Claimant did not desire additional medical intervention. Accordingly, based on the bulk of the medical records, Claimant's request for an epidural steroid injection is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo.

306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to

overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. Table 53 of the *AMA Guides* is entitled "Impairments Due to Specific Disorders of the Spine" and is described as a comprehensive diagnosis-based Table. Table 53.II addresses intervertebral disc or other soft-tissues lesions. Impairment under section II B involves lesions that are "unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with none-to-minimal degenerative changes on structural tests." A lumbar spine injury under Table 53. II.B. warrants a 5% whole person rating. Section II.C. involves unoperated lesions "with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm associated with moderate to severe degenerative changes on structural tests." A lumbar spine injury under Table 53.II. C. warrants a 7% whole person impairment.

8. The *Rating Tips* provide that permanent impairment ratings are only warranted when a specific diagnosis and objective pathology can be identified. *See Desk Aid #11, General Principles* 1. In specifically addressing spinal impairment ratings the *Impairment Rating Tips* note that "[p]hysicians should be aware that in the asymptomatic population, disk bulges, annular tears or high intensity zone areas, and disk height loss are commonly reported in the lumbar spine from 40 – 60% of the time depending on the condition and study. In the cervical spine, the prevalence of disc degeneration or loss of signal intensity on MRI is greater than 50% in the 50 years and older asymptomatic population." *See Desk Aid #11, Spinal Rating 7.* The *Impairment Rating Tips* summarize that

> the existence of [the preceding] anatomic findings cannot be considered pathological unless there are clear physiologic ties and correlation with clinical findings in an individual patient. The mere presence of these changes is not a sufficient justification to attribute correlation to a non-specific spinal complaint**.** The physician should not rate findings by diagnostic imaging which have not been clearly defined as contributing significantly to the patient's condition. . . . Due to discrepancies between x-ray findings and pathological conditions, it is incumbent on physicians to carefully examine and apply other diagnostic tests as appropriate to identify the true pain generators in a patient and plan their treatment and impairment rating accordingly.

See Desk Aid #11, Spinal Rating 7.

9. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Finn that she suffered an 8% whole person impairment as a result of her April 25, 2015 admitted lower back injury. Initially, Claimant suffered a lower back injury while working for Employer on April 25, 2015. She underwent a course of conservative treatment and obtained minimal improvement. A lumbar MRI revealed "a right paracentral disc protrusion at L5-S1 abutting the right S1 nerve root." ATP Dr. Burris

determined that Claimant reached MMI on February 18, 2016 with no permanent impairment.

10. As found, Claimant subsequently underwent a DIME with Dr. Finn. Dr. Finn diagnosed Claimant with lower back pain as well as unspecified neuralgia and neuritis. He noted that Claimant's lumbar spine x-ray was normal but her MRI reflected disc bulging on the right side at L5-S1. Dr. Finn agreed with Dr. Burris that Claimant had reached MMI on February 18, 2016 but assigned an 8% whole person impairment rating. He provided Claimant a 5% whole person impairment for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides*. However, he determined that Claimant was unable to meet the validity criteria for straight leg raises and her lumbar flexion was non-physiological. Dr. Finn thus did not assign an impairment rating for lumbar range of motion deficits. He determined that Claimant warranted a 1% whole person impairment rating for decreased range of motion for left and right lateral bending for a total 2% range of motion impairment. Dr. Finn also assigned Claimant a 3% lower extremity rating that converted to an additional 1% whole person impairment. Combining the ratings yields an 8% whole person impairment.

11. As found, in contrast, Dr. Yamamoto reasoned that Dr. Finn erred in assigning Claimant an 8% whole person impairment rating and instead concluded that Claimant warranted a 21% whole person rating for her April 25, 2015 accident. Dr. Yamamoto explained that Claimant was entitled to receive a 7% whole person rating for a specific disorder of the lumbar spine pursuant to Table 53 II.C of the *AMA Guides*. He also assigned Claimant a 15% whole person impairment rating for range of motion deficits. The *Rating Tips* specify that a "[s]ymptomatic disk extrusion/herniation is rated under II.C" of the *AMA Guides* and Claimant would thus receive a 7% whole person rating instead of a 5% rating for her specific disorder of the lumbar spine. However, Claimant's lumbar MRI only reflected "a right paracentral disc protrusion" or "disc bulging" at the L5-S1 level. Dr. Finn thus properly assigned a 5% whole person impairment under Table 53.II.B of the *AMA Guides*. Furthermore, Dr. Yamamoto did not outline any other errors in Dr. Finn's application of the *AMA Guides*. Dr. Finn therefore properly applied the *AMA Guides* and exercised his discretion in assigning Claimant a total 8% whole person impairment rating as a result of her April 15, 2015 industrial injury. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Finn's impairment determination was incorrect.

Medical Maintenance Benefits

12. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-

461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

13. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of an epidural steroid injection that is designed to relieve the effects of her April 25, 2015 industrial injury or prevent further deterioration of her condition. Initially, Dr. Chan recommended an epidural steroid injection that would constitute maintenance care, but Claimant first sought to pursue her own research on the procedure. ATP Dr. Burris agreed that the injection could be covered under maintenance treatment if Claimant pursued the procedure within six months. Dr. Finn did not recommend maintenance care because Claimant was "not interested in any intervention at this time." Although Claimant sought to pursue an epidural steroid injection at the hearing in this matter, the request occurred more than 18 months after she reached MMI. Furthermore, the record reveals that Dr. Burris' recommendation for the procedure expired after six months and Dr. Finn noted at the time of the DIME that Claimant did not desire additional medical intervention. Accordingly, based on the bulk of the medical records, Claimant's request for an epidural steroid injection is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

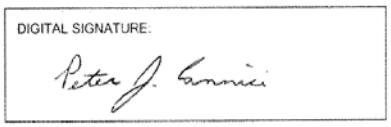
1. Claimant sustained an 8% whole person impairment as a result of her April 25, 2015 industrial injury.

2. Claimant's request for medical maintenance treatment in the form of an epidural steroid injection is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 14, 2017.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-004-715-02

ISSUES

- Whether Property Cousins demonstrated by a preponderance of the evidence that Claimant was not an employee.

- Whether Claimant established by a preponderance of the evidence, that he sustained a compensable injury arising out of and in the course and scope of his employment on December 14, 2015.

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable, necessary, and medical treatment stemming from the December 14, 2015 injury.

- Whether the Claimant established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) from December 14, 2015 until June 21, 2016.

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to permanent partial disability (PPD) benefits from the December 14, 2015 injury.

- Whether Property Cousins have proven by a preponderance of the evidence that they are entitled to reduced compensation benefits by fifty percent for willful violation of a safety rule pursuant to C.R.S. section 8-42-112(1)(b).

- Whether Claimant has proven by a preponderance of the evidence that he entitled to a fifty percent (50%) penalty as a result of Property Cousins, LLC not having workers compensation insurance at the time of his injury pursuant to C.R.S. CRS 8-43-408.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer hired Claimant, a carpenter's assistant, to perform renovation work on properties Employer owned.

2. Clamant assisted Rosendo Salazar, a master carpenter, who Employer also hired to perform renovation work on properties Employer owned.

3. Claimant speaks Spanish and no English. Brian Moore, Employer's owner, speaks English and almost no Spanish. Mr. Salazar would translate for Mr. Moore to Claimant regarding Claimant's job responsibilities and which jobsite to report to. Mr. Salazar also translated for Claimant whatever Mr. Moore needed to convey to Claimant

about timekeeping, limits on what work Claimant could not perform, and other job related duties.

4. Levi Maes, a cousin of Mr. Moore's, also spent limited time on the jobsite. When he was there, he would also supervise Claimant and Mr. Salazar. Mr. Maes testified that Mr. Salazar provided Claimant with the day-to-day direction of his work because Claimant was Mr. Salazar's assistant/helper.

5. During the four to five months before he was injured, Claimant only worked for Employer and was not allowed to leave without permission to work another job.

6. Mr. Moore told Claimant when to arrive at work and when to leave. Claimant testified that if he needed to leave work early, he was required to have Mr. Moore's permission. However, he also testified that he and Mr. Salazar could leave at 3:00 or 4:00 p.m., they never did.

7. Employer required Claimant to use a time-clock to punch in and out of work for the majority of the time he worked for Employer. Both Claimant and Mr. Salazar testified that they used the time-clock the entire time they worked for Employer. Mr. Moore acknowledged that he required his workers to use the time clock because he did not trust them to accurately report their hours.

8. Employer did not allow Claimant to work on electrical and plumbing projects, and on "more dangerous aspects of construction."

9. Claimant provided his own hand tools but also used a circular saw, table saw, and other large tools Employer provided.

10. Claimant testified that he often worked with Mr. Salazar and two other workers (Roberto and Omar) at the jobsite, while Mr. Moore was often not there. When Mr. Moore was present, he supervised Claimant.

11. Claimant and Mr. Salazar had the combination to the lock box at the Elizabeth property and could let themselves in to begin work. They would lock the house when leaving. Mr. Maes testified that Claimant could come and go from work as he pleased so long as "the project was progressing." However, he also testified that he and Mr. Moore made Claimant use the time clock to track his hours.

12. Mr. Moore paid Claimant weekly based on the number of hours he worked at the rate of $15 per hour, using Employer's company checks. Claimant worked approximately fifty hours per week. Claimant's average weekly wage was $750.

13. Employer made checks out to Claimant personally.

14. Claimant has never owned any type of contracting business.

15. Claimant did not have a written contract while he worked for Employer.

16. Claimant did not work for Mr. Salazar, was never paid by him, and never had a contract to work for him. Mr. Salazar also did not have a contract with Employer.

17. Claimant previously worked for Levi Maes who told Claimant at Mr. Maes' project that he was not an employee and would be given a 1099 tax form. No persuasive evidence supports a finding that Mr. Moore told Claimant similar information about working for Employer.

18. Mr. Moore testified that he did not have employees because it was what he was taught as a general contractor. As the general contractor Mr. Moore oversaw and managed the project. However, he also testified that because he had another full-time job, he would "go in, see if they need anything, and then go about my day and get ready for work." When asked specifically about overseeing the workers, he testified, "I didn't have time for that." Further, Mr. Moore testified that because he was relatively new at flipping houses, he "relied on his workers for a lot of direction." "They would usually tell me what they were going to accomplish during the week, and I'd be like, okay, that sounds great."

19. Mr. Moore testified that he installed the time clock because he did not trust the workers to accurately report their hours. In particular, he found Roberto to be difficult to work with and not trustworthy. After four or five weeks the workers would kick the time clock around and they eventually destroyed it.

20. The ALJ finds it unlikely that Mr. Moore relied on his workers to direct their own work given that he did trust them enough to rely on their time reports. The ALJ also finds it unlikely that Employer, whose business was to flip houses for profit, would ask his workers what they wanted to accomplish in a week of work and that he would simply agree.

21. Mr. Moore testified that he paid Claimant by the hour at the end of the week. He testified that he did not set Claimant's hours, and he did not withhold FICA from Claimant's pay.

22. Claimant worked for Employer for approximately four or five months when, on December 14, 2015, Claimant was assisting Mr. Salazar install bars on a stair rail at Employer's property located at the corner of 13th and Elizabeth in Denver, Colorado. Mr. Salazar was using a pneumatic nail gun to install the stair rails. As he was nailing one of the bars on to the stair rail, a nail ricocheted and penetrated Claimant's right eye.

23. Mr. Salazar immediately reported the injury to Mr. Moore.

24. Claimant pulled the nail out of his eye and a coworker gave Claimant a roll of toilet tissues to cover his eye. Claimant's daughter arrived within minutes and transported Claimant to Rose Medical Center seeking emergent care to evaluate the extent of and to stabilize Claimant's eye injury.

25. Rose Medical Center then referred Claimant to Porter Surgery Center/Harvard Park Surgery Center where Dr. Holly Kent, a specialized ophthalmologist

performed emergency surgery. The procedures performed included repair of a corneal laceration, brief exam under anesthesia, and repositioning of the right iris.

26. Claimant received follow-up evaluation and treatment at Denver Health Medical Center Eye Clinic. Claimant underwent further surgery with Richard Hwang, MD, at the Eye Clinic on December 22, 2015, which included the following procedures: a 23-guage pars plana vitrectomy; a pars plana lensectomy; Endolaser photocoagulation; anterior chamber intraocular lens placement; and Subtenon Kenalog. Claimant's post-surgical diagnoses included traumatic cataract, vitreous debris versus vitreous hemorrhage, and history of open globe repair due to penetrating nail injury.

27. On March 30, 2016, Frank Seringo, MD, evaluated Claimant, and on April 12, 2016, he prepared a Physician's Report of Worker's Compensation Injury report. Dr. Seringo ultimately placed Claimant at MMI on June 1, 2016.

28. On November 1, 2016, Ronald Wise, MD, performed a Claimant-sponsored IME. He reported that subsequent to his December 22, 2015 surgery, Claimant experienced a traumatic and glaucomatous optic neuropathy of his right eye.

- Impairment rating: After performing a physical examination, Dr. Wise used the AMA Guides to arrive at a combined rating of 99% for Claimant's right eye. This equated to a 25% visual system impairment rating and a 24% whole person impairment rating.

- Maintenance Care: Dr. Wise determined that Claimant required maintenance including an ophthalmic examination every six months for life to monitor his macula and glaucoma status. And also that Claimant should remain on timolol and brimonidine twice a day in his right eye for life.

- MMI: Dr. Wise agreed with Dr. Siringo's MMI date of June 1, 2016.

- Permanent Restrictions: Dr. Wise restricted Claimant from driving commercial vehicles and operating heavy machinery. He provided, "[Claimant] should work at heights above the ground and use power tools with extreme caution due to his monocular status." Claimant should undergo a performance evaluation before performing any work activity that might be limited by his monocular status. And finally, he required Claimant to use corrective and protective eyewear at all times.

29. To date Employer has not paid for any of Claimant's medical care and treatment.

30. Claimant's daughter transported Claimant to his medical appointments, including to his initial emergency care. Because Claimant does not speak or read English, his daughter filled out intake forms and provided translation services. Claimant did not direct his daughter how to fill out the forms and she acted at her own discretion in providing information.

31. Claimant testified that Employer did not provide him with any safety equipment, including goggles. And that he never noticed Mr. Moore bring a box of goggles to the jobsite. Claimant testified that Mr. Salazar never told him that there were glasses and to wear them. Further, Mr. Moore did not lecture him about wearing goggles when doing dangerous work.

32. Mr. Salazar testified that on the date of Claimant's injury Employer did not provide Claimant with safety goggles. However, Employer had provided Mr. Salazar with protection glasses on another job. Mr. Salazar did not know whether Employer had provided Claimant with protection glasses on another job. Mr. Salazar testified further that Mr. Moore would bring safety glasses to the jobsite "whenever we asked him to." But that he was not aware of o box of safety glasses being on the jobsite.

33. Mr. Salazar testified that Mr. Moore "sometimes" told him to use safety glasses when he and Claimant were working around dangerous machinery. But he did not know whether Mr. Moore told Claimant the same thing. Mr. Maes testified that he and Mr. Moore would ask Claimant and Mr. Salazar what they needed and then would supply the requested safety items.

34. Mr. Moore testified that he bought a box of safety goggles for Claimant and Mr. Salazar. Mr. Moore testified that many times he would say, "You guys need to wear safety glasses," but they "would just not listen to me." Instead of reprimanding or firing them, Mr. Moore bought a box of safety glasses and told them, "No more excuses. Please use the safety goggles." Mr. Moore testified that he gave Claimant and Mr. Salazar the "safety goggle speech" "more times than he could count." The ALJ finds this testimony inconsistent with Mr. Moore's testimony that he did not have the time to oversee the work being done on the project and that he would just stop in at the jobsite to see if the workers needed anything.

35. While Mr. Maes testified that he told Claimant to wear goggles, from context the ALJ finds that he did so when Claimant was working for him; not for Employer. In addition, Mr. Maes testified that at times there was a box of goggles at the Elizabeth street jobsite, but he did not know if it was there the day Claimant was injured.

36. Mr. Salazar was not wearing safety goggles at the time Claimant was injured. No persuasive evidence was offered that Employer took any negative employment action against Mr. Salazar for failing to use protective eyewear.

37. Based on the totality of the evidence, the ALJ finds that Employer did not have a safety rule about safety glasses or that any such policy was enforced.

38. Mr. Maes has no ownership interest in Employer. He testified inconsistently that he gave no direction at the Elizabeth street project, but rather acted as a "resource;" and that when he supervised Claimant when Mr. Moore was not on site.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. §8-40-102(1). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-42-101.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The question of whether the claimant met his burden of proof is one of fact for determination by the ALJ. See *Jefferson County Public Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. C.R.S. §8-43-201. A Workers' Compensation case is decided on its merits. C.R.S. §8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence/or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). This decision does not specifically address every item contained in the record; instead,

incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Status of Claimant: Employee or Independent Contractor

C.R.S. section 8-40-202(2)(a), sets forth a statutory presumption that "any individual who performs services for pay for another shall be deemed to be an employee, irrespective of whether the common-law relationship of master and servant exists, unless such individual is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed."

The parties do not dispute that no contract existed between Employer and Claimant. Therefore Claimant is presumed to be Employer's employee. To overcome this presumption, Employer must prove by a preponderance of the evidence that the conditions set forth in C.R.S. section 8-40-202 (2)(b)(II)(A)-(I) have been satisfied to establish Claimant was an independent contractor. To prove independence from the employee-employer relationship Employer must show that it did not:

> (A) Require the individual to work exclusively for the person for whom services are performed; except that the individual may choose to work exclusively for such person for a finite period of time specified in the document;
>
> (B) Establish a quality standard for the individual; except that the person may provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed;
>
> (C) Pay a salary or at an hourly rate instead of at a fixed or contract rate;
>
> (D) Terminate the work of the service provider during the contract period unless such service provider violates the terms of the contract or fails to produce a result that meets the specifications of the contract;
>
> (E) Provide more than minimal training for the individual;
>
> (F) Provide tools or benefits to the individual; except that materials and equipment may be supplied;
>
> (G) Dictate the time of performance; except that a completion schedule and a range of negotiated and mutually agreeable work hours may be established;
>
> (H) Pay the service provider personally instead of making checks payable to the trade or business name of such service provider; and

(I) Combine the business operations of the person for whom service is provided in any way with the business operations of the service provider instead of maintaining all such operations separately and distinctly.

The ALJ finds and concludes that Employer has not meet its burden in regard to proving Claimant was an independent contractor rather than an employee. Claimant and Mr. Salazar both testified in detail about their working relationship with Employer. The ALJ finds both Claimant and Mr. Salazar to be credible witnesses. Both testified to the following: 1) they were told what to do on the jobsite on a given day by Mr. Moore or Mr. Maes; 2) they could not work for another employer other than Employer; 3) their work was supervised by Mr. Moore or Mr. Maes; 4) they were told when to arrive at work and when they could go home; 5) Employer required them to keep track of their hours worked by using a time clock located at the job site; 6) they could not leave the jobsite during the day without getting permission from Mr. Moore or Mr. Maes to do so; 7) they were paid an hourly wage based upon the number of hours worked in a week; 8) their paychecks were made to each of them individually and not to a company; 9) they did not have a contract with Employer; and 10) they brought many of their own small tools to the job site, but Employer furnished certain larger pieces of equipment.

Mr. Moore, owner of Employer, testified that Claimant and Mr. Salazar came to the jobsite as a team and that due to Claimant not speaking English, directions on what Claimant was to do on the jobsite came through Mr. Salazar. Mr. Moore testified that he hired Claimant and Mr. Salazar on a time and material basis but offered no other evidence of Claimant's status as an employee versus an independent contractor. Mr. Moore also testified that he could have fired Mr. Salazar for poor performance, which in turn, since they were viewed as a team, would have terminated Claimant's employment relationship.

In addition, the ALJ is guided by apply the analysis used by the Colorado Supreme Court in *Industrial Claim Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014), pertinent to the issue of whether the claimant was engaged in an independent trade or business.

To that end, the Supreme Court, in *Softrock*, revised the standard previously used by the Panel and the Court of Appeals when analyzing whether or not an employee "is customarily engaged" in an independent trade or business. That previous standard had sought to simply ask if the employee had customers other than the employer. If not, it was reasoned the employee was not "engaged" in an independent business and would necessarily be a covered employee. However, in *Softrock* the Court declared, "we also reject the ICAO's argument that whether the individual actually provided services for someone other than the employer is dispositive proof of an employer-employee relationship." 325 P.3d at 565.

Instead, the fact finder was directed to conduct "an inquiry into the nature of the working relationship." Such an inquiry would consider not only the nine factors listed in § 8-202(2)(b)(II), but also any other relevant factors. The Court pointed as an example to the decision in *Long View Systems Corp. v. Industrial Claim Appeals Office*, 197 P.3d 295 (Colo. App. 2008). In *Long View* the Panel was asked to consider whether the

employee "maintained an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance." 325 P.3d at 565. This analysis of "the nature of the working relationship" also avoided a second problem presented by the single-factor test disapproved by the *Softrock* decision. That problem involved a situation where, based on the decisions of the employee whether or not to pursue other customers, the employer could be subjected to "an unpredictable hindsight review" of the matter which could impose benefit liability on the employer. 325 P.3d at 565.

The ALJ must conduct an inquiry into the "nature of the working relationship." A review of the record in this matter reveals there is no persuasive evidence that Claimant had an independent business card, phone listing, and business address, had any financial investment subject to a risk of loss, set the price for performing the project or employed others. There was no evidence he carried liability insurance. There was also evidence in the form of Mr. Moore's acknowledgement that Claimant was working approximately fifty hours per week for Employer which suggested Employer knew Claimant was working full time and exclusively for Employer. The ALJ finds Employer would reasonably be aware that Claimant was not engaged in an independent business, based on the working relationship it had with Claimant.

The Court concludes that Employer failed to meet its burden of establishing by a preponderance of the evidence that the conditions set forth in C.R.S. section 8-40-202 (2)(b)(II)(A)-(H) and in *Softrock* have been satisfied, and further finds and concludes that Clamant was an employee of Employer on December 14, 2015.

Claimant's Entitlement to Benefits

Having determined that Claimant was an employee on the date of his injury, the ALJ next must determine whether Claimant was injured while performing an activity arising out of and in the course and scope of that employment. Arising out of and in the course of an employee's employment means that there must be a nexus between the claimant's injury and the conditions of his employment. *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989). Whether an employee is acting within the course and scope of his employment depends on the facts surrounding the incident in question. *Bennett v. Furr's Cafeterias,* 549 F. Supp 847 (D. CO. 1982). The testimony at the hearings was uncontroverted that on December 14, 2015, while working at a property owned by Employer, Claimant was struck in the right eye by a nail discharged from a nail gun operated by a co-worker. Claimant and his co-worker were installing bars in a stair rail at the direction of Employer's owner. Carpentry work such as installing bars on a stair rail were part of Claimant's normal day-to-day responsibilities. The mechanism of Claimant's injury, being struck in the eye by a nail fired from a nail gun, is unquestionably a result of the conditions of his employment. The ALJ therefore finds and concludes that Claimant sustained an injury on December 14, 2015 while performing an activity arising out of and in the course and scope of that employment.

Claimant contends that he is entitled to medical benefits, temporary total disability benefits, and permanent partial disability benefits as a result of the December 14, 2015 accident. Claimant bears the burden of proving his entitlement to benefits by a preponderance of the evidence. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo.1985).

Medical Benefits

C.R.S. 8-42-101 (1)(a) provides:

> Every employer, regardless of said employer's method of insurance, shall furnish such medical, surgical, dental, nursing, and hospital treatment, medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee from the effects of the injury.

Claimant received medical care as a result of his injury. While the reasonableness and necessity of his medical care was not contested, a review of Claimant's Exhibits 1-6 as well as Claimant's testimony convinces the ALJ that Claimant received extensive medical treatment for the injury to his right eye. The ALJ finds and concludes that Claimant has demonstrated by a preponderance of the evidence that his medical care was reasonable and necessary and the need for those medical services arose directly from his accident of December 14, 2015.

Employer is therefore ordered to pay Claimant's medical expenses arising from this accident.

Claimant also presented persuasive and uncontroverted evidence that he requires medical maintenance benefits including prescriptions for medications Timolol and Brimonidine and ophthalmic examinations every six months to monitor his macula and glaucoma status. Claimant will require these benefits for his lifetime.

Employer is ordered to provide such medical maintenance care.

Temporary Total Disability Benefits

To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between his work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace*

Electric, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Claimant was injured on December 14, 2015, sought medical attention immediately thereafter, was restricted from returning to work by Dr. Siringo, and was found to be at MMI and released to return to work on June 1, 2016. The ALJ finds and concludes that Claimant has demonstrated by a preponderance of the evidence that as a result of Claimant's December 14, 2015 injury, he was unable to perform his normal occupation from December 14, 2015 until the date he was released to work on June 1, 2016. Claimant is entitled to temporary total disability benefits for the period of December 14, 2015 to June 1, 2016.

Employer is ordered to pay Claimant temporary total disability benefits at the rate of $500.00 per week from December 14, 2015 until June 1, 2016.

Permanent Partial Disability

C.R.S. section 8-42-107 provides that permanent partial disability benefits shall be awarded to an injured worker at such time as he or she reaches maximum medial improvement and has had a determination of his or her medical impairment performed by a physician accredited by the Division of Workers Compensation. Claimant was found to be at maximum medical improvement on June 1, 2016. Dr. Ronald Wide, a workers' compensation accredited physician, found Claimant sustained a permanent impairment of 99% loss of his right eye which converts to a 24% whole person rating. Employer offered no persuasive or contradictory medical evidence. The ALJ finds and concludes that Claimant has proven by a preponderance of the evidence that he is entitled to permanent partial disability benefits.

Employer shall pay to Claimant permanent partial disability benefits based upon Dr. Wise's 24% whole person impairment.

Safety Rule Violation

C.R.S. section 8-42-112(1)(b) provides for a fifty percent reduction in compensation to a claimant where a respondent proves that the claimant's injury was caused by his or her willful failure to obey any reasonable rule adopted by the employer for the claimant's safety. *See In re Claim of Bromirski, 082113 COC, 4-882-047-01.*

Under section 8-42-112(1)(b), respondents bear the burden to prove every element justifying a reduction in the claimants' compensation for the willful failure to obey a reasonable safety rule. *Triplett v. Evergreen Builders*, Inc., W. C. No. 4-576-463 (May 11, 2004).

The question of whether the respondent proved willful violation of a safety rule by a preponderance of the evidence is one of fact for the ALJ. *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Violation of a rule is not

willful unless the claimant did the forbidden act with deliberate intent. A violation which is the product of mere negligence, carelessness, forgetfulness or inadvertence is not willful. *Bennett Properties Co. v. Indus. Commission*, 437 P.2d 548 (Colo. 1968); *Johnson v. Denver Tramway Corp.*, 171 Colo. 214, 171 P.2d 410 (1946). Conduct which might otherwise constitute a safety rule violation is not willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). A violation of a safety rule will not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

Employer must prove the following elements: 1) There must be a specific, unambiguous and definite safety rule adopted by the employer; 2) The safety rule must be reasonable; 3) The safety rule must be "brought home" to the employee and diligently enforced; 4) Violation of the safety rule must be willful; and 5) The violation of the safety rule must be a cause of the claimant's injury. C.R.S. § 8-42-112(1)(b)(2015); *L.B. Cole Produce Co. v. Indus. Com'n.*, 228 P.2d 808, 809 (1951); *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995).

The first step is to determine whether or not Employer adopted a reasonable "safety rule." A safety rule does not have to be formally adopted, does not have to be in writing, and does not have to be posted. Rather, it is necessary that the safety rule was heard and understood and given by someone generally in authority. *Indus. Commission v. Golden Cycle Corp.*, 126 Colo. 68, 246P.2d 902 (Colo. 1952); *McCulloch v. Industrial Commission*, 109 Colo. 123, 123 P.2d 414 (Colo. 1942)

Employer alleges Claimant violated a safety rule on December 14, 2015, when he did not wear safety glasses while working with or around a nail gun. Claimant testified that Employer did not provide him with safety goggles; Mr. Moore did not tell him to wear safety goggles; Mr. Salazar did not tell him to wear safety goggles; and Mr. Moore did not lecture or reprimand him for not using safety goggles.

Mr. Moore testified that he bought an entire box of safety goggles for "the guys" working on site. He further testified that after he bought the box of safety goggles, he told them to please use safety goggles.

The ALJ finds that Employer did not have a specific, unambiguous and definite safety rule in place with regard to the use of safety goggles on December 14, 2015. Further, the evidence supports a conclusion that even if there were a safety rule, Employer did not enforce it. Analysis of the other elements of a safety rule violation are unnecessary.

The ALJ finds that Employer failed to prove by a preponderance of the evidence that it is entitled to reduce compensatory benefits by fifty percent for a willful violation of a safety rule pursuant to C.R.S. section 8-42-112(1)(b).

Penalty for Employer's Failure to Have Complying Workers' Compensation Insurance

C.R.S. section 8-43-408(4) provides a fifty percent (50%) penalty against any employer who fails to comply with the insurance provisions of the Colorado Workers Compensation Act. Employer admitted during the June 7, 2017 hearing that it was not insured at the time of Claimant's injury. This Court has no discretion in imposing the penalty. *See Kamp v. Disney,* 135 P.2d 1019 (Colo. 1943). Employer is therefore assessed a 50% penalty on all of the amounts due Claimant for temporary total disability and permanent partial disability.

In addition, C.R.S. section 8-43-408(5) provides that a defaulting employer shall pay an amount equal to twenty-five percent (25%) of the compensation or benefits due to the employee to the Colorado Uninsured Employer Fund created by C.R.S. section 8-67-105. The ALJ finds and concludes that Employer, having failed to have complying workers compensation insurance, is liable to the Colorado Uninsured Employer fund in an amount equal to twenty-five (25%) of the benefits due Claimant.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's AWW is $750.00 with an equivalent TTD rate of $500.00 per week.

2. Employer shall pay the costs of Claimant's medical care and treatment for his compensable injury of December 14, 2015, subject to the Division of Workers' Compensation Medical Fee Schedule.

3. Employer shall pay the costs of Claimant's maintenance medical care.

4. Employer shall pay Claimant temporary total disability in the amount of $500.00 per week, or $100.00 per day from December 14, 2015 until June 1, 2016, both dates inclusive, in the aggregate amount of $12,100.00, which is payable retroactively and forthwith.

5. Employer shall pay Claimant permanent partial disability benefits based upon an impairment rating of 24% whole person.

6. Employer's claim for a safety rule offset is denied and dismissed.

7. Employer shall pay Claimant an additional fifty (50%) of the temporary total disability and permanent partial disability benefits to which he is entitled.

8. Employer shall pay the Colorado Uninsured Employer Fund an amount equal to twenty-five (25%) of the benefits due Claimant.

9. Employer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

10. Issues not expressly decided herein are reserved to the parties for future determination.

11. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 14, 2017

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant provided materially false information to Respondents in order to induce them into admitting liability for his injury and to fraudulently obtain workers' compensation benefits.

- If so, whether the court can declare Respondents general admissions of liability filed on December 22, 2015 and December 23, 2016, void *ab initio*.

- Whether the court can order Claimant to repay Respondents.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 44-year-old who was working for 5280 Staffing Solutions during November 2015. On November 17, 2015, Claimant alleged that at 11:50 p.m. while he was picking lumbar from a stack of wood, he jumped down from the stack and slipped and fell onto his left shoulder.

2. Respondents conducted an investigation into the incident which included speaking with Employer and Claimant and reviewing medical records. The incident was unwitnessed, however, the Employer had no reason to question the incident as alleged by Claimant. Likewise, Claimant told Respondents how he was allegedly injured at work and medical records corroborated Claimant's story.

3. Relying on the statements Claimant made to Employer, to his providers, and to the Insurer's claims adjuster, Respondents filed a general admission of liability on December 22, 2015, admitting to medical benefits and TTD in the amount of $479.87 per week starting on November 28, 2015.

4. Claimant first reported to the Emergency Department at St. Anthony Hospital on November 18, 2015. Claimant indicated that he had slipped on an icy piece of wood and fell approximately 2 feet onto the ground striking his left lateral shoulder. Claimant was noted to have a 3 cm abrasion to his left shoulder posteriorly and some mild swelling. Claimant was given pain mediation and referred to a worker's compensation provider for further treatment.

5. Claimant followed up with Dr. Noel that same day and was diagnosed with a work-related contusion and dislocation. Claimant was placed in a sling and restricted from using his left arm. Dr. Noel referred Claimant to undergo an MRI of his left shoulder. Employer was unable to accommodate Claimant's restrictions so TTD continued.

6. MRI results obtained on November 23, 2015, and reviewed by Dr. Noel on December 3, 2015, revealed fraying and fissuring of the postero-superior labrum with a small displaced tear. Claimant indicated that he was in 8/10 pain with ROM and that he had been on vacation for two weeks. Claimant was recommended to undergo physical therapy two times a week for four weeks and was restricted from using his left arm. Dr. Noel referred Claimant to Dr. Foulk for orthopedic evaluation.

7. Claimant underwent an EMG study on January 14, 2016, due to continued numbness extending into Claimant's left arm and hand. EMG results showed no abnormality. Claimant denied ever having been in a prior motor vehicle accident and was noted to have multiple prior workers' compensation claims.

8. Claimant continued with physical therapy and home exercises until April 28, 2016, when he returned for evaluation with Dr. Foulk. Upon review, Dr. Foulk recommended Claimant undergo surgery for his left shoulder injury. Claimant elected to pursue surgical intervention and underwent left shoulder arthroscopy, subacromial decompression, distal clavicle resection and extensive debridement of the biceps tendon tear and torn labrum on June 2, 2016.

9. Claimant underwent a second round of physical therapy and home exercises during his recovery from surgery with progressive improvement noted. Claimant continued off from work and received TTD benefits during his recovery.

10. In October or early November 2016, an anonymous tip left on Insurer's fraud hot-line, reported Claimant was involved in an MVA immediately before his claimed injury at work and was fraudulently obtaining workers' compensation benefits. Claimant reportedly fled the scene of the accident, and went to work where he then lied to Employer about a work-related injury.

11. On November 1, 2016, the District Attorney's office of Colorado's17th Judicial District filed a criminal complaint against Claimant and issued a warrant for his arrest. The State charged Claimant with 13 different criminal offenses including insurance fraud, theft of over $20,000, and providing materially false statements in a workers' compensation claim. Claimant was arrested on November 8, 2016.

12. On December 23, 2016, Respondents filed an additional General Admission of Liability in an attempt to stop indemnity benefits based C.R.S. 8-42-113(1). *Resp. Ex. E, BN 13-15.* However TTD benefits continued as claimant had not yet been convicted as required under the statute. *See C.R.S. 8-42-113(1) and Resp. Ex. G, BN 21 (date of actual conviction 3.23.2017).*

13. Claimant remained incarcerated pending conviction until March 23, 2017, when he plead guilty to providing materially false information in order to obtain benefits in violation of C.R.S. 8-43-402 and vehicular assault. *Id., and Resp. Ex. J, BN 31.* Claimant was sentenced to one year in prison, placed on probation, and ordered to pay restitution to the victims of his crimes. *Id.*

14. Respondents filed the current application for hearing on April 11, 2017, requesting to have the court declare all general admissions of liability void ab initio due to Claimant providing materially false information upon which Respondents relied in filling the admissions of liability. *Resp. Ex. A, BN 1.*

15. On April 21, 2017, Respondents filed another petition to terminate claimant's lost wage benefits. *Resp. Ex. F, BN 16.* This motion was granted on May 16, 2017. *Id., at 20.* By that time, Respondents had paid a total of $36,881.44 in lost wage benefits and $24,642.89 in medical benefits for a total of $61,524.33. *Testimony of Arthur Ramirez and Resp. Ex. L.*

1.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S. (2013), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), *supra*. **[**Claimant shoulders the burden of proving by a preponderance of the evidence that he/she sustained an injury arising out of and within the course of his/her employment. Section 8-41-301(1), *supra*; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). **OR** Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), *supra*. **OR** Insurer shoulders the burden of proving by a preponderance of the evidence grounds for allowing it to withdraw its admissions of liability on the basis that claimant's injury is not compensable.**]** A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. Section 8-43-201, *supra*.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the sacroiliac (SI) joint injection recommended by Dr. John Ogrodnick and Dr. Samuel Chan is reasonable, necessary and related to Claimant's March 24, 2017 industrial injury.

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to reimbursement for medical mileage.

STIPULATIONS

1. Respondents will file a General Admission of Liability admitting compensability for the March 24, 2017 industrial injury.

2. Claimant's average weekly wage was $997.92.

3. Claimant is entitled to, and Respondents will commence paying, temporary partial disability benefits beginning March 28, 2017 and ongoing.

4. Respondents will authorize and pay for the medical care provided to date by Dr. John Ogrodnick, Dr. Samuel Chan and Dr. William White.

FINDINGS OF FACT

1. Claimant is a 58-year-old man who worked for Employer as a loader. Claimant sustained an industrial injury on March 24, 2017 while stepping into a gap between the dock and trailer while loading packages.

2. Claimant presented to John Ogrodnick, M.D. at SCL Physicians on March 28, 2017. Claimant provided a history of striking his right knee against the dock while his left knee was folded in front of him as he dropped all the way down to his buttocks while hanging from the door strap. Claimant complained of 6-7/10 right-sided low back pain. On physical exam, Dr. Ogrodnick noted very limited lumbar flexion, tenderness over the right SI joint, and positive right FABER and posterior sheer tests. Claimant had full range of motion in the right knee without swelling. Dr. Ogrodnick determined Claimant's condition was work-related and assessed a lumbar strain. He placed Claimant on a 10-pound lifting restriction with no bending or twisting and referred Claimant to Dr. White for chiropractic treatment.

3. At a follow-up evaluations with Dr. Ogrodnick on April 7 and April 18, 2017, Claimant reported that he continued to experience right-sided low back pain, which he rated at a 4-5/10. Dr. Ogrodnick noted tenderness over the SI joint. Claimant's knee pain had resolved.

4. Claimant began chiropractic treatment with William White, D.C. on April 19, 2017. Claimant provided a history of the mechanism of injury consistent with what he had previously reported. Claimant complained of low back pain and tingling into his lower right extremity. Dr. White noted normal lumbar range of motion with pain, tenderness and edema at L5 and the SI joint on the right, and muscle spasm of the lumbar paravertebral musculature on the right. Dr. White diagnosed Claimant with a work-related lumbar sprain and lumbosacral radiculopathy. He recommended that Claimant undergo six sessions of chiropractic manipulative technique and passive physiotherapy.

5. On May 3, 2017, Claimant reported to Dr. White a decrease in low back pain from 5/10 to 3/10. Dr. White noted painful but normal lumbar range of motion and tenderness and edema at L5 and the SI joint on the right. He recommended an additional six sessions of chiropractic treatment.

6. Dr. Ogrodnick reevaluated Claimant on May 9, 2017. Claimant reported constant 3/10 low back pain and 2/10 right thigh pain/tingling. Dr. Ogrodnick remarked that a May 9, 2017 x-ray of Claimant's lumbosacral spine revealed an "unusual degree of lordosis and some degeneration of S1/sacrum interspace." On physical exam, Claimant was able to reach to within five inches of his toes through lumbar flexion. Dr. Ogrodnick noted tenderness over the right SI joint and that the right FABER and FADIR tests created an atypical pain in the usual right low back area. Dr. Ogrodnick recommended Claimant continue working with restrictions, build up his abdominal strength, and continue his chiropractic regimen.

7. On May 25, 2017, Claimant reported to Dr. Ogrodnick 2/10 pain over his upper right gluteals. Claimant was able to reach to within two inches of toes through lumbar flexion. Dr. Ogrodnick noted tenderness mainly over right SI joint. FABER and FADIR and posterior sheer tests reproduced ipsilateral discomfort. Dr. Ogrodnick referred Claimant to Dr. Chan to perform a diagnostic SI injection.

8. On May 26, 2017, Dr. White issued a follow-up report on the final chiropractic visit and completion of treatment. Claimant reported that his pain had reduced from a 3/10 to a 1/10 with additional therapy. Claimant continued to complain of right-sided SI pain. Dr. White noted normal lumbar range of motion and pain and inflammation of the right SI joint. Claimant had completed a total of 12 chiropractic sessions and was discharged from Dr. White's care at this time.

9. Samuel Chan, M.D. performed a physiatric evaluation of Claimant on June 16, 2017. Claimant provided a history of the mechanism of injury consistent with prior histories provided by Claimant. Claimant reported that he was no longer experiencing any pain over the lumbar spine, but continued to experience 3/10 right hip pain that radiated into his right knee. On physical exam, Dr. Chan noted that the "Right SI joint engage somewhat slow on the left with lumbar forward flexion." Gaenslen's and FABER tests were positive. Dr. Chan opined that Claimant had SI joint dysfunction and agreed that an SI injection could be offered as an option that may help truncate a potentially lengthy rehabilitative process.

10. The request for an SI injection was denied by Respondents.

11. On June 22, 2017, Claimant reported to Dr. Ogrodnick 3/10 intermittent right-sided low back pain localized to the upper gluteal region. FABER, FADIR and posterior sheer tests reproduced ipsilateral pain. Claimant was able to reach within four inches of his toes through lumbar flexion. Claimant reported "testing" himself on a few occasions, noting that he had carried a case of 32-ounce water bottles from his car to a company picnic.

12. On July 24, 2017, Claimant reported to Dr. Ogrodnick 1/10 right-sided low back pain. Dr. Ogrodnick noted that FABER, FADIR, posterior sheer, and right log roll tests were positive on the right.

13. Claimant last saw Dr. Ogrodnick on August 22, 2017. At that time, Claimant reported 2/10 right-sided low back pain. Claimant reported that he had attempted to tolerate cashier duties during his second job with King Soopers, which caused significant pain. Claimant was able to reach within 10 inches of his toes through lumbar flexion. The right FABER test reproduced ipsilateral pain. Dr. Ogrodnick suggested not scheduling any additional follow-up until further treatment was authorized by Respondents.

14. On September 8, 2017, F. Mark Paz, M.D. conducted an Independent Medical Evaluation (IME) of at the request of Respondents. Dr. Paz issued an IME report dated October 3, 2017. Claimant reported to Dr. Paz a history of the mechanism of injury consistent with the prior history documented in the medical records. Dr. Paz opined that Claimant had suffered a work-related injury, but that the mechanism reported was not consistent with the diagnosis of SI dysfunction or aggravation of a preexisting SI joint arthritis. Dr. Paz indicated that the anatomical location of the reported pain was over the right buttock and hip, without involvement of the SI joint. Dr. Paz indicated that Claimant suffered an abrasion to the right knee and contusion to the right buttock as a result of the March 24, 2017 injury, and that these conditions were resolved. He opined that there was no further treatment required to address the work-related injury.

15. Claimant testified at hearing that prior to March 24, 2017 he had no problems with his low back. Claimant testified that as a result of the work-related accident, claimant injured his low back, right hip and right leg. Claimant rated his back pain at a 1/10 upon completion of chiropractic treatment, but testified that he continues to experience pain and functional limitation in his low back and right hip that was not present prior to March 24, 2017. Claimant testified that he wished to obtain the SI joint injection recommended by Dr. Ogrodnick and Dr. Chan.

16. Claimant submitted a medical appointment mileage reimbursement form evidencing 244.60 miles traveled to medical appointments from March 28, 2017 through May 8, 2017. Claimant testified that he incurred the mileage documented in the mileage reimbursement form driving to and from treatment with Dr. Ogrodnick and Dr. White. The mileage expenses were reasonable and necessary.

17. Claimant's testimony is found credible and persuasive.

18. The ALJ credits the opinions of Drs. Ogrodnick and Chan over the conflicting opinion of Dr. Paz.

19. Claimant has proven by a preponderance of the evidence that the SI injection recommended by Drs. Ogrodnick and Chan is reasonable, necessary and related to his March 24, 2017 industrial injury.

20. Claimant has proven by a preponderance of the evidence that he is entitled to medical mileage reimbursement for 244.60 miles of travel to and from medical appointments with Drs. Ogrodnick and White from March 28, 2017 through May 8, 2017.

21. Evidence and inferences to the contrary of these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination

regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Reasonable, Necessary and Related Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Claimant provided a specific and consistent history of his mechanism of injury throughout the claim to his health care providers. Claimant has consistently reported ongoing low back pain located in this right SI joint, which has been supported by findings on physical examination. Both Dr. Ogrodnick and Dr. Chan opined based on Claimant's description of the mechanism of injury, pain complaints, and physical examination that Claimant sustained work-related SI joint dysfunction, and recommended SI joint injections for both diagnostic and therapeutic purposes. As found, Claimant has established that it is more likely than not that the SI joint injection is reasonable, necessary and related to the March 24, 2017 industrial injury.

Mileage Reimbursement

Section 8-42-101(1)(A), C.R.S. requires respondents to pay for expenses that are incidental to obtaining reasonable and necessary medical treatment. WCRP Rule 18-6 (E) provides that respondents shall reimburse an injured worker for reasonable and necessary mileage expenses for travel to and from medical appointments at a rate of 53 cents per mile.

Mileage expenses for travel to and from medical appointments are recoverable as incidental medical treatment under the Workers Compensation Act. *Sigman Meat Co. v. Industrial Claim Appeals Office*, 761 P.2d 265 (Colo. App. 1988). "Incidental mileage expenses are those that "would not have been incurred but for the industrial injury." *Daughty v. King Soopers, Inc.,* W.C. No. 3-837-001 (ICAP, Jan. 17, 1996); *see Anderson v. United Airlines,* W.C. No. 4-445-052 (ICAP, Jan. 9, 2004). However,

whether particular mileage expenses are reasonable, necessary and incidental to medical treatment is a question of fact for determination by the ALJ. *Krupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Anderson v. United Airlines,* W.C. No. 4-445-052 (ICAP, Jan. 9, 2004).

As found, Claimant has established by a preponderance of the evidence that the mileage expenses for which he is seeking reimbursement are reasonable, necessary and incidental to medical treatment. 244.60 miles were incurred traveling to and from medical appointments with authorized treating providers.

ORDER

It is therefore ordered that:

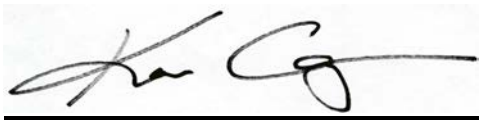
1. Respondents are liable for the SI joint injection recommended by Drs. Ogrodnick and Chan.

2. Respondents shall reimburse Claimant for medical mileage for 244.60 miles at $0.53 per mile, for a total reimbursement of $129.63.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 15, 2017



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Michael Janssen, D.O. regarding Claimant's permanent impairment rating.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from October 28, 2015 through April 4, 2016.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability (TPD) benefits from August 12, 2015 through October 27, 2015.

4. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant worked for Employer as a part-time seasonal gardening technician. Employer is a residential gardening company. Claimant's duties involved weeding and general gardening.

2. Claimant worked for Employer during the 2014 season and from July, 2014 through the end of the season and until approximately the end of October/beginning of November.

3. After the end of the 2014 season, Claimant sought more permanent employment but remained unemployed until January of 2015. In January of 2015 Claimant began employment with New Agora Real Estate, trimming marijuana plants and working at their facility. Claimant worked for New Agora Real Estate until March of 2015.

4. In the spring of 2015 Employer contacted Claimant and offered him the opportunity to come back to work for the 2015 season. Claimant accepted the offer of part-time seasonal employment and began working again for Employer on March 30, 2015 and expected to work part-time through the end of the season like he had in 2014.

5. The seasonal start and end dates depend heavily on the weather and when the ground freezes. The work hours and schedule can vary due to the seasonal nature and due to the number of jobs. Claimant understood that the season for Employer ran from March until November or December. Claimant testified that in 2014 he knew that

half of the employees for Employer were still working at Halloween, and the other half of employees had ended their seasonal work. He expected he would work until the end of the season when he was offered seasonal work for the 2015 season.

6. For the 2015 season, Claimant was paid an hourly rate of $14.00 per hour. Claimant was paid every two weeks.

7. During the 2015 season, Claimant was offered an opportunity to work as an independent contractor for Ottertail in the Mojave Desert in California. Claimant asked Employer if he could take a leave of absence for 15 days so that he could travel to California to work for Ottertail. Employer indicated that was okay.

8. Claimant left Colorado and began the temporary job for Ottertail on April 20, 2015. Claimant worked 15 days straight for Ottertail, through May 5, 2015. Claimant earned $275.00 per day for this work and was paid issued a 1099 for a total of $4,125.00 for the 15 days of work. After this temporary job ended, Claimant returned to Colorado and began working for Employer again.

9. Prior to leaving for California, Claimant had received two paychecks from Employer covering a 4 week period. The first paycheck was for 36.86 hours of work covering the period of March 21, 2015 through April 3, 2015. The second paycheck was for 52.31 hours of work covering the period of April 4, 2015 through April 17, 2015.

10. Claimant did not receive a paycheck from Employer covering April 18, 2015 through May 2, 2015 which was the next pay period for Employer. The first pay period following Claimant's return from California was May 3, 2015 through May 16, 2015 and Claimant was paid for 29.08 hours of work.

11. The next pay periods leading up to Claimant's injury include: May 16, 2015 through May 29, 2015 for 41.21 hours; May 31, 2015 through June 13, 2015 for 40.22 hours; June 14, 2015 through June 27, 2015 for 53.99 hours; June 27, 2015 through July 10, 2015 for 58.33 hours; July 12, 2015 through July 25, 2015 for 65.71 hours. Excluding the initial paycheck at the start of the season for 36.86 hours, and excluding the paycheck that overlapped with some of the time Claimant was in California for 29.08 hours, Claimant worked a total of 311.77 hours in the 6 remaining pay periods, covering approximately 12 weeks. On average, Claimant worked approximately 25.98 hours per week at his hourly rate of $14.00, and on average earned $363.72 per week for Employer.

12. On August 3, 2015 Claimant sustained an admitted work related injury to his lower back when he was bent over a flower bed picking weeds.

13. On August 7, 2015 Claimant was evaluated at Aviation and Occupational Medicine. Claimant reported that on August 3, 2015 while kneeling over a garden bed and bent at the waist he felt muscles in his lower back seize up, and that he had lower back pain ranging from a 4-7/10. Claimant was noted to have tenderness in the

paraspinals, left greater than right and pain with all of range of motion most severe with forward flexion. X-rays performed showed no acute findings. Claimant was found to have a negative straight leg raise bilaterally. Claimant was assessed with lumbar strain, placed on modified duties, and ice/heat/back belt were recommended along with home exercises. *See* Exhibit P.

14. On August 8, 2015 Claimant returned to work within his work restrictions. Claimant continued working through the end of the 2015 season.

15. The pay periods following Claimant's injury and return to work include: August 8, 2015 through August 21, 2015 for 42.44 hours; August 22, 2015 through September 4, 2015 for 42.01 hours; September 5, 2015 through September 18, 2015 for 40.43 hours; September 20, 2015 through October 3, 2015 for 45.95 hours; October 3, 2015 through October 16, 2015 for 44.49 hours; and October 17, 2015 through October 30, 2015 for 30.43 hours. This was a total of 245.75 hours over 6 pay periods, covering approximately 12 weeks. On average, following his injury, Claimant worked approximately 20.48 hours per week at his hourly rate of $14.00, and on average earned $286.72 per week for Employer.

16. Claimant indicated that he had to stop working on Fridays during this time period due to physical therapy and doctors' appointments. *See* Exhibit 4.

17. On October 30, 2015 Claimant's seasonal work for Employer ended. Claimant is unsure if other employees in his same position continued working past that date or not. At the time his seasonal employment ended, Claimant was still under work restrictions.

18. Records show Claimant was evaluated on the following Fridays in 2015 at Aviation & Occupational Medicine: August 14, August 28, September 4, September 18, September 25, October 9, October 23, and November 6. *See* Exhibit P.

19. At these appointments, Claimant was repeatedly noted to have bilateral negative straight leg raises, no lower extremity symptoms, no radiculopathy, and no numbness or tingling in his legs. By September 25, Claimant reported improvement of 65-70%. *See* Exhibit P.

20. On October 30, 2015 Claimant was evaluated by Samuel Chan, M.D. Claimant reported overall improvement but that he had generalized pain over the lumbar spine area that radiated to the lateral buttock region greater on the right than left with no radiating pain and no numbness and tingling. Dr. Chan noted on examination diffuse tenderness to palpation over the lumbosacral paraspinal musculature. Dr. Chan found a negative straight leg raise in the seated and supine positions. Dr. Chan diagnosed lumbosacral strain with an essentially normal neurologic examination and opined that Claimant's findings were most consistent with muscular strain. Dr. Chan recommended Claimant follow through with an active exercise program for core stabilization and recommended acupuncture. *See* Exhibit Q.

21. On November 6, 2015 Claimant was evaluated at Aviation & Occupational Medicine. Claimant reported lower back pain at a 3/10 that was on and off. Claimant reported that he felt better overall. Claimant reported no numbness and tingling in his legs, no lower extremity weakness, and was found to have a negative bilateral straight leg test. An MRI of the lumbar spine was ordered due to the length of the injury and it was noted as important that Claimant did not have radicular symptoms. *See* Exhibit P.

22. On November 13, 2015 the MRI was reviewed with Claimant. At the next appointment, Claimant reported increased pain at 5/10. Claimant reported that he was cleaning his house the week prior when he bent over and had pain up his lumbar spine and then into his legs, left greater than right and into the big toe. This was the first report of radiating pain into the legs. *See* Exhibit P.

23. On December 2, 2015 Claimant was evaluated by Dr. Chan. Claimant reported axial back pain with no radiation, no numbness and tingling. Dr. Chan again found negative straight leg raising in the seated and supine positions. Dr. Chan noted that the MRI had shown an L4-5 disc herniation lateralizing on the left side but also noted that Claimant had an essentially normal neurologic examination. Dr. Chan noted that it was unclear whether the MRI findings were a pain generator. *See* Exhibit Q.

24. On December 31, 2015 Claimant was evaluated by Dr. Chan. Again, Claimant reported axial lumbar spine pain with no radiating pain and no numbness and tingling. Dr. Chan found a negative straight leg raise on testing. Dr. Chan indicated a lengthy discussion was held with Claimant and that despite the MRI showing a L4-5 disc herniation, the clinical findings on examination were more suggestive of being myofascial in origin. Dr. Chan instructed Claimant, therefore, to continue with a core stabilization exercise program. *See* Exhibit Q.

25. Claimant also continued to treat with Aviation & Occupational Medicine throughout the winter of 2015-2016. *See* Exhibit P.

26. On February 10, 2016 Claimant was evaluated by orthopedic surgeon Brian Reiss, M.D. Claimant reported that he had lower back and bilateral buttock pain that got worse through the day. Claimant reported no lower extremity complaints. Claimant reported that he had undergone therapy, chiropractic care, and acupuncture and that he had had an SI joint injection and epidural steroid injection, all without lasting relief. Dr. Reiss noted that Claimant's psychological screening indicated depression with a low to medium level of functional status. On physical exam, Dr. Reis noted that Claimant did not appear to be in any distress, moved around the room quite easily, and transitioned from sitting to standing and lying down quite easily with no pain behaviors. Dr. Reiss found minimal tenderness in the lumbar spine and negative straight leg raises, that just produced back pain at 60 degrees. Dr. Reiss reviewed the MRI from November of 2015. Dr. Reiss assessed low back pain and degenerative change of the lumbosacral spine. Dr. Reiss suggested surgery was not a good solution. Dr. Reiss recommended increasing core strength, continued stretching, and more aerobic conditioning. Dr. Reiss

suggested that Claimant was probably at or near MMI, but noted he would leave that up to Aviation & Occupational Medicine and Dr. Ladwig. *See* Exhibit V.

27. On April 4, 2016 Claimant was evaluated by Dr. Ladwig. Dr. Ladwig noted that Claimant was overall essentially with no change. Dr. Ladwig noted that Claimant was doing a home exercise program and using flexeril as needed. Dr. Ladwig found no lower extremity symptoms and a negative straight leg raise. Dr. Ladwig opined that Claimant was at maximum medical improvement (MMI), recommended permanent lifting restrictions, and recommended no maintenance. Dr. Ladwig opined that Claimant sustained a 9% whole person impairment. *See* Exhibit P.

28. On November 15, 2016 Claimant underwent a Division Independent Medical Examination (DIME) performed by Michael Janssen, D.O. Claimant reported that the week prior to his injury he was moving some 450 pound trees and had some nonspecific low back pain and that the following week he was just bent over doing weeding when he felt an electrical shooting sensation up and down his back and into the posterior thighs and buttocks that had been incapacitating since. Claimant reported that he was unable to work the 2016 summer because of his ongoing back pain and that he was unable to do most activities including recreational fishing. Dr. Janssen noted that he received a fairly extensive amount of medical records to review including a report from surgeon Dr. Reiss who did not believe Claimant was a surgical candidate for the non-specific lumbar spine condition. Dr. Janssen noted an impairment was performed by Dr. Ladwig on April 4, 2016 with permanent restrictions including lifting floor to overhead lift of 35 pounds. Dr. Janssen noted there were no maintenance benefits recommended and that the impairment rating included 2% for range of motion and 7% for II-C under Table 53 for specific disorders of the spine, for a whole person rating of 9%. *See* Exhibits 9, T.

29. Claimant reported back pain, bilateral buttock pain, and intermittent tingling into the left lower extremity that was not constant. Dr. Janssen performed a physical examination noting straight leg raise test on the right at 72 degrees and on the left at 70 degrees both felt to be valid and without radicular pain. Dr. Janssen opined that Claimant had a specific disorder of the spine under Table 53 II-C for a 7% impairment and that Claimant had a valid range of motion impairment of 1% on physical exam. Dr. Janssen opined that Claimant's combined whole person impairment rating was 8%. Dr. Janssen opined that there was no indication for Claimant to have restrictions. Dr. Janssen opined that Claimant had nonspecific low back pain with a suspicion of subjective symptoms that outweighed objective clinical findings. *See* Exhibits 9, T.

30. On March 28, 2017 Claimant underwent an independent medical examination performed by Bennett Machanic, M.D. Claimant reported that he had been unemployed since late October of 105 when he lost his job and that he had previously worked as both a gardener and field botanist. Claimant reported chronic low back and leg pain. Claimant reported that he had been placed at maximum medical improvement in late 2016 and was provided an 8% impairment rating. Claimant indicated that he disagreed that he had ever reached MMI and complained about the 8% rating being too

low. Claimant also reported that he had been placed at MMI in April of 2016 by his occupational physician and provided a 9% permanent rating which he believed was premature and inappropriate. *See* Exhibit 7.

31. Claimant reported that on August 3, 2015 he was weeding a raised flower bed when he turned to the left, bent forward, and experienced an electrical shock which went up and down his spine involving his low back, middle back, and neck. Claimant reported that it was somewhat immobilizing at the time, but that he was capable of completing the work day. Claimant reported the problem to his supervisor and stopped working for about 203 days but the pain got worse. Dr. Machanic noted Claimant's treatment included physical therapy, chiropractic care, and acupuncture. Dr. Machanic noted that by November, 2015, Claimant had an MRI of the lumbar spine since Claimant had not improved and a central disc protrusion at L4-5 causing severe left lateral recess stenosis and suspected left L5 radiculopathy was found. Dr. Machanic noted that Claimant received epidural steroid injections and sacroiliac injections but that it was not clear that the injections benefited Claimant and appeared that Claimant made very little progress and therefore was evaluated by orthopedic surgeon Dr. Reiss. Dr. Machanic noted Dr. Reiss' recommendation against surgery that emphasized core strengthening, stretching, aerobic conditioning, and pointed out that Claimant was probably at or near MMI. *See* Exhibit 7.

32. Claimant reported to Dr. Machanic that he did not wish to undergo surgery. Dr. Machanic reviewed DIME physician Dr. Janssen's report. Dr. Machanic also noted that a February, 2017 MRI showed at L4-5 ongoing moderate to severe left lateral recess stenosis due to a residual small left central disc protrusion/extrusion, slightly smaller in overall size as well as signs of an annular tear and posterior displacement and mass effect upon the adjacent descending left L5 nerve root sleeve. Claimant reported to Dr. Machanic that he had chronic, diffuse, and bilateral low back pain with pain going down both legs. Claimant reported that he felt like he needed further intervention, but was reluctant to accept further injections and/or surgery. *See* Exhibit 7.

33. Dr. Machanic opined that Claimant appeared depressed, showed pessimism, showed psychomotor retardation, and showed a lack of spontaneity. Dr. Machanic opined that on examination it was quite clear that Claimant had a positive straight leg raise causing pain on the right, maximizing at 55 degrees and on the left maximizing at 45-50 degrees. Dr. Machanic opined that on the left, foot there was decreased pin sensation over the dorsum extending up to the anterolateral left calf very much in an L5 distribution. Dr. Machanic used a dual inclinometer to measure lumbar spine range of motion and opined that there was a combined loss of range of motion over the lower back of 8% that was valid. Dr. Machanic opined that Claimant had chronic lumbosacral strain with the presence of an extruded disc and clinical signs of L5 distribution nerve issues that were mild and minor, but present. *See* Exhibit 7.

34. Dr. Machanic opined that Claimant's August 3, 2015 work injury had resulted in chronic problems and that it was not clear that Claimant had necessarily reached a point of true MMI. Dr. Machanic opined however, that if Claimant had in fact

reached MMI, then Claimant would possess a significant impairment rating with a II-C rating from Table 53 of 7% whole person and an 8% whole person range of motion loss, as well as a 4% rating for neurologic system: loss of sensation for the lower extremity. Dr. Machanic opined that combining the different impairments, Claimant would have an 18% whole person permanent partial impairment rating. *See* Exhibit 7.

35. The Figure 83 lumbar range of motion measurements performed by Dr. Machanic from March 28, 2017 and the Figure 83 lumbar range of motion measurements performed by DIME physician Dr. Janssen on November 15, 2016 are sharply in contrast. Both physicians completed three measurements and both found validity, but the difference in the measurements is significant.

36. Kathleen D'Angelo, M.D. testified by deposition on October 6, 2017. Dr. D'Angelo completed an independent medical examination of Claimant on July 2, 2017. Claimant reported to Dr. D'Angelo that DIME physician Dr. Janssen had falsified some of the documentation and had not performed a straight leg raise test and that Claimant had never even laid on his back. Dr. D'Angelo opined that a straight leg test could be performed either seated and/or supine. Dr. D'Angelo opined that if a patient had pain down the leg during the straight leg raise test it would be a sign of radiculopathy. On her examination, she performed both a seated and a supine straight leg raise test. Dr. D'Angelo noted that the pain on straight leg raise was negative bilaterally when Claimant was seated, but that Claimant reported it as positive when supine which did not make sense to her. Dr. D'Angelo opined that if Claimant was presenting truthfully and actually had radiculopathy, she would expect to have had positive results both in the supine and seated positions during testing.

37. Dr. D'Angelo noted that she wasn't able to obtain range of motion or impairment rating measurements because Claimant had literally almost no motion. When she asked him to flex and extend, Claimant moved a fraction of an inch, which does not register on dual inclinometers. Dr. D'Angelo noted that Claimant was able, however, to walk to the exam room, sit down, get onto the exam table, lie down, sit up again, get off the table, and walk out. Dr. D'Angelo did not understand why Claimant had such a lack of movement during measurements. Dr. D'Angelo opined that there was no objective evidence that supported an 18% whole person impairment rating to Claimant's lumbar spine.

38. Dr. D'Angelo noted that although the MRI showed a left central disc protrusion that was suspected to be hitting the left L5 nerve root, Claimant did not have complaints of left sided radiculopathy prior to the MRI or any physical signs of radiculopathy prior to the MRI. Dr. D'Angelo opined that 40-60 percent of patients with no back pain have evidence of a disc herniation. Dr. D'Angelo opined thus that the disc protrusion to the left at L4-5 was not responsible for the symptoms Claimant reported to her, and that she couldn't understand how Claimant had no symptoms or physical findings of radiculopathy prior to the MRI. Dr. D'Angelo opined that Claimant had a work related lumbosacral strain. Dr. D'Angelo noted that she didn't understand how Dr. Machanic could rate sensation loss to the left leg since Claimant did not have

paresthesias to the left leg until months and months after the injury. Dr. D'Angelo opined that DIME Dr. Janssen did not do anything incorrect in providing an 8% whole person impairment. Dr. D'Angelo also agreed with the date of MMI of April 4, 2016.

39. Dr. D'Angelo opined that if Claimant had herniated the disc acutely, the first symptom acutely would have been radicular pain and she noted that Claimant did not have radicular pain until several months after the alleged injury.

40. Dr. D'Angelo noted Claimant's diffuse complaints to her at her independent medical examination and the bilateral symmetrical identical complaints and symptoms in both the upper extremities and lower extremities. Dr. D'Angelo noted Claimant's report of an abnormal brain MRI. Dr. D'Angelo expressed repeatedly her concern that Claimant had a systemic non work related disease, likely multiple sclerosis and that his other symptoms and concerns were very troubling and needed to be evaluated as soon as possible.

41. Dr. D'Angelo is found credible and persuasive. Her opinions are consistent with the DIME physician's findings and consistent with the overall weight of the medical evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186

(Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Average Weekly Wage (AWW)

Section 8-42-102(2) C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon his AWW on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Earnings from concurrent employment may be included in a claimant's AWW where the injury impairs earning capacity from such employment. *Jefferson County Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

The ALJ finds that considering the Claimant’s earnings at the time of his work related injury results in an AWW of $363.72. This is a fair approximation of Claimant’s wage loss and diminished earning capacity. Although Claimant received a temporary 15 day job that paid him significantly higher wages than he had earned while working for Employer or for his past employers, this was not concurrent employment and was not representative of his diminished earning capacity. This employment with Ottertail was an anomaly outside of his normal earnings while employed for Employer. This was also not concurrent employment, but consecutive employment. Claimant, on average, worked part-time for Employer averaging 25.98 hours per week at a rate of $14.00 per hour, resulting in an AWW of $363.72. The ALJ concludes that this is a fair approximation of Claimant’s wage loss and diminished earning capacity.

Overcoming DIME on Permanent Impairment Rating

A DIME physician must apply the AMA Guides when determining the claimant’s medical impairment rating. *See* § 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant’s medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The

questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Claimant has failed to meet his burden to establish by clear and convincing evidence that the DIME physician was incorrect or erred in any way. Claimant has failed to overcome the 8% whole person impairment given by DIME physician Dr. Janssen. The DIME physician's opinion is consistent with the treating physician (who provided a 9% rating) and is supported by the credible testimony of Dr. D'Angelo. No error has been found. Claimant argues that Dr. Janssen did not perform a straight leg test while Claimant was on his back, however, the test can also be performed while seated.

Temporary Partial Disability (TPD)

An employee is entitled to receive sixty-six and two-thirds percent of the difference between the employee's AWW at the time of the injury and the employee's AWW during the continuance of the temporary partial disability. *See* § 8-42-106(1), C.R.S. As found above, Claimant was injured on August 3, 2015. Claimant returned to work shortly after his injury. However, during this time Claimant was under restrictions and missed work due to doctor's appointments as well as therapy appointments. Although Claimant's work hours and schedule could vary based on the weather conditions, the ALJ finds it persuasive that Claimant missed work during this period of time and until the end of the season due to his temporary partial disability, work restrictions, and medical appointments. Claimant's average number of hours worked per week prior to his injury were 25.98. After his injury, he averaged 20.48 hours per week. Claimant's AWW prior to his work injury was $363.72. For the twelve weeks he worked following his injury and until the end of the season, Claimant's AWW was $286.72. The difference in his AWW at the time of injury and his AWW during the continuance of his temporary partial disability is $77.00. Claimant has established that he sustained a total wage loss of $924.00 ($77.00 x 12 weeks) and is entitled to sixty-six and two-thirds of $924.00 for the twelve week period following his injury.

Temporary Total Disability (TTD) Benefits

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and

(2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The loss of seasonal employment does not automatically disqualify a claimant from receiving subsequent disability benefits, but whether or not the wage loss was caused by the injury is a question of fact for determination by the ALJ. *City of Aurora v. Dortch,* 799 P.2d 461 (Colo. App. 1990). Inherent in the Dortch decision is the court's recognition that seasonal employment is a common fact of economic life, and that the conclusion of a particular period of seasonal employment should not automatically be viewed as the permanent end to the employment relationship or evidence of the claimant's "voluntary" decision to become unemployed. Termination of employment resulting from the conclusion of a contract for seasonal work does not automatically disqualify a claimant from receiving subsequent TTD benefits. *Cf. J.D. Lunsford v. Sawatsky*, 780 P.2d 76 (Colo. App. 1989). The fact that a claimant knows the seasonal employment will end at a fixed point in time does not necessarily lead to the conclusion that he is responsible for the termination. *City of Aurora v. Dortch*, supra. However, the result might be different if an ALJ were to find that claimant selected a fixed period of seasonal employment with the intent of the remaining unemployed throughout a portion of the year, or permanently. *El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo. App. 1986).

Claimant has established by a preponderance of the evidence an entitlement to TTD benefits from October 31, 2015 through April 4, 2016. At the end of his seasonal employment on October 30, 2015, Claimant remained under work restrictions and was unable to effectively perform his normal job duties. Claimant is credible that he was unable to find employment due to his restrictions and evidence shows that in the prior year, he had not only sought but obtained employment during the offseason at New Agora Real Estate. Claimant has established, more likely than not, that if he had not been injured he would have been employable and had been employed in the prior off season. Claimant is credible that he had an intent of seeking employment but due to his incapacity, restrictions, and pain from the work related injury, he was impaired in his wage earning capacity and in his job search.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant’s average weekly wage is $363.72.

2. Claimant has failed to overcome DIME physician Dr. Janssen’s permanent impairment rating. Claimant is entitled to an 8% whole person impairment, consistent with the DIME opinion.

3. Claimant has established by a preponderance of the evidence an entitlement to TPD benefits from August 8, 2015 through October 30, 2015 in the amount of $616.03 (sixty-six and two-thirds of $924.00).

4. Claimant has established by a preponderance of the evidence an entitlement to TTD benefits from October 31, 2015 through April 4, 2016.

5. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

6. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 14, 2017,

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable injury while at work on July 5, 2017?

II. If compensability has been proven, what are the reasonable and necessary medical benefits?

III. If compensability has been proven, who is Claimant's Authorized Treatment Provider?

IV. If compensability has been proven, is Claimant entitled to Temporary Total Disability Benefits?

STIPULATIONS

I. The parties stipulated that Claimant's Average Weekly Wage is $771.81. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked as a roofer for Employer off and on since 1996. He was involved in commercial roofing.

2. His job duties included tearing off old roofs, and did require lifting and carrying heavy objects, which Claimant states could be up to 100 pounds.

3. Claimant testified that he first noticed some pain in his right groin area in May of 2016, but was able to continue his job duties unabated.

4. Claimant testified that on July 5, 2016, while working on a drain in a kneeling position, he stood up and felt pain in his groin. He testified that this was the same pain that he had been feeling since May of 2016, but that it was sharper and more intense. Despite this pain, he testified that he continued working and finished out the work day, but most of the heavy lifting had already been completed. He testified that his co-workers noticed his distress, and he told them he thought he had pulled a groin.

5. Claimant testified that he went to the Emergicare on Austin Bluffs in Colorado Springs the same day. Emergicare records show that Claimant did not appear until July 7, 2016. (Ex A, p.1). Upon his presentation to Emergicare on July 7, 2017, Claimant complained of groin pain. He could not identify any specific event or

any specific activity or incident that caused the pain. *Id.*

6. Claimant did not represent to the provider at Emergicare that he believed he had sustained a work related injury. *Id.*

7. The Emergicare provider, Dr. Erik Ritch, MD, provided a work excuse to Claimant from July 6 through July 8, 2016, noting that Claimant could return to work on Monday, July 11, 2016. (Ex. A, p. 4).

8. Claimant testified that he called Employer on the Friday following the date of injury, to report that he had suffered a work related injury. He contends that he spoke with Employer's Office Manager, Kim Stimson.

9. Claimant returned to work on Monday, July 11, 2016 and worked the following week. The following Tuesday, on July 19, 2016, Claimant returned to Emergicare, this time to the facility on South Academy in Colorado Springs with continued complaints of groin pain and pain in his right hip. (Ex. A, p. 5).

10. The Emergicare provider, Dr. Cynthia Lund, provided Claimant with an excuse from work for one week. (Ex A, p. 10). Claimant testified that he presented this work restriction note to Ms. Stimson in person the same day.

11. Claimant also underwent x-rays at the July 11, 2016 Emergicare appointment. The x-rays showed no evidence of an acute fracture in Claimant's right hip. (Ex. A, p. 11).

12. Claimant continued to treat with Emergicare over the next several weeks. On August 3, 2016, Emergicare referred Claimant for a MRI scan of his right hip and also referred Claimant to orthopedist, Dr. Roger Sung. On August 3, 2016, Claimant was cleared to work, with restrictions "1. You may resume light duty. 2. Sitting work. 3. Get up on can[e] and cautiously move around 10 minutes per hour. 4. Maximum 10 lbs lifting." (Ex. 6 p. 45). Claimant was never offered light duty by Employer.

13. Claimant went to Dr. Sung on September 26, 2016. Dr. Sung documented that Claimant had complaints of an approximate 2 month long pain in his right hip. Dr. Sung further documented that Claimant had not reported his hip pain to Employer as a work- related injury. (Ex. B, p. 36).

14. Upon examination and evaluation of Claimant, Dr. Sung could not make a determination whether he had suffered any acute injury and referred Claimant for an MRI.

15. Claimant underwent an MRI on 8/29/16. (Ex. E). The MRI found "No clearly defined fracture is noted, but the appearance of the marrow is 'worrisome' for an infiltrative process." (Ex. E pp. 46, 47).

16. In a January 6, 2017, consulting memo, Dr. Jon Erickson noted: "The MRI scan also showed significant arthritic changes in the hip with a flattening of the femoral head and osteophyte formation noted in the periarticular areas. There was also joint effusion and a great deal of synovitis." (Ex. E, p. 38).

17. In this same memo, Dr. Erickson also observed, in response to Dr. Schuck's treatment plan that:

> When he [Dr. Schuck] saw Mr. Gonzalez next on 11/29/16, he noted that all the lab work was normal including a normal C-reactive protein and erythrocyte sedimentation rate. This is indeed peculiar, because if indeed the patient has suffered any form of fracture *recently,* both of these laboratory parameters *should have been mildly elevated*. *Id.* (emphasis added).

Recently is not defined further, however.

18. There are no follow up records to show that Claimant returned to Dr. Sung.

19. Emergicare subsequently referred Claimant for chiropractic treatment with Dr. Polvi. Claimant testified that it was Dr. Polvi who referred him to Dr. Michael Schuck for an additional orthopedic evaluation. Claimant testified that Dr. Polvi was not able to help with his pain.

20. Claimant testified on direct examination that when he presented to Dr. Schuck, Dr. Schuck examined him and recommended hip replacement surgery.

21. Claimant did not submit a Workers' Compensation Claim for his right hip until December 2, 2016. (Ex 1 p.1). In this filing, he notes the time of injury to be 10:30 a.m. *Id.*

22. Claimant admitted that he did not experience any injury or specific incident at work on the date of injury. He did not fall, and did not twist his body. It was simply while in the act of standing up that caused him to feel this sudden pain.

23. Claimant agreed that in the course of everyday life, there are many situations, work related and non-work related, when he would have a need to crouch or kneel and then stand up from those positions.

24. Further, Claimant acknowledged on cross examination that he did not fill out an accident report with Employer, and that he did not ever request to do so.

25. Claimant also testified that when he first presented to Emergicare, he was not administered a drug test.

26. Claimant testified that he has experienced three prior work related injuries while working for Employer and that in each of those injury events, he reported them to Ms. Stimson who required him to complete an accident report.

27. Claimant testified that he spoke with Ms. Stimson by phone after Thanksgiving when he called to inquire whether he would be given a Christmas food basket that was customarily given by Employer. Claimant did not inform Ms. Stimson that he was about to file, or had already filed, his Workers' Claim for Compensation.

28. Kim Stimson also testified at hearing. She testified that she is Office Manager for Employer. She has worked for Employer for 7 years. She described her job duties as the Office Manager to include Human Resource type activities and Workers' Compensation duties. She testified that she is the person to whom employees are directed to report all work injuries to.

29. Ms. Stimson testified that if an employee has sustained a work related injury, or even if she suspects that an employee has sustained a work related injury, that she requires the employee to fill out an accident report, she provides the employee with a designated provider list, she sends the employee to the doctor whom they have chosen from the list. She also contacts the foreman and any witnesses and requires them to complete a report, and then she contacts her insurer, Pinnacol Assurance, to provide them notice of the work injury.

30. Ms. Stimson testified that Claimant never informed her that he had sustained a work related injury. She did not have a suspicion or reason to believe that Claimant had sustained a work related injury; thus she did not follow the aforementioned steps.

31. Ms. Stimson testified that Claimant called in sick to work on July 7 and July 8, 2016, and that when he called in sick, he did not report anything about a purported work injury.

32. Ms. Stimson concurred that Claimant returned to work the following week and that he worked the entire week.

33. Ms. Stimson testified that Claimant came to the Employer's office on or about July 19, 2016, and presented her with a note from Emergicare excusing him from work for the next several days. She testified that she asked Claimant three times or more whether he'd injured himself at work and that Claimant's response to each inquiry was that he had not.

34. Ms. Stimson testified that she asked Claimant repeatedly whether this was an injury he sustained at work. This was so that she could make certain to follow the steps necessary to report the injury to Pinnacol Assurance, and to make certain that Claimant would receive medical benefits, and that he would also receive some form of income.

35. After July 19, 2016, Ms. Stimson testified that she'd had at least 3-4 more conversations with Claimant by telephone. She testified that Claimant never reported any work-related injury during any of those conversations.

36. Ms. Stimson was the Office Manager for two of the three prior work injuries that Claimant sustained while working for Employer. She testified that Claimant followed the reporting procedure in those two prior injury events, including reporting the injury to her and filling out an accident report.

37. Ms. Stimson said that Claimant last contacted her by phone sometime between Thanksgiving and the second week of December, when he called to inquire about the Christmas food basket. She testified that he still did not report any work injury to her during this conversation.

38. The first time that Ms. Stimson learned that Claimant was alleging a work injury is after she received Claimant's Workers' Claim for Compensation in the mail in December, 2016.

39. On cross examination, Claimant's counsel presented Ms. Stimson with a report completed by Claimant with the Joint Health and Welfare Fund, which is part of the Roofers Union. (Ex. 3). Counsel pointed out to Ms. Stimson that on the document, Claimant asserts that his injury occurred at the jobsite. This documents does not bear Claimant's signature, nor a date that Claimant prepared its contents, but does indicate that the injury occurred at 1:00 p.m. It does bear the signature of Dr. Polvi, dated 8/31/16. (Ex 3, pp. 6, 7).

40. Ms. Stimson testified that she had never seen the Joint Health and Welfare Fund report until Claimant's counsel presented it to her during the hearing. She testified that this is not the Employer's injury report form.

41. Ms. Stimson testified that Emergicare is one of the designated providers for Employer. Employer and Emergicare have an agreed upon practice that when an employee of Employer initially presents to Emergicare, Emergicare will contact Ms. Stimson to confirm that the employee is to be seen for a work related injury and that Emergicare will administer a drug test.

42. Ms. Stimson testified that Emergicare never contacted her regarding Claimant's treatment with them after any of his many presentations to an Emergicare facility. Moreover, Ms. Stimson testified that when Claimant presented her with paperwork from Emergicare excusing him from work in July 2016, the work excuse did not reference any work related injury.

43. Ms. Stimson testified that she has never received any notification, records, or other information from any healthcare provider that Claimant was treating for a work related injury.

44. Claimant took the deposition orthopedic surgeon, Dr. Michael Schuck, on August 30, 2017. Dr. Schuck testified that he is not Level II accredited for Colorado Workers' Compensation. (Dr. Schuck Depo., p. 25, ll. 6-9).

45. Dr. Schuck first saw Claimant on November 15, 2016. His initial evaluation documents that Claimant reported an initial onset of pain began on or about May 7, 2015. (Ex. D, p. 40). His initial diagnosis is that Claimant suffered a femoral neck fracture – possibly pathologic. (Ex. D, p.41). A femoral neck fracture means that the bone just below the ball of the hip is broken, or that a facture or crack is noticed in the bone. (Dr. Schuck Depo., p. 9, ll. 18-24).

46. At the initial examination and evaluation, Dr. Schuck documented that Claimant did not have a fall or any type of twisting injury while at work. (Ex. D, p. 40).

47. Dr. Schuck ordered lab work to rule out infection. He opined that even if the lab work was normal and ruled out infection, that an underlying pathological process could still be at work in Claimant's left hip, including a possible neoplasm. He would have Claimant undergo a bone biopsy in the event the lab testing ruled out infection. (Ex. D, p. 41).

48. On November 29, 2016, at Claimant's second appointment with Dr. Schuck, Dr. Schuck again noted that Claimant had experienced no trauma to the hip at work. (Ex. D, p.44). Dr. Schuck confirmed at this November 29, 2016 appointment that the lab work ruled out an infection. However, despite this Dr. Schuck did not refer Claimant for a bone biopsy. Instead, recommended that Claimant undergo a right hip replacement. (Ex. D. p.44; Dr. Schuck Depo. p. 20, ll. 12-22).

49. Dr. Schuck testified, however, that he could not rule out a pathologic fracture, and that there are other reasons for pathologic fracture that won't really be evidenced on a bone biopsy. (Dr. Schuck Depo. p. 15, ll. 12-15; p. 21, ll. 18-20).

50. He testified regarding the underlying pathologic process in Claimant's right hip:

> Q:…Even when you have…a pathologic fracture where you have a weakening of the bone, you still have to have some *mechanism* to cause the fracture, don't you?
>
> A: Yes, but *that mechanism may be just walking on it.* (Dr. Schuck Depo. p. 15, ll. 21-24; p. 16, ll. 1-2). (emphasis added).

51. He testified that it was because Claimant's symptoms started at work, it would be reasonable to consider this a work related condition. (Dr. Schuck Depo., p. 10, ll. 13-16; p. 11, ll. 13-20; p. 16, ll. 10-11; p. 27, ll. 4-6), (Ex D, p. 41).

52. In his report from January 6, 2017, Dr. Erickson concluded that without a mechanism of injury, it could not be reasonable to say that the femoral neck fracture

occurred as a result of Claimant's employment. It is much more likely that the opposite is true, and that for reasons that have not been discovered as of yet, Claimant probably had a pathologic fracture. (Ex. C, pp. 38-39). Dr. Erickson stated that. "[w]hen it hurts is not necessarily why it hurts." (Ex. C; p. 39).

53. Respondents also referred Claimant for an IME with Dr. James Lindberg on January 31, 2017. He issued a written report dated February 5, 2017. (Ex. G). The parties took the evidentiary deposition of Dr. Lindberg on September 26, 2017.

54. Dr. Lindberg practiced orthopedics for over thirty years, with a subspecialty in hip surgery, knee surgery, and shoulder surgery. He is now retired but continues his practice of performing IMEs. He has been licensed in the State of Colorado since 1981, and is Level II accredited in Workers' Compensation. (Lindberg Depo., p. 5, ll. 10-25, p. 6, l. 1).

55. As part of his IME of Claimant, Dr. Lindberg performed a record review of Claimant's prior medical records. The records reviewed are summarized in Dr. Lindberg's IME report. (Lindberg Depo. p. 6, ll. 16-20). Dr. Lindberg also obtained a personal history from Claimant and performed a physical examination. (Ex.G, pp. 91-92).

56. Dr. Lindberg testified that he retired from active orthopedic practice in 2012. He now primarily performs IMEs, the clear majority of which are paid for by Respondents.

57. Dr. Lindberg documented in his IME report and testified that there was no injury in this case. Claimant did not slip, nor did he fall. He did acknowledge that, among other things, that a fracture such as Claimant's would likely cause severe pain when it occurs, would result in an inability to work physical labor, and that "femurs don't fracture for no reason."

58. Dr. Lindberg testified that he reviewed an x-ray of Claimant's hip that showed marked pathological changes. He could not identify the specific pathology, however. He also viewed an MRI scan of Claimant's right hip which showed what appeared to be an infiltrative process, i.e. cancer, chronic osteomyelitis infection, some sort of congenital anomaly. (Lindberg Depo. p. 7, ll. 9-14), (Ex.G, p. 92).

59. Due to this problem in Claimant's femur, he noted:

> It [the femur] has been altered and changed significantly, and in that process, the femur has become weakened, so that *even taking a step in the activities of daily living is significant enough force to cause this to fracture.* (Dr. Lindbergh Depo, p. 16, ll. 1-5)(emphasis added).

60. Dr. Lindberg strongly advised that it was imperative for Claimant to seek further care under his own health insurance, as he was concerned that the underlying non-work related pathological process could be life threatening to Claimant. (Ex G, p. 94). Claimant subsequently underwent evaluation and examination by Dr. Bennie Lindeque at UCHealth. Dr. Lindeque undertook additional x-rays and performed a right proximal femur bone and tissue biopsy. (Ex. F).

61. The x-rays ordered by Dr. Lindeque of Claimant's right hip region showed significant abnormalities, with collapse of Claimant's right femoral head, with femoral head flattening as well as a mottled, moth-eaten appearance of his intertrochanteric and proximal diaphyseal regions of his right femur. (Ex. F, p. 53).

62. Dr. Lindeque opined that the results of the x-ray were concerning for an infiltrative process that could be due to a possible infection versus multiple myeloma versus avascular necrosis. (Ex. F, p.53).

63. Dr. Lindeque conducted a biopsy of claimant's femur on May 2, 2017. The biopsy ruled out infection, but revealed that Claimant had experienced significant avascular necrosis. (Ex. F, p.87).

64. Dr. Lindberg opined in his IME report and also testified that to the degree of certainty, Claimant's hip complaints are due to an underlying pathological process and not due to claimant's employment. (Ex. G; Lindberg Depo. p. 8, ll. 1-16).

65. Other than the fact that Claimant complained of pain in his right hip while he was at work, there is no causal connection or reason to believe that Claimant sustained a work injury. (Ex.G; Lindberg Depo. p. 8, ll. 23-25).

66. Dr. Lindberg testified that he'd reviewed the medical records of Dr. Schuck and that he'd also reviewed Dr. Schuck's evidentiary deposition testimony. He testified that he disagreed with Dr. Schuck's opinion that claimant sustained a work related injury. (Lindberg Depo., p. 9, li. 10-12). Specifically, Dr. Lindberg cited Dr. Schuck's own documentation that Claimant did not sustain any type of injury at work, but rather, Claimant only had experienced pain while he was at work. (Lindberg Depo. p. 9, ll. 13-23; Ex G, pp.93-94).

67. Dr. Lindberg testified that the underlying pathology occurring in Claimant's right hip has not yet specifically been identified by any provider, within or without the Workers' Compensation system, but that there is definitely an underlying pathologic process that caused Claimant's fracture. (Lindberg Depo. p. 12, ll. 10-18).

68. Dr. Lindberg testified that the moth-eaten, mottled appearance of the femoral head is consistent with, and is objective medical evidence to support, that there is a chronic, longstanding, ongoing underlying pathological process occurring in Claimant's femur that caused the fracture, and that the fracture is not related to Claimant's employment at Central States Roofing. (Lindberg Depo. p. 25, ll. 5-23).

69. Dr. Schuck testified that he had not seen the report from Dr. Lindeque in which the moth-eaten, mottled appearance in and around claimant's right hip was noted. Dr. Schuck admitted, though, that such an appearance is an abnormal finding and that such an appearance is indicative of an underlying pathologic problem. (Dr. Schuck Depo. p. 22, ll. 22-25; p. 23, ll. 3-8).

70. Dr. Schuck conceded on cross examination that there are other reasons for pathologic fracture that won't really be evidenced on a bone biopsy. (Dr. Schuck Depo. p. 15, ll. 12-15; p. 21, ll. 18-20).

71. Dr. Schuck also admitted on cross examination that even though pain can appear while at work, it does not necessarily correlate that the pain was caused by work. (Dr. Schuck Depo. p. 24, ll. 21-23; p.25, ll. 1-5).

72. With regard to the femoral head fracture in Claimant's right hip, Dr. Lindberg testified that a fracture secondary to trauma requires major trauma, as the femur is the largest bone in the body. (Lindberg Depo., p. 14, ll. 2-4). He further testified that there is no objective medical evidence or any report from Claimant that he had sustained any trauma to the right hip at all, whether it be micro trauma or major trauma. Instead, the objective medical evidence, which shows significant abnormalities and changes on his MRI and x-ray, shows the underlying pathology to be the reason Claimant sustained a fractured femur. (Lindberg Depo., p. 14, ll. 5-11; (Ex. G).

73. Dr. Lindberg stated that the underlying pathological process in Claimant's right hip causes Claimant's right hip to be weaker and more susceptible to fracture. Lindberg Depo. 15, l. 17-20. He explained that due to the underlying pathological process that is occurring in claimant's right hip, Claimant's femur had been altered and changed significantly, and in that process, the femur had become weakened, so much so that even taking a step in the activities of daily living could have caused the femoral head fracture. (Lindberg Depo., p. 15, l. 25, p. 16, ll. 1-5).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Reporting of Injury

D. Every employee who sustains an injury resulting from an accident shall notify said employee's employer in writing of the injury within four days of the occurrence of the injury. If the employee fails to report the injury in writing, the employee may lose up to one day's compensation for each day's failure to so report. §8-43-102(1)(a), C.R.S.

E. The ALJ finds that Claimant did not report this work incident to *anyone* in the Workers Compensation system until the First Report of Injury was filed with the Division of Workers Compensation on December 2, 2016. The record is unclear when Employer received actual notice; apparently some days later when a copy arrived in the mail. The ALJ credits the testimony of Kim Stimson regarding the steps she took to ascertain what occurred with Claimant, and the reasons she did so, to wit: to try to effectuate the dictates of the Workers Compensation system. That is part of her job. The preparation of the Joint Health and Welfare Fund form, and its possible presentation to a labor union constitutes no notice of any sort to the Employer in connection with the Workers Compensation system. It was never presented to Employer until the hearing.

F. While Claimant's repeated denials to Ms. Stimson that his medical problem was work-related does not, ipso facto, mean his injury isn't compensable, it

does lead the ALJ to one conclusion: *Claimant himself didn't believe it was work-related for months.* This, despite the indemnity benefits that could flow from a claim. Claimant was fully aware of the process, having gone through it previously with this same Employer.

Compensability

G. Claimant has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals* Office, 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals* Office, 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office,* 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones,* 688 P.2d 1116 (Colo. 1984).

H. An "injury" refers to a physical trauma caused by the accident. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id*. An activity arises out of and in the course of employment when the activity is sufficiently related to the conditions and circumstances under which the employee generally performs her job functions such that the activity may reasonably be characterized as an incident of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo.App.Div. 5 2009).

I. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury." The occurrence of

symptoms may represent the result of a natural progression of a pre-existing condition that is unrelated to the industrial injury or employment. See *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995).

J. The primary basis for Dr. Schuck's opinion that Claimant's fractured femur was caused by work is because Claimant was at work when he experienced pain. As noted above, this is insufficient to establish compensability. Dr. Schuck admitted that Claimant had reported no specific incident or trauma, and he agreed that the findings of a moth eaten, mottled appearance of Claimant's bone on the x-ray taken by Dr. Lindeque was an abnormal finding which suggests an underlying, non-work related pathology. Although the biopsy that was later taken ruled out an infection and a cancerous tumor, there are any number of other underlying pathologies that could cause the weakening and fracture of Claimant's femur. As of the close of the evidence, that exact pathology remains unknown. That does not mean it does not exist. The ALJ finds that Claimant has suffered, and continues to suffer, from an as-yet unidentified pre-existing pathology in his femur that has led to the injuries he complains of.

K. There is simply no way to ascertain how long this pathology has been present, or at what point it may have become symptomatic. Had the bone already been cracked for months? Did such a crack simply widen when Claimant first reported symptoms in May, 2016? Did that occur at work? Did it just widen further on July 5, 2016? Or, as both Drs. Schuck and Lindberg testified, did this severely weakened, moth-eaten femur crack while simply going about daily activities? A *recent* crack-however that term is defined-should have raised certain lab work parameters. They were all normal. Claimant has the burden of showing when the injury occurred. He has not carried that burden.

L Dr. Lindberg, who is a Level II accredited physician, also testified that the Medical Treatment Guidelines require that for an injury to be considered related to employment, there must have some work related *mechanism* of injury. Claimant never identified any particular trauma or incident occurred while he was at work on July 5, 2016. Instead, Claimant testified that he merely stood up from a kneeling position. He agreed that standing up from a crouched or kneeling position to a standing position is something that he routinely does in his everyday life, including during his non-work related activities. Moreover, Claimant testified that July 5, 2016 was not the first time that he had experienced this pain in his right hip area; rather, he had been experiencing pain since at least May, 2016. As Dr. Lindberg testified, the femur is the largest bone in the body. If the femur were to have been fractured through some sort of trauma that occurred at work, it would necessarily had to have been a major trauma. Yet Claimant did not fall, did not twist, did not stumble, and did not bear weight other than his own. He just stood up.

M. Claimant has failed to prove by a preponderance of the evidence that he sustained a work related injury while working for Employer on July 5, 2016. Instead, the objective medical evidence shows that Claimant has long suffered from an underlying pathologic condition. It is hoped that such unfortunate condition can be identified without further delay, and remedial measures taken.

N. Because compensability has not been shown, the other issues raised: Temporary Total Disability, Medical Benefits, and Authorized Treatment Provider, will not be addressed further.

ORDER

It is therefore ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Respondents have established by a preponderance of the evidence that Claimant's death benefits should be terminated due to her entry into a common law marriage with Andrew Gardner.

FINDINGS OF FACT

1. Claimant married decedent Gabriel Ortega in 1999 and the couple had a child together, referenced by initials as AO, who has a date of birth of November 4, 1999.

2. On August 7, 2005 Gabriel Ortega suffered fatal injuries when he was involved in a motor vehicle accident while in the course and scope of his employment with Employer.

3. As a result of Gabriel Ortega's death, Claimant receives workers' compensation death benefits as Gabriel Ortega's surviving dependent widow. The death benefits remain ongoing.

4. Following Gabriel Ortega's death and in 2006, Claimant purchased a home in Northglenn, Colorado. Claimant is the sole owner of that home and is the sole person on the home's mortgage.

5. On October 12, 2009 Claimant had a second child, referenced by initials as JG, who was fathered by Andrew Gardner.

6. Around the time of JG's birth, Mr. Gardner moved into the home owned by Claimant. At the time of this hearing four people resided in Claimant's home: Claimant, AO, JG, and Mr. Gardner.

7. Claimant and Mr. Gardner own no real property together, have no joint savings accounts, have no joint credit cards, list themselves as "single" on various policies, and Mr. Gardner is not listed as a beneficiary on any of Claimant's accounts.

8. Claimant and Mr. Gardner sometimes buy items together, sometimes cook and eat together with the two children in the home, and share duties of the house.

9. Claimant, Mr. Gardner, AO, and JG have gone on vacation together along with two of Claimant's other relatives. Mr. Gardner paid for the expenses of himself and JG on that vacation and Claimant paid for the expenses of herself and AO on that vacation.

10. Claimant and Mr. Gardner each own their own respective vehicles and the registration for their respective vehicles is listed in each of their individual names. The vehicles are insured together in a joint policy that allows Claimant to driver Mr. Gardner's two vehicles and also allows Mr. Gardner to drive Claimant's vehicle. This is the only joint policy or item that they are both listed on.

11. There was no evidence that Claimant has ever held herself out publicly to be married to Mr. Gardner, referred to him as her spouse, or intended to enter into a common law marriage with Mr. Gardner.

12. There was no evidence that Mr. Garner has ever held himself out publicly to be married to Claimant, referred to her as his spouse, or intended to enter into a common law marriage with Claimant.

13. There was no evidence or testimony presented from neighbors, friends, or family members as to how the couple holds themselves out in public or how their relationship was publicly viewed.

14. Mr. Gardner indicated by affidavit that after JG's birth, he and Claimant thought it would be best for JG to be in a co-parenting situation and he found it most effective to co-parent by sharing a living space. He further indicated he had never held himself out to be common law married to Claimant. He indicated that he contributed to Claimant's household as is possible, but had a verbal agreement to pay $300 per month in rent and had been doing so since he moved into Claimant's home. *See* Exhibit 6.

15. The evidence establishes that Claimant and Mr. Gardner have never had a formal lease agreement. Similarly, Claimant and Mr. Gardner have no formal child support, custody, or visitation agreements pertaining to JG.

16. On a 2011 Form W-4, Mr. Gardner indicated on a personal allowances worksheet that no one else could claim him as a dependent and that he would file as head of household on his tax return. The worksheet indicates to add lines A-G and then enter them onto the withholding allowance certificate. Mr. Gardener did not add together the allowances for himself and for head of household (which would have equaled 2) and he left the line blank. On his Employee's Withholding Allowance Certificate, which he signed on February 16, 2011 he listed himself as single and listed his total claimed allowances as 1. Mr. Gardner testified at hearing that he files as head of household on his tax returns and has since JG was born. Mr. Gardner lists JG as his only dependent and does not file joint tax returns with Claimant. Mr. Gardner has a tax preparer prepare his returns and he has never been explained what head of household means. *See* Exhibit E.

17. On June 15, 2015 Respondents conducted a "widow check" of Claimant at Claimant's home. Claimant indicated that she had not re-married and had no plans to do so. Claimant indicated that Mr. Gardner was her boyfriend and that they had a child in common. Claimant's marital status was listed as widowed, she was listed as having two dependents one by decedent, and it was listed that Claimant and two children AO and JG

lived in the home. Claimant listed Mr. Gardner (boyfriend) as an emergency contact and listed his contact information. *See* Exhibit C.

18. On February 15, 2017 Respondents conducted another "widow check" of Claimant at Claimant's home. Claimant indicated to the investigator that she had not re-married and had no plans to do so. Claimant reported that Mr. Gardner still remained her boyfriend and that they had a child in common. In the investigative report, Claimant was listed as having two dependents, one by the decedent. The occupants living in the home were listed as Claimant and two children, AO and JG. Claimant provided her sister's information as an emergency contact. The investigator indicated that he had Claimant sign an affidavit in his presence while in the home. The affidavit signed by Claimant includes a statement that she was not engaged in cohabitation and had not remarried since the passing of her husband. *See* Exhibits 7, C.

19. Claimant testified at hearing that she and Mr. Gardner have an open relationship and that she sometimes considers him as her boyfriend, but does not consider him to be her husband. She testified that they co-parent JG. Claimant testified that she told the investigators who came in 2015 and in 2017 that Mr. Gardner was her boyfriend and that he lived at the house.

20. Claimant has an 11th grade education, has not obtained her GED, and is not advanced at reading and writing. Claimant testified that the statement she signed indicating that she was not re-married or co-habitating was put in front of her by the investigator who said by signing she was stating that she was not married or in a co-marriage and that she signed it. Claimant testified that if she knew that document was so important she would have had a lawyer before signing.

21. Claimant also testified that her mortgage payment was approximately $1,100 per month and that Mr. Gardner paid her $300 per month in rent. Claimant also testified that she pays the utility, cable, water, and trash bills. Claimant testified that Mr. Gardner filed bankruptcy and that she was listed as a creditor for a lease agreement through August of 2017.

22. Claimant testified that she has not held herself out as married to Mr. Gardner, has no joint property, that her car is registered in her name only, and that she has no joint bank accounts or credit cards.

23. Mr. Gardner testified at hearing. He testified that he was ordered by a bankruptcy court in 2015 to pay Claimant rent at $500 per month until August of 2017. He testified that before the bankruptcy court order, he paid rent and helped out but was sporadic. He testified that he tried to pay $300 per month. He testified that he paid Claimant $500 per month for two years due to the bankruptcy order, but now pays Claimant $300 per month again.

24. Mr. Gardner testified that Claimant is more than just a friend, and that he sometimes considers Claimant as a girlfriend, but that he also considers her to be a

roommate. Mr. Gardner testified that he likes to come and go as he wants, and doesn't want to have to explain things to Claimant.

25. Mr. Gardner testified that he never told anyone that he was married to Claimant or held himself out as married nor did he hold himself out as married on social media.

26. Claimant and Mr. Gardner are found credible and persuasive that they have no intent to be married or have a relationship beyond that of boyfriend/girlfriend (sometimes and with an open relationship), co-parents, and roommates. Although this relationship is somewhat unusual, there is no agreement or intent between them to be married nor is there any evidence they have held themselves out to the public as being married couple.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Common Law Marriage

Claimant current receives death benefits as the widow of Gabriel Ortega. Under the Act, death benefits shall be paid to her as a dependent widow for life or until remarriage. *See* § 8-42-120, C.R.S. Respondents contend that Claimant has re-married such to allow them to terminate death benefits and argue that Claimant and Mr. Gardner are in a common law marriage.

The existence of a common law marriage "is established by the mutual consent or agreement of the parties to be husband and wife, followed by a mutual and open assumption of a marital relationship." *People v. Lucero*, 747 P.2d 660, 663 (Colo. 1987). The "agreement" of the parties to be married need not be expressed in words but may be "tacitly expressed." *Id.* at 664. Where the existence of an agreement is disputed the agreement may be inferred from "evidence of cohabitation and general repute." *Id.* at 664. The two most important factors demonstrating the parties' agreement to be married are "cohabitation and a general understanding or reputation among persons in the community in which the couple lives that the parties hold themselves out as husband and wife." *Id.* at 665. Moreover, the parties' agreement to be married may be evidenced by "any form of evidence that openly manifests the intention of the parties that their relationship is that of husband and wife." *Id*. at 665. Numerous "behaviors" may be considered as evidence of the parties' intention, but none is determinative.

Ultimately the question of whether a party has established the existence of a common law marriage is one of fact for determination by the ALJ. *Sutphin v. Pinnacol Assurance*, WC 4-815-042-04 (ICAO September 9, 2014). Resolution of the issue turns on issues of fact and credibility.

Claimant and Mr. Gardner did not engage in conduct indicating an agreement to be married. There was no evidence they referred to each other as husband and wife or held themselves out publicly to neighbors, family, friends, or on social media as a married couple. There is an absence of any jointly held property, joint banking accounts, joint credit cards, or joint tax returns. Claimant does not refer to herself using Mr. Gardner's surname.

The ALJ acknowledges that Claimant and Mr. Gardner have a non-conventional relationship in that they have a child together, live in the same home, and sometimes consider one another to be boyfriend/girlfriend. However, it is credible that Mr. Gardner likes to come and go as he pleases and does not like to have to explain himself to Claimant. While non-conventional, many non-conventional relationships exist that do not qualify as common law marriages. Neither Claimant nor Mr. Gardner indicate any intent to be married to one another nor have they held themselves out as married. They co-parent, they live in the same house, they share some duties of the house, and they drive each other's cars. However, they have not agreed to be married, have not tacitly

expressed an agreement to be married, have not held themselves out as married, and do not have a general repute of a married couple. The two most important factors in determining whether a couple is engaged in a common law marriage are cohabitation and reputation among persons in the community that the parties hold themselves out as married. Here, although Claimant and Mr. Gardner live in the same home there is insufficient evidence indicating that they have ever held themselves out as married. The weight of the credible and persuasive evidence establishes that no common law marriage exists at this time between Claimant and Mr. Gardner. Respondents have failed to meet their burden.

ORDER

It is therefore ordered that:

1. Respondents' request to terminate Claimant's dependent widow death benefits due to re-marriage is denied and dismissed. Claimant has not re-married and is not, at this time, in a common law marriage.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant has established by a preponderance of the evidence that the request for a right palm, ring and small finger DeQuervain's release by David Conyers, M.D. is reasonable, necessary and causally related to his admitted April 17, 2016 industrial injury.

FINDINGS OF FACT

1. Claimant worked as a Security Officer for Employer. On April 17, 2016 he suffered an admitted industrial injury to his right hand/thumb while at work when he slipped on ice in a parking lot.

2. On April 21, 2016 Claimant visited David Conyers, M.D. for an examination. On April 22, 2016 Dr. Conyers requested authorization from Respondent to perform a closed reduction and percutaneous pinning, fluoroscopic reduction and K-wire fixation of the right thumb metacarpal base fracture.

3. On May 3, 2016 Dr. Conyers performed a fluoroscopic reduction percutaneous K-wire fixation of the right thumb metacarpal base fracture with intra-articular involvement.

4. On May 9, 2016 Respondent filed a General Admission of Liability (GAL). The GAL acknowledged that Claimant was entitled to receive Temporary Total Disability (TTD) benefits beginning April 20, 2016. Claimant subsequently remained off work and received TTD benefits for the period April 20, 2016 through September 14, 2016.

5. On September 13, 2016 Claimant visited Authorized Treating Physician (ATP) Lynne Fernandez, M.D. for an examination. Dr. Fernandez released Claimant to full duty employment with no restrictions. Claimant returned to work for Employer on September 15, 2016.

6. On December 7, 2016 Claimant returned to Dr. Fernandez for an evaluation. An electrodiagnostic study revealed moderate to severe right carpal tunnel syndrome.

7. On January 17, 2017 Dr. Conyers performed an open right carpal tunnel release. He also administered an injection to the right cubital tunnel. Respondent authorized the procedures.

8. On January 27, 2017 Respondent filed a new GAL. The GAL acknowledged that Claimant was entitled to receive TTD benefits for the period January 15, 2017 until April 19, 2017 because he was unable to work.

9. On March 28, 2017 Claimant returned to Dr. Fernandez for an examination. Claimant reported that "he woke up yesterday with pain on the radial aspect of his right wrist." He commented that he was not sure what happened and speculated that he might have slept on it wrong. Dr. Fernandez listed radial wrist pain as a new onset beginning March 27, 2017.

10. On April 19, 2017 Respondent received a request from Dr. Conyers to perform a right long and small finger trigger release as well as a right wrist first dorsal compartment release on Claimant. Prior to responding to the request for authorization Respondent submitted medical records to Thomas Mordick, II, M.D. for review. Dr. Mordick issued a response on April 25, 2017 in which he concluded that only the trigger of the long finger was related to Claimant's April 17, 2016 work accident.

11. On April 27, 2017 Respondent sent a letter to Dr. Conyers informing him that the request for authorization for a small finger trigger release and a right wrist first dorsal compartment release had been denied. However, Respondent approved Dr. Conyers' request for a trigger release of the long finger. Nevertheless, surgery for a trigger release of the long finger was never scheduled.

12. On April 20, 2017 Claimant returned to work for Employer. Claimant has continued to work full-time with no reported physical issues or complaints.

13. On June 16, 2017 Claimant again visited Dr. Conyers for an examination. He reported right wrist pain. Dr. Conyers requested authorization for a right palm, ring and small finger DeQuervain's release. The request noted that the proposed surgery was scheduled for June 27, 2017.

14. Respondent subsequently submitted medical records to Dr. Mordick to review the surgical request. On June 24, 2017 Dr. Mordick issued a response. He concluded that nothing in the additional medical records contradicted his previous opinion that the requested right palm, ring and small finger DeQuervain's release was unrelated to Claimant's April 17, 2016 industrial injury.

15. On August 4, 2017 Dr. Mordick conducted an independent medical examination of Claimant. He recounted that Claimant fractured his right thumb during a work accident on April 17, 2016. After undergoing thumb surgery Claimant remarked that he continued to suffer numbness on the dorsal forearm, wrist and radial aspect of the hand. Claimant also reported that his right long finger began to bother him in September 2016 and his right small finger discomfort began in November 2016. He noted that he underwent a carpal tunnel release in January 2017 for his April 17, 2016 industrial injury.

16. After conducting a physical examination and reviewing Claimant's medical records Dr. Mordick summarized that Claimant's DeQuervain's tendinitis did not arise until late March 2017 and is thus unrelated to his April 17, 2016 industrial injury. Dr. Mordick noted that two providers stated the time of onset occurred around March 2017 despite Claimant's assertion that his wrist has been bothering him since August 2016. Additionally, Dr. Mordick determined that Claimant exhibited objective findings consistent

with trigger of the right long and small fingers. However, although Claimant maintained that his complaints about the trigger on the right small finger began in November 2016, the medical records reveal that the complaints did not begin until March 2017. Dr. Mordick noted that in either event the symptoms were unrelated to the April 17, 2016 work accident. He acknowledged that the symptoms of the trigger of the long finger were related to Claimant's industrial accident. Dr. Mordick summarized that Claimant is predisposed to stenosing tenosynovitis because of his diabetes.

17. On September 26, 2017 Respondent sent Dr. Fernandez copies of Dr. Mordick's record reviews and independent medical examination report. Respondent sought Dr. Fernandez' opinion regarding the relatedness of Dr. Conyer's surgical request to Claimant's April 17, 2016 industrial accident. On October 4, 2017 Dr. Fernandez responded that she agreed with Dr. Mordick's analysis. The small finger trigger release and DeQuervain's tendonitis were unrelated to Claimant's admitted industrial injury. She summarized that she "agreed with [Dr. Mordick's] findings and recommendations."

18. Dr. Mordick testified at the hearing in this matter. He maintained that Claimant's DeQuervain's tendonitis was unrelated to his April 17, 2016 work accident. He remarked that the right wrist pain began almost one year after the industrial incident. Moreover, Dr. Mordick commented that Claimant's need for a small finger trigger release was not caused by the work accident because the triggering did not begin until November 2016. Finally, Claimant's ring finger simply lacked any triggering issues. Dr. Mordick summarized that Dr. Conyers' request for a right palm, ring and small finger DeQuervain's release is not causally related to Claimant's admitted April 17, 2016 industrial injury.

19. Claimant has failed to establish that it is more probably true than not that the request for a right palm, ring and small finger DeQuervain's release by Dr. Conyers is reasonable, necessary and causally related to his admitted April 17, 2016 industrial injury. Initially, Claimant injured his right hand/thumb while at work when he slipped on ice in a parking lot. Claimant subsequently underwent two authorized surgeries to address his right hand/thumb symptoms. However, the medical records and persuasive opinions of Dr. Mordick demonstrate that the need for a right palm, ring and small finger DeQuervain's release is not causally related to Claimant's admitted industrial injury.

20. Following the initial May 3, 2016 surgery to repair a thumb fracture, Claimant returned to work on September 15, 2016. After complaints about pain in his right hand, Claimant underwent another surgery performed by Dr. Conyers on January 17, 2017. The medical records and history of treatment demonstrate that Drs. Fernandez and Conyers addressed Claimant's symptoms and pain complaints. However, Claimant did not mention any right wrist or small finger symptoms until well after his April 17, 2016 work injury. More specifically, the medical records do not reflect that Claimant suffered right small finger triggering until at least November 2016. Claimant also did not mention right wrist pain until March 27, 2017.

21. After conducting two medical record reviews and an independent medical examination, Dr. Mordick concluded that Dr. Conyers' request for a right palm, ring and small finger DeQuervain's release was not causally related to Claimant's admitted April

17, 2016 industrial injury. Considering the temporal delay in Claimant's development of symptoms, Dr. Mordick reasoned that his DeQuervain's tendinitis did not arise until late March 2017. Furthermore, Dr. Mordick noted that two providers stated the time of onset was around March 2017 despite Claimant's assertion that his wrist had been bothering him since August 2016. Additionally, Dr. Mordick determined that Claimant exhibited objective findings consistent with trigger of the right long and small fingers. However, although Claimant maintained that his complaints about the trigger on the right small finger began in November 2016, the medical records reveal that the complaints did not begin until March 2017. Dr. Mordick noted that, in either event, the symptoms were unrelated to the April 17, 2016 work accident. Finally, Dr. Fernandez agreed with Dr. Mordick's analysis. The small finger trigger release and DeQuervain's tendonitis were unrelated to Claimant's admitted industrial injury. Accordingly, Claimant's April 17, 2016 industrial accident did not cause, aggravate or accelerate his pre-existing condition to produce a need for surgical intervention in the form of a right palm, ring and small finger DeQuervain's release.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment

aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has failed to establish by a preponderance of the evidence that the request for a right palm, ring and small finger DeQuervain's release by Dr. Conyers is reasonable, necessary and causally related to his admitted April 17, 2016 industrial injury. Initially, Claimant injured his right hand/thumb while at work when he slipped on ice in a parking lot. Claimant subsequently underwent two authorized surgeries to address his right hand/thumb symptoms. However, the medical records and persuasive opinions of Dr. Mordick demonstrate that the need for a right palm, ring and small finger DeQuervain's release is not causally related to Claimant's admitted industrial injury.

6. As found, following the initial May 3, 2016 surgery to repair a thumb fracture, Claimant returned to work on September 15, 2016. After complaints about pain in his right hand, Claimant underwent another surgery performed by Dr. Conyers on January 17, 2017. The medical records and history of treatment demonstrate that Drs. Fernandez and Conyers addressed Claimant's symptoms and pain complaints. However, Claimant did not mention any right wrist or small finger symptoms until well after his April 17, 2016 work injury. More specifically, the medical records do not reflect that Claimant suffered right small finger triggering until at least November 2016. Claimant also did not mention right wrist pain until March 27, 2017.

7. As found, after conducting two medical record reviews and an independent medical examination, Dr. Mordick concluded that Dr. Conyers' request for a right palm, ring and small finger DeQuervain's release was not causally related to Claimant's admitted April 17, 2016 industrial injury. Considering the temporal delay in Claimant's development of symptoms, Dr. Mordick reasoned that his DeQuervain's tendinitis did not arise until late March 2017. Furthermore, Dr. Mordick noted that two providers stated the time of onset was around March 2017 despite Claimant's assertion that his wrist had been bothering him since August 2016. Additionally, Dr. Mordick determined that Claimant exhibited objective findings consistent with trigger of the right long and small fingers. However, although Claimant maintained that his complaints about the trigger on the right small finger began in November 2016, the medical records reveal that the complaints did not begin until March 2017. Dr. Mordick noted that, in either event, the symptoms were unrelated to the April 17, 2016 work accident. Finally, Dr. Fernandez agreed with Dr. Mordick's analysis. The small finger trigger release and DeQuervain's tendonitis were unrelated to Claimant's admitted industrial injury. Accordingly, Claimant's April 17, 2016 industrial accident did not cause, aggravate or accelerate his pre-existing condition to produce a need for surgical intervention in the form of a right palm, ring and small finger DeQuervain's release.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a right palm, ring and small finger DeQuervain's release is denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that medications prescribed by Dr. Ellen Price, including Wellbutrin (bupropion), Lunesta, and Belsomra are reasonable and necessary to maintain claimant at maximum medical improvement (MMI).

- At hearing, respondents stated that claimant's use of Nucynta has been authorized and agreed to reimburse claimant for any out of pocket expenses he incurred for Nucynta.

FINDINGS OF FACT

1. Claimant was employed with employer as an underground miner. On March 9, 2008, claimant suffered an admitted injury to his left ankle. Since that injury claimant has undergone two surgeries to his left ankle and a spinal cord stimulator trial. Dr. Ellen Price is claimant's authorized treating physician (ATP).

2. On March 9, 2016, Dr. Price determined that claimant had reached MMI and assessed a permanent impairment rating of 31% whole person. At that time, Dr. Price opined that claimant would need ongoing maintenance medical treatment including prescription medications, physical therapy, and "MTB shoes".

3. Claimant has been diagnosed with complex regional pain syndrome (CRPS). Claimant testified that his current CRPS symptoms include shocking and burning sensations in his left leg and foot as well as discoloration in his lower leg and foot. Claimant testified that he has difficulty walking and the pain in his leg affects his ability to sleep.

4. To address claimant's sleep issues, Dr. Price has prescribed various sleep aides beginning with Ambien on June 7, 2010. Dr. Price first prescribed Lunesta to claimant on September 5, 2013. Claimant reported to Dr. Price that he was sleeping better with Lunesta. Dr. Price has also prescribed the sleep aide Belsomra to claimant. However, on March 6, 2017, Dr. Price noted that Lunesta worked better than Belsomra in treating claimant's sleep issues.

5. Claimant testified that if he does not take a sleep aide, like Lunesta, he will have little or no sleep. This lack of sleep increases claimant's pain levels. Claimant testified that prior to the March 9, 2008 work injury he did not have difficulty sleeping and did not take a sleep aide.

6. Dr. Price has also prescribed Wellbutrin (bupropion) for claimant. Claimant testified that when he takes the Wellbutrin in combination with Nucynta, he is able to better manage his pain. Based upon the medical records entered into evidence, Dr. Price first prescribed Wellbutrin to claimant on June 7, 2012.

7. On January 11, 2016, Dr. Bart Olash reviewed the relatedness of claimant's various prescription medications, including Wellbutrin (bupropion) and Lunesta. Dr. Olash opined that bupropion is prescribed for the treatment of depression, cigarette cessation, seasonal affective disorder, and ADHD. Dr. Olash indicated in his report that bupropion is not used to treat chronic pain. Dr. Olash also opined that sleep aides such as Lunesta are not related to claimant's work injury. In support of this opinion Dr. Olash noted that there was "no clear documentation" that claimant suffers from "sleep abnormalities". Based upon Dr. Olash's opinion, respondents have denied the prescriptions for Wellbutrin, Lunesta, and Belsomra.

8. Dr. Price testified by deposition and stated that it is her opinion that claimant's use of Wellbutrin (bupropion), Lunesta, and Belsomra are related to claimant's March 9, 2008 work injury. Dr. Price credibly testified that although bupropion is an anti-depressant, it is commonly prescribed to treat chronic pain.

9. The ALJ credits claimant's testimony and the opinion of Dr. Price and finds that claimant has demonstrated that it is more likely than not that his difficulty sleeping is caused by his March 9, 2008 injury and related CRPS diagnosis. Therefore, the ALJ finds that claimant has demonstrated that it is more likely than not that sleep aides, including Lunesta and Belsomra, are necessary to maintain claimant at MMI.

10. The ALJ credits claimant's testimony and the opinion of Dr. Price over the conflicting opinion of Dr. Olash and finds that claimant has demonstrated that it is more likely than not that claimant uses Wellbutrin (bupropion) to treat his chronic pain and CRPS symptoms. Therefore, the ALJ finds that claimant has demonstrated that it is more likely than not that the continued use of Wellbutrin (bupropion) is necessary to maintain claimant as MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., (2016). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

6. As found, claimant has demonstrated by a preponderance of the evidence that the prescription medications Wellbutrin (bupropion), Lunesta, and Belsomra, are reasonable medication treatment necessary to maintain claimant at maximum medical improvement (MMI). As found, claimant's testimony and the opinion of Dr. Price are credible and persuasive.

ORDER

It is therefore ordered that:

1. Respondents shall pay for claimant's maintenance medical treatment including the prescription medications Wellbutrin (bupropion), Lunesta, and Belsomra.

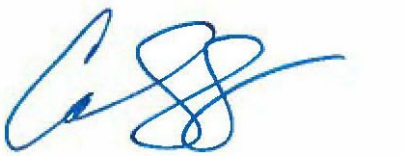
2. To the extent that claimant has paid out of pocket for the prescription medications Wellbutrin (bupropion), Lunesta, and Belsomra, respondents shall reimburse claimant for those expenses.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: November 16, 2017



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, CO 81501

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable work related occupational disease to her bilateral upper extremities.

FINDINGS OF FACT

1. Claimant works for Employer as a housekeeper and began working for Employer in approximately April of 2016. *See* Exhibit H.

2. Claimant works, on average, approximately 35 hours per week. On a daily basis she cleans 10 apartments per day including vacuuming, cleaning bathrooms, taking out trash, changing linens, dusting, and other general cleaning activities.

3. On November 8, 2016 Claimant was evaluated by her primary care physician, Julia Cuervo, M.D. Claimant reported right medial arm pain that began five weeks ago, and left arm pain that began two weeks ago and that she felt like she had needles in her medial elbows and her hands/fingers felt like she had gloves on due to the numbness. On examination, Dr. Cuervo noted tenderness at the right elbow over the medial epicondyle and lateral epicondyle as well as tenderness at the medial epicondyle on the left elbow. Dr. Cuervo assessed golfers elbow of the left upper extremity, and golfers elbow of the right upper extremity. Dr. Cuervo noted that Claimant would contact her employer since this would likely need to be filed under workman's comp. *See* Exhibit F.

4. On November 11, 2016 Claimant was evaluated at Concentra by Cynthia Goacher, M.D. Claimant reported right elbow pain in the lateral and medial epicondyle that started five weeks ago and that was constant and worsening with swelling. Claimant also reported that her left elbow started to have the same pain three weeks ago. Claimant reported that vacuuming, cleaning kitchens, and cleaning bathrooms caused increasing pain. Claimant reported no known injury. On examination, Dr. Goacher noted swelling in the lateral epicondyle, pain with resisted wrist pronation, pain with resisted wrist extension, pain with resisted wrist flexion, and pain with resisted wrist supination. Dr. Goacher also found swelling in the medial epicondylitis. Dr. Goacher assessed medial epicondylitis of both elbows and lateral epicondylitis of both elbows. Dr. Goacher referred Claimant to physical therapy and ordered a work site evaluation to evaluate for repetitive trauma guidelines. Dr. Goacher noted that a worksite evaluation would be done and would determine whether this fit a workers comp injury. *See* Exhibit C.

5. On December 9, 2016 a physical demands analysis and risk factor assessment evaluation was performed at Employer's location by Sara Nowotny. Claimant was not working at the time of the evaluation so another worker was interviewed and observed performing the work duties associated with the position of housekeeper. The description of the job included: cleaning 10 residential rooms per day (20-30 minutes per apartment); cleaning bathrooms, bedrooms, and kitchens; performing rotation cleaning to include high dusting, cleaning hard furniture, cleaning windows, or vacuuming furniture; wiping down sinks, showers, counters, microwave, and mirrors; removing trash and changing linens weekly; sweeping and mopping vinyl areas and vacuuming carpet. Ms. Nowotny opined after a direct interview and observation of the job tasks and working environment that Claimant's job duties had no primary or secondary risk factors. *See* Exhibit B.

6. On January 18, 2017 Claimant was evaluated at Concentra by Felix Meza, M.D. It was noted that the pathophysiology of the diagnosis was discussed with Claimant along with the physical demands analysis and risk factor assessment evaluation. Given the evaluation, Claimant was referred to her primary care provider for continued care. Dr. Meza noted that Claimant may need an orthopedic evaluation given the stagnation of progress and he opined that given her symptoms and physical examination, continued work restrictions were recommended. The assessment was: lateral epicondylitis of both elbows; medial epicondylitis of both elbows; and mild carpal tunnel syndrome, right. Dr. Meza noted that Claimant was released from care and referred to her primary care provider as the work site evaluation concluded that Claimant's work activities did not meet the criteria for workers' compensation. *See* Exhibit C.

7. On January 20, 2017 Claimant was evaluated by Dr. Cuervo. Claimant reported that she had been seen at Concentra and underwent 8 physical therapy sessions and bilateral elbow injections. Claimant reported continued symptoms and pain and that she had been dropping even light objects. Claimant reported that Concentra found it non work related and requested she see her primary care provider for an orthopedic referral. On examination, Dr. Cuervo found tenderness to palpation over the right medial epicondyle and tenderness to palpation over the right medial and lateral epicondyles. Claimant was diagnosed with left tennis elbow, golfer's elbow of the right upper extremity, and right carpal tunnel syndrome. Claimant was referred to Front Range Orthopedics for evaluation. *See* Exhibit F.

8. On February 5, 2017 Claimant underwent an independent medical evaluation performed by John Burris, M.D. Claimant reported to Dr. Burris that she had bilateral upper extremity pain and that she had the insidious onset of pain several weeks prior to her report of injury. Claimant reported no specific event that precipitated her symptoms but that she initially had pain in her right elbow that then extended into her right hand with a feeling of needle sensation and stiffness in her fingers. Claimant reported that as time went on, the pan extended up her right arm to her shoulder. Claimant reported that she began using her left arm more because of the right arm pain and that then she developed similar symptoms in her left arm. Claimant reported that she believed

the pains were associated with her work activities as a housekeeper, where she cleans 10 apartments per day doing vacuuming, mopping, and sweeping. *See* Exhibit A.

9. Claimant reported treatment that included elbow arm bands, physical therapy, and cortisone injections to her elbows. Claimant reported the treatment had no benefit. Claimant reported continued pain of 8/10 worsened with movements of her arms and forcefully grasping items. Claimant reported that she had no symptoms before September of 2016. Dr. Burris reviewed medical records and performed a physical examination. Dr. Burris assessed subjective complaints of bilateral upper extremity pain. Dr. Burris opined that Claimant's subjective complaints at the IME were non physiologic with a glove type distribution and a benign examination with no objective findings. Dr. Burris opined that significant psychosomatic overlay was present likely contributing to Claimant's symptom maintenance. *See* Exhibit A.

10. Dr. Burris opined that because there was no acute event, it had to be determined if Claimant met the criteria for a cumulative trauma disorder as defined by the medical treatment guidelines. He noted that the jobsite analysis did not identify any primary or secondary risk factors associated with Claimant's jobsite or her work activities. Dr. Burris also opined that there was no temporal association between the time at the jobsite and Claimant's symptoms. Dr. Burris opined that according to the Division of Workers' Compensation, Claimant's subjective complaints cannot be causally related to her workplace. Dr. Burris opined that Claimant's exact diagnosis, with diffuse complaints and no objective findings, was unclear but that the complaints were not work related and that there were no workplace risk factors identified related to any upper extremity cumulative trauma diagnosis. *See* Exhibit A.

11. In March of 2017 Claimant was evaluated by Dr. Cuervo. Claimant reported that she had attempted to schedule an appointment with orthopedics, but was told nothing was available until August. Dr. Cuervo then referred Claimant to Orthopedics Dr. Jani. Claimant was still reporting pain in both upper arms with numbness and tingling of her fingers that went up to the nape of her neck bilaterally. *See* Exhibit F.

12. On April 5, 2017 Claimant was evaluated by Sunif Jani, M.D. Claimant reported right greater than left medial and lateral elbow pain, forearm pain, and hand pain that radiated into all fingers. Claimant reported injections into both elbows had only helped with mild improvement for six weeks and that now her symptoms were getting worse. Claimant reported numbness/tingling from her neck down through both shoulders, elbows, and into both hands. Dr. Jani found positive cervical testing indicating bilateral upper extremity radiculopathy and found circumferential pain and tenderness at the elbows, forearms, wrists, and hands with weakness of the hands/wrists/elbows. Dr. Jani found positive spurlings and positive augmented spurlings. X-rays of the elbows showed minimal degenerative spurring change from the coronoid process of the ulna on the left, and negative unremarkable on the right. Dr. Jani opined that Claimant needed an evaluation and possible referral to a spine specialist and/or to physical therapy for bilateral cervical radiculopathy. *See* Exhibit E.

13. On April 11, 2017 Claimant was evaluated by Dr. Cuervo. Claimant reported that she saw orthopedics Dr. Jani and that she was told that her arm pain was stemming from her neck. Dr. Cuervo noted that the clinic note indicated Claimant had cervical radiculopathy and needed evaluation with possible referral to physical therapy or a spine specialist. Dr. Cuervo noted that a cervical MRI would be ordered and referred Claimant to neurologist Dr. Gill. *See* Exhibit F.

14. On May 9, 2017 Claimant underwent an MRI of her cervical spine. The impression provided was: mild canal stenosis at C4-5 with a small borad based disc and bony oteophytes with no significant effect on the cord. At C4-5 there was severe left foraminal stenosis. *See* Exhibit G.

15. On June 1, 2017 Claimant was evaluated by Kristi Gill, D.O. Claimant reported the onset of pain in her right elbow followed by similar symptoms in her left arm with gradual worsening that involved tingling in both hands and tingling in both upper arms. Dr. Gill noted that examination was made difficult by give way weakness throughout, but doubted there was any severe true weakness. Dr. Gill noted some sensory changes with relative diminished sensation of the first digit on the left and fourth and fifth digits on the right. Dr. Gill noted that if the cervical MRI was negative for any significant stenosis, the symptoms could be related to focal entrapment neuropathy, ulnar neuropathy, and/or median mono-neuropathy at the wrist. Dr. Gill ordered EMGS of both upper extremities. *See* Exhibit D.

16. On June 9, 2017 Claimant underwent nerve conduction studies on her bilateral upper extremities. The findings included prolonged right medial mid palmar sensory response distal latency both relatively and absolutely with reduced amplitude and a slowing of conduction velocity of the left ulnar nerve across the elbow. Dr. Gill concluded that there was electro-diagnostic evidence of ulnar neuropathy at the left elbow and median mono-neuropathy at the right wrist of mild to moderate severity. *See* Exhibit D.

17. Dr. Gill noted that the studies had revealed ulnar neuropathy at the right elbow and mild to moderate right carpal tunnel syndrome. Dr. Gill recommended wearing splints and physical therapy. Dr. Gill reviewed Claimant's cervical MRI and noted evidence of severe neural foraminal narrowing on the left at C4-5 and recommended that Claimant be referred for cervical epidural steroid injections to address the left sided neural foraminal stenosis. *See* Exhibit D.

18. In this case, after receiving a report of injury, Respondents filed a notice of contest. Claimant initially filed an application for hearing on the issue of compensability. The matter was set for hearing in May of 2017. Prior to hearing, a pre-hearing was set and at pre-hearing, an ALJ ordered Claimant to respond to interrogatories and ordered that the scheduled hearing be continued. The hearing was not reset. As it was not reset, Respondents filed an application for hearing on June 19, 2017 which caused this hearing to be set. Claimant did not respond or argue "ripeness" until the start of this hearing.

19. The undersigned ALJ allowed the hearing to proceed. Claimant did not present any evidence or testimony at hearing.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury.

Singleton v. Kenya Corp., 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet her burden to establish by a preponderance of the evidence that she sustained a work related occupational disease to her bilateral upper extremities. The credible and persuasive evidence presented at hearing establishes that Claimant's normal job duties contain zero primary and zero secondary risk factors for the development of an occupational disease. Claimant failed to present any testimony or evidence contrary to the job duties and physical demands analysis and risk factor assessment evaluation completed by Ms. Nowotny. The evaluation appears to be a thorough representation of the actual duties of the housekeeper position. Additionally, as found above, both the authorized treating provider and Dr. Burris opined that Claimant did not have a work related occupational disease. Further, medical opinions indicate that Claimant's symptoms on the left may be due to severe foraminal narrowing at C4-5 as opposed to an occupational disease of her left upper extremity. Claimant has not established that her employment caused, intensified, or aggravated her bilateral upper extremity conditions or symptoms.

Ripeness

Claimant also argued at hearing that the issue of compensability was not ripe for hearing because Claimant was not sure whether or not she wanted to pursue a claim. Claimant also argued that the issue of compensability was premature as Claimant did not know whether she sustained an occupational injury or whether the symptoms were coming from a different source or her neck. The undersigned ALJ allowed the hearing to proceed. The ALJ concludes that there was no legal impediment to going forward on a hearing regarding the issue of compensability, even though it was Respondents' application for hearing. The issue of compensability is and was ripe and fit for adjudication. The alleged onset of the occupational disease was more than one year prior to the date of hearing. Claimant has seen numerous physicians and a job site evaluation has been performed. Although unusual for Respondents to apply on compensability, under the Act any party may request a hearing on issues ripe for

adjudication by filing an application for hearing. *See* § 8-43-211(2)(b), C.R.S. Here, the issue of compensability is ripe.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work injury occupational disease to her bilateral upper extremities.

2. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 20, 2017,

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief, erroneously labeled as Proposed Findings of Fact, Conclusions of Law and Order, was filed on November 13, 2017. Respondents' answer brief, erroneously labeled as Respondents' Proposed Findings…was filed on November 17, 2017. The Claimant waived the prerogative of filing a reply brief. Consequently, the matter was submitted for decision on November 17, 2017.

ISSUES

The issues to be determined by this decision concern compensability of an alleged occupational disease, a hearing loss; medical benefits, and a statute of limitations defense by Respondents.

The Claimant bears the burden of proof, by a preponderance of the evidence regarding compensability.

Respondents bear the burden of proof, by a preponderance of the evidence, on the issue of statute of limitations.

Because the ALJ hereby determines in this decision that the Claimant did not sustain a compensable hearing loss with a date of alleged last injurious exposure of March 15, 2016, resolution of all other designated issues is moot.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant has been employed by the Employer for approximately 36 1/2 years. He began employment as an operator. Thereafter, he became a network technician, approximately 15 years ago, or in 2002.

2. As part of his position as a network technician, the Claimant would use an air tool to remove bolts on telecommunication cases in manholes. He estimated that it would take 2-3 minutes to remove the bolts on the cases, and the same amount of time to replace the bolts, thereby making his average time in the manhole about 4-6 minutes.

3. The Claimant has not worked as a network technician, in manholes with the air tool for approximately 5 years, making his last exposure to the source of his alleged claim sometime in 2012.

Exposures

4. During the 10 year-period that the Claimant was working as a network technician, he removed and replaced the bolts on cases approximately 1,000 times, or 100 times per year. The ALJ calculates that there are approximately 300 work days during a year, discounting weekends, holidays and vacations. This means that the Claimant was performing the task approximately once every 3 working days for about 6 minutes per day. This equates to about 30-40 uses of the air wrench per average work day.

5. The Claimant has participated in indoor-range firearms shooting prior to the date of his alleged occupational disease in this matter. He shot 9mm pistols in indoor, not outdoor, ranges, prior to his employment with Cabela's, which began in 2013. From June 2013 to June 2015, the Claimant shot pistols, and sometimes rifles, in an indoor range on a quarterly basis with his Cabela's co-workers. He described shooting 9mm, .40 caliber, and .45 caliber handguns, and a .308 rifle.

6. The Claimant continued to shoot firearms subsequent to the end of his employment at Cabela's, the last time being in June 2017.

7. The records contained in the official hearing file indicate that the Claimant sought treatment and a hearing test in 2015, during the two-year period when he was engaged in shooting firearms (Respondents' Exhibit D, bates stamp 0020) ("Have you ever had a hearing test? Yes, 2012 & 2015").

8. The Claimant denied ever reporting to any medical provider that he had damaged his hearing due to firearm shooting. The ALJ, however, finds that when the Claimant specifically sought treatment in 2012 for hearing issues, he reported that he had undergone "noise" exposure in the form of an accident relating to "firearms." He also reported notice exposure from "concerts during the 1970's". (Respondents' Exhibit D, bates stamp 24).

9. The Claimant denied that he had *ever* had a referral for an ENT (Ear, Nose, Throat Specialist) prior to his appointment with Urgent Care on March 16, 2016.

10. The records document, however, that the Claimant was referred to and saw an ENT sometime in 2008, and that the Claimant was disappointed with the treatment received from the ENT (Respondents' Exhibit B, bates stamp 15, Exhibit D, bates stamp 26-27).

11. According to the Claimant, his current symptoms are that he hears "white noise" at a level 2-3 and cannot hear people talk. He relies on this to support his contention that these symptoms worsened in 2016, thereby causing him to make the connection between his employment and the condition.

12. The ALJ finds that the Claimant has not actually been in a manhole for over 5 years, and he has not been exposed to the source of noise (use of air tool) which he alleges is the cause of his condition.

13. Further, the evidence does not support the Claimant's contention that his symptoms worsened in 2016 as a result of his employment with the Employer herein. In 2012, the Claimant was reporting a "constant hissing" in his ears, and he was frequently asking people to repeat, he had difficulty following conversations involving more than 2 people, people sounded as if they mumbled or muffled, and he had difficulty hearing in restaurants. Again, the Claimant also characterized his "noise exposure" as stemming from concerts in the 70's and firearms (Respondents' Exhibit D, bates stamp 24).

14. The Claimant confirmed that he has taken for years, and is currently still taking, aspirin.

Medical Evidence--Seth Reiner, M.D. (ENT)

15. The Claimant was seen for an Independent Medical Examination (IME) by Dr. Reiner on September 18, 2017. Dr. Reiner is an ENT (Ear, Nose and throat specialist), board certified by the American Academy of Otolaryngology and in Head and Neck Surgery. He was qualified to testify as an expert witness (October 30, 2017 Depo. of Dr. Reiner, p. 5 lines 9-12).

16. Dr. Reiner reviewed the medical records, including audiograms from 2012 through 2016, as well as the audiogram he performed in his office, and took a history from the Claimant.

17. Dr. Reiner stated that when determining the cause of hearing loss, several factors must be evaluated, including noise exposure, congenital reasons, family history, medication use, trauma, age and sex. Medication usage included taking aspirin (Depo. of Dr. Reiner, p. 14, lines 9 through page 15; and, line 3). Dr. Reiner noted that taking even low-dose aspirin can cause non-occupational tinnitus (Respondents' Exhibit A, p. 4).

18. Dr. Reiner concluded that the Claimant had high frequency, non-occupational hearing loss, known as presbycusis (hearing loss due to aging) and that the audiograms supported this pattern. He noted that presbycusis is more common in males, and that the Claimant's age and onset fit with the diagnosis. He concluded that this was the most likely cause of the Claimant's hearing loss (Depo. of Dr. Reiner, p. 15, line 10 through p. 16, line 20.); Respondents Exhibit A, p. 4).

19. Dr. Reiner also identified through his review of the records and interview with the Claimant other non-occupational exposures such as concert attendance and firearm shooting. He noted the effect of firearm shooting on the inner ear with skull

vibration which can lead to hearing loss (Depo. of Dr. Reiner, p. 17, line 22 through p. 18, lines 1-14).

20. Dr. Reiner also did independent research as part of his expert opinion regarding air wrenches. He noted the range to be from 90 up to 100 decibels, the latter being for removing bolts from tires or wheels in a tire business (Depo. of Dr. Reiner, p. 19, line 20 through p. 20, lines 1-9).

21. Dr. Reiner also evaluated the Claimant's alleged noise exposure with the Employer herein as part of his opinion, and his ultimate conclusion was that the Claimant's hearing loss is due to non-occupational presbycusis. He explained from his research that it is not only the decibel level but the duration of the exposure which must be considered. He was of the opinion that based on the Claimant's report to him, the exposure was limited to short bursts of sound, lasting a few seconds, which would not be sufficient to cause hearing loss (Depo. of Reiner, p. 20, line 10 through p. 21, lines 1 through 21; and, p. 22 lines 1 through 5.).

The Claimant

22. The Claimant argues that Dr. Reiner's opinions should not be credited because he equated the air wrench to a dental drill. This is not an accurate reflection of Dr. Reiner's opinions. In fact, Dr. Reiner specifically noted that the highest decibel level for an industrial air wrench that he found during his research, was 110. Even at this level, however, he noted that only long-term chronic, consistent exposure would be dangerous in terms of hearing loss, and not the short-burst exposure related by Claimant. *Id.*

23. Further, the Claimant testified at hearing that he disagreed with Dr. Reiner because he felt the noise from using his air wrench to remove bolts from telecommunication boxes (5 years ago) was closer to the sound made by a mechanic changing a tire. Dr. Reiner actually addressed this scenario in his testimony. He noted that in his practice he had evaluated car mechanics who used much more powerful air wrenches than what was described to him by the Claimant, to remove tires. He testified that even these individuals, removing lug nuts from cars all day long, did not develop occupationally related hearing loss (Depo. of Dr. Reiner)

24. The Claimant argues that Dr. Reiner's opinion should be discredited based on his assertions about the Claimant's firearm shooting and concert attendance having an effect on his hearing loss. At hearing, the Claimant also denied that he had ever reported damaging his hearing from firearm use, and he attempted to characterize his concert going as inconsequential. Despite the Claimant's denials, the medical records in 2012 confirm that he reported to his own physician that he damage his hearing in a firearm episode, and that concerts during the 70's were "noise exposures". Therefore, the Claimant's attempt to discredit Dr. Reiner for emphasizing non-

occupational factors which are documented in the medical records “falls on deaf ALJ ears” because it is misplaced and is not persuasive.

25. The Claimant contends that the sound of the air wrench was “amplified” in the manhole. Dr. Reiner, as board certified ENT, who researched the specific issue, and is an expert with respect to occupational hearing loss, however, unequivocally concluded that the decibel level of an air wrench is *not* magnified for causation purposes simply by being in a manhole (Depo. of Dr. Reiner, p. 32, lines 15 through 19).

Claimant’s Medical Evidence—PA-C (Certified physician’s Assistant) Baker

26. Claimant asserts that the opinion of “Dr. Michelle Baker” should be credited in this matter. There is no “Dr. Michelle Baker.” The M164 cited by the Claimant is signed by Michelle Baker, PA-C. Baker is a physician’s assistant, not a medical doctor. Further, the Claimant has not submitted any records indicating that Baker’s opinion was countersigned or approved by any physician. There is no evidence in the record to support that Baker has any expertise regarding hearing loss, ENT issues, or is qualified to render an opinion helpful to the ALJ.

27. Moreover, Baker appears to have had at her disposal only the subjective report of the Claimant. She does not reference any review of prior medical records, nor does her report provide a meaningful analysis of causation. She did not examine or interpret the numerous audiology tests done over a period of years, or examine the Claimant’s medical records for contributing non-occupational factors.

28. The ALJ finds that the opinions of Dr. Reiner are more credible and persuasive than those of PA-C Baker. Dr. Reiner is a medical doctor, and a board certified ENT. He was qualified as an expert in occupational hearing loss. He reviewed and interpreted multiple audiograms pertaining to the Claimant, over a span of many years, in addition researching the literature and reviewing the Claimant’s complete medical records. The ALJ finds that his opinions are well founded and credits those opinions over the opinions of PA-C Baker.

29. The ALJ has considered Dr. Reiner’s special knowledge, training, experience and the research that he complied as part of his opinion and finds Dr. Reiner to be credible and persuasive. Dr. Reiner considered the Claimant’s available medical history, including review of audiograms spanning several years, and did research into the literature regarding causation of the injury related to the Claimant’s allegation of using an air wrench. Dr. Reiner’s conclusions that the Claimant’s hearing condition is due to non-occupational factors is persuasive and supports the ultimate fact that the Claimant’s claim is not compensable.

30. The Claimant is not alleging a distinct event occurring on his date of alleged injury, March 15, 2016. Rather, he is alleging an occupational disease

stemming from a work condition to which he was not exposed since *2012*, or over 4 years prior to the alleged date of onset.

31. The ALJ finds that although the Claimant was removed from his alleged occupational exposure almost 4 years before the date of alleged onset, he continued to shoot large caliber firearms and he has done so as late as June 2017. Dr. Reiner persuasively explained firearms shooting's (even with ear protection) effect on hearing, and this constitutes a non-occupational risk. The ALJ finds that the Claimant continued to be exposed to a non-occupational risk factors prior to the alleged alleged onset of his alleged work-related exposure in manholes while working for the Employer herein,

Statute of Limitations

32. The Claimant stated that twelve (12) years ago, he realized that at the end of his working shifts, his ears would ring.

33. When his ringing in the ears would not go away, the Claimant sought treatment with Dr. Mancuso in 2008. Claimant testified that he was told in 2008 by Dr. Mancuso that he had high-frequency hearing loss from exposure to loud noises.

34. The Claimant underwent audiology testing Dr. Mancuso in May 2012 which confirmed "severe sensorineural hearing loss, bilaterally". The Claimant reported that ringing or noises started 10 years previously with constant hissing, ringing/loudness and next to this history is "works Telecom—troubleshooting"(Respondents' Exhibit D, bates stamp 26-27). The Claimant testified that he was again told he had high frequency hearing loss.

35. The Claimant reported Tinnitus, noise exposure, hearing loss and he was recommended the curative modality of "hearing aids" in 2012. *Id.* at p. 27.

36. According to the Claimant, he knew his condition was "serious" because after he reported the condition as work related, he was sent to the authorized provider (Urgent Care) on March 16, 2016, who recommended that he see an Ear, Nose and Throat (ENT) specialist. The records confirm the referral (Respondents' Exhibit C, bates stamp 17).

37. The Claimant denied at hearing that he had *ever* had a referral for an ENT appointment, much less treatment, before his appointment with Urgent Care on March 16, 2016. His denial is contradicted by the weight of medical evidence in the record.

38. The records document that the Claimant was referred to and saw an ENT sometime in 2008, and that he was frustrated with the level of care he received. (Respondents' Exhibit B, bates stamp 15; Exhibit D, bates stamp. 26-27). In addition to

showing that the Claimant's testimony is not credible, it also reinforces the proposition that he knew his condition was "serious" by his own definition as early as 2008. Moreover, according to the Claimant's testimony, Dr. Mancuso told him in 2008 and again in 2012 that he had high frequency hearing loss due to loud noises.

39. The ALJ finds that the Claimant's own terminology is revealing. He seeks medical benefits under the workers' compensation system, based on his belief that a referral to an ENT is "serious". By this logic, he should have understood that his referral in 2008 to an ENT was equally "serious" particularly in light of his testimony that he had ringing in his ears at the end of his shifts after 2002. This is underscored by the fact that the Claimant also testified that Dr. Mancuso told him that he had "high frequency hearing loss due to loud noises" which the totality of the evidence demonstrates was based on the Claimant's report of his position with the Employer herein.

40. As a reasonable person, the Claimant knew or reasonably should have known of the serious and probable compensable nature of his hearing loss as of five years ago, when he last worked in the manholes for the Employer herein, yet he did not report a work-related hearing loss until March 16, 2016, more than three years after the statute of limitations had run.

Ultimate Findings

41. The ALJ finds the opinions of Dr. Reiner, a board certified otolaryngologist and ENT specialist, more credible and persuasive than any and all evidence to the contrary.

42. Between conflicting opinions and evidence, the ALJ makes a rational choice, based on substantial evidence, to accept the ultimate causality opinion (lack thereof) of Dr. Reiner and to reject any and all evidence to the contrary.

43. As a reasonable person, the Claimant knew or reasonably should have known of the serious and probable compensable nature of his hearing loss as of five years ago, when he last worked in the manholes for the Employer herein, yet he did not report a work-related hearing loss until March 16, 2016, more than three years after the statute of limitations had run.

44. The Claimant has failed to prove, by a preponderance of the evidence that he sustained a compensable hearing loss which resulted directly from his employment with the Employer herein or the conditions under which his work was performed, which could be seen to have followed as a natural incident of his work and as a result of the exposure occasioned by the nature of his employment, and which could be fairly traced to his employment as a proximate cause and which did not come from a hazard to which he would have been **equally** exposed outside of his employment.

45. The Respondents have proven, by a preponderance of the evidence that the Claimant reasonably should have known that his hearing loss could be work-related five years before he filed his claim, more than the period encompassed by the statute of limitations.

46. The Claimant failed to prove any circumstances that would toll the statute of limitations.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found herein above, the credibility factors weighed against the Claimant's credibility and against the credibility of PA-C Baker. The ALJ weighed the opinions of Dr. Reiner against the opinions of PA-C Baker, or any other opinion to the contrary, and found the

opinions of Dr. Reiner to be determinative of the compensability issue. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 165 Colo. 504, 441 P.2d 21 (1968); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

b. As further found, the ALJ considered Dr. Reiner's special knowledge, training, experience and the research he complied as part of his opinion and finds Dr. Reiner to be credible and persuasive. *See Young v. Burke*, *supra*. Dr. Reiner considered the Claimant's available medical history, including review of audiograms spanning several years, and did research into the literature regarding causation of the injury related to the Claimant's allegation of using an air wrench. Dr. Reiner's conclusions that the Claimant's hearing condition is due to non-occupational factors is persuasive and supports the proposition that the Claimant's claim is not compensable.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions and evidence, the ALJ made a rational choice, based on substantial evidence, to accept the ultimate causality opinion (lack thereof) of Dr. Reiner and to reject any and all evidence to the contrary.

Statute of Limitations

d. Pursuant to § 8-43-103(2), C.R.S., a claim for benefits is barred unless a formal claim is filed with the Division of Workers' Compensation within two years after an injury. The statute of limitations does not begin to run until a claimant, as a reasonable person, knows or should have known the "nature, seriousness and probable compensable character of his injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (Colo. 1967). *See, e.g., City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997); *Intermountain Rubber Industries v. Valdez,* 688 P.2d 1133 (Colo. App. 1984). As found, Respondents have proven their

affirmative defense that the Claimant reasonably should have known that his hearing loss could be work-related five years before he filed his claim, more than the period encompassed by the statute of limitations.

e. The statute of limitations is an affirmative defense, which means that the burden to prove that the claimant was aware of the seriousness and probable compensable nature of the injury or occupational disease more than two years prior to filing the claim falls on Respondents. *Atlantic & Pacific Ins. Co. v. Barnes*, 666 P.2d 163 (Colo. App. 1983); *Kersting v. Indus. Comm'n*, 567 P.2d 394 (Colo. App. 1977). This is a question of fact for resolution by an ALJ. *Indus. Comm'n v. Canfield*, 172 Colo. 18, 469 P.2d 737 (Colo. 1970). As found, Respondents have proven their affirmative defense.

f. As found, the Claimant failed to prove any tolling provisions, which are provided in § 8-43-103 (20, C.R.S., or as considered in *Likens v. Dept. of Corrs*., W.C. No. 4-560-107 [Indus. Claim Appeals Office (ICAO), Feb. 10, 2004]; or, in *Bonazzo v. J.A. Jones Const.,* W.C. No. 4-241-121 (ICAO, Sept. 24, 1998).

Compensability of Occupational Disease

g. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). As found, the Claimant failed to prove that he sustained a compensable hearing loss which resulted directly from his employment with the Employer herein or the conditions under which his work was performed, which could be seen to have followed as a natural incident of his work and as a result of the exposure occasioned by the nature of his employment, and which could be fairly traced to his employment as a proximate cause and which did not come from a hazard to which he would have been **equally** exposed outside of his employment.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury or occupational disease and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A

"preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v.Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain his burden with respect to compensability. Also, as found the Respondents sustained their burden with respect to the affirmative defense of statute of limitations.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed

DATED this_____day of November 2017.

ISSUES

The issues to be determined by this decision concern compensability of an alleged occupational disease, a hearing loss; medical benefits, and a statute of limitations defense by Respondents.

The Claimant bears the burden of proof, by a preponderance of the evidence regarding compensability.

Respondents bear the burden of proof, by a preponderance of the evidence, on the issue of statute of limitations.

Because the ALJ hereby determines in this decision that the Claimant did not sustain a compensable hearing loss with a date of alleged last injurious exposure of March 15, 2016, resolution of all other designated issues is moot.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant has been employed by the Employer for approximately 36 1/2 years. He began employment as an operator. Thereafter, he became a network technician, approximately 15 years ago, or in 2002.

2. As part of his position as a network technician, the Claimant would use an air tool to remove bolts on telecommunication cases in manholes. He estimated that it would take 2-3 minutes to remove the bolts on the cases, and the same amount of time to replace the bolts, thereby making his average time in the manhole about 4-6 minutes.

3. The Claimant has not worked as a network technician, in manholes with the air tool for approximately 5 years, making his last exposure to the source of his alleged claim sometime in 2012.

Exposures

4. During the 10 year-period that the Claimant was working as a network technician, he removed and replaced the bolts on cases approximately 1,000 times, or 100 times per year. The ALJ calculates that there are approximately 300 work days during a year, discounting weekends, holidays and vacations. This means that the Claimant was performing the task approximately once every 3 working days for about 6

minutes per day. This equates to about 30-40 uses of the air wrench per average work day.

5. The Claimant has participated in indoor-range firearms shooting prior to the date of his alleged occupational disease in this matter. He shot 9mm pistols in indoor, not outdoor, ranges, prior to his employment with Cabela's, which began in 2013. From June 2013 to June 2015, the Claimant shot pistols, and sometimes rifles, in an indoor range on a quarterly basis with his Cabela's co-workers. He described shooting 9mm, .40 caliber, and .45 caliber handguns, and a .308 rifle.

6. The Claimant continued to shoot firearms subsequent to the end of his employment at Cabela's, the last time being in June 2017.

7. The records contained in the official hearing file indicate that the Claimant sought treatment and a hearing test in 2015, during the two-year period when he was engaged in shooting firearms (Respondents' Exhibit D, bates stamp 0020) ("Have you ever had a hearing test? Yes, 2012 & 2015").

8. The Claimant denied ever reporting to any medical provider that he had damaged his hearing due to firearm shooting. The ALJ, however, finds that when the Claimant specifically sought treatment in 2012 for hearing issues, he reported that he had undergone "noise" exposure in the form of an accident relating to "firearms." He also reported notice exposure from "concerts during the 1970's". (Respondents' Exhibit D, bates stamp 24).

9. The Claimant denied that he had *ever* had a referral for an ENT (Ear, Nose, Throat Specialist) prior to his appointment with Urgent Care on March 16, 2016.

10. The records document, however, that the Claimant was referred to and saw an ENT sometime in 2008, and that the Claimant was disappointed with the treatment received from the ENT (Respondents' Exhibit B, bates stamp 15, Exhibit D, bates stamp 26-27).

11. According to the Claimant, his current symptoms are that he hears "white noise" at a level 2-3 and cannot hear people talk. He relies on this to support his contention that these symptoms worsened in 2016, thereby causing him to make the connection between his employment and the condition.

12. The ALJ finds that the Claimant has not actually been in a manhole for over 5 years, and he has not been exposed to the source of noise (use of air tool) which he alleges is the cause of his condition.

13. Further, the evidence does not support the Claimant's contention that his symptoms worsened in 2016 as a result of his employment with the Employer herein. In 2012, the Claimant was reporting a "constant hissing" in his ears, and he was frequently asking people to repeat, he had difficulty following conversations involving

more than 2 people, people sounded as if they mumbled or muffled, and he had difficulty hearing in restaurants. Again, the Claimant also characterized his "noise exposure" as stemming from concerts in the 70's and firearms (Respondents' Exhibit D, bates stamp 24).

14. The Claimant confirmed that he has taken for years, and is currently still taking, aspirin.

Medical Evidence--Seth Reiner, M.D. (ENT)

15. The Claimant was seen for an Independent Medical Examination (IME) by Dr. Reiner on September 18, 2017. Dr. Reiner is an ENT (Ear, Nose and throat specialist), board certified by the American Academy of Otolaryngology and in Head and Neck Surgery. He was qualified to testify as an expert witness (October 30, 2017 Depo. of Dr. Reiner, p. 5 lines 9-12).

16. Dr. Reiner reviewed the medical records, including audiograms from 2012 through 2016, as well as the audiogram he performed in his office, and took a history from the Claimant.

17. Dr. Reiner stated that when determining the cause of hearing loss, several factors must be evaluated, including noise exposure, congenital reasons, family history, medication use, trauma, age and sex. Medication usage included taking aspirin (Depo. of Dr. Reiner, p. 14, lines 9 through page 15; and, line 3). Dr. Reiner noted that taking even low-dose aspirin can cause non-occupational tinnitus (Respondents' Exhibit A, p. 4).

18. Dr. Reiner concluded that the Claimant had high frequency, non-occupational hearing loss, known as presbycusis (hearing loss due to aging) and that the audiograms supported this pattern. He noted that presbycusis is more common in males, and that the Claimant's age and onset fit with the diagnosis. He concluded that this was the most likely cause of the Claimant's hearing loss (Depo. of Dr. Reiner, p. 15, line 10 through p. 16, line 20.); Respondents Exhibit A, p. 4).

19. Dr. Reiner also identified through his review of the records and interview with the Claimant other non-occupational exposures such as concert attendance and firearm shooting. He noted the effect of firearm shooting on the inner ear with skull vibration which can lead to hearing loss (Depo. of Dr. Reiner, p. 17, line 22 through p. 18, lines 1-14).

20. Dr. Reiner also did independent research as part of his expert opinion regarding air wrenches. He noted the range to be from 90 up to 100 decibels, the latter being for removing bolts from tires or wheels in a tire business (Depo. of Dr. Reiner, p. 19, line 20 through p. 20, lines 1-9).

21. Dr. Reiner also evaluated the Claimant's alleged noise exposure with the Employer herein as part of his opinion, and his ultimate conclusion was that the Claimant's hearing loss is due to non-occupational presbycusis. He explained from his research that it is not only the decibel level but the duration of the exposure which must be considered. He was of the opinion that based on the Claimant's report to him, the exposure was limited to short bursts of sound, lasting a few seconds, which would not be sufficient to cause hearing loss (Depo. of Reiner, p. 20, line 10 through p. 21, lines 1 through 21; and, p. 22 lines 1 through 5.).

The Claimant

22. The Claimant argues that Dr. Reiner's opinions should not be credited because he equated the air wrench to a dental drill. This is not an accurate reflection of Dr. Reiner's opinions. In fact, Dr. Reiner specifically noted that the highest decibel level for an industrial air wrench that he found during his research, was 110. Even at this level, however, he noted that only long-term chronic, consistent exposure would be dangerous in terms of hearing loss, and not the short-burst exposure related by Claimant. *Id.*

23. Further, the Claimant testified at hearing that he disagreed with Dr. Reiner because he felt the noise from using his air wrench to remove bolts from telecommunication boxes (5 years ago) was closer to the sound made by a mechanic changing a tire. Dr. Reiner actually addressed this scenario in his testimony. He noted that in his practice he had evaluated car mechanics who used much more powerful air wrenches than what was described to him by the Claimant, to remove tires. He testified that even these individuals, removing lug nuts from cars all day long, did not develop occupationally related hearing loss (Depo. of Dr. Reiner)

24. The Claimant argues that Dr. Reiner's opinion should be discredited based on his assertions about the Claimant's firearm shooting and concert attendance having an effect on his hearing loss. At hearing, the Claimant also denied that he had ever reported damaging his hearing from firearm use, and he attempted to characterize his concert going as inconsequential. Despite the Claimant's denials, the medical records in 2012 confirm that he reported to his own physician that he damage his hearing in a firearm episode, and that concerts during the 70's were "noise exposures". Therefore, the Claimant's attempt to discredit Dr. Reiner for emphasizing non-occupational factors which are documented in the medical records "falls on deaf ALJ ears" because it is misplaced and is not persuasive.

25. The Claimant contends that the sound of the air wrench was "amplified" in the manhole. Dr. Reiner, as board certified ENT, who researched the specific issue, and is an expert with respect to occupational hearing loss, however, unequivocally concluded that the decibel level of an air wrench is *not* magnified for causation purposes simply by being in a manhole (Depo. of Dr. Reiner, p. 32, lines 15 through 19).

Claimant's Medical Evidence—PA-C (Certified physician's Assistant) Baker

26. Claimant asserts that the opinion of "Dr. Michelle Baker" should be credited in this matter. There is no "Dr. Michelle Baker." The M164 cited by the Claimant is signed by Michelle Baker, PA-C. Baker is a physician's assistant, not a medical doctor. Further, the Claimant has not submitted any records indicating that Baker's opinion was countersigned or approved by any physician. There is no evidence in the record to support that Baker has any expertise regarding hearing loss, ENT issues, or is qualified to render an opinion helpful to the ALJ.

27. Moreover, Baker appears to have had at her disposal only the subjective report of the Claimant. She does not reference any review of prior medical records, nor does her report provide a meaningful analysis of causation. She did not examine or interpret the numerous audiology tests done over a period of years, or examine the Claimant's medical records for contributing non-occupational factors.

28. The ALJ finds that the opinions of Dr. Reiner are more credible and persuasive than those of PA-C Baker. Dr. Reiner is a medical doctor, and a board certified ENT. He was qualified as an expert in occupational hearing loss. He reviewed and interpreted multiple audiograms pertaining to the Claimant, over a span of many years, in addition researching the literature and reviewing the Claimant's complete medical records. The ALJ finds that his opinions are well founded and credits those opinions over the opinions of PA-C Baker.

29. The ALJ has considered Dr. Reiner's special knowledge, training, experience and the research that he complied as part of his opinion and finds Dr. Reiner to be credible and persuasive. Dr. Reiner considered the Claimant's available medical history, including review of audiograms spanning several years, and did research into the literature regarding causation of the injury related to the Claimant's allegation of using an air wrench. Dr. Reiner's conclusions that the Claimant's hearing condition is due to non-occupational factors is persuasive and supports the ultimate fact that the Claimant's claim is not compensable.

30. The Claimant is not alleging a distinct event occurring on his date of alleged injury, March 15, 2016. Rather, he is alleging an occupational disease stemming from a work condition to which he was not exposed since *2012*, or over 4 years prior to the alleged date of onset.

31. The ALJ finds that although the Claimant was removed from his alleged occupational exposure almost 4 years before the date of alleged onset, he continued to shoot large caliber firearms and he has done so as late as June 2017. Dr. Reiner persuasively explained firearms shooting's (even with ear protection) effect on hearing, and this constitutes a non-occupational risk. The ALJ finds that the Claimant continued to be exposed to a non-occupational risk factors prior to the alleged alleged onset of his alleged work-related exposure in manholes while working for the Employer herein,

Statute of Limitations

32. The Claimant stated that twelve (12) years ago, he realized that at the end of his working shifts, his ears would ring.

33. When his ringing in the ears would not go away, the Claimant sought treatment with Dr. Mancuso in 2008. Claimant testified that he was told in 2008 by Dr. Mancuso that he had high-frequency hearing loss from exposure to loud noises.

34. The Claimant underwent audiology testing Dr. Mancuso in May 2012 which confirmed "severe sensorineural hearing loss, bilaterally". The Claimant reported that ringing or noises started 10 years previously with constant hissing, ringing/loudness and next to this history is "works Telecom—troubleshooting"(Respondents' Exhibit D, bates stamp 26-27). The Claimant testified that he was again told he had high frequency hearing loss.

35. The Claimant reported Tinnitus, noise exposure, hearing loss and he was recommended the curative modality of "hearing aids" in 2012. *Id.* at p. 27.

36. According to the Claimant, he knew his condition was "serious" because after he reported the condition as work related, he was sent to the authorized provider (Urgent Care) on March 16, 2016, who recommended that he see an Ear, Nose and Throat (ENT) specialist. The records confirm the referral (Respondents' Exhibit C, bates stamp 17).

37. The Claimant denied at hearing that he had *ever* had a referral for an ENT appointment, much less treatment, before his appointment with Urgent Care on March 16, 2016. His denial is contradicted by the weight of medical evidence in the record.

38. The records document that the Claimant was referred to and saw an ENT sometime in 2008, and that he was frustrated with the level of care he received. (Respondents' Exhibit B, bates stamp 15; Exhibit D, bates stamp. 26-27). In addition to showing that the Claimant's testimony is not credible, it also reinforces the proposition that he knew his condition was "serious" by his own definition as early as 2008. Moreover, according to the Claimant's testimony, Dr. Mancuso told him in 2008 and again in 2012 that he had high frequency hearing loss due to loud noises.

39. The ALJ finds that the Claimant's own terminology is revealing. He seeks medical benefits under the workers' compensation system, based on his belief that a referral to an ENT is "serious". By this logic, he should have understood that his referral in 2008 to an ENT was equally "serious" particularly in light of his testimony that he had ringing in his ears at the end of his shifts after 2002. This is underscored by the fact

that the Claimant also testified that Dr. Mancuso told him that he had “high frequency hearing loss due to loud noises” which the totality of the evidence demonstrates was based on the Claimant’s report of his position with the Employer herein.

40. As a reasonable person, the Claimant knew or reasonably should have known of the serious and probable compensable nature of his hearing loss as of five years ago, when he last worked in the manholes for the Employer herein, yet he did not report a work-related hearing loss until March 16, 2016, more than three years after the statute of limitations had run.

Ultimate Findings

41. The ALJ finds the opinions of Dr. Reiner, a board certified otolaryngologist and ENT specialist, more credible and persuasive than any and all evidence to the contrary.

42. Between conflicting opinions and evidence, the ALJ makes a rational choice, based on substantial evidence, to accept the ultimate causality opinion (lack thereof) of Dr. Reiner and to reject any and all evidence to the contrary.

43. As a reasonable person, the Claimant knew or reasonably should have known of the serious and probable compensable nature of his hearing loss as of five years ago, when he last worked in the manholes for the Employer herein, yet he did not report a work-related hearing loss until March 16, 2016, more than three years after the statute of limitations had run.

44. The Claimant has failed to prove, by a preponderance of the evidence that he sustained a compensable hearing loss which resulted directly from his employment with the Employer herein or the conditions under which his work was performed, which could be seen to have followed as a natural incident of his work and as a result of the exposure occasioned by the nature of his employment, and which could be fairly traced to his employment as a proximate cause and which did not come from a hazard to which he would have been **equally** exposed outside of his employment.

45. The Respondents have proven, by a preponderance of the evidence that the Claimant reasonably should have known that his hearing loss could be work-related five years before he filed his claim, more than the period encompassed by the statute of limitations.

46. The Claimant failed to prove any circumstances that would toll the statute of limitations.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found herein above, the credibility factors weighed against the Claimant's credibility and against the credibility of PA-C Baker. The ALJ weighed the opinions of Dr. Reiner against the opinions of PA-C Baker, or any other opinion to the contrary, and found the opinions of Dr. Reiner to be determinative of the compensability issue. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 165 Colo. 504, 441 P.2d 21 (1968); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

b. As further found, the ALJ considered Dr. Reiner's special knowledge, training, experience and the research he complied as part of his opinion and finds Dr. Reiner to be credible and persuasive. *See Young v. Burke*, *supra*. Dr. Reiner considered the Claimant's available medical history, including review of audiograms spanning several years, and did research into the literature regarding causation of the injury related to the Claimant's allegation of using an air wrench. Dr. Reiner's

conclusions that the Claimant's hearing condition is due to non-occupational factors is persuasive and supports the proposition that the Claimant's claim is not compensable.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions and evidence, the ALJ made a rational choice, based on substantial evidence, to accept the ultimate causality opinion (lack thereof) of Dr. Reiner and to reject any and all evidence to the contrary.

Statute of Limitations

d. Pursuant to § 8-43-103(2), C.R.S., a claim for benefits is barred unless a formal claim is filed with the Division of Workers' Compensation within two years after an injury. The statute of limitations does not begin to run until a claimant, as a reasonable person, knows or should have known the "nature, seriousness and probable compensable character of his injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (Colo. 1967). *See, e.g., City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997); *Intermountain Rubber Industries v. Valdez,* 688 P.2d 1133 (Colo. App. 1984). As found, Respondents have proven their affirmative defense that the Claimant reasonably should have known that his hearing loss could be work-related five years before he filed his claim, more than the period encompassed by the statute of limitations.

e. The statute of limitations is an affirmative defense, which means that the burden to prove that the claimant was aware of the seriousness and probable compensable nature of the injury or occupational disease more than two years prior to filing the claim falls on Respondents. *Atlantic & Pacific Ins. Co. v. Barnes*, 666 P.2d 163 (Colo. App. 1983); *Kersting v. Indus. Comm'n*, 567 P.2d 394 (Colo. App. 1977). This is a question of fact for resolution by

an ALJ. *Indus. Comm'n v. Canfield*, 172 Colo. 18, 469 P.2d 737 (Colo. 1970). As found, Respondents have proven their affirmative defense.

f. As found, the Claimant failed to prove any tolling provisions, which are provided in § 8-43-103 (20, C.R.S., or as considered in *Likens v. Dept. of Corrs*., W.C. No. 4-560-107 [Indus. Claim Appeals Office (ICAO), Feb. 10, 2004]; or, in *Bonazzo v. J.A. Jones Const.,* W.C. No. 4-241-121 (ICAO, Sept. 24, 1998).

Compensability of Occupational Disease

g. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). As found, the Claimant failed to prove that he sustained a compensable hearing loss which resulted directly from his employment with the Employer herein or the conditions under which his work was performed, which could be seen to have followed as a natural incident of his work and as a result of the exposure occasioned by the nature of his employment, and which could be fairly traced to his employment as a proximate cause and which did not come from a hazard to which he would have been **equally** exposed outside of his employment.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury or occupational disease and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v.Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain his burden with respect to compensability. Also, as found the Respondents sustained their burden with respect to the affirmative defense of statute of limitations.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed

DATED this_____day of November 2017.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail,

as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-041-084-01

ISSUES

- Whether Claimant sustained an injury to her back on December 4, 2016, arising out of and occurring within the course and scope of her employment?

- If Claimant sustained a compensable injury, whether the medical treatment she received is reasonably necessary and related to her compensable injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a Comprehensive Health and Safety Supervisor ("CHSP") with Employer who alleges she suffered a low back injury on December 4, 2016. Claimant has been employed with Employer for over sixteen years. Claimant worked in Employer's Fresno, California facility before February of 2016, when she moved to Denver as a CHSP. Claimant has worked multiple jobs for Employer, including supervisor roles in the departments of safety, human resources, dispatch, and operations.

2. Claimant's CHSP duties included working with safety committees, coaching and mentoring employees on proper work methods, filing reports, and performing other training and compliance functions for safety. Lifting is an essential job functions of CHSP supervisors. CHSP training involves training on work-related injuries is more extensive than the training for hourly employees. As a CHSP, Claimant would have been trained in the proper procedures for reporting a work-related injury. Employer requires that work-related injuries be reported immediately to the management team or otherwise into the risk database, if management is unavailable. Employees are required to indicate how they injured themselves when reporting an injury. As a supervisor, Claimant would have undergone annual training every January.

3. In February of 2014, Claimant filed a claim against Employer with the EEOC over a promotional dispute. Claimant filed the complaint because "[Employer] had promoted four male supervisors in the span of three weeks, and admittedly did not consider a single female supervisor." Claimant was upset that she had not been interviewed.

4. On June 20, 2014, Claimant sought medical care at Kaiser. Claimant complained of work-related stress associated with being promoted to Dispatch Supervisor, a job she did not feel qualified to do. Claimant reported stress and anxiety at work and had requested time off work.

5. Also on June 20, 2014, Claimant saw a psychiatric social worker, Janet Ann Flanagan at Kaiser. Claimant reported that Employer discriminated against her by promoting three men when she was not even interviewed. Claimant reported working sixteen hours per day and not being able to take time off. After this visit, Claimant treated through Concentra, her occupational medicine service provider.

6. Claimant testified and told Respondents' IME physician, Dr. Kathleen D'Angelo, that she had injured her back at work on August 19, 2014. Claimant testified that she was putting a package on a shelf and felt pain in her back "like a twinge that went down both legs, and that the pain lasted for several days. Claimant testified that she felt a pop in her back with intense pressure.

7. On the afternoon of August 20, 2014, Claimant returned to Kaiser, complaining of severe pain in her bilateral lower legs "that made her suddenly woke [sic] up this morning." The record states that "Patient wants to know the reason, concerned for blood clot, taking Motrin and Tylenol – pain was better now, can walk well without limping." Claimant asked if the pain may be related to stress. The record does not mention a work-related injury or event precipitating pain or prompting the visit. The examining physician indicated the symptoms were possibly due to cramping.

8. An August 20, 2014 note from Kaiser ER states, "[Claimant] went to work as usual the day before last, slept at noon and awoke at 8:30 p.m. with extreme bilateral leg pain." Claimant indicated that she had been under stress at work during her night shift, and "denies any trauma." Claimant stated that she had pain that ascended into the posterior thighs bilaterally and up towards the back, and that this was different than the sciatica that she has had in the past. The provider noted that in 2005, Claimant had experienced total body pain similar to her then-current symptoms which had lasted a week and dissipated.

9. On October 23, 2014, Claimant returned to Kaiser reporting continuing stress at work over the EEOC complaint. Claimant stated she was "suddenly promoted to a job that she was not qualified for" and that she was working up to 70 hours per week. A note dated March 3, 2015 states that Claimant was reassigned and experienced stress relief. The records note that Claimant had a personal and family history of rheumatoid arthritis.

10. On September 8, 2015, Claimant e-mailed Kaiser reporting right leg pain for around three weeks at this time without a determined cause. Claimant suggested experiencing back symptoms that began before ocean diving. Claimant stated the pain varied extensively, as she was sometimes able to walk fine but other times could put no weight on her leg. Claimant underwent an MRI on September 10, 2015 for right hip pain (without trauma), and the MRI showed only degenerative changes.

11. On September 28, 2015, Claimant reported that she had worse back pain and was seeing a chiropractor. Claimant had pain with walking, standing and sitting and requested an MRI. Claimant stated "there has to be a reason for the pain . . . . how can the pain be diagnosed?"

12. Claimant returned to Kaiser on September 29, 2015, reporting six weeks of low back pain with right hip and leg pain radiating down the buttock. Claimant experienced only mild relief with chiropractor therapy and pain medication. The provider diagnosed chronic low back pain.

13. In December 2015, Claimant underwent physical therapy for her low back pain and right sciatica. On December 8, 2015, Claimant presented with low back complaints which were present "off and on for several years." The complaints involved the anterior right tibia, and hip and groin pain radiating into her lumbar spine. Claimant indicated daily pain in her right hip and shin with right leg pain upon movement, without left-sided complaints.

14. Claimant stated in a December 12, 2015 e-mail that she was worsening with therapy, and reported frequent back pain starting to affect her left leg. Dr. Karl Quinn at Kaiser noted that Claimant had back pain for four months with recent left leg pain that improved with therapy but recently returned. A lumbar x-ray on this date noted "pain without trauma" with mild degenerative spondylosis.

15. On December 13, 2015, Claimant reported to Dr. Quinn that her pain "just left" after four or five chiropractic visits but subsequently returned with symptoms into the right shin and left leg. Claimant indicated that she now had pain regardless of whether she was sitting, standing, or walking.

16. On December 24, 2015, Dr. Marsa White at Kaiser evaluated Claimant for back and right leg pain. Dr. White noted that Claimant had multiple areas of pain that could be attributed to different medical issues, including right hip osteoarthritis. Dr. White questioned radiculopathy versus tibial pathology, and ordered a right leg x-ray and lumbar MRI. On December 28, 2015, Clamant continued to indicate that she was looking for a cause for her symptoms and that she [could] "[could] not live like this for the next 20 years."

17. The December 28, 2015 lumbar MRI showed moderate canal stenosis at L3-4 and right-sided disc protrusion. The findings showed a cyst impressed on the right posterior aspect of the neural elements of the thecal sac. The estimated size of the cyst is not documented.

18. Dr. Quinn reviewed MRI findings and on January 2, 2016 told Claimant that there was a disc bulge at L3-4 that narrowed the central canal through which the nerves ran, which would match the symptoms. Dr. Quinn opined that the pain was not related to the central canal narrowing at L4-5.

19. Dr. Quinn referred the study to Dr. White but, as noted on January 6, 2016, Claimant refused to discuss the matter with Dr. White. "Patient does not allow me to speak once I announce myself. States she cannot talk and proceeds to hang up the phone." On January 11, 2016, Dr. White noted that Claimant's pain had resolved with a prednisone pack and recommended a lumbar ESI.

20. On January 19, 2016, Claimant saw Dr. Eugene Huang for a trial ESI. Dr. Huang opined that Claimant was a "not motivated" patient with radicular pain and low back pain. Dr. Huang reviewed the MRI results and listed his impression as "lumbar radiculopathy and discogenic low back pain."

21. In February 2016, Claimant transferred from Employer's Fresno facility to its Denver facility.

22. On June 21, 2016, Claimant saw Dr. Mark Mills (with Gene Cook, PA-C under supervision) at Panorama Orthopedics, complaining of back pain and bilateral radiculopathy with spondylolisthesis. Dr. Mills characterized the symptomology as "acute re-exacerbation of back and bilateral leg pain." Claimant's pain involved the base of her back with radiating pain down the back and sides of both of her legs with pain in the right greater than left front of shin. Dr. Mills noted that Claimant originally presented benignly in August 2015 with pain that started as back pain. Claimant's pain worsened after therapy and she developed a more radicular pattern, prompting an MRI. Claimant reported significant relief from the January ESI. Dr. Mills noted that Claimant's pain started to come back three weeks earlier and was steadily progressing. Claimant had good relief with prednisone from her primary care provider.

23. Dr. Mills ordered a new MRI "due to [Claimant's] inability to gain access to her [MRI] images and the fact that it has been [greater] than six months since the previous films were obtained and patient does have spondylolisthesis, I believe a new MRI is warranted to evaluate for compressive etiology for possible injection therapy and perhaps surgical planning." On July 1, 2016, Claimant began physical therapy.

24. On June 17, 2016, a repeat lumbar MRI was performed. The MRI showed multilevel degenerative changes with central canal and foraminal encroachment and degenerative anterolisthesis at L3-4. The findings showed a "small synovial cyst arising from the medial aspect of the right facet joint measuring roughly 3.4 x 2.4 mm" which minimally indents the right posterior lateral canal at L3-4. Radiographic findings showed slight, Grade 1 anterolisthesis at L3-4.

25. A July 13, 2016 note by Dr. Lonnie Loutzenhiser indicates a measurement of "5mm" for the synovial cyst at L3-4.

26. On September 14, 2016, Claimant's imaging was noted as significant for spondylolisthesis at L3-4. Claimant reported that she was doing well and felt "about 100%" with only an occasional twinge and that she was more worried about the future and preventative strategies.

27. On December 7, 2016, Employer's Health and Safety Manager, David Loya, authored an e-mail to the Area Human Resources Manager concerning the timeline of events surrounding Claimant's December 4, 2016 alleged injury. On Friday, December 2, 2016, Mr. Loya notified Claimant that she was required to work the hub on Sunday, December 4. Claimant stated that she had a school paper to finish but was

told that the shift was mandatory. Claimant also expressed concern about her ability to load and unload trailers without hurrying her back.

28. On December 4, 2016, Claimant reported to the conference room and was assigned to the small sort shift. While this position required Claimant to perform lifting, the amount of lifting and the weight of pieces lifted was significantly less than what was required in loading and unloading trailers. Claimant expressed concern for her back and again brought up her school work, but accepted the assignment. The shift began at 3:00 p.m. At 9:28 p.m., Mr. Loya received a text message from Claimant stating: "FYI. Sometimes we need to make exceptions. Right now I am in so much pain. It hurts to even walk." Mr. Loya consulted with two other management personnel and agreed that the situation would need to be addressed with Claimant, as she appeared to be either reporting a work injury or asking for an accommodation for a preexisting condition.

29. On Tuesday, December 6, 2016, Mr. Loya contacted Claimant and asked her to meet the following day. Claimant indicated she did not want to meet and attempted to minimize her prior statements. Claimant sent Mr. Loya an e-mail, in which she described the history of her back pain. Claimant noted that in May or June 2016, she had discussed with Mr. Loya needing to take time off for back surgery. Claimant indicated that in 2015 in Fresno, she had filed a claim for a back injury to the base of her spine. Claimant repeatedly stated that she was not injured on Sunday December 4, 2016, and was not going to file a claim. Claimant stated that she was in pain, but reiterated that she was not injured on Sunday December 4, 2016. Claimant stated that she had taken the next day, Monday, off, with Gary's permission, and had been up until 1:30 a.m. to finish her school paper. This was inconsistent with Claimant's hearing testimony. Claimant had worked on the paper all day Saturday, on Sunday until she had to work, and then all day on Monday.

30. At the meeting on Wednesday, December 7, 2016, Claimant was informed that the meeting was necessary because she represented that she did not meet the Essential Job Functions which included lifting. Claimant reiterated at least three times that she had not injured herself on Sunday. Mr. Loya referred Claimant to the ADA process, which Claimant refused, and a verbal altercation ensued. Mr. Loya noted that "At one point, [Claimant] stated out loud that perhaps she should claim the pain as an injury so that she could continue to work."

31. After initial evaluation, Employer's occupational health nurse, Gayle Brown, referred Claimant to Dr. John Ogrodnick at SCL for evaluation for her alleged August 19, 2014 back injury. Dr. Ogrodnick saw Claimant on December 9, 2016. Claimant stated that she did not seek medical attention for the alleged 2014 work injury. Claimant alleged that Employer told her she was not allowed to file a claim, and that her soreness "just kind of went away." The pain returned in 2015 to involve her right and left legs, to the point where it hurt to walk. Claimant reported full relief after her January 2016 ESI but the effects waned and she could barely walk again. After participating in therapy and purchasing new shoes, Claimant's pain again disappeared. Claimant stated that, on December 3, 2016, she was assigned to small sort and could barely walk out of the building after six hours. Claimant stated that she was sent by Employer's

nurse for evaluation to re-open the alleged 2014 claim. Claimant described her low back pain at 2/10 while at rest, however the pain diagram she completed at the visit showed 8/10 pain. Claimant had right shin pain. Claimant stated that her back pain on December 4, 2016 was 20/10. Dr. Ogrondick reviewed the June 2016 MRI and restricted Claimant's lifting to 30-pounds. Dr. Ogrodnick indicated that "it is not at all clear that 2014 events are responsible for current symptoms," and advised Claimant that the work-relatedness was undetermined at that time.

32. Claimant continued working under restrictions. On the morning of December 16, Claimant returned to Dr. Ogrodnick to review the 2014 events. Claimant clarified that the claim filed in December 2014 was for mental stress due to a conflict with management unrelated to the alleged 2014 lifting. Claimant also clarified that the alleged 2016 "small sort incident" occurred on December 4, not December 3. Claimant presented as pain free during the visit but had 4/10 pain in the "very, very base of [her] tailbone" while driving. Claimant stated that it had been two days since she had pain in her legs and that she did not understand her pain as it could be inconsistent. Claimant stated that sometimes it hurt when she rose from sitting and sometimes it did not. Claimant mentioned the possibility of filing another claim for compensation for the alleged 2016 injury. Dr. Ogrodnick released Claimant to full duty and indicated that he did not have sufficient evidence to make a causal connection between her then-present complaints and the alleged August 2014 incident. Dr. Ogrodnick indicated the subjective leg pain was not substantiated with objective findings on the MRI leading to questions of etiology.

33. Later on December 16, 2016, Claimant was sitting in her vehicle thinking that she could lose her job when she decided to report a work-related injury for December 4, 2016. Mr. Loya filed a First Report of Injury on December 16, 2016.

34. On December 17, 2016, Claimant presented to Dr. Natascha Deonarain at Concentra. Claimant stated that she had pain in her lower back and bilateral legs since December 4, 2016, which she believed was due to "repetitive bending of the knees." Claimant stated that she was told to work on small sort after informing her supervisor on December 2 that she was not able to perform that job. Claimant stated that she was "lifting up to 100 pounds repetitively over the course of a 5 ½ hour duration." Claimant stated that there was no specific trauma but at the end of the day she could not walk. Claimant repeated her version of events surrounding the alleged August 2014 injury, again stating that she had not sought medical treatment. Claimant was told during her previous surgical evaluation that she may need to have "special surgery" to prevent long term complications of her condition, but she did not pursue this at the time "presumably because of insurance reasons." Dr. Deonarain diagnosed sacral pain; neck pain (acute); and diffuse left and right leg pain. Dr. Deonarain imposed 30-pound lifting restrictions.

35. On December 19, 2016, Mr. Loya drafted another e-mail concerning Claimant's recent report of a work-related injury. On December 16, Claimant notified Mr. Loya by text message that she had an injury on December 3 as an "exasperation of existing injury." Claimant sent the text shortly after she was notified that she was

required to work the day sort on the following Sunday, December 18. Claimant stated that she had not been released to regular duty, which was contrary to the documentation available to Mr. Loya by Dr. Ogrodnick. Claimant demanded to see another provider, and repeatedly stated that she bent at the knees and this was how she injured her back. Claimant recanted her initial claim that she had to lift 120 pound bags. Claimant previously expressed concern about her ability to load and unload trailers. Claimant was not loading/unloading trailers on December 4 and expressed no concern for the small sort assignment that day.

36. On December 22, 2016, Claimant saw Dr. Bryan Counts. Claimant reported having had received chiropractic care for her back. Dr. Counts diagnoses explicitly included neck complaints, as Claimant reported to him that she hurt herself from "frequent head turning working in the small sort area on December 4th." Dr. Counts prescribed physical therapy for Claimant's neck.

37. Claimant subsequently reported moderate improvement and was working her regular job. On January 23, 2017, Claimant requested another ESI. Dr. Counts requested a lumbar MRI and referred Claimant to Dr. Robert Kawasaki. On February 20, 2017, Claimant told Dr. Counts she felt her back had improved and that she no longer wanted an ESI. However, Claimant did want an MRI to see if the anterolisthesis at L3-4 had worsened. Dr. Counts noted that Dr. Kawasaki had a visit that day and considered MMI.

38. On February 23, 2017, Claimant saw Dr. Kawasaki. Claimant reported that her pain had improved and was 1-2/10 to the low back and legs. Dr. Kawasaki noted "aggravation of underlying condition" with chronic low back pain but that "it is not clear if she has a new injury." Dr. Kawasaki noted that Claimant felt discriminated against at UPS, which may be impacting her recovery. Dr. Kawasaki ordered a lumbar MRI.

39. Claimant underwent a lumbar MRI on March 11, 2017. The reading radiologist read the MRI as showing: multilevel degenerative disc disease; disc bulging; moderate-severe L3-4 central canal stenosis with right L3-4 synovial cyst; and multilevel central canal narrowing and bilateral existing nerve root compression/abutment.

40. On March 20, 2017, Dr. Kawasaki reviewed the MRI and noted degenerative changes. At L3-4, there was moderate-to-severe facet arthropathy and a "4mm synovial cyst" causing some compression of the L3 nerve roots, which appeared to displace the existing L4 nerve root. The impression was "chronic low back pain from the initial workers' compensation claim in February of 2014; right L4 radiculopathy; synovial cyst at L3-4; radicular symptoms at L4; and spondylolisthesis at L3-4, grade 1." Dr. Kawasaki noted that he did not compare the 2017 MRI with the 2016 lumbar MRI. Dr. Kawasaki noted that Claimant had minimal response from the prior ESI and "quite a bit of conservative care." Dr. Kawasaki suggested a facet cyst lysis procedure or ESI and referred Claimant to Dr. Michael Rauzzino.

41. On April 1, 2017, Claimant saw Dr. Rauzzino. Claimant reported no neck complaints. Dr. Rauzzino reviewed the 2017 MRI and noted the synovial cyst at L3-4 with grade 1 spondylolisthesis. Dr. Rauzzino noted that the 2016 MRI was not available for comparison. Dr. Rauzzino recommended a fusion surgery over decompression of the cyst.

42. On April 6, 2017, Claimant saw Dr. Kawasaki and described pain, numbness, tingling, and stabbing into her posterior thigh and calf regions. Dr. Kawasaki noted that it was not clear what Dr. Rauzzino had recommended and indicated a cyst lysis procedure with an ESI at L3-4 may be appropriate.
