5. That morning, Claimant was short mixing animal feed and mixing animal feed to be transferred to the pellet mill to be made into pellets for animal feed. (*Hearing TR*, p. 9. 4-7; p. 12. 12-14).
6. Claimant alleges that while pulling ingredients from a rack, he noticed trash on the ground. He claims he picked up the trash and when he stood up, he realized a forklift was 20 feet away. To avoid being "hit" by the forklift being driven by his colleague Tyler M[Redacted], Claimant testified he, "thrusted (sic) my upper body out, and I kind of went over the weight (sic) of the back of the forklift." (*Hearing TR*, p. 14. 9-16).
7. At hearing, Mr. M[Redacted] specifically testified he did not strike Claimant with the forklift. (*Hearing TR*, p. 31. 11-13).

8. According to his witness statement taken on the alleged date of injury, Mr. M[Redacted] stated he looked back, then put the forklift in reverse, and then heard someone yell as he was backing up the forklift. (*Respondents' Exhibit H*, p. 68).
9. Upon hearing the yell, Mr. M[Redacted] testified he immediately stopped the forklift. (*Hearing TR*, p. 31. 17-20). Mr. M[Redacted] testified, and his testimony is found credible and persuasive and corroborated by other evidence, that Claimant was standing about 20 feet away from the forklift at the time of the alleged incident. (*Hearing TR*, p. 32. 1). Mr. M[Redacted]'s testimony contradicts Claimant's testimony about the alleged accident.
10. According to Mr. M[Redacted] Claimant would not communicate with him so he continued with his work. (*Respondents' Exhibit H*, p. 68).
11. At hearing, Claimant's colleague Melissa C[Redacted] testified she was working at the plant on the date of the alleged incident in the area where the incident allegedly occurred and did not see the forklift strike Claimant. (*Hearing TR*, p. 36. 20-22). According to her witness statement taken on the date of the alleged injury, Claimant was nowhere near the forklift while it was in motion. (*Respondents' Exhibit H*, p. 69). Moreover, Claimant did not tell Ms. C[Redacted] that he had been struck by the forklift. (*Hearing TR*, p. 37. 12-14). Ms. C[Redacted]' testimony is found to be credible and persuasive and contradicts Claimant's testimony about the alleged accident.
12. Claimant testified that after the alleged incident he went to the main office of the plant where he alleges he yelled "Tyler hit me." (*Hearing TR*, p. 15. 21-22). At hearing, Claimant testified he did not receive a response from anyone in the office after yelling out he had been hit by the forklift. He then voluntarily walked off the job by proceeding out to his car to seek medical attention as he alleged, "nobody was helping me." (*Hearing TR*, p. 16. 10-19; p. 22. 7-15).
13. Claimant's colleague, and supervisor, Joshua L[Redacted], a production supervisor with Employer, was in the office at the time of the alleged accident. At hearing, Mr. L[Redacted] testified he heard Claimant say, "hit by the forklift." He then repeatedly asked Claimant what happened, trying to get Claimant to stop walking and explain what happened, only to have Claimant keep repeating the phrase, "he hit me with a forklift," as he walked out of the plant. (*Hearing TR*, p. 39. 22-25).
14. Mr. L[Redacted] did not observe Claimant walking with a limp or limitation in his gait as he left the plant. (*Hearing TR*, p. 41. 16-24).
15. Mr. L[Redacted] then had Claimant's colleagues complete witness statements on what they had observed. Based on that investigation, Mr. L[Redacted] testified he had been unable to confirm an incident had occurred that day. (*Hearing TR*, p. 46. 3-15).
16. Mr. L[Redacted]'s testimony is found to be credible and persuasive and contradicts Claimant's testimony.

17. After voluntarily walking off the job and leaving his place of employment, Claimant first presented at the Emergency Department at Sterling Regional Medical Center. Claimant alleges he presented to a Dr. Mackintosh, who he is asserting is the authorized treating physician. (*Hearing TR*, p. 9. 20-21, p. 16. 21-25).
18. That said, according to the emergency room report from that initial visit, Claimant presented to Michael Baier, D.O. (*Respondents' Exhibit A*, p. 1).
19. At the emergency department, Claimant reported his toe had been caught by a forklift at work however the toe did not get run over. (*Hearing TR*, p. 23. 22-25). He reported extreme lower back pain and right-sided pain. It was also noted he was extremely frustrated as the forklift driver had not stopped to see if he was okay and instead yelled at him. (*Respondents' Exhibit A*, P. 1).
20. Despite having sent text messages of his inability to work in June 2019 due to back pain, Claimant reported he had no history of back pain in the past. (*Id.*; *Respondents' Exhibit H*, p. 65).
21. Dr. Baier opined it was unclear why Claimant was guarding and had weakness in his plantar flexion. (*Respondents' Exhibit A*, p. 3). Nor was there any evidence of objective findings or evidence of trauma to Claimant's body. (*Respondents' Exhibit F*, *Burriss depo.* p. 10. 3-5).
22. Claimant underwent an MRI of the lumbar spine without contrast. The MRI revealed degenerative disc space narrowing and a small central disc protrusion at the L5-S1 level that was not causing any compromise of the canal or foramen. The MRI also revealed mild facet arthritis at the L5-S1 level. (*Respondents' Exhibit A*, p. 5).
23. The next day, January 3, 2020, Claimant's wife presented a written statement to David J[Redacted], the plant manager, about his alleged injury. Claimant testified at the hearing, despite this written statement about the injury that his wife produced to Mr. J[Redacted], he was not contacted by any representatives from Employer about where to seek medical treatment for his alleged injury. (*Hearing TR*, p. 17. 20-24).
24. At hearing, Mr. J[Redacted] testified based on the information he was provided on the alleged incident, including the statement Claimant's wife dropped off and witness statements from Claimant's colleagues, he determined an incident had not occurred as alleged by Claimant. (*Hearing TR*, p. 55. 8-14).
25. Further, based on his knowledge of the tightness of where the alleged incident occurred and the speed of the forklift, together with the information provided by Claimant's colleagues on where he was standing at the time of the alleged incident, it did not make sense that the incident could have occurred as Claimant alleged. (*Hearing TR*, p. 64. 7-11).
26. Mr. J[Redacted] then painstakingly went through the photographs of the forklift and the area where the incident allegedly occurred. Mr. J[Redacted]'s testimony is found to be credible and persuasive. It fits with and corroborates the testimony

of Mr. M[Redacted] and Ms. C[Redacted] and directly refutes Claimant's testimony about the alleged incident.

27. Claimant asserts he was unable to return to work. He also testified that Employer did not provide any modified job offers and that he is currently unemployed and unable to return to any type of work. (*Hearing TR*, p. 10. 2-5).
28. Claimant also testified no representative from Employer has contacted him about his injury to investigate what happened or to get a statement from Claimant about the alleged injury. (*Hearing TR*, p. 19. 18-23).
29. That said, at the hearing, Mr. L[Redacted] credibly testified he tried to contact Claimant multiple times to investigate what happened. Claimant, however, never called him back and basically abandoned his job. (*Hearing TR*, p. 44-45).
30. On January 9, 2020, Claimant presented at Banner Health to Keri Ann McKay, PA. He reported the forklift had caught his left toe and smacked him in the right hip. He reported numbness, bilaterally, in his feet and legs. Upon physical examination, there were no abrasions or bruises noted. (*Respondents' Exhibit B*, pp. 7-8).
31. PA McKay also noted Claimant was not happy with how Employer had treated him about his alleged injury. (*Claimant's Exhibit 7*, p. 32).
32. The claim was put on a Notice of Contest on January 16, 2020 to allow Respondents to conduct further investigation into the compensability of Claimant's alleged injury. (*Claimant's Exhibit 5*, p. 9).
33. When Claimant was seen by PA McKay on January 30, 2020, he reported back spasms, numbness, and decreased strength down both legs. As a result of the self-reported numbness and weakness, Claimant alleged he was falling at home because of his legs giving out under him. Yet PA McKay did not find any objective evidence to support Claimant's contention that his legs were numb and weak and causing him to fall. Thus, there were no findings of bruising or abrasions caused by Claimant allegedly falling. Plus, Claimant's contention that he was falling also seems doubtful since PA McKay noted Claimant presented to her office using a walker. In other words, Claimant's use of a walker should have prevented him from falling. (*Claimant's Exhibit 7*, p. 29).
34. Claimant was again seen by PA McKay again on February 20, 2020. He again reported having leg numbness and was using a cane for support. PA McKay also noted Claimant was not working as he felt he could not perform his job as lifting caused him pain. (*Claimant's Exhibit 7*, p. 23).
35. When Claimant was seen by Gene Cook, PA at Banner Health on March 11, 2020, he reported he had developed severe spasms and worsening leg functions in the months that followed the alleged incident. PA Cook noted he had undergone no therapy, chiropractic, or other alternative therapy. PA Cook also noted Claimant had reportedly gained 60 lbs. since the alleged incident. That said, PA Cook's physical examination of Claimant seems to reflect there were only subjective symptoms of pain and worsening leg functions without objective findings to support Claimant's complaints. (*Respondents' Exhibit C*, p. 10).

36. As a result, PA Cook opined a new MRI was unnecessary to evaluate any other changes and that Claimant did not have any pathology that required surgical intervention. (*Respondents' Exhibit C*, p. 12). He diagnosed Claimant with acute back pain with radiculopathy and noted the mild central disc bulge at L5-S1 with underlying disc degeneration revealed in an MRI taken that day. (*Claimant's Exhibit 8*, p. 38).
37. On May 5, 2020, Claimant underwent an Independent Medical Evaluation with John Burris, M.D. (*Respondents' Exhibit F, Burris depo.* p. 8. 24-25).
38. At his deposition, Dr. Burris opined Claimant had many subjective reports of pain and there were inconsistencies in those subjective reports. (*Respondents' Exhibit F, Burris depo.* p. 8. 9-12).
39. As to the date of injury, Claimant reported to Dr. Burris his left foot had been pinched/trapped under the pivoting tire of the forklift and the back of the forklift contacted him on the right side, specifically the front of his right hip. This caused him to contort his body. (*Respondents' Exhibit F, Burris depo.* p. 9. 7-12).
40. Based on that report, Dr. Burris opined he would have expected to see some type of contusion, a sprain, or a strain. (*Respondents' Exhibit F, Burris depo.* p. 9. 22-24). Review of the medical evidence contemporaneous to the alleged date of injury does not support any evidence of a contusion, sprain, or strain.
41. Claimant then underwent an IME at his lawyer's request with Anjmun Sharma, M.D. on June 5, 2020. (*Respondents' Exhibit G, Sharma depo.* p. 5. 13-14).
42. At the IME Claimant reported developing low back pain immediately following the alleged injury. (*Claimant's Exhibit 6*, p. 10). Claimant reported his foot had been pinched and trapped under the pivoting tire of the forklift and the back of the vehicle. (*Claimant's Exhibit 6*, p. 11).
43. At his deposition, Dr. Sharma admitted he did not know if the alleged incident even occurred. Dr. Sharma also admitted that he based his opinions on the subjective reporting of what Claimant told him. (*Respondents' Exhibit G, Sharma depo.* p. 10. 9-11).
44. At the IME, Dr. Sharma noted Claimant demonstrated pain behaviors that could be consistent with a low back injury. That said, at his deposition, Dr. Sharma admitted these pain behaviors could also be attributed to the three-hour drive Claimant had to the IME. (*Respondents' Exhibit G, Sharma depo.* p. 15. 4-8).
45. Dr. Sharma's office is in Monument, Colorado outside Colorado Springs. Claimant resides in Sterling in northeast Colorado.
46. Upon physical examination with Dr. Sharma, Claimant demonstrated good range of motion of the lumbar region. (*Respondents' Exhibit G, Sharma depo.* p. 16. 17-19). Yet he only raised his legs about 15 degrees from the bottom of the table. (*Claimant's Exhibit 6*, p. 15).

47. Although Dr. Sharma made recommendations for more medical care, he admitted at his deposition that all the recommendations he made should be carried out by Claimant irrespective of whether he was injured at work. (*Respondents' Exhibit G, Sharma depo.* p. 32. 3-12).
48. Claimant was seen by Adam Mackintosh, D.O. on May 20, 2020. Claimant reported he had undergone an MRI that had come back normal, but he was still in pain. (*Claimant's Exhibit 7, p. 20*).
49. Based on a review of additional medical records, Dr. Burris issued an addendum to his IME report on June 8, 2020. Based on his review of those records, he opined there was a similar pattern in the records as documented in his IME report of Claimant's complaints about his employer as well as examinations obscured by guarding, pain behaviors, and poor effort. Nor were there any objective findings documented in any of the other medical records he reviewed to support Claimant's self-reported symptoms. (*Respondents' Exhibit E, p. 20*).
50. Upon review of Dr. Sharma's IME Dr. Burris again opined Claimant had several inconsistencies in his subjective complaints and symptomology yet there were no objective findings to support those complaints. (*Respondents' Exhibit F, Burris depo.* p. 19. 2-10).
51. At his deposition, Dr. Burris also testified Claimant still harbored a great deal of anger during the IME with Dr. Sharma as when Dr. Burris saw him at the May 5, 2020 IME. Dr. Burris opined psychological factors could be driving Claimant's ongoing subjective pain complaints. (*Respondents' Exhibit F, Burris depo.* p. 22. 6-15).
52. The ALJ finds Dr. Burris' opinions in his reports and deposition testimony to be credible and persuasive.
53. The ALJ does not find Claimant's version of events about the incident with the forklift to be credible for many reasons. First, each Employer witnesses who was working with Claimant during the alleged incident and testified at hearing credibly and persuasively testified that they did not see the alleged incident or see any indication that the incident even occurred.
54. Second, Claimant's self-reported symptoms are inconsistent. For example, when Claimant was evaluated by Dr. Sharma in June 2020, he told Dr. Sharma that he lost bowel and bladder function one time. Based on Claimant's report, Dr. Sharma stated Claimant was consistent about reporting his loss of bowel and bladder function. Claimant, however, has not been consistent about the reporting of his bowel and bladder problems. Claimant saw Dr. Burris in May 2020, one month earlier, and told Dr. Burris that he has lost his bowel and bladder function 4 times. So, although Claimant might be consistent about mentioning the issue, he is inconsistent about its frequency.
55. Third, many of Claimant's self-reported symptoms are not supported by any objective findings. For example, Claimant contends that since the incident at work, he suffers from bowel and bladder incontinence. Dr. Sharma also noted that such condition is called "cauda equinus syndrome" and is identifiable on an

MRI. In this case, however, Claimant's MRI did not show cauda equina syndrome. As a result, Dr. Sharma found the report of such symptoms, without MRI findings to support those symptoms, to be "puzzling." (*Burris Deposition* pp. 17-18.)

56. Furthermore, Claimant's subjective complaints suggest radiculopathy. These symptoms include the following:

- Numbness and tingling in his legs.
- Numbness and tingling in his feet.
- Numbness and tingling in his thighs.
- Bilateral weakness in his legs.
- The need to use a walker and cane at times.

However, despite his subjective complaints being indicative of radiculopathy, even Dr. Sharma's findings on physical examination do not support Claimant's subjective complaints. For example, objective testing revealed Claimant had the following:

- Normal and excellent strength in legs.
- Normal reflexes bilaterally.
- Normal findings revealing no atrophy in his lower extremities, particularly the thighs and legs.

57. Based on the totality of the evidence, the ALJ does not find Claimant's statements his Employer and co-workers regarding the alleged accident to be credible, reliable, or persuasive. The ALJ also does not find Claimant's statements made to the various medical providers regarding the alleged accident and his symptoms to be credible, reliable, or persuasive.

58. Based on the totality of the evidence, the ALJ also does not find Claimant's testimony regarding the alleged accident and his symptoms to be credible, reliable, or persuasive.

59. Dr. Sharma's opinions and conclusions about the cause of Claimant's symptoms and Claimant's need for medical treatment depends on the information provided by Claimant. The ALJ does not find the information Claimant provided to his medical providers, including Dr. Sharma, to be credible or reliable. As a result, the quality of Dr. Sharma's opinion is no better than the data on which he relies. Thus, the ALJ does not find Dr. Sharma's opinions and conclusions to be reliable or persuasive.

CONCLUSIONS OF LAW

Based on the findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles about credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable industrial injury on January 2, 2020.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability

or need for medical treatment. *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Claimant was engaged in the course and scope of his employment on January 2, 2020. But Claimant failed to prove by a preponderance of the evidence that he suffered an injury that day.

The ALJ concludes Claimant has failed to prove by a preponderance of the evidence that the alleged forklift incident occurred at all. Claimant failed to establish he was struck by the forklift being driving by his colleague, Mr. M[Redacted]. Based on the evidence presented at hearing, the ALJ finds and concludes the forklift did not make contact with Claimant that day. The ALJ also finds and concludes Claimant failed to establish by a preponderance of the evidence that any other incident occurred that day involving the forklift that caused an injury and necessitated the need for medical treatment or caused any disability.

As found, the medical evidence submitted at hearing do not support Claimant's contention that he suffered an injury at work. Instead, the medical evidence contains mainly Claimant's subjective reports of symptoms. There are a few medical records that suggest Claimant might have had some muscle spasms. And the MRI shows a small central disc protrusion at the L5-S1 level. Claimant, however, had preexisting back problems. As a result, Claimant failed to establish any incident at work caused any muscle spasms, disc protrusion, or other condition that required medical treatment or caused any disability. Claimant also failed to establish that any incident at work aggravated or accelerated a preexisting condition.

As a result, the ALJ concludes Claimant failed to establish by a preponderance of the evidence that any incident at work caused, aggravated, accelerated, or combined with any pre-existing disease or infirmity and caused the need for medical treatment or caused any disability. Thus, the ALJ concludes Claimant has failed prove by a preponderance of the evidence that he sustained a compensable work injury on January 2, 2020.

ORDER

Based on the findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: August 19, 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a compensable injury on February 13, 2020?

If Claimant proved a compensable injury, the ALJ will determine:

- Did Claimant prove entitlement to reasonably necessary medical treatment?
- Which providers are authorized?
- What is Claimant's average weekly wage (AWW)?
- Is Claimant entitled to TTD benefits from February 14 through February 16, 2020, TPD benefits for February 17, 2020, and TTD benefits commencing February 18, 2020 and continuing?

FINDINGS OF FACT

1. Claimant works for Employer as a Field Technician. He performs maintenance and repair services at Walgreens stores across Colorado. The job entails a wide variety of repair and installation services, including electrical work, plumbing, installing countertops, and replacing glass. The job is physically demanding and would reasonably be classified as medium to heavy work.

2. Claimant worked out of his home and used his personal vehicle, a 2004 Chevrolet pickup truck, for work-related travel.

3. At approximately 12:52 PM on February 13, 2020, Claimant was involved in a motor vehicle accident while returning from a job at a Walgreens store in Aurora, Colorado. Claimant's vehicle was rear ended while he was stopped in traffic. The impact pushed his truck into the vehicle in front of him.

4. Claimant credibly testified he felt "very shaken up" immediately after the accident. He noticed an abrasion on his right leg from hitting the steering column but appreciated no other specific injuries at that time.

5. Shortly thereafter, Claimant discussed the accident by phone with his dispatcher, Jonathan Hughes. Claimant was heading home to rest. He told Mr. Hughes he hurt his leg in the accident, was "shooked up," and planned to get checked out later.

6. Claimant texted his supervisor, Scott S[Redacted], after arriving home. He stated, "I have been in an accident today as I was coming home. . . . I need to take a sick day for Friday, I am already starting to feel the stiffness in my left arm in my right leg." Claimant planned to see his doctor "to see if I can get some muscle relaxers," and assumed he would be "good by Monday."

7. He felt progressively worse over the weekend, with increasing back pain, neck pain, and headaches.

8. Claimant tried to work on Monday, February 17, 2020, and repaired a broken window at a Walgreens store. At 9:01 AM, he texted Mr. S[Redacted] that he could not keep working and needed to see a doctor. He stated, "Sorry but I am not ready to come back to work in full force because my right there [sic] is something pulled or out of alignment. I am going to try to get an appointment today." The ALJ infers this brief work activity corresponds to the 2.13 hours shown on Claimant's pay stubs for the period beginning February 17, 2020.

9. Claimant initially tried to see his PCP at Springs Medical Associates, but they had no available appointments for several days, so he went to the UC Health emergency department instead.

10. Claimant saw Kimberly Paine, NP at the emergency department. The report stats Claimant complained of low back and right buttock pain, shooting into his right leg and foot with "certain movements," particularly walking. He also reportedly described "occasional" headaches since the accident, although "he is unable to tell me if he truly hit his head or not." Ms. Paine documented, "Patient has had previous problems with his right lower back and leg from a previous car accident. He states that he did see a chiropractor and physical therapist after his last car accident and had his hip 'put back into place.' He is concerned that he is can [sic] have that same problem again." Although Claimant reported low back pain, and his symptoms were bad enough to bring him to the emergency room, NP Paine reported "no thoracic or lumbar spine tenderness with the exam." The remainder of NP Paine's physical exam was also reported as entirely normal.

11. At hearing, Claimant disputed NP Paine's account of his reported symptoms and physical condition. He testified he told her about neck and upper back pain in addition to the severe low back and leg symptoms. Claimant testified Ms. Paine primarily spoke with him and performed no detailed physical exam. Given the apparent internal incongruities in the report, coupled with closely contemporaneous reports from other providers, the ALJ is persuaded the emergency department report does not accurately depict the symptoms Claimant was having at the time.

12. Claimant texted Mr. S[Redacted] the next morning, February 18, and stated, "If have a doctor's appointment tomorrow at 8:30 AM. I'll let you know what they tell me and what [is] going to be done. I still have these massive headaches in the morning in my right leg feels like it's going to pop out of its socket. Emergicare¹ thinks it's my sciatic nerve because sit aggravate and triggers the nerve when sitting for a short period of time but the doctor didn't take any x-rays where [sic] yesterday."

13. Employer did not direct Claimant to a physician or clinic or give him a list of designated providers. Respondents conceded at hearing Claimant had the right to select his own treating physician.

¹ The ALJ infers Claimant meant "emergency room" when referring to "Emergicare."

14. Claimant was seen in the office of Dr. Scott Oliphant on February 19, 2020. He completed a pain diagram endorsing headaches, low back and right leg pain, pain in both shoulders, pain and numbness in his left arm and hand, right groin pain, and “pulling feels like my hip is popping out.” In response to the question whether he hit his head, Claimant replied, “I really don’t know?” For unknown reasons, Dr. Oliphant could not complete the examination that day and scheduled Claimant to return on February 22.

15. Claimant texted Mr. S[Redacted] after leaving Dr. Oliphant’s office. He stated, “I know you’re probably busy right now and that’s probably why you couldn’t answer your phone but I won’t to be coming back to work this week. Unfortunately the doctor postponed his visitation with me but he will see me Saturday. Meanwhile I am out for this week. I’m just going to use the rest of whatever time I have left I [sic] my PTO time and just put it towards this week.”

16. Dr. Oliphant evaluated Claimant on February 22, 2020. Dr. Oliphant observed, “[Claimant] has no symptom magnification or pain fixation findings and is a good historian. He gave a good effort on the effort test. He appears in some pain, related distress” Claimant described aching neck pain extending to his shoulders and upper back. His left shoulder was more painful than the right. He also reported low back pain, worse on the right side, radiating into his right leg. The physical examination revealed abnormalities in multiple areas, including the neck, upper back, shoulders, low back, and right leg. Dr. Oliphant appreciated hypertonicity and muscle spasms throughout the suboccipitals, splenius capitis, splenius cervicis, scalenes, trapezius, levator scapulae, erector spinae, and deltoids. He diagnosed cervical, thoracic, lumbar, and sacroiliac sprain/strain, muscle spasm resulting in myofascial pain syndrome, bilateral shoulder sprain/strain with muscle spasms resulting in myofascial pain syndrome, post-traumatic headaches with neck pain, post-concussive syndrome, and possible lumbar radiculopathy. He referred Claimant to Dr. Michael Ament for a neurological evaluation, Dr. Brock Bordelon to rule out an inguinal hernia, and Optima Rehabilitation for physical therapy. He also ordered cervical and lumbar x-rays and a lumbar MRI. The significant symptoms reported by Claimant and documented in Dr. Oliphant’s detailed report contrast sharply with the report from the emergency department just a few days earlier.

17. Claimant underwent a lumbar MRI on February 25, 2020. It showed disc protrusions at L3-4, L4-5, and L5-S1 that appeared to irritate and compress the bilateral L3 nerve roots, L4 nerve roots, and right L5 nerve root, respectively. The radiologist opined the L4-5 and L5-S1 disc protrusions compressing the nerve roots “may relate to acute to subacute pathology.”

18. On February 28, 2020, Claimant wrote to Charlene Purtlebaugh in Employer’s HR department, regarding his injuries. He described the accident and stated, “I am unable to come back to work because of headaches causing my equilibrium to be unbalanced, possible slip disc in my lower back and possibly a hernia that will be checked out on the 10th of March 2020. I am filing for workers’ compensation because I will not be able to come back to working at this [sic] and cannot work with my current injuries that I have sustained in the accident on February 13, 2020.”

19. Claimant saw Dr. Ament, a neurologist, on March 3, 2020. Dr. Ament noted, “within the first 24 hours after the collision, the patient developed jaw pain, headaches, bilateral shoulder pain, right hip pain, right knee pain, bilateral elbow pain, bilateral ankle pain, tinnitus, sensitivity to bright light, cognitive difficulties Within the first week, he developed neck and lower back pain.” Dr. Ament was most impressed with Claimant’s headaches and cervical issues. Dr. Ament documented, “The patient has a history of bilateral ulnar nerve repositioning surgeries . . . and has some decrease in intrinsic hand strength and ability to oppose digits 1 and 5. Against this background, he has now developed more difficulty with holding objects, and finds that he is dropping items. . . . In addition, his reflexes in the upper extremities are asymmetric, and taken in combination, there is concern for radicular pattern and potentially for relative cervical cord stenosis.” Significant examination findings included increased tone through the trapezius, reduced cervical range of motion, tenderness to palpation of the occipital cervical junction, and bilateral scalene pain. Vision examination showed convergence insufficiency and diplopia suggesting residual effects of a concussion. Dr. Ament opined,

Based on the patient’s reports and data available, there appears to be a plausible mechanism and sufficient force present to cause injury, and a temporal relationship between the injury and the onset of symptoms. The symptoms reported are consistent with the occurrence of a mild traumatic brain injury (mTBI)/concussion at the time of the accident. The patient reports being functional and asymptomatic with regard to the above-mentioned symptoms just prior to the referenced injury, with the exceptions noted in the body of the report. It is more likely than not that the patient’s symptoms as outlined are secondary to injuries sustained on the above indicated injury date. The patient’s pre-injury medical condition was fairly complicated as noted in the body of the report.

20. Dr. Ament ordered a cervical MRI and referred Claimant to Dr. Joshua Watt, a vision specialist. He also referred Claimant for cervical injections.

21. Claimant saw his PCP, Jessica Roberts, NP, on March 6, 2020. Nurse Robertson noted, “Accident 2-13-20, dx with mild concussion: drops car keys, stumbles but catches self, left-sided weakness, currently seeing neurologist. . . . New onset of lower back pain and bilateral groin. Walking increases sharp stabbing pain. +Chronic back pain. Polyneuropathy. Saw a neurologist decreased coordination, right eye vision, has started to have migraines.” NP Roberts’ assessment was “cervical disc disorder with radiculopathy; Pt is currently seeing several specialists related to car accident, as having concussion symptoms as well. Continue with neuro, gastro, and D.C. for treatments.”

22. There is no persuasive evidence Dr. Oliphant, Dr. Ament, or any other authorized provider referred Claimant to NP Roberts for any injury-related treatment.

23. Claimant had the cervical MRI on March 11, 2020. Significant findings included (1) multilevel facet arthropathy, (2) a C4-5 disc bulge and protrusion causing moderate left and mild right neuroforaminal narrowing possibly compressing and irritating the exiting left C5 nerve root, and (3) disc and facet pathology at C3-4 and C6-7 causing

neuroforaminal narrowing that “may abut and irritate the exiting right C4 and right C7 nerve roots” respectively.

24. Dr. Watt performed sensorimotor and neurobehavioral vision testing on April 20 and 21, 2020. He noted multiple abnormalities including visual field deficits, reduced ocular tracking, accommodation problems, a left visual midline shift, and possible vestibular issues. Dr. Watt opined “[Claimant] suffers from many conditions consistent with Post-Traumatic Vision Syndrome. He has deficits with his visual field, pursuit and saccadic eye movements, accommodative/focusing control, binocular fusion stability, visual perception, visual memory, visual midline shift, and visual motion sensitivity. . . . It is my professional opinion that the diagnosed conditions and previously mentioned visual deficits are 100% caused by the MVA that [Claimant] sustained on 02/13/2020.” Dr. Watt recommended optometric vision therapy, which he anticipated would probably require 24-28 sessions to remediate Claimant’s vision problems.

25. Claimant followed up with Dr. Ament on April 24, 2020 to review the cervical MRI. Dr. Ament opined, “the imaging shows multilevel moderate to severe abnormalities. I would not clear the patient for chiropractic maneuvers but would recommend engagement in physical therapy. The plan was to have him referred to interventional pain for cervical injections. Due to the Corona virus situation, this was not accomplished.” He referred Claimant to Pikes Peak Spine & Joint (“PPS&J”) for consideration of cervical and lumbar injections.

26. Claimant saw Patrice Kiesling² at PPS&J on May 6, 2020. Ms. Kiesling noted, “Neck pain was rated as a 6/10 radiating to all digits, right worse than left. The radicular symptoms affect his ability to grab and hold items in his hands. He has experienced multiple episodes of dropping dishes, coffee cups. He has now purchased only plastic-ware for safety measures. [After the] motor vehicle accident he started to experience headaches. These headaches are being treated by Dr. Ament. . . . Complains of low back pain. This pain is constant and is rated as an 8/10 based on the visual analog scale. He experiences radicular symptoms to the bilateral lower extremities right greater than left. Pain is exacerbated with activity and movement. The pain also affects his ability to sleep.” Cervical spine examination showed painful and limited range of motion, taught muscle bands and trigger points in the bilateral upper trapezius and rhomboid muscles, and reduced sensation in the right arm. Lumbar examination showed extreme tenderness, limited range of motion, and reduced sensation and strength in the right leg. Ms. Kiesling diagnosed neck pain, cervical radiculopathy, low back pain, lumbar radiculopathy, and myalgia. She recommended cervical and lumbar ESIs.

27. Dr. Kerry Latch at PPS&J performed a lumbar ESI on May 13, 2020.

28. Dr. John Raschbacher performed a record-review for Respondents on May 22, 2020. He also testified at hearing. Dr. Raschbacher agreed Claimant suffered injuries in the February 13 MVA but opined his injuries were minor and confined to the low back and right leg as referenced in the emergency room report. Dr. Raschbacher opined any

² The ALJ infers Ms. Kiesling is probably a PA or NP at the clinic.

symptoms related to the MVA would have been present when he went to the emergency room. Dr. Raschbacher saw no indication of a direct head injury. He opined whiplash can occasionally cause concussion but does not believe Claimant suffered whiplash because there were no reports of neck pain or cervical exam findings at the emergency room. Dr. Raschbacher acknowledged Claimant reported headaches at the emergency room, but opined they were probably related to “agitation or nervousness after trauma,” as opposed to a head injury. Dr. Raschbacher indicated he probably would have “had [Claimant] on some type of light-duty restricted work” immediately after the accident but does not know whether he would have Claimant under any restrictions as of the hearing. Dr. Raschbacher believes Claimant’s complaints are exaggerated and sees no “clear reason to believe him.”

29. Claimant has a history of conditions affecting or overlapping some of the body parts involved in his work-related injury. He treated with Dr. Malabre at Colorado Springs Health Partners in 2015, and Springs Medical Associates from 2017 through 2020. Dr. Malabre’s records contain a diagnosis of diabetic polyneuropathy, although Claimant disagrees that was a significant problem before the February 2020 work accident. It is not clear when the diagnosis was originally made or what diagnostic criteria were used. Respondents argue the record contains positive diabetic foot exams, but the cited page (Ex. D, p. 33) shows no observable problems with the feet or toes, and “normal” monofilament sensory testing bilaterally. There is no evidence Claimant ever underwent neurological testing and it appears the diagnosis was made based on symptoms. Claimant tried Neurontin and Lyrica in 2015, but there is no persuasive evidence of any specific treatment for diabetic neuropathy in the past several years.

30. Claimant injured his right shoulder in an MVA in April 2016. A June 3, 2016 MRI showed rotator cuff tendinosis, a SLAP tear, and a posterior inferior labral tear. The record does not conclusively show whether Claimant underwent surgery or other definitive treatment for the shoulder. A shoulder MRI on October 30, 2018 showed AC joint degenerative changes and a partial undersurface tear of the distal supraspinatus tendon, but “[the] rotator cuff appears otherwise normal. Remainder negative.”

31. At the time of the work accident, Claimant was taking Tramadol daily for lumbar and thoracic pain and lower extremity “symptoms.” There are few documented abnormalities on physical examinations aside from mild tenderness to palpation of the lumbar and thoracic paraspinal muscles and limited shoulder range of motion. Claimant’s pain was repeatedly described as “well controlled” with Tramadol, which supports Claimant’s testimony. A thoracic MRI on October 30, 2018 was largely unremarkable, with diffuse disc desiccation throughout the cervical spine and a small disc bulge at T7-8, but no significant canal or foraminal stenosis. An October 24, 2018 lumbar MRI showed only mild degenerative changes, mild stenosis at L2 through L4, and moderate bilateral neural foraminal stenosis at L4. There was no indication nerve root compression as referenced in the February 25, 2020 MRI report. Comparing the reports of the 2018 and 2020 MRIs supports the radiologist’s interpretation that the disc protrusions and nerve root compression at L4-5 and L5-S1 represent “acute to subacute pathology.”

32. Claimant's PCP records are filled with cloned passages carried over from one appointment to the next. For example, the following passages are recited verbatim multiple times from November 2017 through September 2019:

Right shoulder pain: MVA on 4-24-16. His symptoms include throbbing, constant ache, limited rom, and interference with general ADL. He's used heat, ice, massage, Epsom salts, and ibuprofen. He feels like it is not getting better.

Chronic Back Pain: He continues to take the tramadol 50 mg 5x day for subsequent symptoms down both legs.

On October 19, 2018, the notation regarding "Chronic Back Pain" changed slightly to:

Back pain began at MVA see above. Pain today is 2/10 localized in the thoracic back. He also states that he has RLS³ that is better with tramadol. Will obtain imaging today. He continues to take the tramadol 50 mg 5x day for subsequent symptoms down both legs.

The reference to Tramadol "5x day" persisted even after it was increased to six times per day.

33. Similar issues are seen in the Physical Examination section of the reports, with the following language repeated verbatim multiple times:

EXTREMITIES: on visual inspection there was no effusion, ecchymosis, conclusions, or bony deformities of the lumbar spine. The patient had mild tenderness to palpation over the lumbar and thoracic paraspinous muscles. The patient had FAROM. The patient strength was 5-5 and symmetric of the lower extremities. sensation was intact to light touch along the Sural, saphenous, deep and superficial peroneal nerves.

On visual inspection there was no effusion, ecchymosis, conclusions, or bony deformities of the Shoulders bilaterally. The patient had no tenderness to palpation. He has limited ROM due to pain. his strength was 5 5 and symmetric. sensation was intact to light touch at C5, C6, C, C8 and T1.

Negative Speeds Test

Negative cross arm impingement

Positive obrien's

Negative Jobes test

34. Nurse Roberts' office switched to a different format of EMRs in December 2019. On December 27, 2019, Claimant was seen for a medication refill, complaining of left leg pain and sleep issues. He denied any weakness, headaches, or visual changes. Examination of his spine was described as "on visual inspection there was no effusion,

³ The meaning of this acronym in this context is unclear, although in this ALJ's experience, "RLS" typically refers to Restless Leg Syndrome.

ecchymosis, conclusions, or bony deformities of the lumbar, thoracic or cervical spine. The patient had moderate tenderness to palpation over the bilateral paraspinous muscles at approximately L4-S1." He had full range of motion and strength of the upper and lower extremities. His pain was "well controlled" with medication with no significant functional deficits noted. The findings were the same on January 8, 2020, the last primary care visit before the work accident.

35. The usefulness of the previously described records is compromised by the large amount of cloned information, which raises questions regarding the accuracy of the descriptions of Claimant's condition at any given appointment. All this ALJ can glean with confidence is Claimant had low-level right shoulder, lumbar and thoracic back pain, and some degree of leg symptoms, all of which were "well controlled" on stable doses of Tramadol. This conclusion is buttressed by Claimant's working a physically demanding job without difficulty before the accident.

36. Claimant was seen at the St. Francis Medical Center emergency department on August 26, 2019 for left hamstring pain. PA Sharon Sawyer noted, "he awoke with the symptoms today. He reports feeling pain in his right hip Friday that has since resolved. He reports working in maintenance and having a labor-intensive job. He denies any acute onset of pain or known injuries or trauma. . . . No back pain. Pain is isolated to the hamstring region." The physical examination showed tenderness along the hamstring and inability to fully extend his knee because of pain. There was no tenderness to palpation around the hip, pelvis, thoracic, or lumbar areas. Claimant was diagnosed with left thigh pain and given an off-work note for three days.

37. The findings, conclusions, and opinions of Claimant's treating physicians are more persuasive than the contrary opinions offered by Dr. Raschbacher.

38. Claimant proved by a preponderance of the evidence he suffered a compensable injury on February 13, 2020.

39. The preponderance of persuasive evidence shows Claimant injured his neck, low back, right leg, and probably suffered a mild concussion/TBI from acceleration/deceleration forces (i.e., whiplash). His headaches are probably related to his neck pain, the concussion, or some combination thereof. Claimant's low back injury either represents a new injury or an aggravation of a pre-existing condition. The neck injury is new because there is no persuasive evidence of any pre-existing neck problems. Claimant's upper and lower extremity symptoms are compensable consequences of his neck and back injuries to the extent they are radicular in nature as opposed to symptoms of unverified polyneuropathy. There is no persuasive evidence Claimant suffered any structural injury to his shoulders. His bilateral shoulder pain probably represents muscle strains or referred pain from his neck. The ALJ agrees with the concession in Claimant's brief there is insufficient evidence to establish groin or pelvic symptoms and/or a hernia were caused by or related to the accident.

40. Claimant proved the evaluations and treatment provided by Dr. Oliphant, Dr. Ament, Dr. Watt, and PPS&J were reasonably needed to diagnose, cure, and relieve

the effects of Claimant's compensable injury. Treatment at the UC Health emergency room on February 17, 2020 was reasonably necessary emergent treatment.

41. Claimant had the right to choose his own treating physician because Employer never referred him to a provider. Claimant chose Dr. Oliphant, who became the primary ATP. Dr. Ament, Dr. Watt, and PPS&J are authorized based normal progression of authorized referrals.

42. Nurse Roberts and Springs Medical Associates are not authorized because there is no persuasive evidence of a referral from any authorized provider.

43. Claimant was paid a base rate of \$22.50 per hour, plus overtime. He was paid "portal to portal," including travel time to and from jobs. He was also paid an allowance for use of his personal vehicle for work and the upkeep of his tools, which is identified on his paystubs as "Vehicle Tool AI." The Vehicle Tool AI was included in Claimant's gross taxable wages and subject to F.I.C.A. and income tax withholding.

44. Claimant earned \$15,317.36 in gross taxable wages in the eleven full weeks immediately preceding the injury. This equates to an AWW of \$1,392.49, with a corresponding weekly TTD rate of \$928.32, and a daily TTD rate of \$132.62.

| Pay period end date | Gross Pay |
|--------------------------------|--------------------|
| 2/9/2020 | \$1,272.65 |
| 2/2/2020 | \$1,136.15 |
| 1/26/2020 | \$1,654.66 |
| 1/19/2020 | \$1,511.42 |
| 1/12/2020 | \$1,212.04 |
| 1/5/2020 | \$1,370.59 |
| 12/29/2019 | \$1,135.75 |
| 12/22/2019 | \$1,788.31 |
| 12/15/2019 | \$1,379.47 |
| 12/8/2019 | \$1,657.25 |
| 12/1/2019 | \$1,199.07 |
| TOTAL: | \$15,317.36 |
| No. weeks: | 11 |
| AWW: | \$1,392.49 |
| TTD rate: | \$928.32 |
| Daily TTD: | \$132.62 |

45. Claimant proved he was disabled by the effects of the work injury and suffered a wage loss commencing February 14, 2020. Claimant could not reasonably have tolerated the physical demands or the prolonged travel required by his job. Although he tried to return to work on February 17, the pain prevented him from continuing. Employer offered no modified duty and Claimant has been off work since February 18.

Claimant is entitled to TTD from February 14 through February 16, 2020 and from February 18, 2020 continuing until terminated by law.

46. Claimant earned \$47.93 for 2.13 hours of work on February 17, 2020. His average daily wage is \$198.93 ($\$1,392.49 \div 7 = \198.93), resulting in a wage loss of \$126.82. This equates to **\$98.97 in TPD benefits** ($\$198.93 - \$47.93 = \$151 \times 2/3 = \100.67).

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury.

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

The mere fact a claimant is involved in a work-related “accident” does not automatically mean they suffered a compensable “injury.” The term “accident” refers to an “unexpected, unusual, or undesigned occurrence,” whereas an “injury” is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an “accident” is the cause, and an “injury” is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers’ compensation benefits are only payable if an accident results in a compensable “injury.” A compensable injury is one that requires medical treatment or causes a disability. *E.g.*, *Montgomery v. HSS, Inc.*, W.C. No. 4-989-682-01 (August 17, 2016). The mere fact that a claimant seeks medical treatment or receives work restrictions after an accident does not automatically establish a compensable injury if the symptoms that triggered the need for treatment or disability were not proximately caused by the accident. *E.g.*, *Madonna v. Walmart*, W.C. No. 4-997-641-02 (August 21, 2017); *Washburn v. City Market*, W.C. No. 5-109-470 (June 3, 2020); *Fay v. East Penn*, W.C. No. 5-108-430-001 (April 24, 2020).

As found, Claimant proved he suffered a compensable injury because of the MVA on February 13, 2020. The accident caused a need for treatment and disability. There is no dispute Claimant was involved in a rear-end MVA, and even Dr. Raschbacher agreed he suffered minor injuries to his low back and leg that reasonably required evaluation at the emergency room. Dr. Raschbacher also agreed he would have put Claimant on “light duty” restrictions for at least some undefined period.

B. Treatment rendered by Dr. Oliphant, Dr. Ament, Dr. Watt, PPS&J was reasonably necessary to diagnose, cure, and relieve the effects of Claimant's compensable injury.

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is recently necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, the preponderance of persuasive evidence shows Claimant injured his low back, neck, right leg, and probably suffered a mild brain injury from acceleration/deceleration forces (i.e., whiplash). His headaches are probably related to his neck pain, the concussion, or some combination thereof. Claimant's upper and lower extremity symptoms are also compensable consequences of his neck and back injuries to the extent they are radicular in nature as opposed to symptoms of an unverified polyneuropathy. There is no persuasive evidence Claimant suffered any structural injury to his shoulders; his bilateral shoulder pain likely represents muscle strains or referred pain from his neck. There is insufficient evidence to establish groin or pelvic symptoms and/or a hernia were caused by or related to the accident.

The evaluations and treatment provided by Dr. Oliphant, Ament, Watt, and PPS&J were reasonably needed to diagnose, cure, and relieve the effects of Claimant's compensable injury. The ALJ credits the findings and causation opinions of Claimant's treating physicians over the contrary opinions offered by Dr. Raschbacher. Dr. Raschbacher's exclusive reliance on the emergency room report to delineate the accident-related body parts is unpersuasive when viewed in the context of the entire record, particularly the pain diagram Claimant completed two days later and Dr. Oliphant's detailed report of February 22, 2020. The ALJ is not persuaded by Respondents' insinuation that Claimant's counsel orchestrated the expansion of Claimant's complaints between the February 17 emergency room visit and the February 19 appointment at Dr. Oliphant's office. It is more probable and consistent with the expected role of emergency rooms that Claimant received a cursory examination to rule out any condition that required immediate aggressive treatment or hospitalization and, finding none, was given palliative treatment and released with instructions to follow up with other providers. Respondents' argument that Claimant's current complaints are merely the continuation of multiple pre-existing conditions is refuted by the fact Claimant pursued minimal treatment and worked a physically demanding job with no apparent difficulty or limitation until the work accident. Claimant's back pain appears substantially more severe than before the accident, and there is no persuasive evidence of significant pre-injury neck pain, headaches, or vision issues like those Dr. Watt ascribed to the effects of the injury.

C. Dr. Oliphant, Dr. Ament, Dr. Watt, and PPS&J are authorized

Besides proving treatment is reasonably necessary, the claimant must prove the provider is “authorized.” *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a provider’s legal right to treat the claimant at the respondents’ expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Providers typically become authorized by the initial selection of a treating physician, agreement of the parties, or upon referrals made in the “normal progression of authorized treatment.” *Bestway Concrete v Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Under § 8-43-404(5)(a)(I)(A), the employer has the right to choose the treating physician in the first instance. The employer must tender medical treatment “forthwith, ” or the claimant has “the right to select a physician or chiropractor.” *Id.*; *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Here, Employer never referred Claimant to a physician, and Respondents agree the right of selection passed to Claimant. A claimant “selects” a physician when he demonstrates by words or conduct he has chosen a physician to treat the industrial injury. *Squitieri v. Tayco Screen Printing, Inc.*, W.C. No. 4-421-960 (September 18, 2000). The persuasive evidence shows Claimant chose Dr. Oliphant. Although he tried to get in with his PCP first, they had no available appointments soon enough, so he went to Dr. Oliphant instead. Thereafter he pursued treatment under Dr. Oliphant’s direction. Dr. Ament, Dr. Watt, and PPS&J became authorized upon referral from Dr. Oliphant.

D. Treatment at the UC Health emergency department was reasonably necessary emergency treatment

Emergency treatment for a work-related injury is authorized without regard to whether the claimant had a referral or prior approval from the respondents. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); see also WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and the existence of a “bona fide emergency” is a question of fact for the ALJ. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). As found, Claimant’s treatment at the UC Health emergency department on February 17, 2020 was reasonably necessary emergency treatment for his compensable injury.

E. Nurse Roberts and Springs Medical Associates are not authorized

Once a claimant exercises the right to choose a treating physician, they cannot unilaterally engage other providers without obtaining permission from the respondents or following the statutory procedures for a change of physician. *Pickett v. Colorado State Hospital*, 513 P.2d 228 (Colo. App. 1973). As found, NP Roberts and Springs Medical Associates are not authorized because Claimant had already selected Dr. Oliphant and there is no persuasive evidence Claimant was referred by Dr. Oliphant or any other provider within the chain of authorized referrals.

F. Claimant’s AWW is \$1,392.49

The term “wages” is defined as “the money rate at which the services rendered are recompensed under the contract of higher in force at the time of the injury.” Section 8-40-201(19)(a). “Wages” includes per diem payments that are included in the claimant’s federal taxable wages. Section 8-40-201(19)(c). Section 8-42-102(2) provides that compensation shall be based on the employee’s average weekly earnings “at the time of the injury.” The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to “fairly” calculate the employee’s AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a “fair approximation” of the claimant’s actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

As found, Claimant’s average weekly wage is \$1,392.49, based on his gross taxable earnings in the eleven full weeks immediately preceding the injury, including the Vehicle Tool AI. See *Stonebraker v. American Merchandising Special*, W.C. No. 4-959-213-01 (December 1, 2015) (presence or absence of tax withholding is “the most significant” factor determining whether per diem is included in the AWW). The corresponding TTD rate is \$928.32 per week or \$132.62 per day.

G. Claimant is entitled to TTD benefits from February 14 to February 16, 2020 and from February 18, 2020 ongoing.

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by claimant’s inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no requirement that a claimant have restrictions from a treating provider, and disability can be established by any competent evidence. *Savio House v. Dennis*, 685 P.2d 141 (Colo. App. 1983).

As found, Claimant was disabled and suffered a wage loss commencing February 14, 2020. Claimant returned to work briefly on February 17 and has been continuously off work since February 18, 2020. Although Dr. Oliphant did not put Claimant on work restrictions, Claimant’s testimony coupled with the functional limitations documented in medical records shows he was disabled by the effects of the work injury. Even Dr. Raschbacher agreed he would have put Claimant on “light duty” restrictions immediately after the accident. Respondents owe Claimant \$397.86 from February 14 through February 16, 2020 ($\$132.62 \times 3 = \397.86), and \$928.32 per week commencing February 18, 2020.

H. Claimant is entitled to TPD benefits for February 17, 2020.

Claimant's brief return to work on February 17, 2020 terminated his eligibility for TTD benefits for that date. Section 8-42-105(3)(b). Because he could not complete the full day, he is entitled to TPD benefits based on his wage loss on February 17. Section 8-42-106(1). As found, Claimant earned \$47.93 for 2.13 hours of work on February 17. His average daily wage is \$198.93, resulting in a wage loss of \$126.82. This equates to \$98.97 in TPD benefits.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits based on injuries sustained on February 13, 2020 is compensable.
2. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including but not limited to, charges from Dr. Oliphant, Dr. Ament, Dr. Watt, Pikes Peak Spine & Joint, imaging studies ordered by Dr. Oliphant and Dr. Ament, and the February 17, 2020 visit to the UC Health emergency department.
3. Claimant's request for medical benefits related to treatment rendered by Jessica Roberts, NP and Springs Medical Associates is denied and dismissed.
4. Claimant's average weekly wage is \$1,392.49, with a corresponding TTD rate of \$928.32 per day and \$132.62 per day.
5. Insurer shall pay Claimant \$397.86 in TTD benefits for February 14 through February 16, 2020.
6. Insurer shall pay Claimant \$98.97 in TPD benefits for February 17, 2020.
7. Insurer shall pay Claimant TTD benefits at the weekly rate of \$928.32 commencing February 18, 2020 and continuing until terminated by law.
8. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.
9. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: August 20, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury on October 22, 2019?
- II. Has Claimant shown, by a preponderance of the evidence, that the left shoulder surgery as proposed by Dr. Pak is reasonable, necessary, and causally related to Claimant's work injury?
- III. Have Respondents shown, by a preponderance of the evidence, that Claimant was responsible for her own termination of employment, thus severing her claim for TPD or TTD payments?

STIPULATIONS

By agreement of the parties, the issue of Average Weekly Wage was held in abeyance, pending the outcome of this hearing. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Accident

1. Claimant began working for Employer in October 2015 as an auto parts delivery driver. At hearing, Claimant testified that she earned \$12.50 per hour and worked 30 to 40 hours on average per week.
2. On October 22, 2019, Claimant was involved in a motor vehicle accident while delivering auto parts for Employer. She was driving a Nissan Frontier pickup truck, and wearing a seatbelt when the collision occurred. Claimant came to a stop in the right-hand turn lane at Austin Bluffs and Academy Boulevard in Colorado Springs. She was preparing to make a right turn onto South Academy, when her vehicle was rear-ended by a Honda Pilot that was traveling at a speed unknown to Claimant. Claimant did not anticipate the impact when the collision occurred.
3. At hearing, Claimant testified that she had her left arm on the armrest of the driver-side door and her left hand was holding onto the steering wheel. The collision caused her body to go 'flying forward'. Claimant's seatbelt caught, and she was then thrown backwards in her seat. The seatbelt was situated over her left shoulder at the time of the collision. Claimant testified that she was not able to undo her seatbelt due to the amount of pain. The airbags on her vehicle did not deploy.

4. Following the crash, police arrived at the scene. The traffic accident report indicates that Claimant's vehicle sustained 'moderate' damage to the rear end. The other vehicle's damage to the front end was described as 'slight'. (Ex. 8). The report also reflects that Claimant was complaining of left shoulder pain following the collision. *Id.*
5. At hearing, Claimant testified that she was unable to use her left arm to undo her seatbelt. She was asked if she wanted an ambulance, and she said yes. She then called her employer.

After that, I was examined by the fire department in the ambulance, and I told them I couldn't move my arm. That's when they went ahead and put my arm in a sling, and one of the police officers unbuckled my seat- belt.

And after that happened, that's when I was helped out of the vehicle and transported into the ambulance and moved from there to the hospital. *Hearing transcript.*

Emergency Treatment

6. Claimant testified that she was taken by ambulance to Penrose Hospital. The AMR report indicated that Claimant reported that her left shoulder felt 'dislocated'. (Ex. 2, p. 50). Claimant reported pain in her left shoulder that extended down her left arm. *Id at 48.* Claimant also reported loss of feeling in her left fingers.
7. At Penrose Hospital, the attending physician noted that Claimant was involved in a rear-end collision less than an hour ago. Claimant complained of left shoulder pain. (Ex. 2, p. 26). Claimant underwent a left shoulder x-ray. The x-ray was noted to be negative for acute fracture or dislocation. *Id.*
8. The ER records indicate that there was no sign of bony tenderness, no signs of dislocation, normal distal neurovascular exam, full range of motion and no clavicular tenderness. (Ex F: p. 111). There was no evidence of any significant traumatic injury. Claimant was diagnosed with a left shoulder strain and discharged. (Ex. 2, p. 29).

Treatment at Concentra, and Referrals

9. The next day, Claimant went to Concentra. (Ex. 3, p. 51). Claimant was examined by PA Mendy Peterson. PA Peterson noted that Claimant was a restrained driver sitting at a red light and was rear-ended. Claimant denied prior injury to her left shoulder, but numbness down to her fingers. *Id at 54.* Claimant reported that she was experiencing decreased range of motion. Claimant also reported having difficulty lifting her two-year old daughter.

10. Physical examination of Claimant's left shoulder revealed no distal clavicle deformity, no midshaft clavicle deformity, no proximal clavicle deformity, no ecchymosis, no effusion, no erythema, no scapular winging, and no swelling. There was noted to be limited range of motion in all directions. The physical examination also revealed tenderness in the bicipital groove, trapezius muscle, and anterior/posterior shoulder. (Ex. 3, p. 54).
11. Claimant was referred to physical therapy. PA Peterson agreed that Claimant's history and mechanism of injury appeared to be consistent with her presenting symptoms and physical exam. *Id* at 56.
12. On October 29, 2019, Claimant returned to Concentra reporting 'minimal' range of motion in her left shoulder. (Ex. 3, p. 62). Claimant reported that her shoulder constantly felt like it had to pop. Claimant also reported pain radiating down her left side. PA Peterson noted that Claimant had some signs of impingement, instability, clunk, and scapular winging. *Id*. PA Peterson referred Claimant for an MRI, and an orthopedic consult. *Id*.
13. Claimant underwent an MRI on October 29, 2019. (Ex. 6, p. 189). The MRI's *Impressions* revealed:
 - 1.) Changes *suspicious of* posterior glenohumeral dislocation with small reverse Hill-Sachs impaction fracture. Posterior inferior labral irregularity *could be subacute* tear with scarring of the labrum and posterior band inferior glenohumeral ligament attachment to the glenoid. No *acute* labral tear is seen.
 - 2) No rotator cuff or biceps tendon abnormality. *Id*. at 190. (emphasis added).

Also noted, under *Miscellaneous*: Subtle bone *edema* and *questionable minimal impaction injury* at the anterior inferior medial aspect of femoral head....(emphasis added).

The MRI was read by Trystain Johnson, MD, who is fellowship trained in musculoskeletal radiology.
14. Orthopedic surgeon, Dr. Michael Simpson, examined Claimant on November 5, 2019. (Ex. 3, p. 69). Dr. Simpson noted that Claimant seemed to have an acute posterior shoulder subluxation/dislocation. *Id*. at 70. He recommended Claimant undergo a structured physical therapy program two times per week for four weeks. The program was to work on shoulder range of motion, stabilization, scapular stabilization, and rotator cuff strengthening. Claimant was given a sling and a Medrol Dosepak. Dr. Simpson noted that he would order an EMG if Claimant remained symptomatic with numbness and tingling. *Id*. Despite the MRI results, and the suspicion of a dislocation, Dr. Simpson still did not recommend surgery. *Id*.
15. Claimant was reexamined at Concentra on November 11, 2020. (Ex. 3, p. 73). Claimant was continued on light duty work restrictions. *Id*.

16. Claimant returned to Concentra on November 28, 2020. (Ex. 3, p. 76). Claimant reported that she did not feel better, was still in a lot of pain, and did not feel like she was improving. She was given a cortisone injection. *Id.*
17. Claimant returned to Dr. Simpson on December 10, 2019. (Ex. 3, p. 86). Dr. Simpson noted that Claimant had evidence of a posterior fracture dislocation of the left shoulder with a Hills-Sachs lesion and a lesion to the posterior labrum in the posterior band of the inferior glenohumeral ligament. *Id.* Claimant had some dysesthesias in her arm that has worsened. Claimant reported numbness in all fingers and tension style headaches. Dr. Simpson noted that therapy seemed to aggravate her symptoms. He then referred Claimant for an EMG and nerve conduction study. *Id. at 87.*
18. Claimant had also been examined by PA Peterson at Concentra on November 11, 2019. (Ex. 3, p. 81). No changes were made to Claimant's treatment plan. *Id.*
19. On December 26, 2019, Claimant underwent an EMG with Dr. Randall Scott. *Cl. Ex. 7.* Dr. Scott interpreted the EMG results to be a normal study. *Id.*
20. On January 14, 2020, Dr. Simpson opined that Claimant was not a good surgical candidate, "as her symptoms and response to provocative maneuvers are not consistent with this just being an isolated glenohumeral process" (Ex. 3, p 102). In his report, he tacitly noted that Claimant still had MRI evidence of posterior fracture dislocation of her left shoulder. *Id at 98.*
21. He opined that Claimant had 'inexplicable pain from beyond what he would anticipate for an isolated shoulder injury'. Dr. Simpson was not able to explain the numbness and weakness in Claimant's hand. Dr. Simpson recommended chiropractic treatment and a psychological evaluation. Dr. Simpson also suggested that Claimant get a second orthopedic opinion regarding surgery. *Id at 102.*
22. That same day, Claimant was also examined by Dr. George Johnson, the ATP at Concentra. (Ex. 3, p. 93). Dr. Johnson referred Claimant to Dr. Pak, an orthopedic surgeon specializing in shoulder surgery, for a second opinion.
23. On January 27, 2020, Claimant was examined by Dr. John Pak. (Ex. 5, p. 168). Dr. Pak agreed that Claimant's mechanism of injury was consistent with her diagnosis. Dr. Pak explained that Claimant's physical examination was consistent with moderate posterior instability in the left shoulder. He noted that Claimant did not have much in the way of anterior apprehension, but she did have posterior apprehension on examination. The MRI was consistent with a posterior inferior labral pathology. Dr. Pak recommended surgical labral repair since Claimant had not improved with nonsurgical options. *Id.*
24. On January 28, 2020, Claimant returned to Concentra and was examined once again by Dr. Johnson, her ATP. (Ex, 3, p. 106). Dr. Johnson noted that the

surgery recommended by Dr. Pak was pending approval. At this visit, Dr. Johnson agreed with the surgery recommended by Dr. Pak. *Id. at 109.*

25. Between October 23, 2019 through May 1, 2020, Claimant attended eight physical therapy sessions. (Ex. 4). At hearing, Claimant testified that the physical therapy did not help her shoulder condition.

Respondents approve Conservative Treatment only

26. Respondents filed a Notice of Contest on February 3, 2020. (Ex. 5, p. 186). The claim was denied for further investigation. On February 5, 2020, Respondents sent Dr. Pak a letter denying the recommended surgery because compensability had not been established. *Id at 184.*
27. On February 13, 2020, Claimant returned to Concentra. (Ex. 3, p. 111). PA Peterson noted that the surgery was denied because the MRI “subacute tear”. Ms. Peterson noted that Claimant was not improving. *Id at 114.*
28. On March 6, 2020, Claimant returned to Concentra. PA Peterson noted that Claimant continued to have popping and decreased range of motion. Claimant was instructed to continue physical therapy. Claimant returned to Concentra on March 19, 2020, reporting that her symptoms were unchanged. *Id at 122.* On April 15, 2020, Dr. Johnson referred Claimant for additional physical therapy. *Id at 130.*

IME Report by Dr. O’Brien

29. On March 20, 2020, Claimant underwent an independent medical examination at the Respondents’ request with Dr. Timothy O’Brien. (Ex. A). Dr. O’Brien opined that Claimant suffered a minor shoulder injury that would have healed on or before her first evaluation with Dr. Simpson on November 5, 2019. He agreed that Claimant suffered an injury to her left shoulder on October 22, 2019.
30. Dr. O’Brien opined that Claimant’s ongoing pain is not caused by an ongoing injury. Rather, Dr. O’Brien thought that the pain was caused by secondary gain issues. *Id at 10.* Dr. O’Brien said this about the MRI:

The MRI scan is being *dramatically over interpreted*. When a radiologist uses nomenclature such as “subtle” and “suggested”, they are informing their reading audience of the fact that the findings they are observing are not definitive.....The radiologist’s over-read of the MRI scan and his “suggestion” that a dislocation had occurred was a great disservice to Ms. Newell and it *mislead the physicians who utilize those clinically insignificant “suggestions” to validate their desire to perform surgery*, which is never indicated. (emphasis added).

Dr. O'Brien also stated that the MRI "was also read by Dr. Bower (sic). [The ALJ notes Dr. O'Brien to be incorrect: Dr. Paul *Bauer*, DO, performed the pre-MRI arthrogram protocol by injecting Claimant under CT guidance. That is what Dr. Bauer signed-not the MRI report] (Ex. 6. p. 191).

31. Dr. O'Brien also criticized Dr. Pak's (in his opinion) lack of understanding of Claimant's nonorganic factors. Referring to the surgery proposed by Dr. Pak, Dr. O'Brien stated, "It will categorically fail if it is performed." (Ex. A, p. 11).

32. He went on to criticize even Dr. Simpson's referral for a second opinion, stating:

Thus, Dr. Simpson was inappropriately advocating for Ms. Newell rather than calling a spade a spade and indicating that this was a Workers Compensation claim that was inherently associated with secondary gain issues...Just because Dr. Simpson was unwilling to indicate that nonorganic factors best explained the symptomology and exam findings that he noted, it does not mean that his ongoing desire to exercise investigative efforts was appropriate and indeed, it was not. *Id.*

33. On March 31, 2020, Respondents sent a letter to Dr. Pak denying the labral repair surgery. (Ex. 5, p. 170).

34. In the interim, Claimant continued to see not only PA Peterson at Concentra, but also her ATP, Dr. Johnson as well. In visits on 1/14/2020, 1/28/2020, and 4/15/2020, Dr. Johnson continued to note the *Assessment* as 1. Closed Hill-Sachs fracture of left humerus, initial encounter, and 2. Injury of superior glenoid labrum of left shoulder joint. In each visit, he continued to note pain with range of motion. (Ex. 3, pp. 96, 110, 126). He initially agreed with Dr. Pak's recommendation for surgery on 1/28/2020. *Id at 109.*

35. Then, on 4/15/2020 (and while noting the same symptoms, and carrying a similar *assessment*, Dr. Johnson notes: "IME Dr. O'Brien report did not recommend surgery. I still do not have the report." *Id at 126.*

36. On 5/1/2020 Dr. Johnson now noted: "IME Dr. O'Brien report states that the injury that she has was minor and would not cause a significant injury. He states that she is at MMI. *Still with significant pain.*" *Id at 132* (emphasis added). Dr. Johnson then released Claimant at maximum medical improvement because he now opined that Claimant's condition was *not work related*. *Id at 135.* He recommended by Claimant see her own provider for care of the condition. *Id.*

IME Report by Dr. Rook

37. Claimant underwent an independent medical evaluation with Dr. Jack Rook on May 11, 2020. (Ex. 1). Dr. Rook diagnosed Claimant with left shoulder pain, brachial plexus injury/irritation post MVA, and myogenic thoracic outlet syndrome due to pectoralis minor muscle, and sleep disturbance. Dr. Rook opined that

Claimant's clinical presentation is consistent with the mechanism of injury of the on-the-job motor vehicle accident on October 22, 2019. Dr. Rook reasoned that Claimant has been struggling with left shoulder pain, involvement of the periarticular musculature, and experiencing upper extremity symptoms since October 22, 2019. The symptoms have been consistently documented throughout the medical records. *Id.*

38. Dr. Rook opined that based on Claimant's history, "it is likely that she sustained a posterior joint subluxation of her left shoulder post-impact with some degree of trauma to her brachial plexus caused by the posteriorly subluxed humeral head." *Id.* Claimant "reported that immediately post-impact she was experiencing left arm pain that extended from her shoulder to her left hand with paresthesias in the ulnar distribution." Dr. Rook explained that this is suggestive of injury to the lower cord of Claimant's brachial plexus, which consists of nerve fibers that coalesce to become the ulnar nerve. *Id.*
39. Dr. Rook commented on Dr. O'Brien's opinions contained in his IME report. Dr. Rook noted that Dr. O'Brien's suggestion that Claimant had some sort of migrating chronic pain syndrome suggesting malingering is not supported by the medical records. *Id at 12.* Dr. Rook explained that the medical documentation suggests that Claimant has had problems in all the areas that she complains of currently dating back to her injury. The Claimant reports that many of her symptoms have worsened over time. Dr. Rook explained that it is expected that Claimant's symptoms would worsen over time because she is over seven months post-injury, with unrelenting pain emanating from her left shoulder joint, and with frequent popping in her shoulder is perpetuating the surrounding muscle spasms. *Id.*
40. Dr. Rook explained that from a pathophysiological perspective, the Claimant likely sustained a posterior subluxation at the time of her injury when her seatbelt caught and pushed her humeral head backwards, injuring the shoulder capsule and the humeral head.
41. Dr. Rook opined that the term "subacute" on the MRI is not indicative that Claimant had a preexisting condition. He explained that the medical definition of subacute is "Rather recent onset or somewhat rapid change." Dr. Rook further explained that "in contrast, the term chronic indicates indefinite duration or virtually no change." Dr. Rook explained that the presence of edema on an MRI typically represents an inflammatory response to some sort of recent trauma. *Id.*
42. Dr. Rook concluded that he agreed with Dr. Pak and Dr. Johnson's *original* opinion that Claimant should proceed with surgery. *Id at 14.* He opined that the surgery recommended by Dr. Pak is reasonable, necessary, and directly related to the on-the-job injury that occurred on October 22, 2019.

Dr. O'Brien's Deposition

43. Dr. O'Brien testified via a deposition prior to the hearing. Dr. O'Brien testified consistent with his IME report. Dr. O'Brien testified that there was a 0% chance that Claimant would have full range of motion in her shoulder if she had just dislocated the shoulder. Dr. O'Brien also testified that seatbelt sign is never positive in a rear-end collision. Dr. O'Brien testified that seatbelt signs are only positive in a front-end collision. *Id.*

44. Dr. O'Brien testified that a rear-end collision cannot cause a posterior dislocation injury. However, he agreed that Claimant suffered an injury to her shoulder when she was rear-ended on October 22, 2019. *O'Brien Depo, p. 31-32.* He also testified that the absence of blood in the MRI images proves there was no acute fracture to claimant's shoulder.

45. Dr. O'Brien also agreed that there was no evidence that Claimant required medical treatment for her left shoulder prior to October 22, 2019. He also agreed that Claimant did not have work restrictions prior to October 22, 2019. *Id.*

46. After taking issue with Drs. Pak and Simpson's conclusions, Dr. O'Brien went on to explain why his IME physical exam was better than Dr. Simpson's:

A And that's the difference. I took my exam to the next level; whereas Dr. Simpson didn't. And when I say "next level," what I mean is *I looked at* the hand and wrist, and I said there is not difference in hair growth, there is not difference in temperature or hydration.

So just by observation, I ruled out the presence of claudication or neurogenic pain. (Depo transcript, pp. 23-24) (emphasis added).

47. However, Dr. O'Brien made the following clarification of what he meant about what he had called a "normal" MRI up to that point. **"I believe she injured her shoulder at some point in the past"**. *O'Brien Depo, p. 41.*

A You can't have what looks like a cleavage fracture in the front part of the humeral head and not determine that, well, there was something that caused that. And we know[what] causes those type[s] of V-impaction injuries is a dislocation. So it's highly medically probable that at a remote time in the past there was a posterior impaction fracture/dislocation of the left shoulder.

Q So would you agree then that the MRI is consistent with a dislocation-type injury?

A Yes

Qwould you agree [that Claimant] is a good surgical candidate—was surgery reasonable to treat this type of condition?

A Hypothetically, if the take away the cause, the motor vehicle issue, and if you take away everything except the MRI scan – so I’m not even factoring in the exam, which proves that she’s not unstable, at least based on the two orthopedists who tried to evaluate her and my exam—if you take all that away and just look at the MRI scan, then yes, *surgery could be considered reasonable. Id at 42-43.* (emphasis added).

48. Dr. O’Brien testified that, scarring of the labrum and glenohumeral ligament where it attaches to the glenoid demonstrates that the glenohumeral dislocation had occurred well before the motor vehicle accident. He opined that scarring does not develop within a week of a dislocation or accident.
49. Dr. O’Brien testified that the findings contained in the Concentra records from the day after the alleged injury are inconsistent with Claimant’s allegations. Specifically, a fracture/dislocation injury is such a traumatic injury that it always results in massive bleeding, and that there would be a seat belt sign, abrasion and bruising. The absence of any sign of trauma proves that there was not enough energy dissipated as a result of the collision to break tissue in Ms. Newell’s left shoulder. Furthermore, he opined, the initial exam and MRI scan are consistent with each other as they both show a complete absence of trauma. He testified that if an alleged injury occurred, it was extremely minor and would have healed fully without the need for any formal medical care.

Claimant’s Hearing Testimony

50. Claimant testified that she has never gone to the doctor before the October 22, 2019 crash for left shoulder pain. Claimant testified that she has never injured her left shoulder prior to October 22, 2019.
51. Claimant testified that she is no longer employed for Employer. Claimant testified that her last day working for Employer was January 8, 2020. *Hr. Tr., p. 19.* Claimant was terminated due to missing too many consecutive days of work within a quarter. *Id.* Claimant testified that she missed work because of her injury. *Id.* Claimant testified that she has not started working again due to her injury and the COVID pandemic. *Hearing transcript, p. 28.*
52. Claimant testified that she has a two-year old daughter. She is a single parent and does not have anyone to help lift her child. She testified that her two-year-old daughter is not able to get in and out of the car by herself. Claimant testified that she tries to use her right arm to do most of the lifting. She testified that she struggles to do anything that involves using both arms. When she reaches for something, her shoulder still “pops.”
53. Claimant testified that she had bruising in “her whole entire shoulder area and collarbone area...” and when referring to the ATP exam, stated “the doctor never asked to actually see my shoulder”. *Hearing transcript*

Claimant's Disciplinary Work History

54. However, Claimant began to accrue disciplinary write-ups, beginning on 9/22/2015 (noted to be a month before Claimant stated before she began work for Employer). (Ex. M, p. 187). Claimant had failed to call in sick to work twice within a 6-month period. *Id.*
55. On 5/14/2019, Claimant was issued a 'First Warning': "[Claimant Name Redacted] was absent on Friday, May 10 [2019] and provided no doctor's note. [Claimant Name Redacted] is often late clocking in"...(Ex. M, p. 191).
56. On 8/8/2019, Claimant was issued a 'Second Warning': "[Claimant Name Redacted] was absent 8/5/19 and late 8/7/19" (Ex. M, p. 192).
57. On 9/12/2019, Claimant was issued a 'Final Warning': "attendance [Claimant Name Redacted] called off 8/13/19, 8/14/19, 9/6/19, 9/12/19". (Ex. M, p. 193).
58. On 1/8/2020 Claimant was issued a Termination Notice: "Excessive attendance occurrence's (sic) have taken place. Occurrence dates: 12/23/2019, 12/30/2019, 1/3/2020, 1/6/2020, 1/7/2020, 1/8/2020." Ex. M, p. 194). In each instance, Claimant electronically signed the disciplinary notices. *Id.* The ALJ further notes that none of the above dates of absence correlates with any authorized treatment dates.

Surveillance Video of Claimant

59. Respondents submitted brief, edited, video footage of Claimant as an exhibit at hearing. The first, dated 6/5/20, and 6/7/20 is 1 minute, 42 seconds in total length. It shows Claimant getting in and out of her car, and grocery shopping. She appears to be right-hand dominant, in no apparent distress, and displaying no apparent disability. However, her left arm is not challenged in any fashion, so no range of motion abilities or deficiencies are observed. The second, dated 6/11/20 is 37 seconds long. Claimant can be seen lifting her toddler age daughter into her car seat, then is later seen carrying her *from* a store using both arms, but carrying the child more with her right arm. In neither instance does Claimant display any distress or disability, but as noted, no range of motion is detectable.
60. However, the surveillance narrative (Ex. L) indicates that Claimant was observed for over 28 minutes over that three-day period. It even indicates that between 1:01 pm and 1:25 pm on June 7, 2020, Claimant lifted and carried her child *towards* the store (not visible in the edited versions of the video), and then filled her car, and "utilized a window cleaning device". The narrative does not state which arm Claimant used to clean her windshield, nor does this activity appear in any of the videos submitted into evidence.

Dr. Rook's Hearing Testimony

61. Dr. Rook testified live at hearing. Dr. Rook was accepted as an expert in the field of physical medicine and rehabilitation with Level II training. Dr. Rook has treated patients with physical injuries and motor vehicle accidents for 35 years. He testified that Claimant's physical examination findings and imaging were absolutely consistent with her mechanism of injury. Dr. Rook explained that the compression of Claimant's seatbelt pushed the humeral head backwards causing it to impact against the posterior shoulder capsule. The impact caused both a bony and ligamentous injury to the left shoulder. Dr. Rook opined that the impact caused a mild impaction fracture and an irritation of the brachial plexus.
62. Dr. Rook also explained that, given the relatively minor nature of this injury, one would not necessarily expect to see a massive amount of internal bleeding on the MRI as predicted by Dr. O'Brien, but the edema was indicative of some fairly recent event. Dr. Rook posits that, given the relatively minor nature of the subluxation, Claimant's shoulder could have returned to its normal position on its own by the time she arrived at the ER; thus her normal range of motion and x-ray at that time.
63. Dr. Rook (like, at various times, Drs. Simpson, Pak, and Johnson) noted a positive apprehension sign in her shoulder, indicating some instability. Some tenderness on the left side was noted, as was a diminished range of motion.
64. Dr. Rook opined that Claimant is not at maximum medical improvement. It is not surprising, given her untreated condition, which would not be made better with physical therapy. He explained that Claimant requires the shoulder surgery recommended by Dr. Pak, an orthopedic surgeon specializing in shoulder surgeries. However, he noted: "I would agree that the surgery by itself would be insufficient in alleviating her current pain presentation. She will require multiple modalities and perhaps pharmacologic measures once her shoulder is stabilized surgically to improve her chance of recovery." (Ex. 1, p. 13).
65. Dr. Rook also explained that, regardless of how one might construe the age of the injuries noted on the MRI, his analysis does not change, inasmuch as if there were a prior (undocumented) subluxation, her symptoms now (including occasional popping) are more likely to be the result of the loss of integrity in the joint.

Accident Reconstruction by Mark Passamaneck

66. At hearing, Mark Passamaneck was accepted as an expert in the field of accident reconstruction. Mr. Passamaneck is a mechanical engineer. His accident reconstruction report concluded that the rear car struck Claimant's pickup at a one mile per hour differential. Mr. Passamaneck testified that he only looked at 13 photos of the outside of the vehicles and the police report. Mr.

Passamaneck did not look at photos of the underbody or the interior of Claimant's vehicle.

67. Mr. Passamaneck opined that there was no indication of frame bending, buffering of rear fenders, and nothing broken, dislodged or significantly marred which indicates a fairly low indication of impact. He further testified that airbag deployment occurs over 8 miles per hour, and the fact that no airbags deployed in either vehicle indicate the impact was certainly below 8 miles per hour.
68. Based upon all of the information reviewed, Mr. Passamaneck testified that the impact velocities of these vehicles upon impact, along with the basic weights of the vehicles indicates that upon impact, the Claimant's car would have gone from zero to 1 mph, and the rear car would have gone from 2 to 3 mph down to 1 mph. He explained that there were no skid marks on the roadway and it was a very low speed accident, similar to pulling into a parking space and bumping a car, or hitting a concrete curb with your tires going one to two miles an hour.
69. Mr. Passamaneck explained that the accident would have caused Claimant to go gently backwards into the seat instead of moving forward toward the seatbelt. He further testified that there would not be enough energy involved with the accident to move the Claimant back into her seat and then rebound into the seatbelt. He could not tell from the available data whether the rear car was accelerating, decelerating, or going at a constant speed at the time of impact.
70. Dr. Rook testified that the accident reconstruction report does not change his opinion that Claimant suffered from a dislocation injury on October 22, 2019. Dr. Rook explained that the speed that the vehicle was traveling does not change his opinion regarding causation:

A ...it doesn't change my opinion because the forces I'm concerned about are the...pounds per square inch that developed underneath the seatbelt and between the seatbelt and her....shoulder joint. And there are multiple factors that....contribute to whatever that number was.

I think that the positioning of the arm, the fact that she was gripping the steering wheel, that fact that she was thrown forwards, the fact that the seatbelt was directly over the shoulder, and there might have been a very isolated focus generated underneath the seatbelt, perhaps overlaying the humeral head – and I think all of those things contribute to the ...actual biological effects of the impact with the patient at the time of the accident. *Hearing transcript.*

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, while the Claimant is not a flawless historian, the ALJ is not persuaded that she is driven purely by secondary gain issues. In fact, the ALJ is not at all convinced that Claimant, unsophisticated as she is, had the guile or sense of opportunism to fake her injuries from the moment of impact, through the emergency room, through her ATP and referred surgeons, through two IMEs, and into a court hearing. This is someone who apparently thought her own toddler weighed 65 pounds. In summary, the ALJ finds that Claimant's reported symptoms reasonably correlate to the available objective data.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, while both Dr. O'Brien and Dr. Rook are both sincere in delivering their opinions, as will be discussed in greater detail, the ALJ finds Dr. Rook to be more persuasive overall.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo 1972).

Jurisdictional Issue

F. Respondents argue that the ALJ is without jurisdiction to decide the medical benefit issue, since the ATP placed Claimant at MMI on 5/1/2020. The ALJ does not concur. Claimant was denied the shoulder surgery, as recommended by Dr. Pak, on 2/5/2020. Claimant timely filed her Application for Hearing on 3/10/2020, requesting a determination of compensability, and contesting the denial of this surgery. A hearing date on these issues of 7/7/2020 was then agreed upon by the parties, with a Notice of Hearing being sent by the OAC on 4/6/2020. The ALJ does not conclude that Dr. Johnson's subsequent change of heart, after reviewing Dr. O'Brien's IME report, and placement of Claimant at MMI on 5/1/2020 renders this hearing a nullity. To the contrary, the ALJ finds all issues before him to be ripe for determination. If a FAL was issued after this MMI finding, such issue is not part of this hearing.

Compensability, Generally

G. A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 2993. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2013). See *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

H. There is a distinction between the terms "accident" and "injury". The term accident refers to an "unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. 2002. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause of and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (1967). No benefits flow to the victim of an industrial

accident unless an “accident” results in a compensable “injury.” Compensable injuries involve an “injury” which requires formal medical treatment or causes disability. H & H Warehouse v. Victory, 805 P.2d 1167, 1169 (Colo.App. 1990). All other “accidents” are not compensable injuries. Ramirez v. Safeway Steel Products Inc., W.C. No. 4-538-161 (September 16, 2003).

Compensability, as Applied

I. This injury is compensable. Claimant was driving a work pickup truck in the furtherance of her employment when she was struck from behind by the other driver. She felt immediate pain, and appropriately enough, was taken for treatment in the emergency room. Considerable medical treatment, authorized by her ATP, ensued. Even Respondent’s IME, Dr. O’Brien conceded that she at least suffered a shoulder strain in this accident.

Medical Benefits Generally

J. Respondents are liable for medical treatment *reasonably necessary* to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was *proximately caused* by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990).

K The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411, 415 (Colo. App. 1995).

L. The Claimant has a compensable injury if the employment-related activities aggravate, accelerate or combine with the preexisting condition to cause a need for medical treatment or produce the disability for which benefits are sought. *Section 8-41-301(1)(c), C.R.S. 2015; Snyder v. Industrial Claims Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). An industrial aggravation is the “proximate cause” of a Claimant’s disability if it is the “necessary precondition or trigger” of the need for medical

treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988).

Shoulder Surgery, Reasonable and Necessary, as Applied

M. Claimant, albeit imperfectly, has regularly reported symptoms consistent with a minor shoulder dislocation- not merely a minor sprain. She reported to fire personnel an inability to move her arm while still in her car. She told ER personnel that her arm felt “dislocated.” She reported limited range of motion to Concentra, and tenderness consistent with a shoulder injury. Physical therapy was unhelpful, consistent with a structural defect, as was a popping sensation. Provocative maneuvers were consistent with a dislocation.

N. Objectively, the MRI was also consistent with a minor dislocation. Contrary to Dr. O'Brien's assertion, the MRI was not “normal.” In fact, Dr. O'Brien eventually conceded that, based upon the MRI results, such procedure could indeed be considered reasonable and necessary. At some point in the past, he also conceded that an injury to Claimant's shoulder had likely occurred - his ultimate argument was against the recency of such an injury. Shoulder orthopedist Dr. Pak felt the surgery was reasonably necessary, as does Dr. Rook.

O. The surveillance video, all 2½ minutes of it, is arguably consistent with someone with a normal shoulder. However, it is also arguably consistent with someone with an 8-month-old untreated, minor dislocation. At no point does Claimant display any range of motion ability, nor is range of motion described in the narrative. According to that narrative, Claimant was observed using a squeegee to clean her windshield, but that scene got lost on the cutting room floor. Had Claimant been observed, and documented, using her *left* arm (as one might expect while standing by the driver's side door), this could have proven quite problematic. However, what is left to view is Claimant using her left arm to hold up some groceries (milk-or bread?), and placing her toddler straight into the car. She was also seen carrying her, cradled more in her right arm. Perhaps it hurt, perhaps it didn't, but Claimant had to get on with the business of life as a single mom while her case was pending.

P. Dr. Johnson placed Claimant at MMI on 5/1/2020, even while noting that Claimant was still in pain. He did not find the proposed surgery to be unreasonable or unnecessary – in fact, he suggested that Claimant pursue treatment outside the Workers Compensation system. While Dr. Simpson felt that Claimant's constellation of symptoms was not wholly explained by the dislocation (thus his hesitancy to operate), Dr. Rook posited a plausible explanation; to wit: Claimant has other symptoms *in addition to* an unstable shoulder; the shoulder instability must be addressed surgically, then the other symptoms must be addressed separately. The ALJ finds Dr. Rook's reasoning to be persuasive. The shoulder surgery as proposed by Dr. Pak is *reasonably necessary* to cure Claimant of her current shoulder condition.

Shoulder Surgery, Related to the Work Injury, as Applied

Q. Claimant has testified that she has not previously injured her left shoulder, nor has she been placed on any left shoulder work restrictions in the past. She also testified that while she had been treated for some unrelated condition at Ft. Carson in the past, this did not include her shoulder. As of this Order, the ALJ has no information to the contrary, despite Respondents' protestations. If Respondents uncover such information moving forward, they may pursue appropriate remedies at that time. At this juncture, the ALJ finds Claimant to be credible in her denial of prior left shoulder injuries. If the ALJ is to deny this claim based upon Dr. O'Brien's theory of pure secondary gain, Claimant will have to be caught with her hand far deeper into the proverbial cookie jar than has been shown to date. Assuming arguendo, that Claimant had (unbeknownst to her or not) a pre-existing condition in her left shoulder rendering her more susceptible to this injury, the analysis does not change. Claimant (unless shown otherwise after the fact) was not symptomatic until this work accident occurred. Thus, her need for treatment came about as a direct result of this low-speed traffic collision.

R. As a result, there is MRI evidence, ultimately even according to Dr. O'Brien, of a prior shoulder injury. To paraphrase a former US President, *it depends on your definition of subacute*. Dr. Rook opines that *scarring* (undefined herein by Dr. Trystain Johnson) could show in the MRI within one week of her injury. Dr. O'Brien thinks such interpretation is untenable. There is, however, also some evidence, however subtle, of edema as well. This is suggestive of a more recent injury than from some undefined, perjuringly denied, chronic shoulder injury, as posited (sans evidence) by Dr. O'Brien. While Dr. O'Brien castigates Dr. Johnson for *dramatically over interpreting* the MRI (along with the physicians who read his report), the ALJ notes the following: Dr. Johnson is fellowship trained in musculoskeletal radiology - Dr. O'Brien is not. Further, Dr. Johnson actually looked at the films - Dr. O'Brien did not. All he did was critique Dr. Johnson's interpretation of those films. Indeed, and to his credit, Dr. Johnson hedged his bets, and qualified what he saw, instead of being 100% certain about everything under the sun. This actually renders Dr. Johnson more persuasive, in the eyes of this ALJ. The ALJ finds that it is more likely than not that the MRI evidence is consistent with a week-old injury.

S. The ALJ finds Mr. Passamaneck's testimony and report to be sincere, based upon expertise, and free of unwarranted bias. There has certainly been no testimony, even from Claimant, to contradict his opinions. While admittedly an inexact science, this was plainly not a high impact accident. However, (and understandably so), he was not able to determine Claimant's position within the driver's seat at the point of impact, relative to the seatback. Nor would he know the position of Claimant's shoulder, relative to the seatbelt. If Claimant were already seated firmly against the seatback, greater kinetic energy would be available to then move her forward into the seatbelt on the rebound. Dr. O'Brien posits that a rear end collision could *never* result in this type of injury. The ALJ would only concur only insofar as such injury would not occur during her initial rearward press into the seat. Upon rebound, as posited by Dr. Rook, such

subluxation, however minor, could indeed occur even at low speeds, and the ALJ so finds. While no 'seatbelt sign' was observed in the ER, this incident occurred in October in Colorado; Claimant could have been wearing anything from a t-shirt to a padded jacket, and the record is silent on what she had on that day.

T. The ALJ finds, by a preponderance of the evidence, that the surgery being proposed by Dr. Pak (and initially seconded by ATP Dr. George Johnson, before he read Dr. O'Brien's IME report) is also *causally related* to Claimant's work injury.

Claimant Responsible for Termination of Employment, Generally

U. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a Claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

V. Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992) (claimant disqualified from unemployment benefits after discharge for unsatisfactory performance when aware of expectations, even if not explicitly warned that job was in jeopardy). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

Termination from Employment, as Applied

W. While Claimant no doubt suffered from some pain during December, 2019, and January, 2020, Respondents had made reasonable accommodations with modified duty, based upon what information they had from the ATP during this period. The ALJ finds that Claimant, despite her discomfort, was not somehow rendered incapable of reporting to work. Instead, she had a long, well-documented history of unexcused absence from work. She was already on the bubble before this work injury occurred in October. The ALJ finds and concludes, by a preponderance of the evidence, that Claimant knew what was (reasonably) required of her, to wit: simply showing up for work, unless medically excused. She failed to do so on six (6) occasions, none of which appear to correlate with appointment dates set by her ATP. Claimant was responsible for her own termination from employment, effective 1/8/2020, and her resultant wage loss is not attributable to her work injury. Claimant is not entitled to TPD or TTD from that day forward.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury on October 22, 2019.
2. Respondents shall pay for all reasonable, necessary, and causally related medical expenses in connection with her work injury, to include the shoulder surgery as proposed by Dr. Pak.
3. Claimant was responsible for her own termination from employment, effective 1/8/2020, and is not entitled to TTD payments from that time forwards.
4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: August 25, 2020

/s/ William G. Edie

William G. Edie

Colorado Springs, Colorado 80906

ISSUES

- Whether Respondent has proven by clear and convincing evidence that the Division Sponsored Independent Medical Examination (“DIME”) physician erred in his determination of permanent partial disability (“PPD”)?
- Whether claimant has proven by a preponderance of the evidence that Dr. Cynthia Manninen is authorized to provide medical treatment to claimant?

FINDINGS OF FACT

1. Claimant was injured on December 15, 2015 when he was involved in a motor vehicle accident (“MVA”) while traveling from Durango to Telluride for a work related meeting. Claimant testified that the MVA occurred in snowy weather when the vehicle lost control, and went down a forty (40) foot embankment, rolling one half time and landing on its’ roof.

2. Claimant testified that following the MVA, he knocked out the window of the side door, climbed out of the vehicle, and assisted another passenger in the vehicle to get out the rear hatchback of the vehicle. Claimant testified that he and the co-workers who were in the vehicle then climbed the embankment and received assistance from a passing vehicle. Claimant was then transported by ambulance to the emergency room (“ER”) at Southwest Memorial Hospital in Cortez, Colorado.

3. In the ER, the physician noted that claimant was traveling approximately 35 miles per hour when the vehicle rolled after spinning in the snow. Claimant reported some right lateral neck pain with palpation. Claimant also reported some tenderness to the right paralumbar soft tissue. Claimant testified he was later taken back to his car in Durango by a co-worker.

4. Claimant was referred for medical treatment with Dr. Jernigan. Claimant was initially examined by Dr. Jernigan on December 17, 2015. Dr. Jernigan noted claimant was involved in an MVA and had to crawl up an embankment. Dr. Jernigan evaluated claimant and diagnosed him with right shoulder contusion, cervical strain and thoracolumbar strain. Dr. Jernigan also noted claimant reported a persistent headache.

5. Claimant returned to Dr. Jernigan on December 23, 2015. Dr. Jernigan noted claimant presented with persistent right neck pain and shoulder pain with range of motion of the neck and shoulder limited. Dr. Jernigan noted that claimant’s low back also remained sore. Claimant was referred for chiropractic care for his injury.

6. Dr. Jernigan recommended a cervical magnetic resonance image (“MRI”) which was performed on January 13, 2016. The cervical MRI demonstrated moderate posterior disc protrusion at C5-C6 and mild to moderate central disc protrusion at C6-7.

7. Claimant was referred to Spine Colorado for consultation. Claimant was examined by physician assistant (“PA”) LaBaume on February 8, 2016. PA LaBaume noted claimant was reporting that he had significant pain following the MVA in his neck and right shoulder. Claimant also reported problems with his right shoulder dislocating. PA LaBaume also noted claimant complaining of numbness and tingling in his medial forearm and down into his 4th and 5th digits.

8. Claimant subsequently underwent a lumbar MRI on April 12, 2016. The lumbar MRI demonstrated a broad-based right paracentral disc protrusion at L5-S1 with annular fissuring and a mild broad based annular disc bulge at L5-S1.

9. Claimant testified he was referred by Dr. Jernigan to Dr. Anderson for his right shoulder after December 31, 2015. Claimant testified Dr. Anderson recommended claimant undergo an MRI of his right shoulder. Claimant underwent the MRI of the shoulder on March 23, 2016. The MRI showed two small tears, a small chronic impaction fracture of the humeral head. After reviewing the MRI, Dr. Anderson diagnosed a separation of the anterior superior labrum and recommended physical therapy. Claimant testified he was discharged from further care with Dr. Anderson in April 2016.

10. Claimant underwent a C5-C6 bilateral facet joint nerve block on April 25, 2016 under the auspices of Dr. Santos. Claimant subsequently underwent a radiofrequency lesioning of the right C5 and C6 medial branch nerves on May 9, 2016.

11. Dr. Bohachevsky performed a right L5-S1 transforaminal epidural steroid injection on May 16, 2016. Dr. Bohachevsky performed a second transforaminal ESI on November 4, 2016 to the right SI joint.

12. Dr. Santos performed a right L4-5 L5-S1 facet joint nerve block on February 21, 2017. Dr. Santos performed a radiofrequency lesioning of the right L3 and L4 medial branch nerves and the L5 dorsal ramus nerve supplying the L4-5 and L5-S1 facet joints. Claimant only reported minimal relief from this procedure. Dr. Santos performed an additional radiofrequency procedure on March 17, 2017 to the left 3rd occipital nerve and C3-C4 medial branch nerves supplying the left C2-3 and C3-4 face joints.

13. Respondents obtained an independent medical examination (“IME”) with Dr. O’Brien on November 21, 2017. Dr. O’Brien reviewed claimant’s medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. O’Brien noted in his report that claimant had full range of motion of his cervical spine and right shoulder. Dr. O’Brien opined that claimant did not sustain a shoulder injury in the MVA. Dr. O’Brien noted that when claimant reported to the ER following the accident, he complained of neck pain and back pain, but not shoulder pain. Dr. O’Brien opined that if claimant had sustained a shoulder injury in the MVA, he would not have been able to assist his co-workers up the embankment after the MVA. Dr. O’Brien diagnosed claimant with a minor cervical strain and minor lumbosacral strain as a result of the MVA.

14. Dr. Jernigan reviewed Dr. O'Brien's report on January 30, 2018 and opined that claimant was not at MMI.

15. Claimant underwent SI joint injections on August 2, 2018 under the auspices of Dr. McLaughlin.

16. Respondents requested a 24 month Division-sponsored Independent Medical Examination ("DIME"). Claimant was examined in connection with the DIME by Dr. Gordon on September 18, 2018. Dr. Gordon opined in his DIME report that claimant was not at MMI. Dr. Gordon opined that claimant would likely be at MMI after his right SI joint radiofrequency ablation.

17. Claimant underwent the right SI joint radiofrequency ablation on October 10, 2018. Claimant subsequently underwent a functional capacity evaluation ("FCE") on April 2, 2019. Claimant was placed at MMI and underwent a permanent impairment evaluation with Dr. Burns on July 29, 2019. Dr. Burns determined that claimant's permanent impairment included 18% for the lumbar injury, and 15% for the cervical injury which combined for a whole person impairment rating of 30%. Dr. Burns opined that claimant's shoulder symptoms were related to claimant's cervical injury and did not provide a rating for claimant's shoulder.

18. Respondents requested a follow up DIME on the issue of permanent impairment. Claimant returned to Dr. Gordon for the follow up DIME. Dr. Gordon provided claimant with a permanent impairment rating of 7% for the lumbar spine, after invalidating the lumbar spine range of motion measurements, 14% for the cervical spine, and 4% for the right shoulder. Dr. Gordon combined the impairment ratings to come to a 23% whole person impairment rating.

19. The Division of Workers' Compensation issued an incomplete notice to Dr. Gordon on November 1, 2019, noting that the straight leg raising test validates the lumbar flexion only, not lumbar extension and lateral flexion as long as those are internally valid. Dr. Gordon issued an addendum to his report on November 22, 2019 that provided claimant with an impairment rating of 11% for the lumbar spine. Dr. Gordon combined the 11% lumbar spine impairment rating with the 14% of the cervical spine and 4% of the shoulder and provided claimant with a final combined rating of 26% whole person.

20. Respondents referred claimant to Dr. O'Brien for another IME on March 16, 2020. Dr. O'Brien opined in his IME report that claimant did not have an impairment rating based on his minor injuries. Dr. O'Brien opined that all an examiner has to do is look at claimant and "we see that there is no visible impairment."

21. Dr. O'Brien testified by deposition in this matter. Dr. O'Brien testified that the MRI scans showed normal age-related changes and opined that none of the findings would correlate to claimant's symptoms. Dr. O'Brien's testimony was consistent with his medical reports.

22. Claimant testified at hearing that he had a previous injury to his right shoulder when playing football in high school. Claimant testified following that injury he would experience right shoulder dislocations. Claimant had undergone a right shoulder surgery in 2010 to repair a torn labral. Claimant testified that despite this prior injury, his shoulder had recovered and he had full range of motion of his shoulder prior to the MVA.

23. The ALJ credits the testimony of claimant at hearing and the medical reports of Dr. McLaughlin, Dr. Jernigan, Dr. Burns and Dr. Gordon over the reports and testimony of Dr. McLaughlin and finds that respondents have failed to overcome the impairment rating provided by Dr. Gordon by clear and convincing evidence. The ALJ notes that Dr. Gordon's DIME report properly recites claimant's medical history and found that claimant had permanent impairment to his lumbar spine, cervical spine and right shoulder.

24. Claimant presented a note from a nurse practitioner, Kelly MacLaurin, dated March 13, 2020 that indicated that claimant should follow up with his primary medical provider regarding the medication amitriptyline. Claimant testified at hearing that his primary medical provider is Dr. Manninen at Mercy Family Medicine. Claimant requests that Dr. Manninen be authorized as a treating physician in this case.

25. The ALJ finds that claimant has shown that Dr. Manninen is within the chain of referrals from his authorized treating physician and is therefore authorized to treat claimant for his work related injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2016. A party seeking to modify an issue decided by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and

actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra*. A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

4. As found, respondents have failed to establish by clear and convincing evidence that Dr. Gordon's impairment rating set forth in the DIME report is incorrect. As found, the ALJ credits the reports of Dr. Jernigan, Dr. McLaughlin, Dr. Burns and Dr. Gordon over the conflicting opinion expressed by Dr. O'Brien and finds that respondents have failed to meet their burden of proof of overcoming the DIME report on the issue of permanent impairment.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. See *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996).

6. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion...." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), citing, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

7. As found, claimant's authorized treating physician has referred claimant to seek medications for his work injury through his primary care physician. As found, Dr. Manninen is claimant's primary care physician and is therefore authorized to provide treatment for claimant for his work related injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay claimant PPD benefits based on the impairment rating provided by the DIME physician, Dr. Gordon.
2. Dr. Manninen is authorized to treat claimant for his work injury.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: August 27, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury on August 31, 2019?
- II. If such injury is compensable, are Respondents responsible for medical benefits in connection with this injury?
- III. If such injury is compensable, are Respondents responsible for Temporary Total Disability payments?

STIPULATIONS

The parties stipulated that, if compensable, Claimant's Average Weekly Wage is sufficient to result in the maximum TTD rate of \$1,022.56, minus any offsets. The period of disability would run from the date of injury, until October 28, 2019.

Further, that if compensable, then UCHealth would serve as the Authorized Treating Physician(s), and the treatment Claimant received from UC Health, including from the UCHealth physicians, was reasonable and necessary to treat Claimant's injuries.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant has been employed by Employer for approximately 33 years. Employer is a company that provides its customers with 24/7 unified communication services including network infrastructure and monitoring. Those IT engineering services include VoIP service, BTC, Jabber services, etc. In order to provide 24/7 services, the Employer has three work shifts. Claimant is classified as a Senior Network Engineer. His duties include working with clients in resolving various technical issues for Employer's clients, one of which is the United States Government.
2. Claimant's typical work schedule at the Employer was Monday through Friday, 6:00 a.m. to 2:00 p.m. Claimant testified that in the year prior to his work accident, he was called into work outside of his normal shift somewhere between "five and ten" times. Claimant testified that on August 31, 2019, there was no specific procedure to follow when being called into work on a weekend or holiday, but that the policy had now changed. It was not common for him to be

called into work on a weekend. When it did occur, he was called in by a watch officer or supervisor at the Employer. Claimant testified that he was not required to go into the office 24/7 when asked. If he was not able to go into the office, the Employer would have to call "someone else." Claimant further testified that he had not been told when he was hired that the job was, in effect, 24/7.

3. On August 31, 2019, at approximately 12:00 P.M., Claimant was called by the watch officer, who is a U.S. government employee, to obtain assistance with a technical problem. Claimant attempted to resolve the problem from his home phone to no avail. As a result, the watch officer asked Claimant to come into Employer's office located at 8610 Explorer Drive in Colorado Springs. Claimant testified that there are special encrypted phones at Employer's office that are required to be used in resolving technical issues for employer's clients.
4. Claimant testified that his office at the Employer was approximately 7 minutes from his home. He testified that he arrived at the office "around 1:00 (p.m.)" and then left the office at 2:15 or 2:20 p.m.
5. Claimant rode his personal motorcycle to Employer's office where he spent approximately 1 ¼ hours resolving the technical issue for Employer's client. After Claimant finished his work, he started home on his motorcycle. As he was riding home, Claimant's motorcycle veered into the median near the intersection of Research Parkway and Union Blvd. Claimant's route back home from his office was essentially straight down Research to Channel Drive where he would take a left turn. Claimant did not stop or [significantly] deviate from his route home prior to the accident.
6. Claimant testified that he was an experienced motorcycle rider who had ridden the involved motorcycle for over 19 years at the time of the accident. Claimant has a motorcycle endorsement on his driver's license.
7. Claimant is a salaried employee. Even though salaried, he is still required to keep track of the hours he works on any given day. Claimant and other employees are required to enter their hours they work outside of work hours, into a computer system. The extra hours worked are approved by Claimant's supervisors at the end of each week. Employees are on the honor system when entering their hours.
8. Claimant testified that when he goes into work on a weekend, he enters the hours worked but he does not get extra pay for said hours. He gets "comp time." He was not paid for mileage or for his time going into work. He was not paid overtime or additional pay, he received no extra pay for working on a Saturday, since it was part of his salary. Claimant stated that while he was a salaried employee, he still documented his time in in the "company web portal." It was not a time clock. Claimant testified that it was his understanding that when called into work on a weekend, he was to enter into the computer a minimum of 4

hours call-out time. He further stated that he would track his hours “portal to portal.”

9. Claimant testified that prior to this accident, he could be called into work on weekends not only by his supervisor, but also by the watch commander, who is a government employee. Claimant testified that prior to the accident it was common for him to go into the office when called by the watch commander, and not merely one of his supervisors. He was unaware of any policy requiring his supervisor’s approval before going into work for these on-call requests. Claimant testified that *after* this accident, he was then advised by Employer that he was to come into the office on weekends *only* when requested by one of his supervisors.
10. Claimant’s manager, Jessica H[Redacted], testified that Employer provides 24/7 services of networking and unified communication services divided into three shifts: the daytime shift, the swing shift, and the midnight shift. Ms. H[Redacted] explained that the unified communications team (of which Claimant is a member), provides onsite services on Monday through Friday from 6:00 A.M. to 6:00 P.M. and then after 6:00 P.M., the team members go into an on-call status.
11. According to Ms. H[Redacted], Claimant can be called in at any given time, including weekends and holidays, to assist with a mission-critical issue. According to Ms. H[Redacted] each issue is unique. Whether or not an issue is mission-critical is determined by Employer or by Employer’s customers.
12. Ms. H[Redacted] testified that Claimant’s on-call status was a specific element of his employment at the time of his accident. Furthermore, Ms. H[Redacted] testified that an employee in Claimant’s position should have an expectation that he or she could be called into the office outside of their scheduled shift. She explained that an employee could decline to come in when asked, as it is understood that employees have personal lives.
13. Ms. H[Redacted] then testified that the procedure for an employee being called into work outside their normal hours starts with a customer reporting a mission critical issue to the watch officer. The watch officer then reaches out to the employer’s team or “NOC”, who then determines if the issue is mission-critical. If the issue is mission- critical, the “NOC” will call the technician in. Ms. H[Redacted] explained that Employer does not like the watch officers to call the technicians directly, as many times the issue turns out not to be mission-critical. Ms. H[Redacted] acknowledged that many times the watch commander circumvents the “NOC” and contacts the technician directly, to ask him or her to come into the office and resolve the issue. She testified that in those instances where the watch commander contacts the technician directly, the expectation is that the technician contacts their supervisor, manager, or someone in the chain so that Employer is aware of the technician’s activity.

14. Ms. H[Redacted] also testified that Claimant's normal work schedule is Monday through Friday and outside of these days is considered "on-call". Furthermore, Ms. H[Redacted] testified that if Claimant is called into work outside of normal work hours by the watch commander and can't reach any of his supervisors in the chain of command, Claimant should go ahead into the office and deal with whatever issue is pending.
15. Ms. H[Redacted] testified that the four hours Claimant entered into his time sheet for this date do not impact Claimant's pay. She testified that the Employer had no policy permitting an employee to bill 4.00 hours as a standard minimum call-out time when the employee had actually worked fewer hours. She was surprised to hear Claimant testify to such a protocol. Ms. H[Redacted] stated that employees are responsible for entering their time worked into the Employer's system, and the Employer must rely on the integrity of employees to charge [the client] the correct number of hours they actually worked. She also testified that Claimant's prior manager told her that at one time there was a minimum 2-hour charge for callout time. Ms. H[Redacted] said that she does not know if Claimant was ever advised of what the procedure was concerning call-out time. Ms. H[Redacted] confirmed that Claimant is a good employee, and has never been counseled for time clock violations.
16. Ms. H[Redacted] confirmed Claimant's testimony that employees are not paid for mileage to travel to and from the office outside of the employee's scheduled shift. She testified that employees are not paid after the time they leave the office at the end of their workday, and they should not be billing for travel time from the office. She explained that the Employer cannot account for the activities of an employee after the employee departs the office, so an employee is not permitted to charge time for traveling from work to home. Ms. H[Redacted] testified that the Employer does not require any certain type of transportation to and from the office.
17. Regarding Claimant's Exhibit 6, with the name of Peter D. Fredericks on page 1, and signed by Claimant on September 6, 2019, Ms. H[Redacted] testified that she had not seen the document previously. She had not provided the document to any medical provider. She advised that Peter D. Fredericks is not an employee of Employer. She was unaware who had filled out the form. Ms. H[Redacted] stated that she had not presented the document to Dr. Fredericks for him to fill out.
18. A review of the dash cam video of the accident shows Claimant riding his motorcycle in the inside lane next to a rock lined median when he slowly drifted into the median. After Claimant hit the median, he was thrown off the motorcycle and tumbled over the rocks, coming to a stop a short distance from where the motorcycle hit the median. It is unclear as to why the motorcycle drifted into the median from a review of the video.

19. As a result of the accident Claimant sustained significant and serious injuries to include the following: closed fracture of fourth metacarpal bone of left hand, lumbar transverse process fracture, L2 and L5, phalanx distal fracture of left finger, left tibial plateau fracture, and left great toe fracture.
20. Claimant treated at UCHealth for his injuries. A review of the medical records reveals that there are various histories noted which slightly differ. For example, one E.R. note indicates that Claimant was riding a motorcycle when he struck the curb and was ejected onto some large rocks while another history from the same E.R. record indicates Claimant took his eyes off the road for a second when his front tire hit the curb and he landed in the median that had some rocks in it. Another history from the E.R. note of August 31, 2019 indicates Claimant was riding his motorcycle between 30 to 40 miles an hour, when he failed to pay attention and “drifted into a car.”
21. The traffic accident report reflects that Claimant gave a history that it was his son’s first day of working at Taco Bell and that while looking [presumably to see if his son’s car was parked in the Taco Bell lot], he drifted slightly to the left and hit the curb, riding up on it and being thrown from the motorcycle. In addition, Claimant’s Workers’ Claim for Compensation reveals that Claimant struck an unseen object then hit a curb.
22. Claimant agreed on cross-examination that he did not describe having looked to see his son’s vehicle at Taco Bell. He further did not describe swerving to miss an object in the road.
23. Claimant testified that his memory of the accident is foggy due to the injuries he sustained coupled with the medication given to him at the hospital. Claimant further testified he is unsure as to what exactly happened in this accident.
24. By agreement of the parties the care provided by and under the providers at UCHealth is reasonable, necessary, and authorized.
25. Claimant testified that as a result of his motorcycle accident on August 31, 2019, he missed time from work until he was released to return to work by Dr. Frederick. Dr. Frederick opined in his letter/report of October 28, 2019, that “Lewis may return to work on 10/28/19.” (Ex. I) Claimant testified that he in fact returned to work on October 28, 2019.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), *Sections 8-40-101, C.R.S. 2007, et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* In general, the Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. *Section 8-43-201, C.R.S.* A preponderance of the evidence is that which leads the trier-of fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page V. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the Respondents. *Section 8-43-201, C.R.S.*

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office, 84 P.3d 1023 (Colo. 2004)*. This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000)*.

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University park Care Center v. Industrial Claim Appeals Office, 43, P.3d 637 (Colo. App. 2001)*. Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. cline, 57 P.2d 1205 (Colo. 1936)*; *Bodensieck v. Industrial Claim Appeals Office, 183 P3d 684 (Colo. App. 2008)*; *Kroupa v. Industrial Claim Appeals Office, 53 P.3d 1192 (Colo. App. 2002)*.

D. In this instance, the ALJ finds both Claimant and Ms. H[Redacted] to be equally sincere and credible in recounting what they *understood*, at least, to be the company protocols in placing employees on call, the call-in procedures, and how and when to bill for one's time. Suffice it to say, the written vs. unwritten codes of conduct are less than airtight, and are not spelled out with great specificity. Incidents such as this often serve as teachable moments for all concerned. Nonetheless, the legal analysis required at this point does not hinge

upon finding one party more credible than the other. Likewise, Claimant has, perhaps due to trauma, provided differing details in how this accident occurred. The ALJ likewise finds these details not to be outcome determinative in this no-fault analysis. In any event, the video best tells the tale, consistent with his initial version of events. Claimant lost focus for just an instant on his way back home, hit the curb, and was injured.

Compensability, Generally

E. To sustain his burden of proof concerning Compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an “injury” arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P. 3d 548 (Colo. App. 2001), aff’d *Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 214); Section 8-45-301(1)(b), C.R.S.

F. The phrases “arising out of” and “in the course of” are not synonymous and a Claimant must meet both requirements for the injury to be compensable. *Younger v. City and County of Denver*, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 1720 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando*, 811 P2d 379, 381 (Colo. 1991). An injury occurs in the course of employment when it takes place within the time and place limits of the employment relationship and during and activity connected with the employee’s job-related functions. *In Re Question submitted by U.S. Court of Appeals, Supra; Deterk v. Times Publishing Co.*, 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

Travelling To or From Work

G. Generally, an injury sustained while traveling to or from work is not considered to have occurred within the scope of employment. *Varsity Contractors v. Baca* 709 P.2d 55 (Colo. App. 1985); *Berry’s Coffee Shop, Inc. v. Palomba*, 161 Colo. 369, 423 P.2d 2 (1967). However, there is an exception when “special circumstances” create a causal relationship between the employment and the travel beyond the sole fact of the employee’s arrival at work. *Madden v. Mountain West Fabricators*, 977 P.2d 861,863 (Colo. 1992); *Staff Administrators, Inc. v. Reynolds*, 977 P.2d 866 (Colo. 1999).

H. In *Madden v. Mountain West Fabricators, Inc.*, supra. The Supreme Court set forth four categories of evidence that *may* establish a travel injury to be an exception to the coming and going exclusion:

- 1.) Whether the travel occurred during working hours,
- 2.) Whether the travel occurred on or off the employer’s premises,

3.) Whether the travel was *contemplated by the employment contract*, and

4.) Whether the obligations or conditions of the employment created a “zone of special danger” out of which the injury arose.

I. Claimant concedes that this accident occurred on a public roadway, using his own vehicle. He further concedes that it did not occur during regular work hours. He further concedes (and the ALJ concurs) that the obligations of this assignment did not create some sort of “zone of special danger”, such as driving in a blizzard, or during serious domestic unrest. The remaining category to be examined is whether this travel is *contemplated by the employment contract*.

J. There are three categories of cases generally recognized as exceptions to the coming and going exclusion because travel is *contemplated by the employment contract*:

- a. The particular journey was assigned or directed by the employer,
- b. The travel was at the express or implied request of employer or conferred a benefit to employer beyond the employee’s arrival at work, and
- c. The travel was singled out for special treatment as an inducement to employment.

Madden v. Mountain West Fabricators, Supra; In the Matter of the Claim of Kurt Barnes v. City and County of Denver, Denver Police Department, W.C. No. 5-003-724-04, (ICAO April 20, 2017).

K. Such distinctions drawn are critical to distinguish injuries which would ordinarily occur in the simple business of going to or from work, lest the exception swallow the rule. In the ordinary employment situation, employees are expected to report for work at (or at least near), specified hours. How they get there does not matter; they can drive their personal vehicle, take the bus, walk, bike in, ride with a friend, or take an Uber. As a result of those choices available, they alone assume the associated risks - at least until arriving on the employer’s premises. Employees can take a less efficient means to get to work (e.g., walk vs. drive), as long as they arrive on time. There is also no requirement that employees go straight to work. They can stop at the cleaners, go to the Y to work out, or stop and order the Grand Slam Breakfast - as long as they get to work on time. Similarly, they need not go straight home after work. They can stop at the cleaners, go to the Y to work out, or stop and order the Grand Slam Breakfast (available 24/7!) - as long as they maintain domestic bliss. Such travel itself is not at the express request of the employer, nor does the travel itself confer a

benefit beyond employee's arrival at work.

L. The ALJ has reviewed *Teller County v. Industrial Claim Appeals Office*, 410 P. 3d 567 (Colo. App. 2015), along with *Colorado Civil Air Patrol vs. Hagans and Industrial Commission of Colorado*, 662 P. 2d 194 (Colo. App 1983). In those and related cases, while the distinction was not *expressly* made between going **into** work, as opposed to leaving **from** work, in the compensable cases, the claimant was in fact going *into* work, and as an implied condition of employment, be it volunteer or paid. The ALJ finds such distinction, at least in this case, to be pivotal.

M. Claimant's duties include resolving technical issues for Employer's clients one of which is the U.S. government. Claimant's normal work hours are from 6:00 A.M. to approximately 2:00 P.M. Monday through Friday. Claimant does not work outside of his normal work hours *unless* specifically called in to "troubleshoot" a technical issue for Employer's clients. Claimant, as part of his job, is required to be on call to assist Employer's clients when necessary. Claimant does not meet the traditional criteria of being "on call", i.e., carrying a phone at all times, remaining within a certain radius, refraining from alcohol, etc. Nor is he assigned a certain "on call" status for certain periods; he is just on the list, subject to being called, but at liberty to decline for a wide variety of personal reasons. If so, Employer just goes down the list until they find a volunteer, perhaps one looking for comp time down the road. Nonetheless, the ALJ infers that if Claimant were to continually, habitually turn down call-ins, his employment status could be affected. In all fairness, he must share the load in the long run. Thus, it was part of Claimant's contract, and it was Employer's reasonable expectation, that Claimant go into the workplace outside normal work hours when asked, if not otherwise engaged.

N. Employer contends that Claimant was only to go into the workplace when requested by one of his supervisors as opposed to the watch commander. The ALJ makes no such distinction. In any event, Claimant credibly testified he was unaware of such policy prior to his accident. Furthermore, Ms. Howard testified that it is common for the watch commander to call the Senior Technicians directly to have them come into the office on weekends. On the day of the accident, it was necessary for Claimant to go *into* the workplace to handle a technical issue. He was required to use an encrypted phone to perform his job duties, and the ALJ so finds. However, the ALJ makes the following distinction:

O. When he was called in to solve this problem, what was implicit (if not explicit) in his employment relationship was that *we need you right now* – not just to come in at some point on Saturday, and put in a couple hours. Regardless of who was to label his call-in as 'mission-critical', it certainly was not Claimant's to make. Once he accepted the job, he had to head straight in, in the most efficient way possible (car or motorcycle), with no Grand Slam Breakfast on the way. Thus, Claimant's trip **into** work was assigned or directed by Employer. Such trip

also conferred a benefit to employer, to wit: Employer's contractual obligation was thereby met with the client, by solving this problem asap and in person. It also appears from the testimony that the client (Uncle Sam) got billed in some fashion, since comp time had to be awarded to the employee.

P. Had Claimant been injured on the trip *into* work, this result could well have been different – at least assuming he went in with reasonable dispatch. But that is not what happened. He was hurt *after leaving* Employer's premises. Claimant stated he was heading back home, and the ALJ finds this to be true, at least in large part. What is a distinction without a difference is whether Claimant drifted into the curb, or swerved to avoid some object in the roadway. Fault or neglect does not matter. What is also a distinction without a difference is whether Claimant's momentary, fatherly glance over towards Taco Bell constituted some deviation from his trip home. Lastly, another distinction without a difference here is whether Employer characterizes his travel both ways as unpaid, vs. Claimant's entering his own billing as being "portal to portal." Function over form here.

Q. However, what is of critical distinction is that once Claimant completed the mission, and thereby left the premises of his Employment, he was no longer acting at the behest of Employer. While of course Claimant would have to go back home at some point, he was not, as a condition of his employment, required to head straight for home. Nor was he required to run any errands for Employer. Claimant became the master of his own fate, and of his own choices. He was free to go straight home, stop by Taco Bell and order the #3 and say hi, or brave the I25 Gap, head to the Tech Center, and walk the rat maze at IKEA for a couple hours. He just had to be back at work Monday at 6:00 a.m.

R. The ALJ finds and concludes that this unfortunate accident did not occur in the course and scope of his employment; thus, Claimant's claim is not compensable.

Medical Benefits

S. Claimant has failed to establish that he sustained a compensable work-related injury; therefore, he is not entitled to an award for medical treatment.

Temporary Total Disability Benefits

T. Claimant has failed to establish that he sustained a compensable work-related injury; therefore, he is not entitled to an award of temporary total disability benefits.

ORDER

It is therefore Ordered that:

1. Claimant did not suffer a compensable work injury.
2. Claimant's claim for medical benefits is denied and dismissed.
3. Claimant's claim for Temporary Total Disability benefits is denied and dismissed.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: August 27, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-078-582-002**

ISSUES

- I. Whether Claimant sustained a compensable work-related injury on or about September 25, 2017.
- II. If Claimant sustained a compensable work injury on or about September 25, 2017, whether the medical treatment she has received since that date is reasonable, necessary, and related to her work injury.
- III. If Claimant sustained a compensable work injury on or about September 25, 2017, whether the arthroscopic surgery recommended by Dr. John Reister is reasonably necessary treatment related to Claimant's work injury.

STIPULATION

- The parties agree that if Claimant sustained a compensable work-related injury on or about September 25, 2017, Front Range Occupational Medicine and On The Mend Occupational Medicine – which includes Dr. Miller and Dr. Walker - are authorized providers and Respondent should be ordered to pay their bills.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was employed by Employer as a second-grade teacher at Kendrick Lakes Elementary School on September 25, 2017 when she stepped into a hole in the grass on her way to her car for lunch with her right foot while in the course and scope of her employment.
2. Claimant twisted her right knee, heard a loud pop, had immediate pain in the right lower part of the knee below the kneecap and had difficulty walking to her car.
3. Claimant had to call the office for help because she was unable to walk on the right leg at that point and another teacher came to assist Claimant into the school health room.
4. Claimant's knee was swelling and the school health aide gave her ice to help with the pain and swelling. Claimant did, however, stay and taught the remainder of the day in her chair with ice on her knee.
5. Claimant's husband picked her up from work and took her to the emergency room at SCL Community Hospital Southwest. (*Claimant's Exhibit 8.*) Claimant was diagnosed with a sprain of the right medial collateral ligament of the right knee. (*Claimant's Exhibit 8, p. 14.*)

6. Claimant provided a history of right knee pain after feeling like she twisted her knee and then heard a pop after stepping into a pothole. She reported that she had some soreness knee due a foot issue and walking awkwardly to try and avoid exacerbating her foot pain, so the knee had been sore for a couple of months. She was actively seeking care from a podiatrist for her foot condition in an outpatient setting. (*Claimant's Exhibit 8, p. 2.1*) She advised the ER doctor that she stepped in uneven ground and her foot fell into a possible (pothole) causing her knee to twist to avoid falling and since than had been painful and she was having a hard time bearing weight. (*Claimant's Exhibit 8, p. 22.*)
7. Claimant provided a history of previous bilateral arthroscopic lateral release surgeries, two on the left knee and one on the right. (Claimant's Exhibit 8, p. 22.)
8. Claimant testified she did take a couple of days off from work following the injury. She was also referred to Dr. Matt Miller of Front Range Occupational Medicine. She was initially evaluated on September 26, 2017. Dr. Miller provided work restrictions of no prolonged walking or standing; seated work 95% of the time and use of crutches as needed. (*Claimant's Exhibit 9, p. 34.*) Dr. Miller was provided with a history of Claimant's pre-existing right knee condition and found that the incident was work related, noting that Claimant had some ongoing pain in the knee at the time of the injury but had a distinct aggravation with the incident.
9. Claimant returned to work and was working within her restrictions, however, she continued to have sharp pain in her right knee that was not improving. Dr. Miller ordered an MRI to rule out a meniscal tear of the right knee. (*Claimant's Exhibit 9, p. 42.*) Because Claimant was extremely claustrophobic the MRI was requested in an open MRI. (*Claimant's Exhibit 9, pp. 41-42.*)
10. Claimant underwent an MRI of her right knee on October 13, 2017 at Upright MRI of Colorado. (*Claimant's Exhibit 10.*) Per the radiologist there was no discrete meniscal tear with mild medial and lateral femorotibial joint degenerative changes. There was moderate sized right knee joint effusion.
11. Claimant testified that she has treated with Dr. Reister for several years starting with medical care and treatment for her low back following a slip and fall at work for Jefferson County and subsequent treatment for her bilateral knee problems.
12. Claimant testified that she has a problem with her kneecaps. Claimant testified that it is her understanding that her kneecaps tend to move toward the outside of her knees. As a result, they do not sit in the joint correctly and this leads to tears in the cartilage. Such condition caused pain and swelling in her knees. Therefore, Claimant had her first lateral release surgery on left knee while she was college. She testified that it is her understanding that the surgery required them to cut muscle off of the patella so the inner muscle will pull the kneecap back over to where it should sit.
13. Dr. Reister performed two lateral releases to the left knee and one to her right. The lateral release surgery to her right knee was performed in 1999. Claimant had ongoing bilateral knee problems that would require treatment for exacerbations. The exacerbations were generally pain and swelling. Claimant's treatment also included taking Celebrex on and off for her knee pain.

14. Claimant testified that she was not in active treatment at the time of her work injury for her knees, but the problems she was having with her right foot that she was treating for had caused some increased right knee pain because of the way she was walking due to the foot issues.
15. Claimant described extreme swelling after her work fall, greater than she had with her routine exacerbations, pain that was in a different part of the knee, straightening and bending the knee were painful, and she had pain all of the time that never went away despite care including up until the date of hearing. She also felt unstable on her right knee and was concerned that the knee was going to give out and she would fall. (*Claimant's Exhibit 9, p. 45; Exhibit 13, p. 61.*) This was a new problem for her. She used crutches until November of 2017 and kept them with her in the event she was feeling unsteady on her leg after that.
16. On November 3, 2017 Claimant requested that Dr. Miller refer her to Dr. Reister because of her ongoing problems that were not improving because of his knowledge of her orthopedic medical conditions. Dr. Miller would not make the referral because he did not know Dr. Reister and would only refer to orthopedic doctors that he worked with that understood workers compensation. (*Claimant's Exhibit 9, p. 50.*)
17. Claimant sought a change of physician to Dr. Sharon Walker at On the Mend Occupational Medicine. Her first evaluation was on December 11, 2017. Dr. Walker was familiar with Dr. Reister and referred Claimant to him for evaluation of her right knee condition. Dr. Walker provided ongoing work restrictions, prescribed Celebrex and cyclobenzaprine. (*Claimant's Exhibit 13, pp. 63-64.*)
18. Claimant was evaluated by Dr. Reister on January 4, 2018. Dr. Reister indicated that Claimant had been his patient for over 20 years. He indicated that there had been a delay in treatment as a result of the workers compensation system. Dr. Reister indicated that the MRI showed advancing mediolateral osteoarthritis, which was mild in the tibial femoral compartments and some very advanced chondromalacia patella. According to Dr. Reister the chondromalacia patella is an interesting diagnosis as it goes from degenerative to mechanical quite easily and Claimant was having large effusions and significant pain. He noted that she was having more difficulty with stairs, chairs, getting up from the ground and not as much of a problem with level plantigrade walking. (*Claimant's Exhibit 14, p. 80.*)
19. Dr. Reister diagnosed Claimant with acute right knee pain and chondromalacia of the patella, right with effusion and mechanical symptoms. His treatment plan was to inject the right knee with an anti-inflammatory to try to get it calmed down. If that worked, he would repeat it as necessary. If that did not work and the problem had become mechanical, then an arthroscopic debridement of the patellar cartridge may be necessary.
20. Claimant returned to Dr. Reister on February 18, 2018 post injection indicating that she had substantial relief from the that injection for 4 weeks, but the pain had returned. Based upon his examination and the ongoing problems he was of the opinion that he needed to determine whether or not there had been acute damage to the meniscus in the knee and ordered an MRI. (*Claimant's Exhibit 14, p. 82.*)

21. An MRI of the right knee was performed on March 27, 2018 at Touchstone Imaging Highline. It was read as showing a medial meniscus tear of the posterior horn root attachment of the medial meniscus with peripheral extrusion of the medial meniscal body. (*Claimant's Exhibit 11, p. 53.*)
22. Claimant was referred to pool therapy by Dr. Walker on March 12, 2018. (*Claimant's Exhibit 13, p. 67.*) she continued with work restrictions and medications.
23. Dr. Walker also performed a Comprehensive Outcome Management Technologies psychological assessment, which showed Claimant was functioning poorly, but scored normal in the psychological category indicating that she did not need psychological counselling. (*Claimant's Exhibit 13, p. 68.*)
24. Claimant returned to Dr. Walker on April 8, 2018 who indicated that because the first MRI did not show a meniscal tear and the second one did that she could not say that the tear and need for surgery were related to the work injury. (*Claimant's Exhibit 13, p. 73.*) Claimant denied any other injury in between and explained that Dr. Reister indicated that the first MRI was an open one and of such poor quality that he ordered a repeat MRI in a closed MRI machine. Dr. Walker indicated Claimant should return to Dr. Reister who could compare the two MRI's and provide his opinion about whether the meniscal tear and need for surgery are related to her work injury. MMI was deferred, prescriptions written, and work restrictions continued.
25. Claimant returned to Dr. Reister on April 11, 2018 advising him of the workers compensation physician's opinions that the two MRI findings were so different that they do not believe the meniscal tear is related to the work injury. Dr. Reister indicated that the knee has been different since the injury, and he would review the two MRI's and provide an opinion. (*Claimant's Exhibit 14, p. 85.*)
26. On May 31, 2018, Dr. Reister provided Claimant the following diagnoses regarding her right knee:
 - Acute medial meniscus tear.
 - Arthritis of the right knee.
 - Chondromalacia of the patella.
 - Acute pain.(*Claimant's Exhibit 14, pp. 88-89.*)
27. Dr. Reister further noted Claimant had failed conservative management for improvement and was not a candidate for a total knee or arthritis surgery at her current young age of 50 and is an appropriate candidate for a diagnostic and therapeutic arthroscopy which he recommended. (*Claimant's Exhibit 14, pp. 88-89.*)
28. Moreover, the findings on MRI do not dictate whether the surgery recommended by Dr. Reister is reasonable, necessary, and related to the work injury. As credibly noted by Dr. Reister, "There are many other internal derangements that do not show up on MRI." Dr. Reister went on to state:
 - Claimant has paid the test of time and is not improving.

- Claimant is still complaining of pain and swelling of the knee on a regular daily basis.
- Claimant has failed conservative treatment of her knee symptoms.
- Claimant is not a candidate for a total knee replacement due to her current age of 50.
- Claimant is a candidate for a diagnostic and therapeutic arthroscopy.

(Claimant's Exhibit 14, pp. 88-89.)

29. On June 4, 2018 Dr. Reister requested authorization for outpatient right knee diagnostic scope and debridement. He attached his May 31, 2018 report that indicated that the different MRI findings were not significant in his opinion because of her diagnostic response to corticosteroids with a classic response to the steroid of a mechanical injury instead of a degenerative response, and appropriate for a scope because of the 8 months of ongoing pain and swelling and appropriate medical care. *(Claimant's Exhibit 2, p. 4.)*
30. On June 7, 2018 Employer denied authorization of the requested surgery pending a medical review. *(Claimant's Exhibit 3.)*
31. On June 11, 2018, a subsequent denial was sent to Dr. Reister including a medical record review dated June 9, 2018 from Dr. Mark Failing that the requested care was not reasonable, necessary, or appropriate for the Claimant. *(Claimant's Exhibit 4.)* Dr. Failing performed a record review and indicated that the surgery was not reasonable based upon the MRI findings, and Claimant's morbid obesity. He recommended a repeat cortisone or viscosupplementation as an alternative to surgery. Dr. Failing indicated that if a procedure were to be performed that it should be a total knee replacement. Dr. Failing indicated that he understood Dr. Reister's desire to prolong the life of the patient's knee prior to a knee replacement given her age, that it was his opinion that the arthroscopic meniscus repair had a low probability of improving her situation. *(Respondent's Exhibits 5-6.)*
32. On June 28, 2018 Claimant presented to Denver Foot and Ankle Clinic for a preoperative appointment for a tibial sesamoid ectomy of the right foot right with excision of matrix ectomy hallux right. *(Claimant's Exhibit 12, p. 56.)*
33. Claimant returned to Dr. Reister on August 6, 2019 following her foot surgery with multiple complications including an infection. Dr. Reister found her right knee to be effused, the medial joint line was tender, and the posteromedial joint line is tender with a positive McMurray with pop and pain. Dr. Reister related the need for care to the workers compensation injury of September 25, 2017 and recommended the arthroscopic surgery as the appropriate treatment. He once again requested authorization for the surgery.
34. Respondent's filed a Notice of Contest on August 8, 2019 on the same day that Dr. Reister re-requested the right knee scope. *(Claimant's Exhibit 5, p. 7.)*

35. Claimant was evaluated by Dr. Failinger on January 16, 2020. Dr. Failinger diagnosed Claimant with right knee severe degenerative joint disease with exacerbation of symptoms which are persistent and unrelenting, as well as a degenerative medial meniscus tear. (*Respondent Exhibit 1, p. 20.*) He was of the opinion that her symptoms were not solely related to the work injury of September 25, 2017. He was of the opinion that although there was an increase of symptoms that there was not new pathology.
36. Dr. Failinger agreed that surgery was the only option at this point but did not think that arthroscopic surgery was appropriate and that a total knee replacement for the arthritis was the only option.
37. Dr. Reister opined that September 25, 2017 workers compensation injury is the reason that Claimant currently needs medical care and treatment because the work incident described caused a worsening of her right knee pain and an acute change in her ambulatory capacity which did not get better with time, rest and conservative management. (*Claimant's Exhibit 15, p. 95.*)
38. Dr. Reister indicated that he was in a better position to determine claimant's baseline having treated her for over 20 years and previously operated on the right knee. Dr. Reister indicated that Claimant's knee is arthritic and the Claimant had day to day knee pain as a baseline, but was able to work on her feet as an elementary school teacher with her baseline pain and after the September 25, 2017 incident the pain worsened and has been unrelenting since the injury. It requires medical intervention.
39. Dr. Reister indicated that the injury of September 25, 2017 aggravated and increased the symptoms associated with her preexisting degenerative joint disease of the right knee. Specifically, the preexisting arthritic condition was aggravated, and Claimant has new onset mechanical symptoms from the meniscus tear.
40. Dr. Reister is of the opinion that a right knee arthroscopy is the appropriate medical treatment rather than a total knee replacement. He indicated that the literature does support that operating on arthritic knees does not have significant benefit when the arthritis is the only diagnosis. According to Dr. Reister in Claimant's case, the extruded meniscus tear is a degenerative condition, but if the posterior horn of the extruded meniscus is unstable it certainly can be incarcerating the back of the joint and producing mechanical symptoms on top of the degenerative condition that is her baseline.
41. Based upon Claimant's weight and age, she is young for consideration of a total knee replacement, Dr. Reister indicates that putting in a total knee will set her up for early failure of the total knee replacement, and that he would work continuously to preserve her own joint for as many years as possible.
42. Claimant's description of the extent of her preexisting knee condition and how it got significantly worse is consistent with the medical record and the findings and recommendations of Dr. Reister. Claimant has been open and honest about her prior knee problems. Moreover, Claimant's description of the accident and injury is consistent with her actions after the accident, which included having her husband drive her to the emergency room for medical treatment. As a result, the ALJ finds Claimant's statements to her medical providers and her testimony at hearing to be credible and persuasive.

43. The ALJ has considered the reports and testimony of Dr. Failinger. Dr. Failinger relies heavily on the September 14, 2017 report from Trista Swift and her notation that Claimant's right knee flexion was limited to 40 degrees.
44. At this appointment, Claimant complained primarily of foot pain. For example, according to the medical report from that visit, Claimant's chief complaint (CC) was foot pain. The report provides that Claimant's foot pain:
- [I]s located on the right and at the MP joint of the great toe followed by podiatry until she lost her insurance – was supposed to get an MRI but has to wait now until she has insurance with Kaiser – 2 weeks from now.
45. At this visit, Claimant also complained of knee pain. However, after reviewing Ms. Swift's notes, the ALJ finds that Ms. Swift's notes lack clarity, precision, and consistency. For example, Ms. Swift indicated that her inspection of Claimant's right knee revealed upon inspection a "normal exam." Then, despite indicating Claimant's knee inspection was normal, Ms. Swift noted Claimant's knee was tender, had a small effusion, and had a tender joint line. And, despite noting a normal exam, she then indicates Claimant's knee range of motion – flexion – is limited to 40 degrees. (*Respondent's Exhibit C, pp. 32–34.*)
46. Ms. Swift, in a conclusory fashion, stated Claimant suffered from a "right foot and knee injury, possible soft tissue damage." In other words, Ms. Trist did not explain and provide any detail as to whether she concluded Claimant suffered from an acute injury or whether she concluded Claimant was having pain in her foot and knee due to an underlying condition. The most likely scenario, which Claimant provided, was that she was being seen for her foot pain, which was causing her to walk in a manner that was also causing her some pain in her right arthritic knee.
47. In addition, Dr. Failinger notes in his reports that Ms. Swift is a Physician Assistant. However, Ms. Swift's report does not indicate her designation or credentials which might give some insight into her qualifications to perform a thorough and accurate orthopedic evaluation of Claimant's knee. For example, her report does not indicate whether she is a Registered Nurse (RN), Nurse Practitioner (NP), Physicians' Assistant (PA), Physician, or something else.
48. Although Dr. Failinger relied heavily on the range of motion measurement noted by Ms. Swift to conclude Claimant's need for treatment preexisted her date of injury and relates solely to her preexisting arthritis, there is no indication how Ms. Swift determined Claimant's flexion was limited to 40 degrees. For example, was Claimant merely asked to flex her knee until she started to feel pain? Or, was Claimant told to flex her knee until she could no longer flex her knee because of pain and/or swelling?
49. Moreover, Dr. Failinger stated that Claimant had better range of motion after the work accident. And, although Dr. Failinger concluded that supported his opinion that Claimant's knee was really symptomatic before the injury, he failed to consider why such a finding did not make the notation of Ms. Swift questionable. And, there is no indication that when he examined Claimant, he tried to determine whether the 40 degrees of flexion noted by Ms. Trist was accurate. For example, it does not appear he

asked Claimant whether her flexion was limited to 40 degrees when she saw Ms. Trist. Plus, there is no indication that he tried to determine how Ms. Trist measured the flexion of Claimant's knee during the examination.

50. As a result, the ALJ does not put much weight on the amount of flexion noted by Ms. Trist and the conclusions drawn by Dr. Failinger based on such.
51. The ALJ has also considered Dr. Failinger's testimony regarding the MRI findings which did not note any "interarticular bodies" that might have revealed "pieces of cartilage knocked off and floating around." (*Hrg. tran.* at 88, L21-24). Despite there being a lack of such findings, there is a lack of credible and persuasive evidence indicating such findings must be present to establish an aggravation of preexisting condition or a new injury.
52. On the other hand, the ALJ has also considered Dr. Reister's opinions and conclusions regarding the MRIs as set forth in his reports. The ALJ finds that Dr. Reister is of the opinion that Claimant's MRIs demonstrate an extruded medial meniscus with an acute tear as well as arthritic changes. As a result, the ALJ finds Dr. Reister concluded that Claimant's twisting injury resulted in an acute injury in the form of an aggravation of Claimant's arthritis and an aggravation of her degenerative meniscal tear in the form of an acute tear that resulted in an increase in pain as well as mechanical problems for which he has recommended surgery. Moreover, he opined that Claimant might have additional pathology that was caused by her work injury that cannot be identified by MRI.
53. As a result, Claimant's work injury resulted in new pathology which resulted in an acute injury and an acute change in Claimant's ambulatory capacity, i.e., increase in right knee pain and it has not gotten better with time, rest, and conservative treatment. (*Claimant's Ex. 15, p. 95.*)
54. Claimant needs additional medical treatment, which includes the surgery recommended by Dr. Reister, to cure her from the effects of her work injury.
55. When comparing the opinions of Dr. Reister and Dr. Failinger, the ALJ finds Dr. Reister's opinions and conclusions to be credible and more persuasive than those of Dr. Failinger. The primary reason for crediting Dr. Reister's opinions and conclusions over Dr. Failinger's is because Dr. Reister's opinions are consistent with Claimant's statements and testimony – which the ALJ finds credible - regarding the mechanism of injury and onset of increased symptoms that immediately followed the twisting injury at work and which have continued.
56. The ALJ also credits and finds persuasive Dr. Reister's opinions regarding the need for additional medical treatment, including arthroscopic surgery, to cure Claimant from the effects of her work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant sustained a compensable work-related injury on or about September 25, 2017.

Respondent agrees that while in the course and scope of employment Claimant stepped in a hole in the parking lot at work. Respondent, however, contends Claimant did suffer a "compensable" injury.

A "compensable" industrial accident is one which results in an injury requiring medical treatment or causing disability. *H and H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990); *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988). Where pain triggers the claimant's need for medical treatment, the claimant has established a compensable injury if the industrial injury is the cause of the pain. See *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949). The term medical treatment includes diagnostic procedures required to ascertain the extent of the industrial injury. See *Merriman v. Industrial Commission, supra*; *Villela v. Excel Corp.*, W.C. No. 4-400-281 (February 1, 2001); *Hatch v. John H. Harland Co.*, W.C. No. 4-368-712 (August 11, 2000).

A preexisting disease or susceptibility to injury does not disqualify a claim if the injury aggravates, accelerates, or combines with the preexisting disease or infirmity to produce the need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ICAO has noted that pain is "a typical symptom from the aggravation of a pre-existing condition" and a claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.*, WC 3-998-279 (ICAO February 16, 2001).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.*, WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Here, before the accident at work, Claimant had preexisting symptomatic arthritis involving her right knee. She also had a right foot problem that caused her to walk in a manner that resulted in an increase in right knee pain. Despite her preexisting knee condition, Claimant was able to drive herself to work, walk without assistance, perform her job, and manage her knee pain. However, on September 25, 2017, while at work, Claimant:

- Stepped in a hole with her right foot.
- Twisted her right knee.
- Heard and felt a loud pop in her right knee.
- Suffered an acute meniscal tear.
- Had the immediate onset of pain in her right knee.

- Had an immediate increase in swelling in her right knee.
- Was unable to walk on her right leg due to her knee pain.
- Was disabled due to her knee injury.
- Was unable to drive her car to get medical treatment.
- Required medical treatment to diagnose and treat the injury that resulted from twisting her knee.

As a result, after Claimant injured her right knee at work, Claimant's husband picked her up from work and took her to the emergency room at SCL Community Hospital Southwest. Claimant was diagnosed with a sprain of the right medial collateral ligament of the right knee. Claimant was also referred for medical care and treatment to Dr. Matt Miller who provided work restrictions and ordered medical testing including an MRI. Medications were provided and Claimant was referred to physical therapy.

A compensable injury is one that causes the need for medical treatment or disability. In this case there was both. As a result, the ALJ concludes Claimant established by a preponderance of the evidence that she suffered a compensable injury to her right knee.

II. Whether the medical treatment Claimant has received since September 25, 2017 to treat her knee is reasonable, necessary, and related to her work injury.

The Respondent is liable for medical treatment, reasonably necessary, to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Claimant is not required to prove the extent of the injury or that a permanent disability flowed from that injury. As a result, compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000).

In this case, Claimant established by a preponderance of the evidence that she suffered a compensable injury on September 25, 2017 that caused the need for medical treatment. On the day of the accident, and due to injuring her knee, Claimant went to the emergency room. Due to her work injury, Claimant was also referred for medical care and treatment to Dr. Matt Miller who provided work restrictions and ordered medical testing including an MRI to determine the extent of the injury and the need for future medical treatment. Dr. Miller also prescribed medications and referred Claimant to physical therapy. As result, the ALJ concludes Claimant has established by a preponderance of the evidence that the treatment provided to Claimant to treat her right knee since the accident has been reasonable, necessary, and related to her work accident.

III. Whether the arthroscopic surgery recommended by Dr. John Reister is reasonably necessary treatment related to Claimant's work injury.

The Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.*, WC 4-606-563 (ICAO August 18, 2005). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

In this case, Claimant sustained an acute injury to her right knee when she stepped into a hole and twisted her right knee and aggravated her pre-existing symptomatic arthritic knee and also suffered an acute meniscal tear causing the need for medical care as a result of the twisting injury at work.

In determining whether Claimant has sustained an acute injury, the lower extremity *Medical Treatment Guidelines* indicate that the physician should take a history and perform a physical examination. As part of that the physician should record:

The Mechanism of injury. This includes details of symptom onset and progression. It should include such details as: the activity at the time of the injury, patient description of the incident, and immediate and delayed symptoms. The history should elicit as much detail about these mechanisms as possible. (*Guidelines*, Ex. 6, p. 5.)

Dr. Failinger agreed that the mechanism of injury as described by Claimant could cause a meniscal tear. Dr. Matt Miller opined that the incident was work related as patient had been having ongoing pain but there was a distinct aggravation with the incident. Dr. Failinger did not disagree with that opinion.

The *Guidelines* indicate that for determination of whether there is an acute injury of the lower extremity that the physician should determine:

- Did the patient hear a pop at the time of the injury?

- Was he or she able to bear weight immediately following the injury?
- Could he or she straighten the knee and did it swell immediately? (*Guidelines*, Ex. 6, p. 5.)

In this case, Claimant met all three requirements for the determination of an acute injury under the *Guidelines*. As found, at the time of the accident Claimant heard a pop, was unable to bear weight immediately following the accident, and developed swelling immediately following accident.

As a result, Dr. Reister provided Claimant the following diagnoses regarding her right knee:

- Acute medial meniscus tear.
- Arthritis of the right knee.
- Chondromalacia of the patella.
- Acute pain.

As found, Claimant suffered an acute injury to her right knee. The injury resulted in an aggravation of her preexisting arthritis and an acute meniscus tear. Claimant's acute injury caused an exacerbation of her underlying condition which resulted in a significant increase in symptoms and disability. Moreover, the increase in symptoms and disability caused by the work accident are persistent and unrelenting.

Dr. Failinger agreed that there can be acute injuries in pre-existing arthritic joints. Dr. Failinger agreed that Claimant probably does have increased pain since the incident, but did not believe that she sustained an acceleration, worsening or acute injury because of the work injury. However, based on the facts of this case, the ALJ cannot conclude that a permanent and significant increase in Claimant's pain and disability occurring contemporaneously to the work accident does not flow from an acute injury as well as an acceleration and aggravation of Claimant's preexisting knee condition.

Dr. Failinger agreed that Claimant presented with a classic symptom presentation of an exacerbation of pre-existing arthritis. Dr. Reister did not disagree with this opinion, but did explain that in his opinion that the current need for care is as a result of the work injury is based upon Claimant's presentation of a mechanical issue in the knee rather than the underlying degenerative condition in the knee that requires care. As found, the mechanical part of the knee problem is related to the work injury based upon history, increased pain and loss of function, the medical treatment response, and a failure to improve with time.

Dr. Reister credibly opined there was a mechanical component within the degenerative knee as early as January of 2018 when he initially examined her post injury, prior to the MRI. Dr. Reister performed a cortisone injection prior to the MRI, which according to Dr. Reister post injection was consistent with a mechanical defect in the knee rather than a degenerative response. Dr. Reister once again indicated that even if the meniscus tear is degenerative, there remains a distinct possibility in

Claimant's case that it has caused a mechanical problem in the back of the knee that cannot be seen or evaluated without an arthroscope, which would be both diagnostic and therapeutic.

Moreover, the findings on MRI do not dictate whether the surgery recommended by Dr. Reister is reasonable, necessary, and related to the work injury. As credibly noted by Dr. Reister, "There are many other internal derangements that do not show up on MRI." Dr. Reister went on to state:

- Claimant has paid the test of time and is not improving.
- Claimant is still complaining of pain and swelling of the knee on a regular daily basis.
- Claimant has failed conservative treatment of her knee symptoms.
- Claimant is not a candidate for a total knee replacement due to her current age of 50.
- Claimant is a candidate for a diagnostic and therapeutic arthroscopy.

More weight is given to Claimant's authorized treating physician, Dr. Reister, who has a doctor patient relationship with Claimant and has evaluated and treated Claimant both before and after the work accident and injury. Dr. Reister has been articulate and deliberative in his recommendations and treatment of Claimant. Plus, his reluctance to perform a total knee replacement and instead opt for a less invasive treatment based on the facts of this case is found to be credible and persuasive. The ALJ credits Dr. Reister's opinion that the arthroscopic surgery is both diagnostic and therapeutic to cure Claimant from the effects of her work injury. Dr. Reister credibly stated that the arthroscopic surgery is the best option at this time to help preserve Claimant's knee joint and avoid a knee replacement for as long as possible.

As a result, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that the arthroscopic surgery recommended by Dr. Reister is reasonable and necessary to cure her from the effects of her work injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her right knee within the course and scope of her employment.
2. Claimant has proven her entitlement to medical benefits including the right knee arthroscopic surgery recommended by Dr. Reister.

3. The medical treatment Claimant has received since the date of injury is reasonable, necessary, and related to her work injury.
4. Respondent shall pay for Claimant's reasonable, necessary, and related medical treatment, subject to the Colorado Medical Fee Schedule.
5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: August 28, 2020

ISSUES

➤ Whether claimant has proven by a preponderance of the evidence that the cervical discectomy and fusion surgery is reasonable medical treatment necessary to cure and relieve claimant from his admitted work related injury?

FINDINGS OF FACT

1. Claimant sustained an admitted work related injury on March 6, 2018 when he was working on a job in New Castle, slipped on a thin sheet of ice and injured his cervical spine. Claimant testified at hearing that he fell to the ground when he slipped. Claimant testified that following the injury, he had pain in his back, neck, right elbow and right hand. Claimant testified that while the low back symptoms started following his fall, the neck pain started to just compound. Claimant testified reported the injury to his employer and tried to stay at work, but went home around 11:00 a.m. after the injury. Claimant testified that the following day he was in severe pain and sought treatment in the emergency room ("ER").

2. Claimant was evaluated in the Grand River Health ER on March 7, 2018. Claimant reported to the ER physician that he had pain in his low back after slipping two days earlier. Claimant reported he did not fall to the ground. Claimant reported that when he tried to catch himself, he sprained his lower back. Claimant was diagnosed with a lumbar sprain.

3. Claimant was subsequently referred to Grand River Health by Employer and came under the care of physicians' assistant ("PA") Bjerstedt who initially evaluated claimant on March 9, 2018. Claimant reported to PA Bjerstedt a prior history of a vertebrae fracture in the lumbar spine from approximately 30 years prior. Claimant reported that he had jerked his back on or about March 5, 2018 when he was at work and slipped on ice. Claimant also reported that approximately two weeks prior, he slipped on ice at work and injured his neck. Claimant reported some neck discomfort on the right side of his lower neck. Claimant reported that after this incident two weeks prior, he never reported the incident and did not seek treatment, but felt as though he had aggravated his neck during the March 5 incident. Claimant filled out a pain diagram in connection with his evaluation and noted pain in the right side of his neck along with low back pain.

4. PA Bjerstedt diagnosed claimant with a lumbar strain with spasm and an aggravation of the cervical strain with spasm. PA Bjerstedt recommended physical therapy and prescribed Flexeril. Claimant was released to return to work on Monday, March 12 with a 20 pound lifting restriction.

5. Claimant returned to Grand River Health on March 30, 2018. Claimant reported improvement with his low back pain, but noted his cervical pain was getting

worse. PA Bjerstedt noted claimant was tender along the right paracervical musculature from the high cervical down to the upper thoracic region. PA Bjerstedt diagnosed claimant with a lumbar strain, resolved, and a cervical strain, worsening. PA Bjerstedt refilled claimant's Flexeril prescription and ordered a cervical x-ray. The cervical x-ray showed loss of disc space as well as osteophytes and osteoarthritis. The x-ray showed mild anterolisthesis of C2 on C3, of C3 on C4, of C6 on C7, and of C7 on T1. The x-ray also showed mild retrolisthesis of C4 on C5 and of C5 on C6.

6. Claimant reported to his physical therapist on April 24, 2018 that his neck had been feeling better since his prior physical therapy visit, but after he did some yard work two days prior, his neck pain had increased.

7. Claimant returned to PA Bjerstedt on April 26, 2018 and noted reported that he had been doing a little bit better, but after he mowed his law, it flared his neck pain. Claimant denied any pain down the arm and denied any numbness or tingling. PA Bjerstedt recommended adding cervical traction to the physical therapy modalities.

8. Claimant testified he stopped working for employer approximately one month after his work injury.

9. Claimant next returned to PA Bjerstedt on June 17, 2019. PA Bjerstedt noted that claimant had discontinued care while his claim was denied. Claimant reported to PA Bjerstedt that he was experiencing non-stop pulling in the high right side of his neck. PA Bjerstedt returned claimant to physical therapy and recommended another cervical x-ray and magnetic resonance image ("MRI") of the cervical spine.

10. Claimant returned to PA Bjerstedt on July 23, 2019. Claimant's x-ray from that date showed no changes in the cervical spondylosis and spondylolisthesis, with questionable mild left C3-4, right C5-6 and right C6-7 neural foramen stenosis. Claimant reported he had experienced some flare ups in his symptoms, including one time while getting out of a car, but could not relate the other flare ups to anything else. Claimant reported he was still unable to mow his lawn without triggering severe neck pain. Claimant reported riding his motorcycle, but not for more than 45 minutes. Claimant reported riding a bicycle with his grand kids. Claimant reported using ibuprofen and marijuana for the discomfort.

11. Claimant returned to PA Bjerstedt on August 21, 2019. PA Bjerstedt noted claimant was still having aching and right low neck discomfort that would radiate into the right ear that was now associated with some pain, and numbness in the right palm when he rides his motorcycle. PA Bjerstedt noted that the therapist would like to try dry needling. PA Bjerstedt recommended an MRI of the cervical spine.

12. The MRI was performed on August 27, 2019. The MRI demonstrated anterior spondylolisthesis of C2 in relation to C3 with a right paracentral disc bulge with slight stenosis and mild right neural foraminal narrowing. At the C3-4 level, broad-based bulge and joints of Luschka osteophytes resulting in mild bilateral neural foraminal narrowing was noted. At the C4-5 level, broad-based bulge with a right paracentral disc protrusion that resulted in stenosis, broad-based disc impingement with

right sided cord flattening (especially on the right) and bilateral neural foraminal narrowing was noted. At the C5-6 level, broad-based protrusion and posterior osteophytes resulting in stenosis, broad-based disc impingement with right sided cord flattening and bilateral neural foraminal narrowing was noted. At the C6-7 level, broad-based disc bulge with a right paracentral disc protrusion which appeared to touch/impinge on the cord with mild left neural foraminal narrowing was noted.

13. Claimant was referred by PA Bjerstedt to Dr. Krauth. Dr. Krauth evaluated claimant on September 10, 2019. Dr. Krauth noted claimant's accident history of slipping on ice at work and injuring his neck. Dr. Krauth noted claimant reported chronic pain that is stabbing and severe under his right scapula and right at the base of the neck on the right side. Claimant reported that if he turns his neck to the right he will get a sharp jolt that sometimes goes up and down his spine.

14. Dr. Krauth reviewed claimant's cervical MRI and noted that it demonstrates a swan neck deformity with reversal of the cervical lordotic curve from C4-C5 and C5-C6. Dr. Krauth noted claimant's MRI demonstrated a chronic degenerative process and recommended surgery.

15. Claimant returned to PA Bjerstedt on September 18, 2019. PA Bjerstedt noted claimant had been evaluated by Dr. Krauth who had recommended surgery. Claimant reported to PA Bjerstedt that he had a flare up earlier when he fell while trying to plug in his electric garage door opener. Claimant reported that his symptoms returned to baseline following a massage from his wife. PA Bjerstedt further noted that Dr. Krauth had taken claimant off of work until the surgery. PA Bjerstedt issued work restrictions consistent with the recommendations of Dr. Krauth.

16. Claimant returned to Dr. Krauth on October 17, 2019. Dr. Krauth noted that he had reviewed the case with his colleagues and they had agreed that claimant's best course of action would be surgical intervention consisting of an anterior cervical discectomy and fusion at C4-5 and C5-6 with anterior plating. Dr. Krauth noted that he would like to perform the procedure in October.

17. Claimant returned to PA Bjerstedt on November 21, 2019. PA Bjerstedt noted that claimant reported he still had not heard if the surgery had been approved.

18. Claimant was examined by Dr. Krauth on December 3, 2019. Dr. Krauth noted that the recommended surgery had still not yet been approved.

19. Respondents obtained a records review from Dr. Janssen regarding the surgery on December 14, 2019. Dr. Janssen noted that he reviewed the medical records and the MRI. Dr. Janssen recited the history of claimant slipping but not falling, and opined that the mechanism of injury involving a slip and a twist, but not falling, resulting in myofascial pain, did not warrant surgical intervention for a work related condition. Dr. Janssen opined that the findings on MRI were not related to the accident history of slipping at work, but not falling. Dr. Janssen opined that the surgery should not be approved.

20. Claimant returned to PA Bjerstedt on January 9, 2020. Claimant reported to PA Bjerstedt that he attempted to return to work because he needed money and had an intense flare up of his pain. Claimant reported it felt like his left hand had a bunch of needles stabbing his palm. Claimant reported his flare up lasted 7 days and was relieved after a long massage from his wife. Claimant was instructed to return in a month.

21. Claimant returned to PA Bjerstedt on February 4, 2020. Claimant reported he had not been sleeping well and was have more spasms in his back and his hands were getting more numb. Claimant reported he had not returned to the neurosurgeon because his surgery had been denied. Claimant again returned to PA Bjerstedt on March 4, 2020. Claimant reported his neck pain continued with pain radiating to his wings. Claimant reported dropping several coffee mugs. PA Bjerstedt requested authorization for a referral to a pain management physician.

22. Respondents had the request for referral for pain management reviewed by Dr. Orgel on March 23, 2020. Dr. Orgel noted that there was a report from Dr. Janssen from December 14, 2019 stating that he believed claimants cervical condition was related to a long standing prior condition and not a work related injury and opined that the underlying abnormality was not a compensable injury and suggested claimant pursue the treatment through his private insurance. Dr. Orgel opined that any further treatment for claimant be denied until after an independent medical examination ("IME") is concluded.

23. Respondents obtained a records review IME with Dr. Reiss on April 21, 2020. Dr. Reiss reviewed claimant's medical records and surveillance video of claimant from September and October 2019. Dr. Reiss opined that it was possible that claimant strained his cervical spine in the work incident causing some myofascial pain, but from his review of the surveillance, Dr. Reiss opined that claimant was not significantly disable or limited by his symptomatology. With regard to the surveillance video, Dr. Reiss found that there was no pain behaviors depicted in the video and claimant is able to rotate his head.

24. The surveillance video entered into evidence in this case demonstrates claimant performing chores and running errands. The surveillance demonstrated claimant lifting a battery and driving a vehicle. Dr. Reiss identified the battery as a car battery. Claimant testified it was a battery for a lawn mower. While claimant had been taken off of work completely by the recommendations of the neurosurgeon, Dr. Krauth, at this point, the actions of claimant are consistent with the work restrictions set forth by Dr. Bjerstedt from August 2019 and prior that included a 20 pound lifting restriction and no extreme neck positions.

25. Claimant returned to Dr. Bjerstedt on May 4, 2020. Dr. Bjerstedt discussed referring claimant to a counselor due to his increasing depression.

26. Dr. Reiss testified by deposition in this matter. Dr. Reiss testified consistent with his medical reports. Dr. Reiss testified that multilevel cervical disc fusions don't generally work unless you can prove that the deformity is leading to the

pain. Dr. Reiss testified that the more levels that are involved, the less likely the surgery is going to resolve someone's neck pain. Dr. Reiss testified that when claimant resumed treatment in June 2019, he was denying radicular symptoms after more than a year between his treatments.

27. Claimant testified at hearing that he continues to experienced symptoms in his neck that began after his slip and fall at work and has not resolved. The ALJ credits the testimony of claimant and the opinions expressed by PA Bjerstedt and Dr. Krauth and finds that claimant has demonstrated that it is more likely than not that the need for the cervical fusion surgery recommended by Dr. Krauth is reasonable medical treatment necessary to cure and relieve claimant from the effects of his work injury.

28. The ALJ has considered the contrary opinions expressed by Dr. Reiss and Dr. Janssen, but finds the opinions expressed by Dr. Krauth and PA Bjerstedt to be more credible and persuasive with regard to the issue of the relatedness of the surgical procedure.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2016. A party seeking to modify an issue decided by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has proven by a preponderance of the evidence that the cervical discectomy and fusion surgery recommended by Dr. Krauth is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the ALJ credits claimant's testimony at hearing along with the opinions expressed by Dr. Krauth and PA Bjerstedt as being credible and persuasive with regard to the issue of whether the medical treatment is reasonable and necessary to cure and relieve claimant from the effects of the work injury.

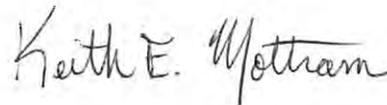

ORDER

It is therefore ordered that:

1. Respondents shall pay for the cervical discectomy and fusion surgery recommended by Dr. Krauth pursuant to the Colorado Medical Fee Schedule.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. . **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: August 28, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

Whether Respondents have established by a preponderance of the evidence that Claimant's future medical maintenance benefits, including opioid medications, are no longer reasonable, necessary or causally related to her July 21, 2011 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 55-year old female who no longer works for Employer. She previously worked as a Merchant Manager but was laid off in approximately 2018. Claimant's job duties included unloading trucks in the back of the store and operating the front cash registers.

2. On July 21, 2011 Claimant suffered industrial injuries to her legs. She was restocking shelves in the back of Employer's store while standing on a pallet. Her left foot slid in between two of the pallet's wooden slats and boxes began falling on her. Claimant pulled back, twisted her left ankle or foot area and felt a pop. She did not fall to the ground.

3. As a result of Claimant's industrial injuries, she underwent two surgeries on her ankle and one surgery on her knee. The first ankle surgery occurred on November 21, 2011. Daniel L. Ocel, M.D. performed an ankle stabilization with repair of the peroneal tendons, repair of the peroneus longus and debridement of the brevis.

4. On April 10, 2013 Claimant underwent a second left ankle surgery with Dr. Ocel. Claimant initially had improvement in ankle function and mechanical symptoms. She testified that, following the second ankle surgery, she began taking Nucynta and other medications

5. In 2014 Claimant visited Dr. Mann for right knee pain and underwent an MRI. The MRI revealed degenerative tearing at the posterior horn in the medial meniscus with some extrusion as well as underlying medial femoral cartilage loss, underlying tibial insufficiency fracture and edema. Claimant received crutches and nonsteroidal anti-inflammatory medications. She underwent a repeat MRI of the right knee on July 14, 2014 that showed healing of the tibial plateau insufficiency fracture.

6. On November 11, 2014 Claimant underwent a 24-month Division Independent Medical Examination (DIME) with Gary Zuehlsdorff, D.O. He determined that Claimant had not reached Maximum Medical Improvement (MMI) and made multiple recommendations. He specifically suggested further therapeutic procedures for Claimant's left ankle including injections. Dr. Zuehlsdorff noted that "[o]therwise, manipulation of other medications would be appropriate under maintenance." In

addressing Claimant's right knee, Dr. Zuehlsdorff recommended surgery because of the medial meniscal tear.

7. Claimant was subsequently referred to L. Barton Goldman, M.D. Dr. Goldman recommended nutritional supplementation, weight loss and medications. He performed an EMG/Nerve Conduction Study of the left lower extremity on January 26, 2015 that showed mild left superficial peroneal neuritis.

8. Claimant underwent a repeat EMG/Nerve Conduction Study of the left lower extremity with Dr. Goldman on July 27, 2015. She exhibited mild left superficial peroneal nerve neuritis and new peroneal neuropathy, but no lumbar radiculopathy. Dr. Goldman recommended ongoing treatment with her primary care physician and weight loss.

9. On December 2, 2015 Claimant visited Dr. Mazola for treatment. Dr. Mazola performed hydrodissection of the nerve tracks with approximately three weeks of pain relief. He repeated the injections and Claimant obtained temporary improvement. On December 8, 2017 Dr. Mazola recommended sural nerve blocks and an ongoing series of hydrodissection as needed for maintenance care.

10. On January 29, 2018 Claimant visited Authorized Treating Physician (ATP) William H. Miller, III, M.D. Dr. Miller determined that Claimant had reached MMI on January 10, 2018. He assigned a 17% lower extremity rating for Claimant's left ankle and a 15% lower extremity rating for her right foot. His recommended maintenance care included ongoing pain management and medications. Dr. Miller specifically commented:

Maintenance care = ongoing pain management/medications (presently with Dr. Zimmerman), Chiropractic 20 visits per year (Dr. Graves), Orthotics (Dr.Channin), injections into the foot 3-4 sural nerve blocks or series of hydrodissection injections (Cornerstone), visits to Dr. Ocel (ortho foot and ankle), visits to PROS

11. Claimant underwent a follow-up DIME with Dr. Zuehlsdorff on January 30, 2018. Dr. Zuehlsdorff agreed with Dr. Miller's date of MMI. He assigned a 26% lower extremity rating for Claimant's left ankle, a 12% lower extremity rating for Claimant's right knee and a 1% psychiatric rating for acute on chronic pain. Dr. Zuehlsdorff assigned restrictions including no lifting, pushing, pulling, or carrying in excess of 25 pounds and no crawling, kneeling, or climbing ladders. He noted that Claimant required maintenance care including medication management and 3-4 hydrodissection injections with Dr. Mazzola over the following year.

12. On April 18, 2018 Claimant had her first visit with new ATP Roberta Anderson-Oeser, M.D. for post-MMI chronic pain management. Dr. Anderson-Oeser noted that Claimant reported ongoing left ankle and foot pain, bilateral knee pain and lower back pain. She recounted that Claimant had recently reached MMI with permanent impairment of the right knee, left ankle and left foot. Dr. Anderson-Oeser remarked that, "if i were to manage [Claimant's] chronic pain medications, she would

need to read and sign a Pain Contract at today's visit, agree to abide by the terms of the contract and submit a random urine sample. She was in agreement to reading and signing the contract, abiding by the terms of the contract and submitting a random urine sample." Dr. Anderson-Oeser "explain[ed] to [Claimant] that the goal would be to gradually reduce the amount of Nucynta ER that she is taking with the eventual goal of weaning her off the opioid medication in the foreseeable future." She instead recommended Lyrica for Claimant's neuropathic pain. Dr. Anderson-Oeser noted that Lyrica would be the most beneficial in controlling Claimant's neuropathic symptoms because opioid medications have minimal to no effect on neuropathic pain.

13. On May 7, 2018 Claimant returned to Dr. Anderson-Oeser for an evaluation. Claimant reported continued burning, pins and needles, and a numbing sensation in her left knee, left lower leg and left foot. Dr. Anderson-Oeser advised Claimant that the goal would be to reduce her Nucynta intake and increase Lyrica because opioids are not successful in managing neuropathic pain. Claimant noted she increased her Lyrica dosage, but the change caused depression and loss of focus at work. She thus reduced her dosage and continued with Nucynta. Claimant remarked that her medications, including Nucynta ER and Lyrica were "75-100% effective with controlling her symptoms and she is more active with the medicine." She also noted some fatigue, difficulty focusing, waking, depression and difficulty breathing with her medications. Dr. Anderson-Oeser reiterated the importance of reducing her dosage of Nucynta because the medication might have caused her hyperalgesia. However, Claimant was reluctant to reduce the medication. Dr. Anderson-Oeser hoped the combination of topical cream would help.

14. On May 12, 2018 Claimant underwent an independent medical examination with Kathleen D'Angelo, M.D. Dr. D'Angelo noted Claimant had undergone seven years of active treatment for a work-related injury that consisted of twisting her left foot and ankle. She expressed concern over Claimant's pre-existing and causally unrelated issues such as diffuse osteoarthritis of her bilateral knees, lumbar pain complaints and significant underlying psychiatric issues. Dr. D'Angelo also noted that Claimant's continued use of opioids was of significant concern. She mentioned that Dr. Anderson-Oeser had already attempted to decrease Claimant's opioid medications by increasing her dosage of Lyrica. Claimant expressed to Dr. D'Angelo that she has sensitivity to several medications including non-narcotic pain killers as well as higher therapeutic doses of Lyrica and Gabapentin. The only medication family for which Claimant did not note any persistent issues with opioids. Dr. D'Angelo strongly encouraged an opioid weaning program as recommended by Dr. Anderson-Oeser. She remarked that, for the vast amount of time Claimant was taking opioids, her functional gains had stalled.

15. Since May 2018 Claimant's medications have included the following: Baclofen 10 mg for muscle spasms; Diclofenac 1.5% transdermal solution, which she uses four times per day for pain and inflammation when not utilizing ibuprofen; lidocaine 5% topical ointment for non-narcotic relief of her neuropathic pain, which she utilizes three to four times per day; ibuprofen 600 mg for pain and inflammation; Lyrica, 100 mg; Nucynta 100 mg extended release and; Nucynta 15 mg.

16. On November 1, 2018 Claimant presented to Thomas Eichmann, M.D. for bilateral knee pain. Dr. Eichmann assessed chronic bilateral primary knee osteoarthritis with severe varus osteoarthritis in the bilateral knees, joint space narrowing and osteophyte formation. He noted in a previous report from an August 16, 2018 visit that Claimant had tried Lyrica, Nucynta, PT and injections to treat her knee pain. On December 5, 2018 Claimant received a left total knee arthroplasty and in January 2019 she underwent a right total knee arthroplasty. She acknowledged that the knee replacements were not related to her July 21, 2011 industrial injury.

17. On May 29, 2019 Dr. Anderson-Oeser again discussed with Claimant a reduction in her Nucynta ER. Claimant agreed to decrease immediate release pills from 100 mg to 75 mg. On June 20, 2019 Dr. Anderson-Oeser again mentioned reducing Claimant's Nucynta by an additional 25 mg.

18. On August 15, 2019 Claimant again visited Dr. Anderson-Oeser for an evaluation. Claimant reported increased pain in her lower back and left foot. She believed the increase was secondary to reducing Nucynta. Dr. Anderson-Oeser explained that the goal was to reduce Claimant's use of opioid medication over time to decrease problems with dependence and addiction. She remarked that the 50 mg Nucynta Claimant was taking at midday would be changed to the instant release formula. Dr. Anderson-Oeser expressed concern about Claimant's reluctance to further reduce her pain medications. She discussed with Claimant a referral to New Health Services for assistance in reducing her opioid medications.

19. At the hearing in this matter Claimant acknowledged on cross-examination that she did not follow through with the referral to New Health Services. Claimant asserted there were problems with the referral and thus did not proceed with treatment. However, she noted that she later spoke with a physician's assistant in Dr. Anderson-Oeser's office who said she was not required to continue with the referral to New Health Services. However, there is no evidence that Claimant's providers stated she should not visit New Health Services for assistance in reducing her opioid medications.

20. On December 20, 2019 Dr. Anderson-Oeser commented that Claimant had not followed through with her referral to New Health Services. Similarly, on January 21, 2020 Dr. Anderson-Oeser specifically stated that she had been discussing the referral to New Health Services for the past four to five months. Nevertheless, Claimant obtained refills of her medications including: Nucynta extended release 100 mg; Nucynta 15 mg; Baclofen for spasms in foot and back; ibuprofen for inflammatory pain; diclofenac gel for inflammatory pain; lidocaine ointment for neuropathic pain and; Lyrica 50 mg for neuropathic pain.

21. On February 2, 2020 Dr. D'Angelo issued an addendum to her May 2018 independent medical examination following a records review. Dr. D'Angelo repeated that Claimant's continued care was neither reasonable nor necessary for her July 21, 2011 injury. Dr. D'Angelo remarked that Claimant has been receiving treatment for her pre-existing and causally unrelated osteoarthritis issues. She noted that in her independent medical examination she expressed concerns about Claimant's diffuse

pain complaints and ongoing waxing and waning left lower extremity complaints that never resolved despite extensive interventions.

22. Dr. D'Angelo also expressed her continued concern that Claimant remained on opioid medications. She explained that the use of opioid medications such as Nucynta are inappropriate for treating chronic musculoskeletal pain. In fact, Claimant had not demonstrated any functional improvement. Specifically, Claimant's last day working for Employer occurred on August 12, 2018 and she remained unemployed. Dr. D'Angelo reasoned that Claimant's functional gains have stalled and her use of chronic opioid medications was not associated with any increased work or functional capacity. She recommended aggressive weaning from her chronic opioid use with the option of in-patient treatment. Moreover, Dr. D'Angelo explained that Claimant did not require continuation of her topical pain medication and any other ancillary treatment, including chiropractic care, nine years after her original work injury. However, she acknowledged that Claimant could continue Lyrica for up to a year, but should be switched to the generic version.

23. On February 13, 2020 Elena C. Antonelli, M.D. performed a peer review regarding the medical necessity of Claimant's ongoing medications. Dr. Antonelli determined the lidocaine cream, Nucynta Extended Release 100 mg, Nucynta 15 mg, Baclofen, Lyrica and Diclofenac gel were not medically necessary. The only medically necessary medication was ibuprofen. Because of the nature of the Lyrica and Nucynta, Dr. Antonelli recommended weaning.

24. On February 27, 2020 William M. Barreto, M.D. conducted a peer review. He considered the medical necessity of Claimant's Nucynta Extended Release 100 mg. and Nucynta 50 mg. He determined that neither medication was medically necessary. Dr. Barreto also recommended weaning.

25. On June 5, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. D'Angelo. Dr. D'Angelo remarked that Claimant's initial diagnosis after the July 21, 2011 incident included a tear of the peroneal longus tendon and a complex medical meniscus tear of the right knee. She maintained that Claimant's medical maintenance benefits were not reasonable, necessary or causally related to her work injuries. In fact, Dr. D'Angelo noted that she was uncertain about why Claimant was still receiving medications and treatment approximately nine years after her original industrial injuries. She specifically, remarked that the results of Claimant's EMG tests did not demonstrate any neuropathy that should be treated with opioid medications. Dr. D'Angelo emphasized that Claimant's failure to resume work activities reflected a lack of functional gains. Notably, the record reveals that Claimant's functional capacity decreased while continuing her maintenance medications. Dr. D'Angelo explained that Claimant's need for ongoing treatment is caused by the confounding of unrelated personal medical conditions with her work-related injuries. She specifically commented that "I absolutely believe that the confounding issue was that we took many of her personal medical issues, lower back pain, obesity, degenerative knee disease, bilaterally, and we treated it -- all of those, as if they were acute traumatic injury due to

her work injury, and they were not.” Accordingly, Dr. D’Angelo concluded that Claimant’s medical maintenance benefits should be terminated.

26. Claimant testified at the hearing in this matter. She explained that she cannot pursue her activities of daily living without her maintenance medications. Claimant also remarked that she would like to continue her chiropractic care and undergo additional hydrodissection injections as originally recommended by ATP Miller.

27. On June 18, 2020 Claimant returned to Ascent Medical Consultants and visited Kristin Seger, PA. Claimant reported that, without all of her medications, she would have difficulty performing her activities of daily living. However, PA Seger noted that Ascent Medical Consultants had received a weaning notice from Claimant’s insurance company specifying that, unless otherwise instructed, they would begin weaning following a refill of her medications.

28. Respondents have established that it is more probably true than not that Claimant’s future medical maintenance benefits, including opioid medications, are no longer reasonable, necessary or causally related to her July 21, 2011 admitted industrial injuries. Claimant’s initial injury involved twisting her left ankle and caused a peroneal tendon tear. Her subsequent left knee condition was also determined to be compensable. The record reveals that Claimant has experienced a number of intervening and overlapping non-work-related symptoms. Claimant has specifically suffered back pain, generalized joint pain in her hips, back, and knees, a total left knee arthroplasty, a total right knee arthroplasty, depression, osteoarthritis and obesity. Because the preceding symptoms have contributed to Claimant’s overall medical condition, medical maintenance benefits are no longer directly related to her July 21, 2011 industrial injuries. Specifically, Claimant had relatively minor injuries to her left foot and knee and underwent surgeries to correct her conditions. After the surgeries, the only significant ongoing problem was mild nerve pain in the foot as demonstrated by objective EMG testing.

29. Dr. D’Angelo persuasively explained that Claimant’s medical maintenance benefits are no longer reasonable, necessary or causally related to her work injuries. She remarked that Claimant’s initial diagnosis after the July 21, 2011 incident included a tear of the peroneal longus tendon and a complex medical meniscus tear of the right knee. Dr. D’Angelo noted that she was uncertain about why Claimant was still receiving medications and treatment approximately nine years after her original industrial injuries. She specifically remarked that the results of Claimant’s EMG tests did not demonstrate any neuropathy that should be treated with opioid medications. Dr. D’Angelo detailed that the use of opioid medications such as Nucynta are inappropriate for treating chronic musculoskeletal pain. In fact, Claimant had not demonstrated any functional improvement. Specifically, Claimant’s last day working for Employer occurred on August 12, 2018 and she remained unemployed. Dr. D’Angelo reasoned that Claimant’s functional gains have stalled and her use of chronic opioid medications was not associated with any increased work or functional capacity. She recommended aggressive weaning from her chronic opioid. Dr. D’Angelo also determined that Claimant did not require continuation of her topical pain medication and any other

ancillary treatment, including chiropractic care, nine years after her original work injury. However, she acknowledged that Claimant could continue Lyrica for up to one year.

30. Similarly, ATP Dr. Anderson-Oeser explained that Claimant's goal was to reduce the use of opioid medication over time to decrease problems with dependence and addiction. She specifically informed Claimant that opioid medications are not appropriate for her nerve pain. Dr. Anderson-Oeser repeatedly sought to decrease Claimant's reliance on Nucynta and referred her to New Health Services for assistance in reducing her opioid medications. However, the record reveals that Claimant failed to follow-up with the referral. Moreover, Dr. Antonelli conducted a peer review and determined the lidocaine cream, Nucynta Extended Release 100 mg, Nucynta 15 mg, Baclofen, Lyrica and Diclofenac gel were not medically necessary. The only medically necessary medication was ibuprofen. Because of the nature of the Lyrica and Nucynta, Dr. Antonelli recommended weaning. Finally, in another peer review Dr. Barreto considered the medical necessity of Claimant's Nucynta Extended Release 100 mg. and Nucynta 50 mg. He determined that neither medication was medically necessary. Dr. Barreto also recommended weaning.

31. In contrast, when Dr. Miller determined that Claimant reached MMI on January 10, 2018 he recommended maintenance care including ongoing pain management and medications. Furthermore, on January 30, 2018 DIME Dr. Zuehlsdorff agreed with Dr. Miller's date of MMI. He noted that Claimant required maintenance care including medication management and 3-4 hydrodissection injections with Dr. Mazzola over the following year. Finally, Claimant explained that she cannot pursue her activities of daily living without her maintenance medications. Claimant also remarked that she would like to continue her chiropractic care and undergo additional hydrodissection injections as originally recommended by ATP Miller.

32. Despite Claimant's testimony and the opinions of Drs. Miller and Zuehlsdorff, the record reflects that Claimant's medical maintenance treatment and medications are no longer reasonable, necessary or causally related to her July 21, 2011 admitted industrial injury. The record reveals that Claimant has had extensive treatment before and after she reached MMI. Claimant's medical maintenance treatment for her peroneal nerve injury and meniscal repair has provided little relief. Based on the persuasive medical opinions and the medical records, Claimant's continuing symptoms are likely related to her underlying health conditions instead of her July 21, 2011 admitted industrial injuries. Accordingly, Claimant's continued medical maintenance treatment and medications are no longer reasonable, necessary or causally related to her July 11, 2011 work injury. Claimant's medications and treatment shall thus be terminated. However, Claimant shall be weaned from her opioid medications as recommended by Dr. Anderson-Oeser and weaned from Lyrica over the course of one year as recommended by Dr. D'Angelo.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured

workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.*, 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expeditors, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); see *Karathanasis v. Chilis Grill & Bar*, W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 919 P.2d 701, 704 (Colo. App. 1999).

5. Although Respondents filed a FAL acknowledging medical maintenance benefits, it is not precluded from contesting liability for future treatment. See *Azar v. Mervyn's*, W.C. No. 4-354-936 (ICAO, June 9, 2005). An admission for medical maintenance benefits is general in nature and subject to a respondents' subsequent right to challenge specific treatment. *Id.* When the respondents seek to terminate all medical maintenance benefits, they have the burden to prove that medical maintenance benefits are no longer reasonable, necessary or related to the industrial injury. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990); see §8-43-201(1), C.R.S. (specifying that "a party seeking to modify an issue determined by a general or

final admission, a summary order, or a full order shall bear the burden of proof for any such modification”).

6. It is appropriate for an ALJ to consider the Colorado Division of Workers' Compensation *Medical Treatment Guidelines (Guidelines)* in determining whether a certain medical treatment is reasonable and necessary for a claimant's condition. *Deets v. Multimedia Audio Visual*, W.C. No. 4-327-591 (ICAO, Mar. 18, 2005); see *Eldi v. Montgomery Ward*, W.C. No. 3-757-021 (ICAO, Oct. 30, 1998) (noting that the *Guidelines* are a reasonable source for identifying the diagnostic criteria). The *Guidelines* are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). Nevertheless, the *Guidelines* expressly acknowledge that deviation is permissible.

7. The *Guidelines* provide, in relevant part, that opioid “medications should be clearly linked to improvement of function, not just pain control.” WCRP 17, Exhibit 9 (I)(6). Furthermore, the *Guidelines*, specify that, “examples of routine functions include the ability to perform work tasks, drive safely, pay bills or perform math operations, remain alert and upright for 10 hours per day, or participate in normal family and social activities.” WCRP 17, Exhibit 9(I)(6).

8. As found, Respondents have established by a preponderance of the evidence that Claimant's future medical maintenance benefits, including opioid medications, are no longer reasonable, necessary or causally related to her July 21, 2011 admitted industrial injuries. Claimant's initial injury involved twisting her left ankle and caused a peroneal tendon tear. Her subsequent left knee condition was also determined to be compensable. The record reveals that Claimant has experienced a number of intervening and overlapping non-work-related symptoms. Claimant has specifically suffered back pain, generalized joint pain in her hips, back, and knees, a total left knee arthroplasty, a total right knee arthroplasty, depression, osteoarthritis and obesity. Because the preceding symptoms have contributed to Claimant's overall medical condition, medical maintenance benefits are no longer directly related to her July 21, 2011 industrial injuries. Specifically, Claimant had relatively minor injuries to her left foot and knee and underwent surgeries to correct her conditions. After the surgeries, the only significant ongoing problem was mild nerve pain in the foot as demonstrated by objective EMG testing.

9. As found, Dr. D'Angelo persuasively explained that Claimant's medical maintenance benefits are no longer reasonable, necessary or causally related to her work injuries. She remarked that Claimant's initial diagnosis after the July 21, 2011 incident included a tear of the peroneal longus tendon and a complex medical meniscus tear of the right knee. Dr. D'Angelo noted that she was uncertain about why Claimant was still receiving medications and treatment approximately nine years after her original industrial injuries. She specifically remarked that the results of Claimant's EMG tests did not demonstrate any neuropathy that should be treated with opioid medications. Dr. D'Angelo detailed that the use of opioid medications such as Nucynta are inappropriate for treating chronic musculoskeletal pain. In fact, Claimant had not demonstrated any

functional improvement. Specifically, Claimant's last day working for Employer occurred on August 12, 2018 and she remained unemployed. Dr. D'Angelo reasoned that Claimant's functional gains have stalled and her use of chronic opioid medications was not associated with any increased work or functional capacity. She recommended aggressive weaning from her chronic opioid. Dr. D'Angelo also determined that Claimant did not require continuation of her topical pain medication and any other ancillary treatment, including chiropractic care, nine years after her original work injury. However, she acknowledged that Claimant could continue Lyrica for up to one year.

10. As found, similarly, ATP Dr. Anderson-Oeser explained that Claimant's goal was to reduce the use of opioid medication over time to decrease problems with dependence and addiction. She specifically informed Claimant that opioid medications are not appropriate for her nerve pain. Dr. Anderson-Oeser repeatedly sought to decrease Claimant's reliance on Nucynta and referred her to New Health Services for assistance in reducing her opioid medications. However, the record reveals that Claimant failed to follow-up with the referral. Moreover, Dr. Antonelli conducted a peer review and determined the lidocaine cream, Nucynta Extended Release 100 mg, Nucynta 15 mg, Baclofen, Lyrica and Diclofenac gel were not medically necessary. The only medically necessary medication was ibuprofen. Because of the nature of the Lyrica and Nucynta, Dr. Antonelli recommended weaning. Finally, in another peer review Dr. Barreto considered the medical necessity of Claimant's Nucynta Extended Release 100 mg. and Nucynta 50 mg. He determined that neither medication was medically necessary. Dr. Barreto also recommended weaning.

11. As found, in contrast, when Dr. Miller determined that Claimant reached MMI on January 10, 2018 he recommended maintenance care including ongoing pain management and medications. Furthermore, on January 30, 2018 DIME Dr. Zuehlsdorff agreed with Dr. Miller's date of MMI. He noted that Claimant required maintenance care including medication management and 3-4 hydrodissection injections with Dr. Mazzola over the following year. Finally, Claimant explained that she cannot pursue her activities of daily living without her maintenance medications. Claimant also remarked that she would like to continue her chiropractic care and undergo additional hydrodissection injections as originally recommended by ATP Miller.

12. As found, despite Claimant's testimony and the opinions of Drs. Miller and Zuehlsdorff, the record reflects that Claimant's medical maintenance treatment and medications are no longer reasonable, necessary or causally related to her July 21, 2011 admitted industrial injury. The record reveals that Claimant has had extensive treatment before and after she reached MMI. Claimant's medical maintenance treatment for her peroneal nerve injury and meniscal repair has provided little relief. Based on the persuasive medical opinions and the medical records, Claimant's continuing symptoms are likely related to her underlying health conditions instead of her July 21, 2011 admitted industrial injuries. Accordingly, Claimant's continued medical maintenance treatment and medications are no longer reasonable, necessary or causally related to her July 11, 2011 work injury. Claimant's medications and treatment shall thus be terminated. However, Claimant shall be weaned from her opioid

medications as recommended by Dr. Anderson-Oeser and weaned from Lyrica over the course of one year as recommended by Dr. D'Angelo.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's continued medical maintenance treatment and medications are no longer reasonable, necessary or causally related to her July 11, 2011 work injury. Claimant's medications and treatment shall thus be terminated. However, Claimant shall be weaned from her opioid medications as recommended by Dr. Anderson-Oeser and weaned from Lyrica over the course of one year as recommended by Dr. D'Angelo.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: September 1, 2020.

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury on February 19, 2020?
- II. If so compensable, what medical bills are the responsibility of Employer?
- III. If so compensable, has Claimant shown, by a preponderance of the evidence, that the reverse shoulder replacement surgery, as recommended by Dr. Defee, is reasonable, necessary, and related to his work injury?
- IV. If so compensable, who is now Claimant's Authorized Treating Physician?
- V. Have Respondents shown, by a preponderance of the evidence, that Claimant was responsible for his own termination from his employment?
- VI. What is Claimant's average weekly wage?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background

1. Claimant is 74-years-old. He worked for Employer initially as a potato laborer, then as a sorter. (Ex. G, p. 90).
2. Claimant was hired on October 24, 2019. *Id* at 89. He was hired as a baler. His job was to place either ten 5-pound bags of potatoes or five 10-pound bags in a 50-pound sacks and then stack the sacks 8' high on a pallet. Claimant was struggling with lifting the 50-pound sacks. In late 2019, Claimant requested his hours be reduced, and he was moved to a lighter duty job sorting potatoes, and with significantly diminished hours.
3. The larger potatoes which the Claimant had to sort (which needed to be tossed onto a second conveyor) weighed approximately 3-4 ounces; the B size potatoes weighed approximately 1-2 ounces.

4. On February 19, 2020, Claimant's job involved sorting potatoes on the "B" line, which were coming down a conveyer belt, running from Claimant's left towards his right. Claimant would stand to the side of this lower conveyer, which was approximately groin height. He was required to pick out the larger sized potatoes, then toss them in an underhanded motion to another conveyer, which was located directly in front of where Claimant stood.
5. This second conveyer was running in the opposite direction of the lower one, in an upward angle. The height of the second conveyer above the floor would vary but required a toss from approximately armpit level. Claimant would also sort the small and 'bad' potatoes into a chute, which was located directly across the lower conveyer from Claimant. At hearing, Claimant stated he would toss approximately 5 large potatoes per minute onto the second conveyer, i.e., one toss every 12 seconds. (see *also* Ex. H, I).

Demonstrative Video Evidence

6. The ALJ has viewed the videos (Ex. H, I), as demonstrative evidence, with Mr. T[Redacted] (who is 5'6", compared with Claimant, who is 5'9"), depicted in the role Claimant was assigned on the date of his alleged injury. Tossing the potatoes (using an underhand motion) onto the upper conveyer does not require the worker to lift his hand past his armpits, although the motion is repetitive. The potatoes must be tossed no more than a foot or two to safely land on the upper conveyer. Tossing the small rejects into the floor chute requires an underhanded toss - using more wrist than shoulder - of perhaps a foot or two, with the hand never having to go above the worker's waist. This motion is the rough equivalent of tossing a spoon into a sink. As noted, while not the least bit strenuous, the action is repetitive, and requires some focus.
7. According to Employer's job description, the sorter position involved constant grasping and fine manipulation with both hands, constant reaching below shoulder level but no reaching above shoulder level. It also involved constant lifting up to 10 pounds but no lifting over ten pounds. (Ex. F pp. 75-76). The ALJ finds the work depicted in the videos to be consistent with this written job description.

The Alleged Work Injury

8. Claimant alleges injury to his right shoulder arising out of the activity of tossing one of the larger potatoes to the second conveyer when he felt a pop and pain in his right shoulder on February 19, 2020. Claimant testified that he continued to work through the pain for a few minutes longer, then informed Employer.

9. Claimant told Josh, his supervisor, that his shoulder hurt. He was directed to see Steve T[Redacted], who is the Safety Manager for the Colorado Division, and Food Safety Compliance Specialist for the entire company.
10. Claimant told Mr. T[Redacted] that he had pain in his right shoulder. He said that his shoulder hurt like it had hurt him in the past. Mr. T[Redacted] asked whether he had fallen or hit his head. He had not. Claimant did not report anything in writing at the time.
11. Mr. T[Redacted] is trained as a first responder. He examined Claimant's shoulder, and upon cursory examination, did not perceive any obvious signs of injury. Mr. T[Redacted] did not understand at this time that Claimant was reporting his shoulder condition as a work-related injury, because he had recently requested to reduce his hours and had changed his job duties. Mr. T[Redacted] asked Claimant if he wanted to go to the doctor. Claimant declined, indicating he felt more comfortable just going home to ice his shoulder because it had bothered him before and that was what he did before.
12. At hearing, Mr. T[Redacted] testified that his understanding at the time was that Claimant's shoulder pain was due to a preexisting condition. He did not understand Claimant to have alleged a work-related injury. Claimant told Mr. T[Redacted] that he had experienced the same pain before and Claimant told him his shoulder had popped before. Mr. T[Redacted] sent Mr. Packer home to ice his shoulder and take ibuprofen. He directed Claimant to let him know if he was still in pain in the morning or if he wanted to go see a doctor.
13. At hearing, Claimant testified that, while examining his shoulder, Mr. T[Redacted] simply grabbed his shoulder, without asking permission, and caused excruciating pain during this examination.

Claimant seeks Treatment

14. The next day Claimant called Mr. T[Redacted] and requested that he be sent to a doctor. Mr. T[Redacted] obtained a doctor's appointment with Sheryl Belanger, MD for Claimant to be seen the next day. Mr. T[Redacted] called Claimant back and notified him of the appointment. Mr. T[Redacted] told Claimant to call him back following his doctor's appointment as soon as he found out what was wrong with his shoulder so they could determine if they needed to fill out paperwork.
15. At hearing, Claimant testified that he brought in paperwork to Mr. T[Redacted] (Ex. 2, p. 6), which is the *Physician's Report of Workers Compensation Injury*, form WC164. This was signed by Cheryl Belanger, MD, who noted 'alignment suspicious for rotator cuff injury', recommended

an MRI, and placed Claimant on TTD, with follow-up in two weeks. *Id.*

The Workers Compensation Claim

16. Claimant then completed a *Workers' Claim for Compensation*, form WC15, on February 28, 2020. (Ex. G p. 90).
17. In that document, Claimant listed his average weekly wage at \$456.98. He also checked the box indicating he received overtime pay.
18. Mr. T[Redacted] did not become aware that Claimant was alleging a work-related injury until the end of March 2020. An Employer's First Report of Injury was then completed on March 25, 2020, by Mr. T[Redacted]. (Ex. G, p. 89).

Preexisting Conditions

19. Three weeks before his alleged injury, Claimant was seen on January 30, 2020, by Jackie Bennett, FNP-BC to 'establish care and to refill medications'. (Ex. C, p. 65). At this visit, Claimant reported chronic hip, left shoulder, right knee pain, "bad arthritis". Claimant had been taking oxycodone (Percocet) to manage his arthritis pain for a long time. *Id.*
20. A number of maladies were listed under ***Active Diagnosis*** at that visit, including:
 - ****Complete tear of the right rotator cuff***
 - **Internal derangement of the right shoulder*
 - *Osteoarthritis multiple sites
 - *Other chronic pain
 - ****Other injury of the muscle, fascia and tendon of long head of biceps right arm sequela***
 - *Over exertion from repetitive movements,
 - ****Traumatic complete tear of the right rotator cuff***, subsequent encounter
 - ****Unspecified injury of right shoulder and upper arm***, subsequent encounter.

Surgical history included his right rotator cuff surgery in 1998 and back surgery in 1970. *Id.* (emphasis added). There is no information in the records regarding any follow-up visits to address of any of these issues.

21. At hearing, Claimant testified he had arthritis in his hands, but denied he had arthritis in his left shoulder, knee, or low back.
22. Claimant testified he had bursitis in his hip, denied chronic left shoulder pain, but agreed he had chronic knee pain. According to visit note [from an unidentified provider, but consistent with his 1/30/2020 visit] of March 2, 2020, Claimant was there to refill his chronic pain medications. "He has taken oxycodone 5 mg TID to manage for "a long time"; requests refill today." He reported chronic hip, left shoulder and right knee pain and 'bad arthritis'. His left shoulder had been more painful for the last 2 months; he was awaiting imaging for it. (Ex. C, p. 56).
23. At hearing, Claimant testified he injured the same (right) shoulder on or about September 1996 in an occupational injury while employed with the Rocky Mountain News in their newspaper distribution department. Claimant testified while lifting a bundle of newspapers, he felt and heard a pop in his right shoulder. He testified he underwent a right rotator cuff surgical repair, was restricted from work for five (5) months and returned to work until 1998. He testified he quit that job in 1998 when his wife became ill and later died. (see Ex. 7, p. 24). Claimant testified he was released without restrictions.
24. Claimant testified that WC claim closed when he was placed at MMI with a small PPD rating. In the ensuing decades, Claimant testified that his surgical repair was so complete that he worked as a construction laborer breaking concrete with a jackhammer for a period of years, and later for John Gonzales, Tree Man Service, as laborer using a chain saw to cut limbs, tree stumps and remove debris from May 2014-September 2017.

Treatment by Dr. Belanger

25. When Claimant was first seen by Dr. Belanger February 21, 2020, he reported that he was sorting potatoes off of a conveyor belt throwing them into bins; he reported joint aches, joint stiffness, muscle aches, weakness, pain in arms shoulder pain - not just his right upper extremity. Dr. Belanger restricted Claimant from repetitively lifting, carrying, pushing, pulling, or reaching away from the body. Examination of the right shoulder revealed no bruising, no redness, and no swelling. (Ex. C, p. 64). Under the intake note, Dr. Belanger made the following notation: "Of note is he had a *previous right rotator cuff* repair 20 years ago or more. *He had been doing well until this injury.*" (emphasis added).
26. X-rays of the right shoulder taken on February 21, 2020, reflected no fracture, but *chronic* arthritic and posttraumatic changes. (Ex. E, p. 73).
27. Claimant was prescribed a 30 day supply of cyclobenzaprine, and a 30 day

supply of ibuprofen 600 mg. He was also administered 60 mg of toradol in the right glute to treat inflammation.

28. February 26, 2020, review of the x-ray report by Dr. Belanger reflected no dislocation or fracture, but abnormal contour of the biceps shadow and humerus/glenoid alignment suspicious for rotator cuff injury. (Ex. C, p. 64).
29. MRI of the right shoulder taken on March 5, 2020, reflected degenerative osseous labral changes. Cartilaginous labrum was not well evaluated due to motion. There was bulky osteophyte formation noted in the glenohumeral joint. (Ex. E, p. 72).
30. Claimant saw Dr. Belanger on March 6, 2020. She then opined that the MRI showed full thickness tears of the right rotator cuff, supraspinatus and infraspinatus. Claimant was referred to orthopedist, Dr. Defee. It was further noted that Claimant's shoulder "now appears with bruising in various shades of colors." (Ex C pp. 52- 55).
31. On March 24, 2020, Claimant returned to Dr. Belanger. According to her report, by this point, Employer had light duty to offer, but they needed work restrictions outlined. They discussed his ability to return to work in a modified duty capacity using his left upper extremity if light duty was available. Claimant initially told Dr. Belanger that there was nothing he could do at work as *he could not move his arm at all*, but was observed by Dr. Belanger to be able to sign papers, hold papers, and supinate/pronate forearm without problems. Claimant was also noted to have full range of motion with his left arm. (Ex. C pp. 44, 45). Despite Claimant's stated inability to function, Dr. Belanger filed a WC164 on 3/24/20, returning him to modified light duty, using upper left extremity only. *Id* at 44.
32. Claimant was next seen by Dr. Belanger on April 21, 2020, reporting that his orthopedic appointment had been delayed due to Corona virus. He reported that he was not going to be able to take his medication during the day and drive. [Claimant had been taking Percocet for at least the previous 10 years on a regular basis]. When he worked for Tree Man Service for nearly 3 ½ years between 2014 and 2018, he took Percocet several times a day every day. The entire time he worked for the Respondent Employer he took Percocet several times a day. Yet, on April 21, 2020, he had a discussion with Dr. Belanger, resulting in her taking him completely off work, because he should not be around machinery when taking medication. (Ex. C, p. 33). There is nothing in the record indicating that Dr. Belanger had any awareness of Claimant's regular use of Percocet for years, apparently without incident.

Orthopedic Referral

33. Claimant saw Laticia Hollingsworth, PAC, with San Luis Valley Health Orthopedics on April 27, 2020. She noted that x-rays of his right shoulder showed narrowing of the glenohumeral joint with inferior osteophyte formation. There was significant translation of the humeral head with narrowing of the acromiohumeral interval. Under Claimant's medical history, she notes:

He states that prior to that [date of injury] *he was not having any pain or difficulty*. He did have an injury to his rotator cuff 23-24 years ago. He had a rotator cuff repair Rose Medical Center at the time. He states that really *he had been doing well up until his injury* in February. (Ex. 8, p. 40) (emphasis added).

34. On that same visit, it was noted that "Review of the MRI shows tearing of the supraspinatus and infraspinatus **with retraction and atrophy**. There is evidence of significant glenohumeral arthritis in addition to changes consistent with a previous rotator cuff repair. *Id* at 43. (emphasis added).
35. Claimant saw orthopedist Dr. Defee on June 12, 2020. Dr. Defee assessed osteoarthritis of the right glenohumeral joint and rotator cuff arthropathy of the right shoulder. He recommended a right reverse shoulder replacement. Dr. Defee did not provide a connection between Claimant's symptoms and his alleged work injury. (Ex. 8, p. 39).
36. Claimant had a prior work-related right rotator cuff tear approximately 23 - 24 years ago. He underwent surgery for that and was off work for approximately 5 months.

IME by Dr. Striplin

37. Dr. Michael Striplin, MD, performed an Independent Medical Examination on behalf of Respondents on May 27, 2020. He is board certified in Occupational Medicine. He also testified at hearing, consistent with his report. He opined that a pop and pain did not equate to an injury of the right shoulder. He opined that the MRI findings were most consistent with longstanding pathology, resulting in the recommended right shoulder surgery, but which was not caused by or substantially aggravated by sorting potatoes at work on February 19, 2020.
38. While the apparent rupture of the long head of the right biceps was of

undetermined age and etiology, the notation of injury of the muscle, fascia and tendon of long head of biceps right arm sequela was noted on the January 30, 2020, report from Jackie Bennett, FNP-BC. Thus, he opined, the rupture of the long head of the biceps has already occurred prior to February 19, 2020.

39. Dr. Striplin further opined that the non-strenuous mechanism of injury of tossing potatoes as depicted in the demonstrative videos of the potato sorting job would not have caused or substantially aggravated the underlying glenohumeral arthritis seen on the March 5, 2020, MRI report. Nor would it have caused the right rotator cuff tears. The advanced preexisting degenerative arthritis in the glenohumeral joint was the reason for the recommended reverse total shoulder replacement. Dr. Striplin opined that Claimant did not sustain a work-related injury to his right shoulder on February 19, 2020.
40. Dr. Striplin acknowledged that he did not take a complete employment history, and was unaware that Claimant had returned to other heavy duty labor for a number of years post-surgery without restrictions, until after he examined Claimant on May 27, 2020. However, he did not indicate that his changed his analysis.

Claimant's Wages

41. Consistent with Mr. T[Redacted]'s testimony (and pursuant to Claimant's own request to Employer, which was honored), the wage records show that Claimant's hourly wage remained constant at \$11.60 per hour. Beginning with his check period dated 11/1/2019, through the check period dated 12/13/2019, Claimant worked nearly 40 hours every week, sometimes more, resulting in overtime pay. (Ex. G, p. 75, Ex. 9, pp. 78-92)
42. Beginning with the check period dated 12/20/2019, and continuing through Claimant's tenure (not counting the final paycheck), Claimant's weekly hours ranged from a high of 31.82, to a low of 21.00. His weekly hours worked, once he went to the "B" line, averaged 25.72. *Id.* At no point after this change did Claimant come even close to qualifying for overtime. His average weekly wage is thus \$298.35.

Temporary Total / Partial Disability

43. The last day Claimant worked for the employer was February 19, 2020, the day he alleges he was injured. Claimant has had no further contact with his employer. After three 'no-call/no-shows', Employer's policy is to terminate the employment relationship. As a result of Claimant accruing three no-

call/no-shows, Claimant was terminated.

44. Mr. T[Redacted] acknowledged that no written termination letter was personally tendered or mailed to Claimant, and there is no evidence in the record that Respondent's Human Resources department had notified Claimant, in writing or otherwise, of his termination.
45. At hearing, Claimant testified that he hand delivered the WC164 to Mr. T[Redacted], and in the presence of other workers. He further indicated that he then called Mr. T[Redacted], and left several messages on his voicemail about his work injury. He never heard back.
46. Mr. T[Redacted] testified he did not meet with Claimant after 2/19/2020. He was not even at the office on the day Claimant alleged he submitted the WC164 to him; instead he was in an all-day meeting at a different location from 9:00 a.m. to 5:00 p.m. regarding an unrelated operation. Mr. T[Redacted] also denied that Claimant left any messages for him after the injury. Instead, Mr. T[Redacted] made several attempts to reach Claimant by phone, leaving voicemails. On the last attempt, he testified that the phone number of Claimant was no longer in service.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.*, this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive

arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. 2008). In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007). Although credibility will be outlined in somewhat detail in this Order, suffice it to say at this juncture that Claimant has not been shown to be a reliable medical historian.

Compensability, Generally

D. According to C.R.S. § 8-43-201, “a claimant in a workers’ compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers’ compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers’ compensation case shall be decided on its merits.” Also see *Qual-Med, Inc. v. Indus. Claim Appeals Off.*, 961 P.2d 590, 592 (Colo. App. 1998) (“The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence.”); *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915, 918 (Colo. App. 1993) (“The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence.”).

E. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between his employment and his injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ). See also, *In the Matter of the Claim of Tammy Manzanares, Claimant*, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

F. For an injury to be compensable under the Workers’ Compensation Act, it must “arise out of” and “occur within the course and scope” of the employment. *Price v.*

Indus. Claim Appeals Off., 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. See *Schepker, supra*. "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment merely because an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n*, 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

G. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.; *Faulkner v. Indus. Claim Appeals Off.*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner*, 12 P.3d at 846.

H. Colorado's Workers' Compensation Act creates a distinction between the terms "accident" and "injury". The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." See §8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." A compensable injury is one which requires medical treatment or causes a disability.

Compensability, as Applied

I. In this case, the evidence is sufficient to show that Claimant at least suffered some compensable injury, albeit a very minor one. Although Claimant's reliability as a medical historian, and as a fact witness, is questionable, there is sufficient corroboration in the medical records of a minor strain of Claimant's right shoulder, sufficient to warrant seeking medical attention. Such finding is consistent with Dr. Striplin's opinions. Claimant was referred, however unwittingly, to Dr. Belanger by Mr. T[Redacted]. Claimant was treated with an anti-inflammatory, and prescribed pain medication and a muscle relaxant good for 30 days. Such treatment was adequate to fully treat Claimant's minor work injury, and the ALJ so finds.

Medical Benefits, Generally

J. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. See § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of

medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).

Medical Benefits, Reasonably Necessary

K. No one, even Dr. Striplin, is disputing that Claimant might need a reverse shoulder replacement at this stage of his life. The medical evidence shows severe arthritis in the joint, torn supraspinatus and infraspinatus tendons, a biceps tendon that is likely absent, and misalignment of the glenohumeral joint. Claimant's symptoms are consistent therewith.

Medical Benefits, Related to Work Injury

L. The mere fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

M. In this case, Claimant's pain symptoms *related* to his actual work injury (a minor strain, and nothing more) would have abated within a few days with the treatment provided on the initial visit. The ALJ finds that this minor shoulder strain *did not* cause Claimant's severe, pre-existing shoulder symptoms to suddenly become symptomatic, and now to somehow necessitate a reverse shoulder replacement. Claimant was already symptomatic when he went in to establish care on January 30, 2020, and refill his longstanding prescription for Percocet. Claimant's shoulder was not "doing fine" before February 19, 2020, although he told his providers that. The MRI showed that his supraspinatus and infraspinatus tendons were already *retracted and atrophied*. They did not reach this condition as a result of tossing a 4-ounce potato on February 19. Those tendons, and the surgery to repair them, had failed at a time well prior, likely before Claimant even started work for Employer. While it remains *possible* that Claimant's bicep tendon was hanging by a thread, then snapped on the "B line" on 2/19/2020, the evidence is insufficient to show even this by a preponderance. The ALJ finds and concludes that the shoulder surgery being proposed is *not related* to Claimant's compensable, minor shoulder strain.

N. Therefore, the only medical treatment which was reasonable, necessary, *and related* to Claimant's work injury was the initial visit with Dr. Belanger on 2/21/2020.

There is, therefore, no need to determine at this point whether Claimant is entitled to a change of physician. Any medical needs of Claimant are now to be addressed outside the Workers Compensation system.

Temporary Total Disability

O. To establish entitlement to TTD and TPD benefits the Claimant maintains the burden to proof by a preponderance of the evidence that his wage loss has some connection to his industrial injury. *PDM Molding v. Stanberg*, 898 P.2d 542 (Colo. 1995). Once Claimant establishes entitlement to temporary disability benefits, it becomes incumbent upon the Respondent to prove, by a preponderance of the evidence, that the temporarily disabled employee is responsible for his termination of employment, and if proven, the resulting wage loss of the injured worker shall not be attributable to the on-the-job injury. C.R.S. sec. 8-42-105 (4), sec. 8-42-103 (1)(g), *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004).

P. Claimant will be held responsible for his separation of employment from the insured if he performed some volitional act, or exercised some control over the circumstances of the termination. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994) (opinion after remand, 908 P.2d 1185 (Colo. App. 1995)). The determination of the fault issue is ordinarily one of fact for resolution by the ALJ. *Id.*

Q. The ALJ finds that Respondents have met their burden here. Claimant insists he drove to work (apparently using only his left hand the whole drive, while on Percocet) to hand deliver the WC164 to Mr. T[Redacted] on 2/21/2020. Mr. T[Redacted] insists that did not occur; instead, he provided a credible account of his whereabouts when this allegedly occurred. Claimant posits that Mr. T[Redacted] has the greater motive to bend the truth – the ALJ finds that if anyone has such motive, it is Claimant. The ALJ also does not find Claimant’s version of events surrounding his cursory exam by Mr. T[Redacted] to be persuasive. Mr. T[Redacted] is trained as a first responder, and the ALJ finds that his cursory exam was reasonable, appropriate under the circumstances, and not excruciating. The ALJ finds Mr. T[Redacted] to be far more persuasive in his testimony.

R. Claimant effectively abandoned his position, once he failed to show for work, and did not respond to Mr. T[Redacted]’s phone inquiries. Any misunderstanding of what tasks Claimant might or might not be able to perform from that point could have been cleared up with some communication. Claimant could still be working there, if he desired to keep his job. The lack of a formal termination letter being delivered to Claimant (who would not pick up his phone) changes nothing. He was still let go, and for good cause. The ALJ is especially unpersuaded by Claimant’s rationalization that he could not drive in to work and use his left hand, because he was to continue his longstanding Percocet prescription. Claimant ‘played’ his physicians, who were attempting to treat him. The ALJ finds that Claimant was responsible for his own termination.

Average Weekly Wage

S. This is a moot point, despite Claimant's Average Weekly Wage having now been calculated. What is concerning is that Claimant even wished to claim he worked overtime on his WC15. Claimant knew full well that, upon his own request, he had only been working part-time since the Christmas holidays.

ORDER

It is therefore Ordered that:

1. Claimant suffered a minor compensable injury, in the form of a shoulder strain, on February 19, 2020.
2. Respondents shall pay for all reasonable, necessary, and related medical treatment; in this instance, the treatment Claimant received at his initial visit with Dr. Belanger.
3. Claimant's request for a change of physician is denied and dismissed.
4. Claimant's request for reverse shoulder surgery is denied and dismissed.
5. Claimant's requests for Temporary Total Disability payments is denied and dismissed.
6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-103-828-002**

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that on February 15, 2019, she suffered an injury arising out of an in the course and scope of her employment with the employer.

If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she has received is reasonable, necessary, and related to the work injury.

The parties have stipulated to an average weekly wage (AWW) of \$666.00.

The issues of temporary total disability (TTD) benefits and temporary partial disability (TPD) benefits were also endorsed for hearing. However, at hearing the parties agreed to reserve those issues for future determination.

FINDINGS OF FACT

1. The claimant began working for the employer in July 2018. She was hired to work in public safety. The claimant's job duties included patrolling the property and working at the gate house. The claimant testified that she worked 40 to 50 hours per week and was paid \$16.65 per hour.

2. On February 15, 2019, the claimant slipped on ice and fell while at work. The claimant testified that the fall occurred after she had finished washing her work truck when she stepped on black ice, slipped and fell. The claimant testified that as she slid she fell forward onto her knees and landed on her right side. The claimant also testified that after her fall, she had pain in her knees and her right shoulder.

3. The claimant immediately went to speak with Ms. M[Redacted] in Human Resources to notify her of her fall. When she arrived at Ms. M[Redacted]'s office, Ms. S[Redacted] and Mr. H[Redacted] were both present.

4. The claimant testified that Ms. M[Redacted] assisted her with basic first aid on her knees. At that time, Ms. M[Redacted] asked if the claimant wanted to seek medical treatment. The claimant testified that at that time she declined, because she wanted to wait and see.

5. The other individuals present in Ms. M[Redacted]'s office also testified at the hearing. Ronald H[Redacted], IT Administrator, testified that he was present in Ms. M[Redacted]'s office when the claimant reported that she had fallen. Mr. H[Redacted] also testified that the claimant arrived in the HR office and stated that she had fallen near the fuel pumps. The claimant stated to the group that she was "fine" and that she had

scraped her knee. Mr. H[Redacted] further testified that the claimant seemed to be lighthearted and was laughing. The claimant did not complain of shoulder pain in Mr. H[Redacted]'s presence.

6. Tracy S[Redacted], Office Manager, was also present when the claimant reported her February 15, 2019 fall. Ms. S[Redacted] testified that the claimant reported that she slipped and fell while fueling her work truck. Ms. S[Redacted] also testified that the claimant did not exhibit behavior indicative of shoulder pain.

7. Erin M[Redacted], worked at the employer's Human Resource Manager on February 15, 2019. Ms. M[Redacted] testified that the claimant was laughing when she reported her fall. The claimant reported to Ms. M[Redacted] that she fell onto her knees and then caught herself with her hands. The claimant did not report shoulder pain to Ms. M[Redacted] at that time.

8. On March 2, 2019, Ms. M[Redacted] received an email from the claimant requesting medical treatment related to her February 15, 2019 fall. As that date was a Saturday, Ms. M[Redacted] began the process of scheduling a medical appointment for the claimant on that Monday. Ms. M[Redacted] authored a summary of her February 15, 2019 interaction with the claimant and interactions thereafter. That written summary is consistent with Ms. M[Redacted]'s testimony at hearing.

9. Ms. X[Redacted] testified that on February 15, 2019, she was the claimant's supervisor. Ms. X[Redacted] was unable to recall the events of that date and an event described in a memorandum authored by Ms. M[Redacted].

10. The claimant testified that during the two week period after her fall, her knee pain improved, but her right shoulder pain became worse. As a result, on March 2, 2019, the claimant emailed Ms. M[Redacted] and requested medical treatment. Ms. M[Redacted] replied to the claimant's email and began the process to schedule a medical appointment for the claimant.

11. On March 5, 2019, Ms. M[Redacted] completed an Employer's First Report of Injury. In that report, the February 15, 2019 incident is described as "[s]lipped on ice, fell sideways onto her right side."

12. On March 13, 2019, the claimant was seen at Avon Occupational Health by Lucia London, CNP. The claimant reported to Ms. London that she tripped and fell "forward and slightly to the right side landing on her right upper arm and shoulder." The claimant also reported pain in her right shoulder. Ms. London diagnosed a right shoulder strain and ordered x-rays that were performed that same date. The x-rays of the claimant's right shoulder showed no fracture or dislocation. Ms. London noted that she was concerned the claimant could have a rotator cuff tear, and ordered a magnetic resonance image (MRI) of the claimant's right shoulder.

13. The claimant testified that she was placed on work restrictions that included no lifting, pushing, or pulling over one pound. The claimant further testified that even with these work restrictions, she continued to work full duty.

14. On March 16, 2019, an MRI of the claimant's right shoulder showed a full thickness tear of the posterior supraspinatus. In addition, the MRI showed a moderate partial thickness tear of the cranial subscapularis, mild infraspinatus tendinosis, and prominent lateral acromial downsloping with mild subacromial spurring.

15. On March 18, 2019, Ms. London referred the claimant to Vail Summit Orthopaedics and Neurosurgery.

16. On March 27, 2019, the claimant was seen at Vail Summit Orthopaedics and Neurosurgery by Dr. William Sterett. At that time, the claimant reported that she fell onto her right shoulder on February 15, 2019. Dr. Sterett diagnosed strain of the muscles and tendons of the right rotator cuff. He recommended surgical intervention that would include right shoulder arthroscopy, debridement, decompression of the subacromial space, rotator cuff repair, and a biceps release.

17. On April 1, 2019, Ms. London amended the claimant's work restrictions to include no driving.

18. Dr. Alisa Koval testified by deposition. Dr. Koval indicated that she has treated the claimant at Vail Health. In her testimony, Dr. Koval opined that the claimant's fall on February 15, 2019 was a consistent mechanism of injury to cause the claimant's right rotator cuff tear. In support of this opinion, Dr. Koval noted that a chronic finding would include muscle atrophy, and there was no atrophy to the muscle on the MRI. Dr. Koval also noted that prior to the fall at work, the claimant had normal function. Dr. Koval testified that she agrees with Dr. Sterett's surgical recommendation in treating the claimant's right shoulder. With regard to causation, Dr. Sterett opined that the claimant's shoulder pain was secondary to a fall at work. In addition, on the WC 164 form, Dr. Sterett indicated that the claimant's condition was consistent with an injury at work.

19. On May 16, 2019, the claimant attended an independent medical examination (IME) with Dr. Nicholas Olsen. In connection with the IME, Dr. Olsen reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. At the IME, the claimant described to Dr. Olsen the manner in which she fell. First, she indicated that she "slipped forward onto her right side". Then the claimant told Dr. Olsen that she caught herself with her hands, then landed on her knees, and ultimately fell to the right onto her right shoulder.

20. In his IME report, Dr. Olson opined that the condition of the claimant's right shoulder was not caused by her fall at work on February 15, 2019. In support of that opinion, Dr. Olsen noted that Ms. M[Redacted]'s written summary indicated that the claimant did not demonstrate pain behaviors immediately following the incident. However, Dr. Olsen also notes in his IME report that if one were to believe the claimant's version of events, then the MRI findings would correlate to the February 15, 2019 slip on the ice.

21. Dr. Olson's testimony was consistent with his written report. Dr. Olson testified that the claimant's description of her fall does not make sense to him. Dr. Olsen

further testified that if the claimant's right shoulder struck the ground last, then there would not be enough force to cause a rotator cuff tear.

22. The ALJ credits the claimant's testimony over the contrary testimony of the respondent witnesses regarding the events of February 15, 2019. The ALJ also credits the medical records and the opinions of Drs. Koval and Sterett over the contrary opinions of Dr. Olsen. The ALJ places weight on the absence of atrophy as noted by Dr. Koval, thereby indicating the likelihood of an acute rotator cuff tear. Therefore, the ALJ finds that the claimant has successfully demonstrated that it is more likely than not that on February 15, 2019, she suffered an injury to her right shoulder while at work. The claimant has also successfully demonstrated that it is more likely than not that the right rotator cuff tear and the need for surgical repair is causally related to the claimant's February 15, 2019 fall at work.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it

“aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has demonstrated by a preponderance of the evidence that on February 15, 2019 she suffered an injury to her right shoulder arising out of and in the course and scope of her employment with the employer. As found, the claimant’s testimony, the medical records and the opinions of Drs. Koval and Sterett are credible and persuasive.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, the claimant has demonstrated by a preponderance of the evidence that treatment of her right shoulder, including the right shoulder surgery recommended by Dr. Sterett is reasonable medical treatment, necessary to cure and relieve the claimant from the effects of the work injury. As found, the claimant’s testimony, the medical records and the opinions of Drs. Koval and Sterett are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant suffered a compensable injury on February 15, 2019.
2. The respondents are responsible for treatment of the claimant’s right shoulder, including the right shoulder surgery recommended by Dr. Sterett, pursuant to the Colorado Medical Fee Schedule.
3. The ALJ adopts the stipulation of the parties and orders that the claimant’s average weekly wage (AWW) is \$666.00
4. All matters not determined here, including TTD and TPD, are reserved for future determination.

Dated this 3rd day of September 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-088-752-001**

ISSUES

1. Whether Respondents established by clear and convincing evidence that the Division Independent Medical Examination (DIME) opinion of Caroline Gellrick, M.D., that Claimant is not at MMI is incorrect.
2. Assuming Respondents overcome the DIME, have Respondents established by clear and convincing evidence that Dr. Gellrick's provisional impairment rating is incorrect?
3. Whether Claimant established by a preponderance of the evidence that additional shoulder treatment is reasonably needed to cure and relieve and related to the effects of the March 12, 2018 admitted work injury.

FINDINGS OF FACT

1. Claimant is a 47-year-old male who sustained an admitted work-related injury to his right shoulder on or about March 12, 2018 while moving a slot machine in the course of his employment with Employer.
2. On March 15, 2018, Claimant was seen at Concentra for his right shoulder pain. Claimant reported anterior shoulder pain with radiation into the distal upper arm. Claimant reported a slot machine tipped while he was moving it, pulling his right shoulder downward, resulting in immediate sharp pain. Claimant reported pain with extension and cross-body movements and denied a history of prior shoulder injuries. Claimant was referred for physical therapy and advised to take ibuprofen. (Ex. 3 and E). (Claimant's treatment note from Concentra on March 15, 2018 is not included in the record).
3. After several weeks of conservative treatment and a lack of improvement, Claimant's authorized treating provider (ATP), Theodore Villavicencio, M.D., ordered an MRI of Claimant's right shoulder. The MRI was interpreted as showing mild degenerative changes, Type I acromion with slight down sloping anteriorly, mild infraspinatus and suprascapularis tendinosis with no rotator cuff tearing and a mild thickening of the axillary pouch with an intact biceps tendon labrum. Dr. Villavicencio then referred Claimant to orthopedic surgeon Michael Hewitt, M.D., for evaluation. (Dr. Villavicencio's reports and the MRI Report are not included in the record). (Ex. 3).
4. Claimant saw Dr. Hewitt on April 23, 2018. Claimant remained symptomatic for anterior/posterior shoulder pain. Dr. Hewitt found posterior instability of the right shoulder with moderate posterior impingement and posterior joint line tenderness. Dr. Hewitt ordered a repeat MRI of the right shoulder with contrast. The MRI was performed on May 8, 2018, and was interpreted as showing a partial thickness, non-detached SLAP tear in

the right shoulder from 1:00 to 11:00 with mild diffuse rotator cuff tendinosis with no tear, no evidence of atrophy, no osseous lesions. Dr. Hewitt recommended surgery for Type I vs Type III SLAP tear with probable biceps tenodesis recommended. (Ex. 3 and E). (Neither Dr. Hewitt's April 23, 2018 treatment note, nor the May 8, 2018 MRI Report is included in the record).

5. On May 21, 2018, Claimant saw Dr. Hewitt and reported increased symptoms with overhead use within his shoulder. Claimant was diagnosed with a right shoulder superior labral tear and surgery was recommended. (Ex. 3). (Dr. Hewitt's May 21, 2018 report is not included in the record).

6. On August 27, 2018, Claimant saw Dr. Hewitt and reported persistent shoulder symptoms without indicating the location of symptoms. Dr. Hewitt discussed with Claimant that surgery would involve the evaluation of the biceps labral attachment and if the superior labrum was compromised, he would recommend a biceps tenodesis. (Ex. 2).

7. On November 27, 2018, Dr. Hewitt performed surgery on Claimant's right shoulder. The pre-operative diagnoses were right shoulder superior labral tear and subacromial impingement. The procedures performed included right shoulder arthroscopic biceps tenodesis within the intertubercular groove, arthroscopic posterior superior labral repair with anchor, distal clavicle co-planing with resection of inferiorly directed distal clavicle exostosis. The post-operative diagnoses were right shoulder posterior superior labral tear, 10:30 and 12:00; subacromial impingement; and acromioclavicular arthropathy. (Dr. Hewitt's operative note is not included in the record). (Ex. 3 and Ex. E).

8. Following surgery, Claimant continued to follow up with Dr. Hewitt and Dr. Villavicencio's office. Claimant also underwent physical therapy following surgery. (No records between November 27, 2018 and February 15, 2019 are included in the record).

9. On February 15, 2019, Dr. Hewitt evaluated Claimant and noted moderate capsular tightness of the right shoulder and recommended continuing formal therapy and placed Claimant in a dynamic stretching brace. (Ex. 3). (Dr. Hewitt's note from February 15, 2019 is not included in the record).

10. On April 3, 2019, Claimant saw Dr. Villavicencio. Dr. Villavicencio noted that Claimant had seen Dr. Hewitt in March 2019, to discuss possible options of MUA (the ALJ infers that MUA means "manipulation under anesthesia") if the Claimant's range of motion did not improve. (Ex. 3). (Neither Dr. Villavicencio's note from April 3, 2019 nor Dr. Hewitt's treatment note from March 2019 is included in the record).

11. On April 8, 2019, Claimant saw Dr. Hewitt who documented moderate improvement in range of motion. Dr. Hewitt offered Claimant the option of a cortisone injection if his symptoms failed to improve further. Claimant opted for conservative treatment. (Ex. 3). (Dr. Hewitt's April 8, 2019 note is not included in the record).

12. On May 15, 2019, Claimant underwent a right shoulder MRI on referral from Dr. Hewitt. The MRI was interpreted by Frank Crnkovich, M.D. Dr. Crnkovich interpreted the

MRI as showing a type I acromion. The Dr. Crnkovich's findings of the acromion outlet states, in part: "[i]nterval hypertrophic degenerative changes in the acromioclavicular joint with capsular thickening and edema. Reactive edema in the clavicle and acromion. Findings much more prominent on the current exam than the prior. Coracoacromial ligament is thickened and edematous. Did the patient have surgery on the acromion in the interim?" (Ex. C).

13. On May 23, 2018, Claimant was seen by Dr. Hewitt who reviewed the MRI. Dr. Hewitt recommended an ultrasound guided intra-articular injection, and recommended Claimant continue working on range of motion and strengthening during physical therapy along with massage. (Ex. 3). (Dr. Hewitt's record from May 23, 2018 is not included in the record).

14. On June 3, 2019, Claimant received a corticosteroid injection in the glenohumeral joint. Although the record for this injection is not included in the record, the ALJ infers this injection was in the right shoulder. (Ex. 2).

15. On August 8, 2019, Claimant saw a physician assistant at Concentra and was noted to have continued aching pain in the right shoulder, with physical therapy aggravating the shoulders. The physician assistant recommended an independent home exercise program recommended release from care at MMI. Claimant was instructed to return to follow up with Dr. Villavicencio in two weeks. (Ex. 3). (The August 8, 2019 Concentra treatment note is not included in the record).

16. On August 22, 2019, Claimant saw Theodore Villavicencio, M.D., for an evaluation. Dr. Villavicencio's examination of Claimant's right shoulder showed no ecchymosis. Claimant had tenderness in the AC joint, in the anterior glenohumeral joint and in the anterior shoulder, but not in the bicipital groove and not in the posterior shoulder. Dr. Villavicencio noted that Claimant was at his function goal, but not at the end of healing. Dr. Villavicencio recorded Claimant's right shoulder active range of motion as: flexion 150° (with pain); extension 35°; abduction 140° (with pain), adduction 55°; internal rotation 30° and external rotation 60°. Dr. Villavicencio assessed that Claimant was at maximum medical improvement as of August 22, 2019 and recommended that Claimant have 12 months of maintenance orthopedic care, as needed. Dr. Villavicencio provided Claimant with an 8% scheduled impairment for right shoulder range of motion deficits. (Ex. B).

17. On October 1, 2019, Respondents filed a Final Admission of Liability ("FAL") in accordance with Dr. Villavicencio's August 22, 2019 report, admitting for 8% scheduled impairment and reasonable, necessary, and related maintenance benefits. (Ex. A). Claimant objected to the FAL and requested a DIME.

18. Caroline M. Gellrick, M.D., performed the DIME on March 5, 2020. Dr. Gellrick reviewed some of Claimant's medical records, including records from Dr. Villavicencio, Dr. Hewitt, and Concentra physical therapy. Dr. Gellrick noted that records were not available for the period of May 23, 2019 to August 8, 2019, and that no records were available for review after August 8, 2019. Claimant reported problems with shoulder and

neck pain causing him to have difficulty with dressing and other personal care issues. He also reported difficulty with other activities of daily living and hobbies due to the status of his right arm and shoulder. (Ex. 3).

19. Claimant reported restrictions with cervical ROM with pain radiating from the lower paraspinal muscles on the right side of the cervical spine to the proximal trapezius with a trigger point in that area. Dr. Gellrick found restricted range of motion of the right shoulder and 4/5 strength due to pain of the right shoulder, with supraspinatus tenderness. Dr. Gellrick noted a positive impingement test. Claimant indicated his pain was located at the acromioclavicular joint on the right side. Dr. Gellrick's found Claimant's right shoulder range of motion to be flexion 115°; extension 25°; abduction 60°, adduction 25°; internal rotation 35° and external rotation 30°. Dr. Gellrick was apparently not provided Dr. Villavicencio's August 22, 2019 report placing Claimant at MMI, but did review a report dated August 8, 2019 from a physician assistant indicating that Claimant was at MMI. (Ex. 3).

20. Dr. Gellrick noted that Claimant was continuing to receive cortisone injections at the time he was placed at MMI. Additionally, Claimant reported he was a candidate for surgery with Dr. Hewitt. Dr. Gellrick concluded Claimant was not at MMI. The ALJ inferred Dr. Gellrick was of the opinion that Claimant required additional treatment and this treatment is related to the work injury. Dr. Gellrick assigned Claimant a scheduled impairment rating of 19% for his right shoulder (converted to 11% whole person impairment), and a whole person impairment of 5% for his spine. Dr. Gellrick assigned a combined and unapportioned impairment rating of 15% whole person. (Ex. 3).

21. Dr. Gellrick noted that, with respect to future care "if the patient needs surgery with Dr. Hewitt, this should be authorized due to persistent capsular tightness, impingement scenario, subacromial bursitis. Once surgery is completed with Dr. Hewitt, the patient will have to go through physical therapy rehab with consideration ultimately at MMI." (Ex. 3).

22. On June 23, 2020, Adam Farber, M.D., performed an IME at the request of Respondents. Dr. Farber examined Claimant and reviewed some of Claimant's medical records. The medical records Dr. Farber reviewed, summarized, and characterized included the following:

- 22 records from Concentra dated March 15, 2018, March 19, 2018, March 26, 2018, April 3, 2018, April 11, 2018, April 23, 2018, April 25, 2018, May 9, 2018, May 21, 2018, August 27, 2018, December 17, 2018, January 7, 2019, January 28, 2019, February 11, 2019, February 25, 2019, March 18, 2019, April 3, 2019, April 8, 2019, May 1, 2019, May 23, 2019, August 8, 2019, and February 10, 2020;
- an April 9, 2018 non-contrast MRI report from Health Images Denver West;
- a May 8, 2018 MRI arthrogram report from Touchstone Imaging Lakewood;
- November 27, 2018 records from Surgery Center at Cherry Creek;

- Colorado Orthopedic Consultants records dated December 7, 2018, January 11, 2019, and February 15, 2019;
- a radiology report for a non-contrast MRI scan of the right shoulder from Health Images at Denver West dated May 15, 2019;
- Physical therapy records from Concentra Medical Center dated March 26, 2018 - April 8, 2019;
- Massage therapy records from Standley Lake Massage Therapy dated March 7, 2019;
- a June 3, 2019 report for a CT-guided glenohumeral joint corticosteroid injection performed at Health Images Diamond Hill; and
- Dr. Gellrick's DIME report dated March 5, 2020.

23. With the exception of an April 8, 2019 physical therapy record from Concentra (Ex. D); a May 15, 2019 right shoulder MRI report (Ex. C); May 21, 2018 and August 27, 2018 records from Dr. Hewitt (Ex. 2); and Dr. Gellrick's DIME report (Ex. 3), the records reviewed and characterized by Dr. Farber were not offered or admitted as part of the evidentiary record.

24. Dr. Farber's testimony was offered by pre-hearing deposition and through his report dated June 23, 2020. Dr. Farber testified that Claimant suffered a right shoulder superior labral tear as a result of his March 12, 2018 industrial injury. (Ex. F).

25. Dr. Farber opined that Claimant's "industrial injury did not cause any significant acromioclavicular joint pathology." Dr. Farber's report indicates that the Claimant's mild degenerative changes in his right shoulder and particularly the acromioclavicular joint are "chronic, degenerative, and pre-existing, but are not causally related to the effects of the March 12, 2018 industrial injury." (Ex. E).

26. Dr. Farber testified that Claimant reported he had "never had pain on the top of his shoulder prior to surgery." Dr. Farber agreed that Claimant has no record of shoulder or acromioclavicular joint treatment prior to Claimant's industrial injury. (Ex. F).

27. Dr. Farber further opined that the distal clavicle co-planing procedure was not indicated to address Claimant's industrial injury, but to address a chronic, degenerative, and pre-existing acromioclavicular joint arthritic condition. Dr. Farber opined that Claimant's current shoulder symptoms (i.e., "superior" shoulder pain), is a post-surgical sequela of the co-planing procedure, which Dr. Farber believes is unrelated to the Claimant's industrial injury, and therefore, any treatment related to the acromioclavicular joint is not related to the Claimant's May 12, 2018 industrial injury.

28. The record contains only two treatment notes from Dr. Hewitt, one dated May 21, 2018 and one dated August 27, 2018. The record does not include Dr. Hewitt's operative note or any other record from Dr. Hewitt explaining the purpose or rationale for the

surgical procedures performed on November 27, 2018. Similarly, the record contains no treatment notes from Dr. Villavicencio other than his August 22, 2019 evaluation.

29. The record does not contain information sufficient for the ALJ to determine or infer the type and nature of future treatment recommended by Dr. Hewitt, the purpose of such treatment, or whether Dr. Hewitt or Dr. Villavicencio has requested that any future treatment for Claimant's right shoulder be authorized.

30. Respondents failed to overcome Dr. Gellrick's opinion on MMI.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON MMI

MMI exists at the point in time when “any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” Section 8-40-201(11.5), C.R.S. A DIME physician’s finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant’s condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant’s medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant’s condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO, May 20, 2004). Thus, a DIME physician’s findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI

The party seeking to overcome the DIME physician’s finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician’s rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician’s opinion, “there must be evidence establishing that the DIME physician’s determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, *supra*.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Respondents have failed to prove by clear and convincing evidence that Dr. Gellrick's DIME opinion on MMI is incorrect. DIME physician, Dr. Gellrick, concluded Claimant was not at MMI as of March 5, 2020, due to continued shoulder pain, restricted range of motion and the need for ongoing surgery and injections.

Respondents rely on Dr. Farber's opinion that Claimant had no symptoms prior to the November 27, 2018 for which the co-planing procedure was indicated. Dr. Farber opined the co-planing procedure addressed a pre-existing, asymptomatic, degenerative condition in the Claimant's acromioclavicular joint (i.e., a bone spur or osteophyte in the acromioclavicular joint). Dr. Farber has opined that Claimant's acromioclavicular joint pathology was neither caused nor aggravated by the industrial injury. Respondents contend Claimant's continuing symptoms are the result of the purportedly unrelated co-planing procedure, and that any further treatment for the acromioclavicular joint is therefore unrelated to his industrial injury.

Dr. Farber's conclusion that Claimant had no pre-surgical complaints regarding his acromioclavicular joint is based relies, in part, on the purported omission of complaints regarding Claimant's "superior shoulder" on pain diagrams from Concentra appointments. Although Dr. Farber characterizes pain diagrams from at least nine different Concentra visits, none of the referenced pain diagrams or associated Concentra treatment notes are included in the record. Given the subjective nature of patient-marked pain diagrams and the close anatomic proximity of Claimant's admitted right shoulder superior labral tear superior and the acromioclavicular joint, Dr. Farber's interpretation of Claimant's self-marked pain diagrams is not persuasive in the absence of the underlying documents. Similarly, because the record does not contain most of the medical records from Dr. Hewitt, Dr. Villavicencio, or Concentra, the ALJ cannot reliably determine whether Claimant complained of such symptoms prior to surgery.

Respondents have not offered evidence that is unmistakable and free from serious doubt that the co-planing procedure was not performed to address any industrial-injury-related condition. While Dr. Farber opined he was not aware of objective medical evidence indicating that Claimant's industrial injury aggravated the Claimant's pre-existing degenerative changes, Dr. Farber also testified that removal of a bone spur (i.e., the co-planing procedure) is not something that is normal to perform without specific symptoms at the acromioclavicular joint. The limited supporting records admitted into evidence do not indicate the reason Dr. Hewitt performed the co-planing procedure. The ALJ cannot infer from the available evidence that Dr. Hewitt performed the co-planing procedure without a medical basis. The evidence indicates that Claimant's shoulder was

asymptomatic prior to his injury on March 12, 2018. The ALJ infers that Dr. Hewitt performed the procedure either to address an symptomatic condition in the Claimant's acromioclavicular joint, or because Dr. Hewitt deemed it necessary to successfully address Claimant's SLAP lesion or biceps tenodesis. Respondents have not produced clear and convincing evidence that the co-planing procedure was unrelated to Claimant's industrial injury.

The evidence is also not unmistakable or free from serious doubt that Claimant's ongoing shoulder symptoms (even if emanating from Claimant's acromioclavicular joint) are unrelated to his industrial injury. When questioned whether Claimant's post-surgical acromioclavicular symptoms are due to the March 12, 2018 industrial injury, Dr. Farber testified that the Claimant did not have symptoms in the acromioclavicular joint prior to surgery, and "if he has new findings after the surgery, they're not necessarily attributed to the injury itself, but perhaps to the [co-planing] procedure which was done." (emphasis added). Dr. Farber's opinion in this regard is not unmistakable or free from serious doubt.

Similarly, because of the lack of medical records regarding the corticosteroid injections the Claimant received from Dr. Hewitt or the recommendation for future surgery, the ALJ cannot find it unmistakable and free from serious or substantial doubt, that further treatment is unrelated to the industrial injury, or that Claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. Implicit in Dr. Gellrick's opinion is that future treatment for Claimant's shoulder condition is reasonably expected to improve the condition. Dr. Farber's opinion to the contrary is a mere difference of medical opinion.

Overcoming Dime On Impairment Rating

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physician's opinion carries

presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries W.C.* No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café W.C.* No. 4-863-323-04 (ICAO, July 26, 2016).

Because Respondents have not overcome the DIME's opinion on MMI, Dr. Gellrick's non-binding, provisional impairment rating is not subject to review.

Additional Medical Benefits

Respondents assert Claimant's current condition is not related to his admitted injuries and seek a denial of additional medical treatment. Respondents rely upon the opinion of Dr. Farber for the proposition that Claimant's current condition is due to a pre-existing degenerative condition and the co-planing procedure performed purportedly to address that condition. Because Claimant is entitled to medical benefits until reaching MMI, a denial of future medical treatment necessarily reflects a determination that Claimant reached MMI for the effects of his industrial injury. Because the DIME physician, determined Claimant is not at MMI, and Respondents have failed to overcome that opinion, Claimant proved he is entitled to medical benefits.

Moreover, although the record reflects that Claimant reported to Dr. Gellrick that Dr. Hewitt believes Claimant may be a surgical candidate in the future, the record does not reflect that either Dr. Hewitt or Dr. Villavicencio (Claimant's ATP), have actually recommended a specific surgery or future treatment. Thus, the record contains insufficient information for the ALJ to determine whether any additional treatment has been recommended, and whether such treatment would be reasonably needed to cure and relieve and related to the effects of the March 12, 2018 admitted work injury. The issue is not ripe for decision. The Claimant is entitled to receive continued medical care for his March 12, 2018 industrial injury until he is determined to be at MMI, which includes the right to return to his ATP for future treatment recommendations.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish by clear and convincing evidence that Dr. Gellrick's DIME opinion that Claimant is not at MMI is incorrect.
2. All remaining issues are moot.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 3, 2020

1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant prove diagnostic lumbar epidural steroid injections recommended by Dr. Botolin and Dr. Leggett are reasonably necessary and causally related to his admitted industrial injury?
- Did Claimant prove a left shoulder arthroscopic surgery recommended by Dr. Walden is reasonably necessary and causally related to his admitted industrial injury?

FINDINGS OF FACT

1. Claimant works for Employer as a fuel truck driver. He suffered an admitted low back injury on July 28, 2020 while draining a 50-pound fuel hose after a delivery. He had draped the hose over his shoulder to facilitate draining the fuel. The hose slipped off his shoulder and he quickly turned to catch it. In the process, he twisted awkwardly and jerked his low back.

2. Claimant experienced immediate back pain after the accident. He called his dispatch supervisor, Michael Price, to report the injury. Claimant told Mr. Price he probably "pulled a muscle" in his back. Mr. Price advised Claimant to continue with his route for the day and hopefully the pain would subside. Instead, the pain intensified by the time he finished his shift.

3. Dr. Daniel Olson at CCOM has been Claimant's primary ATP for this injury. At his initial visit on July 30, 2018, Claimant described pain in his low back and buttocks radiating into his thighs. He also reported numbness, tingling, and a "cold" feeling in his feet. Physical examination showed muscle spasms in the right lower lumbar area. Claimant had difficulty standing in a neutral position, and reduced range of motion. Dr. Olson diagnosed a lumbar "sprain." He gave Claimant a Toradol injection and referred him to physical therapy. Dr. Olson also took Claimant off work.

4. Claimant improved after a couple weeks of physical therapy and tried to return to full-duty work. Unfortunately, his back pain flared significantly, so Dr. Olson took him off work again and ordered an MRI.

5. The lumbar MRI was completed on August 22, 2018. The radiologist interpreted it as showing a bulging disc at L2-3 which, combined with congenitally short pedicles, produced moderately severe spinal stenosis. There was also a bulging disc at L3-4 causing moderate stenosis, and less severe findings at L4-5.

6. On August 29, 2018, Dr. Olson noted Claimant was having pain in his low back and hips with diffuse numbness down his legs. Dr. Olson considered a surgical evaluation but wanted to try a short course of chiropractic treatment first.

7. On September 11, 2018, Dr. Olson stopped the chiropractic treatment because it aggravated Claimant's pain. Claimant was noted to favor his right leg while standing, and his gait was described as "unstable." Dr. Olson referred Claimant to Dr. Leggett or Dr. Sparr "to see if they have any other options."

8. On September 27, 2018, Dr. Olson documented, "[Claimant] has been trying to walk more but he has to use a cane as he fatigues." Claimant used the cane during the appointment to help him arise from a sitting position.

9. Claimant saw Dr. Leggett on October 10, 2018. He described ongoing low back pain, aggravated by activities including prolonged sitting. He reported numbness, tingling, and a "cold" sensation in his right foot, and numbness radiating into his right thigh. Claimant was using a cane because "he feels that sometimes his legs want to give out when he takes steps." On examination, Dr. Leggett observed multiple postural abnormalities related to back pain, significant myofascial tightness and tenderness around the lumbar and gluteal musculature, and significant pain with facet loading at L3-4, L4-5, and L5-S1. Despite the significant spinal stenosis shown on MRI, Dr. Leggett thought Claimant's symptoms were probably related to myofascial/soft-tissue dysfunction and facet arthropathy rather than a frank radiculopathy. He recommended bilateral L4-5 and L5-S1 facet joint injections.

10. Claimant had the facet injections on October 30, 2018. They produced temporary relief, which Dr. Leggett opined was a sufficient diagnostic response to warrant medial branch blocks. Claimant continued to exhibit objective clinical signs consistent with myofascial and soft tissue pain, including muscle spasm and multiple trigger points throughout the lumbosacral and upper gluteal musculature. Dr. Leggett recommended massage therapy and trigger point injections.

11. The medial branch blocks were performed on December 4, 2018. They produced temporary benefit, during which time Claimant noted "significant improvement in walking, lying down tolerance, sleep, and mood. Overall, he is quite pleased with the effect of the diagnostic test." Based on his positive diagnostic response, Dr. Leggett recommended radiofrequency ablation (rhizotomy).

12. On December 27, 2018, Claimant was walking at home when his right leg "locked up" and gave way, causing him to fall. He landed on his outstretched left arm, which caused significant pain in the left shoulder.

13. Claimant called CCOM the next morning to request treatment for injuries suffered in his fall. No one answered the phone, probably because the clinic was closed for the holiday, and he left a message. He called again the next morning (December 29) and again reached the clinic's voicemail. The message directed patients to the emergency room if they desired immediate assistance.

14. Claimant was seen at the St. Mary Corwin Hospital emergency room on December 29, 2018 with a chief complaint of "left shoulder pain." He explained he was being treated for low back problems "with known deficit of right leg weakness, walking

with a cane. He tripped and fell, twisting his right ankle, landing on his chest and left shoulder. Event happened 2 days ago.” The ER provider noted only “mild” tenderness in the anterior shoulder and biceps tendon, with “full” shoulder range of motion.¹ X-rays showed “no fracture or dislocation.” Claimant was diagnosed with “multiple contusions” and a right ankle sprain.

15. Claimant saw Brendon Madrid, NP at CCOM on January 2, 2019. He indicated he had fallen on December 27 “secondary to right leg numbness. The patient states that he fell forward, bracing [h]is fall with his left hand and arm and injuring his left shoulder.” He described stabbing, aching, and burning pain in his left shoulder and down his right leg. Claimant could “barely move his left arm due to [pain] in the left shoulder.” On examination of the left shoulder, Mr. Madrid documented, “The patient is unable to shrug his left shoulder due to discomfort. Patient is unable to abduct his left arm anteriorly or laterally past 15°. There was moderate to severe discomfort with internal and external rotation of his left shoulder. There is 2+ strength² in his left arm to internal and external rotation of the left shoulder.” Mr. Madrid diagnosed a rotator cuff “strain,” and ordered an MRI.

16. Claimant followed up with Dr. Olsen on January 10, 2019. Dr. Olson noted, “[Claimant] was seen by Brendon last time after he fell. He states he has fallen 4 times when his right leg gives out on him. This last time he fell forward onto his left upper extremity. Since then he has been having left shoulder pain. MRI scan was ordered but not authorized.” A rhizotomy was scheduled on January 22.

17. Claimant underwent the rhizotomy on January 22, 2019 and followed up with Dr. Leggett the next day. He reported “night and day change to his low back pain.” Claimant said, “last evening was the first time that he has gotten a full night’s sleep since his injury began. He is extremely pleased with this.” He was still having pain in his right leg, which was not affected by the rhizotomy. Claimant told Dr. Leggett, “He had a period of significant leg weakness on the right, resulting in a fall. He states that this resulted in a strain of his right ankle and left shoulder. He is in the process of seeing if workman’s comp will cover these issues. He is reporting high levels of numbness and tingling throughout the right lower extremity, as well as continued weakness. He utilizes a straight cane for balance and stability.” Dr. Leggett recommended an electrodiagnostic study of the right leg.

18. Dr. Sparr performed an EMG on February 7, 2019. Dr. Sparr opined, “the patient has an essentially normal study of the lower extremity. Given the findings of absent peroneal F-wave response there is certainly a chance that symptoms are stemming from peroneal nerve irritation within the central buttock (sciatic nerve).”

19. The left shoulder MRI was completed on February 13, 2019. It showed a Hill-Sachs lesion “consistent with recent dislocation and relocation,” an anterior bony contusion consistent with a reverse Hill-Sachs lesion, a large joint effusion, a probable

¹ This description of Claimant’s clinical presentation is suspect given the significant findings documented at CCOM a few days later, and significant shoulder pathology subsequently demonstrated on MRI.

² This is a significant strength deficit, because normal strength is generally described as “5/5.”

biceps tendon tear, and multiple rotator cuff tears. After receiving the MRI report, Dr. Olson referred Claimant to Dr. David Walden for a surgical evaluation.

20. Claimant had his initial visit with Dr. Walden on March 5, 2019. Claimant explained that his back problems “cause[] him intermittently to lose complete control of his lower extremities and fall. . . . [On 12/28/2018] the patient lost control of his legs, fell onto an outstretched left arm to prevent hitting his face. Reports immediate shoulder pain.” Physical examination showed significant pain with palpation around the shoulder, reduced range of motion, and evidence of instability. Claimant’s shoulder was “excruciatingly painful” and “he cannot utilize his left arm.” Dr. Walden reviewed operative versus non-operative options, and Claimant elected to proceed with surgery. Dr. Walden recommended a left shoulder arthroscopic anterior, inferior, posterior capsulorrhaphy with possible subscapularis repair. Respondents denied authorization for the left shoulder surgery.

21. Claimant was evaluated by Dr. Sergiu Botolin, a spine surgeon, on April 18, 2019. Consistent with his reports to other providers, Claimant described severe low back pain radiating into the right leg, and “weakness in his right lower extremity and buckling then losing control of it from time to time.” Dr. Botolin noted “[the] patient also has to use a cane to try to unload his right side.” Dr. Botolin reviewed the August 2018 lumbar MRI images, and saw the L2-3 disc bulge was impinging the L2 nerve. He also thought the bulging disc at L3-4 might be contacting the L3 nerve root. Dr. Botolin opined, “[Claimant’s] history, physical examination, and radiographic findings are compatible with low back pain with radiation into the right upper extremity together with the weakness consistent with lumbar radiculopathy, in the setting of a multilevel degenerative spondylosis of the lumbar spine with a far right lateral disc herniation at L2-3 and L3-4 with impingement on the L2 and possibly L3 nerve on the right.” He further stated, “he has a good match between his clinical presentation and imaging.” Dr. Botolin opined the majority of Claimant’s symptoms were coming from the L2-3 right-sided disc herniation, but wanted an updated MRI “to make sure his L3 nerve is not compressed between the facet joints and the far lateral disc herniation at the L3-4 level.”

22. The repeat lumbar MRI was completed on May 2, 2019. The radiologist noted the L2-3 bulge impinging on the right L2 nerve but referenced no L3 nerve root impingement.

23. Claimant returned to Dr. Botolin on May 17, 2019. After reviewing the MRI images himself, Dr. Botolin continued to believe the L3-4 disc bulge may be contacting the right L3 nerve root. He opined, “To try and differentiate between those two, I would like to recommend a right-sided transforaminal steroid injection, first at L2-3 and then on another date at L3-4. However, if the L2-3 transforaminal injection on the right provided the patient with 100% relief that will be confirmatory and there is no need for the L3-4 injection.”

24. Claimant followed up with Dr. Walden on May 21, 2019 and received a cortisone injection in the shoulder. The injection provided no sustained benefit.

25. Dr. Timothy O'Brien performed an IME on behalf of Respondents on April 26, 2019. Dr. O'Brien opined the work accident was trivial and Claimant's injury was limited to a "minor lumbosacral spine strain/sprain" that resolved in less than four weeks. He opined the lumbar MRI showed only chronic longstanding congenital and degenerative conditions, with no evidence of acute injury. He thought Claimant's clinical presentation and reported symptoms were "profoundly nonorganic," highly exaggerated, and cannot be explained by any objective medical findings. Instead, Claimant's reported symptoms are "present only as a means to continue adjudicating a Workers' Compensation claim based on that potential secondary gain that is inherent to that claim." Dr. O'Brien accused Claimant's providers, including Dr. Leggett and Dr. Walden, of "overtreating" Claimant because they did not perform the "due diligence" of a "meticulous review of the medical records." He recommended all treatment be terminated and Claimant immediately returned to unrestricted work. He opined the "completely normal" EMG "proves" Claimant's reported lower extremity symptoms are "nonphysiologic" and "not organically based." He estimated the likelihood that Claimant's leg gave out and caused him to fall on December 27, 2018 "is approximately 0 percent."

26. Claimant followed up with Dr. Leggett on June 18, 2019 to discuss Dr. Botolin's recommendations. Dr. Leggett again observed significant myofascial tightness, tenderness, and multiple trigger points throughout the lumbosacral region. He agreed with Dr. Botolin's recommendations regarding lumbar ESIs. He also disagreed with the opinions expressed in Dr. O'Brien's report.

27. Claimant saw Dr. Timothy Hall for an IME at his counsel's request on August 12, 2019. Dr. Hall noted pain behaviors such as grimacing and moaning when moving about the exam room. Examination of the low back showed straightening of the lumbar lordosis, considerable spasm and hypertonicity in the thoracolumbar paraspinal muscles, and active trigger points. Claimant walked with an antalgic gait. Claimant's left shoulder and biceps tendon were tender to palpation, with markedly limited shoulder range of motion. Dr. Hall's diagnoses included lumbar sprain with ongoing myofascial pain and potential discogenic pain, piriformis syndrome versus radiculopathy, potential foraminal stenosis with radiculopathy, rotator cuff tear, and potential instability/Hill-Sachs lesion and Bankart tear. Dr. Hall disagreed with Dr. O'Brien's conclusions in most respects. He opined Claimant's pre-existing degenerative changes and congenitally short pedicles "means that it would only take a minor incident to create symptomatology in this previously asymptomatic patient." He disagreed Claimant has been "overtreated" and opined, "a number of very good providers who have been in his community for many years and provide appropriate care have simply tried to help [Claimant] in this work-related injury." He further opined, "Does [Claimant] exhibit pain behaviors, some of them excessive? Yes. That does not mean his presentation is 'nonorganic.' It simply means this is his way of dealing with his situation. Some deal more effectively with pain than others. It does not make him a liar." Regarding the shoulder, Dr. Hall opined leg weakness is often associated with low back injuries and "there is nothing all that out of the ordinary about his fall." He thought Claimant's low back and shoulder issues were work-related and he should receive further treatment.

28. Dr. O'Brien issued several supplemental reports after his initial IME. None of the additional information he reviewed altered any of his opinions. He disagreed with Dr. Hall's analysis and opined physiatrists have insufficient training, experience, or expertise to accurately evaluate acute musculoskeletal pathology. His opinion in that regard is not specific to Dr. Hall but applies to the expertise of physiatrists in general.

29. Dr. Leggett authored a lengthy narrative report dated January 13, 2020 addressing Dr. O'Brien's opinions. He disagreed the described mechanism of injury was "minor," and believed the associated forces would be "quite substantial" and reasonably associated with an injury to Claimant's lumbar spine. He opined the low back problems for which Claimant is being treated are "more likely than not" related to the July 2018 work accident. He explained Dr. O'Brien's characterization of the electrodiagnostic study as "completely normal" is inaccurate. The EMG showed fibrillation potentials, which may correlate with the upper lumbar nerve root irritation later identified by Dr. Botolin. Moreover, the absent peroneal F-wave response may indicate sciatic nerve irritation. He also pointed out that purely sensory radiculopathies and subtotal nerve root impingements "are hard to detect" with EMG. He described many of Dr. O'Brien's other opinions as "extreme." Finally, he explained that physiatrists (such as himself and Dr. Hall) are considered experts in "polytrauma" with extensive training and experience treating a wide variety of pathologies in a multidisciplinary context, including spinal cord injuries, musculoskeletal traumas, and neurological conditions. He found Dr. O'Brien's assertion that physiatrists are inadequately trained to evaluate and treat musculoskeletal conditions "inaccurate and condescending."

30. Respondents obtained video surveillance of Claimant in June and September 2019, and January 2020. The video showed Claimant engaging in basic activities such as entering and exiting medical offices, standing and sitting on his front porch, and shopping with his wife. Claimant generally used a cane to assist with ambulation, consistent with medical records. He accompanied his wife to the grocery store but generally avoided lifting or carrying items. After leaving the store, Claimant's wife loaded groceries into the vehicle while he stood and watched. The ALJ paid close attention to the September 19, 2019 video, which Respondents argue shows Claimant acting normally until he spots the investigator, at which time he ostentatiously resumes a disability affectation. The video was not nearly as impressive as the description suggests. The initial portion of the September 19 video shows Claimant step down and back up while holding a railing. He then sits down. Although Claimant looks directly toward the camera while sitting and smoking a cigarette, there is no persuasive indication he actually saw the investigator, as opposed to merely coincidentally looking in his direction. In any event, the remainder of the video shows Claimant arise slowly and limp back into his home, consistent with his reported symptoms and limitations. On balance, the video supports Claimant's testimony and his reports to physicians.

31. The opinions of Claimant's treating physicians and Dr. Hall are more persuasive than the contrary opinions expressed by Dr. O'Brien. Although Dr. O'Brien does not explicitly use the term fraud, that is the upshot of his argument that Claimant is intentionally reporting fictitious complaints to obtain monetary compensation. Based on the evidence presented, the ALJ is not persuaded that is an accurate characterization of

Claimant's situation. Having thus rejected the primary assumptions underlying O'Brien's argument, the ALJ finds his opinions of limited utility in deciding this matter. The ALJ is more persuaded by the findings and opinions of Claimant's treating providers and Dr. Hall. Dr. Leggett's January 13, 2020 narrative report is particularly compelling and persuasive.

32. Claimant proved the lumbar ESIs recommended by Dr. Botolin and Dr. Leggett are reasonably necessary diagnostic procedures for his work-related injury.

33. Claimant proved the fall on or about December 27, 2018, and resulting left shoulder injury, are causally related to his work accident.

34. Claimant proved the surgery recommended by Dr. Walden is reasonably needed to cure and relieve the effects of his compensable injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, for either claimant or respondents. Section 8-43-201.

As found, Claimant proved the lumbar ESIs recommended by Dr. Botolin and Dr. Leggett are reasonably necessary treatment for the July 2018 admitted injury. The ESIs were primarily recommended as diagnostic procedures to help identify the pain generators in Claimant's back. Diagnostic procedures are a compensable medical benefit if they have a reasonable prospect of diagnosing or defining the claimant's condition and suggesting a course of further treatment. *Soto v. Corrections Corp. of America*, W.C. No. 4-813-582 (October 27, 2011). The ALJ credits the opinions of Claimant's treating providers and Dr. Hall that Claimant's low back problems are causally related to the July 2018 work accident, as well as the underlying rationale for the injections.

Regarding the shoulder injury, the respondents are liable for the direct effects of an injury and indirect effects that flow naturally and proximately from the original injury. *Standard Metals v. Ball*, 474 P.2d 622 (Colo. 1970). Where a work injury leaves the body in a weakened condition and that weakened condition causes additional injury, the additional injury represents a compensable consequence of the original injury. *Employer's Fire Insurance Company v. Lumbermens Mutual Casualty Company*, 964 P.2d 591 (Colo. App. 1998); *Price Mine Service, Inc. v. Industrial Claim Appeals Office*, 64 P.3d 936 (Colo. App. 2003). The additional injuries are compensable because of their causal relationship to the original compensable injury.

As found, Claimant's fall on or about December 27, 2018 was a natural and proximate result of the original injury. The record contains multiple references to Claimant's antalgic gait and reliance on a cane to assist with ambulation, both before and after the fall. Claimant has consistently attributed the fall to leg weakness related to his back injury. Claimant's back pain and lower extremity symptoms were precipitated by the work accident and directly led to the fall. The ALJ credits Dr. Walden's opinion that surgical intervention is the best option for definitive treatment of Claimant's shoulder injury.

ORDER

It is therefore ordered that:

1. Insurer shall cover the lumbar ESIs recommended by Dr. Botolin and Dr. Leggett.
2. Claimant's left shoulder injury is a compensable consequence of his July 28, 2018 admitted injury. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's left shoulder injury, including but not limited to the left shoulder arthroscopic surgery recommended by Dr. Walden.
3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to

review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us

Administrative Law Judge
Office of Administrative Courts

ISSUES

- I. Whether Claimant proved, by a preponderance of the credible evidence, that his condition has worsened to justify reopening his claim pursuant to C.R.S. § 8-43-303.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant suffered an admitted work injury to his lumbar spine on October 26, 2017 (*RHE A*, p. 2; *RHE C*, p. 56).
2. Dr. Nicholas Olsen, the authorized treating physician, placed Claimant at maximum medical improvement (MMI) on September 6, 2018 (*RHE C*, p. 57). In his September 6, 2018, treatment record, Dr. Olsen noted Claimant “continues to notice pain 8-9/10”. At that time, Claimant reported he felt his symptoms were worsening. Dr. Olsen said the Claimant presented “in significant discomfort” (*RHE C*, p. 56). Dr. Olsen’s working diagnosis of the Claimant’s October 26, 2017, injuries included, lumbar sprain/strain and lumbar spondylosis with clinical signs of right L5-S1 radiculitis (*RHE C*, p. 56). Dr. Olson assigned Claimant 12 percent whole person impairment, 7 percent per Table 53(II)(C) and 5 percent for loss of lumbar motion. Despite placement at MMI, the Claimant remained interested in an epidural steroid injection, but was unable to successfully get authorization (*RHE C*, p. 59).
3. Respondents filed an October 3, 2018, Final Admission of Liability, admitting to Dr. Olsen’s opinions on MMI and impairment and denied post MMI - maintenance – medical treatment.
4. The claim closed based on the October 3, 2018, Final Admission of Liability as to the issues of MMI, impairment and medical treatment post-MMI.
5. On December 30, 2019, the Claimant filed an Application for Hearing endorsing the issues of Petition to Reopen and worsening of condition.
6. The Claimant testified at the May 21, 2020, hearing on his own behalf. Claimant credibly testified that he accurately reported his injury-related symptoms to all treating physicians. Claimant testified that he consistently reported back pain at a level 8 to 10 out of 10 to all his treating providers, and that his pain has been present, “24/7” since the October 26, 2017, work injury.
7. Claimant underwent an independent medical examination (IME) with Dr Brian Reiss on May 17, 2018, and a repeat IME with Dr. Reiss on November 13, 2019 (*RHE F*, pp. 84-100).
8. During the May 18, 2018, IME, the Claimant reported to Dr. Reiss that he was

experiencing low back pain at an “8-9/10” level, with constant pain radiating to the right low back area and sometimes to the left (*RHE F, p. 87*). Claimant also reported some cramping on and off in his legs bilaterally “perhaps 4-5 times per week”; a sharp, transient pain in “one of the other legs” in the mornings; and right anterior lateral thigh numbness perhaps burning on and off (*RHE F, p. 87*).

9. On May 18, 2018, Claimant reported to Dr. Reiss that his worst pain was “more than 10 out of 10”, even though Dr. Reiss described a level 10 out of 10 to Claimant as being the worst possible pain imaginable (*7/10/20 Dr. Reiss Depo. Tr. at 7*). Claimant described his pain level as never going below 6 or 7 (*7/10/20 Dr. Reiss Depo. Tr., p. 7*).
10. Before the May 18, 2018, IME with Dr. Reiss, Claimant completed a pain diagram in which he indicated that his level of pain was “7, 8, 9, 10.” (*RHE F, p. 91*).
11. In connection with his November 13, 2019, IME, the Claimant completed a pain diagram. On this pain diagram, the Claimant indicated his pain levels were “8 to 10, 24/7 for 25 months”. On November 13, 2019, Claimant also reported to Dr. Reiss lower back pain right more than left “between 8 and 10” (*RHE F, pp. 95-96*). Claimant reported that the pain may shoot up his back; sometimes to the anterior and posterior thighs; possibly to the lower legs; and he may get cramping (*RHE F, p. 96*).
12. Claimant has consistently rated his pain somewhere between an 8 out of 10 to over 10 out of 10 throughout his claim (*7/10/20 Dr. Reiss Depo. Tr., p. 8*).
13. Dr. Reiss testified, Claimant’s pain description on November 13, 2019, “is generally not compatible with reality”. Dr. Reiss credibly testified that a person with the pain levels that Claimant described on November 13, 2019, would be in the emergency room regularly and on “a huge amount” of drugs to try to get it under control (*7/10/20 Dr. Reiss Depo. Tr., p. 9*).
14. Claimant walked into his November 13, 2019, IME with Dr. Reiss and was otherwise functional (*7/10/20 Dr. Reiss Depo. Tr. at 9*). Claimant’s physical examination by Dr. Reiss on this date revealed that Claimant was not in any apparent distress (*RHE F, p. 96*).
15. Dr. Reiss credibly testified that an exercise and conditioning program is all that is needed to maintain Claimant at MMI (*7/10/20 Dr. Reiss Depo. Tr., p. 14*).
16. Dr. Reiss credibly testified that Claimant’s pain complaints remained the same in Dr. Reiss’ November 13, 2019, follow-up IME that they were in his pre-MMI IME of Claimant on May 18, 2018 (*7/10/20 Dr. Reiss Depo. Tr., pp. 14-15*).
17. Dr. Reiss credibly testified that the only difference he observed between his May 18, 2018, IME of Claimant and his November 13, 2019, follow-up IME was a great deal more pain behaviors that did not appear to be totally physiologic, but Claimant complained of the same level of pain he had previously (*7/10/20 Dr. Reiss Depo. Tr., p. 15*).
18. Dr. Reiss credibly testified that, from examining Claimant, and reviewing his medical records, there has been no worsening of Claimant’s condition since Dr. Olsen placed

Claimant at MMI on September 6, 2018 (7/10/20 Dr. Reiss Depo. Tr., p. 18).

19. Claimant presented to Dr. Eduardo Carrera on November 27, 2019, for treatment of low back pain. The report from this appointment notes that “[p]ain is currently 7/10,” and that Claimant denied any new weakness, numbness or tingling (*CHE Section 2, p. 17*).
20. Claimant started seeing Dr. Tushar Sharma around the beginning of 2020.
21. On February 28, 2020, Claimant was evaluated by Dr. Sharma. At this visit, Dr. Sharma’s assessment included sacroiliac dysfunction. Given his assessment, Dr. Sharma prescribed a sacroiliac joint injection as well as physical therapy (*CHE Section 1, pp. 4-12*).
22. On March 12, 2020, Claimant underwent a sacroiliac joint injection (*Section 1, p. 13*).
23. On April 16, 2020, after his sacroiliac joint injection, Claimant followed up with Dr. Sharma. The report from this appointment indicates Claimant had a “Pain Score” of 7/10 and reported low back pain radiating to his posterior thigh.

Dr. Sharma also indicated Claimant said the injection provided short term relief for “just a few hours.” Dr. Sharma said that based on Claimant’s stated response to the injection, he still had to:

[R]eassess his pain in the office to differentiate between LBP [low back pain]/left leg sciatica vs left SI [sacroiliac] joint pain.

(*CHE Section 1, pp. 15-17*)

As a result, Dr. Sharma was unable to determine an exact diagnosis. Despite not having a definitive diagnosis, Dr. Sharma concluded in his report that Claimant’s work injury has worsened. He specifically stated:

[Claimant] is being treated for a worsening of condition that is directly related to the original work injury of 2017/work trauma.

(*CHE Section 1, p. 17*)

24. Even though Dr. Sharma concluded in his April 16, 2020 report that Claimant’s work condition worsened, there is no indication he reviewed Claimant’s prior medical records to determine Claimant’s condition when Claimant was placed at MMI. Plus, it is not clear what information Dr. Sharma used to determine Claimant’s condition worsened since he had yet to determine whether he thought Claimant was suffering from low back pain or sacroiliac joint pain (*CHE Section 1, p. 17*).
25. In the end, all Dr. Sharma provided was a conclusory statement that Claimant’s condition has worsened. As a result, the ALJ does not find his opinion to be persuasive.
26. Claimant credibly testified that the doctors whom he saw through the VA after he was placed at MMI did not have all his work-related medical notes.

27. Claimant credibly testified that his “pain level has been the same” and “hasn’t gone up or down” since October 26, 2017.
28. The ALJ does not find Claimant’s allegation that his work-related condition has worsened to be supported by credible and persuasive evidence.
29. The ALJ finds Dr. Reiss’ opinions, as explained in his reports and deposition testimony, to be credible and persuasive. Dr. Reiss’ opinions fit with the Claimant’s statements to other medical providers that he has been in pain at a level 7-10/10 since his October 26, 2017, work injury.
30. The ALJ finds insufficient evidence to establish that it is more likely true than not that Claimant’s injury-related condition has worsened justifying reopening of the claim.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

- A. The purpose of the Workers’ Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on its merits. C.R.S. § 8-43-201.
- B. The ALJ’s factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng’g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).
- C. In deciding whether a party has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions, the reasonableness or unreasonableness

(probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant proved, by a preponderance of the credible evidence, that his condition has worsened to justify reopening his claim pursuant to C.R.S. § 8-43-303.

- D. At any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition. C.R.S. § 8-43-303(1).
- E. The party seeking to reopen an issue or claim shall bear the burden of proof on any issues sought to be reopened. C.R.S. § 8-43-303(4).
- F. To warrant the reopening of an award on the ground of a "change of condition," a claimant must prove a change in physical or mental condition. *Avalanche Industries v. Industrial Claim Appeals Office*, 166 P.3d 147, 152 (2007).
- G. A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition which can be causally connected to the original compensable injury. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220, 222 (2008).
- H. Claimant's reported symptoms to examining and treating physicians have remained constant throughout the treatment for his October 26, 2017, work injury, both before, and after Claimant reached MMI.
- I. When Claimant was placed at MMI, he reported to his authorized treating physician experiencing pain at level 8-9/10. At an appointment with a physician on April 16, 2020, Claimant reported pain in his low back at a level 7/10.
- J. Claimant has reported pain at a level 7-10/10 to all physicians who have treated or examined him for symptoms relating to his October 26, 2017, work injury, both before and after MMI.
- K. Claimant also testified that his pain level has been the same and has not gone up or down since his date of injury.
- L. Moreover, although Dr. Sharma specified Claimant's condition has worsened, the ALJ did not find his opinion to be persuasive since there was no indication he reviewed Claimant's prior medical records and compared Claimant's condition when he was placed at MMI to when he was evaluating Claimant.
- M. As found, Claimant failed to prove, by a preponderance of the evidence, that his condition resulting from the October 26, 2017, work injury, has worsened, justifying reopening.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to prove, by a preponderance of the evidence, that his work-related condition has changed since he was placed at MMI on September 6, 2018.
2. Claimant's Petition to Reopen is DENIED and DISMISSED.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 8, 2020

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-106-898-003**

ISSUES

- I. Whether Claimant has overcome the Division IME as to maximum medical improvement ("MMI").
- II. If Claimant is not at MMI, is Claimant entitled to further medical treatment and diagnostic procedures that are reasonably necessary and related?
- III. If Claimant is at MMI as of May 24, 2019, is she entitled to a general award of maintenance medical benefits?

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was a 78-year-old part-time substitute teacher on the date of injury. On March 7, 2019, Claimant slipped and fell on her bottom in a parking lot in the morning on her way into the building. Claimant continued to work that day, but she left early.
2. After leaving early, Claimant treated her pains with warm water and Epsom salts. Claimant had continued to utilize this treatment to address her pains, along with a heating pad. Claimant had taken no pain medications by the time she sought medical care. (Hrg. Ex. B, pg. 12).
3. Claimant did not seek medical treatment until March 18, 2019, eleven days after the fall. On March 18, 2019, Claimant presented to Dr. Matus with complaints of low back pain, neck pain, left shoulder pain and headaches. Claimant reported her pains were activity based, primarily in her low back. Claimant reported her pain at seven out of ten. She noted her left shoulder was sore when she woke up, but there was no numbness or tingling and she could not identify any motion that made her pain worse. Claimant denied any vision changes or hearing, but she was unsteady on her feet without disequilibrium or loss of balance. (Hrg. Ex. B, pg. 12).
4. Lumbar and cervical x-rays showed no acute findings. (Hrg. Ex. B, pg. 15). Dr. Matus concluded after Claimant's examination that there were no serious injuries, but Claimant continued to have discomfort. Claimant declined prescription medications. She was dispensed bio-freeze and instructed to take over the counter Tylenol for her pain. She was referred to physical therapy and chiropractic treatment to address limitations. Claimant was returned to work regular duty as a substitute teacher. (Hrg. Ex. B, pg. 15).
5. Claimant returned on April 1, 2019 and reported her low back and left shoulder were improving. (Hrg. Ex. B, pg. 16). But, Claimant reported persistent

headaches and a vertigo sensation associated with the headaches. With these reported complaints, Dr. Matus referred Claimant for a brain MRI. (Hrg. Ex. B, pg. 16). Claimant reported some continued pain in her left shoulder with clicking. Claimant's examination demonstrated full range of motion in her left shoulder with normal strength. (Hrg. Ex. B, pg. 17). Dr. Matus noted Claimant had progressed with her motion and pain but had developed balance and vision changes which warranted diagnostic testing. (Hrg. Ex. B, pg. 18).

6. Dr. Matus evaluated Claimant on April 10, 2019 and again, Claimant noted her condition was improving. Her primary pain was in her back and neck and her pain was a five. Claimant reported she had returned to a partial class of yoga. (Hrg. Ex. B, pg. 19). Dr. Matus noted Claimant had intermittent headaches, neck, and back stiffness. Claimant was to continue with physical therapy. (Hrg. Ex. B, pg. 20).
7. On April 16, 2019, a little over a month and a half after the fall, Claimant returned to Dr. Matus, and she reported minimal symptoms. (Hrg. Ex. B, pg. 22-23). She reported no radicular symptoms in her upper or lower extremities. She had no weakness in her upper extremities. Claimant reported her pain in her back and SI joints were significantly improved. Claimant reported that she was performing her exercises regularly. Claimant reported significant improvement in her left shoulder. Claimant reported her vertigo has almost completely resolved. Claimant informed Dr. Matus that she could do balance exercises and yoga. (Hrg. Ex. B, pg. 23). Claimant had also returned to work a couple of days. The brain MRI showed no acute findings. (Hrg. Ex. B, pg. 23). Claimant's left shoulder examination revealed normal range of motion without palpable crepitation. After claimant reported significant improvement in all her complaints, Dr. Matus continued conservative treatment to continue to resolve Claimant's symptoms. (Hrg. Ex. B, pg. 24).
8. On April 29, 2019, claimant presented to Dr. Matus and her improvement had plateaued. Claimant's primary complaint was in her low back. Claimant was still attending physical therapy, which she found beneficial. Claimant had returned to part-time work. (Hrg. Ex. B, pg. 26).
9. Claimant returned a month later on May 24, 2019. Claimant reported she was better. Claimant reported dull throbbing pain, but it improved with rest. Claimant had been working. (Hrg. Ex. B, pg. 29). Dr. Matus concluded Claimant had made steady progress with her therapies and exercises. Claimant had resumed her usual exercises with yoga and was tolerating regular work. Claimant reported only intermittent pain in her neck, arm and back. (Hrg. Ex. B, pg. 30). Dr. Matus found no other indications for escalation of care. Dr. Matus placed Claimant at maximum medical improvement ("MMI") as of May 24, 2019, with no impairment rating. Dr. Matus recommended a few more massage and physical therapy sessions for maintenance medical treatment to relieve Claimant from the effects of her work injury. (Hrg. Ex. B, pg. 31).
10. On June 28, 2019, after being placed at MMI, Claimant returned to physical therapy for maintenance medical treatment as prescribed by Dr. Matus. The

physical therapist documented Claimant had normal range of motion in her bilateral shoulders, but Claimant had pain in her left triceps region. (Hrg. Ex. C, pg. 41). Claimant also reported to the physical therapist during this visit that she was performing yoga on her own without issues. Claimant's treatment plan was to transition her to a home exercise program with the remaining maintenance medical treatment sessions. (Hrg. Ex. C, pg. 42).

11. As a result, upon being placed at MMI, Claimant needed maintenance medical treatment to relieve her from the effects of her work injury.
12. Dr. Burris evaluated claimant on October 8, 2019, nearly five months after being placed at MMI for a Division IME. Claimant reported seven out of ten pain in her left upper arm, not her shoulder. Claimant reported a constant ache in her arm which worsened with movements. Claimant denied neck pain or low back pain. Claimant denied radiating pain in her upper and lower extremities. Claimant had no numbness or weakness in any extremity. Claimant was continuing to work her normal schedule and was not taking any medications. (Hrg. Ex. A, pg. 4). Claimant's left upper extremity examination showed normal range of motion. Dr. Burris also documented performing a thorough shoulder examination. Dr. Burris noted Claimant had some mild tenderness at the distal insertion of the deltoid in the upper arm. Even so, he also noted the following examination findings:
 - Negative impingement test.
 - Negative speed's test.
 - Negative resistive Jobe's test.
 - Negative drop arm sign.
 - Full strength with resisted abduction.(Hrg. Ex. A, pg. 5).
13. Dr. Burris also assessed Claimant's neurological complaints. He noted that when Claimant slipped and fell, she did not strike her head. He further noted there was no loss of consciousness associated with the event. He also reviewed the MRI findings and indicated that the MRI of her head on April 13, 2019 was negative for acute/traumatic findings.
14. Dr. Burris assessed Claimant with a lumbar contusion/strain and a left upper arm strain. Dr. Burris concluded Claimant had appropriately been placed at MMI on May 24, 2019 after completing a reasonable course of conservative care and transitioning to a self-directed home exercise program. Dr. Burris assigned no impairment rating, like Dr. Matus, the authorized treating physician.
15. Dr. Sander Orent performed a records review with a telephonic interview with Claimant on June 10, 2020, fifteen months after the injury. (Hrg. Ex. 2, pg. 17). Claimant reported continued low back, neck, and left arm complaints. Claimant also informed Dr. Orent that she suffered vision changes after the incident, although this was not documented in the medical records. Claimant informed Dr. Orent that she had been extremely active until the accident and since that time

she had been unable to do any of her activities, including yoga. (Hrg. Ex. 2, pg. 18). Dr. Orent concluded Claimant was discharged prematurely with multiple unresolved body parts. Dr. Orent based this opinion on Claimant's "substantial mechanism of injury." (Hrg. Ex. 2, pg. 19, 21). Dr. Orent "completely disagreed" with the Division IME's opinion that claimant reached MMI with no impairment rating. (Hrg. Ex. 2, pg. 21).

16. Here, Dr. Matus physically examined Claimant and treated Claimant on numerous occasions. Moreover, Dr. Burris performed a DIME and physically examined Claimant. Dr. Orent, however, did not physically examine Claimant. As a result, Dr. Orent was unable support Claimant's verbalized complaints pursuant to a physical examination. Plus, Dr. Orent was unable to provide credible and persuasive evidence to contradict the normal shoulder examination documented by Dr. Burris and Dr. Burris' other findings on which he concluded Claimant was properly placed at MMI. Thus, the ALJ does not find Dr. Orent's opinions and conclusions to be persuasive.
17. Claimant also testified at hearing. She testified consistent with her statements about her ongoing complaints and symptoms as documented by Dr. Orent in his telephonic IME.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Indus. Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Eng'g v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *Univ. v. Indus. Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other

things, the consistency, or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Indus. Commission*, 441, P.2d 21 (Colo. 1968).

I. Whether Claimant has overcome the Division IME as to maximum medical improvement (“MMI”).

D. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by “clear and convincing evidence.” §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

E. Claimant failed to submit sufficient evidence to overcome Dr. Burris's opinion that Claimant reached MMI on May 24, 2019, by clear and convincing evidence. Claimant has failed to meet her burden of proof. *Resources One, LLC v. Indus. Cl. App. Off.*, 148 P.3d 387 (Colo. App. 2006).

F. Claimant obtained an IME from Dr. Orent regarding MMI. This ALJ finds Dr. Orent's opinion is less credible than Dr. Burris, the Division IME, and Claimant's treating physicians as to MMI. Dr. Matus – who physically examined Claimant on several occasions - opined Claimant did not sustain serious injuries when she fell. This opinion is supported because Claimant did not seek treatment for eleven days after she fell. Rather, Claimant treated her injuries with salt baths and a heating pad. Plus, Claimant did not take any medications for pain during this time. When she did seek treatment, Claimant treated conservatively with significant improvement in her complaints over a couple of months. Claimant's treating physicians documented Claimant's continued improvement in her pain complaints and function. When Claimant was released and placed at MMI, she had returned to her regular activities, including yoga and her part-time work as a substitute teacher.

G. Dr. Burris' evaluation and opinion on MMI and impairment rating concurred with Claimant's treating provider, Dr. Matus. Dr. Burris noted Claimant

reported left arm pain, not left shoulder pain, which was also documented by the physical therapist. Dr. Burris also noted Claimant had returned to work and was not taking any medications for her complaints. Dr. Burris also completed a thorough shoulder evaluation by performing various tests – each of which were negative. Lastly, he also considered Claimant’s neurological complaints and reviewed the MRI findings. As noted by Dr. Burris, the MRI of Claimant’s head/brain was negative for acute/traumatic findings.

H. Dr. Orent’s opinions are merely a difference of opinion than that of the Division IME and Claimant’s primary treating physician, Dr. Matus. Plus, as found, Dr. Orent’s opinions and conclusions are not supported by an actual physical examination. Thus, Claimant has failed to present clear and convincing evidence that Dr. Burris’ opinions and conclusions were incorrect or in error.

II. Whether Claimant is entitled to a general award of maintenance medical benefits?

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Indus. Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent on a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, W. C. No. 4-543-730, (ICAO, July 14, 2006).

In this case, when Claimant was placed at MMI, her primary treating physician, Dr. Matus, specifically prescribed maintenance medical treatment in the form of four more visits of manual therapy or physical therapy to relieve Claimant from the effects of her injury. The ALJ credits Dr. Matus’ conclusion that maintenance medical treatment was reasonable and necessary to relieve Claimant from the effects of her work injury at the time she was placed at MMI. And, after Claimant was placed at MMI, she did undergo maintenance medical treatment in the form of physical therapy on June 28, 2020, to relieve her from the effects of her work injury. As a result, Claimant established by a preponderance of the evidence that she is entitled to a general award of maintenance medical treatment.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to overcome the opinion of the Division IME physician, Dr. Burris.
2. Claimant reached MMI on May 24, 2019.
3. Claimant is entitled to maintenance medical treatment.
4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 9, 2020.

Denver, CO 80203

ISSUES

Whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant engaged in an unsanitary or injurious practice, and pursuant to Section 8-43-404 (3), C.R.S., his temporary total disability (TTD) benefits should be suspended from May 26, 2020, up to the date of the (as yet unscheduled) recommended shoulder surgery.

Whether the respondents have demonstrated, by a preponderance of the evidence, that there was an overpayment of TTD benefits to the claimant.

The ALJ takes administrative notice that due to the COVID-19 pandemic, on March 25, 2020, Governor Jared Polis issued a statewide "Stay at Home" Order. That Order resulted in the suspension of elective medical procedures, including surgeries. On April 27, 2020, Mesa County was approved for a "variance" from the March 25, 2020 Order. This variance allowed elective surgeries to proceed.

FINDINGS OF FACT

1. The employer operates a coal mine. The claimant has worked for the employer since 2000. On January 17, 2020, the claimant suffered an injury to his right shoulder, while at work. The injury occurred when the claimant was hosing off mining equipment and slipped on ice. The slip resulted in the claimant falling on his right side, jarring his right shoulder. On January 29, 2020, the respondents filed a General Admission of Liability related to the claimant's January 17, 2020 work injury.

2. On January 27, 2020, a magnetic resonance image (MRI) was taken of the claimant's right shoulder. The MRI showed, *inter alia*, a complete tear of the supraspinatus tendon, and a complete tear of the infraspinatus insertion with tendon retraction.

3. Subsequently, the claimant was referred to Dr. Mark Luker for a surgical consultation. On February 25, 2020, the claimant was seen in Dr. Luker's practice by Daryl Haan, PA-C. On that date, Mr. Haan addressed the possible repair of the claimant's rotator cuff. Mr. Haan noted that it would be "imperative" that the claimant stop smoking for four weeks before the surgery and for three months after the surgery. In the medical record of that date, Mr. Haan noted that the claimant would begin physical therapy and pursue a smoking cessation program.

4. On March 3, 2020, the claimant was seen by Dr. Luker. At that time, Dr. Luker recommended a rotator cuff repair with debridement. In addition, Dr. Luker reiterated that it would be necessary for the claimant to stop smoking. Dr. Luker observed that the claimant "seems reluctant to quit smoking and says that he does not think he will

be able to do it". The claimant also informed Dr. Luker that he was considering finding a surgeon that would perform the operation, but allow the claimant to continue smoking. At the Tuesday, March 3, 2020 appointment with Dr. Luker, the claimant indicated that he was going to ask his primary care physician for assistance to quit smoking that Friday.

5. On May 8, 2020, the claimant attended an independent medical examination (IME) with Dr. Mark Failing. In connection with the IME, Dr. Failing reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Failing opined that if the claimant does not quit smoking, it is unlikely that the recommended surgery would be successful. In the IME report, Dr. Failing noted that the claimant refuses to quit smoking. Dr. Failing also noted that the claimant wanted to find a surgeon that would perform the surgery without requiring him to stop smoking.

6. On May 26, 2020, the respondents filed a Petition to Modify, Terminate, or Suspend Compensation. On June 15, 2020, the claimant timely filed his Objection to Petition to Modify, Terminate, or Suspend Compensation.

7. On June 30, 2020, the claimant was seen by Dr. Kelly Jensen in Price, Utah. Dr. Jensen diagnosed right rotator cuff arthropathy. Dr. Jensen opined that repair of the claimant's rotator cuff "would be a partial repair". The medical record of that date indicates that with regard to smoking the claimant was "[t]hinking about quitting."

8. The claimant testified that he has been a smoker for 35 years. The claimant also testified that when he learned that Dr. Luker would not perform the surgery until the claimant stopped smoking, the claimant disagreed. The claimant testified that he had prior surgeries while smoking and recovered from those surgeries. The claimant further testified that he did not think it was necessary for him to quit smoking before the surgery. However, he also testified that now he understands that he has to quit smoking to be able to undergo the surgery. The claimant began taking the prescription smoking cessation drug Chantix one week before the hearing.

9. The claimant's spouse also testified at hearing. Her testimony was consistent with the claimant's testimony. In addition, the claimant's spouse corroborated that the claimant began taking Chantix approximately one week before the hearing.

10. Dr. Failing's testimony by deposition was consistent with his written report. Dr. Failing testified that the claimant has limited range of motion and a loss of strength in his right shoulder. Dr. Failing further testified that the claimant's primary diagnosis is "a very large rotator cuff tear". Dr. Failing noted his opinion that the recommended surgery is reasonable treatment of the claimant's right shoulder condition. Dr. Failing also testified that he agrees with Dr. Luker's instruction to the claimant to quit smoking. Dr. Failing described in his testimony the claimant's repeated statements at the IME regarding his unwillingness to quit smoking and the claimant's belief that he does not need to quit smoking.

11. The ALJ credits the medical records, Dr. Failing's report, and statements made by the claimant to various medical providers. The ALJ finds that the respondents

have demonstrated that it is more likely than not that the claimant has repeatedly refused to quit smoking, despite the requirement that he do so prior to surgery. The ALJ finds that the claimant did not attempt to quit smoking, but fail. Rather, the claimant simply refused to quit smoking. The ALJ places weight on the statements he made to various medical providers that he was not willing to quit smoking. The ALJ also notes that it was only one week prior to the hearing that the claimant began taking steps to stop smoking, by taking Chantix.

12. The ALJ is further persuaded that the claimant's refusal to quit smoking rises to the level of an injurious practice. Specifically, the claimant's ongoing refusal to quit smoking delayed the recommended surgery, ultimately delaying his recovery. The ALJ recognizes that nicotine is addictive and it is not "easy" to quit smoking. However, it is clear from the evidence in this case that the claimant simply refused to stop smoking and sought out a surgeon willing to perform surgery while allowing the claimant to continue to smoke.

13. The ALJ notes the COVID-19 pandemic and related Stay at Home Order that impacted timely scheduling of the recommended surgery. However, that delay does not negate the fact that the claimant refused to quit smoking. Therefore, the ALJ finds that Governor's Stay at Home Order did not have any impact on the claimant's refusal to quit smoking.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-43-404(4), C.R.S., provides, in pertinent part:

If any employee persists in any unsanitary or injurious practice which tends to imperil or retard recovery . . . , the director shall have the discretion to reduce or suspend the compensation of any such injured employee.

5. In determining whether a claimant's actions constitute an "unsanitary or injurious practice", the ALJ may consider whether the claimant's actions were reasonable. *MGM Supply Co. v ICAO*, 62 P.3d 1001 (Colo. App. 2002).

6. The process for requesting the suspension of disability benefits is addressed in WCRP 6. More specifically, WCRP 6-4 allows an insurer to file a Petition to Suspend, Modify or Terminate Compensation. If the claimant files a written objection to the petition, as was done in the current case, the matter is set for an expedited hearing before an ALJ.

7. WCRP 6-4(D) provides:

When a claimant files a timely objection to a petition, the insurer shall continue temporary disability benefits at the previously admitted rate until an application for hearing is filed with the Office of Administrative Courts, and the matter is resolved by order. The Director finds that good cause exists to expedite a hearing to be held within sixty (60) days from the date of the setting, **because overpayment of benefits may result if the suspension, modification or termination is granted.** (*emphasis added*).

8. As found, respondents have demonstrated, by a preponderance of the evidence, that the claimant's refusal to quit smoking as recommended by his surgeon, constitutes an injurious practice that tends to "imperil or retard" the claimant's recovery. Therefore, the claimant's temporary total disability (TTD) benefits shall be suspended beginning May 26, 2020 and until the date the recommended shoulder surgery is performed.

9. Pursuant to WCRP 6-4(D), the respondents have demonstrated, by a preponderance of the evidence, that an overpayment of TTD benefits has occurred from May 26, 2020 to the date of the hearing; (August 12, 2020).

ORDER

It is therefore ordered:

1. TTD benefits are suspended beginning May 26, 2020 and until the date the recommended shoulder surgery is performed.

2. TTD payments made to the claimant from May 26, 2020 to the date of hearing (August 12, 2020) are deemed an overpayment.

Dated this 11th day of September 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury on or about January 21, 2020?
- II. Has Claimant shown, by a preponderance of the evidence, that Employer is responsible for Claimant's medical treatment to date?
- III. Has Employer shown, by a preponderance of the evidence, that Claimant was responsible for his own termination from work for this Employer?
- IV. Is Employer obligated to post a bond for Claimant's Workers Compensation benefits, pursuant to C.R.S.8'43-408(2)?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage is \$598.77. The parties also agreed that the Employer in fact is [Employer Name Redacted]

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury

1. Claimant worked as a bud trimmer for Employer. He had been doing this job for approximately four months prior to January 21, 2020. On that date, Claimant testified that he was lifting a bud tray when a marijuana bud got caught in between the top and bottom tray and caused a splinter in his right small finger. (Exhibit C, p. 9). Claimant did not remove the splinter, and his condition deteriorated.

Medical Treatment

2. Claimant received emergent care at St. Mary Corwin Medical Center Emergency Department on January 31, 2020. Notes indicate that Claimant received this splinter "2 days ago." Claimant was placed on an antibiotic to stem the infection that had developed by this time. Claimant's diagnosis was cutaneous abscess of the right hand and cutaneous abscess of the right finger. Records indicate Claimant's pain secondary to the infection had worsened, prompting him to go to the emergency room. Claimant's infection is identified as swollen, warm and tender, with decreased range of motion in the right small finger on all planes. (Ex. E, pp. 44-59).
3. Orthopedist Kenneth Danylchuk became involved with Claimant's care through

the St. Mary Corwin Emergency Department. He first saw Claimant on 2/3/2020. The notes from that visit indicate: "*The finger does show most likely improved function*, he did state there is some pain in the elbow and forearm...today we will clean and redress it. I will see him tomorrow and at that time we will consider a digital block with more aggressive cleaning" (Ex. F, p. 71)(emphasis added).

4. Claimant returned to Dr. Danylchuk on 2/4/2020. A block around the finger was made, with necrotic skin removed. The wound was irrigated, and a gauze with antibiotic solution was applied. Claimant was to return in 48 hours. (Ex. F, p. 72).
5. Claimant returned on 2/6/2020, at which time it was noted: "Gavan is status post 2 days Right I&D of the 5th finger, *states he is doing ok*" (Ex. R. p. 73)(emphasis added). Antibiotics were continued. *Id.*
6. The next visit was 2/18/2020. Dr. Danylchuk noted: " Gavan is status 2 weeks right pinky I&D. *He states it is doing good....His wound looks excellent. Skin appears viable.*" (Ex. F, p. 74)(emphasis added). Follow-up in two weeks. *Id.*
7. Claimant returned on 3/5/2020. Dr. Danylchuk noted: "He states it is feeling better and looking better. The loss of skin over the palmar surface of the distal phalynx of the right fifth finger *is (sic) gone on to heal*. Range of motion is diminished particularly at the DIP joint." (Ex. F, p. 75)(emphasis added). Claimant was referred to physical therapy, and to return in one month. *Id.*
8. The final entry from Dr. Danylchuk is dated 4/2/2020. Claimant again stated he was 'doing well'. "Gavin returns, his finger has responded an extremely positive way. His function has returned, the infection is gone. Range of motion is near normal. *At this time is ready to return to work.* (Ex. F, p. 76)(emphasis added).

Claimant's Testimony

9. At hearing, Claimant testified that when this splinter initially occurred, he told his supervisor, Jeremy A[Redacted], within minutes. Mr. A[Redacted]'s response was something to the effect that 'it was Claimant's fault'. During this exchange, Claimant testified that Mr. A[Redacted] had alcohol on his breath. Claimant did not file a claim that day, since it 'did not seem like a big deal' at the time.
10. In the following days, Claimant made some attempts to remove the splinter on his own, but was unable to do so. He noted that the pain in his finger was increasing, along with a deteriorating appearance. He finally told someone with Employer that he was going in to the ER for treatment.
11. Claimant further testified that once he went to the ER for treatment, he was told to avoid moisture by the treating physician.
12. Claimant also acknowledged that once he reported this injury to Employer, that

he was asked to fill out paperwork to report his injury. He stated he knew how to report a work injury, but was not told by this Employer how to do so.

13. An *Employee's Report of Injury* form was filed. (Ex. 3, p. 37). Claimant insisted at hearing that he did not fill this form out, as the handwriting was not his. He later denied filling out an attachment thereto, after initially admitting he had filled it out. (Ex. 3, p. 39). He indicated that of the forms he did fill out, he did so in his left hand. Once he filled out the forms, he picked up his final paycheck.
14. Claimant acknowledged that he was able to complete his work tasks up until he sought treatment for this injury (on 1/31/2020), although it was more difficult to do so, due to the pain; however, he never told anyone at work of this pain.
15. Claimant testified that once he mentioned this issue to Jeremy [A[Redacted]], but was told "there was nothing [in the form of modified duty] to do."
16. Claimant further testified that for three to four months, post-surgery, he could not hold *anything* in his [right] hand.

Edward V[Redacted] Testimony

17. Edwards V[Redacted] testified at hearing. He is part-owner of [Employer Name Redacted], which manages several marijuana farms and pays its employees. He first knew of this issue when Jeremy informed him that Claimant had gone to the ER for treatment. He told Jeremy to have Claimant come in and fill out an incident report. The last thing he was aware of was that Claimant had come in to pick up his final paycheck. He knew that in the first week of February [2020], Claimant had missed some work. He never spoke in person with Claimant. He did leave at least one voicemail for Claimant to call him back. Claimant never did so.
18. Mr. V[Redacted] indicated that Employer would have been willing to offer modified duty to Claimant, and accommodate any work restrictions, including keeping Claimant away from excess moisture. He could also find things for Claimant to do without using his right hand; office work, cleaning, outdoor work, etc. At this point, Claimant is considered by Employer to have abandoned his position with Employer.
19. Mr. V[Redacted] acknowledged that his insurance broker had "dropped the ball" as of the previous December, and had allowed his Workers Compensation insurance to lapse. He only became aware of this lapse once this injury was reported. This was the only Workers Compensation claim that occurred during this lapsed period. He then reinstated this insurance at once, but was unable to make it retroactive to cover this claim. Employer's designated provider was the Button Family Practice, and he would have sent Claimant there, had this been reported in due course, despite the lapse in insurance. He knew full well that he

would have to accept any Workers Compensation claims, insurance or not, and knew it would be in his own best interest to offer modified duty when appropriate.

Jeremy A[Redacted] Testimony

20. Jeremy A[Redacted], Claimant's immediate supervisor, testified at hearing. He recalls Claimant texting him on 2/1/2020 that he could not make it in to work. At this time, Claimant did not tell him that he had suffered a work injury initially. He found out on Monday (2/3/2020) that Claimant was alleging a work injury. He was still not told that his injury had occurred on 1/21/2020. He called Claimant during that week to check up on him, regardless of whether this was a work or off-premise injury, but got no response. He did eventually receive the Incident Report from Claimant on 2/7/2020. He then never heard from Claimant after Claimant picking up his final paycheck during this time.
21. Mr. A[Redacted] further indicated Claimant asked him for contact information from "the owner", which he provided. He further denied drinking on the job when Claimant accused him of doing so. Once this became clear that Claimant was reporting this as a work injury, he then began to ask other co-workers about what they knew about it, and collected written statements. Upon examination, such statements do not indicate on their face that Claimant received this splinter from any location other than work.
22. During the time Claimant was working with the splinter still embedded, Mr. A[Redacted] noted that Claimant's production remained constant. Claimant was able to perform his work tasks at full productivity up until the day he left work. He also indicated that during his conversation with Claimant [on 2/7/2020] he told Claimant that Employer wanted to work with him on getting the problem solved.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.
2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every

item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

4. In this instance, while Claimant has shown sufficient evidence to prove compensability, as noted below, his credibility has been shown to be highly suspect. The ALJ finds, among other instances, that he has unconvincingly accused his supervisor of drinking on the job, unconvincingly denied signing at least two documents bearing his handwriting, and unconvincingly stated that he has been unable to use his right hand for any purpose for 3 to 4 months, despite medical records to the contrary.

5. In contrast, the ALJ finds that Edward V[Redacted] and Jeremy A[Redacted] testified credibly and persuasively. As such, there has been a direct conflict in the testimony – in this case, over the circumstances of Claimant's departure from work – which will be resolved in Respondent's favor.

Compensability, Generally

6. To qualify for recovery under the Workers' Compensation Act of Colorado, a claimant must be performing services arising out of and in the course of her employment at the time of her injury. See § 8-41-301(1)(b) C.R.S. 2007. For an injury to occur "in the course of" employment, the claimant must demonstrate that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. See *Gregory v. Special Counsel, and Travelers Indemnity Co.*, W.C. 4-713-707 (2008); *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arise out of" requirement is narrower than the "in the course of" requirement. See *id.* For an injury to arise out of employment, the claimant must show a causal connection between the employment and injury such that the injury

has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. See *id.* at 64-1-42; *Industrial Comm'n v. Enyeart*, 81 Colo. 521, 524-25, 256 P. 314, 315 (1927) (denying recovery to claimant who was injured when his steering gave out while he was driving across a bridge on his employer's property on his way home from work). The claimant must prove these statutory requirements by a preponderance of the evidence. See *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo.1985).

Compensability, as Applied

7. In this instance, once the apparent discrepancies regarding Claimant's statements about how he originally got the splinter were resolved, the ALJ finds, by a preponderance of the evidence, that Claimant received this splinter at work, while trimming buds for Employer. While the exact date and time of occurrence will remain unclear, suffice it to say Claimant received it on or about January 21, 2020. While the possibility remains that Claimant got the splinter elsewhere, no viable alternative theory has been offered by Respondents. Claimant has met his burden here.

Medical Benefits, Generally

8. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 293 (1951).

Medical Benefits, as Applied

9. While Claimant's decision to defer treatment for this splinter no doubt aggravated his condition unnecessarily, it cannot be concluded that he acted *willfully*, in some effort to bring about this result. It began benignly enough, and despite unsuccessful early attempts at removal, Claimant just soldiered on for a few days more. Had he mentioned it earlier, the ALJ finds that Respondents would have made reasonable efforts to accommodate treatment through Button Family Practice. Nonetheless, the situation progressively worsened. While an argument might be made that Claimant failed to mitigate his damages, the ALJ cannot identify a remedy to apply. The ALJ does not conclude that the ensuing infection was an intervening medical event; instead, it was a natural extension of the original, untreated injury. Further, the ALJ

does not conclude that Claimant's *negligence* in seeking earlier intervention constituted a willful *refusal* to engage in offered treatment.

10. The ALJ finds that all medical treatment rendered from the point of entering the ER through his release by Dr. Danylchuk was reasonable, necessary, and related to his compensable work injury. Claimant's treatment (by this time, on a weekend) at the ER was of an emergent nature, and the ALJ therefore finds that the ER, and their referral to Dr. Danylchuk, are Claimant's Authorized Treating Physicians. No further care is anticipated from any provider, however.

Claimant Responsible for Own Termination, Generally

11. If an injured worker is responsible for his termination from employment, the injured worker is not entitled to receive benefits compensating him for the wage loss after the date of termination. § 8-42-103(1)(g), C.R.S.; § 8-42-105(4), C.R.S. For an employee to be responsible for termination, the employee must perform a volitional act which leads to the termination. *Gutierrez v. Exempla Healthcare*, W.C. No. 4-495-227 (ICAO June 24, 2002). An employee commits a volitional act when he exercises some degree of control over the circumstances leading to the termination. *Colorado Springs Disposal v. Indus. Claim Appeals Office*, 58 P.3d 1061, 1062 (Colo. App. 2002). An employee is responsible for termination if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colo. Dept. of Public Safety*, W.C. No. 4-432-301 (ICAO, Sept. 27, 2001). Negligent or inadvertent acts qualify as volitional acts for the purposes of determining whether a claimant is responsible for termination. *Gleason v. Southland Corp.*, W.C. No. 4-149-631 (ICAO June 13, 1994).

12. Failing to return to or call in to work after an injury for a position that is within a Claimant's work restrictions are volitional acts which support a finding that a Claimant is responsible for termination. *Villa v. Wal-Mart Stores, Inc.*, W. C. No. 4-631-217 (ICAO Sept. 30, 2005); *Hoefner v. Russell Stover Candies*, W.C. No. 4-541-518 (ICAO Dec. 13, 2002).

13. Respondents have the burden to prove by a preponderance of the evidence that claimant was responsible for termination. *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008).

Claimant Responsible for his Own Termination, as Applied.

14. As noted, the ALJ finds Edward V[Redacted] and Jeremy A[Redacted] to be far more credible and persuasive than Claimant regarding their conversations, or lack thereof, with Claimant after he sought treatment. The ALJ finds that Claimant abandoned his job when failed to report for work when scheduled to return on February 3, 2020. Not only that, he never attempted to contact Employer to see how he could continue work, and declined to return their phone calls. At no point did Jeremy A[Redacted] tell Claimant that there was no modified duty available to explore. The ALJ finds and concludes that modified employment would have been offered, but Claimant

willfully chose not to pursue that as an option. There were no formal work restrictions in effect, because Claimant willfully thwarted Employer's ability to even obtain the needed information from Dr. Danylchuk. In addition, Claimant effectively thwarted Dr. Danylchuk from formally defining any work restrictions for Employer. He cannot now shift the blame to Employer for failing to formally offer modified employment.

15. In effect, Claimant unilaterally placed himself on Temporary Total Disability, but without going through the process. The ALJ finds no justification for this. Claimant was able to work at full productivity up through January 31, 2020, albeit with some level of pain. Once he was treated at the ER, his condition actually began to improve, but with a bandaged hand. Claimant could fill out WC forms, regardless of which hand he claims to have used. There was plenty he could have done, as testified by Mr. V[Redacted], even if Dr. Danylchuk had formally placed Claimant onto one-handed duty in a dry environment. At no point in this process could Claimant legitimately claim that he was temporarily, totally disabled. An injured worker's subjective beliefs about his ability to perform a modified job are legally irrelevant, and do not provide a basis to refuse to begin modified employment. *Burns v. Robinson Dairy*, 911 P.2d 661, 663 (Colo. App. 1995) (“[A]ny evidence concerning claimant’s self-evaluation of his ability to perform his job was irrelevant.”). The ALJ finds that Respondents have shown that Claimant was responsible for his own termination from employment.

Bond for Uninsured Employer

16. The ALJ accepts the testimony from Mr. V[Redacted] that Employer's broker “dropped the ball” and failed to timely renew Employer's Workers Compensation policy. It came as a genuine surprise and disappointment, and was rectified as soon as practicable. The ALJ finds that based upon the information presented, Employer had a good faith, albeit unsuccessful, belief that this claim was not compensable. Otherwise, they stand prepared to pay this claim as self-insured. Fortunately for all, the injury was not serious. Nonetheless, Employer was uninsured on the day this happened.

17. CRS 8-43-408(2) provides:

In all cases where compensation is awarded under the terms of this section, the director or an administrative law judge of the division shall compute and require the employer to pay to a trustee designated by the director or administrative law judge an amount equal to the present value of all unpaid compensation or benefits computed at the rate of four percent per annum; or, in lieu thereof, such employer, within ten days after the date of such order, shall file a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado. The bond shall be in such form and amount as prescribed and fixed by the director and shall guarantee the payment of the compensation or benefits as awarded. The filing of

any appeal, including a petition for review, shall not relieve the employer of the obligation under this subsection (2) to pay the designated sum to a trustee or to file a bond with the director or administrative law judge.

18. There is no dispute in the evidence that the Respondent is uninsured, and as a result, the Respondent has to pay a bond, which should be sufficient to cover anticipated benefits in the case, as well as a fifty percent increase for temporary disability benefits. *Miller v. United Insurance Group*, W.C. Nos. 4-940-803-01 & 4-940-803-02 (December 2, 2016); § 8-43-408(2), C.R.S. (2020).

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable injury on or about 1/21/2020.
2. Respondents are liable for all reasonable, necessary, and related medical treatment rendered to date.
3. Claimant's claim for Temporary Total Disability is denied and dismissed.
4. Respondents shall post a bond for Claimant's medical treatment, in the matter prescribed by C.R.S. 8-43-408(2).
5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: September 11, 2020

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that he is entitled to temporary total disability ("TTD") benefits beginning August 16, 2019 and ongoing?
- II. If Claimant has proven an entitlement to TTD benefits, have Respondents, by a preponderance of the evidence, shown that Claimant was responsible for his wage loss by voluntarily resigning, or, alternatively, by being terminated for cause?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed by Employer as a sign installer. On May 3, 2018, Claimant sustained admitted injuries to his back while installing a sign.

2. Claimant was placed on modified duty restrictions by his physician after his injury. These restrictions included 10 pounds lifting and repetitive lifting, no crawling, kneeling, or squatting, and limited climbing. (Ex. E, p. 43). Employer accommodated Claimant's restrictions by taking him from a sign installer position in the field and moving him to a light duty warehouse position, working 4 hours per day instead of 8.

3. At hearing, Claimant testified that he continued to work for the Employer in the warehouse after his injury, and was able to work modified duty within these restrictions until the end of his employment on August 15, 2019. Claimant and Mr. K[Redacted] both testified that he was able to paint, perform light welding, do light assembly, and clean and organize the warehouse.

4. The medical records also show that Claimant was working within his restrictions. The ATP, Dr. Rudderow noted multiple times in her records that Claimant was working per restrictions. (see Ex. E, pp. 30; 35, 44; 45). Additionally, the FCE report noted that Claimant was working part time on restrictions. (Ex. I, p. 83). No medical records show that Claimant was complaining to his physicians that his work duties were too strenuous or that his restrictions needed to be modified.

5. Claimant was placed at MMI by Dr. Rudderow on March 5, 2019, and those same work restrictions became permanent. (Ex. E, p. 43). After Claimant was placed at MMI with permanent restrictions, Employer continued to accommodate Claimant's restrictions and he was able to work modified duty within those restrictions. Dr. Rudderow also assigned a 21% whole person rating for Claimant's lumbar spine

based on the results of a formal FCE. *Id.*

6. Claimant sought a Division IME with Dr. Dwight Caughfield, which took place on January 7, 2020. Dr. Caughfield opined that Claimant was not at MMI, but he agreed with the restrictions put in place by Dr. Rudderow, the ATP. (Ex. J, p. 96). During the *History of Injury*, Claimant reported to Dr. Caughfield:

He [Claimant] is not currently working *since his employer doesn't have work for him within his restrictions* that were provided after he was placed at maximum medical improvement. *Id* at 93 (emphasis added).

7. The sole reason Dr. Caughfield found Claimant not to be at MMI was his belief that Claimant would benefit from psychological treatment for delayed recovery. Otherwise, Dr. Caughfield assigned a provisional 18% rating for the lumbar spine. *Id.* There were no additional physical impediments noted. Additionally, Dr. Caughfield noted that Claimant's complaints - and significant pain behaviors - did not correlate to any physical findings. He noted, for example:

There is *no palpable spasm* in the paraspinals either in static posture or with motion *despite significant pain reports*. *He has back pain to even light skin stroking* over the paraspinals bilaterally. *Id* at 94 (emphasis added).

8. At hearing, Claimant testified that his treating physician placed him on sitting, standing, and walking restrictions. This is not supported by the evidence. The medical records from the ATP, Dr. Rudderow, and the DIME, Dr. Caughfield, show that Claimant's work restrictions in evidence are "no lifting or repetitive lifting over 10 pounds, no crawling, no kneeling, no squatting, and limited climbing." (Ex. E, p. 43; Ex. J, p. 96). At the time of Claimant's separation from employment, he was not restricted by any physician for walking, standing, or sitting in any manner.

9. Respondents filed an application for hearing on February 12, 2020 to overcome the DIME's MMI determination. (Resp. Ex. A). During the interim time period, Claimant's employment with the Employer came to an end on August 15, 2019.

10. The parties subsequently agreed that Claimant was not at MMI. A stipulation and motion for approval was submitted and granted. (Ex. C). Respondents further agreed to pay temporary partial disability ("TPD") to Claimant for his ongoing work from the original date of MMI, March 5, 2019, through August 15, 2019. *Id.* at 7. Respondents filed a General Admission of Liability on May 12, 2020 consistent with these terms. (Resp. Ex. D).

11. Respondents' Exhibit L (surveillance video snippets of Claimant's workstation, taken on various days in July, 2019, cumulatively over one hour) was received at hearing. It includes footage of Claimant working over multiple days in the weeks leading up to his last day at work. Claimant is seen welding, painting, carrying

light equipment, using power tools, and organizing the shop. Claimant appears to be able to perform the job duties requested of him. Claimant also works unsupervised during much of the footage. Claimant is not seen exhibiting any pain behaviors, grimacing, or obvious difficulty with the tasks that were assigned to him.

12. Claimant testified that Mr. K[Redacted] would become upset if Claimant sat down at work. Mr. K[Redacted] testified that Claimant often worked unsupervised in the warehouse, because the other employees were installing signs in the field. Claimant testified he continued working for the Employer after MMI at reduced hours, and that he often had to violate his restrictions because his boss would get upset if he saw Claimant sitting down. Mr. K[Redacted] testified that Claimant would have been allowed to sit down and take a break if he needed, and that Claimant was never punished for sitting down or taking a break. Mr. K[Redacted] acknowledged that Claimant must work within his restrictions, and he testified that he had a conversation with Claimant wherein he told Claimant that he had to stay within the restrictions of the doctor's notes when working.

13. Mr. K[Redacted] testified that if the Claimant had not quit his employment on August 15, 2019, that Employer would have continued accommodating Claimant's modified duty restrictions in the warehouse just as Employer had for the fifteen months after his injury.

14. Claimant testified that he did not appear for work on August 14, 2019 because he had a doctor's appointment. Claimant admitted that his doctor's appointment was not related to his workers' compensation case, but was for a different [as yet undisclosed] condition. Claimant also agreed that he had not treated for his Workers' Compensation case since he was placed at MMI on March 5, 2019 by Dr. Rudderow. Claimant has never provided any documentation of this alleged doctors' appointment. To date, no medical records have been produced by Claimant showing excused absences for attendance at any doctors' appointments.

15. Claimant's attendance issues were already an issue with Mr. K[Redacted]. Claimant agreed at hearing that he was missing work or leaving early some days because he was feeling sick. Mr. K[Redacted] testified that Claimant had serious attendance problems. Mr. K[Redacted] testified that out of 17 payrolls, Claimant only worked a full 40-hour payroll twice. He also testified that Claimant was only working 20 hours per week, so the 40-hour payroll was for two weeks of work. Effectively, out of 34 weeks of work, Claimant only worked his full hours for 4 of the 34 weeks. Mr. K[Redacted] testified that Claimant was disappearing during his work hours, and that Claimant would leave early or be gone when the crew would come back from outside sign installs in the field.

16. Mr. K[Redacted] testified that he was Claimant's direct supervisor, and that employees are trained and required to request time off from their supervisor. This attendance policy is reiterated in the employee handbook (see Exhibit K, p. 102). However, when asked if they are given to every employee, he answered, "No." Mr.

K[Redacted] testified that he did not know of a time that Claimant ever requested time off from him to attend doctors' appointments after March of 2019. Mr. K[Redacted] testified that Claimant did not provide him with any appointment slips after he was placed at MMI on March 5, 2019.

17. Mr. K[Redacted] testified that although Claimant was a native Spanish speaker, he felt that he was able to communicate with Claimant without the need for a translator. Claimant had worked off and on for him for a number of years, and the ability to communicate effectively was important, since power tools are involved, among other things.

18. At hearing, Claimant testified that he was not allowed in to begin work on August 15, 2019. Claimant testified on direct examination that Mr. K[Redacted] told him he was not firing him, that Claimant refused to provide doctors' notes, and that Claimant turned around and left work on August 15, 2019. Mr. K[Redacted] testified that it was his intent for Claimant to continue working that day if he provided a doctor's note.

19. Mr. K[Redacted] testified that on August 15, 2019 he had a conversation with Claimant about his attendance issues. Mr. K[Redacted] asked Claimant why he left early on August 13, 2019, and why he did not show up for work on August 14, 2019. Claimant got very defensive and responded that he had doctors' appointments. After Mr. K[Redacted] asked Claimant for the doctors' notes, Claimant became very defensive and angry, and told Mr. K[Redacted] that he quit. Claimant then began walking away, but then turned around and told Mr. K[Redacted] that "that means you just fired me."

20. Mr. K[Redacted] testified that he did not terminate Claimant, that he never told Claimant he was fired, and that instead, Claimant said that he quit.

21. Claimant testified that he left the premises on August 15, 2019 under the assumption that he would return to work the next day like he always did. Claimant sent a text message to Mr. K[Redacted] asking if he was needed at work that day, and Mr. K[Redacted] replied, "No." When asked when he could return, Claimant was told by Mr. K[Redacted] that Claimant had quit.

22. On cross-examination, Mr. K[Redacted] testified consistently with a prior statement that he told to the adjuster, Zoraida Juarez, on August 28, 2019. Again, this testimony was that Claimant told Mr. K[Redacted] that he quit, and then turned around and said "you fired me."

23. Claimant's testimony at hearing was that he was terminated for failing to show up to work on August 14, 2019. However, Claimant has now also filed a civil rights complaint against Employer alleging that he was terminated, in part, because he is Hispanic. (Ex. O, p. 129).

24. Claimant testified that he was terminated because he did not show up for work on August 14, 2020. Claimant admitted that he missed work for a non-Workers' Compensation related medical appointment, and that he had not treated for Workers' Compensation injuries from the time he was placed at MMI with Dr. Rudderow on March 5, 2019 until his Division IME in January, 2020.

25. Mr. K[Redacted] testified that Claimant was trained to request time off from their supervisor if they need to take time off, and that he was Claimant's supervisor. Mr. K[Redacted] testified that Claimant never requested time off for any doctor's appointment after March of 2019.

26. Claimant testified that he has not applied for any other jobs. Claimant presented no evidence supporting his contention that his work-injury is impeding his ability to obtain new employment. Claimant does not know whether he could obtain other employment, because he has not applied. Claimant has not demonstrated that his work restrictions are the cause of his wage loss because he has not attempted to find work.

27. Claimant has not shown that he suffered any worsening of his condition. His restrictions prior to and after the separation from employment were the same. The only additional treatment that has been recommended on this claim is psychological treatment for delayed recovery. (Ex. J, p. 95). Claimant's physical condition now is the same now as it was at the time of the separation from his employment.

28. Claimant also exhibited inconsistent effort on functional capacity evaluations, and failed validity testing. (see Ex. I, pp. 64, 82). The DIME, Dr. Caughfield, also invalidated claimant's lumbar flexion because it was non-physiological. (Ex. J, p. 96). Claimant has a medical history of demonstrating self-limited effort during his medical evaluations, and being insincere in his presentation.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

a. The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to Employers, without the necessity of litigation.

b. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all

of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the Employer, Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. *Id.*

c. In assessing credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness of the testimony; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936). The ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." See *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

d. In this instance, there is a conflict in the testimony which the ALJ must resolve. In summary, the ALJ finds Mr. K[Redacted] to be more credible, and therefore persuasive, than Claimant. Such conflicts are now resolved in Mr. K[Redacted]'s favor, as Claimant bears the appearance of someone looking for a free lunch wherever he can find it. He told the DIME physician in January, 2020 that Employer was unable/unwilling to accommodate his restrictions. One month prior, he averred before a State Agency that, among other things, he was not allowed to speak Spanish at work. His medical providers, including the DIME physician, noted what is tantamount to symptom magnification. He claims to be unable to perform even the modified duty he was placed on, when the video evidence suggests otherwise. His attendance record at work leading up to his termination is suggestive of taking advantage of lax supervision.

Temporary Total Disability, Generally

e. To receive temporary disability benefits, the claimant must prove the injury caused a disability. C.R.S. § 8-42-103(1); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the claimant's physical inability to perform regular employment. See also *McKinley v. Bronco Billy's*, 903 P.2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d). Claimant is not required to prove that the industrial injury is the "sole" cause of his wage loss to recover temporary disability benefits. *Jorge Saenz Rico v. Yellow Transportation, Inc.* W.C. No. 4-547-185 (ICAO December 1, 2003), citing *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209 (Colo. App. 1996).

Termination of Temporary Disability Payments, Generally

f. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held that the term

“responsible” introduced into the Workers’ Compensation Act the concept of “fault” applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of “fault” as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (ICAO, April 18, 2005). In that context, “fault” requires that Claimant have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. See *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995). An employee is thus “responsible” if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep’t of Public Safety*, W.C. No. 4-432-301 (ICAO, Sept. 27, 2001).

g. The termination statutes provide an affirmative defense to a claim for TTD and the respondents bear the burden of proof to establish their applicability. *Witherspoon v. Metropolitan Club* W. C. No. 4-509-612 (December 16, 2004). *White-Skunk v. QK, Inc.*, W.C. No. 4-500-149 (October 3, 2002). Generally, the question of whether the Claimant acted volitionally, and therefore is “responsible” for a termination from employment, is a question of fact to be decided by the ALJ, based on consideration of the totality of the circumstances. *Gonzales v. Industrial Commission; Jeppsen v. Huerfano Medical Center, supra. Windom v. Lawrence Construction Co.*, W.C. No. 4-487-966 (November 1, 2002).

h. To receive temporary disability benefits, a Claimant must establish a causal connection between the industrial injury and the loss of wages. § 8-42-103(1)(g), C.R.S. In *Gonzalez v. Nat’l King Coal, Inc.*, the court evaluated whether a Claimant has looked for work following his separation as a factor in establishing whether the wage loss was caused by the work injury. W.C. No. 3-114-636, 1995 WL 615299, at *3 (Sept. 26, 1995). Claimant must prove that his work restrictions impaired his ability to earn wages to some degree. Where there is no evidence that Claimant’s post-separation wage loss is attributable to the work-injury, then Claimant has failed to establish the causal connection. *Id.*

Termination of Temporary Disability Payments, as Applied

i. At the outset, the ALJ finds that Employer took all reasonable steps to accommodate Claimant’s work restrictions. Contrary to Claimant’s assertions, he was not required to sit, nor, however, did Employer forbid it. Claimant was mostly unsupervised while the other crew members were out in the field. Claimant’s own subjective belief about his ability to meet his work restrictions is not relevant. As shown in the video, Claimant was fully able to perform the modified duty prescribed. There was not a hint of struggle, even with tasks which appear to exceed his work restrictions, but for which no credible evidence exists that Claimant was somehow forced to perform. The ALJ also finds that Claimant was fully capable, within his restrictions, of performing similar work for a different employer, but has declined to seek work elsewhere. *Claimant is not temporarily and totally disabled, and the ALJ so finds.*

j. As noted by Respondents, it is not necessary for the ALJ to dissect whether Claimant quit or got fired on August 15, 2019. It is not a requirement under any case law that the ALJ can identify that a formal passage from a work manual need be cited. Even in the most informal of circumstances, Employers have the right to expect their employees to show up for work, on time, perform their assigned tasks, and not argue with their supervisor about it. In this instance, Mr. K[Redacted] had grounds to terminate Claimant for his attendance up to that point, without seeking a resignation. Nothing in the record suggests that Claimant even had a non-Workers Comp medical appointment the day prior – such a note would not have been difficult to obtain for hearing.

k. Claimant wants the ALJ to decide this case based upon whether he quit or got fired. For someone who is purportedly deficient in English, such semantic distinction was important in Claimant's mind, even in the heat of the moment. Either way, Claimant performed a volitional act [poor attendance, without documentation] which is an adequate reason for his wage loss. In any event, the ALJ finds that Claimant got mad and quit. That was also a volitional act on Claimant's part. The fact that he thought better of it overnight and wanted his job back does not mean he didn't quit when he did – or that his lack of accountability up to that point was somehow insufficient in and of itself to let him go. The ALJ finds that it was Claimant's actions which led to his wage loss, and not due to any retaliation by Employer for having a Workers Comp claim. The ALJ cannot conclude that Employer would suddenly stop accommodating claimant's restrictions after having accommodated them for over a year. Furthermore, the Employer intended to continue accommodating these restrictions if Claimant had continued to work satisfactorily. Nor was Claimant's wage loss due to his own inability to function within his work restrictions.

ORDER

It is therefore Ordered that:

1. Claimant has failed to show that he is temporarily and totally disabled, thus he is not entitled to any Temporary Total Disability benefits.
2. Claimant voluntarily resigned from his employment on August 15, 2019; thus he is not entitled to TTD benefits.
3. Additionally, Claimant was responsible for his own termination from employment, effective August 15, 2019; thus he is not entitled to TTD benefits.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: September 14, 2020

Colorado Springs, Colorado 80906

ISSUE

Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving Temporary Total Disability (TTD) benefits effective April 7, 2020.

FINDINGS OF FACT

1. Claimant is 21-year-old male who worked for Employer as a C-50 Operator. He began working for Employer on March 31, 2019. Claimant's job duties specifically involved operating tea bagging machines. He worked the graveyard shift from 11:15 p.m. to 7:15 a.m.

2. On February 10, 2020 Claimant injured his lower back when he slipped and fell on ice in a parking lot at work. Claimant remarked that he had no physical restrictions prior to working for Employer and performed his job duties without limitations until his work-related lower back injury.

3. On March 3, 2020 Respondents filed a General Admission of Liability (GAL) acknowledging Claimant was entitled to receive Temporary Partial Disability (TPD) benefits from February 17, 2020 through February 25, 2020 at a variable rate. The GAL also recognized that Claimant was authorized to receive Temporary Total Disability (TTD) benefits beginning February 26, 2020 on an ongoing basis at the rate of \$471.59.

4. After Claimant's industrial injury on February 10, 2020 he received work restrictions from Authorized Treating Physician (ATP) Concentra Medical Centers. Specifically, on February 12, 2020 Claimant's work restrictions consisted of no lifting in excess of 10 pounds constantly, no squatting, kneeling, ladders and sitting 80% of time. By February 17, 2020 Claimant's lifting restriction was limited to five pounds. Claimant testified that Employer mostly accommodated his work restrictions, but later in the week he was lifting in excess of his limitations.

5. On February 20, 2020 Claimant was terminated from his position with Employer. Operations Manager Brett R[Redacted] made the decision to terminate Claimant. Employer sent the formal termination paperwork to Claimant on February 27, 2020 based on violations of Employer's attendance policy.

6. On April 7, 2020 Respondents' filed a Petition to Terminate Claimant's TTD benefits. On April 17, 2020 Claimant objected to the Petition. The Division of

Workers' Compensation did not approve the Petition and invited Respondents to apply for hearing if they wished to pursue the issue.

7. Employer's attendance policy is set forth in its Employee Handbook. The Handbook explains that when an employee is not at work, an added burden is placed on fellow employees. Moreover, employees are expected to work their scheduled time, report to work on time and complete their shift unless authorized by a supervisor.

8. Absenteeism is defined as "an unscheduled absence from work on any scheduled workday due to illness, injury, or an emergency situation." In contrast, absenteeism does not include days off that are covered by Employer's vacation and personal time off policies.

9. The Handbook specifies that more than six occurrences of absenteeism or tardiness within a rolling twelve-month period is excessive and will result in disciplinary action up to and including termination of employment. The Handbook explains that each period of unscheduled consecutive absences will be recorded as one occurrence regardless of the number of days' duration up to a maximum of three days. More than three consecutive days of absences will result in additional occurrences.

10. If an employee must be absent from work or leave early during a workday, the supervisor should be notified in advance so that the employee's job responsibilities can be covered with a minimum of inconvenience to Employer and coworkers. Employees are required to call in at least a half hour prior to a scheduled shift and explain the reason for their absence.

11. Based on the circumstances, Employer has discretion in counting an occurrence as an attendance violation. Mr. R[Redacted] explained that he worked with employees when possible because Employer's goal was to retain employees. In fact, Mr. R[Redacted] and Claimant agreed that Claimant had a number of occurrences that Employer did not charge as attendance violations. The provision of a doctor's excuse to Employer does not preclude an occurrence from counting as an attendance violation absent Employer's discretion. Specifically, Claimant had multiple occurrences that Employer did not count toward violations of the attendance policy when he was dealing with family, dental and medical issues.

12. By September 28, 2019 Claimant had been charged with six occurrences of absenteeism or tardiness within a rolling six-month period of his March 31, 2019 hire date. The number of occurrences was considered excessive and triggered disciplinary action.

13. Claimant received a verbal warning on December 13, 2019 documenting that he had received seven attendance policy violations. Mr. R[Redacted] counseled Claimant that he was in violation of Employer's attendance policy and was at risk of further disciplinary action. He warned Claimant that if there was no immediate and sustained improvement in performance or there were any other performance, behavior

or attendance problems he would be subject to further disciplinary action up to and including termination.

14. On January 8, 2020 Claimant again violated Employer's attendance policy. Employer prepared a formal written warning on the following day.

15. On January 15-16, 2020 Claimant had another occurrence for an unscheduled absence. Claimant received a formal warning on January 17, 2020 advising him of another attendance policy violation. Employer warned Claimant that if there was no immediate and sustained improvement in performance or if there were any other performance, behavior or attendance problems he would be subject to further disciplinary action up to and including termination.

16. Claimant provided Employer with an undated work release from Boulder County Smiles. The release specified: "[p]lease Excuse [Claimant] for any absences that may have occurred between 1/22/2020-1/24/2020, [Claimant] was seen today for an abscess/infected tooth and asked to avoid any activities that may inflame or stress the affected area. Thank you for your understanding, Dr. Gordon West D.D.S." However, Claimant testified consistently with the records from Boulder County Smiles that he did not visit the facility between January 8, 2020 and January 30, 2020.

17. Claimant also provided Employer with an undated work release from Boulder Community Health. The release provided: "[p]lease Excuse [Claimant] for any absences that may have occurred between 1/28/2020-1/30/2020, [Claimant] was seen today for heart palpitations resulting in him losing consciousness. Regards, Dr. Molly G. Ware M.D."

18. Claimant testified that he found the Boulder County Smiles and Boulder Community Health excuses on a table at his home one week apart. He remarked that he had no idea how they got there and neither he nor someone he knew drafted them.

19. Claimant missed work on January 8, 15-16, 22-24, 28-30 and February 3 and 5, 2020. The preceding dates amounted to six more violations of Employer's attendance policy after his verbal warning on December 13, 2019.

20. On February 18, 2020 Claimant received his final written warning. Employer again advised Claimant that if there was no immediate and sustained improvement in performance and if there were any other performance, behavior or attendance problems he would be subject to further disciplinary action up to and including termination.

21. Claimant's last day of work for Employer was February 20, 2020. The Employee Termination Form was also dated February 20, 2020. Although the Employee Termination Form was dated February 20, 2020, both Claimant and Mr. R[Redacted] confirmed Claimant was scheduled to work from February 22-25, 2020.

22. Claimant testified he called Employer's nurse on February 22, 2020 and was told not to return to work until he visited ATP Concentra. He was originally

scheduled to visit Concentra on February 23, 2020 but had to reschedule and went to the facility on February 25, 2020. Claimant gave the report to Employer on February 26, 2020 and was informed that he was suspended. Mr. R[Redacted] noted that the February 23-25, 2020 absences constituted “call outs” or “no call or show” at work and were also grounds for termination. Employer sent the formal termination paperwork to Claimant on February 27, 2020 based on numerous violations of Employer’s attendance policy.

23. As of February 25, 2020 Claimant’s work restrictions limited lifting to 10 pounds constantly and working no more than four hours per day. Claimant continued to treat with ATP Concentra and Spine West after termination of his employment. He received physical restrictions that limited his ability to work. On March 2, 2020 Claimant’s lifting restriction was limited to five pounds.

24. By June 29, 2020 Claimant’s work restrictions were relaxed. He was permitted to lift 20 pounds occasionally and push or pull up to 40 pounds occasionally. Claimant was authorized to bend occasionally up to three hours per day and work a complete eight-hour shift.

25. Claimant testified that he first felt some improvement of his condition after leaving work but his condition deteriorated after his physical therapy ceased in June, 2020. The Concentra report of June 29, 2020 confirmed physical therapy was suspended pending an MRI and physical medicine consultation. He also required additional diagnostic testing and physical therapy. Claimant remarked that since June his symptoms have steadily increased with bilateral lower back, hip and radiating pain into his lower extremities.

26. Respondents have proven that it is more probably true than not that Claimant was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits effective April 7, 2020. Initially, Claimant began working for Employer on March 31, 2019 and suffered an industrial injury to his lower back on February 10, 2020. Employer terminated his employment on February 20, 2020 because he frequently failed to show up or call in to work during his approximately 11 months of employment. The record reveals that Claimant willfully violated Employer’s attendance policy when he repeatedly failed to notify a supervisor that he would not be coming in or arrive late to work.

27. Employer’s Employee Handbook specifies that more than six occurrences of absenteeism or tardiness within a rolling twelve-month period is excessive and will result in disciplinary action up to and including termination of employment. The Handbook explains that each period of unscheduled consecutive absences will be recorded as one occurrence regardless of the number of days’ duration up to a maximum of three days. More than three consecutive days of absences will result in additional occurrences. By September 28, 2019 Claimant had been charged with six occurrences of absenteeism or tardiness within a rolling 6-month period of his March 31, 2019 hire date. The number of occurrences was considered excessive and triggered disciplinary action. Claimant received a verbal warning on December 13, 2019

documenting that he had received seven attendance policy violations. Mr. R[Redacted] counseled Claimant that he was in violation of Employer's attendance policy and was at risk of further disciplinary action. He warned Claimant that if there was no immediate and sustained improvement in performance or there were any other performance, behavior or attendance problems, he would be subject to further disciplinary action up to and including termination. Claimant subsequently missed work on January 8, 15-16, 22-24, 28-30 and February 3 and 5, 2020. The preceding dates amounted to six more violations of Employer's attendance policy after his verbal warning on December 13, 2019. Employer repeatedly warned Claimant that if there was no immediate and sustained improvement in performance or if there were any other performance, behavior or attendance problems he would be subject to further disciplinary action up to and including termination.

28. On February 18, 2020 Claimant received his final written warning. Employer again advised Claimant that if there was no immediate and sustained improvement in performance and if there were any other performance, behavior or attendance problems he would be subject to further disciplinary action up to and including termination. Claimant's last day of work for Employer was February 20, 2020. The Employee Termination Form was also dated February 20, 2020. Although the Employee Termination Form was dated February 20, 2020 both Claimant and Mr. R[Redacted] confirmed Claimant was scheduled to work from February 22-25, 2020. On February 26, 2020 Claimant was informed that he was suspended. Mr. R[Redacted] noted that Claimant's February 23-25, 2020 absences constituted "call outs" or "no call or show" at work and were also grounds for termination.

29. On February 27, 2020 Employer sent the formal termination paperwork to Claimant based on violations of Employer's attendance policy. Regardless of any confusion over Employer notices, the record reveals that Claimant had at least eight unscheduled, non-medical absences in his 11 months of his employment. Employer appropriately applied its attendance policy in terminating Claimant. The record reflects that Claimant was thus responsible for his termination. Through his repeated attendance violations Claimant exercised some control over the circumstances causing his termination. Claimant precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. He is therefore precluded from receiving TTD benefits effective April 7, 2020.

30. Claimant contends that, even if he was responsible for his termination of employment with Employer, he is entitled to receive TTD benefits based on a worsening of condition. Despite Claimant's assertion, the record reveals that he did not suffer a worsening of condition subsequent to his termination from employment with Employer that caused a wage loss. A subsequent increase in work restrictions is not per se evidence of a worsening condition. After his termination from employment Claimant continued to treat with ATP Concentra and Spine West. He received physical restrictions that limited his ability to work. As of February 25, 2020 Claimant's work restrictions limited lifting to 10 pounds constantly and working no more than four hours per day. By March 2, 2020 Claimant's lifting restriction was limited to five pounds.

31. Claimant testified that he first felt some improvement of his symptoms after leaving work but his condition deteriorated after his physical therapy ceased in June, 2020. The Concentra report of June 29, 2020 confirmed physical therapy was suspended pending an MRI and physical medicine consultation. Claimant remarked that since June his symptoms have steadily increased with bilateral lower back, hip and radiating pain into his lower extremities. He also required additional diagnostic testing and physical therapy. However, on June 29, 2020 Claimant's work restrictions were relaxed. He was permitted to lift 20 pounds occasionally and push or pull up to 40 pounds occasionally. Claimant was authorized to bend occasionally up to three hours per day and work a complete eight-hour shift. Although Claimant required additional medical treatment after his June 29, 2020 Concentra visit, the totality of the evidence reveals that he has not demonstrated that his condition worsened after his termination of employment. His relaxed work restrictions on June 29, 2020 demonstrate that Claimant has not shown that any increase in symptoms prevented or diminished his ability to work. Accordingly, Claimant's request for TTD benefits based on a worsening of condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See*

Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

5. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act “volitionally” or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. See *Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus “responsible” if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

6. Section 8-42-105(4) does not bar TTD wage loss claims after a termination for which the employee was responsible when the worsening of a work-related injury incurred during that employment causes a subsequent wage loss. *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323, 326 (Colo. 2004). This is limited to cases in which the “claimant's condition worsens after the termination of employment and prevents or diminishes the claimant's ability to work,” rather than where the wage

loss is the result of the voluntary or for-cause termination of the regular or modified employment. *Id.* at 326; *Grisbaum v. Indus. Claim Appeals Office*, 109 P.3d 1054, 1056 (Colo. App. 2005). A subsequent increase in work restrictions is not per se evidence of a worsening condition, and whether a worsened condition caused the claimant's wage loss is a factual question for the ALJ. See *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo.App.2014); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo.App.2002). An ALJ may consider several factors in determining that a worsened condition, and not an intervening termination of employment, caused the claimant's wage loss. *Apex Transportation, Inc.*, 321 P.3d at 633.

7. As found, Respondents have proven by a preponderance of the evidence that Claimant was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits effective April 7, 2020. Initially, Claimant began working for Employer on March 31, 2019 and suffered an industrial injury to his lower back on February 10, 2020. Employer terminated his employment on February 20, 2020 because he frequently failed to show up or call in to work during his approximately 11 months of employment. The record reveals that Claimant willfully violated Employer's attendance policy when he repeatedly failed to notify a supervisor that he would not be coming in or arrive late to work.

8. As found, Employer's Employee Handbook specifies that more than six occurrences of absenteeism or tardiness within a rolling twelve-month period is excessive and will result in disciplinary action up to and including termination of employment. The Handbook explains that each period of unscheduled consecutive absences will be recorded as one occurrence regardless of the number of days' duration up to a maximum of three days. More than three consecutive days of absences will result in additional occurrences. By September 28, 2019 Claimant had been charged with six occurrences of absenteeism or tardiness within a rolling 6-month period of his March 31, 2019 hire date. The number of occurrences was considered excessive and triggered disciplinary action. Claimant received a verbal warning on December 13, 2019 documenting that he had received seven attendance policy violations. Mr. R[Redacted] counseled Claimant that he was in violation of Employer's attendance policy and was at risk of further disciplinary action. He warned Claimant that if there was no immediate and sustained improvement in performance or there were any other performance, behavior or attendance problems, he would be subject to further disciplinary action up to and including termination. Claimant subsequently missed work on January 8, 15-16, 22-24, 28-30 and February 3 and 5, 2020. The preceding dates amounted to six more violations of Employer's attendance policy after his verbal warning on December 13, 2019. Employer repeatedly warned Claimant that if there was no immediate and sustained improvement in performance or if there were any other performance, behavior or attendance problems he would be subject to further disciplinary action up to and including termination.

9. As found, on February 18, 2020 Claimant received his final written warning. Employer again advised Claimant that if there was no immediate and sustained improvement in performance and if there were any other performance,

behavior or attendance problems he would be subject to further disciplinary action up to and including termination. Claimant's last day of work for Employer was February 20, 2020. The Employee Termination Form was also dated February 20, 2020. Although the Employee Termination Form was dated February 20, 2020 both Claimant and Mr. R[Redacted] confirmed Claimant was scheduled to work from February 22-25, 2020. On February 26, 2020 Claimant was informed that he was suspended. Mr. R[Redacted] noted that Claimant's February 23-25, 2020 absences constituted "call outs" or "no call or show" at work and were also grounds for termination.

10. As found, on February 27, 2020 Employer sent the formal termination paperwork to Claimant based on violations of Employer's attendance policy. Regardless of any confusion over Employer notices, the record reveals that Claimant had at least eight unscheduled, non-medical absences in his 11 months of his employment. Employer appropriately applied its attendance policy in terminating Claimant. The record reflects that Claimant was thus responsible for his termination. Through his repeated attendance violations Claimant exercised some control over the circumstances causing his termination. Claimant precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. He is therefore precluded from receiving TTD benefits effective April 7, 2020.

11. As found, Claimant contends that, even if he was responsible for his termination of employment with Employer, he is entitled to receive TTD benefits based on a worsening of condition. Despite Claimant's assertion, the record reveals that he did not suffer a worsening of condition subsequent to his termination from employment with Employer that caused a wage loss. A subsequent increase in work restrictions is not per se evidence of a worsening condition. After his termination from employment Claimant continued to treat with ATP Concentra and Spine West. He received physical restrictions that limited his ability to work. As of February 25, 2020 Claimant's work restrictions limited lifting to 10 pounds constantly and working no more than four hours per day. By March 2, 2020 Claimant's lifting restriction was limited to five pounds.

12. As found, Claimant testified that he first felt some improvement of his symptoms after leaving work but his condition deteriorated after his physical therapy ceased in June, 2020. The Concentra report of June 29, 2020 confirmed physical therapy was suspended pending an MRI and physical medicine consultation. Claimant remarked that since June his symptoms have steadily increased with bilateral lower back, hip and radiating pain into his lower extremities. He also required additional diagnostic testing and physical therapy. However, on June 29, 2020 Claimant's work restrictions were relaxed. He was permitted to lift 20 pounds occasionally and push or pull up to 40 pounds occasionally. Claimant was authorized to bend occasionally up to three hours per day and work a complete eight-hour shift. Although Claimant required additional medical treatment after his June 29, 2020 Concentra visit, the totality of the evidence reveals that he has not demonstrated that his condition worsened after his termination of employment. His relaxed work restrictions on June 29, 2020 demonstrate that Claimant has not shown that any increase in symptoms prevented or diminished his ability to work. Accordingly, Claimant's request for TTD benefits based on a worsening of condition is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is precluded from receiving TTD benefits effective April 7, 2020.
2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: September 15, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-122-747-001**

ISSUE

1. Whether Claimant established by a preponderance of evidence that she suffered an injury in the course and scope of her employment on or about October 16, 2019.
2. Whether Claimant has established by a preponderance of the evidence that she is entitled to reasonable, necessary, and related medical benefits because of a work-related injury.
3. Whether Claimant has established by a preponderance of the evidence that the medical care and treatment she has received by Banner Urgent Care; Dr. Stacey Garber and Dr. Thomas Pazik is reasonable and necessary and related to her work injury.
4. Whether Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability benefits because of a work-related injury from October 17, 2019 until terminated pursuant to statutes, rule, or further order?
5. Determination of Claimant's average weekly wage (AWW).
6. If Claimant proves a compensable injury, whether Claimant has demonstrated by a preponderance of the evidence that penalties should be imposed against Respondent under Section 8-43-408, C.R.S. for employer's alleged failure to obtain and maintain workers' compensation insurance.
7. Whether Claimant has demonstrated by a preponderance of the evidence that penalties should be imposed pursuant to Section 8-43-304, C.R.S., for Respondent's alleged failure to timely file an Employer's First Report of Injury. and for failing to timely file either a Notice of Contest or Admission of Liability.

FINDINGS OF FACT

1. Claimant is a 73-year-old female who was employed by Employer as a cashier at Employer's liquor store beginning on or about September 2, 2019.
2. Claimant's duties included cashiering, stocking, and cleaning. Claimant's job duties required her to stand and walk approximately 7.5 hours per day and lift up to 40 pounds.
3. On October 16, 2019, Claimant was working for Employer when she was sent to lunch. Claimant was walking through the store when she tripped on a box located between the washroom and the hallway. Her knee "snapped" and "popped." Claimant reported her injury to her manager, Manny S[Redacted], and then continued on to lunch. When Claimant returned from lunch, she again reported her injury to Mr. S[Redacted].

4. At the time of Claimant's injury, Employer did not have workers compensation insurance. Employer did not provide Claimant with a list of authorized treating providers. Employer did not provide Claimant with any instructions on what to do with respect to her injury.

5. Claimant credibly testified that she had no problems with her right knee prior to October 16, 2019.

6. On October 16, 2019, Claimant self-referred to Banner Urgent Care where she was seen by Renee Dutcher, NP. Claimant reported she tripped over a box on the floor at work when going to the bathroom resulting in an injury to her right knee. Ms. Dutcher diagnosed Claimant with a work-related right knee injury. Ms. Dutcher authorized Claimant to return to work on modified duty the following day, subject to restrictions including walking and standing less than 2 hours per day, no crawling, kneeling, squatting, or climbing. (Ex. 1). Ms. Dutcher provided Claimant with a copy of Exhibit 1, which set forth her work restriction. Claimant provided a copy of Ex. 1 to Employer the following day, October 17, 2019.

7. Due to the work restrictions, Claimant was not able to fully perform her duties for Employer. Employer did not offer Claimant modified duty or other opportunities to work for Employer following the October 16, 2019 injury.

8. On November 1, 2019, Claimant saw Stacey Garber, M.D., her primary care physician at Family Physicians of Greeley. Claimant reported that tripped over a box and experienced painful twisting of her knee when she caught herself. Claimant reported pain in her right knee with persistent effusion, pain with movement, and joint-line tenderness. Dr. Garber diagnosed Claimant with a right knee injury, recommended an MRI of the right knee, and referred Claimant to physical therapy. (Ex. 2)

9. On November 20, 2019, Claimant saw Thomas Pazik, M.D., for an orthopedic evaluation. Claimant reported experiencing no problems with her right knee prior to October 16, 2019 when she tripped over a box and felt a painful "pop." Dr. Pazik reviewed Claimant's MRI and performed a physical examination. Dr. Pazik diagnosed Claimant with an acute lateral meniscus tear of the right knee. Dr. Pazik recommended initially attempting non-operative measures to address Claimant's injury and performed a right knee injection. (Ex. 3)

10. Claimant returned to Dr. Pazik on December 3, 2019. Claimant reported no relief from the November 20, 2019 right knee injection performed by Dr. Pazik. Dr. Pazik diagnosed Claimant with tear of the lateral meniscus of the right knee and recommended a right knee arthroscopy with partial lateral meniscectomy for treatment of the meniscal tear. (Ex. 3)

11. On December 18, 2019, Dr. Pazik performed an arthroscopic partial lateral meniscectomy on Claimant's right knee. Following surgery, Claimant was referred to physical therapy once per week for six to eight weeks. (Ex. 3)

12. On December 31, 2019, Claimant saw Ryan Nettles, PA at Dr. Pazik's office for a follow up evaluation. Claimant reported some intermittent calf swelling and concern of a possible blood clot. A doppler ultrasound was performed which was negative. PA Nettles noted Claimant's symptoms were slowly improving. On examination, PA Nettles found mild diffuse swelling at Claimant's right knee. He also noted moderate tenderness at the mid distal thigh likely due to intra-operative tourniquet placement. PA Nettles noted that despite the Claimant's persistent swelling, her progress was satisfactory. (Ex. 3)

13. On January 28, 2020, Claimant saw Dr. Pazik. Claimant reported her knee was still very stiff and "buckles" on her constantly. Claimant reported she had not returned to work. On examination, Dr. Pazik, noted a mild right a mild right antalgic gait, but when observed walking down the hallway exiting the clinic, claimant walked slowly without asymmetry and with a non-antalgic gait. Due to Claimant's ongoing complaints, Dr. Pazik performed a right knee injection. Dr. Pazik did not recommend any specific work restrictions. (Ex. 3)

14. On April 21, 2020, Claimant saw Dr. Pazik. Claimant reported her knee was "popping and locking up" as well as giving out. Claimant reported progressive difficulty with activities of daily living (ADLs) due to right knee pain, marked antalgia, progressive valgus alignment and difficulty with weightbearing, and significant start up stiffness. X-rays demonstrated progressive narrowing of the lateral compartment with nearly bone-to-bone contact throughout the lateral compartment on 45-degree weightbearing. Dr. Pazik diagnosed Claimant with osteoarthritis of right knee. Dr. Pazik noted "rapidly progressive valgus arthrosis of the right knee after prior injury at work and subsequent arthropathy with partial lateral meniscectomy 12/18/2019." Dr. Pazik recommended use of two crutches for assisted ambulation weightbearing as tolerated and ordered an MRI of the right knee. Dr. Pazik opined that Claimant was likely to require TKA (total knee replacement). (Ex. 3)

15. On May 26, 2020, Claimant saw Dr. Pazik. Dr. Pazik reviewed Claimant's right knee MRI (performed on May 11, 2020). Dr. Pazik noted that the MRI showed significant progression of the lateral compartment chondrosis with full-thickness chondral degeneration, loss of the TP with sub-adjacent reactive subchondral edema, which was a new finding compared to the previous MRI. Dr. Pazik diagnosed Claimant with osteoarthritis of the right knee and recommended right total knee replacement. (Ex. 3)

16. On June 9, 2020, Claimant saw PA Nettles. Based on his examination, PA Nettles assessed that Claimant had failed non-operative measures and was experiencing increasing difficulty and inability to perform activities of daily living independently and comfortably. PA Nettles indicated Claimant's planned procedure was right total knee arthroplasty. PA Nettles prescribed a front-wheeled walker, high toilet seat and shower chair. (Ex. 3)

17. On June 15, 2020, Dr. Pazik performed a right total knee replacement on Claimant. (Ex. 3)

18. As of the date of hearing, Claimant was continuing to receive physical therapy twice per week. Claimant credibly testified that she continues to experience pain, tightness, and limited range of motion. Claimant uses a cane to assist with walking. Claimant also testified that she has not been placed at maximum medical improvement (MMI).

19. Claimant credibly testified that since her October 16, 2019 injury, she has not been offered work within her restrictions by Employer. Claimant has not worked elsewhere since October 16, 2019.

20. Manny S[Redacted], the Employer's store manager, testified at hearing. Mr. S[Redacted] testified that Claimant had complained of knee pain prior to her injury of October 16, 2019. Mr. S[Redacted] also testified that on October 17, 2019, Claimant provided him a copy of Exhibit 1, and that Claimant was unable to perform her job duties on that day due to her knee. Mr. S[Redacted] testified that he did not know whether Employer had workers' compensation insurance at the time of Claimant's injury.

21. Claimant testified her hourly wage at the time of her injury was \$12.50 per hour. Employer paid Claimant wages for work performed between September 2, 2019 and October 16, 2019 (a period of thirty workdays, or six 5-day weeks.). For the period of September 2, 2019 until October 16, 2019, Claimant received wages from employer in the amount of \$2,535.42. (Ex. 5) Claimant's wages of \$2,535.42 represents payment for 202.83 hours (i.e., $\$2,535.42 \div \$12.50 = 202.83$), or 33.8 hours per week ($202.83 \text{ hours} \div 6 \text{ weeks} = 33.8 \text{ hours/week}$). Claimant's average weekly wage (AWW) is \$422.57 per week ($33.8 \text{ hours/week} \times \$12.50 = \$422.57$).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility,

the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability & General Medical Benefits

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S.; see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301(1)(c). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the ALJ. *Faulkner*, 12 P.3d at 846. A compensable injury is an injury which "arises out of" and "in the course of" employment. See C.R.S. § 8-41-301(1)(b); *Price v. Industrial Claim Appeals*, 919 P.2d 207 (Colo. 2012).

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. See *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id.*, citing *Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.*, 236 P.2d 293 (Colo. 1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Royal Indemnity Co.*, 236 P.2d 293 (Colo. 1951). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984).

Claimant has established by a preponderance of the evidence that she sustained a work-related injury to her right knee on or about September 2, 2019. Claimant credibly testified that she tripped over a box at her place of employment and sustained an injury to her right knee while walking to the restroom at Employer's business. Claimant's testimony was not credibly rebutted by Respondents and is corroborated by Claimant's relevant, contemporaneous medical records, including records from Banner Urgent Care on the date of her injury. Mr. S[Redacted]'s testimony that Claimant came to work on October 16, 2019 with a painful knee is not credible. Claimant has met the burden to establish that her right knee injury is a compensable injury.

The ALJ finds the Claimant met her burden of proof of establishing that her right knee injury is related to or caused by her October 16, 2019 industrial injury and, therefore, treatment for her right knee is reasonably necessary to cure or relieve the effects of her October 16, 2019 injury or to prevent further deterioration of this work-related condition. Respondent is responsible for and shall pay general medical benefits that are reasonably necessary to relieve the effects of Claimant's October 16, 2019 injury.

Specific Medical Benefits

The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The ALJ's determinations in this regard must be upheld if supported by substantial evidence. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). Section 8-43-301(8), C.R.S. The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).” *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011).

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that Employer most provide injured workers with a list of designated treatment providers. Section 8-43-404(5)(a)(1)(A), C.R.S. states that, if the employer or insurer fails to provide an injured work with a list of physicians or corporate medical providers, “the employee shall have the right to select a physician.” W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, “the employer shall provide the injured worker with a written list of designated providers.” W.C.R.P. Rule 8-2 additionally provides that the remedy for failure to comply with the preceding requirement is that “the injured worker may select an authorized treating physician of the worker's choosing.” An employer is deemed notified of any injury when it has “some knowledge of the accompanying facts connecting the injury of illness with the employment and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim.” *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381, 383 (Colo. App. 2006).

Claimant has established by a preponderance of the evidence that Employer failed to provide a list of designated physicians. Thus, Claimant was permitted to select a treating physician. After Claimant reported her injury and sought medical care with Banner Urgent Care, she obtained treatment from her primary care physician, Stacey Garber, M.D. The ALJ finds that Dr. Garber is Claimant's ATP.

Authorized providers are those to whom the ATP refers the Claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513, (Colo. App. 2002) Dr. Garber referred the Claimant to Dr. Pazik, an orthopedic surgeon. Dr. Garber and Dr. Pazik referred Claimant for MRIs and physical therapy. Claimant received authorized medical care through Banner Urgent Care, Stacey Garber, M.D., Thomas Pazik, M.D., and physical therapy. Claimant has established by a preponderance of the evidence that the care and treatment she received from Banner Urgent Care, Dr. Garber, and Dr. Pazik was reasonable and necessary to cure or relieve the effects of the October 16, 2019 work injury. Employer is financially responsible for Claimant's work injury treatment and shall pay to Claimant the reasonable value of medical treatment for treatment from Banner Health, Dr. Garber, Dr. Pazik and physical therapy for her work-related right knee injury. Claimant submitted no evidence as to the amount of medical expenses incurred to date. Consequently, the ALJ is unable to make an award of a specific amount of medical benefits incurred.

Average Weekly Wage

Section 8-42-102(2), C.R.S. requires the ALJ to determine a claimant's AWW based on her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO*, 18 P.3d 867, 869 (Colo. App. 2001)

An AWW of \$422.57 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity based on Claimant's testimony that she earned \$12.50 per hour working and Claimant's 2019 W-2 from Employer. Claimant's AWW of \$422.57 results in TTD benefits in the amount of \$281.71 per week.

Entitlement to TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove her industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999).

The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) TTD benefits ordinarily continue until terminated by the occurrence of one of the criteria listed in § 8-42-105 (3), C.R.S. The existence of disability is a question of fact for the ALJ. No requirement exists that a claimant produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997).

Claimant sustained an injury to her right knee and was initially placed on work restrictions on October 16, 2019, including walking and standing less than 2 hours, and no crawling, kneeling, squatting, or climbing. Claimant credibly testified that her position as a cashier required her to stand approximately 7.5 hours per day, and that she was required to lift approximately 40 lbs. Claimant credibly testified that she has been unable to return to her position as a cashier due to the restrictions of her right knee. Medical records demonstrate that, since her injury, Claimant continually complained of pain in her right knee with standing, and ongoing stiffness and discomfort. The ALJ finds that Claimant's testimony and medical records, including records of a total knee replacement in June 2020, establishes by a preponderance of the evidence that Claimant is medically incapacitated with restrictions of bodily function that cause her to have work restrictions and impairment in her wage-earning capacity. Since October 16, 2020, Claimant has been unable to resume her prior work. Her wage-earning capacity is thus impaired due to her industrial injury and resulting disability. Claimant testified that she has not returned to work since October 16, 2020. Claimant has established by a preponderance of the evidence an entitlement to TTD benefits beginning on October 17, 2020 and continuing until terminated by law.

Employer shall pay to Claimant TTD benefits for the period of October 17, 2019 through September 16, 2020 in the amount of \$13,522.08 representing 48 weeks of TTD payments. Employer shall continue to pay Claimant TTD benefits in the amount of \$281.67 per week until terminated by law.

Penalties

Uninsured Employer

Claimant seeks penalties under § 8-43-408(1), C.R.S. Claimant's Position Statement argues for a penalty of fifty percent. Prior to July 1, 2017, Section 8-43-408(1), C.R.S., provided that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits payable to the claimant were to be increased fifty percent. Effective July 1, 2017, Section 8-43-408, C.R.S. was amended and the language regarding a fifty percent increase in claimant benefits was removed. The version of Section 8-43-408 C.R.S. in effect at the time of Claimant's October 16, 2019 work injury states that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the employer is subject to a penalty and additional twenty-

five percent of the benefits ordered, which is payable to the Colorado uninsured employer fund.

Claimant has demonstrated by a preponderance of the evidence that the Employer did not have workers' compensation coverage at the time of Claimant's October 16, 2019 work injury. For its failure to obtain and maintain workers' compensation insurance, the Employer shall pay penalties of \$3,380.04 to the Colorado uninsured employer fund; (which is an amount equal to 25% of the total unpaid TTD benefits owed as of September 16, 2020). The record contains no evidence of the amount of medical bills owed. Consequently, the ALJ is unable to calculate any penalty to be assessed as a percentage of medical bills, and therefore assesses no penalty for unpaid medical benefits.

Failure to Timely File Employer's First Report of Injury and Notice of Contest or Admission of Liability:

Section 8-43-304 (a), C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that any employer or insurer:

“who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel..., or fails, neglects, or refuses to obey any lawful order..., shall be subject to ... a fine of not more than one thousand dollars per day for each such offense.”

Section 8-43-304(1) identifies four categories of conduct and authorizes the imposition of penalties when an employer or insurer: (1) violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or Panel. *Pena v. Industrial Claim Appeals Office*, 117 P.3d 84 (Colo. App. 2005). The imposition of penalties under § 8-43-304(1), *supra*, requires a two-step analysis. The claimant must first prove by a preponderance of the evidence that the disputed conduct constituted a violation of statute, rule, or order¹ before a court can assess penalties against a respondent. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If the ALJ finds a violation, the ALJ must determine whether the employer's actions which resulted in the violation were objectively reasonable. *See City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003). The reasonableness of the employer's action depends on whether it is

¹ Section 8-40-201(15) defines an “order” as “any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge.” In *Rio Blanco County*, *supra*, the court of appeals affirmed the imposition of a penalty as a failure to obey an “order” within the meaning of §8-43-304(1), for failure to comply with then W.C.R.P. VIII which at the time provided workers' compensation adjudication rules. To summarize, violation of a Workers' Compensation Rule of Procedure is tantamount to violation of an order.

predicated in a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The standard is “an objective standard measured by reasonableness of the [respondent’s] action and does not require knowledge that the conduct was unreasonable.” *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

The fine shall be apportioned in whole or part at the discretion of the director or administrative law judge between the aggrieved party and the workers’ compensation cash fund created in Section 8-44-112, C.R.S. with the amount apportioned to the aggrieved party being a minimum of fifty percent of any penalty assessed. See § 8-43-304, C.R.S. In addition, § 8-43-305 C.R.S. provides that each day a party engages in the violation is construed as a separate offense.

Claimant asserts Employer failed to timely file an Employer’s First Report of Injury, pursuant to § 8-43-101 (1), C.R.S., which provides:

Within ten days after notice or knowledge that an employee has contracted such an occupational disease, or the occurrence of a permanently physically impairing injury, or lost-time injury to an employee, or immediately in the case of a fatality, the employer shall, upon forms prescribed by the division for that purpose, report said occupational disease, permanently physically impairing injury, lost-time injury, or fatality to the division.

Similarly, WCRP 5-2(B)(2), requires that a First Report of Injury be filed with the Division within ten days after notice or knowledge that an injury or occupations disease has resulted in lost time from work for the injured employee in excess of three shifts or calendar days.

The record before the ALJ contains no evidence regarding Employer’s filing or failure to file a First Report of Injury. Neither Claimant nor Employer offered testimony on this issue and neither party submitted documentary evidence to indicate whether a First Report of Injury was filed. As such, the ALJ cannot determine whether Employer did or did not comply with § 8-43-101 (1), C.R.S. or WCRP 5-2. The ALJ finds that Claimant failed to prove by a preponderance of the evidence that penalties should be imposed against Employer for violation of § 8-43-101 (1), C.R.S. or WCRP 5-2.

Claimant also asserts Employer failed to timely admit or deny liability and seeks penalties based on this allegation. Section 8-43-203(1)(a), C.R.S. provides:

The employer or, if insured, the employer’s insurance carrier shall notify in writing the division and the injured employee ... within twenty days after a report is, or should have been filed with the division pursuant to section 8-43-101, whether liability is admitted or contested; except that, for purpose of this

section, any knowledge on the part of the employer, if insured, is not knowledge on the part of the insurance carrier.

Similarly, WCRP 5-2(C) imposes the requirement to file either an admission or contest on the insurer within 20 day after the date the employer's First Report of Injury is filed with the Division.

Section 8-43-203(2)(a), C.R.S. provides that if such notice is not filed, "the employer, or if insured, the employer's insurance carrier, may become liable to the claimant, if successful on the claim for compensation, for up to one day's compensation for each failure to so notify." The claimant bears the burden of proof to establish the circumstances justifying the imposition of the penalty. See *Pioneer Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005).

The record before the ALJ contains no evidence regarding Employer's notification to the Division or Claimant as to whether liability was admitted or contested. Neither Claimant nor Respondent offered testimony on this issue and no documentary evidence was admitted into evidence to indicate when, or if, an admission or contest of liability was filed. The ALJ finds that Claimant failed to prove by a preponderance of the evidence that penalties should be imposed against Employer for violation of § 8-43-203 (1), C.R.S.

Claimant's Position Statement indicates that Employer filed its First Report of Injury on January 27, 2020 and filed a Notice of Contest on January 23, 2020. However, these representations are not supported by sworn testimony or admitted documentary evidence and are therefore not part of the record. However, assuming *arguendo*, these statements are correct, Respondent filed both a Notice of Contest and First Report of Injury within 20 days of Claimant's January 9, 2020 Application for Hearing, and therefore filed within the time period permitted to cure under § 8-43-304(4), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of evidence that she suffered an injury in the course and scope of her employment on or about October 16, 2019.
2. Claimant is entitled to a general award of reasonable and necessary medical benefits to treat her right knee injury.
3. Claimant has established by a preponderance of the evidence that the medical care and treatment she has received by Banner Urgent Care; Dr. Stacey Garber, Dr. Thomas Pazik, and physical therapy for her right knee injury is reasonable and necessary and related to her work injury.
4. Claimant's average weekly wage (AWW) is \$422.50 (resulting in TTD benefits in the amount of \$281.71 per week).

5. Claimant's claim for TTD benefits from October 17, 2019 through the date of this Order is granted. Employer shall pay to Claimant TTD benefits for the period of October 17, 2019 through September 14, 2020 in the amount of \$13,522.08 representing 48 weeks of TTD payments. Employer shall continue to pay Claimant TTD benefits in the amount of \$281.67 per week until terminated pursuant to statute, rule, or further order.
6. Respondent shall pay penalties pursuant to section 8-43-408 (5), C.R.S., in the amount of \$3,380.52 to the Colorado uninsured employer fund; (which is an amount equal to 25% of the total unpaid TTD benefits owed as of September 16, 2020).
7. Claimant failed to establish by a preponderance of the evidence that penalties should be imposed pursuant to § 8-43-304, C.R.S., for Respondent's alleged failure to timely file an Employer's First Report of Injury. and for failing to timely file either a Notice of Contest or Admission of Liability. Claimant's request for penalties pursuant to § 8-43-304 is denied and dismissed.
8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 16, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-098-497-004**

ISSUE

1. Whether Claimant established, by a preponderance of the evidence, that he sustained a compensable, work-related injury to spinal levels L2-L3, L3-L4, L4-L5 and L5-S1 on December 20, 2018.
2. Whether Claimant established, by a preponderance of the evidence, that he is entitled to reasonable, necessary and related medical benefits for his December 20, 2018 work-related injury.
3. Whether Claimant established, by a preponderance of the evidence, that his March 29, 2019 surgery on spinal levels L2-L3, L3-L4, L4-L5 and L5-S1 was reasonable and necessary to cure or relieve the effects of his December 20, 2018 the industrial injury.
4. If Claimant fails to establish any of the above, how financial responsibility for medical benefits should be allocated with respect to Claimant's March 29, 2019 surgery and subsequent treatment.

FINDINGS OF FACT

1. Claimant is a 56-year-old male employed by Employer as a rental manager and sales representative. Claimant sustained an admitted industrial injury to his back on December 20, 2018, while working for Employer. On December 20, 2018, Claimant was picking up a box weighing approximately 40 lbs., when he experienced pain in his left lower back. Claimant reported the incident to Employer on or about and was instructed to seek treatment on his own. Because Claimant's injury occurred just before the Christmas holiday, Claimant did not immediately seek medical attention.
2. Claimant initially sought treatment on December 28, 2018, at Rocky Mountain Urgent Care, where he was seen by Christopher Wright, P.A., for complaints of lower back pain. Claimant reported left-sided electric and tingling-like pain radiating from his low back to his left calf and foot. Claimant denied weakness in the affected area. Mr. Wright diagnosed Claimant with radiculopathy in the lumbar region and advised Claimant to consider physical therapy. Claimant was instructed to return to work at light duty. (Ex. E).
3. On January 8, 2019, Claimant saw Lawrence Coulehan, M.D. and reported his back was painful following a work injury. Claimant reported receiving some initial relief from prednisone, but the pain had returned. Claimant reported experiencing left sciatic radiation to foot and left foot weakness. Dr. Coulehan's record appears to indicate he made a "back referral" which the ALJ infers is a referral to a back specialist. (Ex. H).

4. On January 14, 2019, Claimant saw Okezie Aguwa, M.D, of Denver Spine Surgeons. Claimant reported a 4-week history of low back pain and left lower extremity pain. Claimant reported bilateral foot numbness left worse than right. Claimant reported some of his numbness was prior to the work accident, but he had significantly worsened. Claimant reported weakness in his left leg with the leg giving out. Claimant reported that his left buttock and leg pain were significantly worse than his back pain. On his patient information form, Claimant reported “sharp pain in lower lumbar that radiates down back of leg into feet.” Claimant reported his symptoms as “constant pain (stabbing in lower back & butt) that radiates into back of knee, then radiating into ankle & feet, feet are numb, issues with incontinence, no erections, trouble walking, bending, standing, leg cramps at night.” Claimant’s patient information form did not disclose prior imaging for his lumbar spine from 2011 or a prior injury to his lower back but did disclose a neck fusion surgery performed in 2011. (Ex. F. & 11)

5. On January 14, 2019, Dr. Aguwa diagnosed Claimant with low back pain after lifting a 40 lb. motor at work; intervertebral disc disorders with radiculopathy, lumbar region; other intervertebral disc degeneration, lumbar region; L3-L4 DDD (degenerative disc disease); lumbar radiculopathy; and left lower extremity weakness. Dr. Aguwa ordered an MRI of Claimant’s lumbar spine. (Ex. F & 11).

6. On January 26, 2019, Claimant had a lumbar MRI. The radiologist, Dr. Vincent Herlihy, M.D., interpreted the MRI as showing the following at the L2-L3 spinal level: “There is disc desiccation, mild loss of disc height, and a mild to moderate circumferential disc bulge with left-sided disc osteophyte complex formation. There is a small superimposed caudal left paracentral disc extrusion. There is mild to moderate left and mild right facet joint osteoarthritis with ligamentum flavum hypertrophy. There is mild central canal stenosis with a 9 mm AP thecal sac diameter. There is mild to moderate left and mild right lateral recess stenosis with contact of the descending left L3 nerve roots. There is also moderate to severe left and mild right neural foraminal stenosis with flattening of the exiting left L2 nerve roots. (Ex. 5).

7. Dr. Herlihy interpreted the MRI as showing L3-L4 disc desiccation, moderate to severe loss of disc height, and a moderate circumferential disc osteophyte complex. Dr. Herlihy noted mild bilateral facet joint osteoarthritis with ligamentum flavum hypertrophy; moderate central canal stenosis with an 8 mm AP thecal sac diameter and moderate bilateral neural foraminal stenosis with contact of the bilateral exiting L3 nerve roots. (Ex. 5).

8. Dr. Herlihy’s report of January 26, 2019 includes the following Impression: “Additional lumbar degenerative disc disease and facet arthropathy with moderate central canal stenosis at L3-L4. There is fairly diffuse neural foraminal stenosis which is most prominent on the left at L2-L3 where it is moderate to severe with flattening of the exiting L2 nerve roots. Additional stenoses are detailed above.” (Ex. 5).

9. On January 28, 2019, Claimant saw Dr. Aguwa for review of his lumbar MRI. Dr. Aguwa interpreted the MRI as showing multilevel disc degeneration throughout the lumbar spine. At L2-L3, the MRI showed a left paracentral disc extrusion causing lateral

recess and entry foraminal narrowing. At L3-L4, the MRI showed severe loss of disc height and moderate central stenosis, with moderate foraminal narrowing. At L4-L5, the MRI showed moderate central stenosis and severe left lateral recess stenosis due to an inferior disc extrusion. At L5-S1 there was a large left-sided paracentral disc extrusion with severe central and left recess stenosis. Dr. Aguwa's assessment included, among other things, Left paracentral disc herniations at L5-S1, L2-L3, L3-L4 and L4-L5. Dr. Aguwa recommended a left-sided decompression and microdiscectomy at all levels from L2-S1. (Ex. F). Dr. Aguwa's medical record did not opine as to the cause of Claimant's lumbar pathology.

10. On January 28, 2019, Dr. Aguwa completed an "Attending Physician's Report of Workability" which indicates that claimant's diagnosis was Left L2-L3, L3-L4, L4-L5, L5-S1 disc herniations. In response to the statement "Work Related," Dr. Aguwa checked the box labeled "Yes." Dr. Aguwa indicated Claimant was unable to work from January 28, 2019 to "to be determined." (Ex. 11).

11. On January 29, 2019, Dr. Aguwa's office submitted a request for authorization to Insurer seeking authorization to perform Left L2-S1 Posterior lumbar microdecompression and microdiscectomy. (Ex. 11).

12. On March 22, 2019, Claimant saw Gerard Bernales, M.D. for a preoperative history and physical. Claimant reported a history of chronic lower back pain with bilateral sciatica symptoms and occasional urinary symptoms. (Ex. G).

13. On March 27, 2019, Claimant saw Dr. Aguwa for a pre-operative visit. Dr. Aguwa noted that Claimant had tried and failed many non-operative treatment modalities including but not limited to activity modification, over the counter and/or prescription medication, physical therapy, and injections. Despite this, the patient continues to be clinically debilitated and has elected to undergo surgical management. Dr. Aguwa's surgical plan was left L2-L3 microdecompression and microdiscectomy. (Ex. 11)

14. On April 9, 2019, Claimant saw Dr. Aguwa for a post-operative visit. At that time, Claimant continued to have mild left lower extremity pain and some numbness and tingling in his left foot. (Ex. F).

15. On May 7, 2019, Claimant saw Dr. Aguwa for a four week follow up visit. Claimant reported some mild pain in the left buttock and the posterior aspect of the left thigh and some improvement in the numbness of his left foot.

16. On March 29, 2019, Dr. Aguwa performed surgery on Claimant, including posterior lumbar microdecompression at L2-L3, L3-L4 L4-5 and L5-S1; Left L5-S1 microdiscectomy; use of intraoperative microscope, use of intraoperative fluoroscopy, and use of intraoperative monitoring. Dr. Aguwa's relevant postoperative diagnosis was lumbar spinal stenosis at L2-S1; left paracentral disc herniation at L5-S1; left paracentral disc protrusion at L2-L3, L3-L4; left lateral recess stenosis at L4-L5 and left lower extremity radiculopathy. Dr. Aguwa's operative report indicates that the MRI

demonstrated multi-level degenerative disc disease, large left paracentral disc herniation at L5-S1, and spinal stenosis from L2-S1. (Ex. G; Ex. 8).

17. Dr. Aguwa's operative report from March 29, 2019 describes the surgical procedure performed in detail. As part of the procedure, Claimant was administered preoperative antibiotics. Dr. Aguwa used a single incision and dissection to access Claimant's L2-S1 spinal lamina. Dr. Aguwa performed the decompression at the L5-S1 level first, and then performed an L5-S1 microdiscectomy. He then performed decompressions at the L2-L3, L3-L4, or L4-L5 levels. Dr. Aguwa did not perform microdiscectomies at the L2-L3, L3-L4, or L4-L5 levels. A hemovac drain was placed and the wound was closed. The patient was then transferred to the post-anesthesia care unit (PACU). Dr. Aguwa was assisted by Scott Como and an anesthesiologist, Dr. Alt, was also present in the operative suite. In addition, intraoperative neurophysiology was also provided during the surgery by IONM Technologist Tae Gugate, CNIM. The Intraoperative Neurophysiology report indicates the total professional time for the ION was 3 hours and 5 minutes. The Intraoperative Neurophysiology report was prepared by Badreldin Ibrahim, M.D. Dr. Ibrahim's "Technical; Report" indicates Claimant was in the operating room for 3 hours and 45 minutes. (Ex. G).

18. Following surgery, Claimant received physical therapy at Panorama Physical Therapy, from April 23, 2019 through May 23, 2019.

19. On July 30, 2019, Claimant saw Gary Ghiselli, M.D., of Denver Spine Surgeons. Claimant reported that he continued to have weakness in his left leg, that he felt may be getting worse. He also reported that his ED had gotten worse. Dr. Ghiselli ordered an MRI with contrast of Claimant's lumbar spine to assess the decompression, and an EMG/nerve conduction study of claimant's left leg to assess the neural elements.

20. On August 12, 2019, Claimant underwent an MRI of the lumbar spine. The radiologist, Samuel Scrutchfield, M.D. interpreted the MRI as showing the following at the L2-L3 level: "Posterior disc osteophyte complex formation with small central T2 hyperintense zone/annular tear. Facet arthropathy. Minimal spinal canal stenosis, improved. Mild left subarticular zone narrowing, improved. Mild to moderate right subarticular zone narrowing, stable. Severe left foraminal narrowing. Mild right neural foraminal narrowing. (Ex. 6).

21. Dr. Scrutchfield interpreted the August 12, 2019 MRI as showing the following at the L3-L4 level: "Posterior osteophytic ridging with slightly more focal right subarticular zone involvement. Facet arthropathy. Moderate to severe spinal canal stenosis which appears slightly worse. Moderate to severe subarticular zone narrowing slightly asymmetric to the right side which also appears progressive. Moderate to severe right neural foraminal narrowing. Moderate left neural foraminal narrowing. (Ex. 6).

22. On November 1, 2019, Respondent filed a General Admission of Liability admitting for medical benefits, temporary total disability, and temporary partial disability.

2011 Injury and Sequelae

23. In the summer of 2011, Claimant sustained an injury to his cervical and lumbar spine unrelated to his employment. As the result of that injury, Claimant had acute lower back and upper buttock pain and pain going down his left posterior leg that did not improve.

24. On September 12, 2011, Claimant saw Ahmed Stowers, M.D., at the Porter Adventist Hospital emergency department for evaluation of his back pain. Claimant reported a one-month history of worsening back pain with weakness in his lower extremities and numbness which extended to his groin area. Claimant was diagnosed with multiple level degenerative changes in the lumbar spine without evidence of significant canal stenosis and multiple-level foraminal narrowing at multiple levels. Dr. Stowers recommended that Claimant consult with a spine team. (Ex. G).

25. On September 12, 2011, Claimant had an MRI of his lumbar spine. The radiologist interpreted the MRI as showing degenerative disc disease, moderate disc bulge resulting in moderate left neural foraminal stenosis and mild modic endplate changes at the L2-L3 level. At the L3-L4 level, the radiologist interpreted the MRI as showing modic endplate changes, severe loss of disc height, a central disc bulge creating bilateral foraminal stenosis and bilateral facet arthropathy. (Ex. 4).

26. On September 16, 2011, Claimant saw Lawrence Coulehan, M.D. Dr. Coulehan's handwritten records are, in many aspects, illegible. Claimant reported that he had painful legs and back that started after lifting a relatively [illegible] object approximately one month earlier. Claimant reported developing progressively more severe back pain with radiation and weakness in the left leg. He reported no urine or fecal incontinence. Claimant reported being seen in the ER and seeing an orthopedist, and that Percocet helped. (Ex. H).

27. On October 10, 2011, Claimant saw Timothy Kulko, M.D. and Kathryn Dorweiler, PA-C, of Colorado Comprehensive Spine Institute. Claimant reported a history of intermittent back pain but not severe. Claimant reported acute left lower/upper buttock pain starting "a few months ago" after lifting a heavy box. At the time of the visit with Dr. Kulko, Claimant reported he had received chiropractic care in early August and had increased left leg pain and numbness and tingling ("n/t") below his waist in general. Claimant reported diffuse decreased sensation in his testicles and groin region. Claimant reported receiving a "recent" L3-5 tfESI (transforaminal epidural steroid injection) with a Dr. Fillmore, which provided good relief of his left leg pain. On examination, Claimant had pain with lumbar flexion and extension, and minimal tenderness along the spine. Dr. Kulko reviewed Claimant's September 12, 2011 lumbar MRI and the radiologist report and agreed with the radiologist's report. (Ex. D).

28. Claimant credibly testified that Dr. Kulko recommended Claimant undergo cervical surgery to address his cervical injury, and that no surgery on the lumbar spine be performed at that time. Claimant testified that Dr. Kulko indicated that Claimant may need lumbar surgery at some point in the future.

29. On or about October 13, 2011, Claimant underwent cervical spine surgery, performed by Dr. Kulko.
30. The record contains minimal documentation of Claimant's medical treatment and symptoms between October 13, 2011 and his injury on December 20, 2018.
31. On October 31, 2011, Claimant saw Dr. Coulehan. At that time, Claimant reported continuing to experience numbness in his left foot and ED (erectile dysfunction). On gait examination, Dr. Coulehan noted that Claimant had decreased left leg strength.
32. On May 30, 2014, Claimant saw Dr. Coulehan. Claimant reported numbness in his toes was [illegible] better, and that his activities of daily living (ADLs) were normal. Claimant reported that his exercise tolerance was able to walk four miles. Claimant also reported left calf cramps and back issues.
33. On August 4, 2016, Claimant saw Dr. Coulehan. At that time, Claimant reported that his exercise tolerance was such that he could hike up to ten miles. Claimant also reported chronic low back pain and that he was continuing to experience some left leg weakness. Dr. Coulehan found claimant had decreased range of motion in the cervical and lumbar spine, mild degenerative joint disease in his knees (R>L) and decreased left quad strength. (Ex. H).
34. On August 6, 2019, at Claimant's request, John Hughes, M.D. performed an independent medical examination (IME) of Claimant. Dr. Hughes interviewed Claimant and reviewed some of Claimant's medical records. Dr. Hughes relevant assessment was that Claimant had a past medical history of lumbar spine disc protrusion with documentation of left leg weakness through August 4, 2016, a lumbar spine sprain/strain with a frank disc extrusion, meriting surgical decompression done on March 29, 2019. Dr. Hughes concluded that while Claimant had a preexisting disc protrusion prior to December, 20, 2018, he also sustained injuries leading to a "frank disk extrusion," and therefore, Claimant's need for medical evaluation and treatment subsequent to December 20, 2018 was reasonable, necessary and related to his work-related injury on December 20, 2018. Dr. Hughes opined that this included surgical treatment of Claimant's lumbar spine. Dr. Hughes' August 6, 2019 report did not address whether any specific level of Claimant's lumbar spine was injured on December 20, 2018, or whether any portion of Claimant's March 29, 2019 surgery was work-related.
35. Subsequently, on February 25, 2020, Dr. Hugues conducted a case review at the request of Claimant to respond to the opinions of Dr. Castro, and specifically whether claimant sustained work-related injuries to his L2-L3 and L3-L4 spinal levels. Based on his review and comparison of MRI findings, Dr. Hughes concluded that Claimant sustained a lumbar disc extrusion at L2-L3 as a result of his work-related injury on December 20, 2018.
36. Dr. Hughes compared Claimant's L3-L4 MRI findings from 2011 and 2019, and opined that the 2019 MRI outlined similar pathologic findings and made no mention of a disc protrusion that he would consider to be substantially changed from the 2011 findings

of a central disc bulge. Dr. Hughes did not opine that Claimant sustained an injury at L3-L4 as the result of his work-related injury. Dr. Hughes did opine that because Claimant sustained injuries to the levels both above and below L3-L4, he believed L3-L4 also needed to be treated as part of the overall decompressive surgical procedure.

37. On August 21, 2019, Claimant saw Andrew Castro, M.D. for an IME at the request of Respondents. Dr. Castro reviewed Claimant's medical records and examined Claimant. Dr. Castro opined that Claimant experienced a new herniation at the L5-S1 and L4-L5 levels with new symptoms related to these injuries. Dr. Castro opined Claimant's MRI records showed that the L2-L3 and L3-L4 demonstrated non-severe, chronic degenerative changes, and no new disc herniations at these levels. Dr. Castro opined that surgery at L4-L5 and L5-S1 was reasonable and related to Claimant's work injury. He also opined that surgical intervention at the L2-L3 and L3-L4 levels were not related to Claimant's work injury.

38. Dr. Castro testified many of the medical expenses associated with surgery, including medications, surgical supplies, oxygen, self-administered drugs, recovery room (i.e., PACU), and observation room would be the same for a four-level vs. two-level surgery. Similarly, Dr. Castro testified that anesthesia charges would only be different to the extent additional time was needed to perform two additional levels of surgery. Dr. Castro testified he was not aware of whether anesthesiology charged by the hour. Dr. Castro testified that with the exception of the time spent performing two additional levels of surgery, the remaining charges associated with Claimant's surgery would not have been materially different. The ALJ infers from this testimony that Claimant would have incurred substantially similar medical expenses had Dr. Aguwa not performed microdecompression at L2-L3 and L3-L4 during March 29, 2019 surgery, and that the only increased expenses would have been associated with the additional time spent performing those procedures. The ALJ also infers that no additional personnel, supplies, or equipment was needed to perform the microdecompression at L2-L3 and L3-L4.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge.

University Park Care Center v. Industrial Claim Appeals Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S.; see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301(1)(c). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the ALJ. *Faulkner*, 12 P.3d at 846. A compensable injury is an injury which "arises out of" and "in the course of" employment. See C.R.S. § 8-41-301(1)(b); *Price v. Industrial Claim Appeals*, 919 P.2d 207 (Colo. 2012).

"A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury." *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, (2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo.App.1990).

Respondents do not dispute that Claimant sustained an injury to the L4-5 and L5-S1 spinal levels as the result of his December 20, 2018 work injury. Claimant has

established by a preponderance of the evidence that he sustained an injury to the L4-L5 and L5-S1 spinal levels in the course and arising out of his employment on December 20, 2018. It is also undisputed that Claimant had pathology at the L2-L3 and L3-L4 levels of his spine prior to December 20, 2018, dating to at least 2011.

The issue before the ALJ is whether Claimant's work-injury on December 20, 2018 caused additional injury, aggravated, or accelerated his pre-existing L2-L3 and/or L3-L4 spinal condition causing a need for treatment. Dr. Castro credibly testified that Claimant's 2019 MRI demonstrated that Claimant's disc bulge at L2-L3 was slightly larger than shown on the 2011 MRI. Dr. Castro's interpretation is consistent with that of Dr. Hughes. Dr. Castro also opined that the changes reflected at L2-L3 were likely degenerative changes, rather than acute, traumatic changes. While Dr. Hughes attributed the "disk extrusion" to Claimant's work-related injury. The ALJ finds the testimony of Dr. Castro to be persuasive on this issue.

Dr. Hughes and Dr. Castro agree Claimant's MRI studies do not demonstrate a new injury to L3-L4. Although, Dr. Hughes opined that surgery on L3-L4 was necessary because of injuries both above and below that spinal level. Because the ALJ finds that Claimant's work injury did not result in a new injury or aggravate his pre-existing condition at L2-L3, Dr. Hughes' opinion that surgery on L3-L4 was necessary is not persuasive on this issue.

The evidence establishes Claimant sustained significant disc injuries at the L4-L5, L5-S1 levels on December 20, 2018. The symptoms Claimant experienced following December 20, 2018 were consistent with injuries at these spinal levels, including pain in the back of the thigh, pain in the buttocks to the calf, which are consistent with an L4-L5, L5-S1 radiculopathy. Although Claimant reported a worsening of his pre-December 20, 2018 symptoms, the evidence is insufficient to conclude that the worsening of symptoms was attributable to a new injury to L2-L3 or L3-L4, or that his work injury aggravated those pre-existing conditions, as opposed to symptoms directly related to the large herniation at L5-S1 and injury to L4-L5. Dr. Aguwa's completion of the "Attending Physician's Report of Workability," indicating that his diagnosis was "work related" is not persuasive. Dr. Aguwa's medical records do not indicate that Claimant informed Dr. Aguwa of his 2011 injury, his 2011 lumbar MRI, or Dr. Kulko's indication that Claimant may require future surgery.

Claimant has met his burden of proof of establishing by a preponderance of the evidence that he sustained a work-related injury to the L4-L5 and L5-S1 spinal levels. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable, work-related injury to L2-L3 or L3-L4, or that Claimant's December 20, 2018 work injury aggravated or accelerated Claimant's pre-existing condition at L2-L3 or L3-L4.

Medical Benefits

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the

industrial injury. See *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id.*, citing *Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.*, 236 P.2d 293 (Colo. 1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Royal Indemnity Co.*, 236 P.2d 293 (Colo. 1951).

Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984).

Although § 8-42-104(3), C.R.S. provides that “An employee’s ... medical benefits shall not be reduced based on a previous injury,” the Workers Compensation Act does not obligate respondents to pay medical benefits for the treatment of unrelated conditions. Rather, treatment is only compensable “where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment.” *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

Because Claimant has not established by a preponderance of the evidence that he sustained compensable injuries to the L2-L3 or L3-L4 levels, or that his work injury aggravated, accelerated or combined with his preexisting condition to produce the need for treatment, the ALJ concludes that Claimant has not met his burden of establishing that surgery on these levels was reasonable and necessary to cure or relieve the effects of his work injury.

Claimant has established by a preponderance of the evidence that he sustained compensable injuries to the L4-L5 and L5-S1 spinal levels, and that surgery performed by Dr. Aguwa on March 29, 2019, and post-operative care, including physical therapy, was reasonable and necessary to cure or relieve the effects of his work injury. Respondents are financially responsible for the treatment reasonable and necessary to cure or relieve the effects of his work injury.

Allocation of Responsibility for Medical Expenses

Claimant’s March 29, 2019 surgery addressed both compensable and non-compensable conditions. Because respondents are liable for medical treatment that is reasonable and necessary to cure or relieve the effects of the related industrial injury, Respondents are responsible for that portion of the March 29, 2019 surgery and subsequent treatment that was reasonable and necessary to cure or relieve the effects

of the injuries sustained at L4-L5 and L5-S1. See *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002).

Respondents contend that they are responsible for 50% of the medical expenses from the March 29, 2019 surgery. However, a 50% allocation of the costs of surgery and post-surgical therapy is not supported by the evidence. The testimony of Dr. Castro indicates the costs of surgery were only marginally increased by the addition of the unrelated decompression procedures at the L2-L3 and L3-L4 levels. The compensable portion of the surgery required Dr. Aguwa's services, as well as the services of assistant surgeon Dr. Como, anesthesiologist Dr. Alt, IONM Technologist Fugate, and Dr. Ibrahim. Additionally, if the surgery had only addressed the L5-S1 and L4-L5 levels, the surgery would still require an operative suite, administration of preoperative antibiotics, anesthesia, oxygen, surgical supplies, medications, self-administered drugs, and intraoperative use of a microscope, fluoroscopy and neuromonitoring. Dr. Aguwa performed a single opening incision and single dissection through which all procedures were performed. Additionally, the procedures performed at L5-S1 were more involved than those at L2-L3 and L3-L4 and included a microdiscectomy at L5-S1 and decompressions at L4-L5 and L5-S1. Post-surgery, Claimant would have required PACU care, a recovery room, an observation room, and post-surgical care (including physical therapy) regardless of whether the L2-L3 and L3-L4 procedures were performed. In essence, these were "fixed costs" of surgery that would be incurred had only the compensable procedures been performed. The additional costs associated with the L2-L3 and L3-L4 procedures were limited to the time spent addressing Claimant's L2-L3 and L3-L4 pathology, such that anesthesia and surgical time may have been longer.

Respondents shall pay for the full cost of the March 29, 2019 surgery, less the incremental increase in the cost of surgery directly attributable to performance of the non-compensable microdecompression performed at L2-L3 and L3-L4. The evidence at hearing is insufficient for the ALJ to determine the amount of those costs or to make a specific allocation of costs. Counsel for the parties shall confer on this issue. Should the parties be unable to resolve the matter, either party may file an application for hearing to adjudicate this issue.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to the L4-L5 and L5-S1 levels of his spine in the course and arising out of his employment with Employer on December 20, 2018.
2. Claimant has not proven by a preponderance of the evidence that he sustained a compensable injury to the L2-L3 and L3-L4 levels of his spine in the course and arising out of his employment with Employer.

3. Respondents shall pay the costs for all authorized, causally related and reasonably necessary medical care and treatment for Claimant's compensable injury to the L4-L5 and L5-S1 levels of his spine, including the costs associated with Claimant's March 29, 2019 surgery and post-surgical physical therapy, less the incremental increase in the cost of surgery directly attributable to performance of the non-compensable microdecompression performed at L2-L3 and L3-L4.
4. Counsel for the parties shall confer regarding the issue of allocation of costs attributable to the compensable vs. non-compensable portions of Claimant's March 29, 2019 surgery. Should the parties be unable to resolve the issue, either party may file an application for hearing on this issue.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 18, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-108-431-001**

ISSUES

- Did Claimant prove he suffered a compensable injury arising out of and in the course and scope of his employment?
- Did Claimant prove medical care and treatment provided by UCHealth was reasonably necessary and authorized?
- Did Claimant prove he is entitled to TTD benefits from May 23, 2019 through July 31, 2019?

STIPULATIONS

The parties stipulated to an average weekly wage (AWW) of \$662.95, with a corresponding TTD rate of \$441.97.

FINDINGS OF FACT

1. Claimant works for Employer as an inspector and outside salesperson. Claimant travels to potential customers homes, performs inspections, and tries to sell Employer's pest eradication services.

2. Claimant's job requires extensive travel, and he was assigned a company vehicle for business purposes. As part of his "compensation package," Claimant can use the vehicle for limited personal purposes outside of work hours, such as running errands. Claimant is not allowed to have other passengers in the vehicle when using it for personal purposes. Claimant was permitted, but not required, to take his assigned vehicle home so he could drive directly to or from his first or last work site each day without stopping at the branch office to pick up and drop off his personal vehicle. Most employees in Claimant's position take their company car home each night, but some do not.

3. After he was hired, Claimant received training on Employer's policies regarding use of the company vehicle. Employer's "Vehicle Programs Policy" states that the assignment of a Company vehicle "is a privilege extended to certain positions based on the amount of business miles that the employee is expected to drive within a year. As one of the tools necessary to perform the job, the perquisite ("perk") is provided for certain business functions." Employer's policy also states, "time spent traveling in the morning from an employee's home to the branch to check-in or attend a meeting, is not work time."

4. Claimant was responsible to ensure his company vehicle was clean and professionally presentable. Employer paid for maintenance on the vehicle, but Claimant would take it to the service appointments. Claimant was given a company gas card to pay for fuel.

5. Employer conducts a mandatory meeting at 7:00 AM each morning at the branch office in southwest Colorado Springs. Claimant was required to attend the daily meetings unless he had an appointment with a distant customer that required him to be traveling at that time. Such morning appointments were relatively uncommon, and Claimant attended the meeting most days.

6. Claimant is a salaried employee, so he does not formally “clock in” or “clock out.” Mr. S[Redacted] persuasively explained the workday for all employees is generally considered to start when they arrive at the branch office for the meeting, even those on salary:

The branch is essentially our starting point, and that’s when we officially become on the clock. It is the same procedure for everybody at the branch, not just certain people. I’m held to the same standards, and I drive 60 miles one way to work every day, and I’m still not on [Employer’s] time until I reach the branch

7. On May 22, 2019 at approximately 6:55 AM, Claimant was involved in a rear-end motor vehicle accident on the I-25 exit ramp at Circle Drive. At the time of the accident, Claimant was commuting in his assigned company vehicle to attend the 7:00 AM meeting. Claimant had performed no work-related task that morning before the accident.

8. Claimant reported to Employer he developed back pain because of the accident. Employer referred Claimant to Concentra Medical Centers, where he was diagnosed with a thoracic strain and referred for therapy. Respondents paid for the initial treatment with Concentra but then denied the claim and further care. Claimant was subsequently diagnosed with a low back strain.

9. Claimant failed to prove the May 22, 2019 accident occurred while performing services arising out of and in the course of his employment. Claimant was merely commuting to work at the time of the accident and not performing or furthering any specific work tasks. The fact Claimant has a company car does not mean all travel is considered part of his service for Employer. Claimant is allowed but not required to take the company car home at night, primarily as a convenience and “perk” for him. Claimant’s job could be performed as effectively if he left the car at the branch office each evening. Employer derives no benefit from Claimant commuting to and from the branch office in the company vehicle. Claimant established no “special circumstances” that would justify an exception to the usual rule that injuries sustained while commuting to work are not compensable.

CONCLUSIONS OF LAW

To establish a compensable claim, a claimant must prove he suffered an injury arising out of and in the course of employment. Section 8-41-301(1)(b); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The “course of employment” requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and

during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower and requires an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

Under the "going and coming rule," injuries sustained while commuting to and from work are not compensable unless "special circumstances" create a sufficient nexus to the employment beyond the mere fact of the employee's arrival at work. *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999). *Madden* established an analytical framework centered on four "variables" to determine whether the requisite "special circumstances" exist. Those variables are: (1) whether the travel occurred during working hours, (2) whether the travel occurred on or off the employer's premises, (3) whether the travel was contemplated by the employment contract, and (4) whether the obligations or conditions of employment created a "zone of special danger" out of which the injury arose. *Id.* at 864. If the claimant establishes only one of the four variables, "recovery depends on whether the evidence supporting the variable demonstrates a causal connection between the employment and the injury such that the travel to and from work arises out of and in the course of employment." *Id.* at 865.

Claimant's accident did not occur during working hours or on Employer's premises. Nor did the conditions of employment create any "zone of special danger" around commuting to work. Accordingly, the primary question is whether the travel was contemplated by the employment contract. *Madden* cited examples of situations that satisfy this factor, such as (a) when a particular journey is assigned or directed by the employer, (b) when the employee's travel is at the employer's express or implied request or when such travel confers a benefit on the employer beyond the sole fact of the employee's arrival at work, and (c) when travel was singled out for special treatment as an inducement to employment. The court emphasized those examples were "not an exhaustive list" of situations where travel can be considered part of the employment contract.

Travel is a substantial component of Claimant's job, and the car was provided in part to mitigate the expense to Claimant of using his own vehicle. The parties expected Claimant would routinely use the vehicle during the workday to accomplish his duties. But the question is not simply whether the employment contract contemplates *some* travel on the employee's part. Rather, the dispositive issue is whether the contract contemplated the travel in which the employee was engaged at the time of the accident. The fact that Claimant travels as part of his job does not mean he is within the course and scope of employment every time he operates the company-provided vehicle. Certainly, an accident that occurred while Claimant was driving between customer properties would be covered. But here the accident occurred before the workday started, while he was merely commuting to work to attend the daily morning meeting.

Employer's explicit policy regarding travel provides that "time spent traveling in the morning from an employee's home to the branch to check and/or attend the meeting, is not work time." This policy was conveyed to Claimant in writing during his training. While

language in an employee manual is not necessarily dispositive, Employer's express directive is persuasive evidence that commuting to work was not contemplated as part of Claimant's employment contract or his service to Employer.

Access to the company car is a convenience and a "perk" for Claimant, but his use of the vehicle for commuting provides no substantial benefit to Employer. There is no requirement Claimant take the company vehicle home in the evening and he could perform his job just as effectively if he left the vehicle at the branch office overnight and commuted in his personal vehicle. Any benefit Employer may have derived from Claimant's access to the company car during working hours was not implicated at the time of his accident. Claimant was merely commuting to work and not engaged in any specific employment-related task. Claimant failed to prove the existence of "special circumstances" to warrant an exception to the general rule that injuries suffered while commuting to work are not compensable. Thus, Claimant failed to prove he suffered a compensable injury arising out of and in the course of his employment.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits in WC 5-108-431 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: September 19, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that on December 13, 2019 he suffered an injury arising out of and in the course and scope of his employment with the employer.

Whether the claimant has demonstrated, by a preponderance of the evidence, that on January 10, 2020 he suffered an injury arising out of and in the course and scope of his employment with the employer.

If the claimant proves a compensable injury on December 13, 2019 or January 10, 2020, whether the claimant has demonstrated, by a preponderance of the evidence, that injuries he sustained as the result of a motor vehicle accident (MVA) on January 16, 2020 are compensable under the quasi-course of employment doctrine.

If the claimant proves a compensable injury for any of the dates identified above, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to reasonable and necessary medical treatment related to that compensable injury.

If the claimant proves a compensable injury for any of the dates identified above, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits.

The issue of the claimant's average weekly wage (AWW) has been reserved for future determination.

FINDINGS OF FACT

1. The employer operates a tree trimming and removal company. The claimant began working for the employer as an arborist assistant in August 2019. The claimant's job duties included trimming trees and hauling away all related debris.

2. The claimant has a history of low back pain that began in 2002 when he fell off an oil rig. Much of the treatment for the claimant's low back has been provided by the Veterans' Administration (VA).

3. On February 8, 2016, the claimant was seen at the VA Medical Center by Tammy Keel, RN. The claimant reported a history of pain in his right knee, low back, and neck. On that date, the claimant requested a referral to Rocky Mountain Orthopaedic Associates. Ms. Keel noted that the claimant would first need to be seen by a doctor with the VA before such a referral could be made.

4. On March 7, 2016, the claimant was seen at the VA Medical Center by Dr. Randall Coffey. The claimant reported low back pain that radiated into his right hip and thigh, as well as neck pain. Dr. Coffey referred the claimant to Rocky Mountain Orthopaedic Associates, recommended physical therapy, and prescribed Tramadol.

5. On April 28, 2016, the claimant was seen at Rocky Mountain Orthopaedic Associates by Jason Bell, PA-C and Dr. James Gebhard. The claimant reported right sided low lumbar pain that radiated into his buttock. Dr. Gebhard diagnosed low back pain with right lower extremity radiculopathy. At that time, Dr. Gebhard referred the claimant to physical therapy.

6. The claimant continued to complain of low back pain and on September 1, 2016, a magnetic resonance image (MRI) of the claimant's lumbar spine was performed. The MRI showed degenerative disc disease at the L3-L4 and L4-L5 levels and right foraminal narrowing at the L3-L4 level.

7. The claimant continued to seek treatment of his low back in 2018 and into 2019. On July 11, 2019, the claimant was seen at the VA Medical Center by Andrea Briner, Nurse Practitioner. At that time, the claimant reported chronic back pain. However, he also noted that his back pain did not slow him down and he was able to work in a physically demanding job in the oil and gas industry.

8. The claimant testified that he has undergone chiropractic treatment for several years with Brady Chiropractic. The medical records entered into evidence indicate that on July 2, 2019, the claimant was seen at that practice by Dr. Sean Lynch. On that date, the claimant reported a headache, sharp pains down his right leg, a stiff neck, numbness in his right foot, pain in his cervical spine, lumbar spine, and thoracic spine.

9. On November 19, 2019, the claimant was seen at the VA Medical Center by Dr. Dean Scow. At that time, the claimant reported chronic right knee pain and chronic back pain. The claimant also reported mid and low back pain with shooting pain into both legs. Dr. Scow noted that the claimant had a known history of degenerative disk disease and ordered an MRI of the claimant's lumbar spine.

10. On December 16, 2019, the MRI of the claimant's lumbar spine showed a right disc extrusion at the L4-L5 level, a left paracentral disc extrusion at the L5-S1 level, and foraminal stenosis at those same levels.

11. On January 10, 2020, the claimant was working for the employer at the home of the owner's father¹. On that date, the crew was trimming a number of trees and removing the debris. The claimant testified that during that job, he placed the cut limbs and branches in a trailer. The claimant also testified that he noticed that his back pain was greater than normal.

¹ The claimant initially testified that this work was performed on December 13, 2019. However, based upon the testimony of the respondents' witnesses and the medical records, the ALJ finds that the work was performed on January 10, 2020.

12. On Sunday, January 12, 2020, the claimant sent a text message to his supervisor, Mr. R[Redacted], asking what time work would begin on January 13, 2020. The claimant did not report any back issues to Mr. R[Redacted] at that time.

13. The claimant testified that on Monday, January 13, 2020, he had back pain that was radiating into his legs that was so great that he was unable to get out of bed. The claimant notified Mr. R[Redacted] that he was not feeling well. In addition, the claimant asked to see a doctor. Mr. R[Redacted] provided the claimant with a list of medical providers. From that list, the claimant selected Dr. Theodore Sofish as his authorized treating provider (ATP). An appointment was scheduled with Dr. Sofish for January 16, 2020.

14. Mr. R[Redacted] is the owner/operator of the employer's company. He testified that he learned that the claimant was alleging a work injury when he received a text message from the claimant on January 13, 2020. That text message indicated that the claimant had hurt his back on Friday, January 10, 2020. Mr. R[Redacted] understood that the claimant was going to seek medical treatment at the emergency room on January 13, 2010. On that same date, Mr. R[Redacted] contacted the insurer regarding the proper steps to initiate a workers' compensation claim.

15. On January 16, 2020, the claimant's spouse drove him to his appointment with Dr. Sofish. While en route to the appointment, they were involved in a motor vehicle accident (MVA). The MVA occurred when another driver struck the passenger side of the claimant's vehicle.

16. At the time of the MVA, the claimant did not seek emergency medical treatment. The claimant testified that after the MVA he developed other symptoms. These new symptoms included headaches, numbness and tingling down both arms and down both legs, and right shoulder pain.

17. Despite the MVA, the claimant attended his January 16, 2020 appointment with Dr. Sofish, as scheduled. At that time, the claimant reported that due to lifting heavy logs on January 10, 2020, he began to have pain in his right lower back that radiated into his right leg. The claimant described the pain as stabbing and burning. Dr. Sofish recommended the use of ibuprofen and Tylenol and placed the claimant on restricted work duty of no lifting over five pounds. Dr. Sofish also noted that he would need to review the prior MRI results. In that same medical record, Dr. Sofish noted that the claimant arrived utilizing a cane. The claimant testified that he sometimes uses a cane because of balance issues. The claimant further testified that at the January 16, 2020 appointment, Dr. Sofish pushed the claimant's legs in such a way that it caused the claimant pain.

18. The claimant returned to Dr. Sofish on January 21, 2020. On that date, Dr. Sofish addressed the claimant's prior lumbar disc diagnosis. Dr. Sofish described the claimant as becoming "somewhat verbally hostile". In addition, at that time, the claimant informed Dr. Sofish he felt he "was not receiving good care". The claimant and Dr. Sofish agreed that the claimant would seek care with another provider. The WC 164 form of that date indicates that Dr. Sofish discharged the claimant from his care because the claimant

was “hostile”. The claimant did not return to Dr. Sofish after January 21, 2020. No other ATP was authorized by the respondents.

19. The claimant testified that since he reported the January 10, 2020 incident to the employer, the claimant’s medical treatment has included physical therapy, chiropractic treatment, and treatment with a pain specialist.

20. On January 21, 2020, Mr. R[Redacted] completed the First Report of Injury or Illness that identified a date of injury as January 13, 2020.

21. Following a referral from his VA physician, Dr. Scow, on February 25, 2020, the claimant was seen by Jeffrey Johnson, DC-FNP with Colorado Injury and Pain Specialists. The claimant reported to Mr. Johnson that he had right sided cervical pain, right sided lumbar pain, right sided thoracic pain, pain in his right leg, right arm, and right hand. Mr. Johnson noted there was restricted range of motion of both the claimant’s cervical spine and lumbar spine. Mr. Johnson diagnosed, *inter alia*, intervertebral disc displacement in the lumbosacral region and lumbosacral disc disorders with radiculopathy. He recommended physical therapy and a possible transforaminal epidural injection. Mr. Johnson also referenced a Vertiflex procedure. The claimant testified that he understands this procedure would involve placing a “bridge” in his back.

22. The claimant returned to Mr. Johnson on March 24, 2020. At that time, he reported that his pain had decreased. In addition, the claimant wished to further discuss the Vertiflex procedure. Mr. Johnson made a referral to Dr. Kirk Clifford for a surgical consultation.

23. On March 25, 2020, the claimant was seen by Dr. Christine Welsh at Primary Care Partners. At that time, the claimant reported ongoing pain in his “whole spine”. Dr. Walsh administered osteopathic manipulative treatment (OMT).

24. On July 7, 2020, the claimant attended an independent medical examination (IME) with Dr. Brian Reiss. In connection with the IME, Dr. Reiss reviewed the claimant’s medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Reiss opined that the claimant was not injured at work. He further opined that the claimant’s current symptoms are due to a combination of the claimant’s preexisting chronic pain and the January 16, 2020 MVA. Dr. Reiss’s testimony was consistent with his written report.

25. Dr. Reiss testified that the claimant has a significant prior history of back pain. Dr. Reiss reiterated his opinion that the claimant did not suffer a new injury while working for the employer. In support of this opinion, Dr. Reiss stated that chronic soreness with pain does not constitute an injury.

26. The claimant testified that he was injured on December 13, 2019 and reported that injury to his supervisor on December 16, 2019. The ALJ has considered all evidence and testimony presented at the hearing and finds that the incident that resulted in the claimant’s request for medical treatment and subsequent trip to see Dr. Sofish, occurred on January 10, 2020. The ALJ finds that there was no incident or injury in December 2019.

27. The claimant asserts that he is entitled to temporary total disability (TTD) benefits beginning December 14, 2019, and ongoing until terminated by law; (with the excluded dates of December 20, 2019; December 23, 2019; and January 10, 2019). The excluded dates are based upon the claimant's belief that he was injured on December 13, 2019 and worked for the employer on those dates.

28. With regard to the January 10, 2020, alleged injury, the ALJ credits the medical records, the testimony of Mr. R[Redacted], and the text message exchanges. Particularly, the ALJ notes that in his text message on January 12, 2020, the claimant did not mention concerns with his back. In addition, the ALJ credits the opinions of Dr. Reiss. Furthermore, the ALJ does not find the claimant's testimony to be credible or persuasive. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he suffered a compensable injury on January 10, 2020. In addition, the ALJ notes that the claimant has a long history of low back symptoms. The ALJ is not persuaded that the claimant's work activities on January 10, 2020 aggravated, accelerated, or combined with the claimant's preexisting low back condition to necessitate medical treatment.

29. With regard to the January 16, 2020, MVA and related injuries, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he was in the quasi-course of employment at the time of the MVA. First, as noted above the claimant has failed to demonstrate that he suffered a compensable injury on either December 13, 2019 or January 10, 2020. Although the claimant was en route to his appointment with Dr. Sofish on January 16, 2010, the ALJ finds that there must first be a compensable injury before applying the quasi-course of employment doctrine to a subsequent injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." See *H & H Warehouse v. Vicory*, *supra*.

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an injury on December 13, 2019. As found, there was no incident that occurred on December 13, 2019. As found, the medical records, the testimony of Mr. R[Redacted], the text message exchanges, and the opinions of Dr. Reiss are credible and persuasive.

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an injury on January 10, 2020. As found, the claimant's work activities did not aggravate, accelerate, or combine with his preexisting low back condition. As found, the medical records, the testimony of Mr. R[Redacted], the text message exchanges, and the opinions of Dr. Reiss are credible and persuasive.

7. Under the quasi-course of employment doctrine injuries sustained while undergoing or traveling to and from authorized medical treatment are compensable, even though they occur outside the ordinary time and place limitations of normal employment. *Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo. App. 1998); *Schreiber v. Brown & Root, Inc.*, 888 P.2d 274 (Colo. App. 1993).

8. Colorado courts recognize the quasi-course of employment doctrine. This legal construct provides that injuries sustained while traveling to and from appointments for authorized medical treatment are compensable. *Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo.App. 1993). The doctrine is restricted to injuries arising out of "authorized" treatment. *Schrieber v. Brown & Root, Inc.*, 888 P.2d 274, 278 (Colo.App. 1993). The rationale for this principle is that, because an employer is required to provide medical treatment, and because the claimant is required to submit to treatment in order to receive benefits, travel to receive authorized treatment is an "implied part of the employment contract." *Turner v. Industrial Claim Appeals Office*, 111 P.3d 534 (Colo. App. 2004); *Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo. App. 1993); *Bopp v. Garden Square Assisted Living W.C. No. 4-893-767* (ICAO, Feb. 6, 2014). The quasi-course of employment doctrine provides "the requisite connection between the employment and an injury that would not otherwise be considered to have arisen out of

and in the course of employment.” *Price Mine Service, Inc. v. Industrial Claim Appeals Office*, 64 P.3d 936 (Colo. App. 2003).

9. However, the doctrine is not limited to injuries sustained while actually engaged in a particular medical treatment explicitly "prescribed" by the authorized treatment physician. To the contrary, the quasi-course of employment doctrine applies to post-injury activities undertaken by the employee which, although they take place outside the time and space limits of the employment, and would not be considered employment activities for usual purposes, are nevertheless related to the employment in the sense that they are necessary or reasonable activities that would not have been undertaken but for the compensable injury. *Excel Corp. v. Industrial Claim Appeals Office*, supra; *Travelers Insurance Co. v. Savio*, 706 P.2d 1258 (Colo. 1985); *In re Martin*, W.C. No. 4-924-715-03 (ICAO, Oct. 11, 2018).

10. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered a compensable injury pursuant to the quasi-course of employment doctrine. The ALJ notes that the line of cases addressing the quasi-course of employment doctrine recognizes a compensable injury from which the subsequent quasi-course injury arises. Therefore, the ALJ concludes that for the January 16, 2020 MVA to be considered a compensable injury under the quasi-course of employment doctrine, there must have first been a compensable injury. As the ALJ has concluded that the claimant did not suffer a compensable injury on January 10, 2020, there is no injury from which a quasi-course of employment injury may flow.

ORDER

It is therefore ordered that the claimant's claim for benefits is denied and dismissed.

Dated this 21st day of September 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- I. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits from December 13, 2019 to July 5, 2020.
- II. Whether Claimant's issue for TTD benefits was ripe and, if not, whether Respondents are entitled to attorney fees and costs pursuant to §8-43-211(3), C.R.S.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was employed by Employer and had an admitted work-related injury on March 7, 2019, injuring his left arm, shoulder, and neck.
2. Claimant came under the care of Dr. John Sacha and Dr. Theodore Villavicencio.
3. Dr. Sacha and Dr. Villavicencio are authorized providers who took care of Claimant and treated his work injury. As a result, Dr. Sacha and Dr. Villavicencio each became an attending physician.
4. On August 13, 2019, Claimant was initially given work restrictions by Dr. Villavicencio of no lifting over 10 pounds and no push/pull over 20 pounds. (Claimant's Exhibit 15).
5. Claimant continued to work at the modified job until the Employer closed on April 24, 2019 and he stopped working. Respondents began paying TTD on April 25, 2019. (See Respondents' Exhibit A, FAL at page A-1).
6. On August 8, 2019, Dr. Sacha stated that Claimant was ready for a full duty release trial. (Claimant's Exhibit 16). Dr. Sacha also stated that Claimant had a full duty release on November 8, 2019, December 5, 2019, and December 12, 2019. (*Id.*)
7. Claimant testified that Dr. Villavicencio told him on December 12, 2019 and December 13, 2019, that he still had lifting restrictions. The ALJ finds this testimony not credible as Dr. Villavicencio's medical records show that, even though the December 12, 2019 note states that Claimant has a 20-pound lift restriction, the note states that Claimant was not seen on that date and the December 13, 2019 note and the WC164 reflects that Dr. Villavicencio gave him a full duty release on that date. (Exhibit 15 and Exhibit B at B-18).
8. The ALJ finds that Dr. Villavicencio gave Claimant a full duty release on December 13, 2019. (*Id.*)

9. Marchelle R[Redacted], [Insurer Redacted] claim professional, testified credibly that she filed the Final Admission of Liability (FAL) on January 13, 2020, based on Dr. Villavicencio's maximum medical improvement (MMI) note dated December 13, 2019 and Dr. Sacha's rating. (See Exhibit A).
10. Claimant underwent a DIME and the DIME doctor found he was not at MMI. But the DIME doctor also stated that Claimant was "capable of full duty but should limit working above the shoulder level if [sic] possible." (Exhibit B at B-11).
11. After the DIME was completed and the DIME doctor found Claimant was not at MMI, Ms. R{Redacted} filed the General Admission of Liability (GAL) on May 1, 2020. She did not restart TTD benefits because the ATP had given Claimant a full duty release. (Exhibit B).
12. On May 15, 2020, Claimant filed an Application for Hearing and endorsed the issue of TTD as of December 13, 2019. Respondents responded to Claimant's Application.
13. Shortly thereafter Respondents set a prehearing. The prehearing was set to address Respondents' motion to strike Claimant's application for hearing. Respondents asserted that the issue of TTD was not ripe because Claimant was not entitled to TTD pursuant to *Burns v. Robinson Dairy, Inc.*, 911 P.2d 661 (Colo. App. 1995) because Claimant was released to full duty. Prehearing ALJ Gallivan concluded the issue of TTD was ripe and denied Respondents' motion. (Exhibit F).
14. On July 6, 2020, Dr. Villavicencio gave Claimant new work restrictions which included no reaching above shoulders with affected extremity. He also retracted his full duty release by placing Claimant on modified duty. (Exhibit D).
15. On July 16, 2020, Ms. R{Redacted} filed a new GAL and restarted TTD benefits as of July 6, 2020. (Exhibit C).
16. Ms. R[Redacted] testified that she retained counsel because Claimant filed the instant Application for TTD benefits and that the attorney charges of \$2,206.50 were related to the defense of the Application. (Exhibit E).
17. When Claimant filed his Application for Hearing and endorsed the issue of TTD, there was no legal impediment that prevented Claimant from pursuing a claim for TTD benefits at a hearing. Nothing about the issue of TTD was uncertain or contingent upon a future matter that had to be addressed. The mere fact that Respondents had a defense to Claimant's claim for TTD benefits — Claimant had been released to full duty by an attending physician — made the issue a factual dispute and subject to resolution by an ALJ. As a result, the issue of TTD was ripe for adjudication.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits from December 13, 2019 to July 5, 2020.

Section 8-42-105(3)(c), C.R.S., provides that TTD benefits shall continue until the attending physician gives the employee a written release to return to regular employment. The termination of TTD benefits under any of the enumerated statutory

conditions is mandatory. *Burns v. Robinson Dairy, Inc.*, 911 P.2d 661 (Colo. App. 1995).

If the attending physician issues conflicting or ambiguous opinions concerning release, or there are conflicting opinions between multiple attending physicians, the ALJ may resolve the issue as a matter of fact. See *Burns v. Robinson Dairy, Inc.*, *supra*. The determination of whether the attending physician has issued a release to return to work is a question of fact for resolution by the ALJ. *Id.*

As found, both Dr. Sacha and Dr. Villavicencio are each an authorized provider who took care of Claimant and treated his work injury. As a result, each was found to be an attending physician. As further found, both Dr. Sacha and Dr. Villavicencio released Claimant to full duty as of December 13, 2019. As a result, the ALJ finds and concludes Respondents established by a preponderance of the evidence that Claimant was released to full duty on December 13, 2019, and his right to temporary disability benefits terminated until his full duty release was retracted as of July 6, 2020, when Dr. Villavicencio limited Claimant to performing modified duty. Therefore, Claimant is not entitled to TTD from December 13, 2019 through July 5, 2020.

II. Whether the issue of TTD benefits was ripe and, if not, whether Respondents are entitled to attorney fees and costs pursuant to §8-43-211(3), C.R.S.

Section 8-43-211(3), C.R.S. provides that:

If an attorney requests a hearing or files a notice to set a hearing on an issue that is not ripe for adjudication at the time the request or filing is made, the attorney may be assessed the reasonable attorney fees and costs of the opposing party in preparing for the hearing or setting.” such request or filing is made, such person shall be assessed the reasonable attorney fees and costs of the opposing party in preparing for such hearing or setting.

The term “ripe for adjudication” is not defined by the statute. That said, in *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3d 1178 (Colo. App. 2006) the court noted that generally ripeness tests whether an issue is real, immediate, and fit for adjudication. Under that doctrine, adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury, which may never occur.

Here, Respondents asserted that Claimant’s right to TTD ceased upon being released to full duty on December 13, 2019 pursuant to Section 8-42-105(3)(c), C.R.S. The successful application of the statute terminating Claimant’s right to TTD required Respondents to establish that an attending physician released Claimant to full duty or if there were multiple attending physicians whether each attending physician released Claimant to full duty. These were the factual showings Respondents had to establish to terminate Claimant’s TTD as of December 13, 2019. The Claimant did not have to determine the likelihood of Respondents succeeding on their defense to Claimant’s

claim to TTD benefits. The likelihood of a party's success is relevant to the question of merit, but not to the question of ripeness. As a result, Respondents failed to establish by a preponderance of the evidence that Claimant's claim for TTD was not ripe and that Respondents are entitled to attorney fees and costs.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for TTD benefits from December 13, 2019 through July 5, 2020, is denied and dismissed.
2. Respondents claim for attorney fees and costs is denied and dismissed.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 21, 2020

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Bryan D. Counts, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) for her admitted October 4, 2013 right knee injury.

2. Whether Claimant has demonstrated by a preponderance of the evidence that the right total knee arthroplasty with a custom implant requested by Authorized Treating Physician (ATP) Mark Tuttle, M.D. is reasonable, necessary and causally related to her admitted October 4, 2013 right knee injury.

FINDINGS OF FACT

1. On October 4, 2013 Claimant suffered an admitted right knee injury during the course and scope of her employment with Employer. Claimant subsequently underwent extensive conservative treatment for her right knee condition. She ultimately required two right knee surgeries. Specifically, on November 1, 2016 Claimant underwent a partial knee replacement with Jeremy R. Kinder, M.D. On December 13, 2016 Dr. Kinder performed a debridement and manipulation procedure on Claimant's right knee.

2. Claimant continued to experience right knee pain. Authorized Treating Physician (ATP) Brian Williams, M.D. referred Claimant to surgeon Rajesh Bazaz, M.D. for an examination. Dr. Bazaz determined that Claimant's patellofemoral replacement had gone well and there was no infection. Nevertheless, Claimant experienced soft tissue discomfort. Dr. Bazaz did not recommend additional surgery and noted that 'conversion to a knee replacement' would not "help the situation."

3. On June 1, 2018 Dr. Williams referred Claimant to National Jewish Health for allergy testing because of her continuing right knee symptoms. On August 16, 2018 Claimant visited Annyce Mayer, M.D., M.S.P.H. for patch allergy tests involving various metals used in orthopedic hardware. Dr. Mayer determined that Claimant reacted to the metals of chromium and manganese as well as components of bone cement. Nevertheless, Dr. Mayer determined "[Claimant's] localized pain and swelling laterally has a dysesthetic quality is not typical for sensitization and raises concern for possible neurogenic contributor as well." Claimant also underwent a lymphocyte proliferation test to assess possible allergies to nickel and cobalt. She had a negative result.

4. On August 22, 2018 Claimant returned to Dr. Kinder for an examination. Dr. Kinder recommended Neurontin and a visit to a pain doctor for treatment options prior to a total knee replacement.

5. On July 12, 2018 Respondents requested a 24-Month Division Independent Medical Examination (DIME). Bryan Counts, M.D. was confirmed as the DIME physician and conducted his initial DIME on October 17, 2018. He concluded that Claimant had not reached Maximum Medical Improvement (MMI). On physical examination Dr. Counts documented active range of motion from 0-120 degrees, no erythema, small effusion, mild diffuse swelling, no increase warmth and negative Lachman's and McMurray's tests. Nevertheless, Dr. Counts explained that Claimant's "right knee symptoms are still very significant 23 months after patellofemoral arthroplasty, undoubtedly from the allergy to two or more components of the knee hardware and bone cement. The definite next step in treatment would be a total knee arthroplasty and that is my recommendation."

6. Based on Dr. Williams' referral, Claimant visited orthopedic surgeon Craig Loucks, M.D. for an evaluation. Dr. Loucks considered Claimant's allergy tests and the conversion of her partial knee replacement to a total knee arthroplasty. Dr. Loucks performed x-rays of Claimant's right knee. The x-rays revealed a "patellofemoral arthroplasty components to be well sized and position with no sign of failure or loosening noted. Medial and lateral compartments revealed reasonable preservation of the joint space with no acute findings noted." Dr. Loucks remarked that "[u]nfortunately, [Claimant] has been led down this path of thinking that her patellofemoral replacement is the source of pain because a physician at National Jewish tested her for metal and cement allergy. She tested positive for cement allergy on the skin patch test and for some reason they continue to connect the dots and somehow are trying to tell her that she needs a revision because of the skin patch test. This is completely ludicrous in our opinion."

7. Respondents sent inquiries to Dr. Kinder regarding his recommendations for Claimant's medical treatment. On January 24, 2019 Dr. Kinder determined that Claimant likely reached MMI, but did not provide a specific date. Dr. Kinder explained that he would not recommend a total knee arthroplasty based on Claimant's allergy tests. He suggested additional testing because the allergy tests were invalidated. Dr. Kinder specifically remarked that he was uncertain if "patch test was the best way to determine this." At a subsequent visit he reiterated "I think we are still in the infancy of understanding what really is going on with these allergies and doing a revision on her to a total knee I think would be unpredictable." Dr. Kinder recommended further allergy testing through Orthopedic Analysis from Chicago. He commented that the only other option for further allergy assessment would be T lymphocyte testing.

8. On April 4, 2019 Dr. Kinder testified through a pre-hearing evidentiary deposition in this matter. He explained that patch testing for allergies is not a validated procedure. Dr. Kinder testified that, if Claimant's T lymphocyte test from Orthopedic Analysis came back positive, it would give a stronger case for revision. However, he remarked that performing a revision surgery with a custom implant is "very unpredictable, and I think the outcomes of having a successful surgery isn't as predictable as having a plethora of other implants available." On April 19, 2019 Claimant proceeded with the T lymphocyte allergy testing recommended by Dr. Kinder.

9. On August 28, 2019 Karen S. Pacheco, M.D. M.S.P.H. from National Jewish health issued a report summarizing Claimant's metal and cement allergies. She explained that Claimant is "sensitized to manganese, cobalt and chromium as well as to bone cement." She commented that, if revision surgery is considered, a "press-fit titanium coated cobalt/chromium implant" is the best choice.

10. On September 18, 2019 Dr. Kinder reviewed the T lymphocyte testing performed by Orthopedic Analysis. In response to interrogatories from Respondents, Dr. Kinder did not recommend a total knee replacement based on the results of the T lymphocyte allergy test. He reiterated that Claimant had reached MMI for her October 4, 2013 injury.

11. On September 13, 2019 Claimant visited Mark S. Tuttle, M.D. for an evaluation of a possible right knee arthroplasty. Dr. Tuttle stated that Claimant was suffering right knee pain with a history of a right knee replacement. He noted that Claimant had a difficult situation with regard to the cement, manganese and chromium allergies. Dr. Tuttle commented that Claimant was severely debilitated by her pain. He recommended a total right knee replacement. Dr. Tuttle specifically determined that Claimant required a custom titanium press fit knee revision without manganese. He noted that he would fabricate a custom pressed-fit titanium knee.

12. On November 7, 2019 Claimant underwent a follow-up DIME with Dr. Counts. Dr. Counts maintained that Claimant had not reached MMI and recommended the right knee arthroplasty suggested by Dr. Tuttle. He explained that revision surgery was critical for Claimant's well-being due to her continued loss of function and pain. Dr. Counts remarked that Claimant suffers intermittent swelling of her knee and great difficulty on stairs. Her right knee also feels unstable at times and she can walk only about 15-25 minutes at a time. Dr. Counts summarized that Claimant's right knee continued to be problematic and it was very likely due to "allergy to the components of the knee hardware and/or bone cement." He relied on Dr. Pacheco's opinion endorsing revision surgery due to Claimant's magnesium and chromium allergies.

13. Dr. Counts recognized that Claimant's recent imaging did not reveal any loosening of her current prosthesis. He also documented the Orthopedics Analysis negative T lymphocyte and bone cement testing, with the exception of a mild reaction to nickel. Dr. Counts noted that Claimant underwent a genicular nerve block that did not relieve her symptoms. He acknowledged that orthopedic surgeons Drs. Loucks and Bazaz did not support revision surgery. Dr. Counts noted that "the smallness of the effusion and her fairly good range of motion does give me pause as to the likelihood that her ongoing post-op pain is from the allergy." However, Dr. Counts remarked that the surgery recommended by Dr. Tuttle would likely be 60-80% successful. Despite the lack of loosening or laxity in the right knee instrumentation, Dr. Counts determined that Claimant required surgery to improve both her function and quality of life. He ultimately concluded that, despite surgical risks, Claimant could benefit greatly from surgery. Dr. Counts acknowledged that Claimant would be at MMI if the revision surgery was not authorized.

14. On February 11, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. Counts. He also testified at the hearing in this matter. Dr. Counts maintained that Claimant should proceed with the proposed total right knee arthroplasty. He explained that he based his opinion on the literature and allergist Dr. Pacheco's report. Dr. Counts noted that Claimant met the criteria for joint failure after her initial surgery. He remarked that the proposed right knee arthroplasty had about a 60-80% likelihood of resolving Claimant's symptoms. Nevertheless, Dr. Counts acknowledged that the results of a total knee replacement are unpredictable and he did not know whether Claimant's pain was actually caused by a hypersensitivity to metal or bone cement. He also recognized that a total knee replacement could worsen Claimant's condition. Although Dr. Counts acknowledged the risks of a total knee replacement, he commented that the procedure was warranted because of Claimant's persistent pain and functional limitations.

15. Kathleen D'Angelo, M.D. testified at the hearing in this matter. Dr. D'Angelo conducted an independent medical examination of Claimant on March 28, 2018. On April 24, 2018 she performed a Rule 16 review regarding the proposed total knee arthroplasty. On April 4, 2019 Dr. D'Angelo conducted a second independent medical examination. She concluded that Dr. Counts erroneously determined Claimant has not reached MMI. Dr. D'Angelo also concluded that the proposed revision surgery requested by Dr. Tuttle was not reasonable, necessary or causally related to Claimant's October 4, 2013 admitted industrial injury.

16. Dr. D'Angelo testified that at her March 28, 2018 independent medical examination Claimant had good range of motion, no erythema, no effusion, no popliteal swelling and minimal tenderness to the right knee. She also noted that Claimant did not exhibit right knee laxity or pain behaviors and there were no documented complications regarding the device used for Claimant's partial knee arthroplasty. She remarked that, at her subsequent independent medical examination on April 4, 2019, Claimant's objective symptoms were not very different from her prior examination. Dr. D'Angelo specified that Claimant had excellent functional range of motion and updated records did not document complications with her partial knee prosthesis.

17. Dr. D'Angelo reviewed the DIME reports of Dr. Counts. She remarked that it was unclear why Dr. Counts recommended a total knee replacement when there were no physiological indications for the procedure. Dr. D'Angelo testified that the medical literature cited by Dr. Counts in his DIME reports failed to support his recommendation for a total right knee replacement. She noted that the article cited by Dr. Counts "presents an argument regarding some systemic signs: general pruritis, metal taste. Again, this article does not indicate the patient's sole subjective complaint of pain." Dr. D'Angelo emphasized that a positive allergy test does not reflect prosthesis failure. She commented that "[t]o date, there has been no allergy study for components of implants that has been validated." Dr. D'Angelo explained that the allergy tests in the present case validly reflect hypersensitivity. However, she specified "[t]hat there has been no validity proven in any of the literature, be it the allergy immunology or the orthopedic or sports medicine literature, that shows the presence of hypersensitivity denotes a predictive value for prosthesis failure. They are two separate results."

18. Dr. D'Angelo further testified that "the way you make a determination as to whether or not a partial or total prosthesis has to be replaced is that there's prosthesis failure. We are talking...about loosening, we are talking about infection, we are talking laxity. Those would be indications for revising a prosthesis." However, Claimant did not exhibit any of the preceding symptoms. Dr. D'Angelo noted that Dr. Counts credited Claimant's subjective symptoms over objective findings to support the total knee replacement. She remarked that Claimant would not likely benefit from the proposed total knee replacement based on her past lack of success with treatment. Dr. D'Angelo specified that Claimant failed to respond to conservative measures including injection therapy, genicular injections, manipulation under anesthesia and open debridement after prosthesis placement. She summarized that Claimant reached MMI one week after genicular injections on March 25, 2019. Dr. D'Angelo concluded that Claimant does not require maintenance medical care and assigned a 20% scheduled permanent impairment rating for the right lower extremity.

19. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Counts that Claimant has not reached MMI as a result of her admitted October 4, 2013 right knee injury. After Claimant's admitted injury she underwent two right knee surgeries but continued to experience right knee pain. Dr. Mayer performed patch allergy tests for various metals used in orthopedic hardware. She determined that Claimant reacted to the metals of chromium and manganese as well as components of bone cement.

20. On October 17, 2018 DIME Dr. Counts concluded that Claimant had not reached MMI. He explained that Claimant's "right knee symptoms are still very significant 23 months after patellofemoral arthroplasty, undoubtedly from the allergy to two or more components of the knee hardware and bone cement." He suggested that the next step in treatment was to perform a total right knee arthroplasty. He commented that Claimant was severely debilitated by her pain. On November 7, 2019 Claimant underwent a follow-up DIME with Dr. Counts. Dr. Counts maintained that Claimant was not at MMI and recommended the right knee arthroplasty suggested by Dr. Tuttle. He reasoned that Claimant's right knee disability arose from an allergic reaction to magnesium and chromium as explained by Dr. Pacheco. Dr. Counts explained that revision surgery was critical for Claimant's well-being due to her continued loss of function and pain.

21. In contrast, Dr. D'Angelo remarked that it was unclear why Dr. Counts recommended a total knee replacement when there were no physiological indications for the procedure. Dr. D'Angelo testified that the medical literature cited by Dr. Counts in his DIME reports failed to support his recommendation for a total knee replacement. She noted that Dr. Counts credited Claimant's subjective symptoms over objective findings to support the total knee replacement. She remarked that Claimant would not likely benefit from the proposed total knee replacement based on her past lack of success with treatment. Dr. D'Angelo specified that Claimant failed to respond to conservative measures including injection therapy, genicular injections, manipulation under anesthesia and open debridement after prosthesis placement. She summarized that Claimant reached MMI one week after genicular injections on March 25, 2019.

22. Despite Dr. D'Angelo's analysis, Respondents have failed to demonstrate that Dr. Counts improperly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) or otherwise erred in concluding that Claimant has not reached MMI. Dr. D'Angelo's disagreement about whether Claimant has reached MMI or requires additional treatment is insufficient to demonstrate that Dr. Counts' conclusion was clearly erroneous. Notably, Dr. D'Angelo remarked that, because Dr. Counts improperly credited Claimant's subjective symptoms over objective findings and Claimant has failed to respond to conservative treatment, she reached MMI in late March 2019. Furthermore, although multiple surgeons disagree with Dr. Counts about whether the proposed total knee arthroplasty is reasonable, necessary and causally related to Claimant's October 4, 2013 industrial injury, disagreements about future medical treatment do not constitute clear and convincing evidence. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Counts' MMI determination was incorrect.

23. Claimant has failed to demonstrate that it is more probably true than not that the total knee arthroplasty with a custom implant requested by Dr. Tuttle is reasonable, necessary and causally related to her admitted October 4, 2013 right knee injury. On September 13, 2019 Dr. Tuttle stated that Claimant was suffering right knee pain with a history of a right knee replacement. He noted that Claimant had a difficult situation with regard to the cement, manganese and chromium allergies. Dr. Tuttle commented that Claimant was severely debilitated by her pain. He recommended a total right knee replacement. Dr. Tuttle specifically determined that Claimant required a custom titanium press fit knee revision without manganese. Similarly, Dr. Counts recommended the right knee arthroplasty suggested by Dr. Tuttle. He explained that revision surgery was critical for Claimant's well-being due to her continued loss of function and pain. Dr. Counts summarized that Claimant's right knee continued to be problematic and it was very likely due to "allergy to the components of the knee hardware and/or bone cement." He relied on the opinion of Dr. Pacheco endorsing revision surgery due to Claimant's magnesium and chromium allergies.

24. Despite Dr. Tuttle's recommendation and the supporting opinions of Drs. Counts and Pacheco, the bulk of the evidence reflects that the proposed right total knee arthroplasty is not reasonable, necessary or causally related to Claimant's October 4, 2013 right knee injury. Orthopedic surgeon Dr. Loucks considered Claimant's allergy tests and the conversion of her partial knee replacement to a total knee replacement. He noted that x-rays revealed the patellofemoral arthroplasty components were well-positioned with no sign of failure or loosening. Dr. Loucks remarked that, unfortunately Claimant had been led to believe "that her patellofemoral replacement is the source of pain She tested positive for cement allergy on the skin patch test and for some reason they continue to connect the dots and somehow are trying to tell her that she needs a revision because of the skin patch test. This is completely ludicrous in our opinion." Moreover, Dr. Kinder explained that he would not recommend a total knee arthroplasty based on Claimant's allergy tests. He suggested additional testing because the allergy tests were invalidated. Dr. Kinder subsequently did not recommend a total right knee replacement based on negative T lymphocyte allergy testing. Furthermore, Dr. Bazaz determined that Claimant's patellofemoral replacement had gone well and

there was no infection. He did not recommend additional surgery and noted that “conversion to a knee replacement” would not “help the situation.” Finally, Dr. D’Angelo explained that “the way you make a determination as to whether or not a partial or total prosthesis has to be replaced is that there’s prosthesis failure” such as loosening, infection and laxity. However, Claimant did not exhibit any of the preceding symptoms. Dr. D’Angelo summarized that Claimant would not likely benefit from the proposed total knee replacement based on her past lack of success with treatment.

25. In addition to the persuasive opinions of Drs. Loucks, Kinder, Bazaz and D’Angelo, Dr. Counts acknowledged that the results of a total knee replacement are unpredictable and he did not know whether Claimant’s pain was actually caused by a hypersensitivity to metal or bone cement. The persuasive medical opinions suggest that the allergy tests performed at National Jewish Health do not conclusively establish prosthesis failure, the need for a total knee replacement or ongoing treatment as a result of the October 4, 2013 industrial incident. Moreover, Claimant’s medical records do not document prosthesis failure and establish the need for a total knee replacement. Accordingly, the proposed right knee arthroplasty is not reasonable, necessary or causally related to Claimant’s admitted October 4, 2013 right knee injury. Claimant’s request for a right knee total arthroplasty is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); cf. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) (“right to workers’ compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment”). While scientific

evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable left shoulder injury during the course and scope of her employment with Employer on May 22, 2019. Initially, Claimant explained that she injured her left shoulder while cleaning up after a patient in the shower room. Claimant detailed that on May 22, 2019 she was in a squatting position, cleaning the floor underneath the patient's chair with her right hand while holding onto the top of the chair with her left hand. While standing up, Claimant felt immediate pain in her left lateral biceps area. The records reveal that there is a dispute regarding the specific mechanism of Claimant's injury. The discrepancy involves the amount of force and position of Claimant's left arm when she lifted herself from the squatted position. The initial history suggests that Claimant placed all her weight on her left arm/shoulder to help herself up. Additionally, Claimant testified that her hand was located well above her head while standing up. Nevertheless, Claimant's testimony regarding the position of her arm in relation to the chair was inconsistent with the medical records and directly conflicts with what she represented and demonstrated to Dr. Cebrian during the independent medical examination. Because of the inconsistencies and the lack of a causal analysis by Drs. Hughes and Lugliani, the persuasive opinion of Dr. Cebrian reflects that Claimant's work activities on May 22, 2019 did not aggravate, accelerate or combine with a pre-existing condition to produce a need for medical treatment.

9. As found, Claimant's June 10, 2019 left shoulder MRI reflected a moderate partial interstitial tear of the midportion of the supraspinatous insertion. Dr. Cebrian credibly testified that there was insufficient force to cause an acute injury to the rotator cuff based on Claimant's position and use of her arm while standing from a squatting position. The mechanism was minimal and the MRI showed no acute tear of the tendon. Rather, the MRI reflected a degenerative interstitial tear that Dr. Cebrian characterized as incidental and the result of the natural aging process. Dr. Cebrian persuasively noted that Claimant's interstitial tear began inside the tendon and did not extend to the outer edge. An interstitial tear is in the intrasubstance of the tendon and is typically degenerative in nature. In contrast, most traumatic tears begin at the outer edge and then extend into the tendon. Dr. Cebrian specified that no external event was necessary for the MRI findings and they could be explained by the aging process.

10. As found, in contrast, Dr. Hughes diagnosed Claimant with a left shoulder strain/sprain with rotator cuff tear secondary to work activities on May 22, 2019. Dr. Hughes specifically disagreed with Dr. Cebrian and determined the forces and mechanism of injury were consistent with a rotator cuff tear. Similarly, Dr. Lugliani repeatedly noted on the M164 form that objective findings were consistent with Claimant's history and/or mechanism of injury. However, Drs. Hughes and Lugliani specifically failed to consider that the MRI findings suggested a degenerative interstitial tear that began inside the tendon and did not extend to the outer edge. Notably, an

interstitial tear is in the intrasubstance of the tendon and is typically degenerative in nature.

11. As found, although physicians provided Claimant with diagnostic testing, treatment and work restrictions based on her reported symptoms, the conclusion that Claimant suffered a compensable injury is not warranted. The lack of a scientific theory and causation analysis reveal that Claimant did not likely suffer a left shoulder injury while performing her job duties for Employer on May 22, 2019. Claimant's work activities on May 22, 2019 did not aggravate, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

Proposed Surgery

13. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier*, W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

14. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the total knee arthroplasty with a custom implant requested by Dr. Tuttle is reasonable, necessary and causally related to her admitted October 4, 2013 right knee injury. On September 13, 2019 Dr. Tuttle stated that Claimant was suffering right knee pain with a history of a right knee replacement. He noted that Claimant had a difficult situation with regard to the cement, manganese and chromium allergies. Dr. Tuttle commented that Claimant was severely debilitated by her pain. He recommended a total right knee replacement. Dr. Tuttle specifically determined that Claimant required a custom titanium press fit knee revision without manganese. Similarly, Dr. Counts recommended the right knee arthroplasty suggested by Dr. Tuttle. He explained that revision surgery was critical for Claimant's well-being due to her continued loss of function and pain. Dr. Counts summarized that Claimant's right knee continued to be problematic and it was very likely due to "allergy to the components of the knee hardware and/or bone cement." He relied on the opinion of Dr. Pacheco endorsing revision surgery due to Claimant's magnesium and chromium allergies.

15. As found, despite Dr. Tuttle's recommendation and the supporting opinions of Drs. Counts and Pacheco, the bulk of the evidence reflects that the proposed right total knee arthroplasty is not reasonable, necessary or causally related to

Claimant's October 4, 2013 right knee injury. Orthopedic surgeon Dr. Loucks considered Claimant's allergy tests and the conversion of her partial knee replacement to a total knee replacement. He noted that x-rays revealed the patellofemoral arthroplasty components were well- positioned with no sign of failure or loosening. Dr. Loucks remarked that, unfortunately Claimant had been led to believe "that her patellofemoral replacement is the source of pain She tested positive for cement allergy on the skin patch test and for some reason they continue to connect the dots and somehow are trying to tell her that she needs a revision because of the skin patch test. This is completely ludicrous in our opinion." Moreover, Dr. Kinder explained that he would not recommend a total knee arthroplasty based on Claimant's allergy tests. He suggested additional testing because the allergy tests were invalidated. Dr. Kinder subsequently did not recommend a total right knee replacement based on negative T lymphocyte allergy testing. Furthermore, Dr. Bazaz determined that Claimant's patellofemoral replacement had gone well and there was no infection. He did not recommend additional surgery and noted that "conversion to a knee replacement" would not "help the situation." Finally, Dr. D'Angelo explained that "the way you make a determination as to whether or not a partial or total prosthesis has to be replaced is that there's prosthesis failure" such as loosening, infection and laxity. However, Claimant did not exhibit any of the preceding symptoms. Dr. D'Angelo summarized that Claimant would not likely benefit from the proposed total knee replacement based on her past lack of success with treatment.

16. As found, in addition to the persuasive opinions of Drs. Loucks, Kinder, Bazaz and D'Angelo, Dr. Counts acknowledged that the results of a total knee replacement are unpredictable and he did not know whether Claimant's pain was actually caused by a hypersensitivity to metal or bone cement. The persuasive medical opinions suggest that the allergy tests performed at National Jewish Health do not conclusively establish prosthesis failure, the need for a total knee replacement or ongoing treatment as a result of the October 4, 2013 industrial incident. Moreover, Claimant's medical records do not document prosthesis failure and establish the need for a total knee replacement. Accordingly, the proposed right knee arthroplasty is not reasonable, necessary or causally related to Claimant's admitted October 4, 2013 right knee injury. Claimant's request for a right knee total arthroplasty is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome Dr. Counts' DIME opinion that Claimant has not reached MMI for her admitted October 4, 2013 right knee injury.
2. Claimant's request for a right knee total arthroplasty is denied and dismissed.
3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: September 9, 2020.

ISSUES

- I. Has Claimant, by clear and convincing evidence, overcome the DIME's thoracic spine impairment rating?
- II. Has Claimant, by clear and convincing evidence, overcome the DIME's cervical spine impairment rating?
- III. What is Claimant's Average Weekly Wage?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Accident

1. This is an admitted claim for an auto accident. Claimant suffered injuries to both shoulders, but the shoulder injuries are not in dispute herein. Claimant was a 33 year old driver, who was involved a motor vehicle accident ("MVA") on March 12, 2019. Claimant was driving a Ford F350, and was stopped at a traffic light. A minivan was approaching straight towards him, so he reported that he backed up, to minimize impact. The minivan struck the passenger side front light. The airbags did not deploy. Claimant did not hit his head, or lose consciousness. (Ex. D, p. 28).

Claimant's Preexisting Conditions

2. Claimant had a well-documented pre-existing cervical spine condition. A cervical spine MRI from December 2014 showed what appeared to be a fusion of the facet joints at C2-3, C3-4, and C4-5 on both sides and possibly C5-6 on the left. (Ex. E, p. 115).

3. Claimant was diagnosed with arthropathy of the cervical spine facet joints. As of January 2018, he was informed he needed to complete a medical history release form, so that all documentation could be sent to his primary care providers to move forward with a possible disability claim. (Ex. H, p. 122).

4. Claimant went January 17, 2018 for a physical. (Ex. 8, pp. 122-23). It was documented that Claimant's neck lateral rotation was "about 20 degrees bilaterally." *Id. at 123*. There are no other range of motion measurements of the neck mentioned, nor

is it stated that the 20 degrees of lateral rotation was measured consistently with the AMA Guides.

Treatment for the Work Injury

5. Claimant was taken to the emergency room with complaints of pain in his left clavicle and chest. Claimant had some mild paraspinal tenderness in his neck and back, but denied severe pain. His examination showed tenderness in the thoracic and lumbar area. He informed the physician that he had cervical facet syndrome with congenital cervical fusion. (Ex. I, pp. 128-129). It was noted that he had 'normal limited range of motion' (?) of his neck due to his congenital cervical spine fusion. (Resp. Ex, I, pg. 131). "He [Claimant] has some thoracic and lumbar paraspinal tenderness which is extremely mild, but no midline tenderness." No x-rays or CT scans were performed, as the emergency room physician did not deem them necessary. *Id.*

6. Claimant returned to care on April 2, 2019. His ATP was Dr. Cynthia Shafer at UCHealth. Dr. Schafer assessed Claimant with cervical strain and thoracic sprain. She documented that Claimant had pre-existing cervical facet syndrome. (Ex, D, p. 28). Dr. Schafer noted that Claimant subsequently developed neck and upper back tightness, but Claimant had already scheduled an appointment with his primary care physician. *Id.* at 29. Claimant reported to her that "he feels like his back just needs to be popped." *Id.*

7. Dr. Schafer noted that Claimant's increased neck pain which was new, but he had chronic neck stiffness. *Id.* Dr. Schafer noted the following under her examination:

Cervical back: He exhibits decreased range of motion (chronic per ptmost decr L lat flex & L rot)(sic). Tenderness (mild) and deformity (straightened). He exhibits no bony tenderness, no swelling and no spasm.

Thoracic back: He exhibits tenderness (rhomboids and L trap) and bony tenderness (mild mid thoracic processes) He exhibits no swelling, no deformity, and no spasm. (Ex. D, p. 30).

8. On April 9, 2019, Claimant reported new symptoms to his right shoulder, starting when he woke up on April 6, 2019. Claimant reported new weakness and pain. (Ex. D, p. 33).

9. Beginning on April 16, 2019, Claimant began undergoing manual therapy to both his cervical and thoracic spine. (Ex. 7, p. 77). It documents they were working on Claimant's cervical spine and his thoracic spine, particularly from T2 to T8, for joint mobilization. *Id.* Both a hot pack and electrical stimulation were used on Claimant's "cervical and thoracic regions to reduce pain and [minimize] tension." *Id.*

10. Dr. Schafer later noted that Claimant reported new anterior neck/throat and jaw pain on April 30, 2019. Dr. Schafer suggested trigger point injections, which

Claimant had had in the past. Claimant also reported increasing pain in his thoracic spine from mid to lower thoracic spine. Dr. Schafer discussed muscle relaxers, but Claimant reported he had used both suggested medications in the past with no benefit. (Ex. D, p. 41).

11. Claimant was subsequently referred to Dr. Michael Sparr with Accelerated Recovery Specialists for treatment. (Ex. 8). Claimant was referred to him due to only having “some” relief, but nothing significant. *Id.* at 83. Claimant indicated to Dr. Sparr that on a scale of 1 to 10, his pain ranges from a 7 to a 10. He also stated that prior to the accident, his pain was “mostly achy” and around a 4 or 5 out of 10. *Id.* at 84. “He reports that his cervical range of motion has diminished substantially following the accident.” *Id.*

12. Claimant told Dr. Sparr on July 19, 2019, that he still has pain throughout his neck and mid back. *Id.* at 95. Under the objective examination, Dr. Sparr documented that thoracic range of motion was painful in rotation and lateral bending both directions. *Id.* at 96. “The patient has persistent profound cervical and thoracic myofascitis with underlying thoracic facet and costovertebral joint dysfunction and arthralgias.” *Id.*

13. On June 18, 2019, Claimant reported little change in his symptoms to his back and right shoulder. (Ex. D, p. 43). At this time, Claimant reported concerns about his mood and not getting enough sleep. He reported stress and the impact on his relationships and indicated a desire to talk to a counselor. (Ex. D, p. 45). Claimant’s wife had recently had a baby, which may have contributed to Claimant’s fatigue.

14. Claimant had a left shoulder MRI, which showed an acute to subacute mild compression fracture of the posterior superior lateral aspect of the humeral head with bone marrow edema. (Ex. D, p. 48). Dr. Schafer noted that the findings of the MRI could be related, if his arms flew up over his head and back with the impact of the MVA. (Ex. D, p. 50). However, Claimant maintained at the beginning of his treatment that his hands were firmly clenched on the steering wheel at the time of the work MVA.

15. On July 15, 2019, Claimant returned due to shoulder pain. He also noted some left wrist pain. (Ex. D, p. 54). Claimant had reported prior left wrist pain on 6/16/2016, and received treatment from a prior MVA, which Claimant did not mention to his treating providers. (see Ex. H, p. 117). Dr. Schafer examined Claimant and noted that he had an extremely stiff neck, and he cannot rotate side to side and had minimal flexion and extension. Claimant informed Dr. Schafer that he had been seen previously and told that his neck and upper back was almost fused, and his chiropractor ‘questioned’ ankylosing spondylitis. (Ex. D, p. 55).

16. At this same visit with Dr. Schafer on 7/15/2019, under *family history*, her notes show: “reports that he has *never* smoked. He has *never* used smokeless tobacco. He reports that he drank alcohol.” *Id.* at 55. (emphasis added). However, during Claimant’s 6/16/2016 visit with Dr. Balju, the notes under *Assessment* show:

5. Smoker – smoker edu[cation] given
F17.200 Nicotine dependence, unspecified, uncomplicated (see Ex.
H, p. 117).

17. Claimant underwent a psychological consultation with Sean Kelly, Psy.D. (Ex. 10). Dr. Kelly documented in his July 22, 2019 note that Claimant reported having about 20% to 30% range of motion in his neck prior to the accident, and now he has only around 5% to 8% range of motion, per his estimate. *Id.* Claimant testified at hearing that he continues to agree with those estimates.

18. Dr. Sparr documented ongoing reported neck and thoracic symptoms in his September 12, 2019 note. (Ex. 8, p. 100). Dr. Sparr noted ongoing midthoracic paraspinal tenderness from T5-T9. *Id. at 101.*

19. After continued treatment for Claimant's complaints, Dr. Schafer placed him at MMI on October 18, 2019. (Ex. D, p. 72). At her impairment rating appointment on November 27, 2019, Dr. Schafer assigned Claimant a 6% whole person under Table 53, (II)(C) for his cervical spine, noting "persistent soft issue pain, unoperated, with moderate structural changes" *Id at 74.* Dr. Schafer noted Claimant had "profound" decreased cervical range of motion loss, and Claimant had reported he was back to his baseline. Dr. Schafer concluded no range of motion loss applied to the impairment rating. *Id.* Dr. Schafer then assessed Claimant a 2% whole person for soft tissue pain of the thoracic region under Table 53(II)(B), but assessed 9% for range of motion loss. *Id.*

Dr. Polanco IME

20. Dr. Frank Polanco evaluated Claimant for an Independent Medical Evaluation on October 9, 2019. Claimant reported headaches, jaw pain, neck pain, bilateral shoulder pain, mid and upper back pain and low back pain. (Ex. B, pp. 12-13). Claimant demonstrated markedly limited range of motion in his neck. Dr. Polanco noted that Claimant sustained a cervical strain which had resolved. He noted that Claimant had congenital cervical spine fusion and cervical facet syndrome that was pre-existing, and he opined had not been aggravated. (Ex. B, p. 16). Dr. Polanco opined that it was unlikely that Claimant sustained shoulder dislocations during the MVA, as Claimant did not report shoulder pain at the time of his initial evaluation in the emergency room; in fact he did not report shoulder pain until two and a half months later. Further, Dr. Polanco opined that Claimant may have suffered a mild cervical/thoracic strain, and treatment for six weeks would be appropriate. However, further treatment would be attributed to his pre-existing conditions. (Ex. B, p. 17).

Dr. Bissell DIME

21. Claimant attended a Division IME with Dr. Bissell on February 26, 2020. Claimant reported that after the MVA, he had immediate pain in his neck and both shoulders with stiffness in his shoulders, arms and neck. (Ex. A, p. 1). Claimant reported to Dr. Bissell that after an MVA (when Claimant was 16 years old), he

developed cervical facet syndrome which resulted in a fusion in his neck to T1. Claimant admitted to Dr. Bissell that he had essentially no range of motion in his neck. Claimant reported to Dr. Bissell that he had chronic aching and stabbing pains in his bilateral shoulders.

22. Dr. Bissell noted that Claimant did not have a prior impairment rating for his neck, but he noted that Claimant had no cervical range of motion both before and after the accident. Therefore, Dr. Bissell did not assign a rating for range of motion loss for the cervical spine. (Ex. A, p. 5). He noted, under *Apportionment*:

The patient's accident occurred after July 1, 2008 (on March 12, 2019). Based on today's evaluation and record review, I am aware of no prior impairment [rating] of the patient's cervical spine but *he did have complete bony ankylosis of the spine with no range of motion* both pre-and post-motor vehicle accident. Therefore, I did not give an impairment rating for his limited cervical range of motion (because the motor vehicle accident *caused no change* in his cervical range of motion and his cervical range of motion was at baseline at his date of maximum medical improvement on October 18, 2019). *Id at 5, 6.* (emphasis added).

23. Dr. Bissell assigned a 4% whole person from Table 53(II)(B) for his cervical spine, finding, (in contrast to Dr. Shafer), that Claimant's cervical region has suffered "*none-to-minimal* degenerative changes on structural tests." Dr. Bissell noted that at the Division IME evaluation, Claimant did not have complaints about his thoracic spine. Dr. Bissell therefore concluded that Claimant did not sustain any ratable injury to the thoracic spine. (Ex, A, p. 5). Under *Rationale for your Decision*: Dr. Bissell noted;

I rated the Claimant for his neck condition. I did not rate him for his thoracic condition since he had no complaints referable to his thoracic spine on today's evaluation *and sustained no ratable injury to his thoracic spine as a result of the March 12, 2019 MVA.* *Id at 6.* (emphasis added).

24. Dr. Bissell ultimately provided Claimant with a 12% right upper extremity rating, a 5% left upper extremity rating, and a 4% whole person rating for the cervical spine. *Id.* at 128, 132. He concurred with the ATP's MMI date of October 18, 2019. The Division accepted Dr. Bissell's DIME report, and Respondents filed a Final Admission of Liability consistent therewith.

Dr. Polanco Addendum and Testimony

25. On June 20, 2020, in an addendum to his initial report, Dr. Polanco addressed Claimant's assigned cervical rating. Dr. Polanco noted that Claimant had a history of chronic cervical pain and degenerative changes when he was involved in an earlier MVA. Dr. Polanco noted that Claimant was not moving his neck at that time. (Ex. C, p. 26). Dr. Polanco noted that Claimant did not sustain any structural injury to his cervical spine and thus, no impairment rating should apply. Similarly, Dr. Polanco

opined that Claimant's thoracic rating was based on pain complaints which was not consistent with the Guidelines. (Ex. B, p. 27).

26. At hearing, Dr. Polanco testified that neither Dr. Schafer, nor Dr. Bissell, assigned an impairment rating for cervical range of motion loss. At hearing, he testified that Claimant's prior fusion was not part of or related to the motor vehicle accident.

27. Dr. Polanco further testified it was not error for Dr. Bissell to decline to assign a rating for Claimant's cervical spine range of motion loss, since claimant had a well-documented condition that caused a clear loss of range of motion, and such loss existed prior to the work injury.

28. Dr. Polanco agreed that Dr. Bissell appropriately declined to assign an impairment rating for the thoracic spine, since at the time Dr. Bissell performed the Division IME, there was no findings of objective pathology to rate under Table 53.

29. Dr. Polanco testified that it is within the physician's discretion when providing a rating, because there are a variety of factors which impact conditions and findings, as well as the need for objective evidence to meet the criteria of the guidelines.

Claimant's Hearing Testimony

30. At hearing, Claimant estimated that he had approximately 20 to 30 percent of his range of motion in his neck before the motor vehicle accident. He explained that he would have some painful days, but it was mostly a manageable ache. "It didn't really interfere with my daily activities frequently, it was pretty sporadic, you know, a couple times a year. But it was – it was manageable and – and I was able to function more completely." (Transcript. 14:19 – 15:4). He elaborated that the loss of the additional range of motion made driving even more difficult, it has impaired his sleep, and his ability to get dressed in the morning. (Transcript. 15:5-12). Presently, Claimant experiences "very sharp pains" in his neck that occur frequently, cause headaches, and can become unbearable. (Transcript. 16:1-5).

Average Weekly Wage

31. Claimant testified that when he began working for the employer, there was training involved and he had to receive certifications from the Employer before he could start working with clients. (Tr. 20:10-15). He acknowledged that he continued to work for Employer after this MVA, and did not suffer any wage loss as a result of his work injury.

32. Claimant and Respondents have supplied identical documentation regarding Claimant's Average Weekly Wage. While neither party supplied any interpretation of Employer's data, the pertinent data is summarized (and calculated) below:

| Period End | Hours | Salary | Draw | Comm | Taxable | in 2018 | in 2019 | x4 | /52= AWW |
|------------|--------|--------|------|---------|---------|---------|---------|-----------|----------|
| 10/30/2018 | 77.88 | 1000 | | | 1000 | 1000 | | | |
| 11/15/2018 | 100.35 | 1500 | | | 1500 | 1500 | | | |
| 11/30/2018 | 93.25 | 1000 | 500 | | 1500 | 1500 | | | |
| 12/14/2018 | 78.5 | 1000 | | | 1000 | 1000 | | | |
| 12/28/2018 | 100.02 | 1000 | 500 | | 1500 | 1500 | | | |

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder

should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

4. In this instance, the only lay witness who testified at hearing is Claimant. While Claimant's circumstances leading up to this incident were unfortunate indeed, the ALJ cannot accept everything at face value, given some of Claimant's occasional inconsistencies as a medical historian, depending upon the context. He was, however, forthright with medical providers and examiners regarding his preexisting cervical issues. The ALJ finds Dr. Polanco's testimony to be consistent with his written report, and sincerely delivered, but not pivotal in assisting the ALJ in deciding this case.

Overcoming the DIME Opinion, Generally

5. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect and that said opinion is "free from substantial doubt." *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, *supra*. A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* W.C. No. 4-782-625 (ICAO, May 24, 2010).

Overcoming the DIME Opinion, Thoracic

6. At the time of the DIME examination on 2/26/2020, Claimant did not complain to Dr. Bissell of thoracic symptoms. From reading the DIME report, the ALJ does not find evidence that any corners were cut in taking a medical history from Claimant. By all accounts, by this time (and not contested by Claimant), Claimant had been at MMI for over four months. Were his thoracic region still an issue over four months after treatment had ended, certainly it was worth a mention to the DIME examiner. Dr. Bissell was fully aware of Dr. Schafer's reasoning in providing the 11% thoracic rating; he chose to opine differently from her. More to the point, Dr. Bissell specifically found on the issue of causation, that Claimant *sustained no ratable injury* to

his thoracic spine as a result of the 3/12/19 MVA. Dr. Polanco concurred with Dr. Bissell's analysis on this issue. In summary, the ALJ cannot conclude that Dr. Bissell's thoracic impairment rating was highly probably incorrect. The DIME opinion on thoracic impairment has not been overcome.

Overcoming the DIME Opinion, Cervical

7. Dr. Schaefer found that Claimant had experienced *moderate* structural changes to his cervical region (along with the other requisite criteria) sufficient to warrant a 6% impairment rating under Table 53(II)(C). In contrast, Dr. Bissell found the structural changes to Claimant's cervical region (along with the other requisite criteria) to have been *none-to-minimal*, thus warranting a 4% impairment rating under Table 53(II)(B). Dr. Polanco went further, and found no cervical impairment attributable to the work MVA at all. The ALJ finds and concludes that such contrasting findings are mere differences in medical opinion; there is insufficient evidence to conclude that the DIME's assignment to Table 53(II)(B) was highly probably incorrect. Such an assignment falls within the DIME's medical discretion, and is supported by substantial evidence.

8. There is no medical opinion from any source which assigns an impairment rating for loss of cervical range of motion. They all list his loss of range of motion at zero, due to Claimant's unfortunate preexisting condition. Nonetheless, Claimant argues that Dr. Bissell did not follow the Impairment Rating Tips under Desk Aid 11; thus, the DIME is effectively precluded from apportioning Claimant's loss of range of motion due to incomplete data. The AMA guides are never likely to be pertinent, and therefore documented, in treating a non-work-related injury, no matter how serious. Claimant herein would use that to his own advantage. The ALJ is not prepared to concur with Claimant's reasoning. In fact, according to the DIME's own narrative and apportionment analysis, Claimant's prior, well-documented cervical range-of-motion deficiencies were *identified, treated, and noted to be independently disabling*. The ALJ finds that there is ample record support for the DIME to have reached this conclusion. The ALJ further finds that the DIME's apportionment analysis was adequately addressed head-on, and concludes that it is not highly probably incorrect. The DIME opinion on cervical impairment has not been overcome.

Average Weekly Wage, Generally

9. An ALJ has broad, statutorily granted discretion to calculate AWW in such a manner and by such a method as will, in the opinion of the director based upon the facts presented, fairly determine such employee's [AWW]." Section 8-42-102(3), C.R.S.; see also *Pizza Hut v. Industrial Claim Appeals Office*, 18 P.3d 867, 869 (Colo. App. 2001). The overall objective when calculating AWW is to arrive at "a fair approximation of the claimant's wage loss and diminished earning capacity." *Campbell v. IBM Corp.*, 867 P.2d 77, 82 (Colo. App. 1993).

Average Weekly Wage, as Applied

10. Other than Claimant's brief testimony (for which the ALJ finds some record support) that he made more money after his training period, there is little assistance in interpreting the payroll records. Nonetheless, certain observations are noted.

- Claimant was paid twice a month, but always on a weekday. If he worked more than approximately 90 hours in a particular pay period, he was paid an additional \$500 in the form of a draw or additional base salary. (89.85 hours did not qualify; 93.25 did qualify).
- Beginning (conveniently enough for calculation purposes) in 2019, Claimant was paid a Commission check on the 15th of each month, alternating with a \$1000 base salary - only - on the final payment of each month. Assuming Claimant would still have qualified for the extra \$500 for hitting 90 hours once he went on commission, he never hit that mark in 2019.
- While Claimant was injured on 3/12/2019, he testified that he missed no work as a result. Thus, the ALJ concludes that this work injury did not thwart Claimant's ability to exceed the 90 hour threshold in qualifying for the extra \$500 - assuming Claimant were still eligible to so qualify at all, once he went on commission.
- Once Claimant went on commission, there is no identifiable correlation between the hours he worked, and the commission earned. There is no discernable upward trend in commission earnings.

11. Respondents argue that there is no discernable pattern to Claimant's earnings, and that therefore all his earnings should be averaged from each pay period, even the partial period at the beginning of his employment. Claimant argues that he showed an increase in his wages (with record support, to a point) but that the final pay period (with the \$1000 salary only) should be totally disregarded, since Claimant was injured partway through this month. Claimant also argues (without record support) that he was paid every other week. (In fact, Claimant was paid twice monthly, but always on a weekday).

12. The ALJ will divide the baby thusly: Claimant's earnings did increase as a result of his promotion to commission status. Therefore, (and conveniently enough) his earnings beginning in 2019 best represent his earning capacity at the time of the work MVA. For reasons best explained by the 90-hour rule, Claimant earned only \$1000 on his second paycheck of each month, and was not paid on commission. Therefore, the ALJ finds that all six pay periods – exactly one-quarter year - in 2019 best represent Claimant's earning capacity at the time of the work injury. The math from the spreadsheet should be self-explanatory; Claimant's Average Weekly Wage is \$629.50.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Bissell has not been overcome.
2. Claimant's Average Weekly Wage is \$629.50.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

ISSUES

Whether the claimant has overcome, by clear and convincing evidence, the opinion of the Division-sponsored independent medical examination (DIME) physician that the claimant has no permanent impairment related to her lumbar spine.

FINDINGS OF FACT

1. The claimant suffered an injury at work on June 28, 2017. The respondent has admitted liability for the claimant's injury. The claimant's authorized treating provider (ATP) for this claim has been Dr. Emilly Burns. While treating the claimant, Dr. Burns did not diagnose the claimant with a back injury or refer the claimant for any low back treatment.

2. On September 6, 2018, Dr. Douglas Lucas performed surgery on the claimant's right ankle. During subsequent postoperative visits in Dr. Lucas's office on September 12, 2018, September 26, 2018, October 30, 2018, and December 11, 2018, the claimant did not report complaints of back pain. During her last follow-up on February 13, 2019, the claimant specifically denied any back pain. Dr. Lucas did not diagnose the claimant with a back injury.

3. On July 30, 2019, Dr. Burns placed the claimant at maximum medical improvement (MMI). In addition, Dr. Burns assessed "a total 18 [percent] lower extremity impairment" for the claimant's right ankle. At that time, the claimant did not report any low back pain. Dr. Burns did not diagnose the claimant with a lumbar spine injury or provide her with an impairment rating for her lumbar spine.

4. Although not included in the hearing exhibits, the ALJ infers that a Final Admission of Liability (FAL) was filed by the respondent based upon Dr. Burns's opinions and permanent impairment assessment. Subsequently, the claimant requested a Division-sponsored independent medical examination (DIME).

5. On December 12, 2019, the claimant presented for a DIME with Dr. Thomas Moore. In connection with the DIME, Dr. Moore reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his DIME report, Dr. Moore identified the body parts to be assessed as the claimant's right foot, lumbar spine, left shoulder, left wrist, and left hip¹. Dr. Moore assigned 14 percent permanent impairment for the claimant's left lower extremity, and 9 percent for the claimant's right lower extremity. During the DIME, the claimant reported to Dr. Moore that

¹ The claimant does not dispute Dr. Moore's opinions regarding her right foot, left shoulder, left wrist, and left hip. Therefore, in this order the ALJ only addresses Dr. Moore's opinions related to the claimant's lumbar spine.

her low back pain was not present at the time of the injury but rather arose sometime shortly before her surgery in September 2018.

6. When listing the claimant's various diagnoses, Dr. Moore included "lumbar spine sprain/strain". Dr. Moore did not assign a permanent impairment rating for the claimant's lumbar spine. In the DIME report, Dr. Moore noted "[t]here is no Table 53 diagnoses [sic] for her lumbar spine, and therefore no impairment was provided for her lumbar spine".

7. On March 12, 2020, the respondent filed a Final Admission of Liability based upon Dr. Moore's DIME opinions.

8. Dr. Stephen Gray testified that he reviewed Dr. Moore's DIME report. Dr. Gray disagreed with Dr. Moore's decision to assign no impairment for the claimant's lumbar spine. It is Dr. Gray's opinion that Dr. Moore should have assigned an impairment rating based upon Table 53 of the AMA Guides², specifically Section II. B.

9. Section II of Table 53 addresses intervertebral disc or other soft-tissue lesions. Section II. B. provides that a condition that is "[u]noperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with *none-to-minimal* degenerative changes on structural tests" (emphasis in the original). Application of this section to the lumbar spine would result in an impairment rating of five percent.

10. Table 53 II. A. provides that a condition that is "[u]noperated, with no residual signs or symptoms" would result in an impairment rating of zero.

11. The ALJ credits the medical records and the opinions of Dr. Moore over the contrary opinions of Dr. Gray. The ALJ finds that Dr. Moore correctly applied the AMA Guides to the claimant's lumbar spine condition. Although Dr. Moore listed a diagnosis of a lumbar sprain or strain, the ALJ finds that that diagnosis is based solely on the claimant's subjective pain complaints. In addition, there was no imaging of the claimant's lumbar spine. Therefore, Dr. Moore's determination that no impairment rating for the claimant's lumbar spine was appropriate. The ALJ finds that the claimant has failed to overcome the DIME physician's opinion by clear and convincing evidence.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted

² *American Medical Association Guides to the Evaluation of Permanent Impairment*, Third Edition (Revised) in effect as of July 1, 1991.

liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt. The party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In re Dazzio*, W.C. No. 4-660-149 (ICAO, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005).

6. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. Section 8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In re Gurrola*, W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett*, W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

7. As found, the claimant has failed to prove by clear and convincing evidence that Dr. Moore's opinions regarding zero impairment for the claimant's lumbar spine were incorrect. The claimant has failed to establish anything other than a difference of opinion between Drs. Moore and Gray. As found, the medical records and the opinions of Dr. Moore are credible and persuasive.

ORDER

It is therefore ordered that the claimant has failed to overcome the DIME physician's opinion by clear and convincing evidence.

Dated this 23rd day of September 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment from Aspen Family Medical Care and physical therapy are reasonable medical treatment necessary to cure and relieve the claimant from the effects of the industrial injury?

FINDINGS OF FACT

1. Claimant was employed with employer in their snowmaking operation on December 30, 2018. Claimant testified that he would begin snowmaking at Aspen Mountain at the beginning of the year, and then shift his work to snowmaking on Buttermilk Mountain later in the year. Claimant testified that on December 30, 2018, he was working at Buttermilk Mountain during the night shift making snow.

2. Claimant testified that snowmaking is a rough job as it is often cold and dark and he is exposed to difficult elements, including avalanches, water pressure issues and air pressure issues. Claimant testified that the employees making the snow during the night are often the only employees on the mountain.

3. Claimant testified that snowmaking involves a lot of physical work and minor injuries are common. Claimant testified that snowmaking employees are trained as to snowmobile operations and use the snowmobiles to access different parts of the mountain where the snowmaking operations take place. Claimant testified that in operating the snowmobiles at night, the employees must deal with varying terrain and often times maneuver around chunks of snow that are commonly found on the paths used by the snowmobiles.

4. Claimant testified that on December 30, 2018, he was working for employer making snow. Claimant testified he was in the control room and then needed to go out and check the snowmaking guns. Claimant testified that the snowmaking guns draw water from a creek and it becomes necessary to check the filters on the guns. Claimant testified that he came upon a snowmaking gun that was buried in the snow and blowing the snow back on itself. Claimant testified that when this happens, you need to dig out the snowmaking gun with a shovel. Claimant provided pictures of the type of snowmaking gun that was buried to demonstrate the size of the snowmaking gun. Claimant testified that in digging out the snowmaking gun, he had to pick up a lever to rotate the upper portion of the gun to aim the gun in the proper direction. Claimant testified that after doing these tasks he got back on the snowmobile and felt something in his shoulder.

5. Claimant testified he drove the snowmobile to the next snowmaking gun that was located on a tower. Claimant testified he climbed the ladder on the tower, reached out on to the gun to pull the lever to maneuver where the gun was aimed, and felt an acute pain in his right arm. Claimant testified he then changed to use his left arm to adjust the lever.

6. Claimant testified he reported his injury to his supervisor, Mr. D[Redacted]. The Employer's First Report of Accident filled out by Mr. D[Redacted] indicates that claimant was "feeling slight pain in his right shoulder diving snowmobiles and while performing other like tasks". The First Report of Accident also indicated that claimant was unsure of what caused the injury and he had not seen a doctor, as claimant was waiting to see if the pain subsides.

7. Claimant was eventually evaluated by Physicians' Assistant ("PA") Kiehnbaum on January 11, 2019. PA Kiehnbaum noted an accident history of claimant noticing symptoms while performing his snowmaking job on December 30, 2018. PA Kiehnbaum reported no specific activity or trigger that caused his pain, but noted that claimant's job is very active. Claimant reported his pain was aggravated with turning snow guns or pushing/pulling levers. Claimant was diagnosed with a right rotator cuff strain with possible labral pathology. PA Kiehnbaum recommended six sessions of physical therapy ("PT") and non-steroidal anti-inflammatories (NSAID's) or ice as needed. Claimant was provided with work restrictions of no pushing or pulling greater than 25, pounds.

8. Claimant returned to PA Kiehnbaum on January 24, 2019 and reported he had started PT and that his physical therapist believed that claimant's symptoms were related to the biceps head. PA Kiehnbaum noted that there was not a clear work trigger to the pain, although the pain began while claimant was at work riding a snowmobile downhill. PA Kiehnbaum further noted that claimant is very active at work and performs frequent pushing and pulling movements.

9. PA Kiehnbaum noted in her January 24, 2019 report that shoulder injuries are often multifactorial given the anatomy and complexity of the joint. PA Kiehnbaum also noted that there was no clear triggering event for the right shoulder pain and opined that it cannot be assumed that the work incident on December 30, 2018 was the sole cause of claimant's shoulder condition. PA Kiehnbaum noted that claimant had a history of a prior right shoulder SLAP tear repair in 2002, and that while this is not directly known to cause glenohumeral osteoarthritis, it could contribute to other symptoms in the shoulder such as a biceps tendinopathy, which claimant appeared to have. PA Kiehnbaum further noted that claimant performed a lot of repetitive movements and heavy lifting at work which over time could cause shoulder pathology.

10. Claimant was again examined by PA Kiehnbaum on February 12, 2019. Claimant reported his shoulder felt about the same and he still had pain along the biceps tendon head. PA Kiehnbaum recommended claimant continue with PT and noted she would consider a referral to an orthopedic specialist if there was no improvement.

11. Claimant was examined by Dr. Scheuer on March 1, 2019. Dr. Scheuer noted that while this visit and prior visits were covered by workers' compensation, future visits would not be covered, nor would future PT appointments. Dr. Scheuer released claimant to return to work without restrictions.

12. Respondents presented the testimony of Mr. J[Redacted], the workers' compensation manager for Employer. Mr. J[Redacted] testified that following claimant's injury, claimant returned to work for one day on January 17, 2019 driving a snow cat. Mr. J[Redacted] testified that claimant returned to work later in March at one of the restaurants and in a ski shop, before returning to work in the snowmaking department on May 13, 2019. Claimant disputed Mr. J[Redacted]'s testimony regarding the work he performed for Employer in March of 2019 and the date of his return to the snowmaking department.

13. With regard to the issue of compensability, claimant was at work when he first noticed pain in his shoulder. Claimant testified he noticed the pain while operating the snowmobile. Claimant testified he felt pain in his shoulder while at work in an area he had not felt pain before.

14. Unfortunately, the development of pain while on the job does not necessarily lead to a compensable workers' compensation claim. Claimant must establish that an injury occurred arising out of and in the course of his employment with employer. While the onset of pain while at work may establish that an injury occurred "in the course of" his employment with employer, claimant must also establish that the injury "arose out of" his employment with employer.

15. In this case, claimant has failed to establish how his work activities resulted in an injury to his right shoulder. As noted by PA Kiehnbaum, claimant has a prior history of a right shoulder injury resulting in a SLAP tear repair. PA Kiehnbaum further noted that this prior history could contribute to a biceps tendinopathy, which claimant appeared to have.

16. The ALJ notes that if claimant's work injury aggravates a pre-existing condition, the workers' compensation claim is compensable. However, in this case, there is a lack of credible evidence as to the development of any pain being related to work activities associated with claimant's employment. Claimant testified at hearing that he noticed the pain while operating a snowmobile, but did not establish that the use of the snowmobile resulted in an injury to the claimant's shoulder. Nor did claimant explain how operating the snowmobile and maneuvering the snowmobile would result in an injury to his right shoulder. Claimant's testimony that he later felt pain while attempting to move the lever on the snowmaking gun likewise does not establish that claimant sustained an injury to his right shoulder arising out of his employment. Pursuant to claimant's testimony, he had already noticed the pain in his right shoulder while operating the snowmobile, and again noticed the pain while trying to pull the lever on the snowmaking gun. While claimant began experiencing pain in his right shoulder while at work on December 30, 2018, the facts in this case fail to establish that the cause of that pain was related to claimant's work for employer.

17. Due to the fact that claimant has failed to establish that his right shoulder injury arose out of and in the course of his employment with employer, his claim for compensation must be dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2018.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with “a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra*.

4. A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. (2017). The “arising out of” test is one of causation. It requires that the injury have its origin in an employee’s work-related functions, and be sufficiently related thereto so as to be considered part of the employee’s service to the employer. In this regard, there is no presumption that injuries which occur in the course of a worker’s employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968); Rather, it is the claimant’s burden to prove by a preponderance of the evidence that there is a direct

causal relationship between the employment and the injuries. Section 8-43-201, C.R.S. 2002; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989).

5. As found, claimant has failed to establish by a preponderance of the evidence that he sustained an injury arising out of and in the course of his employment with employer. As found, the mere fact that claimant began to experience pain in his right shoulder while operating a snowmobile is insufficient under the facts of this case to establish that he sustained an injury arising out of and in the course of his employment with employer. As found, claimant has failed to establish that his injury had its origin in claimant's work related functions. Instead, the facts establish only that claimant began experiencing pain in his right shoulder while at work on December 30, 2018, but failed to establish that the cause of that pain was related to claimant's work for employer.

6. The ALJ recognizes that claimant argued at hearing that the purpose of the Workers' Compensation Act indicates that facts should be construed liberally in favor of the injured workers to ensure that they receive the benefits they are entitled to under the Act. However, this recitation of the law is incorrect. Facts involving the compensability of a claim cannot be interpreted liberally in favor of an injured worker or the employer.

7. Due to the fact that claimant has failed to prove by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer, claimant's claim for benefits must be denied.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP.

You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. . In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

DATED: September 24, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Did Claimant prove a sternoclavicular joint injection, an acromioclavicular joint injection, trigger point injections, and physical therapy ordered by Dr. Michael Sparr are reasonably needed to cure and relieve the effects of her industrial injury?
- What is the appropriate AWW?

FINDINGS OF FACT

1. Claimant works for Employer as a bank teller. She suffered admitted injuries on November 12, 2019 when she was assaulted by a homeless man after arriving at work. The man approached her and asked for money while she was walking in from the parking area. Claimant indicated she does not carry cash and continued walking into the bank. Without warning, the man grabbed her from behind and threw her face-first into a tree. Claimant primarily struck her face, but also impacted her left chest and shoulder area. She then fell to the ground and landed on her left side.

2. Employer referred Claimant to Emergicare for authorized treatment. She was initially seen by Dr. Erik Ritch on November 14, 2019. Her primary complaints were headache and nausea. There was no mention of any problem relating to the left chest or left shoulder. Physical examination revealed mild tenderness over the right forehead with bruising below the right eye. Dr. Ritch diagnosed a concussion and released Claimant to modified duty.

3. Claimant saw Dr. Dallenbach at Emergicare on November 18, 2019, who has been the primary ATP since then. Although the report states Claimant denied neck or shoulder pain, the physical examination documented significant muscle spasm in the paracervical musculature bilaterally. Dr. Dallenbach ordered cervical x-rays, which showed no bony abnormalities other than hardware from a C5-7 fusion Claimant underwent in 2013. He referred Claimant for a cervical MRI and took her off work.

4. Claimant underwent the cervical MRI on November 25, 2019. It showed post-surgical changes at C5-7 from a two-level fusion performed in approximately 2013, and minimal spondylosis at C3-4 with no evidence of nerve root impingement or cord compression. No other significant pathology was identified.

5. Medical records document continued neck pain and muscle spasms over the next two months. On December 11, 2019, Claimant told Dr. Dallenbach her neck pain started in the back of the neck on the left side and worked its way up over the top of her head as the day progressed. Dr. Dallenbach diagnosed a cervical "strain."

6. Claimant underwent left C2-C5 medial branch blocks on December 19, 2019. The blocks alleviated her neck pain for approximately three days.

7. Claimant had been receiving treatment from the Colorado Pain Specialists clinic before the work accident, primarily for pain related to polycystic kidney disease. She also received periodic treatment residual neck pain from the 2013 fusion surgery. Records dating to June 2018 show no significant interventions directed to Claimant's neck before the work accident. On October 22, 2019, a provider at the pain clinic described Claimant's neck pain as "intermittent and aching," and noted she was able to perform ADLs and desired no treatment or diagnostics at that time. Confusingly, that same day, a physical therapist documented "increasing" neck and back pain, and Claimant completed a Neck Disability Index Questionnaire indicating difficulty with certain ADLs.

8. Respondents filed a General Admission of Liability (GAL) on January 15, 2020. The GAL admitted to TTD benefits from November 15 through December 23, 2019 (5 4/7 weeks) based on an AWW of \$348.60. The GAL admitted for TPD benefits from December 24, 2019 ongoing at the rate of "varies."

9. Claimant followed up with Dr. Dallenbach's office on January 28, 2020 and reported significant and worsening pain in her neck, left shoulder, and arm. Claimant stated, "woke up today with pain around L clavicle radiating to L shoulder and upper back. Cannot move her L arm without severe pain." On examination, she was very tender to palpation of the left paracervical, parascapular, upper trapezius muscles, and the left clavicle. Claimant was referred to Dr. Michael Sparr a physical medicine evaluation.

10. Dr. Sparr evaluated Claimant on February 13, 2020. Claimant described the accident and explained she struck the tree with her face and left shoulder and fell to the ground. She reported pain in the superior and posterior shoulder radiating to the left lateral arm, medial forearm, and fourth and fifth digits. She was having numbness in the fingers of her left hand. Her neck was "achy," although "much improved from what she had initially." She also reported pain in the sternoclavicular and acromioclavicular joints. Physical examination showed asymmetric myofascial tightness and tenderness in the left-sided cervical and parascapular musculature. There was also moderate myofascial tightness with corresponding tenderness over the left-sided trapezius, levator scapula, posterior scalenes, rhomboids, the sternocleidomastoid and anterior scalenes, and the pectoral muscles. She was exquisitely tender to palpation over the left sternoclavicular and acromioclavicular joints and over the brachial plexus. Compression over the clavicle caused a substantial increase in pain and some radiating pain to the upper extremity. Deep compression over Erb's point and palpation of the pectoralis minor caused radiating pain through the upper extremity. Adson's maneuver produced numbness in the left upper extremity. Acromioclavicular joint loading was markedly positive.

11. Dr. Sparr opined sternoclavicular and acromioclavicular joint arthralgias and instability were causing myofascial irritation around the brachial plexus. He thought the upper extremity symptoms were related to brachioplexopathy. He ruled out cervical radiculopathy in light of the minimally abnormal cervical MRI and Claimant's clinical presentation. Dr. Sparr referred Claimant for a short course of manual physical therapy to improve myofascial tightness within the cervical, parascapular, and pectoral musculature. He also prescribed trigger point injections for the neck, acromioclavicular

and sternoclavicular joint injections, and an electrodiagnostic study of the left upper extremity.

12. Dr. Elena Antonelli performed a Rule 16 review of Dr. Sparr's recommendations on February 25, 2020. Dr. Antonelli opined none of Dr. Sparr's recommendations were medically necessary. Respondents denied the treatment based on Dr. Antonelli's report.

13. Claimant followed up with Dr. Sparr on February 27, 2020. Dr. Sparr was "quite concerned" because Dr. Antonelli had denied the requested treatment without speaking to him first. His office received a call from Dr. Antonelli on February 26 requesting a peer-to-peer review. Dr. Sparr was in a different office that day and unavailable. When he arrived at his main office on February 27, he received a "blanket denial of every treatment that was requested. This was without even discussing the case." Claimant's physical examination was largely the same as it had been on February 13. Dr. Sparr opined,

I stand by my initial history and physical examination as well as assessment of the patient. The patient's insurance company is obviously not willing to cover any further treatment so my hands are tied. I suggest that they are acting in bad faith. The patient does not seem litigious but has been forced to obtain the services of an attorney. Since nothing that I have recommended has been authorized I will not schedule further follow-up until further treatment is allowed. In the meantime, the patient continues to suffer rather severe pain and has no treatment options thanks to the carefully crafted denial of her insurance company.

14. Respondents eventually authorized the EMG, which Dr. Sparr performed on March 17, 2020. He interpreted the results as "mildly abnormal," with slowing of both median and ulnar motor nerves across the brachial plexus consistent with thoracic outlet syndrome (TOS). There was no evidence of cervical radiculopathy, generalized peripheral neuropathy, or left median or ulnar neuropathy. There was mild slowing of the ulnar sensory and motor nerves across the elbow, which was "suggestive of a mild cubital tunnel syndrome but not diagnostic." Dr. Sparr opined the electrodiagnostic findings were consistent with his previous physical examination findings. He opined Claimant is "likely experiencing [myogenic] compression of the brachial plexus which is causing a great deal of her symptoms. I have previously proposed appropriate treatment that would likely help greatly. All of the patient's treatment has been denied for unknown reasons despite appropriate supporting evidence that the patient was injured as a result of an assault and requires a substantial treatment."

15. Dr. Lawrence Lesnak performed an IME at Respondents' request on June 1, 2020. Dr. Lesnak emphasized Claimant's long history of neck pain, which he described as "chronic" and "clearly symptomatic" before the work accident. He opined there was "absolutely no medical evidence" to suggest Claimant injured her cervical spine, left shoulder, left clavicle, AC joint, or any surrounding structures. He opined Claimant had undergone numerous diagnostic tests, "none of which reported any evidence of

abnormalities that would in any way be related to the occupational incident of 11/12/2019.” He further opined, “a possible mild left cubital tunnel syndrome or ‘myogenic’ thoracic outlet syndrome would be completely unrelated to striking one’s face against the tree.” Dr. Lesnak thought Claimant’s progress was being hampered by “psychological factors.” He opined her subjective complaints “do not correlate with any reproducible objective findings whatsoever,” and saw “absolutely no evidence that she has any specific symptomatic pathology involving her left sternoclavicular joint or any of the surrounding soft tissues of her left upper chest, neck, and suprascapular region as it would pertain to the reported occupational incident.” He opined any mild facial trauma and mild closed head injury Claimant “may” have sustained had “clearly resolved.” He concluded Claimant was at MMI with no permanent functional impairment and no need for further treatment.

16. Dr. Sparr testified via deposition on July 16, 2020. He acknowledged Claimant’s preinjury history of neck problems including a two-level fusion, but opined the treatment he recommended is directed to the effects of the November 2019 injury and not any pre-existing condition. He explained the acromioclavicular and sternoclavicular joints are not part of the neck and not related to the prior cervical fusion. He opined Claimant probably suffered a cervical strain from the accident but most of her symptoms were coming from the anterior shoulder and brachial plexus rather than the cervical spine. He opined Claimant’s neurological findings, including abnormal sensation in the left upper extremity and all fingers, suggest a problem below the neck, consistent with brachial plexus irritation. He also noted the lack of any nerve root compression or other significant structural pathology shown on the cervical MRI. Dr. Sparr explained his recommended treatment plan is first focused on decreasing the muscle tightness within Claimant’s neck, parascapular region, shoulder blade, and pectoral region. He requested manual physical therapy to address those issues. The trigger point injections are intended to give Claimant a better chance to benefit from therapy. He thinks sternoclavicular and acromioclavicular joint injections will calm down those irritated joints he believes are further perpetuating muscle tightness and numbness in the upper extremity.

17. Dr. Sparr opined Claimant’s symptoms are directly related to the assault at work. He noted Claimant struck the front of her body and her shoulder when she was thrown into the tree. She was never treated for similar problems before the accident and he knew of nothing else that could have caused the condition. He opined Claimant’s described mechanism of injury — being thrown face-first into a tree, impacting the front of her body and falling onto her left shoulder — was sufficient to cause thoracic outlet syndrome, brachial plexopathy, sternoclavicular joint pain, and acromioclavicular joint pain. Regarding the two-month delay in developing symptoms, Dr. Sparr opined, “it can be seen with trauma to the clavicle that the joint becomes irritable at a later date.”

18. Dr. Lesnak testified at hearing to elaborate on the opinions expressed in his IME report. He disagreed with the diagnosis of myogenic TOS because his exam showed no findings to support it. He disagreed with Dr. Sparr’s interpretation of the EMG, and opined it was normal. He opined it is “anatomically impossible” to develop TOS from striking one’s face, shoulder, or chest on a tree because the thoracic outlet is “very protected” and “deep inside” the body. He emphasized that the acromioclavicular and sternoclavicular joint issues started two months after the accident, which he believes rules

out a causal connection. He also opined the proposed acromioclavicular and sternoclavicular joint injections, trigger point injections and physical therapy are not reasonably necessary, regardless of causation. He indicated Claimant no longer has neck symptoms are headaches, and all effects of her minor injuries have resolved.

19. Dr. Sparr's opinions are credible and more persuasive than the contrary opinions offered by Dr. Lesnak.

20. At hearing, Claimant credibly described striking her face and left shoulder on the tree and falling to the ground on her left side. She felt no immediate neck or left shoulder pain, but noticed some neck pain the next day. The headaches were her biggest concern early on. Claimant credibly testified she had a good result from the cervical fusion but had episodic neck issues before the November 19 work accident. The neck pain she experienced after the work accident differed from her previous neck problems. She did not mention striking the left side of her body and left shoulder early on because she was not having significant symptoms and was most focused on her headaches and neck pain.

21. Claimant proved the sternoclavicular joint injection, acromioclavicular joint injection, trigger point injections, and physical therapy ordered by Dr. Michael Sparr are reasonably needed to cure and relieve the effects of her industrial injury.

22. Claimant started working for Employer on or about August 19, 2019. She worked limited hours during the first two-week pay period because she was in training and was typically sent home after four or five hours each day. The first pay period is not representative of her typical earnings on the date of injury. Claimant earned \$4,122.86 in the five pay periods (10 weeks) from September 1, 2019 through November 8, 2019. This equates to an AWW of \$412.29, with a corresponding TTD rate of \$274.86.

CONCLUSIONS OF LAW

A. The requested medical benefits are reasonably necessary and causally related to the November 2019 work accident.

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove the requested treatment is reasonably

necessary, if disputed. Section 8-42-101(1)(a). The claimant must prove entitlement to medical benefits by a preponderance of the evidence.

As found, Claimant proved the sternoclavicular joint injection, acromioclavicular joint injection, trigger point injections, and physical therapy ordered by Dr. Sparr are reasonably needed to cure and relieve the effects of her industrial injury. Dr. Sparr's opinions are credible and more persuasive than contrary opinions offered by Dr. Lesnak. Being thrown face-first into a tree is a plausible mechanism for neck, chest, clavicular and brachial plexus injuries. Claimant's testimony that she impacted the left side of her body and landed on her left shoulder is credible. She probably did not immediately draw attention to the clavicular area, chest, or left shoulder because she had no symptoms, and those details about the accident would not have affected the treatment she desired or received. Although a two-month delay in developing symptoms is not necessarily typical, Dr. Sparr persuasively explained, "It can be seen with trauma to the clavicle that the joint becomes irritable at a later date." Such a scenario probably occurred here. There is no persuasive evidence of any alternative explanation for the development of Claimant's symptoms aside from the assault at work. Although Respondents do not have to prove a nonwork-related cause, the absence of a persuasive alternate explanation in this case a significant factor in determining the accident more-likely-than-not caused the condition. Dr. Sparr's interpretation of the electrodiagnostic testing he personally administered is more persuasive than Dr. Lesnak's interpretation. The interventions Dr. Sparr has proposed are reasonably necessary for the injury-related pathology he identified.

B. Claimant's AWW is \$412.29.

Section 8-42-102(2) provides that compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

As found, Claimant's AWW is \$412.29 based on gross wages of \$4,122.86 from September 1, 2019 through November 8, 2019. The first pay period has been excluded because it does not accurately reflect Claimant's typical earnings immediately before her accident. The corresponding TTD rate is \$274.86.

ORDER

It is therefore ordered that:

1. Insurer shall cover the sternoclavicular joint injection, acromioclavicular joint injection, trigger point injections, and physical therapy recommended by Dr. Sparr.
2. Claimant's average weekly wage is \$412.29.

3. Insurer shall pay Claimant \$1,531.36 in TTD benefits from November 15, 2019 through December 23, 2019 (5 4/7 weeks x \$274.86 = \$1,531.36). Insurer may take credit for TTD already paid for those dates.

4. Insurer shall recalculate and pay Claimant TPD benefits based on an AWW of \$412.29 commencing December 20, 2019 and continuing until terminated by law. Insurer may take credit for TPD already paid for those dates.

5. Insurer shall pay Claimant statutory interest of eight percent (8%) per annum on all benefits not paid when due.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: September 25, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-127-137-002**

ISSUE

- I. Whether Respondents established by a preponderance of the evidence that Claimant is responsible for the termination of her employment and not entitled to TTD benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant speaks Spanish and testified through an interpreter at the hearing.
2. Employer operates in multiple states, including Colorado.
3. Claimant worked for Employer in Colorado as a room attendant cleaning hotel rooms.
4. Claimant worked for Employer during two separate time periods. The first period was from 2014 to March 2018. The second period was from about September 2018 through her termination in May or June 2020.
5. Each time Claimant applied for employment with Employer, she dealt with Ms. Mercedes A[Redacted], who was in management.
6. When Claimant first started working for Employer in 2014, she provided Employer, through Ms. A[Redacted], her alleged social security number.
7. During her first period of employment, Claimant suffered an industrial injury and filed a claim for workers' compensation benefits. Under this first claim, Claimant used the first social security number she provided Employer.
8. Claimant stopped working for Employer in March 2018.
9. Around September 2018, Employer rehired Claimant. When Claimant was rehired, she again dealt with Ms. A[Redacted]. For her second period of employment, Claimant presented two social security numbers to Ms. A[Redacted]. Regardless of Claimant presenting two different social security numbers to Ms. A[Redacted], Claimant was hired, and a second social security number was linked to Claimant and used by Employer. As a result, when Claimant was hired again, Employer knew or reasonably should have known Claimant did not have a valid social security number.
10. On December 11, 2019, Claimant suffered another compensable work injury.
11. Ms. Claudia P[Redacted] testified on behalf of Employer. Ms. P[Redacted] is the Human Resources Director for Employer. Ms. P[Redacted] works in the corporate office in Atlanta Georgia. Her job duties include processing workers' compensation claims.

12. Ms. P[Redacted] testified that when she started processing Claimant's December 11, 2019 workers' compensation claim, she had to enter Claimant's name into their computer system's workers' compensation "module." Ms. P[Redacted] stated that upon entering Claimant's name into the workers' compensation module, it showed another Martha Sanchez with the same date of birth, but a different social security number.
13. Effective February 21, 2020, and despite Claimant using two social security numbers, Respondents started paying Claimant temporary total disability benefits.
14. Ms. P[Redacted] also testified that after she discovered the discrepancy regarding Claimant's social security numbers, she followed company policy and requested Claimant to provide proper documentation regarding her social security number.
15. On April 22, 2020, Ms. P[Redacted] wrote the following letter to Claimant:

Dear Ms. [Claimant name redacted],

We recently received information that the data and or documents you presented at the time of hiring may be coming close to expiration, have errors, or may not be accurate. Based on such, the documents might not satisfy the Form I-9 employment eligibility verification requirements of the Immigration and Nationality Act. As a result, the documents need to be reviewed or updated.

If you have proper identity and eligibility to work documentation and believe that this information is erroneous, or you have new documents that will supersede your previous expiring items, please provide us with proper documentation no later than 05/01/2020.

If you are working towards the effort of clearing this up, then on 05/01/2020, please provide us with adequate supporting documentation showing you are in active pursue of clearing this matter up.

Unless identification and employment eligibility acceptable documentation is presented, your employment with [Employer] will need to be terminated indefinitely immediately. This is a very serious matter that requires your immediate attention.
16. On May 12, 2020, Employer sent the same letter to Claimant, except it extended the deadline to respond to May 25, 2020. This second letter was sent to Claimant's new address – of which Respondents were recently apprised.
17. On May 26, 2020, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation. In their petition, Respondents asserted Claimant's temporary total disability benefits should be terminated because Claimant was terminated for her failure to "clear up what appeared to be a social security number problem." (Respondents' Exhibit B.)

18. On May 29, 2020, Employer sent the same letter a third time, except this letter extended Claimant's deadline to respond to June 12, 2020.
19. Each letter was sent to Claimant in English and Spanish.
20. Claimant received at least the last two letters. Claimant, however, did not respond because she could not provide a valid social security number.
21. Ms. P[Redacted] stated that based on Claimant's failure to provide the appropriate documentation — a valid social security number — Respondents terminated Claimant's employment.
22. When Claimant was terminated, she was already receiving temporary total disability benefits. As a result, the termination did not cause any additional wage loss.
23. The ALJ, does not find Ms. P[Redacted]'s testimony regarding the basis for Claimant's termination to be credible or persuasive for many reasons. First, the timing of events is suspect. Ms. P[Redacted] testified that she discovered the discrepancy about Claimant's social security number when she first processed Claimant's claim. Claimant was injured on December 11, 2019. Ms. P[Redacted] did not send a letter to Claimant about the discrepancy until April 22, 2020 when Claimant was receiving temporary total disability benefits. Absent from Ms. P[Redacted]'s testimony was any explanation as to why it took over four months for Employer to decide to advise Claimant there was a problem with her employment documentation — social security number.
24. Second, their computer system, which helps manage the hiring and rehiring of employees, is set up in a manner that allows employees to use multiple social security numbers. Ms. P[Redacted] testified that their general computer system allows them to enter two employees with the same name, date of birth, but different social security number. As a result, Employer's computer system allows employees like Claimant to use multiple social security numbers. On the other hand, Ms. P[Redacted] testified that they have set up their workers' compensation system differently. Ms. P[Redacted] testified that their worker's compensation system has a "module" that prevents an employee with the same name and date of birth from having multiple worker's compensation claims under different social security numbers. As a result, Employer chooses to make social security number variances an issue when adjusting workers' compensation claims but not when rehiring and staffing.
25. Third, Employer does not use E-Verify in every state in which they do business to confirm each of their employees is using a valid social security number. Ms. P[Redacted] was asked whether Employer uses E-Verify to confirm each employee is using a valid social security number and eligible to work in the United States. Ms. P[Redacted] said they only use E-Verify in those states that mandate its use and that she was not sure whether Colorado required employers to use it. In other words, Employer will not use E-Verify to confirm an employee is eligible to work in the United States unless the state in which they are doing business mandates it use. As a result, there is no indication in the record that Colorado required Employer to use E-Verify when hiring or rehiring Claimant. There is also a lack of credible and

persuasive evidence in the record indicating Employer used E-Verify at any time during Claimant's preemployment screening or employment. Thus, Employer chose to hire and employ Claimant without verifying she had a valid social security number.

26. Fourth, assuming Employer just learned Claimant might be using two different social security numbers while processing Claimant's December 11, 2019, workers' compensation claim, there is no indication they used E-Verify at that time see whether either social security number was valid and assigned to Claimant. Had they done so and confirmed one of the social security numbers was valid, that might have negated the need to send out the letters. By not using E-Verify at that time, Respondents acted as if they already knew Claimant had not provided a valid social security number at any time. As a result, the ALJ finds Employer did not use E-Verify to confirm Claimant was using a valid social security number when she was hired the first time, the second time, or at any other time, because they did not want to know. Thus, they agreed, or tacitly agreed, to hire and employ Claimant without a valid social security number.
27. Fifth, Ms. P[Redacted] stated it was Employer's policy to follow up on any discrepancies regarding an employee's I-9 Form documents, such as a discrepancy regarding an employee's social security number. That said, Ms. P[Redacted] did not provide any details about their policy and how they administer and enforce the policy in Colorado and in states that do not mandate the use of E-Verify. As a result, the ALJ finds Employer failed to establish they enacted, implemented, and consistently enforced a policy that required employees to have a valid social security number.
28. In the end, the ALJ does not find Ms. P[Redacted]'s testimony to be credible and persuasive regarding when Employer learned about Claimant using two, invalid, social security numbers and the basis for terminating Claimant.
29. Employer did not submit any evidence to establish that but for Claimant's termination or undocumented status, Employer had available, and would have offered, modified employment to Claimant.
30. The ALJ finds Claimant's testimony to be credible and persuasive. Her testimony fits with the timing and sequence of events regarding Employer rehiring Claimant knowing she did not have a valid social security number and allowing her to work without a valid social security number up until Claimant started receiving temporary total disability benefits. It is also consistent with her contention that the Employer's proffered reason for her termination – an invalid social security number - is pretextual.
31. Based on the totality of the evidence, Employer failed to establish they implemented a policy requiring each worker to have a valid social security number, that they followed that policy when they hired and employed Claimant on two occasions, and that they actively enforced that policy. As a result, Employer failed to establish they required Claimant to provide a valid social security number to be hired and remain employed.
32. Based on the totality of the evidence, the ALJ finds Employer knowingly, or tacitly, allowed Claimant to work without a valid social security number.

33. The ALJ finds that it was only after Claimant filed a workers' compensation claim and Respondents started paying disability benefits that Respondents sought to require Claimant to have a valid social security number. Had Claimant not been receiving temporary disability benefits, it does not appear Respondents would have terminated Claimant for using an invalid social security number or for not being able to provide a valid social security number.
34. Based on the inconsistencies, contradictions, and sequence of events regarding how and when Employer terminated Claimant, the ALJ finds Respondents' proffered reason for terminating Claimant is pretextual. As a result, Claimant is not at-fault for her termination.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential*

Insurance Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents established by a preponderance of the evidence that Claimant is responsible for the termination of her employment and not entitled to TTD benefits.

Section 8-42-103(1)(g), C.R.S., and § 8-42-105(4)(a), C.R.S., provide that if a temporarily disabled employee "is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Because these statutes provide a defense to an otherwise valid claim for TTD benefits, the respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.*, W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood before the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Thus, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp.*, *supra*.

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). That said, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, *supra*. This is true even if the claimant is not specifically warned that failure to comply with the employer's expectations may result in termination. See *Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992). Ultimately, whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, *supra*.

As found, Claimant worked for Employer during two separate time periods. The first period was from 2014 to March 2018. The second period was from about September 2018 through her termination in May or June 2020. Each time Claimant applied for employment with Employer, she dealt with Ms. A[Redacted], who was in management.

When Claimant first started working for Employer in 2014, she provided Employer, through Ms. A[Redacted], her alleged social security number. During her first period of employment, Claimant suffered an industrial injury and filed a claim for workers' compensation benefits. Under this first claim, Claimant used the first social

security number she provided Employer. Claimant stopped working for Employer in March 2018.

Around September 2018, Employer rehired Claimant. When Claimant was rehired, she again dealt with Ms. A[Redacted]. For her second period of employment, Claimant presented two social security numbers to Ms. A[Redacted]. Regardless of Claimant presenting two different social security numbers to Ms. A[Redacted], Claimant was hired, and a second social security number was linked to Claimant and used by Employer. As a result, when Claimant was hired again, Employer knew or reasonably should have known Claimant did not have a valid social security number. As a result, Employer did not require Claimant to provide a valid social security number to be hired and remain employed.

On December 11, 2019, Claimant suffered another compensable work injury. Ms. P[Redacted], the Human Resources Director for Employer, testified on behalf of Employer. She testified that when she started processing Claimant's December 11, 2019 workers' compensation claim, she had to enter Claimant's name into their workers' compensation "module." Ms. P[Redacted] stated that upon entering Claimant's name into the workers' compensation module, it showed another Martha Sanchez with the same date of birth, but a different social security number. Ms. P[Redacted] also testified that after she discovered the discrepancy regarding Claimant's social security numbers, she followed company policy and requested Claimant to provide proper documentation regarding her social security number. Ms. P[Redacted] stated that based on Claimant's failure to provide the appropriate documentation — a valid social security number — Respondents terminated Claimant's employment.

This ALJ did not find Ms. P[Redacted]'s testimony to be credible or persuasive about the stated reason for terminating Claimant. This ALJ did not find her testimony to be credible or persuasive for the following reasons. First, Ms. P[Redacted] testified that she discovered the discrepancy about Claimant's social security number when she first processed Claimant's claim. Claimant was injured on December 11, 2019. Ms. P[Redacted], however, did not send a letter to Claimant about the discrepancy until April 22, 2020. Absent from Ms. P[Redacted]'s testimony was any explanation as to why it took over four months for Employer to decide to advise Claimant there was a problem with her employment documentation — social security number. As a result, the timing and sequence of events – combined with the lack of any explanation for 4 month delay to raise the issue - makes the proffered reason for terminating Claimant to not be credible or persuasive.

Second, Ms. P[Redacted] testified that their general computer system allows them to enter two employees with the same name, date of birth, but different social security number. As a result, Employer's computer system allows employees like Claimant to use multiple social security numbers. On the other hand, Ms. P[Redacted] testified that they have set up their workers' compensation system differently. Ms. P[Redacted] testified that their worker's compensation system has a "module" that prevents an employee with the same name and date of birth from having multiple worker's compensation claims under different social security numbers. Thus, it appeared to this ALJ that Employer chooses to make social security number variances an issue when adjusting workers' compensation claims but not in rehiring and staffing.

Third, during cross examination, Ms. P[Redacted] was asked whether Employer uses E-Verify to confirm each employee is using a valid social security number and eligible to work in the United States. Ms. P[Redacted] said they only use E-Verify in those states that mandate its use and that she was not sure whether Colorado required employers to use it. In other words, Employer will not use E-Verify to confirm an employee is eligible to work in the United States unless the state in which they are doing business mandates it use. This ALJ found that there was no indication in the record that Colorado required Employer to use E-Verify when hiring or rehiring Claimant. This ALJ also found there was a lack of credible and persuasive evidence in the record indicating Employer used E-Verify at any time during Claimant's preemployment screening or employment. Thus, this ALJ found Employer chose to hire and employ Claimant without verifying she had a valid social security number.

Fourth, assuming Employer just learned Claimant might be using two different social security numbers while processing Claimant's December 11, 2019, workers' compensation claim, there is no indication they used E-Verify at that time see whether either social security number was valid and assigned to Claimant. This ALJ found and concluded that by not using E-Verify at that time, Respondents acted as if they already knew Claimant had not provided a valid social security number at any time. As a result, this ALJ found Employer did not use E-Verify to confirm Claimant was using a valid social security number when she was hired the first time, the second time, or at any other time, because they either knew or did not want to know. Thus, Employer agreed, or tacitly agreed, to hire and employ Claimant without a valid social security number.

Fifth, Ms. P[Redacted] stated it was Employer's policy to follow up on any discrepancies regarding an employee's I-9 Form documents, such as a discrepancy about an employee's social security number. That said, Ms. P[Redacted] did not provide any details about their policy and how they administer and enforce the policy in Colorado and in states that do not mandate the use of E-Verify. As a result, this ALJ found Employer failed to establish they enacted, implemented, and consistently enforced a policy that required employees to have a valid social security number.

This ALJ did find Claimant's testimony to be credible and persuasive. Her testimony fit with the timing and sequence of events about Employer rehiring Claimant knowing she did not have a valid social security number and allowing her to work without a valid social security number up until Claimant started receiving temporary total disability benefits. It also aligns with Employer terminating Claimant's employment to terminate her TTD and not because she provided, or was unable to provide, a valid social security number.

Based on the totality of the evidence, Employer failed to establish they had a policy in place to not hire and employ workers without a valid social security number, that they followed that policy when they hired Claimant on two occasions, and that they actively enforced that policy.

Based on the totality of the evidence, the ALJ finds and concludes Employer knowingly, or tacitly, allowed Claimant to work without a valid social security number. The ALJ finds that it was only after Claimant filed a workers' compensation claim and

Respondents started paying disability benefits that Respondents sought to terminate Claimant.

The conduct on which an employer bases its decision to terminate an employee cannot be wielded in an inconsistent manner. It cannot allow the conduct when it suits its interests at one time and then disallow the same conduct when its interests change at a different time.

This ALJ finds and concludes Respondents failed to establish Claimant is at-fault for her termination. Based on the inconsistencies, contradictions, and sequence of events regarding how and when Employer terminated Claimant, the ALJ finds and concludes Respondents' proffered reason for terminating Claimant to be pretextual. As a result, Claimant is not at-fault for her termination.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents request to terminate Claimant's temporary total disability benefits based on their termination of Claimant is denied and dismissed.
2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 28, 2020.

ISSUE

1. Whether Claimant has established by a preponderance of the evidence that his scheduled impairment rating for his left shoulder injury should be converted to a whole person impairment rating.

FINDINGS OF FACT

1. Claimant is a 63-year-old, left-handed man who sustained an admitted work-related injury to his left shoulder on February 26, 2017 when he was moving a 20 lb. box of cat litter in his capacity as a freight verifier at Employer's Loveland, Colorado distribution center.
2. Claimant initially saw Dr. David Farstad at UC Health on February 26, 2017 and reported sudden left shoulder pain, radiation to the lateral neck muscles and down the arm. Claimant reported no history of left shoulder or cervical pathology. Dr. Farstad prescribed Norco and placed Claimant in a sling. (Ex. 3).
3. On February 27, 2017, Claimant saw Robert Dupper, M.D. at WorkWell. Dr. Dupper diagnosed claimant with an injury to the left rotator cuff and pain in the left shoulder. Dr. Dupper placed claimant on work restrictions and ordered an MRI of the left shoulder. (Ex. 4).
4. On March 7, 2017, Claimant had an MRI of his left shoulder. The MRI was interpreted as showing a full thickness tear involving the entire width of both the supraspinatus and infraspinatus tendons. The MRI showed retraction of the torn fibers and mild to moderate fatty atrophy of both muscle bellies. The subscapularis tendon showed a moderate to high grade partial tearing of the most inferior fibers of the tendon adjacent to the insertion, but no evidence of a full thickness tear. There was also extensive tearing of both the superior and inferior aspects of the labrum. The MRI also demonstrated an abnormal intrasubstance signal within the biceps tendon at the anchoring at the labrum and a labral SLAP lesion. (Ex. F & G).
5. On April 28, 2017, Claimant underwent surgery performed by Steven J. Seiler, M.D. Dr. Seiler performed an arthroscopic biceps tenolysis, subacromial decompression with acromioplasty and arthroscopic biceps repair to Claimant's left shoulder. (Ex. F & G).
6. On August 29, 2018, Claimant had an MRI of his cervical spine, ordered by Dr. Dupper. The MRI was interpreted as showing a circumferential disc bulge with facet and uncovertebral degenerative changes at C2-3, with moderate to severe left-sided neural foraminal narrowing with mild canal stenosis. There was mild canal stenosis and bilateral neural foraminal narrowing at C4-5. There was a CS-6 posterior broad-based disc

protrusion with posteriorly directed osteophytes and hypertrophic changes of the facet joints, as well as a superimposed left neural foraminal disc extrusion and severe left-sided neural foraminal narrowing and moderate right-sided neural foraminal narrowing. There was also a broad-based disc protrusion at C6-7. (Ex. F).

7. On September 13, 2017, Claimant saw Dr. Seiler for a follow up visit. Dr. Seiler opined that Claimant had no specific restrictions, could increase his activities as tolerated, and would be placed at maximum medical improvement. Dr. Seiler found Claimant was still having a "slight clicking" in the lateral aspect and anterolateral aspect of his shoulder. (Ex. 5).

8. On September 20, 2017, Claimant saw physiatrist Eric Shoemaker, D.O., on referral from Dr. Dupper due to complaints of neck and left upper extremity pain. Dr. Shoemaker opined that Claimant's symptoms were due to pathology of the left shoulder and a left C6 radiculitis due to severe left C5-6 foraminal stenosis related to "disc osteophyte complex." (Ex. F).

9. On June 11, 2018, Claimant was examined by Carlos Cebrian, M.D., at the request of Respondents. Dr. Cebrian agreed Claimant sustained a compensable injury to his left shoulder on or about February 26, 2017. Dr. Cebrian agreed Claimant qualifies for an impairment rating for his left shoulder. Although Dr. Cebrian's range of motion measurements and impairment rating differ from Dr. Tyler's, Dr. Cebrian agreed Claimant sustained permanent impairment to his left shoulder. Dr. Cebrian opined that Claimant's impairment was a scheduled, rather than whole-person, impairment because the functional impairment is limited to Claimant's left upper extremity and there was no functional impairment extending beyond the left glenohumeral joint. Dr. Cebrian opined Claimant could lift up to 20 pounds with his left arm but should not lift over his shoulder level on the left. (Ex. C).

10. On June 26, 2018, Claimant saw Dr. Dupper. Dr. Dupper placed Claimant at MMI for his left shoulder effective June 26, 2018. Dr. Dupper also recommended permanent work restrictions "Limited to the left upper extremity: Limit lifting from floor to shoulder height to 20 pounds. No overhead work. No reaching and lifting. No repetitive lifting. Pushing or pulling no more than 20 pounds." (Ex. D).

11. On August 21, 2018, Claimant saw Dr. Dupper for an impairment rating. Dr. Dupper noted Claimant had some improvement with surgery but continued to have left arm pain and shoulder pain. Dr. Dupper also noted Claimant had significant functional deficits in strength and range of motion. Dr. Dupper opined that Claimant had been at MMI for his left shoulder since June 26, 2018. Dr. Dupper assigned a scheduled impairment rating of 20% for range of motion deficits and weakness in the left shoulder, which converts to a 12% whole person impairment. Dr. Dupper also noted work restrictions "Limited to the left upper extremity: Limit lifting from floor to shoulder height to 10 pounds. Pushing or pulling no more than 10 pounds. No overhead lifting. No overhead work." (Ex. 3).

12. On February 20, 2019, Claimant underwent a Division Independent Medical Examination (DIME) performed by John M. Tyler, Jr., M.D. Claimant reported he was working as a “freight verifier” and was lifting a 20 lb. bag of cat litter when his right hand slipped off the bag and the bag pulled his left arm. Claimant reported the immediate onset of left shoulder pain and pain radiating into the lateral aspect of the cervical spine and superomedial parascapular region. Claimant reported he had no prior problems with his left shoulder, superomedial parascapular region or cervical spine. Claimant reported his primary problem was residual ongoing chronic neck pain. Claimant described the location of his pain as the middle to upper portion of the left posterolateral cervical spine into the superomedial parascapular region over to the level of his AC joint. Claimant reported that rotation of his spine to the left increased his pain, and that he could not maintain a static position of his head without the sensation worsening. Claimant reported his second area of concern was symptoms deep within his left shoulder with motion causing an “icepick” sensation within the shoulder joint itself. Claimant also reported difficulty sleeping due to pain in his cervical spine and shoulder. (Ex. 4).

13. Dr. Tyler’s impression was status post left rotator cuff repair of both the supraspinatus and infraspinatus and subacromial decompression; cervical myofascial pain syndrome with restriction of mobility at the CS-6 and C2-3 facet levels on the left side; diffuse myofascial pain syndrome throughout the left parascapular and superomedial parascapular regions. (Ex. 4).

14. Dr. Tyler concluded Claimant was at maximum medical improvement (MMI) as of June 26, 2018. Dr. Tyler provided a scheduled impairment rating of 15% for Claimant’s left upper extremity related to loss of motion, including 5% for impairment of the upper extremity for loss of shoulder flexion, 1% for loss of extension, 1% for loss of adduction, 3% for loss of abduction, 4% for loss of internal rotation and 1% for loss of external rotation. Dr. Tyler indicated no further impairment for shoulder pathology was given as there was no clavicle resection or shoulder replacement required. Claimant’s 15% upper extremity impairment converts to a 9% whole person impairment. Dr. Tyler agreed with the work restrictions recommended by Dr. Dupper. (Ex. 4).

15. Dr. Tyler also provided a whole person impairment for Claimant’s cervical spine impairment related to the pain in Claimant’s cervical spine. In addition, Dr. Tyler assigned a 13% impairment for loss of cervical range of motion. Dr. Tyler assigned a combined 16% permanent partial impairment rating for Claimant’s cervical spine. (Ex. 4)

16. Claimant credibly testified he had no prior injuries to his left shoulder or cervical spine. Claimant testified that as a result of his injury, he had pain down his left arm. Claimant testified he could not separate the impairment he attributes to his shoulder injury from the impairment attributable to his cervical injury.

17. On May 17, 2019, Respondents filed an Amended Final Admission of Liability (FAL) consistent with Dr. Tyler’s impairment rating and admitted for a 15% scheduled impairment of Claimant’s left shoulder and 16% whole person impairment related to Claimant’s cervical spine.

18. Respondents submitted footage of video surveillance of Claimant. The videos, taken on August 2, 3, 4 and 5, 2019, generally show an individual (presumed to be Claimant) entering and exiting an automobile and carrying various items in both his left and right arm. Nothing in the videos demonstrate Claimant performing any task inconsistent with his work restrictions. The videos neither demonstrate nor disprove any functional restrictions Claimant may experience. (Exhibit I).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Conversion of Scheduled Impairment to Whole Person Impairment

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder."

See §8-42-107(2)(a), C.R.S. However, the “shoulder” is not listed in the schedule of impairments. See *Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998).

When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. See §8-42-107(8)(c), C.R.S.

Because §8-42-107(2)(a), C.R.S. does not define a “shoulder” injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. See *Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. See *DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

The ALJ must thus determine the situs of a claimant’s “functional impairment.” *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant’s ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O’Connell v. Don’s Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs*, W.C. No. 4-536-198 (ICAO June 20, 2005). *In re Claim of Barnes*, 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

Claimant has failed to establish by a preponderance of the evidence that his scheduled impairment rating for loss of use of the arm below the shoulder should be converted to a whole person impairment. Claimant did not testify as to the nature or location of any impairment related to his shoulder injury and testified, he could not distinguish between functional impairment he attributed to his cervical spine and his shoulder. The medical providers did not find any impairment beyond the shoulder, with the exception of that related to Claimant’s cervical spine, for which he received an impairment rating. Neither Dr. Dupper, Dr. Cebrian nor Dr. Tyler noted functional impairment beyond the Claimant’s shoulder, with the exception of those restrictions related directly to his cervical spine. The restrictions placed upon Claimant by Dr. Dupper (and agreed by Dr. Tyler) principally affect Claimant’s arm movements (i.e., pushing,

pulling, lifting, and working overhead with the left arm). Dr. Dupper specifically noted Claimant's permanent restrictions are "limited to the left upper extremity." Claimant reported to Dr. Tyler he experienced pain "deep within his left shoulder" with movement, and the Claimant's records do not document functional impairment extending beyond his left arm.

Claimant does have impairment as the result of his cervical spine injury, this has been separately rated as a whole person impairment. Where the accident has caused measurable impairment to more than one part of the body, the claimant may have more than one "injury" for purposes of § 8-42-107(7)(b)(II), C.R.S. *Warthen v. Industrial Claim Appeals Office*, 100 P.3d 581 (Colo. App. 2004). Section 8-42-107(8)(b)(II), C.R.S., "precludes conversion of a scheduled disability to a whole person impairment rating for the purposes of combining a scheduled disability with a whole person impairment where the claimant sustains both scheduled both scheduled and nonscheduled injuries." *Guzman v. KBP Coil Coaters*, (WC No. 4-444-246 (January 10, 2003); see also *Jesmer v. Portercare Hospital*, W.C. No. 4-442-706 (March 27, 2002). Although the ALJ makes no factual findings regarding the causation or relatedness of Claimant's cervical spine condition, the DIME physician did assign a whole person impairment rating for Claimant's cervical spine based on his finding that the Claimant sustained a related cervical injury.

Claimant has not established by a preponderance of the evidence that he sustained any functional impairment related to his shoulder injury that extends beyond the shoulder. As such, Claimant has not established that the 15% scheduled impairment assigned by the DIME for loss of use of arm below the shoulder should be converted to a whole person impairment.

ORDER

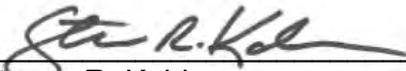

It is therefore ordered that:

1. Claimant's request to convert the 15% scheduled impairment rating for loss of use of the left arm below the shoulder to a whole person impairment rating is denied.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 28, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable injury to her right shoulder on February 8, 2019?
- II. If compensable, has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related medical benefits, including treatment from UCHealth and Colorado Springs Orthopedic Group?
- III. If compensable, has Claimant shown, by a preponderance of the evidence, that the medical benefits she received before she reported this claim to Respondents are authorized?

STIPULATIONS

- I. Claimant's Average Weekly Wage is \$1,131.73
- II. Should Medical Benefits be awarded, the Division of Workers Compensation Fee Schedule would apply.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Hearing Testimony about the Work Incident

1. Claimant worked as a full time fundraiser for Employer[Redacted]. At hearing, Claimant testified that she was pulling a wheeled case inside the Reno, Nevada airport to reach the airline's check-in counter and check those wheeled cases in as luggage for her flight. The case had a handle and was tilted forward so it rolled on two wheels built in to the case. Claimant explained she was grasping the handle with her right hand while walking forward. She was facing forward, with her arm extended down behind her to grasp the handle of the cases to pull the cases forward. Claimant said she was pulling the case as one typically does with wheeled luggage. She was not using any new or changed grip to pull the case. She was pulling the case on a smooth concrete floor, and there were no impediments, cracks, uneven places, an incline, a decline, or defects on the floor.

2. Claimant testified that nothing occurred while she was pulling the cases. They did not wobble, fall, stop suddenly, shift, bump, jump, shake, or do anything other than roll forward. No one added or subtracted weight from the case she was pulling. Claimant said at hearing that she felt her right shoulder "hyperextend" while pulling the

case. The pain began after she had been pulling the case for a time in the airport, and not when she was setting the case in motion, or when stopping it. Claimant testified that she experienced a deep sharp pain on the right shoulder down to her right elbow and that this pain was constant. Claimant testified that she told her co-worker Kevin N[Redacted] that she had extreme soreness in her right shoulder on February 8, 2019 and that she was not sure why.

3. Claimant testified that she had approximately four work trips in 2017 and seven work trips in 2018. These work-related trips typically lasted for three days during which Claimant was physically active for a minimum of three up to a maximum of ten hours a day. In performing her duties on these trips, Claimant was required to pack pallets weighing up to 600 pounds, set up booths with firearms and displays, and transport luggage weighing up to 80 pounds. During these trips, Claimant had assistance from one other employee. Claimant testified that although she had some soreness after these work trips, she did not have any difficulty performing her job duties prior to February 8, 2019.

4. Claimant testified that, although she continued to work after her February 8, 2019 injury, she required assistance from her travel partner Kevin N[Redacted]. Mr. N[Redacted] assisted Claimant with carrying her laptop in his backpack and lifting and pulling additional equipment to limit her physical activity. Claimant testified that she never required this type of assistance in performing her job duties prior to February 8, 2019. Claimant testified that she had four subsequent work trips after her February 8, 2019 injury. However, Claimant testified that she was not able to do the same amount of physical activity during these trips as she could before. Ultimately, Claimant was unable to go on her planned June 19 to June 24, 2019 work trip due to her injury. Claimant testified that the symptoms she experienced in her right shoulder after her February 8, 2019 injury were distinct from the soreness she previously experienced after her work trips in 2017 and 2018. Claimant described her symptoms from February 8, 2019 as very deep and intense in the right shoulder with chronic aching. Claimant described her previous soreness as “all body” and that it would resolve on its own with time. Claimant testified that she felt pain in her right shoulder then, and has felt a constant ache ever since.

Claimant Initially Treats through Primary Care

5. Claimant initially reported at Carlson Chiropractic and Acupuncture (Ex. D). Claimant, at her first appointment at Carlson Chiropractic on April 18, 2019, completed a pain diagram endorsing dull aches in her right and left arms and shoulders. (Ex. D, p. 107). This pain diagram endorses fewer symptoms and fewer affected body parts than her later pain diagrams, with a pain level of six on a 10- point pain scale. Claimant did not mention that she was injured on February 8, 2019, when she saw Dr. Carlson on April 18, 2019. Instead, he wrote, “This started following a lot of travel which began in December. There was a lot of lifting, pushing and pulling of heavy backpacks, etc. for work.” When asked about her arm pain, Dr. Carlson recorded, “The *patient is unsure when these symptoms started*. The symptoms appear on both sides.” *Id* at 109.

Claimant was similarly unsure when her neck, and mid back, pains began.

6. Dr. Carlson took detailed range of motion notes. He measured both arms for Flexion, Extension, Abduction, Adduction, Internal rotation, and External Rotation. In every measurement, the reported *ROM findings for both left and right arms were identical*. Additionally, the pain that Claimant reported for each ROM movement was *identical between the left and right sides*, but ranging from 3 to 6, depending on the specific movement. *Id at 109, 110*.

7. Claimant continued to treat with Dr. Carlson. Dr. Carlson never mentions any traumatic or specific injury occurring on February 8, 2019, in his reports from those visits. He never discusses any specific injury to Claimant's right shoulder. Instead, his chiropractic treatments focused on Claimant's cervical spine region. (Ex. D, p. 111-112). On May 10, 2019, Claimant said she had worsening arm pain wither severe symptoms that worsened with physical exertion. When asked about her bilateral shoulder and arm pain, [Claimant] "[I]s unsure when this condition started." *Id at 113*.

8. On May 16, 2019, Claimant told Dr. Carlson that her symptoms were better and, "[I]s now flared up again." Dr. Carlson said the flare up had occurred, "[F]or unknown reasons." She still reported bilateral shoulder and arm symptoms, with neck and mid back symptoms. Under *Shoulder Pain*, he writes "The symptoms are *bilateral*." (Ex. D, p. 115-116). On June 10 and 12, 2019, Claimant still reported bilateral shoulder symptoms, and was still unsure when that condition started. *Id at 117, 120*. In none of his reports from his treatment of Claimant over almost two months, does Dr. Carlson mention any injury occurring on February 8, 2019, or any injury to the right shoulder or any other body part.

Claimant Reports this as a Work Injury

9. Claimant completed the "Workers' Compensation – First Report of Injury or Illness" on June 21, 2019. Therein, she stated: "Started feeling pain in the neck and shoulder thought I was sore continued to feel sore after time I decided to go to chiropractor and he said I had pinched nerves." (Ex. P) Claimant alleges she informed Employer[Redacted] of her alleged injury on June 21, 2019 (*Id.*). After receiving a copy of the November 7, 2019, Worker's Claim for Compensation from the DOWC (Ex. Q), Insurer issued a Notice of Contest.

10. Claimant then went to UCHHealth on June 21, 2019. Claimant reported she had neck, bilateral arm, and low back pain, "[D]ue to pushing, pulling, moving lots of gear, works long hours and travels a lot as well. DOI sometime around 2/8/19." (Ex. C, p. 23). Claimant did not state or mention to Dr. Shafer at this visit that she sustained a specific injury to her right shoulder on February 8, 2019, while pulling wheeled luggage as she alleged at hearing. Claimant reported diffuse symptoms in her neck, back, right arm, and left arm, and reported her symptoms were emanating from her neck. Claimant was uncertain of the date when her symptoms began, stating they started after one of her work trips around February 8, 2019 (Ex. C, p. 24). She did not discuss or disclose her involvement in a 2013 motor vehicle accident (Ex. T, U) and the treatment and

symptoms she had due to that accident. Claimant said her previous chiropractic treatment (at Carlson Chiropractic and Acupuncture, Ex. D) had resolved her lower back symptoms, and her lumbar spine was normal to exam.

11. Claimant said that when she flexed and rotated her neck, her pain and symptoms in her arms increased. Luis A. Santiago, P.A.-C., diagnosed Claimant with cervical radiculopathy in the C5-C7 distribution, prescribed a steroid burst and Robaxin, and gave her work restrictions. PA Santiago did not diagnose Claimant with any right shoulder injury or pathology. Claimant's physical exam on June 21, 2019, did not mention any problems, issues, or symptoms in her right shoulder. (Ex. C, pp. 23-30). Claimant did not report a specific injury to her right shoulder at this appointment, and did not have any signs, symptoms, or diagnosis of right shoulder pathology at this appointment.

12. Claimant returned to UCHealth on June 27, 2019, and saw Dr. Cynthia Shafer for the first time. She said she was better. Claimant disclosed that she had worked for Employer[Redacted] for two and one-half years, and she had been, "[H]aving gradually increased symptoms since starting." Claimant did not state that her symptoms began suddenly or acutely when she was pulling luggage behind her in airport. Instead, Dr. Schafer's history from Claimant states:

Ms. Woods works for USA shooting, the Olympic shooting team doing a lot of fundraising which means a lot of shows. They are heavy as season of the year as January and February. Around 2/8/2019 coming home from 1 of her trips she noticed increased neck pain radiating into the right greater than left arm and some right arm weakness (this is her dominant hand). She also had diffuse back pain. She went to the chiropractor a few times which resolved her low back, but the upper back continued. Her coworkers kept urging her to get seen because this was work-related, so she finally came in and saw 1 of my colleagues last week on 6/21/2019. He gave her a steroid burst as well as Robaxin 750 mg put her on fairly tight restrictions and brought her back to see me today.

(Ex. C, pg. 34)

13. Claimant's shoulders had full, normal range of motion on Dr. Schafer's exam. She had diffusely tender in her paraspinous trapezius, and bilateral rhomboids. Her right deltoid muscle was also diffusely tender (Ex. C, g. 35). Cervical x-rays did not reveal any injury or degenerative changes. Dr. Schafer thought it unlikely that claimant had a cervical disc pathology. She concluded, "I actually believe all this is simply soft tissue, fascial as well as muscular from the cumulative effect of overloading her body." (Ex. C, pp.34-37) Dr. Schafer stated that Claimant had no work restrictions, and could regulate her activities herself. Claimant last worked for Employer[Redacted] on June 28, 2019, when she was laid off.

Prior Injury in 2013

14. Claimant did disclose to Dr. Schafer on June 27 that she had a significant injury in a motor vehicle accident in Texas in 2013. "She went to physical therapy and chiropractor for 2 years to resolve this." (Ex. C, p. 35). Records confirm that she required treatment and evaluation in the emergency room for neck, back, bilateral arm, and hand soreness. Claimant also sought care at Manitou Wellness Center for pain that interfered with her work (Ex. T). Claimant was found to have "Compression in Spine. External rotation of R[ight] hip. L[eft] and R[ight] scapula imbolized [sic]. She

was given treatment to increase mobility for her shoulder and shoulder girdle, including “Rotator cuff opening stretch.” She was to continue treatment for eight to 10 weeks *Id.*

15. At Claimant’s second appointment with Manitou Wellness Center, her scapula was, “[S]till immobilized [sic].” She was told to perform, “Deepened stretch for rotator cuff” Both shoulders were reported to be symptomatic at that appointment. On her fourth visit on July 3, 2013, Claimant still reported symptoms in her shoulders, and was still getting rotator cuff opening exercises. On July 17, 2013, Claimant still reported right scapula symptoms. Claimant’s pain was “high” when she returned for her sixth visit on August 14, 2013, and her right shoulder was, “[P]ulled forward.” Claimant’s physical therapist believed therapy should continue every other week. {Note: these medical records were obtained in mid-July, 2020; the hearing occurred June 30, 2020}.

16. At hearing, the following exchange took place:

Q What about that 2013 accident; what type of treatment did you receive for that?

A I didn’t need any treatment.

Q Did you have any treatment?

A I’m sorry. I went to get a – I went to the urgent care, and they sent me to get X rays.

Q *Did you have any follow-up after that?*

A *No.*

Q When was the last time you received medical treatment for that?

A That would be during the accident in 2013.

Q Did that issue resolve?

A Yes (Hearing transcript, pp. 30, 31)(emphasis added).

Claimant Referred for Chiropractic Care

17. Claimant was referred by Dr. Shafer to see Dr. Doyle for her first chiropractic appointment on July 15, 2019 (Ex. E). Dr. Doyle acquired a more detailed history from Claimant. Claimant, he wrote, was working 17-hour shifts and traveling, “[D]uring which she had to transport luggage and stack pallets past the point of fatigue. She reports that she developed neck upper back and shoulder pain *gradually* and that it significantly *worsened* in February of 2019.” (Ex. E, p. 128)(emphasis added). Claimant said that her complaints were of right greater than left neck, upper back, shoulder and arm pain. *Id.*

18. Claimant did not tell Dr. Doyle that she sustained a specific traumatic injury while pulling wheeled luggage in the airport on February 8, 2019, or any specific injury on any date. Her symptoms, she said, arose gradually, and not from a specific incident. Claimant said she was off work for the summer and thus now able to pursue medical treatment. She said her right shoulder and right side of her neck were most painful. She completed a pain diagram for Dr. Doyle, showing no specific right shoulder injury;

but diffuse symptoms covering her entire back, neck, head, and both upper extremities to the elbows. (Ex. E, p. 121). She wrote in her questionnaire for Dr. Doyle that her symptoms began in “February 2019” and in response to a question asking how her symptoms began, claimant wrote, “Worsening on the road.” (Ex. E, p. 122)

19. Dr. Doyle recorded Claimant, “Felt very sore,” in January and February 2019, and that her symptoms worsened February 8, 2019 (Ex. E, p. 127). Claimant wrote that her symptoms began in her neck and went from her neck down her arms to the elbow *Id.* Dr. Doyle’s physical exam revealed myofascial findings, “[C]onsistent with rotator cuff injury as well as impingement and subdeltoid bursitis on her right.” He also thought Claimant was symptomatic in her cervical and thoracic spine regions. He recommended she continue to receive chiropractic care three times weekly for two weeks, *Id at 128-129* Dr. Doyle added trigger point dry needling at Claimant’s next appointment on July 17, 2019, and continued manual therapy. *Id at 130.*

20. However, on July 18, 2019, Dr. Shafer found Claimant had right shoulder flexion and abduction of only 90 degrees, but normal rotator cuff strength (Ex. C, p. 46). Dr. Doyle had contacted Dr. Schafer to say he was concerned Claimant had a right shoulder rotator cuff injury along with her, “[S]evere muscle and myofascial findings.” Dr. Doyle wanted to add massage therapy to Claimant’s treatment plan. Claimant’s right shoulder range of motion was significantly restricted at this visit, but her muscle spasms had lessened. Claimant mentioned pulling wheeled luggage behind her for work at this visit but said she felt, “[A] lot in her *elbow* around the reported date of injury, so perhaps she did damage something.” Claimant does not say she injured her shoulder in this activity (Ex. C, p. 45).

21. Claimant continued chiropractic treatment with dry needling, manual therapy, and electrical stimulation. On July 22, 2019, Claimant said her symptoms began, “[G]radually, and that it significantly worsened in February of 2019.” (Ex. E, p. 132). She does not mention any specific injury on February 8, 2019. Claimant told Dr. Doyle she was, “[D]oing much better with treatment . . .” on July 24, 2019 *Id at 133.* On July 26, 2019, Claimant told Dr. Doyle that she was steadily improving and was very positive about her progress. She still makes no mention of any injury on February 8, 2019.

22. However, at Claimant’s sixth visit with Dr. Doyle on July 29, 2019, she said her symptoms in her right shoulder were now much worse. Her neck and upper back pain had not increased. Claimant said her range of motion in her right shoulder and ability to use her right arm were very limited. Claimant did not provide, and Dr. Doyle does not mention, any cause for this sudden increase in her symptoms. Dr. Doyle wrote that Claimant had, “Refractory right shoulder pain which seems due to a combination of rotator cuff impingement subdeltoid bursitis and bicipital tendonitis.” Dr. Doyle contacted Dr. Schafer to say he thought a right shoulder MRI would be needed (Ex. E, pp. 137-138). Claimant began massage therapy on July 30, 2019; then on July 31, 2019, told Dr. Doyle that her right shoulder symptoms were improved. *Id at 139-140.* Claimant continued to report that she was pleased with her treatment and positive about

her recovery, and continued with chiropractic and massage therapy appointments.

Care Focuses on Right Shoulder

23. Dr. Schafer saw Claimant again on August 8, 2019 (Ex. C, p. 57). Dr. Shafer said Claimant's neck and trapezius symptoms had resolved, but that Claimant's continued right shoulder symptoms made her concerned about internal derangement in that shoulder. She referred Claimant to Dr. John Redfern at Colorado Springs Orthopedic Group for an evaluation and to an MRI. That MRI, done August 22, 2019, was interpreted to show findings:

1. Thickening and edematous change inferior capsular margin with synovitis changes of the rotator interval. Findings *highly suggestive of adhesive capsulitis*.
2. Articular surface compromise of the supraspinatus tendon as above. Mid and bursal 50% remains intact. *Complete tear is not identified*.
3. Overall, given the *constellation* of findings, *consider* orthopedic surgery evaluation. (Ex. H, pp. 175-176)(emphasis added).

24. Dr. Redfern saw Claimant in the morning on September 5, 2019. Claimant told him her right shoulder pain started when traveling for her job with employer and having to carry heavy backpack and luggage, and set up display tables. Dr. Redfern wrote, "She believes that the shoulder was [injured] during her travels for work which requires her to carry heavy backpack and luggage. She also set up tendon [sic] tables. She began experiencing increased pain around the shoulder and upper arm and [sic] January/February 2019." Dr. Redfern diagnosed, "Incomplete rotator cuff tear or rupture of right shoulder, *not specified as traumatic*." (emphasis added). Dr. Redfern stated she should continue her therapy, and not have surgery at this time. An injection was deferred. Claimant agreed with that plan, stating she wanted to avoid surgery (Ex. G, pp. 169-171).

25. Claimant then saw Dr. Shafer that same afternoon on September 5, 2019, and told her that she was, "[A]mazed with the improvement that she has had working with the massage therapist." At this visit with Dr. Schafer, Claimant had 90 degrees of right shoulder flexion (Ex. C, pp. 68-69). However, earlier that day when Claimant saw Dr. Redfern, Claimant, Dr. Redfern found, had 160 degrees of flexion (Ex. G, p. 170).

26. Claimant presented to Orthopedic Rehabilitation Associates for physical therapy from September 18, 2019 to October 15, 2019. The physical therapy records reveal chronic right sided shoulder and neck pain, with intermittent less intense left shoulder pain. Claimant reported pain began while moving and handling a lot of heavy equipment during her work with Employer[Redacted] on February 8, 2019. Claimant reported that her pain progressed leading to difficulty with movement of the right shoulder and neck, difficulty sleeping, and difficulty performing activities of daily living and recreational activities. Physical examination revealed tenderness on the rhomboids, right rotator cuff, traps, pec major/minor and deltoid, with moderate guarding. Claimant

also had decreased right scapular mobility. Assessment included “WC due to overuse working for Employer[Redacted] February 2019.” On her last physical therapy session, the physical therapist noted “due to lack of significant functional progress, patient may be a surgical candidate at this time per her discussions with Dr. Redfern,” and that, although she responds well to treatment with improved motion and decreased pain, results are temporary and function is declining overall. (Ex. 7)

27. On December 12, 2019, Claimant told Dr. Schafer, “She has never had issues with the shoulder before including no frozen shoulder. The only thing with her joints has been a nonspecific ‘autoimmune disorder’ with no further delineation that she has had for many years.” Dr. Schafer opined: “her underlying autoimmune disorder may make her more likely to develop adhesive capsulitis, but the original injury I believe is work-related and therefore this adhesive capsulitis is secondary thus part of the same injury in my opinion.” (Ex. 2, pp. 74-80).

28. When Claimant returned to Dr. Redfern on October 10, 2019, she told him her symptoms had not improved with physical therapy and conservative care. Claimant now wanted to have a right rotator cuff repair (Ex. G, pp. 172-174). Dr. Redfern’s office then submitted a surgery authorization request to insurer.

Proposed Surgery is Denied

29. Jon Erickson, M.D. reviewed Dr. Redfern’s surgery authorization request as a Pinnacle physician advisor on November 26, 2019. Dr. Erickson reviewed Claimant’s medical records. He opined there was no specific injury, and that Claimant’s symptoms arose over time with activities. He stated claimant’s MRI was, “[M]ore consistent with progressive degenerative changes and not a work injury.” He recommended the surgery be denied (Ex. B, pp. 21-22).

Dr. Ciccone IME

30. William Ciccone, II, M.D. saw Claimant on February 26, 2020, for an IME at Respondents’ request. During this IME, Claimant did not tell Dr. Ciccone that her right shoulder symptoms began when pulling wheeled luggage behind her in an airport on February 8, 2019. Instead, she told him she noticed her shoulder was sore in January 2019 after doing three shows for employer. Claimant also said that she noticed increased pain *at night* after working on February 8, 2019. Dr. Ciccone wrote, “She notes she had to pull 80 pounds in January and felt a shift in her shoulder while pulling.”

31. Claimant also admitted to Dr. Ciccone that she did not report this as a work injury until June 2019. Claimant denied “[A]ny previous history of shoulder injury.” After reviewing Claimant’s medical records, taking her history, and performing a physical examination, Dr. Ciccone addressed the relatedness of Claimant’s right shoulder complaints to February 8, 2019. He opined, “I do not believe that the Claimant suffered a work-related injury to the right shoulder. While the Claimant may have been active at work there is no recollection of a specific injury that required a medical

evaluation or limited work duties.” (Ex. A, p. 10). He expanded on his reasoning:

In my experience, most patients who suffer an acute rotator cuff injury present for medical evaluation due to pain. In this case, the claimant relates some increased work with the shoulder but did not present for medical evaluation for months. From the records provided she did see a chiropractor on 4/18/2019, still months after the reported injury event, and in this note she was unsure when the symptoms started. Further, the claimant’s examinations have not been consistent with a shoulder injury that purportedly occurred around February 2019. In her examination on 7/6/2019 [sic], the claimant was noted to have a normal range of motion of the right shoulder then on 7/18/2019 she had flexion of only 90 degrees, but with normal rotator cuff strength. One would expect the claimant to have a consistent examination as she is now months after the work event. More concerning on 9/5/2019, the claimant had two examinations from two different providers. The occupational medicine physician documented right shoulder flexion of 90 degrees the orthopedic surgeon documented flexion at 160 degrees. These changes in range of motion are not consistent with an anatomic injury. Further, my own examination was limited by patient pain with even light touch about the shoulder with flexion limited to 40 degrees. None of these findings are consistent with rotator cuff tearing. (Ex. A, pp. 10-11)

32 Dr. Ciccone did not find Claimant had any work-related injury to her right shoulder’s rotator cuff, or any diagnosis of frozen shoulder/adhesive capsulitis in her right shoulder. He wrote that shoulder capsulitis, “[M]ost commonly just begins with no preceding event.” He noted Claimant had normal shoulder range of motion five months after the alleged work-related injury as documented by Dr. Shafer on June 27, 2019, and also nearly full range of motion when she saw Dr. Redfern on September 5, 2019. This, he noted, is inconsistent with adhesive capsulitis. “Patients with capsulitis do not have loss of motion intermittently.” He also stated claimant’s MRI findings, “[A]re chronic and unrelated to a work injury.” He concluded, “The claimant suffered no event that would be related to an acute rotator cuff injury. The findings of potential adhesive capsulitis are unrelated to a work event. *Id at 11.*

Dr. Ciccone Deposition

33. Dr. Ciccone also testified in a deposition on August 4, 2020. He explained Claimant told him, “[T]hat her pain began in January of 2019 when they had multiple shows that she was performing for Employer[Redacted]. And in February, she had increased pain at night She told me that she was pulling 80 pounds in January and felt a shift in her shoulder while pulling” (Ciccone, depo, p. 9, 11-12) Claimant did not tell Dr. Ciccone that she injured her right shoulder in a specific incident on

February 8, 2019, while pulling wheeled luggage behind her (Ciccone depo, p. 10). Claimant told him her pain began the night of February 8, 2019, and not during that day. If Claimant had said her right shoulder pain began during the day, Dr. Ciccone stated he would have recorded that statement as the timeline of the injury is important (Ciccone depo, pp. 10, 11).

34. Dr. Ciccone explained that the alleged mechanism of injury of simply pulling this wheeled luggage while walking on a level surface in an airport, without any events such as the luggage falling or shifting, would not put stress on the shoulder joint sufficient to cause a rotator cuff injury (Ciccone depo, pp. 12,13). He testified that had Claimant sustained an injury to her shoulder on February 8, 2019, she would have had pain from the injury *on that date*. Instead, Claimant's medical records show she told her providers that she had pain in her right shoulder in December 2018; there was no mention of any injurious event on February 8, 2019 in her initial chiropractic visit on April 18, 2019. He also explained that Claimant had neck pain, bilateral arm pain, and was not sure when those symptoms started (Ciccone depo, pp. 14-15, 19, 20). Dr. Ciccone acknowledged that while it may not happen commonly, that he does have patients who delay seeking treatment for injuries similar to Claimant. Dr. Ciccone further testified that if someone can perform their work duties one day, but requires assistance the next, that this change can be indicative of an acute injury.

35. Dr. Ciccone testified that Claimant's right shoulder rotator cuff partial-thickness tear is, "[C]hronic and preexisting." (Ciccone depo, pp. 16, 21) "I do not believe that the claimant suffered a rotator cuff injury as a result of a work injury because her physical examination never really correlated with a rotator cuff injury. She had normal range of motion and normal strength through most of her exams." *Id at pp. 10, 25.*

36. Dr. Ciccone opined that the most common presentation of adhesive capsulitis is spontaneously, without any known cause or trauma (Ciccone depo, p. 18). He did not believe Claimant's adhesive capsulitis, if that diagnosis were to exist, is not due to any work injury on February 8, 2019. He explained, "Mostly because if someone is developing adhesive capsulitis, they should have loss of motion on their examinations. Looking at her history and her medical records, she had pretty good range of motion of her shoulder. In fact, in July, five months after the injury, she had normal range of motion of the shoulders. She was actually released back to full work duties at that time. So developing -- the diagnosis of adhesive 3 capsulitis is based upon loss of motion. And she didn't have any loss of motion at that point, even five months after the injury." (Ciccone depo, p. 19).

Dr. Redfern Deposition

37. Dr. John Redfern's was deposed on June 24, 2020. He is not Level II accredited. He testified Claimant told him she experienced pain around her right shoulder around January or February 2019 (Redfern depo, p. 7). He explained that, "there's really very little correlation with activity level. . . ." when looking at rotator cuff

degeneration and pain progression (Redfern depo, p. 25), and that there is no orthopedic literature supporting an increased change of shoulder pain with degeneration (Redfern depo, p. 30). Heavy lifting is not a recognized risk factor for shoulder pain (Redfern depo, p. 31). Dr. Redfern was asked whether claimant's work activity of pulling, pushing, and lifting crates weighing 80 pounds was a major contributing cause of her right shoulder becoming symptomatic. He was unable to testify that this activity would be a causative factor (Redfern depo, p. 35). He also could not testify that claimant's job caused her shoulder to hurt (Redfern depo, pp. 36-37). Around 35% of asymptomatic rotator cuff tears will increase in size and become painful over a two-to five-year time frame (Redfern depo, p. 38).

38. When Dr. Redfern saw Claimant, he was just treating her symptoms, not looking for or analyzing a cause of those symptoms (Redfern depo, pp. 43; 53-54). When Claimant did not seek medical care until April 18, 2019, Dr. Redfern testified, "[I]t is very common for *degenerative tears to see me after months of pain*, while *acute traumatic tears* typically see me *very quickly* because of the change in their shoulder function." (Redfern depo, p. 46)(emphasis added).

39. Dr. Redfern explained that if Claimant had adhesive capsulitis in her right shoulder her range of motion would not change very much at all (Redfern pp. 49, 51). He explained that it is difficult to disagree whether something *could or can cause something* as, "[I]n medicine, almost anything is possible, so to ask if something can contribute or can cause is hard to disagree with that." He agreed that asking if something could cause a result is basically irrelevant to medical determinations (Redfern depo, pp. 52-53).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.*, this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ

has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. 2008). In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). In this instance, the ALJ finds that Claimant has been an inconsistent medical historian with her providers. Further, the ALJ notes that Claimant’s claim at hearing that she received no treatment for her 2013 auto accident is not consistent with medical records subsequently obtained.

Compensability, Generally

D. According to C.R.S. § 8-43-201, “a claimant in a workers’ compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers’ compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers’ compensation case shall be decided on its merits.” Also see *Qual-Med, Inc. v. Indus. Claim Appeals Off.*, 961 P.2d 590, 592 (Colo. App. 1998) (“The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence.”); *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915, 918 (Colo. App. 1993) (“The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence.”).

E. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between his employment and his injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be

accorded evidence on question of causation is issue of fact for ALJ). See also, *In the Matter of the Claim of Tammy Manzanares, Claimant*, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

F. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.*, 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. See *Schepker, supra*. "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment merely because an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n*, 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

G. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.; *Faulkner v. Indus. Claim Appeals Off.*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner*, 12 P.3d at 846.

H. The mere fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

Compensability, as Applied

I. Claimant has a partial tear in her right rotator cuff. The MRI also suggests adhesive capsulitis, but the origin of that condition is undermined, and her range of motion measurements along the way suggest it might not be present at all. There is no objective evidence of when or how the rotator cuff condition might have occurred. Had Claimant reported this case promptly on February 8, 2019 - which she now alleges as her injury date - there would have been a far greater chance of determining if such tear was traumatic or degenerative. The paper trail in this case suggests that Claimant herself did not believe this was a traumatic event until months later. Even then, the history she supplied along the way was a moving target. Her shoulder complaints to Dr. Carlson were *bilateral*. In fact, every one of six range of motion measurement for each

shoulder was *identical*, over two months after the date of alleged injury. Claimant herself did not purport to know when this allegedly occurred for months, until the medical attention began to focus on her left shoulder.

J. In this case, the ALJ finds Dr. Ciccone's reasoning to be persuasive. While on occasion an individual might delay in seeking treatment after a traumatic event as alleged here, such is not the norm. Dr. Redfern himself concurred. The pain would be more prominent, and would cause more than a request for help carrying items by a coworker. Claimant could not even tell Dr. Ciccone the 'right' injury date at the IME exam. The varying ranges of motion were not consistent with a traumatic injury of the rotator cuff – nor with adhesive capsulitis. Dr. Ciccone opined that adhesive capsulitis most commonly begins with "no preceding event", and no other medical expert here has opined differently. He further opined that the MRI was suggestive of a chronic condition, instead of a traumatic event. Dr. Ciccone further opined that the described mechanism of injury was not likely to cause a tear such as Claimant has. And Claimant got no dissent from that opinion from her own expert, Dr. Redfern. In fact, Claimant has no medical opinions on causation in her favor, even though surgery *might* still be in her best interest.

K. While it remains *medically possible* that Claimant suffered an injury to her rotator cuff sometime in February of 2019, the ALJ finds that Claimant has not met her burden here. Nor can the ALJ conclude that Claimant suffered a permanent aggravation of a preexisting shoulder condition, which then led Claimant to be in need of medical treatment. In fact, given the timelines and symptoms as outlined, the ALJ cannot find that Claimant suffered even a *temporary* aggravation of her shoulder on February 8, 2019, which required any medical treatment.

ORDER

It is therefore Ordered that:

1. Claimant's claim for Workers Compensation Benefits, including medical treatment, is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: September 28, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- I. Whether Claimant's ongoing medical treatment is related to his admitted injury.
- II. Whether further rhizotomies performed by Dr. Kawasaki are reasonable, necessary, and related to the admitted injury.
- III. Whether Therma Care Patches and muscle relaxants are reasonable, necessary, or related to the admitted injury.
- IV. Whether Respondents established Claimant is not entitled to ongoing maintenance medical treatment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a 73-year-old male. Claimant sustained a significant injury to his back before his employment with Employer in around 2000. As a result, the 2000 injury appears to have caused Claimant to be permanently and totally disabled for about ten (10) years before the subject date of injury with the Respondent Employer on March 24, 2010.
2. In 2000, Claimant sustained an injury while working at the United States Mint in Denver. The injury caused significant chronic low back pain, left leg numbness, and throbbing in his thighs. The injury also caused significant long-term disability.
3. In 2004, Claimant was also involved in a motor vehicle accident. His vehicle was rear-ended which resulted in whiplash. Claimant was treated for cervical spine pain for the next few years. (Ex. A.)
4. Claimant has continued treating for years because of his 2000 back injury – without improvement.
5. According to Dr. Ryan, in 2007, Claimant still had significant limitations which included significant range of motion deficits and significant functional tolerances. As result, Dr. Ryan stated Claimant's symptoms prevented him from performing even sedentary work. (Ex A.)
6. While Claimant was treating with Dr. Ryan, Claimant's wife read about radiofrequency rhizotomy treatment. As a result, Claimant and his wife discussed the possibility of rhizotomy treatment for Claimant with Dr. Ryan. Dr. Ryan, however, did not think it was a good idea. Thus, Claimant did not undergo rhizotomy treatment with Dr. Ryan.

7. Claimant's 2000 claim ultimately closed. But, shortly after his case closed, Claimant began working on getting his case reopened so he could obtain rhizotomy treatment through another physician who would support such treatment.
8. In January 2008, Claimant started treating with Dr. Robert Kawasaki. As noted by Dr. Kawasaki in his January 9, 2008 report from his initial evaluation, Claimant was hopeful to reopen his 2000 workers' compensation claim and have Dr. Kawasaki assume his care. (Ex. B, p. 25.)
9. At his first appointment with Dr. Kawasaki in January 2008 Claimant completed a "Pain Self-Evaluation." Claimant noted that after 8 years, he still had unrelenting back pain. In describing his pain, he marked the next items that defined the duration and extent of his back pain: He noted that:
 - He had pain 12-24 hours per day.
 - His pain was bad all the time. When asked to identify whether his pain was worse, in the morning, afternoon, evening, or nighttime, he did not just check one or two time periods. Claimant checked off each time period that was listed. As a result, he stated that his pain was at its worst all of the time, i.e., morning, afternoon, evening, and nighttime. Basically, 24 hours per day.
 - He could not sit, stand, drive, or walk for more than 20 minutes.
 - He also noted that he had not worked for the last 8 years.
10. In March 2008, Claimant returned to see Dr. Kawasaki. At this visit, Dr. Kawasaki noted Claimant continued to have "significant pain complaints of low back pain with pain radiating down the left lower extremity." Dr. Kawasaki said Claimant's condition was unchanged from his prior visit, but that he was using a cane to walk. Claimant advised Dr. Kawasaki that he had a hearing within the next couple weeks to hopefully get his case reopened. (Ex. B, p. 34-35.)
11. Dr. Kawasaki noted that as of March 2008:
 - Claimant was continuing having pain in his low back – since 2000.
 - Claimant had weakness in his left lower extremity - with his leg giving out on him at times.
 - Claimant's MRI in October 2007 showed degenerative disc changes at L2-3, L3-4, L4-5, and L5-S1, and demonstrated that his maximum area of stenosis was at the L4-5 level with some lateralization towards the left. As a result, he concluded Claimant's Examination was compatible with L4 and L5 radiculopathy.
 - Claimant had undergone EMG (electrodiagnostic examination) in March 2008 which was normal for his left lower extremity.
 - Claimant was using Therma Care patches.
 - Claimant had been prescribed one or another muscle relaxers on an ongoing basis.

12. Claimant did not succeed in reopening his 2000 Claim. Despite his inability to reopen his claim, Claimant's chronic pain continued. According to Claimant and his wife, during 2008 and 2009 his average pain remained around 6-7.5/10 and would increase to 8-9/10 with minimal activity.
13. Around the beginning of 2010, Claimant returned to work and began working for the Respondent Employer in a part-time, light-duty position with significant permanent restrictions as an auto parts delivery driver. Claimant had only worked for two - three months before the admitted injury. Claimant was on Social Security Disability at the time of his DOI on March 24, 2010 and had been for several years. (Ex. A.)
14. Claimant remained symptomatic from his 2000 injury up to, and through, the March 24, 2010 admitted injury.
15. On March 24, 2010, Claimant was working for Employer as an auto parts delivery driver. Claimant was asked to help move an item at work. At times, it has been described as a bookcase. Claimant alleges that while moving the bookcase with a co-worker, he injured his back.
16. On March 27, 2010, Claimant sought medical treatment. At the first appointment, Claimant told the nurse that he was helping move a shelf and while moving the shelf he felt a pull in his lower back when he let go of it and developed lower back pain. There is no indication Claimant told the nurse at this appointment that he had a prior back injury. Nor is there any indication Claimant said he, or anyone else, heard a "pop" at the time of the alleged incident. Plus, there is no indication Claimant complained of symptoms radiating into his legs.
17. On March 29, 2010, five days after the alleged accident, Claimant presented to Dr. Gellrick. During his appointment, Claimant described how he was injured. According to Dr. Gellrick, Claimant stated that he was:
 - Helping a coworker move some things.
 - The item he was carrying, when he injured himself, was heavier than he thought.
 - The item weighed around 30 pounds.(Ex. C, p. 52.)
18. Claimant did tell Dr. Gellrick that he had a prior back injury about ten years earlier. But, instead of telling Dr. Gellrick the truth about his chronic and longstanding back problems that kept him out of work for approximately 10 years, Claimant told Dr. Gellrick that he fully recovered from his prior back injury. According to Dr. Gellrick, Claimant told her that: "He was fine, asymptomatic, no problems until the current injury."
19. Based on the false and misleading history Claimant provided to Dr. Gellrick, Dr. Gellrick concluded that his recent injury and need for medical treatment was work-related. At this first appointment with Dr. Gellrick, he was prescribed physical therapy. (Ex. C, p. 52.)

20. On April 21, 2010, Claimant returned to Dr. Gellrick. At this appointment, Claimant complained of pain radiating into his left SI joint, hip, and thigh. After engaging in physical therapy, Claimant said his pain was getting worse and he rated it at a 9/10. Again, this level of pain was no different than the level of pain he complained about having in 2008 and 2009 with minimal activity. Nor is there any indication Claimant told Dr. Gellrick that his current symptoms were similar, if not the same, to his prior symptoms. As before, minimal activity, whether it be physical therapy, standing, or walking, caused Claimant's pain to increase to a 9/10. Based on Claimant's description of his symptoms, Dr. Gellrick ordered an MRI.
21. On May 13, 2010, Claimant returned to Dr. Gellrick. There is no indication she knew Claimant previously had an MRI and there is no indication she could compare the prior MRI against the new MRI. Based on the information available to her, Dr. Gellrick recommended Claimant undergo an EMG/NCV and a surgical consultation.
22. Based on Claimant's allegations, Respondents admitted liability for his back injury. That said, as Claimant began treating for his back injury, it became evident that he had a significant preexisting back injury that was contributing to his symptoms. As a result, as time went on and more information became available about his prior back injury, it became less clear about whether Claimant's symptoms and need for treatment were related to his 2000 injury or his 2010 injury. Complicating the causation assessment was Claimant's changing story about the extent and permanent nature of his 2000 injury as well as the mechanism and extent of his 2010 injury.
23. On May 28, 2010, Claimant was seen by Dr. Plotkin, Dr. Gellrick's associate, as a walk-in. Claimant reported his current medications, which included Robaxin and Darvocet, were not helping at all. At this appointment, Dr. Plotkin also noted "[Claimant] wants a letter to say take off work and go back when everything is resolved." Despite Claimant's request to be taken completely off work, Dr. Plotkin returned Claimant to sedentary duty. (Exhibit C, p. 53.)
24. On June 1, 2010, Claimant saw Dr. L. Barton Goldman, who performed an EMG/NCV. Although Claimant told Dr. Gellrick that his prior back injury and associated pain resolved, he told Dr. Goldman that he had a prior back injury that resulted chronic but mild back pain. Based on the information provided by Claimant, Dr. Goldman concluded that Claimant's symptoms and findings on EMG/NCV could be preexisting or could be because of the recent work incident described by Claimant.
25. On June 3, 2010, Claimant returned to Dr. Plotkin. Dr. Plotkin noted Claimant voiced displeasure about being returned to modified duty and having to perform indoor sedentary work. After this examination, Claimant was to follow up with Dr. Castro. (Ex. C, p. 53.)
26. On June 21, 2010, Claimant returned to Dr. Plotkin and reported that his pain was 9/10. (Ex. C, p. 53.) Later, Dr. Plotkin referred Claimant Dr. Kawasaki for evaluation and consideration of epidural steroid injections.

27. On July 2, 2010, Claimant was evaluated by Dr. Kawasaki. Claimant had sought treatment with Dr. Kawasaki in 2008 to reopen his 2000 claim and have Dr. Kawasaki assume treatment once his claim was reopened. At this appointment, Dr. Kawasaki noted that Claimant said his prior back injury caused him to be out of work for 7 years, but he was told by "Workers Compensation... that he needed to go find a job." And, according to Claimant, he had only been working for Employer for a few months before his accident. (Ex. C, p. 53.) Claimant told Dr. Kawasaki that he aggravated his back:

[W]hen he was moving a file with another coworker. The other coworker dropped his end of the file, forcing [Claimant] to take the brunt of the weight.

Claimant reported to Dr. Kawasaki the same symptoms he had before the March 24, 2010 incident but suggested that moving the item at work made his pain worse. Based on Claimant's contention that his symptoms were worse after the March incident at work, Dr. Kawasaki's impression included:

- History of chronic low back pain with previous Workers' Compensation claim with similar symptomatology and similar findings.
- Acute aggravation on 02/04/10.

(Exhibit B, pp. 36-38.)

28. On August 8, 2010, Dr. Kawasaki wrote a letter to the adjuster in which he answered various questions about the extent of Claimant's prior condition and whether Claimant's current diagnoses were due to Claimant's 2000 work injury. Dr. Kawasaki concluded that all of Claimant's current diagnoses were preexisting. Dr. Kawasaki stated:

All the diagnoses are due to pre-existing conditions. The patient has had chronic low back pain and pain, numbness, and tingling down the left lower extremity from an injury in 2000 while working for the Denver Mint.

(Exhibit B, p. 42.)

29. Dr. Kawasaki then described Claimant's extensive, chronic, and unrelenting symptoms and restrictions based on the 2000 injury. Dr. Kawasaki stated:

The patient was significantly impaired when I saw him on 01/09/08. There are also records from Dr. Christopher Ryan in a letter on 03/05/07 indicating the patient had significant limitation of lumbar range of motion. His prognosis at that point was that he was permanent and stationary. He was limited in his ability to bend, twist, engage in repetitive neck motions and overhead work, and endure static head positioning. He had a limited ability to tolerate certain positions such as sitting, standing, walking, and even lying down. It was indicated the effects of his injury prevented him from returning to the job that he performed when he was injured, and this is a permanent condition. His limitations were indicated to be profound. His postural intolerance prevented him from engaging in a sedentary job

on a meaningful basis. Otherwise, he would have been placed in a sedentary-duty category.

(Exhibit B, p. 42.)

30. Lastly, Dr. Kawasaki said that it was exceedingly difficult to determine whether Claimant's current complaints were based on his 2000 work injury or his recent incident in 2010. Dr. Kawasaki stated:

[I] is very difficult to differentiate whether the aggravation had resolved as the patient had continued pain complaints, although the same complaints that he had previously with his pre-existing condition but subjectively worse.

(Ex. B, p. 43.)

31. On October 26, 2010, Claimant followed up with Dr. Goldman. Since his 2010 injury, Claimant had undergone some chiropractic treatment and acupuncture. And, at this visit, Claimant noted his pain level was 6-7.5/10 on average. This was similar, if not better, than his average pain complaints in 2008 and 2009. As a result, Claimant's subjective pain complaints had returned to his preinjury baseline. Plus, Claimant's return to baseline was before Claimant had undergone any facet injections or radiofrequency ablation procedures.
32. On December 3, 2010, Claimant returned to Dr. Kawasaki. At this appointment, Claimant stated that the ESI provided no long-term pain relief. At this time, Dr. Kawasaki was not optimistic that any additional injections would help based on Claimant's ten-year history of low back pain. (Ex. C, p. 54.)
33. On December 22, 2010 and January 19, 2011, Dr. Kawasaki performed a left L4-5 and left L5-S1 medial branch block, which decreased Claimant's subjective pain complaints to 0/10. (Ex. B.) After these procedures, Dr. Kawasaki recommended repeat rhizotomies.
34. On May 3, 2011, Andrew Plotkin, M.D. placed Claimant at maximum medical improvement (MMI) with a 15 percent whole person rating. Maintenance care in the form of repeat rhizotomies was recommended. Restrictions were put on Claimant for lifting, pushing, and long-periods of standing. (Ex. A.)
35. On July 22, 2014, Dr. Basse evaluated claimant for an independent medical examination. As for Claimant's medical history, she noted "[b]y 2008-2009, he reports his low back was stable but very functionally limiting for him." (Ex. C, p. 49.) She also noted that by the end of 2009, Claimant's pain was generally 5-7/10 on average and would increase to 8-9/10 "if he would tinker around in the garage and do an hour or so of standing." (Ex. C, p. 50.) Claimant reported to Dr. Basse that he sought to reopen his prior claim because his wife read about rhizotomies online and he thought the treatment may be helpful for him. (Ex. C, p. 50.)
36. Claimant told Dr. Basse that he was injured under this claim in 2010 while helping his supervisor move a bookshelf. Claimant first described the incident to Dr. Base by saying that "He threw it to me without telling me it was coming..." On clarification, Claimant agreed his supervisor did not throw the bookcase to him, but it was more

like he handed to him and then let go. Claimant also stated that the bookshelf hit the ground and he felt a pop in his back and had a lot more pain. Claimant also told Dr. Basse that his supervisor also heard the pop in his back. (Ex. C, p. 50.)

37. After reviewing Claimant's medical history, and performing a physical examination of Claimant, Dr. Basse concluded that Claimant's need for ongoing medical treatment was unrelated to the 2010 incident at work. Dr. Basse credibly and persuasively supported her conclusions in her report as follows:

Mr. Steger presents as pleasant, cooperative, and entrenched in his disability which dates back more than 14 years to February, 2000. As clearly outlined by Dr. Kawasaki, Mr. Steger had significant low back pain complaints, significant range of motion deficits and profound functional limitations PRIOR to 03/24/10. This is consistent with Mr. Steger's report that by the end of 2009 and PRIOR to 03/24/10, his average pain was 5-7/10 and would increase to 8-9/10 with minimal activity to include standing for one hour.

Mr. Steger has a longstanding, complicated, multifactorial Chronic Pain Syndrome with degenerative deconditioned and psychologic components. His February 2000, on-the-job case was closed between 2006 and 2007. Prior to that, he requested radiofrequency treatment from Dr. Ryan and was denied. He "relentlessly" tried to get his case reopened through April 2008, so he could pursue radiofrequency treatment. This was denied and at some point, he gave up.

With this background, Mr. Steger returns to work and after a two to three-month period had an increase in pain with a work activity on 03/24/10. Pre-existing symptoms and disability were not reported and as such, no comparison to prior studies were obtained. It is unknown if actual additional injury occurred versus simply increased pain with increased activity. Regardless, he was treated with physical therapy, chiropractic, pool therapy and ESI without lasting relief. He ultimately underwent radiofrequency rhizotomy with longer lasting relief. He then returned to pool and physical therapy with continued benefit.

Dr. Plotkin placed Mr. Steger at MMI on 05/03/11 with 15 percent whole person impairment and recommended maintenance care to include "two rechecks with Dr. Kawasaki over the next year as needed and for consideration of repeat facet rhizotomies once per year for the next two years." Mr. Steger is already past two years and past two radiofrequency rhizotomy procedures. He has completed his maintenance care as originally outlined at time of determining MMI.

Mr. Steger's report of improvement with facet rhizotomy is subjective and with minimal, if any, improvement in functional status. He is not participating in any home exercise program as recommended by his care providers or the treatment guidelines. Mr. and Mrs. Steger both report patient's request for radiofrequency in approximately 2003 or 2004 and trying to get his claim reopened to obtain radiofrequency procedure

between 2006 and 2008. This suggests that the patient's current desire for the radiofrequency procedure is related to his original low back injury in February 2000, and not the more recent exposure of 03/24/10.

Dr. Kawasaki notes in letter of 08/08/10 that all his diagnoses are due to pre-existing conditions. The radiofrequency is treating a pre-existing condition and not anything that occurred on 03/24/10. Additional radiofrequency should be pursued outside of this claim.

With Mr. Steger's poor memory, Chronic Pain Syndrome, and some radiofrequency procedures lasting less than two months, in my opinion he is not a candidate for further radiofrequency treatment without careful review of all prior medical records to include those of Dr. Disorbio – his prior treating psychologist, and Dr. Ryan - his prior PM&R specialist, who originally denied his radiofrequency rhizotomy request. Cardiac status needs to be clarified as well.

In my opinion, Mr. Steger is best served by resuming an independent home pool program on a regular basis starting at once a week and building to three times a week. He reports benefit with this while in formal treatment and it offers him the safest option for long-term improved function and overall general health. He reports significant cardiac limitations and is status post left total knee arthroplasty. These non-work-related problems would also be best addressed with an independent pool program.

(Exhibit C, pp. 49-60.)

38. On May 1, 2019, Claimant underwent another independent medical examination (IME) with Kathie McCranie (Ex. D.) During this examination, Claimant told Dr. McCranie that he was injured in March 2010 while moving a heavy rack with a coworker. He told Dr. McCranie that he was injured when his coworker threw it while he was holding it.
39. Moreover, in 2010 Claimant originally told his medical providers that the weight of the item he was carrying was about 30 pounds. During this IME, however, Claimant significantly increased the weight of the item he was moving when he was allegedly injured in 2010. Claimant told Dr. McCranie that the item he was moving weighed 200 pounds.
40. On top of misrepresenting the weight of the item he was carrying, Claimant also tried to minimize the extent of his prior injury by telling Dr. McCranie that “He thinks he may have seen Dr. Kawasaki for a prior work injury and had been given muscle relaxants.” But after that statement, Claimant later indicates Dr. Kawasaki ordered an MRI and provided Claimant 9 lumbar facet rhizotomies.
41. During his IME with Dr. McCranie, Claimant also told her that he had been working at this job for 1-2 years before the March 2010 injury. The prior medical records, however, reflect Claimant was only working at this job for 2-3 months before the alleged incident. All in all, the ALJ does not find Claimant’s representations to Dr. McCranie to be reliable or credible.

42. Dr. McCranie concluded that Claimant's current need for medical treatment is unrelated to the incident in March 2010, but due to his prior injury in 2000. Dr. McCranie stated:

[I]n reviewing Mr. Steger's case, records are indicative of Mr. Steger having reached baseline from his 2000 injury. His pain is in the same location as noted by Dr. Kawasaki in January of 2008. It is of the same intensity as it was prior to 3/24/10, according to Dr. Basse's independent medical examination. If anything, he appears less symptomatic and his examination appears improved compared to the baseline state preinjury.

Prior to his work injury of 2010, his MRI showed facet arthropathy. According to Dr. Basse's IME, he was actively seeking facet rhizotomy treatments. While it does appear that the facet rhizotomy treatment has been of benefit to Mr. Steger, there are several concerns in continuing this procedure. First, while he reports six to eight months of benefit, it appears that his symptoms are returning after only two months, making this a much less beneficial procedure.

As the patient has reached baseline, continuing these procedures is no longer related to the work injury of 2010 but rather due to his longstanding preexisting history of lumbar pain and multilevel spondylosis.

(Ex. D, p. 70)

43. The ALJ finds Dr. McCranie's opinions and conclusions to be credible and persuasive. Dr. McCranie's ultimate opinions and conclusions are supported by Claimant's extensive medical record that sets forth the significant and chronic nature of Claimant's 2000 back injury.

44. On February 17, 2020, Claimant also underwent an independent medical examination (IME) by Lloyd Thurston, D.O. (Ex. A.)

45. Dr. Thurston also concluded that Claimant has returned to his baseline before the 2010 work injury. (Ex. A, p. 11.) Dr. Thurston noted:

[I]t is my medical opinion Dr. Basse carefully and accurately summarized this complicated case...Specifically, lumbar rhizotomies are no longer appropriate and reasonable medical care for Mr. Steger's 3/14/2010 incident at Advance Auto Parts. (Ex. A, p. 13.)

46. Furthermore, Dr. Thurston concluded that the Thermo-Care Patches can be replaced with over the counter treatments. (Ex. A, p. 13.)

47. The ALJ finds Dr. Thurston's IME and report to be extremely well documented and footnoted. Dr. Thurston supported his ultimate opinions and conclusions on Claimant's extensive medical record. As a result, the ALJ credits his conclusions and finds his opinions persuasive.

48. Unlike Dr. Thurston's, whose IME report (Exhibit A) is extremely well documented and footnoted with a long medical records review which also formed the basis and foundation for his opinion and conclusions, Dr. Kawasaki's deposition testimony makes clear that he had not reviewed the prior medical records (including his own

pre-DOI records) and had little recall or understanding of his or other physicians prior opinions about claimant's pre-DOI medical history. (Kawasaki depo T @ 54, L2-13.) Thus, Dr. Thurston's opinions on causation and the relatedness of Claimant's current medical treatment needs is found to be more persuasive than the opinions of Dr. Kawasaki.

49. As found, Dr. Kawasaki deferred his current understanding of Claimant's pre-existing medical condition as well as his own prior opinions on causation and when claimant had returned to his pre-DOI medical baseline to his opinions made contemporaneously in his actual medical records before 2015. Dr. Kawasaki testified that his prior opinions contain the truth as he understood that to be when he issued his contemporaneous reports" (Kawasaki deposition at p43, L-1-19, p46, L22-25, p47, L1-2).
50. The ALJ does not find Claimant's statements to medical providers and testimony at hearing to be credible and reliable about the extent of his symptoms before and after the March 24, 2010 incident at work. For example, Claimant misrepresented to Dr. Gellrick that he was asymptomatic before the March 24, 2010 incident. Despite Claimant's statements to Dr. Gellrick to the contrary, Claimant's preexisting back condition was highly symptomatic in March 2010 and was not asymptomatic.
51. Moreover, Claimant's version of what he was carrying and how he was carrying it during the incident has also been inconsistent.
52. As found above, Claimant also misrepresented to Dr. McCranie the weight of the item he was carrying when the incident occurred. Originally, Claimant said the item weighed about 30 pounds. But, when he was seen by Dr. McCranie, he changed the weight of the item to 200 pounds. The ALJ finds that Claimant's misrepresentation over the amount of weight he was carrying in 2010 was made to support his claim that his current need for medical treatment relates to his 2010 work injury and not his preexisting injury from 2000. Such misrepresentation, however, has done the exact opposite.
53. The ALJ does not find Claimant's representations to his medical providers regarding the change in symptoms due to his March 2010 injury to be credible or persuasive. The ALJ also does not find Claimant's testimony to be credible or persuasive.
54. Claimant does not require any medical treatment to relieve him from the effects of the March 24, 2010 incident or to prevent further deterioration of his condition. As a result, Claimant does not require any maintenance medical treatment due to the incident at work.
55. Claimant's current need for medical treatment is not causally related to the March 24, 2010 incident at work.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

- A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.
- B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).
- C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.
- D. After an award of post-MMI medical benefits, Respondents retain the right to contest any future claims for medical treatment on the basis that such treatment is unrelated to the industrial injury. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If a dispute over medical benefits arises after the filing of an admission of liability, respondents may assert that the claimant did not establish the threshold requirement

of a direct causal relationship between the on-the-job injury and the need for medical treatment. *Snyder v. Industrial Claim Appeals Office*, *supra*. This principle recognizes that even though an admission is filed, Claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury. See *Maestas v. O'Reilly Auto Parts*, W.C. 4-856-563-01 (ICAO Aug. 31, 2012).

- E. Alternatively, where Respondents seek to withdraw an admission for maintenance benefits, Respondents carry the burden of proof. A party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. Section 8-43-201(1), C.R.S.
- F. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. The need for medical treatment may extend beyond the point of maximum medical improvement where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The evidence must establish a causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999).
- G. To the extent Dr. Kawasaki believes Claimant's need for ongoing treatment is related to the March 2010 incident at work, the ALJ does not find his opinions to be credible or persuasive since they appear to be heavily based upon Claimant's subjective complaints and Claimant's contention as to the onset, development, and extent of his symptoms - which the ALJ does not find credible. Moreover, Dr. Kawasaki did not have and review all of the records regarding Claimant's prior work injury. Like a house built on sand, an expert's opinion is no better than the facts and data on which it is based. See *Kennemur v. State of California*, 184 Cal. Rptr. 393, 402-03 (Cal. Ct. App. 1982).
- H. Claimant has failed to meet his burden to prove that further rhizotomies are reasonable, necessary, and related. The ALJ credits the opinions of Drs. Thurston, McCranie, and Basse that further rhizotomies are not reasonable and necessary and are not related to this claim.

- I. Claimant has failed to meet his burden to prove that the ongoing use of Thermo-Care Patches is reasonable, necessary, and related to the admitted injury. The ALJ notes that Claimant was utilizing Thermo-Care Patches prior to this work-related injury.
- J. Claimant also failed to meet his burden of proof that his ongoing use of a muscle relaxant (currently Baclofen) is casually related to his admitted injury. As found, Claimant's present and future need for muscle relaxers is related to his preexisting medical condition as he had required similar muscle relaxants on a chronic basis for several years before he filed this claim.
- K. The ALJ credits the opinions of Dr. Thurston and Dr. McCranie that Claimant has returned to his pre-injury baseline.
- L. The ALJ finds Respondents met their burden of proving Claimant does not require any ongoing medical maintenance treatment and Respondents are relieved of their ongoing admission for maintenance medical treatment.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

- 1. Claimant's award of ongoing medical maintenance benefits is terminated.
- 2. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 29, 2020.

1525 Sherman Street, 4th Floor
Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-102-255-004**

ISSUE

1. Whether claimant has established by a preponderance of the evidence that Claimant's scheduled 45% impairment rating for his right lower extremity should be converted to a whole person rating.

FINDINGS OF FACT

1. Claimant is a 48-year-old man who has worked for Employer as a painter for approximately 8 years. Claimant sustained an admitted work-related injury in the spring of 2018. Neither Claimant nor Respondents presented definitive information concerning the date of injury. Claimant's application for hearing indicates the injury occurred on March 24, 2018. Employer's First Report of Injury, filed on June 6, 2018, Final Admission of Liability and correspondence from Insurer indicate the date of injury to be March 21, 2018. (Ex. A). Claimant's medical records indicate the injury occurred on May 7, 2018. Neither Claimant nor Employer offered testimony sufficient to ascertain the specific date of injury.

2. The parties stipulated that Claimant's average weekly wage for this claim is \$1,027.82.

3. On June 7, 2018, Claimant was examined by Brian Cazden, M.D., of Workwell. Claimant reported he fell to his right side while painting on stilts. Claimant reported pain in his right lower back, hip, and knee. Claimant denied prior problems of this type and denied prior work-related injuries. Claimant completed a pain diagram indicating he was experiencing pain in the front of his right hip and the right side of his lower back, as well as left knee pain. Dr. Cazden ordered x-rays of Claimant's right hip, right knee, and lumbar spine. The x-rays showed degenerative disc disease at L4-5 and L5-S1 but were otherwise unremarkable. Dr. Cazden diagnosed Claimant with a contusion of the right hip, contusion of right knee, acute pain due to trauma, radiculopathy, lumbar region, and low back pain. Dr. Cazden recommended that Claimant have physical therapy for his lumbar spine, right knee, and right hip. Otherwise, Claimant was authorized to return to work without restrictions. Dr. Cazden noted Claimant may require further diagnostics, to possibly include MRI of the lower back, right knee if Claimant's symptoms persisted. (Ex. B).

4. On July 13, 2018, Claimant saw Bill Ford, ANP-C at Workwell. Claimant reported right hip discomfort and knee pain, and occasional pins and needles sensation in his right foot near the toes. Claimant did not report any back pain. Mr. Ford's physical examination demonstrated normal range of motion of Claimant's lumbar spine without pain. (Ex. B).

5. Between June 14, 2018 and October 5, 2018, Claimant participated in approximately 17 physical therapy sessions at Workwell. In the course of receiving

physical therapy, Claimant reported difficulty standing on ladders at work, numbness at the bottom of his right foot, and issues with walking and standing for long periods of time. Claimant also reported his hip was his worst issue, and that he experienced intermittent tingling in his leg. On June 25, 2018, the physical therapist noted that it “seems more and more like [he] has an L5S1 issue with neural compromise.” On August 15, 2018, the physical therapist noted Claimant’s “lumbar spine is affected through the right SIJ. We will focus on that to stabilize his pelvic girdle which should allow his hip and knee to heel barring any HNP that might be back there.” On September 19, 2018, the physical therapist indicated Claimant was experiencing significant tightness and tenderness at the right hip flexor which “is most likely caused by compensation due to labral injury.”

6. On July 19, 2018, Claimant saw Kevin Keefe, D.O., at Workwell. Claimant reported, through an interpreter, falling on his left side, which caused his right leg to be forced outward because he was wearing stilts. Claimant reported his primary problem was in his right knee. On examination, Dr. Keefe noted pain to palpation in the right lateral hip, normal hip range of motion, and a diffuse area of pain in the low lumbar spine causing discomfort. Dr. Keefe ordered an MRI of the Claimant’s right knee. (Ex. B).

7. On August 3, 2018, Claimant saw David Kistler, M.D., at Workwell. Claimant’s appointment was conducted through an interpreter. Dr. Kistler noted that Claimant was “not having low back pain despite the position of his exercise on the pain diagram.” [The ALJ infers that the word “exercise” is a dictation or typographical error and is intended to say “Xs.”] Claimant’s pain diagram is marked to indicate pain in the right side of Claimant’s lower back. Claimant reported pain in the right knee and hip and noted he was tolerating work at full duty. (Ex. B).

8. On August 10, 2018, Claimant had an MRI of his right hip. The MRI was interpreted as showing mildly degenerated right hip with degeneration versus subtle tearing of the superior labrum and small sulcus or tear through the anterior superior labrum. A left-sided paralabral cyst suggesting a labral tear and mild tendinosis without tearing of the right gluteus minimus tendon. (Ex. E).

9. On August 24, 2018, Claimant saw Dr. Cazden. Dr. Cazden reviewed the Claimant’s MRI scans, which he interpreted as showing a labral injury to Claimant’s hip, an chondral defect in the knee. On physical examination, Dr. Cazden noted possible decreased sensation between the first and second toes suggesting an S1 nerve root irritation. Dr. Cazden noted Claimant had “severe degenerative changes at L4-5 and L5-S1 in the lumbar spine. This may be causing his numbness.” Dr. Cazden indicated Claimant’s then-primary problem was pain in the right knee and right hip. (Ex. B).

10. On September 5, 2018, Claimant saw Nirav Shah, M.D., of Front Range Orthopedics and Spine. Claimant described experiencing pain in the right hip, groin, and buttocks, aggravated by walking. Claimant also reported knee pain aggravated by squatting and stairs. Dr. Shah diagnosed Claimant with arthritis of the lumbar spine, a tear of the right acetabular labrum, right hip pain, and right knee pain. Dr. Shah performed a cortisone injection in Claimant’s right hip. (Ex. C).

11. On September 14, 2018, Claimant saw David Kistler, M.D at Workwell for right hip and knee pain. Claimant reported tolerating work but avoiding ladders and stairs. Claimant reported his hip bothered him significantly more than his knee. Dr. Kistler recommended a work restriction of no ladders. Dr. Kistler recommended that Claimant see Dr. Brian White for his experience with labral tears. (Ex. B).

12. Claimant saw Dr. Shah on October 3, 2018 and reported the previous cortisone injection did not improve his hip pain but did offer significant improvement to his right knee. Dr. Shah noted that Claimant continued to experience pain in the hip, groin, and buttock with some radiation down his leg. Because of the failure of cortisone injection to impact Claimant's hip pain, Dr. Shah ordered an MRI of Claimant's lumbar spine to determine if the pain was lumbar in origin. (Ex. C).

13. On October 8, 2018, Claimant saw Terrell Webb, M.D. at Workwell. Dr. Webb noted Claimant had completed 17 sessions of physical therapy and continued to do a home exercise program. Claimant reported his primary problem was pain located in the knee and hip. [The ALJ infers that Dr. Webb's record indicating pain located in Claimant's "left knee, left hip" is a typographical or dictation error and was intended to reference the right knee and right hip.] Dr. Webb's examination of Claimant's lumbar spine did not specifically state whether Claimant's motion in the lumbar spine was restricted, noting extension of 10° and lateral bending of approximately 25°. (Ex. B).

14. On October 22, 2018, Claimant saw Dr. Kistler at Workwell. Dr. Kistler opined that Claimant's right hip and knee pain were more than 50% probable to be a work-related condition. Claimant reported his primary problem was pain in his right knee that improved with walking. Claimant also reported numbness in his right leg and toes made worse by walking on uneven ground. On physical exam, Dr. Kistler noted Claimant's gait was normal. He noted mild tenderness over the lateral hip and a decrease in abduction which was painful and pain on flexion of the hip. (Ex. B).

15. On October 26, 2018, Claimant had an MRI of his lumbar spine. The MRI was interpreted as showing multilevel degenerative changes with mild to moderate canal stenosis at the L3-4 level, and moderate canal stenosis at the L4-5 level. Additionally, the MRI showed mild to moderate bilateral foraminal stenosis at L4-5 with subtle effect on the exiting right L4 nerve root. The MRI also showed moderate to severe bilateral foraminal stenosis at L5-S1 with subtle effect on the exiting L5 nerve roots. (Ex. E).

16. On October 31, 2018, Claimant saw Dr. Shah. Dr. Shah noted the MRI confirmed significant lumbar arthrosis, loss of normal lordosis and foraminal stenosis with impingement on the exiting L4 and L5 nerve roots. Dr. Shah opined that Claimant's buttock and leg pain is associated with his lumbar pathology. Dr. Shah performed epidural steroid injections (ESI) at the L4-L5 and L5-S1 levels of Claimant's lumbar spine. (Ex. C).

17. On November 19, 2018, Claimant saw Dr. Kistler at Workwell for right hip and right knee pain. Claimant reported experiencing episodic severe pain in his right hip, especially if he slept on it wrong. Claimant reported not using ladders at work, but otherwise working

full duty. Claimant reported his primary problem to be pain in the right hip and knee. On physical examination, Dr. Kistler noted tenderness in the right knee, full range of motion in the right knee, no low back tenderness, pain on rotation of the right hip. (Ex. B).

18. On December 6, 2018, Claimant saw Katherine Drapeau, D.O., at Workwell. Claimant noted that he received a steroid injection in his right hip which improved his hip. Dr. Drapeau's physical examination of Claimant's right hip noted no click on motion, no decreased sensation, but pain on motion over the hip. (Ex. B).

19. On December 12, 2018, Claimant saw Dr. Shah. Dr. Shah's records from December 12, 2018 do not discuss Claimant's back-related symptoms, hip pain, or the effect of the ESI performed on October 31, 2018. (Ex. C).

20. On December 20, 2018, Claimant saw Dr. Drapeau at Workwell. Claimant reported experiencing pain and weakness in his hip and pain in his right knee. Claimant reported his low back was not bothering him much. (Ex. B).

21. On January 16, 2019, Claimant saw Brian White, M.D. of Western Orthopaedics. Dr. White's January 16, 2019 report appears to be a report following the administration of a steroid injection in Claimant's right hip. Dr. White indicated that the steroid injection resulted in 70% improvement and Claimant was able to work and function. No other records from Dr. White were offered into evidence. (Ex. D).

22. On January 17, 2019, Claimant saw Dr. Cazden for right hip and knee pain. Dr. Cazden found Claimant has a right hip labral injury with residual pain following a prior cortisone injection. Claimant also had right knee pain from the injury and suffered a bone contusion and loss of cartilage over the medial femoral condyle, where his pain is located. Claimant reported his low back was "not really bothering him" and Dr. Cazden opined that Claimant did not seem to have radicular pain. Dr. Cazden noted Claimant was able to walk without significant antalgia and could get in and out of a chair easily. Dr. Cazden re-emphasized Claimant's work restriction of no climbing ladders. (Ex. B).

23. On February 18, 2019, Claimant saw Dr. Cazden for a follow up appointment. Through a translator, Claimant indicated his right hip and knee pain was better and he was following his home exercise program. Claimant reported his primary problem was pain in the right hip and right knee. He reported his right hip hurt when laying down, and his pain was made worse by walking on uneven surfaces. On physical examination, Dr. Cazden noted tenderness in the Claimant's right hip along the greater trochanter and posterior joint capsule which increased with rotation of the hip. Examination of Claimant's right knee showed mild tenderness over the medial femoral condyle, with very little joint line tenderness and full range of motion. Examination of Claimant's lumbar spine showed full range of motion without discomfort, no weakness, and no radicular findings. Claimant reported mild improvement in functional status. Dr. Cazden indicated Claimant had not met his functional goal of being able to lift 70 pounds to chest height without difficulty or sitting for 3 hours at a time without difficulty. Claimant also noted hip pain when sleeping or laying down. (Ex. B).

24. On March 15, 2019, Claimant saw Dr. Cazden for an impairment rating. Dr. Cazden determined that Claimant was at maximum medical improvement (MMI) on March 15, 2019. On physical examination, Dr. Cazden noted Claimant ambulated into the room with significant antalgia favoring the right hip. He found Claimant had restricted range of motion in the right hip, tenderness over the greater trochanter and tenderness in the anterior joint capsule. On examination of the Claimant's lumbar spine, he found no gross deformity or swelling, very little tenderness to palpation, no noted range of motion deficit, no radicular findings, no sensory or vascular deficits and no focal weakness from radicular findings. Dr. Cazden assigned a 15% impairment rating for loss of motion in his right knee and a chondral injury and an impairment rating of 35% for loss of motion of his right hip. Dr. Cazden converted these ratings to a 45% scheduled impairment rating of Claimant's right leg, which corresponds to 18% whole person impairment. Dr. Cazden noted that "this is the only impairment for injury dated May 7, 2018." (Ex. B).

25. On April 1, 2019, Respondent filed a Final Admission of Liability and admitted Claimant's entitlement to PPD benefits for a 45% impairment of his right leg.

26. Claimant credibly testified that he continues to experience pain in his right hip and demonstrated the location of his hip pain to be on the outside of his upper right leg, below his belt line. Claimant testified he is now able to use ladders, but the use is somewhat limited and modified. Claimant also credibly testified that, depending on the amount of work he performs, his hip bothers him when he sleeps approximately two to three times per week, and that he places a pillow between his legs to help him sleep.

27. On January 15, 2020, Dr. Albert Hattem, M.D., conducted a review of Claimant's medical records and issued an opinion regarding whether conversion of Claimant's scheduled impairment rating to a whole person rating is warranted. Dr. Hattem opined that conversion was not appropriate because 1) Claimant only injured his right knee and right hip, not his low back; 2) that Claimant responded diagnostically to a hip injection administered by Dr. White; 3) that although Claimant may have suffered an initial sprain of his low back, the condition resolved; and 4) there was no evidence for an acute injury to Claimant's low back. Dr. Hattem testified that he did not believe the Claimant qualified for a spinal impairment rating, because, in Dr. Hattem's opinion, Claimant did not suffer an injury to his lumbar spine. Dr. Hattem's testimony was not instructive because his opinions regarding conversion of impairment rating were related to the legal issue of conversion, and based on the situs of the Claimant's injury, rather than the situs of the Claimant's functional impairment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits

by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Conversion of Scheduled Impairment to Whole Person Impairment

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. § 8-42-107(l)(a), C.R.S. The schedule includes the "loss of a leg at the hip joint or so near thereto as to preclude the use of an artificial limb," but does not define "hip" or specifically include an injury limited to the "hip." § 8-42-107(2)(w), C.R.S., When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. See §8-42-107(8)(c), C.R.S.

The term "injury" contained in Section 8-42-107(l)(a), C.R.S. "refers to the situs of the functional impairment, meaning the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co.*, 942 P.2d 1390, 1391 (Colo. App. 1997); see also *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo.App.1996). Depending upon the facts of a particular claim, therefore,

damage to the lower extremity may or may not reflect functional impairment enumerated on the schedule of benefits. See *Strauch v. PSL Swedish Healthcare System, supra*; see also *Abeyta v. Wackenhut Services*, W.C. No. 4-519-399 (September 16, 2004).

The ALJ must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the leg at the hip and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs*, W.C. No. 4-536-198 (ICAO June 20, 2005). *In re Claim of Barnes*, 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

The Claimant has failed to establish, by a preponderance of the evidence, that he has sustained a functional impairment that limits Claimant's ability to use a part of his body not included in the impairment schedule of § 8-42-107(2), C.R.S. Section 8-42-107(2)(w), provides that the partial loss of use of a leg at the hip is a scheduled disability. See *In re Lewis*, WC 4-517-426 (ICAP September 22, 2003). Claimant's testimony, though credible, does not demonstrate the situs of Claimant's functional impairment extends beyond his right leg at the hip. When demonstrating the location of his pain, Claimant indicated the location to be on the outside of his right leg, at the hip. (Findings of Fact, ¶ 26). Claimant did not testify about loss of use or functional impairment of his torso or other parts of his body extending beyond the right leg. Similarly, Claimant's medical records at the time of and for several months before MMI do not demonstrate any functional impairment beyond Claimant's right leg. (Findings of Fact, ¶ 20-24). The functions that are impaired by Claimant's injury include intermittent difficulty sleeping, a reduced capacity to use ladders, and difficulty walking on uneven ground. The situs of the functional impairment, however, is the Claimant's right leg which manifests itself by impairing these activities. As such, Claimant has not established by a preponderance of the evidence sufficient grounds for converting his 45% right leg scheduled impairment rating to a whole person impairment.

ORDER

It is therefore ordered that:

1. Claimant's request to convert the 45% scheduled impairment rating for loss of use of the right leg at the hip to a whole person impairment rating is denied.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: September 30, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant prove he suffered a compensable injury on November 28, 2019?
- Did Claimant prove entitlement to reasonably necessary medical treatment to cure and relieve the November 28, 2019 work injury?
- Was treatment provided by Mr. Quakenbush at CCOM authorized?
- Is Dr. Weinstein an authorized provider?

FINDINGS OF FACT

Claimant works as a tractor trailer driver hauling mail between USPS facilities in Salida and Denver.

Claimant's standard route follows Highway 285 from Salida through Fairplay and over Kenosha Pass to C-470 near Morrison. He then takes C-470 and I-70 to reach the mail distribution center. The return trip retraces the route in reverse. He generally leaves Salida in the late afternoon and returns to Salida between 1:00 AM and 2:00 AM, depending on traffic and road conditions.

Employer operates two trucks daily between Salida and Denver. The trailers are dropped at the USPS facility in Salida after returning from Denver, but the tractors are parked off-site because of limited parking space. The tractor Claimant operated on the date of injury is parked behind Quincy's restaurant, a few miles from the Salida USPS facility. Claimant's usual routine was to leave his personal vehicle parked at Quincy's while he drove the mail route.

Employer's tractors are equipped with "Keep Truckin" Electronic Logging Devices (ELDs). The ELD connects with GPS and records data such as location, speed, and hours driven. The system pings its location several times per minute while the vehicle is in motion, less frequently when the vehicle is stationary.

If the ELD malfunctions, drivers are instructed to contact the Keep Truckin' 24/7 support line. A Keep Truckin' representative goes through a series of troubleshooting steps with the driver on the phone to identify and resolve the issue if possible. The driver is given a case number and instructed to note the case number on the ELD and the paper log.

When Claimant started his shift on November 26, he discovered the ELD had incorrectly showed him as being on duty since his last shift ended the day before. As a result, "it had run me out of hours, and I wasn't eligible to drive." Claimant testified he called Tamarra Williams, Employer's Safety and Compliance manager to report the situation. He testified he was advised to drive his route and maintain paper logs.

Claimant's cell phone records show a five-minute call to Employer's office at 4:17 PM on November 26, closely contemporaneous with the start of his shift.

Ms. Williams testified she did not recall receiving a call from Claimant on November 26 regarding an ELD malfunction. She testified if she did receive such a call, she would tell the driver to contact Keep Truckin' because they can troubleshoot and resolve many problems remotely. She would also tell the driver to switch to paper logs if Keep Truckin' could not fix the issue.

Ms. Williams' testimony appeared credible, but the phone records show Claimant spoke with someone in the office at the start of his shift on November 26. The ALJ infers Claimant spoke with a different person he mistakenly thought was Ms. Williams, and that individual advised him to maintain paper logs.

Claimant completed handwritten Driver's Daily Log sheets for his shifts that started on November 26 and 27.

On November 27, 2019, Claimant drove the usual round-trip route between Salida and Denver. The weather was poor because of a major snowstorm. The ELD monitored and recorded the truck's movements during the shift. The GPS log shows Claimant reached the Salida postal facility at 1:32 and parked at the loading dock at 1:35 AM. He unloaded the mail, disconnected the trailer, and departed the mail facility at 2:09 AM to go park the tractor.

The tractor drove 0.75 miles (primarily south) and stopped at 2:14 AM. The engine started again at 2:38 AM and the tractor drove 0.38 miles (primarily west and slightly north) to Quincy's restaurant. The vehicle stopped again at 2:41 AM and remained stationary in an east facing direction for the remaining two hours shown on the log. Although there was no direct testimony regarding where Claimant was parked between 2:14 AM and 2:38 AM, but the ALJ infers from the distances involved and directions of travel he probably stopped at a gas station on Highway 50 before parking the truck at Quincy's.

After parking the tractor, Claimant transferred his personal gear such as his toolbox, coveralls, gloves, and winter boots to his personal vehicle. He made several trips back and forth between the two vehicles. As Claimant was walking back to the tractor to lock it, he slipped on a patch of ice and fell, landing on his back and left side. After lying on the ground for a few moments, Claimant got up with some difficulty, locked the tractor and got into his personal vehicle. He waited awhile for his vehicle to warm up and drove home to Cotopaxi.

Claimant subsequently gave a recorded statement during Insurer's investigation of his claim. Claimant stated he arrived at the Salida postal facility at approximately 1:30 AM, which is consistent with the GPS log. Claimant estimated the accident occurred at approximately 3:00 AM, also consistent with the GPS log.

Claimant's paper log shows a slightly different timeline than the GPS records and his recorded statement. The paper and electronic logs are essentially identical except for the portion after Claimant's final break in Fairplay. The paper log shows he left Fairplay at 12:30 AM, whereas the GPS shows 12:22 AM. The paper log shows Claimant parked at the loading dock in Salida at 2:30 AM, but GPS shows 1:35 AM. The paper log shows it

took 45 minutes to unload and drop the trailer, but the GPS shows it took 34 minutes. The paper log shows the tractor finally parked at Quincy's at 3:30 AM, but the GPS shows it was 2:41 AM. The remaining portions of the log are reasonably congruent.

The GPS record is probably the most accurate representation of the exact timeline and sequence of events on the morning of November 28, 2019. The pattern of activity shown on the paper log is reasonably consistent with the GPS log. The discrepancies between the paper and electronic logs probably reflect estimation errors on Claimant's part regarding specific times. The ALJ is not persuaded Claimant purposefully falsified his log.

November 28, 2019 was Thanksgiving. Claimant did not call the office to report his accident because it was closed for the holiday. At 6:07 PM that evening, he called his supervisor, Bruce H[Redacted], at home. Claimant did not call earlier because he was reluctant to intrude on Mr. H[Redacted]'s Thanksgiving family time. Mr. H[Redacted] instructed Claimant to call the office manager, Emily A[Redacted], in the morning. Mr. H[Redacted] did not refer Claimant to a physician or clinic for treatment.

Claimant called the office at 9:32 AM on November 29 and spoke with Ms. A[Redacted]. He reported the injury and explained he used paper driver logs because the ELD was not tracking his time properly. Ms. A[Redacted] instructed Claimant to call [Redacted TPA] who would "triage" the situation. Claimant asked Ms. A[Redacted] which doctor he should see, and she said she would need to check and get back to him. Ms. A[Redacted] never referred Claimant to a specific physician or clinic.

Claimant contacted UC Health Urgent Care/CCOM in Canon City in the afternoon on November 29 because he was experiencing severe pain and had not heard back from Ms. A[Redacted] about a doctor. CCOM advised him to come in right away because he was having rib pain making it difficult to breathe.

Claimant was evaluated by PA-C Steven Quakenbush at CCOM on November 29, 2019. He described slipping on ice while unloading items from his truck at the end of his shift, consistent with his hearing testimony. Claimant's primary concern was left lateral posterior chest pain and the possibility of a broken rib. He also reported shoulder pain. Mr. Quakenbush noted, "the patient does have a history of chronic lower back symptoms but no exacerbation of his low back symptoms." Claimant had tenderness to palpation of the mid-posterior lateral chest wall but no obvious discoloration or ecchymosis. Rib x-rays showed no fracture. He was moving his upper extremities freely with no indication of rotator cuff tear. Mr. Quakenbush diagnosed a chest wall contusion and prescribed tramadol and muscle relaxers. He took Claimant off work because it was not safe to drive or operate machinery while taking the medication. Mr. Quakenbush also opined the examination findings were consistent with the history given by Claimant.

Claimant contacted Care Point after his appointment with CCOM. He described the accident as "was walking back and forth between trailer and pickup truck when [he] slipped on ice, injury upper back and shoulder." Although the report states Claimant was referred for care, there is no persuasive evidence of a referral to a specific physician or clinic.

Employer has names of designated providers posted at its Denver facility. There is no persuasive evidence Claimant recalled the names of any of those designated providers

at the time of his accident or that any were in reasonable proximity to him. As Claimant persuasively testified, “considering I was 150 miles away in Salida, [posters in the Denver facility] didn’t do me any good.”

Having received no referral from Employer, Claimant continued to follow up with Mr. Quakenbush. On December 2, 2019, Claimant reported the medication had helped but he was still having persistent pain with deep inspiration and trunk rotation. Mr. Quakenbush advised Claimant to continue the medication and ordered physical therapy for “rib manipulation.” He continued Claimant’s “off work” status. Although not mentioned in the report, Claimant’s pain diagram indicates pain in the left shoulder, scapular area and left upper back. Claimant completed several similar pain diagrams at appointments in December 2019.

Claimant started physical therapy on December 2, 2019. His primary complaints were significant pain over his left-sided chest, scapula and upper back since the accident. He related a prior history of occasional left leg swelling “from a pinched nerve in back, no thoracic/shoulder/neck issues.”

On December 3, 2019, Mr. Quakenbush released Claimant to work with no lifting over 5 pounds and no commercial driving. As of the hearing, Employer had not offered Claimant any modified duty.

On December 11, 2019, Claimant described “popping and pain over his left lateral shoulder without new injury since his initial injury date.” Mr. Quakenbush noted Claimant had complained of shoulder pain at the initial evaluation on November 29. The physical examination revealed tenderness of the left lateral shoulder with “a palpable deformity.” Claimant had pain into the left anterior joint space. His range of motion was good, although he had some popping of the left shoulder with internal rotation. He was again described as moving his extremities “freely,” which indicates apparent movement is not a helpful indicator of Claimant’s shoulder pathology.

Claimant saw Dr. Dale Buckhaults, a chiropractor, on December 3, 2019. His primary complaints were left hip and left hamstring pain. He also mentioned left sacroiliac and left lumbar pain. This was the first post-accident mention of low back or leg issues. He indicated his symptoms were present “since 11/28/2019 . . . after a slip on ice.” There is no persuasive evidence Mr. Quakenbush referred Claimant to Dr. Buckhaults.

Claimant underwent a left shoulder MRI on January 15, 2020. It was interpreted as showing moderate supraspinatus tendinosis, moderate AC joint arthrosis with impingement, a small joint effusion, and a suspected labral tear.

Claimant’s last injury-related appointment with Mr. Quakenbush took place on January 17, 2020. He reviewed the MRI report and referred Claimant to Dr. Minihane for an orthopedic evaluation. Mr. Quakenbush noted, “PT states the adjuster from [Redacted TPA]t called him yesterday and stated his claim has been denied.” He advised Claimant to follow up in a month and opined, “MMI now pending orthopedic review and recommendations regarding his left shoulder.”

Claimant saw Dr. Weinstein, an orthopedic surgeon, on February 26, 2020 under his health insurance. Dr. Weinstein’s report indicates the referral source was Claimant’s PCP,

Dr. Steven Olson. Claimant described problems with his left shoulder since the work accident. Claimant exhibited slight range of motion and strength deficits in the left shoulder. Jobe's sign, Neer impingement sign, and Speed's test were positive. Dr. Weinstein personally reviewed the MRI images, and noted a low-grade partial-thickness supraspinatus tear, subscapularis and proximal biceps tendinitis, and rotator cuff muscle atrophy with fatty deposition. He recommended conservative care and administered a subacromial cortisone injection. Claimant followed up with Dr. Weinstein on May 27, 2020 and received a second cortisone injection.

On February 27, 2020, Claimant was evaluated by Dr. Sergiu Botolin, a spine surgeon, for low back and left leg pain. The referral source is identified as Dr. Steven Olson. Dr. Botolin noted, "the patient reports that his symptoms developed around Thanksgiving of 2019 after a slip and fall. He reports that prior to that he had some rare intermittent low back aches and but nothing as serious as this." Dr. Botolin reviewed films from a lumbar MRI performed on February 17, 2020, which showed multilevel degenerative spondylosis with moderate to severe central canal stenosis at L2-3 and L3-4 and severe left foraminal stenosis at L5-S1. He diagnosed lumbar stenosis and radiculopathy. Dr. Botolin opined, "I would like him to start with physical therapy for core strengthening and stretching. I also would like to place a referral for interventional pain management."

There is no persuasive evidence any ATP referred Claimant to Dr. Weinstein or Dr. Botolin.

Dr. Nicholas Kurz performed an IME for Respondents on June 19, 2020. He also testified at the hearing. Dr. Kurz opined Claimant suffered an acute left chest/rib contusion from the slip and fall. He opined the injury had "resolved" and Claimant reached MMI by December 27, 2019. He did not believe Claimant's shoulder problems were related to the accident. Dr. Kurz examined medical records from Claimant's chiropractor from mid-2017 to the end of January 2018 and opined Claimant's current low back symptoms are a continuation of chronic back pain related to long-standing degenerative changes. Dr. Kurz opined the accident did not "aggravate or accelerate" Claimant's pre-existing condition because he did not report the symptoms for several weeks and the MRI identified no acute structural abnormality.

Claimant saw Dr. Timothy Hall for an IME at his counsel's request on June 26, 2020. Dr. Hall diagnosed left shoulder impingement syndrome, bicipital tendinitis, and rotator cuff tendinosis, traumatic trochanteric bursitis with IT band syndrome, and advanced lumbar degenerative disease with radiculitis "exacerbated by fall." He opined the diagnoses were plausibly associated with the mechanism of injury and were a direct result of the November 28 work accident.

Claimant's description of the accident at hearing was generally credible and supported by the persuasive medical evidence. Claimant proved he suffered a compensable injury on November 28, 2019.

Claimant proved he suffered a chest contusion and left shoulder injury because of the November 28, 2019 accident.

The November 29, 2019 treatment with Mr. Quakenbush at CCOM was reasonably necessary emergency treatment for Claimant's injuries.

Employer did not refer Claimant to a physician after receiving notice of his injury. The right of selection passed to Claimant.

Claimant proved evaluations and treatment provided by Mr. Quakenbush for a chest contusion and left shoulder injury were reasonably necessary to cure and relieve the effects of his work-related injury.

Claimant failed to prove Dr. Weinstein or Dr. Botolin are authorized.

Although some evidence was presented regarding Claimant's low back, no ATP has recommended treatment directed at the low back. The ALJ has no authority to award treatment recommended only by unauthorized providers or IMEs. Accordingly, any ultimate findings regarding reasonable necessity or relatedness pertaining to Claimant's low back would be merely advisory and have no impact on any justiciable issue presented in this hearing.

CONCLUSIONS OF LAW

A. Claimant proved he suffered a compensable injury arising out of and in the course of his employment.

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" requires an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). "Many job functions involve discretionary or optional activities on the part of the employee, devoid of any duty component and unrelated to any specific benefit to the employer, but nonetheless sufficiently incidental to the work itself as to be properly considered as arising out of and in the course of employment." *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The ultimate question is whether the activity is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Price, supra* at 210.

As found, Claimant proved he suffered a compensable injury because of a work-related accident on November 28, 2019. Claimant's description of the accident at hearing was generally credible and consistent with his previous reports to Employer, Insurer, and multiple examining and treating providers. Although not a strict duty of employment, transferring work-related personal items such as tools and winter clothing to his personal vehicle was sufficiently incidental and ancillary to his job that the accident arose out of

and occurred within the course of his employment. The relatively minor discrepancies between Claimant's handwritten driver logs and the GPS data are probably the result of honest mistakes. The ALJ is not persuaded Claimant fabricated his reported accident. The conditions Mr. Quakenbush identified and treated (i.e., a chest contusion and left shoulder injury) are plausibly associated with the described mechanism of injury.

B. The treatment provided by Mr. Quakenbush was reasonably necessary

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a).

Claimant proved the treatment from Mr. Quakenbush was reasonably needed to cure and relieve the effects of his injury. The preponderance of persuasive evidence shows Claimant suffered at least a chest contusion and left shoulder injury because of the accident. The diagnostic evaluations and conservative care Mr. Quakenbush recommended were reasonable and appropriate.

C. The treatment from Mr. Quakenbush was authorized

Besides proving treatment is reasonably necessary, the claimant must prove the provider is "authorized." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a provider's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Providers typically become authorized by the initial selection of a treating physician, agreement of the parties, or upon referrals made in the "normal progression of authorized treatment." *Bestway Concrete v Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); see also WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). As found, Claimant's treatment at CCOM on November 29, 2019 was reasonably necessary emergency treatment for his injuries. Claimant was experiencing severe pain and difficulty breathing and CCOM personnel advised him to come in immediately. Additionally, it was mid-afternoon of the Friday after Thanksgiving, and Claimant perceived his window of opportunity to receive treatment was closing.

Under § 8-43-404(5)(a), the employer has the right to choose the treating physician in the first instance. The employer must tender medical treatment "forthwith" upon

receiving notice of the injury, or the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). An employer's attempt to "pre-designate" a provider with posted notices is not a sufficient tender of treatment if the injured worker does not recall the notice at the time of injury. *E.g.*, *Park v. Phil Long Ford d/b/a Academy Ford*, W.C. No. 4-373-188 (December 14, 1999); *Broadmoor Hotel v. Industrial Claim Appeals Office*, (Colo. App. No. 92CA1635, May 27, 1993) (NSOP).

Employer did not refer Claimant to a provider after receiving notice of his accident and injuries. By the time Claimant returned to Mr. Quakenbush on December 2, 2019, he had spoken with two management-level Employer representatives and Employer's accident "triage" service, none of whom referred him to a physician or clinic. Claimant did not recall any provider listed on notices posted at the facility in Denver, and even if he had, there is no persuasive evidence any of those providers were in reasonable proximity to Salida or his home in Cotopaxi. The right of selection passed to Claimant, and he selected Mr. Quakenbush. Treatment provided by, and on referral from, Mr. Quakenbush was authorized.

C. Dr. Weinstein and Dr. Botolin are not authorized

Claimant failed to prove Dr. Weinstein or Dr. Botolin are authorized providers. Once a claimant exercises the right of selection, he may not change physicians without following the statutory procedure for a one-time change of physician, or obtaining permission from the respondents or the Division. *E.g.*, *Pickett v. Colorado State Hospital*, 513 P.2d 228 (Colo. App. 1973). A claimant is not permitted to change physicians simply because the respondents deny liability for the claim. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). Mr. Quakenbush referred Claimant to Dr. Minihane to evaluate the shoulder and remained willing to treat Claimant even though the claim was denied. There is no persuasive evidence any ATP referred Claimant to Dr. Weinstein or Dr. Botolin.

D. The ALJ cannot adjudicate treatment related to Claimant's back because no treatment has been recommended by any authorized provider.

Respondents are only liable for treatment rendered by ATPs. The ALJ lacks authority to award medical treatment recommended only by unauthorized treating providers or IMEs. *E.g., Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (May 15, 2018); *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (May 4, 1995). Here, no ATP has addressed Claimant's low back or made any treatment recommendations. Although Dr. Botolin and Dr. Hall recommended treatment, neither is an ATP. Any ultimate findings regarding reasonable necessity or relatedness pertaining to Claimant's low back would be merely advisory and have no impact on justiciable issue involved in this hearing. All issues regarding Claimant's low back will be reserved for future determination, if necessary.

ORDER

It is therefore ordered that:

1. Claimant's claim in W.C. No. 5-127-158 for injuries suffered on November 28, 2019 is compensable.
2. Insurer shall cover all treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's injuries, including treatment provided by and on referral from Mr. Quakenbush on and after November 29, 2019.
3. Claimant's request to hold Insurer liable for treatment already provided by Dr. Weinstein is denied and dismissed.
4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: October 3, 2020

Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable left shoulder injuries during the course and scope of his employment with Employer on November 13, 2019.
2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period November 14, 2019 through January 23, 2019.
3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period January 24, 2020 until terminated by statute.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of \$1,125.83.

FINDINGS OF FACT

1. Employer is a property management company that owns buildings and parking lots throughout Colorado. Claimant is a 62 year old male who worked for Employer as a Lead Maintenance Technician. His job duties involved plumbing, cutting trees, repairing potholes and various other maintenance activities on Employer's properties.
2. Dan B[Redacted] was Employer's Painter and Maintenance Assistant. Claimant worked with Mr. B[Redacted] when he required assistance with his job responsibilities.
3. On November 13, 2019 Claimant arrived at jobsite Green Box Storage at about 7:15 a.m. Claimant and Mr. B[Redacted] were supposed to unload ice melt and then proceed to an emergency paint job at a different location. However, Mr. B[Redacted] failed to arrive to help unload the material. Claimant contacted Mr. B[Redacted] but he was at another job location shampooing carpet. Mr. B[Redacted] responded he would arrive as soon as possible. Claimant finished unloading the ice melt then proceeded to the storage unit to retrieve the paint for the emergency paint job.
4. Claimant went to the back of the storage shed looking for a five gallon bucket of paint. When Mr. B[Redacted] arrived at the storage unit an argument ensued between the parties. Mr. B[Redacted] approached Claimant and got in his face. Claimant asked Mr. B[Redacted] to back away and bent down to look for the paint. Mr. B[Redacted] then struck Claimant with an unknown object on the left side of his face.

The blow knocked Claimant back into scaffolding. Claimant noted he put his arm back to catch himself and Mr. B[Redacted] was immediately on top of him. He specified that Mr. B[Redacted] struck him on the back of his head and back area. Claimant moved his left arm above his head to protect himself. Claimant never struck the ground during the assault but was stuck in the scaffolding between two bars. When Claimant pulled himself out of the scaffolding Mr. B[Redacted] ran out the door.

5. Claimant immediately reported the incident to Employer's Property Manager Adriana W[Redacted]. He told her that he was attacked but did not request medical care or treatment. Ms. W[Redacted] testified that Claimant reported Mr. B[Redacted] was freaking out, got in his face, punched him in the face and ran out of the building where they were working. She noted that Claimant did not tell her there were any punches other than one strike to the face. Claimant did not mention specific body parts that were injured and Ms. W[Redacted] only took pictures of a scrape or cut on the left side of Claimant's face.

6. Claimant completed his work shift, but suffered increased pain during the night. On the following day Claimant reported his injuries to Erica L[Redacted] in Human Resources.

7. Employer directed Claimant to Concentra Medical Centers for treatment. On November 15, 2019 Claimant visited Ron Rasis, PA-C at Concentra for an examination. He reported that he had been assaulted at work, pushed back into equipment and landed on his left side. He noted that he was suffering left shoulder pain. X-rays of the left shoulder were unremarkable. PA-C Rasis diagnosed Claimant with a left shoulder contusion and referred him to physical therapy. He assigned work restrictions of lifting, pushing and pulling up to 10 pounds constantly and no reaching above the head with the left arm.

8. On December 2, 2019 Claimant returned to Concentra and visited PA-C Rasis for an evaluation. Claimant reported that his overall range of motion had improved, but he was still suffering lateral left shoulder pain, soreness and weakness. He also noted left trapezius region soreness with ongoing aching pain along the lateral and posterior shoulder region. PA-C Rasis recommended a left shoulder MRI. He continued work restrictions of lifting, pushing and pulling up to 10 pounds constantly and no reaching above the head with the left arm.

9. On December 13, 2019 Claimant underwent a left shoulder MRI. The MRI revealed an "acute appearing full-thickness" left rotator cuff tear.

10. On December 16, 2019 Claimant returned to PA-C Rasis for an examination. Claimant reported continuing left shoulder pain and intermittent weakness with heavier lifting. PA-C Rasis diagnosed Claimant with a left rotator cuff tear and referred him for an orthopedic evaluation. He continued work restrictions of lifting, pushing and pulling up to 10 pounds constantly and no reaching above the head with the left arm.

11. On January 6, 2020 Claimant visited Orthopedic Surgeon Michael Hewitt, M.D. for an evaluation. Dr. Hewitt recorded that Claimant had been attacked by a fellow employee and was struck in the face and head with a large brush. Claimant fell backwards onto his left shoulder. He reported superior and lateral shoulder pain exacerbated with overhead use. Dr. Hewitt explained that the left shoulder MRI revealed a full thickness tear involving the subscapularis with 1.5 mm retraction and subluxation of the long head of the biceps tendon. He recommended surgical intervention in the form of a left rotator cuff repair.

12. Claimant testified that his work restrictions impeded his ability to perform his job duties. He continued to work light duty under restrictions but suffered a partial wage loss from November 14, 2019 through January 23, 2020 as a result of the assault.

13. On January 24, 2020 Claimant was terminated from employment with Employer. A Waiver and Release Agreement specified the terms and financial details of the separation. Claimant has not reached Maximum Medical Improvement (MMI) subsequent to his termination.

14. On June 25, 2020 Claimant underwent an independent medical examination with John S. Hughes, M.D. Claimant reported that he was preparing for a painting job and contacted his coworker Mr. B[Redacted]. Mr. B[Redacted] became agitated, got on top of Claimant and struck him in the face. Although Claimant returned to work he developed progressive left arm and shoulder pain. Dr. Hughes recounted Claimant's initial medical care with PA-C Rasis, physical therapy treatment, left shoulder MRI and surgical evaluation with Dr. Hewitt. After reviewing Claimant's medical history, Dr. Hughes noted that he did not suffer left shoulder symptoms prior to the assault at work. He reasoned that "it seems clear" that Claimant sustained left shoulder injuries on November 13, 2019. Dr. Hughes specifically concluded that Claimant sustained rotator cuff tear injuries to his left shoulder as a result of the assault. He noted that Claimant "merits" the surgical treatment recommended by Dr. Hewitt.

15. On June 30, 2020 Claimant underwent an independent medical examination with F. Mark Paz, M.D. Claimant reported that on November 13, 2019 he arrived at work at approximately 7:45 a.m. Claimant contacted his co-worker Mr. B[Redacted] to assist him in moving 40-50 bags of ice melt. However, Mr. B[Redacted] did not arrive and Claimant finished moving the ice melt. Claimant moved upstairs to begin work on a paint job when coworker Mr. B[Redacted] arrived. Claimant noted that Mr. B[Redacted] appeared to be agitated. He remarked that he put his hands up in front of him as he was bent forward and advised Mr. B[Redacted] that he was not going to argue. Claimant was about to move a five gallon bucket when Mr. B[Redacted] struck him on the right side of his face with an unidentified object that was possibly a scrub brush. Claimant then fell backwards onto scaffolding behind him and landed between the railings. He was flexed forward between the railings of the scaffolding. Mr. B[Redacted] continued hitting him on the back of the head. After the assault Claimant completed the paint job by climbing on the building and using a paint pole while leaning over the edge of the building.

16. Dr. Paz reviewed Claimant's medical treatment, prior medical history, left shoulder MRI and surgical evaluation with Dr. Hewitt. He diagnosed Claimant with a left shoulder subscapularis tear and impingement syndrome. Dr. Paz determined that Claimant's mechanism of injury was inconsistent with his rotator cuff tear and thus not causally related to the November 13, 2019 assault. He specifically reasoned that the mechanism of injury was "incongruent with the diagnosis of left shoulder subscapularis tear and left shoulder impingement syndrome." The mechanism of injury did not constitute a left shoulder traumatic exposure. Furthermore, if Claimant had been struck one time in the face by Mr. B[Redacted], he would not have suffered a left shoulder injury. However, Dr. Hewitt's record from January 6, 2020 provided that Claimant fell backwards onto his left shoulder during the altercation. Dr. Paz explained that a direct fall onto the left shoulder was "congruent with the left shoulder diagnoses, and the condition would require treatment as a result of the November 13, 2019 incident."

17. On July 6, 2020 Dr. Hughes prepared a Case Review Report. He considered the opinion of Dr. Paz based on inconsistent accounts of Claimant's mechanism of injury to PA-C Ron Rasis on November 15, 2019 and Dr. Hewitt on January 6, 2020. Dr. Paz distinguished between the two histories and determined that the Concentra report was inconsistent with Claimant's left shoulder pathology and Dr. Hewitt's report was consistent with Claimant's left shoulder injuries. Dr. Hughes explained that Claimant did not have a precise recollection of the November 13, 2019 assault and PA-C Rasis' report two days after the incident was consistent with Claimant's left shoulder pathology. Therefore, the surgery proposed by Dr. Hewitt was reasonable, necessary and causally related to the November 13, 2019 attack.

18. Dr. Paz also testified at the hearing in this matter. He reiterated that the November 13, 2019 assault did not cause Claimant's left rotator cuff tear or need for surgery. He specified that Claimant's full thickness tear required significant force. Although Claimant fell backwards during the altercation, his left arm did not support all of his weight. Claimant specifically did not come to rest on his shoulder with his full body weight because he was caught up in the scaffolding. Furthermore, a full thickness tear would have caused immediate pain. However, Claimant completed his painting duties on the day of the incident and developed left shoulder pain over time.

19. Dr. Paz considered three scenarios regarding Claimant's mechanism of injury. The first situation involved a single punch to Claimant's face by Mr. B[Redacted]. Second, while Claimant was bending or leaning down near a paint can, Mr. B[Redacted] struck him multiple times on the head and the back of the shoulder. The third scenario involved Claimant falling backwards, catching himself with his left arm and using his left arm to block Mr. B[Redacted]'s punches. Dr. Paz summarized that none of the preceding scenarios would have placed sufficient force directly on Claimant's left shoulder to cause impingement syndrome or a rotator cuff tear.

20. Claimant has demonstrated that it is more probably true than not that he suffered compensable left shoulder injuries during the course and scope of his employment with Employer on November 13, 2019. Initially, Claimant explained that he was preparing to perform a painting job for Employer when coworker Mr. B[Redacted]

struck him with an unknown object on the left side of his face. The blow knocked Claimant back into scaffolding. Claimant noted he put his arm back to catch himself and Mr. B[Redacted] was immediately on top of him. He specified that Mr. B[Redacted] struck him on the back of his head and back area. Claimant moved his left arm above his head to protect himself. He never struck the ground during the assault but remained stuck in the scaffolding between two bars. In his initial visit to Ron Rasis, PA-C at Concentra Claimant reported that he had been assaulted at work, pushed back into equipment and landed on his left side. PA-C Rasis referred Claimant to physical therapy. He assigned work restrictions of lifting, pushing and pulling up to 10 pounds constantly and no reaching above the head with the left arm.

21. On December 13, 2019 Claimant underwent a left shoulder MRI. The MRI revealed an “acute appearing full-thickness” left rotator cuff tear. Orthopedic Surgeon Dr. Hewitt recorded that Claimant had been attacked by a fellow employee and was struck in the face and head with a large brush. Claimant fell backwards onto his left shoulder. Dr. Hewitt explained that the left shoulder MRI revealed a full thickness tear involving the subscapularis with 1.5 mm retraction and subluxation of the long head of the biceps tendon. He recommended surgical intervention in the form of a left rotator cuff repair. Claimant subsequently underwent an independent medical examination with Dr. Hughes. After reviewing Claimant’s medical history, Dr. Hughes noted that he did not suffer left shoulder symptoms prior to the assault at work. Dr. Hughes reasoned that “it seems clear” that Claimant suffered left shoulder injuries on November 13, 2019. He specifically concluded that Claimant sustained rotator cuff tear injuries to his left shoulder as a result of the assault and “merits” the surgical treatment recommended by Dr. Hewitt.

22. In contrast, Dr. Paz maintained that the November 13, 2019 assault did not cause Claimant’s left rotator cuff tear or need for surgery. He specifically reasoned that Claimant’s mechanism of injury was “incongruent with the diagnosis of left shoulder subscapularis tear and left shoulder impingement syndrome.” The mechanism of injury did not constitute a left shoulder traumatic exposure. At hearing Dr. Paz explained that falling into scaffolding would not place direct force on the shoulder. In fact, he summarized that none of the three injury scenarios presented at hearing would have placed sufficient force directly on Claimant’s left shoulder to cause impingement syndrome or a rotator cuff tear. Despite Dr. Paz’ conclusion that the November 13, 2019 incident did not cause Claimant’s left shoulder condition, the record reflects that Claimant suffered an acute left shoulder rotator cuff tear during the November 13, 2019 assault. Although Claimant presented several different details about the altercation, they were not inconsistent but instead reflect an incident that impacted Claimant’s left shoulder and caused symptoms. Claimant had not suffered any prior left shoulder problems and the temporal proximity of the November 13, 2019 incident to Claimant’s development of symptoms suggests a causal relationship between the assault and the left rotator cuff tear. Moreover, Dr. Hughes explained that Claimant did not have a precise recollection of the November 13, 2019 assault and PA-C Rasis’ report two days after the incident was consistent with Claimant’s left shoulder pathology. Based on the medical records, report of Dr. Hewitt and persuasive opinion of Dr. Hughes, Claimant suffered left shoulder injuries during the course and scope of his employment on

November 13, 2019. Claimant's work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment.

23. Claimant has established that it is more probably true than not that he is entitled to receive TPD benefits for the period November 14, 2019 through January 23, 2019. Claimant received work restrictions as a result of his November 13, 2019 industrial injuries. Claimant's work restrictions consisted of lifting, pushing and pulling up to 10 pounds constantly and no reaching above the head with the left arm. Claimant noted that during the approximately two and one-half month time period between the assault and his termination he required help in performing his job duties. Claimant's left shoulder injury and work restrictions impaired his ability to effectively and properly perform his regular employment. He suffered an impairment of earning capacity because the restrictions impeded his ability to effectively and properly perform his regular employment. Claimant continued to work light duty under restrictions but suffered a partial wage loss from November 14, 2019 through January 23, 2020. Claimant has thus demonstrated that the difference between his AWW at the time of his injury and his earnings during the continuance of temporary partial disability was caused by his November 13, 2019 work injuries. Accordingly, claimant shall receive TPD benefits for the period November 14, 2019 through January 23, 2019.

24. Claimant has demonstrated that it is more probably true than not that he is entitled to receive TTD benefits for the period January 24, 2020 until terminated by statute. On January 24, 2020 Claimant was terminated from employment with Employer. A Waiver and Release Agreement specified the terms and financial details of the separation. Claimant has not reached MMI. Claimant's industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Accordingly, Claimant shall receive TTD benefits for the period January 24, 2020 until terminated by statute.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings

as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a

referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered compensable left shoulder injuries during the course and scope of his employment with Employer on November 13, 2019. Initially, Claimant explained that he was preparing to perform a painting job for Employer when coworker Mr. B[Redacted] struck him with an unknown object on the left side of his face. The blow knocked Claimant back into scaffolding. Claimant noted he put his arm back to catch himself and Mr. B[Redacted] was immediately on top of him. He specified that Mr. B[Redacted] struck him on the back of his head and back area. Claimant moved his left arm above his head to protect himself. He never struck the ground during the assault but remained stuck in the scaffolding between two bars. In his initial visit to Ron Rasis, PA-C at Concentra Claimant reported that he had been assaulted at work, pushed back into equipment and landed on his left side. PA-C Rasis referred Claimant to physical therapy. He assigned work restrictions of lifting, pushing and pulling up to 10 pounds constantly and no reaching above the head with the left arm.

9. As found, on December 13, 2019 Claimant underwent a left shoulder MRI. The MRI revealed an "acute appearing full-thickness" left rotator cuff tear. Orthopedic Surgeon Dr. Hewitt recorded that Claimant had been attacked by a fellow employee and was struck in the face and head with a large brush. Claimant fell backwards onto his left shoulder. Dr. Hewitt explained that the left shoulder MRI revealed a full thickness tear involving the subscapularis with 1.5 mm retraction and subluxation of the long head of the biceps tendon. He recommended surgical intervention in the form of a left rotator cuff repair. Claimant subsequently underwent an independent medical examination with Dr. Hughes. After reviewing Claimant's medical history, Dr. Hughes noted that he did not suffer left shoulder symptoms prior to the assault at work. Dr. Hughes reasoned that "it seems clear" that Claimant suffered left shoulder injuries on November 13, 2019. He specifically concluded that Claimant sustained rotator cuff tear injuries to his left shoulder as a result of the assault and "merits" the surgical treatment recommended by Dr. Hewitt.

10. As found, in contrast, Dr. Paz maintained that the November 13, 2019 assault did not cause Claimant's left rotator cuff tear or need for surgery. He specifically

reasoned that Claimant's mechanism of injury was "incongruent with the diagnosis of left shoulder subscapularis tear and left shoulder impingement syndrome." The mechanism of injury did not constitute a left shoulder traumatic exposure. At hearing Dr. Paz explained that falling into scaffolding would not place direct force on the shoulder. In fact, he summarized that none of the three injury scenarios presented at hearing would have placed sufficient force directly on Claimant's left shoulder to cause impingement syndrome or a rotator cuff tear. Despite Dr. Paz' conclusion that the November 13, 2019 incident did not cause Claimant's left shoulder condition, the record reflects that Claimant suffered an acute left shoulder rotator cuff tear during the November 13, 2019 assault, Although Claimant presented several different details about the altercation, they were not inconsistent but instead reflect an incident that impacted Claimant's left shoulder and caused symptoms. Claimant had not suffered any prior left shoulder problems and the temporal proximity of the November 13, 2019 incident to Claimant's development of symptoms suggests a causal relationship between the assault and the left rotator cuff tear. Moreover, Dr. Hughes explained that Claimant did not have a precise recollection of the November 13, 2019 assault and PA-C Rasis' report two days after the incident was consistent with Claimant's left shoulder pathology. Based on the medical records, report of Dr. Hewitt and persuasive opinion of Dr. Hughes, Claimant suffered left shoulder injuries during the course and scope of his employment on November 13, 2019. Claimant's work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment.

Temporary Partial Disability Benefits

11. Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's Average Weekly Wage (AWW) at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; see *Safeway Stores, Inc. v. Husson*, 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

12. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive TPD benefits for the period November 14, 2019 through January 23, 2019. Claimant received work restrictions as a result of his November 13, 2019 industrial injuries. Claimant's work restrictions consisted of lifting, pushing and pulling up to 10 pounds constantly and no reaching above the head with the left arm. Claimant noted that during the approximately two and one-half month time period between the assault and his termination he required help in performing his job duties. Claimant's left shoulder injury and work restrictions impaired his ability to effectively and

properly perform his regular employment. He suffered an impairment of earning capacity because the restrictions impeded his ability to effectively and properly perform his regular employment. Claimant continued to work light duty under restrictions but suffered a partial wage loss from November 14, 2019 through January 23, 2020. Claimant has thus demonstrated that the difference between his AWW at the time of his injury and his earnings during the continuance of temporary partial disability was caused by his November 13, 2019 work injuries. Accordingly, claimant shall receive TPD benefits for the period November 14, 2019 through January 23, 2019.

Temporary Total Disability Benefits

13. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

14. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive TTD benefits for the period January 24, 2020 until terminated by statute. On January 24, 2020 Claimant was terminated from employment with Employer. A Waiver and Release Agreement specified the terms and financial details of the separation. Claimant has not reached MMI. Claimant's industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Accordingly, Claimant shall receive TTD benefits for the period January 24, 2020 until terminated by statute.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. On November 13, 2019 Claimant suffered compensable left shoulder injuries during the course and scope of his employment with Employer.
2. Claimant shall receive TPD benefits for the period November 14, 2019 through January 23, 2019.
3. Claimant shall receive TTD benefits for the period January 24, 2020 until terminated by statute.
4. Claimant earned an AWW of \$1,125.83.
5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: October 6, 2020.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he sustained a cervical spine injury on August 27, 2017 during the course and scope of his employment with Employer.
2. Whether Claimant has demonstrated by a preponderance of the evidence that the artificial disc replacement and two-level fusion requested by Michael E. Janssen, M.D. is reasonable, necessary and causally related to his industrial injury.

FINDINGS OF FACT

1. Claimant has worked for Employer since 1998. He currently works as a Data Technician. Claimant installs and maintains T1 and fiber lines for commercial and governmental services.
2. Claimant has an extensive history of pre-existing cervical spine symptoms. On April 18, 2006 Claimant was injured in a significant motor vehicle accident involving six vehicles. As a result of the accident, Claimant underwent a cervical fusion at C5-C7 in February 2007.
3. By November 2007 there were significant concerns that Claimant's fusion had failed. A CT scan established incomplete incorporation of the bone grafts. In fact, on November 30, 2007 Sanjay Jatana, M.D. remarked that Claimant would require posterior cervical surgery in the future to solidify the arthrodesis at C5-C7 because it had not completely healed.
4. Claimant's symptoms continued and in 2012 he reported pain in his neck radiating into his head. He also had numbness and tingling in his hands. X-rays in early 2012 revealed mild degenerative changes above the fusion at the C4-C5 level.
5. On July 17, 2012 Claimant underwent hardware removal at the C5-C7 levels. Claimant subsequently suffered an infection as a result of the procedure. On August 16, 2012 he underwent a debridement and removal of infected tissue.
6. Claimant testified that following his treatment for the infection he did not have any other symptoms. He was off work for about two to three months following the 2012 hardware removal, but returned to full duty employment. Claimant commented that from 2012 until August 2017 he did not have any neck issues and worked full duty for Employer.
7. On August 27, 2017 Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer. Claimant specifically tripped over a water meter lid and fell forward onto his outstretched arms while working at a

jobsite. Claimant landed primarily on his right side and struck his chest. He contacted his supervisor within 30 minutes to report his injury. Claimant continued to work over the next two weeks but remained in contact with his supervisor regarding his symptoms.

8. On September 11, 2017 Employer completed a First Report of Injury. On the same day Claimant visited the Emergency Department at Good Samaritan Hospital and reported his symptoms. Claimant's primary concern was whether he sustained a rib fracture. He reported he had fallen onto his chest and experienced right-sided thoracic pain since the fall. Notably, a physical examination of the cervical spine was normal. Claimant was diagnosed with a chest wall contusion and chest wall pain.

9. Claimant visited Concentra Medical Centers on September 19, 2017 and received treatment from Monica Schubert, NP. A physical examination revealed tenderness in the neck area. NP Schubert diagnosed Claimant with a neck strain and recommended message therapy.

10. On September 29, 2017 Claimant visited Debra Smith, M.D. and reported residual pain in the right trapezius and biceps. Dr. Smith noted tenderness in the right trapezius muscle and right-sided muscle spasms.

11. On October 31, 2017 Dr. Smith discharged Claimant at Maximum Medical Improvement (MMI) and released him to full duty employment. She recommended eight sessions of maintenance massage therapy.

12. On November 27, 2017 Respondents voluntarily reopened the claim. Claimant returned to Concentra and visited Dr. Smith. He reported that his work activities aggravated his neck and shoulder symptoms.

13. Claimant continued to experience symptoms and visit Dr. Smith for treatment. On January 23, 2018 Claimant reported persistent pain at the base of the right side of his neck. He noted that the neck pain was aching, sharp, positional and radiated to the shoulder blade. On physical examination, Dr. Smith noted tenderness at the C6-T1 level of the cervical spine, right paraspinal muscle and right trapezius muscle as well as right-sided muscle spasms. She diagnosed Claimant with cervical myofascial pain syndrome and referred him for a cervical MRI.

14. On February 2, 2018 Claimant underwent an MRI of the cervical spine. A comparison of the MRI against an October 22, 2007 CT scan reflected an "unchanged" anterior C5-C7 fusion and mild degenerative changes including mild C4-C5 central canal narrowing.

15. On February 5, 2018 Claimant visited John Sacha, M.D. for an evaluation. He reported right-sided neck pain with occasional headaches and right inferior periscapular pain. Dr. Sacha noted cervical paraspinal spasm and segmental dysfunction. He diagnosed cervical facet syndrome above and below the areas of Claimant's prior fusion. Dr. Sacha recommended staged right C2-C5 and C7-T1 facet injections.

16. Claimant continued to report right-sided neck pain and underwent extensive conservative treatment for his neck pain and related symptoms. During 2018 Claimant attended 28 massage therapy sessions. From December 4, 2018 through May 8, 2019 Claimant also received 12 osteopathic manipulation treatments. Finally, from May 21, 2019 through July 8, 2019 Claimant underwent 10 acupuncture sessions.

17. On June 17, 2019 Claimant underwent a cervical MRI. The MRI revealed a C4-5 disc osteophyte complex causing worsening central canal stenosis and slight progression of bilateral foraminal stenosis. On June 25, 2019 Claimant underwent a right upper extremity EMG that reflected a C5 radiculopathy.

18. On July 9, 2019 Claimant visited Michael E. Janssen, D.O. for an examination. He reviewed Claimant's history, including prior cervical treatment, EMG results and the cervical MRI. Dr. Janssen determined that Claimant suffered a classic C5 radiculopathy and required surgery. He considered whether Claimant's need for surgery was related to the natural progression of his cervical spine condition or his work injury. Dr. Janssen explained that Claimant had surgery 10 years earlier and there was an "incidence of generally about 2 percent per year" regarding the need for additional surgery after the initial 2007 procedure. He reasoned that there was a "less than one in five [chance] that [the current need for surgery was] related to the natural history" rather than the work injury. Dr. Janssen thus concluded that Claimant's need for surgery was causally related to his August 27, 2017 industrial injury. On July 17, 2019 Dr. Janssen requested authorization to perform C4-5 artificial disc replacement with C5-7 hardware removal.

19. On July 22, 2019 Michael J. Rauzzino, M.D. performed a records review regarding Dr. Janssen's request for surgical authorization. Dr. Rauzzino determined Claimant did not sustain a cervical spine injury, there was no clear pain generator, the cervical MRI showed degenerative changes and Claimant did not meet the Workers' Compensation criteria for the recommended surgery.

20. On July 16, 2019 Claimant completed a Workers' Claim for Compensation. On August 26, 2019 Respondents filed a General Admission of Liability (GAL) and denied Claimant sustained a cervical injury. On September 6, 2019 Claimant applied for a hearing on the compensability of his cervical spine condition and whether the surgery recommended by Dr. Janssen was reasonable, necessary and related to his industrial injury.

21. On December 17, 2019 Dr. Janssen issued a summary regarding his treatment of Claimant. He specifically considered whether Claimant's need for surgery was related to his August 27, 2017 industrial injury. Dr. Janssen explained that "100% of the indications of surgery are related to this event for which [Claimant] has been undergoing treatment for the last years. It is not preexisting. It is not related to the 2006 incident either."

22. On January 8, 2020 Dr. Janssen issued another report detailing his opinion regarding the need for surgery as a result of Claimant's August 27, 2017

industrial injury. Dr. Janssen determined that Claimant's need for surgery was most likely related to his industrial injury and not simply a product of adjacent level disease following the prior two-level anterior cervical discectomy and fusion (ACDF). He noted that patients who have had a single-level ACDF and were followed over 10 years have an approximately 2.9% incidence of adjacent level disease per year. Because Claimant underwent a fusion 13 years earlier, his incidence rate and necessity for additional surgery would be 39%. Dr. Janssen stated that patients with a two-level ACDF had a lower incidence of adjacent level disease than patients with a one-level fusion. Because Claimant underwent a two-level fusion, his incidence rate and necessity for additional surgery would be lower than 39%. Dr. Janssen thus concluded that Claimant's need for cervical spine surgery was causally related to his industrial injury.

23. On February 3, 2020 the parties conducted the pre-hearing evidentiary deposition of Michael J. Rauzzino, M.D. Dr. Rauzzino concluded that Claimant did not sustain a cervical injury as part of the August 27, 2017 accident. He relied on the medical records that included reports of the mechanism of injury, the timing of Claimant's symptoms, a review of imaging studies and information about Claimant's prior medical history. Dr. Rauzzino remarked that, if Claimant sustained a disc injury on August 27, 2017, he would have anticipated neurologic deficits to manifest on physical examination at the emergency department on September 11, 2017. He summarized that there was nothing about the 2017 accident that would have altered the structure of Claimant's spine or caused it to progress more rapidly than what would have been anticipated based on the previous fusion.

24. Dr. Rauzzino also relied on imaging studies in reasoning that Claimant did not suffer a cervical spine injury on August 27, 2017. He explained that the 2018 MRI compared to pre-injury studies established there was no acute structural injury to the cervical spine. Dr. Rauzzino specifically commented "[t]here wasn't a new blown out disc or broken bone. There was just the progression of previous degenerative changes which occurred over time as one would expect."

25. Dr. Rauzzino reasoned that, if Claimant suffered a cervical injury on August 27, 2017, it was limited to a strain. He explained that a cervical strain "is a soft tissue or muscular injury... that would resolve over time." Dr. Rauzzino remarked that a soft tissue injury would not have affected the cervical discs, spinal column, cervical nerves or spinal structure. Specifically, a cervical strain would not have caused an injury to the C5 nerve root. Dr. Rauzzino summarized that the proposed surgery would not address a cervical strain.

26. Dr. Rauzzino also explained that the surgery proposed by Dr. Janssen was not causally related to Claimant's August 27, 2017 industrial injury. It was instead necessitated by the natural progression of Claimant's underlying cervical spine condition. Dr. Rauzzino remarked that the proposed surgery was the type of procedure that would have been anticipated within 10 years after the initial 2007 fusion. Specifically, he testified that the cervical MRI findings in 2018 compared to the study performed in 2012 represented a progression of the previous disease rather than an acute structural injury. He explained that Dr. Janssen's reference to the incidence

percentage described “the fact that you can have what’s called adjacent level disease in the setting of a previous cervical or lumbar fusion.” Dr. Rauzzino commented that a known side effect of a cervical fusion as Claimant underwent at C5-C7 in 2007 is the cause of adjacent level disease at the proximal segment or C4-C5 that progresses over time. He elaborated that Dr. Janssen’s assessment of a 2% per year incidence rate in Claimant’s case was likely low. Dr. Rauzzino remarked “if you perform a fusion in a young person, especially at two levels, you would explain to that patient there’s a significant likelihood in their lifetime that they may require additional surgery.” He agreed with Dr. Jatana that there was a 40-60% chance that Claimant’s spine would deteriorate after the 2007 fusion to the point he would require future surgeries within 10 years.

27. Dr. Rauzzino commented that the proposed surgery was designed to address a C5 radiculopathy. His review of the medical records established that there was no evidence of a C5 radiculopathy until July 2019 or almost two years after Claimant’s date of injury. Dr. Rauzzino noted that numerous doctors performed significant examinations and found no C5 radiculopathy on examination. He detailed that

the diagnosis of a classic C5 radiculopathy made by Dr. Janssen was made after multiple providers had seen [Claimant] and had the opportunity to make such a diagnosis and did not. This would include his treating physicians. It would also include Dr. Sacha, who saw the patient, who is well versed in surgical radiculopathy, very much in the position to make a diagnosis of that if it existed. It’s also in contradistinction to Dr. Janssen’s own PA, Ruth Beckham, who saw the patient in June of 2019 and did not note a classic C5 radiculopathy.

Dr. Rauzzino summarized that “there would be no way to relate” the symptoms from Dr. Janssen’s July 2019 exam to the fall Claimant suffered two years earlier. He instead attributed Claimant’s symptoms to the natural progression of the prior C5-C7 fusion that caused a known complication of adjacent level disease at the C4-C5 segment.

28. On March 19, 2020 Dr. Janssen testified through a pre-hearing evidentiary deposition in this matter. Dr. Janssen noted that he reviewed Dr. Rauzzino’s reports and deposition testimony. He commented that Claimant’s lack of an immediate classic C5 radiculopathy did not change his opinion that Claimant sustained a cervical spine injury on August 27, 2017. Dr. Janssen remarked that, although the initial September 11, 2017 emergency department report noted Claimant’s neck range of motion was normal, he may still have injured his neck. He explained that patients with spinal cord disc injuries do not always immediately manifest acute radiculopathy or splinting.

29. Dr. Janssen also explained that Claimant requires decompression and reconstruction surgery. He remarked that a disc replacement will provide Claimant with a shorter recovery, better outcome and decrease the likelihood of additional surgery. Furthermore, Claimant’s need for cervical surgery is related to his industrial injury. Nevertheless, Dr. Janssen recognized that a prior fusion could break down over time.

He explained that the incidence rate of the need for an additional surgery by 2019 after the original 2007 fusion was “between 20 or 25 percent to 30 percent.”

30. Claimant has proven that it is more probably true than not that he sustained a cervical spine injury during the course and scope of his employment with Employer. Initially, on August 27, 2017 Claimant tripped over a water meter lid and fell forward onto his outstretched arms while working at a jobsite. He reported he had fallen onto his chest and experienced right-sided thoracic pain since the fall. At a September 11, 2017 visit to the emergency department a physical examination of the cervical spine was normal and Claimant was diagnosed with a chest wall contusion. At a Concentra visit on September 19, 2017 NP Schubert diagnosed Claimant with a neck strain and recommended message therapy. Claimant subsequently continued to report right-sided neck pain. From September 2017 through mid-2019, Claimant received significant treatment for his cervical spine symptoms. The treatment included a variety of conservative measures including massage therapy, acupuncture, osteopathic manipulation and injections. Although Claimant suffered pre-existing neck symptoms, he was asymptomatic and had not visited a doctor for his neck condition in the five years prior to his August 27, 2017 industrial injury.

31. Although Claimant suffered an industrial injury while working for Employer on August 27, 2017, the record reflects that it was limited to a cervical strain. On February 2, 2018 Claimant underwent an MRI of the cervical spine. A comparison of the MRI against an October 22, 2007 CT scan reflected an “unchanged” anterior C5-C7 fusion and mild degenerative changes including mild C4-C5 central canal narrowing. Dr. Rauzzino persuasively explained that the 2018 MRI compared to pre-injury studies established there was no acute structural injury to the cervical spine. He remarked that there was nothing about the 2017 accident that would have altered the structure of Claimant’s spine or caused it to progress more rapidly than what would have been anticipated based on the previous fusion.

32. In contrast, Dr. Janssen commented that Claimant’s lack of an immediate classic C5 radiculopathy did not change his opinion that he sustained a cervical spine injury on August 27, 2017. Dr. Janssen remarked that, although the initial September 11, 2017 emergency department report noted Claimant’s neck range of motion was normal, he may still have injured his neck. He explained that patients do not always immediately manifest acute radiculopathy or splinting. However, Dr. Rauzzino persuasively reasoned that if Claimant suffered a cervical injury on August 27, 2017 it was limited to a strain. He explained a cervical strain “is a soft tissue or muscular injury... that would resolve over time.” Dr. Rauzzino commented that a soft tissue injury would not have affected the cervical discs, spinal column, cervical nerves or spinal structure. Specifically, a cervical strain would not have caused an injury to the C5 nerve root. Accordingly, based on a review of Claimant’s prior medical history, the medical records and persuasive opinion of Dr. Rauzzino, Claimant did not suffer an acute structural injury to the cervical spine on August 27, 2017. Instead, he only suffered a cervical strain. Claimant’s work activities on August 27, 2017 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment for the cervical strain.

33. Claimant has failed to demonstrate that it is more probably true than not that the artificial disc replacement and two-level fusion requested by Dr. Janssen is reasonable, necessary and causally related to his August 27, 2017 cervical strain. Initially, after reviewing Claimant's medical history, including prior cervical treatment, EMG results and the cervical MRI, Dr. Janssen determined that Claimant suffered a classic C5 radiculopathy and required surgery. In considering whether Claimant's need for surgery was related to the natural progression of his cervical spine condition or work injury, Dr. Janssen explained that Claimant had surgery 10 years earlier and there was an "incidence of generally about 2 percent per year" regarding the need for additional surgery after the initial 2007 procedure. He reasoned that there was a less than one in five chance that Claimant's need for surgery was related to the natural history rather than his work injury. Dr. Janssen thus concluded that Claimant's need for surgery was causally related to his industrial injury and requested authorization to perform a C4-5 artificial disc replacement with C5-7 hardware removal.

34. In contrast, Dr. Rauzzino explained that the proposed surgery is designed to address a C5 radiculopathy. However, the August 27, 2017 work accident did not cause, aggravate or accelerate Claimant's C5 radiculopathy. Dr. Rauzzino persuasively commented that the C5 radiculopathy would have been present at Claimant's initial evaluation on September 11, 2017 if it had been caused by the work injury. Instead, the C5 condition was not documented until July 2019 or nearly two years after the work accident. Dr. Rauzzino noted that numerous doctors performed significant examinations and found no C5 radiculopathy on examination. He detailed that "the diagnosis of a classic C5 radiculopathy made by Dr. Janssen was made after multiple providers had seen [Claimant] and had the opportunity to make such a diagnosis and did not." Dr. Rauzzino summarized that "there would be no way to relate" the symptoms from Dr. Janssen's July 2019 exam to the fall Claimant suffered two years earlier.

35. Dr. Rauzzino detailed that Claimant's symptoms are related to the natural progression of the prior C5-C7 fusion. He explained that a known side effect of a cervical fusion like Claimant underwent at C5-C7 in 2007 is adjacent level disease at the proximal segment or C4-C5 that progresses over time. Dr. Rauzzino elaborated that Dr. Janssen's assessment of a 2% per year incidence rate in Claimant's case was likely low. He remarked "if you perform a fusion in a young person, especially at two levels, you would explain to that patient there's a significant likelihood in their lifetime that they may require additional surgery." Dr. Rauzzino agreed with Dr. Jatana that there was a 40-60% chance that Claimant's spine would deteriorate after the 2007 fusion to the point he would require future surgeries within 10 years. Therefore, based on a review of the medical records and the persuasive opinion of Dr. Rauzzino, Claimant's August 27, 2017 work activities did not aggravate, accelerate or combine with his pre-existing condition to produce the need for Dr. Janssen's proposed surgery. Claimant's need for surgery was instead caused by the natural progression of his pre-existing cervical condition and degeneration of the adjacent segments of his prior cervical fusion. Accordingly, Claimant's request for an artificial disc replacement and two-level fusion as proposed by Dr. Janssen is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); cf. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) (“right to workers’ compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment”). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has proven by a preponderance of the evidence that he sustained a cervical spine injury during the course and scope of his employment with Employer. Initially, on August 27, 2017 Claimant tripped over a water meter lid and fell forward onto his outstretched arms while working at a jobsite. He reported he had fallen onto his chest and experienced right-sided thoracic pain since the fall. At a September 11, 2017 visit to the emergency department a physical examination of the cervical spine was normal and Claimant was diagnosed with a chest wall contusion. At a Concentra visit on September 19, 2017 NP Schubert diagnosed Claimant with a neck strain and recommended message therapy. Claimant subsequently continued to report right-sided neck pain. From September 2017 through mid-2019, Claimant received significant treatment for his cervical spine symptoms. The treatment included a variety of conservative measures including massage therapy, acupuncture, osteopathic manipulation and injections. Although Claimant suffered pre-existing neck symptoms, he was asymptomatic and had not visited a doctor for his neck condition in the five years prior to his August 27, 2017 industrial injury.

9. As found, although Claimant suffered an industrial injury while working for Employer on August 27, 2017, the record reflects that it was limited to a cervical strain. On February 2, 2018 Claimant underwent an MRI of the cervical spine. A comparison of the MRI against an October 22, 2007 CT scan reflected an “unchanged” anterior C5-C7 fusion and mild degenerative changes including mild C4-C5 central canal narrowing. Dr. Rauzzino persuasively explained that the 2018 MRI compared to pre-injury studies established there was no acute structural injury to the cervical spine. He remarked that there was nothing about the 2017 accident that would have altered the structure of Claimant’s spine or caused it to progress more rapidly than what would have been anticipated based on the previous fusion.

10. As found, in contrast, Dr. Janssen commented that Claimant’s lack of an immediate classic C5 radiculopathy did not change his opinion that he sustained a cervical spine injury on August 27, 2017. Dr. Janssen remarked that, although the initial September 11, 2017 emergency department report noted Claimant’s neck range of motion was normal, he may still have injured his neck. He explained that patients do not always immediately manifest acute radiculopathy or splinting. However, Dr. Rauzzino persuasively reasoned that if Claimant suffered a cervical injury on August 27, 2017 it was limited to a strain. He explained a cervical strain “is a soft tissue or muscular injury... that would resolve over time.” Dr. Rauzzino commented that a soft tissue injury would not have affected the cervical discs, spinal column, cervical nerves or spinal structure. Specifically, a cervical strain would not have caused an injury to the C5 nerve root. Accordingly, based on a review of Claimant’s prior medical history, the medical records and persuasive opinion of Dr. Rauzzino, Claimant did not suffer an acute structural injury to the cervical spine on August 27, 2017. Instead, he only suffered a cervical strain. Claimant’s work activities on August 27, 2017 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment for the cervical strain.

Proposed Surgery

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier*, W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

12. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the artificial disc replacement and two-level fusion requested by Dr.

Janssen is reasonable, necessary and causally related to his August 27, 2017 cervical strain. Initially, after reviewing Claimant's medical history, including prior cervical treatment, EMG results and the cervical MRI, Dr. Janssen determined that Claimant suffered a classic C5 radiculopathy and required surgery. In considering whether Claimant's need for surgery was related to the natural progression of his cervical spine condition or work injury, Dr. Janssen explained that Claimant had surgery 10 years earlier and there was an "incidence of generally about 2 percent per year" regarding the need for additional surgery after the initial 2007 procedure. He reasoned that there was a less than one in five chance that Claimant's need for surgery was related to the natural history rather than his work injury. Dr. Janssen thus concluded that Claimant's need for surgery was causally related to his industrial injury and requested authorization to perform a C4-5 artificial disc replacement with C5-7 hardware removal.

13. As found, in contrast, Dr. Rauzzino explained that the proposed surgery is designed to address a C5 radiculopathy. However, the August 27, 2017 work accident did not cause, aggravate or accelerate Claimant's C5 radiculopathy. Dr. Rauzzino persuasively commented that the C5 radiculopathy would have been present at Claimant's initial evaluation on September 11, 2017 if it had been caused by the work injury. Instead, the C5 condition was not documented until July 2019 or nearly two years after the work accident. Dr. Rauzzino noted that numerous doctors performed significant examinations and found no C5 radiculopathy on examination. He detailed that "the diagnosis of a classic C5 radiculopathy made by Dr. Janssen was made after multiple providers had seen [Claimant] and had the opportunity to make such a diagnosis and did not." Dr. Rauzzino summarized that "there would be no way to relate" the symptoms from Dr. Janssen's July 2019 exam to the fall Claimant suffered two years earlier.

14. As found, Dr. Rauzzino detailed that Claimant's symptoms are related to the natural progression of the prior C5-C7 fusion. He explained that a known side effect of a cervical fusion like Claimant underwent at C5-C7 in 2007 is adjacent level disease at the proximal segment or C4-C5 that progresses over time. Dr. Rauzzino elaborated that Dr. Janssen's assessment of a 2% per year incidence rate in Claimant's case was likely low. He remarked "if you perform a fusion in a young person, especially at two levels, you would explain to that patient there's a significant likelihood in their lifetime that they may require additional surgery." Dr. Rauzzino agreed with Dr. Jatana that there was a 40-60% chance that Claimant's spine would deteriorate after the 2007 fusion to the point he would require future surgeries within 10 years. Therefore, based on a review of the medical records and the persuasive opinion of Dr. Rauzzino, Claimant's August 27, 2017 work activities did not aggravate, accelerate or combine with his pre-existing condition to produce the need for Dr. Janssen's proposed surgery. Claimant's need for surgery was instead caused by the natural progression of his pre-existing cervical condition and degeneration of the adjacent segments of his prior cervical fusion. Accordingly, Claimant's request for an artificial disc replacement and two-level fusion as proposed by Dr. Janssen is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. On August 27, 2017 Claimant suffered a cervical strain during the course and scope of his employment with Employer.
2. Claimant's request for an artificial disc replacement and two-level fusion as proposed by Dr. Janssen is denied and dismissed.
3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: October 7, 2020.

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his cervical spine, (and specifically the surgery performed by Dr. David Corenman on September 4, 2019), is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI) and/or cure and relieve the claimant from the effects of the admitted February 19, 2007 work injury.

FINDINGS OF FACT

1. The claimant suffered an injury at work on February 19, 2007, when he slipped on ice and fell. The claimant testified that at that time he injured his neck and back. The claimant also testified that after the injury, his symptoms included a stiff neck and migraine headaches.

2. On July 20, 2009, the claimant was seen at The Steadman Clinic by Dr. Sanjitapal Gill for a surgical consultation. At that time, Dr. Gill diagnosed cervical degeneration with disc herniation and lumbar facet degenerative joint disease (DJD). Dr. Gill recommended a computerized tomography (CT) scan and magnetic resonance imaging (MRI) of the claimant's lumbar spine, and an MRI of the claimant's cervical spine.

3. The claimant returned to Dr. Gill on July 30, 2009 to discuss the imaging findings. Dr. Gill noted that there were diffuse disc bulges at the C4-C5 and C5-C6 levels, with significant stenosis. Dr. Gill recommended the claimant undergo a C4-C5 and C5-C6 anterior cervical discectomy and fusion (ACDF), with allograft and plating. The recommended surgery was performed on August 18, 2009.

4. The claimant testified that following the 2009 surgery he noted a decrease in his pain and numbness. However, he continued to experience stiffness in his neck and migraine headaches.

5. In a medical record November 19, 2009, Dr. Gill noted that the claimant had no pain, but continued to have some left posterior neck stiffness. Similar symptoms were noted by Dr. Gill on August 18, 2010, as some cramping in the back of the claimant's neck with daily headaches.

6. On April 4, 2013, the claimant was seen at The Steadman Clinic by Dr. David Corenman and reported an increase in neck pain over the previous six months. At that time, Dr. Corenman opined that the findings in the claimant's neck, mid-back and low back were due to an aggravation of preexisting conditions. He recommended physical therapy and opined the claimant was nearing maximum medical improvement (MMI).

7. On October 24 2013, Dr. Corenman determined the claimant had reached MMI. He assessed permanent work restrictions of no lifting, pushing, or pulling more than 100 pounds. Dr. Corenman assessed permanent impairment of 21 percent whole person for the claimant's cervical spine, and 16 percent whole person for the lumbar spine.

8. On July 2, 2014 Dr. Brain Reiss performed a Division-sponsored independent medical examination (DIME) of the claimant. Dr. Reiss determined that the claimant had reached MMI. With regard to permanent impairment, Dr. Reiss assigned a whole person impairment of 17 percent. Dr. Reiss recommended that the claimant do a home exercise program with core strengthening.

9. Based upon the opinions of Dr. Reiss, on October 14, 2014, the respondents filed a Final Admission of Liability (FAL) admitting for the impairment rating of 17 percent whole person, and the MMI date of July 2, 2014. The respondents also admitted for post-MMI medical treatment that is reasonable, necessary, and related to the 2007 injury.

10. The claimant testified that after he was placed at MMI he continued working for the employer. Since that time, the claimant worked as a roof bolter, a shuttle car driver, and a laborer. The claimant also testified that during that time his neck was always stiff and he continued to have migraines.

11. On June 2, 2019, the claimant sought treatment in the emergency department (ED) at the Ashley Regional Medical Center. The claimant testified that he sought treatment on that date because he woke up with pain shooting down his neck and left arm.

12. The ED medical record of June 2, 2019, indicates that the claimant's symptoms included " 'spasm' pain" in the left side of his chest, the left side of his back and his left arm. The claimant reported that he was injured in 2007 and he had similar pain that "acts up intermittently" and this was not new pain. Dr. Adam Nielson recorded the claimant's condition as strain of muscle and tendon of back wall of thorax.

13. On June 3, 2019, the claimant returned to the ED reporting back pain. On that date, Dr. Nolan Brooksby diagnosed the claimant with cervicalgia; upper extremity pain and spasm; cervical disc disorders; segmental and somatic dysfunction of the cervical region; and chronic pain syndrome. On that same date, Dr. Brooksby administered a trigger point injection to the claimant's left shoulder.

14. On July 1, 2019, an MRI of the claimant's cervical spine showed a mature fusion at C4 through C6; a right C4-C5 subarticular osteophyte; and multilevel neural foraminal narrowing, most prominent at the left C6-C7 level.

15. On August 1, 2019, the claimant was seen at The Steadman Clinic by Eric Strauch, PA-C and Dr. Corenman. At that time, the claimant reported that he experienced severe left trapezius and arm pain when he woke up on May 31, 2019. On August 1, 2019, x-rays of the claimant's cervical spine showed the prior fusion as solidly fused, with normal plate alignment. The x-rays also showed disc narrowing at the C3-C4, C4-C5, and C6-C7 levels. Dr. Corenman opined that the claimant had C7 radiculopathy and

recommended an injection. Dr. Corenman implied that if the injection was not successful, a repeat ACDF would be pursued.

16. On August 20, 2019, Dr. Thos Evans administered a left transforaminal epidural steroid injection (TFESI).

17. On September 4, 2019, Dr. Coreman performed surgery that included removal of the C4 through C6 plate, ACDF at the C6-C7 level, using an iliac crest graft, local bone graft, and plate, with reconstruction of the graft site.

18. The claimant testified that this surgery was paid for by his personal insurance. The claimant also testified that he did not wait to obtain authorization from the respondents because he was in too much pain.

19. On September 13, 2019, the claimant was seen by Ehrich Bean, PA-C in Dr. Coreman's practice. At that time, the claimant reported resolution of his left arm symptoms, with a return of left triceps strength.

20. The claimant testified that following the September 4, 2019 surgery his arm and back pain was "instantly gone". The claimant further testified that he believes his 2019 arm and back symptoms are related to the 2007 work injury because he experienced the same symptoms.

21. At the request of the respondents, Dr. Brian Castro performed a review of the claimant's medical records. In his report dated February 29, 2020, Dr. Castro opined that the claimant was appropriately placed at MMI on July 2, 2014. Dr. Castro further opined that the claimant has suffered a new injury that is not related to the admitted 2007 work injury. Dr. Castro noted that the disc herniation is likely acute, and not due to adjacent segment syndrome.

22. Dr. Castro's testimony at hearing was consistent with his written report. Dr. Castro testified that the claimant had acute cervical radiculopathy with disc herniation and acute symptoms down the arm. Dr. Castro reiterated his opinion that the recent disc herniation is not related to the claimant's original injury. Dr. Castro also testified that the claimant's 2019 symptoms are demonstrative of an acute disc herniation. On cross examination Dr. Castro was asked to address adjacent segment disease. Dr. Castro explained that when a spinal level is fused, the levels above and below that level can become weakened resulting in adjacent segment disease.

23. The ALJ credits the medical records and the opinions of Dr. Castro and finds that the claimant has failed to demonstrate that it is more likely than not that the September 4, 2019 surgery was related to the February 19, 2007 injury. While the surgery may have been reasonable, as it appears to have resolved the claimant's symptoms, the ALJ is not persuaded that claimant's need for surgery was related to his 2007 work injury. Additionally, the ALJ finds no indication that any medical provider has diagnosed the claimant with adjacent segment disease.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the claimant’s need for the September 4, 2019 surgery (as performed by Dr. Corenman) is related to the February 19, 2007 work injury. As found, the medical records and the opinions of Dr. Castro are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for treatment of his cervical spine, and specifically the September 4, 2019 surgery performed by Dr. Corenman is denied and dismissed.

Dated this 8th day of October 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-130-945-001**

ISSUES

- Did Claimant prove he suffered a compensable injury on June 5, 2019?
If Claimant proved a compensable injury, the ALJ will consider the following:
- What is Claimant's average weekly wage (AWW)?
- Did Claimant prove entitlement to temporary partial disability (TPD) benefits from June 6, 2019 through December 1, 2019?
- Did Claimant prove entitlement to temporary total disability (TTD) benefits commencing December 2, 2019?
- Are Dr. Bryan Hynes and Dr. Lance Farnworth authorized providers?
- Did Claimant prove a left shoulder surgery performed by Dr. Farnsworth on March 6, 2020 was reasonably needed to cure and relieve the effects of his compensable injury?

FINDINGS OF FACT

1. Claimant works as a "trimmer" processing rebar coil in Employer's [Redacted Employer].

2. Rebar coil leaves the furnace and travels down the production line on a hook. The hook stops at the trimming station, where the trimmer cuts defective scrap rings from the ends of the coil using hydraulic cutters. The trimmer manually removes the cut rings from the hook and carries them to a discard pile. The cut rings are then sent back to the furnace to be recycled into rebar.

3. Shortly after the start of his shift on June 5, 2019, Claimant was cutting 7/32" high carbon steel rings off the rebar coil. Claimant thought he had cut through approximately 20 rings of coil. When he tried to move the rings, he discovered two rings had not been cut. He jerked the rings twice and then used the hydraulic cutters to free the two remaining rings. He removed the approximately 20 rings from the hook and threw them onto the discard pile.

4. Claimant felt a painful pop in his left arm when he jerked the coils.

5. Video surveillance footage shows Claimant cutting coil and pulling the rings as he described. He first testified the force of jerking the coils caused his hard hat to fall off. He later conceded his hard hat fell off at a different time. The video footage is relatively low resolution, but Claimant displays no obvious signs of injury or pain.

6. Claimant continued working for approximately 10-15 minutes and then reported the injury to a supervisor because the pain was getting worse. He reported the injury to the lead worker at his station, Tony Tafoya. Employer's practice when an employee reports an injury is to call the on-site EMTs to transport the employee to the on-site clinic. Mr. Tafoya accompanied Claimant upstairs to the office to wait for the EMTs to arrive.

7. Chris C[Redacted] is the General Supervisor of Production in the [Redacted Employer]. While waiting for the EMTs to arrive, Mr. C[Redacted] obtained a brief statement from Claimant regarding the injury. Claimant explained the injury occurred when he pulled on two rings that were not cut. Mr. C[Redacted] testified Claimant stated he injured his left elbow but said nothing about his shoulder.

8. Larry M[Redacted] is a Safety Supervisor for the [Redacted Employer]. Mr. M[Redacted] interviewed Claimant briefly in the office while waiting for the EMTs to arrive. Claimant stated the injury occurred when he was pulling rings and some were "hung up." Mr. M[Redacted] testified Claimant stated he injured his left elbow.

9. Claimant was then seen at Onsite Innovations. He reported injuring his left shoulder and left biceps when pulling coils. There is no reference to the left elbow, although Claimant's pain diagram indicates pain in the biceps immediately adjacent to the elbow.

10. After discussing the incident with Claimant, Mr. M[Redacted] and Jeremy Vassar, one of Claimant's supervisors, initiated a "Detailed Report" of the incident. The report describes the accident as:

Employee was trimming on the closed end of the hook at trim station. He was pulling about 20 rings of 7/32 high carbon off the hook. He walked around to the north side of the hook to pull rings off. As he yanked the rings he felt a sharp pain in the left shoulder. He realized he still had two rings he had not cut yet. He dropped stack he had and went back around the hook and cut the last two rings. He had a hard time picking up the rings on ground. His hard hat also fell off at the time.

The report contains no reference to Claimant's left elbow.

11. Claimant followed up at Onsite Innovations on June 6, 2019. He described the accident as:

[H]e was at the trim station and was pulling coils, however 2 coils apparently weren't cut and when he tried to pull he wrenched his L shoulder "pretty good." Continued to work for about 15 min but then pain was too much.

12. The provider ordered an MRI of the left shoulder, which was completed on June 7, 2019. It showed a full-thickness full-width tear/rupture of the supraspinatus tendon, a full-thickness near full-width tear of the infraspinatus tendon, a subacute subscapularis rupture, and a dislocated biceps tendon with tendinosis.

13. Also on June 7, 2019, Employer completed a WC1 Employer's First Report of Injury listing the injury as a left shoulder strain that occurred while Claimant was "pulling rod rings from hook."

14. Claimant received a list of designated providers on June 11, 2019. The listed providers were: Onsite Innovations, Dr. Charles Hanson, Dr. Jorge Klajnbar, and Dr. Jeremy Brown.

15. Onsite Innovations assigned Claimant work restrictions and Employer put him on "light duty." He worked in the upstairs office for approximately one month, and was then was moved to the "tagging station."

16. Claimant started physical therapy on August 13, 2019. The therapist opined the MRI revealed a suspected chronic long head biceps tear likely exacerbated by Claimant's left shoulder injury. Claimant participated in 14 additional PT sessions through October 10, 2019.

17. Claimant saw Dr. Mark Failinger for an IME at Respondent's request on October 18, 2019. Dr. Failinger conceded Claimant could have been injured by pulling the coils but concluded he suffered no injury because there was no objective evidence of any acute or new pathology in the shoulder. Dr. Failinger explained,

[W]hen looking at the MRI, there is evidence of a chronic and massive and retracted rotator cuff tear with atrophy and with dislocation of the biceps tendon. There is not a significant or major joint effusion, which one would expect in this situation if any significant pathology had occurred in the work incident of 06-05-2019. The MRI clearly shows a massive retracted rotator cuff tear, which is, with high medical probability, pre-existing. Most rotator cuff disease is that of degeneration, with many patients not realizing they have a tear unless an event occurs, which begins the subjective symptoms. However, when looking at the films, there does not appear to be any objective evidence of new and acute injury.

Although I have no doubt the patient has some subjective symptoms in terms of his left shoulder, it would not appear, after looking at the films, the patient has sustained any objective evidence of new pathology created at the work incident of 06-05-2019. As stated previously, massive rotator cuff tears almost never occur with an acute event. In most every circumstance, there is a pre-existing large tear and an incident can cause some subjective symptoms. Sometimes, the event which may involve minimal forces after the rotator cuff has already been torn, can extend the tear, especially to the degree of [Claimant's] pre-existing cuff tear.

18. Dr. Failinger thought Claimant was an appropriate candidate for shoulder surgery, but not in relation to any work accident. He was skeptical a rotator cuff repair would succeed and thought Claimant may require a more significant procedure such as a reverse total shoulder arthroplasty.

19. Claimant returned to Onsite Innovations on December 2, 2019. The provider noted the claim had been “denied” based on Dr. Failinger’s report. The provider stated, “Pt was educated about denial of claim. . . . Pt encouraged to contact PCP about further treatment.” The report also states, “since he continues on modified duty and claim was denied he was educated on how to go off on Standard [short term disability].”

20. As instructed, Claimant saw his PCP, Dr. Bryan Hynes, on December 11, 2019. Claimant asked about seeing an orthopedic surgeon because he was having difficulty moving his left shoulder and could not perform his job. On examination, Claimant’s left shoulder was painful to palpation with minimal range of motion. He had popping and clicking with passive range of motion. Dr. Hynes advised Claimant should remain “off work” and referred him to Dr. Lance Farnworth, an orthopedic surgeon.

21. Claimant saw Dr. Farnworth on December 18, 2019. He explained he injured the shoulder at work when his arm “jerked” while pulling on two coils he mistakenly thought had been cut. Claimant told Dr. Farnworth he received no sustained benefit from physical therapy. After examining Claimant in reviewing the MRI films, Dr. Farnworth recommended an arthroscopic rotator cuff repair and biceps tenodesis.

22. On March 6, 2020, Dr. Farnworth performed a left shoulder open biceps tenodesis, arthroscopic acromioplasty and distal clavicle resection, and mini open rotator cuff repair.

23. Dr. Failinger performed a record review for Respondent on June 19, 2020. He reviewed the surveillance video and saw no pain behaviors or apparent difficulty performing work tasks. He stated the video supported his previously expressed opinions that Claimant’s work on June 5, 2019 caused no additional structural damage or otherwise objectively altered his pre-existing massive rotator cuff tear.

24. Claimant proved he suffered a compensable injury to his left arm and shoulder on June 5, 2019. Despite some minor inconsistencies in his hearing testimony, Claimant has described the accident in a consistent manner to his supervisors and multiple treating and examining medical providers over many months. His description of the incident is also supported by the video. Although Claimant had extensive rotator cuff pathology before the accident, it was asymptomatic or minimally symptomatic with no persuasive evidence it required any treatment or caused any functional limitations. As Dr. Failinger explained, many individuals are not even aware they have a rotator cuff tear until some “event” triggers it to become symptomatic. Pulling the rings was the “event” that precipitated Claimant’s left shoulder symptoms, proximately causing disability and a need for treatment. Claimant proved a compensable aggravation of his pre-existing condition.

25. Claimant proved Dr. Hynes and Dr. Farnworth are authorized providers. The provider at Onsite Innovations advised Claimant to seek care from his PCP on December 2, 2019 because the claim had been “denied.”

26. Claimant proved the March 6, 2020 surgery was reasonably necessary to cure and relieve the effects of his injury. Dr. Failing agreed Claimant was a surgical candidate and unlikely to benefit from additional conservative care. Although Dr. Failing thought Claimant might require a more aggressive surgery such as a reverse total shoulder arthroplasty, his opinion reasonably supports Dr. Farnworth's decision to proceed with a less extensive procedure.

27. Claimant earned gross wages of \$8,566.59 in the 12 weeks leading up to the accident (pay periods ending March 30, 2019 through June 8, 2019). This equates to an AWW of \$713.88, with a corresponding TTD rate of \$475.92 per week.

28. Claimant's weekly earnings from June 6, 2019 through November 23, 2019 were higher than the AWW of \$713.88.

29. Claimant was "laid off" on November 16, 2019 because of a "mill outage for maintenance." Confusingly, his pay records show he worked through November 18, 2019. In any event, he was paid \$1,548.94 for the pay period ending November 23, 2019, which is higher than two times his AWW. Claimant failed to prove entitlement to TPD benefits from June 6, 2019 through November 23, 2019.

30. Claimant's paystub for the period ending December 7 shows he was paid \$19.66 for one hour of work between December 1 and December 7, 2019. The ALJ infers the one hour worked was on December 2, 2019, which corresponds to the "Last date worked" stated on his Workers' Claim for Compensation Form. Claimant also took 16 hours of holiday pay from November 24, 2019 through November 30, 2019. No evidence was presented regarding whether holiday pay was a form of accrued leave. Neither party specifically addressed TPD benefits from November 24, 2019 through December 2, 2019, and that period will be reserved for future determination, if necessary.

31. Claimant proved he was disabled and suffered an injury-related wage loss starting December 3, 2019. Claimant was laid off in late November 2019 but returned for one hour on December 2, 2019. There is no persuasive evidence Employer offered any modified duty on or after December 3, 2019. Claimant is entitled to ongoing TTD benefits commencing December 3, 2019.

32. Claimant received short-term disability benefits from Standard on or after December 2, 2019. No persuasive evidence was presented regarding the amount or duration of those benefits. Claimant's counsel argued Claimant will have to repay Standard if awarded any temporary disability benefits, but the policy is not in evidence.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must

prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved he suffered a compensable injury on June 5, 2019. Pulling the uncut rings aggravated, accelerated, or combined with his pre-existing condition to cause disability and a need for treatment. Although Dr. Failinger's *medical* analysis regarding Claimant's shoulder pathology is credible and persuasive, his assumption that a compensable aggravation requires objective evidence of "new" pathology is not accurate. To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. A purely symptomatic aggravation is a sufficient basis for an award of compensation or medical benefits if it caused the claimant to need treatment he would not otherwise have required but for the accident. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). As Dr. Failinger pointed out, Claimant's shoulder was susceptible to symptomatic aggravation by a variety of activities, even those involving "minimal forces." Claimant's rotator cuff was massively degenerated when he arrived at work on June 5, 2019, but it was asymptomatic and caused no functional limitations. Pulling the rings precipitated symptoms and caused him to need treatment he did not otherwise need before the accident.

B. Medical benefits

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is recently necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

Besides proving treatment is reasonably necessary, the claimant must prove the provider is “authorized.” *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a provider’s legal right to treat the claimant at the respondents’ expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Claimants can, and frequently do, have multiple ATPs. *E.g.*, *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Aside from the initial selection, the most common way providers become authorized is from referrals made in the normal progression of authorized treatment. *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985). Here, Claimant’s authorized provider at Onsite Innovations explicitly advised him to follow up with his primary care physician on December 2, 2019 because the claim was being denied. Claimant dutifully complied with that instruction and saw Dr. Hynes, who referred him to Dr. Farnworth. Accordingly, Dr. Hynes and Dr. Farnworth are ATPs within the chain of authorized referrals.

Claimant also proved the treatment he received from Onsite Innovations, Dr. Hynes and Dr. Farnworth were reasonably needed to cure and relive the effects of his injury. Physical therapy as prescribed by Onsite Innovations is generally accepted conservative care for a non-emergent musculoskeletal injury. Dr. Farnworth’s surgical recommendation was reasonable because Claimant had received no sustained benefit from therapy and significant vocational disability. Dr. Failinger agreed Claimant was a surgical candidate and unlikely to benefit from additional conservative care. Although Dr. Failinger thought Claimant might require a more extensive surgery such as a reverse total shoulder arthroplasty, his opinion reasonably supports Dr. Farnworth’s decision to proceed with a less aggressive procedure.

C. Average weekly wage

The term “wages” is defined as “the money rate at which the services rendered are recompensed under the contract of higher in force at the time of the injury.” Section 8-40-201(19)(a), C.R.S. “Wages” includes per diem payments that are included in the claimant’s federal taxable wages. See § 8-40-201(19)(c), C.R.S. Section 8-42-102(2) provides that compensation shall be based on the employee’s average weekly earnings “at the time of the injury.” The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to “fairly” calculate the employee’s AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a “fair approximation” of the claimant’s actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

As found, Claimant’s average weekly wage is \$713.88, but based on his gross earnings of \$8,566.59 in the 12 weeks leading up to the accident (pay periods ending March 30, 2019 through June 8, 2019). The corresponding TTD rate is \$475.92 per week ($\$713.88 \times 2/3 = \475.92).

D. Temporary partial disability

A temporarily partially disabled claimant is entitled to two-thirds of the difference between their AWW and their reduced earnings during the period of disability. Section 8-42-106, C.R.S. As found, Claimant failed to prove entitlement to TPD benefits from June 6, 2019 through November 23, 2019 because his earnings during that period exceeded his AWW. Entitlement to TPD benefits from November 24, 2019 through December 2, 2019 is reserved.

E. Temporary total disability benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

Claimant last worked on December 2, 2019, and Employer offered no modified duty on or after that date. Once commenced, TTD benefits continue until the occurrence of one of the terminating events enumerated in § 8-42-105(3), C.R.S. as of the date of the hearing, Claimant had not returned to work, been released to full duty, or been put at MMI by an ATP. Claimant is entitled to ongoing TTD benefits commencing December 3, 2019.

F. Offset for short term disability benefits

Respondents are entitled to an offset against TTD benefits for any disability benefits paid under a plan financed in whole or in part by the employer. Section 8-42-103(1)(d)(I), C.R.S. The statutory offset may be reduced or precluded if the disability policy contains a reciprocal offset provision. Section 8-42-103(1)(d)(I)(B), C.R.S. Respondent proved Claimant received short-term disability benefits from Standard but provided no evidence regarding the amount or duration of those benefits. Claimant's counsel argues Claimant will have to repay Standard if awarded any temporary disability benefits, but the policy was not entered into evidence. Under these circumstances, the ALJ can issue no specific order regarding offsets other than permitting Respondents to take an offset for short-term disability benefits to the extent allowed by the Act.

ORDER

It is therefore ordered that:

1. Claimant's claim for an injury on June 5, 2019 is compensable.
2. Respondent shall cover all treatment from authorized providers reasonably necessary to cure and relieve the effects of Claimant's compensable injury, including, but not limited to, treatment received from Onsite Innovations, Dr. Bryan Hynes and Dr. Farnworth.

3. Respondent shall cover the left shoulder surgery performed by Dr. Farnworth on March 6, 2020.

4. Claimant's AWW is \$713.88, with a corresponding TTD rate of \$475.92.

5. Claimant's claim for TPD benefits from June 6, 2019 through November 23, 2019 is denied and dismissed.

6. Respondent shall pay Claimant TTD benefits at the rate of \$475.92 per week commencing December 3, 2019 and continuing until terminated according to law.

7. Respondent shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

8. Respondent may take an offset for short-term disability benefits Claimant received on or after December 3, 2019 to the extent otherwise permitted by § 8-42-103(1)(d), C.R.S.

9. All issues not decided herein, including but not limited to TPD benefits from November 24, 2019 through December 2, 2019, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

Office of Administrative Courts

ISSUES

- I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Sharma regarding his Impairment Rating of the Whole Person?
- II. Are Claimant's lumbar spine complaints due to a subsequent intervening [not work-related] injury, instead of the work injury?
- III. If the DIME opinion has been overcome, what is the appropriate Impairment Rating for Claimant's injury?
- IV. If only a scheduled Impairment Rating is assigned by the ALJ, has Claimant shown, by a preponderance of the evidence, that it should then be converted to the Whole Person?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury, and Initial Treatment

1. Claimant was a general manager for Grandezza Landscaping LLC, when he experienced an admitted injury on December 12, 2017. Initially, he reported that he was doing irrigation repair and injured his right foot by pushing a shovel into the dirt. (Ex. M, pp. 155-156). A first report of injury was filed on January 3, 2018. A medical-only General Admission of Liability was filed on October 25, 2018.

2. Dr. Kenneth Raper was Claimant's authorized treating physician. Claimant was also treated by Dr. Brad Drescher, and podiatrist Dr. Kerry Berg. Dr. Michael Zyzda performed an independent orthopedic evaluation at Respondents' request on June 17, 2019. (Ex. K).

3. At this orthopedic examination, Dr. Zyzda noted that Claimant complained to him of back issues, and that he felt that his other providers, up to that point, had ignored his back complaints. It is unclear whether Claimant alleged to Dr. Zyzda that he complained of back issues prior to his 2018 MVA. Claimant also mentioned at this exam that activities actually made his back symptoms better; it was worse when seated. Dr. Zyzda felt that Claimant was at MMI on that date.

4. Claimant was initially referred for x-rays of his right foot and ankle on December 18, 2017. These showed no acute bony abnormality. Dr. Raper gave Claimant a steroid injection in his hip for the pain in the foot. After his first visit with Dr. Raper, Claimant was

assigned no restrictions. The work related diagnosis from Dr. Raper was strain of the right foot. He was seen up through January 2, 2018. (Ex. M, pp. 158-160). Claimant then stopped working for Employer, and began work for his own business in May of 2018.

5. Claimant did not seek further treatment for several months. He then returned to Dr. Raper May 31, 2018. Dr. Raper added plantar fasciitis to the diagnosis, and treatment resumed. (Ex. M, p. 162). Claimant was then referred to Dr. Kerry Berg, MS, DPM, who saw him initially on June 7, 2018. (Ex. K). Dr. Berg provided a diagnosis of Achilles tendonitis/plantar fasciitis. Dr. Berg stated that the use of the foot on the shovel digging holes caused a contusion and strain to the medial band of the plantar fascia and possible partial tearing. Claimant was referred to physical therapy, but continued to work (now for his own landscape company) without restrictions.

6. In Claimant's initial evaluation for physical therapy, the pain was identified as located at the right foot/ankle. Goals were to improve foot pain. There is no mention of Claimant's back. (Ex. J, p. 117). There was no mention of back problems in Claimant's physical therapy notes. By August 9, 2018, Dr. Raper's PA, Donna Oliver, described Claimant's complaints as 'persistent and worsening' pain. There is still no mention of his back. Dr. Raper saw Claimant next on August 30, 2018. He noted muscle spasms in the thigh. Claimant's complaints continued, and Dr. Raper recommended an evaluation by an orthopedic surgeon for Claimant's foot after his November 14, 2018 visit. There was no discussion of back pain at this visit.

Motor Vehicle Accident in December of 2018

7. Claimant was then involved in a Motor Vehicle Accident ("MVA") on December 15, 2018. According to reports, another car ran a red light, and Claimant's car struck this other car in the side at 40 mph. Claimant's car spun and ran through a fence. The airbags did deploy. (Ex. N). Claimant reported that he had loss of consciousness for a second after he stood up.

8. Claimant was a 'walk-in' to the emergency room after the accident. He had abrasion on his left hip, and dried blood in his nose. The notes state that Claimant presented with bilateral hand and wrist, nose and back pain. He reported pain of 7/10. His diagnosis included dorsalgia (pain arising from the lumbar spine). (Ex. A, p. 15).

Continuing Treatment

9. Claimant saw Dr. Brad Drescher for a third opinion on March 11, 2019. (Ex. F). At that visit, he complained of new radicular symptoms down the right lower extremity. Claimant did not mention the MVA at all to Dr. Drescher. Because of radicular symptoms down the right lower extremity. Dr. Drescher suggested an MRI of the lumbar spine along, with the right ankle. He provided a diagnosis of disorder of the ligament in the right foot, radiculopathy in the lumbar region, and peroneal tendinitis. His impression was chronic pain in the right foot, posterior tibial tendinitis in the right ankle and radiculopathy in the right lower extremity. Based

upon Claimant's new complaints of radiculopathy, physical therapy for the lumbar spine was recommended by Dr. Dresher. (Ex. F, p. 96). Complaints of medial foot and lateral thigh numbness resulted in a referral for an EMG. (Ex. D).

Diagnostics

10. The MRI of the right foot on April 11, 2019 showed intact ankle ligaments, small posterior tibialis tendon sheath effusion that may relate to tenosynovitis, and moderate size posterior subtalar joint effusion with no evidence of posterior ankle impingement. (Ex. L, p. 150).

11. The MRI of the lumbar spine was performed the same day. Under *Impression*, it was noted:

No *significant* disc herniation, nerve compression, spinal canal stenosis, or neuroforaminal narrowing noted *at any level*.

Under *Findings*, it was noted:

The normal lumbar lordosis is maintained. No spondylolisthesis. Vertebral body heights and facet alignments are maintained. Marrow signal intensity is within normal limits. Disc space heights are maintained.

Paraspinal soft tissues are normal. The conus is normal in morphology and signal intensity terminating at a normal level. The cauda equina is normal.

T12-L1: No disc herniation, spinal canal stenosis or neuroforaminal narrowing.

L1-L2L No disc herniation, spinal canal stenosis or neuroforaminal narrowing.

L2-L3: No disc herniation, spinal canal stenosis or neuroforaminal narrowing.

L3-L4: No disc herniation, spinal canal stenosis or neuroforaminal narrowing.

L4-L5: *Minimal* disc desiccation. *Minimal* disc bulging. No spinal canal stenosis or neuroforaminal narrowing. Bilateral* facet osteoarthritis and ligamentum flavum thickening. *(not noted to be *mild*, *moderate*, or otherwise)

L5-S1: *Minimal* disc desiccation. *Minimal* disc bulging. No spinal canal stenosis or neuroforaminal narrowing. *Mild* bilateral facet joint osteoarthritis. (Ex. L, p. 152).(emphasis added).

12. An EMG performed on August 7, 2019 was normal. (Ex. F). Claimant was placed at MMI with a diagnosis for right foot pain on October 8, 2019, and referred to Dr. Thomas Higginbotham for an impairment rating for the right foot pain. (Ex. M, pp. 182, 183).

Initial Impairment Rating by Dr. Higginbotham

13. Dr. Thomas Higginbotham performed an impairment rating on October 23, 2019. He described the mechanism of injury as development of right sided foot and ankle pains while working with a shovel. (Ex C p. 57). Dr. Higginbotham's medical review history does reference the MVA of December 15, 2018, but Claimant denied any back injuries to him. Claimant told him that he had only a "black eye" and laceration of the right hand in that accident. (Ex. C, p. 64).

14. Claimant's complaints to Dr. Higginbotham were focused on the right lower extremity and the right buttock. *Id.* Functionally, he related tightness in the sole of the right foot, pain in the sole of the foot with prolonged walking and weight bearing, progressive tightness and discomfort about the right calf and lateral thigh up into the right buttock that progressed through the day with physical activity. With driving, claimant noted aggravation of his right lower extremity problems "from the foot up to the right buttock." No complaints of back pain and functional difficulty were included in Dr. Higginbotham's review of systems. *Id.*

15. Dr. Higginbotham provided a 9% lower extremity impairment for right hind foot range of motion deficits, only. He noted, "there is no impairment schema for a recalcitrant plantar fasciitis." (Ex. C, p. 68). Dr. Higginbotham also provided 6% whole person impairment for the lumbar spine, based solely upon range of motion deficits. He stated that there was no specific disorder associated with the lumbar spine. He stated, "Impairment is provided for the low back because of limitations of the back range of motion as a result of the reactive myofascial tension and tenderness of the right lower extremity. There is no frank injury to the low back." *Id.* "This examiner references the DOWC Desk Aid #11, Impairment rating tips, page 4, (1) using range of motion measurement of the lumbar spine without a Table 53 diagnosis similarly as one would use for cervical range of motion loss, with no specific cervical spine injury, and for pertinent shoulder conditions." *Id at 70.*

DIME Report by Dr. Sharma

16. Respondents then requested a DIME, and Dr. Anjou Sharma was selected. Respondents requested a Prehearing conference with the Division on their motion to hold the DIME in abeyance, pending the receipt of medical records pertaining to Claimant's December, 2018 MVA. That motion was denied, as the Prehearing ALJ did not feel Respondents had shown that the records would be relevant to the DIME. (Ex. V). Thus, at the time Dr. Sharma conducted his exam and issued his report, he was not made aware of the December 2018 MVA.

17. The DIME occurred on January 30, 2020. Dr. Sharma agreed that Claimant reached MMI on October 23, 2019. He provided 12% Whole Person for the lumbar spine and 9% for the lower extremity (which converted to 4% Whole Person). He did not adopt Dr. Higginbotham's reasoning for rating the lumbar spine. Instead, he used the MRI findings of

osteoarthritis at L4-5 and L5-S1 as the basis for a Table 53(II)(C) rating of 7%. In his DIME report, he stated specifically:

Referencing the lumbar spine, the patient does meet criteria for specific disorders. Now the patient has *mostly moderate* findings on L4-L5, L5-S1 with regard to facet arthrosis. I will assign an impairment of 7% from section 2C. This is combined with the range of motion of 5% from the lumbar spine to give a final whole person impairment for lumbar spine of 12%. (Ex. 3, p.17)(emphasis added).

18. Dr. Sharma then added range of motion deficits of 5% for a final combined Whole Person rating of 12% for the back. Combined with 4% for the lower extremity, the cumulative Whole Person Impairment Rating came to 16%. He recommended no maintenance, and no work restrictions. (Ex. B, p. 52).

Dr. Sharma's Deposition

19. Dr. Sharma was deposed by Respondents. He confirmed that the mechanism of injury described to him was that some unclear event occurred when Claimant was shoveling that affected his foot. Claimant did not have back pain or any acute injury to the spine at the time of this incident. (Sharma Depo, p. 7, p. 9). He testified that the EMG that had been done clearly indicated that there was nothing in the lumbar spine causing Claimant's radicular complaints. (Sharma Depo. pp. 10, 11). Dr. Sharma explained that he provided an impairment rating because, although there was no injury that occurred on the date of injury specifically to the lower back, altered gait from the plantar fasciitis caused pain in Claimant's back. (*Sharma Depo p. 14*). Dr. Sharma initially indicated that there was no Table 53 diagnosis. (*Sharma Depo, p. 15*). "And I did indicate that in my report, that there was no Table 53 diagnosis that was assigned from page 80, Table 53. I also had indicated that the patient was not really complaining of a lot of back symptoms until later on in the course of his care...but I do feel I addressed the lumbar spine appropriately." *Id.*

20. Dr. Sharma said that Claimant had complained to him of back soreness. He testified that he concluded that the generator of those complaints was the minimal disk desiccation and bulging at L4-5 seen on the MRI and the bilateral facet joint osteoarthritis at that level and arthrosis at level L5-S1. (Sharma Depo, p. 24, 25). Dr. Sharma did admit that there were just vague back complaints within the records, which he chose to associate with the degenerative changes seen on the MRI. (Sharma Depo. pp. 27, 28).

21. Dr. Sharma testified that he did not know anything about the MVA, and had not received records about that accident. He was shown emergency room records from the date of that accident. He agreed that the emergency room records showing back involvement was 'important data'. (Sharma Depo, p. 28). Despite this, he did not indicate that such information would be pivotal in his conclusions.

22. Later in the deposition, however, Dr. Sharma provided a more detailed rationale for his Table 53(II)(C) assignment:

Q ...Where in the record do we have medically documented injury?

A Right. So we do have complaints of pain in the lumbar spine, and those pain complaints were made, I would say probably nine months before he was placed at MMI, maybe six months, to my recollection...And that is the six months that I considered as meeting the criteria for Table 2C.

Table 2C also includes moderate-to-severe degenerative changes, which is in contrast to section 2B, which is none-to-mild. So I included section C because based upon his MRI, we had *bilateral* facet joint osteoarthritis, ligamentum flavum thickening, and it was *all {at?} two levels, not just L4-L5, but L5-S1*. So again, *I used clinical discretion*, and I assigned 7 percent in that case. (Sharma Depo, p. 24) (emphasis added).

23. He also clarified that he considered Claimant's back issues to be a medically documented injury, thusly:

Q All right. And in your report, I believe you provided the diagnosis of a lumbar strain regarding Mr. Lewis' back. So is it your opinion that that is or is not an injury?

A *It is an injury*. You can have chronic strain. (Sharma Depo, p. 32).

24. Dr. Sharma also clarified that one could consider the diminished range of motion to constitute rigidity for a Table 53(II)(C) diagnosis. He then (and for the first time) definitively opined on the causation link between the foot injury and Claimant's back condition:

Q And in your opinion, would that [Claimant's back problems] be unrelated to the claim or would that be related to the claim?

A Well, *it would be related to the claim*, in my opinion, based upon the fact that he reported initial injury to his foot. And if his foot was causing him significant pain throughout the course of his medical care, *that pain could have affected the dynamics of his back*, the functioning of his back. That could have resulted in range of motion deficit. That could have resulted in an exacerbation of the underlying condition in his spine, which in this case is *facet arthrosis*. (Sharma Depo, pp. 33-34) (emphasis added).

IME by Dr. D'Angelo

25. Dr. Kathy D'Angelo conducted a records review and testified at hearing as an expert in occupational medicine and Level II certified with the DOWC. It is her opinion that Dr. Sharma was clearly wrong when he included a lumbar rating for this injury. She noted that there were no recorded complaints of lumbar radiculopathy due to Claimant's work injury prior

to the 2018 non work-related MVA. Although Dr. Sharma opined that claimant's work related "antalgic gait" was responsible for development of lumbar pain and radiculopathy, those complaints did not occur until long after the initial foot injury, and after the MVA. As she noted, if Claimant were ambulating with an "antalgic gait" from the work injury, there was a significant amount of time prior to the MVA without any complaint of back pain. (Ex. A, p. 20).

26. Dr. D'Angelo viewed and discussed video surveillance of Claimant prior to the MVA, on November 5, 2018 and November 7, 2018. She described Claimant's activity in detail, and noted that this did not show lumbar pain or functional limitations, or even gait disturbance. (Ex. A, pp. 34-36, 38). Dr. D'Angelo discussed medical studies discussing the relationship of abnormal gait and spinal conditions. She noted, "There is not medical or biologic plausibility to the notion that limping would initiate, cause or accelerate to any degree: facet arthrosis, desiccation of disks, ligamentum hypertrophy, tearing disk disruption, disk bulging, disk herniation or curvature of the spine. There is no evidence or potential for sustained pathology of the spine or permanent loss of function from baseline." (Ex. A, p. 40).

27. Dr. D'Angelo also testified at hearing, and in great detail, consistent with her written report.

Claimant's Hearing Testimony

28. Claimant testified at hearing. He described a mechanism of injury inconsistent with what he had earlier told his providers (that he felt pain in his lower foot while driving a shovel into the ground). This time, he stated "I had stepped and turned off of the curb to walk towards the truck and that's when I noticed the pain in my foot." He indicated that he is still feeling the same back pain as when he was examined by Dr. Higginbotham and Dr. Sharma. He stated that he did not seek any follow-up treatment for his back following the MVA in December, 2018.

29. Regarding the video not showing an antalgic gait, Claimant explained:

A I usually walk just fine. I don't have any issues with walking; it's when I stop is when it hurts. Actually sitting – sitting and driving is the worst.

QAnd at any point in time prior to that motor vehicle accident, were you having the antalgic gait?

A Before, yes.

30. The ALJ notes that the surveillance video, taken in November, 2018 (one month prior to the MVA) depicts Claimant engaging in various activities in and around a work truck parked in his driveway. At no point does Claimant appear to be in distress, or demonstrate an antalgic gait. There are no apparent range of motion deficits, including when Claimant is placing items of an unknown weight in or out of the truck. In effect, Claimant appears to be working normally.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

4. In this instance, two witnesses testified at hearing, and one via deposition. The ALJ has a healthy skepticism of Claimant's hearing testimony, but will stop short of finding Claimant to be incredible as a witness. For reasons unclear, the mechanism of injury has morphed from pushing his right foot into a shovel into firm ground, to stepping onto cobblestones, then down off a curb. It was initially his foot, then his ankle, then his back some time later. The timing of his increased complaints coincides with his self-

employment. His back complaints appeared after the MVA. Claimant shows no distress while working in his driveway a month before the MVA. Nonetheless, the ALJ must focus on the task at hand, to wit: determining if the DIME has been overcome, and applying the proper burden.

5. The ALJ finds that both Dr. D'Angelo and Dr. Sharma testified sincerely, and to the best of their respective abilities. Both testified consistently with their written reports, but as will be noted, Dr. Sharma had much more to add to his written report at his deposition. Thus, the ALJ will view their testimony not so much in terms of *credibility* per se, but rather of *persuasiveness* - keeping in mind, however, the high burden of proof that Respondents bear in this case.

Overcoming the DIME, Generally

6. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In re Dazzio*, W.C. No. 4-660-149 (ICAO, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005).

7. A DIME physician is required to rate a Claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In re Gurrola*, W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett*, W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

8. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

9. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals*

Office, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

Was Dr. Higginbotham Correct in his Impairment Rating?

10. The Colorado General Assembly, in the Workers' Compensation Act, has chosen to designate the AMA Guides to the Evaluation of Permanent Impairment, Third Edition (Revised) as the basis for physical impairment ratings. Section 8-42-101(3)(a)(I), § 8-42-101(3.7), C.R.S. The Director was instructed to promulgate rules establishing a system for the determination of medical treatment guidelines and utilization standards and medical impairment rating guidelines for impairment ratings. The Workers' Compensation Division's interpretation of the AMA Guides as set forth in the Impairment Rating Tips ("Division Tips") is provided deference by the ICAO. *Guillermo v. Lineage Logistics Holdings, LLC*. W.C. 5-054-538 (ICAO February 11, 2020). These Division Tips were written at the direction of the statute, § 8-42-101(3.5)(a)(II), 24-4-103(1). *Fisher v. State of Colorado*, W.C.. No. 5-068-151 (March 25, 2020). If the applicable language is clear, the court must apply its plain and ordinary meaning. *Lobato v. Industrial Claim Appeals Office*, 105 P.3d 220 at 223 (Colo. 2005). Although the Division Tips are not part of the AMA Guides, the Division Tips may be relevant to the impairment rating. *Davis v. Mohawk Industries*, W.C. No. 4-674-003 (July 21, 2011). Therefore, a physician's application of those Division Tips goes to the weight the ALJ gives to an impairment rating. *Serena v. SSC Pueblo Belmont*, W.C. No. 4-922-394 (December 1, 2015) *aff'd*, *Serena v. Industrial Claim Appeals Office*, (Colo. App. No. 15CA2095, November 3, 2016) (not selected for publication). A finding that the DIME report does not comply with the directions of the AMA Guides supports a conclusion that the DIME determinations have been overcome by clear and convincing evidence. *Silva v. Corporate Services Group Holdings, Inc.*, W.C. No. 4-944-337-03 February 23, 2016). As the Division Tips are integral in our understanding of the proper application of the AMA Guides in Colorado, a finding that the DIME report does not comply with those Tips also supports a conclusion that the DIME determination has been overcome.

11. The Division Tips state, under the heading, "Impairment Ratings Based on Objective Pathology,":

Impairment ratings are given when a specific diagnosis and objective pathology is identified. (*Reference: C.R.S. §8-42-107 (8) (c)*)

The Division Tips state on page two, under the heading, "Spinal and Extremity Rating. Table 53 and Application for Spinal Range of Motion:"

In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating

of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established. (*References: Spine section of the AMA Guides, 3rd Edition (Revised); Level II Accreditation Curriculum, Spinal Impairment*). . . . (Emphasis in original)

The Division Tips discuss the unusual case of severe shoulder pathology accompanied by treatment of the cervical musculature, but then says, “Otherwise there are no exceptions to the requirement for a corresponding Table 53 rating.” Dr. Higgenbotham opined that he could make an exception in this case and relate the lumbar spine to the foot injury, like can be done in the “unusual case” of cervical rating in a case of severe shoulder pathology. The Division Tips are clear that there are no additional exceptions for body parts other than the shoulder and cervical spine to the requirement of a correspondent Table 53 diagnosis. *Dr. Higgenbotham was incorrect in his representation that there could be a similar exception in this case for the lumbar spine, and the ALJ so finds.* However, the issue before the ALJ is whether Dr. Sharma’s Impairment Rating has been overcome, and not Dr. Higginbotham’s.

Overcoming Dr. Sharma’s Written DIME Opinion

12. In this instance Dr. Sharma was required to provide a lumbar spine Table 53(II)(C) Specific Disorder diagnosis, which may then - and only then - be appended to lumbar range of motion deficits to yield a Whole Person Impairment Rating. He did so in his DIME report, but had it ended there, the ALJ might well have found that his causation analysis fell short. There was no causation analysis at all in his written report; just the bare assignment of a Specific Disorder. Even then, with no analysis in support, he found *moderate-to-severe* degenerative changes to the lumbar spine, when the only mention in the MRI for facet joint osteoarthritis was *undescribed* at L4-L5, and *mild* at L5-S1. That would have placed Claimant into, at most, Table 53(II)(B), with a 5% WP, instead of 7%. The DIME at that point would have been overcome.

Overcoming Dr. Sharma’s [Cumulative] DIME Opinion

13. However, Dr. Sharma was then deposed. In all fairness to Respondents, they then had the opportunity [denied by the prehearing ALJ] to present evidence of the MVA to the DIME physician to see if such evidence might be pivotal to his causation analysis. While *relevant* to Dr. Sharma, it was not *pivotal*. For reasons unclear, Dr. Sharma initially stated that there was no Table 53 diagnosis. If so, game over. But later on, he then provided a rationale that Claimant had indeed suffered an *injury* to his back. He explained that the range of motion deficit itself could constitute six months of *rigidity*, along with six months of *pain* Claimant had complained of. During his deposition, Dr. Sharma justified using Table 53(II)(C), instead of (II)(B), since Claimant’s MRI showed pathology at *two levels* instead of just one, and both levels’ pathology were noted to be *bilateral*. The ALJ is unaware of any Rule or case law which says the DIME may not use his discretion to now assign this as *moderate*. And lastly, Dr. Sharma concluded with a *causation* analysis which, *in his opinion*, linked Claimant’s back complaints to the admitted work injury to his lower extremity – and not to the MVA.

14. In the view of this ALJ, Dr. D'Angelo provided a more detailed, and medically supported rationale for her opinions. Were the burden of proof on a more level playing field, her opinion might well have carried the day. But this is a DIME, and for policy reasons already set forth above, Respondents must show that Dr. Sharma's medical opinion, taken as a whole, is highly probably incorrect. Dr. Sharma effectively rescued his written DIME report during his deposition. In this case, despite strong evidence in support, Dr. D'Angelo's excellent medical opinions are, well, exactly that. And a difference in medical opinion from that of the DIME is insufficient to overcome the presumption that the DIME physician enjoys. The ALJ finds that the DIME opinion of Dr. Sharma has not been overcome.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Sharma has not been overcome.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: October 9, 2020

/s/ William G. Edie

William G. Edie

Colorado Springs, Colorado 80906

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his left hip and low back constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 26, 2019 work injury.

FINDINGS OF FACT

1. On October 7, 2019, the claimant began working for the employer as an over-the-road truck driver. The claimant testified that on November 26, 2019, he was driving for the employer. On that date, the claimant stopped at a truck stop near Burlington, Colorado. The claimant slipped on ice and fell to the ground. The claimant immediately had pain in his right knee.

2. The claimant was transported by ambulance to the emergency department at Kit Carson County Memorial Hospital. The claimant testified that while he was in the ED, he was provided with a knee brace and crutches.

3. On November 26, 2019, x-rays of the claimant's right knee showed degenerative changes, but no evidence of a fracture or knee joint effusion.

4. On November 26, 2019, the claimant was seen at Thornton COMP by Monica Fanning-Schubert, APN. Ms. Fanning-Schubert noted the claimant's mechanism of injury and a recommendation from the ED that the claimant obtain a magnetic resonance image (MRI) of his right knee.

5. On November 27, 2019, an MRI of the claimant's right knee showed a high-grade tear of the distal quadriceps tendon of 80 percent thickness, with some retraction of the torn fibers.

6. On December 3, 2019, the claimant was seen by Ms. Fanning-Schubert who reviewed the MRI results. On that same date, Ms. Fanning-Schubert referred the claimant for an orthopedic consultation.

7. On December 4, 2019, the claimant was seen at Panorama Orthopedics and Spine Center by Dr. Hector Mejia. At that time, Dr. Mejia referenced the MRI results and the tear of the right quadriceps tendon and recommended surgical intervention.

8. On December 10, 2019, the claimant experienced pain in his left hip. The pain was such that the claimant was transported by ambulance to the emergency department (ED) at St. Anthony North Health Campus. The claimant was seen by Dr.

Mariana Guerrero who noted that the claimant developed acute left hip pain that was atraumatic. Dr. Guerrero ordered x-rays of the claimant's lumbar spine and pelvis. The lumbar spine x-ray showed no fracture or malalignment. The pelvic x-rays showed bilateral pistol-grip deformities of the femoral heads. Dr. Guerrero diagnosed the claimant with femoral acetabular impingement and noted that the claimant was scheduled for right knee surgery.

9. On December 11, 2020, the claimant was seen at Aspen Valley Hospital by Dr. Tomas Pevny. At that time, Dr. Pevny noted that the claimant had a right quad tendon rupture. Dr. Pevny recommended that the claimant undergo surgical repair of the tendon. In that same medial record, it was noted that the claimant was complaining of left hip pain.

10. On December 12, 2019, Dr. Pevny performed a right quad tendon repair. In addition, Dr. Pevny administered an injection to the claimant's left hip greater trochanteric bursa.

11. The claimant testified that since the December 12, 2019 surgery he walks with a limp. Specifically, he describes the limp as if his right leg is shorter than his left. In addition, this limp has become worse over time.

12. On December 17, 2019, the respondents filed a General Admission of Liability (GAL) for the claimant's November 26, 2019 injury. The GAL specifically states "[a]ccepted body part is right knee. Respondents deny all body parts not admitted to."

13. On January 24, 2020, the claimant first treated with his authorized treating provider (ATP), Dr. Craig Stagg. At that time, Dr. Stagg listed the claimant's complaints as a right knee injury, with surgery, low back pain, and left hip pain. The claimant reported to Dr. Stagg that he developed back pain "sometime after the initial injury".

14. On March 9, 2020, the claimant returned to Dr. Pevny and reported that he was making progress in physical therapy. The claimant also reported that he was having low back pain. In the medical record of that date, the claimant's low back pain is attributed to his limp and antalgic gait.

15. On March 11, 2020, the claimant returned to Dr. Stagg and reported continued back pain. Dr. Stagg noted that an x-ray was taken on that date of the claimant's lumbar spine. Dr. Stagg noted that the x-ray was within normal limits. Dr. Stagg opined that the claimant's low back pain was caused by his right knee issues.

16. On June 3, 2020, the claimant was seen by Dr. Stagg and reported that his back pain had begun to radiate into his right and left buttocks approximately three or four days prior.

17. On June 12, 2020, the claimant attended an independent medical examination (IME) with Dr. John Raschbacher. In connection with the IME, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant; and performed a physical examination. Dr. Raschbacher opined that the claimant had reached maximum medical improvement (MMI) for his right lower extremity as of the date of the IME. Dr. Raschbacher also assessed a permanent impairment rating

of three percent for the claimant's right lower extremity, (which converts to one percent whole person). Dr. Raschbacher recommended that the claimant continue with a home exercise program and avoid crawling, kneeling, and squatting.

18. With regard to the claimant's reports of hip and back symptoms, Dr. Raschbacher opined that those symptoms are not work related. In support of this opinion, Dr. Raschbacher pointed to the claimant's prior history of chronic back pain. In addition, he noted that if the claimant had injured his left hip and low back at the time of the fall, he would have experienced immediate symptoms.

19. Dr. Raschbacher's testimony by deposition was consistent with his written report. In his testimony, Dr. Raschbacher noted the claimant's history of back and neck pain. Dr. Raschbacher also testified that there was no aggravation of the claimant's pre-existing conditions at the time of his November 26, 2019 fall.

20. On June 18, 2020, an MRI of the claimant's lumbar spine showed right sided moderate to severe neural foraminal narrowing at the L3-L4 level; mild diffuse disc degenerative disease, and mild to moderate diffuse facet arthropathy.

21. On June 19, 2020, the claimant was seen by Dr. Stagg. On that date, Dr. Stagg noted the MRI results and referred the claimant for a neurosurgery consultation.

22. On June 22, 2020, the claimant was seen by Dr. Pevny. At that time, the claimant reported he was continuing to improve, but occasionally his knee would lock up.

23. On June 29, 2020, Dr. Pevny authored a letter in which he opined that the claimant has developed an altered gait as a result of wearing a locked brace on his right knee. Dr. Pevny also opined that that because of the altered gait, the claimant has developed pain in his back, hip, and ankle. Dr. Pevny attributes these new symptoms to the claimant's initial injury and related surgery.

24. On July 10, 2020, Dr. Stagg responded to a number of questions posed to him by respondents' counsel. In that writing, Dr. Stagg noted that the claimant did not injure his back when he fell on November 26, 2019. However, Dr. Stagg opined that the claimant's antalgic gait may have aggravated the claimant's pre-existing lumbar spine condition.

25. On July 14, 2020, Jill Hennebert, FNP-BC authored a letter in which she stated that she has not treated the claimant for back pain and the claimant does not have a back pain related diagnosis.

Prior Medical Treatment

26. Prior to the November 26, 2019 work injury, the claimant received medical treatment from the Veterans' Administration (VA). On January 23, 2018, the claimant was seen at the VA in Grand Junction, Colorado. At that time, it was noted that, as a result of a fall, the claimant had degenerative disc and endplate changes of the spine.

27. On March 12, 2018, a medical record from the VA references a “c-spine injury” as the result of an accident.

28. August 14, 2019, the claimant was seen at the VA for neck stiffness, with cramping in his back, neck, legs, and hands. The medical record of that date references chronic neck and upper back discomfort.

29. On August 22, 2019, the claimant was seen at the VA and reported a “flare” of his low back symptoms. It was noted that the claimant’s pain was in his mid to low back following a motor vehicle accident (MVA) on June 25, 2019. The claimant described three incidents of low back pain that radiated into his coccyx. Jim Blankenship, NP identified this as an “exacerbation of chronic lower back pain”. Mr. Blankenship also noted that the claimant had not experienced a new injury, but demonstrated difficulty moving around and was using a cane.

30. The claimant testified that he does not have a history of left hip pain or treatment. With regard to back pain, the claimant testified that his prior back pain was more of a soreness in the muscle and on the right side. Now, his back pain is in the center of his low back. It is the claimant’s belief that his limp has made his back pain worse.

31. The ALJ credits the claimant’s testimony, the medical records, and the opinions of Drs. Stagg and Pevny over the contrary opinions of Dr. Raschbacher. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that his fall on November 26, 2019 aggravated, accelerated, or combined with his pre-existing low back condition to necessitate the need for medical treatment of his low back. The ALJ also finds that the claimant has successfully demonstrated that it is more likely than not that his fall on November 26, 2019, and the related right knee surgery, has altered the claimant’s gait to the point that it has caused the claimant’s left hip symptoms, necessitating treatment.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer.

Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a pre-existing disease or infirmity to produce disability or need for treatment." See *H & H Warehouse v. Vicory, supra*.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has demonstrated, by a preponderance of the evidence, that treatment of his left hip and low back constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 26, 2019 work injury. As found, the claimant's fall on November 26, 2019 aggravated, accelerated, or combined with his pre-existing low back condition to necessitate the need for medical treatment of his low back. As found, his fall on November 26, 2019, and the related right knee surgery, has altered the claimant's gait to the point that it has caused the claimant's left hip symptoms, necessitating treatment. As found, the claimant's testimony, the medical records, and the opinions of Drs. Stagg and Pevny are credible and persuasive.

ORDER

It is therefore ordered that the respondents shall authorize reasonable and necessary treatment of the claimant's low back and left hip, pursuant to the Colorado Medical Fee Schedule.

Dated this 13th day of October 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-108-170-003**

ISSUES

- Did Claimant prove he suffered a compensable injury to his left shoulder on or about June 11, 2018?
- If Claimant proved a compensable injury, did he prove a left total shoulder arthroplasty performed by Dr. David Weinstein

FINDINGS OF FACT

1. Claimant has worked for Employer as an overnight stocker since 2007. During the shift that started the evening of June 11, 2018, Claimant stocked product in the sporting goods section. At some point during the shift he was stocking collapsible water jugs. He was placing some extra jugs on the top shelf used for overstock, approximately 7 feet high. Claimant was facing down the aisle with the shelves to his left. He lifted one of the jugs with his left arm, twisted his torso, and abducted and rotated his left arm to place the jug on the shelf when he felt a sharp pain in his left shoulder. Claimant estimated the jugs weighed approximately 5-10 pounds each. He testified, "it wasn't the weight that bothered me I think it was the rotation, the way I turned my arm when I set it on the shelf."

2. The sharp pain abated soon thereafter but the shoulder continued to bother Claimant as he worked. Claimant testified he tried to keep his left arm close to his side the rest of his shift and mostly used his right arm.

3. Claimant believes the accident occurred sometime around 11:30 PM. Respondents admitted into evidence the store security video which depicts Claimant stocking product from approximately 10:30 PM to 12:30 AM. Although most items Claimant stocked appeared to be relatively light, he used both extremities throughout the video and at no point appeared to be in pain or limited by any injury.

4. Claimant testified he reported the injury to his manager, Michael A[Redacted], around midnight. Mr. A[Redacted] confirmed the conversion but opined Claimant must be mistaken about the timing, because he was in the cash office doing end-of-day processes at midnight. Mr. A[Redacted] asked Claimant he needed medical attention. Claimant assumed it was just a minor strain so he decided to "just wait to see how it feels."

5. Mr. A[Redacted] came through the sporting goods section again near the end of Claimant's shift while making his rounds. Claimant said he wanted to file an accident report because his arm was still painful. Mr. A[Redacted] went to get the paperwork, but when he returned a few minutes later Claimant had clocked out and left the store. Claimant testified he did not realize Mr. A[Redacted] was coming back with the

paperwork. Claimant estimated the second conversation occurred around 4:00-5:00 AM, but it appears he was again mistaken about timing, because his shift ended at 7:00 AM.

6. Claimant worked again the next evening performing his regular duties. Mr. A[Redacted] was not on duty that night and Claimant did not discuss the injury with the manager on duty, who knew nothing about the injury. Claimant testified he “babied” his arm and relied more on his right arm. The next day, Claimant left for an already-planned fishing and camping vacation. Claimant testified he fished from the lake shore and primarily used his right arm while on vacation. He testified he hoped the pain would go away during the vacation, but it did not.

7. Claimant returned from vacation on June 23, 2018. His arm was still painful, so he completed an accident report and asked to see a doctor. He described the accident as, “I was putting something on top stock when I felt a sharp pain in L shoulder.” On June 30, 2018, he completed a “Witness Statement” on which he stated, “I was reaching up to put in item on top stock on aisle K23 when I felt a sharp pain in my left shoulder. After 2 weeks the pain didn’t go away so I went to the doctor.”

8. Mr. A[Redacted] completed a Witness Statement on June 28, 2018. He stated,

[Claimant] came to me on 6/11 and was saying he felt discomfort in his shoulder. He said he did not feel it was injured and he would see how he felt later. He told me toward the end of the night shift we should fill out a paper after all, so when I broke away from [illegible] moments later to find him to sit down and fill it out, he had clocked out for the night and proceeded to go on vacation. I noticed no visible symptoms coming from him that night. When he returned, we filled out said paperwork immediately.”

9. Employer referred Claimant to Highlands Medical Group for authorized treatment. He saw Stacey Concelman, NP at his initial visit on June 26, 2018. Claimant’s chief complaint was described as, “LEFT shoulder pain for 2 weeks after WC injury. He was placing items onto a shelf above his head. It was not heavy. He is unsure of what happened but had immediate pain while placing the item on the shelf. He has rested for 2 weeks and the pain is mildly improved. Pain improved with rest. Worse with movement.” On examination, he had a positive crossover test, mildly positive Hawkins sign and empty can sign, and could not forward flex or abduct his left arm past horizontal. Ms. Concelman diagnosed left shoulder pain, biceps tendinitis, and osteoarthritis. She ordered x-rays and referred Claimant to physical therapy.

10. Claimant had a cortisone injection on July 25, 2018, which provided no sustained benefit.

11. A left shoulder MRI on July 30, 2018 showed degenerative changes of the left shoulder, small partial-thickness infraspinatus and supraspinatus tears, tendinopathy and a partial-thickness tear of the proximal biceps tendon, and chronic degenerative labral tears.

12. Claimant was evaluated by PA-C Sara Beauchamp at Colorado Springs Orthopedic Group on August 9, 2018. Claimant reported his symptoms started when he “lifted a 5 lb object onto a higher shelf and felt pain in his shoulder. He has had this pain since.” Ms. Beauchamp diagnosed left shoulder pain, osteoarthritis, and impingement syndrome.

13. A CT scan on August 17, 2018 showed advanced glenohumeral arthritis with significant joint space loss, osteophyte formation, subchondral cyst exchanges, and AC joint degenerative changes.

14. Claimant saw Dr. Christopher Jones at CSOG on September 7, 2018. He reported continuing difficulty lifting any weight with the left arm or reaching overhead. Claimant stated, “he did not have any symptoms at all until he was doing overhead lifting at work and ever since then he is unable to get back to preinjury status.” Dr. Jones opined Claimant had failed conservative treatment and the only reasonable surgical option was a total shoulder arthroplasty.

15. Claimant asked Ms. Concelman for a second opinion, and she referred him to Dr. David Weinstein.

16. Claimant saw Dr. Weinstein and PA-C Jeremy Raulie on October 31, 2018. He explained, “he was reaching overhead and lifting approximately a 10 pound item and felt searing pain in the left shoulder and has continued to have trouble with pain and function since that time. . . . Prior to that time he states he did not have any problems with the left shoulder.” Claimant was diagnosed with a left shoulder injury on June 11, 2018 with rotator cuff and biceps strain and “aggravation of underlying pre-existing degenerative joint disease.” Dr. Weinstein and Mr. Raulie opined “he does have significant advanced arthritis of the left shoulder which was present prior to his injury but aggravated by the event in addition to soft tissue strain and subsequent inflammation of the rotator cuff and biceps with some partial-thickness tearing.”

17. Claimant had an ultrasound-guided intra-articular injection and continued to perform his therapy exercises at home to see if it would give him some relief. When those treatment modalities failed, he returned to Dr. Weinstein on December 17, 2018, who reiterated his opinion Claimant suffered a rotator cuff and biceps strain that aggravated his pre-existing degenerative condition. He recommended a total shoulder arthroplasty.

18. On February 19, 2020, Claimant returned to Dr. Weinstein who noted progression of posterior glenoid wear with early posterior subluxation. He again recommended total shoulder arthroplasty. Claimant underwent the surgery on June 16, 2020 through Medicare.

19. Claimant had a remote history of injury to the left shoulder. In approximately 1993 he underwent surgery to remove “bone spurs” in the left shoulder. He recovered well and had no further problems with the left shoulder for many years. He neither desired nor pursued any treatment for his left shoulder before the work accident in June 2018. Mr. A[Redacted] confirmed Claimant never complained of or gave any indication of left

shoulder problems in the many years he worked as a stocker for Employer. Claimant's testimony his left shoulder was asymptomatic and caused no functional limitations before the work accident is credible and persuasive.

20. Dr. Wallace Larson performed an IME for Respondents on July 30, 2019. Dr. Larson reviewed the surveillance tapes from the store and was "unable to identify anything in the videos that could reasonably be described as a traumatic injury." Dr. Larson opined aggravated osteoarthritis typically requires some demonstration of trauma and a two-year time frame from the injury until the patient is a candidate for a total joint arthroplasty. He noted Claimant's described work injury only involved lifting 5-10 pounds at most slightly overhead, and there was no repetitive lifting or evidence of trauma. Therefore, Dr. Larson concluded Claimant did not aggravate his underlying osteoarthritis and suffered no work-related injury. He agreed the total shoulder arthroplasty recommended by Dr. Weinstein was reasonably necessary, but not causally related to Claimant's work.

21. Claimant saw Dr. Timothy Hall for an IME at his counsel's request on February 6, 2020. Dr. Hall disagreed with Dr. Larson's hypothesis that it "would take some specific level of trauma to aggravate underlying osteoarthritis such as in this case." He opined underlying degenerative changes such as these "do not require a great deal of trauma to create symptomatology. It is clear from the patient's history in reviewing the record that he did not have shoulder pain prior to this date of injury. He had no restrictions and was functioning normally. That is not the case now. It is the work injury/event that created the symptoms"

22. Dr. Larson provided an updated opinion in March 2020 after reviewing additional medical records. Dr. Larson opined there was no evidence Claimant sustained any damage to any articular surface because of occupational exposure, and no evidence of any traumatic change in the shoulder. Dr. Larson opined Dr. Hall's conclusions were based primarily on "subjective reports" and not medical imaging or other objective studies. Dr. Larson reiterated Claimant's pre-existing left shoulder osteoarthritis was not exacerbated by any alleged work injury.

23. Dr. Weinstein testified via deposition on June 10, 2020. He agreed the June 11, 2018 incident did not cause Claimant's advanced underlying arthritis, but opined it caused a rotator cuff and biceps strain that aggravated his pre-existing arthritis and caused it to become symptomatic. He emphasized Claimant's left shoulder was asymptomatic and caused no limitations before June 11, 2018. He opined it is not unusual for an individual with significant degenerative shoulder pathology to have little or even no pain. Dr. Weinstein opined the motion and position of Claimant's arm at the time of the injury were more significant than the fact he was only lifting 5-10 pounds. He opined the described mechanism of injury is sufficient to injure one's shoulder, especially in the context of severe pre-existing arthritis. Dr. Weinstein opined Claimant's shoulder was more susceptible to injury compared to a non-degenerated shoulder. Dr. Weinstein opined that Claimant would probably have required a shoulder replacement at some point, but the work accident accelerated the timeline and caused him to need the surgery now. He emphasized he would "absolutely not" recommend a total shoulder replacement

for an individual with an asymptomatic shoulder even if the individual had severe pre-existing degenerative arthritis.

24. Dr. Larson testified at hearing consistent with his reports. He opined the position of Claimant's arm while reaching with the jug did not cause any injury, or aggravate or accelerate any pre-existing conditions. He explained the advanced osteoarthritis seen on Claimant's MRI probably started with the acute trauma from the accident in the 1990s and subsequently progressed because of age-related wear and tear over the next 25 years. He opined the need for total shoulder arthroplasty is not causally related to the June 11, 2018 reaching event in Claimant's experience of pain while reaching at work was simply an expression of the underlying progressive degenerative condition in his shoulder. He reviewed multiple portions of the surveillance video and sought no appreciable difference in Claimant's presentation at any time.

25. Dr. Weinstein and Dr. Hall's causation opinions are credible and more persuasive than the contrary opinions offered by Dr. Larson.

26. Claimant proved he suffered a compensable injury at work on June 11, 2018. Although he suffered from advanced pre-existing osteoarthritis, it was asymptomatic before June 11, 2018. The work accident aggravated, accelerated, or combined with his pre-existing condition to produce a need for treatment.

27. Claimant proved the total shoulder arthroplasty performed by Dr. Weinstein was reasonably needed to cure and relieve the effects of his compensable injury. Multiple providers, including Dr. Larson, agree the shoulder surgery was reasonably necessary, and the binary dispute here is over causation.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. A purely symptomatic aggravation is a sufficient basis for an award of compensation or

medical benefits if it caused the claimant to need treatment he would not otherwise have required but for the accident. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved the accident at work aggravated, accelerated, or combined with his pre-existing condition to produce a need for treatment, including a total shoulder arthroplasty. Admittedly, the lack of any apparent pain or difficulty working with both arms as shown on the video detracts somewhat from Claimant's credibility. But on balance, the persuasive evidence shows the incident he described probably occurred and caused his shoulder to become symptomatic. Claimant reported the injury to his manager promptly but did not immediately seek treatment because he assumed it was a minor strain that would improve on its own. Mr. A[Redacted] corroborated Claimant spoke to him about the injury twice during his shift. Mr. A[Redacted] testified Claimant appeared to be in pain based on his facial expressions but not his movements. Claimant appears to be a relatively stoic individual not given to ostentatious displays of pain behavior. He has described the accident in similar terms to Employer, multiple treating and examining providers, and at the hearing. Claimant worked a relatively demanding job for eleven years with no suggestion of any shoulder problems. He sought no treatment for any shoulder symptoms for many years leading up to the work accident. These factors support his testimony the shoulder was asymptomatic until June 11, 2018. Although he undeniably had advanced osteoarthritis before the accident, surgeons do perform arthroplasties on asymptomatic joints no matter how bad the underlying degeneration. Additionally, Claimant was demonstrably wrong about the timing of events that night at least twice, so it is at least possible the accident occurred after the time covered by the video. In any event, the discrepancy between the video and Claimant's testimony about limiting the use of his arm after the injury is insufficient to overcome the rest of the evidence in Claimant's favor.

B. The total shoulder arthroplasty was reasonable and necessary

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is recently necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant proved the total shoulder arthroplasty performed by Dr. Weinstein was reasonably needed to cure and relieve the effects of his compensable injury. Multiple providers, including Dr. Larson, agree the shoulder surgery was reasonably necessary, and the primary dispute here relates to causation.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits in W.C. No. 5-108-170 is compensable.
2. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including, but not limited to, the total shoulder arthroplasty performed by Dr. Weinstein on June 16, 2020.
3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: October 13, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-112-166-001**

ISSUE

1. Whether Claimant was a "victim of a crime of violence" thereby exempting her from the twelve (12) week limitation on medical impairment benefits under § 8-41-301(2)(b), C.R.S.

FINDINGS OF FACT

1. Claimant is a 25-year-old oncology nurse employed by Employer. Claimant sustained an admitted permanent mental impairment arising out of and in the course of her employment with Employer.
2. On June 22, 2019, an incident occurred at University of Colorado Health, in which an oncology patient was shot in the face by a family member. The assailant immediately committed suicide in the patient's room by shooting himself in the head. The patient did not immediately expire from the gunshot wound. Claimant was working as a nurse and was one of the first people to enter the patient's room with the crash cart to initiate efforts to save the patient's life. After approximately 30 minutes, the patient expired. (Ex. A).
3. The parties stipulated to the following facts:
 - a. The incident that occurred on June 22, 2019 was a crime of violence.
 - b. When Claimant entered the room, the perpetrator of the crime was deceased.
 - c. What Claimant saw when she entered the room was a psychologically traumatic event.
 - d. As a result of this psychologically traumatic event, Claimant suffered post-traumatic stress disorder (PTSD), which resulted in permanent mental impairment.
 - e. Claimant experienced no physical injuries as a result of the June 22, 2019 incident.
4. On April 3, 2020, Claimant was placed at MMI with a 7% whole person impairment rating for mental impairment. Respondents filed a Final Admission of Liability on April 10, 2020, admitting to temporary total disability and temporary partial disability benefits. (Ex. 5).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

INTERPRETATION OF § 8-41-301 (2)(b), C.R.S.

Section 8-41-301(2)(b) provides that where a claim is "by reason of mental impairment" the "claimant shall be limited to twelve weeks of medical impairment benefits," which is inclusive of "any temporary disability benefits." The limitation does not, however, apply to a "victim of a crime of violence." Claimant's entitlement to medical impairment benefits due to a mental impairment is not disputed. The issue before the ALJ is whether Claimant was the "victim of a crime of violence," thereby rendering the twelve-week limitation contained in § 8-41-301 (2)(b), C.R.S., inapplicable. Respondents contend the term "victim" is limited to persons against whom a crime of violence is directly perpetrated (*i.e.*, a "direct victim"). Claimant contends the term encompasses "direct victims" and persons, such as Claimant, who sustained a mental impairment as the result of a crime violence committed against another person (*i.e.*, an "indirect victim").

Section 8-41-301 (2)(b), C.R.S., states:

Notwithstanding any other provision of articles 40 to 47 of this title, where a claim is by reason of mental impairment, the claimant shall be limited to twelve weeks of medical impairment benefits, which shall be in an amount not less than one hundred fifty dollars per week and not more than fifty percent of the state average weekly wage, inclusive of any temporary disability benefits; except that this limitation shall not apply to any victim of a crime of violence, without regard to the intent of the perpetrator of the crime, nor to the victim of a physical injury or occupational disease that causes neurological brain damage; and nothing in this section shall limit the determination of the percentage of impairment pursuant to section 8-42-107(8) for the purposes of establishing the applicable cap on benefits pursuant to section 8-42-107.5. (Emphasis added).

When construing a statute, the ALJ must give effect to the General Assembly's purpose and intent as reflected in the plain language of the statute. *State, Dept. of Labor and Employment v. Esser*, 30 P.3d 189, 195 (Colo. 2001). "To that end, the words in a statute should be given their plain and ordinary meanings, and the statute should be construed so as to give consistent, harmonious, and sensible effect to all its parts." *In Re Spencer*, WC. 4-580-221 (ICAO June 15, 2004) (citations omitted). A court may consider dictionary definitions, but also the context in which the words are used to harmonize the meaning with the remainder of the statutory provisions. *People v. Berry*, 459 P.3d 578, 581 (Colo. App. 2017). The ALJ should not depart from the plain meaning unless it leads to an absurd result. *Colo. Dep't of Soc. Servs. v. Bd. of County Comm'rs*, 697 P.2d 1 (Colo.1985). If, after applying these principles, the statute remains ambiguous, the court may resort to other rules of statutory construction. *Francen v. Colo. Dept. of Revenue*, 411 P.3d 693, 698 (Colo. App. 2012); *Midboe v. Industrial Claim Appeals Office*, 88 P.3d 643 (Colo. App. 2003).

Because the Act does not define "victim," the ALJ must begin by applying the plain and ordinary meaning of the term "victim." The term "victim" by itself is not sufficiently clear to resolve the issue because, as illustrated by this case, "victim" can have different meanings. Various dictionaries limit "victim" to mean the "object" of a crime (*i.e.*, a "direct victim"), but others include someone, such as Claimant, who suffered harm from a crime committed against another person (*i.e.*, the "indirect victim").

Definitions supporting the "direct victim" meaning include the 5th and 6th editions of Black's Law Dictionary which define "victim" as "the person who is the object of a crime or tort, as the victim of a robbery is the person robbed." *Black's Law Dictionary*, (6th Ed., 1990); *Black's Law Dictionary* (5th Ed., 1979). Additionally, Merriam-Webster defines "victim" as "one that is acted on and usually adversely affected by a force or agent." <https://www.merriam-webster.com/dictionary/victim>.

In contrast, the 10th edition of Black's Law Dictionary, as cited by Claimant, includes "a person harmed by a crime, tort or other wrong." Ballentine's Law Dictionary

defines the term as “one who has suffered the commission of a crime, tort or wrong.” *Ballentine’s Law Dictionary* (2010). The Cambridge Dictionary defines the term as “someone or something that has been hurt, damaged, or killed or has suffered, either because of the actions of someone or something else, or because of illness or chance.” <https://dictionary.cambridge.org/us/dictionary/english/victim>.

The General Assembly’s use of the word “victim” within § 8-41-301 (2)(b) provides a better indication of the meaning of the “victim.” Section 8-41-301(2)(b) uses the term “victim” twice, exempting from the twelve-week limitation a “victim of a crime of violence” and a “victim of a physical injury or occupational disease that causes neurological brain damage...” When discussing § 8-41-301(2)(b), the Colorado Supreme Court explained the section as follows: “[A] worker is compensated for mental impairment with permanent partial disability benefits for no more than twelve weeks unless she is the victim of a violent crime or suffers from a ‘physical injury or occupational disease that causes neurological brain damage.’” *Dillard v. Industrial Claim Appeals Office of State of Colorado*, 134 P.3d 407, 441 (Colo. 2006). The Supreme Court’s characterization indicates the meaning of “victim” in the context of a “physical injury or occupational disease” is the object or “direct victim” of such injury or disease (*i.e.*, the person who sustains the physical injury or occupational disease).

The rules of statutory construction require that if “separate clauses in the same statutory scheme may be harmonized by one construction, but would be antagonistic under a different construction, [courts] should adopt that construction which results in harmony rather than that which produces inconsistency.” *Colorado-Ute Elec. Ass’n, Inc. v. Public Utilities Com’n of State of Colo.*, 760 P.2d 627, 635 (Colo. 1988). The ALJ must, therefore, presume the General Assembly intended the term “victim” to have the same meaning when referring to a “victim of a crime of violence” as when referring to the “victim of a physical injury or occupational disease” within the same sentence. The interpretation that gives a consistent and harmonious meaning to the term “victim” is that it means the person upon whom a physical injury, occupational disease, or crime of violence was inflicted (*i.e.*, the “direct victim”).

This interpretation is consistent the General Assembly’s use of the term “victim” in other statutes where the term is not defined. In Colorado’s criminal statutes that use but do not define “victim,” the word refers to the person against whom the crime is perpetrated. For example, § 18-3-102, C.R.S., defining “murder in the first degree” includes the following among the elements of the crime: “A person commits the crime of murder in the first degree if: ... (f) The person knowingly causes the death of a child who has not yet attained twelve years of age and the person committing the offense is one in a position of trust with respect to the victim.” § 18-3-102 (1), C.R.S. (emphasis added). In this context, the statute clearly and unambiguously uses the term “victim” to refer to the person against whom the crime was directly perpetrated (*i.e.*, the person murdered). See *also e.g.*, § 18-3-107(1) (First degree murder of a peace officer, fire fighter, or emergency medical service provider) § 18-3-202(1)(e) and (e.5); (Assault in the first degree); § 18-3-301 (First degree kidnapping); § 18-6.5-103(3), (4) & (5), C.R.S. (Crimes against at-risk persons). These criminal statutes clearly and unambiguously use the undefined term

“victim” to refer to the person against whom the criminal act is perpetrated (*i.e.*, the “direct victim”).

Had the General Assembly intended to expand the definition of “victim” in § 8-41-301(2)(b) to include “indirect victims,” it could have done so expressly, as it has in other contexts. The General Assembly has applied expanded definitions of “victim” to include “indirect victims” in statutes governing crime victim compensation boards. For example, in § 24-4.1-102(10), C.R.S., (Crime Victim Compensation Act), the term “victim” is defined to include the person against whom a crime is perpetrated (“primary victim”), any person who attempts to assist or assists a “primary victim,” and any relative of a “primary victim.”

Section 24-4.1-302 (5), defines “victim” as “any natural person against whom any crime had been perpetrated or attempted...or if such person is deceased or incapacitated, the person’s spouse, parent, legal guardian, child, sibling, grandparent, grandchild, significant other or other lawful representative.” Section 24-4.1-302 (5), also states: “It is the intent of the general assembly that this definition of the term ‘victim’ shall apply only to this part 3 and shall not be applied to any other provision of the laws of the state of Colorado that refer to the term ‘victim’.”

Similarly, § 18-1.3-602 (4)(a), C.R.S., (Restitution), includes within its definition of “victim” relatives, guardians, and lawful representatives of the person against whom a crime has been perpetrated or attempted. Section 18-1.3-602 (4)(a)(V), defines a “victim” to be a “child living with the victim,” the use of the term “victim” within the definition of “victim” is an apparent recognition that the statutory definition expands the term to include those who would not otherwise be considered “victims” under the plain and ordinary meaning of the term. Again, the General Assembly specifically excludes this definition from wider application in § 18-1.3-602 (4), stating the definition “shall not be applied to any other provision of [Colorado law] that refers to the term ‘victim’.”

The limiting language in these statutes demonstrates the General Assembly’s intent to expand the definition only in certain, well-defined circumstances. The statutory construct also demonstrates the General Assembly’s understanding of the plain and ordinary term “victim” and its ability to expand that definition when intended. *See also*, *e.g.*, § 24-4.1-201(1.3); § 19-1-103(112). Had the General Assembly intended to include “indirect” victims in § 8-41-301 (2)(b), C.R.S., it would have done so expressly.

The inclusion of the phrase “without regard to the intent of the perpetrator of the crime” does not lead to a different conclusion. This phrase was added to § 8-41-301 (2)(b) in a 2006 amendment. The 2006 amendment permits a victim of crime of violence to receive Workers’ Compensation Benefits without the necessity of establishing that the perpetrator possessed the requisite criminal intent. Prior to the 2006 amendment, the Colorado Court of Appeals found that the mental state of a third-party actor must be considered when determining whether a workers’ compensation claimant was the “victim of a crime of violence.” *See Bralish v. Indus. Claim Appeals Office*, 81 P.3d 1091 (Colo. App. 2003). It is presumed “when the General Assembly adopts legislation it is aware of judicial precedent relating to the subject matter under review.” *Pulsifer v. Pueblo Professional Contractors, Inc.*, 161 P.3d 656 (Colo. 2007). The ALJ does not interpret

this phrase as altering the definition of “victims of a crime of violence,” but rather eliminating the requirement from *Bralish* that a claimant must prove the perpetrator’s mental state.

The ALJ finds the phrase “victim of a crime of violence” as used in § 8-41-301(2)(b), C.R.S., to refer to the person against whom a crime was directly committed (the “direct victim”). The Claimant undoubtedly witnessed a horrific crime scene, and undisputedly sustained severe emotional trauma and a permanent mental disability. However, because no crime was perpetrated directly against her, she was not the “victim of a crime of violence” as that phrase is used in the Workers’ Compensation Act. Therefore, the Claimant is limited to twelve weeks of medical impairment benefits.

ORDER

It is therefore ordered that:

1. Claimant’s medical impairment benefits are subject to the twelve-week limitation set forth in § 8-41-301 (2)(b), C.R.S.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: October 13, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- I. Whether Claimant's permanent total disability ("PTD") benefits can be reduced or suspended pursuant to section 8-43-404(3), C.R.S.
- II. Whether Claimant's permanent total disability ("PTD") benefits should be reduced or suspended pursuant to section 8-43-404(3), C.R.S.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained a work-related injury on November 13, 2017, when he fell off a platform. He fell about eight feet and landed on his feet and buttocks. A co-worker fell simultaneously and landed on claimant's neck.
2. Claimant was evaluated at UC Health the same day, where he was diagnosed with a teardrop fracture at C-5 and underwent an anterior C-5 corpectomy and interbody fusion from C-4 through C-6. *Respondents' Hearing Exhibit B, Bates Number 3 (hereinafter formatted as, for example, "Resp. Ex. B-3")*. Claimant has been diagnosed with quadriplegia because of the injury. *Id. at 9*.
3. Claimant was treated at Craig Hospital for several months after the accident. After being discharged, he began treating with authorized treating providers ("ATP") Allison Fall, M.D., Katherine McCranie, M.D., and Lloyd Thurston, M.D. *Resp. Ex. B-5*.
4. Claimant first visited Dr. Fall on July 17, 2018, at which time he was living in a care center and waiting to be discharged into an adapted private residence. *Resp. Ex. C-11*. Dr. Fall noted that she would assist with claimant's transfer to the outpatient setting, and Dr. McCranie would be providing pain management services. *Id. at 12*. Claimant did not have any decubitus ulcers at that time. *Id. at 11*.
5. Claimant first saw Dr. Thurston on November 14, 2018, at which time he was pleasant, cooperative, and in good spirits. *Resp. Ex. D-21*. Drs. Thurston and McCranie were each responsible for different parts of claimant's medication regimen. *Id. at 22*.
6. On December 10, 2018, Dr. Fall noted Claimant had recently missed an appointment with Dr. Sceleza, a physiatrist at Craig Hospital. *Resp. Ex. A-5*.
7. On February 18, 2019, Dr. Fall placed Claimant at maximum medical improvement ("MMI") and assigned an 88% whole person impairment rating. *Resp. Ex. C-14*. Dr. Fall recommended lifetime maintenance care, including wound care, monitoring of

urinary function and the skin, and additional visits with Dr. McCranie, Craig Hospital, and hematologist Raul Alvarez, M.D. *Id. at 15.*

8. On March 19, 2019, Claimant underwent a drug screen. The drug screen was positive for cocaine, methamphetamine, and marijuana. *Resp. Ex. B-6.*
9. On April 18, 2019, Respondents filed a final admission in which liability was accepted for PTD benefits and post-MMI maintenance medical benefits. *Resp. Ex. A-1.*
10. On April 20, 2019, Dr. McCranie authored a report stating Claimant had missed several appointments and was no longer a candidate for opioids due to the drug screen results. *Resp. Ex. C-19.*
11. Fran Tafuro, R.N., nurse case manager, authored a report dated April 30, 2019, which documented several missed appointments, Claimant's failure to return phone calls from Dr. Alvarez's office, and a refusal of psychological care despite depression. *Resp. Ex. G-69, 70, and 75.* Nurse Tafuro expressed concern that Claimant's actions had led to his health "deteriorating badly," recurrent constipation, and emergency room ("ER") visits. *Id. at 75.* She also documented that Claimant "expects an external source to take care of everything for him," yet he "is maximally resistant to being 'told what to do' in relation to any aspect of his life." *Id.*
12. As a result, Claimant's refusal to attend several medical appointments, call doctor Alvarez back, and accept psychological care led to more health care costs associated with Claimant's emergency room visits.
13. Claimant was disagreeable and appeared inebriated when he visited Dr. McCranie on May 10, 2019. *Resp. Ex. C-16.* Dr. McCranie tried to address the drug screen results, but Claimant refused to discuss whether he was still using drugs, speak with a counselor, or see a psychologist. *Id. at 16.* Claimant told Dr. McCranie that he "was on his way to the bar," and, "go to Hell." *Id. at 16 and 17.* Dr. McCranie informed Claimant that she would no longer prescribe opioids considering the drug screen results, although she renewed his non-narcotic medications. *Id.* She also noted Claimant had forgotten to call in for refills of his medications several times, which led to four ER visits. *Id. at 16.*
14. Nurse Tafuro authored a report on May 22, 2019, in which she documented the need for more hospitalizations based on Claimant running out of gabapentin and his failure to communicate with his providers. *Resp. Ex. G-77, 78, and 80.* She also noted that applicant was "combative" with her and Dr. McCranie during the appointment on May 10, 2019, he appeared to be under the influence, and he accused them of "keeping him from drinking with [his] buddies." *Id. at 79.* Nurse Tafuro said that she was closing her file and the case was being transferred to Mary Thomas-DuBois, R.N. *Id. at 81.*
15. Ms. Thomas was accepted as an expert in nursing. She testified that she became involved here in May 2019, and Claimant's condition has significantly deteriorated since then, which she attributes to missed appointments, injurious practices, and refusals to undergo medical treatment.
16. Claimant was scheduled for an appointment with Dr. Alvarez on September 26, 2019

but failed to attend. *Resp. Ex. H-82*. Dr. Alvarez needed to evaluate him in person to begin tapering him off anticoagulants. *Id. at 1-84 and 85*. Ms. Thomas testified that Claimant had arrived late for a previous appointment, Dr. Alvarez warned Claimant that he would be discharged for missing another appointment, and she reminded Claimant about his next appointment with Dr. Alvarez on December 5, 2019, but he still no-showed. Ms. Thomas also testified that Dr. Alvarez discharged Claimant after missing that appointment and Dr. Alvarez has not been replaced by another hematologist to date. Claimant testified that he did not have any excuse for the missed appointments with Dr. Alvarez, but also testified that there are days that he simply does not feel well.

17. Ms. Thomas testified that Claimant was also discharged by Craig Hospital after failing to attend several appointments, including a urology visit with Dr. Ferdinand Mueller on September 26, 2019, and wound clinic evaluations on October 23, 2019, November 6, 2019, November 13, 2019, and November 20, 2019. She also testified that Claimant told her that he did not attend the appointment on November 13, 2019, because he was “tired of all of this.” In the interim, a home care report dated November 12, 2019, documented Claimant had several wounds on his legs. *Resp. Ex. A-7*.
18. Claimant testified that his wounds got worse due to him not going to the wound care clinic. He also testified that he notified Ms. Thomas before missing appointments, but Ms. Thomas testified that he did not provide any notice for some of the missed appointments and gave minimal notice for others. Claimant testified that it can be troublesome to find a driver, but on cross-examination, he admitted that he has access to a driver and entered into stipulations with respondents, which made him responsible for his own transportation and provided him with a modified van.
19. Lon Noel, M.D., replaced Dr. Thurston when he retired. Claimant first saw Dr. Noel on February 20, 2020, who referred him to a new hematologist and for wound care evaluations every three months. *Resp. Ex. D-24 and 25*.
20. Ms. Thomas testified that she spoke with Claimant’s mother on March 24, 2020, who advised that the wounds on his legs had reopened. Following that conversation, Ms. Thomas scheduled claimant for an appointment with the wound care clinic at St. Luke’s Medical Center (hereinafter “St. Luke’s”) on April 6, 2020. Claimant travelled to St. Luke’s for the appointment but left before his evaluation. He testified that he left because Ms. Thomas was not there, and he was allegedly expected to enter the hospital by himself without assistance. Ms. Thomas testified, however, that she arranged for a different nurse to attend that appointment (Jerome Stone), who Claimant met previously. Ms. Thomas explained that Mr. Stone was waiting at the doorstep of the hospital and would have helped Claimant enter the building. Ms. Thomas also testified that the wound care clinic provided Claimant with directions and he was in contact with Mr. Stone after arriving at the building while parking or looking for the entrance.
21. Claimant presented to the Denver Wound Healing Center where Paul Thombs, M.D., saw him on April 22, 2020, for treatment of several decubitus ulcers on his posterior legs. *Resp. Ex. E-30*. It was noted that Claimant “did finally agree to be seen”

despite the ulcers existing “for approximately 3 to 4 months.” *Id.* Dr. Thombs documented his strong belief that Claimant needed to “be admitted to a long-term acute care setting for further evaluation of these wounds as well as significant nonemergent medical issues,” to which Claimant consented. *Id. at 32.*

22. Ms. Thomas testified that Dr. Thombs recommended that Claimant undergo the inpatient wound care at Post-Acute Medical Specialty Hospital (hereinafter “PAMS”). She also testified that PAMS specializes in the treatment of severe injuries, PAMS has a high rate of successfully closing wounds, PAMS admits only those candidates who they believe will succeed, and Respondent-Insurer approved an admission into PAMS. She also testified that “there is not one physician that did not request or require an inpatient hospitalization for the [sic] types of injuries.” Claimant testified that he believes an inpatient stay is unnecessary.
23. Claimant was admitted into St. Luke’s the next day, April 23, 2020, because of the ulcers. *Resp. Ex. E-35.* Krista Culp, M.D., wrote that he was “failing outpatient therapy and will need admission and likely placement in a long-term care facility.” *Id. at 37.*
24. Claimant was seen by David Schnur, M.D., of St. Luke’s on April 24, 2020. *Resp. Ex. E-43.* In an effort to reduce the wound closure timeframe by months or years, Dr. Schnur recommended surgery for the ulcers, which he performed on April 28, 2020. *Id. at 43 and 45.* The ulcer on the right thigh was so severe that it was noted to “go down to femur.” *Id. at 45; see also Resp. Ex. J.*
25. Ms. Thomas testified that Claimant and his mother sent her photos of the ulcers in 2020. *See Resp. Ex. J.* She also testified that Claimant misled her about their severity because the wounds in the photos were much less severe than what she observed in person (“the pictures weren’t recent”).
26. Dr. Schnur performed a second surgery on April 30, 2020, to excise and close the ulcers. *Resp. Ex. E-47.* An MRI was taken the same day, which confirmed the presence of osteomyelitis. *Resp. Ex. F-67.*
27. Claimant left St. Luke’s against medical advice on May 3, 2020, despite being advised to stay and receive IV antibiotics to treat the osteomyelitis. *Resp. Ex. E-49.* He was still on vancomycin/Zosyn and had a PICC line and wound vacuum in place on the right thigh. *Id.* Claimant was given a two-week prescription of oral antibiotics upon departure but was advised that this would “not be sufficient to treat his osteomyelitis.” *Id. at 49 and 50.* St. Luke’s was unable to coordinate a portable wound vacuum or home healthcare due to the sudden departure. *Id. at 50.* Claimant “was able to articulate” the risks of leaving prematurely, including “worsening infection, septic shock, loss of limb, and death.” *Id. at 49.* Ms. Thomas testified that she was present when Claimant left St. Luke’s, and he refused to disclose where he was going when she asked.
28. On the same day that he left St. Luke’s (May 3, 2020), Claimant checked himself into Swedish Medical Center (hereinafter “Swedish”). *Resp. Ex. F-56.* Claimant told Swedish that he left St. Luke’s because he “was unhappy with his care,” “being treated unfairly and not receiving his meds.” *Id. at 57 and 64.* William Scott, M.D.,

documented that Claimant was smoking cigarettes every day, using marijuana, and had “a history of noncompliance with medical instructions.” *Id. at 58, 61 and 64.* The doctors at Swedish restarted Claimant on vancomycin/Zosyn, prescribed antibiotics, and recommended another wound surgery for debridement and possible closure. *Id. at 67.* After undergoing that surgery, Claimant checked out of Swedish against medical advice. *Resp. Ex. A-9.* Ms. Thomas testified that this was concerning because Claimant still had post-surgical staples, the wounds were severe, he was still on antibiotics, he was prescribed two medications which had not yet been filled, and more post-operative care was needed. Ms. Thomas also testified that she was unaware of Claimant’s whereabouts thereafter despite trying to reach him, and respondents asked the Adams County Police Department to perform a welfare check on claimant on May 8, 2020.

29. Ms. Thomas testified that she met with Claimant in his home on May 18, 2020, at which time he agreed to be admitted into PAMS. Ms. Thomas also testified that Claimant still had staples and stitches in both legs, which needed to be removed, he lacked necessary wound care supplies, and she has no information to suggest that the stitches or staples were ever removed. She also testified that Claimant reported smoking tobacco, which his providers had recommended against because of the open wounds.
30. Ms. Thomas testified that she participated in a conference call with Claimant and PAMS on May 20, 2020, at which point he refused to be admitted. She testified that he refused because he disliked a “zero visitor” policy PAMS instituted during the COVID-19 pandemic, which contradicts his testimony about him checking out of the hospitals against medical advice due to COVID-19 concerns.
31. On May 26, 2020, Claimant attended a telemedicine appointment with Dr. Noel and Ms. Thomas. *Resp. Ex. D-27.* Dr. Noel noted that claimant’s ulcers were “completely healed after he was seen at Craig,” and, “[a]fter he went home, his decubiti began to return . . .” *Id.* Dr. Noel diagnosed the ulcers as being “stage IV,” noting that they penetrated all the way to the femur, and cultures taken at St. Luke’s revealed “four different bacteria” requiring the PICC line and IV medications. *Id.* Dr. Noel observed that Claimant self-discharged from St. Luke’s and Swedish, disconnected his phone, and terminated communications with Ms. Thomas. *Id. at 28.* Dr. Noel noted Claimant was “agitated and not cooperative,” refused psychological care, and was “verbally abusive and eventually hung up . . .” *Id.* Dr. Noel stated that Claimant was not benefitting from any care “because of his noncompliance and noncooperativeness [sic],” and he therefore did not want to continue treating him “as it would be futile . . .” *Id.*
32. On May 29, 2020, Dr. Fall responded to a questionnaire and confirmed that she is willing to keep treating Claimant. *Resp. Ex. C-20.* Ms. Thomas also testified that Dr. Fall remains willing to treat Claimant.
33. Ms. Thomas testified that Claimant was scheduled for an appointment with Dr. Fall on June 2, 2020. She explained that one of the reasons Respondents scheduled the appointment was to obtain home health care orders if Claimant planned to refuse treatment at PAMS. She also testified that Claimant sent her a text message the day

before stating that he was refusing to attend, and his mother was no longer providing him with in-home attendant care (“bitch don’t want to listen she is gone too”). Ms. Thomas also testified that Claimant did not attend that appointment.

34. The testimony of Claimant and Ms. Thomas confirms that he has refused to follow up with any ATPs since being discharged by Dr. Noel.
35. Claimant testified that he checked himself out of the hospitals because of COVID-19 concerns and because they “just leave [him] there” and do not care about him. Claimant also testified, however, that he has been going into the public for in-person medical appointments at Denver Health and St. Anthony’s.
36. Claimant testified that respondents have failed to timely authorize medications, but Ms. Thomas testified that she coordinated a new medication vendor, she facilitated the approval of medication several times, some medications could not be authorized due to the lack of current prescriptions, and Claimant might have been able to obtain updated prescriptions if he saw Dr. Fall or was not discharged by Dr. Noel.
37. Ms. Thomas testified that claimant’s mother contacted the admission coordinator at PAMS and requested wound care on July 7, 2020. She also testified that the insurer again approved Claimant for an admission into PAMS. Ms. Thomas explained that she arranged for Claimant to be transported to PAMS on July 10, 2020, but he called 911 one hour before the transportation was scheduled to arrive due to stomach pain and was therefore taken to Lutheran, but Lutheran did not admit him and instead sent him to PAMS. Ms. Thomas testified that Claimant was admitted into PAMS on July 10, 2020, briefly, but he left against medical advice that same evening.
38. Lawrence Lesnak, D.O., authored a report on July 13, 2020, based on his review of Claimant’s medical records. *Resp. Ex. B-2*. Dr. Lesnak concluded that Claimant has been increasingly noncompliant and engaged in “significant injurious activities” which have dramatically worsened his condition and the ulcers, “severely negatively impact[ed] his recovery,” and led to several medical providers discharging him. *Id. at 2 and 10*. Ms. Thomas testified that she agrees with this opinion. As examples, Dr. Lesnak referenced the polysubstance abuse, verbal abuse of several providers, and leaving St. Luke’s and Swedish against medical advice. *Resp. Ex. A-10*.
39. Although claimant’s MMI status was not adjusted, the work-related injury worsened and became subject to additional recovery due to the ulcers which developed in late 2019. To restore his previous status, two hospitalizations and three surgeries were performed, antibiotics were prescribed for the resulting osteomyelitis, and a wound vacuum remains necessary. Claimant refused to undergo an inpatient stay, but this additional wound treatment was recommended by Dr. Thombs, Dr. Culp, and Ms. Thomas.
40. In the months before the ulcer surgeries, Claimant engaged in injurious and unsanitary practices which imperiled or retarded his recovery and refused or willfully neglected medical treatment which was reasonably essential to promote his recovery. Contrary to the recommendations of Drs. Alvarez, Fall, and Noel, he missed or failed to undergo several appointments with wound care specialists, hematologists, and other providers. He did not contact Respondents about the

worsening ulcers until March 24, 2020, by which point they had reopened. He then unreasonably left St. Luke's without being seen for the wound care evaluation, which was scheduled by Ms. Thomas due to his mother's concerns. Before eventually seeking treatment, Claimant misled Ms. Thomas about the severity of the ulcers, abused alcohol and illicit drugs, declined physical therapy, and refused psychological care despite depression.

41. Claimant's injurious practices and refusals of care since undergoing the ulcer surgeries have further imperiled or slowed his recovery and have also increased the extent and cost of his care. His post-surgical recovery was incomplete when he left St. Luke's and Swedish against medical advice. When he left St. Luke's, he acknowledged the severe risks which he incurred by refusing to stay and receive IV antibiotics. When Claimant left Swedish, he still had open wounds, surgical stitches, and staples. Claimant's abrupt exodus and failure to communicate also jeopardized his ability to obtain in-home care and wound care supplies. His refusal to submit to inpatient treatment for the ulcers has prolonged his recovery, as evidenced by the ongoing use of a wound vacuum, and Ms. Thomas's testimony that PAMS expected an inpatient wound care program to be completed within six to eight weeks (i.e., by mid-June 2020). Claimant's abuse of Dr. Noel and refusal to see any remaining ATPs has further imperiled his recovery by eliminating the well-rounded and multi-disciplined treatment plan he had before 2020.
42. Ms. Thomas testified that the treatment which Claimant failed to complete with PAMS, Dr. Pacheco, and Nurse Alvarez was reasonably essential to promote his recovery from the work injury. She also testified that the changes needed for Claimant to stop impairing his recovery include an inpatient hospitalization, improved communication, and attending appointments with his physicians to facilitate the treatment and medications he needs. The testimony of Ms. Thomas, and the consistent medical opinions of Drs. Lesnak, Thombs, and Culp, are credible and persuasive.
43. Claimant did not offer any compelling justifications for his conduct. Claimant had access to transportation and a driver while missing the appointments. Although missing an occasional appointment due to sickness is understandable, the number and importance of the appointments which claimant failed to attend has been unreasonable. Claimant's explanation that he left the hospitals due to COVID-19 concerns is contradicted by the evidence, which indicates that he refused admission into PAMS based on that facility's strict anti-COVID policies and his own testimony that he ventures into the general public for treatment with providers outside the chain of ATPs.
44. Claimant's unsanitary and injurious practices are not only not imperiling and retarding his recovery, but his conduct is aggravating the compensable consequences of his industrial injury and thereby imposing increased liability on Respondents.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

- I. **Whether Claimant's permanent total disability ("PTD") benefits can be reduced or suspended pursuant to section 8-43-404(3), C.R.S.**
- II. **Whether Claimant's permanent total disability ("PTD") benefits should be reduced or suspended pursuant to section 8-43-404(3), C.R.S.**

The injurious practice statute, §8-43-404(3), C.R.S., states as follows, in relevant part:

If any employee persists in any unsanitary or injurious practice which tends to imperil or retard recovery or refuses to submit to such medical or surgical treatment or vocational evaluation as is reasonably essential to promote recovery, the director shall have the discretion to reduce or suspend the compensation of any such injured employee.

Respondents bear the burden of proving an entitlement to relief under §8-43-404(3) by a preponderance of the evidence. *C.R.S. §8-43-201*. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792, 800 (Colo. 1979) (en banc). Based on the facts and additional legal conclusions outlined below, the ALJ concludes Respondents carried their burden to establish a reduction or suspension of Claimant's PTD benefits pursuant §8-43-404(3).

When relief is sought under §8-43-404(3) based on a refusal to undergo treatment, respondents must establish only that the treatment is "reasonably essential to promote recovery" for the injury; there is no obligation to establish a "worsening" of condition due to the refusal. *Parks v. Ft. Collins Ready Mix, Inc.*, W. C. No. 4-251-955, 1999 WL 203122, at *2 (ICAO Mar. 31, 1999). Whether Claimant has unreasonably refused to submit to such medical treatment is a question of fact for resolution by the ALJ. *Id.*

When construing a statute, courts must ascertain and give effect to the intent of the General Assembly and refrain from rendering judgments that are inconsistent with that intent. *Walker v. People*, 932 P.2d 303, 309 (Colo.1997). To determine legislative intent, a court must first look to the plain language of the statute. *Vaughan v. McMinn*, 945 P.2d 404, 408 (Colo.1997). When interpreting statutes, "[w]ords and phrases should be given effect according to their plain and ordinary meaning." *S. Ute Indian Tribe v. King Consol. Ditch Co.*, 250 P.3d 1226, 1233 (Colo. 2011).

One of the ordinary definitions of the word "recovery" in the litigation context is "[t]he regaining or restoration of something lost or taken away." *Lanahan v. Chi Psi Fraternity*, 175 P.3d 97 (Colo. 2008), citing Black's Law Dictionary 1302 (8th ed. 2004). Another ordinary definition of the word "recovery," according to Merriam-Webster.com is "the act of regaining or returning toward a normal or healthy state." *Merriam-Webster.com* Dictionary, s.v. "recovery," accessed October 9, 2020, <https://www.merriam-webster.com/dictionary/recovery>. The context of Dr. Lesnak's report demonstrates that he used a similar definition in opining that Claimant's actions negatively impacted "his recovery," without tethering the word "recovery" to the distinct legal concept of MMI or claimant's entitlement to a particularly category of indemnity benefits.

Courts should "not construe a statute in a manner that assumes the General Assembly made an omission; rather, the General Assembly's failure to include particular language is a statement of legislative intent." *Specialty Restaurants Corp. v. Nelson*, 231 P.3d 393, 397 (Colo. 2010) (en banc). The phrase "MMI" is used throughout the

Act and the legislature could have conditioned the applicability of §8-43-404(3) upon refusing treatment needed to attain MMI, or unsanitary practices delaying MMI, but intended otherwise. By utilizing the broader standard of whether the treatment refused was “reasonably essential to promote recovery” of the injury, the legislature accounted for cases like this where the injured worker’s post-MMI condition worsens and becomes subject to additional recovery. From a practical standpoint, cases involving ongoing PTD benefits need not be reopened to deliver full indemnity compensation to a claimant whose injury worsens, because the amounts payable for PTD benefits and temporary total disability benefits are equivalent. Interpreting §8-43-404(3) as applying when PTD benefits are payable furthers the Act’s goals of efficiency and cost reduction by foregoing the administrative inefficiencies which would be associated with reopening and reclosing a claim every time that a permanently and totally disabled worker’s injury worsens.

The case of *Hays v. Industrial Comm’n of Colo.*, 138 Colo. 334 (1958) (en banc), suggests that a reduction or suspension of benefits under §8-43-404(3) is available even in cases involving permanent total disability (“PTD”) benefits. As the Court noted in *Hays*, “[W]hile the option is his to refuse treatment, he may not do so and continue to receive full compensation for the balance of his life.” *Id.* at 337. “[I]t would appear that even if no favorable result was obtained from the recommended surgery, he would be no worse off, since one cannot become more than 100% disabled.” *Id.* The *Hays* Court construed the 1953 version of the injurious practice statute, C.R.S. 1953, 81-12-12, which is nearly identical to the current version, and stated as follows: “If any employee shall refuse to submit to such medical or surgical treatment as is reasonably essential to promote his recovery, the commission in its discretion may, reduce or suspend the compensation of any such injured employee.” See *Cain v. Industrial Comm’n*, 136 Colo. 227, 235 (1967) (quoting the statute).

Hays remains valid because the subsequent changes to the injurious practice statute did not pertain to whether the offset is available in cases involving PTD benefits. Rather, those changes merely broadened the statute’s scope to make suspension or reduction available in more circumstances, now including when a claimant “persists in any unsanitary or injurious practice which tends to imperil or retard recovery.” Pursuant to *Hays* and a plain language reading of the statute, the ALJ concludes that a reduction or suspension of indemnity benefits under §8-43-404(3) is available in cases like this, where the work-related injury worsens and becomes subject to additional recovery while PTD benefits are being paid. In this regard, the ALJ concludes that Respondents are entitled to relief under §8-43-404(3), because the work-related injury worsened and became subject to additional recovery due to the ulcers, Claimant engaged in several injurious and unsanitary practices which imperiled or delayed his recovery, Claimant refused a variety of medical care that was reasonably essential to promote his recovery, and such actions increased the amount, duration, and cost of medical treatment that Respondents are providing.

Section 8-43-404(3) gives ALJs wide discretion to fashion an appropriate remedy. Indeed, the statute does not place any parameters on the timeframe or quantity of such a suspension or reduction of benefits. Furthermore, nothing in the *Hays*

opinion suggests that a reduction must be calculated based on the same methodology which the referee used in that case.¹

Based on the evidence presented, the ALJ concludes that the most appropriate sanction in this particular case is a fifty percent reduction of Claimant's PTD benefits if Claimant refuses to be admitted to an inpatient wound care facility such as PAMS within the next two weeks and refuses to resume treatment with his ATPs, which includes Dr. Fall. The ALJ concludes that this amount - and the timing - is fair and appropriate under these circumstances, where it seems that a significant financial incentive is needed for Claimant to become compliant with his treatment recommendations, and Claimant's injurious conduct has been particularly risky and unreasonable.

The ALJ also concludes that Claimant's PTD benefits shall be fully reinstated once he is admitted to an inpatient stay facility for wound care such as PAMS and resumes medical treatment with his ATPs, which includes Dr. Fall. Thus, if Claimant cooperates and is admitted into a facility within two weeks and follows up with Dr. Fall, there will be no reduction in benefits.

Should Claimant get admitted to an inpatient stay facility for wound care such as PAMS and leave prematurely and against the advice of his treating physician at the wound care clinic, Respondents shall be entitled to again reduce Claimant's PTD benefits by 50%. Such reduction shall remain in effect until Claimant's wounds heal to the extent necessary where inpatient wound care is no longer reasonable and necessary.

ORDER

1. Each party shall cooperate with each other and work expeditiously to get Claimant admitted to an inpatient wound care facility so treatment can begin as soon as possible.
2. Each party shall cooperate with each other and work expeditiously to get Claimant back in active treatment with his ATPs, including Dr. Allison Fall, so treatment can resume as soon as possible. The treatment with his ATPs can include telemedicine visits if reasonable and appropriate under the circumstances. For example, Claimant's inpatient care at a wound care facility, COVID 19 concerns, or both, might require Claimant to resume treatment with his ATPs via telemedicine. Whether a telemedicine visit with each ATP is reasonable and appropriate under the circumstances, instead of an in-person visit, shall be determined by each ATP.
3. If within 14 days from the date of this order, Claimant has not been admitted into an inpatient wound care facility and has not resumed care

¹ The ICAO reached a different conclusion in *Aranda v. Evraz, Inc.*, W.C. No. 4-628-418 (Feb. 17, 2020), but this non-precedential opinion is distinguishable. *Aranda* did not involve a situation like this case where Claimant's conduct aggravates the compensable consequences of his industrial injury and thereby imposes increased liability on Respondents. As found in this case, Claimant's refusal of treatment delayed his recovery and increased the liability of Respondents for additional medical treatment.

with his ATP physician, Dr. Allison Fall, Claimant's ongoing PTD benefits shall be reduced by fifty percent (50%) pursuant to §8-43-404(3), C.R.S.

4. Claimant's PTD benefits shall be reinstated at their full rate upon Claimant's physical admission to an inpatient wound facility such as PAMS and his resumption of medical treatment with his ATPs, which includes Dr. Allison Fall.
5. Should Claimant get admitted to an inpatient stay wound care facility such as PAMS, but leave before treatment has been completed and against the medical advice of his treating physician at the wound care facility, Respondents may again reduce Claimant's PTD benefits by 50% until Claimant attends and fully participates in inpatient treatment or until his wounds heal and inpatient care is no longer reasonable and necessary.
6. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: October 14, 2020.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left knee injury during the course and scope of his employment with Employer on June 18, 2019.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical treatment for his June 18, 2019 left knee injury.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to Temporary Total Disability (TTD) benefits for the period April 26, 2020 until terminated by statute.

4. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits effective April 26, 2020.

5. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant is a 45-year old male who worked at Employer's front-end service desk and fuel center. His fuel center job responsibilities included helping customers at fuel pumps, cleaning the fuel area, removing equipment from the kiosk and taking products out of the kiosk to display for customer purchase.

2. Claimant testified that on June 18, 2019 he was moving a cooler of Red Bull out of a kiosk to display at the fuel center. The Red Bull cooler was top-heavy and there was about a half-inch threshold at the bottom of the doorway. As Claimant was wheeling the cooler through the kiosk's doorway and over the raised threshold it started to tip. In attempting to catch the cooler, Claimant twisted and felt a pop in his left knee. Claimant remarked that his left knee pain worsened throughout the remainder of his shift.

3. Claimant reported his injury on the following day to Store Manager Chris R[Redacted]. He then completed an Associate Work Related Injury/Illness Report.

4. Claimant obtained medical treatment through Concentra Medical Centers. On June 19, 2019 Claimant visited Concentra for an initial evaluation. Claimant reported that he injured his left knee on June 18, 2019 when he was moving a display barrel outside and it became caught on the door threshold. The handle broke and the barrel started to tip over. He twisted his left knee when he tried to prevent the barrel from falling over. Deanna Halat, N.P. diagnosed Claimant with a left knee sprain and determined it was

more than 51% likely that Claimant suffered “a work related injury due to twisting knee while trying to stop Red Bull display from falling over.” NP Halat assigned work restrictions including lifting up to 20 pounds occasionally, pushing/pulling up to 20 pounds occasionally and no squatting. She permitted Claimant to work his entire shift.

5. Claimant subsequently underwent conservative care in the form of physical therapy. However, his symptoms failed to improve.

6. On August 9, 2019 Claimant underwent a left knee MRI. The MRI revealed a medial meniscus tear of the left knee.

7. By August 21, 2019 Claimant returned to Concentra for an examination. Claimant reported continuing left knee pain. He had been working with restrictions but his pain increased by the end of each day. Kathryn Bird, D.O. assigned work restrictions including lifting up to 20 pounds constantly, pushing/pulling up to 20 pounds constantly and no squatting or kneeling. She permitted Claimant to work his entire shift.

8. On September 5, 2019 Claimant visited Mark S. Failinger, M.D. for an orthopedic examination. After reviewing Claimant’s medical records and performing a physical examination Dr. Failinger diagnosed Claimant with a left knee medial meniscus tear and medial compartment chondromalacia. Dr. Failinger recommended surgical intervention in the form of a left knee scope, meniscectomy and chondroplasty.

9. On April 26, 2020 Claimant was terminated from employment. Store Manager Chris R[Redacted] testified that Employer utilized a progressive disciplinary structure for employees with attendance issues. The structure started with a written warning, followed by increasingly lengthened suspensions and culminated in termination after a five-day suspension.

10. The record reflects that Claimant had an extensive disciplinary history with Employer. On March 16, 2016 Claimant received a verbal warning pertaining to lunch violations. A Behavior Notice reflected that further violations would result in disciplinary action up to and including termination. On March 12, 2017 Claimant was scheduled to work at 1:45 pm but did not report to work until 2:30 pm. Claimant received a written warning that further infractions would result in additional disciplinary action including suspension and termination. On March 26, 2017 Claimant arrived one hour and 36 minutes late for his shift and received a one-day suspension to be served on April 11, 2017. On May 6, 2017 Claimant received a five day final suspension to be served from May 29, 2017 to June 2, 2017 for trading his May 4, 2017 shift to another co-worker resulting in overtime without management approval. Employer again documented that “any further matters of the kind would result in termination.”

11. Despite numerous warnings, Claimant’s disciplinary violations continued into 2018 and 2019. On January 1, 2018 Claimant received a warning regarding attendance issues and was notified of a final 10-day suspension. Documentation again noted that any further infractions or attendance issues would result in immediate termination. On May 27, 2019 Claimant was again disciplined for continued attendance

issues and received a one day suspension. The Behavior Notice specifically provided that Claimant “continues to be late for his shifts.” Claimant had received a written warning on April 24, 2019 for reporting to work late and was absent on May 14, 2019. The Notice specified that any further infractions “of this nature would lead to progressive discipline up to and including termination.” On August 1, 2019 Claimant was again disciplined for habitual tardiness. The Behavior Notice documented that Claimant received a three-day suspension for the period August 11-13, 2019. The Behavior Notice stated that Claimant’s failure to arrive for all shifts and any further infractions could lead to further discipline up to termination.

12. On August 12, 2020 Dr. Failinger authored a three-page supplemental report after reviewing video footage of the June 18, 2019 accident. Dr. Failinger explained that Claimant moved a Red Bull cooler out of a small room. Claimant began moving the cooler out of the door “with some difficulty, as it did not appear the cooler had rolling wheels.” Dr. Failinger described that as Claimant was moving the cooler out the door “there was a partial brief give way episode where [Claimant] torqued the left side of his body.” Although Claimant did not fall “he appear[ed] to have sustained some twisting mechanism of his body.” Dr. Failinger noted that throughout the rest of the video Claimant did not exhibit a “dramatic limp or dramatically favor his knee.” He concluded that the “video of [Claimant’s] reported injury, with reasonable medical probability, is consistent with an acceleration of pre-existing disease.”

13. Dr. Failinger explained that Claimant’s persistent symptoms were not uncommon and “[t]here was no significant arthritis noted on the MRI or other significant pre-existing other pathology, which would explain [Claimant’s] symptoms.” He reasoned that individuals with meniscus tears of Claimant’s type do not immediately develop severe pain or limping. However, with a pre-existing tear and no symptoms, further acceleration can occur with a load and a twist as exhibited by Claimant in the video footage. Dr. Failinger thus reasoned that the June 18, 2019 incident accelerated Claimant’s pre-existing disease and caused him to become symptomatic.

14. On August 12, 2020 Claimant underwent an independent medical examination with John Burris, M.D. Dr. Burris recounted that on June 18, 2019 Claimant was moving a Red Bull cooler from the inside of a kiosk so that it could be displayed outside. While maneuvering the cooler over the door threshold, the cooler began to tip. In attempting to prevent the cooler from falling to the ground, the handle of the cooler broke and Claimant was not able to catch it before some of the drinks fell onto the ground. In the process of catching the cooler Claimant twisted and heard a pop in his left knee. Dr. Burris reviewed Claimant’s medical history, performed a physical examination and considered video footage of the accident. He remarked that the left knee MRI revealed several degenerative changes including a complex medial meniscus tear.

15. Dr. Burris explained that “an acute knee meniscus injury requires a combination of knee flexion (or extension) and rotation, during weight-bearing, which results in an increase in shear forces between the femoral condyles and the tibia.” He reasoned that the “observed movements on the video surveillance do not support a combination of left knee flexion (or extension) and rotation, occurring during the 6/18/2019

workplace event.” Dr. Burris detailed that the events on the video did not constitute an event of sufficient magnitude to cause, accelerate, or contribute to Claimant’s left knee condition. He thus concluded that, because the MRI demonstrated degenerative findings and there was no specific mechanism of injury, Claimant’s left knee condition was not related to the June 18, 2019 incident.

16. On August 17, 2020 Claimant underwent an independent medical examination with Timothy O. Hall, M.D. Dr. Hall reviewed Claimant’s medical history, performed a physical examination and considered video footage of the June 18, 2019 accident. Dr. Hall determined that Claimant suffered a left knee injury on June 18, 2019 when he was walking backward with the Red Bull cooler. He noted that Claimant’s foot was planted when he potentially twisted his knee. Claimant’s activities constituted a reasonable mechanism of injury that would result in a meniscal tear.

17. Dr. Hall also testified at the hearing in this matter. He maintained that Claimant suffered a left knee medial meniscus tear when he was exiting a kiosk while pulling a cooler of Red Bull on June 18, 2019. Dr. Hall acknowledged that Claimant had pre-existing asymptomatic changes in his left knee prior to his work injury. He specified that Individuals with complex meniscus tears can be asymptomatic because degenerative tears typically occur slowly over time with minimal swelling or inflammation. Dr. Hall determined that the mechanism of injury depicted in the video footage was sufficient to cause Claimant’s injury. Claimant specifically suffered a torqueing of the left knee while his foot was planted. Dr. Hall detailed that it is not his experience that meniscus tears only occur when there is a combination of twisting and a deep flex bend or significant weight-bearing/lifting activity. Extension and flexion are not necessary movements to cause a meniscus tear. Instead, simply planting one’s foot and then turning to the side can cause a meniscus tear. Dr. Hall commented that, although Claimant’s left knee is not visible in the video, his upper body was shifting. He thus reasoned that Claimant engaged in a torqueing maneuver of his left knee while exiting the kiosk with the Red Bull Cooler on June 18, 2019. Furthermore, a meniscus tear is not generally an injury that would prevent a person from continuing his work activities as long as they do not include “repetitive kneeling, bending, or torqueing.” Dr. Hall concluded that it is greater than 51% probable that the event in the video caused Claimant’s left knee to become symptomatic and created the need for medical treatment including the meniscectomy recommended by Dr. Failing.

18. Claimant has demonstrated that it is more probably true than not that he suffered a compensable left knee injury during the course and scope of his employment with Employer on June 18, 2019. Initially, Claimant testified that on June 18, 2019 he was moving a cooler of Red Bull out of a kiosk to display at the fuel center. As Claimant was wheeling the cooler through the doorway of the kiosk and over the raised threshold it started to tip. In attempting to catch the cooler, Claimant twisted and felt a pop in his left knee. His left knee pain worsened throughout the remainder of his shift. On June 19, 2019 NP Halat at Concentra diagnosed Claimant with a left knee sprain and determined it was more than 51% likely that Claimant suffered “a work related injury due to twisting knee while trying to stop Red Bull display from falling over.” An August 9, 2019 MRI revealed a medial meniscus tear of the left knee.

19. Dr. Failinger described that when Claimant was moving the Red Bull cooler out the kiosk “there was a partial brief give way episode where [Claimant] torqued the left side of his body.” Although Claimant did not fall “he appear[ed] to have sustained some twisting mechanism of his body.” Dr. Failinger explained that Claimant’s persistent symptoms were not uncommon and “[t]here was no significant arthritis noted on the MRI or other significant pre-existing other pathology, which would explain [Claimant’s] symptoms.” He noted that with a pre-existing meniscus tear and no symptoms, further acceleration can occur with a load and a twist as exhibited by Claimant in the video footage. Dr. Failinger thus reasoned that the June 18, 2019 incident accelerated Claimant’s pre-existing disease and caused him to become symptomatic. Similarly, Dr. Hall acknowledged that Claimant had pre-existing asymptomatic changes in his left knee prior to his work injury. He specified that Individuals with complex meniscus tears can be asymptomatic because degenerative tears typically occur slowly over time with minimal swelling or inflammation. Dr. Hall determined that the mechanism of injury depicted in the video footage was sufficient to cause Claimant’s injury. Extension and flexion are not necessary movements to cause a meniscus tear. Instead, simply planting one’s foot and then turning to the side can cause a meniscus tear. Dr. Hall commented that, although Claimant’s left knee is not visible in the video, his upper body was shifting. He thus reasoned that Claimant engaged in a torquing maneuver of his left knee while exiting the kiosk with the Red Bull Cooler on June 18, 2019. Dr. Hall concluded that it is greater than 51% probable that the event in the video caused Claimant’s left knee to become symptomatic.

20. In contrast, Dr. Burris explained that “an acute knee meniscus injury requires a combination of knee flexion (or extension) and rotation, during weight-bearing, which results in an increase in shear forces between the femoral condyles and the tibia.” He reasoned that the “observed movements on the video surveillance do not support a combination of left knee flexion (or extension) and rotation, occurring during the 6/18/2019 workplace event.” Dr. Burris detailed that the events on the video did not constitute an event of sufficient magnitude to cause, accelerate or contribute to Claimant’s left knee condition. He thus concluded that, because the MRI demonstrated degenerative findings and there was no specific mechanism of injury, Claimant’s left knee condition was not related to the June 18, 2019 incident. Despite Dr. Burris’ determination, the record demonstrates that Claimant suffered a left knee injury during the course and scope of his employment with employer on June 18, 2019. Although Claimant presented several different details about the incident, they were not inconsistent but instead reflect an event that impacted Claimant’s left knee and caused it to become symptomatic. Claimant had not suffered any prior left knee problems and the temporal proximity of the June 18, 2019 incident to Claimant’s development of symptoms suggests a causal relationship between the event and the left knee meniscus tear. Specifically, the medical records, persuasive opinions of Drs. Failinger and Hall and the video footage reflect that Claimant’s mechanism of injury was sufficient to cause a meniscus tear. Accordingly, Claimant’s work activities on June 18, 2019 aggravated, accelerated or combined with his pre-existing left knee condition to produce a need for medical treatment.

21. Claimant has established that it is more probably true than not that he is entitled to reasonable, necessary and causally related medical treatment for his June 18,

2019 left knee injury. Subsequent to his left knee injury Claimant received conservative treatment in the form of physical therapy but his symptoms failed to improve. After an MRI revealed a meniscus tear Dr. Failinger diagnosed Claimant with a left knee medial meniscus tear and medial compartment chondromalacia. Dr. Failinger recommended surgical intervention in the form of a left knee scope, meniscectomy and chondroplasty. Similarly, Dr. Hall concluded that it is greater than 51% probable that the event in the video caused Claimant's left knee to become symptomatic and created the need for medical treatment including the meniscectomy recommended by Dr. Failinger. The persuasive medical opinions thus reveal that the recommended surgery constitutes reasonable, necessary and related medical treatment for Claimant's left knee medial meniscus tear. Accordingly, Claimant's request for medical benefits and the left knee surgery recommended by Dr. Failinger is granted.

22. Claimant contends that he is entitled to receive TTD benefits for the period April 26, 2020 until terminated by statute. However, Respondents assert that Claimant was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits effective April 26, 2020. Initially, Claimant suffered an industrial injury to his left knee on June 18, 2019. On June 19, 2019 NP Halat assigned work restrictions including lifting up to 20 pounds occasionally, pushing/pulling up to 20 pounds occasionally and no squatting. She permitted Claimant to work his entire shift. By August 21, 2019 Claimant returned to Concentra for an examination. Claimant reported he had been working with restrictions but his left knee pain increased by the end of each day. Dr. Bird assigned work restrictions including lifting up to 20 pounds constantly, pushing/pulling up to 20 pounds constantly and no squatting or kneeling. She permitted Claimant to work his entire shift. Employer terminated Claimant's employment on April 26, 2020 because he had numerous attendance violations during his period of employment. The record reveals that Employer applied a progressive disciplinary policy and Claimant received numerous warnings that further violations could result in termination. Claimant's actions reflect that he willfully violated Employer's attendance policy.

23. During 2016-17 Claimant received verbal notifications, written warnings and suspensions for various attendance infractions. Behavior Notices reflected that further violations would result in disciplinary action up to and including termination. By May 6, 2017 Claimant received a five day final suspension to be served from May 29, 2017 to June 2, 2017 for trading his May 4, 2017 shift to another co-worker resulting in overtime without management approval. Employer again documented that "any further matters of the kind would result in termination." Despite numerous warnings, Claimant's disciplinary violations continued into 2018 and 2019. On January 1, 2018 Claimant received a warning regarding attendance issues and was notified of a final 10-day suspension. Claimant subsequently received additional warnings and suspensions. He was again advised that further infractions could result in termination. On August 1, 2019 Claimant was again disciplined for habitual tardiness. The Behavior Notice documented that Claimant received a three-day suspension for the period August 11-13, 2019. The Behavior Notice stated that Claimant's failure to arrive for all shifts and any further infractions could lead to further discipline up to termination. Although Claimant was not terminated until April 26, 2020 the record reveals that Claimant had numerous prior attendance violations that

could result in termination. Through his repeated attendance violations Claimant exercised some control over the circumstances causing his termination. Claimant precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. He was thus responsible for his termination and is therefore precluded from receiving TTD benefits effective April 26, 2020.

24. Claimant suffered a left knee medial meniscus tear while working for Employer on June 18, 2019. He finished his work shift and reported his injury on the following day and completed an Associate Work Related Injury/Illness Report. The record reflects that during the 13 week period preceding his industrial injury between March 19, 2019 and June 19, 2019 Claimant earned \$9,232.77. Dividing \$9,232.77 by 13 yields an Average Weekly Wage (AWW) of \$710.21. An AWW of \$710.21 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold

requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); cf. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) (“right to workers’ compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment”). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left knee injury during the course and scope of his employment with Employer on June 18, 2019. Initially, Claimant testified that on June 18, 2019 he was moving a cooler of Red Bull out of a kiosk to display at the fuel center. As Claimant was wheeling the cooler through the doorway of the kiosk and over the raised threshold it started to tip. In attempting to catch the cooler, Claimant twisted and felt a pop in his left knee. His left knee pain worsened throughout the remainder of his shift. On June 19, 2019 NP Halat at Concentra diagnosed Claimant with a left knee sprain and determined it was more than 51% likely that Claimant suffered “a work related injury due to twisting knee while trying to stop Red Bull display from falling over.” An August 9, 2019 MRI revealed a medial meniscus tear of the left knee.

9. As found, Dr. Failinger described that when Claimant was moving the Red Bull cooler out the kiosk “there was a partial brief give way episode where [Claimant] torqued the left side of his body.” Although Claimant did not fall “he appear[ed] to have sustained some twisting mechanism of his body.” Dr. Failinger explained that Claimant’s persistent symptoms were not uncommon and “[t]here was no significant arthritis noted on the MRI or other significant pre-existing other pathology, which would explain [Claimant’s] symptoms.” He noted that with a pre-existing meniscus tear and no symptoms, further acceleration can occur with a load and a twist as exhibited by Claimant in the video footage. Dr. Failinger thus reasoned that the June 18, 2019 incident accelerated Claimant’s pre-existing disease and caused him to become symptomatic. Similarly, Dr. Hall acknowledged that Claimant had pre-existing asymptomatic changes in his left knee prior to his work injury. He specified that Individuals with complex meniscus tears can be asymptomatic because degenerative tears typically occur slowly over time with minimal swelling or inflammation. Dr. Hall determined that the mechanism of injury depicted in the video footage was sufficient to cause Claimant’s injury. Extension and flexion are not necessary movements to cause a meniscus tear. Instead, simply planting one’s foot and then turning to the side can cause a meniscus tear. Dr. Hall commented that, although Claimant’s left knee is not visible in the video, his upper body was shifting. He thus reasoned that Claimant engaged in a torqueing maneuver of his left knee while exiting the kiosk with the Red Bull Cooler on June 18, 2019. Dr. Hall concluded that it is greater than 51% probable that the event in the video caused Claimant’s left knee to become symptomatic.

10. As found, in contrast, Dr. Burriss explained that “an acute knee meniscus injury requires a combination of knee flexion (or extension) and rotation, during weight-bearing, which results in an increase in shear forces between the femoral condyles and the tibia.” He reasoned that the “observed movements on the video surveillance do not support a combination of left knee flexion (or extension) and rotation, occurring during the 6/18/2019 workplace event.” Dr. Burriss detailed that the events on the video did not constitute an event of sufficient magnitude to cause, accelerate or contribute to Claimant’s left knee condition. He thus concluded that, because the MRI demonstrated degenerative findings and there was no specific mechanism of injury, Claimant’s left knee condition was not related to the June 18, 2019 incident. Despite Dr. Burriss’ determination, the record demonstrates that Claimant suffered a left knee injury during the course and scope of his employment with employer on June 18, 2019. Although Claimant presented several

different details about the incident, they were not inconsistent but instead reflect an event that impacted Claimant's left knee and caused it to become symptomatic. Claimant had not suffered any prior left knee problems and the temporal proximity of the June 18, 2019 incident to Claimant's development of symptoms suggests a causal relationship between the event and the left knee meniscus tear. Specifically, the medical records, persuasive opinions of Drs. Failinger and Hall and the video footage reflect that Claimant's mechanism of injury was sufficient to cause a meniscus tear. Accordingly, Claimant's work activities on June 18, 2019 aggravated, accelerated or combined with his pre-existing left knee condition to produce a need for medical treatment.

Medical Benefits

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier*, W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

12. As found, Claimant has established by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical treatment for his June 18, 2019 left knee injury. Subsequent to his left knee injury Claimant received conservative treatment in the form of physical therapy but his symptoms failed to improve. After an MRI revealed a meniscus tear Dr. Failinger diagnosed Claimant with a left knee medial meniscus tear and medial compartment chondromalacia. Dr. Failinger recommended surgical intervention in the form of a left knee scope, meniscectomy and chondroplasty. Similarly, Dr. Hall concluded that it is greater than 51% probable that the event in the video caused Claimant's left knee to become symptomatic and created the need for medical treatment including the meniscectomy recommended by Dr. Failinger. The persuasive medical opinions thus reveal that the recommended surgery constitutes reasonable, necessary and related medical treatment for Claimant's left knee medial meniscus tear. Accordingly, Claimant's request for medical benefits and the left knee surgery recommended by Dr. Failinger is granted.

Temporary Total Disability Benefits/Termination For Cause

13. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637

(Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

14. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act “volitionally” or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus “responsible” if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

15. As found, Claimant contends that he is entitled to receive TTD benefits for the period April 26, 2020 until terminated by statute. However, Respondents assert that Claimant was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits effective April 26, 2020. Initially, Claimant suffered an industrial injury to his left knee on June 18, 2019. On June 19, 2019 NP Halat assigned work restrictions including lifting up to 20 pounds occasionally, pushing/pulling up to 20 pounds occasionally and no squatting. She permitted Claimant to work his entire shift. By August 21, 2019 Claimant returned to Concentra for an examination. Claimant reported he had been working with restrictions

but his left knee pain increased by the end of each day. Dr. Bird assigned work restrictions including lifting up to 20 pounds constantly, pushing/pulling up to 20 pounds constantly and no squatting or kneeling. She permitted Claimant to work his entire shift. Employer terminated Claimant's employment on April 26, 2020 because he had numerous attendance violations during his period of employment. The record reveals that Employer applied a progressive disciplinary policy and Claimant received numerous warnings that further violations could result in termination. Claimant's actions reflect that he willfully violated Employer's attendance policy.

16. As found, during 2016-17 Claimant received verbal notifications, written warnings and suspensions for various attendance infractions. Behavior Notices reflected that further violations would result in disciplinary action up to and including termination. By May 6, 2017 Claimant received a five day final suspension to be served from May 29, 2017 to June 2, 2017 for trading his May 4, 2017 shift to another co-worker resulting in overtime without management approval. Employer again documented that "any further matters of the kind would result in termination." Despite numerous warnings, Claimant's disciplinary violations continued into 2018 and 2019. On January 1, 2018 Claimant received a warning regarding attendance issues and was notified of a final 10-day suspension. Claimant subsequently received additional warnings and suspensions. He was again advised that further infractions could result in termination. On August 1, 2019 Claimant was again disciplined for habitual tardiness. The Behavior Notice documented that Claimant received a three-day suspension for the period August 11-13, 2019. The Behavior Notice stated that Claimant's failure to arrive for all shifts and any further infractions could lead to further discipline up to termination. Although Claimant was not terminated until April 26, 2020 the record reveals that Claimant had numerous prior attendance violations that could result in termination. Through his repeated attendance violations Claimant exercised some control over the circumstances causing his termination. Claimant precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. He was thus responsible for his termination and is therefore precluded from receiving TTD benefits effective April 26, 2020.

Average Weekly Wage

17. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO*, 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.*, 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the

particular circumstances of the case. *In Re Broomfield*, W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

18. As found, Claimant suffered a left knee medial meniscus tear while working for Employer on June 18, 2019. He finished his work shift and reported his injury on the following day and completed an Associate Work Related Injury/Illness Report. The record reflects that during the 13 week period preceding his industrial injury between March 19, 2019 and June 19, 2019 Claimant earned \$9,232.77. Dividing \$9,232.77 by 13 yields an Average Weekly Wage (AWW) of \$710.21. An AWW of \$710.21 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. On June 18, 2019 Claimant suffered a compensable left knee injury during the course and scope of his employment with Employer.
2. Claimant shall receive reasonable, necessary and causally related medical benefits for his industrial injury including the surgery recommended by Dr. Failingner.
3. Claimant's request for TTD benefits for the period April 26, 2020 until terminated by statute is denied and dismissed. Claimant was responsible for his termination and is thus precluded from receiving TTD benefits effective April 26, 2020.
4. Claimant earned an AWW of \$710.21.
5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his right knee (and more specifically a computerized tomography (CT) scan of the right knee), is reasonable medical treatment necessary to cure or relieve the claimant from the effects of an admitted February 28, 2017 work injury.

PROCEDURAL HISTORY

Prior to hearing, the respondents filed a motion for summary judgment on the basis that the parties had entered into a Partial Settlement Agreement in this matter. The ALJ denied the motion as there were issues of material fact in dispute.

FINDINGS OF FACT

1. The claimant was injured at work on February 28, 2017. The injury occurred while the claimant was working as a security guard at a hospital. Specifically, the claimant approached two individuals at a vehicle, when the individuals backed the vehicle the claimant was stuck and knocked to the ground.

2. Following the February 28, 2017 injury, the claimant was initially seen in the emergency department at Community Hospital. On that date, Dr. Michael Kueber diagnosed the claimant with an acute L4 compression fracture, and a left talus fracture. Of note, Dr. Kueber specifically noted that the claimant's left lower extremity was atraumatic.

3. Throughout the claimant's post-injury medical records he has been diagnosed with a left foot crush injury, and low back pain with radiculopathy. The claimant has undergone significant medical treatment including left ankle surgery, and diagnosis of left lower extremity complex regional pain syndrome (CRPS). The claimant has been seen by a number of medical providers during this claim. Those providers include Dr. Dale Utt, Dr. Ellen Price, Dr. Kirk Clifford, and Dr. Christopher Copeland.

4. At the request of the respondents, Dr. B. Andrew Castro performed a review of the claimant's medical records. In his September 19, 2018 report, Dr. Castro noted that the claimant suffered injuries to his left ankle and low back on February 28, 2017, followed by the development of CRPS. Dr. Castro also noted that the claimant had a history of low back symptoms. Dr. Castro opined that the February 28, 2017 injury exacerbated the claimant's pre-existing back symptoms. Dr. Castro also noted that due to the advancing CRPS, the claimant might not be a good surgical candidate (as it related to a recommended lumbar surgery).

5. On March 7, 2019, the claimant was seen by Dr. Price. At that time, Dr. Price determined that the claimant had reached maximum medical improvement (MMI). She assessed permanent impairment for the claimant's lumbar spine of 22 percent whole person. In addition, Dr. Price assessed a 30 percent left lower extremity impairment (which converts to 12 percent whole person). Dr Price calculated a total whole person impairment of 31 percent.

6. Respondents timely requested a Division-sponsored IME (DIME) on April 18, 2019. The following regions/body parts were requested to be reviewed by the DIME physician: lumbar spine, left foot, left ankle, and left lower extremity CRPS. At no time after this request did the claimant request additional body parts to be considered by the Division IME.

7. On June 28, 2019, the claimant presented for a DIME with Dr. Yusuke Wakeshima. In connection with the DIME, Dr. Wakeshima reviewed the claimant's medical records, obtained a history for the claimant, and performed a physical examination. In his DIME report, Dr. Wakeshima documented that the claimant's chief complaint on the date of the exam was low back pain and left lower extremity pain to the ankle and the foot. Significantly, Dr. Wakeshima performed a physical examination of the right knee and found "right leg, ankle and foot exam demonstrates no pain and tenderness". In addition, the right knee exam "demonstrates full active range of motion with no pain and tenderness bilaterally." Dr. Wakeshima opined that the claimant had the following work-related diagnoses: left ankle and foot pain, low back pain, and CRPS. Dr. Wakeshima assessed a permanent impairment rating of 48 percent whole person; (30 percent for CRPS and 24 percent for lumbar spine impairment). Dr. Wakeshima did not find a right knee condition to be work-related, nor did he assess an impairment for any right knee condition.

8. On August 8, 2019, the claimant was seen by Dr. Price and reported right knee pain. In that same medical record, Dr. Price referenced a hematoma on the claimant's right knee at the time of the February 28, 2017 work injury. Dr. Price opined that the claimant needed evaluation of his right knee, because he was "gaiting heavily on the right side". At that time, she ordered x-rays of the claimant's right knee.

9. On September 4, 2019, the claimant reported to physical therapist, Matthew MacAskill, the claimant reported pain in his right knee when going up and down stairs.

10. Based upon Dr. Wakeshima's DIME report, on September 5, 2019, the respondents filed a Final Admission of Liability (FAL) admitting for the MMI date of March 7, 2019 and a whole person impairment rating of 47 percent.

11. The claimant timely objected to the FAL, and on September 12, 2017 filed an Application for Hearing (AFH) endorsing the issues of permanent total disability (PTD) benefits and disfigurement. A hearing was scheduled on those issues.

12. Thereafter, the parties entered into a Partial Settlement Agreement, leaving maintenance care open. The settlement agreement specifically provides that on February 28, 2017, the claimant suffered injuries "including, but not limited to his low back, left ankle, right foot, and CRPS condition." The settlement agreement also provides that

“[o]ther disabilities, impairments and conditions that may be the result of these injuries or diseases but that are not listed here are, nevertheless, intended by all parties to be included and resolved FOREVER by this settlement.” (*emphasis in the original*).

13. The signed settlement agreement also includes the following language:

Claimant realizes that there may be unknown injuries, conditions, diseases, or disabilities as a consequence of these alleged injuries or occupational diseases, including the possibility of a worsening of the conditions. In return for the money paid or other consideration provided in this settlement, Claimant rejects, waives, and FOREVER gives up the right to make any kind of claim for workers’ compensation benefits against Respondents for any such unknown injuries, conditions, diseases, or disabilities resulting from the injuries or occupational diseases, whether or not admitted, that are the subject of this settlement. (*emphasis in the original*).

14. The agreement also includes the following specific language “this is a final settlement of all benefits except for medical benefits” and once approved the agreement “FOREVER closes all issues relating to this matter except medical benefits and issues related to medical benefits.” (*emphasis in the original*). The parties further clarified the medical benefits to be covered with the language: “[r]espondents will continue to pay [c]laimant’s future reasonable, necessary, and related medical expenses”.

15. As a result of the settlement, the hearing set on the September 12, 2019 AFH was vacated. On December 19, 2019, the Partial Settlement Agreement was approved by the Division of Workers’ Compensation.

16. On December 19, 2019, the claimant was seen by Dr. Copeland. At that time, the claimant reported right knee symptoms that included pain, giving way, swelling, weakness and decreased range of motion. In the medical record of that date, Dr. Copeland noted that the claimant had right knee symptoms “following a specific injury.” While in Dr. Copeland’s practice on December 19, 2019, the claimant underwent an x-ray of his right knee. The x-ray showed moderate degenerative joint disease (DJD) in the claimant’s right knee. Noting the x-rays, Dr. Copeland recommended and administered a right knee steroid injection on that same date.

17. On February 11, 2020, the claimant returned to Dr. Copeland. On that date, Dr. Copeland noted continued right knee symptoms. In addition, he noted that the prior right knee injection provided between five and six weeks of relief.

18. On March 26, 2020, the claimant was seen by Dr. Copeland who noted the claimant’s continued right knee symptoms. Dr. Copeland recommended a computerized tomography (CT) scan of the claimant’s right knee. On March 30, 2020, Dr. Copeland submitted a request to the respondents for authorization for the recommended right knee CT scan. The respondents denied authorization on the basis that compensability for a right knee condition had not been established as part of the claim.

19. Dr. Copeland testified by deposition. Dr. Copeland testified that he first treated the claimant shortly after the work injury. At that time, the focus was on the

claimant's ankles. Dr. Copeland also testified that he examined the claimant's right knee in December 2019 and had concerns with regard to internal derangement of that knee. As a result, Dr. Copeland recommended the claimant undergo a CT scan of his right knee. Dr. Copeland stated his opinion that the condition of the claimant's right knee is secondary to the work injury, combined with overuse of the right knee. Dr. Copeland further testified that due to the claimant's other injuries his biomechanics have changed, which has impacted the condition of the claimant's right knee.

20. At the request of the respondents, Dr. Timothy O'Brien reviewed the claimant's medical records and issued a report on August 3, 2020. In his report, Dr. O'Brien opined that the February 28, 2017 incident at work did not aggravate or accelerate the preexisting osteoarthritis in the claimant's right knee. Dr. O'Brien also noted that individuals recovering from surgery in one lower extremity limb do not develop overuse of the contralateral limb. In support of this opinion, Dr. O'Brien explained that those recovering from surgery "are simply not active enough to result in overuse of the contralateral extremity".

21. Dr. O'Brien's testimony by deposition was consistent with his written report. In his testimony, Dr. O'Brien reiterated his opinion that the claimant did not experience an aggravation of his right knee condition when he fell on February 28, 2017. Dr. O'Brien testified that as early as 2015, the claimant had substantial arthritic changes in his right knee. Dr. O'Brien also noted that in 2015 the claimant's treating providers discussed the need for a possible total right knee replacement. Dr. O'Brien also testified that the claimant's right knee was not injured at the time of the February 28, 2017 fall. In support of that statement, Dr. O'Brien noted that the emergency room records list the claimant's right lower extremity as atraumatic. Finally, Dr. O'Brien testified that there is no scientific evidence that injury of one extremity would result in an injury to the contralateral extremity through overuse.

22. On May 8, 2020, the claimant filed an AFH on the issue of medical benefits, specifically the recommended CT scan of the claimant's right knee.

23. In a medical record dated May 15, 2020, Dr. Price noted that the claimant's primary complaint was pain in his right knee. Dr. Price specifically noted the claimant had "increased pain in right knee over the last three years because he has been avoiding putting weight on his left leg". Dr. Price opined that the claimant's right knee symptoms were "the direct consequence of an altered gait secondary to his [left lower extremity] pain."

24. Based upon the medical records entered into evidence, the claimant underwent right knee treatment prior to the February 28, 2017 injury. On July 28, 2015, the claimant sought treatment for his right knee at Community Hospital and was seen by Terry Villarreal Golba, PA. At that time, the claimant reported right knee pain, swelling, stiffness, decreased range of motion, locking, and difficulty ambulating. The claimant also reported that he had experienced chronic knee pain for years, but his pain had increased over the prior two months. PA Golba referred the claimant to Western Orthopedics and Sports Medicine for consultation.

25. Based upon the evidence and testimony presented at hearing, the ALJ concludes that pursuant to the Partial Settlement Agreement, the ALJ lacks jurisdiction to award medical benefits for the claimant's right knee. As an initial matter, the ALJ finds that pursuant to the Partial Settlement Agreement, the claimant's claim remains open with regard to medical treatment that is reasonable, necessary and causally related to the February 28, 2017 work injury. The claimant's right knee was not a body part included with the initial injury and related workers' compensation claim. Any complaints of right knee symptoms were reported after the DIME performed by Dr. Wakeshima. The ALJ finds that the claimant's right knee symptoms fall within "unknown injuries, conditions, diseases, or disabilities as a consequence of these alleged injuries" in the Partial Settlement Agreement.

26. Based upon the above, the ALJ concludes that the claimant's right knee was not a body part contemplated to be covered by the medical benefits exemption of the parties' Partial Settlement Agreement. As a result, treatment of the claimant's right knee was forever excluded from this claim by application of Partial Settlement Agreement.

27. Furthermore, although the claimant timely requested a hearing following the DIME report of Dr. Wakeshima, the only issues endorsed at that time were PTD benefits and disfigurement. The claimant did not contest Dr. Wakeshima's opinions regarding causation, diagnoses, or MMI. All of these issues were addressed and resolved pursuant to the language of the Partial Settlement Agreement. Based upon all of the foregoing, the ALJ concludes that pursuant to the Partial Settlement Agreement, the claimant is precluded from asserting a compensable right knee injury and/or aggravation of a pre-existing right knee condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. A settlement agreement must be interpreted in accordance with the general principles applied to the construction of contracts. *Bopp v. Garden Square Assisted Living* (WC 4-893-767 ICAO February 6, 2014); citing *Cary v. Chevron U.S.A., Inc.*, 867 P.2d 117 (Colo. App. 1993); and *Resolution Trust Corp. v. Avon Center Holdings*, 832 P.2d 1073 (Colo. App. 1992). In *Bopp*, the ALJ determined that the parties' settlement agreement was clear and unambiguous and did not leave the claim open for adjudication of additional issues. In addition, filing requirements are jurisdictional and statutory provisions governing such requirements must be strictly enforced. *Schneider National Carriers, Inc. v. Indus. Claim Appeals Office*, 969 P.2d 817 (Colo. App. 1998).

6. The ALJ finds the parties' Partial Settlement Agreement to be clear and unambiguous. The parties' intent was to settle all issues, with an exception for reasonable, necessary, and related medical expenses. At that time, the claimant's right knee symptoms were unknown to the parties. The ALJ concludes that the claimant waived any treatment of his right knee when he entered into the Partial Settlement Agreement. The ALJ also concludes that the very language of the Partial Settlement Agreement forecloses litigation of additional body parts and conditions. Therefore, the ALJ lacks jurisdiction to award medical benefits for the claimant's right knee. As found, pursuant to the Partial Settlement Agreement, the claimant is precluded from asserting a compensable right knee injury and/or aggravation of a pre-existing right knee condition.

ORDER

It is therefore ordered that the claimant's claim for treatment of his right knee is denied and dismissed.

Dated this 15th day of October 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUE

1. Whether Respondents established, by a preponderance of the evidence, that Claimant's February 3, 2020 industrial injury resulted from Claimant's willful failure to obey a reasonable rule adopted by Employer for the safety of the employee.

ADMISSIBILITY OF EXHIBIT C

Claimant's objected to the admissibility of Exhibit C on the basis of non-disclosure. Exhibit C is a drawing created by Respondents' expert accident reconstruction expert as part of his notes. Because Exhibit C was not disclosed prior to deposition, Claimant was unable to examine Respondents' expert with respect to this page. Based on the non-disclosure, the ALJ has excluded Exhibit C, and it is not admitted into evidence.

FINDINGS OF FACT

1. Claimant is a 36-year-old forklift operator who has been employed by Employer since February 26, 2018. Claimant was initially hired in another position and was promoted to forklift operator in approximately September 2019. Claimant sustained an admitted injury on February 3, 2020, arising out of and in the course of his employment with Employer.
2. The parties stipulated that Claimant's average weekly wage (AWW) is \$1,854.65, resulting in a maximum benefit rate of \$1,022.56.
3. On February 3, 2020, Claimant was working the night-shift at Employer's warehouse operating a forklift.
4. Claimant's job involved retrieving pallets of various food items from elevated, multi-level racks using a forklift. The elevated product racks consist of four levels, including a ground level, and three elevated shelves approximately 5-7 feet in height. Each elevated shelf is loaded with various pallets of food product that are stored four-deep. Some shelves contain a sliding "pushback" pallet rack mechanism that permits pallets to slide forward on a slightly-sloped rail system to the access point when the preceding pallet in the queue is unloaded. Example photographs of the product racks and the sliding mechanism are contained in Exhibit D. The sliding mechanism is a gravity-fed device which causes pallets to slide forward on the rack to the access point when the preceding pallet is removed.
5. On February 3, 2020, Claimant was operating a forklift attempting to retrieve a pallet of packaged onions from the first elevated shelf on a product rack. He could not access the pallet he was attempting to retrieve because the pallet was set back four to five feet from the front of the shelf, and the push-back mechanism had not slid the pallet forward to allow it to be accessible. Claimant exited his forklift and walked under the

elevated shelf to determine the reason the sliding mechanism had not moved the pallet into the proper position. Claimant testified he was not directly under the pallet but was to the side of the pallet he was inspecting. Claimant did not notify a supervisor or seek assistance with the inaccessible pallet. Instead, Claimant found a 3-4-foot-long piece of wood on the floor, picked it up and used the piece of wood to touch the immobile pallet. When Claimant touched the pallet, the pallet moved forward, and a bag of onions fell from above, striking Claimant in the back of the neck, causing his injury.

6. Employer's safety manager, Edward R[Redacted], testified regarding Employer's safety rules and training for forklift operators. Mr. R[Redacted] did not personally train Claimant or witness the incident on February 3, 2020. Mr. R[Redacted] testified that Employer's forklift operators are trained to contact a supervisor if, during the performance of their job, they encounter a problematic pallet. Mr. R[Redacted] defined a "problematic pallet" as one tipping, stuck, inaccessible or in danger of falling. Mr. R[Redacted] testified that a safety cage may be used in such circumstances to address the problematic pallet, and that this decision would be made by a supervisor. Mr. R[Redacted] testified that Claimant violated the safety rule because he did not notify a supervisor and attempted to remedy a problematic pallet on his own.

7. Prior to becoming a forklift driver, Claimant underwent training with Employer on the safe operation of a forklift. Included within the training materials is a Class II – Forklift Certification Packet, acknowledge by Claimant on September 18, 2019. (Ex. G). In the Pedestrian Safety Training Final Examination successfully completed by Claimant accurately answered that "all safety hazards need to be immediately reported to ... Supervisor/Manager." (Ex. G).

8. Claimant testified that a "stuck" pallet constituted a safety hazard. Claimant also testified that his training required him to notify a member of management in the event a pallet became stuck. Claimant testified that he did not contact a supervisor prior to investigating the inaccessible pallet, and that he made the decision to use the piece of wood to touch the pallet.

9. Claimant testified that he did not believe he was in violation of any safety rule. Claimant testified that he had not previously moved a problem pallet into place without calling a supervisor. Claimant also testified that he would feel it necessary to contact a supervisor if he felt the pallet was up too high to access, or product was falling off of it. Claimant also testified that if it had taken more than one push to dislodge the pallet, he would have called a supervisor.

10. Claimant testified he did not call a supervisor in this instance because he did not have the time to do so. Claimant also testified that he did not believe he violated a safety rule because he needed to be able to "check on things that were happening." Claimant did not believe that the pallet was "stuck" because it moved after he touched it. The ALJ infers from this testimony that Claimant believed he was not obligated to call a supervisor until he had made a determination that the pallet in question was stuck, and that Claimant was using the wooden stick to determine if there was an issue. Claimant testified that he made the decision to address the pallet at issue using the piece of wood he found.

11. Employer conducted a “Safety Committee” review of this incident on or about February 13, 2020 and determined Claimant “acted in a willful manner leading to an injury due to bypassing safety protocols.” The two “protocols” the Safety Committee determined were violated were “What to do if a pallet has fallen or tipped over or is in danger of same (stop and seek a supervisor immediately)” and “Proper use of pallet cage and safety restraints. Get extra help when fixing a pallet. NEVER use a pallet to lift another associate.” (Ex. L). Claimant appealed the Safety Committee decision and participated in an appeal meeting on April 10, 2020.

12. At hearing, Claimant testified that he “lightly” touched the subject pallet with a piece of wood. Claimant’s testimony is inconsistent with other evidence in the case. As part of his appeal, Claimant indicated that he “was going to push [the pallet] with the board, but the pallet released.” (Ex. J). Nurse case management notes indicate that Claimant reported “he tried to unjam [the pallet] with a piece of wood.” (Ex. M). The First Report of Injury, completed by Claimant’s supervisor, indicates Claimant reported that he “pushed the pallet forward with a piece of wood.” (Ex. 4). In the recorded statement Claimant provided to Insurer, Claimant indicated that he “pushed [the pallet] a little” and “Those pallets are easily stuck. So I, I had to push it in order for them to roll....” (Ex. A). The ALJ finds it more likely than not that Claimant applied pressure to the subject pallet, causing it to move.

13. Respondents offered the pre-hearing deposition testimony of Garrick F. Miller, P.E. Mr. Miller is a mechanical engineer with experience and education in accident reconstruction. Mr. Miller conducted an “accident reconstruction” analysis and offered opinions on whether Claimant violated Employer’s safety rules and whether Claimant caused the bag of onions to fall. Mr. Miller’s report indicates the mechanism that caused the bag of onions to fall is not known. Mr. Miller’s report speculates as to the potential causes, and concludes that “irrespective of the exact cause, the bags of onions would not have fallen onto [Claimant] but for his attempt to manually free the stuck pallet from below.” Mr. Miller’s report contains no engineering analysis for this conclusion. While not constituting an “expert” opinion, Mr. Miller’s lay opinion is merely the assertion of a commonsense proposition. The ALJ does not find Mr. Miller’s testimony on causation to be of assistance in understanding the evidence or determining a fact in issue.

14. Mr. Miller’s report and testimony also includes his opinion on whether Claimant’s conduct constituted a violation of Employer’s safety rules. Nothing in Mr. Miller’s curriculum vitae, testimony or report establishes that Mr. Miller is qualified by knowledge, skill, experience, training, or education to offer an expert opinion on the legal issue of whether Claimant violated Employer’s safety rules. Accordingly, the ALJ affords no weight to Mr. Miller’s testimony on this issue.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to

injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SAFETY RULE VIOLATION

Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in an employee's compensation "[w]here injury results from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995). Therefore, in order to prove a safety rule violation, Respondents must prove 1) there was a known safety rule, 2) Claimant "willfully" violated the enforced safety rule, and 3) Claimant's injury was proximately caused by a willful violation of a safety rule. See, *Bennett Properties Co. v. Indus. Comm'n*, 437 P.2d 548 (Colo. 1969), *Johnson v. Denver Tramway Corp.*, 171 P.2d 410 (Colo. 1946); *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO, Aug. 25, 2000). To establish the existence of a safety rule, respondents must either show that there was a written or oral rule that is given by someone generally in authority and heard and understood by the employee. *Bennett*, 437 P.2d at 552; *Jentzen v. Northwest Transport*, W.C. No. 4-009-435 *1 (ICAO, Apr. 24, 1992) (employee must know of the device or the rule).

To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with “deliberate intent.” *In re Alvarado*, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). “The claimant’s conduct is “willful” if he intentionally does the forbidden act, and it is not necessary for the respondents to prove that the claimant had the rule ‘in mind’ and determined to break it.” *In re Burd*, W.C. No. 5-085-572-01 (ICAO July 9, 2019).

Respondents need not establish that an employee had the safety rule in mind and decided to break it. *In re Alvarado*, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* However, willfulness will not be established if the conduct is the result of thoughtlessness or negligence. *In re Bauer*, W.C. No. 4-495-198 (ICAO, Oct. 20, 2003). “Willfulness” also does not encompass “the negligent deviation from safe conduct dictated by common sense.” *In re Gutierrez*, W.C. No. 4-561-352 (ICAO, Apr. 29, 2004). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori’s Family Dining, Inc.*, 907 P.2d at 719.

Generally, an employee’s violation of a rule to facilitate the accomplishment of the employer’s business does not constitute willful misconduct. *Grose v. Rivera Electric*, W.C. No. 4-418-465 (ICAO, Aug. 25, 2000). However, an employee’s violation of a rule to make the job easier and speed operations is not a “plausible purpose.” *Id.*; see 2 *Larson’s Workers’ Compensation Law*, § 35.04.

Respondents have met their burden of establishing that Claimant’s injuries were the result of his knowing violation of a safety rule. The safety rule requiring a forklift operator to contact a supervisor when a pallet is stuck or inaccessible was a known rule. Both Claimant and Mr. R[Redacted] testified that one of the safety rules applicable to Claimant’s position was that Claimant contact a supervisor if he were to encounter a pallet that was stuck, inaccessible, or otherwise problematic.

Claimant’s conduct was willful. Claimant encountered a pallet that was apparently stuck. Rather than contact a supervisor, Claimant attempted to remedy the issue by walking below (or to the side below) the pallet and using a piece of wood he found on the floor to attempt to dislodge the pallet. Claimant’s testimony established that he deliberately used the piece of wood to inspect or attempt to move the pallet. If a pallet is in a precarious position, the rule exists to permit a supervisor to decide how to address the situation. Rather than consult a supervisor, Claimant made the decision to attempt to dislodge the pallet. This was done knowingly and intentionally (i.e., Claimant deliberately touched the pallet with a piece of wood while standing within the confines of the storage racks).

The ALJ finds it more likely than not that Claimant’s action caused his injury. Claimant initiated a sequence of events that caused the stuck pallet to move. Claimant testified that the bag of onions fell immediately when the pallet began to move. It is more likely that the Claimant’s actions caused the movement of the pallet, which dislodged the bag of onions, than for the sequence of events to have been merely coincidental.

Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule on February 3, 2020, and his non-medical benefits should thus be reduced by fifty percent.

ORDER

It is therefore ordered that:

1. Claimant committed a willful failure to obey a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. Accordingly, his non-medical benefits shall be reduced by fifty percent.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: October 15, 2020.

Denver, Colorado, 80203

ISSUES

- Did Respondents prove Claimant's post-MMI medical benefits should be terminated as no longer reasonably necessary or related to the admitted industrial accident?

FINDINGS OF FACT

1. Claimant worked for Employer as a Medical Assistant. On November 27, 2015, she was working with a young patient at the Colorado Springs clinic when Robert Dear attacked the clinic and perpetrated a mass shooting. Fearing for their lives, Claimant and the client barricaded themselves in the room and hoped Dear would not find them. For the next several hours, Claimant could hear Dear rampaging through the facility, terrorizing and killing other occupants of the building and engaging in a protracted standoff with police. At one point, bullets penetrated the room in which Claimant and the patient were hiding. The situation ended when SWAT teams crashed armored vehicles into the lobby of the building and Dear surrendered. Claimant and the patient were the last to be rescued because no one knew they were there.

2. The experience was extremely frightening and highly traumatic for Claimant. Although Claimant suffered no physical injuries, she developed post-traumatic stress disorder (PTSD).

3. Claimant has received psychiatric treatment since the injury, including psychotherapy and medications. Eventually, Dr. Timothy Sandell was designated the primary ATP, although treatment has been managed by providers at Aspen Pointe.

4. Claimant has a remote history of situational depression for which she received brief treatment. She briefly sought mental health treatment while she was 19 years old and attending college in Montana. Claimant went through a period of depression related to stressful family issues and the death of her best friend. She was prescribed Prozac, 20 mg on March 3, 2009. The last treatment note from that time period was dated May 5, 2009, and states "regarding depression, she is doing much better. Almost finished moving back to home for the summer and then transferring, feels confident. Stopped Ambien and sleeping well without it." Claimant stopped taking Prozac by June or July 2009.

5. In December 2012, Claimant sought counseling because she was going through a period of high stress. She wanted a referral to a therapist because she was "really stressed and would appreciate someone to talk to." Her physician, Dr. Kurt Lesh, stated her problem was "high stress at work and at home, obviously situational."

6. There is no persuasive evidence of any other mental health issues before the traumatic event on November 27, 2015.

7. Dr. Robert Kleinman performed multiple IMEs for Respondents during this claim. In his initial report dated February 15, 2018, Dr. Kleinman opined Claimant developed PTSD solely because of the workplace trauma. He thought she was approaching MMI and would have permanent impairment when she reached MMI. He recommended no more than 12 additional psychotherapy sessions over the ensuing six months, at which point she should be at MMI. Once at MMI, she should receive no more than 12 sessions over six months, although periodic psychotherapy sessions may be needed to manage her PTSD through civil and criminal trials involving Dear. Dr. Kleinman opined medications should continue for one year after MMI, and then be tapered off or continued outside the claim.

8. On August 11, 2018, Dr. Kleinman opined Claimant had reached MMI. He recommended one final psychotherapy session, and if desired, she could transition treatment outside the claim. Concurrently, Dr. Kleinman recommended continuing medication for 3 to 6 months. After that, if claimant wished to continue medication, she should transition outside the workers' compensation system.

9. Claimant followed up with Dr. Sandell on December 18, 2018. He noted he had not seen her since August 28, 2017 because "she has appropriately been primarily under the care of a psychiatrist and a psychotherapist." Claimant reported she was still in therapy and did not feel she had returned to her preinjury "baseline." Dr. Sandell agreed Claimant was at MMI, although he utilized the date of the appointment because he had not seen her in over a year. He agreed she had impairment but would need a referral to a Level II psychiatrist because he does not perform psychiatric ratings. Regarding treatment after MMI, Dr. Sandell agreed with some of Dr. Kleinman's recommendations. He agreed psychotherapy could be stopped but recommended four to six more visits to facilitate a "smooth transition." Regarding medications, he opined,

I think these should be continued long-term and possibly chronically. She was not on any type of antidepressant prior to this industrial injury and therefore, ongoing need will relate to the injury. I do not feel that this type of medication can simply be switched and determined at one point that it is no longer related to the injury, as that was the original cause of her anxiety/depression. Therefore, I would recommend ongoing medication as covered by workers' compensation.

10. He also thought Claimant was at risk for periodic recurrence of symptoms and decompensation because of triggers such as a pending court proceeding regarding Dear. Accordingly, he believed maintenance care should include provision for re-engagement with treatment to deal with periodic exacerbations.

11. On April 17, 2019, Dr. Kleinman completed a psychiatric impairment rating. He assigned a 19% whole person rating based on Claimant's continuing PTSD. Regarding maintenance treatment, Dr. Kleinman recommended she complete a limited

course of psychotherapy to smoothly transition from treatment, although she could treatment outside the claim, if she chose to do so. He recommended continuing medications for one year and reassessing at that time whether they are still necessary in relation to the work accident.

12. Claimant saw Dr. Sandell on May 7, 2019. He noted Claimant was “doing fair. She still deals with some of the psychological sequelae as relates to the work injury/episode.” He indicated he would continue to see her for maintenance care and asked her to follow-up in a year.

13. Respondents filed a Final Admission of Liability (FAL) on June 7, 2019 admitting for the rating and reasonably necessary medical treatment after MMI.

14. Dr. Kleinman performed an additional record review on February 18, 2020. He opined Claimant had completed psychotherapy related to the occupational injury and any further therapy should be done “outside of workers’ compensation.” He also recommended Claimant’s medications “be transitioned to a provider outside of workers’ compensation within the next three months. Medications are no longer related to the occupational injury but are related to persistent depression with anxious distress as well as personality issues that have been identified in therapy.”

15. Claimant returned to Dr. Sandell on May 5, 2020. Dr. Sandell noted “she has remained on psychiatric medications including venlafaxine, prazosin, and as-needed use of buspirone. This has been followed by providers at Aspen Pointe and Dr. Day Gould [sic]. She reports the same symptoms in dealing with posttraumatic stress disorder. She still has some triggers.” Dr. Sandell opined, “I support her need for ongoing maintenance care which has included medications and follow-up through Aspen Pointe and Dr. Gould. I never put a time limit on the need for maintenance care as it may be a long-term/chronic need. . . . I have seen her intermittently and have primarily addressed case management issues. I will follow-up with her in 1 year. Her follow-ups here can be discontinued if her treatment is stable and she continues care through her treating providers. If her ongoing psychiatric needs as relates to the work comp injury are being questioned, I will again defer those issues to a specialist in psychiatry.”

16. On May 26, 2020, Dr. Sandell completed a questionnaire from Respondents in which he “deferred” to Dr. Kleinman regarding whether ongoing medications and therapy were causally related to the work injury.

17. Dr. Kleinman testified at hearing consistent with his report. He opined further psychotherapy or medication only treats Claimant’s personal issues, unrelated to the workplace injury. He testified recent Aspen Pointe records demonstrate Claimant has other issues she has been dealing with, and her continued therapy is focused personal issues relating to her family, new relationships, the death of her niece, and a new job.

18. Claimant’s medications were initially prescribed by Dr. Chanel Heerman at Aspen Pointe, and are currently managed by Dayanara Gohil, a psychiatric nurse practitioner. Claimant’s medications are reassessed at approximately three-month

intervals. Although Claimant's PTSD symptoms have improved over time, they continue to impact her functioning. Her moods are generally stable, but she continues to struggle with intrusive thoughts, avoid behavior, and nightmares. The medications are helpful and Claimant would probably decompensate were the medications stopped. The records contain no persuasive evidence of any significant non-PTSD-related mental health issues that would warrant regular medications.

19. Claimant attends psychotherapy sessions at Aspen Pointe approximately every 7-14 days. Her current therapist is Sam Martin, MSW, LCSW. The most recent treatment note submitted into evidence is dated January 9, 2020. Records from November 2019 to January 9, 2020 show PTSD-related issues were a focus of treatment during at least 75% of the sessions. On July 25, 2020, Mr. Martin wrote a letter confirming Claimant was actively addressing issues of PTSD in therapy. He opined PTSD "impacts the whole individual, socially, emotionally, relationships with others, view of themselves, and their place in the world. During [Claimant's] time in clinical services, the whole person is being addressed as the symptoms of Post-Traumatic Stress Syndrome impact the entire individual." He persuasively opined Claimant would benefit from continued therapy.

20. Respondents failed to prove a basis to withdraw their admission for medical benefits after MMI. Respondents failed to prove psychiatric medications and psychotherapy are no longer reasonably needed or causally related to Claimant's admitted injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the industrial injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond maximum medical improvement (MMI) if the claimant requires periodic maintenance care to prevent further deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An injury need not be the sole cause of a claimant's need for treatment so long as there is a "direct causal relationship" to the industrial accident. *Seifreid v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1996); *Munoz v. JBS Swift & Co. USA, LLC*, W.C. No. 4-780-871-03 (October 7, 2014).

Even where the respondents admit liability for medical benefits after MMI, they retain the right to challenge the compensability and reasonable necessity of specific treatment. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003). Ordinarily, the claimant must prove by a preponderance of the evidence that an injury directly and proximately caused the condition for which he seeks benefits, and that the requested treatment is reasonably necessary. *Walmart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). But § 8-43-201(1) was amended in 2009 to place the burden of proof on the party seeking to modify an issue determined by an admission or order. If the effect of the respondents' challenge to medical treatment is to terminate all previously admitted maintenance benefits, the respondents must prove no further treatment is

reasonably necessary or related to the injury. *Salisbury v. Prowers County School District RE2*, W.C. No. 7-702-144 (June 5, 2013); *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (October 1, 2013). The fact a claimant received a rating for a particular diagnosis or body part does not bind the ALJ when considering relatedness of medical treatment after MMI. *Yeutter v. CBW Automation, Inc.*, W.C. No. 4-895-940-03 (February 26, 2018).

Respondents failed to prove a basis to withdraw their admission and terminate Claimant's entitlement to post-MMI medical treatment. The persuasive evidence shows Claimant still needs treatment for PTSD, and the treatment she has been receiving is reasonably necessary. Dr. Sandell's opinions expressed in his December 18, 2018 and May 5, 2020 reports regarding Claimant's likely "chronic" need for medication and lack of arbitrary "time limits" on treatment are credible and persuasive. It is unclear why Dr. Sandell suddenly punted the causation issue to Dr. Kleinman on May 26, 2020, particularly given that Claimant's circumstances have not changed significantly in the interim. It is also puzzling that he would "support her need for ongoing maintenance care which had included medications" but simultaneously "defer" a causation determination to an IME. The rationale regarding medications he set forth in 2018 is equally valid now. Regardless of whether Claimant had some predisposition to anxiety or depression, she was not receiving psychiatric treatment before the work accident and everyone agrees the traumatic experience at work caused her to develop PTSD. In any event, Dr. Sandell is probably not the best treating provider to ask whether ongoing medications or therapy are reasonably needed or related to the accident because he is not actively managing Claimant's psychological treatment. Records from Claimant's quarterly medication review appointments at Aspen Pointe show she continues to struggle with hypervigilance, avoidance behaviors, intrusive thoughts, and nightmares. The medication helps manage her PTSD-related symptoms and stabilize her moods. The ALJ agrees with Dr. Kleinman the medications are needed to treat "persistent depression with anxious distress," but disagrees those symptoms are unrelated to the work accident and PTSD. Respondents failed to prove Claimant's access to psychotropic medications should be terminated. The preponderance of persuasive evidence shows medications are reasonably needed to relieve the effects of the work injury and prevent deterioration of Claimant's condition.

The arguments that Claimant no longer needs psychotherapy related to the injury and should transition to paying for it herself "outside of workers' compensation" are not persuasive. Dr. Kleinman's assertion that therapy is now primarily focused on routine personal issues is not accurate. PTSD remains a significant aspect of her therapy sessions. Claimant persuasively testified psychotherapy helps manage her PTSD. Although she also works through some personal, non-PTSD related issues in therapy, it is difficult, if not impossible, to cordon off those issues given how broadly PTSD impacts the "whole individual," as noted by Mr. Martin. Psychological sequelae of the November 2015 trauma is the predominant driver of Claimant's current need for therapy. Given the ongoing causal nexus to the injury, there is no justification for forcing Claimant to assume the cost of therapy "outside of workers' compensation." As with the medications, the preponderance of evidence shows ongoing psychotherapy is reasonably needed to relieve the effects of the work injury and prevent decompensation.

ORDER

It is therefore ordered that:

1. Respondents' request to terminate Claimant's post-MMI medical benefits is denied and dismissed. Insurer shall continue to cover medical treatment after MMI from authorized providers reasonably needed to relieve the effects of Claimant's admitted injury and prevent deterioration of her condition.
2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that her claim should be reopened pursuant to Section 8-43-303, C.R.S.?
- The parties stipulated at the commencement of the hearing that if the claimant prevails on the reopening issue, respondents have the opportunity to respond to the whole person impairment rating as they would if the claim were open pursuant to Section 8-42-107(8)(c), C.R.S. and W.C.R.P. 5-5(D)(1), including the ability to request a Division-sponsored Independent Medical Examination ("DIME").

FINDINGS OF FACT

1. Claimant was employed with employer as an assistant grocery manager. Claimant sustained a compensable work injury on July 1, 2018 when she was pushing a bookshelf and felt a pop in her right knee. Claimant sustained a second injury that same day when a co-worker kicked out claimant's right knee causing her knee to buckle.

2. Claimant came under the care of Dr. McLellan for her work injury. Dr. McLellan treated claimant conservatively and provided claimant with work restrictions that included no lifting more than 10 pounds and no walking or standing greater than two hours per day as of July 5, 2017.

3. Claimant underwent a magnetic resonance image ("MRI") of her hip and was diagnosed with a labral tear. Claimant subsequently underwent an arthroscopy of the left hip on October 24, 2017 and was diagnosed with synovitis.

4. Claimant underwent left hip surgery with Dr. Scheffel on October 5, 2017. The postoperative diagnosis was a small labral tear requiring minimal debridement but no repair and iliopsoas tendonitis and synovitis. Following surgery, claimant was referred for physical therapy.

5. Claimant continued to treat with Dr. Scheffel with complaints of left hip pain and low back pain. Dr. Scheffel also noted complaints of numbness in her foot as well as continued groin pain. Dr. Scheffel recommended evaluation of claimant's low back.

6. Claimant was referred to Dr. Tice on April 23, 2018. Dr. Tice noted claimant's complaints of left hip and groin pain with pain that occasionally goes to her knee with numbness in her big toe. Dr. Tice noted claimant was pregnant and in her first trimester. Dr. Tice diagnosed claimant with possible left sacroiliitis and possible left L5 radiculopathy. Dr. Tice opined that claimant's injury was simply related to the hip, but noted that she had features of sciatica and nerve root issues that were mild to

moderate. Dr. Tice recommended an MRI along with conservative treatment as claimant was currently pregnant.

7. Claimant underwent an independent medical examination (“IME”) with Dr. Bernton on June 13, 2018. Dr. Bernton reviewed claimant’s medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Bernton noted that his evaluation demonstrated tenderness with palpation of the left SI joint, tenderness of the left trochanteric bursal region and a positive left piriformis test. Dr. Bernton recommended claimant be evaluated for a rheumatologic perspective since she was not improved post operatively. Dr. Bernton also noted claimant had a history of a similar episode previously in her right hip. Dr. Bernton noted that claimant was pregnant and back pain was quite common, including SI joint pain. Dr. Bernton opined that claimant had pregnancy associated low back pain which he anticipated would worsen as claimant’s pregnancy progressed. Dr. Bernton further opined that pregnancy related back pain will often times resolve after delivery. Dr. Bernton recommended a rheumatology evaluation and a repeat MRI of the hip.

8. Claimant returned to Dr. Scheffel on June 19, 2018. Dr. Scheffel noted claimant reported her groin pain and intraarticular hip joint pain had improved, but was complaining of increased trochanteric iliotibial band pain. Dr. Scheffel recommended claimant continue physical therapy. Dr. Scheffel recommended that claimant continue to explore further workup of the SI joint pain, but did not recommend any further treatment for her hip.

9. Claimant returned to Dr. Tice on June 21, 2018. Dr. Tice recommended a repeat MRI scan. The MRI scan was performed on March 7, 2019 which revealed degenerative disc disease at L5-S1 with a disc bulge resulting in right lateral recess stenosis and mild right neural foraminal stenosis.

10. Claimant returned to Dr. McClellan on March 27, 2019. Dr. McClellan reviewed the MRI and noted that it did not reveal any findings that would correlate to the symptoms claimant was reporting on the left side of her low back. Dr. McClellan opined that the source of claimant’s pain was likely the left hip and noted that the pain had persisted since the time of her initial injury. Dr. McClellan recommended a repeat MRI of the left hip.

11. The repeat MRI of the left hip was performed on March 29, 2019 and showed no evidence of a labral tear and no definite etiology of claimant’s left sided symptoms.

12. Dr. Bernton issued a supplemental report on April 2, 2019 after reviewing the low back MRI. Dr. Bernton opined that the MRI did not demonstrate objective evidence that would correspond to claimant’s reported left sided symptoms.

13. Claimant underwent an IME with Dr. Scott on June 25, 2019. Dr. Scott opined that claimant’s original mechanism of injury was minor and resulted in complaints of left hip pain. Dr. Scott opined that the mechanism of injury did not explain

claimant's continuing symptoms including the left SI joint pain. Dr. Scott opined that there could be a possible inflammatory cause of claimant's synovitis, tendonitis and bursitis that would not be related to claimant's work injury.

14. Claimant returned to Dr. McClellan on September 25, 2019. Dr. McClellan opined claimant was at maximum medical improvement ("MMI") and referred claimant to Dr. Price for an impairment rating.

15. Claimant was examined by Dr. Price on October 23, 2019. Dr. Price opined that claimant was at MMI and provided claimant with an impairment rating of 11% of the lower extremity for loss of range of motion. Dr. Price also provided claimant with an additional 3% impairment under "other musculoskeletal system defect" on page 52 of the AMA Guides Third Edition, Revised, because claimant's rating did not adequately define the severity of her clinical findings. Dr. Price combined the ratings and provided claimant with a permanent impairment rating of 14% of the lower extremity. Dr. Price noted that this converted to a whole person impairment rating of 6%.

16. Respondent filed a final admission of liability ("FAL") on November 19, 2019 admitting for the 14% scheduled impairment rating. Claimant filed an objection to the FAL and an Application for Hearing on December 18, 2019 endorsing the issues of PPD and disfigurement.

17. Claimant's counsel inquired with Dr. Price on January 28, 2020 as to whether claimant's ongoing SI joint dysfunction was ratable under Table 53 II(B) as a whole person impairment rating¹. Dr. Price marked the letter on January 28, 2020 indicating that the impairment was ratable under Table 53 II(B) and noted that she was willing to evaluate claimant to determine the extent of her impairment under Table 53 II(B).

18. Dr. Price made an appointment with claimant that was set for the day after the hearing set on claimant's December 18, 2019 application for hearing. Claimant's request for an extension of time until after the appointment with Dr. Price for the medical appointment was denied by Pre-hearing Administrative Law Judge Sandberg on February 27, 2020.

19. Claimant proceeded to hearing on the issue of PPD benefits on April 7, 2020. Claimant again sought an extension of time for the hearing which was denied by the ALJ. The court converted claimant's scheduled impairment rating to a non-scheduled award of PPD benefits on April 30, 2020 with a subsequent Corrected Order being issued on May 13, 2020.

20. Claimant was examined by Dr. Price on April 8, 2020. Dr. Price provided claimant with an additional 10% whole person impairment consisting of 5% for a specific

¹ The letter to Dr. Price cites to Table 52, however the ALJ finds this to be a typographical error as the appropriate Table referenced in the rating tips and Dr. Price's evaluation is Table 53.

disorder of the lumbar spine pursuant to Table 53 II(B), and 5% for loss of range of motion.

21. Respondent filed a revised FAL on May 8, 2020 awarding claimant PPD benefits based on the 6% whole person award of benefits. Claimant filed an Objection to the FAL on June 3, 2020 along with a Petition to Reopen and an Application for Hearing endorsing the issue of additional benefits based on Dr. Price's new impairment rating.

22. Claimant argues at hearing that this case should be reopened based on a mistake in that Dr. Price's initial impairment rating omitted the evaluation of claimant's lumbar spine. Respondent argues that claimant's case should not be reopened as the attempt to reopen the case would circumvent the DIME process. Respondent argues that *Justiniano v. Industrial Claim Appeals Office*, 2016 COA 83, 410 P.3d 659 (Colo. App. 2016) supports the finding that seeking a Petition to Reopen the claim where the proper avenue to challenge the claim is through a DIME would be improper.

23. The ALJ notes that in the present case, Dr. Price only evaluated claimant for an impairment rating. Dr. Price's finding with regard to the extent of the impairment rating failed to include a rating for her lumbar spine. When asked by claimant about the impairment rating, Dr. Price conceded that her impairment rating should have included a lumbar spine rating and requested a follow up appointment.

24. Under the circumstances of this case, the ALJ finds that claimant has established that it is more likely than not that Dr. Price made a mistake by failing to include an impairment rating for her lumbar spine and grants Claimant's Petition to Reopen the claim. The ALJ finds that the mistake in this case is one that is contemplated by the language of Section 8-43-303, C.R.S. and therefore, finds that the claimant's claim should be reopened based on the opinion of Dr. Price that an impairment rating for the lumbar spine should have been included in her final impairment rating.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. At any time within six years after the date of injury, the ALJ may reopen an award on the ground of a fraud, an overpayment, an error, a mistake, or a change in condition. Section 8-43-303(1), C.R.S. The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4).

4. A mistake in diagnosis has previously been held sufficient to justify reopening. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270, 273 (Colo. App. 2005), citing *Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo. App. 1989). At the time a final award is entered, available medical information may be inadequate, a diagnosis may be incorrect, or a worker may experience an unexpected or unforeseeable change in condition subsequent to the entry of a final award. *Id.* When such circumstances occur, Section 8-43-303 provides recourse to both the injury worker and the employer by giving either party the opportunity to file a petition to reopen the award. *Id.* The reopening provision, therefore, reflects the legislative determination that in "worker's compensation cases the goal of achieving a just result overrides the interest of litigants in achieving a final resolution of their dispute." *Id.*

5. In this case, pursuant to the opinion by Dr. Price, claimant should have been provided an impairment rating for her lumbar spine condition during the October 23, 2019 evaluation. As found, claimant has demonstrated by a preponderance of the evidence that Dr. Price made a mistake by not including an impairment rating for her lumbar spine condition until after the April 8, 2020 examination.

6. As found, claimant has established by a preponderance of the evidence that her claim should be reopened based on a mistake. The parties retain all rights reserved at the commencement of the hearing.

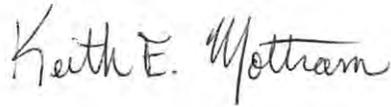

ORDER

It is therefore ordered:

1. Claimant's petition to reopen is hereby GRANTED.

2. All matters not determined here are reserved for future determination.

Dated: October 19, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that she is entitled to medical maintenance benefits as a result of her admitted work injuries?
- II. Has Claimant shown, by a preponderance of the evidence, that her left shoulder scheduled impairment rating should be converted to the whole person?
- III. Has Claimant shown that she is entitled to disfigurement benefits?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury

1. Claimant is a police officer for the Pueblo Police Department. On February 2, 2018, Claimant was involved in a motor vehicle accident, and sustained injury to her left shoulder. Claimant was wearing her seatbelt, and the airbags deployed. That claim was admitted. Claimant began to treat a CCOM in Pueblo, CO.
2. Claimant was still symptomatic from the February 2, 2018 injury when she sustained a second, admitted injury on April 12, 2018. Claimant was restraining a combative suspect. During this event, Claimant heard a loud pop, also in her left shoulder, and reported an immediate onset of severe pain. Claimant reported this injury to Employer, and she was again referred to CCOM for medical treatment.
3. No additional benefits issued on the February 2, 2018 claim after the April 12, 2018 injury. Instead, all benefits were issued under this second claim.
4. Following the second injury, Claimant has continued to work as a police offer, but has now been promoted to detective.

Claimant's Treatment through her ATP

5. On April 20, 2018, Claimant first reported to Dr. Centi at CCOM pain 70% of the time, at a level of 6/10. (Ex. D, p. 33). On physical examination, Dr. Centi noted normal cervical spine range of motion and no pain to palpation of the cervical spine. Dr. Centi diagnosed "[s]train of muscle(s) and tendon(s) of the rotator cuff of left shoulder.." Claimant was to continue home exercises and chiropractic care. *Id* at 30.
6. Claimant has treated with CCOM up through the date of MMI. As noted, Claimant was initially treated by Dr. Thomas Centi, but her care was eventually changed

to Dr. Daniel Olson. While Claimant was still under Dr. Centi's care, on numerous dates, his notes indicate that Claimant had full cervical range of motion ("ROM"), and was pain free. However, on a number of those dates, Claimant reported, via her written pain diagram, that in fact she was experiencing pain and ROM issues, often including areas proximal to the left glenohumeral joint.

7. Claimant was also referred by Dr. Centi to Derek Stickler, DC, for chiropractic treatment of her neck and left shoulder. Claimant treated with Dr. Stickler from April 25, 2018 to February 4, 2019. (Ex. 3). On April 25, 2018, Dr. Stickler performed a physical evaluation. Dr. Stickler noted that he performed a spinal palpation evaluation of Claimant that revealed

Spinal Palpation: Palpation of the patient's spine and extremities revealed the following areas of restrictions; cervical, thoracic and anterior humerus left. Palpitation of the muscles revealed spasm in the following areas; bilateral cervical paraspinals, upper left trapezius left, levator scapula left, rotator cuff muscles (SITS) left and thoracic paraspinals. (Ex. 3, p. 15).

8. During Claimant's treatment with Dr. Stickler her physical presentation and Dr. Stickler's palpation examinations remained fairly consistent. Dr. Stickler also documents Claimant's lumbar dysfunction. At hearing, Claimant testified that that she does have lumbar dysfunction, which she mentioned to Dr. Stickler; however, that this is not a work-related condition. Instead, it has been a longstanding issue.

9. Claimant was also referred by her ATP to massage therapist Joyce Kratzer for therapy on her neck and shoulder area. Claimant treated with Ms. Kratzer from June 12, 2018 to July 18, 2018. On each visit, Ms. Kratzer noted that her "Palpatory Examination" showed objective signs of hypertonicity as well as trigger points of the "supraspinatus, subscapularis, teres, infraspinatus, deltoid, pectoralis major and minor, trapezius and levator scapula." (Ex. 2).

10. The pain diagram produced by Claimant on her first visit to this provider shows Claimant's pain complaints extended up to the side of her neck on the left side. The treatment notes indicate that the massage therapy was beneficial, but temporary. When the massage therapy was completed, Claimant was still reporting symptoms.

Left Shoulder Surgery

11. Claimant was referred by Dr. Olson to Dr. Thomas Noonan for orthopedic evaluation. On 11/18/2018, Dr. Noonan performed a left sided arthroscopic posterior labral repair with suture capsulorrhaphy. (Ex. R. pp. 114-17).

12. At a follow-up, on April 16, 2019, Dr. Noonan saw Claimant, who reported doing well with some mild weakness. Upon left shoulder physical examination, Dr. Noonan found the surgical incision well-healed, excellent motion, stable with posterior translation of the humeral head and good strength. (Ex. CC, p. 172).

13. On May 14, 2019, Dr. Noonan again saw Claimant, who reported doing

quite well. Claimant reported, “[S]he can return to full duty at this time.” Upon left shoulder physical examination, Dr. Noonan found excellent motion, excellent strength and no instability. Dr. Noonan’s only treatment recommendation was to continue home strengthening. Dr. Noonan opined that Claimant was at MMI and may resume full duty work without restriction. Dr. Noonan noted Claimant could follow-up as needed. (Ex. EE, pp. 181-82).

Continued Treatment, Post-Surgery

14. Following Dr. Noonan’s surgery, Claimant continued to treat with Dr. Olson at CCOM. Claimant was examined by Dr. Olson on February 26, 2019. He noted her post-surgical shoulder pain and documented “[s]he also got some discomfort up in to the neck area.” (Ex. AA, p. 154).

15. As Claimant recovered from her surgery, and began to return to her job duties, Claimant’s pain diagrams consistently show pain up into the neck area on the following dates: 2/26/19 (Ex. AA, p. 159), 3/26/19 (Ex. BB, p. 170), 5/5/19 (Ex. DD, p. 179), 5/15/19 (Ex. FF, p. 186), and 6/12/19* (Ex. GG, p. 192). *Claimant was placed at MMI on 6/12/19.

16. Claimant was also referred by her ATP to Nora Harley, C.M.M.T, for more massage therapy. Claimant treated with Ms. Harley from February 2, 2019 to April 8, 2019. (Ex. 4, pp. 86-89). These medical records document Claimant’s pain and functional limitations in her neck. Despite several massage therapy sessions, Claimant remained symptomatic in her neck as of April 8, 2019 when this treatment was discontinued. (Ex. 4, p. 89).

17. Claimant was formally placed at MMI by Dr. Olson via letter on June 24, 2019. (Ex. HH). Dr. Olson makes no mention of symptomology of the cervical spine. Dr. Olson provided a 5% left upper extremity impairment rating, declined to provide Claimant with any permanent restrictions, and opined that future medical care was not warranted. Dr. Olson noted Claimant “can do A.D.Ls” and that there was no reason to believe Claimant was likely to suffer injury, harm, or further medical impairment by engaging in usual activities of daily living or other activities necessary to meet personal, social, and occupational demands. (Id. at p. 198).

18. On November 6, 2019, Respondent filed a FAL consistent with Dr. Olson’s opinions. Claimant objected in a timely manner and requested a Division sponsored Independent Medical Evaluation. Dr. Miguel Castrejon was selected to be the DIME physician.

DIME by Dr. Castrejon

19. Claimant was seen by Dr. Castrejon on March 6, 2020. (Ex. II, pp. 207-218). Dr. Castrejon agreed with the MMI date of 6/12/2019 by Dr. Olson. Dr. Castrejon noted Claimant’s continued complaints of pain and functional limitations in the left shoulder, shoulder girdle, and neck. In his physical exam, Dr. Castrejon noted that

there was a limitation of Claimant's cervical extension at 50 degrees. Dr. Castrejon stated that he does not believe that Claimant sustained a direct injury to her neck. Instead, he notes that "it is my professional opinion that there is sufficient documentation that supports involvement proximal to the glenohumeral joint that supports a whole person level of impairment." (Ex. II, p. 215). Dr. Castrejon recommended maintenance care intended to maintain Claimant's level of functioning. *Id* at 216.

20. On April 21, 2020, Respondents filed a new FAL. Respondents admitted to 8% impairment of the left upper extremity, but not to the converted 5% whole person as opined by Dr. Castrejon. Respondents denied maintenance medical benefits. (Ex. II, p. 200). Claimant timely objected to the FAL. and the matter was set for hearing.

IME by Dr. Ciccone

21. Respondents obtained the IME of Dr. William Ciccone. Dr. Ciccone summarized, "As stated above, the claimant never had complaints of symptoms in the cervical spine in any examination (outside of the chiropractic notes)." (Ex. B, p. 27). It is unclear whether Dr. Ciccone reviewed Claimant's pain diagrams, as well as the chiropractic notes. The pain diagrams document cervical spine pain leading up to being placed at MMI. Dr. Ciccone does not mention that Dr. Olson referred Claimant to massage therapy with Nora Harley due to her ongoing neck pain. Dr. Ciccone does not mention Dr. Olson's discussion of neck pain.

Claimant's Hearing Testimony

22. Claimant testified at hearing. She testified that since she has been placed at MMI, she continues to have pain in her shoulder, her shoulder girdle, and the left side of her neck. Claimant testified that she notices that when she uses her shoulder too much, either at work or around the house, she experiences muscle pain and tightness that extends all of the way to the left side of her neck. She testified that when she experiences this condition, it limits how much she can move her neck from side to side or up and down. Claimant testified that the chiropractic treatment was beneficial, but temporary in nature. As of February 4, 2019, Claimant testified that Respondent was no longer willing to authorize additional sessions.

23. Claimant testified that when her pain flared up her neck could hurt to turn to look at her co-workers while in her cubicle. Claimant testified that occasionally while driving her police vehicle the tightness in her neck could cause problems looking over her shoulder at her blind spot. Claimant did not testify that she literally could not perform her regular work duties.

24. Claimant confirmed that since her return to work, she had apprehended suspects and wrestled with people. When asked if "any of your injuries or anything affect how you can do that job or maybe the aftermath" of apprehending or wrestling with suspects. Claimant testified that it "affects the aftermath"; her shoulder and neck area throb and are sore in the aftermath. Claimant did not testify that she literally could

not apprehend or wrestle with suspects.

25. Claimant further testified that she is aware of some things that will cause her neck to flare up, and she attempts to avoid those activities. She also testified that there are things that will flare her neck symptoms without any advanced warning. The stiffness and range of motion issues in her neck affect her activities of daily living. She listed some specific examples of activities in which she is limited, Driving, both at work and outside the work environment, is compromised by her inability to have full range of motion in her neck. She is limited in her yard work, due to the pain and functional deficit in her neck. She testified that her muscle pain in her neck limited her ability to use a computer for long periods of time. Claimant did not testify that these flare ups prevented her from performing her job duties or that she could not actually perform her job duties.

26. On January 7, 2019, Claimant returned to modified duty. During her testimony, Claimant confirmed that since she returned to work, her condition had not changed. Claimant was asked if her condition had now “plateaued”, that “it is what it is”, to which Claimant answered “yes”.

Disfigurement

27. By agreement of the parties, 3 still, color photographs of Claimant’s left shoulder were admitted, and have been labeled as Claimant’s Exhibits 5a, 5b, 5c. Such photographs depict two well-healed arthroscopic surgical scars surrounding the shoulder, each being approximately 10mm x 2mm, without significant coloration contrast or relief compared to the surrounding skin.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, the ALJ finds Claimant to be sincere and credible in describing her symptoms, both to her medical providers throughout her treatment, and during her hearing testimony.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ finds that while Dr. Ciccone is no doubt sincere in rendering his opinions, he was less than convincing when he effectively sidestepped questioning regarding the observations and findings of the chiropractor, regardless of how he might regard the profession in general.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo 1972).

Medical Maintenance Benefits, Generally

F. To prove entitlement to medical maintenance benefits, the Claimant must present *substantial evidence* to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.*, 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609, 611 (Colo.

App. 1995). Once a claimant establishes the probable need for future medical treatment [s]he “is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity.” *Hanna v. Print Expeditors, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); see *Karathanasis v. Chilis Grill & Bar*, W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). An award for *Grover*-type medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that a claimant is actually receiving medical treatment. *Holly Nursing Care Center v. ICAO*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. ICAO*, 916 P.2d 609 (Colo. App. 1995). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 919 P.2d 701, 704 (Colo. App. 1999).

Medical Maintenance Benefits, as Applied

G. While Claimant's apparently does not suffer from shoulder instability per se, and has been released from her orthopedist, the record shows that she still suffers from ongoing myofascial issues proximal to the glenohumeral joint. For reasons unclear, her consistent complaints, up through the date of MMI, of pain in and around her neck were not diligently noted by her ATP. Nonetheless, the ALJ finds that Claimant made such complaints through her pain diagrams. While Dr. Castrejon's opinions on maintenance medical care are not to entitled to presumptive weight, the ALJ nonetheless finds his rationale persuasive. The ALJ also finds Claimant persuasive, insofar as she is willing to undertake any treatment which will assist with her recovery or prevent further deterioration. Claimant has met her burden, and the ALJ finds that a general award of medical maintenance benefits is appropriate.

Conversion of Shoulder to Whole Person, Generally

H. Whether the Claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8), C.R.S. is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the Claimant's "functional impairment," and the situs of the functional impairment is not necessarily the location of the injury itself. *Langton v. Rocky Mountain Health Care Corp.*, supra; *Strauch v. PSL Swedish HealthcaSystem*, supra. Because the issue is factual in nature, we must uphold the ALJ's determination if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *Walker v. Jim Fuoco Motor Co.*, 942 P.2d 1390 (Colo. App. 1997). This standard of review requires us to defer to the ALJ's resolution of conflicts in the evidence, credibility determinations, and plausible inferences drawn from the record. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

I. Whether the Claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment

need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. See, e.g., *Beck v. Mile Hi Express Inc.*, W.C. No. 4- 238-483 (ICAO February 11, 1997).

Conversion, as Applied

J. Claimant's medical records document throughout her treatment that she has suffered from left shoulder pain that extends all the way to her cervical spine. Dr. Centi referred Claimant for chiropractic care on her neck, due to Claimant's complaints of pain and functional limitations. Dr. Centi also referred Claimant for massage due to cervical spine complaints. Dr. Olson noted these complaints, and Dr. Castrejon found objective evidence of myofascial dysfunction which affected the left side of Claimant's neck. Claimant's testimony is consistent with her medical records. Not only does she have pain in her neck, she has functional limitations in her neck that affect her activities. Once again, while the ALJ does not afford any presumption to the DIME physician's opinion on conversion, the ALJ does find Dr. Castrejon's reasoning persuasive. As such, the *situs of Claimant's functional impairment* extends up past the glenohumeral joint into Claimant's shoulder girdle and up into her neck.

Disfigurement

K. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S. The ALJ Orders that Insurer shall pay Claimant \$500 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore Ordered that:

1. Claimant is entitled to a general award of medical maintenance benefits.
2. Claimant's scheduled left shoulder extremity rating is converted to the whole person.
3. Respondents shall compensate Claimant for her disfigurement in the amount of \$500.
4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: October 19, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he is entitled to Temporary Total Disability (TTD) benefits for the period April 30, 2020 through July 28, 2020.
2. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.
3. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant was hired by Employer on November 13, 2019 as a Warehouse Personnel employee. Claimant was a probationary employee for his first 135 days and could be terminated at Employer's discretion.
2. On January 20, 2020 Claimant suffered admitted industrial injuries to his left foot and left wrist during the course and scope of his employment with Employer. Claimant was specifically riding on an electric pallet jack when he struck a bumper guard, fell off the pallet jack and struck the ground.
3. Claimant obtained medical treatment through Authorized Treating Physician (ATP) Bryan T. Alvarez, M.D. at Thornton COMP. On January 28, 2020 Dr. Alvarez assigned temporary work restrictions including seated duty only, five minutes of stretching every 60 minutes, and no repetitive use or gripping, grasping and squeezing with the left hand.
4. On January 30, 2020 Dr. Alvarez changed Claimant's temporary restrictions to sitting every three hours to ice his left foot, icing his left hand every three hours and prohibiting use of the "Easy Rider" machine. Dr. Alvarez maintained the preceding temporary work restrictions until he released Claimant to full duty employment on February 27, 2020. From January 28, 2020 through February 26, 2020 Claimant continued to earn full wages while working modified duty under restrictions.
5. In a letter dated February 26, 2020 Employer terminated Claimant's employment. The letter specified that new full-time employees were considered probationary employees during their first 135 days working for Employer. During the probationary period employees could be terminated at Employer's sole discretion. The letter noted that Claimant was dismissed for having "failed to demonstrate an acceptable level of performance."

6. Employer's Senior Manager of Warehouse Operations Parker M[Redacted] testified at the hearing in this matter. Mr. M[Redacted] remarked that prior to February 2020 he worked as Employer's Operations Supervisor. He explained that he was responsible for day-to-day operations including hiring and firing recommendations.

7. Mr. M[Redacted] commented that Employer accommodated Claimant's work restrictions with a position that involved repacking/washing beer cans. He explained that the job allowed Claimant to stand or sit as needed and rest his left ankle. Mr. M[Redacted] stated that the position was not created by Employer to accommodate Claimant's modified work restrictions. Instead, the job had always been available and needed to be filled by an employee. Mr. M[Redacted] remarked that there are no limits regarding the length of time Employer will offer modified duty to an injured worker.

8. Mr. M[Redacted] noted that Claimant's disciplinary issues with Employer began on November 17, 2019 or four days after he was hired. Claimant specifically received a Verbal Reprimand for violation of Employer's unexcused absence policy. The notification stated that "[a]ll employees are expected to report to work on time, report to work as scheduled, and to perform a full day's work." The document specified that, because of the "seriousness of this violation, you are receiving a verbal reprimand. Any further violations may result in additional disciplinary action, up to and including dismissal."

9. On December 1, 2019 Claimant received a Written Reprimand for again violating Employer's unexcused absence policy. The document provided that "[a]ll employees are expected to report to work on time, report to work as scheduled, and to perform a full day's work." However, on December 1, 2019 Claimant violated the policy. The document noted that, because of the "seriousness of this violation, you are receiving a written reprimand. Any further violations may result in additional disciplinary action, up to and including dismissal."

10. In addition to formal reprimands, Claimant received coaching from various supervisors between January and February 2020 for safety and attendance concerns. Employer specifically issued warnings to Claimant for violations on January 7, 13, 14 and 15, 2020 as well as February 4, 2020.

11. Mr. M[Redacted] remarked that in early January 2020 he recommended Claimant's termination for his poor work ethic, safety issues and leaving work early on numerous occasions. The termination recommendation occurred within Claimant's 135 day probationary period and prior to his January 20, 2020 industrial injuries.

12. Following Claimant's February 26, 2020 termination from employment, Dr. Alvarez maintained his full duty release from February 27, 2020 through April 29, 2020. On April 30, 2020 Matthew R. Lugliani, M.D. at Thornton COMP assigned temporary work restrictions of 15 minutes of seated work per hour.

13. Claimant's ATP's maintained his temporary work restrictions from April 30 through July 27, 2020. In addressing Claimant's temporary work restrictions, Mr.

M[Redacted] testified that, but for Claimant's termination, Employer would have continued to provide him with modified duty employment.

14. The record reflects that for the period from November 13, 2019 through January 17, 2020 Claimant earned gross wages of \$7,854.79. The preceding period lasted 66 days or 9.4285 weeks. Dividing \$7,854.79 by 9.4285 weeks yields an AWW of \$833.09. An AWW of \$833.09 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

15. Claimant contends that he is entitled to receive TTD benefits for the period April 30, 2020 through July 28, 2020. However, Respondents assert that Claimant was responsible for his February 26, 2020 termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Initially, on January 20, 2020 Claimant suffered admitted industrial injuries to his left foot and left wrist during the course and scope of his employment with Employer. On January 30, 2020 Dr. Alvarez modified Claimant's temporary work restrictions to sitting every three hours to ice his left foot, icing his left hand every three hours and prohibiting use of the "Easy Rider" machine. Dr. Alvarez maintained the preceding temporary work restrictions until he released Claimant to full duty employment on February 27, 2020. From January 28, 2020 through February 26, 2020, Claimant continued to earn full wages from Employer while working modified duty under restrictions. Employer accommodated Claimant's work restrictions with a position that involved repacking/washing beer cans. The job allowed Claimant to stand or sit as needed and rest his left ankle. However, Employer terminated Claimant's employment on February 26, 2020 based on numerous safety and attendance violations during his period of employment. The record reveals that Claimant received several warnings and coaching from various supervisors preceding his termination. Claimant's actions reflect that he willfully violated Employer's attendance policy.

16. Mr. M[Redacted] noted that Claimant's disciplinary issues with Employer began on November 17, 2019 or four days after he was hired. Claimant specifically received a Verbal Reprimand for violation of Employer's unexcused absence policy. On December 1, 2019 Claimant received a Written Reprimand for again violating Employer's unexcused absence policy. Both infractions specified that "[a]ll employees are expected to report to work on time, report to work as scheduled, and to perform a full day's work." The documents noted that, "[a]ny further violations may result in additional disciplinary action, up to and including dismissal." In addition to formal Reprimands, Claimant received coaching from various supervisors between January and February 2020 for safety and attendance concerns. Notably, Employer issued warnings for Claimant's violations on January 7, 13, 14 and 15, 2020 as well as February 4, 2020. Mr. M[Redacted] remarked that in early January 2020 he recommended Claimant's termination because of a poor work ethic, safety issues and leaving work early on numerous occasions. The termination recommendation occurred within Claimant's 135 day probationary period and prior to his January 20, 2020 industrial injuries. A February 26, 2020 termination letter stated that "new full-time employees were considered probationary employees during their first 135 days working for Employer. During the probationary period, employees could be terminated at Employer's sole discretion. The letter provided that Claimant was dismissed for having

“failed to demonstrate an acceptable level of performance.” Through his repeated attendance and safety violations Claimant exercised some control over the circumstances causing his termination. Claimant precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. He was thus responsible for his termination and is precluded from receiving TTD benefits.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

Temporary Total Disability Benefits/Termination For Cause

4. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work,

or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

5. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

6. As found, Claimant contends that he is entitled to receive TTD benefits for the period April 30, 2020 through July 28, 2020. However, Respondents assert that Claimant was responsible for his February 26, 2020 termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Initially, on January 20, 2020 Claimant suffered admitted industrial injuries to his left foot and left wrist during the course and scope of his employment with Employer. On January 30, 2020 Dr. Alvarez modified Claimant's temporary work restrictions to sitting every three hours to ice his left foot, icing his left hand every three hours and prohibiting use of the "Easy Rider" machine. Dr. Alvarez maintained the preceding temporary work restrictions until he released Claimant to full duty employment on February 27, 2020. From January 28, 2020 through February 26, 2020, Claimant continued to earn full wages from Employer while working modified duty under restrictions. Employer accommodated Claimant's work restrictions with a position that involved repacking/washing beer cans. The job allowed Claimant to stand or sit as needed and rest his left ankle. However, Employer terminated Claimant's employment on February 26, 2020 based on numerous safety and attendance violations during his period of employment. The record reveals

that Claimant received several warnings and coaching from various supervisors preceding his termination. Claimant's actions reflect that he willfully violated Employer's attendance policy.

7. As found, Mr. M[Redacted] noted that Claimant's disciplinary issues with Employer began on November 17, 2019 or four days after he was hired. Claimant specifically received a Verbal Reprimand for violation of Employer's unexcused absence policy. On December 1, 2019 Claimant received a Written Reprimand for again violating Employer's unexcused absence policy. Both infractions specified that "[a]ll employees are expected to report to work on time, report to work as scheduled, and to perform a full day's work." The documents noted that, "[a]ny further violations may result in additional disciplinary action, up to and including dismissal." In addition to formal Reprimands, Claimant received coaching from various supervisors between January and February 2020 for safety and attendance concerns. Notably, Employer issued warnings for Claimant's violations on January 7, 13, 14 and 15, 2020 as well as February 4, 2020. Mr. M[Redacted] remarked that in early January 2020 he recommended Claimant's termination because of a poor work ethic, safety issues and leaving work early on numerous occasions. The termination recommendation occurred within Claimant's 135 day probationary period and prior to his January 20, 2020 industrial injuries. A February 26, 2020 termination letter stated that "new full-time employees were considered probationary employees during their first 135 days working for Employer. During the probationary period, employees could be terminated at Employer's sole discretion. The letter provided that Claimant was dismissed for having "failed to demonstrate an acceptable level of performance." Through his repeated attendance and safety violations Claimant exercised some control over the circumstances causing his termination. Claimant precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. He was thus responsible for his termination and is precluded from receiving TTD benefits.

Average Weekly Wage

8. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO*, 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.*, 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield*, W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

9. As found, the record reflects that for the period from November 13, 2019 through January 17, 2020 Claimant earned gross wages of \$7,854.79. The preceding period lasted 66 days or 9.4285 weeks. Dividing \$7,854.79 by 9.4285 weeks yields an AWW of \$833.09. An AWW of \$833.09 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for TTD benefits for the period April 30, 2020 through July 28, 2020 is denied and dismissed. Claimant was responsible for his termination and is thus precluded from receiving TTD benefits.
2. Claimant earned an AWW of \$833.09.
3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: October 20, 2020.

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the spinal cord stimulator, and related surgery (as recommended by Dr. Peter Syre) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 2, 2019 work injury.

FINDINGS OF FACT

1. On June 2, 2019, the claimant was employed at the employer's golf course. On that date, the claimant and a coworker were performing maintenance in sandtrap when the claimant was struck by lightning.

2. The claimant was immediately transported by ambulance to Montrose Memorial Hospital. Dr. Justin Tanner noted that following the lightning strike, the claimant was thrown 10 to 15 feet and lost consciousness. At the hospital, the claimant reported pain in his back and tailbone area. On that same date, x-rays showed that the claimant fractured his tailbone.

3. The claimant's authorized treating provider (ATP) is Dr. John Ribadeneyra. At an office visit on July 31, 2019, Dr. Ribadeneyra noted the claimant had an oval shaped mass in his left buttock that had appeared shortly after the June 2, 2019 injury. Dr. Ribadeneyra recorded the size of the mass as "12-14 cm" and noted that it was causing the claimant pain. Dr. Ribadeneyra referred the claimant to neurology to address the claimant's ongoing back pain and the buttock mass. In addition, Dr. Ribadeneyra recommended the claimant use a walker.

4. The claimant continued to complain of back pain and the mass. On September 11, 2019, Dr. Ribadeneyra referred the claimant to a general surgeon for consultation regarding the mass.

5. On September 30, 2019, the respondents filed a General Admission of Liability (GAL) admitting for the June 2, 2019 injury.

6. On October 11, 2019, the claimant was seen by Dr. George Baumchen. On that date, Dr. Baumchen noted that the claimant had S1 radiculopathy on the left. Dr. Baumchen also referenced a magnetic resonance image (MRI) that showed a L5-S1 disc protrusion with contact with the left S1 nerve root. Dr. Baumchen recommended a left S1 injection. Dr. Baumchen also recommended the claimant see a plastic surgeon with a burn unit to address the buttock mass.

7. On January 9, 2020, the claimant was seen by Dr. Ribadeneyra. At that time, Dr. Ribadeneyra noted that the mass on the claimant's left buttock was seven to eight centimeters in height.

8. On January 14, 2020, the claimant was seen by plastic surgeon Dr. Lily Daniali at Swedish Medical Center. The claimant reported to Dr. Daniali that the buttock mass developed approximately one week after he was injured. The claimant also reported significant and sharp pain that radiates down his thigh and into his back and left hip. Dr. Daniali referred the claimant to neurosurgeon, Dr. Peter Syre for evaluation of nerve injury.

9. On March 4, 2020, Dr. Ribadeneyra noted results from a neurogram that showed a "very ambiguous mass" that was "not amenable to resection".

10. On March 11, 2010, the claimant was seen by Dr. Syre. At that time, Dr. Syre noted that the mass on the claimant's left buttock was "tennis ball size" and mobile on palpation. Dr. Syre noted that an MRI of the claimant's lumbar spine showed degenerative disc disease at the L5-S1 level with mild foraminal narrowing. Dr. Syre recommended an ultrasound and MR neurogram of the mass.

11. On April 2, 2020, Dr. Ribadeneyra made a referral to a pain management specialist.

12. On April 24, 2020, the claimant returned to Dr. Syre. At that time, the claimant reported that he had burning pain that radiated from his left iliac crest into the posterior and mid thigh. The claimant also reported that his pain was so severe that he was unable to use his "entire left side". Dr. Syre noted that an MRI of the claimant's left pelvis showed no abnormality. In addition, the neurogram of the mass showed no abnormality. Dr. Syre recommended that the claimant undergo placement of a spinal cord stimulator (SCS) for pain control.

13. On May 15, 2020, Dr. Syre submitted a request for authorization to the respondents. Specifically, Dr. Syre recommended a T10-T11 laminectomy and placement of an epidural paddle lead, and placement of a subcutaneous pulse generator.

14. At the request of the respondents, Dr. John Douthit reviewed the claimant's medical records and issued a report on May 26, 2020. Dr. Douthit was asked to opine regarding the reasonableness and necessity of the surgery recommended by Dr. Syre. In his report, Dr. Douthit noted that the Colorado Workers' Compensation Medical Treatment Guidelines (MTG) do not allow for the use of an SCS to treat axial back pain. Dr. Douthit opined that the claimant suffers from axial back pain. Therefore, Dr. Douthit opined that the claimant would not benefit from the procedure. Based upon the opinions of Dr. Douthit, the respondents denied authorization for the recommended procedure.

15. The claimant testified that although he was initially provided crutches, he currently uses a walker to ambulate. The claimant also testified that due to pain he is unable to shower alone and he is essentially home bound. The claimant further testified that prior to his injury, he was active, had no injuries, and did not need to use a walker.

16. The ALJ credits the claimant's testimony, the medical records, and the opinions of Dr. Syre over the contrary opinions of Dr. Douthit. The ALJ is persuaded that the SCS would be beneficial to the claimant in addressing his pain management. The ALJ finds that the claimant has demonstrated that it is more likely than not that the

recommended SCS placement and related surgery is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The Colorado Workers’ Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers’ Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: “In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these ‘Medical Treatment Guidelines.’ This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.” WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG “set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate.”

6. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. See *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication); see also *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008).

7. As found, the claimant has demonstrated, by a preponderance of the evidence, that the spinal cord stimulator and related surgery, as recommended by Dr. Syre, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 2, 2019 work injury. As found, the claimant's testimony, the medical records, and the opinions of Dr. Syre are credible and persuasive.

ORDER

It is therefore ordered that the respondents shall pay for the spinal cord stimulator and related surgery, as recommended by Dr. Syre, pursuant to the Colorado Medical Fee Schedule

Dated this 21st day of October 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove he suffered a compensable injury because of a motor vehicle accident on July 2, 2019?
- Did Claimant prove entitlement to a general award of reasonable and necessary medical benefits?
- Is Claimant entitled to TTD benefits?
- What is Claimant's average weekly wage (AWW)?
- Did Respondents prove Claimant was responsible for termination of his employment?

FINDINGS OF FACT

1. Claimant worked for Employer as an HVAC service technician.
2. On July 2, 2019, Claimant was involved in a motor vehicle accident (MVA) while en route to a service call. Claimant was traveling approximately 25 mph when another vehicle backed into him. He tried to avoid the other car, but it struck the rear passenger-side wheel well.
3. The impact damaged the right rear tire of Claimant's van and caused it to become flat. Claimant testified the fender "was pretty much tore off." Claimant testified he felt no pain at the time of the accident, but later developed shoulder and neck pain.
4. Claimant called his supervisors to report the accident immediately after it occurred. Brent C[Redacted], the office manager, went to check on Claimant. When he arrived at the scene, Claimant had the van raised on a jack and was changing the tire. Claimant showed no signs of pain and had no apparent difficulty changing the tire. Mr. C[Redacted] credibly testified the fender suffered no significant damage and the vehicle required no other repairs beyond replacing the tire.
5. Claimant and Mr. C[Redacted] proceeded to the next job, where they spent approximately four hours replacing a residential condensing unit. The condenser was approximately 3 feet by 3 feet and weighed approximately 100 pounds. Claimant removed the old condenser and installed the new condenser, primarily by himself, with no apparent difficulty or outward sign of injury.
6. Claimant worked without limitation for the next three weeks. Employer was short-staffed and "swamped" at the time, so Claimant's shifts typically lasted 14-16 hours.

Claimant completed all assignments without limitation from his shoulder or any other physical condition.

7. Claimant testified he was pulling a compressor from an AC system on July 20, 2019 when he felt a painful “pop” in his arm. Claimant testified, “I felt it pop like . . . it ripped my arm off almost it felt like. . . . [W]hen I did that . . . it really tore everything up.”

8. Claimant sought treatment at the North Suburban Medical Center emergency room on July 21, 2019. The report states, “he was involved in a motor vehicle accident yesterday afternoon, little less than 24 hours ago and has been experiencing pain in his bilateral shoulders since. His right is worse than his left. He reports pain in his anterior shoulder regions with pain that radiates into his proximal upper arm particularly on the right.” The report makes no mention of pulling a compressor the day before. Claimant denied neck pain, back pain, or headaches. Physical examination showed tenderness to palpation over the right anterior shoulder joint, particularly around the long head of the biceps attachment with some mild tenderness of the proximal biceps region. He also had mild tenderness “in the same area on the left side.” His cervical spine was nontender with full range of motion. X-rays showed bilateral shoulder joint arthritis but no effusions, fracture, or other acute findings. The provider opined Claimant’s history and exam was most consistent with rotator cuff tendinitis and arthrosis. She put Claimant in a sling, gave him anti-inflammatories and muscle relaxers, and recommended orthopedic follow-up.

9. Claimant saw Dr. Alexa Shepherd, a chiropractor at Denver Chiropractic, on July 30, 2019. He reported neck pain, low back pain, and headaches “since the accident.” His right arm was in a sling, and he had limited movement of his shoulder. He reported weakness in his right arm and “feels like arm is being pulled off.” Claimant did not mention any issue with his left shoulder, but endorsed numerous other problems he attributed to the MVA including anxiety, flashbacks, nightmares, unusual behavior, irritability, loss of balance, vertigo, difficulty concentrating, and sleep disturbance. He indicated he was impaired in most ADLs including dressing, brushing his teeth, bathing, household chores, and exercise.

10. On August 2, 2019, Claimant saw PA-C Ryan Mansholt, who appears to be affiliated with Denver Chiropractic. Claimant’s primary complaint was right shoulder pain with popping and instability. He also complained of frequent headaches, cervical, thoracic, and lumbar spine pain, and upper extremity paresthesias. Mr. Holt diagnosed cervical facet syndrome, headache, post-concussive syndrome, cervical sprain/strain, thoracic sprain/strain, brachial neuritis/radiculitis, cervical spondylosis without myelopathy, thoracic spondylosis without myelopathy, and a right shoulder sprain/strain. Mr. Mansholt opined, without explanation, all the diagnoses were related to the MVA. He recommended additional chiropractic treatment, physical therapy, and massage therapy.

11. Claimant continued working his regular duties until he was terminated on August 14, 2019. He was terminated for numerous performance issues including repeated instances of tardiness, multiple “no call/no shows,” and violating company policies against having his dog and his girlfriend in the company vehicle. Immediately

before terminating Claimant, Mr. C[Redacted] learned Claimant had received a cash payment from a customer but failed to turn in the invoice or the cash.

12. Claimant underwent a right shoulder MRI arthrogram on August 30, 2019. It showed extensive pathology including a partial-thickness supraspinatus tear, and intra-articular biceps tendon dislocation with severe tendon fraying and split tearing suggesting “recent exacerbation of a chronic process,” a tear in the posterior-Superior glenoid labrum with a low grade subacute subchondral conclusion in the posterior glenoid, and a subchondral contusion with chronic impingement-related pseudocyst in the anterior humeral head.

13. A cervical MRI on August 30, 2019 showed osteophytes, annular tears, stenosis, and facet arthropathy at multiple levels. Dr. Joseph Ugorji was the interpreting radiologist for the lumbar, cervical, and shoulder MRIs.

14. Claimant underwent an IME with Dr. Kathy McCranie at Respondents’ request on May 15, 2020. He reported left-sided chest pain, right shoulder pain, cervical pain, lumbar pain, and depression, all of which he attributed to the July 2, 2019 MVA. Claimant also told Dr. McCranie he injured his right biceps in September 2019¹ while he was cleaning his house and turned his arm “the wrong way.” He said this caused immediate pain accompanied by a “Popeye” deformity of the biceps. Dr. McCranie opined she could not determine a work-related accident occurred on July 2, 2019 due to significant inconsistencies between Claimant’s reported history the medical records. She noted Claimant had only complained of bilateral shoulder pain at the ER on July 21, and specifically denied headaches, neck pain, or back pain. He first reported allegedly injury-related chest pain in November 2019. She opined, “although cervical and lumbar strains can occur with motor vehicle accidents, this does not appear to be the case with [Claimant].”

15. Dr. McCranie testified at hearing consistent with her report. Dr. McCranie opined Claimant may have suffered a right shoulder strain/strain from the MVA, but if so, it resolved without treatment.

16. Dr. McCranie’s opinions are credible and persuasive.

17. Mr. C[Redacted]’s testimony was credible and persuasive.

18. Claimant failed to prove he suffered a compensable injury because of the July 2, 2019 MVA.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App.

¹ This incident probably occurred before September 2019, because the shoulder MR arthrogram on August 30 already showed a dislocated and torn biceps tendon.

2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc.*, W.C. No. 4-989-682-01 (August 17, 2016). Compensable medical treatment includes evaluations or diagnostic

Claimant failed to prove he suffered a compensable injury on July 2, 2019. As an initial matter, it is not readily apparent how the accident described in testimony and medical records would have been sufficient to cause the extensive shoulder pathology shown on the MRI. Furthermore, had Claimant suffered rotator cuff and labral tears and/or dislocated and torn his biceps tendon, he probably would have experienced immediate severe pain and had limited use his arm. By Claimant's own admission, he felt no pain immediately or closely contemporaneous to the accident. He was subsequently able to complete physically demanding tasks including an air-conditioner installation without limitation. Thereafter, Claimant sought no treatment for almost 3 weeks, while continuing to perform his regular work. And according to Claimant, the eventual catalyst for seeking treatment on July 21, 2019 was not the MVA, but was a specific injury he allegedly suffered the day before while moving a heavy condenser.

As Dr. McCranie noted, there are simply too many inconsistencies in the record to give Claimant's testimony significant weight. When Claimant first sought treatment on July 21, he reported only shoulder pain and specifically denied neck pain, back pain, or headaches. He made no mention of an injury while moving a condenser the day before. On July 30, Claimant reported neck pain, back pain, and headaches, and also endorsed numerous other issues such as flashbacks and vertigo not plausibly associated with the minor MVA on July 2, 2019. Similarly, he first complained of chest pain allegedly related to the accident on November 2, 2019, four months after the MVA. Claimant testified the rear fender of his van was "pretty much tore off," but Mr. C[Redacted] credibly explained there was minimal damage and no repairs were required other than replacing the tire. This suggests Claimant was embellishing the severity of the accident to bolster his claim. Claimant denied any prior MVAs, but he was involved in at least two other accidents involving company vehicles. Finally, Claimant has given multiple conflicting accounts of

how he allegedly injured his shoulder. His workers' compensation claim states the injury occurred on July 2. At hearing, he described an incident while moving a compressor on July 20, which he had not previously mentioned to anyone. And Claimant told Dr. McCranie that he injured his arm at home while cleaning, causing immediate pain and a Popeye deformity (a classic sign of a biceps tendon tear).

Although it is undisputed Claimant was involved in an MVA on July 2, 2019, there is insufficient persuasive evidence he required any medical treatment or suffered any disability. Thus, while Claimant proved he had an "accident," he failed to prove he suffered a compensable "injury."

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: October 21, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-136-517-001**

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable right knee injury during the course and scope of her employment with Employer on April 8, 2020.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to reasonable, necessary and causally related medical treatment for her April 8, 2020 right knee injury.

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to Temporary Total Disability (TTD) benefits for the period April 9, 2020 until terminated by statute.

4. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for her termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of \$1,450.00.

FINDINGS OF FACT

1. Employer is a relatively new two-year old wholesale chemical supply company with 35 employees that provides products including absorbents, solvents and enzymes used in multiple industries. Employer is equally owned by its President Sheldon L[Redacted] and his brother. Mr. L[Redacted]'s wife Breanna L[Redacted] is Chief of Staff. Claimant is a 49-year old female who was hired as a Warehouse Manager and worked with Employer through the rapid growth of the company over the prior two years. Claimant's job duties involved overseeing the day-to-day operations of Employer's warehouse. She specifically hired and fired employees as well as operated a forklift to move chemicals around the facility.

2. During 2018 and 2019 Mr. L[Redacted] had phone conversations with Claimant about her job performance. Mr. L[Redacted]'s specific concerns included Claimant's failure to properly use required communication platforms, unwillingness to take responsibility for her actions and quick criticism of others. Around Thanksgiving 2019 Mr. L[Redacted] spoke with Claimant about impeding Employer's operations. In December 2019 Mr. L[Redacted] had a meeting with Claimant regarding issues with her team and improving communication skills. However, Claimant's performance issues persisted and she was demoted in January 2020.

3. In February 2020 Mr. L[Redacted] again spoke to Claimant about her continued performance and communication issues. He explained that he considered terminating Claimant in January or February 2020 because he was beginning to realize that her job performance was not likely to improve.

4. In March 2020 Employer hired Eric B[Redacted] as Director of Operations. He was Claimant's direct supervisor. However, Mr. L[Redacted] explained that Claimant circumvented Mr. B[Redacted]'s authority and generally ignored his role as her superior.

5. On March 26, 2020 Mr. B[Redacted] completed a Supervisor Level Disciplinary and Corrective Action Form. The Form documented that Claimant had received a verbal warning for insubordination and poor communication. The period of the infraction spanned from March 9-26, 2020. The Form also delineated Claimant's job responsibilities, production procedures and communication directives. The Form specifically noted that Mr. B[Redacted] would run warehouse operations as a whole and Claimant would manage day-to-day functions "with direct communication and delegation to the Production and Distribution supervisor." Mr. B[Redacted] would direct his delegation through Claimant "to both teams." The Form provided that "[t]his should be considered a written warning to you that any recurrent or similar conduct may be grounds for further disciplinary action."

6. On March 26, 2020 Claimant also attended a three hour meeting with Mr. L[Redacted] and Mr. B[Redacted] to discuss performance concerns and methods for improvement. In an e-mail to Mr. L[Redacted] and Claimant, Mr. B[Redacted] reviewed the meeting. He enumerated several discussion topics including communication, delegation and warehouse procedures. Mr. B[Redacted] specified that he would run the warehouse and Claimant would manage day-to-day warehouse operations. He summarized that "I feel like we covered a lot of outstanding issues and concerns during this meeting. As we have now put the past behind us we can move forward with building [Employer] into the brand and supplier we know it can be."

7. Despite the corrective action and meeting, Mr. B[Redacted] reported to Mr. L[Redacted] that Claimant's work performance and communication did not improve during late March and early April, 2020. Based on continued performance concerns Mr. L[Redacted] decided to terminate Claimant sometime around April 5-7, 2020. Mr. L[Redacted] could not recall the exact date, but realized that Claimant was not going to improve her work performance, communication or deference to Mr. B[Redacted].

8. On April 7, 2020 Claimant read a message on Employer's Slack Communication System. Human Resources and Benefits Coordinator Rachel B[Redacted] thought she was posting a private message to Mr. B[Redacted] and Mr. L[Redacted] asking about how to compute severance pay. However, the message was inadvertently posted to all employees. Claimant acknowledged that she read the message before leaving for the day. Claimant testified that she did not believe the post was about her because she had never been reprimanded verbally or in writing by Employer.

9. On April 8, 2020 Claimant became confrontational because she believed that Employer should shut down based on the COVID-19 pandemic. However, Mr. L[Redacted] testified that Employer was exempt from State and Federal shut-down

protocols at the time because it was a chemical company. Moreover, warehouse employees wore medical masks and protective clothing. Mr. B[Redacted] sent Claimant home early on April 8, 2020 due to insubordination and inappropriate conduct. However, she refused to leave the warehouse and continued performing her job duties.

10. Claimant testified that while performing her job duties on April 8, 2020 she suffered a right knee injury at about 4:45 p.m. Claimant explained that she was dismounting a forklift when her boot stuck on the foot plate and she fell to the ground. She specified that as she fell, her right knee twisted and made a popping sound. Claimant experienced immediate right knee pain.

11. Claimant did not immediately report her injury, but drove home after the accident. During the evening Claimant noticed right knee swelling and suffered increased pain.

12. Claimant testified that when she awoke on April 9, 2020 her knee was “swollen 2 to 3 times its normal size and it [was] very painful.” Nevertheless, Claimant did not contact Employer to report the injury. Instead, Claimant began to drive to work for her regular 8:30 a.m. shift. On her drive to Employer’s warehouse Claimant stopped at a Maverick convenience store to buy coffee. After purchasing coffee, Claimant returned to her car. She began reading and sending work related emails from the Maverick parking lot. Claimant specifically drafted and sent an email to Employer from the Maverick parking lot at 8:35 a.m. to report her work injury. She noted that the Maverick was located about three to five miles or five to ten minutes from Employer’s warehouse.

13. Claimant specifically sent the following email at 8:35 a.m. on April 9, 2020 to Ms. B[Redacted]:

Hi guys, I just wanted to let you know I will be filing an incident report today for my knee. I hurt it dismounting and then remounting the forklift yesterday and I just want to have it on file in case I need to see the doc for it. Thank you [Claimant.] Rachel, Eric was not in so I have to ask him exactly how to do the report . . . “ Regards, [Claimant] Director of Operations

14. Ms. B[Redacted] testified that she immediately forwarded Claimant’s email to Mr. L[Redacted]. Mr. L[Redacted] remarked that he received the email at about 8:35 a.m. as he was standing in the office waiting for Claimant to arrive at 8:30 a.m. However, Mr. L[Redacted] was unable to read the email because two or three minutes later Claimant arrived at Employer’s office.

15. When Claimant arrived at the warehouse she was invited to a meeting with Mr. L[Redacted], Ms. L[Redacted] and Mr. B[Redacted]. Mr. L[Redacted] had arranged the meeting in preparation for Claimant’s termination. Claimant was immediately apprised of her termination. Claimant testified that she was “shocked” that she was terminated. During the entire 45 minute meeting all four attendees remained standing despite the availability of chairs. Claimant never reported or mentioned the right knee injury or complained of pain.

16. Following the meeting, Mr. L[Redacted] observed Claimant walking to her car in Employer's parking lot, return to the office to use the restroom, walk to the common area to talk to co-workers and finally return to her car. Prior to walking back to her car for the final time Claimant informed Mr. L[Redacted] of her right knee injury at work. Mr. L[Redacted] was surprised because he had not observed anything in Claimant's demeanor to suggest she was injured.

17. On April 10, 2020 Claimant sent an email to Mr. L[Redacted] detailing that she suffered a work injury on April 8, 2020. Claimant explained she was

coming down on one of my last dismounts [off the forklift], my knee twisted and made a popping sound. I had to get up one more time and it was very painful. On 4-9 I woke with it swollen 2-3 times its normal size and it was very painful. I sent an email to HR and my direct report 4-9 early Am because the manager I would report to was not in when the injury occurred. I would like to be seen by a workers comp doctor.

18. On April 10, 2020 Employer completed a First Report of Injury or illness. The First Report specified that on "Wednesday the 8th [Claimant] was getting on and off the forklift as necessary. Coming down on one of my last dismounts, my knee twisted and made a popping sound. I had to get up one more time and it was very painful. On 4-9 I woke with it"

19. On April 13, 2020 Claimant sought medical treatment for her right knee injury at CareNow Urgent Care. Claimant reported that on April 8, 2020 she twisted her right knee while dismounting a forklift at work. After undergoing a right knee x-ray Claimant was diagnosed with right knee pain. David Nuhfer, M.D. recommended Ibuprofen and a hinged knee brace. He also referred Claimant for an MRI.

20. On April 22, 2020 Claimant returned to CareNow Urgent Care for right knee treatment. David Frank, M.D. diagnosed Claimant with a meniscal tear and sprain. He referred Claimant to Michael S. Hewitt, M.D. for an orthopedic evaluation.

21. On May 1, 2020 Claimant visited Dr. Hewitt for an examination. Claimant reported that she injured her right knee when she was stepping off a forklift at work and caught her right foot in a grate. She specifically twisted her knee, felt a pop and fell. After performing a physical examination and reviewing imaging studies Dr. Hewitt discussed treatment options for Claimant's ACL tear, medial meniscus tear and underlying arthritis. Claimant would consider her options of therapy, a brace or surgery.

22. On May 6, 2020 Dr. Hewitt submitted a surgical request for Claimant's right knee condition. He specifically sought to perform a right knee scope and an ACL repair with allograft and meniscectomy.

23. On July 22, 2020 Claimant underwent an independent medical examination with knee surgeon Jon Erickson, M.D. He conducted a causality assessment pursuant to the Colorado Level II Guidelines. After reviewing Claimant's imaging studies and conducting a physical examination Dr. Erickson determined that Claimant suffered from

a chronic ACL rupture and medial meniscus tear. In fact, Dr. Erickson explained that, because of the critical importance of the MRI, he reviewed it on two separate occasions with an MSK expert radiologist. They both concluded that the MRI did not reveal any evidence of an acute injury. Dr. Erickson detailed that Claimant's ACL rupture and medial meniscus tear did not occur on April 8, 2020 and were not preexisting conditions that became symptomatic. Notably, ACL ruptures and medial meniscus tears are severely painful. Dr. Erickson testified that it is highly unlikely that Claimant would have been able to stand for 45 minutes and walk without any difficulties less than 24 hours after her right knee ACL rupture and medial meniscus tear.

24. Dr. Erickson explained that clinical findings documented on Claimant's early medical exams following the April 8, 2020 incident do not support a determination that Claimant's ACL rupture and medial meniscus tear were caused or aggravated by a work event. If Claimant sustained an injury on April 8, 2020 that resulted in an ACL rupture and medial meniscus tear, her right knee would have been full of blood and fluid in the soft tissue. A meniscus tear would also have caused edema. However, none of the findings were present on the MRI. Instead, evidence of swelling on clinical examination was consistent with a pre-existing ACL rupture and/or meniscus tear with minimal symptoms and/or arthritis. Finally, Dr. Erickson concluded that Claimant's mechanism of injury on April 8, 2020 would have at most caused a minor strain or sprain.

25. Between May 6, 2020 and August 4, 2020 Claimant visited her primary care physician Kaiser Permanente for unrelated medical conditions including long standing chronic back and neck pain. Claimant also underwent surgery on May 21, 2020 for a left thyroid nodule. On June 9, 2020 Claimant sought to visit an orthopedic knee surgeon at Kaiser.

26. On August 25, 2020 Claimant underwent right knee surgery with Wayne Gersoff, M.D. at DTC Surgery Center. The procedure specifically involved a "right knee medial meniscus tear, ACL tear, and grade 4 chondral injury of the lateral trochlea and lateral patella."

27. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable right knee injury during the course and scope of her employment with Employer on April 8, 2020. Initially, Claimant explained that on April 8, 2020 she was dismounting a forklift when her boot stuck on the foot plate and she fell to the ground. She specified that as she fell, her right knee twisted and made a popping sound. Claimant experienced immediate pain. Notably, the injury occurred after she had been asked to leave work for the day by Mr. B[Redacted]. Furthermore, Claimant did not immediately report her injury, but her symptoms worsened during the evening. On the following day she was terminated from employment. Notably, Claimant had sent an email mentioning her injury from the parking lot of a Maverick convenience store just prior to the termination meeting. However, during the 45 minute termination meeting Claimant never reported or mentioned the right knee injury or complained of pain. Claimant mentioned the injury to Mr. L[Redacted] while leaving after the termination meeting and then followed-up with an email on the following day. As the preceding chronology reflects, the circumstances surrounding Claimant's right knee injury and reporting of the incident raise concerns about the veracity of her account.

28. More importantly, the medical evidence and persuasive opinion of Dr. Erickson reflect that Claimant did not likely suffer an acute right knee ACL rupture and medial meniscus tear while working for Employer on April 8, 2020. After reviewing Claimant's imaging studies and conducting a physical examination Dr. Erickson determined that Claimant suffered from a chronic ACL rupture and medial meniscus tear. In fact, Dr. Erickson explained that, because of the critical importance of the MRI, he reviewed it on two separate occasions with an MSK expert radiologist. They both concluded that the MRI did not reveal any evidence of an acute injury. Dr. Erickson detailed that Claimant's work activities on April 8, 2020 did not cause or aggravate her ACL rupture and medial meniscus tear. Furthermore, Dr. Erickson persuasively explained that clinical findings documented on Claimant's early medical exams following the April 8, 2020 incident did not support a determination that a work event caused or aggravated her ACL rupture and medial meniscus tear. If Claimant sustained an injury on April 8, 2020 that resulted in an ACL rupture and medial meniscus tear, her right knee would have been full of blood and fluid in the soft tissue. A meniscus tear would also have caused edema. However, none of the findings were present on the MRI. Instead, evidence of swelling on clinical examination was consistent with a pre-existing ACL rupture and/or meniscus tear with minimal symptoms and/or arthritis.

29. Claimant's physicians at CareNow Urgent Care determined that Claimant had an ACL rupture and medial meniscus tear. Moreover, Dr. Hewitt recommended a right knee scope and an ACL repair with allograft and meniscectomy to treat Claimant's right knee condition. However, the record reflects that no physicians other than Dr. Erickson performed a causation analysis to determine whether Claimant's right knee symptoms were related to her work activities on April 8, 2020. The circumstances surrounding the April 8, 2020 incident, in conjunction with Dr. Erickson's persuasive medical opinion and the medical records, reveal that it is unlikely Claimant's work activities on April 8, 2020 aggravated, accelerated or combined with her preexisting condition to produce a need for medical treatment. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to

a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s

reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) (“right to workers’ compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment”). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s claim for Workers’ Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: October 26, 2020.

ISSUES

- Did Respondents prove they should be permitted to withdraw their admission of liability?

FINDINGS OF FACT

1. [Redacted Corporate Entity] is a holding company that owns numerous professional sports franchises and entertainment venues, including the [Redacted subsidiaries]. [Redacted Corporate Entity] does not own the various franchises and venues directly. Rather, it owns numerous subsidiary companies, which in turn own and operate their respective enterprises.

2. The subsidiaries of [Redacted Corporate Entity] are separate legal entities, with their own workers' compensation insurance policies. [Corporate Entity Insurer] insures some of the subsidiaries, including [Redacted Corporate Entity] , while other subsidiaries are insured by other carriers.

3. [Redacted Employer] is one of [Redacted Corporate Entity]'s subsidiaries. [Redacted Employer] is insured by [Redacted Insurer] .

4. On December 28, 2019, Claimant slipped on ice while walking from the Pepsi Center building to the parking lot. He injured his knees in the accident.

5. Claimant was employed by [Redacted Employer] on the date of injury, and remained employed by [Redacted Employer] as of the hearing.

6. On December 30, 2019, Amy F[Redacted] , an employee in [Redacted Corporate Entity] ' business office, inadvertently filed an Employer's First Report of Injury identifying the employer as "[Redacted Corporate Entity] Holdings, LLC" and the insurer as "[Redacted Corporate Entity Insurer] ."

7. [Redacted Corporate Entity Insurer] filed a General Admission of Liability on April 14, 2020. Claimant subsequently underwent knee surgery on June 3, 2020 and missed almost three weeks from work. [Redacted Corporate Entity Insurer] provided medical benefits on the claim, and also paid Claimant TTD benefits from June 3, 2020 through June 21, 2020.

8. Jenna M[Redacted] is the claims representative at [Redacted Corporate Entity Insurer] assigned to Claimant's claim. Initially, the claim was assigned to a different adjuster as a "medical only" claim. When the claim became more involved with surgery and lost time, the file was transferred to Ms. M[Redacted] . After reviewing Claimant's wage records, Ms. M[Redacted] learned that Claimant was an employee of [REDACTED EMPLOYER] , not [Redacted Corporate Entity] .

9. Upon realizing Claimant was not an employee of [Redacted Corporate Entity] , Respondents filed a Petition to Reopen and applied for a hearing seeking to withdraw their admission of liability.

10. [Redacted Corporate Entity Insurer] intends to seek reimbursement from [Redacted Employer] and [Redacted Insurer]] for funds it erroneously expended on this claim. Respondents stipulated on the record they will not seek to recover any overpayment from Claimant if the admission of liability is withdrawn. Respondents did not waive their right to seek reimbursement from any other party who may be liable for Claimant's injuries.

11. The wage records in evidence show Claimant was on [REDACTED EMPLOYER] 's payroll in 2019. Claimant conceded he is and has been employed by [Redacted Employer] rather than [Redacted Corporate Entity] .

12. [Redacted Corporate Entity] proved it should be permitted to withdraw its admission of liability because Claimant was not its employee at the time of his injury.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of his employment. Section 8-40-202(1), C.R.S. By filing an admission of liability, the respondents have "admitted that the claimant has sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If the respondents subsequently seek to withdraw the admission of liability, they must prove by a preponderance of the evidence that the claimant did not suffer a compensable injury. See § 8-43-201(1) ("a party seeking to modify an issue determined by a general or final admission . . . shall bear the burden of proof for any such modification."). As found, [Redacted Corporate Entity] proved Claimant was not its employee at the time of the injury (or at any time). Accordingly, [Redacted Corporate Entity] is not liable for benefits relating to Claimant's injuries.

ORDER

It is therefore ordered that:

1. Respondents' request to withdraw the admission of liability is granted. [Redacted Corporate Entity] and [Redacted Corporate Entity Insurer] shall have no further obligation or liability with respect to this claim.

2. Pursuant to the stipulation on the record, Respondents shall not seek to recoup any benefits paid on this claim from Claimant.

3. Respondents may pursue reimbursement from any party other than Claimant.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Has Claimant shown, by a preponderance of the evidence, that the right shoulder surgery as proposed by Dr. Simpson, is reasonable, necessary, and causally related to her 6/17/2019 work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury

1. On June 27, 2019, Claimant worked for Professional Contract Services as an industrial cleaner at a hospital. Claimant's job duties that day entailed cleaning the locker room in the Pediatrics unit. The locker room had 4 shower stalls. Claimant reports she had to repeatedly scrub the shower walls with a broken wet mop. Claimant testified that the mop head was broken off from the handle. She explained that she had to push the mop handle hard against the mop head, and scrub above her head.
2. Claimant indicated she did not feel pain during this mopping task; instead, her condition worsened about an hour and a half afterwards.

Claimant's Initial Treatment

3. Claimant went to the emergency department at UCHealth on June 28, 2019. (Ex. 4). Claimant reported that she injured her *back* while cleaning a shower with a mop the night before. *Id.*
4. Claimant was initially evaluated at Concentra on July 1, 2019 by Wendy Kleppinger. (Ex. 5, p. 20). Claimant presented with right shoulder and right-side pain. *Id.* Claimant reported that she was at work, cleaning a wall overhead with a wet broken mop. Claimant described that she developed severe pain in her right side and upper back on her way home from work. Claimant was assessed with thoracic pain and right shoulder pain. *Id.* at 22. She was referred to physical therapy.
5. At her physical therapy appointment from the same day, PT Scott Sullivan noted:

Much of the testing was deferred due to high levels of irritability with any movement of the shoulder and pts hesitancy of going onto the

table to test joint mobility and perform therapeutic exercise due to patient's self-reported OCD. *Id* at 24.

Dr. Thurston IME

6. On December 6, 2019, Dr. Lloyd Thurston performed an independent medical evaluation at the Respondents' request. (Ex. C). Dr. Thurston performed a physical examination of Claimant during this IME. Dr. Thurston noted that Claimant's right shoulder showed no redness, warmth or atrophy. No scapular winging, with range of motion being somewhat slow and hesitant, but with consistent effort. He only noted "very slight crepitus" which was "normal for her age" when palpating the shoulder when she went through active range of motion measurements. *Id* at 27.
7. As part of the IME, Claimant completed a pain diagram to show the location of her complaints. *Id* at 29. Claimant showed pain in the right side of her neck, the right parascapular region, and down the right side of her ribs. Notably, Claimant did not depict any pain in her glenohumeral joint.
8. Dr. Thurston concluded that Claimant suffered from a work-related strain of the periscapular region and strain of the right shoulder. *Id* at 28. Dr. Thurston recommended 4 weeks of physical therapy by a provider other than Concentra. *Id*. Dr. Thurston also recommended 4 weeks of massage therapy.
9. Respondents then filed a General Admission of Liability on December 11, 2019. (Ex. 1, A).

Claimant's Treatment Continues

10. On January 2, 2020, Claimant returned to Concentra and was examined by Dr. Peterson. (Ex. 5, p. 28). Claimant requested to transfer her physical therapy to Select Physical Therapy. *Id*. Claimant explained that before her work injury, she received trigger point injections in her neck, shoulders, and traps every three months. *Id*. She further clarified that the pain she experienced after June 27, 2019, injury was very different. *Id*. It was also noted that "Tabatha c/o that the female PT at Concentra made her cry and the male PT ignored her." (Ex. E, p. 38).
11. Claimant was referred for massage therapy and physical therapy. *Id*. at 30. At this same appointment, Claimant indicated to Dr. Peterson that she was also going to see her PCP for her shoulder condition, and he had diagnosed her with a "pulled muscle" and told her it would heal with time. (Ex. 5, p. 28).
12. On February 6, 2020, Claimant return to Concentra and was examined by Tina Voros. (Ex. 5, p. 39). Claimant reported no improvement to her neck and right shoulder pain. Claimant was going to massage therapy by this time. Claimant

alleged that she had not been able to start physical therapy due to the physical therapy clinic refusing to schedule an appointment.

13. On February 14, 2020, Claimant underwent an MRI of her right shoulder. Under *Findings*, the report states:

Mild supraspinatus tendinosis. Supraspinatus and infraspinatus tendon intact. Sub scapularis tendon intact. Biceps tendon normally located. Glenoid labrum grossly intact. Normal marrow signal. "No fractures. Degenerative AC arthropathy. Trace fluid in the subacromial subdeltoid bursa.

Impression: Supraspinatus tendinosis. Degenerative changes right AC joint. (Ex. D, p. 33) (emphasis added).

14. Claimant went to Dr. Peterson on February 20, 2020. According to his reports, Claimant has shown no improvement. According to Claimant, her massage therapist has told her that her upper back and neck are 'swollen'.*{note: no medical records in the file indicate that any provider has described Claimant's upper back or neck as being 'swollen'}. "She [Claimant] did not go to PT and we received a letter from Select PT stating that she refused to schedule appts. She denies this." (Ex. E, p. 37).

Claimant is Referred to Dr. Simpson

15. On February 25, 2020, Claimant was examined by an orthopedic surgeon, Dr. Michael Simpson. (Ex. 6, p. 61). Dr. Simpson reviewed the MRI films and concluded that Claimant had a "pretty significant" arthritic change at the acromioclavicular joint with significant marrow edema both in the acromion and the distal clavicle. He opined that Claimant had some signal change in the region of the superior aspect of the supraspinatus.
16. Dr. Simpson opined that it was unclear whether there was a band of bursal-sided scar tissue over the supraspinatus tendon or whether Claimant has a partial-thickness tear. He recommended a series of selective diagnostic injections for the acromioclavicular and subacromial bursa to determine how much the pain improves with a diagnostic/therapeutic injection. He also recommended a chiropractic evaluation. *Id.*

Chiropractic Treatment / Mixed Results

17. On March 5, 2020, Claimant underwent chiropractic treatment at Concentra with Randy Knoche, DC. Claimant reported having little treatment because of difficulty getting treatment authorized. Claimant reported that massage therapy was mildly helpful. However, once again, she states she has not been able to continue massage therapy because she was having trouble with authorization. Dr. Randy

Knoche opined that Claimant had a somewhat chronic cervicothoracic transition sprain/strain injury including the costovertebral junctions between T4 and T7, resulting in cervical hypertonicity and tension headaches. He also noted:

In attempting to do a facet load test, she complains of pain prior to adequately testing the facet, so facet load test would be inconclusive. Valsalva is negative. Foraminal compression test is also inconclusive due to the inability to adequately challenge range of motion. (Ex. 5, p. 43).

18. One week later, Claimant returned to see DC Knoche on March 12, 2020. This time, however, he notes

The patient states that her right sided neck pain and right scapular pain have *reduced*. Her range of motion is increased. Her ability to do exercises that we have prescribed is improving. She demonstrates a *fairly full range of motion* with her shoulder, with the ability to reach up over her head, reach behind her back, reach forward, and pull back as if rowing. These have all *dramatically improved* over the last week or so. (Ex. 5, p. 45 (emphasis added)).

Claimant reported similar pain issues at the next visit on March 17, 2020. *Id* at 47. On March 19, 2020, it had actually *improved* (from previous). *Id* at 48.

Return to Dr. Simpson

19. Then, on April 6, 2020, Claimant was re-evaluated by Dr. Simpson. (Ex. 6, p. 64). This time, Claimant presented with 10/10 pain. Dr. Simpson's notes now indicate, "She has tried physical therapy, which have remain unchanged her symptoms(sic). She pain has is *unchanged (sic) in the past 12 months*" (Emphasis added).
20. Dr. Simpson performed ultrasound-guided diagnostic/therapeutic injections in Claimant's shoulder. *Id*. Claimant experienced improvement with her range of motion approximately 10 minutes following the injections. Claimant experienced a full passive range of motion and improved forward elevation. However, Claimant continued to report painful popping in her shoulder. *Id* at 67.
21. On April 27, 2020, Claimant returned to Dr. Simpson. (Ex. 6, p. 68). Claimant now reported 8/10 pain. Claimant described the pain as severe, dull, and sharp, and "worse all the time." Claimant reported that the injections did not help. She displayed full passive range of motion, but limited active range of motion. Claimant exhibited tenderness in the AC joint, but *also* in the parascapular paraspinal regions. *Id* at 70.

22. Dr. Simpson noted that Claimant's injections had actually improved her pain (in contrast to what Claimant herself reported) although it lasted only as long as the anesthetic itself. *"I had a frank discussion with her that I cannot be certain whether her symptoms would be improved by surgical intervention."* *Id.* at 70.
23. However, Dr. Simpson opined that Claimant had failed conservative treatment and the diagnostic injection provided some improvement. *Id.* at 69. Dr. Simpson opined that Claimant is a reasonable candidate for arthroscopic evaluation of her shoulder subacromial decompression and distal clavicle excision with debridement. He opined that Claimant meets the Colorado Medical Treatment Guidelines for arthroscopic evaluation of her shoulder given her continued pain and failure to respond to conservative measures including therapy, activity modifications, and injections. *Id.*
24. Dr. Simpson noted that Claimant had a "pretty significant arthritic change in the acromioclavicular joint", but further noted under his *Assessment*, "No diagnosis found." Further, Dr. Simpson's records do not address any analysis of *causation*.
25. Dr. Simpson sent Respondents a request for prior authorization of the recommended surgery on April 28, 2020. (Ex. 6, p. 72).
26. On April 30, 2020, Dr. Peterson noted that Claimant underwent 5 chiropractic sessions that have provided some relief. (Ex. 5, p. 49). Claimant also purportedly underwent 10 physical therapy sessions that have provided some relief. However, Claimant reported that none of the treatment has provided sustained relief.

IME Addendum by Dr. Thurston

27. On May 6, 2020, Dr. Thurston issued an Addendum IME report, responding to Dr. Simpson's surgical request. (Ex. C). Dr. Thurston opined that the recommended surgery should be denied by Respondents. He opined that the surgery is not reasonable, necessary, and related due to a strong psychosocial component. Dr. Thurston opined that the radiologist's interpretation of the MRI report was more accurate than Dr. Simpson's interpretation; however, Dr. Thurston's report indicates that he did not personally view the films.
28. Dr. Thurston noted that the medical treatment guidelines state that "Distal clavicular resection is *not recommended* for patients without AC joint pain. This should only be performed on patients with reproducible pain at the AC joint, which is *relieved with local anesthetic injection.*" (Ex. C, p. 21) (emphasis added).
29. Claimant did not ascribe symptomatic benefit to the injection of local anesthetic. "(t)here was no identified symptomatic benefit from the lidocaine and bupivacaine. This would indicate the AC joint was not a pain generator." *Id.* Dr. Thurston then opined that the requested "Right shoulder arthroscopy,

extensive debridement, arthroscopic distal clavicle excision” is not reasonably necessary to treat Claimant’s right shoulder pain.

30. Dr. Thurston provided an explanation for this position since his November 20, 2019 exam showed soft tissue pain, with no evidence of AC Joint pain; Claimant’s shoulder pain had not improved since stopping work on July 11, 2019, that Claimant’s shoulder pain were now sometimes 10/10 in severity, which is not physiologic and suggests psychological overlay, the right shoulder MRI demonstrated AC arthrosis and supraspinatus tendinosis which are normal for her age, that the AC join has not been appropriately confirmed as a pain generator, and that there is significant psychosocial component to Claimant’s right shoulder pain. *Id* at 22.

Claimant is Referred to Dr. Ricci by Dr. Peterson

31. On May 20, 2020, Dr. Peterson again examined Claimant. (Ex. 5, p. 49). Claimant now reported worsened symptoms following a Toradol Injection. Dr. Peterson noted that Respondents denied the recommended surgery due to lack of a psychological evaluation. Dr. Peterson noted that Claimant’s symptoms persist after a year of unsuccessful recovery and failure of normal treatment modalities. Dr. Peterson referred Claimant to Dr. Anthony Ricci, psychologist, for evaluation of persistent right shoulder pain. *Id* at 52. Nothing in the record indicates that this evaluation ever occurred.

Dr. Hall IME and Testimony

32. Dr. Timothy Hall conducted an independent medical evaluation on July 30, 2020. (Ex. 3.) Dr. Hall concluded that Claimant had impingement syndrome. *Id* at 15. Dr. Hall also opined that Claimant met the requirements under the Medical Treatment Guidelines to undergo shoulder surgery.
33. Dr. Hall explained that the Medical Treatment Guidelines referring to surgeries states “when functional deficits interfere with activities of daily living and/or job duties after three to six months of *active patient participation* in an appropriate shoulder rehabilitation program, surgery may restore the functional anatomy and reduce the potential for repeated impingement.” Dr. Hall further explained that it is not uncommon for soft tissue problems to persist when there is underlying shoulder impingement.
34. Dr. Hall reviewed additional records and drafted an Addendum report on August 18, 2020. (Ex. 3, p. 16). Dr. Hall opined that the additional records continued to indicate that Claimant remained symptomatic, despite further treatment. Dr. Hall opined that the surgery recommended by Dr. Simpson was reasonable, given the circumstances. Dr. Hall noted that Claimant is not a *good* surgical candidate because she has diabetes. However, he concluded that the recommended surgery was still *reasonable*.

35. Dr. Hall also testified at the hearing. Dr. Hall opined that Claimant was a good historian and credible. He testified that the Claimant's pain generator *may* be a partial tear of the supraspinatus tendon and impingement syndrome. Dr. Hall testified that Claimant was positive for impingement syndrome when he performed a physical examination.
36. Dr. Hall explained that impingement syndrome is when the humeral head rubs up against the acromion and impinges the rotator cuff that is between the two structures. Impingement occurs when the bones rub together and cause inflammation of the bursa. Impingement can cause and injury to the supraspinatus tendon. Dr. Hall explained that bursitis is inflammation of the bursa. Dr. Hall further explained that trace fluids present on the MRI could be an indicator of inflammation.
37. Dr. Hall opined that the surgery recommended by Dr. Simpson is reasonably necessary. He explained that Claimant has failed conservative treatment. MRIs are not perfect, and sometimes a surgeon needs to do a scope to figure out what is going on. There is really nothing else, besides arthroscopic surgery, to do to help Claimant at this time. Dr. Hall testified that the surgery recommended by Dr. Simpson is related to the work injury.
38. Dr. Hall disagrees with Dr. Thurston's conclusion that the AC joint has not been confirmed as the pain generator. Dr. Hall opined that Claimant has pain in the AC joint. He explained that Claimant has improvement with a range of motion under local anesthetic in the AC joint. He further explained that Claimant has a type 2 acromion, which predisposes her to a partial thickness tear in the supraspinatus tendon.
39. Dr. Hall opined that the pain scale is subjective, and can't be used as a scale for psychological soundness. Dr. Hall opined that Claimant is disgusted with the situation and anxious about her condition. Dr. Hall further explained that he did not pick up any signs of specific psychological dysfunction during his examination. Dr. Hall opined that Claimant is a good surgical candidate from a psychological perspective.

Claimant Testifies at Hearing

40. Claimant testified at hearing that she wants to have the surgery recommended by Dr. Simpson. She testified that her primary care physician cleared her to have surgery. Claimant testified that besides the work injury, she has not done anything else to injure her right shoulder.
41. Claimant testified that the chiropractic, massage therapy, and physical therapy provided some relief. However, the treatment kept starting and stopping due to authorization issues and the COVID-19 pandemic. Claimant testified that her

symptoms have remained the same since her work injury. Claimant also confirmed that she has not received any psychological treatment in the past year.

42. Claimant testified that she might experience pain of 10/10 probably twice a week. No specific activities precipitate this pain. When asked if it just jumps to 10/10, Claimant stated:

A Yes and no. It depends on what I'm doing. I could be cooking dinner in the kitchen and just moving around the spatula trying to get dinner done it just feels like a stabbing pain *in my back and my neck, my shoulder, and my neck*. Transcript at p. 22) (emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.
2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).
3. Assessing weight, credibility, and sufficiency of the evidence in Workers Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has

been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Taken as whole, both in hearing testimony, and in reporting symptoms to the myriad of medical providers, the ALJ has concerns about Claimant's consistency as a medical historian. As mentioned by Dr. Thurston and ATP Dr. Peterson, Claimant has an apparent psychological overlay which has not been adequately addressed.

4. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ has heard oral testimony from one expert, Dr. Hall, but will also evaluate the reports from Dr. Thurston, and compare them to the written and oral opinions of Dr. Hall. The ALJ finds that both experts have provided sincere, yet contrasting, professionally rendered medical opinions. As such, the ALJ will determine which expert is more *persuasive*, as opposed to *per se credible*.

Medical Benefits, Generally

5. The Claimant is not entitled to medical care that is not *causally related* to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the Claimant has the burden to prove, by a preponderance of the evidence, that the disputed treatment is *causally related* to the injury, and *reasonably necessary* to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).
6. The Claimant has the burden to prove his entitlement to medical benefits by a preponderance of the evidence. §8-43-201, C.R.S. The Respondents are only liable for the medical treatment that is *reasonable and necessary* to cure and relieve the work-related injury. §8-42-101(1)(a), C.R.S.
7. The Medical Treatment Guidelines (Guidelines) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not

sacrosanct and may be deviated from under appropriate circumstances. See, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight.

Causally Related

8. In this matter, Claimant has what is essentially a normal MRI for someone her age. She does not have a torn rotator cuff. There remains the *possibility*, but not *probability*, that she has a *partial* tear. She also has degenerative changes in her shoulder joint, and appears to have a type II acromion. All Claimant alleges as a work 'injury' was working overhead with a poorly adapted mop for some period, with pain manifesting itself later on. Neither of her MRI conditions were *caused* by this soft tissue work injury – nor did Claimant's preexisting shoulder conditions become permanently symptomatic as a result of this mop incident. As such, Respondents have admitted for soft tissue strain only. The ALJ is not persuaded that what is now being proposed by Dr. Simpson - who performed no causation analysis - is *causally related* to the work injury.

Reasonable and Necessary

9. Based upon the evidence, the ALJ further finds that a pain generator has still not been adequately identified. This is emphasized by Claimant's own hearing testimony, which indicated diffuse pain across her back, neck, and shoulder, and which is not precipitated by actions pointing to her shoulder joint. Claimant's pain complaints have varied with her provider. They vary with the time. Her very temporary pain relief from the injections provided by Dr. Simpson does not indicate an AC joint issue. Even Dr. Simpson is hedging his own bets, by having the 'frank discussion' with Claimant. This exploratory surgery might help; it might not. All causality aside, the ALJ is more persuaded by Dr. Thurston's analysis than that of Dr. Hall on the issue of being *reasonable and necessary*.
10. While clearly warranted under the Guidelines, and given Claimant's delicate psyche, there was no follow-through in getting a psychological evaluation. Further, the medical records supplied do not show, according to Dr. Hall's own criteria, that Claimant has been an *active participant* in a shoulder rehabilitation program for three to six months. While a year may have elapsed, the records do not show consistent effort for a three to six-month period within that year. In fact, the records appear to show resistance to that process by Claimant – to the point that her medical providers just want to give her what she wants, even if it's not medically warranted under the Workers Compensation system.

ORDER

It is therefore Ordered that:

1. Claimant's request for shoulder surgery by Dr. Simpson is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: October 26, 2020

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-131-093-001**

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on February 14, 2020, she suffered an injury arising out of and in the course and scope of her employment with the employer.
2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that the respondent is liable for reasonable, necessary, and related medical treatment.
3. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits from February 15, 2020 through and including February 21, 2020.
4. The issue of temporary partial disability (TPD) benefits beginning February 22, 2020, was reserved for future determination.
5. The issue of the claimant's average weekly wage (AWW) was properly endorsed for hearing. Following the hearing, the parties stipulated that if the claim is found compensable, the claimant's AWW is \$500.00.

FINDINGS OF FACT

1. The claimant works for the respondent in the style department.
2. The claimant sustained two prior injuries while employed with the respondent. The first injury occurred on February 20, 2015, and involved the claimant's right knee. The second injury occurred on January 7, 2016 and involved the claimant's neck, both arms, and low back.
3. While undergoing treatment for the February 20, 2015 and January 7, 2016 work injuries, the claimant reported a variety of symptoms to her medical providers. Those symptoms included: right hip pain, gluteal region pain, pain on the right side of her face and jaw, neck pain, upper back pain, mid back pain, low back pain, buttock pain, left leg pain, right leg pain, right knee pain, right arm pain, left wrist pain, and right ankle pain.
4. The claimant's primary care provider (PCP) is Dr. Darrin Green with Cedar Point Health. In a February 19, 2018 medical record, the claimant reported to Dr. Green that she had pain in her right hip, knee and ankle, and felt like they all "go out." The claimant reported pain with sitting, standing, and laying down. The claimant also reported that she had fallen at work three times, three years prior.

5. In a medical record dated April 30, 2018, the claimant reported to Dr. Green that she had pain and swelling in her right ankle, with popping and rolling. The claimant also reported she had experienced these symptoms for three years.

6. The claimant alleged another work injury with the respondent on July 26, 2018. The matter proceeded to hearing before the undersigned ALJ. In an order dated January 14, 2020, the claimant's claim for benefits was denied. The claimant did not appeal the order.

7. On January 27, 2020, the claimant was again seen by Dr. Green. In the medical record of that date, Dr. Green noted the claimant was experiencing "pain right ankle from work comp injury".

8. The claimant testified that she had no prior right ankle problems and also stated she could not remember if she had prior medical treatment for her ankle.

9. On February 14, 2020, the claimant was not scheduled to work. However, it was necessary for her to report to work to break down a signage pallet, and train another employee on signage.

10. The claimant recalls that on February 14, 2020, she stepped into a dark hallway, then noted that she was on the floor and her hands were wet. The inference is that the claimant slipped on a wet floor and fell to the ground. The claimant does not recall how she fell. The claimant does not recall what body parts struck the floor. The claimant's fall was not witnessed. However, her co-workers promptly came to her assistance following the incident. The claimant testified that she immediately had pain in her right ankle, right knee, right side, and head. In a written statement, the claimant's coworker Ashley Vasile noted that the floor "was [definitely] wet".

11. The claimant was transported by ambulance to the emergency department (ED) at Montrose Memorial Hospital. The EMT report lists the claimant's subjective complaints as pain in her right hip, knee, and ankle. The claimant also reported that when she fell she hit her head. The EMT noted that the claimant had pain on palpation in her right hip, right knee, and right ankle.

12. In the ED, the claimant was seen by Dr. Avery Mackenzie who noted that the claimant was reporting pain in her right ankle, right hip, right chest, neck, and head. The claimant denied numbness, dizziness, loss of vision, hearing loss, and chest pain.

13. While in the ED, the claimant underwent computerized tomography (CT) scans of her head and cervical spine; x-rays of her right ankle; and x-rays of her right hip. The imaging showed no acute injuries or fractures. The claimant was provided with a brace for her right ankle and crutches.

14. The claimant's authorized treating provider (ATP) is Dr. Joseph Adragna with Peak Professionals. The claimant was first seen by Dr. Adragna on February 19, 2020. The claimant reported that she "hurt everywhere". More specifically, the claimant had pain in her right ankle, neck, left shoulder, right shoulder, right elbow, and left elbow. The claimant also reported a history of right knee symptoms "because of my 5000 other

falls' ". On exam, Dr. Adragna noted no effusion in the claimant's elbows. In addition there was no effusion or bruising in the claimant's right ankle.

15. On February 26, 2020, the claimant returned to Dr. Adragna. At that time, Dr. Adragna listed the claimant's diagnoses as trochanteric bursitis of the right hip; bilateral cubital tunnel syndrome; right shoulder contusion; left shoulder contusion; and sprain of the tibiofibular ligament of the right ankle. Dr. Adragna recommended a right hip injection, physical therapy, and chiropractic treatment.

16. On February 26, 2020, the claimant was seen by chiropractor, Dr. Douglas Brannam. At that time, the claimant reported neck pain, thoracic pain, pelvic pain, shoulder and elbow pain, and right ankle pain.

17. On March 9, 2020, Dr. Adragna administered a steroid injection to the claimant's right greater trochanter bursa.

18. On March 23, 2020, the claimant was not wearing her ankle brace when seen by Dr. Brannam. At that time, Dr. Brannam encouraged the claimant to see how long she could go without the brace. Subsequently, on April 27, 2020, Dr. Brannam noted that the claimant was not wearing her brace, and was walking and standing equally on both legs. Dr. Brannam's records during this time indicate that the claimant was continuing to improve.

19. On June 18, 2020, the claimant was seen at Peak Professionals by Isaac Klostermann, PA. The claimant reported diffuse pain symptoms, with her right ankle, right knee, and right hip being the worst. Mr. Klostermann noted that the claimant's right knee was not included in the initial medical records. The claimant opined that she was walking differently and that was causing her knee pain.

20. On June 29, 2020, the claimant returned to Mr. Klostermann. On that date, Mr. Klostermann noted the claimant was reporting a "sudden spontaneous worsening after vast improvement". Mr. Klostermann noted that the claimant's ongoing symptoms were "perplexing" and she was now reporting new left sided radicular symptoms.

21. On July 6, 2020, the claimant returned to Dr. Brannam. At that time, the claimant reported that she was " 'doing horrible' " and that the pain in her right ankle, right knee, and right hip was causing her to feel nauseous.

22. The claimant testified that prior to February 14, 2020, she had pain in her neck, right knee, and right hip. The claimant testified that following February 14, 2020, all of these symptoms intensified. The claimant also testified that since February 14, 2020, she has developed pain in her head, right shoulder, and right ankle. The claimant testified that Dr. Adragna has informed her that she will need to continue to wear her ankle brace for a year.

23. At the request of the respondent, Dr. Lawrence Lesnak reviewed the claimant's medical records and issued a written report. In his July 27, 2020 report, Dr. Lesnak noted that he had previously performed an independent medical examination (IME) of the claimant on November 5, 2019 related to the alleged July 2018 work injury .

Dr. Lesnak noted that following the February 14, 2020 incident, the claimant's subjective complaints were the same as those she reported at her IME in November 2019. Dr. Lesnak opined that there is "no medical evidence" that the claimant sustained an injury on February 14, 2020. Dr. Lesnak noted that the claimant has a history of chronic pain dating back to 2004, and a prior diagnosis of fibromyalgia.

24. Dr. Lesnak's testimony was consistent with his written report. Dr. Lesnak testified that he finds no medical evidence that the claimant suffered an injury on February 14, 2020. Dr. Lesnak also testified that the claimant has an extensive prior history for right ankle symptoms, including reports of swelling in 2015, and pain and swelling at the November 2019 IME. With regard to the sudden worsening that the claimant reported in June 2020, Dr. Lesnak testified that such a worsening is "completely non-physiologic".

25. The ALJ credits the medical records and the opinions of Dr. Lesnak. The ALJ does not find the claimant's testimony to be credible or persuasive. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that on February 14, 2020 she suffered an injury arising out of her employment with the respondent. Although the claimant appears to have been found seated on the floor on that date, the ALJ is not persuaded that she sustained an injury necessitating medical treatment. All medical treatment the claimant has undergone since February 14, 2020, is due to the claimant's subjective complaints and not objective findings. The ALJ also finds that the claimant's reported symptoms are identical to those she had prior to February 14, 2020.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias,

prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory*, *supra*.

5. The Act creates a distinction between an “accident” and an “injury.” The term “accident” refers to an “unexpected, unusual, or undesigned occurrence.” Section 8-40-201(1), C.R.S. In contrast, an “injury” contemplates the physical or emotional trauma caused by an “accident.” An “accident” is the cause and an “injury” is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable “injury.” A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on February 14, 2020, she suffered an injury arising out of and in the course and scope of her employment with the respondent. While an incident did occur on that date, the ALJ concludes that the claimant did not suffer an injury necessitating medical treatment. The medical records and the opinions of Dr. Lesnak are found to be credible and persuasive.

ORDER

It is therefore ordered that the claimant’s claim related to an alleged date of injury of February 14, 2020 is denied and dismissed.

Dated this 27th day of October 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of her employment with employer?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary total disability (“TTD”) benefits for the period of May 6, 2020 through June 6, 2020?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary partial disability (“T9D”) benefits for the period of June 7, 2020 through ongoing?
- If claimant has proven a compensable injury, what is claimant’s average weekly wage (“AWW”)?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that she is entitled to a change of physician?
- Have respondents proven by a preponderance of the evidence that claimant’s injury resulted from a deviation of her employment?

FINDINGS OF FACT

1. Claimant was employed by employer as a full time caregiver under the Consumer Directed Attendant Support Services (“CDASS”) program. The CDASS program allows a client to manage their own health care and allows for family members to be hired to participate in providing a client with home health care. Employer is a financial management services company that serves as the financial administrator/fiscal employer agent under the CDASS program. Employer’s roll is to handle the attendant paperwork, run the background checks, and pay the employee’s hired to care for the client. Claimant worked exclusively for one client. For the purposes of privacy the client will not be referred to by name in this Order, but will simply be called “the client”.

2. Claimant’s job duties for employer included cleaning, cooking, bathing, feeding and personal grooming of the client. The client in this case suffers from ALS and is confined to a wheelchair with limited ability to communicate. The client requires care 24 hours a day, 7 days a week. The client continues to have full function of her mind, but her physical capabilities are extremely limited and she needs dependent care in order to be fed, go to the bathroom, bathe, dress, groom and provide daily care for her activities of daily living.

3. The client lives in a mobile home next door to her 90 year old mother, Ms. F[Redacted]. Ms. F[Redacted] is also a caregiver for the client and will provide care for the client when one of the other caregivers does not show up for work.

4. Claimant testified that she showed up for work at her regular shift at approximately 7:50 or 7:55 a.m. on May 6, 2020. Claimant testified that when she arrived at work, she noticed that there was a Kleenex in the trash can in the bathroom, without a plastic in the trash can. Claimant testified that she spoke to the attendant who was finishing up her shift, Ms. B[Redacted], and told her that she needed to put a plastic liner in the trash can. Claimant testified that Ms. B[Redacted] told claimant not to tell her what to do and began swearing at claimant. Claimant testified she went back to the bathroom and told Ms. B[Redacted] to clean the tissue before she left. Claimant testified Ms. B[Redacted] then grabbed claimant by the hair and dragged her into the back yard where Ms. B[Redacted] began beating claimant.

5. Claimant testified she attempted to call Ms. F[Redacted], but Ms. F[Redacted] hung up on her. Claimant testified at some point during the assault, Ms. F[Redacted] came between claimant and Ms. B[Redacted], but Ms. B[Redacted] continued to assault claimant. Claimant testified she screamed for Mr. B[Redacted] to stop, and after screaming five times, Ms. B[Redacted] stopped assaulting claimant and she fled to the front yard.

6. Claimant testified that a neighbor called the police who eventually arrived and called an ambulance for claimant. Claimant testified she was taken by ambulance to the hospital. Claimant testified she was given a citation by the police for disturbing the peace.

7. Ms. B[Redacted] testified at hearing in this matter. Ms. B[Redacted] testified that she is employed by employer as a full time caregiver. Ms. B[Redacted] testified that on May 6, 2020 she arrived at work and noticed there was a napkin on the floor. Ms. B[Redacted] testified she picked up the napkin and threw it into the trash in the bathroom. Ms. B[Redacted] testified that later when claimant arrived at work, claimant came out of the bathroom and began swearing at Ms. B[Redacted] telling her to go clean up the napkin.

8. Ms. B[Redacted] testified she asked claimant if she wanted to go outside, and claimant and Ms. B[Redacted] went outside. Once outside, Ms. B[Redacted] testified Ms. B[Redacted] put her finger in claimant's face. Ms. B[Redacted] testified claimant grabbed her finger and her hair, following which she picked up claimant and threw her to the ground.

9. Ms. B[Redacted] testified to other conflicts she had with claimant involving work, including a conflict involving cleaning a suction pump used for the client. Ms. B[Redacted] testified that she had complained to Ms. F[Redacted] regarding the bullying claimant had been doing to the other caregivers.

10. Ms. B[Redacted] testified that while she and claimant went outside to fight, the client was left alone in the house.

11. Following the fight, claimant was taken by ambulance to North Suburban Emergency Department emergency room ("ER") for evaluation. Claimant was evaluated by Dr. Bassett and was referred for a computed tomography ("CT") scan. The CT scan showed right periorbital swelling, but no intracranial hemorrhage and no fracture of the cervical spine. Claimant was discharged and instructed to follow up with a physician.

12. Claimant testified that after treating in the emergency room she reported the injury to Ms. M[Redacted], the client's sister and the person in charge of the client's care, and requested to be referred to a physician. Claimant testified Ms. M[Redacted] told claimant that they would not refer her to a physician.

13. Ms. M[Redacted] testified at hearing in this matter. Ms. M[Redacted] testified she did not refer claimant to a physician because she did not believe claimant's injury was a compensable workers' compensation claim. Ms. M[Redacted] testified she was offended that claimant and Ms. B[Redacted] had left her sister alone, unable to care for herself, in order to go outside and fight.

14. When she wasn't referred to a physician, claimant sought medical treatment at Advanced Urgent Care. Claimant reported injuries to her right eye, forehead, base of neck, base of head, right cheek, inner lip and bilateral upper extremities. Claimant reported she felt as though her jaw was not lining up and her vision in her right eye was blurry. Claimant also reported chest pain, swelling, joint pain and headaches. The Urgent Care physician noted claimant had upper lip swelling, a scratch on her right upper back, right elbow pain with an abrasion.

15. Claimant returned to North Suburban Medical Center on May 9, 2020 on instruction from the urgent care and was again seen in the ER. Claimant reported to the ER physician that she had persistent pain in her right elbow, chest and right eye since the incident. Claimant underwent x-rays of her right elbow, and ocular ultrasound and a CT scan of the ribs. None of the diagnostic tests showed an acute abnormality. Claimant was provided an eye drop for her eye complaints.

16. Claimant sought treatment with Denver Ophthalmology on May 12, 2020. Claimant presented with complaints of blurring in her right eye associated with irritation, pain, red eyes, swelling in her eyelids and headaches. Claimant was diagnosed with subconjunctival hemorrhage and orbital contusion. Claimant returned to Denver Ophthalmology on May 28, 2020 with complaints of headaches and throbbing behind her right eye. Claimant was diagnosed with an orbital contusion and iridocyclitis. The physician recommended topical steroids and released claimant to return to work without restrictions.

17. Claimant testified that she brought the work release to her employer, but was advised that she would only be used as "back up". Claimant testified she was not given any hours by employer after she presented the release to return to work. Claimant testified she subsequently went to work for Merry Maids as a new employer because she needed to earn money. Claimant testified she began this work in June 2020.

18. Claimant subsequently sought medical treatment with Dr. Chicoine on July 2, 2020. Claimant reported a history of being assaulted by a co-worker and continuing to experience vision change. Claimant reported an injury to her right shoulder, right elbow and right TMJ. Dr. Chicoine instructed claimant to follow up in two weeks. Dr. Chicoine did not provide claimant with any work restrictions.

19. Claimant returned to Dr. Chicoine's office on July 17, 2020 and was examined by Physicians' Assistant ("PA") Krueger. PA Krueger noted claimant reported minimal improvement since her last visit. PA Krueger recommended claimant be evaluated for a consultation regarding her TMJ and follow up with an ophthalmologist. Claimant was instructed to return in three weeks. Claimant was again not given any work restrictions.

20. Claimant testified she continues to experience popping in her jaw and she cannot see clearly out of her right eye. Claimant testified that she continues to need medical care for her injuries. Claimant testified that if she returned to work for employer, she would have trouble transferring the client due to the required lifting and the continued issues with her injury. Claimant's testimony in this regard is found to be credible and persuasive.

21. The ALJ finds that claimant has demonstrated that it is more probable than not that the physical assault in this case arose out of a dispute related to the employment, namely the disagreement over which employee would be cleaning the napkin from the work area. Both claimant and Ms. B[Redacted] testified as to the animosity between them. The testimony was consistent that the animosity had an inherent relationship to their work and did not represent a personal conflict from outside of work. Therefore, the ALJ finds that claimant has demonstrated that it is more probable than not that the injuries sustained in the physical assault represent a compensable work injury.

22. Respondents argue at hearing that claimant's actions in entering into the physical confrontation with Ms. B[Redacted] and abandoning the client represents a deviation from her work duties that take her out of the course and scope of her employment. The ALJ is not persuaded.

23. Respondents argue that claimant's number one job priority was to take care of the client and that by leaving the client alone in her home, claimant placed the client at risk as no one was present to monitor the health status of the client. However, almost all physical assault cases involve employees abandoning their work duties in order to take part in the physical confrontation. It would be the rare case where the employee finds a co-worker to cover their work duties during the time of the confrontation.

24. The ALJ notes that the assault in this case occurred during claimant's work shift, albeit right at the beginning of the shift, and occurred on the employer's premises. The ALJ notes that the claimant and Ms. B[Redacted] took the fight outside the home of the client but the nature of the disagreement generated from the conditions of the employment and a dispute over job duties while both claimant and Ms.

B[Redacted] were inside. The ALJ further notes that while claimant was never provided with additional work for employer after the confrontation, Ms. B[Redacted] remains employed with employer, even though she abandoned the client to engage in the fight in the same manner as claimant.

25. Moreover, the fact that the employee abandons their job duties during the physical confrontation does not make the injuries from the confrontation non-compensable under Colorado case law that addresses the test to determine if injuries from a physical confrontation are compensable. Therefore, the ALJ rejects respondents argument that the claim in this case is not compensable based on a deviation from claimant's employment.

26. Claimant testified at hearing that she works full time, seven day per week. Claimant testified she earns \$15.15 per hour. According to the wage records entered into evidence at hearing, taking into consideration the time period of March 1, 2020 through April 30, 2020, a period of 8 5/7 weeks, claimant earned \$8770.00. This equates to an average weekly wage ("AWW") of \$1006.39.

27. Claimant argues at hearing that the AWW calculation should use the earnings through May 5, 2020, as evidenced by a check issued for the period of May 1, 2020 through May 15, 2020. However, the ALJ finds that based on the nature of claimant's work, it is best to use the entire pay periods for the time prior to her injury. The ALJ notes that the pay stubs for the period of March 1, 2020 through April 30, 2020 would document that claimant was averaging roughly between 8 and 9.5 "units" per day contained in the pay period. For the period of May 1 through May 5, claimant would have averaged 10.2 "units". There was no explanation at hearing to explain why claimant's "units" would be higher for this particular time period that would justify including this time period in the ALJ's calculation of the AWW.

28. Following claimant's injury, she was taken off of work and was not provided with modified duty by employer. The ALJ credits the claimant's testimony at hearing and the medical records entered into evidence and finds that claimant has proven that it is more likely than not that she is entitled to an award of temporary total disability ("TTD") benefits from May 6, 2020 through June 6, 2020 when claimant began working for Merry Maids. Claimant's testimony that she would not have been able to perform her work duties including transferring the client is found to be credible and persuasive regarding the issue of TTD benefits.

29. After claimant began working for Merry Maids on June 6, 2020, claimant was earning reduced wages. The ALJ credits claimant's testimony at hearing and the records from Merry Maids entered into evidence and finds that claimant has proven that it is more likely than not that she is entitled to an award of temporary partial disability beginning June 6, 2020 and continuing until terminated by law.

30. Respondents argued at hearing that the TTD benefits should end with the May 28, 2020 release to return to work without restrictions. The ALJ credits claimant's testimony that she would have needed accommodations to perform her work for employer, including assistance with the transfers. The ALJ further notes that employer

refused to refer claimant to an authorized treating physician in this case and finds that the employer refused to provide claimant with work after being presented with the release to return to work. The ALJ therefore finds that claimant's entitlement to temporary disability benefits continued after May 28, 2020 and includes the period of temporary partial disability.

31. With regard to the issue of authorized treating physician, respondents failed to refer claimant to a physician willing to treat her injuries. Therefore, claimant was forced to seek treatment with the ER and urgent care center. Claimant argued at hearing that because the employer failed to refer her to a treating physician she should be allowed to choose Dr. Yamamoto as her treating physician. However, claimant did select a physician by virtue of her seeking treatment with Dr. Chicoine in July 2020. Therefore, claimant cannot choose a new treating physician. Insofar as claimant is requesting a change of physician, the ALJ finds that claimant has failed to demonstrate that a change of physician is appropriate in this case.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2010. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Claimant must show that the injury was sustained in the course and scope of his employment and that the injury arose out of his employment. The "arising out of" and "in the course of" employment criteria present distinct elements of compensability. *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999). For an injury to occur "in the course of" employment, the claimant must demonstrate that the injury occurred in the time and place limits of his employment and during an activity that had

some connection with his work-related functions. *Id.* For an injury to “arise out of” employment, the claimant must show a causal connection between the employment and the injury such that the injury has its origins in the employee’s work related functions and is sufficiently related to those functions to be considered a part of the employment contract. *Id.* Whether there is a sufficient “nexus” or relationship between the Claimant’s employment and his injury is one of fact for resolution by the ALJ based on the totality of the circumstances. *In re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988).

4. Under the tests set forth by the Colorado Supreme Court involving willful assaults by co-employees, injuries are broken down into three categories: (1) those assaults that have an inherent connection with the employment; (2) those assaults that are inherently private; and (3) those assaults that are neutral. *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); see also *In re Question, supra*. Both the first and third categories of assaults are held to arise out of the employment for the purposes of the Workers’ Compensation Act and therefore prevent an employee from suing his or her employer in tort for injuries based on such assaults. Only the second category of injuries, inherently private assaults, does not arise out of employment.

5. An activity that is sufficiently related to the circumstances under which the claimant normally performs his or her duties is reasonably characterized as an incident of employment or a condition of the workplace. *City of Boulder v. Streeb*, 706 P.2d 786. The fact that a claimant is the initial aggressor in assaultive behavior does not, in itself, render an injury non-compensable. *Banks v. Industrial Claim Appeals Office*, 794 P.2d 1062 (Colo. App. 1990).

6. As found, claimant has proven by a preponderance of the evidence that the assault in this case resulted from an inherent connection with the employment, and not a private conflict that was brought into the work relationship. As found, claimant has demonstrated by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of her employment with employer.

7. Respondents argue that claimant was on a deviation at the time of the injury and therefore the injury did not arise out of her employment with employer. For the reasons stated below, the ALJ rejects respondents argument that claimant was on a deviation at the time of the injury.

8. It is generally not necessary for an employee to be actually engaged in work duties at the time of an accident for an injury to be compensable. See *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). When a personal deviation is asserted, the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship. *Silver Engineering Works, Inc. v. Simmons*, 180 Colo. 309, 505 P.2d 966 (1973); *Roache v. Industrial Commission*, 729 P.2d 991 (Colo. App. 1986). The general test for deviation from employment in Colorado is whether the deviation is substantial. *Kelly v. Industrial Claim Appeals Office*, 214 P.3d 516 (Colo. App. 2009).

9. In this case, the confrontation between claimant and Ms. B[Redacted] arose out of a dispute involving the conditions of employment and job duties related to the employment. The assault in this case took place on the property of employer. As found, claimant and Ms. B[Redacted] both abandoned the client in order to engage in the fight, but Ms. B[Redacted] continued to be employed by employer while claimant was not provided with any more employment shifts after the assault occurred. Based on the facts of this case, the ALJ finds that the deviation in this case was not so substantial as to remove it from the employment relationship.

10. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

11. As found, claimant has demonstrated by a preponderance of the evidence that she is entitled to an award of TTD benefits beginning May 6, 2020 and continuing until June 6, 2020, after which claimant began working for a new employer. As found, claimant's testimony that she would have needed accommodations with employer, including assistance with transfers is found to be credible and persuasive. The fact that claimant was released to return to her work without restrictions on May 12, 2020 does not preclude claimant from receiving temporary disability benefits in this case where claimant testified credibly that she would have needed assistance with transfers and claimant was not offered work by employer when she presented the release to her employer.

12. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

13. As found, claimant has proven by a preponderance of the evidence that she is entitled to an award of TPD benefits beginning June 7, 2020 when she returned to work for a new employer. As found, the employment records from the new employer and claimant's testimony at hearing regarding her inability to perform her previous job

without accommodations are found to be credible and persuasive with regard to the issue of claimant's entitlement to TPD benefits.

14. The ALJ further notes that even though claimant was released to return to work without restrictions by Dr. Chicoine in July 2020, a release to return to work without restrictions is not the basis for a cut off of temporary partial disability benefits under Section 8-42-106, C.R.S.

15. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). "Authorization" refers to the physician's legal status to treat the injury at the respondents' expense. *Popke v. Industrial claim Appeals Office*, 797 P.2d 677 (Colo. App. 1990) Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. See *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). However, Section 8-43-404(5)(a)(I)(A) implicitly contemplates that the respondent will designate a physician who is willing to provide treatment. See *Ruybal v. University Health Sciences Center*, 768 P.2d 1259 (Colo. App. 1988). Therefore, if the physician selected by respondents refuses to treat the claimant for non-medical reasons, the respondents must designate a new treating physician in a timely manner, otherwise the right of selection of the authorized treating physician passes to the claimant, and the physician selected by the claimant is authorized. See *Ruybal v. University Health Sciences Center*, *supra*.

16. As found, respondents failed to properly designate a physician to treat claimant for her work injuries, and therefore, the right to select a physician transfers to claimant. As found, claimant selected Dr. Chicione to treat her for her work injury and is the authorized provider by virtue of claimant's election to treat there. Insofar as claimant is requesting a change of physician to Dr. Yamamoto, the ALJ finds that claimant has failed to prove by a preponderance of the evidence that a change of physician is appropriate in this case. As found, the medical treatment from the ER, urgent care, Denver Ophthalmology and Dr. Chicoine is reasonable care necessary to cure and relieve claimant from the effects of the work injury.

17. The ALJ must determine an employee's AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

18. As found, for the complete time periods in the two months (8 5/7 weeks) prior to claimant's injury, claimant was paid \$8,770.00. As found, this equates to an AWW of \$1,006.39. As found, the ALJ finds that it is not appropriate to include the earnings claimant had for the incomplete pay period that involved her injury in this case.

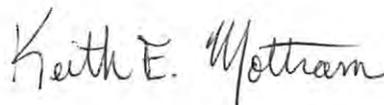

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the industrial injury.
2. Respondents shall pay Claimant TTD benefits based on an AWW of \$1,006.39 for the period of May 6, 2020 through June 6, 2020. Respondents shall pay claimant TPD benefits beginning June 7, 2020 and continuing until terminated by law.
3. Respondents argument that claimant's injury resulted from a deviation of her employment is denied and dismissed.
4. Claimant's treating physician in this case is Dr. Chicoine. Claimant's request for a change of physician is denied.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: October 27, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-140-107-001**

ISSUES

1. Whether respondents have proven by a preponderance of the evidence that claimant's injury was the result of a safety rule violation pursuant to Section 8-42-112(1)(b), C.R.S.?

2. Whether respondents have proven by a preponderance of the evidence that Dr. Zwerdinger is claimant's designated authorized treating physician?

3. Whether claimant has proven by a preponderance of the evidence that he is entitled to an award of medical benefits in the form of a home gym, gym membership, and biking shoes?

4. Claimant endorsed the issue of penalties against respondents. The court dismissed the penalty claim at the commencement of the October 20, 2020 hearing based on claimant's failure to sufficiently answer discovery and set forth, with specificity, the grounds on which the penalty was being asserted.

5. Claimant moved to have ALJ Mottram recuse himself multiple times both before the hearings and during the hearings. The motion to recuse was denied as part of the Status Conference Order dated September 24, 2020 and was denied orally during the hearing. Claimant's exhibit 2 was entered into evidence based on claimant's assertion that he intended to appeal denial of the motion to recuse.

6. After the October 8, 2020 hearing, claimant moved to stay the proceedings and suspend the October 20, 2020 hearing until the "Colorado State Legislature responds on how felony perjury will be enforced and ensure maximum medical improvement, my case and thousands of primarily Latinx workers, is addressed." Claimant's motion to suspend the proceedings was denied by the ALJ. Claimant's exhibit 2 was admitted for purposes of the appeal of the denial of this motion.

FINDINGS OF FACT

1. Claimant was employed by employer working on a construction site in Vail, Colorado. Mr. F[Redacted], the field project coordinator for employer, testified at hearing in this matter. Mr. F[Redacted] testified that on June 3, 2020 he was instructed by his project supervisor, Mr. A[Redacted], with assigning claimant the task of putting up safety rails on an upper level rough opening and securing plastic around multiple rough openings on the job site. A rough opening is a term used on the construction site to describe an area where a window or door is to be installed, but leaves an opening in the building before installation is complete. Mr. F[Redacted] testified he laid out the tasks for claimant between 3:30 and 3:45 p.m.

2. Mr. F[Redacted] testified that the rough opening where claimant was to install the safety rail and hang the plastic was 9' 8 1/2" wide and 8' 8 1/2" tall. Mr. F[Redacted] testified that the safety rails were removed so that the employees could use a forklift to put in heating ventilation and cooling ("HVAC") equipment in the upper level of the house. Mr. F[Redacted] testified that the safety rails were constructed out of 2x4 wood. Mr. F[Redacted] testified that pursuant to OSHA requirements, the safety rails would need to withstand 200 pounds of pressure down and out. Mr. F[Redacted] testified that as he walked with claimant to show him the rough opening and where to hang the plastic, he pointed out ladders that were on the job site that claimant could use to complete the job of hanging the plastic. Mr. F[Redacted] testified that a step ladder would have been the correct tool for claimant to use on the job site.

3. Mr. F[Redacted] testified that at approximately 4:30 p.m. he noticed claimant was still working on hanging the plastic about the rough opening as he was preparing to shuttle workers down to the parking lot. Mr. F[Redacted] testified employees would park at a different parking lot and then be shuttled by employer to the work site. Mr. F[Redacted] testified that he could see claimant in the rough opening from where he was next to the van in the parking lot and called up to claimant to let him know that he was going to shuttle the employees down to the parking lot and would then come back and pick up claimant. Mr. F[Redacted] testified he took the employees down to the parking lot, then returned for claimant. Mr. F[Redacted] testified that when he returned to pick up claimant, claimant advised him that he had injured his ankle while trying to hang the plastic over the rough opening.

4. Mr. F[Redacted] testified that later that evening he received a text message from claimant that stated as follows:

Can't really walk, think I tore calf muscle. It'll be alright, but unlikely by tomorrow. Didn't want to bother Gene, so could you tell him I'll work Friday it's better, but not likely, more likely get on regular 40 hour week starting Monday. It was my fault so would really prefer not to deal with paperwork. Not serious, just limiting right now. Just tell him I was rushing so as not to hold people up and stupidly thought the safety rail would hold. Thanks.

5. Mr. F[Redacted] testified that employer had several skilled carpenters on the job site on June 3, 2020. Mr. F[Redacted] testified that he did not ask a skilled carpenter to reinstall the safety rail because he believed claimant was capable of performing the task and claimant did not raise any concerns with regard to his ability to reinstall the safety rail when Mr. F[Redacted] asked him to perform the task.

6. Mr. F[Redacted] testified as to safety meetings held by employer. Mr. F[Redacted] testified safety meetings are held weekly and attendance by the employees is mandatory. Mr. F[Redacted] testified that the meetings take place during work hours, and employees are paid their hourly rate to attend the meetings. Mr. F[Redacted] testified that employer had a safety meeting on March 2, 2020 regarding fall arrest

systems. Mr. F[Redacted] testified that employees would sign in for attending the safety meetings, but sometime after March 2, 2020, employer changed the sign in process due to concerns with the spread of COVID-19 that were raised by claimant. Mr. F[Redacted] testified that based on these concerns, instead of passing around a piece of paper and a pen to each employee to sign at the beginning of the safety meeting, he would simply note that the employees from the employer and employees from specific contractors were present. Mr. F[Redacted] testified that they would then be able to verify that the employees were present based on wage records that would document that the specific employee was at work that day. Mr. F[Redacted] testified that there were additional safety meetings including fall protection guardrails on April 21, 2020; inspecting ladders on May 21, 2020; and ladder safety and step ladders on May 28, 2020. Employment records entered into evidence at hearing document that claimant was at work on May 28, 2020. The safety meeting attendance sheet indicates that BPC employees had a safety meeting on May 28, 2020 involving ladder safety and step ladders.

7. Mr. F[Redacted] testified that there were multiple ladders on site, some of which were owned by employer and some owned by contractors. Mr. F[Redacted] testified that the ladders were available for claimant's use in performing the tasks he was assigned. Mr. F[Redacted] testified that claimant's failure to use a step ladder to hang the plastic was a violation of the safety rules/expectations established by employer that the employees should use the proper tool for the job. Mr. F[Redacted] testified that the safety rule setting forth that the employee should use the proper tool for the job was mentioned to the employees at the safety meetings held by employer. Mr. F[Redacted]'s testimony in this regard is found to be credible and persuasive.

8. Mr. F[Redacted] testified on cross-examination that once the COVID-19 pandemic becoming apparent, he would ask employees about their symptoms each day and take the temperature of each employee before they are allowed to begin work. Mr. F[Redacted] testified that the employee is then required to sign off on a sheet of paper acknowledging that they are symptom free. Mr. F[Redacted] testified that there have not been any concerns raised by employees with regard to signing in each day prior to work.

9. Mr. F[Redacted] testified that the day following the injury, claimant did not show up to work due to his injury. Mr. F[Redacted] testified that he filled out an incident report on June 4, 2020 based on the claimant's report of his injury to Mr. F[Redacted]. Mr. F[Redacted] testified he did not seek claimant's input with regard to the incident report due to the fact that claimant had indicated that he did not want to deal with paperwork. Mr. F[Redacted] testified that he needed to fill out an incident report because claimant had begun to miss time from work for the injury.

10. Mr. A[Redacted] testified at hearing in this matter. Mr. A[Redacted] is the superintendent for employer. Mr. A[Redacted] testified he is at the job site daily to oversee the work being performed. Mr. A[Redacted] testified that on June 3, 2020, he instructed Mr. F[Redacted] to assign the job of reinstalling the safety rail and hanging the plastic over the rough openings to claimant.

11. Mr. A[Redacted] testified consistent with Mr. F[Redacted] in that he confirmed that the sign in process for safety meetings changed after issues involving the COVID-19 pandemic became apparent in the Spring of 2020. Mr. A[Redacted] testified that employer stopped sharing pens at the safety meeting and a general entry for all employees was used to record attendance at the meetings.

12. Mr. A[Redacted] testified that the rough opening claimant was working on when he was injured is on the second level and is one story off the ground. Photos of the rough opening were entered into evidence at hearing and depict the rough opening being on the second floor above an area for parking consistent with the description presented by Mr. F[Redacted] in his testimony.

13. Mr. A[Redacted] testified as to the safety rail requirements pursuant to OSHA. Mr. A[Redacted] testified that the top level of the safety rail should be 42" from the floor, with a lower rail 21" from the floor. On cross examination, Mr. A[Redacted] testified that OSHA also requires toeboards be present. As noted by Mr. A[Redacted] on redirect examination, photos of the rough opening in question demonstrate that there are 2x6 boards at the base of the rough opening, as the rough opening is in an area where a window will be installed and does not go all the way down to the floor. The ALJ finds that the 2x6 boards at the bottom of the wall represent toeboards as required by the OSHA requirements.

14. Mr. A[Redacted] testified that there were multiple ladders owned by employer on the job site. Mr. A[Redacted] testified he knows that there were multiple ladders on site because he was the person who had purchased the ladders.

15. Mr. A[Redacted] testified on cross examination that claimant had performed no carpentry work to his knowledge before June 3, 2020. Mr. A[Redacted] testified that a person did not have to be a carpenter to install the safety rails. Mr. A[Redacted] testified that a vertical board was not installed on the safety rail, and if a vertical rail was installed, it would probably have increased the strength. Mr. A[Redacted] testified that not stepping on the safety rail is discussed at safety meetings. Mr. A[Redacted] testified he expects the employees to use common sense. Mr. A[Redacted] testified that the issue of stepping on the safety rail is not written down anywhere.

16. With regard to the ladders, Mr. A[Redacted] testified that the ladders owned by employer would have been marked with the initials BPC. Mr. A[Redacted] testified as to specific ladders that are owned by employer where the initials BPC cannot be seen on the photographs, including the ladder on Exhibit Z pages 268, 270 and 271. The ALJ further notes that the picture of the step ladder on Exhibit Z page 280 does contain the initials BPC.¹

¹ The ALJ notes that during the hearing there appeared to be some disagreement between what represented a step ladder versus a regular ladder. For purposes of the hearing, the ALJ considers a step ladder to be a ladder which has a self supporting A frame construction and is capable of standing without being leaned against a separate structure for support.

17. Claimant testified that on June 3, 2020, he started shoveling gravel in the morning. Claimant testified that at approximately 3:30 p.m. he was approached by Mr. F[Redacted] who told him he had forgotten about reinstalling safety rails on an upstairs window and asked claimant to reinstall the safety rails. Claimant testified Mr. F[Redacted] handed him about 20 nails but told claimant that if it was possible, claimant should reuse the old nails from when the safety rails were previously installed. Claimant testified he asked Mr. F[Redacted] for a hammer and Mr. F[Redacted] told him to borrow a hammer from another employee on the work site.

18. Claimant testified he found the old nails and put the boards back into the rough opening to reconstruct the safety rail. Claimant testified that he was instructed by Mr. F[Redacted] to put the nails in the exact same spot as that was the requirement for the height specifications. Claimant testified that in reconstructing the safety rail, there were not boards for vertical support beams. Claimant testified that he then reinstalled the safety rail using the old nails and not the new nails provided to him by Mr. F[Redacted]. Claimant testified he did this because he was instructed to use the old nails by Mr. F[Redacted].

19. Mr. F[Redacted] testified he did not know why claimant would reuse the nails to install the safety rail. Mr. F[Redacted] testified that he did not instruct claimant to reuse the nails and was not present when Mr. F[Redacted] re-installed the safety rail. Mr. F[Redacted] testified that there is not a written safety rule that prohibits an employee from stepping on a safety rail, but expects employees to use common sense. Mr. F[Redacted] testified that employees are instructed to make sure they are using the right tool for the job. With regard to the discrepancy in the evidence between whether claimant was instructed to reuse the old nails to replace the safety rail, the ALJ finds the testimony of Mr. F[Redacted] to be more credible than the testimony of claimant.

20. Claimant testified he then went to hang the plastic on the rough openings, however, he did not have a staple gun to hang the plastic. Claimant testified he eventually found a staple gun, but it was being used. Claimant testified he then cut and prepared the plastic while he waited for the other construction worker to finish with the staple gun.

21. Claimant testified that at approximately 4:32 p.m. he obtained the staple gun and was able to locate some staples with the help of a co-worker. Claimant testified that at 4:35 p.m. he ran into Mr. F[Redacted] at the bottom of the stairwell, two floors below the rough opening where claimant reinstalled the safety rail. Claimant testified Mr. F[Redacted] asked him if he was done with the task, to which claimant informed Mr. F[Redacted] that he had just received the staple gun and staples and was just beginning to install the plastic. Claimant testified that Mr. F[Redacted] responded by saying, "OK, we'll be waiting in the van." Claimant testified that he then proceeded upstairs and installed the plastic over two windows where there were extension ladders. Claimant testified this task took about five minutes. Claimant testified he then proceeded to another room where there was an extension ladder right next to the window and installed the plastic covering over this window, which took him about 3 minutes.

22. Claimant testified that at 4:43 p.m. he entered the room where he was injured and proceeded to staple the left side of the plastic to the board before he put his right foot on one of the 2x4 safety boards and his left hand against the wall to test to see if the board was secure. Claimant testified that the board seemed secure. Claimant transferred the staple gun from his left hand to his right hand to reach up and once he put pressure on the board, the board immediately gave way and claimant fell backwards and stumbled and felt a pain in his calf.

23. Claimant testified that just before stepping on the board, he looked out the window and saw the van to transfer the employees down to the parking area which was running and had several people in the van looking at their phones. Claimant testified he knew that the employees usually leave at 4:30 p.m. or 4:45 p.m. and they were already late. Claimant testified he was aware of 3 large extension ladders but believed that people in the van were waiting on him. Claimant testified that if Mr. F[Redacted] had informed him that he would drop off the employees and come back for him, he could have gone to obtain one of the extension ladders, but that would have taken him 20 minutes. Claimant's testimony that he was rushing to complete the job is consistent with the text message he sent to Mr. F[Redacted] following the injury.

24. Claimant testified that after he fell, Mr. F[Redacted] then informed claimant that he would take the other employees to the parking lot and then return for Mr. F[Redacted]. Claimant testified that if he had been told that Mr. F[Redacted] could return and pick him up, he would not have been rushed and could have gone to get the extension ladder. Claimant testified that by the time Mr. F[Redacted] told him he would come back to get him, he had already sustained the injury, so it was too late to go get the ladder. Claimant testified he was then able to complete the rest of his task even with a severed Achilles.

25. Mr. F[Redacted] testified that it was his understanding that claimant injured his ankle after he left to take the other employees to the parking lot and before he returned. Mr. F[Redacted] also testified that he did not recall having a conversation with claimant at 4:35 p.m. when claimant purportedly told Mr. F[Redacted] that he was just starting to hang the plastic.

26. Claimant testified that the presence of contractor ladders was irrelevant because it is the employer's responsibility to provide adequate ladders for its employees to complete their tasks.

27. Claimant testified that the safety rail that he reinstalled should have had 3 large vertical boards to make the safety rail more sturdy.

28. Respondents' filed a general admission of liability ("GAL") on June 18, 2020 admitting for temporary total disability benefits, but taking a 50% offset of the benefits due to an alleged safety rule violation.

29. Following claimant's injury, claimant was referred by employer to Dr. Kovacevich. Claimant initially saw Dr. Kovacevich on June 11, 2020. Dr. Kovacevich

noted claimant reported a history of having strained his right calf when he was standing on a 2x4 and the 2x4 gave way. Dr. Kovacevich noted claimant had an obvious defect consistent with an Achilles tendon injury. Claimant was referred to Dr. Elton, an orthopedist, and was instructed to proceed with a magnetic resonance image ("MRI"). Dr. Kovacevich took claimant off of work completely.

30. Claimant was examined by Dr. Elton on June 11, 2020. Dr. Elton noted a history of claimant balancing on a board at a construction site when the board slipped and claimant was forced into hyperdorsiflexion as it fell. Claimant reported he felt immediate pain and swelling and had an inability to raise up on his toes. Claimant underwent an MRI which demonstrated an Achilles tendon rupture and Dr. Elton recommended surgery.

31. Claimant underwent surgery under the auspices of Dr. Elton on June 16, 2020 consisting of a limited open right Achilles tendon repair. Claimant returned to Dr. Elton's office on June 29, 2020 and was evaluated by Physicians' Assistant ("PA") Breidenbach. PA Breidenbach removed claimant's sutures and provided claimant with a prescription for physical therapy. PA Breidenbach noted that claimant was requesting a note for a home gym which was provided. In an undated note signed by Dr. Elton, Dr. Elton recommends claimant use an at home gym system to keep claimant in shape so long as he is not bearing weight while participating in the exercises. Dr. Elton noted that due to COVID-19, claimant was limited with respects to his access to the gym.

32. Respondents obtained a physicians' advisor note from Dr. Hattem that opined that a home gym was not reasonable or necessary treatment for a lower extremity injury pursuant to Rule 17, Exhibit 6 of the Colorado Workers' Compensation Medical Treatment Guidelines.

33. Dr. Elton issued a second undated report again requesting a home gym for claimant noting that during claimant's recovery, it would be imperative that claimant maintain his physical fitness in order to supplement for the demands being placed on him during his recovery. Dr. Elton did not explain further what the demands being placed on claimant during his recovery would entail.

34. On July 6, 2020, respondents obtained a second physician advisory report from Dr. Raschbacher that opined that claimant should go to physical therapy for his Achilles tendon injury, but that there was no medical necessity for a home gym. Dr. Raschbacher also opined that the request for a home gym was not reasonable.

35. In response to a July 17, 2020 inquiry from Ms. Cook, a nurse case manager for insurer, Dr. Elton responded and noted that at the present time, it was not medically necessary for claimant to have a gym membership if claimant is attending physical therapy. Dr. Elton noted however, that it could assist in improving his stamina and help maintain physical fitness to better prepare claimant for his return to work demands. Dr. Elton further opined that it would be absolutely reasonable for claimant to have a gym membership in the future to assist in preparing claimant for his return to work demands.

36. Claimant was scheduled a follow up appointment with Dr. Kovacevich on August 3, 2020. Claimant was sent a letter advising him of the date and time of the appointment on July 23, 2020 by Mr. Grady, the adjuster assigned to claimant's case. Claimant and Dr. Kovacevich had a phone conference on July 29, 2020.

37. On July 30, 2020, Dr. Kovacevich contacted claimant via email and indicated that another physician would be handling claimant's care, including all follow-ups and determination of work restrictions and assigning maximum medical improvement ("MMI"), when appropriate.

38. Claimant returned to Dr. Elton on August 3, 2020. Dr. Elton noted that claimant was doing well and needed to continue to follow up with physical therapy for likely another three or four months and gradually increase his strengthening exercises. Dr. Elton also issued an undated note that indicated that he could not predict his exact date of MMI.

39. Dr. Elton issued a note dated August 24, 2020 that stated it had been brought to his attention that claimant no longer had an authorized treating physician for his workers' compensation claim. Dr. Elton expressed a willingness to continue to proceed with care as a specialist, but would not proceed with management of claimant's case. Dr. Elton noted that insurer would need to provide claimant with a list of approved authorized treating physicians to take over the management of the claim.

40. Claimant returned to Dr. Elton on September 21, 2020. Dr. Elton noted that he had a long conversation with claimant regarding claimant's concerns with regard to when he would be placed at MMI. Dr. Elton noted that claimant needed a Level II certified authorized treating physician who can help manage and answer all of those questions for him. Dr. Elton noted that he was happy to be his surgeon but that claimant's behavior had been somewhat irrational with regard to the demands of Dr. Elton's office. Dr. Elton inquired about whether claimant would agree to be treated by Dr. Zwerdinger. Dr. Elton noted that claimant reported he was not a big fan of Dr. Zwerdinger. Dr. Elton noted that claimant should continue with no more than light duty work at this point and opined that claimant would not be at MMI for his injury until 6 to 12 months after surgery.

41. Ms. Gotantas, claimant's physical therapist, issued a letter dated September 28, 2020 which noted that claimant would benefit from aquatic therapy. The letter also noted that claimant should continue to ride his stationary bike at home, until he is released to ride outside as weather permits. Ms. Gotantas noted that claimant was riding up to three hours per day. Ms. Gotantas opined that claimant did not require a special shoe to protect his Achilles while performing stationary bike spinning.

42. Mr. Grady, an adjuster for Pinnacol testified at hearing in this matter. Mr. Grady testified that when he tried to have claimant return to Dr. Kovacevich for the August 3, 2020 appointment, claimant was not happy about it. Mr. Grady testified that

claimant scheduled a phone conference with Dr. Kovacevich on July 29, 2020. Mr. Grady testified claimant then stated he only wanted to see Dr. Elton for his injury.

43. Mr. Grady testified that after receiving the August 24 note from Dr. Elton, he sent claimant a list of possible medical providers on August 27, 2020. The list of medical providers included Eagle Valley Medical Center, Vail Health Hospital / Occupational Health Clinic, Colorado Mountain Medical – Avon, and Dr. Zwerdinger. Mr. Grady testified that claimant did not select a physician from that list of providers. Mr. Grady testified that he then set a medical appointment for claimant with Dr. Zwerdinger that was scheduled for September 30, 2020. A letter was sent to claimant on September 17, 2020 informing him of the appointment.

44. Claimant testified at hearing that he did not attend the appointment with Dr. Zwerdinger. Claimant further testified that he would like Dr. Deveny in Glenwood Springs to be his authorized treating physician. Claimant testified that he believes the Dr. Deveny would be a good physician to treat his injury as she is a runner and he wants to get back to running ultramarathons. Claimant testified he did not know if Dr. Deveny is Level II accredited.

45. With regard to the issue of the safety rule violation, claimant testified at hearing that he used a ladder when putting up the first three plastic coverings over the rough openings. Claimant testified he did not use a ladder over the final opening because a ladder was not available and he was in a rush to complete the task because there was a van full of workers waiting for claimant to drive down to the parking lot. Claimant further testified that the safety rail that he stepped on failed to hold him in this case because he had been instructed to use the old nails instead of new nails by Mr. F[Redacted].

46. The ALJ credits the testimony of Mr. F[Redacted] over the testimony of claimant and finds that Mr. F[Redacted] did not instruct claimant to reinstall the safety rail using old nails. The ALJ further finds that claimant admitted using the safety rail in an inappropriate manner. Although he testified he used it in the inappropriate manner because he was trying to rush to get the task completed, the ALJ is not persuaded that claimant's actions were appropriate. Claimant testified that he used a ladder to install the previous plastic coverings but did not use a ladder on the final plastic covering because he was trying to complete his task quickly so other employees were not waiting for him. The ALJ finds that this constitutes a willful violation of a safety rule.

47. The ALJ credits the testimony of Mr. F[Redacted] that claimant was present for safety meetings involving fall protection, and ladder safety/step ladders while employed with employer. The ALJ notes that claimant's use of the safety rail as a way to reach up above to staple the plastic to the wall effectively negated the intended use of the safety rail. The safety rail is intended to keep a worker from falling from a height of higher than four feet above a lower level (as is noted in the fall protection information entered into evidence at hearing). Claimant placing himself above the safety rail not only runs the risk of the safety rail breaking, but also runs the risk of the employee falling out of the rough opening.

48. The ALJ notes that there were significant disputes at hearing regarding the existence and location of ladders on the job site. In addition, there are conflicts in the evidence as to who owned those ladders. However, the ALJ finds the testimony of Mr. A[Redacted] and Mr. F[Redacted] to be more credible and persuasive than the contrary testimony of claimant regarding the issue of whether employer had ladders available for claimant to use on the job site. The ALJ credits the testimony of Mr. F[Redacted] that there were ladders that were available for claimant to use on the floor where claimant's injury occurred.

49. The ALJ credits the testimony of Mr. F[Redacted] and Mr. A[Redacted] that a safety rule existed which would require claimant to use the right tool for the right job. This rule would require claimant to use a ladder to hang the plastic in this case. The ALJ therefore finds that claimant's use of the safety rail to elevate himself to be able to hang the plastic constitutes a violation of employer's safety rule. The ALJ notes that claimant testified he used a ladder to hang the three other plastic coverings and finds that his testimony that he was rushed to complete the job as his basis for using the safety rail instead of a ladder is further evidence of the willful nature of the safety rule violation and not the result of mere carelessness, negligence, forgetfulness, remissness, or oversight.

50. The ALJ finds that respondents have proven that it is more likely than not that claimant willfully violated a safety rule, and that violation of a safety rule led to claimant's injury, respondents are entitled to reduce claimant's non-medical benefits by 50% pursuant to the Colorado Workers' Compensation Act.

51. With regard to the issue of authorized treating physician, claimant was initially referred to Dr. Kovacevich following his injury. After Dr. Kovacevich indicated that he no longer wished to treat claimant for his work injury, claimant was returned to his surgeon, Dr. Elton. Dr. Elton noted that claimant would need to have a new authorized treating physician to opine on issues such as work restrictions and MMI.

52. The ALJ notes that claimant was presented with a list of four providers from whom he could choose a treating physician. At no point did claimant select any of the physicians identified by respondents. It was only at the hearing that requested the ALJ order that a physician (who was not on the list) be named as his treating physician. The ALJ finds that respondents properly designated a new treating physician in this case and finds that Dr. Zwerdinger is the authorized treating physician for claimant's workers' compensation case.

53. The ALJ finds that respondents timely provided claimant with a list of providers from which claimant could choose a new authorized provider after receiving notice that Dr. Kovacevich was no longer willing to treat claimant and Dr. Elton was not willing to assume the position of the designated authorized treating physician. After claimant failed to select a physician, respondents made an appointment for claimant with Dr. Zwerdinger. Claimant has now, through his testimony at hearing, indicated that he wishes to treat with Dr. Deveny.

54. The ALJ finds that respondents have acted appropriately in designating a new authorized provider after Dr. Kovacevich indicated he no longer wanted to be the treating physician in claimant's case. The ALJ finds that respondents have properly designated Dr. Zwerdinger as the treating physician in this case. The ALJ notes that Dr. Elton has indicated that claimant should have an authorized treating physician that is Level II accredited and has brought up with claimant Dr. Zwerdinger as a possibility of serving as the authorized treating physician. Claimant's failure to select a physician from the list of four providers that was provided to him on August 27, 2020 resulted in the respondents being forced to make an appointment with a physician from that list for claimant. The ALJ further notes that claimant has provided no credible explanation as to why he could not select one of the four providers offered by respondents on August 27, 2020 to assume the position as his designated authorized treating physician.

55. Claimant has sought an order requiring respondents to pay for a home gym, a gym membership, and biking shoes. The ALJ relies on the opinion of Dr. Elton in his response to the July 27, 2020 report which indicated that claimant would not need the gym membership while he is undergoing physical therapy. Dr. Elton has indicated that a gym membership may be warranted in the future, but not until after claimant has completed his physical therapy.

56. Therefore, the ALJ finds that claimant has failed to prove that it is more likely than not that a gym membership or a home gym are reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

57. With regard to the biking shoes, the ALJ notes that claimant's physical therapist is the only medical provider who has opined on the need for the biking shoes and indicated that claimant did not need a special shoe for riding his stationary bike. The ALJ finds that claimant has failed to establish that it is more likely than not that the biking shoes are reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2010. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a

conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents argue that Claimant's injury resulted from a willful violation of a safety rule. Section 8-42-112(1)(b), C.R.S. permits imposition of a fifty percent reduction in compensation in cases of an injured worker's "willful failure to obey any reasonable rule" adopted by the employer for the employee's safety. The term "willful" connotes deliberate intent, and mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard. *Bennett Properties Co. v. Industrial Commission*, 165 Colo. 135, 437 P.2d 548 (1968).

4. The respondents bear the burden of proof to establish that the claimant's conduct was willful. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). The question of whether the respondent carried the burden of proof was one of fact for determination by the ALJ. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). The claimant's conduct is "willful" if he intentionally does the forbidden act, and it is not necessary for the respondent to prove that the claimant had the rule "in mind" and determined to break it. *Bennett Properties Co. v. Industrial Commission, supra; see also, Sayers v. American Janitorial Service, Inc.*, 162 Colo. 292, 425 P.2d 693 (1967) (willful misconduct may be established by showing a conscious indifference to the perpetration of a wrong, or a reckless disregard of the employee's duty to his employer). Moreover, there is no requirement that the respondent produce direct evidence of the claimant's state of mind. To the contrary, willful conduct may be inferred from circumstantial evidence including the frequency of warnings, the obviousness of the danger, and the extent to which it may be said that the claimant's actions were the result of deliberate conduct rather than carelessness or casual negligence. *Bennett Properties Co. v. Industrial Commission, supra; Industrial Commission v. Golden Cycle Corp.*, 126 Colo. 68, 246 P.2d 902 (1952). Indeed, it is a rare case where the claimant admits that her conduct was the product of a willful violation of the employer's rule.

5. As found, claimant injured his Achilles tendon when he stood on a safety rail as he attempted to staple plastic to the wall. As found, claimant's use of the safety rail as a device to elevate himself to reach the top of the window constitutes a willful violation of employer's safety rule that the claimant use the right tool for the right job, which would have been a step ladder. As found, claimant's admission that he used the safety rail to elevate himself because he felt rushed, demonstrates that claimant's violation of the safety rule was willful.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury.

Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). “Authorization” refers to the physician’s legal status to treat the injury at the respondents’ expense. *Popke v. Industrial claim Appeals Office*, 797 P.2d 677 (Colo. App. 1990) Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. See *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). However, Section 8-43-404(5)(a)(I)(A) implicitly contemplates that the respondent will designate a physician who is willing to provide treatment. See *Ruybal v. University Health Sciences Center*, 768 P.2d 1259 (Colo. App. 1988). Therefore, if the physician selected by respondents refuses to treat the claimant for non-medical reasons, the respondents must designate a new treating physician in a timely manner, otherwise the right of selection of the authorized treating physician passes to the claimant, and the physician selected by the claimant is authorized. See *Ruybal v. University Health Sciences Center*, *supra*.

7. In this case, respondents properly designated Dr. Kovacevich as claimant’s treating physician. After Dr. Kovacevich advised respondents that he was no longer willing to treat claimant, and Dr. Elton advised respondents he did not wish to be the authorized treating physician for determination of work restrictions and MMI, respondents provided claimant with a new list of physicians to choose from. As found, claimant failed to select a physician from the list of providers that was offered to him. As found, respondents have now properly designated Dr. Zwerdinger as the authorized treating physician in this case.

8. As found, claimant has failed to prove by a preponderance of the evidence that his request for a gym pass or a home gym is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. As found, Dr. Elton opined in response to the July 17, 2020 inquiry from respondents that while claimant is receiving physical therapy, a gym membership or home gym equipment is not medically necessary at the present time.

9. As found, claimant has failed to prove by a preponderance of the evidence that biking shoes represent reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. The ALJ credits the medical reports from Ms. Gotantas indicating that biking shoes were not necessary for claimant in reaching this decision.

ORDER

It is therefore ordered:

1. Claimant’s injury resulted from the intentional violation of a safety rule and respondents are entitled to take a 50% offset of non-medical benefits pursuant to Section 8-42-112(1)(b), C.R.S.

2. Dr. Zwerdinger is claimant's primary authorized treating physician.
3. Claimant's request for a gym membership and home gym are denied and dismissed without prejudice. Claimant's request for an Order requiring respondents to pay for biking shoes is denied and dismissed.

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- 1) Has Claimant shown, by a preponderance of the evidence, that his low back and left lower extremity symptoms and condition is *causally related* to the January 15, 2020 work incident?
- 2) Has Claimant shown, by a preponderance of the evidence, that the lumbar epidural steroid injection is *reasonable, necessary, and related* to the January 15, 2020 work incident?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background Information / Claimant's 2018 Back Injury

1. Claimant is employed for [Employer Name Redacted] (Employer), formerly [Employer Name Redacted]. Claimant has been employed for the respective companies for 30 years. Claimant's job title is a "roll-off driver". Claimant's job required him to drive a truck and position it next to a large metal dumpster/compressor. Claimant had to back the truck up to the dumpster, get out of the truck, and hook the truck to the dumpster. Claimant had to bend over and sometimes get on his knees to attach the dumpster.
2. In 2018, Claimant injured his lower back while working for Employer. The claim was admitted. Claimant underwent treatment with his ATPs, Dr. Cynthia Schafer at UCHealth and Dr. Paul Stanton at Colorado Springs Orthopedic Group for his injury. Claimant was diagnosed with two herniated disks at L4-L5 and L5-S1. Claimant underwent L4-L5 microdiscectomy surgery on October 15, 2018 by Dr. Paul Stanton. (Ex. 4, p. 58).
3. The records show that Claimant had a good recovery following surgery. (Ex. 2, pp. 19-21). Dr. Schafer released Claimant at maximum medical improvement on May 31, 2019. *Id* at 58. He received a 21% Whole Person impairment rating. At MMI, Claimant reported experiencing pain at 2/10. *Id.* at 61. Dr. Schafer did not assign any permanent work restrictions or maintenance medical care. *Id* at 62. However, when Claimant reached MMI, he continued to report residual symptoms including: numbness in his toes, restricted range of motion, and radiculopathy. *Id* at 62. Claimant did not seek medical treatment for his back between May 31, 2019, and January 15, 2020.

4. At hearing, Claimant testified that he returned to working for Employer full duty without restrictions. Claimant did not have trouble performing his job duties between May 2019 and January 14, 2020.

The 2020 Work Injury

5. On January 15, 2020, Claimant went to retrieve a large compressor filled with cardboard and plastics. The cardboard was significantly compressed, and was jammed in the container. Claimant had to manually loosen the cardboard by repeatedly pulling it out of the container. Claimant reported being in an awkward position as he pulled out the overstuffed cardboard. He had to bend/crouch down and hold open the (estimated 20+ lb.) overhead metal door with his left arm while he grabbed the cardboard with his right arm. Claimant had to exert significant force to yank out about 2 'yards' of jammed cardboard.
6. While doing this, Claimant testified that he developed a sudden sharp pain in his left shoulder and low back pain that radiated down his left leg. Claimant completed the task and notified the dispatcher that he was injured. Claimant was told that he needed to keep working because the Employer was short-staffed that day. Claimant continued working in pain for the rest of the day.
7. Claimant returned to work on January 16, 2020, requesting to go to a doctor. Claimant's supervisor asked him to work because the employer was short-staffed again. Claimant worked through the pain again that day. Claimant returned to his employer on January 17, 2020, requesting to go to a doctor. Claimant's supervisor took him to UCHealth.

Treatment by ATPs

8. Claimant then went to UCHealth on January 17, 2020. (Ex. 4, pp. 63-68). He was examined by PA Zoe Call. PA Call noted that Claimant injured his left shoulder pulling cardboard out of a compactor. Claimant underwent an x-ray of his left shoulder, tentatively diagnosed with a sprain, and was recommended anti-inflammatories. PA Call did not note that Claimant was experiencing low back pain. (At hearing, Claimant insisted that he told PA Call that he hurt his lower back during the January 17, 2020 office visit. However, he explained that he thought he was supposed to go to his primary care physician for his back injury).
9. Claimant returned to UCHealth on January 21, 2020, and was treated by his original ATP, Dr. Schafer. (Ex. 4, pp. 69-72). Dr. Schafer noted that Claimant is a patient well-known to her, due to his previous low back injury. *Id* at 69. Dr. Schafer documented that, in addition to Claimant's left shoulder injury:

He also notes that it was mentioned but not explored at the initial visit that his low back hurts more also. He is worried about that

since it persists and is also stronger pain because of his previous herniated disc and residual numbness and weakness in the left leg. *Id.* at 70.

Dr. Schafer referred Claimant to physical therapy for his left shoulder and lumbar spine. Dr. Schafer assigned temporary work restrictions of no lifting over 20 pounds, no commercial driving, and no work above waist level with left arm. *Id.* at 71.

10. On February 11, 2020, Claimant reported to Dr. Schafer that his low back pain and left calf burning had worsened. Dr. Schafer noted that Claimant had the same left calf/foot/toe numbness since his 10/20/2018 L5 microdiscectomy. Dr. Schafer noted that Claimant's lumbar sprain with increasing left calf cramping & burning "is related to this new injury, NOT the prior injury thus needs to be evaluated/imaging under this injury (though we will compare to prior MRIs)". *Id.* at 76. (emphasis added). Dr. Schafer ordered an MRI of Claimant's lumbar spine and left shoulder. *Id.*
11. Claimant underwent an MRI at Southwest Diagnostic on February 14, 2020. (Ex. 5, p. 112). The MRI revealed L4-L5 mild broad-based posterior disc bulge with facet hypertrophy causing mild bilateral neural foraminal narrowing on left greater than right; L5-S1 mild broad-based posterior disc bulge with facet hypertrophy causing mild right and marked left neural foraminal narrowing. *Id.* at 113. (During her deposition, Dr. Schafer explained that the MRI machines at Southwest Diagnostics are older and do not provide a good comparison to prior imaging).
12. On February 20, 2020, Claimant returned to Dr. Schafer. (Ex. 4, p. 79). Dr. Schafer noted that Claimant came in earlier than his scheduled appointment time, due to worsening symptoms in his back. Claimant appeared with an upper respiratory condition, and coughing is what was exacerbating his back pain.
13. Dr. Schafer opined that was unfortunate that Respondents scheduled Claimant's MRIs through Southwest diagnostics. *Id.* at 81-82. The MRI machines at Southwest diagnostics are much older than those at Colorado Springs Imaging, where Claimant had his initial, 2018 lumbar MRI completed. *Id.* Dr. Schafer explained that it will be difficult to compare the MRIs, because the 2018 and 2020 MRI images differ in quality. Dr. Schafer was not able to compare the actual MRI films due to quality variation. She noted that based on the MRI narrative report, it appears that Claimant may have progressive symptoms related to time more than injury, but could not be certain. *Id.* Dr. Schafer referred Claimant to Dr. Stanton for a consultation.
14. On March 24, 2020, Claimant returned to Dr. Stanton. (Ex. 2, p. 22). Dr. Stanton noted that Claimant was doing great following his lumbar discectomy surgery. He noted that Claimant experienced increased back and leg symptoms after pulling jammed cardboard out of a compactor. During this visit, Claimant did not report a "pop" in his back. Dr. Stanton noted that Claimant was currently experiencing left-

sided radicular pain in his buttock, posterior thigh, and cramping in his calf, and right-sided thigh pain that extended down into his knee.

15. Dr. Stanton noted that the February 2020, MRI report was not available to him. *Id.* at 23. He opined that imaging demonstrated advanced disc disease at L3-4, L4-5, and L5-S1 with the collapse of disc space and foraminal narrowing. *Id.* Dr. Stanton recommended Claimant undergo bilateral L4-5 transforaminal epidural steroid injection and a round of physical therapy. Dr. Stanton did not perform a causation/relatedness analysis in his treatment plan.

16. On March 31, 2020, Dr. Schafer conducted a telemedicine appointment with Claimant. (Ex. 4, p. 91). Claimant reported no change in his symptoms. *Id.* Dr. Schafer noted that there might be a delay for Claimant to get the epidural steroid injection due to COVID. Dr. Schafer issued an addendum documenting a conversation she had with Dr. Scott Primack. Dr. Schafer noted that:

[Dr. Primack] is concerned as to whether there is a larger disc causing a stenosis type scenario versus a sprain that is exacerbating the underlying symptoms. He finds a definite weakness and loss of reflex of the L5. Unfortunately, [Claimant] forgot to bring along the MRI discs for Dr. Primack to compare. He recommends seeing if we can get a radiologist to compare them. *He also agrees with my assessment that the quality of images is so poor from the ancient machines at Southwest Diagnostics that we may need to repeat the imaging to get a true evaluation.* *Id.* at 92. (emphasis added).

17. On April 6, 2020, Claimant was examined by Dr. Scott Primack. (Ex. 3, p. 26). Dr. Primack recommended a pulse dose of prednisone with a taper. *Id.* at 29. Dr. Primack noted an epidural steroid injection could be done, however, there are currently no pain management labs open due to COVID. Dr. Primack felt that the lumbar MRI needed to be compared to determine the difference between the 2018 and 2020 studies. Dr. Primack opined that Claimant may require a second surgery if he continues to have persistent weakness or profound pain in the left leg despite conservative treatment. *Id.*

18. On April 20, 2020, Claimant returned to Dr. Primack. (Ex. 3, p. 34). Dr. Primack noted that Claimant was not able to fill the prescribed prescriptions. He still did not have the MRI films to review. Claimant continued to report left lower extremity discomfort and back pain. Dr. Primack ordered an EMG/NCS. Dr. Primack noted that the EMG will help delineate the acuity of Claimant radiculopathy. He opined that Claimant was not able to progress in his injury due to issues regarding his claim. *Id.*

19. On April 22, 2020, Respondents sent a letter to Dr. Malinky, denying the bilateral transforaminal epidural steroid injection recommended by Dr. Primack. (Ex. 3, p.

42). Respondents indicated that an independent medical evaluation had been scheduled with Dr. Paz. *Id.*

20. On May 1, 2020, Dr. Schafer noted that the steroid medications prescribed by Dr. Primack were denied by Respondents. (Ex. 4, p. 95). However, Claimant had reported worsening symptoms in his legs. *Id.* Dr. Schafer noted that Dr. Primack recommended a bilateral EMG to establish a timeframe for nerve symptoms. *Id.* at 97. The recommended EMG was also denied by Respondents. Dr. Schafer agreed with Dr. Primack's recommendation for a bilateral EMG. Dr. Schafer also recommended that Claimant fill the denied prescriptions out of his own pocket. *Id.* Dr. Schafer placed a second order for an EMG.
21. On May 12, 2020, Claimant underwent an EMG and NCV study with Dr. Primack. (Ex. 3, p. 43). Dr. Primack concluded that "this is a complex case of acute/subacute findings on top of chronic changes. It is good to see that the patient will undergo a second opinion. Other options, aside from medication and physical therapy include a left L5-S1 transforaminal epidural steroid injection." *Id.*
22. On May 29, 2020, Dr. Schafer opined the EMG showed evidence of left S1 greater than L5 lumbar radiculopathy. (Ex. 4, p. 102). Dr. Schafer referred Claimant to Dr. Todd Palmer, a neurosurgeon. *Id.* at 104.

Dr. Paz IME

23. On June 15, 2020, Dr. F. Mark Paz performed an IME at Respondents' request. (Ex. A). Dr. Paz concluded that Claimant's low back pain with lower extremity symptoms are not causally related to the injury that occurred on January 15, 2020. Dr. Paz opined that the mechanism of injury is not consistent with causing an acute injury. He further opined that Claimant did not report low back pain during his initial consultation with UC Health. *Id.*

Second Request for Injections

24. On August 3, 2020, Dr. Primack submitted another request to Respondents for an L5-S1 epidural steroid injection. (Ex. 3, p. 52). Dr. Primack opined that it is reasonable to proceed with an L5-S1 epidural steroid injection. *Id.*

Dr. Rook IME

25. On August 3, 2020, Dr. Jack Rook performed an IME at the Claimant's request. (Ex. 1). Dr. Rook reviewed medical records related to Claimant's 2018 low back injury and 2020 low back injury to assess causation. Dr. Rook concluded that Claimant developed a new and distinct injury while at work on January 15, 2020, resulting in worsening low back pain and the onset of radiculopathy symptoms in both lower extremities.

26. Dr. Rook based his conclusion on the following factors:

- Claimant developed low back pain radiating down his left lower extremity while performing a physically demanding job on January 15, 2020;
- From a pathophysiological perspective, Claimant's body motions associated with pulling forces are known to place significant stress on low back spinal structures including muscles, discs, facet joints, and ligament/joint capsules;
- Claimant was able to perform his regular job duties without the need for physical restrictions before the January 15, 2020 injury;
- Claimant has not been able to return to his regular job since the January 15, 2020 injury;
- The lumbar discectomy surgery in 2018 was a success;
- The physicians that know Claimant best, Dr. Schafer and Dr. Stanton, both opine that Claimant's current increased low back pain that radiates into his lower extremities is related to the January 15, 2020 injury;
- Claimant's clinical objective examination has changed consistent with his complaints that are associated with the January 2020 injury;
- Claimant had an abnormal EMG indicating Claimant had an acute injury to his left L5 and S1 nerve roots;
- Claimant's physical examination demonstrated atrophy in his left calf, left extensor digitorum brevis, and absence of left ankle jerk.
Id at 12-13.

27. Dr. Rook opined that Claimant did not demonstrate exaggerated pain behaviors. Rather, Claimant's presentation is consistent with his objective abnormalities (MRI and EMG) and physical examination. *Id* at 14. Dr. Rook opined that he did not believe Dr. Paz's conclusions are compatible with Claimant's history and review of the medical records. *Id* at 16.

Hearing Testimony

28. Claimant testified at hearing. He stated that he was able to return to work without limitation after Dr. Schafer placed him at MMI in May 2019. Claimant testified that he was not having trouble performing his job duties until he injured his back and shoulder on January 15, 2020. Claimant explained that he told the physician assistant that his low back was hurting during his initial visit on January 17, 2020. He further explained that he thought that he was supposed to go to his primary care doctor for his low back based on his conversation with the physician assistant, since he felt like his back problems were pre-existing.

29. Dr. Paz testified at hearing consistent with his IME report. Dr. Paz based his opinion that Claimant did not injure his back on January 15, 2020, on his understanding of the mechanism of injury. Dr. Paz opined that the terms "disc extrusions and protrusions" found in the 2018 MRI report were pathological changes, indicating an acute injury, whereas the term "bulges" in the 2020 MRI

scan was degenerative and not traumatic. Despite his causation opinion, Dr. Paz agreed that an epidural steroid injection is *reasonable* to treat Claimant's low back injury.

30. Dr. Paz opined that the activity that Claimant was performing on January 15, 2020 would not be consistent with the mechanism of injury needed to cause or aggravate a disc or discs in the lumbar spine. He explained that the accepted cause of a herniated disc would include lifting a load, placing a load across the lumbar spine; or placing a load across the lumbar spine to partial flexion.
31. Dr. Paz opined that Claimant's pain behaviors seemed excessive during his physical examination. Dr. Paz explained that Claimant was unable to complete supine straight leg raise testing, but while in seated position he could achieve full extension across the right and left knee which was inconsistent. Also, Claimant had pain with simulated rotation of the lumbar spine which should not precipitate any symptoms. Dr. Paz testified that Claimant had three out of five Waddell signs which were nonphysiologic findings in low back injuries.
32. Dr. Paz opined that it was not medically probable that Claimant's low back condition was causally related to the January 15, 2020 work incident. This was because there were no contemporaneous symptoms documented; no lower extremity symptoms documented on the pain diagrams; no mechanism of injury which would contribute to causing or aggravating a preexisting pathology; and comparison of the MRI scans document degenerative changes and not traumatic changes. Initially, Dr. Paz opined that the epidural steroid injection was not reasonable, necessary, or related to the January 15, 2020 work incident. However, he later acknowledged that the proposed epidural steroid injection would in fact be *reasonable* to treat Claimant's back condition.
33. Selemaea Apineru testified at the hearing. Mr. Apineru is the operation supervisor for Employer. He testified that Claimant reported that he injured himself on January 15, 2020. However, he testified that Claimant only reported that he injured his shoulder, but not his back. Claimant agreed that he could continue working at this time. Mr. Apineru agreed that Claimant did not report having problems performing his job duties between May 2019 and the injury occurring on January 15, 2020.

Dr. Schafer's Deposition

34. Dr. Cynthia Shafer testified in a post-hearing deposition taken on September 23, 2020. Dr. Schafer is board certified in family medicine, with Level II accreditation. Dr. Schafer explained that she has served as Claimant's authorized treating physician for both his 2018 back injury and his 2020 back injury. Dr. Schafer testified that she released Claimant at MMI for his prior work injury in May 2019. She stated that Claimant was released to full duty work. She did not see Claimant again until January 21, 2020.

35. Dr. Schafer testified that Claimant reported having low back pain and lower extremity symptoms when she evaluated him on January 21, 2020. Dr. Schafer explained that Claimant reported the symptoms to the physician assistant Call, but the symptoms were not explored. Despite no notations by Claimant on his pain diagram at his initial visit with the PA, Dr. Schafer explained:

A In my HPI, on the date of service of 1-21-20, quote, He also notes that it is mentioned but not explored at the initial visit that his low back hurts more also. I already quoted this to – this was quoted previously when I spoke with [Attorney] Nicole [Gallerani]. (Transcript at 18).

36. When asked to explain further, she noted:

A Because he told me – Mr. Anderson is – knowing him for two years, he's a fairly concrete-thinking person. As so he thought, Well, it made his low back pain worse, and Ms. [PA Zoe] Call, he said wanted to focus on his shoulder. And he thought, Well, it's the low back pain, I had this previous injury so, okay, I'm just going to talk about the shoulder....So he thought that he needed to put it in a niche, that the back was all related to the previously (sic) injury and not the new injury. (Transcript at 21).

37. Dr. Schafer testified that Claimant's current symptoms are related to the new injury that occurred on January 15, 2020. Dr. Schafer credibly opined that the epidural steroid injections are reasonable, necessary, and related. She agreed with Dr. Rook's analysis in his IME report.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.
2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim*

Appeals Office, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing weight, credibility, and sufficiency of the evidence in Workers Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The ALJ finds that both Claimant and Mr. Apineru testified sincerely, and to the best of their respective abilities. In resolving any conflict, the ALJ finds that Mr. Apineru did not hear Claimant complain of his back at the time they spoke; however, the ALJ also accepts Claimant's explanation for the delay in reporting his back issues.
4. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ has heard oral testimony from one expert, Dr. Paz, but will also evaluate the IME report from Dr. Rook, and compare them, along with the deposition testimony from Dr. Schafer. The ALJ finds that all experts have provided sincere, yet contrasting, professionally rendered medical opinions. As such, the ALJ will determine which experts are more *persuasive*, as opposed to per se *credible*.

Medical Benefits, Generally

5. The Claimant is not entitled to medical care that is not *causally related* to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric, W.C. No. 4-514-998* (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the Claimant has the burden to prove that the disputed treatment is *causally related* to the injury, and *reasonably*

necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).

6. The Claimant has the burden to prove his entitlement to medical benefits by a preponderance of the evidence. §8-43-201, C.R.S. The Respondents are only liable for the medical treatment that is *reasonable and necessary* to cure and relieve the work-related injury. §8-42-101(1)(a), C.R.S.

Reasonable and Necessary

7. Based upon the evidence, the ALJ concludes that the proposed injections are *reasonable and necessary* to treat Claimant's back condition. This conclusion was essentially conceded even by Respondent's expert, Dr. Paz, during the hearing. This treatment comes recommended by Dr. Schafer, Dr. Stanton, and Dr. Primack, with no medical expert in opposition.

Causation

8. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. §8-41-301 (1)(c) C.R.S.; *Faulkner v Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner*, 12 P.3d at 846.
9. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.*, 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. See *Schepker, supra*. "In the course of" employment refers to the time, place, and circumstances of the injury.
10. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the preexisting condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a preexisting condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying preexisting condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a preexisting condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

Causation / Relatedness of 2020 Work Injury

11. Claimant had a good recovery from his 2018 back injury. Dr. Stanton's records reflect that the surgery was a success. This is corroborated by Claimant. Dr. Schafer released Claimant at MMI in May 2019 without permanent restrictions. Although Claimant had residual symptoms at MMI and beyond (hence his 21% impairment rating) Claimant returned to work and was able to perform his job duties without limitation between May of 2019 through January 14, 2020. Claimant's mechanism of injury is consistent with the symptoms he is now experiencing. To the extent that Dr. Paz differs with Dr. Schafer and Dr. Rook in this regard, the ALJ finds Drs. Schafer, Primack, and Rook more persuasive.
12. Dr. Paz (and not entirely without reason) relies heavily on the timing of Claimant's belated reporting and documentation of his back symptoms in 2020. However, the ALJ does find Claimant's explanation therefor to be satisfactory – as does Dr. Schafer. The ALJ finds that Claimant did indeed suffer significant pain in his lumbar region shortly after the work incident, which was temporarily overshadowed by pain in the shoulder, and confusion about the process of reporting his back issues.
13. Of great significance is that Claimant has now had an abnormal EMG, indicating that he has an acute injury to his left side L5/S1 nerve roots. His clinically objective examination is now different as noted by Dr. Rook, and the ALJ finds it is due to this new work injury, and not merely from a natural degenerative process. Claimant no doubt went to work with a compromised lumbar region on January 15, 2020. However, he has now shown that, at a minimum, his work activities on that date aggravated his back to the point of becoming symptomatic. He now requires medical treatment to bring him back to (it is hoped) MMI. Hopefully the injections will do the trick, but he has waited long enough to find out. The ALJ finds that Claimant has shown that the need for the proposed injections is *causally related* to his work injury.

ORDER

It is therefore Ordered that:

1. Claimant's current lumbar condition is causally related to the 1/15/2020 work injury.
2. Respondents shall pay for all reasonable, necessary, and related medical treatment, to include the lumbar epidural steroid injections as recommended by his ATP.
3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: October 28, 2020

ISSUES

Whether the claimant has overcome, by a preponderance of the evidence, the scheduled permanent impairment rating assessed by the Division sponsored independent medical examination (DIME) physician, Dr. Carlton Clinkscales.

FINDINGS OF FACT

1. The claimant worked for the employer for approximately 29 years. For many years, he worked as a cable splicer. This involved using hand tools to splice cables. The claimant was then promoted to the position of splicing supervisor. Although this was a supervisory position, the claimant continued actively working in the field.

2. On February 24, 2015, the claimant slipped on ice and fell. While falling, the claimant reached out with his right arm to catch himself. As a result, the claimant injured his right wrist.

3. Throughout much of his treatment, Dr. Bruce Lippman, Sr. was the claimant's authorized treating provider (ATP), with Glenwood Medical Associates.

4. On August 12, 2015, Dr. Michael Grillot performed the first of four surgeries to the claimant's right wrist. Dr. Gillot performed a right wrist arthroscopy with arthroscopic debridement of the radial triangular fibrocartilage complex (TFCC).

5. On July 1, 2016, Dr. Randall Viola performed surgery on the claimant's right wrist. That surgery included arthroscopy with TFCC radial sided debridement, distal radial ulnar joint open reduction and internal fixation with ulnar sided TFCC repair, ad open reduction and internal fixation of the distal radial ulnar joint with K wire fixation.

6. On August 12, 2016, Dr. Viola performed a right distal ulnar deep hardware removal.

7. On December 23, 2016 Dr. Viola performed a right wrist deep hardware removal.

8. On September 14, 2017, the claimant was seen by Dr. David Lorah for an impairment rating. At that time, Dr. Lorah determined that the claimant had reached maximum medical improvement (MMI). Dr. Lorah assessed a permanent impairment rating of two percent for the claimant's right upper extremity. With regard to ongoing medical treatment, Dr. Lorah opined that the claimant might need future treatment with Dr. Viola. He also noted that the claimant might need a new brace in the future. Finally, he recommended that the claimant continue his home exercise program.

9. On October 16, 2017, the claimant was seen by Dr. Lorah, who released the claimant to full duty with no work restrictions.

10. On October 30, 2017, the respondents filed a Final Admission of Liability (FAL). In that FAL, the MMI date of September 14, 2017 and the impairment rating assigned by Dr. Lorah were admitted. The respondents denied maintenance medical treatment.

11. On November 6, 2017, the respondents filed an amended¹ (FAL). The respondents again admitted for the MMI date of September 14, 2017 and the impairment rating assigned by Dr. Lorah. The respondents denied maintenance medical treatment.

12. On November 9, 2017, the claimant filed his Objection to Final Admission and requested a Division sponsored independent medical examination (DIME).

13. On December 3, 2018, the claimant attended the DIME with Dr. Carlton Clinkscales. In connection with the DIME, Dr. Clinkscales reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his December 13, 2018 DIME report, Dr. Clinkscales listed the claimant's diagnoses as right wrist pain, right TFCC tear, right DRUJ instability post stabilization; right wrist pain following hardware removal. Dr. Clinkscales noted that as of October 16, 2017, the claimant was released to work full duty with no restrictions. Dr. Clinkscales assessed a permanent impairment rating of five percent for the claimant's right upper extremity.

14. Based upon the report of Dr. Clinkscales, on February 21, 2019, the respondents filed an Amended FAL. The respondents admitted for the date of MMI of September 14, 2017 and the scheduled impairment rating of five percent for the claimant's right upper extremity. Again, the respondents denied maintenance medical treatment.

15. On May 20, 2020, the claimant filed an Application for Hearing (AFH) that led to the current hearing. In that AFH, the claimant listed the issues to be addressed at hearing as overcoming the DIME. No other issues were endorsed for hearing.

16. The claimant testified that his current symptoms include pain, numbness, and tingling in his right wrist. In addition, he has issues with dropping things with his right hand. Although the claimant is right hand dominant, due to his right wrist symptoms, the claimant often uses his left hand or both hands to complete tasks.

17. The claimant argues that the ALJ should consider Dr. Clinkscales's opinions with regard to maintenance medical treatment, work restrictions, and permanent impairment rating.

¹ It appears that the reason the FAL was amended was to correct the date of maximum medical improvement.

18. The respondents argue that work restrictions, as determined by Dr. Clinkscales, would only be relevant in determining the claimant's entitlement to temporary or permanent disability benefits.

19. The ALJ agrees with the respondents and finds that the only issue properly before her is whether the claimant has overcome, by a preponderance of the evidence, the scheduled permanent impairment rating assessed by Dr. Clinkscales.

20. Here, Dr. Lorah assessed a permanent impairment rating of two percent, while the DIME physician, Dr. Clinkscales, assessed five percent. The ALJ notes that both of these impairment ratings are scheduled ratings for the claimant's right upper extremity. The ALJ finds that the accurate scheduled impairment rating for the claimant's right upper extremity is the higher rating of five percent, as assessed by Dr. Clinkscales.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the

evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra*. A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. However, the increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that “when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8).” Therefore, the procedures set forth in Section 8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries.

6. The Court of Appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of Section 8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018). Claimant has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc. and Indemnity Care ESIS Inc.*, W.C. No. 4-777-882 (ICAO, Nov. 5, 2010); *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (ICAO, June 5, 2007).

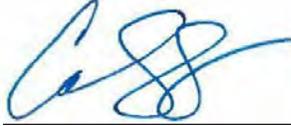

7. As found, the claimant has failed to overcome, by a preponderance of the evidence, the scheduled permanent impairment rating assessed by the DIME physician, Dr. Clinkscales.

[Intentionally left blank]

ORDER

It is therefore ordered that the accurate scheduled impairment rating for the claimant's right upper extremity is five percent, as assessed by Dr. Clinkscales.

Dated this 29th day of October 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-105-470-001**

ISSUE

1. Whether Respondents have established by a preponderance of the evidence that Claimant did not sustain a compensable work-related injury and may therefore withdraw the admissions of liability.
2. If Respondents fail to establish the above, whether Respondents have established by clear and convincing evidence, that the Division Independent Medical Examination opinion of John Bissell, M.D., regarding maximum medical improvement and whole person permanent partial disability impairment rating is incorrect.
3. Whether Respondents have established by a preponderance of the evidence that the Claimant fraudulently supplied false information upon which Respondents relied in filing their admission, entitling Respondents' to repayment of benefits.

FINDINGS OF FACT

1. Claimant is a 42-year-old male, who was working as a bus driver for Employer on February 27, 2019.
2. On February 27, 2019, at approximately 10:51 a.m., Claimant was seen in the Denver Health emergency department for complaints of neck pain, dizziness and numbness by Spencer Tomberg, M.D. Claimant reported a two-week history of posterior neck pain and stiffness, followed by right upper extremity and right lower extremity numbness the week prior to the examination. Claimant reported his neck stiffness had resolved, but he came into the emergency department because of the new numbness, which he described as a deep aching pain in the arm. Claimant reported he "slept wrong, fell asleep on a chair with his shoulder and arm propped up." Claimant reported limited range of motion, and trouble reaching to grab his seatbelt or scratch his head. Claimant also reported that he had a feeling of swelling or throbbing in his left fingers, but this had resolved. Claimant also reported episodes of imbalance occurring for the previous week. Dr. Tomberg opined that Claimant's clinical history and exam were most consistent with right shoulder impingement. Dr. Tomberg referred Claimant for physical therapy for right shoulder impingement and right lower back pain." (R.Ex. D).
3. Respondents called Blayre Stevens, a claims representative for Insurer's third-party administrator (TPA). Ms. Stevens testified that on March 18, 2019, Claimant described his injury to another adjuster as occurring after he was driving a bus for approximately six hours when he developed right shoulder pain that radiated down to his right arm and fingers. Claimant reported experiencing pain radiating down his right arm and fingers and that he called a supervisor who got the bus, and Claimant drove himself to Denver Health. Ms. Stevens testified that Insurer relied upon Claimant's description of

his injury and the March 15, 2019 report from Concentra when it filed a general admission of liability (GAL) on April 15, 2019. The adjuster to whom Claimant apparently provided his statement did not testify, and no written documents memorializing the conversation were offered or admitted into evidence. No evidence was offered regarding the circumstances or nature of Claimant's statement to the TPA, other than that it was a "conversation."

4. On March 15, 2019, Claimant saw Marie Mueller, N.P., at Concentra. Claimant reported he was driving and developed stiffening of his neck and right shoulder, began experiencing lightheadedness and pulled over. Claimant denied any trauma or injury. Claimant indicated he believed the source of his pain was reaching over his shoulder 30-35 times per day. Claimant reported his lightheadedness had resolved. Claimant indicated he had no previous injury to his neck or shoulder. Although Claimant reported working regular duty, he also reported he felt it was not safe to drive because he had pain lifting his arm.(R.Ex. E). Ms. Mueller recommended work restrictions to include lifting up to 10 lbs. occasionally, no driving company vehicle due to functional limitations, and no reaching above shoulders with affected extremity.

5. On physical examination of Claimant's right shoulder, Ms. Mueller found tenderness in the rhomboids, pain with all ranges of motion tested, and normal strength. On rotator cuff testing, she found a negative lift-off test. Cervical spine examination showed no tenderness, and full range of motion with pain on left-side bending, normal grip and normal reflexes. Ms. Mueller diagnosed claimant with a neck strain and right shoulder strain. Ms. Mueller prescribed ibuprofen and Tizanidine HCL and referred Claimant for physical therapy. (R.Ex. E).

6. Between March 18, 2019 and April 11, 2019, Claimant attended seven physical therapy appointments at Concentra. In total, Claimant attended twelve physical therapy appointments at Concentra between March 18, 2019 and May 1, 2019. At his initial appointment on March 18, 2019 Claimant reported that he did not experience a specific injury, and that the pain in his right shoulder was of a gradual onset. (R.Ex G).

7. On April 11, 2019, Claimant saw Ms. Mueller for a follow up appointment. Ms. Mueller reported no change in Claimant's condition. Claimant reported continuing to experience pain in his right trapezius. On examination of Claimant's right shoulder, Ms. Mueller noted tenderness in the trapezius muscle and in the superior shoulder, with pain on range of motion. On physical examination of Claimant's neck, Ms. Mueller noted tenderness in the "ulevel" cervical spine (muscular, C3, C4 and C5) and right trapezius muscle. Ms. Mueller also found pain in right-side bending of the cervical spine, and left rotation of cervical spine. Claimant had negative cervical spine instability and axial load testing, negative Spurling's maneuver and negative Valsalva test. Ms. Mueller noted that Claimant was approximately 25% of the way to meeting the physical requirements of his job. Ms. Mueller ordered an MRI of Claimant's right shoulder, and modified Claimant's work restrictions to allow claimant to return to work his entire shift, with no reaching above shoulder, behind shoulder or across his body with his right arm.

8. On April 19, 2019, Claimant filed a Worker's Claim for Compensation in which he indicated that he sustained an injury to his right shoulder as the result of "repetitive motion." (R.Ex. I).

9. On April 30, 2019, Claimant saw Ms. Mueller. Claimant reported feeling pain "deep" in his right shoulder joint. Ms. Mueller's physical examination of Claimant's right shoulder was unchanged from her April 19, 2019 examination. Ms. Mueller's physical examination of Claimant's cervical spine was unchanged from her April 11, 2019 examination. (R.Ex. E).

10. On May 8, 2019, Claimant had an MRI of his right shoulder performed at OpenSided MRI. The MRI was interpreted by Mark Howshar, M.D. Claimant reported a three-month history of shoulder pain with decreased range of motion, possibly the result of a repetitive motion injury. Dr. Howshar's interpreted the MRI as negative for a rotator cuff tear, and with subtle edematous changes within the distal clavicle. Dr. Howshar noted that the edematous changes were "nonspecific, but can be related to AC joint injury, acute or chronic. No biceps mechanism or labral pathology is identified." (R.Ex. H).

11. May 9, 2019, Claimant saw Jay Reinsma, M.D., at Concentra. Dr. Reinsma noted that he had discussed Claimant's case with physical therapy, "who hasn't really been able to locate any pathology." Claimant was insistent that he be released to perform his regular job duties. Dr. Reinsma noted that Claimant was at was at his functional goal, but not at the end of healing. Dr. Reinsma's assessment was neck strain. Dr. Reinsma recommended physical therapy to address impairment/functional loss and to expedite return to full activity. Dr. Reinsma noted that Claimant was released to return to regular duty as he had good function and "no evidence of pathology on MRI." On physical examination of Claimant's right shoulder, Dr. Reinsma noted tenderness with elevation, abduction and adduction, full range of motion with pain, and normal motor strength bilaterally. Claimant's right trapezius muscle was tender, and Claimant had full cervical range of motion, with pain on extension.(R.Ex. E).

12. On May 23, 2019, Claimant saw Ms. Mueller. At that time, Claimant reported that he was not able to lift, and that his shoulder felt the same as it did at his first visit. On physical examination of Claimant's right shoulder, Ms. Mueller noted full range of motion with pain, and normal muscle strength, bilaterally. Ms. Mueller diagnosed claimant with a right shoulder strain and neck strain. Ms. Mueller authorized Claimant to return to full work activity. Ms. Mueller ordered an MRI of Claimant's cervical spine. (R.Ex. E).

13. On June 20, 2019, Claimant had a cervical MRI at OpenSided MRI. Dr. Howshar interpreted the MRI as showing a protrusion of disc material primarily at C4-5 and C5-6, central/left paracentral in location causing canal and lateral recess narrowing, more on the left. No overt disc extrusion, compression or other fracture or subluxation.

14. On July 19, 2019, Claimant saw Ms. Mueller. On examination of Claimant's right shoulder, Ms. Mueller noted tenderness in the trapezius muscle, with normal palpation. Pain with active range of motion on forward flexion and abduction of the right shoulder,

and normal motor strength bilaterally. Ms. Mueller' examination of Claimant's cervical spine was normal, with the exception of pain on extension.

15. On June 27, 2019, Claimant saw Ms. Mueller after undergoing a cervical MRI. Ms. Mueller noted that the MRI revealed a protrusion of disc material, primarily at the C4-5 and C5-6 levels. The disc protrusion was central/left paracentral in location causing canal and lateral recess narrowing, more on the left. Ms. Mueller referred Claimant for a visit with a physiatrist physician. (R.Ex. E).

16. On July 19, 2020, Claimant saw Kathy McCranie, M.D., a physiatrist. At that time, Claimant indicated he was having pain in his right shoulder area, that he attributed to reaching over his shoulder when grabbing for his seatbelt multiple times per day. Dr. McCranie provided trigger point injections and a TENS unit. Dr. McCranie testified that trigger point injections were helpful to Claimant. Dr. McCranie also referred Claimant for massage therapy and acupuncture – treatments Claimant elected not to pursue.

17. On November 1, 2019, Claimant was seen at Concentra. The medical record was dictated by Ms. Mueller and co-signed by Dr. Reinsma. Ms. Mueller found Claimant's right shoulder to be normal in appearance, tender in the trapezius muscle, with a palpable trigger point in the right trapezius. Claimant continued to have pain with forward flexion and abduction. Ms. Mueller also found Claimant was able to internally rotate his shoulder to reach belt with pain. Claimant was placed at maximum medical improvement and assigned a 4% scheduled impairment rating for Claimant's right upper extremity. The impairment rating was based on an impairment assigned by Dr. McCranie on October 25, 2019. Dr. McCranie's medical record from October 25, 2019 is not included in the Court record, although Dr. McCranie's impairment rating worksheet is included with the November 1, 2019 Concentra record. (R.Ex. E).

18. Respondents filed a Final Admission of Liability on December 10, 2019, admitting for a 4% scheduled impairment for Claimant's right upper extremity and maintenance medical care in accordance with Dr. Reinsma's report of November 1, 2019. (R.Ex. J). Respondents paid Claimant medical benefits totaling \$7,624.68; temporary disability benefits in the amount of \$2,865.67; and permanent partial disability benefits in the amount of \$2,579.20.

19. Claimant objected to the FAL and requested a Division Independent Medical Examination (DIME). John Bissell, M.D., was selected to perform the DIME.

20. On March 19, 2020, John Bissell, M.D. examined Claimant and Claimant's medical records. Dr. Bissell's DIME report does not indicate the records he reviewed. Dr. Bissell's recitation of medical history indicates Claimant was seen at Denver Health on February 27, 2019, but it appears the information related to that date of treatment was derived from Ms. Mueller's March 15, 2019 report. Dr. Bissell's report does not include Claimant's description of the cause of his injury contained in the February 27, 2019 Denver Health report. The ALJ infers, based on the totality of the evidence, that the February 27, 2019 Denver Health emergency department record was not included in the records provided to Dr. Bissell. (R.Ex. A).

21. Claimant reported to Dr. Bissell that he sustained an injury on February 27, 2019 to his right shoulder/neck region. Claimant reported he was driving a bus and reached with his right and over his left shoulder to grab his seatbelt. Claimant reported in the process of reaching, he experienced a sudden onset of severe sharp pain in his right shoulder/neck region (upper mid-trapezius area). Dr. Bissell noted that Claimant reported to physical therapy that his right shoulder/neck pain had been of gradual onset with progressive worsening. Claimant reported to Dr. Bissell that initially he did not believe his injury was work-related, and initially began physical therapy under his private insurance. No records regarding such physical therapy were offered or admitted into evidence. (R.Ex. A).

22. Dr. Bissell's opinions regarding the relatedness of Claimant's injuries to his employment are difficult to ascertain. In separate sections of his report, Dr. Bissell opines that Claimant's injuries are both work-related and unrelated to his work.

23. First, Dr. Bissell's report lists as "Clinical Diagnoses" "Cervical sprain/strain – claim related; Cervical herniated disc with severe canal stenosis – claim related; and right trapezial pain, referred from neck – claim related." (R.Ex. A).

24. In the "Apportionment" section of his report, Dr. Bissell states "Normally I do not comment on causation when performing a DWC IME but in this case I will make an exception because it bears on the evaluation and treatment of this patient." Dr. Bissell then opined that Claimant's presentation and radiological studies were more consistent with Claimant's report to his Concentra physical therapist of a gradual onset of pain with progressive worsening, rather than the sudden onset of pain he described to Dr. Bissell. (R.Ex. A).

25. With respect to Claimant's right trapezial pain, in his "Clinical Diagnoses" Dr. Bissell listed "right trapezial pain, referred from neck – claim related." Dr. Bissell also stated that Claimant's right shoulder MRI showed nonspecific distal clavicle edematous change which would not explain why he has right upper trapezial pain. Dr. Bissell then stated, under "Regarding MMI" that "In the course and scope of his employment as a driver for RTD, the patient sustained an injury to his right upper quarter on February 27, 2019." Dr. Bissell also opined that Claimant's right trapezial pain "is actually referred pain due to his severe cervical stenosis and herniated disc." Later, Dr. Bissell opined that Claimant "sustained no ratable injury to his right shoulder as a result of the February 27, 2019 work injury." The ALJ concludes that Dr. Bissell, the DIME, determined that Claimant did not sustain a compensable injury to his right shoulder or trapezius area in the course of or arising from his employment, and that any issues Claimant was experiencing in his right shoulder/trapezius area were related to the disc herniation and canal stenosis in his cervical spine. (R.Ex. A).

26. With respect to Claimant's cervical disc herniation, Dr. Bissell's conclusions are similarly contradictory. Initially, Dr. Bissell diagnosed Claimant with "Cervical herniated disc with severe canal stenosis – claim related." Dr. Bissell indicated Claimant's cervical MRI demonstrates "severe central and left paracentral canal stenosis at C5-6." However, he also opined that there "was no specific injury on February 27, 20219 which would

explain the development of a large herniated disc occupying most of the patient's spinal canal, therefore it is my opinion this patient's right/neck shoulder condition did not occur as a result of a work injury and is not specifically work-related." (Emphasis added). Despite reaching this conclusion, Dr. Bissell provided an impairment rating for Claimant's cervical spine, a condition he specifically indicated was not work-related. Similarly, Dr. Bissell found that Claimant was not at MMI for his non-work-related cervical spine condition. (R.Ex. A). The ALJ concludes that Dr. Bissell's statement that Claimant did not sustain an injury that would explain the development of a large herniated disc is the best expression of his opinion, and that Dr. Bissell determined Claimant's cervical disc herniation and canal stenosis did not occur in the course of and arising out of his employment.

27. Dr. Bissell opined that Claimant was not at maximum medical improvement and provided a provisions permanent impairment rating related to Claimant's neck condition. Dr. Bissell assigned a 13% whole person impairment—6% for a specific cervical disorder, and 7% for cervical range of motion deficits. (R.Ex. A). Because he found Claimant did not sustain a work-related injury, Dr. Bissell's opinions on MMI and impairment ratings were essentially gratuitous.

28. Dr. Bissell opined that Claimant was in need of follow up care with his authorized treating physicians, diagnostic testing in the form of EMG/NCV testing, consideration of neuraxial spine injection, referral for spine surgical evaluation, right upper limb EMG/NCV testing and acromioclavicular injection of the right shoulder. (R.Ex. A). The "maintenance care" Dr. Bissell recommended is related to the injuries he found were not work-related, and thus non-binding on Respondents.

29. On June 11, 2020, Claimant underwent an independent medical examination at Respondents' request, performed by Lawrence Lesnak, D.O. Claimant reported that while he was preparing to drive his bus, while seated in the driver's seat, he reached across his body with his right arm for the seatbelt, and developed a sudden, acute stabbing pain in his right suprascapular and right lateral neck region. Dr. Lesnak reviewed Claimant's available medical records (not including the February 27, 2019 report from Denver Health emergency department) and performed a physical examination.

30. Dr. Lesnak concluded that, at the time of his evaluation, Claimant had intermittent complaints of right upper trapezius and suprascapular myofascial pain. Dr. Lesnak also concluded that there was no evidence of symptomatic cervical spine pathology or symptomatic right shoulder joint pathology. Dr. Lesnak noted that Claimant may have self-limited his range of motion due to fear of pain, rather than a true anatomic restriction of his right shoulder, and that he had full range of motion in his cervical spine in all planes, without reproduction of symptoms. Dr. Lesnak opined that Claimant is at maximum medical improvement, and that Claimant did not sustain a work-related injury.

31. On June 29, 2020, Dr. Lesnak issued an "IME Addendum" report, after being provided Claimant's February 27, 2020 records from Denver Health Medical Center. Dr. Lesnak opined that, based on the Denver Health records, Claimant was experiencing symptoms in his shoulder at least 1-2 weeks prior to February 27, 2019. Dr. Lesnak

opined that Claimant did not require any further medical care, medical evaluations, diagnostic testing, or interventional treatments.

32. Dr. Lesnak testified by deposition and was qualified as an expert in physical medicine (physiatry). Dr. Lesnak testified that he reviewed the Denver Health emergency department report from February 27, 2019. Dr. Lesnak testified it is “medically improbable” that the act of reaching for a seatbelt would cause a neck or shoulder strain. Dr. Lesnak also testified that based on his review of Claimant’s medical records, there was no evidence of a neck strain or specific shoulder strain based on the initial objective findings at Concentra on March 15, 2019. Dr. Lesnak testified it is “physiologically improbable” that the findings on Claimant’s shoulder MRI would be caused by Claimant reaching across his body to grab a seat belt. Similarly, Dr. Lesnak testified that it would be implausible that the act of reaching for a seatbelt would cause the Claimant’s cervical spine pathology or aggravate pre-existing pathology.

33. Dr. McCranie testified at hearing. Dr. McCranie testified she was provided a copy of the Claimant’s February 27, 2019 Denver Health emergency department report sometime after she last saw the Claimant in October 2019. Dr. McCranie testified that the mechanism of injury Claimant described to her was significantly different than that contained in the Denver Health emergency department record. Dr. McCranie testified that based on the Claimant’s report to Denver Health on February 27, 2019, Claimant did not sustain a work-related injury.

34. Claimant did not testify at hearing, and Claimant offered no testimony of any other witness.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers’ Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility,

the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

WITHDRAWAL OF ADMISSION OF LIABILITY - COMPENSABILITY

When respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; see also *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that “a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.” The amendment to §8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838-01 (ICAO, Oct. 1, 2013). Respondents must, therefore, prove by a preponderance of the evidence that the Claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

A compensable injury is one that arises out of the course and scope of employment with one's employer. §8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). There must be a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the requisite causal connection exists is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc.*, W.C. No. 4-588-675, (ICAO, Sept. 1, 2006).

Respondents have established by a preponderance of the evidence that they are entitled to withdraw their December 10, 2019 Final Admission of Liability. On February 27, 2019, Claimant reported to the Denver Health emergency room and described a 1-2-week history of neck and shoulder pain that started after Claimant “slept wrong, fell asleep on a chair with his shoulder and arm propped up.” Although the Claimant was at work when his symptoms reached the point of seeking medical attention at Denver Health, and he reported to Denver Health that his symptoms were aggravated by reaching for his seatbelt, the evidence established it more likely than not that the Claimant’s injury did not arise out of his employment.

Based on medical records and Dr. McCranie’s testimony, Claimant’s health care providers accepted Claimant’s description of his injury occurring during work as the result of reaching for his seatbelt (either repetitively or suddenly on February 27, 2019). Although Claimant did disclose to his providers and Insurer that he went to Denver Health on February 27, 2019, the records from Denver Health were not obtained until some time after Dr. Bissell’s DIME was performed on March 19, 2020. After review of this information, Dr. McCranie revised her opinion and testified that Claimant’s injuries were not work related. The ALJ finds Dr. McCranie’s opinion that Claimant did not sustain a work-related injury credible. Similarly, Dr. Lesnak credibly testified that Claimant’s injuries were unlikely to result from reaching for his seatbelt, and the action of reaching for a seatbelt was unlikely to aggravate any preexisting condition.

Contrary to Claimant’s assertion, the ALJ does not find that Dr. Bissell found the Claimant’s injuries to be work-related. As found, Dr. Bissell’s report is internally inconsistent and his various statements regarding the relatedness of Claimant’s injuries were incompatible. Although Dr. Bissell stated that Claimant’s diagnoses were “claim related,” his analysis indicates that he found that Claimant did not sustain a work-related injury to his shoulder. Dr. Bissell found Claimant’s shoulder pain to be referred from his cervical disc herniation and canal stenosis. Dr. Bissell also specifically stated that “[t]here was no specific injury on February 27, 2019 which would explain the development of a large herniated disc occupying most of the patient’s spinal canal...” Dr. Bissell also opined that claimant’s C5-6 disc herniation was present at the time of his initial evaluation, which Dr. Bissell incorrectly believed to be March 15, 2019. Based on a totality of the evidence, the ALJ concludes that Dr. Bissell found the Claimant did not sustain an injury to his shoulder, neck or cervical spine arising out of or in the course of his employment.

Respondents have established by a preponderance of the evidence that the Claimant did not sustain a compensable injury, arising from and in the course of his employment. As such, Respondents may withdraw their GAL and FAL.

REPAYMENT OF BENEFITS FOR FRAUD

Respondents have not established by a preponderance of the evidence that Claimant committed fraud such that the ALJ may order repayment of benefits. An ALJ may permit an insurer to withdraw an admission of liability and order repayment of benefits paid under the admission if the claimant fraudulently supplied false information upon which the insurer relied in filing the admission § 8-43-303(4) C.R.S.; see also *Renz v. Larimer County School Dist. Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). Because admissions of liability may not ordinarily be withdrawn retroactively, § 8-43-201(1), C.R.S. provides that the party seeking the reopening bears the burden of proof by a preponderance of the evidence to establish the existence of fraud. See also *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June 5, 2012).

To establish fraud or material misrepresentation a party must prove the following:

- (1) A false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; or concealment of a material existing fact;
- (2) Knowledge on the part of one making the representation that it is false;
- (3) Ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact;
- (4) Making of the representation or concealment of the fact with the intent that it be acted upon; [and]
- (5) Action based on the representation or concealment resulting in damage

See *In re Arczynski*, W.C. No. 4-156-147 (ICAO, Dec. 15, 2005); see also *Morrison v. Goodspeed*, 68 P.2d 458 (Colo. 1937). Where the evidence is subject to more than one interpretation, the existence of fraud is a factual determination for the ALJ. *In re Arczynski*, W.C. No. 4-156-147 (ICAO, Dec. 15, 2005).

The evidence in this case does not compel a finding that Claimant knowingly engaged in fraud. Ms. Stevens testified that Claimant reported to a different adjuster he developed right shoulder pain after driving his bus for roughly six hours, that he called a supervisor to get his bus and drove himself to Denver Health. This statement is not inconsistent with Claimant's report to Denver Health that he had neck stiffness previously from sleeping on a chair, but that his neck stiffness had resolved, and he came into the emergency department because of the new numbness, which he described as a deep aching pain in the arm.

The ALJ does not find that Claimant's statement to the TPA was a knowing false representation or a representation of a material fact with a reckless disregard for its truth. Nor can the ALJ conclude that Claimant knowingly concealed a material fact from the TPA. Claimant disclosed to the TPA and his health care providers that he went to Denver Health on February 27, 2019 for his injuries. The ALJ concludes that had the Claimant intended to conceal his report to Denver Health, he would not have disclosed to the TPA

or health care providers that he had sought treatment at Denver Health, as the information he reported to Denver Health was readily apparent from the Denver Health records.

Because neither party called the Claimant as a witness, there is no evidence in the record to establish that Claimant acted with the intent that his statement to the TPA be acted upon.

The ALJ finds that Respondents failed to establish the elements of fraud by a preponderance of the evidence.

OVERCOMING THE DIME ON MMI AND IMPAIRMENT

Because the ALJ has concluded that Claimant did not sustain a compensable work-related injury, the issues of whether Respondent has overcome Dr. Bissell's opinions on MMI and Impairment are moot.

ORDER

It is therefore ordered that:

1. Respondents request to withdraw its March 15, 2019 GAL and December 10, 2019 FAL is granted.
2. Respondents have failed to establish by a preponderance of the evidence that Claimant fraudulently supplied false information upon which Respondents relied in filing their admission. Respondents' request for an order requiring Claimant to repay benefits is denied.
3. The remaining issues are moot.
4. All matters not determined herein are reserved for future determination

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to

review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: October 29, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits for the period of April 8, 2019 through May 12, 2020.

If it is determined that the claimant is entitled to TTD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant was responsible for termination of his employment with the employer, thereby terminating his entitlement to TTD benefits.

If it is determined that the claimant is entitled to TTD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, that an intervening event occurred that was sufficient to sever the respondent's liability and terminate the claimant's TTD benefits.

The parties agree that the claimant received unemployment insurance benefits (UIB) during the period of May 3, 2019 through September 17, 2019. The parties stipulated that if the claimant is found to be eligible for TTD benefits, the respondents are entitled to an offset for the time the claimant received UIB. The ALJ approves and adopts this stipulation of the parties.

FINDINGS OF FACT

1. The claimant suffered an injury at work on April 4, 2019 while employed as Executive Chef. On that date, the claimant was at work performing his normal job duties and assisted one of his coworkers with dumping a large pot of boiled potatoes. During this process, the claimant was standing on a drain cover, and the drain cover moved. This resulted in the claimant's left foot slipping into the drain, causing his left knee to twist.

2. The claimant sought medical treatment in the emergency department (ED) with Vail Health on April 8, 2019, which was his day off. At that time, the claimant was provided crutches and a knee brace. In addition, he was given work restrictions that included no bending and no squatting.

3. Following the ED visit, the claimant reported to work for the employer, using crutches and a knee brace. Although the season had ended, there were meetings scheduled to discuss the next season. When the claimant arrived he informed the manager, Rafal K[Redacted], of his work restrictions.

4. The claimant testified that his last day of work was April 8, 2019. On that date, the claimant was informed that his services were no longer needed by the employer. The claimant believed he was performing well in his position, as evidenced by the planned

meetings to discuss the upcoming season. The claimant was told by the employer that termination of his employment was not related to his left knee injury.

5. Rafal K[Redacted], Managing Director of the employer's restaurant testified by deposition. Mr. K[Redacted] testified that on April 8, 2019, he and the company owner, Thomas Sullivan, informed the claimant that his employment was terminated. Mr. K[Redacted] also testified that it was the claimant's job performance that led to his job termination. Mr. K[Redacted] noted that the claimant did not meet the employer's standards and was unable to lead. In addition, the claimant was disruptive during meetings and his food did not meet the employer's standards. Mr. K[Redacted] further testified that the claimant was verbally counseled about the employer's concerns prior to April 8, 2019. Mr. K[Redacted] testified that if the claimant's employment had not ended, the employer would have been able to accommodate the claimant's work restrictions. Mr. K[Redacted] also testified that the claimant was not terminated because of his knee injury.

6. Subsequently, the claimant began treatment with Lucia London, CNP and Dr. Alysa Koval with Vail Health/Occupational Health. On May 3, 2019, Ms. London recommended physical therapy and referred the claimant to Vail Summit Orthopaedics for consultation.

7. On May 8, 2019, the claimant was seen at Vail Summit Orthopaedics by Jonathan Walker, PA-C. At that time, the claimant reported ongoing left knee pain. Mr. Walker recommended conservative treatment including physical therapy and a steroid injection. On that same date, Dr. William Sterett administered an intra-articular injection.

8. On May 31, 2019, the claimant returned to Dr. Sterett. At that time, Dr. Sterett recommended that the claimant undergo a left knee diagnostic arthroscopy, lysis of adhesion, with synovectomy. On June 3, 2019, a request for authorization of the recommended surgery was submitted to the insurer.

9. The respondents filed a General Admission of Liability (GAL) on June 27, 2019. However, as reported in the other medical records, it appears that the recommended left knee surgery was denied by the respondents.

10. The claimant was again seen by Dr. Sterett on August 21, 2019. At that time, Dr. Sterett noted that the claimant had significant pain relief from the prior steroid injection. Dr. Sterett again recommended that the claimant undergo surgical intervention involving a left diagnostic arthroscopy and synovectomy. On August 22, 2019, a request for authorization of the recommended surgery was submitted to the insurer.

11. On September 16, 2019, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. Dr. Lesnak did not believe that the claimant was in need of any additional medical treatment, including further injections or surgery. Dr. Lesnak also opined that the claimant had reached maximum medical improvement (MMI). Based upon the opinions of Dr. Lesnak, the respondents denied authorization for the recommended surgery.

12. On November 7, 2019, the parties went to a hearing on the issue of whether the recommended left knee surgery was reasonable, necessary and related to the admitted work injury.

13. On January 7, 2020, the undersigned ALJ issued Findings of Fact, Conclusions of Law, and order in which it was determined that the recommended left knee surgery was not reasonable, necessary, and related to the claimant's work injury. Accordingly, the claimant's request for the surgery was denied and dismissed.

14. The claimant testified that during the month of January 2020, he worked for another employer, Blue Moose Pizza, working in the "front of house". The claimant also testified that during that employment he earned approximately \$2,000.00.

15. The claimant worked at Blue Moose Pizza until he was able to apply for and obtain medical coverage through Medicaid. Once he was covered by Medicaid, the claimant underwent the recommended left knee surgery on February 4, 2020. The cost of the surgery was paid for by Medicaid.

16. On May 1, 2020, the claimant was seen by Dr. Koval. On that date, Dr. Koval noted that the claimant could return to full duty on May 12, 2020.

17. On May 12, 2020, the claimant was seen by Ms. London who noted that following surgery the claimant's knee pain had resolved. On that date, Ms. London released the claimant to full duty work with no work restrictions.

18. The ALJ credits the medical records and the claimant's testimony and finds that the claimant has demonstrated that it is more likely than not that as a result of the work injury, he suffered a wage loss. The ALJ notes that the claimant was not provided any further work with the employer after the injury. In addition, the ALJ infers that with crutches, knee brace, and his work restrictions, the claimant would have been unable to perform his normal duties as an executive chef, had his employment continued. Therefore, the ALJ finds that the claimant was eligible for temporary total disability (TTD) benefits beginning April 8, 2019.

19. The ALJ credits the claimant's testimony over the conflicting testimony of Mr. K[Redacted], and finds that the respondent has failed to demonstrate that it is more likely than not that the claimant was responsible for the termination of his employment. The ALJ finds that the claimant was reasonable in his belief that he was meeting the employer's expectations. Therefore, the ALJ finds that the claimant did not engage in any volitional act, or exercise control over the termination of his employment.

20. The ALJ credits the medical records and the claimant's testimony and finds that the respondent has successfully demonstrated that it is more likely than not that the claimant's surgery on February 4, 2020 constitutes an intervening event severing the respondents' liability to pay TTD benefits from that date. The ALJ finds that any wage loss the claimant experienced following that surgery is not related to the claimant's April 4, 2019 work injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant’s inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician; a claimant’s testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant’s ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

5. As found, the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to TTD benefits beginning April 8, 2019. As found, the medical records and the claimant’s testimony are credible and persuasive.

6. Under the termination statutes in Section 8-42-105(4), C.R.S and Section 8-42-103(1)(g), C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act “volitionally” or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. See *Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus “responsible” if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep’t of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

7. Violation of an employer’s policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). An “incidental violation” is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be “responsible” for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer’s expectations may result in termination. See *Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992) (claimant disqualified from unemployment benefits after discharge for unsatisfactory performance when aware of expectations, even if not explicitly warned that job was in jeopardy). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

8. As used in the termination statutes, the word “responsible” “does not refer to an employee's injury or injury-producing activity.” *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1064 (Colo. App. 2002). Therefore, Colorado termination statute 8-42-105(4)(a) is inapplicable where an employer terminates an employee because of the employee's injury or injury-producing conduct. See *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008); *Colorado Springs Disposal*, 58 P.3d at 1062. Of course, a separation from employment is not necessarily due to an injury simply because it occurs after the injury, and the injured employee need not be offered modified employment before discontinuation of benefits if they were responsible for their separation. See *Gilmore*, 187 P.3d 1129; *Ecke v. City of Walsenburg*, W.C. No. 5-002-020-02 (ICAO, May 5, 2017) (injury occurring one day before claimant’s previously-announced retirement did not cause claimant’s separation from employment).

or loss of wages). However, if the injury also leads to wage loss at a claimant's secondary employment, they are eligible for compensation for those wages, even if their separation from their primary employer was voluntary or for cause. *Id.*

9. A claimant who was "unable to do the work because of a mental, physical, or skills-based impairment," had been terminated for non-volitional conduct and was not "at fault" for the purposes of unemployment compensation. *Mesa County Pub. Library Dist. v. Industrial Claim Appeals Office*, 96, 399 P.3d 760, 766 (Colo. App. 2016), *aff'd*, 396 P.3d 1114 (Colo. 2017). The extent to which the claimant brought on her own mental and emotional impairment was irrelevant as "too attenuated from the cause of the separation." *Id.* However, where an employee treated pain from a work injury by ingesting morphine without a prescription, his "volitional act of ingesting the pain pill," rather than his work-related injury, caused his termination. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo.App.2014).

10. As found, the respondents have failed to demonstrate, by a preponderance of the evidence, that the claimant was responsible for the termination of his employment. As found, the claimant was reasonable in his belief that he was meeting the employer's expectations and he did not engage in any volitional act, or exercise control over the termination of his employment. As found, the claimant's testimony is credible and persuasive.

11. If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See Post Printing & Publishing Co. v. Erickson*, 94 Colo. 382, 384, 30 P.2d 327, 328 (1934). Respondents are only liable for subsequent injuries which "flow proximately and naturally" from the compensable injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

12. As found, the respondents have demonstrated, by a preponderance of the evidence, that the claimant's surgery on February 4, 2020 constitutes an intervening event severing the respondents' liability to pay TTD benefits from that date. As found, the medical records and the claimant's testimony are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant is entitled to temporary total disability (TTD) benefits for the period of April 8, 2019 through and including February 3, 2020.

2. The respondents' are entitled to an offset for the time the claimant received unemployment insurance benefits.

3. All matters not determined here are reserved for future determination.

Dated this 29th day of October 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

The following issues were raised for consideration at hearing.

1. Whether the claim should be reopened for overpayment.
2. Whether the final admission dated February 13, 2019 is *void ab initio*.
3. If the claim is reopened, a reimbursement schedule for the overpayment.

STIPULATIONS OF THE PARTIES

The parties presented the following stipulation at hearing in resolution of all issues:

1. The claim should be reopened for overpayment only.
2. The final admission of liability dated February 13, 2019 is *void ab initio*.
3. There is an overpayment to claimant in the amount of \$12,320.30.
4. The parties have agreed to the following repayment schedule for claimant

to repay the overpayment:

- a. A lump sum of \$6320.30, which has been paid and received by respondents.
- b. The remaining \$6,000 to be paid at a rate of \$500 per month starting January 15, 2021 until that balance is paid.

5. Pursuant to C.R.S. § 8-43-304(2), benefits paid under this claim shall not be included in data used for rate making or individual employer rating or dividend calculations by any insurer or by Pinnacol Assurance.

In light of the stipulations, no findings of fact or conclusions of law are required by the ALJ. The parties instead seek an order approving their stipulations.

ORDER

The ALJ confirmed the agreement of all parties to the stipulations. The ALJ approves the stipulations and adopts the terms of the stipulations in this Order. It is therefore ordered that:

1. The claim is reopened for overpayment only.
2. The final admission of liability dated February 13, 2019 is *void ab initio*.
3. There is an overpayment to claimant in the amount of \$12,320.30.
4. Repayment of the overpayment shall be made by claimant in the following manner:
 - a. A lump sum of \$6320.30, which has been paid and received by respondents.
 - b. The remaining \$6,000 to be paid at a rate of \$500 per month starting January 15, 2021 until that balance is paid.
5. Pursuant to C.R.S. § 8-43-304(2), benefits paid under this claim shall not be included in data used for rate making or individual employer rating or dividend calculations by any insurer or by Pinnacol Assurance.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-122-373-002**

ISSUES

- Did Claimant prove entitlement to ongoing TTD benefits commencing October 25, 2019?

FINDINGS OF FACT

1. Claimant works for Employer as a sales associate in the plumbing department. He suffered an admitted low back injury on July 26, 2016 while emptying a mop bucket. He underwent extensive treatment, including an L4-5 laminotomy and discectomy on August 15, 2017. He was ultimately placed at MMI on December 13, 2018 by his ATP, Dr. Terrence Lakin, with a 28% whole person impairment. Dr. Lakin also assigned permanent work restrictions of:

No crawling, no ladder or stepstool use. May lift and carry sedentary-light level (15 lbs on occasion -up to 1/3 workday, 8 lbs lifting up to 2/3 workday)

2. Employer allowed Claimant to return to modified work after MMI. He coordinated regularly with the assistant store manager, Melanie, to ensure his assigned duties were consistent with his permanent restrictions.

3. Claimant suffered a new injury on October 24, 2019 when he bent over to pick up a faucet for a customer. He felt a sharp stabbing pain in his low back and pain radiating down his left leg. Claimant's direct supervisor was not at work that day, so he reported it to a different department manager.

4. The next day, October 25, Claimant returned to the store and reported the injury to his direct supervisor. Claimant was given a telephone number to call to initiate a workers' compensation claim, because claims were no longer taken at the store level. Claimant also reported the injury to Melanie that day. Melanie instructed Claimant to go home and "keep her in the loop" regarding the new injury and his work restrictions.

5. Claimant reported the injury by telephone as directed. There was a delay in receiving treatment, apparently due to confusion regarding whether the injury should be handled under the prior (2017) claim or as a new claim. Eventually, Respondent authorized a one-time evaluation with Dr. Lakin under the old claim.

6. Claimant saw Dr. Lakin on October 31, 2019. Dr. Lakin noted Claimant "had been doing fairly well with his lumbar pain" before the new injury and had "settled into" a manageable regimen with medication and light duty. Dr. Lakin noted Claimant's current pain was higher in his back than with the previous injury. Additionally, Claimant was having pain in his left leg, whereas his leg pain had previously been on the right side. Dr. Lakin opined, "this sounds like a new injury . . . I have concerns now that this is further DDD at higher dermatomal level of T12-L1." He ordered thoracic and lumbar MRIs and

referred Claimant to Dr. Castrejon, who had previously treated him in connection with the 2016 claim. Dr. Lakin also opined Claimant may require an electrodiagnostic study and additional injections. He concluded, "Since this is a one-time eval, I will not book a follow-up appointment. I do believe he needs to be seen for follow-up. But it makes sense to me that this would be a new injury. Worker's Compensation needs to advise on this and either open up [his] old case for follow-up or consider follow-up for this as a new case."

7. Regarding work restrictions, Dr. Lakin opined, "Seems that he is able to continue with his permanent work restrictions."

8. Respondent denied further evaluations or treatment under the old claim or a new claim.

9. In late November or early December 2019, Dr. Lakin authored a report requesting reconsideration of a "peer review" Respondent obtained from Dr. Ayer regarding the requested MRIs. Dr. Lakin opined, "Dr. Ayer may not appreciate that [Claimant] had lumbar discectomy, great recovery, then regressed significantly. It has been considered that there may have been some issues with persistent pain and radicular issues that his orthopedic spine surgeon indicated could be from some micro-motion irritating nerve combined with scar tissue/granulation tissue postoperatively. Dr. Ayer does not appreciate that [Claimant] sustained another bending over and lifting injury that occurred on October [24], 2019. [Claimant] now has symptoms at different levels and radicular symptoms at different levels."

10. On December 12, 2019, Dr. Lakin spoke with a second peer reviewer, Dr. Antonelli, regarding the MRIs and electrodiagnostic study. He stated "this needs to be determined by WC if this is a new injury vs exacerbation. [N]ew level T11-L1, additional radicular symptoms, flank and lateral/ant[erior] thigh. Past microdiscectomy was doing great and then regressed."

11. Claimant contacted Employer repeatedly about returning to work after his injury. He spoke with Melanie at least four times from November 2019 through February 2020. Each time he was told Employer was not comfortable bringing him back to work without a specific diagnosis regarding his new injury.

12. Although one could reasonably presume Claimant would be more limited after October 24, 2019 because of the new symptoms, there was no testimony or other persuasive evidence presented regarding his functional status. Accordingly, the ALJ accepts Dr. Lakin's assessment Claimant could have returned to light duty under his previous restrictions, had Employer allowed him to do so.

13. Respondent filed a General Admission of Liability (GAL) on September 9, 2020 for a new claim based on the October 24, 2019 accident. The GAL admitted for temporary partial disability (TPD) benefits commencing October 28, 2019. The GAL admitted for an AWW of \$768.40, which corresponds to a TTD rate of \$512.27.

14. Claimant proved entitlement to TTD benefits commencing October 25, 2019. Even if Claimant suffered no increased disability from the second injury, Employer's

refusal to allow him to return to work after the accident directly and proximately caused a total wage loss commencing October 25, 2019.

CONCLUSIONS OF LAW

A claimant is entitled to TTD benefits “in case of temporary total disability lasting more than three working days’ duration.” Section 8-42-105(1), C.R.S. As a general rule, the claimant must show the injury caused a disability, they left work because of the injury, and they missed more than three shifts. However, as will be discussed below, that formulation is subject to variation in appropriate cases.

There is no dispute Claimant has been off work since October 25, 2019. But Respondent argues Claimant is ineligible for TTD because his October 24, 2019 admitted injury caused no greater disability than existed immediately before the injury. Respondent’s argument is predicated on *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1998). *City of Colorado Springs* held that claimants are not entitled to additional TTD benefits when their claim is reopened based on a worsening after MMI unless the worsened condition caused a “greater impact” on their “temporary work capability” than existed at the time of MMI.

Claimant argues *City of Colorado Springs* is inapplicable because he suffered a new injury which is being covered under a new claim. But based on the plain language in the decision, the ALJ sees no reason why the holding in *City of Colorado Springs* could not apply to Claimant’s case. The court specifically stated it was immaterial whether the second injury was “considered as a worsened condition or as a new injury.” The court essentially analyzed the issue as one of causation and determined a claimant could not receive additional TTD unless the worsened condition caused a greater impact on the claimant’s “temporary work capacity” than already existed. That concept can logically be applied to a new injury too if, as here, the claimant had a pre-existing disability at the time of the injury.

Regardless, given the unique circumstances presented by this case, two factors persuade the ALJ Claimant is entitled to TTD. First, Respondent already admitted liability for TPD benefits commencing October 28, 2019. By filing an admission of liability, the Respondent “admitted that the claimant has sustained the burden of proving entitlement to benefits.” *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). The threshold requirements for TPD benefits similar as for TTD, and the primary difference is the extent of the wage loss (partial versus total). Thus, Respondent conceded Claimant is eligible for temporary disability benefits, which conflicts with their current position the new injury caused no additional disability. Withdrawal of an admission is an affirmative defense on which the respondents have the burden of proof. See § 8-43-201(1) (“a party seeking to modify an issue determined by a general or final admission ... shall bear the burden of proof for any such modification.”). Here, withdrawal of the admission for TPD was neither pled, requested, nor tried. And it is inconsistent for Respondent to admit Claimant is entitled to TPD benefits while simultaneously arguing he is not eligible for TTD because the new injury did not cause any disability.

Second, and more important, the Court of Appeals recently clarified that a showing of “disability” is not an absolute prerequisite to a claim for temporary disability benefits if the work injury directly and proximately caused a wage loss. *Montoya v. Industrial Claim Appeals Office*, ___ P.3d ___, 17CA 0322 (Colo. App. 2018). The claimant in *Montoya* was an interior designer who was paid strictly on commission. She suffered back and shoulder injuries for which she received medical treatment. Although the claimant had no work restrictions and was able to perform her regular duties, she repeatedly missed work to attend medical appointments. Those absences hampered her ability to meet with current and potential, which caused her to lose substantial commissions. The ALJ was persuaded the injury had directly caused the claimant’s wage loss, and awarded TPD benefits despite the fact she had no restrictions and was otherwise able to perform her regular duties.

The ICAO reversed the ALJ on the theory that eligibility for temporary disability benefits requires the claimant to prove a “disability” in all cases. The Court of Appeals reversed the ICAO and held that “medical disability” is not a required element of a claim for temporary disability benefits. *Montoya* relied on a passage from *Larson’s* that the Supreme Court had previously cited in *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The *Montoya* court explained the concept of “compensable disability” is “a blend of two ingredients.” The first ingredient is “disability in the medical or physical sense,” whereas “the second ingredient is *de facto* inability to earn wages.” The court stated,

The two ingredients usually occur together; *but each may be found without the other*. a claimant may be, in a medical sense, utterly shattered and ruined, but may by sheer determination and ingenuity contrive to make a living. Conversely, a claimant may be able to work, in both the claimant’s and the doctor’s opinion, but awareness of the injury may lead employers to refuse employment. These two illustrations will expose at once *the error that results from an uncompromising preoccupation with either the medical or the actual wage-loss aspect of disability*. An absolute insistence on medical disability in the abstract would produce a denial of compensation in the latter case, although the wage loss is as real and as directly traceable to the injury as in any other instance. (Italics in original).

The court ultimately held that “although the concept of disability incorporates both ‘medical incapacity’ and ‘loss of wage earnings,’ a claimant need not prove both components to establish entitlement to disability benefits under the Act.” The Supreme Court denied *certiorari* in *Montoya* on May 29, 2018, which suggests the court does not perceive the holding to be conflict with prior case law.

The reasoning in *Montoya* is persuasive and applies equally well to Claimant’s case. The persuasive evidence shows Claimant suffered a wage loss as a direct and proximate result of the October 24 injury. Claimant is essentially that “latter case” to which the court referred, and he would suffer precisely the harm the court sought to avoid were the “disability” element slavishly applied to this situation. The Act should be interpreted in a manner as to avoid “absurd” results. *E.g., Lujan v. Life Care Centers*, 222 P.3d 970 (Colo. App. 2009). It would be nonsensical to hold that even though Employer sent

Claimant home because of the work-related injury, and subsequently refused to allow him to return to work because of the injury, he is not eligible for TTD because he theoretically could have worked had Employer allowed him to do so.¹ While it was within Employer's prerogative to keep Claimant off work until it received a clear diagnosis, it is not reasonable to deny Claimant compensation for the subsequent wage loss cause by Employer's decision.

ORDER

It is therefore ordered that:

1. Respondent shall pay Claimant TTD benefits at the weekly rate of \$512.27 per week commencing October 25, 2019 and continuing until terminated by law.
2. Respondent shall pay Claimant statutory interest of 8% per annum on all indemnity benefits not paid when due.
3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: October 31, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

¹ The ICAO has previously held TTD must be reinstated for claimants who have increased restrictions after a worsening even if they were not working when the worsening occurred and therefore cannot prove any actual wage loss. *E.g., Friesz v. Wal-Mart Stores, Inc.*, W.C. No. 4-823-944-01 (July 26, 2012). It would be highly anomalous to allow some claimants to recover TTD for a theoretical or potential wage loss but deny Claimant compensation for his actual wage loss caused by the injury.

ISSUES

- Did Claimant prove his claim should be reopened for additional medical benefits based on a change of condition?

FINDINGS OF FACT

1. Claimant worked for Employer as a warehouse manager. He suffered an admitted injury to his right shoulder on June 18, 2015 while was moving a slab of granite with a forklift. The slab broke and a piece of falling granite struck him in the right upper arm/shoulder.

2. Claimant's received authorized treatment through Concentra. He was diagnosed with a shoulder strain and impingement.

3. A July 16, 2015 right shoulder MRI showed mild AC joint arthrosis with a type II acromion morphology. The rotator cuff tendons and muscles were normal, with no evidence of a rotator cuff tear or labral tears.

4. A second right shoulder MRI on January 19, 2016 was "unchanged" with "no demonstrated rotator cuff tear."

5. Claimant was treated by Dr. Wiley Jinkins, an orthopedic surgeon. Dr. Jinkins administered three cortisone injections in Claimant's right shoulder. Dr. Jinkins repeatedly opined Claimant was not a surgical candidate.

6. Dr. Jeffrey Jenks administered two cortisone injections to Claimant's right biceps tendon in September and October 2015. The injections were not helpful.

7. Claimant saw Dr. Robert Messenbaugh for an IME at Respondents' request on January 25, 2016. On examination, Dr. Messenbaugh noted full shoulder range of motion with "quite strong abduction and external rotation," and "quite superb" biceps and triceps extension. Claimant exhibited no tenderness to palpation of the long head of the biceps tendon. He had an area of tenderness over the proximal lateral aspect of the biceps muscle and underlying humerus bone. Dr. Messenbaugh diagnosed a deep-seated biceps muscle contusion and bone contusion about the proximal humerus.

8. Claimant saw Dr. Albert Hattem at Concentra on March 3, 2016. Dr. Hattem noted mild decreased range of motion with tenderness over the anterior shoulder. Impingement maneuvers were "slightly positive." Claimant was uninterested in additional cortisone injections and Dr. Hattem opined he was approaching MMI.

9. Dr. Hattem put Claimant at MMI on April 26, 2016. Examination of the shoulder showed tenderness over the anterior surface, decreased range of motion, and

positive impingement maneuvers. Dr. Hattem diagnosed right shoulder impingement and assigned a 10% upper extremity impairment based on range of motion deficits. He released Claimant to return to medium level work consistent with the results of a March 17, 2016 FCE.

10. On May 5, 2016, Respondents filed a Final Admission of Liability (FAL) based on Dr. Hattem's rating. The FAL denied medical benefits after MMI. Claimant did not object to the FAL, and the claim closed.

11. Claimant continued working full-time for Employer after his claim closed. Claimant also engaged in recreational activities including weightlifting.

12. Claimant's right shoulder became increasingly painful in 2019.

13. A right shoulder MRI on October 23, 2019 showed AC joint degenerative changes and a possible partial-thickness infraspinatus tendon tear. The radiologist saw no indication of biceps tendon pathology, labral tears, or tears to any other rotator cuff tendons.

14. Claimant had a repeat MRI on November 5, 2019, which was interpreted as essentially identical to the October 23 MRI.

15. Claimant saw Dr. Hannah Houck on November 18, 2019, who documented, "In the last few months the patient has developed worsening pain and weakness in the right shoulder. He has also noted some numbness in his arm if he moves his arm and certain directions. He was seen last month for the issue with Dr. Longfellow – x-rays and MRIs were ordered. The MRI shows a partial-thickness tear of the right infraspinatus muscle at the insertion site." On examination, Claimant was tender to palpation over the lower scapula, posterior upper arm, and the AC joint. He had decreased strength in major muscle groups of the right upper extremity (4/5), pain with external rotation of the right arm (infraspinatus test), and a painful empty can test. He could not perform the lift-off test because it hurt too much to put his hand behind his back.

16. Claimant saw Dr. Alex Romero, an orthopedic surgeon, on December 18, 2019. Physical examination showed tenderness to palpation over the impingement area, above the AC joint, and along the long head of the biceps tendon, and reduced range of motion. Supraspinatus provocative sign, Speed's test, external rotation stress test, and the belly press test all produced pain. Dr. Romero reviewed the MRI and noted edema in the AC joint and around the supraspinatus tendon, and a low-grade partial-thickness infraspinatus tendon tear. He concluded, "The patient has low-grade partial-thickness tear to his infraspinatus that may be age-related changes or secondary to previous injury. I think symptomatically he is developing of frozen shoulder." Dr. Romero administered an intra-articular and subacromial cortisone injections, which only helped for one day before symptoms returned.

17. Claimant saw Dr. Romero on January 8, 2020 for right elbow pain. Dr. Romero noted, "This has been ongoing for a couple of months but worst in the last three

weeks. He denies any injury.” There is no persuasive evidence linking the right elbow symptoms to the June 2015 work accident.

18. Dr. Romero performed right shoulder arthroscopic surgery on May 28, 2020. The preoperative diagnosis was “right shoulder adhesive capsulitis.” But under anesthesia, Dr. Romero was able to remove his right shoulder in all directions without limitation. Accordingly, Dr. Romero determined Claimant did not have adhesive capsulitis. Intraoperatively, he discovered a SLAP tear, a low-grade partial-thickness supraspinatus tear, severe subacromial and subdeltoid bursitis, and mild biceps tendinosis. He did not appreciate the infraspinatus tear suggested by the MRI. Dr. Romero debrided the rotator cuff, bursa, and SLAP tear, and performed a biceps tenodesis.

19. Dr. Messenbaugh performed a record review for Respondents on August 14, 2020. He also testified at hearing. Dr. Messenbaugh opined none of the pathology addressed by Dr. Romero was causally related to the June 2015 work accident. He noted Claimant had undergone two MRIs in 2015, neither of which showed a labral tear, rotator cuff tear, biceps pathology, or bursitis. He explained the pathology for which Claimant had surgery was not consistent with the original injury mechanism. He did not know exactly what caused the recent pathology in Claimant’s shoulder but was confident it was not related to the 2015 injury.

20. Dr. Messenbaugh’s opinions are credible and persuasive.

21. Claimant failed to prove the change of condition in his right shoulder since MMI reflects the natural progression of the original injury. The shoulder symptoms and pathology that prompted Claimant to seek treatment in 2019 and 2020 were not causally related to the June 2015 work injury.

CONCLUSIONS OF LAW

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the grounds of “an error, a mistake, or a change in condition.” The party seeking to reopen has the burden of proving a basis for reopening by a preponderance of the evidence. Section 8-43-201(1); *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo. App. 1985). If a claimant’s condition is shown to have changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from some other cause. *Goble v. Sam’s Wholesale Club*, W.C. No. 4-297-675 (May 3, 2001).

As found, Claimant failed to prove his worsened condition after MMI was causally related to the work accident. There is no persuasive medical or lay evidence connecting the worsened condition to the original injury. Dr. Messenbaugh’s analysis and opinions are credible and persuasive. The pathology that prompted Claimant to pursue treatment

in 2019 and ultimately lead to surgery did not exist while Claimant was receiving treatment for the 2015 work injury. Although Claimant's shoulder is clearly worse than when he was put at MMI, that worsening is not causally related to the work injury.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his workers' compensation claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: November 2, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Watson that Claimant is not at MMI?
- II. If the DIME opinion has been overcome on the issue of MMI, what is the appropriate Impairment Rating for Claimant's work injury?
- III. Is the ethanol embolization surgery as recommended by Dr. Yakes reasonable, necessary, and related to Claimant's work injury?
- IV. Is a CRPS evaluation, as recommended by Dr. Primack, reasonable, necessary, and related to Claimant's work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury / Claimant's Testimony

1. Claimant, now age 28, sustained an admitted injury to his left foot at work on November 8, 2018. (Ex. 1). At hearing, Claimant testified that he was working for Employer, cleaning up "the yard," by throwing away scrap material and filling up the "trash roll off." Claimant climbed on top of the trash roll-off and attempted to compact what was already there. When he was done, Claimant "hopped [his] body over the side of the trash roll off onto the ground." Claimant was working full-time as a roofer when this occurred.
2. Claimant explained, "Well, when I landed, I landed solid.... [I]t felt like I had, maybe, stepped on a nail or something like that. Just sharp, shooting pain instantly. So I sat down. I took my shoe off. I didn't notice any blood or anything like that, so I just went out about finishing my day of work." He testified that he was wearing regular construction boots with lug soles that tied above the ankles. He did not roll his ankle. The pain increased steadily overnight. Claimant then reported the incident, and was sent to Emergicare for treatment.
3. At hearing Claimant testified that, just a few days prior to the incident, he was able to carry two 80 pound sandbags up a ladder at the same time. After the incident, he attempted to climb a ladder in physical therapy, but the pain was 'too excruciating' and he had to stop. Claimant testified that his condition never seemed bad enough for him to justify seeking treatment for it until after it became severe and persistent, as opposed to rather moderate and sporadic. Claimant testified that he had mentioned the AVM to his

doctors in the past. His understanding was 'the doctor' told him that "it was [an] enlarged vein, and that I didn't have anything to worry about." Claimant testified that he never actually received *treatment* for his left foot prior to the work injury.

Treatment by a Series of ATPs

4. Claimant was first seen by Dr. Douglas Bradley at Emergicare on November 9, 2018. (Ex. 3, p. 32). Dr. Bradley noted, "Pt was jumping out of a roll off trailer and landed wrong on a large landscaping rock. Pt states he has to walk using the side of his foot or he has shooting pains like he is stepping on needles. Pt has swelling in his left foot. Pt states the majority of his pain is on the *bottom of his foot in the arch.*" *Id* (emphasis added).
5. Dr. Bradley's physical examination found moderate swelling of the left foot, decreased range of motion of the left foot, swelling of the left ankle, and decreased range of motion in the left ankle. *Id* at 34. Due to the symptoms, Dr. Bradley ordered x-rays of the foot. No fractures were noted. He was diagnosed with "sprain of unspecified ligament of the left ankle." (Ex R, pp. 229, 231). No restrictions were provided by Dr. Bradley at this encounter. *Id* at 233. Claimant's next scheduled appointment was November 17, 2018.
6. However, Claimant returned to Emergicare on November 13, 2018. (Ex. 3, pp. 36, 37). Claimant was seen by Dr. Lisa Baron, MD at this appointment. Claimant reported that the walking shoe he was previously given was helping with swelling, but that he was still having pain in his foot radiating up his calf. *Id.* at 37. Claimant reported that he thought he would be able to return to work; however, he quickly realized he could not tolerate much more than 10 minutes of weightbearing at a time. *Id.* His pain was reportedly "fairly focal" in the arch of the foot.
7. The physical examination noted "Focal swelling in arch of R[sic] foot." *Id.* at 38. Claimant had tenderness to palpation at the site of focal swelling in the arch of the left foot, but by now had a normal ankle exam. *Id.* He was prescribed crutches and medications, and told to wear his special shoes at all times. Claimant was restricted from walking more than 15 minutes per hour, no climbing, and no squatting. *Id.* at 38. He was scheduled to start physical therapy for his foot. Claimant requested, and was taken off work and has not returned to work since.
8. An MRI was performed of Claimant's left midfoot and forefoot on November 29, 2018 due to ongoing left foot pain after jumping "from a height and landing awkwardly on a rock." (Ex. 4, p. 41). The MRI showed a vascular malformation over the plantar aspect of the medial midfoot, within abductor hallucis and flexor hallucis longus muscles, extending into plantar subcutaneous tissues. Under *Impression*, it was noted:

Nerve root impingement would be uncommon with a pliable venous malformation, nonetheless, *correlation with symptomatology is requested*, as the malformation is closely apposed to branches of the medial plantar nerve. *Id* (emphasis added).

An MRI of the left ankle was also performed, to address the question of whether there was a low-grade interstitial partial tear, since it correlated with a point of tenderness. *Id.* at 43.

9. Claimant was then evaluated by Dr. Michael Sparr on January 23, 2019. (Ex. 5, pp. 45-48). Dr. Sparr notes in his first paragraph, "He [Claimant] has a history of vascular malformation in his left medial foot which has been present chronically. *He reports it has not caused a great deal of pain over the years.*" *Id.* at 45 (emphasis added). It was again documented that Claimant's symptoms were the result of him jumping about 5 to 6 feet from the rolloff trailer and landing on a sharp rock with his left plantar surface. *Id.*
10. Dr. Sparr's physical examination documented a moderately antalgic gait favoring the left lower extremity. Claimant was unable to walk on his toes. He was using a crutch. Claimant also had moderate swelling around the arteriovenous malformation ("AVM"). (Ex. 5, p. 47). In assessing for causality, Dr. Sparr opined, "This is admittedly a problem that has been present *chronically*. If he struck his plantar foot on a rock he may have had some *exacerbation* of pain from the vascular malformation." *Id.* at 47. (emphasis added). Dr. Sparr recommended a left tarsal tunnel injection and suggested that Dr. Leggett evaluate the malformation with an ultrasound while performing the injection. (Ex. N, p.137).
11. Claimant was evaluated by Orthopedist John R. Shank, on February 19, 2019. He provided a history of landing forcefully on his left foot and gave the following history, "The patient states that prior to this injury he had no significant issues with his foot. He notes plantar medial foot pain over the region of his plantar fascia and has developed a painful venous mass about his left foot which he says was not present prior to the injury." (Ex. L, p. 130).
12. Claimant's next appointment with Dr. Sparr was on March 13, 2019. (Ex. 5, pp. 49-50). Claimant had a minimal decrease in his foot pain since his past visit. *Id.* at 49. "He was noted to have a chronic vascular malformation over the medial foot. I felt the problem had been *exacerbated* by his work injury." *Id.* (emphasis added). Claimant had seen an orthopedist for his foot, Dr. Shank, who had referred Claimant to a vascular specialist. *Id.*
13. Claimant then went to the American Vein and Vascular Institute on July 23, 2019 for evaluation. (Ex. 6). The reported mechanism of injury was jumping off of the trash roll-off. *Id.* Claimant explained that the AVM was increasing in pain, and that it was interfering with his quality of life and activities of daily living. Claimant had not worked

since the incident. *Id.* Under discussion, Dr. Timothy Cawlfeld documented, “[Claimant] has an AVM in [his] left foot that is interfering with his daily activities and causing severe pain.” *Id.* at 55. Dr. Cawlfeld felt it was best to refer Claimant to a specialist in AVMs. *Id.* Claimant was referred to Dr. Wayne Yakes at the Vascular Malformation Center in Englewood, CO.

14. Claimant was first seen at Dr. Yakes’ clinic on October 16, 2019. (Ex. 7, pp. 64-66). Claimant again reported his inability to work since the date of the injury due to pain, edema, and neuropathy. *Id.* at 64. Under original presenting symptoms, it states, “Functional disability: yes, patient unable to work due to pain level.” *Id.* He was having persistent pain, numbness, tingling, and burning that was also affecting his sleep. *Id.* at 65. Dr. Yakes recommended Claimant undergo ethanol embolization to treat his AVM.
15. Dr. Yakes wrote a detailed letter on November 19, 2019, explaining why Claimant requires this particular surgery. (Ex. 7, p 69). He states in this letter that Claimant “did not have any symptoms prior to the injury of his foot in November of 2018.” *Id.* Dr. Yakes also noted that Claimant had been referred to him by Dr. Bradley, following an injury at work, but did not detail a causation analysis.
16. Dr. Yakes’ request for surgery was denied, and Claimant was subsequently placed at MMI on January 15, 2020. Claimant reported to Dr. Bradley on January 15, 2020 that he continued to have level 8 out of 10 pain and that the pain was so bad it was taking his breath away. (Ex. 1, p. 12). It is noted under *history of present illness* that the proposed AVM surgery had been denied.

DIME by Dr. Watson

17. Claimant then sought a DIME. This examination occurred with Dr. William Watson on May 5, 2020. (Ex. 8). Dr. Watson found Claimant to be ‘not at MMI’ and assigned a 15% provisional lower extremity rating. *Id.* at 71. Despite mentioning the chronic, pre-existing AVM in the medical record, Dr. Watson wrote under the prior injury history that “[Claimant] states this never gave him any difficulty until the injury of November 8, 2018.” *Id.* Dr. Watson also summarized the notes from Dr. Sparr where Claimant’s prior condition had been discussed.

He [Claimant] is noted to have *significant vascular malformation* within the medial foot. This is admittedly a problem. *It has been present chronically.* When he struck his plantar foot on the rock he may have had some *exacerbation* of pain from the vascular malformation. (Ex. C, p. 21) (emphasis added).

Dr. Watson again references Dr. Sparr’s notations from Claimant’s March 13, 2019 visit thusly:

He [Claimant] was noted to have a *chronic* vascular malformation at the medical(sic) foot. I felt his problem had been *exacerbated* by his work injury. *Id* at 22 (emphasis added).

18. Dr. Watson documented Claimant's pain to be 8 - 9 / 10 in the arch of his left foot. (Ex. 8, p. 73). Dr. Watson's documentation of Claimant's subjective history also states, "The examinee states that prior to this injury he had no pain on the bottom of his left foot." *Id.* at 81. Ultimately, Dr. Watson stated his rationale for the not at MMI determination was:

The examinee has no medical history of being ***treated*** for his arteriovenous malformation of the left foot. The pain started after he sustained a sharp blow to the undersurface of the foot. He states that following this the smaller lesion slowly became quite large and very painful. *Id.* at 83. (emphasis added).

Dr. Watson then quotes an article from a vascular surgeon, who noted:

Although AVMs are congenital lesions symptoms do not develop until the lesions are large enough to cause hemodynamic disturbance. Growth can be triggered by environmental factors such as activity, *trauma* and/or changes in the hormonal milieu as occurs during puberty and pregnancy. (See *also*, Ex. GG).

He then concludes:

I believe in this case, *although he had a preexisting condition*, the *proximate cause* of this work-related injury was the *trauma* which caused the AVM to be *symptomatic*. There is no previous history of visits to a physician for this lesion, disability or loss of work time. *Id* at 83. (emphasis added).

19. Dr. Watson then went on to recommend the embolization as recommended by Claimant's vascular surgeon (Dr. Yakes), and evaluation for CRPS.

20. Note: Respondent's Counsel represents to the ALJ that Exhibit E, exchanged by Respondents on August 14, 2020, was found within over 600 pages from Parkview Medical Center associated with low back and other treatment. Exhibit D was received by Respondents, on September 18, 2020. These records were not provided to the DIME. The ALJ accepts Respondents Counsel's offer of proof.

Dr. Primack recommends CRPS Testing

21. After the DIME's finding of "not at MMI," and pending Respondents' challenge thereto, treatment with authorized physicians resumed. Claimant was referred by Dr. Bradley to Dr. Scott Primack on July 13, 2020. (Ex. G). Dr. Primack noted, "I have only a small

component of his medical records.” Claimant denied any previous left foot problems. With the history provided to him, Dr. Primack recommended testing for CRPS. With the records he had, Dr. Primack could only say “the patient may very well have an AV malformation; however, the results of the MRI are not available for my review.” *Id* at 81. He indicated that he would do some research in reference to trauma and its relationship to an AV malformation. Dr. Primack also noted a very low index of physical functioning of his foot/ankle, and also noted that Claimant fell into the “Distressed Depressed category” for emotional resiliency. He recommended coping skills.

Claimant’s Pre-Injury Medical History

22. Claimant’s work incident occurred on November 8, 2018. There is a report from Pueblo Community Health Center (“PCHC”) dated February 3, 2017 that documents Claimant reported to the clinic with “left foot pain x 1 day.” (Ex. D, p. 32). Claimant initially reported soreness, but now reported “stabbing and throbbing” around the great toe on the distal portion of the foot. There was no redness or warmth. There was only mild swelling, and Claimant had not taken anything for the pain. *Id*. Physical exam documented that the foot had no swelling, and there was only mild tenderness to palpation from the mid foot to great toe, and full range of motion with mild pain. *Id*. Claimant was recommended compression and elevation, and referred to follow-up with podiatrist Dr. Jurewicz. *Id* at 33. However, the record is silent whether such follow-up visit actually occurred.
23. Claimant also had presented to Southern Colorado Clinic on May 22, 2017, but not for his left foot. The record reflects Claimant sought treatment for lower back pain he was having after moving a large boulder in his yard. (Ex. D, p. 35). Claimant’s lower back pain and left lower extremity symptoms at that time were “likely due to a lumbar HNP.” *Id*. Physical therapy was prescribed for Claimant’s lower back, but not for his foot.
24. As of October 10, 2017, Claimant was still undergoing treatment for his lower back; however, it was noted that he had a visible, palpable nodule on his left foot along with a “weird pain.” This was not treated by the physical therapist; Claimant was told merely to see his physician about the foot. *Id*. at 40. Claimant went to see his PCP and returned to physical therapy on November 2, 2017. *Id*. at 42. “[Claimant] also reports that his [left] foot does not hurt as much, informed his doctor, ‘he [Claimant’s doctor] said he is not concerned with this right now.’” *Id*. Claimant had to stop physical therapy for his back due to transportation and personal issues.
25. The Parkview Physical Therapy notes from June of 2018 address Claimant’s treatment for ongoing back issues related to the rock lifting incident. (Ex. E, p. 47). Per the outpatient therapy history form, Claimant was at therapy for his back pain that he had only been treating with Advil. *Id*. at 54. The pain diagram shows large, dark marks on Claimant’s lower back and left hip/groin region with an arrow pointing all the way down to Claimant’s left foot. The note from September 19, 2018 states that he does have

some tingling radiating from his left buttock to his foot, but that he is *able to work 8 hour days most days*, but would typically take one day a week off for his *low back pain*. *Id.* at 63. (emphasis added).

26. Claimant's primary care clinic is the Parkview Adult Medicine Clinic in Pueblo, CO. (Ex. 2, pp. 18-21). The notes from his PCP document that he presented on November 27, 2017 for "Follow up back pain." *Id.* at 18. It also noted that the tingling in the left lower extremity had resolved at that time. It is further noted on May 22, 2018 that the tingling in the left lower extremity had returned; however, this note is again in the context of treatment for Claimant's lower back pain. *Id.* at 15. It is also noted, "Current pain [average] around 4-6/10 with some paresthesia radiating down post left thigh *down to knee area*." Claimant received a diagnosis of low back pain with left sided sciatica, but no diagnosis related to the foot or treatment recommended for the foot. *Id.*
27. Claimant again saw his PCP on October 17, 2018 (Ex. 2, pp. 22-26). He presented for nausea and vomiting; again nothing to do with his foot. Physical exam documented a *normal gait*. *Id.* at 23. Neurological exam documented all extremities to be normal. Under review of symptoms, Claimant was not complaining of his left foot. *Id.* There is mention that Claimant had started a new job, and he was being excused from October 15, 2018 through October 19, 2018 due to his *illness*. *Id.* at 25.

Dr. Orgel's IME Record Review

28. Drs. David Orgel performed a records review IME. (Ex. 9, Ex. B). He did not examine Claimant. Dr. Orgel wrote a report dated June 29, 2020 after having reviewed medical records. Dr. Orgel notes that Claimant complained of left foot pain at his initial visits, and since his symptoms persisted after therapy, an MRI was ordered. (Ex. 9, p. 84). Dr. Orgel writes, "[Claimant] does admit that the abnormality has been present for some time, and in his discussion with Dr. Simpson ('He says he has noticed it there but it is more swollen') and Dr. Sparr ('He reports that it has not caused a great deal of pain over the years') he does indicate that the swelling and pain are longstanding." *Id.* at 87.
29. The prior AVM records were not discussed by Dr. Orgel in his initial written records review report. He concluded, "Mr. Rochester has a long-standing congenital malformation. He sustained a relatively minor ankle injury and began noticing increasing pain and swelling in his foot from his pre-existing condition." At hearing, Dr. Orgel testified and explained how AVMs develop. He testified that there is no indication in the medical literature that an AVM would improve without treatment. The natural history of this problem is that they can become symptomatic at any point. Once they are symptomatic, they tend to progress and become worse. They don't go away, and they don't disappear.
30. Dr. Orgel testified that 90% of a diagnosis is made by history, and that untrue statements regarding history affect the diagnosis. He then reviewed the prior AVM

records. Dr. Orgel testified that, based upon the prior AVM records, several of the present symptoms were present for several years without any instigating trauma. The records now available do not reflect an aggravation or acceleration at the time of the work injury. Claimant was on a trajectory that his AVM was becoming more painful. Comparing the measurements within Dr. Sparr's records and those of the physical therapist in October 2017, the physical description of the AVM did not change after the work incident of November 8, 2018.

31. Dr. Orgel acknowledges that Claimant did not fail to disclose his pre-existing condition. He concludes, "[B]ut for the work injury, *in my opinion*, [Claimant] would have presented with the same complaints because this is the natural history of that problem, with the AVM becoming progressively symptomatic." *Id.* (emphasis added).
32. Dr. Orgel testified at hearing consistently with his authored report. He testified that CRPS and AVMs have similar symptoms and presentations. The Division Guidelines indicate that CRPS evaluation is appropriate only when "No other diagnosis that better explains the signs and symptoms." In Claimant's case, the AVM better explains the signs and symptoms noted by Dr. Watson, Rook and Primack. The signs and symptoms leading those physicians to recommend CRPS testing were pre-existing and associated with the AVM: "stabbing" "throbbing" radiating pain, antalgic gait, episodes of cold sensation, numbness along the arch and into the great toe, and "weird pain" for three years prior to 2017.
33. Regarding impairment, Dr. Orgel agreed with Dr. Raschbacher. He noted that there was no objective evidence of a persistent ankle injury, and that there was no persistent ankle injury warranting a rating. (Ex. B, p. 17). The use of range of motion in the subtalar joint was not a correct method of rating for the work-related injury. The records show that the foot is the problem, not the ankle, and using the range of motion in the ankle would not be correct. It is measuring range of motion in the wrong place. He indicated that the medial plantar nerve neuropathy is tied to the AV malformation, and not related to the work injury. The prior records show this, with complaints of cold sensation in the foot recorded more than a year prior to the work incident. Dr. Orgel testified that no one has diagnosed a work-related nerve injury in the foot. There has not been work up or treatment for that complaint. Under those circumstances, it is not appropriate to provide a rating for that nerve damage.
34. However, when asked about the advisability of CRPS testing, Dr. Orgel stated:

Well, so it's understandable that - - why the two could get confused, because they do have a similar presentation. You know, the AV malformation, because of its vascular nature, it, you know, a different color than the rest of the skin. Because of, you know, the heightened amount of blood that's flowing through that area, there may be associated warmth and, you know, other things that - when you touch. We know already that he's quite tender there, and so that can be allodynia, perhaps. That's just

the nature of the – the AV malformation. And then the other – you know— there’s, sort of, the neurovascular – or the – I’m sorry, *the neuropathic complaints of numbness, et cetera, not necessarily related to his, you know, CRPS, but could be related to a medial plantar branch or other sort of neuropathy from pressure of the AV malformation on that nerve.* (Transcript, pp. 44, 45) (emphasis added).

35. When asked again if CRPS testing is reasonable, necessary, or related to the work injury, Dr. Orgel stated:

I would do other things first...if we assume the claim is accepted, I would probably have – I wouldn’t jump immediately into CRPS testing. I would probably do some other things, like the nerve block...or an EMG and things like that...CRPS is a tough nut to crack because some people say well, you really want to get rid of – let’s say you had CRPS. Well, you want to get rid of the instigating problem to help get rid of the CRPS. So it’s kind of, an – chick and egg kind of thing.

So I understand what you’re trying to say. *I would leave that more up his [Claimant’s] providers, how they want to approach it...so as long as ...his treating providers are aware of that, they can...do what they want to get to the bottom of the problem.* (Transcript, pp. 46-47) (emphasis added).

Dr. Ocel’s IME

36. Dr. Daniel Ocel authored a report from his independent medical examination dated July 27, 2020. (Ex. 10). He summarizes that the first visit note from November 9, 2018 documents shooting pain and moderate swelling of the left foot, along with pain and swelling of the ankle. *Id.* at 90. Claimant reported that his pain in his foot can shoot up to a 10 out of 10 level pain roughly 50% of the time, but he was at a 7 out of 10 during the examination. *Id.* at 94. Claimant reported that walking and standing both exacerbate his pain. *Id.* Dr. Ocel noted, “He has a significant amount of difficulty participating in the exam due to pain.” *Id.* Dr. Ocel diagnosed Claimant with an AVM of the left midfoot.

37. Dr. Ocel did not indicate that he had the prior AVM records. He concluded that the AVM was not aggravated by the work incident of November 8, 2020. He noted that if the impaction to the foot would have been deleterious to the AVM, i.e. prompting increasing size and pain, there would have been some clinical evidence at the initial examination. He noted none. He also stated, “In addition, from evaluation of the literature provided and further evaluation it is my understanding that trauma as an etiology of exacerbating the clinical findings of the ABM would result in significant edema about the region of the AVM and possible thrombosis of the venous structure causing pain. This is likewise not evidence[d] clinically nor on the MRI.” (Ex. A, p. 8). He also stated, “We must not discount the adverse effects of Mr. Rochester’s significant tobacco and marijuana use.

Nicotine has a significant effect on the endothelial lining of the blood vessels and can essentially make them less elastic. This may be an important factor in the assessment of the development of a painful and enlarging AVM.”

38. Dr. Ocel writes in his report that AVMs are typically congenital, though they *can be caused by trauma*, and that the AVM “may become symptomatic at any point throughout the patient’s life. *Id.* at 95. Dr. Ocel opined that the moderate findings on physical examination at the first visit on November 9, 2018 were “fairly benign” and that it was his “suspicion” there would have been some type of clinical evidence that the incident had been injurious to the AVM. *Id.* at 96. Dr. Ocel noted “The natural history of an AVM is that this entity *may* become larger over time and thus become more symptomatic.... *Thus the etiology for his pain is elusive.*” *Id.* (emphasis added). Dr. Ocel did not state that Claimant’s current AVM symptoms are clearly not related to the work incident.

Dr. Raschbacher’s Impairment Rating Critique

39. Dr. Jeffrey Raschbacher reviewed and discussed the provisional rating provided by Dr. Watson (*Ex. H*). Along with his opinion that the rated condition was not work related, he concluded that the substance of the rating was incorrect. He noted that the range of motion used in the rating was for range of motion at the ankle and hindfoot. He indicated that there was no clear medical basis for a finding that there should be range of motion impairment in this area. The AVM, which is the diagnosis used by the DIME, is in the arch of the foot. He also noted that there was no clear objective evidence of a nerve dysfunction. Without that, he noted it is not appropriate to rate the medical plantar branch nerve.

Dr. Rook’s IME

40. Claimant also underwent an IME with Dr. Jack Rook on August 19, 2020. (*Ex. 11*). Claimant reported the same mechanism of injury to Dr. Rook: “He climbed into the dumpster, whose walls were approximately 7 feet high, and he proceeded to tamp down the trash. He then jumped out of the dumpster.... He reports that he landed on both feet but that his left foot landed on a fairly large rock that was embedded in the dirt.” *Id.* at 98.
41. Claimant reported to Dr. Rook that he was having no issues with the foot before the incident while working as a roofer. He was able to do the heavy lifting, frequently over 100 pounds, and to climb ladders while holding 80 pound bags over each shoulder immediately prior to the work injury. *Id.* at 104. Dr. Rook states that Claimant “had never seen a doctor regarding his left foot,” {which is incorrect}. However, Claimant did in fact never have treatment for his left foot condition prior to the work injury. *Id.* at 105. Dr. Rook also relied heavily on the fact that Claimant had no disability associated with his foot prior to the work incident and was able to perform heavy, climbing work without restriction. *Id.* at 108. Dr. Rook, among other practitioners, opined that Claimant may

have complex regional pain syndrome (“CRPS”), and should undergo testing for the CRPS. *Id.* at 108-09.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers’ compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Claimant has not been a totally consistent and reliable medical historian throughout the process; however, the ALJ notes that Claimant is medically unsophisticated. As such, he will not be held to a standard of precision in order to find him to be credible in his hearing testimony in describing the progression of his symptoms. It is clear from the record that prior to the work incident as described,

Claimant's plantar symptoms would, unsurprisingly, ebb and flow to a degree. However, they accelerated dramatically once he landed on the rock in the ground.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that each expert has rendered their opinions to the best of their ability, based upon the information they were provided. The real issue here is one of *persuasiveness*.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe*, W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines*, W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office, supra*. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO November 21, 2008).

H. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

Overcoming the DIME, as Applied.

I. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. See *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Industrial Comm'n*, 736 P.2d 1262, 1263 (Colo. App, 1986) (“[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five-percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.”)

J. Generally, the Claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009). However, in this instance Claimant has effectively persuaded the DIME physician that his current symptoms were proximately caused by the work injury, rather than the inevitable, natural progression of his AVM condition. Respondents must now overcome the DIME in this regard.

K. Dr. Ocel does not provide information or an opinion that amounts to clear error on the part of Dr. Watson. Dr. Ocel himself acknowledges that an AVM “may”, but not necessarily “will” get progressively worse. He stated that the etiology of Claimant's pain is elusive. Although Dr. Ocel is of the sincere and well-considered opinion that the AVM is not work related, and the work incident did not cause his need for treatment, his opinion is exactly that - his medical *opinion*, which differs from that of the DIME.

L. Respondents and Dr. Orgel heavily rely on the underlying premise that Dr. Watson's opinions are clearly wrong - because Dr. Watson was under the impression in his report that Claimant's foot was never symptomatic in the past. Even though Claimant's foot had been symptomatic to varying degrees in the past, the ALJ finds this is not sufficient grounds to establish Dr. Watson clearly erred. There is insufficient evidence that the DIME opinion would have changed had he knew Claimant had lower back issues with lower extremity radiculopathy, or that Claimant had spoken a doctor for his foot in the past. Had Respondents wished to strengthen their case with these after-acquired records, they could have asked for a Samms conference, or requested to depose the DIME physician. That would have been fair game, and then we would all know if this might have significantly mattered to the DIME. It is also clear from the DIME's own record review that he was fully aware of Claimant's pre-existing AVM, vis-à-vis his excerpts from Dr. Sparr's records. The ALJ finds that Dr. Watson was not entirely operating in the dark about the AVM in any event.

M. Claimant never did actually *treat* for his foot. He was able to perform a demanding roofing job, right up until he wasn't. There is no 'clear evidence' to establish Claimant's AVM was disabling to him at the time of the work injury, as it was not preventing him from performing his job that requires climbing ladders, an activity he can no longer perform. Respondents presented no evidence that Claimant was functionally limited prior to the work incident in a manner that would be considered disabling. There is also a lack of clear evidence that Claimant would have needed his current regimen of treatment for the foot, were it not for the work injury. This was a traumatic event, with documented trauma to the foot and ankle on examination the day after the incident, and again after that. Claimants' ankle got better on its own. Claimant's plantar pain has never subsided since the work injury. His previously-noted foot pain was sporadic at best, and was often described in the context of lower back treatment.

N. Respondents and Dr. Orgel heavily rely on the underlying premise that Dr. Watson's opinions are clearly wrong because Dr. Watson was under the impression in his report that Claimant's foot was never symptomatic in the past. Even though Claimant's foot had been symptomatic to some degree in the past, the ALJ finds this is not sufficient grounds to establish Dr. Watson clearly erred and that his opinion would have changed had he had full access to all medical records. Since that Claimant never did actually treat for his foot, and his foot was functioning up to the date of injury, Dr. Watson's opinion remains reliable. The ALJ finds that Respondents have failed to overcome the opinions of the DIME by clear and convincing evidence. Claimant is therefore found to be not at MMI and Claimant's current need for treatment for the AVM is causally related.

Medical Benefits, Generally

O. For a compensable injury, Respondents must provide all medical benefits that are reasonably necessary to cure and relieve the injury. C.R.S. § 8-42-101 (2020). Respondents are liable for reasonable and necessary medical treatment by a physician to whom a claimant has been referred by an authorized treating provider. *Rogers v. Industrial Commission*, 746 P.2d 565 (Colo. App. 1987). An aggravation of a pre-

existing condition is compensable. *State v. Richards*, 405 P.2d 675 (Colo. 1965). The question of whether there has been a permanent aggravation is one of fact for determination by an ALJ. *Monfort Inc. v. Rangel*, 867 P.2d 122 (Colo. App. 1993).

Medical Benefits, as Applied

P. No medical expert has articulated that the AVM surgery as proposed by Dr. Yakes is not reasonable and necessary. The ALJ now finds that Claimant has established by a preponderance of the evidence that the ethanol embolization procedure proposed by Dr. Yakes is reasonable, necessary, *and related* to the work injury. The evidence has already established that the work incident caused Claimant's asymptomatic to minimally symptomatic foot to require treatment. The ALJ credits Dr. Yakes' opinion as to why Claimant should have the procedure performed, both due to his rationale and his expertise on this particular and rare condition. Further, the ALJ finds Dr. Watson's rationale for also recommending this procedure more persuasive than opinions to the contrary.

Q. Dr. Primack, who is treating Claimant, has recommended CRPS evaluation. Dr. Watson has concurred. At hearing, Dr. Orgel concurred that CRPS evaluation might be warranted, but that at the end of the day, *he would defer to Claimant's treating providers*. The ALJ concurs, especially since Dr. Orgel has never met or treated Claimant. Claimant has also shown, by a preponderance of the evidence, that a CRPS evaluation is reasonable, necessary, and related to his work injury.

Overcoming the DIME's Impairment Rating

R. Respondents have presented credible evidence that the Impairment Rating methodology by the DIME physician is suspect. However, since Claimant is not at MMI, that issue is moot for now. Once Claimant receives all reasonable, necessary, and related medical treatment, it is hoped that his need for an Impairment Rating might be reduced.

ORDER

It is therefore Ordered that:

1. The DIME opinion on MMI has not been overcome. Claimant is not at MMI.
2. Respondents shall pay for all reasonable, necessary, and related medical treatment, including, but not limited to, the ethanol embolization surgery as recommended by Dr. Yakes, and a CRPS evaluation, as recommended by Dr. Primack.
3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: November 3, 2020

Colorado Springs, Colorado 80906

ISSUES

- I. Whether Claimant is entitled to a general award of maintenance medical treatment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted injury on February 22, 2018 as a result of a motor vehicle accident.
2. On the same day as the accident, Claimant presented to the emergency room. Her complaints at that time were left-sided neck pain and midline lower back pain. The assessment at that time was a "cervical and lumbar strain." (Ex. 6, p. 37.)
3. A General Admission of Liability was filed on March 16, 2018. (Ex. 1, Pg. 1).
4. On April 11, 2018, Claimant was seen by an occupational medical provider. At that time, Claimant was still complaining of left sided neck pain and back pain. (Ex. 6, p. 32.)
5. On or about April 18, 2018, Claimant started treating with Bradley Keeney, D.C. The record suggests Claimant saw him about five times during April and May 2018. In his notes, he states Claimant had preexisting back problems and migraines. He also noted that Claimant stated that while her back pain appears to have gone back to baseline, the frequency of her migraines had increased in frequency and pain levels. (Ex. 6, p. 38.)
6. On May 30, 2018, Claimant came under the care of Dr. Reichhardt. At this appointment, Claimant complained of pain in her left scapular area, neck pain, and lower back. Claimant also said that she felt like her neck pain was lowering her migraine thresholds. As a result, Dr. Reichhardt diagnosed Claimant with neck and periscapular pain, low back pain, and headaches. Based on his evaluation and assessment, he prescribed Topamax and discussed possible injections. (Ex. 6, p. 38.)
7. On June 12, 2018, Claimant returned to Dr. Reichhardt. At that appointment, Dr. Reichhardt explained that in some respects Claimant was better and in other she was worse. He also noted that he was unable to find a pain generator in relationship to her shoulder. But, based on ongoing symptoms, he continued Claimant on her current medication regimen, increased her Topamax, and considered repeating trigger point injections. (Ex. 6, p. 39.)

8. On September 13, 2018, Dr. Reichhardt referred Claimant to Dr. Josh Snyder, an orthopedic surgeon, for evaluation of her left shoulder. (Ex. 6, p. 40.)
9. On February 6, 2019, Claimant followed up with Dr. Sanders. Dr. Sanders' was also treating Claimant for her left shoulder, posterior neck pain and headaches for what he described as a "high-speed [motor vehicle accident] MVA." (Ex. 9, p.54.)
10. Based on Dr. Sanders' records, Claimant was being prescribed, and taking, several medications because of the injuries she sustained in the motor vehicle accident. The medications included:
 - Cyclobenzaprine (Flexeril),
 - Ibuprofen, and
 - Meloxicam (Mobic).

Dr. Sanders also noted he was treating her migraines, prophylactically, with medication. Those medications consisted of:

- Sumatriptan (Imitrex), and
- Topiramate (Topamax).

At the end of February 6, 2019 appointment, Dr. Sanders concluded that Claimant should continue on her current medication regimen, which consisted of the medications listed above.¹ He also noted that Claimant should follow up with Dr. Snyder, for a possible steroid injection, and with Dr. Reichhardt in "consultation." (Ex. 9, p. 54-56.)

11. On February 20, 2019, Claimant had a follow up appointment with Dr. Reichhardt. At this appointment, Dr. Reichhardt noted Claimant still had left shoulder pain, periscapular pain, neck pain, and headaches. He also noted she was waiting for approval for psychology treatment to be authorized.
12. On February 21, 2019, Dr. Steven Moe performed a Rule 16 records review. The purpose of his review was to determine whether the need for psychological treatment was reasonable, necessary, and related to the motor vehicle accident. Dr. Moe concluded that Claimant suffers from a somatic symptom disorder and a generalized anxiety disorder. He also concluded that both conditions preexisted the motor vehicle accident and the need for any psychological treatment was unrelated to the motor vehicle accident.
13. On March 5, 2019, Claimant followed up with Dr. Snyder. At that time, her pain had increased significantly. Upon examination, however, Dr. Snyder did not see any indication that Claimant would benefit from shoulder surgery. It was his opinion at that time that the majority of Claimant's symptoms were related to her

¹ Cyclobenzaprine (Flexeril), Ibuprofen, Meloxicam (Mobic), Sumatriptan (Imitrex), and Topiramate (Topamax).

whiplash injury to her neck. As a result, he did not think more diagnostic injections for her shoulder, such as those suggested by Dr. Reichhardt, were warranted.

14. On March 18, 2019, Dr. Reichhardt responded to a request asking whether Claimant required more treatment to reach MMI. Dr. Reichhardt said that the only treatment he would recommend, before placing Claimant at MMI, would be:
- A pain psychology evaluation, and
 - An independent home exercise program.

He also indicated that any other consultations could be provided as maintenance medical treatment. Thus, he anticipated Claimant would be at MMI in 8 weeks.

(Exhibit 6, p. 44.)

15. On September 25, 2019, Claimant returned to Dr. Reichhardt. As noted by Dr. Reichhardt, he had not seen Claimant since February 2019. At this appointment, Dr. Reichhardt noted that Claimant had obtained a new job at a bank and was working full time in their credit card department. Despite tolerating her work, Claimant still rated her pain at 7/10. Dr. Reichhardt also noted that Claimant tried to refill her prescriptions but was unable to get them filled because she needed a follow-up visit with her physician. As for her medications, he specifically noted that Claimant said the Meloxicam and the Topamax were the most helpful. Claimant, however, did not suggest the other medications were not being helpful. As result, all the medications that were being prescribed were helping to relieve Claimant from the effects of her work injury. (Ex. 4, p. 12-14.)
16. After evaluating Claimant, Dr. Reichhardt concluded that despite her ongoing pain complaints, Claimant had reached MMI as of September 25, 2019. His final diagnosis was "Left subacromial impingement and periscapular myofascial pain." Based on his assessment, he provided Claimant an impairment rating for her left shoulder. Based on Claimant's ongoing pain complaints, he recommended maintenance medical treatment for the next three years. He recommended maintenance treatment in the form of physician visits, coverage of medications, and any laboratory tests necessary to monitor for any side-effects of any medications being prescribed and taken by Claimant. He also referred Claimant back to Dr. Sanders for her medication management and refills. (Ex. 4, p. 12-14.)
17. Respondents filed an initial Final Admission dated November 6, 2019 which admitted for the permanent impairment rating provided by Dr. Reichhardt and medical maintenance benefits. (Ex. 2, Pg. 2).
18. Claimant timely objected to the Final Admission and requested a DIME.
19. Claimant underwent the DIME which was performed by Dr. Alicia Feldman on or about March 2, 2020. Dr. Feldman agreed with the date of maximum medical

improvement provided by Dr. Reichhardt but disagreed with rating Claimant's left shoulder. Dr. Feldman concluded Claimant suffered an injury to her cervical spine. Thus, rather than rate Claimant's left shoulder, she provided an impairment rating for Claimant's cervical spine. She also summarily concluded Claimant does not require maintenance medical treatment. On the other hand, she stated Claimant should treat her ongoing pain with over the counter NSAIDs. (Ex. D, pp. 17-37).

20. Respondents filed a final admission base on Dr. Feldman's DIME report admitting for the cervical spine impairment rating and denying maintenance medical benefits. (Exhibit B, pp. 2-8).
21. After the DIME, Dr. Reichhardt, responding to a letter asking about maintenance medical treatment, stated that he "would defer to Dr. Sanders as to whether or not any maintenance treatment at this time appears to be indicated as I discharged her from my care eleven months ago." (Ex. 5, Pg. 19).
22. Claimant testified that she would have followed up with Dr. Sanders, however; Respondents denied any follow up appointments.
23. Claimant testified that the prescription medications provided by Dr. Sanders helped control her symptoms and ability to function. Claimant testified that she currently has ongoing symptoms and would like to return to see Dr. Sanders for ongoing prescription management.
24. Gloria Montano is the adjuster for the Insurer on this claim. Ms. Montano testified at hearing. Since the filing of the final admission based on the opinions of Dr. Reichhardt, but before the final admission based on the opinions of Dr. Feldman, Ms. Montano received one inquiry from Dr. Sanders' office about claimant returning for evaluation. Ms. Montano testified that she granted this one authorization request, but that there was no subsequent billing information provided nor a follow-up evaluation report from Dr. Sanders. Circumstantially, during the time maintenance medical benefits were admitted, and then denied, Claimant did not obtain any treatment from Dr. Sanders.
25. The ALJ finds Claimant's statements to medical providers as well as her testimony to be credible and persuasive as it relates to her ongoing pain complaints associated with the work-related motor vehicle accident. The ALJ finds Claimant's statements and testimony to be credible for many reasons. First, although Claimant had pre-existing back problems and migraines, she openly advised her medical providers about the nature and extent of her prior back problems and migraines. Second, although Claimant first said she injured her back, she conceded early on in her case that her back returned to baseline at that time. As a result, the ALJ did not find any indication in the record that Claimant is trying to intentionally deceive her treating medical providers about the extent of her preexisting conditions and the extent of her symptoms that the work accident caused.

26. There is some evidence that Claimant has a somatic symptom disorder, generalized anxiety disorder, and a history of long-standing anxiety. And it may be true that those conditions are affecting Claimant's pain complaints. But only a medical provider – through the provision of medical treatment - can determine the extent and type of medical treatment necessary to maintain Claimant's condition and relieve her from the ongoing effects of her automobile accident. As a result, any underlying psychological condition does not negate Claimant's need for maintenance medical treatment.
27. Here, there is a disagreement between Dr. Reichhardt and Dr. Feldman about the anatomical location of Claimant's work injury. There is not, however, a disagreement between Dr. Reichhardt and Dr. Feldman about whether Claimant suffered a compensable work injury and whether Claimant still has pain. Here, both Dr. Reichhardt and Dr. Feldman agree that Claimant suffered a compensable injury that led to pain complaints, necessitated the need for medical treatment, and caused permanent impairment. Moreover, each treating physician here has been treating Claimant's pain with medication. And, except for the migraine medication, there is no indication any of the pain medications prescribed for Claimant could target Claimant's pain in only a specific body part. In other words, regardless of the precise anatomical location of the work injury, or injuries, the automobile accident caused Claimant's ongoing pain for which medical treatment is required to relieve and to maintain Claimant's MMI status.
28. The ALJ also credits Claimant's testimony that she would like to return to Dr. Sanders for medication management.
29. The ALJ also finds Dr. Reichhardt's opinion about the need for ongoing maintenance medical treatment to be credible and persuasive for the following reasons. Dr. Reichhardt was one of Claimant's authorized treating physicians. As an authorized treating physician, Dr. Reichhardt evaluated and treated Claimant on a long-term basis. This allowed Dr. Reichhardt to be in a better position to make maintenance medical treatment recommendations when placing Claimant at MMI based on his long-term evaluation and treatment of Claimant. Moreover, his opinion is bolstered by Dr. Feldman who acknowledged in her report that Claimant should take over the counter NSAIDs for her pain.
30. Claimant is in need of maintenance medical treatment to relieve her from the effects of her compensable work accident and to maintain MMI.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant is entitled to a general award of maintenance medical treatment.

The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, W. C. No. 4-543-730, (ICAO, July 14, 2006).

A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to § 8-42-107(8)(b)(III), C.R.S.; see *Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." § 8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." See *Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21. Therefore, Claimant's burden to establish her right to maintenance medical treatment is by a preponderance of the evidence.

Causation may be established entirely through circumstantial evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). In fact, the finding of a compensable injury may be upheld where the exact medical cause of the injury remains shrouded in mystery, but the circumstantial evidence as a whole is sufficient to justify the inference that it was work-related. *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968). Medical evidence is neither required nor determinative of causation. Claimant's testimony, if credited, may alone constitute substantial evidence to support the ALJ's determination concerning the cause of the claimant's condition. See *Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986) (claimant's testimony was substantial evidence that his employment caused his heart attack); *Savio House v. Dennis*, 665 P.2d 141 (Colo.

App. 1983); see also *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997) (lay testimony sufficient to establish disability).

In this case, Claimant was involved in a motor vehicle accident. As a result of her compensable accident she suffered an injury that caused ongoing pain around her left shoulder, neck, or both. The accident also increased the frequency and intensity of her migraines.

The DIME physician's opinion about the location and type of injury has put into question the exact anatomical location – or locations – injured during the motor vehicle accident. But there is not a dispute about whether Claimant suffered a compensable injury that caused pain and necessitated the need for medical treatment in the first instance.

But, when Claimant was placed at MMI, her primary treating physician, Dr. Reichhardt, specifically prescribed "maintenance medical treatment in the form of follow up visits with a physician, coverage of medications, and any necessary laboratory tests to monitor for side effects of medication on an as needed basis over each of the next three years." Dr. Reichhardt also directed Claimant to follow up with Dr. Sanders for her maintenance medication refills.

The ALJ credits Dr. Reichhardt's conclusion that maintenance medical treatment was reasonable and necessary to relieve Claimant from the effects of her work injury when she was placed at MMI. The ALJ also credits the testimony of Claimant about her symptoms and that but for the denial of medical maintenance benefits, Claimant would have sought the recommended medical maintenance benefits to relieve her from the effects of her work injury. The ALJ also credits the testimony of Claimant that the prescription medication helps relieve her from the effects of her work injury. As a result, Claimant established by a preponderance of the evidence that she is entitled to a general award of maintenance medical treatment to relieve her from the effects of her work injury and to maintain MMI.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is entitled to maintenance medical treatment.
2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For

further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 4 , 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-125-074-001**

ISSUES

- Did Claimant prove he suffered a compensable injury on November 8, 2019?
If the claim is found compensable, the ALJ will address the following issues:
- Did Claimant prove entitlement to reasonably necessary medical treatment?
- Did the right to select a treating physician passed to claimant?
- Did Claimant prove entitlement to TTD benefits commencing November 13, 2019?
- Did Respondents prove Claimant was responsible for termination of his employment?

STIPULATIONS

The parties stipulated to an average weekly wage (AWW) of \$267.38 if the claim is compensable.

FINDINGS OF FACT

1. Claimant worked for Employer as a maintenance worker. He alleges a low back while moving a vending machine on November 8, 2019. Claimant and a co-worker, Jacob C[Redacted], travelled from Employer's hotel in Canon City to Colorado Springs to pick up the vending machine. After arriving at the destination, Claimant's, Mr. C[Redacted], and Employer's brother-in-law dollyed the vending machine out to the truck to be loaded. Claimant testified he was behind the machine pulling on the dolly as they loaded it into the bed of Mr. C[Redacted]'s pickup truck. Claimant testified he was in the truck bed when he lost control of the dolly and the vending machine fell on top of him. Claimant testified Mr. Jacob and Employer's brother-in-law walked away and left him under the vending machine. Claimant testified he pushed the vending machine off himself and "wiggled out" from underneath. Claimant testified he told Jacob "I think I messed my back up pretty bad from that" while they were tying down the machine.

2. Claimant and Mr. C[Redacted] drove back to Employer's hotel in Canon City to deliver the vending machine. Claimant testified he texted Justin K[Redacted], the hotel owner, on the drive back and reported he injured his back. Claimant testified he again reported the injury to Mr. K[Redacted] when they arrived at the hotel. Claimant testified he had bruises on both shoulders after the accident.

3. Mr. K[Redacted] denied Claimant reported an injury on November 8, 2019.

4. Claimant worked part of the next day, November 9. He testified he only worked one hour, but his timecard shows he worked three hours. Claimant testified Mr. K[Redacted] sent him home early because he could “barely shovel snow.” Mr. K[Redacted] confirmed Claimant worked on November 9, but testified Claimant said nothing about any back pain or injury.

5. Claimant did not return to work for Employer after November 9, 2019.

6. Claimant saw his PCP, Dr. Norman Macleod, on November 13, 2019 for severe back pain. Claimant reported the pain began “4 days ago” after a vending machine fell on him at work. Physical examination was largely benign with only lumbar spine tenderness and mild pain with lumbar range of motion. Claimant’s neck and mid back were normal. There was no indication of any bruises or conclusions on Claimant’s shoulders, chest, or any other part of his body. Dr. Macleod diagnosed lumbar degenerative disc disease. He ordered x-rays and prescribed muscle relaxers and NSAIDs.

7. Lumbar x-rays were performed on November 16, 2019. They showed multilevel degenerative changes, particularly at T12, L1, and L2. There was mild loss of height and anterior wedging at T12, which appeared “slightly more prominent” than on prior x-rays from 2016, but the radiologist opined it was “likely chronic given the endplate spurring at this level.” No other fracture or acute pathology was identified.

8. Claimant subsequently told several providers his back was injured when a vending machine fell on him, including a physical therapist, emergency room physicians, and IMEs.

9. Claimant was seen at the St. Thomas More Hospital emergency Department on December 3, 2019. He reported back pain after “a vending machine fell on him 3 weeks ago.” He reported numbness “at the top of his buttocks where the vending machine hit him.”

10. Claimant filed a Workers’ Claim for Compensation form on December 3, 2019. He reported the alleged injury to Employer that same day. Mr. K[Redacted] testified he knew nothing about any claimed injury moving the vending machine before December 3. Mr. K[Redacted] forwarded the claim information to Insurer for processing.

11. Mr. C[Redacted] completed a witness statement on December 11, 2019. He stated,

Me and [Claimant] left Motel 6 around 3:30 PM to head to Colorado Springs Day’s Inn motel to pick up a vending machine Me, [Claimant] and Justin’s brother-in-law loaded the machine in back of my pickup. We used the dolly to help us, and nobody got hurt. Then we strapped the machine down and headed back to Canon City. [Claimant] is now coming to me and just making up a bunch of lies, that he got hurt that night.

12. Mr. Jacob testified he and Mr. K[Redacted]'s brother-in-law lifted the dolly in the vending machine up and slid it in the back of the truck. Mr. C[Redacted] testified Claimant was standing on the ground next to the truck and "just holding" the dolly. Mr. C[Redacted] testified he laid the vending machine down and strapped it down, while Claimant stood in the ground next to the tailgate. Mr. C[Redacted] testified the vending machine did not fall. He disputed Claimant's testimony he had reported an injury from the activity with the vending machine. Mr. C[Redacted] testified Claimant left immediately after they arrived back at the hotel in Canon City. Mr. C[Redacted] testified Claimant said his back was hurting but did not say anything about why it hurt. Mr. C[Redacted] observed Claimant working on November 9 and testified "he seemed all fine." Mr. C[Redacted] currently works for a restaurant in Canon City and has no current affiliation with Employer.

13. Claimant sought treatment at the Parkview Medical Center emergency Department on December 16, 2019. He reported back pain, left leg weakness, numbness in his left leg and genitals, and episodic incontinence. He attributed the symptoms to the vending machine falling on him in mid-November. A lumbar MRI showed mild multilevel lumbar spondylosis, mild degenerative stenosis at L4-5 and L5-S1 with effacement of the lateral recesses contacting the dissenting right S1 nerve root, and degenerative multilevel foraminal stenosis. There is no persuasive evidence suggesting any of the pathology shown on the MRI was acute or recent.

14. Claimant had lumbar x-rays on January 13, 2020. The radiologist appreciated mild chronic compression fractures of T12 and L1 that were "unchanged from prior studies," including CT scans in June 2016.

15. Claimant had an IME with Dr. Allison Fall on April 1, 2020. Dr. Fall noted multiple inconsistencies between Claimant's statements and information documented in medical records. Claimant told Dr. Fall the vending machine fell and pinned him on the ground, not in the truck bed. He told Dr. Fall he worked "three to four more days" after the accident. She reviewed records showing Claimant sought treatment in emergency department for low back pain in June 2019. Claimant told Dr. Fall the ER physician performed an osteopathic adjustment that resolved his symptoms, but he saw Dr. Macleod two days later complaining of 6/10 back pain radiating to the right buttock and was excused from work. Claimant denied any prior low back symptoms before summer of 2019, but records show he had imaging studies on his back in 2016. Dr. Fall concluded "it is my opinion based on the inconsistencies between his initial symptoms and the current symptoms that his current symptoms are not causally related to an event that occurred on 11/08/19." She opined that if a vending machine did fall on Claimant as he described, he had most suffered a lumbar strain that healed without the need for ongoing treatment.

16. Claimant saw Dr. Timothy Hall for an IME at his counsel's request on June 10, 2020. Dr. Hall accepted Claimant's statement a 2,500-pound vending machine fell on him on November 8, 2019 and caused him to develop severe back pain. Accordingly, he considered the causation question "straightforward" and opined Claimant's low back and left leg symptoms were related to the alleged work accident.

17. Claimant's testimony was no more credible than Mr. K[Redacted]'s testimony.

18. There is no persuasive evidence Mr. Jacob is biased against Claimant or has any motivation to provide false testimony.

19. Claimant failed to prove he suffered a compensable injury on November 8, 2019. The preponderance of persuasive evidence does not show the alleged accident more likely than not occurred. Claimant's symptoms are at least as likely related to pre-existing multi-level degenerative changes in his lumbar and thoracic spines, without contribution from any alleged work accident.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

Claimant failed to prove he suffered compensable work-related injury on November 8, 2019. After considering the highly conflicting testimony of multiple witnesses, including Mr. C[Redacted] who has no apparent vested interest in the outcome, the ALJ is not persuaded the accident described by Claimant probably occurred. Although Claimant has told multiple medical providers he injured his back when a vending machine fell on him, the mere repetition of a story does not necessarily make it more persuasive. At the IME with Dr. Hall, Claimant estimated the vending machine weighed 2,500. He testified his Mr. Jacob and Mr. K[Redacted]'s brother-in-law walked away after the accident instead of helping him, so he pushed the vending machine up by himself and "wiggled out" from underneath. That scenario is implausible. Mr. C[Redacted] testified he lowered the vending machine and strapped it down while Claimant was standing on the ground next to the truck. Claimant testified he worked the next day and was sent home early because he could "barely shovel show." But Mr. C[Redacted] also saw Claimant working on November 9, and he did not appear hurt. Claimant sought no treatment until November 13, 2019, and the corresponding medical record documents no bruising, abrasions, or other visible evidence of trauma. Finally, Claimant has pre-existing degenerative disc disease which was sufficiently symptomatic to require treatment as recently as June 2019. He has chronic compression fractures at T12 and L1 that are "unchanged" since imaging studies in 2016. The back and leg symptoms for which

Claimant sought treatment on and after November 13, 2019 are probably related to his pre-existing condition without contribution from his work.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

Administrative Law Judge
Office of Administrative Courts

ISSUE

1. Whether Respondents established by clear and convincing evidence that the Division Independent Medical Examination (DIME) opinion of Thomas Higginbotham, D.O., that Claimant is not at MMI as a result of the injury she sustained on September 2, 2017 is incorrect.

FINDINGS OF FACT

1. Claimant is a 50 -year-old female who sustained an admitted work-related injury to her left knee, and ankle on or about September 2, 2017, when she tripped while exiting a storage freezer. Claimant worked for Employer as a store manager in Employer's restaurant.
2. In 2001, Claimant underwent a left knee contralateral ACL reconstruction surgery performed by Rocci Trumper, M.D., and had previously undergone surgery on her left knee.
3. On November 29, 2017, Claimant's then-treating provider, Logan Jones, D.O., of Workwell, placed Claimant at maximum medical improvement (MMI). Dr. Jones opined that Claimant had no permanent injury and no permanent impairment. (EX. A). Dr. Jones testified that Claimant reported a mechanism of injury including tripping, falling forward, and landing on both knees. (Ex. E). Dr. Jones' opined that Claimant sustained a "minor fall" and diagnosed her with a left knee sprain, among other injuries. (Ex. A).
4. Claimant then underwent a Division Independent Medical Examination (DIME) performed by Thomas Higginbotham, D.O., on April 30, 2018. Dr. Higginbotham found Claimant was not at MMI and recommended further orthopedic assessment for causality, relatedness, and treatment. (Ex. D).
5. On October 22, 2018, Claimant underwent the recommended orthopedic evaluation with Michael Thornton, PA-C, who is supervised by Dr. Trumper. PA Thornton performed a physical examination and reviewed claimant's left knee MRI (performed on September 23, 2017). The left knee MRI was interpreted as showing tricompartmental degenerative changes with mild effusion. Anterior horn lateral meniscus tear, small cyclops lesion, and some evidence of small intra-articular loose body around the anterior horn of the lateral meniscus. After reviewing his findings with Dr. Trumper, PA Thornton concluded that Claimant appeared to have aggravation of primary osteoarthritis in her left knee. PA Thornton opined that Claimant' anterior horn lateral meniscus tear was associated with her "mechanism of injury." (The ALJ infers the "mechanism of injury" refers to Claimant's work-related injury). PA Thornton recommended continued conservative management, including corticosteroid injection, home exercise program and

physical therapy. PA Thornton performed a steroid injection on October 22, 2018. (Ex. C).

6. Claimant returned to PA Thornton on December 10, 2018, and reported the prior steroid injection provided significant relief for approximately one month, and that she then had recurrent pain. PA Thornton recommended a series hyaluronic acid (Hyalgan) injection, which Claimant received on January 16, 2019, January 21, 2019, and January 28, 2019. (Ex. C).

7. Claimant saw Dr. Trumper in follow up on March 6, 2019. Claimant reported that the Hyalgan injections seemed to be helping, until she fell on her left knee approximately one hour before her appointment with Dr. Trumper. Dr. Trumper opined that Claimant's primary left knee issue was primary osteoarthritis, which he indicated was exacerbated by her work injury. He noted her knee was structurally intact and recommended additional therapy. (Ex. C).

8. On April 10, 2019, Claimant returned to Dr. Trumper for evaluation. Dr. Trumper opined that Claimant's condition was an aggravation of her preexisting primary arthritis in her left knee. Claimant reported no significant problems prior to her injury. He recommended an MRI to determine possible co-morbidities and opined that if the MRI demonstrated primary arthritis and no other issues, Claimant's only option would be to consider knee replacement. (EX. C).

9. Claimant saw Dr. Trumper again on May 20, 2019. Dr. Trumper noted that Claimant's knee MRI showed tricompartmental osteoarthritis and a suggested a possible lateral meniscal tear. Claimant indicated she would consider a knee arthroscopy for management of her meniscal tear and a chondroplasty. (Ex. C).

10. On June 25, 2019, Dr. Trumper wrote a letter to Insurer requesting a total knee replacement for aggravation of a primary osteoarthritis from her work injury and indicated Claimant had not reached MMI. (Ex. D).

11. On August 9, 2019, Claimant underwent an independent medical exam at Respondents' request performed by Mark Failing, M.D. Dr. Failing conducted a physical examination and review of Claimant's pre- and post-injury medical records. In his report, Dr. Failing summarized records of Claimant's medical treatment from October 200, through June 2019. Dr. Failing's summary contains no mention of medical treatment to Claimant's left knee from July 2007 until December 2016. With respect to Claimant's knee, Dr. Failing opined "within a reasonable medical probability, that [Claimant] had exacerbation of pre-existing chondromalacia with no new tears of anterior cruciate segment." (Ex. B).

12. Dr. Failing noted that "If in fact [Claimant] did strike her knees, it could be sufficient to cause a permanent aggravation or acceleration of pre-existing disease, which can often be seen on an MRI in the early post-injury timeframe. The only treatment that can be attempted would be that of an arthroplasty if in fact the claimant has high-grade chondromalacia or arthritis." Dr. Failing further noted that "Unfortunately, with pre-

existing disease, sometimes it does not take a significant amount of force to create pathology, as the knee is 'set up' to begin having symptoms with injuries or forces that would not necessarily cause symptoms in a pristine and non-diseased and non-pathologic joint." Dr. Failinger also noted that Dr. Jones' conclusion on November 29, 2017, that Claimant sustained a "minor fall" was dubious given that there was nothing in the records to indicate it was a "minor fall." Dr. Failinger also noted that he would need to review Claimant's actual MRI films taken shortly after the accident to determine if Claimant were at MMI. In his recitation of the Claimant's medical records, Dr. Failinger characterized Claimant's September 23, 2017 MRI as: "the anterior cruciate ligament graft that had been placed was intact. Cyclopes lesion was noted. There was a joint effusion and degeneration of the anterior horn of the lateral meniscus and chondromalacia of the patellofemoral joint with Grade III changes in the trochlear groove. MCL scarring was noted. Lateral compartment moderate cartilage thinning was noted." (The September 23, 2017 MRI report was not offered or admitted into evidence and is not in the Court record). (Ex. B).

13. Sometime around the beginning of September 2019, Failinger issued an "addendum" to his August 9, 2019 report, after reviewing Claimant's MRI films from September 23, 2017 and comparing it to the April 26, 2019 film. Dr. Failinger opined that he would expect the Claimant's MRI film to reflect "pre-patellar swelling or edema in the soft tissues" to conclude that Claimant experienced a "likely acceleration of disease with a direct blow to the knee." Dr. Failinger indicated he found no swelling or edema on the September 23, 2017 MRI. Dr. Failinger concluded that Claimant's need for treatment would be due to ongoing degenerative changes rather than due to any new pathology or "severe contusion" or any direct blow to the knee which could have accelerated the Claimant's pre-existing chondromalacia" (Ex. B).

14. Dr. Failinger also testified by deposition. Dr. Failinger testified that in his review of the Claimant's MRI films he was looking for "evidence of forces that were involved that could have created new pathology." Based on his review of the MRI films., Dr. Failinger concluded that Claimant "did not take a direct blow to the knee, which could absolutely have caused acceleration of disease." Dr. Failinger also speculated that although he did not review any of Claimant's pre-injury MRI films, Claimant's left knee pathology would have appeared the same on pre-injury MRI. Dr. Failinger also testified that Claimant's left knee pathology was worse on the 2019 MRI, but he attributed this to natural progression of a pre-existing condition. Dr. Failinger opined that Claimant's need for surgery is not related to her work injury. (Ex. F).

15. On November 5, 2019, Claimant was seen by Lloyd Luke, M.D., of Workwell. Dr. Luke placed Claimant at MMI, recommending continuing medications, massage, and physical therapy. (Ex. A).

16. On February 11, 2020, Claimant was seen by Robert Watson, M.D., at Workwell. Dr. Watson agreed that Claimant was at MMI and assigned a permanent impairment rating. (Ex. A).

17. On March 23, 2020, Dr. Higginbotham performed a second DIME. Dr. Higginbotham reviewed Claimant's medical records dating to October 3, 2000, including reports from records from Dr. Trumper and the August 9, 2019 opinion of Dr. Failing. The index of records provided with Dr. Higginbotham's DIME report contains no records between July 2007 and December 2016. Dr. Higginbotham concluded the Claimant is not at MMI. Dr. Higginbotham opined that Claimant sustained a significant aggravation of her pre-existing arthritis of the left knee, and the treating orthopedist recommended a total knee arthroplasty. He indicated that absent Claimant's work-related injury, "it is purely speculative as to when [Claimant] would have needed a total knee arthroplasty," and a "total knee arthroplasty wasn't even in consideration prior to this WC injury claim." Dr. Higginbotham also noted that Claimant was working full-time as a restaurant manager prior to her injury and was not under active evaluation or treatment at the time of her injury. He concluded that Claimant was not at MMI "based on the significant affect upon her functionality and in need of a left total knee arthroplasty related to the significant aggravation of an osteoarthritis condition that without this injury, it is purely speculative as to whether she would have needed this procedure." (Ex. D).

18. In his pre-hearing deposition testimony, Dr. Jones testified that he would defer to Dr. Trumper regarding the Claimant's need for a knee meniscectomy or a total knee replacement. Dr. Jones also testified that he would defer to Dr. Trumper as to whether Claimant's need for a total knee replacement was related to her September 2017 work injury. (Ex. E).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness;

whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON MMI

Respondents are seeking a determination that Dr. Douthit's determination that Claimant was at MMI on July 13, 2020 was incorrect, and that Claimant was at MMI at an earlier date.

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, *supra*.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties

unless overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO, May 20, 2004). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI.

Respondents have proven by clear and convincing evidence that

Respondents have failed to prove by clear and convincing evidence that Dr. Higginbotham's DIME opinion on MMI is incorrect. Dr. Higginbotham determined on March 23, 2020 that Claimant had not reached MMI due to ongoing symptoms, impaired function and need for surgery. Dr. Higginbotham and Dr. Trumper opined that Claimant sustained an aggravation of her pre-existing condition as a result of her work-related injury, and that surgical intervention may be necessary to relieve the effects of the Claimant's injury. Dr. Higginbotham and Dr. Trumper opined that Claimant is not at MMI. Dr. Jones testified that he would defer to Dr. Trumper's opinions on the need for surgery and whether the need was related to Claimant's work injury.

Respondents rely on Dr. Failinger's opinion that Claimant's September 2, 2017 fall did not result in "new pathology" to her left knee, and that her symptoms and need for surgery are the result of a natural progression of preexisting arthritis, rather than work-related, and therefore Claimant is at MMI. Dr. Failinger's opinion is based, primarily on his interpretation of Claimant's September 23, 2017 MRI. In his initial IME report, Dr. Failinger noted that evidence of injury can "often be seen on an MRI" early in the post-injury phase. Dr. Failinger opines, based on his interpretation of the MRI, that Claimant did not sustain a direct fall on her knees as she reported to multiple treating physicians because he did not interpret Claimant's MRI scan as demonstrating pre-patellar edema.

In essence, Dr. Failinger's opinion is that Claimant's work injury did not aggravate, accelerate, or combine with an existing condition to cause a need for additional medical treatment, and therefore she is at MMI. Dr. Failinger's opinion is based on his interpretation of Claimant's post-injury MRI films, without comparison to pre-injury imaging studies, which apparently do not exist. The ALJ does not credit Dr. Failinger's opinion as to what a pre-injury imaging study of Claimant's knee would likely show because this opinion is mere speculation.

The ALJ concludes that Dr. Failinger's opinion that Claimant is at MMI is a mere difference of opinion with those expressed by the DIME physician, Dr. Higginbotham, and Dr. Trumper. Respondents have not offered evidence that is unmistakable and free from serious doubt that Dr. Higginbotham's opinions regarding MMI are incorrect.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish by clear and convincing evidence that Dr. Higginbotham's DIME opinion that Claimant is not at MMI is incorrect.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 4, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the following medical treatment requested by J. Tashof Bernton, M.D. is reasonable, necessary and causally related to his January 31, 2019 admitted industrial injury: (1) an autonomic testing battery with stress thermography; (2) a compound topical ointment with ketamine and tricyclics; and (3) three ketamine intravenous infusions.

FINDINGS OF FACT

1. On January 31, 2019 Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer. Claimant specifically sustained a right wrist fracture.

2. On May 6, 2019 Claimant underwent a diagnostic assessment for Chronic Regional Pain Syndrome (CRPS) with J. Tashof Bernton, M.D. Claimant exhibited significant contractures in the index fingers of his right hand. Based on a positive autonomic testing battery and stress thermography, Dr. Bernton diagnosed Claimant with CRPS.

3. On November 5, 2019 Claimant visited Dr. Bernton for an evaluation. Dr. Bernton noted some minor CRPS findings in Claimant's left hand including the inability to make a fist and tremors. Claimant also reported symptoms into his lower extremities. However, Dr. Bernton remarked it was unclear whether Claimant's sensation of "pulling" in the lower extremities when walking had any relation to CRPS. Dr. Bernton explained that spreading of CRPS is noted in the clinical literature and Colorado Division of Workers' Compensation *Medical Treatment Guidelines (Guidelines)*. He remarked that CRPS most commonly spreads from one extremity to the contralateral extremity. However, CRPS can also spread from the upper to lower extremities.

4. Dr. Bernton testified that Claimant's lower extremity symptoms have become more pronounced over time. He thus recommended an autonomic testing battery and stress thermography of the lower extremities to confirm a CRPS diagnosis. He detailed that Claimant has exhibited symptoms including skin color changes, a loss of motion, atrophy and hyperalgesia in the lower extremities that suggests the spread of CRPS. However, because Insurer has denied an autonomic testing battery and stress thermography it is uncertain whether Claimant has true four-limb CRPS.

5. Dr. Bernton remarked that Claimant had undergone a sympathetic block and multiple medications without any relief. He thus recommended an intravenous ketamine infusion. Dr. Bernton noted that ketamine is an "NMDA Receptor Antagonist." However, he acknowledged the *Guidelines* reflect that "ketamine is 'not recommended' for CRPS because of the lack of documentation of long-term efficacy and potential side effect." He asserted that Claimant has advancing CRPS likely involving at least two

extremities. Although Dr. Bernton acknowledged that a spinal cord stimulator was an alternative treatment, he recommended a trial of ketamine because the spinal cord stimulator poses greater risks. He specified that an indwelling electromechanical device such as a spinal cord stimulator that requires surgery in an individual with CRPS has considerably more risks than the trial of an intravenous medication. Dr. Bernton commented that ketamine infusions are not a “first line” treatment for CRPS. However, he remarked that there are cases in which ketamine infusion treatment is both reasonable and necessary.

6. On December 10, 2019 Diana Hussain, M.D. performed a Peer Review of Dr. Bernton’s request for ketamine infusions. Dr. Hussain summarized that Claimant had reported continued pain and discomfort in the right upper extremity. A physical examination with Dr. Bernton revealed Claimant “had CRPS present with discoloration, hyperesthesia, and a loss of range of motion in both the digits and the wrist.” Dr. Bernton thus recommended a ketamine infusion. However, Dr. Hussain referenced the *Guidelines* and noted that ketamine is “not recommended for treatment of CRPS.” Rule 17, Exhibit 7 of the *Guidelines* specifically provides that “[s]tudies have not shown any functional improvements in patients with CRPS treated with ketamine infusions.” Furthermore, Dr. Hussain noted that the *Guidelines* provide “ketamine is not recommended since there are less harmful therapies available.” She remarked that the side effects mentioned in the *Guidelines* occur in 12% of patients. Specifically, the reactions range from “pleasant dream-like states to delirium accompanied by irrational behavior, cognitive impairment and cystitis, drug-induced liver damage, respiratory depression, apnea, and laryngospasm.” Furthermore, Dr. Bernton failed to provide the rationale for a ketamine infusion as opposed to other available treatments for Claimant’s symptoms. Finally, there were no “exceptional factors” justifying a deviation from the *Guidelines*. Dr. Hussain therefore recommended the denial of Dr. Bernton’s request.

7. On January 17, 2020 Steven Arsht, M.D. also conducted a Peer Review of Dr. Bernton’s request for ketamine infusions. Dr. Arsht reviewed Claimant’s medical records and noted that there were “no exceptional factors” to support Dr. Bernton’s request “as an outlier” to the recommendations in the *Guidelines*. He explained that “formulations of ketamine hydrochloride have been FDA approved for injection as the sole anesthetic agent for diagnostic and surgical procedures that do not require skeletal muscle relaxation.” Dr. Arsht further remarked that “[s]tudies have not shown any functional improvements in patients with CRPS treated with ketamine infusions.” He thus recommended the denial of Dr. Bernton’s request.

8. Dr. Bernton also requested authorization for a topical analgesic compound in the form of a cream to treat Claimant’s CRPS symptoms. Ketamine and amitriptyline are the primary and secondary ingredients in the compound. He noted that Claimant is suffering extreme pain as his disease progresses. Dr. Bernton remarked that the topical cream would decrease Claimant’s skin sensitivity while reducing burning and hyperalgesia. He explained that the compounding of medications is not simply for the convenience of including multiple medications in one tube.

9. On February 13, 2020 Siva Ayyar, M.D. performed a Peer Review of Dr. Bernton’s request for the topical analgesic compound to treat Claimant’s CRPS. Dr.

Ayyar noted that ketamine is the primary ingredient in the requested compound. Referring to the portion of the *Guidelines* addressing CRPS, Dr. Ayyar remarked that “ketamine and related drugs are not recommended owing to the fact that studies have not shown any functional improvements in claimants with complex regional pain syndrome (CRPS).” Moreover, Dr. Ayyar commented that the section of the *Guidelines* addressing Chronic Pain Disorders “reiterates that ketamine “is not recommended for neuropathic pain.” Dr. Ayyar summarized that “both ketamine and amitriptyline, the primary and secondary ingredients in the compound, are not recommended for topical compound formulation purposes.” Accordingly, Dr. Ayyar recommended the denial of Dr. Bernton’s request for the topical analgesic compound.

10. Claimant has demonstrated that it is more probably true than not that the autonomic testing battery with stress thermography recommended by Dr. Bernton is reasonable, necessary and causally related to his admitted industrial injuries. Initially, on January 31, 2019 Claimant suffered an admitted right wrist fracture while working for Employer. By May 6, 2019 Dr. Bernton diagnosed Claimant with CRPS in his right upper extremity. On November 5, 2019 Dr. Bernton noted some minor CRPS findings in Claimant’s left hand. Claimant also reported symptoms into his lower extremities. However, Dr. Bernton remarked it was unclear whether Claimant’s sensation of “pulling” in the lower extremities when walking had any relation to CRPS. He explained that spreading of CRPS is noted in the clinical literature and *Guidelines*. Dr. Bernton remarked that CRPS most commonly spreads from one extremity to the contralateral extremity but can also spread from the upper to lower extremities.

11. Dr. Bernton testified that Claimant’s lower extremity symptoms have become more pronounced over time. He thus recommended an autonomic testing battery and stress thermography of the lower extremities to confirm a CRPS diagnosis. He detailed that Claimant has exhibited symptoms including skin color changes, a loss of motion, atrophy and hyperalgesia in the lower extremities that suggests the spreading of CRPS. However, because Insurer denied an autonomic testing battery and stress thermography, Dr. Bernton was uncertain whether Claimant has true four-limb CRPS. The medical records and persuasive testimony of Dr. Bernton reflect that Claimant’s CRPS symptoms may have spread from his right upper extremity into his left upper extremity and lower extremities. An autonomic testing battery and stress thermography would confirm or eliminate a CRPS diagnosis for all four of Claimant’s extremities. Therefore, the requested testing is a reasonable and necessary diagnostic and treatment modality. Accordingly, Claimant’s request for an autonomic testing battery and stress thermography is granted.

12. Claimant has failed to demonstrate that it is more probably true than not that the compound topical ointment recommended by Dr. Bernton is reasonable, necessary and causally related to his admitted industrial injury. Dr. Bernton requested authorization for a topical analgesic compound in the form of a cream to treat Claimant’s CRPS symptoms. Ketamine and amitriptyline are the primary and secondary ingredients in the compound. He noted that Claimant is suffering extreme pain as his disease progresses. Dr. Bernton remarked that the topical cream would decrease Claimant’s skin sensitivity while reducing burning and hyperalgesia. He explained that the

compounding of medications is not simply for the convenience of including multiple medications in one tube.

13. In contrast, Dr. Ayyar recommended the denial of Dr. Bernton's request for the topical analgesic compound. Dr. Ayyar noted that ketamine is the primary ingredient in the requested compound. Referring to the portion of the *Guidelines* addressing CRPS, Dr. Ayyar noted that ketamine and related drugs are not recommended for treatment of CRPS because studies have not shown any functional improvement. Moreover, Dr. Ayyar commented that the section of the *Guidelines* addressing Chronic Pain Disorders provides that "ketamine is not recommended for neuropathic pain." Dr. Ayyar summarized that "both ketamine and amitriptyline, the primary and secondary ingredients in the compound, are not recommended for topical compound formulation purposes." In fact, the Chronic Pain section of Rule 17 in the *Guidelines* specifically provides that "neither 2% topical amitriptyline nor 1% topical ketamine reduces neuropathic pain syndromes." Although the *Guidelines* specifically acknowledge that "it is physiologically possible that topical tricyclics and a higher dose of ketamine could have some effect on neuropathic pain" other less expensive topicals and compounds should be tried prior to using more expensive compounds. Despite Dr. Bernton's opinion, the persuasive direction in the *Guidelines* and the opinion of Dr. Ayyar suggest that it is speculative whether the requested compound will reduce Claimant's neuropathic pain. Claimant has thus failed to demonstrate that the compound topical ointment recommended by Dr. Bernton is reasonable, necessary and causally related to his admitted industrial injuries. Accordingly, Claimant's request for the compound topical ointment is denied and dismissed.

14. Claimant has failed to prove that it is more probably true than not that the ketamine infusions recommended by Dr. Bernton are reasonable, necessary and causally related to his admitted industrial injury. Initially, Dr. Bernton recommended ketamine infusions based on Claimant's advancing CRPS. Although Dr. Bernton acknowledged that a spinal cord stimulator was an alternative treatment, he recommended a trial of ketamine because the spinal cord stimulator poses greater risks. He specified that an indwelling electromechanical device such as a spinal cord stimulator that requires surgery in an individual with CRPS has considerably more risks than the trial of an intravenous medication. Dr. Bernton commented that ketamine infusions are not a "first line" treatment for CRPS. However, he remarked that there are cases in which ketamine infusion treatment is both reasonable and necessary.

15. In contrast, Dr. Hussain referenced the *Guidelines* and noted that ketamine is "not recommended for treatment of CRPS. Rule 17, Exhibit 7 of the *Guidelines* specifically provides that "[s]tudies have not shown any functional improvements in patients with CRPS treated with ketamine infusions." Furthermore, Dr. Hussain noted that the *Guidelines* provide "ketamine is not recommended since there are less harmful therapies available." She remarked that the side effects mentioned in the *Guidelines* occur in 12% of patients. Furthermore, Dr. Bernton failed to provide the rationale for a ketamine infusion as opposed to other available treatments for Claimant's symptoms. Finally, there were no "exceptional factors" justifying a deviation from the *Guidelines*. Dr. Hussain therefore recommended the denial of Dr. Bernton's request. Similarly, Dr. Arshat reviewed Claimant's medical records and noted that there were "no

exceptional factors” to support Dr. Bernton’s request “as an outlier” to the recommendations in the *Guidelines*. He further remarked that “[s]tudies have not shown any functional improvements in patients with CRPS treated with ketamine infusions.” He thus also recommended the denial of Dr. Bernton’s request.

16. The CRPS section of Rule 17 in the *Guidelines* addresses the treatment of CRPS with ketamine infusions. The *Guidelines* specifically provide that “[s]tudies have not shown any functional improvements in patients with CRPS treated with ketamine infusions.” Because the potential harm of ketamine infusions outweighs evidence of limited short-term benefit in patients with CRPS, the *Guidelines* do not recommend ketamine infusions. Furthermore, the *Guidelines* note that “[l]ess harmful therapies with longer term effects are available.” Based on the persuasive direction in the *Guidelines* and the opinions of Drs. Hussain and Arsht, Claimant has failed to demonstrate that the ketamine infusions recommended by Dr. Bernton are reasonable, necessary and causally related to his admitted industrial injuries. Accordingly, Claimant’s request for ketamine infusions is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the

employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

5. The mere occurrence of a compensable injury does not require the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *In re McIntyre*, W.C. 4-805-040 (ICAO, July 2, 2010). Instead, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006).

Autonomic Testing Battery and Stress Thermography

6. As found, Claimant has demonstrated by a preponderance of the evidence that the autonomic testing battery with stress thermography recommended by Dr. Bernton is reasonable, necessary and causally related to his admitted industrial injuries. Initially, on January 31, 2019 Claimant suffered an admitted right wrist fracture while working for Employer. By May 6, 2019 Dr. Bernton diagnosed Claimant with CRPS in his right upper extremity. On November 5, 2019 Dr. Bernton noted some minor CRPS findings in Claimant's left hand. Claimant also reported symptoms into his lower extremities. However, Dr. Bernton remarked it was unclear whether Claimant's sensation of "pulling" in the lower extremities when walking had any relation to CRPS. He explained that spreading of CRPS is noted in the clinical literature and *Guidelines*. Dr. Bernton remarked that CRPS most commonly spreads from one extremity to the contralateral extremity but can also spread from the upper to lower extremities.

7. As found, Dr. Bernton testified that Claimant's lower extremity symptoms have become more pronounced over time. He thus recommended an autonomic testing battery and stress thermography of the lower extremities to confirm a CRPS diagnosis. He detailed that Claimant has exhibited symptoms including skin color changes, a loss of motion, atrophy and hyperalgesia in the lower extremities that suggests the spreading of CRPS. However, because Insurer denied an autonomic testing battery and stress thermography, Dr. Bernton was uncertain whether Claimant has true four-limb CRPS. The medical records and persuasive testimony of Dr. Bernton reflect that Claimant's CRPS symptoms may have spread from his right upper extremity into his left upper extremity and lower extremities. An autonomic testing battery and stress thermography would confirm or eliminate a CRPS diagnosis for all four of Claimant's extremities. Therefore, the requested testing is a reasonable and necessary diagnostic and treatment modality. Accordingly, Claimant's request for an autonomic testing battery and stress thermography is granted.

Compound Topical Ointment

8. It is appropriate for an ALJ to consider the *Guidelines* in determining whether a certain medical treatment is reasonable and necessary for a claimant's condition. *Deets v. Multimedia Audio Visual*, W.C. No. 4-327-591 (ICAO, Mar. 18, 2005); see *Eldi v. Montgomery Ward*, W.C. No. 3-757-021 (ICAO, Oct. 30, 1998) (noting that the *Guidelines* are a reasonable source for identifying the diagnostic criteria). The *Guidelines* are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). Nevertheless, the *Guidelines* expressly acknowledge that deviation is permissible.

9. The *Guidelines* provide, in relevant part, that "medications should be clearly linked to improvement of function, not just pain control." WCRP 17, Exhibit 9 (H)(6). Furthermore, the *Guidelines*, specify that, "examples of routine functions include the ability to perform work tasks, drive safely, pay bills or perform math operations, remain alert and upright for 10 hours per day, or participate in normal family and social activities." WCRP 17, Exhibit 9(H)(6).

10. The Chronic Pain section of Rule 17 in the *Guidelines* addresses the treatment of CRPS with topical medications. The *Guidelines* specify in relevant part:

Topical medications, such as the combination of ketamine and amitriptyline, have been proposed as an alternative treatment for neuropathic disorders including CRPS. A study using a 10% concentration showed no signs of systemic absorption. This low-quality study demonstrated decreased allodynia at 30 minutes for some CRPS patients. However, as of the time of this guideline writing, neither tricyclic nor ketamine topicals are FDA approved for topical use in neuropathic pain. Furthermore, there is good evidence that neither 2% topical amitriptyline nor 1% topical ketamine reduces neuropathic pain syndromes. Despite the lack of evidence, it is physiologically possible that topical tricyclics and a higher dose of ketamine could have some effect on neuropathic pain. Other less expensive topicals and compounds, including over-the-counter, should be trialed before more expensive compounds are ordered. The use of topical tricyclics and/or ketamine should be limited to patients with neuritic and/or sympathetically mediated pain with documented supporting objective findings such as allodynia and/or hyperalgesia.

WCRP 17, Exhibit 9 G(10)(k).

11. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the compound topical ointment recommended by Dr. Bernton is reasonable, necessary and causally related to his admitted industrial injury. Dr. Bernton requested authorization for a topical analgesic compound in the form of a cream to treat Claimant's CRPS symptoms. Ketamine and amitriptyline are the primary and secondary ingredients in the compound. He noted that Claimant is suffering extreme pain as his disease progresses. Dr. Bernton remarked that the topical cream would decrease Claimant's skin sensitivity while reducing burning and hyperalgesia. He explained that

the compounding of medications is not simply for the convenience of including multiple medications in one tube.

12. As found, In contrast, Dr. Ayyar recommended the denial of Dr. Bernton's request for the topical analgesic compound. Dr. Ayyar noted that ketamine is the primary ingredient in the requested compound. Referring to the portion of the *Guidelines* addressing CRPS, Dr. Ayyar noted that ketamine and related drugs are not recommended for treatment of CRPS because studies have not shown any functional improvement. Moreover, Dr. Ayyar commented that the section of the *Guidelines* addressing Chronic Pain Disorders provides that "ketamine is not recommended for neuropathic pain." Dr. Ayyar summarized that "both ketamine and amitriptyline, the primary and secondary ingredients in the compound, are not recommended for topical compound formulation purposes." In fact, the Chronic Pain section of Rule 17 in the *Guidelines* specifically provides that "neither 2% topical amitriptyline nor 1% topical ketamine reduces neuropathic pain syndromes." Although the *Guidelines* specifically acknowledge that "it is physiologically possible that topical tricyclics and a higher dose of ketamine could have some effect on neuropathic pain" other less expensive topicals and compounds should be tried prior to using more expensive compounds. Despite Dr. Bernton's opinion, the persuasive direction in the *Guidelines* and the opinion of Dr. Ayyar suggest that it is speculative whether the requested compound will reduce Claimant's neuropathic pain. Claimant has thus failed to demonstrate that the compound topical ointment recommended by Dr. Bernton is reasonable, necessary and causally related to his admitted industrial injuries. Accordingly, Claimant's request for the compound topical ointment is denied and dismissed.

Intravenous Ketamine Infusions

13. The CRPS section of Rule 17 in the *Guidelines* specifically addresses the treatment of CRPS with ketamine infusions. The *Guidelines* provide in relevant part:

There is some evidence that in CRPS I patients, low dose daily infusions of ketamine can provide pain relief compared to placebo. The relief, however, faded within a few weeks. Studies have not shown any functional improvements in patients with CRPS treated with ketamine infusions. Because their potential harm, as described below, outweighs evidence of limited short-term benefit in patients with CRPS, NMDA receptor antagonists are not recommended. Less harmful therapies with longer term effects are available.

...

Due to the potential harm and limited short-term benefit in patients with CRPS, ketamine NMDA receptor antagonists are **not recommended** since less harmful therapies are available.

...

If ketamine is being considered for a CRPS patient who has been refractory to other treatments, there must be a complete discussion with the patient regarding lack of evidence for treatment, the possible side effects and the unknown long term side effects of repeat treatment.

WCRP, Exhibit 7 H(8)(c).

14. As found, Claimant has failed to prove by a preponderance of the evidence that the ketamine infusions recommended by Dr. Bernton are reasonable, necessary and causally related to his admitted industrial injury. Initially, Dr. Bernton recommended ketamine infusions based on Claimant's advancing CRPS. Although Dr. Bernton acknowledged that a spinal cord stimulator was an alternative treatment, he recommended a trial of ketamine because the spinal cord stimulator poses greater risks. He specified that an indwelling electromechanical device such as a spinal cord stimulator that requires surgery in an individual with CRPS has considerably more risks than the trial of an intravenous medication. Dr. Bernton commented that ketamine infusions are not a "first line" treatment for CRPS. However, he remarked that there are cases in which ketamine infusion treatment is both reasonable and necessary.

15. As found, in contrast, Dr. Hussain referenced the *Guidelines* and noted that ketamine is "not recommended for treatment of CRPS. Rule 17, Exhibit 7 of the *Guidelines* specifically provides that "[s]tudies have not shown any functional improvements in patients with CRPS treated with ketamine infusions." Furthermore, Dr. Hussain noted that the *Guidelines* provide "ketamine is not recommended since there are less harmful therapies available." She remarked that the side effects mentioned in the *Guidelines* occur in 12% of patients. Furthermore, Dr. Bernton failed to provide the rationale for a ketamine infusion as opposed to other available treatments for Claimant's symptoms. Finally, there were no "exceptional factors" justifying a deviation from the *Guidelines*. Dr. Hussain therefore recommended the denial of Dr. Bernton's request. Similarly, Dr. Arsht reviewed Claimant's medical records and noted that there were "no exceptional factors" to support Dr. Bernton's request "as an outlier" to the recommendations in the *Guidelines*. He further remarked that "[s]tudies have not shown any functional improvements in patients with CRPS treated with ketamine infusions." He thus also recommended the denial of Dr. Bernton's request.

16. As found, the CRPS section of Rule 17 in the *Guidelines* addresses the treatment of CRPS with ketamine infusions. The *Guidelines* specifically provide that "[s]tudies have not shown any functional improvements in patients with CRPS treated with ketamine infusions." Because the potential harm of ketamine infusions outweighs evidence of limited short-term benefit in patients with CRPS, the *Guidelines* do not recommend ketamine infusions. Furthermore, the *Guidelines* note that "[l]ess harmful therapies with longer term effects are available." Based on the persuasive direction in the *Guidelines* and the opinions of Drs. Hussain and Arsht, Claimant has failed to demonstrate that the ketamine infusions recommended by Dr. Bernton are reasonable, necessary and causally related to his admitted industrial injuries. Accordingly, Claimant's request for ketamine infusions is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for an autonomic testing battery with stress thermography as proposed by Dr. Bernton is granted.
2. Claimant's request for a compound topical ointment as recommended by Dr. Bernton is denied and dismissed.
3. Claimant's request for ketamine infusions as proposed by Dr. Bernton is denied and dismissed.
4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: November 6, 2020.

ISSUES

- I. Has Claimant, by a preponderance of the evidence, shown that the lumbar revision surgery as proposed by Dr. Rauzzino is reasonable, necessary, and causally related to her 12/17/2019 work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background

1. Claimant, age 55, is employed as a special education para teacher at [Employer Name Redacted]. Claimant has worked for Respondent in the same role since April 2000. At hearing, Claimant testified her job duties have included helping special ed students with calming, with academics, and supervising safety.

Claimant undergoes Lumbar Fusion before the Work Injury

2. Prior to the date of injury, Claimant was treating pain in her back. On January 8, 2019, she was seen by her personal physician, David Bird, MD, after she strained her back while trying yoga. Dr. Bird noted Claimant should continue using Meloxicam to treat her pain at that time. (Ex. A, p. 4).
3. A January 30, 2019 MRI of the lumbar spine revealed subtle degenerative anterolisthesis of the L3 level and retrolisthesis of the L5 level, moderate spinal stenosis at the L3-L4 level, mild to moderate spinal stenosis at the L4-L5 level, and degenerative disc disease with a small right bulge at the L5-S1 level. *Id.* Claimant was diagnosed with a degenerative condition of the lumbar spine, which caused her to lose her lumbar lordosis. (Rauzzino depo. p. 15).
4. After Claimant's symptoms continued without relief, she underwent a four-level fusion procedure that included (1) L2-L3, L3-L4 anterior spinal discectomy and arthrodesis; (2) L2-L3, L3-L4 insertion of intervertebral biomechanical device; and (3) L2-L3, L3-L4 allograft. The surgery was performed by Paul Stanton, DO, on May 31, 2019. (Ex. E, p. 105).

Post-Surgical Treatment

5. After the procedure, Claimant continued to be prescribed Meloxicam 15 mg daily. On September 25, 2019, Dr. Bird discontinued the Meloxicam prescription, and switched Claimant to a Celebrex 200 mg twice per day prescription. (Ex. D, p. 103).

6. At hearing, Claimant elaborated on her actual usage of any NSAIDs. She indicated that she stopped taking the Meloxicam (which had been prescribed for arthritis by Dr. Bird), and other drugs, prior to the fusion, upon medical advice. While her prescriptions were *filled* (by Dr. Bird), she did not actually *use* the Meloxicam until September, 2019, after which the Meloxicam was changed on a trial basis with Celebrex. That was then changed to Ibuprofen 600mg in October, but she never took Meloxicam or Celebrex at the same time as the Ibuprofen.
7. Claimant had also developed right arm pain, eventually leading to numbness and tingling in the right arm. She was therefore prescribed ibuprofen, 600 mg, three times per day. At her November 8, 2019 appointment with Dr. Bird, Claimant was recommended to continue taking ibuprofen at this dosage. Dr. Bird's file noted that Claimant was still prescribed Meloxicam 15 mg once per day, but does not reflect if this was actually discussed with Claimant. (Ex. D, p. 101).
8. At hearing, Claimant testified that she was in a brace for six weeks following her fusion, followed by physical therapy. Her progress went well. Her symptoms and pain level had become much more tolerable and she had increased her activity levels, including returning to the gym, walking, hiking, swimming, biking, and yard work.

The Work Injury

9. On December 17, 2019, Claimant attempted to control a special education student who was observed to be combative and "not cooperating." She estimated the student to be about 70 pounds. At that time, there was also a substitute teacher, Mary H[Redacted], in the room. Claimant and Ms. H[Redacted] attempted to coax Claimant out from behind a chair. He was "screaming, banging his fists and feet against the wall and the recliner." (Transcript, p. 17).
10. The student then climbed under a computer desk where computer cords were hanging, and tried to put a cord around his neck. Claimant felt there was no time to await help; instead, she felt she had to act right then. She climbed under the desk and removed him, hoping he would calm down. Instead he proceeded to the other side of the desk and grabbed a cord again.
11. When asked how long it lasted, Claimant explained:

A This was – altogether this was a few minutes. I mean, this went really fast. There was not time to think, you know. We were just trying to help him. She was – the other person in the room, the substitute, she was trying to loosen his fingers on the grip of the cord of the [computer] tower. I climbed again from the back underneath the desk and moved him again and pulled him out and then lifted him up, and then we moved him to the middle of the room.

And when I let him go, I felt some really strange pain in the back, was really, really difficult to breathe and then my shoulder as well, and

then I actually said to her that I had surgery in the back previous in the summer and I shouldn't have done that. (Transcript, p. 19).

12. Claimant testified she immediately felt pain in her low back; "...it felt like something just went wrong in there right away."

Post Work Injury Treatment

13. Claimant testified that she did not seek immediate medical assistance, hoping she would get better with icing and rest. She did file a report at once with Employer, within a half-hour. When her symptoms did not improve, on December 19, 2019, Claimant then sought medical care. Claimant had an initial appointment at CCOM with Edith Reichert, FNP-BC. Ms. Reichert noted Claimant's current prescribed medications included Meloxicam, Spironolactone, and Tylenol. (Ex. C, p. 95).
14. Claimant was also referred for x-rays of the right shoulder, cervical, and lumbar spine. Ms. Reichert prescribed Flexeril 10 mg to be taken at bedtime. *Id* at 96.
15. An x-ray of the lumbosacral spine was taken the same day, revealing slight lucency about the left L4 level, as well as a sacral pedicular screw that was indicative of some degree of loosening. (Ex. B, p. 19).
16. The physical examination documents "Lumbar spine-no deformity, no edema, no ecchymosis, no spinal pain, full flexion, extension, bilat[eral] side flex and rotational twist with paraspinal discomfort on palp and movement, Bilat[eral] straight leg negative, normal gait, normal sensation, normal motor function, (Ex. C pp. 95-96) The diagnosis at that time was "sprain of the lumbar ligaments" *Id*.
17. On December 31, 2019, Claimant returned to see Dr. Bird. Dr. Bird noted that although she had undergone the May 31, 2019 surgery with Dr. Stanton, she had been referred to see Dr. Stanton's partner, Dr. Bee, for injuries related to the workplace incident. X-rays had revealed issues with the screws in the lumbar spine that were used in the May 2019 fusion procedure. (Ex. 1, p. 3).

Claimant is referred to Dr. Rauzzino

18. Claimant was never actually seen by Dr. Bee. Instead of being seen by Dr. Bee, Claimant was referred by the Risk Management department of Respondent to Michael Rauzzino, M.D. on February 17, 2020. X-rays were reviewed at this appointment.
19. Claimant was seen by her ATP, Thomas Centi, M.D. at CCOM on February 26, 2020. Dr. Centi noted Claimant had undergone a neurosurgical evaluation, with a subsequent CT scan being ordered to evaluate the screw alignment. Claimant was listed to have Meloxicam, among other medications, as a current medication. (Ex. C, p. 64).

20. Claimant returned to see Dr. Rauzzino on March 3, 2020. Dr. Rauzzino noted it appeared Dr. Stanton had performed a unilateral approach during the May 2019 procedure, placing pedicle screws only on one side of the lumbar spine. (Ex. 1, p. 5). Dr. Rauzzino initially noted on 3/3/2020 it was possible that the screw had broken over time, or that it had broken as a result of the December 17, 2019 workplace incident and acute onset of pain. *Id.*

21. Dr. Rauzzino opined he suspected the pedicle screws at the L5 and S1 levels were loose. Therefore, he did not believe there was adequate fusion. Further, he suspected there was pseudarthrosis, or nonunion, at the L5-S1 level, as well as a broken screw. According to the records, Claimant was still prescribed Meloxicam at that time. *Id.*

Deposition of Dr. Rauzzino

22. Dr. Rauzzino was also deposed, post-hearing, on 9/21/2020. When asked if a broken screw (such as Claimant has) can cause pain, he replied:

A A broken screw can cause pain in and of itself, but it's also indicative of other problems as well.

When asked what other problems, he noted:

A If the screw is broken, that means the hardware that was placed to provide stability to allow the bones to he'll [sic "heal"] has been compromised, and it's not likely the fusion will go on to heal with the screw broken and the instrumentation not effective anymore. (Rauzzino Depo, pp. 21-22).

Dr. Rauzzino was also asked about pseudarthrosis. He elaborated:

A ...And that it may take a full year for a fusion to occur. So it might be premature to call it a pseudarthrosis in the absence of a broken screw in the sense that if you did an operation on somebody's back to fuse their spine and you took a CAT scan of your back a week later and the bones weren't fused, *you wouldn't call that a pseudarthrosis because the fusion hasn't had time to fully heal.*

In this case for Ms. Young, she was less than a year out from the surgery. And with the broken screw, it meant she no longer had the ability to try to continue to heal at the fusion at the lowermost level. *It took away her ability to do that.* (Rauzzino Depo, p. 22) (emphasis added).

23. Dr. Rauzzino felt that the screw broke as a result of the occupational injury. He elaborated:

A I think if one looks at the case or claim from Ms. Young, it's very clear that as of September, she was having no pain or very minimal pain, she was doing very well. She had this large surgery and had gone back to work and was doing well.

And there was no documentation that I was afforded that between the last time she saw Dr. Stanton in September of 2019 and at the time of the occupational injury in December 2019, I was not provided any records that she was having increasing back pain or needed additional treatment or x-rays. So she was doing very well clinically.

And after the work-related of the occupational injury she sustained with the special needs kid, she had immediate onset of back pain that did not get better, was not relievable. And that's the same point at which the broken screw was noted.

24. Dr. Rauzzino acknowledged there was no 'objective evidence' to support a finding that the screw had become minimally displaced in December 2019. He also had no criticism of Dr. Stanton's unilateral-sided fusion technique, noting that this was a legitimate school of thought, depending on how the surgeon is trained.

Continued Consultation with Dr. Rauzzino

25. On March 27, 2020, Claimant underwent an MRI of the lumbar spine, which was compared to the (pre-surgical) MRI taken on January 30, 2019. The MRI revealed post-surgical changes, with anterior and posterior fusion. However, there was mild foraminal stenosis bilaterally at the L4-L5 and L5-S1 levels. (Ex. B, p. 15).
26. Claimant returned to Dr. Rauzzino on April 20, 2020. He again noted there was pseudarthrosis (nonunion) at the L5-S1 level, broken screws at the anterior interbody cage into the sacrum, and a loose screw near the S1 level, also consistent with pseudarthrosis. Dr. Rauzzino opined Claimant's pain had become worse, which he noted was also consistent with pseudarthrosis. (Ex. 1, p. 7).
27. On April 21, 2020, Dr. Rauzzino submitted a request for authorization for a L3-S1 revision procedure. (Ex. 1, p. 13). This was denied, following the IME with Dr. Castro.

Dr. Castro's IME

28. Respondent retained Andrew Castro, M.D. to perform an independent medical examination ("IME") of Claimant, pursuant to rule 16. The IME took place on June 8, 2020. Dr. Castro prepared a written report, and was also deposed on September 25, 2020.
29. On the day of the IME, Dr. Castro noted Claimant was still using a Meloxicam compound cream, spironolactone, Flexeril, and using a lidocaine patch. (Ex. A, p. 3).

30. In his review of the medical records leading up to the date of injury, Dr. Castro noted the escalation in the dosage of anti-inflammatories as well as a, “not yet fused back.” *Id* at 8. (emphasis added).
31. In his IME report, Dr. Castro noted that anti-inflammatory medications have been shown and proven to limit bony fusion – the exact purpose of the May 31, 2019 procedure. Dr. Castro concluded that the increase in these medications contributed to Claimant developing pseudarthrosis. *Id* at 12.

Dr. Rauzzino’s written Response

32. Dr. Rauzzino then responded to Dr. Castro’s IME in a letter dated July 22, 2020. (Ex. 1, p. 2). He notes that he and Dr. Castro differ on the causality of Claimant’s current predicament. He notes that he had read Claimant’s imaging studies directly. He stated that there was no basis to say that the screw was broken before “the fall” (*Note: Claimant does not describe a fall in her testimony regarding her mechanism of injury), but there was a basis to say it was broken afterwards, due to Claimant’s increased symptomology. Claimant may well have been developing a nonunion, but she was doing well prior to the work injury. He noted: “Once the screw has failed, there is no chance for the patient to develop union as she no longer has hardware fixating it”. *Id*.

Dr. Castro’s Deposition

33. Dr. Castro was also deposed on September 25, 2020. He was offered and accepted as a medical expert in orthopedic surgery with education, training and experience in examining, diagnosing and treating patients with low back complaints like Claimant. He also performs lumbar fusions.
34. Dr. Castro testified the medications taken by Claimant were a direct inhibitor of bone healing.
35. Dr. Castro testified, consistent with his IME report, that Claimant had instrumentation placed unilaterally at the May 31, 2019 lumbar procedure. There had been no attempt to perform a posterolateral fusion to neutralize the posterior column of the lumbar spine. Because of this, he opined, Claimant developed the nonunion.
36. Dr. Castro agreed with Dr. Rauzzino that Claimant does require surgical intervention, specifically the revision surgery. However, Dr. Castro opined and testified the need for the surgery was not caused by the December 17, 2019 workplace incident.
37. Dr. Castro based his opinion on the fact that at the time of the workplace incident, Claimant was not even one year out from the May 31, 2019 lumbar fusion. Further, her ongoing use of high doses of anti-inflammatories had contributed to the lumbar nonunion. *Note: While Dr. Castro performed a detailed records review, including what and when NSAIDs were prescribed, the record never reflects if he ever *asked* Claimant if she *discontinued* using them for any intervals of time, pre or post-surgery.

38. Dr. Castro opined the December 2019 workplace incident did not carry any increased stress along the lumbar spine than any other type of daily forces that Claimant regularly experienced. Specifically, the lumbar forces applied across the spine on the date of injury were not likely greater than any other situation in her normal daily life, and did not impart any increased forces that would have caused the injury.
39. Dr. Castro noted Claimant been going to the gym on a regular basis prior to the date of injury, which had also in part increased loads on the lumbar spine, particularly at the high stressed L5-S1 junction. Dr. Castro was of the opinion the lumbar nonunion was likely already taking place on the date of injury. He explained that the same amount of lifting, bending, going to the gym, and other daily life activities would have resulted in a similar outcome.
40. Dr. Castro concluded the inadequate fixation and lack of a posterolateral fusion had resulted in the lumbar nonunion, causing the need for further surgical intervention. He did acknowledge that there was no way to know if the workplace incident of 12/17/2019 was the deciding incident that ultimately broke the screw, although he did opine that when the hardware fails, such failure was not 'catastrophic'. He also acknowledged that he had never reviewed the imaging films of Claimant's back, only the written reports. He did not feel that viewing the films was necessary to render an opinion.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.
2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing weight, credibility, and sufficiency of the evidence in Workers Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Taken as whole, both in hearing testimony, and in reporting symptoms to numerous medical providers, the ALJ finds Claimant to be sincere in what she has reported, even if not entirely consistent. The ALJ notes that Claimant did her best in threading the prescription needle to address her varied maladies, and accepts her explanation that while her ongoing prescriptions may have continued on paper (and thus carried through on subsequent reports), she suspended them upon medical advice when told to do so. Such is not an uncommon occurrence.
4. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ has reviewed, as is not uncommon, conflicting theories from Drs. Rauzzino and Castro on *why* Claimant is now currently situated. The ALJ finds both to be sincere and highly-credentialed, and to have rendered their opinions to the best of their professional abilities. Both are *credible*; the ALJ must find who is more *persuasive*, in light of all the evidence.

Medical Benefits, Generally

5. The Claimant is not entitled to medical care that is not *causally related* to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the Claimant has the burden to prove, by a preponderance of the evidence, that the disputed treatment is *causally related* to the injury, and *reasonably necessary* to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).

6. The Claimant has the burden to prove his entitlement to medical benefits by a preponderance of the evidence. §8-43-201, C.R.S. The Respondents are only liable for the medical treatment that is *reasonable and necessary* to cure and relieve the work-related injury. §8-42-101(1)(a), C.R.S.

Reasonable and Necessary

7. This is not disputed. Claimant has a loose screw in her back, and also a broken one – at least. She currently suffers from a nonunion of her fusion, with no prospect of this being rectified at any point, until the hardware is placed properly to allow the union to occur over time. While bilateral affixation makes intuitive sense, this is best left to the attending surgeon to determine. The ALJ finds that the surgery as proposed by Dr. Rauzzino to be reasonable and necessary to cure Claimant of the nonunion, and the loose hardware in her lumbar spine that she currently suffers from.

Causally Related to the Work Injury

8. Dr. Castro opines that the unilateral affixation used by Dr. Stanton was a poor choice; Dr. Rauzzino does not share that view. It does not matter now- maybe it was a bad choice, and maybe it wasn't, but *Claimant's back was the one she brought into work on December 17, 2019 – and it was not a perfect back*, at that. Much has also been made of Claimant's usage – vs temporary discontinuation – of NSAIDs preceding and following her fusion surgery. The ALJ accepts Claimant's version of those events (after all, Claimant worked hard otherwise to assure a good result –PT, exercise, etc.). But what if Respondents' accusation is correct after all? For that matter, what if Claimant followed medical advice (it is noted, for example, she is a non-smoker) but, through no fault of her own, just congenitally occupies the outer edge of the bell curve; i.e., is just a slow healer? (Dr. Castro was thinking a 3 to 6-month union window, Dr. Rauzzino thought she might need up to a year). Even controlling all environmental factors, individuals respond differently to surgery. Would that mean her slow-healing condition (be it congenital or NSAID-induced) is therefore the proximate cause of the broken screws? Or did the screws break prematurely, thus rendering further healing a nullity? Either way one looks at it, it is again noted that *Claimant* (whether just a slow healer, or covert NSAID-taker) *brought a highly imperfect back into work on 12/17/2019*.
9. The mere fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a

preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

10. Claimant was thrust into a no-win situation when this student became unruly. She had to act as she did. The average special ed para educator might well have only suffered a back strain in wrestling with him, but Claimant brought her still-healing back into work with her that day. She became symptomatic at once – and has remained similarly symptomatic ever since. She will remain so until her symptoms are alleviated with a revision surgery. It is duly noted that correlation does not equal causation, but the ALJ finds Dr. Rauzzino to be more persuasive than Dr. Castro on this issue. The ALJ does not accept the proposition that Claimant had essentially an equal chance of breaking a screw simply by going about her daily activities.
11. Claimant never was symptomatic until the injury, for which she was then assigned an ATP and later a neurosurgeon. Before then, Claimant liked to swim, bike, garden, and work out. She did not have any interest in fighting down a few weight classes in the UFC. Controlling this unruly student was no ordinary event. It was...wait for it...the straw that broke the camel's back, and the ALJ so finds. Perhaps indeed due to her slow healing, one or more screws become dislodged during this incident, thus rendering the supporting hardware incapable of doing its job. Her back was no longer stable. Claimant has shown, by a preponderance of the evidence, that her need for revision surgery is *causally related* to her work injury.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the lumbar revision surgery as proposed by Dr. Rauzzino.
2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory

reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

ISSUES

- Did Claimant prove an anterior cervical discectomy and fusion (ACDF) recommended by Dr. Michael Rauzzino is reasonably necessary and causally related to her admitted industrial injury?

FINDINGS OF FACT

1. Claimant works for Employer as a Treaty Compliance Specialist. She suffered admitted injuries on July 24, 2017 when she slipped on a wet floor while walking into the restroom.

2. Claimant testified she went “up in the air” and landed on her right hip. She testified her shoulder struck the wall, which “bounced” her backward and caused her to strike her neck on the bathroom door as it was closing. She then hit her head on the floor. She testified she injured her right hip, right shoulder, neck, and left calf in the accident.

3. There is no dispute Claimant injured her right hip and right shoulder in the accident. Respondents have provided extensive treatment, including a right total hip arthroplasty on November 19, 2018 and a right shoulder surgery on June 28, 2019. The current dispute relates to surgery on Claimant’s neck.

4. Claimant testified, “the [neck] pain itself has not gotten worse [since the accident], the pain has continued to be the same. It’s like a red-hot poker somebody is sticking down inside my neck.” She also described “pins and needles” radiating from her neck into both hands since the accident. She testified the numbness and weakness in her hands has gotten progressively worse since the accident. She recounted a recent incident where she grabbed a hot soldering iron and did not realize it had burned her until she looked down and saw the blister. Claimant testified she had never experienced similar symptoms before the July 24 accident.

5. Contrary to her testimony, Claimant was treated for neck pain and arm symptoms in 2016. A December 8, 2016 progress note from her primary care provider FNP Laura McMahon states Claimant “has been having neck pain x3 months. Has worsened and now she is having pain down arms. Complains of numbness and tingling to both arms. Has tried tramadol for discomfort without relief. Has decreased ROM to neck secondary to pain. Initially thought she strained her neck but it’s not improving.” Physical examination showed cervical paravertebral tenderness to palpation. Ms. McMahon ordered a C-spine x-ray and prescribed Valium for neck pain. At the time, Claimant was already taking cyclobenzaprine, Tramadol and Ultracet for low back pain, and yet the neck pain was bad enough to cause her to seek additional treatment.

6. The x-ray was performed on December 9, 2016. It showed mild reversal of the cervical lordosis and mild multilevel degenerative changes.

7. At her next visit with Ms. McMahon on February 3, 2017, Claimant said the Valium was “helping” her neck pain but “she is still having the pain and thinks that when her blood pressure is higher she has more pain.” Physical examination again showed cervical paravertebral tenderness to palpation.

8. At hearing, Claimant disputed the medical records and claimed the pain was actually “between my shoulder blades” instead of her neck.

9. After the July 24, 2017 work accident on July 24, 2017, Claimant drove herself to the Parkview Medical Center emergency room. She stated she landed on her right hip and was wedged between the stall. She described severe, sharp, throbbing right hip pain radiating across her hip and down her leg. She reported a history of sciatica on the left side, a previous L5 sacrum injury, and cervical disc degeneration. There is no mention of any neck pain or upper extremity symptoms. Dr. Alexis Bencze examined Claimant’s low back and lower extremities, but not her neck. Claimant underwent hip and pelvic x-rays and a lumbar MRI, but no imaging of her neck was ordered. Claimant testified she was icing her neck at the ER and a nurse pointed out a red spot on the back of her neck for the door struck her. The emergency room records do not corroborate her testimony and there is no mention of any red spot on her neck, neck pain, or neck injury. Claimant was given pain medication and a lidocaine patch, referred for physical therapy, and discharged.

10. Claimant saw Dane Farnworth, MPT, for a physical therapy evaluation on August 9, 2017. Claimant reported she slipped on a wet floor at work and landed on her back and hip. She described “constant” 6/10 low back pain radiating down the back of her leg to her feet and toes, and pain in the anterior hip/groin. Ms. Farnworth diagnosed “lumbar pain with leg pain,” and recommended six weeks of therapy and exercise. The report makes no mention of any neck symptoms or problems.

11. Respondents referred Claimant to Dr. Terrence Lakin for authorized treatment. At her initial visit on September 14, 2017, claimant reported she slipped and fell on her right hip and became wedged between the stall. She had a sharp pain in her back radiating down her leg. She had attended physical therapy on Dr. Bencze’s recommendation. Claimant stated, “last week while doing planks she had a pop in her lower back and since then has been having numbness and tingling with bilateral upper extremities and cervical pain and numbness.” Dr. Lakin noted she “lightly struck her head but jolted her neck . . . She reports continued lumbar and right hip pain, left medial knee pain, and now for one week cervical neck and bilateral upper arm paresthesias.” Examination of the neck showed slightly reduced range of motion, midline tenderness to palpation, and muscle spasms in the paracervical musculature and bilateral trapezius muscles. Dr. Lakin opined, “I am concerned about this onset of cervical pain and tightness and upper arm bilateral paresthesias that began one week ago after a pop in her lower back.” He ordered a cervical MRI and referred Claimant to Dr. Michael Sparr.

12. The cervical MRI was completed on October 10, 2017. The radiologist interpreted it as showing a herniated disc at C4-5 with mild canal stenosis, a C5-6 disc extrusion contacting the spinal cord, and a disc bulge at C6-7. He saw no cord compression and no significant bone marrow edema.

13. Claimant saw Dr. Sparr on October 20, 2017. She described falling on her right hip and “also recalls straining her neck awkwardly during the fall.” Claimant recalled having moderate hip and knee pain and “mild neck pain initially following the injury.” Dr. Sparr further noted, “In late August while she was traveling in Washington DC, she reports feeling a pop in her low back and developed extreme neck pain. She reports that she had difficulty even turning her neck. She developed symptoms of numbness and tingling in her right lateral arm.” Physical examination showed increased muscle tension in the right posterior and lateral cervical musculature. She was very tender to palpation over the right trapezius, posterior scalenes, levator scapula, and cervical paraspinals from C5-T1. Spurling’s maneuver was positive on the right. Dr. Sparr opined, “the patient developed severe right cervical pain and upper extremity symptoms after feeling a pop in her low back while in Washington DC perhaps three weeks after the injury. At this point she presents with a right C5-C6 disc herniation and extrusion which is likely the greatest cause of her symptoms. She appears to have C6 radiculopathy.” He recommended a steroid burst and an electrodiagnostic study.

14. Dr. Sparr performed a right upper extremity electrodiagnostic study on November 6, 2017. It was normal, with no evidence of cervical radiculopathy. He opined, “although the patient does not seem to have radiculopathy, she may certainly be irritating the C6 nerve within her neck. This has not caused obvious damage on electrodiagnostic study. The patient seems to have profound cervical and parascapular myofasciitis. I think she will respond well to a combination of trigger point injections, chiropractic treatment, and massage.”

15. Claimant saw Dr. Robert Graham for chiropractic evaluation on November 9, 2017. Dr. Graham noted Claimant “slipped and fell onto her right low back/hip and wedging her leg underneath the stall. She apparently hurt her neck and right shoulder as well; however, we are only authorized to treat and evaluate her lumbar spine and pelvis. . . . [S]he did start physical therapy. She felt a pop in her low back, which caused her cervical spine to start hurting.”

16. Dr. Stephen Scheper performed a cervical epidural steroid injection (ESI) on December 29, 2017.

17. Claimant saw Dr. James Bee on January 8, 2018 for a surgical consultation. She stated she slipped on a wet floor and injured her right hip and right shoulder. She also stated the accident caused her to “whip my head back,” and the closing door hit the back of her neck. She described weakness and “clumsiness” in her arms and hands. Claimant told Dr. Bee she received no benefit from the cervical ESI administered by Dr. Scheper, or from prior trigger point injections. Her pain diagram shows pain and numbness throughout both arms, which Dr. Bee described as “nondermatomal.” On examination, Spurling’s maneuver to the left caused some left-sided neck pain but no

radiating arm symptoms. Spurling's maneuver on the right caused some left-sided neck tightness. Motor strength was 5/5 throughout the bilateral upper extremities. Sensation was intact and equal bilaterally. Flexion-extension x-rays of the cervical spine obtained in the office showed no instability. Dr. Bee reviewed the cervical MRI images and noted a mild central disc bulge at C5-6 which "does touch the right C6 nerve root but does not deflect it." He saw no evidence of cord compression, cord signal change, or ligamentous injury. Dr. Bee diagnosed mild C5-6 disc degeneration, nondermatomal distribution numbness, and neck pain. He concluded,

I was able to go over her x-rays, her MRI, as well as her treatment options. Although she does have a subtle disc bulge at the C5-6 level, I am not seeing a "disc extrusion causing significant stenosis." Her lack of benefit with an epidural steroid injection in the cervical spine certainly points away from something I can make predictably better with surgery. Her nondermatomal distribution numbness is certainly nothing that I think can be improved upon with an anterior cervical discectomy and fusion.

18. Dr. Bee recommended Claimant continue with Dr. Sparr and Scheper for non-surgical treatments.

19. On March 7, 2018, Dr. Sparr opined Claimant's neck pain was "related to a combination of disc herniation/extrusion, facet joint dysfunction and arthralgias, [and] profound myofasciitis." There is no persuasive evidence Dr. Sparr reviewed the MRI images, and the ALJ finds his diagnosis of a "disc herniation/extrusion" is based on the radiologist's report.

20. Claimant had a repeat cervical ESI on July 25, 2018. This time, she reported temporary benefit, including diminished neck pain, and numbness/tingling in her upper extremities. She also reported similar temporary benefit from a cervical ESI on October 30, 2018.

21. A repeat cervical MRI on January 10, 2020 showed mild degenerative disk bulging at C5-6 resulting in moderate spinal stenosis without cord compression, and bilateral foraminal stenosis. It also showed mild facet arthropathy and uncovertebral hypertrophy from C2-3 through C5-6. The radiologist compared the MRI to a cervical MRI from November 2013, which suggests Claimant's pre-existing neck problems significantly predated the PCP records from December 2016.

22. Dr. Sparr performed a repeat electrodiagnostic study on January 17, 2020. It was normal, with no evidence of cervical radiculopathy, brachial plexopathy, or other neuropathy. Dr. Sparr indicated he discussed the results with Claimant.

23. Claimant saw Dr. Rauzzino on January 20, 2020 for a second opinion regarding surgery. She described chronic neck pain with pins and needles in her hands and arms since the work accident. She was having increasing difficulty performing keyboarding. Upper extremity strength was normal bilaterally except 4+/5 weakness in the hand grip and pinch grip. She had "subjective" decreased sensation in her hands.

Claimant told Dr. Rauzzino the recent EMG showed cervical radiculopathy, despite having discussed the normal results with Dr. Sparr three days earlier. Dr. Rauzzino opined Claimant had exhausted conservative treatment and “a definitive fix would likely involve surgery.” Claimant wanted to proceed with surgery. Dr. Rauzzino considered a disc replacement but thought a C5-6 ACDF was probably the best choice. He ordered flexion-extension x-rays and a cervical CT scan to help make that determination.

24. The CT scan and x-rays were completed on February 7, 2020. The x-rays showed no instability. The CT showed multilevel degenerative changes, but no canal or foraminal stenosis. After reviewing the imaging, Dr. Rauzzino opined, “given the amount of degenerative disc disease, foraminal disease, and facet disease posteriorly, I think she would be better off with a single level anterior cervical discectomy and fusion as opposed to disc replacement. I think this would give her the best chance of a good functional outcome.”

25. On March 17, 2020, Dr. Sparr responded to an inquiry from Claimant’s counsel regarding the proposed surgery. Dr. Sparr stated Claimant’s diagnosis was “cervical radiculopathy due to advanced foraminal stenosis as well as cervical spinal stenosis.” Regarding causation, he opined, “while there are degenerative findings in her cervical spine, these did not cause pain or require treatment until after the 7/24/2017 industrial injury.” Accordingly, he opined the injury aggravated, accelerated, or brought about the need for the surgery. He opined that the surgery was reasonably necessary because Claimant had failed conservative treatment.

26. Dr. Rauzzino responded to questions from Claimant’s counsel in a letter dated April 20, 2020. He diagnosed C5-6 cervical myelopathy, radiculopathy, and central and foraminal stenosis. He opined,

The workplace injury aggravated/accelerated/brought about the need for the requested cervical fusion. In this situation, even though [Claimant] had pre-existing degenerative disc disease of C5-C6, it was asymptomatic and there was no guarantee that it would have become symptomatic in her lifetime. After a well-documented injury and a mechanism consistent with causing injury to the cervical spine, she developed of the immediate onset of new clinical symptoms for which there is no documentation of having existed previously. Were it not for the fall, she would not have become symptomatic and would not have required treatment. The symptoms developed in an appropriate temporal relationship after the fall; they are consistent with the radiographic findings as well as with the mechanism of injury. While some people have degenerative disc disease that progresses over time, others do not. There is no guarantee that the pre-existing degenerative disc disease of C5-C6 would have progressed to the patient needing surgery in her lifetime. In fact, the C5-C6 degenerative disc disease made her more prone to potential injury because the spinal cord and nerves started with less room to begin with when [Claimant] fell and struck her head and neck.

27. Claimant saw Dr. Jack Rook for an IME at her counsel's request on May 1, 2020. Claimant told Dr. Rook her right shoulder struck the wall as she was falling which caused her head and neck to bend laterally "in an acute whiplash like fashion." She said the bathroom door struck the back of her neck, and "she then fell further and her head struck the floor causing an additional whiplash movement of her head and neck." Claimant stated the physical therapist had instructed her to perform planks as core strengthening for her back pain. She told Dr. Rook she experienced an acute sharp pain "in her neck" while performing planks that required her to immediately terminate the exercise and lie flat on the floor. She told Dr. Rook she was already experiencing "significant" neck pain before the planking incident. She also reported persistent upper extremity paresthesias, weakness, and decreased dexterity. Claimant told Dr. Rook "she has never received any treatment for a cervical condition prior to this injury." Dr. Rook opined even though Claimant may have had some pre-existing cervical arthritis, she was asymptomatic before the fall and probably would not have become symptomatic but for the fall. He agreed with Dr. Rauzzino the C5-6 ACDF was reasonably necessary.

28. On June 1, 2020, Dr. Eric Young opined the proposed surgery was reasonably necessary and related to the work accident. He relied on the belief Claimant's pre-existing degenerative disc disease was "not problematic" before the accident.

29. Dr. Rauzzino testified via deposition on June 29, 2020. He opined the purpose of the surgery is to alleviate pressure on the spinal cord and nerve roots, and also to "stabilize" Claimant's spine. He opined Claimant's spinal cord and nerves may become permanently damaged from prolonged compression if she does not have the surgery. He opined Claimant has maximized any benefit from conservative care and no other treatment options are likely to improve her neck issues short of surgery. Dr. Rauzzino pointed to the disc extrusion referenced in the October 10, 2017 MRI report as providing objective evidence of an acute injury to Claimant's cervical spine. He opined, "once the disc fails and there is an extrusion, while some of the disc material can desiccate or dry up and get smaller, the disc can develop advanced degeneration due to the injury, and that's what occurred in this situation." Dr. Rauzzino relied on the October 10, 2017 MRI report rather than personally reviewing the images. He had reviewed medical records supplied by the parties before the deposition, including preinjury records from Claimant's PCP. Dr. Rauzzino acknowledged Claimant was not "asymptomatic" before the injury as stated in his narrative report but maintained his opinion the surgery was work-related because Claimant was "much more symptomatic" after the accident. He opined the surgery was due to an acceleration or exacerbation of Claimant's degenerative disc disease at C5-6 and not the natural progression of her underlying condition.

30. Dr. Brian Reiss performed an IME for Respondents on July 22, 2020. When asked about a previous history of neck pain or treatment, she said she had some neck soreness "now and then," but it was more between her shoulder blades. She denied prior upper extremity symptoms, which Dr. Reiss noted was inconsistent with the PCP records from December 2016. Dr. Reiss reviewed the October 10, 2017 cervical MRI images and opined the only significant finding at C5-6 was a central and right-sided small bulge/high-intensity zone touching the cord. He thought the foramina looked open with only mild or at most moderate narrowing. There was also a small bulge at C4-5. This interpretation of

the MRI closely tracks Dr. Bee's impression. Dr. Reiss also reviewed the x-ray images from January 2018 and February 2020, and the February 7, 2020 CT images. He opined the imaging findings are not significant enough to cause myelopathy or radiculopathy. He further opined the findings are probably chronic and predated the work injury. He opined it was unlikely a single level ACDF would be beneficial, especially considering the multilevel degenerative changes, chronic pre-existing neck complaints, and reported subjective sensory changes in a nondermatomal "glove distribution." Regarding the planking incident, Claimant told Dr. Reiss she felt a pop in her neck and developed severe neck pain. Dr. Reiss reviewed the multiple medical records in which Claimant said the pop was in her low back, not her neck. He could not see how a pop in the low back would plausibly lead to neck pain. Dr. Reiss concluded the proposed surgery is neither reasonably necessary nor causally related to the work accident.

31. Dr. Reiss testified at hearing consistent with his report. He opined the degeneration in Claimant's cervical spine is relatively mild and the imaging studies show no spinal cord or nerve root compression to account for her symptoms. He agreed with Dr. Bee the reported widespread upper extremity numbness is not consistent with radiculopathy affecting a specific nerve root. He also agreed with Dr. Bee that a C5-6 ACDF is unlikely to provide significant benefit. He disagreed with Dr. Rauzzino's diagnosis of cervical myelopathy. Dr. Reiss' examination was not consistent with myelopathy. Claimant had no hyperreflexia. She demonstrated very illegible handwriting and a smooth signature. He discerned almost no weakness in his examination. He conceded Claimant may have strained her neck and developed some myofascial pain but opined that would not, and did not, exacerbate or accelerate the pre-existing degenerative changes. He opined there is no clearly identified pain generator in Claimant's cervical spine that will respond to surgery. He referenced Dr. Staudenmayer's November 2017 psychological evaluation that showed somatization of stress and likely amplification of symptoms. He considered the psychological evaluation a contraindication to surgery.

32. Dr. Reiss' and Dr. Bee's opinions regarding the causal relationship and reasonable necessity of the proposed surgery are credible and more persuasive than the contrary opinions in the record.

33. Claimant failed to prove the C5-6 ACDF recommended by Dr. Rauzzino is reasonably needed to cure and relieve the effects of her work-related injury. Although Claimant probably suffered a soft tissue injury to her neck because of the work accident, she failed to prove the accident aggravated, accelerated, or combined with her underlying pre-existing degenerative condition to cause a need for a C5-6 ACDF.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability and pay for some treatment, they retain the right to dispute the reasonable necessity or relatedness of any other treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's

entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). But the mere fact a pre-existing condition becomes more painful after an accident does not necessarily establish a causal nexus. The ultimate question is whether the need for treatment was proximately caused by an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant failed to prove the proposed C5-6 ACDF is reasonably needed to cure and relieve the effects of her work-related injury. There are simply too many inconsistencies in the record to give Claimant's testimony significant weight. The description of the accident has changed and become more dramatic over time. Despite Claimant's testimony she experienced "red-hot poker" pain in her neck since the accident, there is no mention of neck problems in the initial ER records or the initial PT report. Claimant told Dr. Lakin the neck pain and upper extremity paresthesias "began" while doing plank exercises. Claimant told at least three providers she felt a pop in her low back while doing planks, which caused her to develop severe neck pain. But she later told Dr. Rook, Dr. Rauzzino, and Dr. Reiss the pop was in her neck. Claimant's description to Dr. Lakin of "lightly" striking her head changed to "whipping" her head and neck at the appointment with Dr. Bee and then became two episodes of "acute whiplash" at the IME with Dr. Rook. What was initially described to Dr. Sparr as "mild" post-accident neck pain changed to "significant" pain at Dr. Rook's IME and "red-hot poker" pain at the hearing. Dr. Staudenmayer documented probable somatization and "amplification" of symptoms. Claimant repeatedly denied pre-injury neck pain or upper extremity symptoms, which is refuted by records from her PCP. Claimant's lack of candor regarding her pre-existing neck and upper extremity issues detracts from her overall credibility. It also undermines the opinions of Dr. Sparr, Dr. Rauzzino, Dr. Young, and Dr. Rook, all of whom relied at least in part on the mistaken belief Claimant was asymptomatic before the work accident. Although Dr. Rauzzino modified his opinion during the deposition after being presented with pre-injury medical records, the shifting nature of his opinion reduces its persuasiveness. Additionally, Dr. Rauzzino's theory Claimant suffered an acute work-related disc extrusion that compromised the integrity of the C5-6 disc is incorrect. Dr. Bee and Dr. Reiss persuasively explained the reference to a disc extrusion reflects a misreading on the radiologist's part.

Additionally, the ALJ agrees with Dr. Bee and Dr. Reiss the proposed surgery will not likely provide significant benefit. There is no persuasive evidence of any structural abnormality or other pathology in Claimant's neck that will respond to surgery. Claimant

has consistently described a nondermatomal pattern of pain, numbness, and weakness that cannot be remedied with C5-6 ACDF.

ORDER

It is therefore ordered that:

1. Claimant's request for a C5-6 ACDF recommended by Dr. Rauzzino is denied and dismissed.
2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

WORKERS' COMPENSATION NO. 5-041-219-002**

ISSUES

- I. Whether Claimant proved by a preponderance of the evidence that her upper extremity rating should be converted to a whole person impairment rating.
- II. Whether Claimant proved by a preponderance of the evidence that she is entitled to disfigurement benefits, and if so, how much.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was employed by [Employer Redacted] on April 28, 2016 when she sustained an admitted injury to her right shoulder when lifting a garbage can to dump it into a dumpster with a coworker who lifted the can too high and too fast causing an injury to Claimant's right shoulder. (Respondent J #243-255)
2. Respondents then sought to withdraw the original admissions of liability following a recommendation for a second right shoulder surgery by Dr. Hsin. Following a hearing in May 2018, Respondents' motion to withdraw their admissions of liability based on the medical opinions of Dr. Timothy O'Brien that Claimant did not sustain an injury to her right shoulder was denied. (Respondent J #256-267)
3. Claimant has been employed by Employer since 2012 as a production worker. Claimant remains employed by Respondent working in a different capacity than the one she was working at the time of her injury. At the time of her injury her job involved working on a molding machine that required the loading and unloading of parts onto pallets. Claimant's current job involves her working part of the day on the molding machine and the rest of the day inspecting parts on a table. (Respondent I #236)
4. Claimant underwent right shoulder surgery in February 2017 with Dr. Fitzgibbons for a complex tear of the biceps tendon that was greater than 50% and a 30% partial undersurface supraspinatus rotator cuff tear. (Claimant 4 #153) Dr. Fitzgibbons performed a right shoulder arthroscopy with extensive debridement, and repair to superior labral tear/undersurface partial thickness supraspinatus rotator cuff tear, biceps tenotomy, and tenodesis.
5. Claimant testified that she had three small arthroscopic scars on her shoulder and one in her armpit that is hardly visible as a result of her surgery of February 9, 2017. (Claimant 9 # 1-2)
6. Claimant testified that the first surgery helped with the terrible pain she was having in the front part of shoulder, but after the first surgery she developed new problems in the

back and top of the shoulder. Before her work injury Claimant had no previous problems with her right shoulder.

7. Claimant had a second surgery on February 18, 2019. Post-surgical medical notes and diagnostic testing document a "Mumford procedure" or resection arthroplasty of the distal clavicle. (Claimant 8 #227)
8. Because Claimant's right distal clavicle was surgically resected, she has undergone an invasive procedure that permanently changed her body part and has thus suffered a derangement of her right distal clavicle.
9. Claimant testified that following the second surgery she had a large scar on the top of her shoulder and in the same three holes that were made for the first surgery.
10. Claimant testified that she currently has pain in the right shoulder that is worse on the top of the shoulder and in the back of her shoulder along the shoulder blade area on the right side. Claimant complains of ongoing problems using her shoulders together, and in her back between the shoulder blades that goes up into her neck area. Claimant feels a "ball" that is located between her body and her neck. Sometimes the pain will run up the side of her neck/head especially when she is working with her head in a flexed position.
11. Claimant's current job position on the bench involves working with her neck in a flexed position. Claimant acknowledged that her current job for employer is lighter, but does cause her problems. A job demands assessment was performed on July 8, 2019 to address safe work levels post-surgery at the recommendation of her physician at Workwell. (Respondent I #236)
12. Dr. Cazden placed Claimant at MMI on July 19, 2019 and provided a permanent impairment rating of 22% of the right upper extremity as measured at the shoulder based on 13% loss of range of motion at the shoulder and 10% for a surgical distal clavicle resection. This rating would convert to 13% whole person. (Claimant 3 #151)
13. Dr. Cazden recommended permanent work restrictions following a functional capacity evaluation which included limitation of lifting greater than 14 pounds from floor to knuckle and 5 pounds from knuckle to shoulder and shoulder to overhead of 1.5 pounds. He recommended no repetitive reaching above axillary arm height with both arms, and that Claimant should avoid incline of the neck greater than 10 degrees with avoidance of static posture. He recommended that Claimant be allowed to stretch her shoulder and neck every 10 minutes as needed. (Claimant 3 #149) The restrictions issued by Dr. Cazden, which are based on the functional capacity evaluation, supports Claimant's contention that she has functional impairment that is beyond the arm at the shoulder.
14. Claimant advised the job site examiner that after she relocated and was provided with a new job position that she has problems with her cervical spine "locking" and left shoulder problems, upper trapezius, periscapular and ocular migraine headaches. A recommendation was made for an alternative workstation to allow Claimant to perform the modified duty job of the visual inspection of parts at the inspection table. A recommendation was made for an adjustable tilted height workstation and anti-fatigue mat, and installation of a forearm pad to reduce repetitive shoulder external rotation and

reduce cervical flex associated with compensatory upper thoracic flexion. (Respondent I #239)

15. Respondents were dissatisfied with Dr. Cazden's impairment rating and requested a Division IME. (Respondent J #274)
16. A Division IME (DIME) was performed by Dr. Robert Mack on October 16, 2019. (Claimant 7) As part of the evaluation, Dr. Mack performed a physical evaluation to assist in providing a current diagnosis. As part of his evaluation, Dr. Mack performed and noted positive tests on the empty and full can sign which are used to assess the supraspinatus muscles/tendon injured in this claim. Dr. Mack also noted a positive cross arm impingement test on the right which is a test for acromioclavicular arthritic pain also present on MRI and surgically repaired as part of this claim.¹
17. Based on his examination, Dr. Mack provided an impairment rating of 20% of the right arm as measured at the shoulder based on loss of range of motion of 11% of the right shoulder and 10% of the upper extremity for the distal clavicle resection. These combined to 20% of the right arm as measured at the shoulder which convert to 12% whole person. (Claimant 1 # 13 & 15)
18. Dr. Mack, a board certified orthopedic surgeon, provided a diagnosis of 1) tendinitis of the supraspinatus tendon, right shoulder 2) Degenerative arthritis of the right acromioclavicular joint, status post distal clavicle resection 3) Biceps tendinitis, right shoulder, status post tenotomy and tenodesis 4) Labral tear, right shoulder, status post repair.
19. Respondents admitted for the scheduled 20% impairment rating as measured at the shoulder. (Claimant 1 & 2)
20. Claimant testified that her ongoing right shoulder pain interferes with sleep. Pain causes her to wake up. Claimant has difficulties with activities of daily living which include problems with putting on her shirts, she has pain lifting overhead and pulling a shirt on. Claimant has problems combing, washing, and styling her hair, this includes showering bathing and drying off. She cannot wash her back.
21. Claimant does cook, shop and clean but takes breaks as necessary and limits lifting to 10 lbs. if possible. Claimant lifts up to 27 lbs. at work when boxes are completed. A recommendation was made that she be allowed to roll the completed boxes to the pallet rather than carry them. (Respondent I #238) Claimant testified that when she does lift, she tries to use both arms and tries to keep her arms close to her body.
22. Claimant testified that she has changed the way she does laundry by hanging a few clothes at a time in the closet. She drives mostly with one arm because reaching out in front of her body with her right arm causes pain in the middle of her back between her shoulder blades.
23. Claimant currently takes medications for her work injury of cyclobenzaprine (muscle relaxant) and meloxicam for pain relief and to help with sleep.

¹ Hearing testimony of Dr. Raschbacher regarding relevancy of the positive test findings.

24. Claimant was evaluated by Dr. John Raschbacher at the request of Respondents on February 14, 2020. (Respondent A) Dr. Raschbacher believed that Claimant's neck should not be included accepted as part of the claim and if it were accepted there is no basis for permanent impairment of the neck nor for a conversion of any shoulder impairment to whole person. He believed that Claimant was not entitled to an additional 10% for the distal clavicle resection as it is not required, and Claimant misrepresented her physical condition based on his review of surveillance videos.
25. A majority of Dr. Raschbacher's opinions rely on review of surveillance conducted on July 7 and July 10, 2019.
26. Before her injury Claimant had worked for employer for 8 years and continues to work as of the date of hearing. Claimant advised Dr. Raschbacher that she was working, and portions of the surveillance appear to follow Claimant to and from work. Claimant also advised Dr. Raschbacher that she cooks, cleans, shops, and works full time (modified duty). Those are the activities that she was performing in the video surveillance. Thus, the ALJ does not find that there is credible and persuasive evidence that Claimant exceeded any of the work restrictions provided by her doctor.
27. Moreover, the ALJ does not interpret Claimant's work restrictions to represent the maximum at which she can lift before exhibiting outward signs of pain and discomfort. Instead, the ALJ interprets Claimant's work restrictions to represent the recommended maximum she can lift without risk of reinjury. As a result, even if Claimant were exceeding her restrictions in the surveillance video when lifting the box of groceries, such evidence would merely show Claimant lifting more than recommended. It would not negate the fact that she had a work injury, she underwent two surgeries, and that she has functional impairment as a result of her work injury that is not on the schedule of injuries.
28. Moreover, Dr. Raschbacher testified that Claimant said she cannot wear a bra because of her shoulder pain and that she appeared to be wearing one in the surveillance. However, a review of the medical records merely states Claimant suggested that her bra strap causes her pain - not that it causes her pain and prevents her from wearing one. In the end, the ALJ does not find Dr. Raschbacher's opinions and testimony to be credible or persuasive.
29. Claimant was evaluated by Dr. John Hughes on August 3, 2020 (Claimant #8) at the request of her attorney. Dr. Hughes concluded that Claimant sustained losses of function that were proximal to her right glenohumeral joint. Dr. Hughes noted that there were findings in the medical records after Claimant's second surgery documenting tenderness in the interscapular area and pain between her shoulders. There were physician notes of reduced cervical range of motion with tightness, pain, tenderness, and spasm of the medial trapezius and cervical paraspinal musculature. Dr. Hughes noted that permanent work restrictions included restrictions in cervical flexion, stretch breaks, and avoidance of static posture. Dr. Hughes was of the opinion that these are descriptions of functional effects that extend into the thoracic and cervical spine areas of her body. Dr. Hughes described these as the persistence of cervicothoracic dyskinesia with losses of cervical ranges of motion and function. Dr. Hughes after reviewing the surveillance did not find any inconsistencies between what he observed on the

surveillance video dated July 7 & 10, 2019 and what he observed during his evaluation of Claimant on August 3, 2020. Dr. Hughes' opinions are supported by the medical record and align with Claimant's treating physicians and the DIME physician. As a result, the ALJ finds Dr. Hughes' opinions to be credible and persuasive.

30. Claimant's date of birth is February 9, 1967, on July 19, 2019, the date of MMI Claimant was 52 years old.
31. Here, there is credible and persuasive medical documentation of Claimant's functional impairment extending beyond the loss of the use of her arm at the shoulder into the structures of her body including her trapezius, cervical and thoracic back area. (Claimant 8 #230) All of the health care providers and examiners documented pain and tenderness of and in the trapezius, deltoid, cervical, thoracic and parascapular musculature on the body (Massage therapy notes Workwell 3-18-19; 3-18-19; 3-21-19; 4-8-19; 4-18-2019;4-23-19; 4-30-19; 6-13-19); "objective: tension for bilateral parascapula, cervical spine right upper extremity" (Claimant's Exhibit 3, #113-115 &122-124 & 128 & 142); Dr. Cazden's referral for massage therapy for up to 4 sessions for cervical muscle spasm (Claimant's Exhibit 3, #117); Dr. Cazden's prescription for cyclobenzaprine (muscle relaxant) for neck stiffness and headache pain, and therapy focused on neck and upper back symptoms. (Claimant's Exhibit 3, #126)
32. Moreover, Dr. Cazden (Claimant's authorized treating physician) provided work related restrictions that limit Claimant's ability to flex at the neck, sustain static postures and require stretching during the workday. The job site evaluation confirmed these problems and recommended job site modifications to account for these losses. Claimant has experienced pain, limitation, and physical problems as a result of injury that are not on the schedule of injuries that include her ability to sleep, ocular headaches, and limitations of her cervical range of motion.
33. Other physicians have documented physical findings that are not on the schedule of injuries but are on the body. For example, Dr. Mack observed "rigid dorsal kyphosis" with local tenderness to palpation as well as reduced flexion and extension of the cervical spine at 40 and 50 degrees. (Claimant's Exhibit 7, #221) Dr. Hughes assessed Claimant with "persistence of cervicothoracic dyskinesia with losses of cervical spine ranges of motion and function." (Claimant's Exhibit 8, #230) Even Dr. Raschbacher noted tenderness to palpation at the right deltoid muscle and at the medial scapular areas and diffusely about the neck. (Respondent's Exhibit A, #10)
34. The ALJ finds Claimant's statements to her medical providers and medical examiners to be credible and persuasive. The ALJ also finds Claimant's testimony to be credible and persuasive. The Claimant's statements and testimony is found credible for several reasons. First, Claimant's has undergone two surgeries because of her work injury. Second, Claimant's pain complaints and functional impairments are found to be consistent with the diagnoses provided by her treating providers, the DIME physician, Dr. Hughes, and the surgeries she has undergone. Third, the surveillance video does not establish Claimant is misrepresenting her symptoms and functional impairments. The record establishes that although Claimant was provided work restrictions, she continues to work, shop for groceries, and perform various activities of daily living. The injury has merely impaired her ability to engage in those activities as she did before the

work injury, but it has not precluded her from engaging in those activities. In the end, the surveillance video merely shows Claimant engaging in the exact activities she has openly admitted to performing and consistent with her functional impairments.

35. Because of her work injury, Claimant has functional impairment that is not fully enumerated on the schedule of injuries involving the loss of an arm at the shoulder. Thus, Claimant's work injury has resulted in functional impairment that is off the schedule.
36. Based on Claimant's testimony and the records submitted at hearing, Claimant underwent two surgeries to her right shoulder. Those surgeries caused visible disfigurement to her body consisting of three arthroscopic surgical port scars on her right shoulder and one larger surgical scar, which is about 1 inch long, at the end of her right clavicle.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant proved by a preponderance of the evidence that her upper extremity rating should be converted to a whole person impairment rating.

a) Whether Claimant's upper extremity rating should be converted to a whole person impairment rating.

The ALJ is the finder of fact on the question of whether the Claimant sustained a "loss of an arm" within the meaning of schedule of disabilities in §8-42-107(2)(a), C.R.S., or a whole person rating under §8-42-107(8)(c), C.R.S. *Strauch v. PSL Swedish Healthcare System*, 917 P. 2d 366, 369 (Colo. App. 1996). In resolving this question, the ALJ must determine the situs of the Claimant's "functional impairment," and the situs of the functional impairment is not necessarily the site of the injury itself. *Langton v. Rocky Mountain Health Care Corp.*, 937 P.2d 883, 884 (Colo. App. 1996); *Strauch at 368-369*. In this case, Claimant's situs of impairment is proximal to the glenohumeral joint or on the body. Claimant's distal clavicle repair was on the body. Dr. Raschbacher testified that the supraspinatus tendon, which was surgically repaired (2-9-2017), is a small muscle of the upper back that is one of the four rotator cuff muscles that runs along the scapula of the shoulder blade. The situs of the injury was again to a structure located on the body, not in the arm.

Injury is the manifestation in part or parts of the body which been impaired or disabled as a result of the industrial accident. *Mountain City Meat v. ICAO*, 904 P.2d 1333 (Colo. App. 1995). The part of the body that sustains the ultimate loss is not necessarily the particular part of the body where the injury occurred. *McKinley v. Bronco Billy's*, 903 P.2d 1239, 1242 (Colo. App. 1995). When evaluating functional impairment the ALJ shall look at the alteration of the claimant's functional abilities by medical means and by non-medical means, as well as the claimant's capacity to meet personal, social, and occupational demands. *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333, 1337 (Colo. 1996).

Here, there is medical documentation of Claimant's functional impairment extending beyond the loss of the use of her arm at the shoulder into the structures of her body including her trapezius, cervical and thoracic back area. (Claimant's Exhibit 8 #230) All of the health care providers and examiners documented pain and tenderness of and in the trapezius, deltoid, cervical, thoracic and parascapular musculature on the body (Massage therapy notes Workwell 3-18-19; 3-18-19; 3-21-19; 4-8-19; 4-18-2019; 4-23-19; 4-30-19; 6-13-19); "objective: tension for bilateral parascapula, cervical spine right upper extremity" (Claimant's Exhibit 3, #113-115 & 122-124 & 128 & 142); Dr. Cazden's referral for massage therapy for up to 4 sessions for cervical muscle spasm (Claimant's Exhibit 3, #117); Dr. Cazden's prescription for cyclobenzaprine (muscle relaxant) for neck stiffness and headache pain, and therapy focused on neck and upper back symptoms. (Claimant's Exhibit 3, #126)

Dr. Cazden (Claimant's authorized treating physician) has provided work related restrictions that limit her ability to flex at the neck, sustain static postures and require stretching during the workday. The job site evaluation confirmed these problems and recommended job site modifications to account for these losses. Claimant has experienced pain, limitation, and physical problems as a result of injury that are not on the schedule of injuries that include her ability to sleep, ocular headaches, and limitations of her cervical range of motion.

Other physicians have documented physical findings that are not on the schedule of injuries but are on the body. Dr. Mack observed "rigid dorsal kyphosis" with local tenderness to palpation as well as reduced flexion and extension of the cervical spine at 40 and 50 degrees. (Claimant's Exhibit 7, #221) Dr. Hughes assessed Claimant with "persistence of cervicothoracic dyskinesia with losses of cervical spine ranges of motion and function." (Claimant's Exhibit 8, #230) Even Dr. Raschbacher noted tenderness to palpation at the right deltoid muscle and at the medial scapular areas and diffusely about the neck. (Respondent's Exhibit A, 10)

The ALJ is the finder of fact as to whether an injury is on the schedule. *Langton* at 884; *Mountain City Meat Co. v. Oqueda*, 919 P.2d 246 (Colo. 1996). When pain and discomfort from the situs of the injury affects the function of other body parts, it is not a scheduled injury. *Langton* at 884-885. A claimant who suffers an injury not enumerated in § 8-42-107(2) is entitled to whole person impairment benefits under § 8-42-107(8), C.R.S. 2009, see § 8-42-107(1)(b), C.R.S. 2009; *Warthen v. Industrial Claim Appeals Office*, 100 P.3d 581 (Colo. App. 2004).

More weight is given to the opinions of Drs. Cazden, Mack, and Hughes than the opinions of Dr. Raschbacher, (Respondents' retained medical expert) who contends that Claimant's presentation to physicians is not accurate in terms of her functional abilities and level of symptomatology. To credit Dr. Raschbacher's opinion the ALJ would have to ignore objective evidence on MRI of damage to Claimant's rotator cuff and surgical repairs made to damaged structures including tears to tendons that do not repair themselves over time, and a completely retracted biceps muscle (MRI 10-12-18). Claimant's ongoing shoulder problems were confirmed by testing performed by the DIME doctor, Dr. Mack, who noted positive tests on the empty and full can sign which are used to assess the supraspinatus muscles/tendon injured in this claim. Dr. Mack also noted a positive cross arm impingement test on the right which is a test for acromioclavicular arthritic pain also present on MRI and surgically repaired as part of this claim.

A majority of Dr. Raschbacher's opinions rely on review of surveillance conducted on July 7 and July 10, 2019. Before her injury Claimant had worked for employer for 8 years and continues to work as of the date of hearing. Claimant advised Dr. Raschbacher that she was working, and portions of the surveillance appear to follow Claimant to and from work. Claimant also advised Dr. Raschbacher that she cooks, cleans, shops, and works full time (modified duty). Those are the activities that she was performing in the video surveillance. There is a lack of credible and persuasive evidence that Claimant exceeded any of the work restrictions provided by her doctor. The surveillance does show Claimant carrying a large box of groceries. Even so, the weight of the box is unknown. Moreover, even if Claimant did violate her work

restrictions on occasion, the violation of a work restriction does not automatically negate the underlying injury and the functional impairment caused by the injury. Lastly, Dr. Hughes after reviewing the surveillance did not find any inconsistencies between what he observed on the surveillance video dated July 7 & 10, 2019 and what he observed during his evaluation of Claimant on August 3, 2020.

Functional impairment is a question of fact for the administrative law judge to determine that is separate and distinct from a physician's rating of a physical impairment. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App 1996). A "functional impairment" is not only assessed by medical means, instead it involves an overall assessment of the effect the injury had on the Claimant's ability to function in terms of movement and in the performance of activities at work and daily living. *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333, 1337 (Colo. 1996) (citing to the AMA guides).

Claimant established by a preponderance of the evidence that the loss of function in this case extends beyond the loss of the use of the arm at shoulder to Claimant's periscapular area, neck, and thoracic area of her body. Claimant established that she has functional impairments that limit her ability to perform activities of daily living as well as ocular headaches and permanent work restrictions involving structures not on the schedule of injuries. As a result, Claimant is entitled to a whole person impairment rating.

b) Whether Claimant is entitled to the distal clavicle rating provided by both the ATP and DIME doctor in this claim.

Respondents admitted for the scheduled impairment rating provided by the DIME doctor at the arm as measured at the shoulder which included 10% for the surgical distal clavicle repair. Dr. Raschbacher, however, believes that the 10% rating for the surgical distal clavicle repair should not be included.

When a party seeks to challenge a scheduled impairment rating, the party must show by a preponderance of the evidence that the scheduled rating is incorrect. See *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App. 1998) (the Division Independent Medical Examination Procedures of § 8-42-107(8) (c), only apply to non-scheduled impairments). Whether a scheduled rating is incorrect is a question of fact for the ALJ.

However, once the ALJ finds the Claimant has functional impairment to the whole person, Respondents must overcome the DIME physician's rating by clear and convincing evidence. *Warthen v. Industrial Claim Appeals Office*, 100 P.3d 581 (Colo. App. 2004). See also *Eacker v. True Value Hardware*, W.C. 4-661-379, (Feb. 15, 2007.)

According to the Division of Workers Compensation Desk Aide #11, Impairment Rating Tips,

2. Impairment Rating for Workers Who Have Undergone an Invasive Treatment Procedure: The rating physician should keep in mind the AMA Guides, 3rd Edition (rev.) definition for impairment: "The loss of, loss of use of, or derangement of

any body part, system, or function.” Given this definition, one may assume any patient who has undergone an invasive procedure that has permanently changed any body part has suffered a derangement.

Assuming this is the definition of impairment, because Claimant’s distal clavicle was surgically resected, she has undergone an invasive procedure that permanently changed her body part and has thus suffered a derangement of the part and is entitled to an impairment rating.

The impairment rating tips also provide under the shoulder surgery section guidance that “providers may assign up to 10% upper extremity impairment for distal clavicular resection/excision.” Both Dr. Cazden (Claimant’s authorized treating physician) and Dr. Mack, the DIME physician, properly provided this impairment rating. Respondents have failed to prove that the impairment rating provided for the distal clavicle rating was incorrect.

Dr. Raschbacher believed that the surgical repair of the distal clavicle was not that extensive, it was not mandatory, and the surveillance video showed she was doing much better than she presented on examination.

The ALJ finds and concludes that Respondents failed to establish - even by a preponderance of the evidence - that the Division Examiner erred in providing Claimant the additional rating for the surgical repair of the distal clavicle in addition to the impairment for the loss of range of motion at the shoulder. Claimant is therefore entitled to the combined upper extremity rating of 20% of the upper extremity as measured at the shoulder which converts to 12% whole person. As a result, Claimant is entitled to an impairment rating of 12% of the whole person.

II. Whether Claimant proved by a preponderance of the evidence that she is entitled to disfigurement benefits, and if so, how much.

Section 8-42-108(1), C.R.S. permits an ALJ to award disfigurement benefits up to a maximum of \$4,000 if the claimant is "seriously, permanently disfigured about the head, face or parts of the body normally exposed to public view. . . ." The ALJ may award up to \$8,000 for "extensive body scars" and other conditions expressly provided for in § 8-42-108(2), C.R.S. These awards are subject to annual adjustment by the Director of the Division of Workers' Compensation pursuant to §8-42-108(3), C.R.S.

Based on Claimant’s testimony and the records submitted at hearing, the two surgeries she underwent caused visible disfigurement to her body consisting of three arthroscopic surgical port scars on her shoulder and one larger surgical scar, which is about 1 inch long, at the end of her clavicle.

As a result, Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation pursuant to Section 8-42-108 (1), C.R.S. As a result, the ALJ awards Claimant \$1,500.00 in disfigurement benefits.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay Claimant permanent partial disability benefits based on a 12% whole person impairment rating.
2. Respondents shall pay Claimant \$1,500.00 in disfigurement benefits. Respondents shall be given credit for any amount previously paid for disfigurement in connection with this claim.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 9, 2020

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- I. Whether Claimant established by a preponderance of the evidence that her 41% scheduled impairment rating should be converted to a 25% whole person rating.
- II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to ongoing maintenance medical care for the effects of her April 27, 2016 work injury.
- III. Whether Claimant is entitled to disfigurement benefits, and if so, how much.

STIPULATIONS / CONCESSIONS / RESERVATIONS

- Respondents conceded in their proposed Order that Claimant is entitled to a general award of maintenance medical benefits.
- The parties agreed to reserve the issue of disfigurement benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was employed with Employer as a cook at the University of Denver cafeteria.
2. On April 27, 2016, Claimant, who is right hand dominant, suffered an admitted injury when she slipped and fell and severely injured her right shoulder. (Cl. Ex. 1, Bates 7.)
3. Claimant saw Dr. Michael Hewitt, who noted that X-rays suggested a large rotator cuff tear in Claimant's right shoulder. (Cl. Ex. 6, Bates 123). An MRI was performed, which revealed a large full thickness rotator cuff tear. (Cl. Ex. 6, Bates 126.)
4. Claimant was seen by Dr. Nathan Faulkner, an orthopedic surgeon, who recommended a right reverse shoulder arthroplasty. (Cl. Ex 4, Bates 93.)
5. In March 2018, Claimant underwent a right reverse shoulder arthroplasty, which was performed by Dr. Faulkner. (Cl. Ex 3, Bates 22.)
6. In April 2018, shortly after her surgery, Claimant came under the care of Matthew Lugliani, M.D. At her initial visit with Dr. Lugliani, Claimant rated her pain at 7/10 and it encompassed the anterior, posterior, and superior aspect of her shoulder. In essence, it encompassed her entire shoulder girdle. Based on her condition,

Dr. Lugliani prescribed physical therapy, various medications, and home health care since Claimant lived alone. (Cl. Ex. 3, Bates 23.)

7. After Claimant progressed through physical therapy and pool therapy, Dr. Lugliani determined Claimant was approaching MMI. As a result, he had Claimant undergo a Functional Capacity Evaluation.
8. On April 3, 2019, Claimant underwent a Modified Functional Capacity Evaluation (FCE). Claimant's chief complaints and symptoms during the FCE included:
 - Right upper quadrant tightness and soreness,
 - Right shoulder pain, and
 - Right axilla pain.
9. The ALJ finds that Claimant's right upper quadrant encompasses the right upper quadrant of her torso. The ALJ also finds that Claimant's complaints of tightness, soreness, and pain in her axilla – underarm - encompasses the arm at the shoulder, the shoulder, and the torso. After the FCE, Claimant had increased chest pain. The ALJ finds that the right upper quadrant tightness and soreness and right axilla pain signifies functional impairment beyond Claimant's right upper extremity.
10. On April 8, 2019, after the FCE, Claimant returned to Dr. Lugliani. It was noted that Claimant overexerted herself at the FCE. As result, the FCE caused Claimant to suffer a temporary setback. For that reason, Dr. Lugliani did not place Claimant at MMI at this appointment. Instead, he prescribed baclofen and meloxicam to treat Claimant's increased pain complaints.
11. On April 29, 2019, Claimant returned to Dr. Lugliani. At this appointment, he placed Claimant at MMI and provided an impairment rating. Other than performing range of motion measurements, there is no indication Dr. Lugliani performed a thorough physical examination. He did, however, provide Claimant permanent restrictions. The restrictions allowed Claimant to lift up to 25-pounds – but only if she was lifting close to her body. That said, Dr. Lugliani went on to greatly restrict Claimant's use of her right shoulder and arm. These other restrictions included:
 - No reaching above shoulder height.
 - No reaching away from the body.
12. As a result, Claimant's injury precluded her from using her entire right shoulder and arm above shoulder height. The injury also precluded Claimant from using her entire right shoulder and arm to reach away from her body. Thus, the ALJ finds these restrictions are evidence of functional impairment beyond Claimant's arm at the shoulder.
13. Dr. Lugliani assigned a 17% upper extremity rating and a 10% whole person rating. As to maintenance medical treatment, Dr. Lugliani recommended follow-up appointments with Dr. Faulkner, a gym membership, and massage therapy. (Cl. Ex. 3, 84-88).

14. The record contains very few treatment notes from Dr. Lugliani. But, except for the notes from his initial visit, his treatment notes about Claimant that are in the record are cryptic and sparse. They show he failed to obtain and document in much detail Claimant's ongoing symptoms and functional impairments at each follow-up appointment. His treatment notes also fail to establish that he performed and documented a thorough physical examination of Claimant at each follow up appointment. In the end, his treatment notes look like an amalgamation of various data fields, from who knows where and when, merged into an electronic medical record. Thus, his records do not reveal he performed and documented a comprehensive evaluation and assessment of Claimant's condition at each visit. As a result, the fact that his treatment notes do not consistently document ongoing functional impairment beyond Claimant's right upper extremity at the shoulder does not mean that Claimant does not have functional impairment beyond her arm at the shoulder. It merely means Dr. Lugliani did not assess and document the extent of Claimant's functional impairments beyond the arm at the shoulder while treating Claimant.
15. On September 17, 2019, Claimant underwent a Division IME. The DIME was performed by Dr. John Tyler. Dr. Tyler was asked to evaluate Claimant's right shoulder as well as her cervical, thoracic, and lumbar spine.
16. In his report, Claimant described the following symptoms and functional limitations regarding her activities of daily living based on her work injury:

[Claimant] informs me that she lives by herself and has some difficulty with personal hygiene as she is only able to use her left arm for bathing and self-cleaning. She has difficulty putting on coats. She is able to do her own meal preparation and basic household chores and is becoming more left-hand dominant now because she is so restricted in mobility and strength with the right upper extremity.

(Cl. Ex. 2, Bates 17.)
17. Dr. Tyler also observed Claimant and performed a physical examination. Based on his observation, Dr. Tyler noted that Claimant demonstrated a lot of pain behaviors during his evaluation. These included Claimant keeping her right arm in a guarded position with it internally rotated at the shoulder, flexed at the elbow to 90 degrees and pronated at the forearm. He did not, however, suggest that her pain behaviors contradicted her underlying injury, functional impairments, and his findings during the DIME.
18. He noted Claimant had a slight anterior shoulder displacement on the right secondary to structural tightness within the right pectoralis minor – which is on the torso – and it was extremely taught on palpation. He also noted inferolateral deviation of the right scapula – which is also on the torso - when compared with the left. In addition, he also found atrophy within the supraspinatus muscle on the right as compared to the left.

19. After evaluating Claimant and reviewing her medical records, his clinical diagnoses associated with the work injury included:

- Status post right reversed total shoulder arthroplasty.
- Right complete rotator cuff tears of the supraspinatus and infraspinatus.
- Short head tendon rupture of the right biceps.
- Myofascial pain pathology syndrome primarily in the pectoralis minor.

20. Dr. Tyler agreed Claimant was at MMI. He provided Claimant an impairment rating under the AMA Guides. Based on the AMA Guides, and his examination of Claimant, he provided Claimant a 41% right upper extremity impairment rating, which converts to a 25% whole person impairment rating. He did not, however, provide any ratable impairment to Claimant's cervical, thoracic, and lumbar spine. He did, however, assess Claimant as also suffering from myofascial pain pathology syndrome primarily in the pectoralis minor. He also noted Claimant had glenohumeral pain, which was superolateral, anterior, and posterior, in the range of 3-7/10 with an average of 5/10. As a result, Dr. Tyler's findings demonstrate functional impairment that is beyond the arm at the shoulder.

21. Dr. Gary Zuehlsdorff performed an independent medical evaluation (IME) on August 21, 2020. In his report, Dr. Zuehlsdorff noted that Claimant had limited use of her arm and shoulder as well as pain throughout her shoulder. He also noted that Claimant had significant functional deficits because of her shoulder injury and resulting surgery. In the pain diagram, it is documented Claimant had symptoms in her right shoulder, neck, and upper back. (See Cl. Ex. 1.)

22. In his report, Dr. Zuehlsdorff noted Claimant's functional limitations. As explained in his report, Claimant said her functional ability to perform many tasks requiring the use of her right arm and shoulder has been reduced by 50%. The functional limitations incurred by Claimant included:

- Reaching.
- Pushing.
- Pulling.
- Carrying.
- Overhead reaching.
- Extending her arm.
- Flexing her arm.
- Ability to pick things up.
- Gripping.
- Turning knobs.
- Chronically bad sleep due to pain waking her up.

(Cl. Ex. 1, Bates 8.)

23. Dr. Zuehlsdorff concluded that the effects of Claimant's injury have caused symptoms and limitations extending to Claimant's entire body. (See Cl. Ex. 1.)
24. Dr. Zuehlsdorff also noted Claimant's right arm exhibited atrophy and wasting. The ALJ concludes the atrophy and wasting noted by Dr. Zuehlsdorff and Dr. Tyler of Claimant's right arm and shoulder supports, and is consistent with, Claimant's claimed functional impairments.
25. Dr. Zuehlsdorff also noted Claimant continues to alternate ibuprofen and aspirin on a daily basis to help manage her pain. (Cl. Ex. 1, Bates 8.)
26. In the end, Dr. Zuehlsdorff concluded that Claimant's ultimate outcome - functional impairment - based on her injury and shoulder replacement stem from the severity of Claimant's initial injury and the delays she endured in obtaining medical treatment and the surgery. Dr. Zuehlsdorff stated:

Given the severity of the injury ultimately documented by the total shoulder arthroplasty, in my opinion, at least in part, resulted from the multiple delays that the patient received have more probably than not led to a worse outcome than would have been present if the case had moved along expeditiously. Nonetheless, the patient has significant lack in her ability to perform ADLs as documented above. This, therefore, affects her whole body ability to perform basic daily activities.

(Cl. Ex. 1, Bates 9.)

27. As part of her evaluation with Dr. Zuehlsdorff, Claimant completed a Pain Diagram. Claimant documented pain around her entire shoulder girdle and the pain extended onto her torso. (Cl. Ex. 1, Bates 10.) The pain diagram follows Dr. Zuehlsdorff's report and testimony related to Claimant's injury and the functional impairment caused by her injury and subsequent surgery.
28. On medical maintenance care, Dr. Zuehlsdorff concluded that, given the scope of the reverse shoulder arthroplasty, Claimant would need continued physical therapy and follow-up appointments with Dr. Faulkner. (Cl. Ex. 1, Bates 8-11).
29. The ALJ finds Claimant's statements and presentation to her medical providers, Independent Medical Examiners, and testimony to be credible and persuasive as for the extent of her disability and functional impairment that flows from her work injury. Claimant is found credible because her representations have been consistent throughout her claim. Moreover, Claimant's functional limitations involving her right shoulder and areas of her torso are supported by the medical opinions and records of various medical providers and independent examiners. Plus, the degree of her functional impairment is also supported by the muscle wasting documented by Drs. Tyler and Zuehlsdorff.
30. The ALJ also finds Dr. Zuehlsdorff's opinions about the extent of Claimant's injuries and functional limitations and impairments to be credible and persuasive.

The ALJ finds his opinions to be credible and persuasive for many reasons. First, Dr. Zuehlsdorff performed a very thorough evaluation which is shown by his detailed report. Second, his report and his opinions are consistent with – and supported by - the underlying medical record. Third, his findings are consistent with other physicians who evaluated Claimant, such as Dr. Tyler, where both doctors identified atrophy involving Claimant’s right upper extremity.

31. The ALJ finds Claimant has functional impairment that extends beyond her right upper extremity that is not enumerated on the schedule. The functional impairments include Claimant’s inability to fully use her shoulder and muscles in her right upper quadrant on her torso to perform various activities of daily living. The functional impairment is evidenced by Claimant’s inability to work above shoulder height, inability to perform personal hygiene activities with her right arm such as bathing and cleaning herself after going to the bathroom, and difficulties getting dressed.
32. Claimant also has additional pain and dysfunction that extends onto her torso and involves her neck, upper back, and pectoralis minor muscle. It is the functional impairment of these body parts which are not enumerated on the schedule which prevents Claimant from using her shoulder to move her arm above shoulder height and away from her body and perform activities of daily living – including work – which requires her to use her shoulder and move her arm above shoulder height and away from her body.
33. The pain in Claimant’s shoulder also impairs Claimant’s ability to sleep and is an additional functional impairment which is not enumerated on the schedule.
34. Based on her injury, Claimant has suffered functional impairment beyond her arm at the shoulder. Thus, Claimant has suffered functional impairment that is not enumerated on the schedule.
35. Pursuant to Respondents’ concession in their proposed order, Claimant is entitled to a general award of maintenance medical benefits.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers’ Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that her 41% scheduled impairment rating should be converted to a 25% whole person rating.

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." See §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. See *Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAo, June 11, 1998).

When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. See §8-42-107(8)(c), C.R.S.

Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. See *Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. See *DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAo Apr. 13, 2006). The situs of the

functional impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

The ALJ credits Claimant's testimony that she experiences pain and physical limitations in her right arm and shoulder that migrated into the right side of her neck and upper back. The ALJ is also persuaded by the diagnoses provided by the DIME physician which includes myofascial pain pathology syndrome primarily in the pectoralis minor – which is on the torso - and further supports a finding of functional impairment extending to Claimant's torso and throughout the entire shoulder girdle. Based on Claimant's injury and her subsequent surgery, she cannot use her right shoulder to move her arm above shoulder level and work with her right arm over shoulder level or away from her body. Claimant's injury has also led to Claimant being unable to wash herself and take care of her bathroom needs with her right shoulder, arm, and hand. In addition, the pain in her shoulder functionally impairs her sleep.

Dr. Zuehlsdorff persuasively testified that these symptoms stem from Claimant's work injury and subsequent surgery. Respondents failed to offer credible and persuasive evidence to rebut Claimant's contention that her functional impairments are not enumerated on the schedule.

As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that she has suffered functional impairment beyond her arm at the shoulder. Claimant has therefore established that she has suffered functional impairment that is not on the schedule. Thus, the ALJ finds that the 41% right upper extremity impairment rating assigned by Dr. Tyler should be converted to a 25% whole person rating.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's 41% scheduled rating for her right shoulder is converted to a 25% whole person rating.
2. Respondents shall pay Claimant permanent partial disability benefits based on a 25% whole person rating. Respondents shall, however, be entitled to a credit for any previously admitted or paid permanent partial disability benefits.
3. Claimant is awarded maintenance medical benefits.

4. Disfigurement benefits are reserved by the parties for future determination.
5. All other issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 11, 2020

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-116-209-002**

ISSUE

1. Whether Respondents have established by a preponderance of the evidence that Claimant did not sustain a compensable injury arising out of and in the course of his employment, entitling Respondents to withdraw its admissions of liability.
2. If Claimant sustained a compensable injury, whether Respondent established by clear and convincing evidence that the Division Independent Medical Examination (DIME) opinions of John Douthit M.D., that Claimant reached maximum medical improvement (MMI) on July 13, 2020 is incorrect.
3. If Claimant sustained a compensable injury, whether Claimant has established by a preponderance of the evidence entitlement to temporary total disability benefits from November 1, 2019 through July 13, 2020?

FINDINGS OF FACT

1. Claimant is a 53-year-old male who worked for Employer as a truck driver/delivery person, delivering packages to Employer's stores. Claimant began his employment with Employer in early August 2019 and worked approximately 13 days prior to August 26, 2019.
2. Claimant testified that he worked 13 consecutive days prior to August 26, 2019, working approximately 14 hours per day. Claimant testified his job required him to handle hundreds of packages each day. Claimant testified he woke up on August 26, 2019 and was experiencing pain and numbness in his hands and feet.
3. On August 26, 2019, Claimant was seen at North Suburban Medical Center where he was examined by Christopher Geddes, M.D. Claimant reported a history of chronic neck pain, taking methadone daily. Claimant presented with complaints of numbness. Claimant reported being struck in the head with a plastic pallet and two days later waking with numbness and tingling to "bilateral extremities." On physical examination, Dr. Geddes noted "mild swelling to the dorsal aspect of right hand, mildly swollen right forearm compared to left, with mild tenderness." Claimant reported he had been off work for a long period of time and recently returned to work "doing heavy labor." Claimant was diagnosed with tendonitis and paresthesia. (Ex. 1).
4. On August 29, 2019, Claimant saw his primary care provider, Matthew Brett, M.D., at Salud Family Health Center. Claimant reported visiting the emergency room three days earlier with complaints of tingling in his hands and feet. Claimant reported the tingling in his hands and feet was starting to resolve. Dr. Brett's assessment was paresthesia.

5. Following his injury, Claimant was provided a list of four providers by Employer. Initially, Claimant initially selected SCLH Medical Group Front Range as his authorized treating provider.

6. On September 6, 2019, Claimant was seen by Grant Robbins, PA-C at SCLH Medical Group Front Range. Claimant reported bilateral hand numbness/tingling and bilateral toe numbness/tingling over the past two weeks. Claimant reported working for 13 consecutive days when he began experiencing pain and swelling in his bilateral arms and legs. Claimant reported his symptoms had improved, but not resolved. Claimant was referred for physical therapy and instructed to follow up with Dean Prok, M.D. PA Robbins concluded based on the provided history and mechanism of injury, that Claimant's diagnosis was more likely than not work-related. (Ex. 2).

7. On September 9, 2019, Claimant saw Dr. Prok at SCLH Medical Group. Claimant reported tingling and numbness in both hands and feet. Claimant did not report a specific mechanism of injury and reported his symptoms had gradually improved. Dr. Prok stated he was not able to connect Claimant's bilateral hand, finger, and foot pain with a work-related event. Dr. Prok recommended that Claimant see his personal physician for work-up and management of his symptoms. Dr. Prok recommended no further care for a work-related injury because he did not attribute Claimant's complaints to a work-related injury. Dr. Prok released Claimant from care at maximum medical improvement without restriction, impairment, or medical maintenance. (Ex. B).

8. On September 25, 2019, Claimant saw Dr. Brett for medication refills for pre-existing chronic pain. Claimant reported difficulty with numbness in his fingertips, which Claimant attributed to overuse that caused arm and wrist pain. Claimant reported experiencing residual numbness to his fingers, right hand worse than left. Dr. Brett prescribed gabapentin for Claimant's paresthesia. Dr. Brett did not express an opinion on the cause of Claimant's finger numbness or assign any work restrictions. (Ex. F).

9. After seeing Dr. Prok, Claimant elected to change authorized treating physicians to Ericson Tentori, D.O., after consultation with Respondents. On October 3, 2019, Claimant saw Dr. Tentori, at Injury Care Associate, and Dr. Tentori became Claimant's authorized treating provider ("ATP"). Claimant reported he had worked 13 consecutive 14-hour days. At the end of 13 days, Claimant reported he woke the following day with significant discomfort and swelling in his hands and feet. Claimant reported to Dr. Tentori that he had not had a good exchange with Dr. Prok, and that Dr. Prok determined Claimant's complaints were not work-related. Claimant returned to Dr. Tentori on October 4, 2019 and reported his feet paresthesias were resolved and his finger paresthesias were improving. Claimant reported he wished to return to work, but not to a position requiring repetitive gripping or grasping. Claimant reported his gabapentin prescription was for pre-existing "nerve damage" related to his shoulders. Dr. Tentori's examination of Claimant hands demonstrated no swelling, discoloration, or atrophy. Dr. Tentori reviewed partial copies of Claimant's medical records from August 26, 2019 (Dr. Geddes); September 6, 2019 and September 9, 2019 (SCLH). (Ex. C).

10. Dr. Tentori was not able to make a causation determination without further records. However, he did agree that Claimant should temporarily restrict his activities, but that the restrictions should not be considered work-related, as no causation determination had been made. (Ex. C).

11. On October 14, 2019, Claimant returned to Dr. Tentori, describing ongoing paresthesias affecting his bilateral fingertips, primarily in medial nerve distribution, but steadily improving. Claimant provided Dr. Tentori with a note from Dr. Brett indicating that Claimant had not had tendinitis or carpal tunnel syndrome during the previous 2 ½ years, and other records. Dr. Tentori noted Claimant had not previously disclosed his history of chronic pain and use of methadone. Dr. Tentori opined it was medically probable that Claimant developed some generalized inflammation-musculoskeletal strain and/or tendinitis affecting his upper extremities, but it was doubtful Claimant had carpal tunnel syndrome. Dr. Tentori's medical record indicates Claimant's objective findings were consistent with work-related injuries. (The ALJ infers that this statement is a reference to Claimant's upper extremity paresthesias). Dr. Tentori determined Claimant was not at MMI but anticipated he would be at MMI in four weeks. Dr. Tentori authorized Claimant to return to modified duty on October 14, 2019, with restrictions to include limit repetitive grip/grasp with hands. (Ex. C).

12. On October 31, 2019, Claimant returned to Dr. Tentori. Dr. Tentori doubted Claimant developed significant pathology related to his short course of employment, and that at worst, the described mechanism of injury may have led to tendinitis/inflammation affecting his hands. Dr. Tentori indicated Claimant's condition may require a short course of conservative treatment (i.e., physical therapy), which Claimant had initiated. Dr. Tentori placed Claimant at MMI and determined that Claimant had no work restrictions related to his work-related injury, and no permanent impairment. Dr. Tentori stated the following: "I am able to state that he no longer requires activity restrictions associated with this particular work injury. But it appears to me that he requires activity restrictions secondary to his chronic pain that requires use of various medications including methadone AND any current restrictions for his nonwork related chronic pain will need to be addressed by the patient's private health care provider," and Claimant "requires activity restrictions unrelated to this work injury in order to address his chronic pain complaints and use of methadone." Dr. Tentori indicated that maintenance care, in the form of physical therapy that had already been initiated would be appropriate. (Ex. C).

13. On November 19, 2019 and December 27, 2019, Claimant saw Dr. Brett. Dr. Brett noted that Claimant requested a referral for physical therapy for carpal tunnel syndrome. Dr. Brett included carpal tunnel syndrome of the right wrist within his assessment, although the medical records from November 19, 2019 and December 27, 2019 do not document any examination or testing of Claimant's right wrist. Dr. Brett provided Claimant with a referral to physical therapy for carpal tunnel syndrome on November 19, 2019. Dr. Brett advised Claimant to avoid repetitive motion that he had been doing but did not recommend any specific work restrictions. (Ex. F).

14. On January 24, 2020, Claimant saw Dr. Brett. Dr. Brett noted Claimant "remains stable with tough situation with cervical spine [pathology] and radicular symptoms.

[Claimant] is to be treat[ed] for [carpal tunnel syndrome] as well through disability claim. Continue physical therapy. Awaiting neurosurgery referral.” (Ex. F).

15. On February 11, 2020, Claimant was seen by Itay Melamed, M.D., of Advanced Brain and Spine. Claimant reported a history of chronic neck and back pain, including a 2005 motor vehicle accident which resulted in a possibly syrinx. Claimant reported pain in his arms and attributed it to shoulder and carpal tunnel issues. Claimant reported numbness in all fingers and toes. Claimant reported he was previously diagnosed with carpal tunnel and that a visit with a neurologist was pending. Dr. Melamed opined it was possible that Claimant’s pain was due to degenerative changes in his spine. Dr. Melamed prescribed Claimant Lyrica for nerve pain and discussed the possibility of injections. (Ex. 3).

16. Between October 18, 2019 and February 18, 2020, Claimant received physical therapy from two different physical therapy clinics. The stated diagnosis in physical therapy records was bilateral carpal tunnel syndrome. (Exs. 11, 12, and K).

17. On February 25, 2020, Claimant saw John Douthit, M.D., for a Division Independent Medical Examination (DIME). Dr. Douthit indicated that the “pertinent medical issue” of the DIME was to determine the cause of Claimant’s hand numbness and inability to resume work. Dr. Douthit examined Claimant’s hands and noted no swelling or atrophy. Percussion of Claimant’s forearm produced symptoms that were “non physiological.” Other tests, including carpal tunnel tests were characterized as “unreliable.” Dr. Douthit’s diagnosis was bilateral hand pain, possible bilateral carpal tunnel syndrome, and possible symptoms from syrinx of the spinal cord. Dr. Douthit concluded that Claimant was not at MMI. He found Claimant’s medical history was “murky” and recommended Claimant have nerve conduction studies to determine if his symptoms correlated with carpal tunnel syndrome, and additional medical records were needed to determine causation. He further opined that “if nerve conduction studies are normal, he will be at MMI without impairment.” Dr. Douthit noted that Claimant should have no further therapy until a diagnosis is established. Dr. Douthit noted that Claimant could work but should not do repetitive heavy lifting. (Ex. A).

18. On April 15, 2020, Claimant was seen by Christian Updike, M.D., at Injury Care Associates. Claimant reported ““overdoing it” grasping thousands of boxes to deliver over two weeks. Claimant reported his pain was worsening. Dr. Updike noted the case was to be reopened according to the DIME recommendations and referred the Claimant for EMG testing and neurologic consult, as recommended by Dr. Douthit. (Ex. C).

19. On May 7, 2020, Claimant consulted with Dr. Brett for a telehealth visit. Dr. Brett performed no examination, and his record does not mention Claimant’s upper extremity symptoms, other than to state “pt is dealing with carpal tunnel and shoulder issues as well as neck pathology.” Dr. Brett did not recommend work restrictions. (Ex. F).

20. On May 14, 2020, Claimant saw Samuel Chan, M.D., to undergo EMG and NCV testing and neurologic consult. Dr. Chan’s examination of Claimant’s wrists demonstrated range of motion within normal limits and negative Tinel’s testing. Dr. Chan performed

EMG (electromyographic) and NCV (nerve conduction velocity) studies. The studies were normal and did not reveal any significant neuropathic lesions. Dr. Chan diagnosed Claimant with pain in both hands and myalgia. Dr. Chan discussed Claimant's case with Dr. Tentori. He opined that, if agreed by Dr. Tentori, the Claimant should be placed at MMI without permanent impairment rating or work restrictions. (Ex. D).

21. Also, on May 14, 2020, Claimant returned to Dr. Tentori. Dr. Tentori spoke with Dr. Chan, who indicated Claimant possibly had "subclinical carpal syndrome", but the diagnosis would not be related to Claimant's employment. Dr. Tentori opined that Claimant was at MMI with no permanent impairment, no indication for maintenance care or treatment, and that any work restrictions would not be related to Claimant's work-related activities. (Ex. C).

22. On July 13, 2020, Dr. Douthit performed a follow-up DIME. Dr. Douthit reviewed additional records since Claimant's initial DIME examination on February 25, 2020, including Dr. Chan's records of EMG and nerve conduction studies. Dr. Douthit noted that the EMG and NCV studies performed by Dr. Chan were normal. Dr. Douthit diagnosed Claimant with bilateral hand pain without objective findings and with normal EMG and nerve conduction studies. He placed Claimant at MMI as of July 13, 2020. He also found no objective physical findings on which to base and impairment rating and found Claimant to have no permanent impairment. Dr. Douthit recommended no further therapy for maintenance care. (Ex. A).

23. The parties stipulated that Respondents paid Claimant temporary disability benefits from August 26, 2019 through October 31, 2019. Respondents have not paid Claimant temporary disability benefits since October 31, 2019, based on Dr. Tentori's October 31, 2019 determination that Claimant has no work restrictions related to his work-related injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App.

2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

WITHDRAWAL OF ADMISSION OF LIABILITY - COMPENSABILITY

When respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; see also *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that “a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.” The amendment to §8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838-01 (ICAO, Oct. 1, 2013). Respondents must, therefore, prove by a preponderance of the evidence that the Claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

A compensable injury is one that arises out of the course and scope of employment with one's employer. §8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlanda*, 811 P.2d 379, 383 (Colo. 1991). There must be a causal nexus

between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the requisite causal connection exists is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc.*, W.C. No. 4-588-675, (ICAO, Sept. 1, 2006).

Respondents have failed to establish by a preponderance of the evidence that Claimant did not sustain a compensable injury arising out of and in the course of his employment. Claimant testified that after 13 consecutive days of work, he woke on August 26, 2019 with symptoms in his hands and feet. Claimant presented that day to the emergency department at North Suburban Medical Center where he was examined by Dr. Geddes. Dr. Geddes' examination of the Claimant demonstrated objective findings consistent with the paresthesias Claimant reported experiencing. Specifically, Dr. Geddes noted "mild swelling to the dorsal aspect of right hand, mildly swollen right forearm compared to left, with mild tenderness." Although, Dr. Geddes did not diagnose Claimant with carpal tunnel syndrome, as Claimant reported to other health care providers, Dr. Geddes did diagnose Claimant with tendonitis and paresthesia. PA Robbins, who saw Claimant on September 6, 2019, also concluded that Claimant's hand symptoms were work-related. Similarly, although Dr. Tentori was skeptical that Claimant could develop carpal tunnel syndrome over a thirteen-day period, he did determine that Claimant's hand symptoms were consistent with work-related injuries. With the exception of Dr. Prok, no other physician stated definitively that Claimant's hand symptoms were not work-related. The ALJ finds it more likely than not that Claimant sustained an injury to his bilateral hands, (i.e., tendonitis and paresthesia, but not carpal tunnel syndrome) in the course of and arising out of his employment.

The ALJ finds that Respondents have not proven by a preponderance of the evidence that Claimant's hand/finger numbness did not arise out the course and scope of Claimant's employment with Employer.

OVERCOMING DIME ON MMI

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v.*

Industrial Claim Appeals Office, supra. “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's MMI determination is incorrect. See e.g., *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office, supra*.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

MMI exists at the point in time when “any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” § 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. § 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools*, W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. See *In Re Villela*, W.C. No. 4-400-281 (ICAP, Feb. 1, 2001). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or

diagnostic procedures to evaluate the condition are inherent elements of determining MMI.

Respondents have not established by clear and convincing evidence that Dr. Douthit's DIME opinion that Claimant did not reach MMI until July 13, 2020 is incorrect. In his February 25, 2020 DIME Report, Dr. Douthit opined Claimant was not at MMI, because nerve conduction studies were needed to determine if Claimant had carpal tunnel syndrome. Implicit in Dr. Douthit's recommendation for additional diagnostic studies is the determination that such studies offered a reasonable prospect for defining Claimant's condition and, potentially, suggesting further treatment. The ALJ finds that Dr. Douthit's recommendation that nerve conduction studies be performed was reasonable and appropriate. The EMG studies were performed on May 14, 2020 and were normal. In his July 13, 2020 DIME report, Dr. Douthit placed Claimant at MMI, without restrictions or an impairment rating.

Respondents did not present evidence that was unmistakable and free from serious or substantial doubt that Dr. Douthit's MMI determination was incorrect. Although Dr. Tentori placed Claimant at MMI on October 31, 2019, he did not opine that Dr. Douthit's opinion was incorrect. No evidence was offered at hearing directly contradicting Dr. Douthit's opinion on this matter. The ALJ finds that Respondents failed to meet their burden of establishing by clear and convincing evidence that Dr. Douthit's opinion was incorrect.

Entitlement To TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove his industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999).

The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) TTD benefits ordinarily continue until terminated by the occurrence of one of the criteria listed in § 8-42-105 (3), C.R.S. These events include: 1) the employee reaching MMI; 2) the employee returning to regular or modified employment; 3) the attending physician releasing the employee to return to regular employment; or 4) the employee is released to return to modified employment and the employer makes a written offer for such, but the employee fails to begin such

employment. *Bestway Concrete & TIG Ins. v. Industrial Claim Appeals*, 984 P.2d 680 (Colo. App. 1999).

“The statute provides that the opinion of the attending physician carries conclusive effect with respect to a claimant's ability to perform regular employment. However, one attending physician's release to work is not conclusive of the issue if multiple attending physicians render conflicting opinions.” *Bestway Concrete & TIG Ins*, supra, citing *Burns v. Robinson Dairy, Inc.*, 911 P.2d 661 (Colo. App. 1995). The term “attending physician” as used in § 8-42-105(3), C.R.S., refers to a physician within the chain of authorization who assumes care of the claimant. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997).

Claimant has failed to establish by a preponderance of the evidence that Claimant continued to be subject to work restrictions that were related to his work-related injury after October 31, 2019. As of October 31, 2019, Claimant's ATP was Dr. Tentori. In his report of October 31, 2019, Dr. Tentori stated that Claimant “no longer requires activity restrictions associated with this particular work injury.” Although Dr. Tentori did indicate that he was not able to release Claimant to unrestricted work activities, this was because he opined Claimant “requires activity restrictions unrelated to this work injury in order to address his chronic pain complaints and use of methadone. Any ongoing activity restrictions will need to be addressed by the patient's private health care provider.” The ALJ finds Dr. Tentori's opinion on this issue credible and persuasive. Neither Dr. Brett nor Dr. Douthit were “attending physicians” within the meaning of the Workers' Compensation Act, and therefore there are no conflicting opinions among attending physicians, which would render Dr. Tentori's conclusive.

To the extent Claimant was restricted from work activities after October 31, 2019, those restrictions arose from conditions that did not arise out of Claimant's course of Employment with Employer. The ALJ, therefore, finds that Claimant failed to establish that Claimant is entitled to TTD benefits after October 31, 2019.

ORDER

It is therefore ordered that:

1. Respondents are not entitled to withdraw their admissions of liability.
2. Claimant reached maximum medical improvement on July 13, 2020.
3. Claimant is not entitled to temporary total disability benefits after October 31, 2019.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 12, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

| STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 222 South 6th Street, Suite 414, Grand Junction, CO 81501 | <input type="checkbox"/> COURT USE ONLY <input type="checkbox"/> |
| In the Matter of the Workers' Compensation Claim of: [Redacted] Claimant, vs. [Redacted] Employer, and SELF INSURED Insurer, Respondents. | |
| CASE NUMBER: WC 5-072-588-002 | |
| FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER | |

On November 12, 2020, a telephone hearing was held in this matter in Grand Junction, Colorado before Administrative Law Judge Cassandra M. Sidanycz. The claimant did not appear at hearing. The respondent was represented by [Redacted], Esq. The hearing was digitally recorded from 1:00 p.m. to 1:35 p.m. The respondent's exhibits A through GG were admitted into evidence.

In this order, [Redacted] will be referred to as "the claimant" and [Redacted] will be referred to as "the employer" or as "the respondent". Also in this order, "the ALJ" refers to the Administrative Law Judge; "C.R.S." Colorado Revised Statutes; "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

The only issue for hearing was whether the claimant demonstrated, by a preponderance of the evidence, that she had suffered a change in condition to warrant the reopening of a workers' compensation claim related to an admitted injury that occurred on March 5, 2018.

PROCEDURAL MATTERS

1. This matter was set for hearing pursuant to the claimant's July 8, 2020 Application for Hearing. At that time, the claimant was represented by attorney, Bethiah Beale Crane.

2. Following a prehearing conference before PAL John Sandberg, a Notice of Hearing was sent to the parties on September 2, 2020 indicating that the hearing would take place on November 12, 2020 at 1:00 p.m. via telephone with an ALJ with the Grand

Junction location of the Office of Administrative Courts (OAC). At that time the claimant continued to be represented by Ms. [Redacted]. The Notice of Hearing was emailed to Ms. [Redacted]'s email address of record.

3. On September 17, 2020, the OAC received a copy an order from the Division of Workers' Compensation in which Ms. [Redacted]'s Motion to Withdraw as the claimant's attorney was granted. The ALJ notes that Ms. [Redacted] filed her Motion to Withdraw on August 27, 2020. However, she did not file that motion with the OAC. Therefore, it was proper for the OAC to provide notice of hearing to Ms. [Redacted] on the claimant's behalf on September 2, 2020.

4. On September 25, 2020, the claimant appeared pro se at a prehearing conference before PALJ John Sandberg. At that time, PALJ Sandberg ordered that the hearing on November 12, 2020 would proceed as scheduled.

5. The claimant appeared pro se at a prehearing conference on October 15, 2020 before PALJ Laura Broniak. At that time, it was noted that a hearing was scheduled in this matter on November 12, 2020.

6. In addition, the claimant had another hearing before the ALJ on Monday, November 9, 2020 regarding two other cases (WC 5-075-911 and WC 5-024-075). At the November 9, 2020 hearing, it was discussed that a hearing was scheduled for Thursday, November 12, 2020.

7. On November 12, 2020, the Grand Junction OAC received a letter from the claimant requesting copies of the recordings for "the full day hearing on 11-9-2020 and the half day [h]earing on 11-12-2020".

8. At the time of the hearing on November 12, 2020, the ALJ called the claimant at her telephone number of record.¹ The claimant did not answer her phone, and the ALJ left her a voicemail with instructions to contact the Grand Junction OAC. The ALJ made three attempts to reach the claimant in this manner. The ALJ's attempts to reach the claimant were unsuccessful.²

9. The ALJ determined that the claimant had failed to appear. On the record, the ALJ reviewed factors listed in OACRP 23 and determined that the hearing would proceed without the claimant.

10. Counsel for the respondent made an oral Motion for Summary Judgment, as the claimant had failed to appear and failed to present any evidence or testimony. The ALJ took the respondent's Motion under advisement and now issues this order.

¹ The ALJ notes that this is the same telephone number that was used by the ALJ to successfully reach the claimant for the November 9, 2020 hearing.

² All attempts to reach the claimant on November 12, 2020 were made a part of the record via the digital hearing recording.

FINDINGS OF FACT

1. The claimant suffered an injury at work on March 5, 2018. This injury was to her right fifth toe. The respondent admitted liability for this injury.
2. The claimant was placed at maximum medical improvement (MMI) on April 12, 2018, with no permanent impairment and no maintenance medical treatment.
3. On May 14, 2018, the respondent filed a Final Admission of Liability (FAL) admitting for the MMI date of April 12, 2018, and no permanent impairment.
4. The claimant did not object to the FAL.
5. On March 2, 2020, the claimant filed her Opposed Petition to Reopen and listed the reason for reopening as “[c]hange in medical condition”.
6. The medical records attached to the claimant’s Opposed Petition to Reopen reflect medical treatment from March 5, 2018 through July 13, 2018.
7. The claimant did not appear at hearing.
8. There is no persuasive evidence in the record to support a finding that the claimant suffered a change in her condition and/or a worsening of her condition to warrant reopening her claim.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.
2. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.
3. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).
4. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

5. Section 8-43-303(1) provides that “any award” may be reopened within six years after the date of injury “on the ground of fraud, an overpayment, an error, mistake, or a change in condition.” Reopening for “mistake” can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g.*, *Standard Metals Corporation v. Gallegos*, 781 P.2d 142 (Colo. App. 1989); see also *Amin v. Schneider National Carriers*, W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission*, 646 P.2d 399 (Colo. 1981).

6. A change in condition refers to “a change in the condition of the original compensable injury or to a change in the claimant’s physical or mental condition which can be causally connected to the original compensable injury.” *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

7. As found, the claimant has failed to demonstrate by a preponderance of the evidence that her condition has changed and/or worsened.

ORDER

It is therefore ordered the claimant’s request to reopen her claim related to a March 5, 2018 date of injury is denied and dismissed.

Dated this 16th day of November 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Castrejon regarding MMI?
- II. If Claimant is not at MMI, has he shown, by a preponderance of the evidence, that the care recommended by Dr. Castrejon is reasonable, necessary, and related to his admitted work injury?
- III. If Claimant is at MMI, what is the appropriate impairment rating?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury / Subsequent Treatment

- 1) On August 7, 2019, Claimant sustained an admitted injury to his lumbar spine, and medical benefits were provided. (Ex. A). One or more loose pilasters had slid sideways down a wall adjacent to where Claimant was bent over working, striking him in the lower back.
- 2) On August 9, 2019, Claimant was seen at UC Health, with complaints of pain and tightness in his low back accompanied by left leg pain. The first note, under "Reason for Visit," reads that Claimant was laying on the floor working and a large piece of loose plastic fell onto his low back; The second note, under "HPI" (History of Present Illness), reads "patient states that several pilasters fell onto his lower back while he was laying 'supine' on the floor." {The ALJ notes it is highly doubtful that Claimant used the actual word 'supine', or even understood its meaning. Claimant's body positioning, detailed further herein, was not 'supine', and something early on got lost in translation}.
- 3) Physical exam revealed decreased range of motion, tenderness and abrasion over L4. Claimant was prescribed medication and given work restrictions of no lifting, carrying, pushing/pulling over 25 pounds. In addition, Claimant was restricted from crawling and squatting. (Ex. 1).
- 4) On August 15, 2019, Claimant returned to UCHealth to see Dr. Walter Larimore, M.D. Claimant still reported left greater than right low back pain, radiating to his left buttock, with numbness and tingling down to the anterior lateral calf. The mechanism of injury was a pilaster falling onto Claimant's lower back while he was laying 'supine' on the floor. Dr. Larimore opined that the method of injury is consistent with

a work-related injury.

- 5) Physical examination revealed tenderness and an abrasion on the low back along with surrounding bruising. A pain diagram shows an oval area of bruising extending leftward from the midline of the low back toward the left buttock. Dr. Larimore's diagnoses were lumbar contusion and abrasion, with exacerbation of pre-existing, non-work related lumbosacral degenerative disease. (Ex. 1, pp. 10-12)
- 6) Claimant returned to Dr. Larimore on September 5, 2019. Claimant reported to be 75-80% better. Physical examination revealed decreased range of motion with tenderness at the L3-5 levels bilaterally. Dr. Larimore restarted ibuprofen 800 mg three times daily and advised Claimant to continue to use Robaxin nightly. Claimant advised Dr. Larimore that he is tolerating his current work restrictions, but his employer has cut back on his work assignments, and so he would like a trial period with no work restrictions. (Ex. 1, pp. 21-22). Dr. Larimore stated that Claimant was to follow up with him in four weeks, after which he expected to close the case. (Ex. F, p. 50).
- 7) After his appointment with Dr. Larimore on September 5, 2019, Claimant was referred to to Fyzical Therapy and Balance Center to start his PT program. The initial examination indicated a history of "door jams" falling onto Claimant's back when he was crouched down. Claimant described an achiness over the lower back more so on the left, and knottiness. The pain location was in the left lower back, radiating intermittently into the posterior lower left extremity. (Ex. 2, pp. 45-46).
- 8) On September 10, 2019 Claimant reported to his physical therapist that he feels someone is poking him in the back with a stick. The therapist noted that Claimant is a little sore today as he had to carry some things up three flights of stairs. Claimant reported having less sciatic pain. (Ex. 20. P. 50)
- 9) On September 13, 2019 the PT note reflects Claimant was reporting intermittent pain in his back which was more a 'tingling' pain as opposed to a 'stabbing' pain. (Ex. 2, p. 52).
- 10)The PT notes for September 17, 19, and 23, 2019 reflect that Claimant was experiencing sciatic pain on the left, with some tingling down the left leg. (Ex. 2, pp. 52-61).
- 11)Claimant continued with PT. The notes for October 1 and October 3, 2019 indicate that Claimant's back pain was increasing. On the October 3, 2019 visit, Claimant advised the physical therapist that his back hurts worse when at work, or if he has to sit for too long. (Ex. 2, pp. 63-65).
- 12)On October 3, 2019, Claimant was also evaluated by Jayme Eatough, P.A.C. Claimant told PA Eatough that he was still experiencing sciatica and that his "pain still hasn't completely gone back to normal." Claimant reported feeling that there are

knots in his back. Furthermore, Claimant still reported feeling numbness and tingling in his entire left leg, and felt like someone is poking him in one specific spot.

- 13) Claimant also asked P.A. Eatough about seeing a pain management doctor, as he had a previous injury where he underwent Novocain injections and chiropractic which helped work out some of the knots. The PA notes do not indicate what body part sustained a previous injury. Ultimately, P.A. Eatough discussed the case with Dr. Bisgard, and opined that Claimant is not at MMI, since Claimant was still having numbness and tingling in his leg. (Ex. 1, pp. 25-26).
- 14) On October 8, 2019 Claimant returned to PT, with complaints of increased tightness. Claimant advised the physical therapist that stretching usually helps relieve the pain, but not on a consistent basis. (Ex. 2, p. 67).
- 15) On October 10, 2019 Claimant returned to Dr. Larimore. Claimant felt he had plateaued at 75% due to persistent left lower back pain that radiates to the left buttock and down the fifth lumbar dermatome. Under MOI, Claimant reported that “[a] pilaster (10-15#) fell onto his lower back....” Dr. Larimore noted that he discussed with Claimant that he sustained a lumbar contusion and abrasion with possible exacerbation of his pre-existing non-work-related degenerative disc disease. This note indicates that Claimant told Dr. Larimore that he had a prior neck injury for which he had injection therapy from a physiatrist, which was helpful. Dr. Larimore opined that massage therapy, coupled with chiropractic treatment four times weekly should be attempted as a final step. On this date, Dr. Larimore transferred care to Dr. Nicholas Kurz for ongoing care if needed (Ex. 1, p. 30).
- 16) Claimant attended PT on October 17, 22, 24, 30, and November 5, and 7, 2019. A review of these notes reflect that Claimant continued to experience back pain, with sciatica on the left side radiating down the left leg. (Ex. 2, pp. 70, 72, 75, 78, 80, 82).

Claimant Referred to Dr. Kurz

- 17) Claimant was first evaluated by Dr. Nicholas Kurz, DO, on November 8, 2019. Dr. Kurz’s note reflects a history of Claimant kneeling when another employee leaned a plastic pilaster against a wall. It then slid sideways, striking Claimant on his left lower back, resulting in a contusion and abrasion. Dr. Kurz wrote that Claimant’s symptoms, including his sciatica, have improved; however, on occasion, he gets tightness in the left lower leg.
- 18) Prior medical history was positive for, a chronic neck condition resulting from a motor vehicle accident. Physical examination revealed a previous abrasion at left side of lower back around L4, that is well healed and non-tender. The rest of the physical exam was normal. Dr. Kurz specifically noted that “no abnormal pain behaviors were observed....” Dr. Kurz diagnosed mild acute lumbar contusions around L4, with a superficial abrasion on chronic congenital v. degenerative pre-existing lumbar L5-S1 moderate disc space narrowing.

- 19) At this initial visit, Dr. Kurz opined that Claimant was at MMI, with no impairment. Dr. Kurz indicated that Claimant has returned to his “pre DOI objective functional baseline” and any ongoing problems are related to his congenital v. degenerative finding in the lumbar spine. Dr. Kurz felt any further care for his lumbar spine should be treated outside the workers’ compensation system. (Ex. 3, pp. 86-90).
- 20) Based on Dr. Kurz’s report, Respondents filed a Final Admission of Liability (“FAL”) on December 4, 2019, admitting to a zero percent impairment. (Ex. 6). Claimant then timely requested a DIME.

DIME by Dr. Castrejon

- 21) On March 5, 2020, Claimant underwent this DIME by Dr. Miguel Castrejon, M.D. In the DIME report, Claimant gave a history of crouching down in a corner, when a pilaster struck him in the lower back. Claimant initially reported that the pilaster was made of solid plastic weighing 50 pounds, measuring 7 inches wide, 1 inch thick, and 7 feet tall. Dr. Castrejon reviewed the notes of the various providers who treated Claimant.
- 22) Physical examination revealed pelvic obliquity with an apparent leg length discrepancy-right greater than left. Palpitation produced tenderness over the left greater than right paralumbar musculature and midline L4-S1. Tenderness was found along the lower lumbar facets on the left. There was also left greater than right sacroiliac joint tenderness and SI joint stressing and left SI pain with SI joint stressed. Sitting straight leg raising (SSLR) was considered mildly positive on the left, with tight hamstring with report of pain into the left lower buttock and upper hamstring.
- 23) Dr. Castrejon in his DIME report wrote that lumbar X-rays revealed the presence of pre-existing degenerative disc disease at L5-S1, which was not caused by the injury but was asymptomatic and non-disabling prior to the current work injury. Based on his evaluation, Dr. Castrejon’s clinical diagnoses were lumbar spine contusion, lumbar musculo-ligamentous strain/ sprain with left SI joint involvement, left lower limb radiculitis, rule out HNP L5-S1, and mild myofascial pain in the left lumbar musculature. (Ex. 5).
- 24) Dr. Castrejon opined in his report that Claimant was not at MMI, and needed additional care, to include a lumbar MRI and flexion-extension x-rays of the lumbar spine. In addition, Dr. Castrejon recommended Claimant undergo electrodiagnostic testing of the left lower limb and lumbar paraspinal muscles. Additional treatment recommendations include spinal injections (epidural v. sacroiliac) and specialist consultation if needed. In support of his opinion, Dr. Castrejon felt that the mechanism of injury of a direct blow on the back by a 50-pound pilaster fit Claimant’s clinical presentation.

25) Dr. Castrejon noted that Claimant had no issues working in construction prior to this injury. He also noted that Claimant's degenerative disc disease was asymptomatic until the work injury. Furthermore, he noted that Claimant's physical exam findings were indicative of mild nerve root mediated pain and for sacroiliac mediated pain which correlates with Claimant's complaints of left leg pain with numbness and tingling. *Id* at 112-113.

26) Using the AMA Guides to the Evaluation of Permanent Impairment, Third Edition (Revised) ("AMA GUIDES"), Dr. Castrejon assigned Claimant a combined impairment rating of 11% of the whole person for his lumbar spine broken down as follows: There was 7% whole person impairment, using Table 53(II)(C). He measured range of motion deficits equating to a 4% WP impairment. *Id* at 113.

Re-evaluation by Dr. Kurz / Further Treatment

27) On May 29, 2020, Claimant returned to Dr. Kurz for re-evaluation. Claimant repeated a similar mechanism of injury. However, Dr. Kurz's note indicates Claimant was unsure of the exact weight and size of the pilaster. However, this same report also indicates that the pilaster weighed between 50 to 80 pounds. Dr. Kurz's record reveals that Claimant's sciatic pain was improved, but he still gets knots in his lower back.

28) Physical examination revealed full range of motion in the lumbar spine seated, and SSLR of greater than 90 degrees bilaterally was negative. Musculoskeletal and neurological exams were opined to be normal. Dr. Kurz noted that Claimant exhibited no abnormal pain behaviors. Dr. Kurz's clinical diagnoses were the same as that noted in his November 8, 2019 report. *Id* at 117-119.

29) Based on the May 29, 2020 evaluation, Dr. Kurz again opined that Claimant was at MMI as of November 8, 2019, and needed no further care. In support of his opinion, Dr. Kurz wrote that MMI is inclusive of three components: employability, possible need for medical maintenance which is considered to be reasonable and necessary to sustain the patient at MMI. Impairment is defined as a loss, a loss of use or derangement of any body part, organ system, or organ function. Dr. Kurz wrote that, because Claimant is working full duty without restrictions and is not requiring any medical care, Claimant meets the definition of MMI. Furthermore, Dr. Kurz felt the mechanism of injury as gleaned from Claimant's history and various medical records is minimal, and not likely to have caused structural damage to a 'muscular' male. Dr. Kurz felt Claimant did not sustain any permanent impairment as a result of the work injury. *Id* at 119-120.

30) Regarding Dr. Castrejon's DIME report, Dr. Kurz opined Dr. Castrejon had an incorrect impression of the mechanism of injury due to the weight of the pilaster(s) involved. Dr. Kurz reiterated that by September 5, 2019 Claimant was 75-80% better without having any active PT. Dr. Kurz wrote that Claimant's prior whiplash type injuries for which he treated with Dr. John Tyler for two to three years, coupled with

the degenerative changes as found on lumbar X-rays led him to conclude that Claimant's present ongoing problems are similar to what he had back in 2003 through 2006, and are not related to the more recent work injury. *Id* at 120-122.

- 31) On June 11, 2020, Dr. Timothy Sandell performed electrodiagnostic studies as recommended by Dr. Castrejon. According to Dr. Sandell, the EMG examination identified abnormalities suggestive of a left S1 radiculopathy. (Ex. 4, pp 126-127).
- 32) An MRI of the lumbar spine was also done on August 7, 2019. According to the radiologist, there was a left sided disc protrusion at **L5-L6**, with crowding of the left S1 nerve root, and lateral recess and potential intermittent left S1 nerve impingement. (Ex. O). {Medical records indicate that Claimant congenitally has one extra lumbar vertebra, noted herein to be **L6**}.
- 33) On July 15, 2020, Dr. Kurz issued an addendum to his prior reports. In this report, Dr. Kurz notes the results of the recent EMG and MRI. He opines that these studies show no acute findings at the level of the abrasion site. Dr. Kurz again wrote that Claimant remains at MMI, with no impairment, or need for further medical care. (Ex. P).

Michael Swearingen's Deposition

- 34) Michael Swearingen, a co-worker of Claimant, testified via deposition, taken on July 31, 2020. Mr. Swearingen had taken a cell phone video of Claimant on a job site. He also testified on the specifications of the pilaster that he believes was the one that fell on Claimant's back. He described the pilaster as being 80" x 4" x 1", weighing 10 pounds. Mr. Swearingen did not know the exact date the video was taken, but it was in the middle of November, 2019. Mr. Swearingen conceded that he was hired after Claimant was injured, and did not witness Claimant's injury. Mr. Swearingen also testified that he can't tell how tall the pilaster is that is depicted in the photo which was submitted in Respondents' Exhibit Q.
- 35) The cell phone video (Ex. S, via thumb drive) has been reviewed by the ALJ. [The video is dated 7/28/2020 at 3:57 pm., presumably the date of data transfer]. The entire video is approximately 10 seconds long, depicting Claimant walking away from the camera in a parking lot, apparently unaware of being filmed. Claimant appears to be in no distress, with no gait disturbance, while carrying one, perhaps more, large, flat cardboard boxes, contents unknown-if any. They are balanced overhead in his right hand, much like a waiter carrying a food tray. Additionally, there is some brief banter between the videographer and another person. The words are mostly unintelligible; in any event, the ALJ will disregard the commentary as being hearsay additions to an otherwise admissible video.

Claimant Testifies at Hearing

- 36) Claimant testified at hearing. He testified that on the morning of the work injury he

was told by a supervisor to mark out and lay out the pilasters on the floor. While doing so, Claimant crouched down on his elbows with forearms on the ground using a pencil to mark the layout. While marking the layout in this fashion, the left side of Claimant's body was very close to the wall with his left foot and knee actually touching it. According to Claimant, at the same time he was working on marking the layout, Jason Moore, Claimant's co-employee, was stacking some pilasters behind where he was working. These pilasters were stacked upright about four inches away from the wall at the bottom and stacked vertically one on top of the other.

- 37) Claimant testified that he saw two pilasters that were stacked. As he crouched down, Mr. Moore was putting a third one up against the wall but Claimant was not sure if this third pilaster was set on top of the other two. The pilasters were stacked approximately six feet from Claimant's feet when he was crouched down. Within a few moments after getting on the ground, at least two, and perhaps three, pilasters slid down the slick tile wall toward Claimant. They struck him in his lower back on the left side, leaving a small cut. There was some bruising as well. Claimant testified that after the incident he observed three pilasters on the ground.
- 38) Claimant described the pilasters that struck him as being made of dense plastic, eighty-four inches tall, 1 inch thick, four inches wide, with an estimated weight of around eighteen pounds each. Claimant came up with the estimated weight by looking it up online.
- 39) Claimant acknowledged that the medical records are inconsistent with the number of pilasters that fell on him. However, Claimant testified that in relating the history to his health care providers, he was referring to the single pilaster which cut his back.
- 40) Claimant testified about the care he had under Dr. Larimore and Dr. Kurz. He testified that while he was actively treating, he would get better, but his symptoms would later return. He testified that when Dr. Kurz placed him at MMI on November 8, 2019 he was feeling better, but he told Dr. Kurz he would wake up from sciatic pain.
- 41) Claimant further testified that when he saw Dr. Castrejon, his low back was stiff. He was having sciatic pain in his buttocks down his thigh into his calf. Claimant continues to have sciatic type symptoms, which are exacerbated by riding his bike, as well as sitting and standing for an extended period. Regarding the video taken of him by Mr. Swearingen, Claimant testified that he was carrying four to five empty boxes weighing at most a total of ten pounds.
- 42) Claimant was involved in an automobile accident in 2003. As a result, Claimant sustained injuries to his back and neck. According to Claimant, the injuries to his neck were greater than those to his low back. Claimant treated with Dr. John Tyler, and received care to include injections, chiropractic, and massage. Claimant testified that after completion of his care under Dr. Tyler in 2006, he has had no low back problems since. He has had no issues performing his job duties which involved

construction type work.

43) Claimant returned back to full duty work after his visit with Dr. Larimore but was terminated from Employer in December 2019. After his termination Claimant did some light construction type work such as patching a roof leak, minor painting, drywall patching, repairing doors, wallpaper removal, and floor repairs. Claimant testified that due to his sciatica, he has turned down bigger construction type jobs.

Dr. Kurz Testifies via Deposition

44) Dr. Nicholas Kurz, D.O. testified as an expert in family and occupational medicine. Dr. Kurz testified consistent with his reports of November 8, 2019, May 29, 2020, and July 15, 2020. Dr. Kurz felt that Claimant sustained minor injuries consisting of an abrasion, and some back pain as a result of a pilaster falling on his low back. However, Dr. Kurz testified that the mechanism of injury as described by Claimant is not consistent with any of the findings noted on X-rays, the MRI, Dr. Sandell's electrodiagnostic studies, or Claimant's ongoing sciatic symptom complex.

45) Dr. Kurz felt that the medical records were inconsistent regarding both the number and weight of the pilasters that fell on Claimant. Dr. Kurz explained that if it was one pilaster-weighing 10-13 pounds-that hit Claimant, then the abrasion, bruising, and any soft tissue damage would be expected to heal within a few weeks. Dr. Kurz opined that Claimant has fully healed, due to no objective findings on physical examination.

46) Dr. Kurz testified he reviewed the MRI and Dr. Sandell's electrodiagnostic studies, and did not believe they revealed any abnormalities related to Claimant's work injury. He said that there were no findings at the L4 level-where the abrasion-was that would correlate with his sciatic complaints. Rather, the sciatic complaints were more consistent with the findings at L5-S1 levels, taking into account Claimant's congenital abnormality of having an L-6 disc.

47) Regarding electrodiagnostic testing, Dr. Kurz said that the testing was "actually normal." Dr. Kurz stated that Dr. Sandell did some "extra tests" that may be suggestive of some issues, but none of which correlated with the physical examination, findings, X-rays, or MRI.

48) Dr. Kurz conceded that he does not know exactly how many pilasters hit Claimant's low back, or how they were stacked. He does not know exactly how far the pilasters fell before they impacted Claimant's back. He agreed that the diagram reflecting the bruising on Claimant's back goes from a little above the beltline down into the L5-S1 level and sacrum. Dr. Kurz summarized his disagreement with Dr. Castrejon's DIME opinion:

A So what we have here is a low back contusion. The mechanism is fairly straightforward. It was the same mechanism that

was described to Dr. Castrejon on his DIME, although, *Dr. Castrejon's DIME, in my opinion is invalid*. He had the mechanism wrong. He had the weight wrong. He had the history wrong. He had the patient's work history with his employer wrong. He has – obviously has issues with both myself and Dr. Larimore.....(Castrejon depo, p. 78) (emphasis added).

- 49) Dr. Kurz testified that history is a very important factor in helping determine etiology. He agreed that it is important to find out when symptoms first started, whether or not there some sort of trauma involved, and if there were prior symptoms in the same part of the body that is in question. He admitted he had not reviewed any medical records which reflect Claimant was having low back pain or pain down the left leg in the five years prior to the 2019 work injury. Dr. Kurz agreed that it is common that as a person ages, degenerative changes will occur in the lumbar spine, but these changes can be asymptomatic.

Dr. Castrejon Testifies via Deposition

- 50) The DIME physician, Miguel Castrejon, M.D. testified as an expert in the field of physical medicine and rehabilitation. Dr. Castrejon outlined the various histories reflected in the medical records regarding the number and weight of pilasters that hit Claimant. He indicated that even if it were two pilasters, each weighing 10 pounds, that hit Claimant's back, it would not alter his opinion. Dr. Castrejon went on to state that the combined weight of two pilasters each weighing ten pounds falling in a five to six-foot arc would augment his opinion regarding the cause of Claimant's low back problems. He further elaborated:

AAnd taking into consideration, when this gentleman saw me, he indicated he was essentially in a crouched position, getting as close as he could to a corner where he was working. So if one considers the amount of intradiscal pressure that the disc is subjected to, in an individual who is in a crouched, flexed position, it's about 400 times that of what one would expect if one were laying back in, let's say, a recliner or a chair. So that lets me know there is the mechanism of injury. The impact, the positioning that he was in, could lead to a significant injury. (Castrejon depo, pp. 15-16).

- 51) Dr. Castrejon described the end result of this mechanism of injury thusly:

Aif there was enough pressure subjected by the disc and the nerve root structures where there is some form of disc protrusion or violation of the annulus, either by what we, quote, term a bulge or a protrusion or even an extrusion of even just an inflammatory process or even an annular tear where there is leakage of the proteoglycans within the disc that then cause an acidic reaction on the nerve. In all those cases, *you will experience nerve root irritation that will lead to a*

radiculitis or referred pain in a dermatomal distribution, which is a specific nerve root distribution. (Castrejon depo, p. 16) (emphasis added).

In his opinion, this is what happened to Claimant.

52) In support of his opinion, Dr. Castrejon stated that the bruising shown in the pain diagram from August 15, 2019 overlaps the sacroiliac joint. To thereby imply that the L4 area—where the abrasion is—the only area that could be injured by the falling pilasters does not make medical sense. An event to a specific area does not preclude symptoms in any other area, especially in Claimant, who had pre-existing degenerative changes in his lumbar spine. This makes his back more susceptible to injury.

53) Dr. Castrejon, is trained to perform, and actually does perform, electrodiagnostic tests. His review of Dr. Sandell's raw data confirmed that Claimant has a mild left S1 radiculopathy. Dr. Castrejon further testified that the findings on the EMG are consistent with Claimant's symptoms, and the findings on MRI. Dr. Castrejon explained that Claimant's symptoms of pain, numbness, and tingling extending down the leg to the lateral calf and lateral aspect of the foot actually confirmed Dr. Sandell's findings. He elaborated:

A ...the presentation of this individual from the initial presentation was that of an S1 radiculopathy. The comments that were offered by Dr. Larimore and the physician assistants that initially treated his case were all consistent in terms of the description and in terms of their concern. The findings on the MRI that was performed after the EMG, is consistent with the EMG. The fibrillation potentials, positive shock waves that are seen on this study, tell me that *there is a process of denervation-reinnervation, which can be a chronic process that can last six months to a year and possibly even more.* All depend – we all depend upon what structure has been injured, the length of the structure away from the plexus where it originates. Those are all lengths that we look at. But, in general, *the data is all very consistent with his presentation.* (Castrejon depo, pp. 23-24) (emphasis added).

54) Dr. Castrejon stated that the MRI revealed that at L5-L6, there is a left sided disc protrusion, with crowding of the left S1 nerve root and lateral recess. This potentially impinges the left S1 nerve root on an intermittent basis. Claimant's symptoms, therefore, can wax and wane, depending upon his activity level

55) Based on the MRI, the EMG, the medical history, and all of the other information obtained, Dr. Castrejon opined that Claimant is not at MMI. Claimant needs additional care, to include a left S1 nerve root block, and additional physical therapy. This should include core strengthening, instruction in a home exercise program, and treatment directed toward his S1 abnormalities.

56) Dr. Castrejon testified, consistent with his DIME report, that he calculated Claimant's impairment by using Table 53 to obtain an impairment of 7% of the whole person and then using range of motion to obtain 4% whole person impairment. Combining these two gives Claimant an 11% whole person impairment. Dr. Castrejon opined that for the 7% table 53 impairment, it is necessary to have six months of medically documented pain and rigidity. Dr. Castrejon said that in Claimant's situation, this criterion has been met.

57) Dr. Castrejon pointed out that Claimant was experiencing pain and rigidity when he examined him. On November 7, 2019 the physical therapist documented trigger points, which occur when a muscle has been subject to some sort of injury or stress. Dr. Castrejon testified that the range of motion testing was valid.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the

witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The ALJ finds that Claimant was a reasonably consistent medical historian to his medical providers, and to the two IMEs. Further, his hearing testimony is reasonably consistent, and credible. While it is likely that the pilasters weighed closer to 10 pounds apiece (rather than 50 as earlier reported), it is apparent that at least two, possibly three struck Claimant. Depending upon the angle of contact, it could feel more like 50.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that each expert has rendered their opinions to the best of their ability, based upon the information they were provided. The real issue here is one of *persuasiveness*.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe*, W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines*, W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office, supra*. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO November 21, 2008).

H. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

Overcoming the DIME, as Applied.

I. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. See *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Industrial Comm'n*, 736 P.2d 1262, 1263 (Colo. App, 1986) (“[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five-percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.”)

J. Generally, the Claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009). However, in this instance Claimant has effectively persuaded the DIME physician that his current symptoms were proximately caused by the work injury, rather than the

inevitable, natural progression of his compression fractures. It is effectively now Respondent's burden to overcome this causation analysis. In this instance, if the compression fractures have been aggravated to the point of becoming symptomatic, then a nexus has been established. However, that is not the gravamen of Dr. Castrejon's findings.

K. Dr. Kurz does not provide information or an opinion that amounts to clear error on the part of Dr. Castrejon. Dr. Kurz himself acknowledges that Claimant did not display radicular symptoms until this injury. It was also not inevitable that Claimant's pre-existing compression fractures would get progressively worse to the point of being symptomatic. Dr. Kurz is of the sincere and well-considered opinion that Claimant's symptomology, if any, is not work related, and the work incident did not cause his need for treatment. He also opines that Claimant's reported symptoms do not correlate with the anatomical findings. In the end, his opinion is exactly that - his medical *opinion*, which differs from that of the DIME. He effectively acknowledged this during his deposition.

L. Respondents and Dr. Kurz heavily rely on the underlying premise that Dr. Castrejon's opinions are clearly wrong - because Dr. Castrejon got certain details wrong. Dr. Castrejon cleared that up in his deposition, by stating that a 10-lb pilaster would not change his analysis. Dr. Castrejon has record support from the EMG and MRI findings, and correlated them to Claimant's symptomology. Those results are, in fact, objective evidence in support, and Dr. Castrejon has greater credentials in administering EMGs than does Dr. Kurz. He explained why Claimant's symptoms might wax and wane, depending upon activity levels. Neurological damage can be confounding at times, but Dr. Castrejon provides a satisfactory analysis. In the end, Dr. Castrejon's opinion on MMI has not been shown to be highly probably incorrect.

M. While questions might remain regarding Dr. Castrejon's placement of Claimant onto Table 53(2)(C), such placement was provisional. No further impairment rating critique is needed at this point, as the ALJ finds that Respondents have not overcome the DIME opinion on MMI. Claimant requires more treatment to reach MMI, at which time that issue might be revisited.

Medical Benefits

N. Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs.

Bellone v. Industrial Claim Appeals Office, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995); *Karim al Subhi v. King Soopers, Inc.*, W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006).

O.' In this instance, the ALJ finds that Claimant has shown that the treatment recommendations by Dr. Castrejon in his DIME report are reasonable, necessary, and related to his work injury. Such treatment should include, but not be limited to, a left SI nerve root block, and additional physical therapy. This should include core strengthening, instruction in a home exercise program, and treatment directed toward his SI abnormalities.

ORDER

It is therefore Ordered that:

1. Respondents have not overcome the DIME of Dr. Castrejon. Claimant is not at MMI.
2. Respondents shall pay for all reasonable and necessary medical treatment to being Claimant to MMI, including, but not limited to, the treatment recommended by Dr. Castrejon.
3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury on November 1, 2018 and aggravated his lower back condition on January 16, 2019 during the course and scope of his employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical treatment for his lower back injury.

3. Whether Claimant has proven by a preponderance of the evidence that Respondents failed to timely provide a list of at least four designated physicians in compliance with §8-43-404(5)(a)(I)(A), C.R.S. and he is thus permitted to select a treating physician.

4. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits and Temporary Total Disability (TTD) benefits for the period November 1, 2018 until terminated by statute.

FINDINGS OF FACT

1. Claimant is a 43-year old male who worked for Employer as a Chef. His job duties required him to stand for approximately 12-14 hours each day for five to seven days per week.

2. On October 10, 2018 Claimant visited Chiropractor Christopher Keirnan, D.C. for an examination. Claimant primarily reported stabbing lower back pain. He remarked that the pain reached a 10/10 level and radiated down both legs. Claimant reported that he had suffered lower back pain on and off every two months for about 10 years. He specifically remarked that the pain felt like he had "been stabbed and took his breath away." Claimant had attempted a back brace, a posture brace, stretching and Ibuprofen.

3. Dr. Keirnan testified at the hearing in this matter about his October 10, 2018 examination of Claimant. He remarked that Claimant demonstrated an antalgic lean to the right during a posture analysis. Dr. Keirnan explained that misalignment can be caused by a pinched nerve that requires the patient to lean in order to relieve pressure. Range of motion testing revealed limited mobility. Dr. Keirnan commented that Claimant's lower back symptoms were the biggest concern and his radiating back pain did not occur from any specific incident. He diagnosed Claimant with sciatica or a

form of pinched nerve. Dr. Keirnan recommended 13 follow up visits. He also suggested treatment with an orthopedist because of the severity of Claimant's complaints.

4. Claimant testified that on November 1, 2019 he suffered a lower back injury while performing his job duties for Employer. He specifically remarked that, while lifting a case of chicken from a walk-in refrigerator, he twisted to the right and immediately experienced lower back pain.

5. Claimant explained that he reported his lower back injury to immediate supervisor Executive Chef Cameron L[Redacted]. In a text message to Mr. L[Redacted] on the evening of Friday, November 2, 2018 Claimant specifically stated "I must have pulled something in my back putting the truck order away the other day. So I'm gonna get it looked at Monday." Mr. L[Redacted] responded shortly after receiving the message by stating "[h]eard let me know."

6. On the afternoon of Monday, November 5, 2018 Claimant sent Mr. L[Redacted] another text message inquiring whether he should report to work on the following day. Mr. L[Redacted] responded that Claimant should take the day off so he could arrange modified job duties.

7. On November 5, 2018 Claimant visited Kaiser Permanente and reported lower back pain. Claimant specifically noted the acute onset of lower back pain radiating into his right leg more than the left. He remarked that he had "some intermittent back pain in the past but woke with more severe pain last Friday." Claimant did not identify any specific, acute event that triggered his lower back symptoms. Scott Goodall, M.D. diagnosed lower back and bilateral leg pain. He prescribed Flexeril and physical therapy.

8. On January 20, 2019 Claimant visited UC Health and saw Elaine M. Reno, M.D. in the Emergency Department. Claimant reported dull back pain for 2-3 months that radiated from his upper back to left leg. He noted his back pain had been worsening for three days with muscle spasms and difficulty walking. Dr. Reno diagnosed Claimant with chronic and acute left-sided lower back pain with left-sided sciatica. Claimant did not identify any specific event that triggered his lower back symptoms.

9. On January 21, 2019 Claimant authored an e-mail to Mr. L[Redacted] regarding requested medical information. Claimant explained that when he left work after Tuesday, January 15, 2019 he was in significant pain and could not stand on the following day. He specifically stated that his "spine has now been damaged to the point where I am no longer physically able to walk. I will be speaking to surgeons today to examine the damage to my spine. I wanted to avoid surgery but now that I am almost completely paralyzed on my left side there may be no other option."

10. On January 25, 2019 Claimant returned to UC Health for an examination. He visited Allison M. Wolfe, M.D. and Christopher Ryan Caruso, M.D. for chronic lower back pain. Claimant reported he first noticed his pain in October 2018 and saw a chiropractor. A physical examination revealed symptoms of center back tightness

towards the right side. Claimant also exhibited hip and lower back tenderness with left leg dysfunction. Drs. Wolfe and Caruso recommended a lumbar spine MRI.

11. A January 28, 2019 lumbar spine MRI revealed degenerative changes without significant spinal stenosis or evidence of nerve root impingement. There was also a L4-5 disc bulge.

12. On January 29, 2019 Claimant authored an email regarding his chronic lower back pain. He specified "I would like to know if this falls under a worker's comp claim or is this short term disability since I was required to work with no modified work duty for those 2 months, which may have caused this injury to progress." Claimant remarked that he had notified management during the week of October 10, 2018 and disclosed the results of his chiropractor visit from the prior day. He also commented that he had an appointment in early November with Kaiser "because my pain had become greater than before." Employer's Case Advisor Steven B[Redacted] from Human Resources responded to Claimant's e-mail. He recommended contacting the leave of absence department about short-term disability. Mr. B[Redacted] also advised contacting Insurer about the possibility of Workers' Compensation benefits, but "given this was a preexisting injury, the claim may not be approved."

13. On January 31, 2019 Claimant visited Marshall B. Emig, M.D. at UC Health for an evaluation. Dr. Emig noted Claimant had the insidious onset of lower back and left hip pain in October 2018. The majority of Claimant's pain was in his hip region. After conducting a physical examination and reviewing Claimant's lumbar MRI results, Dr. Emig diagnosed him with Ankylosing Spondylitis (AS) of the lumbosacral region and chronic bilateral SI joint pain. He specified that the MRI revealed synovitis, edema and erosive changes of the SI joints that was suggestive of spondyloarthropathy such as AS.

14. On January 31, 2019 Mr. B[Redacted] authored an e-mail to Claimant about whether he had provided documentation from his physician regarding modified duty employment. Claimant responded that he had supplied the information to Mr. L[Redacted]. He specified that Mr. L[Redacted] "spoke to HR about it. It would have been first week of Nov. Today I was finally given information and contacts for short term disability."

15. On February 25, 2019 Claimant returned to Dr. Caruso to review his lumbar MRI results. Dr. Caruso noted the findings were concerning for conditions consistent with AS including bilateral sacroiliitis, synovitis and erosive changes. Claimant remarked he had not experienced any issues with his left leg for the previous two weeks but it takes 15-20 minutes for him to get out of bed in the morning.

16. On March 1, 2019 Claimant again visited UC Health for an examination. Claimant's AS symptoms had improved after four weeks of using NSAIDs. Matthew J. Moles, M.D. referred Claimant to rheumatology to co-manage his disease and recommended Etanercept (Enbrel). Claimant received an Enbrel injection on March 16, 2019.

17. On March 16, 2019 Claimant visited Kristine A. Kuhn, M.D., PhD. at the UC Health Rheumatology Clinic for an examination. On his rheumatology questionnaire Claimant noted that his shooting hip pain began in October 2018 and he has morning stiffness that lasts for two hours. Claimant reported increased back pain from October to November 2018. In addressing Claimant's mechanism of injury, Dr. Kuhn noted Claimant "comes with back pain and new diagnosis of AS that started in October." Claimant also awakened on January 16, 2019 in extreme pain and was unable to move his left leg. Claimant commented that it takes him about 90-120 minutes to "really get going" in the morning. On physical examination, Claimant had no tenderness in the lower back but exhibited tenderness in the SI joints. Dr. Kuhn recommended physical therapy for Claimant's AS condition.

18. On April 22, 2019 Claimant drafted an e-mail to Employer's District Manager Kylene O[Redacted]. Claimant stated he notified management the week of October 10, 2018 of his condition and produced the results of his chiropractic visit. In a follow-up May 15, 2019 e-mail to management Claimant stated he had repeatedly tried to educate Employer on his AS condition, but it has "fallen on deaf ears" and he would appreciate understanding of his condition.

19. On August 21, 2019 Claimant returned to Dr. Emig for an evaluation. Dr. Emig stated Claimant has AS that causes acute sacroiliitis with sclerotic change and acute edema as demonstrated on x-ray and MRI. There was no diagnosis of a symptomatic disc herniation or disc bulge. Dr. Emig noted Claimant has suffered severe lower back pelvic region pain since October 2018 that has not resolved with the use of Enbrel. He recommended bilateral SI joint injections.

20. On November 1, 2019 Dr. Caruso noted Claimant was concerned about the L4-5 disc bulge on the MRI. Dr. Caruso explained the MRI demonstrated no significant nerve impingement and he did not feel it was playing a role in Claimant's presentation. He remarked that Claimant's symptoms were consistent with an acute AS flare. Dr. Caruso commented that Enbrel improves Claimant's shooting lower back pain symptoms and recommended additional Enbrel treatment.

21. On November 21, 2019 Claimant visited Jeffrey Wunder, M.D, for an independent medical examination. Claimant denied any prior history of lower back pain. After reviewing Claimant's medical records and performing a physical examination, Dr. Wunder diagnosed Claimant with AS and long-standing back pain. Dr. Wunder noted AS is an autoimmune disease that causes inflammation of the bony structures of the spine. He remarked that "I have no evidence that a work-related injury ever occurred."

22. On July 10, 2020 Dr. Wunder issued an Addendum Report. Dr. Wunder explained that AS is a progressive congenital condition with no known cause. He noted that the symptoms are often mild and intermittent. They increase in severity with age. Dr. Wunder commented that Claimant also had associated conditions consisting of uveitis, iritis and plantar fasciitis. He remarked that the preceding conditions "commonly occur with [AS]. There is little doubt, therefore, that he has active ongoing [AS]."

23. Dr. Wunder recounted that Claimant visited Chiropractor Dr. Kiernan on October 10, 2018 and provided a detailed history of chronic lower back pain with an acute episode. Claimant notably reported a pain rating of 10/10 on the date. Dr. Wunder remarked that Claimant's verbal history was simply inconsistent with the medical records. Claimant told Dr. Wunder that he had no history of lower back pain, but the medical records described intermittent lower back pain for approximately 10 years. Claimant also reported that he had never woken up with a severe episode of lower back pain. The report was inconsistent with the November 2018 records of Dr. Goodall. Moreover, Claimant did not mention a work-related mechanism of injury to Dr. Goodall. Finally, Dr. Wunder noted that on January 25, 2019 Claimant saw Dr. Caruso for an evaluation of chronic lower back pain. Claimant again did not mention a work-related mechanism of injury. Instead, Claimant described the onset of symptoms in October 2018 "which would correlate with the report of Dr. Keirnan."

24. Dr. Wunder also remarked that "there is no evidence that [Claimant's] disc bulge was acute or related to lifting." He detailed that there was no surrounding inflammation or edema. Furthermore, there was no evidence that Claimant experienced any neurogenic pain. Moreover, the MRI did not reveal the compromise of any neurological structures and physical examinations over time did not show any neurological abnormalities.

25. On April 14, 2020 Claimant's counsel wrote to Dr. Kuhn inquiring whether Claimant's lower back disc herniation was the result of the work injury or from his AS. Dr. Kuhn's office responded by stating they were only treating Claimant for AS. Subsequently, Dr. Kuhn stated on July 27, 2020 that AS has different clinical factors than a herniated disc. However, Dr. Kuhn conceded she was only qualified to address Claimant's AS condition.

26. On August 5, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. Wunder. Dr. Wunder maintained that Claimant did not suffer a herniated disc while working for Employer and instead attributed his continuing lower back symptoms to AS. He explained that AS is associated with the genetic marker HLA-B27, causes chronic and gradually worsening inflammation of the spine and typically affects the SI joints. The pain starts as intermittent and becomes more frequent and severe over time. The pain is worse in the morning or with extended periods of inactivity. AS progresses to affect other parts of the body and can cause uveitis, iritis and plantar fasciitis. It is an autoimmune condition with a destructive inflammatory response. Dr. Wunder remarked that the condition has no causal relation to acute trauma, but the pain presentation can be confused with an acute back injury.

27. Dr. Wunder disagreed with the treating physicians that Claimant had a separate pain generator from a disc herniation based on the MRI. The imaging only revealed a minor disc bulge at L4-5, a minor L5-S1 disc protrusion and normal age-related findings. Furthermore, the medical records revealed that there were no consistent neurological findings on physical examination by Drs. Caruso or Emig. Dr. Kuhn's examinations also did not document any neurological findings. Finally, there was no evidence that Claimant's pain originated from the L4-5 disc bulge.

28. Ms. O[Redacted] testified at the hearing in this matter. She remarked that Claimant took several days off work in September or October 2018 after he was hit by a car. She noted that Claimant often complained of back issues prior to the November 1, 2018 lifting incident. Ms. O[Redacted] commented that Claimant's November 2, 2018 text message stating he overdid it and planned on visiting a provider was not filed as a Workers' Compensation claim because he had been complaining about his back pain for some time. Employer advised Claimant to take care of himself and provide updates. Ms. O[Redacted] commented that it was not until January 2019 that she learned Claimant had alleged an acute work injury.

29. On September 8, 2020 the parties conducted the post-hearing evidentiary deposition of Dr. Caruso. Dr. Caruso noted he is a third-year resident in Internal Medicine at the University of Colorado School of Medicine. The only medical records he reviewed were from Dr. Kuhn. He did not review any pre-injury records. Dr. Caruso explained that when he initially saw Claimant on January 25, 2020 his biggest concern was the left greater than right leg weakness. He noted that determining how Claimant's symptoms arose was not critical because "a story can be helpful at times, but in most cases it more leads you astray." Nevertheless, Dr. Caruso concluded that, within a reasonable degree of medical certainty, Claimant's lumbar disc bulges were not related to his AS condition. Instead, the disc bulges were caused by a work injury. He explained that Claimant's AS condition and lumbar injury were separate diagnoses. Nevertheless, Dr. Caruso remarked that it was medically possible that an individual could have overlapping symptoms from the two diagnoses of AS and bulging discs.

30. Dr. Caruso testified that Claimant was diagnosed with AS based on his MRI imaging. He agreed the L4-5 disc bulge did not show nerve compression. Dr. Caruso remarked that Claimant wanted a work up for his disc bulge because of persistent lower back pain. Claimant associated his symptoms with his disc bulge and not with his AS. However, Dr. Caruso had no opinion on the cause of Claimant's L4-5 disc bulge and could not state that his ongoing lower back pain was more consistent with an L4-5 bulge than AS. He acknowledged that Claimant's referred lower back pain began 13 years ago and is thus consistent with the presentation of AS. Dr. Caruso also remarked that a lack of rotation or mobility in the spine to start the morning is associated with AS and not a disc bulge. Regarding Claimant's presentation to chiropractor Dr. Keirnan in October 2018, he stated that 10/10 radiating lower back pain can be consistent with sciatica, a pinched nerve from a disc bulge or AS.

31. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable lower back injury on November 1, 2018 and aggravated his lower back condition on January 16, 2019 during the course and scope of his employment with Employer. Initially, Claimant contends that while working for Employer on November 1, 2018 he suffered a lower back injury while lifting a case of chicken from a walk-in refrigerator. Claimant asserts that he aggravated his lower back symptoms while performing his job duties on January 16, 2019. However, Claimant's history of lower back pain, the medical records and the persuasive opinion of Dr. Wunder demonstrate that he did not likely suffer lower back injuries at work on November 1, 2018 and January 16, 2019. Instead, it is more likely than not that Claimant's lower back

symptoms are attributable to his AS condition that was documented for years prior to his alleged industrial injuries.

32. The medical records, Employer records and Claimant's e-mails suggest that Claimant did not suffer a lower back injury at work on November 1, 2018 or an aggravation on January 16, 2019. Initially, on October 10, 2018 Claimant visited Chiropractor Dr. Keirnan for an examination. Claimant primarily reported stabbing lower back pain. He remarked that the pain reached a 10/10 level and radiated down both legs. Claimant reported that he had suffered lower back pain on and off every two months for about 10 years. The records subsequent to the November 1, 2018 lifting incident are also not consistent with an acute lifting injury at work that caused a symptomatic disc bulge. Specifically, Claimant's first medical visit to Kaiser on November 5, 2018 did not document any history of a lifting injury. In fact, none of Claimant's initial visits with five different providers documented any lifting accident. Furthermore, on January 20, 2019 Claimant visited UC Health and reported dull back pain for 2-3 months that radiated from his upper back to left leg. Dr. Reno diagnosed Claimant with chronic and acute left-sided lower back pain with left-sided sciatica. Claimant did not identify any specific event that triggered his lower back symptoms. On a January 25, 2019 return to UC Health Claimant reported he first noticed his pain in October 2018 and saw a chiropractor. The preceding records suggest that Claimant suffered chronic lower back pain without an acute injury or aggravation as a result of his work activities for Employer.

33. Claimant's e-mails to Employer outlined his difficulties with his AS condition but did not document any lifting incidents at work. Specifically, on January 21, 2019 Claimant authored an e-mail to Mr. L[Redacted]. He explained that his "spine has now been damaged to the point where I am no longer physically able to walk. I will be speaking to surgeons today to examine the damage to my spine. I wanted to avoid surgery but now that I am almost completely paralyzed on my left side there may be no other option." On January 29, 2019 Claimant authored an e-mail to Employer regarding his chronic lower back pain. He remarked that he had notified management during the week of October 10, 2018 and disclosed the results of his chiropractor visit from the prior day. He also commented that he had an appointment in early November with Kaiser "because my pain had become greater than before." On April 22, 2019 Claimant drafted an e-mail to Ms. O[Redacted] and again stated he notified management the week of October 10, 2018 of his condition and presented the results of his chiropractic visit. In a follow-up May 15, 2019 e-mail Claimant commented he had repeatedly tried to educate Employer on his AS condition, but it has "fallen on deaf ears" and he would appreciate understanding of his condition. The preceding e-mails reflect Claimant's awareness of his chronic lower back symptoms, but do not suggest he suffered an injury or aggravation to his condition while performing his job duties for Employer. Finally, Ms. O[Redacted] remarked that Claimant took several days off work in September or October 2018 after he was hit by a car. She noted that Claimant often complained of back issues prior to the November 1, 2018 lifting incident. Ms. O[Redacted] commented that Claimant's November 2, 2018 text message stating he overdid it and planned to visit a provider was not filed as a Workers' Compensation claim because he had been complaining about his back pain for some time.

34. Dr. Wunder persuasively maintained that Claimant did not suffer an acute herniated disc while working for Employer and instead attributed his continuing lower back symptoms to AS. He explained that AS is associated with the genetic marker HLA-B27, causes chronic and gradually worsening inflammation of the spine and typically affects the SI joints. Dr. Wunder commented that Claimant also had other conditions consisting of uveitis, iritis and plantar fasciitis. He remarked that the preceding conditions “commonly occur with [AS].” He also noted that “there is no evidence that [Claimant’s] disc bulge was acute or related to lifting.” Dr. Wunder detailed that there was no surrounding inflammation or edema. Furthermore, there was no evidence that Claimant experienced any neurogenic pain. The MRI did not reveal the compromise of any neurological structures. The imaging only revealed a minor disc bulge at L4-5, a minor L5-S1 disc protrusion and normal age-related findings. Furthermore, the medical records revealed that there were no consistent neurologic findings on physical examination by Drs. Caruso or Emig. Dr. Kuhn’s examinations also did not document any neurological findings. Finally, Dr. Wunder noted there was no evidence that Claimant’s pain originated from the disc bulge.

35. In contrast, Dr. Caruso concluded that, within a reasonable degree of medical certainty, Claimant’s lumbar disc bulges were not related to his AS condition. Instead, the disc bulges were caused by a work injury. He explained that Claimant’s AS condition and lumbar injury were separate diagnoses. However, Dr. Caruso acknowledged that Claimant’s referred lower back pain began 13 years ago and is thus consistent with the presentation of AS. He also remarked that a lack of rotation or mobility in the spine to start the morning is associated with AS and not a disc bulge. Notably, the only medical records Dr. Caruso reviewed were from Dr. Kuhn. He did not review any pre-injury records. Finally, at his January 25, 2019 visit with Dr. Caruso Claimant did not mention a work-related mechanism of injury. As Dr. Wunder explained, Claimant described the onset of symptoms as October 2018 to Dr. Caruso “which would correlate with the report of Dr. Keirnan.”

36. The record reveals that the most likely explanation for Claimant’s ongoing back issues is his AS autoimmune condition. Claimant’s history of 10 years of intermittent back pain followed by a worsening beginning in early October 2018 with 10/10 radiating lower back pain, is consistent with Dr. Keirnan’s October 10, 2018 record and the movement of AS into the SI joints. Claimant’s medically documented presentation throughout the records was consistent with AS. His back symptoms were more severe in the morning after a night of sleep and improved with movement throughout the day. His radiating lower back symptoms improved with AS medication Enbrel. Claimant’s MRI and physical examinations with treating physicians were consistent with AS. He reported back issues to Employer well before any November lifting incident and requested understanding of the difficulties he was having with his AS condition in e-mails. Based on Claimant’s history of lower back pain, the medical records and the persuasive opinion of Dr. Wunder, Claimant did not likely suffer lower back injuries at work on November 1, 2018 and January 16, 2019. Accordingly, Claimant’s request for Workers’ Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); cf. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) (“right to workers’ compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment”). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable lower back injury on November 1, 2018 and aggravated his lower back condition on January 16, 2019 during the course and scope of his employment with Employer. Initially, Claimant contends that while working for Employer on November 1, 2018 he suffered a lower back injury while lifting a case of chicken from a walk-in refrigerator. Claimant asserts that he aggravated his lower back symptoms while performing his job duties on January 16, 2019. However, Claimant’s history of lower back pain, the medical records and the persuasive opinion of Dr. Wunder demonstrate that he did not likely suffer lower back injuries at work on November 1, 2018 and January 16, 2019. Instead, it is more likely than not that Claimant’s lower back symptoms are attributable to his AS condition that was documented for years prior to his alleged industrial injuries.

9. As found, the medical records, Employer records and Claimant’s e-mails suggest that Claimant did not suffer a lower back injury at work on November 1, 2018 or an aggravation on January 16, 2019. Initially, on October 10, 2018 Claimant visited

Chiropractor Dr. Keirnan for an examination. Claimant primarily reported stabbing lower back pain. He remarked that the pain reached a 10/10 level and radiated down both legs. Claimant reported that he had suffered lower back pain on and off every two months for about 10 years. The records subsequent to the November 1, 2018 lifting incident are also not consistent with an acute lifting injury at work that caused a symptomatic disc bulge. Specifically, Claimant's first medical visit to Kaiser on November 5, 2018 did not document any history of a lifting injury. In fact, none of Claimant's initial visits with five different providers documented any lifting accident. Furthermore, on January 20, 2019 Claimant visited UC Health and reported dull back pain for 2-3 months that radiated from his upper back to left leg. Dr. Reno diagnosed Claimant with chronic and acute left-sided lower back pain with left-sided sciatica. Claimant did not identify any specific event that triggered his lower back symptoms. On a January 25, 2019 return to UC Health Claimant reported he first noticed his pain in October 2018 and saw a chiropractor. The preceding records suggest that Claimant suffered chronic lower back pain without an acute injury or aggravation as a result of his work activities for Employer.

10. As found, Claimant's e-mails to Employer outlined his difficulties with his AS condition but did not document any lifting incidents at work. Specifically, on January 21, 2019 Claimant authored an e-mail to Mr. L[Redacted]. He explained that his "spine has now been damaged to the point where I am no longer physically able to walk. I will be speaking to surgeons today to examine the damage to my spine. I wanted to avoid surgery but now that I am almost completely paralyzed on my left side there may be no other option." On January 29, 2019 Claimant authored an e-mail to Employer regarding his chronic lower back pain. He remarked that he had notified management during the week of October 10, 2018 and disclosed the results of his chiropractor visit from the prior day. He also commented that he had an appointment in early November with Kaiser "because my pain had become greater than before." On April 22, 2019 Claimant drafted an e-mail to Ms. O[Redacted] and again stated he notified management the week of October 10, 2018 of his condition and presented the results of his chiropractic visit. In a follow-up May 15, 2019 e-mail Claimant commented he had repeatedly tried to educate Employer on his AS condition, but it has "fallen on deaf ears" and he would appreciate understanding of his condition. The preceding e-mails reflect Claimant's awareness of his chronic lower back symptoms, but do not suggest he suffered an injury or aggravation to his condition while performing his job duties for Employer. Finally, Ms. O[Redacted] remarked that Claimant took several days off work in September or October 2018 after he was hit by a car. She noted that Claimant often complained of back issues prior to the November 1, 2018 lifting incident. Ms. O[Redacted] commented that Claimant's November 2, 2018 text message stating he overdid it and planned to visit a provider was not filed as a Workers' Compensation claim because he had been complaining about his back pain for some time.

11. As found, Dr. Wunder persuasively maintained that Claimant did not suffer an acute herniated disc while working for Employer and instead attributed his continuing lower back symptoms to AS. He explained that AS is associated with the genetic marker HLA-B27, causes chronic and gradually worsening inflammation of the spine and typically affects the SI joints. Dr. Wunder commented that Claimant also had other

conditions consisting of uveitis, iritis and plantar fasciitis. He remarked that the preceding conditions “commonly occur with [AS].” He also noted that “there is no evidence that [Claimant’s] disc bulge was acute or related to lifting.” Dr. Wunder detailed that there was no surrounding inflammation or edema. Furthermore, there was no evidence that Claimant experienced any neurogenic pain. The MRI did not reveal the compromise of any neurological structures. The imaging only revealed a minor disc bulge at L4-5, a minor L5-S1 disc protrusion and normal age-related findings. Furthermore, the medical records revealed that there were no consistent neurologic findings on physical examination by Drs. Caruso or Emig. Dr. Kuhn’s examinations also did not document any neurological findings. Finally, Dr. Wunder noted there was no evidence that Claimant’s pain originated from the disc bulge.

12. As found, in contrast, Dr. Caruso concluded that, within a reasonable degree of medical certainty, Claimant’s lumbar disc bulges were not related to his AS condition. Instead, the disc bulges were caused by a work injury. He explained that Claimant’s AS condition and lumbar injury were separate diagnoses. However, Dr. Caruso acknowledged that Claimant’s referred lower back pain began 13 years ago and is thus consistent with the presentation of AS. He also remarked that a lack of rotation or mobility in the spine to start the morning is associated with AS and not a disc bulge. Notably, the only medical records Dr. Caruso reviewed were from Dr. Kuhn. He did not review any pre-injury records. Finally, at his January 25, 2019 visit with Dr. Caruso Claimant did not mention a work-related mechanism of injury. As Dr. Wunder explained, Claimant described the onset of symptoms as October 2018 to Dr. Caruso “which would correlate with the report of Dr. Keirnan.”

13. As found, the record reveals that the most likely explanation for Claimant’s ongoing back issues is his AS autoimmune condition. Claimant’s history of 10 years of intermittent back pain followed by a worsening beginning in early October 2018 with 10/10 radiating lower back pain, is consistent with Dr. Keirnan’s October 10, 2018 record and the movement of AS into the SI joints. Claimant’s medically documented presentation throughout the records was consistent with AS. His back symptoms were more severe in the morning after a night of sleep and improved with movement throughout the day. His radiating lower back symptoms improved with AS medication Enbrel. Claimant’s MRI and physical examinations with treating physicians were consistent with AS. He reported back issues to Employer well before any November lifting incident and requested understanding of the difficulties he was having with his AS condition in e-mails. Based on Claimant’s history of lower back pain, the medical records and the persuasive opinion of Dr. Wunder, Claimant did not likely suffer lower back injuries at work on November 1, 2018 and January 16, 2019. Accordingly, Claimant’s request for Workers’ Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s request for Workers’ Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: November 17, 2020.

ISSUES

- I. Did Respondents timely deny the SI fusion surgery as proposed by Dr. Barker?
- II. If not, is the proposed surgery deemed authorized by operation of law?
- III. If not deemed authorized by operation of law, is the proposed surgery reasonable, necessary, and related to Claimant's admitted work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Prior Admitted Claim

1. Claimant had a prior workers' compensation to his lumbar spine with a date of injury of February 3, 2016, insurance claim No. 001834016426-WC-01, W.C. No. 5-008-600. Claimant received an L5-S1 fusion, and reached MMI in 2018. This claim currently remains open for post-MMI maintenance care.

The Work Injury at Issue / Treatment by ATPs

2. Claimant served as a cashier for Employer, and has served in that capacity on and off for 5 or 6 years. He sustained a new, compensable work-injury to his lumbar spine on December 18, 2019 when a rolling chair slid from underneath him as he was trying to sit down.
3. Claimant presented to Lincoln County Hospital on December 23, 2019. Brianna Fox, M.D., noted the 2016 injury and fusion, and that Claimant was under the care of Dr. Bissell for chronic pain. She noted, "Today, he reports that he was at work on 12/18 and he works as a cashier sitting down. He reports that the rolling chair rolled and moved away when he went to sit down and he ended up landing on his tailbone. He states that since then he has had pain 7 out of 10 and his chronic pain has been exacerbated. He reports that he has pain that shoots up and shoots down his left leg, he reports that he has this pain at baseline, but it is much worse than baseline." (Ex.4, p. 52).
4. Dr. Fox issued work restrictions and prescribed medications. An x-ray of the lumbar spine was compared to one performed September 14, 2017. It showed, "There are postoperative changes from remote L5/S1 fusion. Vertebral alignment is normal. There has been interval loss of intervertebral disc height at L4/L5. There is lumbar facet degenerative change. No fracture is evident. Soft tissues

are unremarkable.” (Ex. 4, p. 54). Dr. Fox referred Claimant return to Dr. John Barker, who treated him for the 2016 injury.

5. X-rays of claimant’s lumbar spine were taken on March 5, 2020. The x-rays showed a solid fusion at L5-S1 with no osseous fractures, wedge compression fractures and some degenerative changes at L4-5. (Ex. D, p. 30).
6. Claimant saw Dr. Barker on March 5, 2020. Dr. Barker reported,

Evidently a rolling chair slid out from under him and he suffered an axial load to his lumbar spine. He had baseline back pain that he said was about a 7 out of 10 before the injury. Since the injury, his back pain is now a 9 out of 10. He is also developed [sic] new onset left leg pain that radiates down the left buttock, left posterior lateral thigh, left leg stops at the mid calf area. He did not have the left leg pain before the fall in December, 2019. (Ex. 3, p. 33).

Dr. Barker noted the prior fusion was “solid,” but raised the possibility of a L4-5 disc injury. He recommended a MRI. *Id* at 34.

7. Jean T[Redacted] is the insurance adjuster assigned to the December 18, 2019 injury. She is employed by Gallagher Bassett Services, the third party administrator for Insurer, Safety National Casualty Corporation. She filed a General Admission of Liability on behalf of Insurer on March 24, 2020. (Ex. 5, p. 66).
8. On March 27, 2020, Dr. Barker reviewed Claimant’s MRI. He stated, “The MRI showed a solid fusion at L5-S1 with no residual stenosis. The L4-5 and L3-4 levels are normal. There is no disc desiccation, there are no disc herniations and there is no stenosis...I told him that there is no surgery needed and there is no damage to his adjacent levels. I think his fall exacerbated his pre-existing chronic pain. This hopefully will calm down with time and therapy.” (Ex. D, p. 24).
9. On May 13, 2020, Dr. Barker reported he spoke with Claimant on the phone and reviewed the MRI findings. Dr. Barker doubted he was dealing with a L5-S1 pseudoarthrosis and noted, “Since the pain is more in the left lumbosacral it may be actually an SI joint issue and not a spine issue. I told him I would order a left SI joint injection at Lincoln Community Hospital. If that gives him relief then we will have firmed up the diagnosis. If it gives him no relief then I may try an L4-L5 facet injection.” (Ex. 3, p. 40).
10. On July 29, 2020, Dr. Barker reported,

Christopher returns and he is still having more and more pain in his left lumbosacral region. He had a left SI joint injection on June 25 and that gave him about a week’s worth of partial relief. It helped his pain but did not completely resolve it. His pain has now

returned to baseline and it is quite severe. He is ambulating with a cane.” *Id* at 47.

11. Dr. Barker noted an antalgic gait favoring the left side, as well as a positive Faber test on the left. Dr. Barker elaborated,

The patient’s most recent injury appears to have flared up his left SI joint. He had temporary relief from his SI joint injection. He is still having problems with activities of daily living secondary to his pain. We talked about a second injection versus operative intervention. Because he got such limited long-term relief with his SI joint injection he is interested in surgical intervention. We will try to proceed with a left SI joint fusion....Patient voiced understanding and would like to proceed with operative intervention. *Id*.

Original, Incorrect Request for Surgery by Dr. Barker

12. On August 11, 2020, Dr. Barker’s office faxed a request for authorization to perform surgery to Eugino A[Redacted] at fax No. 866-509-8358 under the claim number No. 001834016426. [erroneously, for the 2016 claim]. (Ex. D, p. 14).
13. This 8/11/2020 request for authorization was also sent to the incorrect fax number and adjuster.
14. Jean T[Redacted] is the correct and current adjuster for the 12/18/2019 claim. Ms. T[Redacted]’s fax number is 303-796-9498. The insurer’s claim number for this claim is 001834-020313-WC-01. *Id*.
15. Ms. Jean T[Redacted] became aware of this requested surgery while reviewing medical records from another treatment provider.
16. Ms. T[Redacted] had contacted Dr. Barker’s office prior to the request for authorization to correct the claim number and adjuster information, as Dr. Barker’s office had been submitting medical bills and requests under the incorrect claim number and adjuster. (Ex. F p. 59). Ms. T[Redacted] then contacted Dr. Barker’s office in order to obtain the request for authorization for surgery. (Ex. C, p. 11; Ex. F, p. 60).

Revised Request for Surgery by Dr. Barker

17. Dr. Barker’s office then faxed the request for authorization to Jean T[Redacted] on August 20, 2020. The fax sheet documented the proper corrections to the claim number and fax number for Ms. T[Redacted]. (Ex. D, p. 14).
18. At the top of the request for authorization, the fax confirms it went through on August 20, 2020. *Id*.
19. A fax to Gallagher Bassett goes through a computer system process. The fax goes to a central location. The faxes are then scanned and attached to each adjuster’s email inbox. (Ex. F, p. 58).

20. Per the adjuster notes (and Ms. T[Redacted]'s testimony, *infra*), Ms. T[Redacted] did not personally receive the request for authorization until August 21, 2020. (Ex. F, pp. 57-58; Ex. C pg. 12).

21. Ms. T[Redacted] testified via deposition on October 12, 2020. Pertinent passages read as follows:

Q. And did Dr. Barker recommend a surgery?

A. Yes.

Q. And did you receive a written request for authorization for this surgery?

A. Yes, I did receive a written request for the surgery.

Q. Can you walk me through the timeline of when you became aware of the surgery request to when you received it?

A. Yes. I received it and became aware of the request for surgery on August 21st, 2020.

Q. Did you have to contact Dr. Barker's office regarding this request for surgery?

A. I had seen from another office that Christopher said he was going to have surgery, and I hadn't received a request, so I contacted Dr. Barker's office.

Q. And did you request a copy of the request for authorization?

A. I did.

Q. And did he fax this information to you?

A. Yes, the surgery request was faxed.

Q. And what date did you receive that fax?

A. On August 21st, 2020.

Q. So on the request for authorization, it documents at the top that it says August 20th as the sent date. What is the procedure with Gallagher Bassett and their faxes? Or when they come in, what happens with them?

A. So any fax that is sent to Gallagher Bassett Denver office, there is one fax number. It goes to a central fax location. And the Gallagher Bassett employees at that location then scan those faxes and attach them into each adjuster/resolution manager's e-mails.

Q. And regarding the fax you received from Dr. Barker, is the e-mail you received with this fax dated August 21st, 2020?

A. I don't have the fax pulled up. I just know it was placed into my in-box for me to see and into the claim file on August 21st, 2020.

Q. What did you do following receipt of the request for authorization?

A. I did a referral for Rule 16 review of the surgical request.

Q. And what was your due date with your understanding of the Rule 16?

A. My understanding was that we had seven business days from receipt of the request. *And since I received it on the 21st, my understanding was that I had until September 1st to provide that response to the doctor.*

Q. And was the surgery denied on September 1st, 2020?

A. Correct. (Jean T[Redacted] depo tr. pp. 5-7) (emphasis added).

22. This internal fax procedure was later confirmed:

Q. Okay. So if I understand your testimony, when Dr. Barker's office faxed that authorization for surgery -- request for authorization for surgery on August 20, it was faxed to Gallagher Bassett on August 20 but didn't actually make it to your in-box until the 21st. Is that accurate?

A. That is correct. (Jean T[Redacted] depo tr. p. 14).

23. Ms. T[Redacted] received the Rule 16-7 medical record review from Dr. Brown on September 1, 2020. Respondents' Ex. C, pg. 13.

24. Respondents' Counsel sent Dr. Barker a letter denying the requested lumbar fusion on September 1, 2020. Respondents' Ex. a, pgs. 3-4.

Dr. Brown performs Rule 16-7 Review

25. Dr. Neil Brown performed the W.C.R.P. 16-7 medical record review at the request of Respondents. The report was issued on August 28, 2020. Respondents' (Ex. E pp. 38-40).

26. After review of Claimant's medical records, Dr. Brown diagnosed Claimant with, "Left-sided lumbosacral radiculopathy: pain generator not well established." *Id* at 40.

27. Dr. Brown also testified at hearing. He stated that Claimant's presentation was not necessarily consistent with sacroiliitis. This was because it was atypical for a person to report radiating pain past the knee. This was more likely to be an S1 nerve root irritation. Dr. Brown noted Dr. Barker likely originally noticed this because he had recommended an epidural steroid injection on March 27, 2020, but this was never performed.

28. Dr. Brown testified that epidural steroid injections assist in establishing a pain generator. Dr. Brown testified Claimant had not complained of sacroiliac joint tenderness, which is inconsistent with sacroiliitis.

29. Dr. Brown testified there are five recommended tests during an examination to assist in diagnosing sacroiliitis. In order to have a firm diagnosis of sacroiliitis, at least three of these five tests should be positive. Dr. Brown testified Claimant did not have three documented positive tests. Additionally, in order to recommend a fusion, the guidelines require six months of failed conservative treatment. Dr. Brown testified claimant did not have six months of failed conservative care. Dr. Brown concluded Claimant did not meet the criteria to be diagnosed with sacroiliitis.

30. Dr. Brown concluded, "He has not had any epidural steroid treatment to see if that would be a potential cause of his symptoms...Likewise, he has no documented tenderness over the left sacroiliac joint which would be necessary to be consistent with left-sided sacroiliitis...The diagnosis for sacroiliitis has not been well established...As a consequence, I would not recommend a left-sided sacroiliac joint fusion at this time. I would recommend further conservative management with therapy and I would recommend a pain management consultation for potential injection procedures for possible sacroiliitis...EMG and nerve conduction studies may help in the diagnosis of the radicular symptoms." *Id.*

31. Dr. Brown opined that Claimant did not meet the requirements to undergo a fusion per the Colorado Medical Treatment Guidelines, and was not reasonably necessary to the December 18, 2019 work injury.

Stephanie Moore Testifies at Hearing

32. Stephanie Moore of Dr. Barker's office, Rocky Mountain Spine Clinic, testified at the hearing. She is Dr. Barker's medical assistant, and her job duties include submitting requests for authorization of surgery.
33. Ms. Moore testified about the request for authorization of surgery she submitted on August 11, 2020. She testified that Claimant's Exhibit 1, p. 3 is the fax cover sheet for that request, and p. 2 is the confirmation sheet that shows the fax was transmitted at 2:09 p.m. on August 11, 2020. She testified that 23 pages of Claimant's office notes accompanied the August 11 fax. Those pages are stamped at the top right of each sheet beginning with "P.2" on Exhibit page 3. Ms. Moore testified that Exhibit 1 pages 4-25 were faxed with the cover sheet dated August 11, 2020. As noted on the fax cover sheet, Ms. Moore confirmed surgery was at that time originally scheduled for August 28, 2020.
34. Ms. Moore testified she originally understood the addressee of the fax, Eugino A[Redacted], was the adjuster handling Claimant's 2019 case. She testified she received no response from Mr. A[Redacted], but did receive a phone call from a different adjuster named Jean T[Redacted] on August 20, 2020. Ms. Moore testified Ms. T[Redacted] stated she was the adjuster on the 2019 case, and gave Ms. Moore the correct claim number and the fax number to use for submitting the authorization request.
35. Referring to Claimant's Exhibit 1, p. 2, Ms. Moore testified she resubmitted the authorization request on August 20, 2020, at 12:17 p.m. [Part of the "Aug. 20" date stamp is obscured by a "sent to opposing counsel" stamp; however, Ms. Moore testified she reviewed the original in her computer file and it lists August 20 as the date of transmission. Respondents concur that this fax was submitted on August 20, 2020].
36. Ms. Moore testified Claimant's Exhibit 1, p. 2 was the fax cover sheet, and all pages behind it (in Exhibit 1) accompanied the fax. She testified this fax number is the one Ms. T[Redacted] gave to her. [The ALJ notes the claim number on this fax cover sheet matches the claim number in the General Admission dated March 24, 2020]. As confirmed in the fax cover sheet, there was a new surgery date of September 11, 2020. Ms. Moore explained this surgery date was moved back again in order to give Ms. T[Redacted] more time to review the request for surgical authorization.
37. Ms. Moore testified that on September 1, 2020, she received a written denial of the request for surgical authorization. She identified it as Claimant's Exhibit 2. Ms. Moore confirmed that in light of the denial, the recommended surgery has still not occurred.

Claimant Testifies at Hearing

38. Claimant testified at hearing. He described the mechanism of injury, and the pain he felt upon impact. He testified that prior to the present injury, he experienced chronic pain in his low back, but managed it with medications and was able to continue working for Employer. He testified he experienced new symptoms as a result of the fall. He described the pain as “white hot,” “stabbing,” and “completely constant.” He explained the pain is now in the left side of his low back, whereas before it was just in the “low back,” presumably the center of his back. Claimant testified he “absolutely” wants to have the SI fusion surgery because “any sort of pain relief is better than none.”
39. Claimant testified he did not undergo any therapy. He stated he did not feel like it would help and would exacerbate his pain. Claimant testified he did not undergo any epidural steroid injections, facet injections, an EMG or a psychological evaluation. Claimant testified additional injections were offered, but he declined and wanted to proceed to surgery.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers’ compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and

draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. Claimant is not a pivotal player in this case. Nonetheless, the ALJ finds that he provided accurate symptomology to his medical providers throughout the process, and testified sincerely and credibly at hearing. Ms. Moore testified sincerely and accurately at hearing. The ALJ likewise finds that Ms. T[Redacted] testified thoroughly, sincerely, and credibly during her deposition. In the final analysis, the outcome of this case does not rest upon weighing the relative credibility of the witnesses; rather, this is a matter of legal analysis.

E. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that Dr. Brown has rendered his opinions based upon sound medicine, and has testified sincerely, credibly, and consistently with his written opinions. However, for reasons outlined *infra*, the ALJ will not arrive at the point of addressing the merits of Dr. Brown's Rule 16-7 review.

F. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972). To that end, the ALJ notes that to adopt Respondents' interpretation of Rule 16-7 would serve to defeat the above stated humanitarian purpose, by unduly delaying medical care, due solely to certain bureaucratic, intramural inefficiencies, or even outright mistakes. When an ATP makes a request for treatment on behalf of an injured worker, expectations are that such request will be either timely granted, or timely denied. A Claimant may thereby contemplate his next step in the process. Interpretation of such strictures weighs heavily in favor of Claimants.

W.C.R.P. 16-7 Text

G. W.C.R.P. 16-7 "Denial of a request for prior authorization" provides;

(A) If an ATP requests prior authorization and indicates in writing, including reasoning and relevant documentation, that he or she believes the requested treatment is related to the admitted workers' compensation claim, the insurer cannot deny solely for relatedness without a medical opinion as required by section 16-7(B). The medical review, IME report, or report from an ATP that

addresses the relatedness of the requested treatment to the admitted claim may precede the prior authorization request, unless the requesting physician presents new evidence as to why this treatment is now related.

(B) The payer may deny a request for prior authorization for medical or non-medical reasons. Examples of non-medical reasons are listed in section 16-11(B)(1). If the payer is denying a request for prior authorization for medical reasons, the payer shall, within seven (7) business days of the completed request:

- (1) Have all the submitted documentation under section 16-6(E) reviewed by a “physician provider” as defined in section 16-3(A)(1)(a), who holds a license and is in the same or similar specialty as would typically manage the medical condition, procedures, or treatment under review. The physician providers performing this review shall be Level I or Level II accredited. In addition, a clinical pharmacist (Pharm.D.) as defined by section 16-3(A)(1)(b)(xvi) may review prior authorization requests for medications without having received Level I or Level II accreditation.
- (2) After reviewing all the submitted documentation and other documentation referenced in the prior authorization request and available to the payer, the reviewing provider may call the requesting provider to expedite communication and processing of prior authorization requests. However, the written denial or approval still needs to be **completed** within the seven (7) business days specified under this section.
- (3) Furnish the provider and the parties with a written denial that sets forth the following information:
 - (a) An explanation of the specific medical reasons for the denial, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion.
 - (b) The specific cite from the Medical Treatment Guidelines, when applicable;
 - (c) Identification of the information deemed most likely to influence the reconsideration of the denial when applicable; and
 - (d) Documentation of response to the provider and parties. (Emphasis added).

WCRP 16-7, as Applied

H. W.C.R.P. 16-7 refers to a “payer.” That term is defined in W.C.R.P. 16-2(P) as: “...an insurer, self-insured employer, or **designated agent(s)** responsible for payment of medical expenses. Use of agents, including but not limited to Preferred Provider Organizations (PPO) networks, bill review companies, Third Party Administrators (TPAs), and case management companies, **shall not relieve** the self-insured employer or insurer from their legal responsibilities for compliance with these Rules.” (emphasis added).

I. The GAL filed on March 24, 2020 indicates it was filed by “Safety National Casualty Corp. c/o Gallagher Bassett Services.” Ms. T[Redacted] of Gallagher Bassett Services testified she is a “Senior Resolution Manager” and is handling Claimant’s claims. The ALJ concludes Gallagher Bassett Services is the third party administrator (“TPA”) for Safety National Casualty Corporation. **Gallagher Bassett Services** is, therefore, the “**payer**” for purposes of W.C.R.P. 16-7, and the ALJ so finds.

J. Respondents argue that since she was the adjuster specifically assigned to the case, Ms. T[Redacted] - and *only* Ms. T[Redacted] - can assume the role of “payer”. The ALJ cannot concur. To adopt this interpretation would not only nullify the concept of *respondeat superior*, it would turn the entire concept of *agency* on its ear. In effect, any third party administrator – such as here – could avoid the strictures of Rule 16-7 by simply allowing its individual agents to take vacations, or extended medical leave, or even retire, and have Rule 16-7 requests remain in their personal inbox for...how long exactly? For that matter, Insurers could simply chronically understaff, knowing they get a free pass until such time as the assigned agent actually gets his/her personal hands on the request. This cannot be what the Rule contemplates.

K. The ALJ hastens to add here, however, that Ms. T[Redacted] acted in good faith in her own interpretation of her obligations. She testified sincerely, and consistently therewith. The additional irony here is that Claimant’s ATP (through his own agents) erroneously submitted the original Rule 16-7 request. Ms. T[Redacted] actually played a salutary role in cleaning up that mess. There is no evidence of bad faith on the part of Respondents in this instance, nor does the ALJ so infer. Respondents are not morally *culpable*; they are merely *liable*.

L. Whether there might *ever* be a case that might excuse the strict deadlines imposed by Rule 16-7 [widespread civil unrest, natural disaster, acts of terror, sabotage, or the like], this is not such a case. Ms. T[Redacted]’s obligation was to comply with Rule 16-7 upon receipt *by Gallagher Bassett* (on August 20), and not when she pulled it out of her inbox the next day. Even after getting it a day late, due to Respondents’ own internal procedural inefficiencies, she had time to comply. Her Response was due August 31, 2020. Instead, she mistakenly thought she had an extra day to deny this claim, and she then denied it for medical reasons on September 1, 2020.

The Remedy

M. W.C.R.P. 16-7(E) provides that; “Failure of the payer to timely comply in full with section 16-7(A), (B), or (C) **shall be deemed** authorization for payment of the requested treatment *unless* the payer has scheduled an independent medical examination (IME) and notified the requesting provider of the IME within the time prescribed for responding set forth in section 16-7(B)...” (emphasis added). Respondents failed to file an appropriate response within the 7-day window. The ALJ finds and concludes, as a matter of law, that the request for SI fusion surgery by Dr. Barker is deemed authorized.

Medical Benefits

N. Under different circumstances, the ALJ would weigh the merits of Dr. Barkers’ request against Dr. Brown’s Rule 16 analysis. Perhaps the pain generator has not been identified adequately. Conservative measures might prove to be the better choice. Claimant might not be happy with the end result of the surgery; he might even be worse off. However, Claimant has the procedural kill shot here, and he wants this surgery. The surgery has been deemed authorized by operation of law, and Claimant may now proceed with it.

ORDER

It is therefore Ordered that:

1. The left SI joint fusion surgery recommended by Dr. Barker is authorized. Respondents shall pay for the surgery, along with all reasonable and necessary post-surgical treatment.
2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUE

1. Whether Claimant was an "employee" of Employer within the meaning of § 8-40-202 (a)(2), C.R.S., on July 7, 2020.

FINDINGS OF FACT

1. Claimant is a 21-year-old man who was injured when he fell from a roof while on a sales appointment for Employer on or about July 7, 2020. Employer is a home improvement company that sells roofs, windows, and other home improvement services.
2. On July 10, 2020, Claimant's father sent a letter for Employer advising Employer that Claimant had been injured while performing a roof inspection as part of a sales call for Employer. Claimant's father requested that Employer file a Workers' Compensation claim with Insurer. (Ex. 1).
3. On July 31, 2020, Respondents filed a Notice of Contest in which it asserted Claimant's injuries were "not work-related" and that Claimant is an independent contractor. (Ex. B).

"The 3508 Direct Seller Agreement"

4. On September 9, 2019, Claimant participated in an interview with representatives of Employer. At the conclusion of the interview, Employer presented Claimant signed a contract with Employer and various other documents.
5. On September 9, 2019, Claimant signed a "3508¹ Direct Seller Agreement" with Employer ("3509 Agreement"). Respondents' documentation alternatively refers to Claimant's position as a "Direct Seller" and "Sales Representative." Under the 3508 Agreement, Claimant agreed to "solicit prospective customers for the purchase of [Employer] products and services." (Ex. C).
6. The 3508 Agreement includes the following "Termination" provisions:

Section 4. Termination of this Agreement. (A) Services provided for under this Agreement may be terminated AT WILL by either Company or Direct Seller. (B) Notwithstanding the foregoing, this Agreement shall automatically terminate upon the occurrence of any of the following events: (i) the adjudication of bankruptcy, the insolvency, or cessation of the business of Company, (ii) the commission of an act of misfeasance or malfeasance by Direct Seller, (iii) the breach of any provision of this Agreement by Direct Seller, or (iv) the death of Direct Seller. (C) Upon

¹ "3508" is a reference to Internal Revenue Code § 3508.

termination or expiration of this Agreement for any reason, Direct Seller understands that any and all commissions payable to him at that time will be paid, as reasonably possible, in accordance with Company's next scheduled payroll after the job is fully installed and completed.

(Ex. C, § 4)

7. The 3508 Agreement provides:

Direct Seller agrees and understands that by virtue of Internal Revenue Code §3508, Direct Seller shall be considered a direct seller and shall not be treated as an employee of Company with respect to the services performed hereunder for federal or state tax purposes. Direct Seller shall be considered a direct seller or independent contractor and neither federal, state, local income, unemployment, nor payroll tax of any kind shall be paid by Company on behalf of Direct Seller. Direct Seller understands that Direct Seller is responsible to pay, according to law, Direct Seller's income taxes. Direct Seller may be liable for self-employment taxes, Social Security taxes, and other taxes, to be paid by the Direct Seller according to law. Because Direct Seller is engaged in his/her own business, Direct Seller is not eligible for, and shall not participate in, any employer pension, health, or other fringe benefit plan of Company. Company shall not be liable to Direct Seller for any expenses paid or incurred by Direct Seller unless otherwise agreed to in writing.

(Ex. C, § 3.3).

8. The 3508 Agreement includes the following provision, in all capitalized letters and bold:

DIRECT SELLER AGREES THAT HE WILL NOT, AT ANY TIME DURING OR FOLLOWING HIS/HER RELATIONSHIP WITH COMPANY, CONTEST THIS SECTION AND THIS UNDERSTANDING BETWEEN THE PARTIES, NOR WILL DIRECT SELLER CLAIM THAT HE IS ENTITLED TO UNEMPLOYMENT COMPENSATION OR OTHER BENEFITS ARISING FROM HIS/HER RELATIONSHIP WITH COMPANY. DIRECT SELLER FURTHER AGREES THAT IF HE VIOLATES THIS SECTION AND THIS PROMISE, UPON WHICH COMPANY IS RELYING IN ENGAGING DIRECT SELLER, DIRECT SELLER WILL BE IN BREACH OF THIS AGREEMENT AND WILL PAY TO COMPANY LIQUIDATED DAMAGES OF \$500 PER DAY FOR EACH DAY WHICH DIRECT SELLER IS IN BREACH OF THESE COVENANTS AS WELL AS COMPANY'S REASONABLE ATTORNEY'S FEES IN DEFENDING THIS RELATIONSHIP TO ANY STATE OR FEDERAL AGENCY DUE TO DIRECT SELLER'S ACTIONS.

(Ex. C, § 3.3).

9. Section 3.2 of the 3508 Agreement provides: "Direct Seller understands that pricing calculations performed on In-Home Sales by Direct Seller are subject to verification and adjustment by Company. If Direct Seller prices an In-Home Sale incorrectly, due to mismeasurement, miscalculation, or any other reason, the resulting Net Installed Sales Income for that In-Home Sale will be incorrect. If, in the sole determination of Company, Company finds that Direct Seller has made such an error, Company is hereby authorized by Direct Seller to make positive or negative adjustments directly to Direct Seller's expected commission or indirectly by raising or lowering the Net Installed Sales Income on the applicable In-Home Sale for purposes of internally recalculating the commission due on such In-Home Sale."

10. Section 11 of the 3508 Agreement provides: "Section 11. Entire Agreement. This Agreement contains the entire agreement and supersedes all prior agreements and understandings, oral or written, with respect to the subject matter hereof. This Agreement may be changed only by an agreement in writing signed by the parties hereto. Each party hereto has had equal opportunity to negotiate or draft the terms hereof and to seek the advice of counsel, and no provision alleged to be ambiguous shall be construed for or against any party based on the identity of the draftsman of that provision. (Ex. C, § 11).

EXHIBIT A TO THE 3508 AGREEMENT

11. The 3508 Agreement incorporates an "Exhibit A-Standard Compensation" ("the 3508 Exhibit A") which was not included within Respondents' exhibits. (Exhibit A consists of seven pages, pages 1, 2, 4, 5 and 6 are designated as Claimant's Exhibit 2, p. 000002-6, pages 3 and 7 are designated as Claimant's Exhibit 3, pages 000052-53). The 3508 Agreement provides that "Exhibit A may be amended from time-to-time at the discretion of [Employer], but only with prior written notice to direct seller." (Ex. C, § 3.1).

12. The 3508 Exhibit A includes Employer's "Standard Commission Structure," "Commission Eligibility" and other provisions setting forth Employer's policies and procedures applicable to Claimant and other "Direct Sellers." (Ex. 2 & 3).

13. Page 3 of the 3508 Exhibit A (Ex. 3, p. 000052) includes a "Paperwork Error Fees" provision which states:

"The following charges are made in calculating Net Installed Sales Income:

- \$100 • for any completed original sales or finance packet that is not received by the next business day from date of sale. All the required documents must be included. Review the required list with your General Manager regularly.
- \$25 • When proof of income is not received within 48 hours of the contract being submitted. This is only applicable if the POI is required. It includes Cancels if POI is required."

14. Page 4 of the 3508 Exhibit A (Ex. 2, p. 000004) includes the following provision under “Monthly Net Installed Sale Bonus Only”

To qualify for Monthly Net Installed Sales Bonus the Direct Seller must have 2 (two) reviews, one on each assigned website, in that month to qualify for bonus. [Employer] will decide on which websites the reviews will need to be posted on, monthly. Company or Online Marketing Manager will validate all reviews for Direct Seller to receive bonus. Final determinations of what is or is not a valid review will be made at the sole determination of the Company. Any Buyer complaints will lead to a deduction from their paycheck due to the damage caused to the Company's reputation, if it is a non-job complaint:

- \$100- deduction if the review is private
- \$500- deduction if the review is public (on all open forums)

All complaints will be subject to the Company President's discretion. A Direct Seller has 7 days to reverse a review from the date the review was posted.”

15. Page 5 of the 3508 Exhibit A (Ex. 2, p. 0000005) includes the following “No Appointment Result (NRA)” provision:

“If you cannot make it to an appointment on time, you must notify the MOD at least 2 hours in advance and find someone else to cover the appointment. If you do not find anyone to cover the appointment it is considered an NRA. For any NRA that a Direct Seller causes, a \$300 will be deducted from the next commission(s) calculation.”

16. Page 6 of the 3508 Exhibit A (Ex. 2, p. 000006) includes a “Work Attire and Appearance” policy which imposes a dress code and grooming standards. The Work Attire and Appearance policy required Claimant to wear a shirt bearing Employer’s logo, black or khaki dress pants and dress shoes, or during summer months to wear an Employer-branded polo shirt with dress shorts or pants. The policy also required wear and “prominently display” their badges. (The ALJ infers that the referenced “badges” identify the wearer as a representative of Employer.).

17. Page 6 of the 3508 Exhibit A (Ex. 2, p. 000006) includes the following “Performance Requirements”:

“If a lead is sold by you and another direct seller, the commission will be shared equally as will the sale amount for purposes of achieving sales volume. You are required to produce \$180,000 of Net Installed Sales per quarter which is \$60,000 Net Installed Sales per month. Anytime a Direct Seller does not produce \$60,000 Net Installed Sales in a month, [Employer] may take action ranging from a warning notice being issued up to termination of employment. If the Direct Seller produces \$180,000 Net

Installed Sales within that quarter, the warning notice(s) for not having \$60,000 Net Installed Sales in a month will be forgiven.”

18. The 3508 Exhibit A instructs “Direct Sellers” to address questions concerning commissions or bonuses to “your Sales Manager/General Manager.”

EMPLOYEE HANDBOOK

19. Claimant testified Employer provided him the "Company Handbook – Sales Representative," which was admitted and contained in Claimant’s Ex. 2 (“the Handbook”). The Handbook, which consists of 34 pages, includes provisions such “General Employment Policies” in which “sales representatives” are referred to as “employees.” The Handbook references Employer’s commitment to “providing our representatives with the opportunity to advance within the organization according to their skills and experience;” and opportunities for Sales Representatives to “be transferred from one department to another.” The Handbook also states that Employer establishes “Personnel Files” for each sales representative, which may include medical records and a “Medical File.” (Ex. 2, Handbook, § 2, 2.1, 2.7, 2.9, 2.10, 2.11, 2.12, 2.14).

20. Section 7 of the Handbook entitled “Work Hours” provides “Appointments are scheduled at 10a/11a” “Appointments are scheduled at 10a/11a, 2pm/3pm, and 6pm/7pm.” (Ex. 2, p. 000026).

21. Handbook Section 7.2 "Attendance Policy" (Ex. 2, p. 000027) provides:

Timely and regular attendance is an expectation of performance for all [Employer] representatives. To ensure sufficient staffing, positive representative morale, and to meet expected productivity standards throughout [Employer], all representatives will be held accountable for adhering to their work schedule.

22. Section 7.2 includes under “Expectations” that sales representatives were expected to arrive “to trainings and leads 10-15 minutes prior to scheduled time,” and to remain “at trainings/leads for the duration of the scheduled times....”

23. Section 7.2.1 and 7.2.2 of the Handbook include provisions related to “Unexcused Absences” and Notice of Absence.” These provisions require sales representatives to personally contact “your supervisor” to notify Employer of “absences or tardiness,” and that absences may be excused by the “Director of Human Resources.” Section 7.2.1 provides that “an absence occurs when the representative misses more than four (4) hours of work within a normal workday.”

24. The Handbook imposes attire and grooming standards, health and safety standards, and the requirement for reporting of work-related accidents, injuries, and illnesses. (Ex. 2, Handbook, § 2.17, 2.18, 3.7). In addition, the Handbook contains policies which impose attendance requirements and procedures for “unexcused

absences,” including a requirement that the sales representative “contact your supervisor” when an absence occurs. (Id., § 7.2).

25. Section 9 of the Handbook – “Performance Expectations” includes a “Progressive Discipline” policy which includes the potential imposition of a “Performance improvement plan,” and which may result in a “recommendation to terminate employment.” (Ex. 2, Handbook, § 9).

26. The Handbook states: “This Handbook is not intended to create contractual obligations of any kind with respect to the duration of your employment with [Employer]. Rather, employment with the Company is “at will.” This means that either the Sales Representative or the Company may terminate the employment relationship at any time, with or without cause or prior notice.” (Ex. 2)./

27. On September 9, 2019, Claimant signed an “Acknowledgment of Receipt and Agreement to Arbitrate” through which he acknowledged receipt of the Handbook. The acknowledgement form states, in part “The Handbook provides important information about Company policies and procedures that I will be expected to comply with during the term of my employment;” “I understand that, except for the ‘at will’ nature of my employment, any and all Company policies and procedures described herein may be superseded, modified or eliminated from time to time;” and “In the event of a dispute arising out of any aspect of my employment relationship with the Company (including, but not limited to, any claims under tort or contract theories, whether based on common law or otherwise, and all claims or those arising under any federal, state, or local laws covering terms of conditions of employment), the Company and I will both exercise our best efforts toward a resolution by mutual agreement. However, in the event that such agreement cannot be reached, in accordance with Company policy, and as [a] condition of employment, I agree that the dispute shall be settled using the arbitration procedure outlined in Section 8.4 of the Handbook.”

28. The acknowledgement concludes: “By signing below, I agree to the foregoing terms and conditions of my employment with [Employer] and acknowledge the Company’s expectation that I conduct myself in accordance with the policies and procedures set forth in the Handbook.” (Ex. 3, p. 00046).

CLAIMANT’S TESTIMONY

29. Claimant testified at hearing, and the ALJ found Claimant’s testimony to be credible.

30. Claimant testified that before working for Employer, Claimant’s employment had consisted of working for summer camps, and in the restaurant industry. Claimant had no experience in direct sales, soliciting prospective customers for home improvement, remodeling projects or other similar services, including roofs, windows, and siding. Claimant worked exclusively for Employer from September 9, 2019 until, at least, July 7, 2020.

31. Claimant testified that he was offered his position with Employer on September 9, 2019, without the opportunity to review the 3508 Agreement in any meaningful manner. Claimant was provided with the 3508 Agreement and requested to sign at the conclusion of his interview, after being offered the position.

32. Claimant testified his first week with Employer consisted of full-day training every day. Claimant was instructed on how to properly inspect roofs and how to conduct sales. Claimant then went on sales appointments with Employer's senior sales representatives to build up his proficiency to be able to work independently. Claimant characterized the training program as a "30/60/90-day" training program. Claimant testified that due to his inexperience in direct sales, he remained in Employer's training program for between 100 and 120 days, before he was in a position to conduct sales appointments independently.

33. Employer's "30/60/90 Day Direct Seller Trajectory" ("Training Description") document describes Employer's sales model as "time-proven and educational, yet difficult to learn without a full commitment." (Ex. 3, p. 000051). The Training Description indicates that Direct Sellers who "have improper expectations often feel like they are underachieving, while in actuality, they are on track but are in the learning phase. This trajectory path must be understood to fully commit to a Direct Seller career with [Employer]. 1st 30: Learn to write it up! 2nd 30: Learn to retain it! 3rd 30: Learn to get paid on it. The Training Description setting forth this information was initialed by Claimant and Employer's general manager. (Ex. 3).

34. Claimant testified that Employer required Claimant to work Tuesday through Saturday. Employer required Claimant to report to Employer's office if Claimant did not have a morning appointment, to participate in sales meetings or training, or to complete paperwork. Although Claimant was encouraged to develop sales leads, all sales calls in which Claimant participated were derived from leads supplied by Employer. Claimant testified he was expected to convert 30% of sales calls into sales and required to perform a sales demonstration to 75% of prospective customers.

35. Employer provided Claimant with a draw to purchase an iPad containing Employer's programs, sales presentations, and paperwork. Employer also provided Claimant with branded work apparel, bearing Employer's logo, including polo-style shirts, hats, and face masks. Employer imposed grooming standards on Claimant and other sales representatives. Employer provided Claimant with business cards identifying Claimant as a "sales representative" of Employer, with an Employer-supplied email address. Employer provided Claimant with a "demonstration kit" used to conduct sales presentations. Claimant was required to supply his own ladder and tape measure and use his personal cell phone for Employer's business. Employer provided Claimant with a script to use for his voicemail message.

36. Employer paid Claimant under his own name and social security number. (See Ex. 9). Employer did not require Claimant to establish his own operating entity or to be incorporated. Claimant was paid a bi-weekly commission based on his sales. Claimant did not have any separate business operations of own outside the work performed for Employer.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Employee vs. Independent Contractor Status

Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed."

Claimant has established by a preponderance of the evidence that he provided services to Employer and was paid for his services. Thus, Claimant is presumed to be an employee of Employer under § 8-40-202 (2)(a).

Nonetheless, a putative employer may establish a presumed employee is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. See *Nelson v. ICAO*, 981 P.2d 210, 212 (Colo. App. 1998). Section 8-40-202 (2)(b)(II), identifies the following nine criteria that must be shown “to prove independence.” These nine criteria are that the putative employer must not:

(A) Require the individual to work exclusively for the person for whom services are performed; except that the individual may choose to work exclusively for such person for a finite period of time specified in the document;

(B) Establish a quality standard for the individual; except that the person may provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed;

(C) Pay a salary or at an hourly rate instead of at a fixed or contract rate;

(D) Terminate the work of the service provider during the contract period unless such service provider violates the terms of the contract or fails to produce a result that meets the specifications of the contract;

(E) Provide more than minimal training for the individual;

(F) Provide tools or benefits to the individual; except that materials and equipment may be supplied;

(G) Dictate the time of performance; except that a completion schedule and a range of negotiated and mutually agreeable work hours may be established;

(H) Pay the service provider personally instead of making checks payable to the trade or business name of such service provider; and

(I) Combine the business operations of the person for whom service is provided in any way with the business operations of the service provider instead of maintaining all such operations separately and distinctly.

§ 8-40-202(2)(b)(II), C.R.S.

If the parties have executed a written document that demonstrates by a preponderance of the evidence the existence of these factors, the document creates a rebuttable presumption of an independent contractor relationship between the parties. § 8-40-202 (2)(b)(III) and (IV), C.R.S. To create such a rebuttable presumption, the document must be 1) signed by both parties; 2) all signatures on the document must be

duly notarized; and 3) the document must contain a disclosure, in type which is larger than the other provisions in the document or in bold-faced or underlined type, that the independent contractor is not entitled to workers' compensation benefits and that the independent contractor is obligated to pay federal and state income tax on any moneys earned pursuant to the contract relationship. § 8-40-202 (2)(b)(IV), C.R.S.

Respondents have failed to establish that the 3508 Agreement (which includes the incorporated 3508 Exhibit A) constitutes a written document sufficient to give rise to the presumption that Claimant was an independent contractor, rather than an employee. The 3508 Agreement does not meet the statutory requirements of § 8-40-202(b)(III) and (IV), in several respects. First, the 3508 Agreement does not establish the existence of the nine indicia of independence contained in § 8-40-202 (b)(II).

The 3508 Agreement establishes quality standards in the form of "Performance Requirements" requiring Claimant to produce Net Installed Sales \$60,000 per month and \$180,000 of per quarter, to adhere to paperwork standards, a dress code and grooming standards, and standards for "NRA" appointments. The 3508 Agreement permits Employer to terminate Claimant's contract "at will" during the contract period, without violation of the terms of the contract or failing to produce a result. The 3508 Agreement and 3508 Exhibit A make clear Employer's requirement that Claimant's services be combined with Employer's operations and that there would be no meaningful separation or distinction between Claimant and Employer. Specifically, Claimant was required to present himself as a representative of Employer by wearing a badge, Employer-branded clothing, and attaining reviews of Employer on designated websites to qualify for bonuses. These criteria include deductions in Claimant's "paycheck" for buyer complaints "due to the damage caused to the Company's reputation." These specific requirements and policies make clear that Employer did not consider Claimant's services to be separate and distinct from Employer.

Finally, the 3508 Agreement does not contain a provision that Claimant is not entitled to worker's compensation benefits, and the signatures on the 3508 Agreement are not notarized, as required by § 8-40-202 (2)(b)(IV). The ALJ concludes that the 3508 Agreement does not demonstrate the existence of the nine indicia of independence and does not meet the requirements of § 8-40-202 (2)(b)(III) and (IV). Accordingly, the 3508 Agreement is not sufficient to create a rebuttable presumption that Claimant was an independent contractor.

Because the evidence establishes that Claimant was performing services for pay, and there is no written document establishing Claimant's independent contractor status, the burden of proof rests upon the respondents to rebut the presumption that the claimant was an employee. *Baker v. BV Properties, LLC*, W.C. No. 4-618-214 (ICAO, Aug. 25, 2006). The question of whether the respondents have overcome the presumption and established that the claimant was an independent contractor is one of fact for the ALJ. *Nelson v. Industrial Claim Appeals Office, supra*. See *Industrial Claim Appeals Office v. Softrock Geological Services, Inc.*, 325 P.3d 560 (Colo. 2015) (whether an individual is customarily engaged in an independent trade, occupation, profession, or business related

to the service performed must be determined by applying a totality of circumstances test that evaluates the dynamics of the relationship between the individual and the putative employer). The analysis in *Softrock* reflects that tribunals must look not only at the nine factors to discern customary engagement in an independent business but must also examine other factors involving “the nature of the working relationship” is equally germane to that question in the context of a workers’ compensation matter. See *In re Claim of Pierce*, W.C. No. 4-950-181-02) (ICAO, Sept. 18, 2018).

Respondents have failed to prove by a preponderance of the evidence that Claimant was not an “employee” within the meaning of the Colorado Workers’ Compensation Act. The ALJ finds that the following factors indicate that Claimant was not “customarily engaged in an independent trade, occupation, profession or business related to the services performed” and was not “free from control and direction in the performance of the services, both under the contract for performance of service and in fact” as required by § 8-40-202 (2)(a), C.R.S.

A necessary element to establish that an individual is an independent contractor is that the individual is customarily engaged in an independent trade, occupation, profession, or business related to the services performed. *Allen v. America’s Best Carpet Cleaning Services*, W.C. No. 4-776-542 (ICAO, Dec. 1, 2009). The statutory requirement that the worker must be “customarily engaged” in an independent trade or business is designed to assure that the worker, whose income is almost wholly dependent upon continued employment with a single employer, is protected from the “vagaries of involuntary unemployment.” *In Re Hamilton*, W.C. No. 4-790-767 (ICAO, Jan. 25, 2011).

The evidence at hearing established that Claimant was not “customarily engaged in an independent trade, occupation, profession or business related to the services performed.” Claimant’s testimony credibly established he had no prior experience in direct sales of any kind, no experience in the home remodeling industry, or that he was “customarily engaged” in anything related to the services he provided Employer prior to entering into the 3508 Agreement with Respondents.

Employer imposed quality standards on Claimant’s work and oversaw the actual work and instructed Claimant as to how the work would be performed. As a sales representative, Claimant’s position required him to meet with prospective customers and to produce sales results. In this regard, Employer established “quality standards” for Claimant. With respect to sales, Claimant was required to meet “Performance Requirements,” of producing “Net Installed Sales” of \$60,000 in gross sales per month, and \$180,000 quarter. The 3508 Exhibit A provides that the failure to meet these “Performance Requirements” in a given month could result in “termination of employment.” Claimant credibly testified he was expected to convert 30% of sales calls into sales and required to perform a sales demonstration to 75% of prospective customers. Employer also imposed additional quality standards on Claimant related to work orders and paperwork. For example, the 3508 Agreement required that Claimant submit all work orders to Employer from each buyer within 24 hours of execution. Employer required Claimant to submit “Error Free” paperwork, and contemplated

deducting money from Claimant's commissions where paperwork was not received by the next business day, or "when proof of income is not received within 48 hours of the contract being submitted." Additionally, Section 3.2 of the 3508 Agreement permits Employer to review and adjust Claimant's pricing calculations, indicating that Employer oversaw Claimant's work. In the context of a sales representative position, these "Performance Requirements," paperwork standards, and oversight provisions constitute "quality standards," and oversight of Claimant's work.

Employer provided more than minimal training to Claimant. The 3508 Agreement provides that Claimant would be "informed of and shown the techniques of the Company Business utilizing certain products, presentations and techniques specially designed by Company." Employer's 30/60/90 Day Direct Seller Trajectory document notes that Employer's "sales model" is difficult to learn without a full commitment, and that the training program was anticipated to take at least 90 days. Claimant credibly testified that it took him approximately 3 ½ months to reach a point where he could function as a sales representative. This type of mandated training is more than the "minimal training" contemplated for independent contractors.

Employer maintained the right to terminate Claimant's work at any time, without a violation of the 3508 Agreement, and without cause or liability. Specifically, section 4 of the 3508 Agreement provides that "Services provided for under this Agreement may be terminated AT WILL by either Company or Direct Seller." (Emphasis original). The Handbook also reiterates this principle and states that either party "may terminate the employment relationship at any time, with or without cause or prior notice." Accordingly, the Claimant's work was subject to termination during the contract period without a violation of its terms or a failure to meet specifications of the contract.

Employer dictated the time of performance, and work hours were not negotiated. The evidence established Claimant's work hours were not negotiated. Instead, Employer dictated the days and hours Claimant worked. Employer's "Handbook" devotes three pages to Employer's "Attendance" and "Time Away from Work" policies. Employer dictated the times that appointments were scheduled. The Handbook provides that "Appointments are scheduled at 10a/11a, 2pm/3pm, and 6pm/7pm." The Handbook makes clear that these were requirements, and required Sales Representatives to arrive at leads 10-15 minutes prior to the scheduled time, and remain at leads for the duration of the scheduled times and to obtain "prior approval of the supervisor" if he would be "tardy" to meetings/trainings. The Handbook purports to impose "fines" or deductions from commissions where Sales Representatives missed leads, missed meetings, or could not "make it to an appointment on time." Claimant credibly testified that on days when he did not have a morning appointment, he was required to go to Employer's offices to do training, paperwork or have sales meetings with his team leads. This dictation of working time and requirements that Claimant attain approval from supervisors for issues related to scheduling also shows the oversight and supervision Employer exercised.

Employer paid Claimant personally instead of making checks payable to a trade or business name. The evidence was undisputed that Employer paid Claimant personally,

under his own name and social security number. Claimant was not required to establish an entity of any kind and was not paid through an entity.

Employer did combine its business operations of Claimant's services and did not maintain separate and distinct operations. Employer required Claimant present himself publicly as a representative of Employer, wear a badge, Employer-branded clothing, use an Employer-branded business card, use an Employer-dictated voicemail message, and use Employer provided paperwork. Employer's Handbook indicates Employer would maintain "personnel files" on Claimant, to include medical information. Moreover, Employer incentivized Claimant to foster positive reviews of Employer on websites designated by Employer, and authorized deductions from Sales Representatives' "paycheck due to the damage caused to the Company's reputation."

In addition to these factors, Handbook contains other provisions inconsistent with independent contractor status. For example, Sales Representatives may request transfers to other departments, instructions on how Sales Representatives should respond to media or governmental communications, and a progressive discipline policy.

The record contains no documents indicating Employer required Claimant to work exclusively for Employer. The 3508 Agreement contains a provision that prohibits Claimant from soliciting business from Employer's clients for a period of two years following termination of the agreement. The non-solicitation agreement does not require the Claimant to work exclusively for Employer, but only prevents Claimant from utilizing Employer's trade secret information for himself or others. While the time commitment to Claimant's position may not have permitted Claimant to seek other employment, the ALJ finds no evidence that Claimant was required to work exclusively for Employer.

The provision of "tools" is not significant in the position of a sales representative, . While Claimant was required to provide his own phone, ladder and tape measure, Employer provided sales materials, branded forms, branded attire, business cards, funds for an iPad, forms, and a "demonstration kit."

Although Employer did not require Claimant to work exclusively for Employer, provided minimal materials, and paid a contract commission rate, the ALJ finds that these factors are significantly outweighed by the existence of other factors enumerated in § 8-40-202(2)(b)(II), C.R.S. Based on the totality of the evidence, the ALJ finds that Claimant was not "customarily engaged in an independent trade, occupation, profession or business related to the services performed" and was not "free from control and direction in the performance of the services, both under the contract for performance of service and in fact" as required by § 8-40-202 (2)(a), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant was an "employee" of Employer within the meaning of § 8-40-202(a)(2), C.R.S., on July 7, 2020.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 19, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-119-511-002**

ISSUES

- Did Claimant prove he suffered a compensable injury to his left shoulder on May 17, 2019?
- If Claimant proved a compensable injury, the ALJ will address the following issues:
- Did Claimant prove a left reverse total shoulder arthroplasty recommended by Dr. Papilion is reasonably needed to cure and relieve the effects of his injury?
- What is Claimant's AWW?
- Did Claimant prove entitlement to TTD benefits commencing October 1, 2019?

FINDINGS OF FACT

1. Claimant works for Employer as a commercial tractor-trailer driver. His typical routine was to deliver freight to one location to be unloaded, drive to a second location to be reloaded, and returned to his home base in Denver. Claimant generally deals with "no touch" freight, where the shippers and receivers generally load and unload the trailer. On rare occasions, Claimant assisted in loading or unloading freight from the trailer.

2. Claimant injured his left shoulder on May 17, 2019. The record contains conflicting information regarding the specific location of the accident and whether he was picking up or dropping off a load at the time of the accident. The Employer's First Report indicates Claimant was injured in Rockwell City, Iowa. Claimant reported to Concentra on May 22, 2019 the injury occurred in Cedar Rapids, Iowa. At hearing, Claimant testified he could not remember where the accident occurred, or whether he was loading or unloading. In any event, Claimant's description of the injurious activity has been consistent numerous occasions. The ALJ credits Claimant's account of how the accident occurred, so the specific location and whether he was loading or unloading at the time is of no consequence.

3. Claimant had backed the trailer to a loading dock and was opening the rear trailer doors when a gust of wind caught the left door and "yanked it around. This "jerked" Claimant's left arm, causing immediate pain in his left shoulder.

4. Claimant testified he reported the injury to a "dispatch girl" named "Casey" before heading back to Denver. Claimant testified Casey told him to complete accident paperwork when he got back.

5. Claimant drove back to Denver using primarily his right arm. After returning to Denver, he went to the office and completed an accident report.

6. Respondents presented no witness or other persuasive evidence to contradict Claimant's testimony about reporting the injury on May 17, 2019 or completing an accident report after he returned to Denver.

7. An Employer's First Report was completed on May 22, 2019 by an unknown individual. The form states Employer was notified of the injury on May 22 but does not indicate to whom the injury was reported. The injury is listed as a left shoulder "sprain/strain." The injury mechanism is described as, "5 days ago he was making a delivery when he opened the trailer door, the wind swung the door and yanked."

8. Employer referred Claimant to Concentra for treatment. He saw Dr. Kristina Robinson at his initial visit on May 22, 2019. The history of injury was described as, "left shoulder pain s/p forced hyperextension of left shoulder. Patient reports he was opening a trailer door when a strong gust of wind blew the door open extending his shoulder, immediate pain and anterior shoulder discomfort/tenderness." He described intermittent shoulder pain, worse with activity. Physical examination showed AC joint tenderness, limited range of motion in all directions, and a positive lift off test. Dr. Robinson diagnosed a left shoulder strain, recommended OTC NSAIDs, and gave Claimant work restrictions of no reaching over shoulder level with the left arm.

9. Claimant saw Dr. Jerald Solot at his next appointment on May 25, 2019. There was no change in his left shoulder pain, which was worst at extremes of motion. Examination of the shoulder showed "mildly" limited range of motion with pain. Claimant had not been able to start PT.

10. Claimant saw PA-C Nickolas Curcija at Concentra on May 31, 2019. Claimant's shoulder felt "the same if not worse since last visit." The report states he had "good range of motion and not a lot of pain except with certain movements." With movement, he rated the pain at 7/10. Examination of the shoulder showed anterior and lateral tenderness, weakness with flexion and abduction, and "full" range of motion with pain. Painful arc sign was positive, drop arm test was negative, and liftoff test was equivocal. PA-C Curcija referred Claimant to physical therapy.

11. Claimant attended an initial physical therapy evaluation that same day. The therapist documented flexion of only 136 degrees and abduction of 145 degrees.

12. Claimant saw Dr. Solot on June 10, 2019 and reported "no change since last visit." Dr. Solot documented "limited, painful range of motion of the left shoulder." Based on Claimant's continued symptoms, Dr. Solot ordered an MRI and instructed Claimant to return "after MRI." Dr. Solot indicated he would refer Claimant for an injection or a surgical consultation if the MRI were positive.

13. Claimant tried unsuccessfully to obtain the MRI during the summer. He returned to Concentra on September 25, 2019 and reported, "[he] attempted MRI about a month ago, was unable to tolerate MRI, there was too much motion on all attempts. Pain in shoulder is worse than last visit. Exacerbated by certain motions." Examination of

the shoulder showed limited range of motion was limited in all planes with pain. Concentra referred Claimant to Dr. John Papilion, an orthopedic surgeon.

14. Claimant saw Dr. Papilion on September 26, 2019. The report contains conflicting information regarding the injury. The first paragraph of the history section states Claimant's shoulder symptoms were acute, "nontraumatic," and "the injury occurred at home." The next paragraph states,

[Claimant] is actually known to me for previous rotator cuff repair on his RIGHT shoulder 20 years ago. He's done very well with this. He has an acute injury to his LEFT shoulder which occurred on 5/15/19 [sic]. He is a long-haul truck driver and the wind caught his door and jerked it open. He's had a pop and pain since then [unintelligible] with lifting he felt significant weakness and loss of motion.

15. Dr. Papilion persuasively testified the first paragraph of the history section referenced above was completed by his medical assistant and is erroneous. He personally dictated the remainder of the report, and properly recounted his recollection of how Claimant described the onset of his left shoulder problems began. The history documented by Dr. Papilion is consistent with Claimant's hearing testimony and his reports to other providers.

16. On examination of Claimant's left shoulder, Dr. Papilion noted atrophy, tenderness, and mildly limited range of motion with pain. Flexion was limited to 90 degrees, which is similar to the 100 degrees of flexion measured at Claimant's first Concentra visit. Hawkins, Neer's, and external rotation tests were positive. Dr. Papilion opined Claimant's clinical presentation was consistent with a large rotator cuff tear. Claimant could not complete the MRI because of severe claustrophobia and motion artifact, so Dr. Papilion ordered a left shoulder ultrasound instead. He restricted Claimant from any lifting with his left arm.

17. The ultrasound was completed on September 30, 2019. It showed massive supraspinatus and full thickness subscapularis tears, with probable involvement of the infraspinatus at the common tendon interval, a presumed full thickness rupture of the long head of the biceps tendon with retraction into the upper arm, moderate fatty infiltration of the infraspinatus and supraspinatus muscles, remodeling changes of the greater tuberosity and lesser tuberosity, and cephalad migration of the humeral head with near complete obliteration of the acromiohumeral interval.

18. Claimant followed up with Dr. Papilion on October 1, 2019. Dr. Papilion opined Claimant has a massive rotator cuff tear in his left shoulder with atrophy and rupture of the subscapularis and biceps tendon. He also noted proximal migration of the humeral head consistent with rotator cuff arthropathy. He opined the rotator cuff damage was irreparable and recommended a reverse total arthroplasty. He restricted Claimant from any commercial driving pending the surgery.

19. Claimant has not worked in any capacity since October 1, 2020. Dr. Papilion's restriction of no commercial driving precludes his regular job, and Employer offered no modified duty.

20. On October 20, 2019, Dr. Papilion wrote to Insurer's TPA with additional justification for the requested surgery. Regarding causation, he noted the lack of significant muscle atrophy suggested "early" rotator cuff arthropathy. Although he could not tell the age of the tears from the ultrasound data, he noted Claimant was fully functional and working full duty before the work accident. Dr. Papilion knew of no other recreational or vocational activities that could have caused the condition. He opined the need for surgery was "directly related" to the work injury.

21. Respondents filed a Notice of Contest on October 24, 2019.

22. Claimant saw Dr. Timothy Hall for an IME at his counsel's request on April 28, 2020. Claimant described the accident consistent with his reports to other providers and his hearing testimony. Dr. Hall considered the mechanism of injury "pretty straightforward." Claimant reported significant shoulder pain with activities such as reaching and lifting. Dr. Hall noted decreased shoulder range of motion, including 110 degrees of flexion and 90 degrees abduction. Impingement signs and drop sign were positive. Dr. Hall agreed with Dr. Papilion's recommendation for a reverse shoulder arthroplasty. Regarding causation, he noted Claimant could have had an asymptomatic rotator cuff tear before the accident, although the moderate fatty infiltration and amount of traction was consistent with an injury within a few months of the ultrasound. Dr. Hall opined Claimant's shoulder pain and need for surgery were proximately caused by the work accident. He opined, "This may have been totally an acute event with respect to the local pathology or could be a permanent aggravation of a previous pathology. Be that as it may, the surgical intervention is required to return him to his preinjury level of comfort and function and is therefore 100% related to that work injury."

23. Dr. William Ciccone performed an IME for Respondents on May 29, 2020. Claimant again described the accident as documented throughout the record. Dr. Ciccone noted reduced shoulder range of motion, including 80 degrees of flexion and abduction, 70 degrees of internal and external rotation. He also noted positive impingement signs and "mild" rotator cuff atrophy. Dr. Ciccone agreed a reverse shoulder arthroplasty is reasonably needed but concluded the surgery is not related to the work accident. He opined Claimant suffered a "minor sprain/strain" that was "treated appropriately with conservative measures" and resolved within a few weeks. He thought the reports of "near normal" range of motion on May 31 and June 10, 2019 were inconsistent with a significant shoulder injury. He opined,

Rotator cuff tear arthropathy occurs over a long period of time and is associated with massive rotator cuff tears with associated glenohumeral arthritis. The finding of fatty infiltration of the muscles of the rotator cuff is indicative of a long-standing disease, not an acute injury. This disease is a degenerative disease with the findings on imaging not related to trauma. While I do believe that the claimant suffered a sprain/strain to the shoulder,

I believe this to be a minor injury as the claimant had near full range of motion noted on his examination on 5/31/2019. The finding of fatty infiltration of the muscles of the rotator cuff is indicative of a long-standing disease, not an acute injury.

24. Dr. Ciccone opined Claimant was at MMI from the work-related this sprain/strain on June 10, 2019.

25. On June 30, 2020 Dr. Papilion authored a response to Dr. Ciccone's IME report. He disagreed with Dr. Ciccone regarding the causal connection between the surgery and the work accident. He was not inclined to rely on range of motion measurements obtained in May 2019 by a "a non-orthopedic PA." He noted Claimant had not been evaluated by an orthopedist until Dr. Papilion's examination in September 2019, which demonstrated significant loss of motion, weakness, and evidence of a massive rotator cuff tear. Dr. Papilion further opined,

[E]ven though he may have had a pre-existing condition with the shoulder he was fully functional and it was this incident that pushed him over the edge and necessitated the need for reverse shoulder arthroplasty. It is this fact that I respectfully disagree with Dr. Ciccone. I would consider this aggravation of a pre-existing condition and per Colorado Workers' Compensation Medical Treatment Guidelines, this meets the criteria for surgical indications and relatedness.

26. Dr. Papilion testified via deposition on August 18, 2020. He maintained his opinion the work accident either caused an acute rotator cuff tear or substantially aggravated an underlying pre-existing condition. He opined the injury mechanism described by Claimant could "certainly account for a tear in the rotator cuff." He did not think the clinical findings reported in the Concentra records from May and June were inconsistent with severe rotator cuff injury. He opined patients with severe rotator cuff tears can still have relatively good range of motion. He suspected Claimant had some preinjury shoulder pathology but testified, "perhaps he did not have a normal rotator cuff, but he was fully functional." Dr. Papilion doubted any pre-existing tear was "of this magnitude because I don't think he could of function as well as he was, lifting, and climbing, and doing his job is a long-haul truck driver. He may have had some rotator cuff pathology that was tolerable and not symptomatic." He opined the fatty infiltration shown on the ultrasound could have developed in the four months between the injury and the test. Dr. Papilion opined at a minimum the work accident "certainly exacerbated" Claimant's shoulder and precipitated the need for a reverse total shoulder arthroplasty.

27. Dr. Hall testified at hearing consistent with his IME report. His testimony complements and bolsters the opinions and testimony offered by Dr. Papilion.

28. Dr. Ciccone testified in a post-hearing deposition on September 22, 2020. He reiterated his belief Claimant's clinical presentation reflected in the Concentra records on May 31 and June 10, 2019 was inconsistent with a permanent aggravation of his pre-existing shoulder pathology. Dr. Ciccone opined the findings demonstrated by the

ultrasound are typically not seen early after a massive rotator cuff tear, but appear late in the pathology. He opined the fatty infiltration of the rotator cuff musculature takes years, not months, to develop, which means the tears have been present for years. Dr. Ciccone reiterated Claimant suffered a left shoulder strain, and his physical examinations, diagnostic testing, and course of treatment were consistent with a mild injury that quickly resolved with conservative treatment. He opined Claimant reached his preinjury "baseline" on June 10, 2019, and any ongoing symptoms or need for treatment thereafter was purely related to his pre-existing condition.

29. Dr. Papilion and Dr. Hall's regarding causation are credible and more persuasive than the contrary opinions offered by Dr. Ciccone.

30. Aside from a few memory lapses about non-critical issues, Claimant's testimony was generally credible.

31. Claimant proved he suffered a compensable injury to his left shoulder on May 17, 2019.

32. Claimant proved the left shoulder treatment provided by and through Concentra since May 22, 2019 was reasonably needed to cure and relieve the effects of his compensable injury.

33. Claimant proved the left shoulder reverse total arthroplasty recommended by Dr. Papilion is reasonably needed to cure and relieve the effects of his compensable injury.

34. Claimant's wages fluctuated from week to week, presumably depending on the loads and routes assigned to him. Claimant's gross wages in the 12 weeks from March 11, 2019 through May 20, 2019 provide a fair approximation of his earnings at the time of injury and his subsequent wage loss. Claimant's gross earnings of \$14,353.00 during that period equates to an AWW of \$1,196.08, and a corresponding TTD rate of \$797.39.

35. Claimant worked regular duties through September 9, 2019. There is insufficient persuasive evidence to show why he stopped working on September 9 or to prove he stopped working because of the work accident.

36. Claimant proved he is entitled to ongoing TTD benefits commencing September 26, 2019 when Dr. Papilion restricted him from any lifting with his dominant right arm. That restriction is incompatible with Claimant's regular job. Even though he generally does not have to load and unload his trailer, he must regularly lift various objects necessary to connect and disconnect the trailer and operate the vehicle, including chains and tools.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury/

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A claim is compensable if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms after an incident at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved he suffered a compensable injury on May 17, 2019. Claimant's description of the accident is credible. Dr. Papilion and Dr. Hall credibly opined his shoulder symptoms and need for treatment are directly caused by the work accident. Even Dr. Ciccone opined Claimant suffered a "strain" that was "treated appropriately by conservative measures." An injury need not be dramatic to support a finding of compensability. Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused them to seek medical treatment. *E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

B. A left shoulder reverse total arthroplasty is reasonably necessary treatment for the compensable injury.

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a

preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

Claimant proved the reverse total shoulder arthroplasty recommended by Dr. Papilion is reasonably needed to cure and relieve the effects of his injury. Even Respondents' IME agrees the surgery is reasonably needed, and the primary dispute relates to causation. Dr. Ciccone's opinion Claimant suffered only a "minor" injury and returned to "baseline" by June 10, 2019 is not persuasive. Claimant's preinjury "baseline" was an asymptomatic left shoulder with no functional limitations. By contrast, he has remained continuously symptomatic since the accident, including on June 10, 2019 when Dr. Ciccone thinks he reached MMI. Claimant specifically reported "no change since last visit" on June 10, and the corresponding physical examination showed "limited, painful range of motion of the left shoulder," which is not appreciably different than the findings from his first appointment. Dr. Solot ordered an MRI and indicated he would make a surgical referral if the MRI came back "positive." The MRI probably would have showed severe pathology had Claimant been able to complete it. There is no persuasive evidence Claimant's condition "improved" between May 22 and June 10, 2019. PA-C Curcija' May 31 reference to "full" range of motion is an outlier when viewed in context of other documented exams.

The ALJ credits the causation opinions expressed by Dr. Papilion and Dr. Hall in their reports and testimony. It makes no difference from a legal perspective whether the work accident caused new pathology, aggravated a pre-existing condition, or some combination thereof. The persuasive evidence shows the accident was the proximate cause of Claimant's symptomatology and functional limitations commencing May 17, 2019, which ultimately led to the recommendation for a reverse total arthroplasty.

C. Claimant's AWW is \$1,196.08.

Section 8-42-102(2), C.R.S. provides compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

As found, Claimant's average weekly wage is \$1,196.08. His wages fluctuated from week to week depending on the loads and routes assigned to him. The 12 weeks of earnings before the accident provide a fair approximation of Claimant's earnings at the time of injury and his subsequent wage loss. Claimant's gross wages of \$14,353.00 in the 12 weeks of wages from March 11, 2019 through May 20, 2019 equates to an AWW of \$1,196.08, with a corresponding TTD rate of \$797.39.

D. Claimant is entitled to ongoing TTD benefits commencing September 26, 2019.

A temporarily disabled claimant is entitled to TTD benefits to compensate for a wage loss that is proximately caused by a work-related injury and lasts longer than three days. Section 8-42-105(1); *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Montoya v. Industrial Claim Appeals Office*, ___ P.3d ___, 17CA 0322 (Colo. App. 2018). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

As found, Claimant's compensable injury directly and proximately caused a total wage loss commencing September 26, 2019 when Dr. Papilion restricted him from any lifting with his right arm. Before September 26, his only restriction were no overhead or over shoulder use of the right arm, and he managed to perform his regular job until leaving work on September 9, 2019 for unclear reasons. But the prohibition on any lifting with his dominant arm precluded performance of his regular job, and Employer offered no modified work. There is no persuasive evidence Claimant has returned to work, been released to regular duty, or been placed at MMI by an ATP since September 26, 2019. Accordingly, Claimant is entitled to ongoing TTD benefits commencing September 26, 2019.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits for a May 17, 2019 left shoulder injury is compensable.
2. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including the left shoulder arthroplasty recommended by Dr. Papilion.
3. Claimant's average weekly wage is \$1,196.08, with a corresponding TTD rate of \$797.39.
4. Claimant's request for TTD benefits from September 9, 2019 through September 25, 2019 is denied and dismissed.
5. Insurer shall pay Claimant TTD benefits at the weekly rate of \$797.39, commencing September 26, 2019 and continuing until terminated by law.
6. Insurer shall pay Claimant statutory interest of eight percent (8%) per annum on all compensation not paid when due.
7. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 20, 2020

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-084-002-001**

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his July 26, 2018 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period September 27, 2019 until terminated by statute.

FINDINGS OF FACT

1. Claimant is a 73 year-old male who worked as a truck driver for Employer. On July 26, 2018 at 12:20 p.m. Claimant was involved in a motor vehicle accident (MVA) in Atlanta, Georgia. Claimant rear-ended another truck in front of him while traveling on I-95 North. The responding officer noted that after the accident "[a]ll vehicles came to a controlled rest in the roadway."

2. Claimant sought medical treatment at Concentra Medical Centers in Atlanta beginning at 6:00 p.m. on the day of the accident. Claimant reported bilateral neck and shoulder pain, as well as right shin/knee pain. Claimant denied loss of consciousness and complained of initial dizziness for 10 minutes that resolved. Claimant had no tenderness and full range of motion in his left shoulder. He had tenderness and spasms in his cervical musculature with full range of motion.

3. On July 31, 2018 Claimant began treating at Concentra in Thornton, Colorado. Claimant completed a pain diagram reflecting his symptoms and pain levels. Debra J. Smith, M.D. evaluated Claimant and noted complaints of 4/10 back, neck and arm pain, as well as tingling in both hands, dizziness and headaches. There were no documented complaints of left shoulder pain. Dr. Smith ordered CT scans of Claimant's cervical and thoracic spine and recommended physical therapy.

4. On August 2, 2018 Claimant attended his first physical therapy appointment. Claimant had 1-2/10 pain, but it was "tightness not really pain." He denied headaches, numbness, tingling or other symptoms besides tightness in his upper back and lower neck. The cervical CT showed mild degenerative changes without fractures. The thoracic CT showed moderate degenerative changes without fractures.

5. Dr. Smith re-evaluated Claimant on August 2, 2018. She documented "[m]inimal pain in upper back." Claimant reported improvement, no headaches and 2/10 pain. He denied numbness and tingling down his arms. There were no left shoulder complaints.

6. Claimant's second physical therapy appointment occurred on August 7, 2018. Brea Galvin, P.T. noted Claimant "reports he is doing fine he has no pain and feels his movement is back to normal . . ." She determined that Claimant had met his goals and did not need additional physical therapy.

7. On August 8, 2018 Dr. Smith re-evaluated Claimant. Claimant reported he was feeling good, had no pain and was ready to be released. His cervical exam was normal with no tenderness or muscle spasms and full range of motion. Dr. Smith did not note any left shoulder complaints. She commented that Claimant was "at functional goal, ready for discharge." Dr. Smith determined that Claimant had reached Maximum Medical Improvement (MMI) with no impairment, medical maintenance treatment or permanent restrictions.

8. On August 10, 2018 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Smith's MMI and impairment determinations. Claimant retained counsel, [Redacted], Esq., who filed an Objection to the FAL and a Notice and Proposal to Select an Independent Medical Examiner (DIME) on August 27, 2018. On September 20, 2018 Ms. [Redacted] notified Respondent that Claimant "will not be moving forward with the DIME at this time."

9. Claimant's primary care provider is Platte River Medical Clinic (PRMC). He was evaluated on August 16, 2018 by Garrett Larson, PA-C for a Medicare Annual Wellness Visit. Claimant's symptoms were sleep disturbances in the form of falling asleep randomly and waking up gasping for breath with his lips turning blue. He denied headaches and dizziness. Claimant's psychiatric status was normal and his neck exam was normal with full range of motion. Claimant also exhibited "normal movement of all extremities."

10. PA-C Larson again evaluated Claimant on September 14, 2018. Claimant was sleeping well and his neck exam was again normal. PA-C Larson next evaluated Claimant on February 22, 2019. A review of Claimant's HbA1c lab results revealed improved but still elevated blood sugar levels.

11. On May 2, 2019 Claimant again visited PA-C Larson for an evaluation. Claimant reported pain from 4-8/10 in his neck and through both shoulders, worse on the left. PA-C Larson noted that "[i]n January, he started having pain in his neck that radiates into his left shoulder." Claimant had limited range of motion in his left shoulder with tenderness in his trapezius and cervical spine. PA-C Larson recommended cervical and shoulder MRIs. He remarked that if the cervical MRI showed stenosis it was likely exacerbated by the motor vehicle accident, but he doubted any rotator cuff syndrome would be related.

12. On May 22, 2019 Claimant underwent an evaluation with primary care physician and PA-C Larson's supervisor Anthony G. Euser, D.O. Dr. Euser diagnosed Claimant with cervical radiculopathy and a left shoulder rotator cuff rupture. Dr. Euser recommended cervical and left shoulder MRIs.

13. On June 13, 2019 Claimant underwent MRI's of his neck and left shoulder. The MRI of his left shoulder revealed a full-thickness, partial articular side tear of the subscapularis, along with supraspinatus tendinosis and articular side fraying. The cervical spine MRI reflected a discogenic desiccation between C3 to T2 as well as facet arthrosis at multiple levels.

14. On September 11, 2019 Claimant underwent an independent medical examination with Caroline M. Gellrick, M.D. Dr. Gellrick noted that she only reviewed Physician Work Activity Status Reports from Concentra Atlanta and Concentra Thornton on July 31, 2018, August 2, 2018 and August 8, 2018 with no narrative notes. Dr. Gellrick made several references to her lack of records and assumptions in her conclusions. She was specifically confused regarding the "nebulous work restrictions, assigned initially, which do not make sense to this examiner for an individual with loss of consciousness, C-spine, shoulder and 'knee contusion' injuries." Moreover, Dr. Gellrick only reviewed PRMC notes beginning May 2, 2019. She elaborated, "[w]hat is missing in the records is what transpired in the fall of 2018 . . . To clarify what transpired in the fall of 2018, medical records should be requested from all of his medical providers for review."

15. Claimant reported to Dr. Gellrick that he had been suffering ongoing neck and arm pain since the July 26, 2018 motor vehicle accident. He noted that he lost consciousness at the scene. Claimant advised that he received no benefit from therapy through Concentra. He also remarked that he would get better on his own. Claimant noted headaches three to four times per week and nightmares four times each week, as well as fear, paranoia and anxiety. Based on Claimant's reports, Dr. Gellrick recommended reopening Claimant's case based on a worsening of symptoms. She diagnosed Claimant with post-concussion syndrome, a cervical strain, a left shoulder strain, dizziness and persistent Post Traumatic Stress Disorder (PTSD). Dr. Gellrick concluded that Claimant was no longer at MMI and "there is no reason for the patient to have [his currently] presenting symptoms and ongoing problems, especially of the c-spine, weakness in the left upper extremity other than the injuries of the MVA."

16. On January 2, 2020 Claimant underwent an independent medical examination with Kathleen D'Angelo, M.D. Claimant reported he did not know if he passed out from the July 26, 2018 motor vehicle accident. He described that when he exited the truck after the accident his "legs went out from under me" and paramedics on the scene had to catch him. Claimant denied receiving any improvement from pre-MMI treatment. He stated he objected when the physical therapist released him because of ongoing pain in his left shoulder, but the therapist encouraged him to do home exercises. Dr. D'Angelo noted there were no findings in the records consistent with an acute left shoulder tear. She stated Claimant's shoulder complaints were caused by adhesive capsulitis attributable to poorly controlled diabetes. Dr. D'Angelo explained the condition was causing myofascial irritation to Claimant's left paracervical and parathoracic musculature. Claimant's shoulder MRI showed mild edema and thickening of the inferior joint capsule that was consistent with an adhesive capsulitis. Dr. D'Angelo concluded Claimant's work-related complaints had resolved, he was at MMI and did not require additional medical treatment. Instead, Claimant had the gradual onset of

symptoms months later that were not consistent with his work accident. Finally, Dr. D'Angelo determined that Dr. Gellrick had erroneously relied on Claimant's statements establishing the causal relationship between his ongoing problems and the July 26, 2018 motor vehicle accident.

17. Claimant testified at the hearing in this matter. He remarked that he did not recall the July 26, 2018 motor vehicle accident and lost consciousness for a short time. He commented that his upper back/neck pain has been constant since the accident and he received no temporary or sustained left shoulder improvement from physical therapy. Claimant also noted that he complained of pain in his left shoulder to Dr. Smith at Concentra Thornton at his first visit. He told Dr. Smith to release him from care despite ongoing pain because he thought he would heal on his own. Claimant also testified about a pain diagram completed when he reached MMI on August 8, 2018. The diagram did not show any pain markings and shows "[n]o Pain" on the pain scale that Claimant circled.

18. Claimant explained that his symptoms began to worsen shortly after he reached MMI. He noted that he was set up for a routine physical and diabetes check-up by Medicare at PRMC. He commented that he reported headaches, upper back pain and left shoulder pain at the August 16, 2018 Medicare Annual Wellness Visit at PRMC. Claimant remarked that PA-C Larson dismissed his complaints. However, he had no explanation for why the record specified he had "no headaches," and the physical exam for his neck and upper extremities was normal. Claimant also commented that the May 2, 2019 note from PRMC stating he began to experience neck pain in January was incorrect.

19. On July 20, 2020 the parties conducted the post-hearing evidentiary deposition of Dr. D'Angelo. She maintained that Claimant has not suffered a worsening of condition since reaching MMI on August 8, 2018 that is causally related to his July 26, 2018 motor vehicle accident. Dr. D'Angelo remarked that Claimant's benign left shoulder examination at Concentra on the date of injury was not consistent with an acute rotator cuff tear. Instead, she agreed with the initial diagnoses of cervical and left-sided trapezius strains. Dr. D'Angelo commented that cervical and thoracic imaging did not show evidence of an acute injury and the course of Claimant's improving symptoms in the Concentra records was consistent with the original diagnoses of cervical and trapezius strains. Notably, the left shoulder did not appear to be a cause for concern in Claimant's treatment.

20. Dr. D'Angelo discussed that in February 2019 Claimant had poorly controlled diabetes with hemoglobin A1C levels of 8.3. She reiterated that Claimant likely had an adhesive capsulitis. Claimant was at a higher risk for the condition due to his diabetes. Dr. D'Angelo described that people with fibrosis or scar tissue within the capsular joint region develop increased pain, do not move their arms and progressively lose range of motion. She noted the risk of developing adhesive capsulitis increases to 10-30% in the diabetic population. Dr. D'Angelo thus was not surprised to see Claimant's complaints arise at the time of elevated blood glucose levels. She testified the edema and thickening in the inferior joint capsule identified on his shoulder MRI was

consistent with adhesive capsulitis that not caused or aggravated by his work accident. Dr. D'Angelo summarized that the rotator cuff tear identified on MRI was degenerative because there were no reported symptoms at or near the time of injury consistent with an acute tear. She noted that, based on the medical records, Claimant's symptoms resolved in August 2018. Claimant's current symptoms arose in 2019 and are unrelated to his July 26, 2018 work injury. Dr. D'Angelo concluded that Claimant remains at MMI.

21. On September 25, 2020 the parties conducted the rebuttal post-hearing evidentiary deposition of Dr. Gellrick. Dr. Gellrick agreed that the information she initially relied upon while evaluating Claimant was limited due to the absence of medical records. However, she recognized that the records show he had moderate pain in his shoulders, neck and trapezius as evidenced by the pain diagram of July 31, 2018. Dr. Gellrick did not dispute that Claimant had adhesive capsulitis, but determined it was related to his work injury. She acknowledged that individuals with diabetes are at higher risk of developing adhesive capsulitis. Nevertheless, she reiterated that Claimant had a "significant" injury in July 2018, suffered continuous symptoms, thought he could get better on his own and then worsened. Dr. Gellrick noted Claimant had no intervening accidents to account for his current cervical or left shoulder conditions. She acknowledged the Concentra Atlanta records documented no tenderness and full left shoulder range of motion. However, she explained that symptoms of a shoulder trauma may not appear for a couple days after the event.

22. Respondents' counsel inquired whether Dr. Gellrick questioned the accuracy of Claimant's account. She stated it would be "hard to put a finger on it without examining him further and asking him." She later testified she would like to speak with Claimant again to "get the details, because I have questions." Dr. Gellrick finally acknowledged she could not render an opinion within a reasonable degree of medical probability to a "100%" degree in light of her questions and concerns. She agreed it would be less likely that an onset of symptoms in January 2019, as documented in the PRMC records, would be related to Claimant's July 26, 2018 work injury.

23. Claimant has failed to establish that it is more probably true than not that he should be permitted to reopen his July 26, 2018 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, Claimant was involved in a motor vehicle accident while driving a truck in Atlanta, Georgia on July 26, 2018. He received medical treatment on the day of the accident and obtained follow-up care through Concentra. After undergoing conservative treatment including physical therapy Dr. Smith determined that Claimant had reached MMI with no impairment, medical maintenance treatment or permanent restrictions on August 8, 2018. Claimant contends that he suffered a worsening of condition to his left shoulder, neck and upper back after reaching MMI that is causally related to his July 26, 2018 motor vehicle accident. However, the medical records and persuasive opinion of Dr. D'Angelo reflect that Claimant has not suffered a change in condition pursuant to §8-43-303(1), C.R.S. that is causally related to his July 26, 2018 work accident.

24. The Concentra records document that Claimant had muscular strains to his neck and upper back and no left shoulder injury. Within a week he had minimal

pain/tightness. On August 7, 2018 he reported to his physical therapist that he was pain free. On the following day Claimant reiterated to Dr. Smith he was feeling good, had no pain and was ready to be released. Claimant had full range of motion in his neck, no objective signs of continuing injury and no subjective complaints. Furthermore, his pain diagram from August 8, 2018 did not document any symptoms. The preceding records directly contradict Claimant's statements that he had continuous pain since the accident that later worsened. Instead, the medical records document minimal injuries which evolved into benign physical exams at MMI. Furthermore, Dr. D'Angelo remarked that Claimant's benign left shoulder examination at Concentra on the date of injury was not consistent with an acute rotator cuff tear. Instead, she agreed with the diagnoses of cervical and left-sided trapezius strains. Dr. D'Angelo also commented that cervical and thoracic imaging did not show evidence of an acute injury and the course of Claimant's improving symptoms in the Concentra records was consistent with the original diagnoses of cervical and trapezius strains. Notably, Dr. D'Angelo specified that Claimant's shoulder and cervical imaging revealed only degenerative conditions.

25. Claimant's first reference to any symptoms after MMI were in the May 2, 2019 PRMC records in which he reported neck and left shoulder pain arising in January 2019. PA-C Larson specifically noted that "[i]n January, he started having pain in his neck that radiates into his left shoulder." Claimant exhibited limited range of motion in his left shoulder with tenderness in his trapezius and cervical spine. Claimant's testimony that he was complaining to PRMC of those issues as early as August 16, 2018, is not supported by the records. It is unlikely that Claimant complained of left shoulder pain, neck pain, headaches, dizziness, or sleeping problems to PRMC during the period August 2018 through the first half of 2019, without any medical record documentation.

26. The PRMC note on May 2, 2019 reflects that Claimant's pain complaints began in January 2019, As Dr. D'Angelo explained, symptoms that arose in January 2019 would not be causally related to minor muscular strains that were treated over the course of two weeks and resolved in August 2018. Dr. D'Angelo discussed that in February 2019 Claimant had poorly controlled diabetes with hemoglobin A1C levels of 8.3. She reiterated that Claimant likely had an adhesive capsulitis. Claimant was at a higher risk for the condition due to his diabetes. She noted the risk of developing the condition increases to 10-30% in the diabetic population. Dr. D'Angelo thus was not surprised to see Claimant's complaints arise at the time of elevated blood glucose levels. She testified the edema and thickening in the inferior joint capsule identified on his shoulder MRI was consistent with adhesive capsulitis unrelated to his work accident. Dr. D'Angelo summarized that the rotator cuff tear identified on MRI was degenerative because there were no reported symptoms at or near the time of injury consistent with an acute tear. She noted that, based on the medical records, Claimant's symptoms resolved in August 2018. However, Claimant's current symptoms arose in 2019 and are unrelated to his July 26, 2018 work injury. Dr. D'Angelo concluded that Claimant remains at MMI for his work accident.

27. In contrast, Dr. Gellrick recommended reopening Claimant's case based on a worsening of symptoms since he reached MMI on August 8, 2019. Dr. Gellrick did

not dispute that Claimant had adhesive capsulitis, but determined it was related to his work injury. She acknowledged that individuals with diabetes are at higher risk of developing adhesive capsulitis. Nevertheless, she reiterated that Claimant had a “significant” injury in July 2018, suffered continuous symptoms, thought he could get better on his own and then worsened. Dr. Gellrick noted Claimant had no intervening accidents to account for his current cervical or left shoulder conditions. She acknowledged the Concentra Atlanta records documented Claimant had no tenderness and full left shoulder range of motion. However, she explained that symptoms of a shoulder trauma may not appear for a couple days after the event. Despite Dr. Gellrick’s opinion, the medical records and persuasive testimony reflect that Claimant suffered injuries during his July 26, 2018 motor vehicle accident that resolved by August 8, 2018 when he reached MMI. Claimant’s first reference to any symptoms after MMI are in the May 2, 2019 PRMC records in which he reported neck and left shoulder pain beginning in January 2019. It is speculative to attribute Claimant’s report of symptoms in January 2019 to his July 26, 2018 motor vehicle accident. The temporal delay and medical records suggest an attenuated causal connection between Claimant’s January 2019 symptoms and motor vehicle accident. Claimant has thus failed to establish that he suffered a worsening condition that is causally related to his July 26, 2018 motor vehicle accident. Accordingly, Claimant’s request to reopen his Workers’ Compensation claim based on a change in condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo*, W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen*, W.C. No. 4-543-945 (ICAO, July 19, 2004).

5. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his July 26, 2018 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, Claimant was involved in a motor vehicle accident while driving a truck in Atlanta, Georgia on July 26, 2018. He received medical treatment on the day of the accident and obtained follow-up care through Concentra. After undergoing conservative treatment including physical therapy Dr. Smith determined that Claimant had reached MMI with no impairment, medical maintenance treatment or permanent restrictions on August 8, 2018. Claimant contends that he suffered a worsening of condition to his left shoulder, neck and upper back after reaching MMI that is causally related to his July 26, 2018 motor vehicle accident. However, the medical records and persuasive opinion of Dr. D'Angelo reflect that Claimant has not suffered a change in condition pursuant to §8-43-303(1), C.R.S. that is causally related to his July 26, 2018 work accident.

6. As found, the Concentra records document that Claimant had muscular strains to his neck and upper back and no left shoulder injury. Within a week he had minimal pain/tightness. On August 7, 2018 he reported to his physical therapist that he was pain free. On the following day Claimant reiterated to Dr. Smith he was feeling good, had no pain and was ready to be released. Claimant had full range of motion in his neck, no objective signs of continuing injury and no subjective complaints. Furthermore, his pain diagram from August 8, 2018 did not document any symptoms. The preceding records directly contradict Claimant's statements that he had continuous pain since the accident that later worsened. Instead, the medical records document minimal injuries which evolved into benign physical exams at MMI. Furthermore, Dr. D'Angelo remarked that Claimant's benign left shoulder examination at Concentra on the date of injury was not consistent with an acute rotator cuff tear. Instead, she agreed with the diagnoses of cervical and left-sided trapezius strains. Dr. D'Angelo also commented that cervical and thoracic imaging did not show evidence of an acute injury and the course of Claimant's improving symptoms in the Concentra records was consistent with the original diagnoses of cervical and trapezius strains. Notably, Dr. D'Angelo specified that Claimant's shoulder and cervical imaging revealed only degenerative conditions.

7. As found, Claimant's first reference to any symptoms after MMI were in the May 2, 2019 PRMC records in which he reported neck and left shoulder pain arising in January 2019. PA-C Larson specifically noted that "[i]n January, he started having pain in his neck that radiates into his left shoulder." Claimant exhibited limited range of motion in his left shoulder with tenderness in his trapezius and cervical spine. Claimant's testimony that he was complaining to PRMC of those issues as early as August 16, 2018, is not supported by the records. It is unlikely that Claimant complained of left shoulder pain, neck pain, headaches, dizziness, or sleeping problems to PRMC during the period August 2018 through the first half of 2019, without any medical record documentation.

8. As found, the PRMC note on May 2, 2019 reflects that Claimant's pain complaints began in January 2019. As Dr. D'Angelo explained, symptoms that arose in January 2019 would not be causally related to minor muscular strains that were treated over the course of two weeks and resolved in August 2018. Dr. D'Angelo discussed that in February 2019 Claimant had poorly controlled diabetes with hemoglobin A1C levels of 8.3. She reiterated that Claimant likely had an adhesive capsulitis. Claimant was at a higher risk for the condition due to his diabetes. She noted the risk of developing the condition increases to 10-30% in the diabetic population. Dr. D'Angelo thus was not surprised to see Claimant's complaints arise at the time of elevated blood glucose levels. She testified the edema and thickening in the inferior joint capsule identified on his shoulder MRI was consistent with adhesive capsulitis unrelated to his work accident. Dr. D'Angelo summarized that the rotator cuff tear identified on MRI was degenerative because there were no reported symptoms at or near the time of injury consistent with an acute tear. She noted that, based on the medical records, Claimant's symptoms resolved in August 2018. However, Claimant's current symptoms arose in 2019 and are unrelated to his July 26, 2018 work injury. Dr. D'Angelo concluded that Claimant remains at MMI for his work accident.

9. As found, in contrast, Dr. Gellrick recommended reopening Claimant's case based on a worsening of symptoms since he reached MMI on August 8, 2019. Dr. Gellrick did not dispute that Claimant had adhesive capsulitis, but determined it was related to his work injury. She acknowledged that individuals with diabetes are at higher risk of developing adhesive capsulitis. Nevertheless, she reiterated that Claimant had a "significant" injury in July 2018, suffered continuous symptoms, thought he could get better on his own and then worsened. Dr. Gellrick noted Claimant had no intervening accidents to account for his current cervical or left shoulder conditions. She acknowledged the Concentra Atlanta records documented Claimant had no tenderness and full left shoulder range of motion. However, she explained that symptoms of a shoulder trauma may not appear for a couple days after the event. Despite Dr. Gellrick's opinion, the medical records and persuasive testimony reflect that Claimant suffered injuries during his July 26, 2018 motor vehicle accident that resolved by August 8, 2018 when he reached MMI. Claimant's first reference to any symptoms after MMI are in the May 2, 2019 PRMC records in which he reported neck and left shoulder pain beginning in January 2019. It is speculative to attribute Claimant's report of symptoms in January 2019 to his July 26, 2018 motor vehicle accident. The temporal delay and medical records suggest an attenuated causal connection between Claimant's January 2019

symptoms and motor vehicle accident. Claimant has thus failed to establish that he suffered a worsening condition that is causally related to his July 26, 2018 motor vehicle accident. Accordingly, Claimant's request to reopen his Workers' Compensation claim based on a change in condition is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request to reopen his July 26, 2018 Workers' Compensation claim based on a change in condition is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: November 20, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-118-423-002**

ISSUES

- I. Whether Claimant suffered a compensable injury on August 9, 2019 and is entitled to a general award of medical benefits.
- II. Whether Claimant established she is entitled to temporary total disability benefits.
- III. Whether Claimant established she is entitled to temporary partial disability benefits.
- IV. Whether Claimant established she is entitled to a change of physician.

STIPULATIONS

- The parties stipulated to an average weekly wage of \$835.00, subject to an increase based on COBRA.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant alleges she suffered a back injury at work on August 9, 2019.
2. Claimant worked for Employer for about 14 years as a head chef where she provided meals at a private social club. Her job duties included prepping the food, cooking the food, serving the food, and cleaning up the kitchen. Claimant also described her job as very physical and requiring a lot of standing, lifting, bending, and twisting. Her usual work schedule was Monday through Friday and she would work approximately 6-8 hours, from approximately 8:30 a.m. to 3:00 p.m.
3. Claimant has a history of back pain that existed "for years" before the alleged date of injury. Claimant sought medical treatment and chiropractic care before 2019 for general maintenance of her back pain and to address flare ups of lower back pain and functional issues. During her testimony, Claimant agreed that the need for treatment would occur without a discrete or specific injury and agreed that she would often develop pain spontaneously or from minimal activities. She also agreed that she would not require medical treatment at times. The pain would merely resolve spontaneously.
4. The evidence submitted at hearing establishes Claimant was suffering from increasing back pain in the summer of 2019 and before August 9, 2019. The records establish that before the alleged incident at work, Claimant presented to a new chiropractic provider, Joint Chiropractic, on May 30, 2019. She went to this new chiropractic provider five times during the next month (and then again on August 24, 2019), after an onset of pain from an unknown or unidentified event on May 29, 2019. At the first appointment at Joint Chiropractic, Claimant specified neck and upper back pain in her pain diagram.

She also documented a history of back pain and sciatica. Moreover, the records from Joint Chiropractic include notations for documenting treatment of Claimant's low back in each of the late spring and summer 2019 visits which predate her alleged date of injury. Claimant's treatment frequency of five visits in five weeks shows an increase from her usual treatment frequency which she said consisted around two treatments per year. This increase in treatment suggests Claimant's back pain was elevated in the days and weeks before the alleged incident at work. (Exhibit A, Hearing Testimony.)

5. Claimant's supervisor, Claire G[Redacted], testified that she often spoke with Claimant about back pain since they both suffered from back pain for years before Claimant's alleged work injury. (Hearing Testimony; Exhibits A, C, M, and N.) As a result, Ms. G[Redacted]'s testimony and the Joint Chiropractic records support a finding that Claimant had preexisting and symptomatic back problems that predated the alleged work incident.
6. Claimant testified that she injured her back at the end of her shift on Friday, August 9, 2019. She described injuring herself while cleaning up the kitchen at the end of the day. She testified that on each Friday she has to perform more cleaning tasks, which includes picking up the large rubber floor mats and placing them on the sink. Claimant said that because of the weight of the floor mats, about 15 pounds, she has to pick them up with a swinging motion to get each one up and onto the sink. She stated that it was while she was picking up and swinging a floor mat that she hurt her back. Then, right after the incident, she said she tried to take out the trash but could not lift it because of her back pain and ended up asking a co-worker, Mr. Jay W[Redacted], to take the trash out for her.
7. At the time of her alleged accident, Claimant described her back symptoms. She said her back felt like it "locked-up." Claimant also testified that at the time of the incident, she felt pain going down her legs. Despite Claimant testifying that at the time of the incident she also felt pain going down her legs, the medical records are inconsistent with Claimant's contention that she developed pain down her legs on August 9, 2019.
8. Claimant stated that she neither reported her injury that day nor sought medical treatment because she thought her back would loosen up and get better. So shortly after the incident, Claimant locked up the restaurant and left.
9. Mr. W[Redacted] also testified at the hearing. He confirmed that he was working with Claimant the day of the alleged incident. He confirmed that he saw Claimant when her back locked up and helped her by taking the trash out. He also confirmed Claimant had back problems that predated the alleged work accident. For example, he said that while at work, Claimant would use a foam roller to roll out her back in order to manage her back pain.
10. Rather than seek medical treatment over the weekend, Claimant decided to participate in the Muddy Princess race. According to Claimant, the Muddy Princess is a women's 5k race that takes place over a muddy obstacle course. Claimant testified that she had already paid for the race so she thought that if she took it easy and walked the course, she might feel better. Claimant testified that rather than run the race, she walked the 5k course. Claimant, however, admitted that even though she walked the race, she still had to walk through mud that day. She denied, however, running the race, denied

going under or over any of the obstacles, and denied that her participation in the race aggravated her back. In stark contrast to Claimant's testimony, Claimant's medical records reflect that her participation in the race aggravated her lower back condition.

11. After participating in the Muddy Princess race, Claimant returned to work on Monday, August 12th. Claimant worked that day but testified that she was having trouble performing her job because of her back pain. Claimant also testified that she reported her work injury to her supervisor Clair G[Redacted] on the Monday after the race. Claimant also testified that after reporting her injury, she took the next day off, August 13th, to take it easy, but then returned to work on Wednesday and continued working her regular duties the rest of the week. Again, in stark contrast to Claimant's testimony about her reporting of the injury, Ms. G[Redacted], credibly testified that Claimant did not report an injury to her on Monday, August 12, 2019.
12. The ALJ acknowledges that Claimant did not work on August 13, but there is insufficient evidence about whether this was because of back pain or just a quirk in the schedule, and the ALJ notes that, while Claimant generally worked Mondays through Fridays, she admitted to working other days and hours, too, such as for events, and also that the schedule documented "personal days" when she took August 26 and August 27 off for her injury of August 25, 2019, but that there is no similar notation for August 13. Her supervisor, Ms. G[Redacted], could not state whether Claimant was scheduled to work on August 13 or might have simply not been scheduled. But given the lack of notation of a "personal day" and Ms. G[Redacted]'s credible testimony that she did not believe Claimant reported any work-related injury until August 29, as below, the ALJ finds that Claimant likely did not miss this shift because of any back injury, and as such, missed no time from work the week of August 12 because of any alleged incident on August 9. The ALJ also finds that, even if she did miss work because of back pain, this was more likely than not related to her ongoing back issues that pre-dated August 9 and/or because of her participation the Muddy Princess race that weekend. Claimant worked the balance of the week of August 11, including that Monday, Wednesday, Thursday, and Friday.
13. Claimant also returned to work the week after - From August 19th through August 23rd - and worked every workday and performed her regular job duties. Moreover, as part of her job, Claimant is given the option of cleaning the large commercial grill and stove in the kitchen. This is a very physical task and involves squatting, kneeling, and lifting. Ms. G[Redacted] testified that she had not done that job herself in a couple of years because it aggravated her back. If an employee opts in and agrees to clean the stove and grill, they are paid an extra \$50.00. During this week, and on top of her regular job duties, Claimant agreed to clean the grill and stove, cleaned the grill and stove, and was paid another \$50.00.¹ The ALJ also credits this portion of Ms. G[Redacted]'s testimony as more evidence that Claimant sustained no disability during that time, as she was not only able to perform her usual duties, but the more physical job demands of this special assignment. Nor does it make sense that the employer would allow Claimant to clean the grill after Claimant reported suffering a back injury and was – according to Claimant

¹ On August 21, 2019, Claimant cleaned the commercial grill and stove and was paid an additional \$50.00. (See Exhibit O.)

- having problems performing her regular job duties. As a result, Claimant's actions of cleaning the grill and stove contradict her contention that she suffered an injury at work two weeks earlier, reported that injury, and was unable to perform her regular job duties – without difficulties - since August 9th.

Prior Back Injury and Treatment.

14. As found above, Claimant has had intermittent back pain since she was young and has undergone chiropractic treatment for years. (Ex. A and B.) Moreover, while working for Employer, it was known by her supervisor, Ms. G[Redacted], and co-workers, such as Mr. W[Redacted], that Claimant had preexisting back problems and had a roller at work that she would use to relieve her back pain.
15. On May 30, 2019, Claimant started treating at a new chiropractic center called The Joint Chiropractic. At her first visit, Claimant completed a patient history form and documented her past medical history. She noted, among other problems, that her past medical history included lower back pain, middle back pain, and upper back pain. At this visit, she also completed a pain diagram where she noted pain in her left shoulder, neck, and the middle of her back. At this visit, Dr. Teegerstrom performed SLR (straight leg raise) testing, which was negative on the left and the right. He also did not note Claimant had any symptoms radiating into her lower extremities. He did, however, note Claimant had taut and tender fibers at the L1 and L5 portion of her lumbar spine as well as subluxations. As a result, Dr. Teegerstrom performed chiropractic adjustments at several levels of her neck and back – including her lumbar spine at L1 and L5. He also recommended Claimant follow up with treatment 2 times per week for 2 weeks and then reassess treatment at that time. (Ex. A.)
16. Although Claimant did not follow up and obtain chiropractic treatment 2 times per week, she did continue with treatment. Claimant continued treating with various chiropractors at The Joint from May 30, 2019, through June 29, 2019. At each appointment, the findings, treatment, and recommendations for follow up treatment remained similar - Claimant did not have any symptoms radiating into her lower extremities and treatment was directed towards her neck, middle back, and lower back / lumbar spine. (Ex. A.)

Treatment after August 9, 2019 Incident

17. On August 24, 2019, Claimant presented for another chiropractic treatment. The notes state Claimant complained of - off and on - right sided low back pain and aching for the past week. She also complained of severe aching and sharpness with movement. (Ex. B.) There is not, however, any indication Claimant's work activities caused her to develop her right sided low back pain during the past week. Moreover, "the past week" does not encompass the date Claimant alleges she was hurt at work – which was August 9, 2019 - about 2 weeks earlier. Plus, there is no indication Claimant complained of pain radiating into her legs between August 9th and this appointment.

Dramatic Change in Claimant's Condition after August 25, 2019 incident

18. On Sunday, August 25, 2019, Claimant presented to Kaiser's Urgent Care center. The report from this visit indicates Claimant has had intermittent back problems since she

was young. The medical report from this visit also describes the most recent onset of Claimant's back problems as follows:

- Claimant has had intermittent problems with low back pain since she was younger.
- Claimant is a chef and turned funny while cooking 2 weeks ago and has had right lower back pain since then.
- Her back pain was exacerbated when she ran in muddy purple race which is an obstacle course.
- She notes she went to her chiropractor yesterday for her pain and it might have helped a little.
- She was doing fine, however, until today when she stood up and heard a pop. She has severe pain in her right low back and has numbness in her anterior thigh.
- She started having pain radiating down both of her legs – which occurred after she stood up and heard a pop or snap in her back that day.

19. Claimant was given Toradol for pain and prescribed a steroid burst. It was also noted that Claimant “gets no help with Flexeril,” so it was not prescribed.² Claimant was diagnosed with low back pain with numbness and tingling of her skin and told to follow up with her PCP and get an MRI.

20. Claimant testified that the popping or snapping incident caused immediate and “searing pain” in her back and into her legs, and directly led her to seek urgent treatment at the Kaiser emergent care center on an after-hours basis.

21. On August 29, 2019, Claimant followed up with a physician at Kaiser, Dr. Christina Walden. At this visit, Claimant specifically said that there was no workplace injury when she completed a check-in questionnaire at Kaiser. In the report from Claimant's visit that day, the question, and answer are as follows:

Question: Is today's visit related to Third Party Liability? (Third Party Liability is when another person or company is responsible for paying your charges and not your own personal insurance. Ex: a motor vehicle accident or Workers' Compensation).

Answer: No

22. The notes from the August 29th visit say Claimant was seen in urgent care four days earlier for low back pain radiating to the right side. At this visit, Claimant also described having pain in her left lower back radiating down her left leg with some numbness. It was also noted that Claimant has had back pain in the past but feels this is worse. Claimant also complained of numbness involving her left toes, No. 3, 4, and 5. Based on Claimant's description of her symptoms that developed on August 25th as well as Dr.

² The indication that Claimant told the medical provider that Flexeril does not help reveals Claimant has previously been treated for back pain by a physician and was prescribed Flexeril.

Walden's findings, - low back pain with radicular symptoms in Claimant's lower extremities - she ordered an MRI and referred Claimant to neurosurgery for assessment of her thoracic and lumbar spine.

23. Later that day, Claimant underwent an MRI. The MRI showed a broad-based central disk extrusion [herniation] with severe spinal canal stenosis at the L3-4 level. The MRI findings supported Dr. Walden's decision to refer Claimant to neurosurgery.

Claimant did not report her injury to Employer until after the August 25th incident and a recommendation made for her to see a neurosurgeon.

24. Throughout August 9th through August 28th, Claimant did not state she suffered a compensable work injury and that she desired to pursue a claim. Ms. G[Redacted] credibly testified that Claimant did not report or claim any injury at work until August 29, 2019. Claimant did not complete any paperwork for any workers compensation injury. She did not ask Ms. G[Redacted] to file paperwork or notify the workers' compensation carrier. Moreover, as brought out during the hearing, Claimant has two prior workers' compensation claims that were pursued all the way through settlements. Thus, the ALJ infers Claimant was somewhat familiar with the workers' compensation system and how to report and pursue such claims, but took no action to pursue a claim or report her injury during this three-week time period.

Motor Vehicle Accident on September 11, 2019.

25. On September 11, 2019, Claimant was involved in a motor vehicle accident (MVA). After the MVA, Claimant complained of more consistent pain radiating into her left leg, and new pain radiating into her right leg.
26. On November 4, 2019, Claimant was seen by Dr. William Thoman at Kaiser. At this appointment, she gave a different account as to how she injured her back at work. According to Dr. Thoman's notes, Claimant said her back pain started in August 2019 when she was putting out the trash and picked up some floor mats at work and she felt a twinge in her back and the pain gradually came on and got worse. This note, however, contradicts Claimant's testimony that picking up the floor mats caused her injury and that she was unable to take out the trash. It also contradicts Mr. W[Redacted]'s testimony where he said he had to take the trash out for Claimant because she could not do it after lifting up the floor mats. It also fails to contain the information about the Muddy Princess race and the August 25, 2019 incident when she stood up and felt a pop or snap in her back and then developed severe pain in her back and lower extremities.

Dr. Bernton's IME and Testimony.

27. On February 18, 2020, Claimant was evaluated by Dr. Bernton. As noted in his report, Claimant told Dr. Bernton that she was injured when she was lifting a rubber floor mat at work. It also notes that although Claimant tried to work after the incident, she was ultimately unable to keep working her full shifts. His report states:

Cleaning up at the end of the day and swinging rubber mats that weighed approximately 15 pounds. She notes that she was swinging a mat into the sink; and as she did so, she felt

a "tweak." She notes that it was sore but got worse and continued to worsen over the weekend. She notes symptoms were in the low back, more on the right than on the left. She notes there was also some posterior foot discomfort over the lateral toes.

She notes initially she was trying to stretch and tried to continue to work, although she notes she was not able to continue full shifts in her job as the head chef.

Exhibit M.

28. Based on the history Claimant provided to Dr. Bernton, Claimant merged the timeline of events and left out critical information about her history. Claimant made it sound like once she lifted the rubber mat off the floor at work, she quickly progressed to being unable to work without the occurrence of any other significant events. Claimant, however, left out several critical facts contained in her wage records and medical records. First, Claimant did not tell Dr. Bernton that after the incident at work, she was still able to participate, to some degree, in the Muddy Princess race. Second, she failed to tell Dr. Bernton that the Muddy Princess race made things worse. Third, she failed to tell Dr. Bernton that, except for missing one day of work for an unknown reason, she managed to work full duty, and even took on extra physical job duties – cleaning the commercial stove and grill – before presenting to Kaiser’s urgent care. Fourth, she failed to tell Dr. Bernton that – according to the Kaiser records – she was “doing fine, however, until she stood up and heard a pop” and developed severe pain in her right low back as well as pain and numbness in her right leg. And absent from her description to Dr. Bernton was what she testified to at hearing - that the popping or snapping incident caused immediate “searing pain” in her back and into her legs and directly led her to seek urgent treatment at the emergency room on an after-hours basis.
29. Dr. Bernton testified that the MRI findings were consistent with an acute event as described on August 25 (with some findings that were generally degenerative and pre-existing). He also testified that it is unlikely that the relatively minor event of August 9 – if it even occurred – would cause or aggravate a herniation, the stenosis or any of the other findings, based on the mechanism alleged and based on Claimant’s presentation over the 17 days after the incident. He thought the findings on the MRI were “big time” and a “big disc herniation” and remarked that on the spectrum of determining whether the MRI findings might relate to the event on August 9 or the August 25 incident, it was “way to the end of the scale” in favor of the August 25 incident. He noted that Claimant’s continued work and her participation in the “Mudder” race also supported this, but his primary determination was based on a mechanism, and he noted a study that found that 62% of all disc herniations resulted from a non-specific inciting event as occurred on August 25. He also concluded that it is improbable that Claimant sustained the injuries shown by the MRI findings on August 9 but was still able to keep working, clean the oven and participate in any capacity in the Mudder race.
30. Dr. Bernton also determined that injections and any surgery to address stenosis would relate to pre-existing degeneration that was not impacted by the August 9 incident, or

stemmed from the injuries Claimant sustained on an acute basis on August 25, 2019 and September 11, 2019. (Exhibit M, Hearing Testimony.)

31. Dr. Bernton concluded that both the August 25 and September 11 incidents constituted intervening events, and that all medical treatment needs and disability since that time are related to those injuries. He also concluded that the minimal event of August 9, 2019, assuming that an incident occurred on that date, did not cause the need for any medical treatment, and did not cause any disability. The ALJ credits these opinions of Dr. Bernton and finds them persuasive. His opinions are supported by the medical record and are a plausible interpretation of the evidence.

Dr. Gellrick's IME.

32. While Dr. Gellrick did not testify at the hearing, the ALJ also agrees with Dr. Bernton's opinions in finding her IME report opinion unpersuasive. Dr. Gellrick ignored or did not appreciate the significance of the August 25 event that constituted a discrete injury. She also did not know that Claimant's presentation markedly changed after this acute event. Nor did it appear that she knew that Claimant worked between August 9 and August 25 without issue and even performed increased tasks (cleaning an industrial oven), and may have been under the impression that Claimant stopped working on August 9, and not August 26 and August 29. Moreover, Dr. Gellrick did not critically consider Claimant's current limitations based on her disc herniation that would have precluded her from performing her job in any capacity between August 9 and August 25, if such limitations were present after that August 9 event. She accepted Claimant's inconsistent reports as to her participation in the "muddy race" and did not perform an adequate inquiry into the nature of that race, which involved, at a minimum, walking over three miles partially through mud and possibly some uneven terrain and other obstacles. Dr. Gellrick acknowledged having no records from the September 11th motor vehicle accident, and so did not know that Claimant was suggesting "drastic" increase in pain and new disability that she was attributing to the motor vehicle accident in the worsening context. The ALJ determines these flaws to be fatal to her opinions. Thus, the ALJ does not find Dr. Gellrick's opinions on causation to be credible or persuasive.

Testimony of Jay W[Redacted].

33. Claimant called Jay W[Redacted] to testify as a rebuttal witness. Mr. W[Redacted] was a co-employee who worked regularly with Claimant through the time of her alleged injury. He testified that Claimant had longstanding back problems that significantly predated Claimant's alleged date of injury, and also that he sometimes helped her with more physical tasks. His testimony was sincere, but he recalled few specifics about the injury based on the time that has passed, and his recollection of the chronology did not necessarily track with the evidence. He testified that he witnessed the August 9th incident, after which Claimant's back "locked up." That said, he was unable to recall whether this was while lifting mats or taking out the trash or some other activity and was unable to provide additional specifics. This makes his recollection about whether an incident actually occurred and that he witnessed it, rather than simply recalling later statements by Claimant or seeing her manifesting pain as she often did even before

August 9 – and whether this incident even was on August 9 – subject to some dispute. After that, he recalled, Claimant returned to work and then participated in a race.

34. He also testified that after the race, Claimant appeared to be in much more pain. Mr. W[Redacted] was clear that her presentation was markedly different than before. But he was confident that Claimant worked just a couple of days after that “race,” though and, asked repeatedly, he confirmed that he witnessed Claimant’s markedly different presentation for just two shifts before Ms. G[Redacted] sent her home from work, and that Claimant never returned to her usual position with the company afterward. This time frame conflicts with the “race” that occurred on August 10 or August 11, but does match up with the August 25 incident, after which Claimant missed two days, presented for two shifts in obvious pain and with difficulty walking (per Ms. G[Redacted]) and was then sent home.
35. The ALJ finds that Mr. W[Redacted] saw Claimant exhibit signs and symptoms of back pain on or about August 9. That said, the ALJ cannot credit Mr. W[Redacted]’s recollection in toto. For example, Mr. W[Redacted] said he had to take the trash out for Claimant. Yet Claimant’s statements to Dr. Thoman contradict Mr. W[Redacted]’s testimony. Dr. Thoman stated in his November 4, 2019, report that Claimant said she started developing back pain in August when she was putting out the trash and picked up some floor mats. Moreover, Mr. W[Redacted] testified that Claimant was much worse after the race and had to take two days off and then worked two days before being sent home and never working again. Based on the time sheets, it appears Mr. W[Redacted] is conflating “the race” with the August 25 incident, based on the stated timeline.
36. The ALJ therefore finds that Mr. W[Redacted]’s testimony bolsters the conclusion that the event of August 25 was the significant event in the chronology of events and that it was the sole incident that that caused Claimant’s need for medical treatment and her disability.
37. Mr. W[Redacted] also testified that he may sometime perform other tasks for Claimant – including possibly cleaning “double stack” oven, for which the lower oven would require bending and stooping. He did not recall that he assisted Claimant on August 21, though. The ALJ finds based on Ms. G[Redacted]’s testimony and the wage records that document that Claimant was paid for that service, that Claimant was the one who cleaned the oven without assistance on that date.
38. Overall, the ALJ did not find Claimant’s testimony to be credible or reliable because Claimant.
 - Understated her back problems before August 9, 2019.
 - Understated her participation in the Muddy Princess race and the effect it had on her back.
 - Understated the acute, discrete, and significant injury she sustained on August 25, 2019, when she stood up and suffered a herniated disc.

- Overstated the extent and duration of her symptoms on August 9, 2019.
- Provided inconsistent statements to her medical providers and at hearing about the mechanism of injury and the timing of her symptoms.
- Specifically stated on the August 29, 2019, check-in questionnaire at Kaiser that her treatment for back pain was unrelated to a work injury.

39. As a result, the history and timeline provided by Claimant during her testimony, to Dr. Bernton, and to Dr. Gellrick conflicts with the underlying medical records. Claimant did not have a single incident at work on August 9th that gradually worsened. The ALJ finds, instead, that Claimant had back pain while working on Friday August 9th based on her preexisting back condition. The ALJ also finds that such back pain did not necessitate the need for medical treatment and did not cause any disability. This is evidenced by the fact that Claimant did not report an injury on Friday and did not seek medical treatment based on that incident. Claimant merely obtained chiropractic treatment – which had previously been recommended for her preexisting back condition.

40. The ALJ finds that Claimant had chronic back pain that bothered her while working. Such back pain was merely the result of Claimant’s baseline preexisting condition. Thus, lifting the rubber mat at work did not cause an injury and necessitate the need for medical treatment and did not cause any disability. At that time, Claimant’s pain was due to her preexisting back condition. The ALJ also finds that it was the August 25, 2019, event of standing up that caused her herniated disc that caused a significant increase in Claimant’s back pain and symptoms and necessitated the need for medical treatment, which included the visit to Kaiser’s urgent care, the MRI, and referral to a neurosurgeon for possible surgery and her resulting disability.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers’ Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant suffered a compensable injury on August 9, 2019 and is entitled to a general award of medical benefits.

Claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.*, WC 4-606-563 (ICAO August 18, 2005). The question of whether Claimant met her burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

As found, the ALJ did not find Claimant's testimony to be credible or reliable for many reasons. For example, Claimant:

- Understated her back problems before August 9, 2019.
- Understated her participation in the Muddy Princess race and the effect it had on her back.
- Understated the acute, discrete, and significant injury she sustained on August 25, 2019, when she stood up and suffered a herniated disc.
- Overstated the extent and duration of her symptoms on August 9, 2019.
- Provided inconsistent statements to her medical providers and at hearing about the mechanism of injury and the timing of her symptoms.
- Specifically stated on the August 29, 2019, check-in questionnaire at Kaiser that her treatment for back pain was unrelated to a work injury.

The ALJ also did not find Dr. Gellrick's opinion about causation to be credible or reliable because Claimant did not provide Dr. Gellrick accurate and complete information about the timing, degree, and cause of her symptoms. Like a house built on sand, an expert's opinion is no better than the facts and data on which it is based. See *Kennemur v. State of California*, 184 Cal. Rptr. 393, 402-03 (Cal. Ct. App. 1982).

The ALJ did credit the opinion of Dr. Bernton to the point that he concluded Claimant did not suffer a compensable injury on August 9, 2019, and that Claimant's injury, need for medical treatment, and disability was caused by the August 25, 2019, incident when she suffered a herniated disc while standing up. Dr. Bernton's testimony was found to be supported by the medical records and was a persuasive interpretation of the underlying evidence that was available to him.

As a result, the ALJ finds and concludes Claimant failed to establish by a preponderance of the evidence that she suffered a compensable injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 24, 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-134-834-001**

ISSUE

1. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with Employer.
2. If Claimant established the existence of a compensable injury, whether Claimant is entitled to medical benefits.
3. If Claimant established the existence of a compensable injury, whether Claimant is entitled to temporary disability benefits.

RESPONDENTS' MOTION FOR DIRECTED VERDICT

OACRP 2(B) provides that the Colorado Rules of Civil Procedure apply to Workers' Compensation hearings unless they are inconsistent with the OACRP rules and the provisions of the Workers' Compensation Act. Because neither the Act nor the OACRP prohibits or limits the ability to resolve a case as a matter of law, the C.R.C.P. related to directed verdicts, and specifically, C.R.C.P. 50, is applicable to workers' compensation hearings.

A "motion for a directed verdict admits the truth of the adversary's evidence and of every favorable inference of fact which may legitimately be drawn from it." *Western-Realco Ltd. v. Harrison*, 791 P.2d 1139 (Colo. App. 1989). Every factual dispute must be resolved in favor of the non-moving party and the "strongest inferences reasonably deducible from the most favorable evidence should be indulged in his favor." *Gossard v. Watson*, 221 P.2d 353, 355 (Colo. 1950). "A motion for directed verdict should be granted only in the clearest of cases when the evidence is undisputed, and it is plain no reasonable person could decide the issue against the moving party." *Evans v. Webster*, 832 P.2d 951, 954 (Colo. App. 1991).

C.R.C.P. 50 permits a party to move for a directed verdict at the close of the evidence offered by an opponent or at the close of all the evidence. Respondents moved for directed verdict upon the conclusion of Claimant's case-in-chief. This required the Court to review the evidence admitted at that time, drawing every reasonable inference in favor of the Claimant. The Court took Respondents' motion under advisement, reserving ruling on the motion until this order. Because the Court finds, based on the complete record, that Claimant has failed to meet his burden of establishing a compensable mental impairment, Respondents' motion for directed verdict is denied as moot.

FINDINGS OF FACT

1. Claimant is a 60 year-old-man, who was employed by Employer as the director of security for Employer's hotel in downtown Denver.

2. In late January or early February 2020, Employer began experiencing financial difficulties. In March 2020, Employer made the decision to reduce staffing at Employer's hotel in all departments, including the security department for which Claimant was the director.

3. Respondent's General Manager, Anthony D[Redacted] credibly testified that over the first three days of March 2020, Employer began receiving cancellations of reservations, meetings and conventions due to the COVID-19 pandemic resulting in cancellations of 20,000 room nights, a drop in expected revenue of \$5,800,000 in three days. Occupancy at the hotel dropped from 89 percent to 14 percent.

4. Claimant and other department heads were requested to reduce staff schedule to account for the lower occupancy at the hotel and the loss in revenue. Claimant objected to Employer's decision and communicated his disagreement via email to Mr. D[Redacted]. Claimant testified that in his opinion, Mr. D[Redacted]'s request to cut the security schedule by 40% was totally unacceptable, and he would not let it happen.

5. On March 5, 2020, Mr. D[Redacted] requested that Claimant meet him the following day with his plan to reduce his scheduled by 40% for the next four weeks. In an email on March 6, 2020 at approximately 9:08 a.m., Claimant responded to Mr. D[Redacted] indicating that he "did not have the time to sit down and work out a four-week schedule in three hours." Claimant also communicated his "proposal" to Mr. D[Redacted] for security scheduling. In the email, Claimant stated: "Let me know if you feel this meeting at noon will be constructive. I have my doubts. If it's going to be just simple cost cutting at the expense of Guest and Associate Safety and my 'other family' my Security Team, then I cannot see a positive outcome. Please let me know If you still want to meet so I can decide what actions I need to take to protect the above."

6. The following day, March 6, 2020, Claimant participated in a meeting with Mr. D[Redacted] and Irene Bell, Employer's human resources director at approximately noon. Claimant did not prepare a plan to reduce security schedules by 40% as requested and did not provide the schedules requested. During the meeting, Mr. D[Redacted] and Ms. Bell believed Claimant was aggressive and unprofessional. During the meeting, Claimant stated his belief that Employer (or at least Mr. D[Redacted]) had no concern for hotel guests or associates and criticized Mr. D[Redacted]'s decision regarding reduction in security staffing. At the conclusion of the meeting, Claimant told Mr. D[Redacted] that he should "watch your space" or words to that effect. Mr. D[Redacted] and Ms. Bell interpreted Claimant's statement as a threat. As a result of the meeting, Claimant was asked to leave and go home. Mr. D[Redacted] interpreted Claimant's conduct as insubordinate and made the decision to suspend Claimant.

7. Mr. D[Redacted] testified that he made requests to cut staffing to 15 departments, and Claimant was the only department head who refused to participate.

8. Ms. Bell credibly testified that during the March 6, 2020 Claimant was disrespectful to Mr. D[Redacted], argumentative and unprofessional, and that she interpreted Claimant's statements as threatening.

9. On March 6, 2020, Employer suspended Claimant from his employment for conduct characterized as "unprofessional conduct and veiled threats." (Ex. F)

10. On March 20, 2020, Claimant saw Pamela Wanner, M.D., at Kaiser Permanente. Claimant reported that "he has been disagreeing with general manager and has now been suspended from his job. Now requesting FMLA to deal with significant anxiety over this situation as well as caring for 3 small children." Claimant reported that he did not feel able to work due to the level of stress/anxiety on a daily basis. Dr. Wanner diagnosed Claimant with stress and depression and insomnia, and prescribed medications for these conditions. (Ex. 4).

11. On May 14, 2020 claimant Deirdre Fraller, NP, at Kaiser Permanente. Claimant reported he began having difficulty in January 2020. Claimant reported his employer began having financial difficulty and he was asked to reduce staffing. Claimant felt it was not safe. In March 2020 Claimant was required to make a 40% reduction staff which he felt was "totally unsafe," and he "couldn't let it happen." Claimant reported he tried to raise the issue with the manager by e-mail and then had a meeting with the manager and HR. Claimant noted he was suspended for insubordination in unprofessional conduct and "making veiled threats." (EX. 4).

12. Claimant reported he felt stress and anxiety but denied depression. Claimant reported he had also begun taking medication is in September 2019. Claimant's medical records indicate claim it had experienced marital difficulties beginning in 2019 which contributed to his anxiety. (EX. 4).

13. Ms. Fraller indicated claim it had a prior psychiatric history of major depressive disorder (MDD) and insomnia. Claimant's working diagnosis was a post-traumatic stress disorder, insomnia, and anxiety disorder. Claimant was provided with medications for these conditions. (Ex. 4).

14. The parties have stipulated that Claimant's average weekly wage was \$1,699.25.

15. Claimant did not sustain any physical injury arising out of or in the course of his Employment with Employer.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the

evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability Of Mental Injury

Claimant contends he sustained a mental impairment arising out of and in the course of his employment with Employer, specifically that he suffered from anxiety, insomnia and post-traumatic stress disorder related to his disagreement with Employer's decision to ask him to cut security department staffing by 40%. The Workers' Compensation Act has authorized recovery for a broad range of physical injuries but has "sharply limited" a claimant's potential recovery for mental injuries. *Mobley v. King Soopers*, WC No. 4-359-644 (ICAO, Mar. 9, 2011). Enhanced proof requirements for mental impairment claims exist because "evidence of causation is less subject to direct proof than in cases where the psychological consequence follows a physical injury." *Davidson v. City of Loveland Police Department*, WC No. 4-292-298 (ICAO, Oct. 12, 2001), *citing Oberle v. Industrial Claim Appeals Office*, 919 P.2d 918 (Colo. App. 1996). A claimant experiencing physical symptoms caused by emotional stress is subject to the requirements of the mental stress statutes. *Granados v. Comcast Corporation*, WC No. 4-724-768 (ICAO, Feb. 19, 2010); *see Esser v. Industrial Claim Appeals Office*, 8 P.3d 1218 (Colo. App. 2000), *aff'd* 30 P.3d 189 (Colo. 2001); *Felix v. City and County of Denver* W.C. Nos. 4-385-490 & 4-728-064 (ICAO, Jan. 6, 2009).

Section 8-41-301(2)(a), C.R.S. imposes additional evidentiary requirements regarding mental impairment claims. The section provides, in relevant part:

A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer. The mental impairment that is the basis of the claim must have arisen primarily from the claimant's then occupation and place of employment in order to be compensable.

The definition of "mental impairment" consists of two clauses that each contains three elements. The first clause requires a claimant to prove the injury consists of: "1) a recognized, permanent disability that, 2) arises from an accidental injury involving no physical injury, and 3) arises out of the course and scope of employment. *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023, 1030 (Colo. 2004). The second clause requires the claimant to prove the injury is: "1) a psychologically traumatic event, 2) generally outside a worker's usual experience, and 3) that would evoke significant symptoms of distress in a similarly situated worker." *Id.* The issues of whether the "psychologically traumatic event" is one "generally outside of a worker's usual experience," and of a type which would "evoke significant symptoms of distress in a worker in similar circumstances," are questions of fact. See *In re Jasso*, W.C. No. 5-057-876-01 (ICAO, Nov. 16, 2018). Section 8-41-301 (2)(c), C.R.S., further provides that a "claim of mental impairment cannot be based, in whole or in part, upon facts and circumstances that are common to all fields of employment."

Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable mental injury or impairment. To be compensable, a mental impairment must arise from an accidental injury. The evidence does not establish that any "accidental injury" occurred. The Workers' Compensation Act, § 8-40-201 (1) defines "accident" as "an unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undesigned occurrence; or the effect of an unknown cause, or the cause being known, an unprecedented consequence of it." Claimant's mental impairment (in the form of diagnosed anxiety, insomnia, and PTSD) resulted, in part, from Claimant's disagreement with Employer's direction that Claimant reduce security department staffing by 40% due to financial issues. Mr. D[Redacted] credibly testified the decision to decrease staffing at the hotel was an economic decision driven by occupancy rates and financial conditions, including a drop in hotel occupancy from 89% to 14% over a brief period of time, and decreasing hotel revenue. The ALJ concludes that Employer's decision to request that staffing be reduced in response to economic factors does not constitute an "accident" within the meaning of the Act.

Even if the decision to direct Claimant to cut his labor costs could be characterized as an "accident," a request to reduce staff, or cut costs, based on economic or financial factors is a circumstance that is common to all fields of employment. Similarly, and employee's disagreement with a business decision made by upper management is common to all fields of employment. Because a claim of mental impairment cannot be

based upon facts or circumstances common to all fields of employment, Claimant's mental impairment is not compensable under the Colorado Workers' Compensation Act.

To the extent Claimant's suspension contributed to or caused Claimant's anxiety, insomnia and PTSD, the Workers' Compensation Act specifically provides that a mental impairment resulting from a disciplinary action, termination or other similar action taken in good faith by the employer is not considered to arise out of the course of employment. The evidence established that Claimant sent emails to Mr. D[Redacted] and others which demonstrated his intent to defy Employer's direction to reduce staff, and Claimant's conduct in the March 6, 2020 meeting was reasonably perceived as insubordinate and disrespectful. Claimant's testimony also established his intent not to comply with Employer's request. The ALJ finds that Employer's decision to suspend Claimant was taken in good faith. Accordingly, to the extent Claimant experienced anxiety or distress as a result of his suspension or disciplinary action, it is not compensable as a mental impairment under the Colorado Workers' Compensation Act.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Because Claimant has failed to establish that he sustained a compensable work-related injury, his request for medical treatment is denied and dismissed.

Temporary Total Disability Benefits & Average Weekly Wage

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)).

Because Claimant has failed to establish that he sustained a compensable work-related injury, his request for temporary total disability benefits is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant failed to establish by a preponderance of the evidence that he sustained a compensable injury arising out of the course of his employment with Employer. Claimant's claim is denied and dismissed.
2. Claimant has failed to establish by a preponderance of the evidence an entitlement to medical benefits.
3. Claimant has failed to establish by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits.
4. All remaining issues are moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: November 25, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-119-454-001**

ISSUES

- Did Claimant prove he suffered a compensable injury because of a work-related motor vehicle accident on September 6, 2019?
- If Claimant proved a compensable injury, the ALJ will address the following additional issues:
- What is Claimant's average weekly wage?
- Did Claimant prove treatment from CCOM was reasonably needed to cure and relieve the effects of the injury?
- The parties agreed to reserve any issues relating to a lumbar surgery recommended by Dr. Bhatti.

FINDINGS OF FACT

1. Claimant worked for Employer as a parts delivery driver. He began the job on September 4, 2019.

2. On September 6, 2019, Claimant was involved in a rear-end motor vehicle accident on Highway 50 in Pueblo. Claimant was stopped at a red light at the intersection with Purcell Boulevard when he was hit from behind by a Ford F-350 work truck. Claimant was driving a Nissan Frontier. The tow hook on the front of the F-350 impacted the rear bumper of Claimant's vehicle and dented the metal. The airbags of Claimant's vehicle did not deploy. The responding State Patrol officer estimated less than \$1,000 damage to Claimant's vehicle. The driver of the F-350 indicated he was traveling 15 miles per hour at the time of the accident. The other driver was cited for following too closely.

3. Claimant was facing forward and unaware of the impending impact. He was "thrown forward, jerked backward . . . my torso went forward, my neck went backwards. That's about what I remember." Claimant's neck hit the headrest when his head was jerked backward.

4. Claimant felt no pain immediately after the accident. He was primarily annoyed and worried the accident would impact his job because it was only his third day of work. While he was waiting for the State Trooper to complete the accident report, Claimant started to feel "discomfort" in his low back.

5. Claimant called his manager, Joe O[Redacted], who came to the accident scene. They returned to the store after the report was completed. Mr. O[Redacted] suggested Claimant go to the emergency room, but Claimant did not want to risk taking

time off work, so Mr. O[Redacted] gave Claimant the number of a triage nurse to call instead.

6. Claimant spoke with a triage nurse, who recommended he use ice, heat, and OTC NSAIDs and pain relievers. He finished his shift and went home. Claimant's back was more painful, so he took some ibuprofen, applied ice, and lay on a heating pad.

7. Claimant's back pain was a bit worse the next morning, but he went to work anyway. The supervisor allowed him to sit in the back room between deliveries.

8. Claimant's back pain continued to worsen over the next several days. He also developed pain and stiffness in his neck. Claimant did not go to the doctor and just "soldiered through it" because he did not want to miss work or risk his job.

9. Claimant eventually requested treatment because his back and neck pain continued to get worse. Employer referred him to CCOM.

10. Claimant saw PA-C Buddy Leckie at his initial CCOM appointment on September 23, 2019. He reported pain in his low back, hips, and neck. He rated his overall pain level at 7/10. Claimant said he had no symptoms immediately after the accident, but he subsequently developed low back pain and stiffness, occasionally radiating into his legs. He also reported neck pain that worsened when he turned his head or looked over his shoulder. Claimant denied any prior back injuries. On physical examination, PA-C Leckie noted tenderness to palpation over Claimant's entire low back, hips, and bilateral trapezius muscles. Claimant moved slowly from sitting to standing, with limited range of motion. PA-C Leckie diagnosed lumbar and cervical strains and referred Claimant for physical therapy. He also gave imposed work restrictions of no lifting over 10 pounds, no overhead reaching, and no ladders.

11. Claimant returned to CCOM on October 7, 2019 and saw Dr. Daniel Olson. He reported "a lot of discomfort" across his lower back, hips, and buttock. He was attending physical therapy and reported some modalities were helpful and others aggravated his pain. Claimant appeared in mild to moderate discomfort. He had some difficulty getting up from a chair and tended to lean forward when standing. Range of motion was limited in all directions. Dr. Olson recommended Claimant continue physical therapy but also ordered pool therapy.

12. On October 16, 2019, Claimant reported some improvement in his neck pain, but no significant change in his low back pain. His overall pain level was 8/10. His main complaint was the inability to stand up straight. Dr. Olson observed Claimant had difficulty standing and could not reach a neutral position, lacking approximately 10° of extension. He was tender to palpation across the lower sacroiliac region with "a lot of tightness and tenderness." Dr. Olson ordered chiropractic treatment because Claimant was not responding to physical therapy.

13. Claimant started seeing Dr. David Vik, a chiropractor, on October 23, 2019. He told Dr. Vik he felt no pain immediately after the MVA, but his back became painful "shortly afterwards." He also noted the onset of neck pain five days after the accident.

Claimant reported constant deep, achy low back and right hip pain ranging from 5-8/10 depending on activity. The pain was interfering with his ability to sleep through the night. He also described neck pain, typically at the level of 5/10, and associated headaches. Examination of his neck and back showed palpable muscle spasm, reduced range of motion, and segmental dysfunction at multiple levels. Multiple provocative tests were positive, suggesting hip, disc, and possible lumbar nerve root pathology. Dr. Vik noted "hyperlordosis, rotational malposition and ligamentous laxity, most commonly seen in flexion type injuries typical of motor vehicle collisions." He expressed concern about Claimant's potential recovery and expected treatment would take a longer than usual to reach MMI.

14. On November 15, 2019, Claimant told PA-C Leckie the chiropractic treatment was helping but his back was still painful and stiff. Standing was the most painful posture. His cervical range of motion was improved but he still had pain when turning his head to the right. He was tender to palpation over the low back and right SI joint, with limited range of motion.

15. Claimant followed up with Dr. Olson on December 6, 2019. His back and neck pain were getting worse because additional chiropractic treatment had not been approved as recommended.

16. Claimant's back and neck pain were worse at his next visit with Dr. Olson on December 30, 2019. Dr. Olson ordered a lumbar MRI and recommended Claimant get back into treatment with Dr. Vik.

17. Claimant underwent the lumbar MRI on January 7, 2020. It demonstrated significant multilevel degeneration and disc bulges, a disc herniation at L5-S1, and a 5 mm synovial cyst at L3-4.

18. On January 20, 2020, Dr. Olson noted ongoing low back and neck pain, difficulty sitting and standing, and weakness in Claimant's legs when he walked. Dr. Olson noted the MRI demonstrated pre-existing degenerative changes, but opined, "it does appear that the car accident has aggravated his condition [and] he has not responded to conservative care to bring him back to baseline. Therefore, recommend a surgical evaluation."

19. Claimant had a surgical consult with Dr. Sana Bhatti, a neurosurgeon, on February 14, 2020. He reported 8/10 low back pain and 6/10 neck pain. He was walking with a cane. Dr. Bhatti ultimately recommended excision of the cyst at L3-4 and a decompression and fusion at L3-5.

20. Claimant had a history of low back issues before the September 6, 2019 MVA. Records from Claimant's PCP, Dr. Anaya, show references to "back pain" starting on October 12, 2015. However, despite noting back pain in the Review of Systems portion of several reports, the accompanying physical examinations repeatedly documented no tenderness to palpation of the cervical, thoracic, or lumbar spines. The first documented clinical abnormality was "lumbosacral paravertebral tenderness to palpation" on April 6,

2017. Dr. Anaya again documented lumbar tenderness to palpation in November 2017. Examinations in January, February, and August 2018 showed no tenderness to palpation.

21. October 29, 2018 was Claimant's first visit with Dr. Anaya specifically prompted by low back pain. Claimant reported, "left low back pain for last several months, and no injury." Physical examination showed some tenderness in the lumbar paravertebral region but a negative straight leg raise. Dr. Anaya diagnosed "backache" and opined, "suspect musculoskeletal, no focal neurologic deficits, however this is [sic] been a chronic problem for him and we will have an x-ray."

22. The x-rays were completed on October 30, 2018. They showed moderate multilevel lumbar spondylosis, without compression deformity or fracture, and minor anterolisthesis of L1 on L2 and L4 on L5.

23. Claimant followed up with Dr. Anaya on November 12, 2018, who noted, "[Claimant] is here because of low back pain he states is [sic] been somewhat of a chronic intermittent problem for him and he has had x-rays showed some degenerative changes no acute findings. He is wanting to get involved in PT I think this appears to be musculoskeletal. He has no focal neurological deficits, he had an x-ray which showed degenerative changes we will go ahead and get involved in PT."

24. Claimant started PT on November 13, 2018. The report states, "patient reports back pain for about one month without incident at onset." Claimant responded well to PT, and by November 19, 2018 he "denied any lower back or leg pain . . . during or following ex[ercises]." Claimant was "very pleased" with his response to therapy. On December 3, Claimant reported "no back pain." On December 6, 2018, his back pain was "much improved", and he was discharged because "does appear to have reached goals."

25. Dr. Anaya continued to list "back pain" in the review of systems on January 14, 2019 and June 12, 2019, but examination of Claimant's back showed no tenderness on both occasions.

26. Claimant injured his low back on April 24, 2019 while moving heavy stones at work with a previous employer, Site One. An examination on April 25, 2019 at UC Health Urgent Care "very minimal pain to palpation to the paraspinal muscles of the lumbar spine," and point tenderness over the right SI joint. He also reported "a twinge of pain every now and then that radiates down the posterior aspect of his right leg and no specific dermatomal distribution down to the level of his knee consistent with sciatic nerve irritation." Lumbar x-rays showed multilevel intravertebral narrowing and lower facet arthrosis, but no acute findings. He was prescribed a Medrol Dosepak and put on a 10-pound lifting restriction.

27. Claimant followed up with Dr. Cynthia Schafer at UC Health on May 2, 2019. Although his pain was improved, Dr. Schafer suggested he consider a less demanding line of work. Claimant had previously worked primarily sedentary jobs and did not regularly engage in exercise. Given his advanced age and arthritis in multiple areas of his body, Dr. Schafer thought Claimant was at risk for more serious injury if he continued with

a job that required him to lift and carry heavy rocks and other landscaping materials on a regular basis. Claimant agreed he was probably not “cut out for this kind work,” but did not want to quit because the employer had invested three months training him. He planned to stick with it through July when demand for landscaping materials was expected to taper off. Dr. Schaffer recommended he discuss the issue with his employer.

28. Claimant’s third and final appointment for the April 2019 injury was on May 16, 2019. The physical examination was entirely normal with no tenderness, swelling, or spasm of his low back, right hip, or right leg. Claimant had decided to quit the job because he was pain-free on the weekend and only had back pain with lifting and bending at work. He planned to reapply for sedentary jobs, perhaps in a call center. Dr. Schafer released Claimant at MMI with no impairment, no restrictions, and no need for maintenance treatment.

29. On June 17, 2019, Claimant saw Dr. Roger Davis, an orthopedic surgeon, regarding his right knee. Although the impetus for the evaluation was worsening knee pain, Dr. Davis also commented on Claimant’s low back: “Lumbosacral spine demonstrates limited range of motion with some tenderness paraspinal as well as into the right buttock region. Negative straight leg raise bilateral lower extremities. Right hip demonstrates some limited range of motion with internal rotation of only 15° with mild right groin pain.” Dr. Davis injected Claimant’s knee. He provided no back-related diagnosis or treatment recommendations.

30. Claimant was seen in the Parkview Hospital emergency Department on July 29, 2019 for weakness and dizziness. The report notes a history of “chronic lower back pain, but examination of his low back was “normal” with no tenderness.

31. Claimant credibly testified his low back pain in July 2019 was related to his severe knee pain. He explained, “the pain in my knee was going up into my hip and into my lower back, but it was my knee that was hurting at the time.” Respondents argue the symptoms were consistent with lumbar radiculopathy, but radicular symptoms would normally radiate from the back into the legs, not the other way around. Rather than reflecting an atypical radicular pattern, the ALJ finds the July 2019 episode of low back pain was probably related to Claimant’s right knee.

32. There is no persuasive evidence Claimant had any significant neck problems before the September 2019 MVA. He underwent a cervical MRI in 2016 that demonstrated multilevel degenerative changes, but the MRI was ordered to investigate the cause of Claimant’s vertigo, not neck pain. Claimant had cervical x-rays on January 6, 2017 and the report lists the indication as “chronic neck pain.” But there is no corresponding treatment record showing when or why Claimant was referred for cervical x-rays. Claimant was being worked up for vertigo and upper extremity neuropathy around that time, which might account for the x-rays. The only contemporaneous mention of preinjury neck symptoms in a treatment record is a November 9, 2016 report from Dr. Howe noting “very tight cervical musculature.” Even if Claimant had some fleeting neck pain in late 2016 or early 2017, there is no indication of any neck symptoms in the two and one-half years before the MVA. Claimant had multiple examinations during that time

for other medical issues and his neck was repeatedly described as “supple” and nontender.

33. Claimant saw Dr. Miguel Castrejon on June 22, 2020 for an IME at his counsel’s request. Claimant reported a constant dull pain in his right lower back radiating into his right posterior lateral leg. His pain was worse with walking, sitting, bending, and lifting. He also described a constant neck pain. Examination of Claimant’s neck demonstrated tenderness, muscle hypertonicity and spasm, and decreased range of motion. Examination of his low back showed tenderness in the paralumbar muscles at L4-S1 and around the right SI joint and mildly positive SLR on the right. Dr. Castrejon diagnosed cervical and lumbar musculoligamentous strains/sprains, element of cervical trapezial myofascial pain syndrome, right lower extremity radiculitis secondary to the L5-S1 disc herniation, and right SI joint dysfunction. He opined the MVA aggravated Claimant’s underlying pre-existing cervical and lumbar multilevel degenerative disc and joint disease. Dr. Castrejon saw no documentation of any pre-injury functional limitation or need for treatment related to Claimant’s neck. He noted Claimant’s April 2019 low back strain resolved quickly with minimal treatment. He opined the September 6, 2019 MVA triggered symptoms and a need for medical care “far and above that which would be expected from a natural progression process.” He opined lumbar surgery was premature and recommended additional evaluation and treatment before considering surgery.

34. On July 27, 2020, Dr. Castrejon authored a supplemental report after reviewing the police accident report. He opined the accident report was consistent with his understanding of the mechanism of injury gleaned from his IME. He opined “at the age of 66 one would expect for the typical individual to manifest some degree of spine degeneration. However, the extent of spondylosis for this individual is considered to have been somewhat more extensive, therefore placing the individual at greater risk for injury, disability, or impairment when compared to a similar age ‘normal’ individual.”

35. Dr. Castrejon testified at hearing consistent with his report. The fact Claimant’s neck pain developed several days after the accident did not change his opinions regarding the causal relationship.

36. Mark Passamaneck is a mechanical engineer who performed an accident evaluation for Respondents. Mr. Passamaneck opined the impact speed of 15 mph in the accident report was simply an “off-the-cuff guess” by the investigating officer. When it was brought to his attention that the 15-mph estimate was provided by the driver of the F-350, Mr. Passamaneck opined driver estimates of speed are most often incorrect. He noted photos of the at-fault vehicle show virtually no damage other than some burnishing to the tow hook on the right bumper. Claimant’s vehicle had a dent in the right bumper, but no fractured taillights, no paint transfer, and there were no documented skid marks at the scene. Mr. Passamaneck concluded the impact speed was 1-2 mph.

37. Dr. John Burris performed an IME for Respondents on August 21, 2020. He also testified via deposition consistent with his report. Dr. Burris agreed with Dr. Castrejon that the radiographic findings predated the accident and degenerative in nature. Dr. Burris stated the lumbar MRI shows advanced degenerative changes that took years to develop.

Dr. Burris opined the several-days delay in the development of neck pain means it was unlikely related to the accident. He opined the fact Claimant had a cervical MRI and x-rays in December 2016 and January 2017 means Claimant had chronic and long-standing pain in the region. He opined the kinetic energy from a vehicle crash at less than 5 mph cannot cause injury because the forces involved would not exceed the body tissues' ability to withstand that force. He opined any energy from the impact was probably absorbed by the seat cushion. He noted no objective evidence of any acute trauma or injury after the MVA. He concluded Claimant suffered no injury that required medical treatment and his subjective reports of pain are unrelated to the MVA.

38. Karin P[Redacted] testified at hearing regarding her observations of Claimant's back and neck condition before and after the accident. Ms. P[Redacted] indicated it was common to discuss Claimant's health, particularly his significant gout. She testified she had not been aware of Claimant having any neck pain before the accident, but he had occasional low back pain "if he worked too hard in the back yard or something." She testified Claimant recovered from the April 2019 work injury in "a few days, may be a week?" After that, she noticed he was improved because he was walking normally, doing his household chores, not complaining of any back pain. After the September 6 MVA, Ms. P[Redacted] observed Claimant having difficulty with basic activities such as sitting, standing, ascending and descending stairs, and lifting because of back and neck pain. She noted he was not doing his normal activities such as cooking dinner or other household chores. She testified she became worried because Claimant was not improving and the pain she observed was different than anything she had observed in the past.

39. Ms. P[Redacted]'s testimony was credible and persuasive.

40. Except for a few memory lapses, Claimant's testimony was generally credible.

41. Dr. Castrejon's opinions are credible and more persuasive than the contrary opinions offered by Dr. Burris.

42. Claimant proved he suffered compensable injuries to his low back and neck because of the September 6, 2019 MVA.

43. Claimant proved the evaluations and treatment provided by CCOM were reasonably needed to cure and relieve the effects of his injury.

44. Claimant was hired by Employer on September 4, 2019 and his first paycheck covered only three days. He continued working full time after the accident despite restrictions through November 16, 2019. Claimant's earnings during the ten full weeks from September 8 through November 16, 2019 provide a fair approximation of his earnings at the time of injury. Claimant earned \$4,266.68 during that period, which equates to an AWW of \$426.67.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g.*, *Montgomery v. HSS, Inc.*, W.C. No. 4-989-682-01 (August 17, 2016). An injury need not be dramatic to support a finding of compensability. Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment. *E.g.*, *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

A pre-existing condition does not preclude a claim for compensation and an injury is compensable if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms after an incident at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved he suffered compensable injuries to his low back and neck because of the September 6, 2019 MVA. Claimant probably suffered soft tissue strains and/or aggravated his underlying degenerative disk and joint disease. Dr. Burris' argument that the several-days delay in onset of neck pain rules out a causal connection

is not persuasive. Dr. Castrejon's analysis is credible and supported by other persuasive evidence in the record. The ALJ has also given significant weight to Ms. P[Redacted]'s credible observations regarding the significant difference in Claimant's condition before and after the MVA. Although Claimant had pre-existing degenerative changes in his cervical spine, there is no persuasive evidence of any significant preinjury neck symptomatology or treatment. And his "intermittent" preinjury low back pain was easily managed with minimal or no treatment. The November 2018 episode resolved after a few PT sessions. Similarly, the April 2019 back injury resolved in less than two weeks with no residual impairment or limitations. To the extent Claimant's low back was symptomatic at other times, those symptoms did not require any treatment or impede his ability to participate in routine activities. By contrast, Claimant's low back has been continuously symptomatic since the MVA and has reasonably prompted him to seek a variety of treatments, including medication, PT, and chiropractic manipulation. Although the forces involved in the accident may have been relatively minor, they were sufficient to precipitate significant and persistent symptoms in Claimant's neck and back. As Dr. Castrejon persuasively explained, Claimant's pre-existing degenerative conditions increased his susceptibility to injury, and it is of no consequence that the September 6, 2019 MVA may not have caused injury to a different worker.

B. The treatment provided by CCOM was reasonably necessary

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). As found, the treatment provided by CCOM was reasonably needed to cure and relieve the effects of Claimant's compensable injury.

C. Claimant's AWW is \$426.67

Section 8-42-102(2), C.R.S. provides compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). As found, Claimant's earnings during the ten full weeks from September 8 through November 16, 2019 provide a fair approximation of his earnings at the time of injury. Claimant earned \$4,266.68 during that period, which equates to an AWW of \$426.67.

ORDER

It is therefore ordered that:

1. Claimant's claim for injuries sustained on May 6, 2019 is compensable.
2. Claimant's average weekly wage is \$426.67.
3. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injuries, including but not limited to treatment provided by and on referral from CCOM.
4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable left lower extremity injuries during the course and scope of his employment with Employer on February 27, 2020.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical treatment for his February 27, 2020 industrial injuries.

FINDINGS OF FACT

1. Employer is an events rental company that leases a storage lot in Commerce City, Colorado. The storage lot is not Employer's primary business location. Claimant is a 59 year-old male who worked for Employer as a truck driver and mechanic. Claimant contends that he injured his left lower extremity while attempting to start a truck on the storage lot during the course and scope of his employment on February 27, 2020.

2. Claimant testified that he resided in a motel for two weeks prior to February 27, 2020. He had just moved his belongings to Employer's storage lot on the morning of the incident. Claimant specified that he checked out of a nearby motel at 10:00 a.m. and packed up his clothes, blankets, television and cat. He placed his belongings in Employer's front office building located on the storage lot. He testified that he had been living in a motor home on Employer's property from August 2018 until he was instructed to vacate the premises in the beginning of January 2020. However, Claimant was advised that he had to leave because the property landlord notified Employer that Commerce City law prohibited Claimant from living on the property.

3. Claimant testified that he was assigned to drive a red Volvo Semi truck on February 27, 2020. He specifically remarked that he had been directed to drive the red Volvo semi truck to move trailers between the company's main location and the storage lot. Claimant detailed that he injured his left lower extremity while attempting to start the truck. He explained that, after he left his belongings in the office on February 27, 2020 at about 10:30 a.m., he went "out to do maintenance on the truck and get it started so it would warm up." He testified that this took about an hour. Claimant remarked that he did not clock in for work because his intention was to perform maintenance, get the truck started and text Human Resources and Sales Director Arielle W[Redacted] that he was "about ready to start."

4. Claimant detailed that the red Volvo semi truck "had its issues" but was in full working order. He commented that the dashboard lights did not function, the compression release or Jake break did not work, the pig tail for the electric on the trailer

only worked on one side because the wires had been cut, and the starter button did not operate. Claimant explained that, as he was trying to start the truck from under the hood, he was standing next to the front frame rail behind the tire so that he could access a wiring harness. While standing and holding the wiring harness, the engine fired and knocked him down. Claimant specified that the truck tire bumped him into the fender and some steel fencing. The front tire of the truck then ran over Claimant's left foot. He testified that, after he blacked out and woke, he took the truck out of gear and noticed that his gray sweatpants were soaked in blood. Claimant then entered the truck and drove to North Suburban Hospital for medical treatment. He remarked that he was in the process of "bleeding out" and did not have a chance to call anyone.

5. At North Suburban Medical Center Claimant reported pain in the hollow at the back of his left knee. Providers noted "a visible skin deformity" with "exposed subcutaneous muscles and vascular structures." Claimant also had a laceration between his toes with active venous oozing.

6. The record reveals that Claimant did not clock in or earn any wages on February 27, 2020. Nevertheless, Claimant explained that, instead of using a punch clock, he sent text messages to Ms. W[Redacted] stating when he began and ended his work shifts. Records reflect that Claimant worked hourly and his time schedule varied. For example, he did not work from February 1, 2020 until February 10, 2020. On February 10, 2020 he worked from 12:15 p.m. to 8:30 p.m. and on February 13, 2020 he only worked from 12:50 p.m. to 1:25 p.m. However, the absence of any work time entries on February 27, 2020 reflects that Claimant was not performing job duties for Employer.

7. Claimant explained that part of his job duties involved maintenance, construction and driving equipment back and forth from Employer's lot to various events. However, Claimant does not have a driver's license. Employer was required to pay out-of-pocket expenses for damages incurred during Claimant's motor vehicle accident in July 2019. As a result of the accident Employer discovered that Claimant did not have a driver's license. In fact, Claimant acknowledged that he had been taken off Employer's insurance policy.

8. Claimant did not call 9-1-1 on the date of injury or contact Employer on February 27, 2020. Employer was unaware that Claimant had been injured at work for at least two weeks after the accident. Claimant underwent several surgeries and was discharged to a rehabilitation facility on March 9, 2020. Claimant contacted Employer after his third surgery and sent a photograph of his foot. He remained in the rehabilitation center until his discharge on March 24, 2020. Claimant acknowledged that he did not report a work related injury until after his release from the rehabilitation hospital when he was told twice that he could not live on Employer's storage lot.

9. The record also reveals that Claimant was likely living on Employer's storage lot around the time of his accident. Claimant testified that when he was released from the rehabilitation facility he was dropped off directly at Employer's storage lot. He remarked that he did not believe that he needed permission to be on the premises and

had keys to the office building on the property. Notably, Claimant's intake form from Vibra Rehabilitation Hospital on March 9, 2020 provided that "he has been living in a motel and then recently moved to a warehouse where he had been staying and is still actively working as a truck driver." Another reference from Vibra specifies that Claimant had been "living in a motel on ground level; had been staying in warehouse after slipping on ice for about 1 week before the incident. Pt states not sure where he will return to upon d/c."

10. Employer's Chief Financial Officer Alya B[Redacted] testified that she has worked for Employer since July of 1999. Ms. B[Redacted] remarked that she was very involved in the day-to-day operations of the company. She commented that her job included managing Workers' Compensation claims with Insurer. Ms. B[Redacted] explained that medical providers usually contact her for a claim number when they are providing service to an injured worker, but no one contacted her for a claim number during Claimant's treatment. In fact, Ms. B[Redacted] testified that she did not learn that Claimant had been injured until she heard a conversation between Owner Mr. W[Redacted] and Claimant over the speaker phone about two weeks after February 27, 2020.

11. Ms. B[Redacted] explained that it did not make sense that Claimant was assigned to drive the red Volvo semi truck on February 27, 2020 because it was not licensed or insured. She noted that the red Volvo was located in Employer's storage lot because it was not actively used by the company. In contrast, Employer's active fleet was located at the main office location. Furthermore, Ms. B[Redacted] remarked that the red Volvo was not road worthy. She also noted that Employer had active trucks and individuals who were licensed to drive them. Ms. B[Redacted] remarked that there was no need for Claimant to transfer trailers on February 27, 2020 because Employer had an outside source performing the work. Finally, she noted that Employer became aware that Claimant did not have a drivers' license after he was involved in a motor vehicle accident and damages would not be covered by their insurance. Therefore, Claimant would not have been directed to drive the red Volvo on February 27, 2020.

12. Ms. W[Redacted] testified that there was no reason for Claimant to be driving a truck on the date of injury. She explained that Claimant had been assigned to work on the office building on the storage site. He was instructed to perform repairs, painting, ripping out carpet, and other tasks designed to prepare the building for use as an office. Ms. W[Redacted] explained that the red Volvo semi truck was not one of Employer's active trucks in the inventory. She also confirmed that Claimant was not driving vehicles because he had been removed from Employer's insurance policy. Ms. W[Redacted] also noted that Employer had hired an outside company to perform the work Claimant testified he was assigned to do on February 27, 2020.

13. Ms. W[Redacted] explained that employees are directed to report Workers' Compensation claims to her. She then investigates the claim and provides the information to Ms. B[Redacted]. All employees are informed of the process at the time of hire. Ms. W[Redacted] remarked that she was unaware Claimant had alleged a work injury. She explained that she had conversations with Claimant after he had been

released from the rehabilitation hospital but he never mentioned a Workers' Compensation claim. Because Claimant had not clocked in on February 27, 2020 and had not reported a claim, Ms. W[Redacted] did not investigate the matter as a Workers' Compensation claim or file a First Report of Injury. She thus did not instruct Ms. B[Redacted] to file a Workers' Compensation claim.

14. Claimant has failed to demonstrate it is more probably true than not that he suffered compensable left lower extremity injuries during the course and scope of his employment with Employer on February 27, 2020. Initially, Claimant testified that he was assigned to drive a red Volvo Semi truck from Employer's storage lot on February 27, 2020. He specifically remarked that he had been directed to drive the red Volvo semi truck to move trailers between the company's main location and the storage lot. Claimant detailed that he injured his left lower extremity while attempting to start the truck. However, despite Claimant's testimony, the bulk of the evidence demonstrates that Claimant was not performing job duties for Employer on February 27, 2020 and thus did not suffer injuries during the course and scope of employment.

15. The record reveals a multitude of reasons demonstrating that Claimant did not suffer injuries while working for Employer on February 27, 2020. Reviewing Claimant's testimony and the circumstances surrounding the incident, Claimant's account is not persuasive. Claimant did not clock in on or earn any wages on February 27, 2020. Records reflect that Claimant worked hourly and his time schedule varied daily. However, Claimant's time sheet reflects that he did not work any hours on February 27, 2020. Furthermore, Claimant explained that part of his job duties involved maintenance, construction and driving equipment back and forth from Employer's lot to various events. However, Claimant did not have a drivers' license and Employer hired an outside service to move equipment. In fact, Claimant acknowledged that he had been taken off Employer's insurance policy. Moreover, the evidence reveals that the red Volvo truck was neither insured nor road-worthy. Finally, Claimant did not report any injuries to Employer until at least two weeks after the accident.

16. The testimony of Employer witnesses also establishes that Claimant did not likely suffer left lower extremity injuries while working for Employer on February 27, 2020. Employer's Chief Financial Officer Ms. B[Redacted] credibly explained that it did not make sense that Claimant was assigned to drive the red Volvo semi truck on February 27, 2020 because it was not licensed or insured. She noted that the red Volvo was located in Employer's storage lot because it was not actively used by the company and not road worthy. In contrast, Employer's active fleet was located at the main office location. Ms. B[Redacted] also noted that Employer had trucks and individuals licensed to drive them. She also remarked that there was no need for Claimant to transfer trailers on February 27, 2020 because Employer had an outside service to perform the work. Finally, Ms. B[Redacted] noted that Employer became aware Claimant did not have a drivers' license after he was involved in a motor vehicle accident and damages would not be covered under their insurance policy. For the preceding reasons, Claimant would not have been directed to drive the red Volvo on February 27, 2020.

17. Employer's Human Resources and Sales Director Ms. W[Redacted] also testified that there was no reason for Claimant to be driving a truck on the date of injury. She explained that Claimant was assigned to work on the office building on the storage site. He was instructed to perform repairs, painting, ripping out carpet, and other tasks designed to prepare the building for use as an office. Ms. W[Redacted] explained that the red Volvo semi truck was not one of Employer's active trucks in the inventory. She also confirmed that Claimant was not driving vehicles because he had been removed from Employer's insurance policy. Moreover, Employer hired an outside company to perform the work that Claimant asserted he was assigned to complete on February 27, 2020. Ms. W[Redacted] thus summarized that it simply did not make sense and would not benefit Employer to have Claimant drive the red Volvo and haul trailers on February 27, 2020. Ms. W[Redacted] also detailed that she was unaware Claimant was alleging a work injury because she had conversations with Claimant after he was released from the rehabilitation hospital and he never mentioned a Workers' Compensation claim. Because Claimant had not clocked in on February 27, 2020 and failed to report a claim, Ms. W[Redacted] did not investigate the matter as a Workers' Compensation claim or file a first report of injury.

18. As the preceding testimony reflects, there are a myriad of reasons demonstrating that it is not likely Claimant was working on the red Volvo truck for Employer on February 27, 2020. Instead, the evidence reveals that Claimant likely used Employer's storage lot property for a residence before and after the February 27, 2020 accident. He was thus present on the storage lot property frequently when he was not working. In fact, when Claimant was released from the rehabilitation facility, he was dropped off directly at Employer's storage lot. He remarked that he did not believe that he needed permission to be on the premises and had keys to the office building on the property. In fact, Claimant acknowledged that he did not report a work related injury until after he was released from the rehabilitation hospital when he was told twice that he could not live on Employer's storage lot. Because Claimant was likely not working for Employer when he was injured on February 27, 2020, his injuries did not have a connection to his work-related functions. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered compensable left lower extremity injuries during the course and scope of his employment with Employer on February 27, 2020. Initially, Claimant testified that he was assigned to drive a red Volvo Semi truck from Employer's storage lot on February 27, 2020. He specifically remarked that he had been directed to drive the red Volvo semi truck to move trailers between the company's main location and the storage lot. Claimant detailed that he injured his left lower extremity while attempting to start the truck. However, despite Claimant's testimony, the bulk of the evidence demonstrates that Claimant was not performing job duties for Employer on February 27, 2020 and thus did not suffer injuries during the course and scope of employment.

6. As found, the record reveals a multitude of reasons demonstrating that Claimant did not suffer injuries while working for Employer on February 27, 2020. Reviewing Claimant's testimony and the circumstances surrounding the incident, Claimant's account is not persuasive. Claimant did not clock in on or earn any wages on February 27, 2020. Records reflect that Claimant worked hourly and his time schedule

varied daily. However, Claimant's time sheet reflects that he did not work any hours on February 27, 2020. Furthermore, Claimant explained that part of his job duties involved maintenance, construction and driving equipment back and forth from Employer's lot to various events. However, Claimant did not have a drivers' license and Employer hired an outside service to move equipment. In fact, Claimant acknowledged that he had been taken off Employer's insurance policy. Moreover, the evidence reveals that the red Volvo truck was neither insured nor road-worthy. Finally, Claimant did not report any injuries to Employer until at least two weeks after the accident.

7. As found, the testimony of Employer witnesses also establishes that Claimant did not likely suffer left lower extremity injuries while working for Employer on February 27, 2020. Employer's Chief Financial Officer Ms. B[Redacted] credibly explained that it did not make sense that Claimant was assigned to drive the red Volvo semi truck on February 27, 2020 because it was not licensed or insured. She noted that the red Volvo was located in Employer's storage lot because it was not actively used by the company and not road worthy. In contrast, Employer's active fleet was located at the main office location. Ms. B[Redacted] also noted that Employer had trucks and individuals licensed to drive them. She also remarked that there was no need for Claimant to transfer trailers on February 27, 2020 because Employer had an outside service to perform the work. Finally, Ms. B[Redacted] noted that Employer became aware Claimant did not have a drivers' license after he was involved in a motor vehicle accident and damages would not be covered under their insurance policy. For the preceding reasons, Claimant would not have been directed to drive the red Volvo on February 27, 2020.

8. As found, Employer's Human Resources and Sales Director Ms. W[Redacted] also testified that there was no reason for Claimant to be driving a truck on the date of injury. She explained that Claimant was assigned to work on the office building on the storage site. He was instructed to perform repairs, painting, ripping out carpet, and other tasks designed to prepare the building for use as an office. Ms. W[Redacted] explained that the red Volvo semi truck was not one of Employer's active trucks in the inventory. She also confirmed that Claimant was not driving vehicles because he had been removed from Employer's insurance policy. Moreover, Employer hired an outside company to perform the work that Claimant asserted he was assigned to complete on February 27, 2020. Ms. W[Redacted] thus summarized that it simply did not make sense and would not benefit Employer to have Claimant drive the red Volvo and haul trailers on February 27, 2020. Ms. W[Redacted] also detailed that she was unaware Claimant was alleging a work injury because she had conversations with Claimant after he was released from the rehabilitation hospital and he never mentioned a Workers' Compensation claim. Because Claimant had not clocked in on February 27, 2020 and failed to report a claim, Ms. W[Redacted] did not investigate the matter as a Workers' Compensation claim or file a first report of injury.

9. As found, as the preceding testimony reflects, there are a myriad of reasons demonstrating that it is not likely Claimant was working on the red Volvo truck for Employer on February 27, 2020. Instead, the evidence reveals that Claimant likely used Employer's storage lot property for a residence before and after the February 27,

2020 accident. He was thus present on the storage lot property frequently when he was not working. In fact, when Claimant was released from the rehabilitation facility, he was dropped off directly at Employer's storage lot. He remarked that he did not believe that he needed permission to be on the premises and had keys to the office building on the property. In fact, Claimant acknowledged that he did not report a work related injury until after he was released from the rehabilitation hospital when he was told twice that he could not live on Employer's storage lot. Because Claimant was likely not working for Employer when he was injured on February 27, 2020, his injuries did not have a connection to his work-related functions. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant did not suffer compensable left lower extremity injuries while working for Employer on February 27, 2020. His request for Workers' Compensation benefits is thus denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <https://oac.colorado.gov/resources/oac-forms>.*

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on June 16, 2020.

FINDINGS OF FACT

1. Employer is a landscape company owned by Duane O[Redacted]. On May 23, 2020 Claimant began working for Employer. His job duties involved performing landscaping duties and associated construction work. Claimant also supervised a work crew.

2. On June 16, 2020 Mr. O[Redacted], Claimant and members of his work crew arrived at a customer's home to complete a project. While at the home, Mr. O[Redacted] discussed deck repairs with the homeowner. The homeowner agreed to the construction.

3. In preparation for the repairs, Claimant began moving a large barbeque grill off the deck. Claimant explained that as he touched the first step off the deck, his right foot fell through the wood. He felt his right knee "push out" and heard a popping sound. He noted that both Mr. O[Redacted] and the homeowner witnessed the incident.

4. On the day of the accident Claimant visited the Emergency Department at the University of Colorado Hospital-Aurora Central. Claimant recounted that he "injured his right knee just prior to arrival when he was carrying something off of a deck and the stair broke and he landed with his right knee fully extended." A physical examination by Benjamin Albertus Busch, D.O. revealed tenderness to the medial collateral ligament and pain with stressing of the medial meniscus. X-rays did not reflect any fractures or dislocation. Dr. Busch referred Claimant to orthopedics, provided a prescription for Norco and Naproxen, and placed him in a knee immobilizer. He also gave Claimant crutches and a work note. Claimant remarked that he contacted Mr. O[Redacted] from the hospital to apprise him of the injuries.

5. On June 17, 2020 Claimant reported to Employer's work yard. Mr. O[Redacted] immediately terminated Claimant's employment.

6. Claimant testified that, although his initial symptoms involved his right knee, he subsequently developed pain in his right hip and lower back areas. He continued to seek medical treatment.

7. On June 30, 2020 Claimant returned to the Emergency Department at the University of Colorado Hospital-Aurora Central. Claimant reported pain to his right medial knee that radiated down to his right calf into his foot. He also mentioned lower back pain that started two to three days after his June 16, 2020 accident.

8. On August 24, 2020 Claimant visited UC Health CU Sports Medicine and reported right knee pain. Lakshmi Karra, M.D. M.S. recorded that Claimant suffered an approximately 4-5 foot fall from a balcony while moving a heavy grill on June 16, 2020. Claimant specifically felt his right knee bend “backwards and inwards.” He experienced a “pop” when he moved his right knee back into place. Dr. Karra noted that Claimant reported tenderness at the medial aspect of his right knee and occasional mechanical symptoms of catching/locking. A physical examination of the right knee revealed a trace effusion, MCL laxity and medial joint line tenderness. Dr. Karra ordered a right knee MRI without contrast.

9. On August 25, 2020 Claimant underwent a right knee MRI at UC Health Radiology. The imaging reflected a “clinical suspicion for medial meniscus and MCL injury following a fall from a balcony in mid June.” Claimant testified that he has been advised that he requires right knee surgery as a result of his June 16, 2020 injuries.

10. Employer did not possess Workers’ Compensation insurance on June 16, 2020. Employer has also refused to accept financial responsibility for Claimant’s medical bills as a result of the June 16, 2020 accident.

11. Claimant has established that it is more probably true than not that he sustained compensable injuries to his right lower extremity and lower back during the course and scope of his employment with Employer on June 16, 2020. Claimant credibly testified that on June 16, 2020 he was moving a barbeque grill off a deck while working for Employer. He explained that as he touched the first step off the deck his right foot fell through the wood. Claimant felt his right knee “push out” and heard a popping sound. He subsequently developed lower back symptoms as a result of the accident. The medical records corroborate Claimant’s account because they consistently specify that Claimant suffered a right knee injury while moving a large grill and later developed lower back pain. Medical records also reflect right medial meniscus and MCL injuries that require surgical intervention. Employer did not possess Workers’ Compensation insurance on June 16, 2020 and has refused to accept financial responsibility for Claimant’s medical bills as a result of the accident. Based on Claimant’s credible testimony and a review of the record, Claimant suffered a disability that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer. Claimant is thus entitled to receive Workers’ Compensation benefits.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either

the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. As found, Claimant has established by a preponderance of the evidence that he sustained compensable injuries to his right lower extremity and lower back during the course and scope of his employment with Employer on June 16, 2020. Claimant credibly testified that on June 16, 2020 he was moving a barbeque grill off a deck while working for Employer. He explained that as he touched the first step off the deck his right foot fell through the wood. Claimant felt his right knee "push out" and heard a popping sound. He subsequently developed lower back symptoms as a result of the accident. The medical records corroborate Claimant's account because they consistently specify that Claimant suffered a right knee injury while moving a large grill and later developed lower back pain. Medical records also reflect right medial meniscus and MCL injuries that require surgical intervention. Employer did not possess Workers' Compensation insurance on June 16, 2020 and has refused to accept financial responsibility for Claimant's medical bills as a result of the accident. Based on Claimant's credible testimony and a review of the record, Claimant suffered a disability

that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer. Claimant is thus entitled to receive Workers' Compensation benefits.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable right lower extremity and lower back injuries while working for Employer on June 16, 2020. Claimant is thus entitled to receive Workers' Compensation benefits.
2. Employer failed to carry Workers' Compensation insurance on June 16, 2020.
3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <https://oac.colorado.gov/resources/oac-forms>.*

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-116-760-002**

ISSUES

- Did Claimant prove she suffered a compensable injury on August 1 or August 2, 2019?
- If Claimant proved a compensable injury, the ALJ will address the following issues:
- Is Claimant entitled to reasonably necessary medical treatment to cure and relieve the effects of her injury, including treatment at Rose Medical Center emergency department and treatment from Dr. Jesse Sutherland?
- What is Claimant's average weekly wage?
- Is Claimant entitled to TTD benefits commencing August 2, 2019?
- Is Employer subject to penalties for failure to carry workers' compensation insurance coverage on Claimant's alleged date of injury?

FINDINGS OF FACT

1. Employer operates a Shell gas station and convenience store in Thornton, CO. Claimant worked for Employer as a cashier and clerk. Claimant's duties include ringing up customer sales, stocking product, and keeping the store clean. Occasionally, Claimant emptied trash from the outside receptacles.

2. Claimant alleges a low back injury on August 1, 2019.¹ She testified she started work at 5:00 AM that day. She testified she lifted a heavy bag of garbage left over from the previous night shift. She heard a pop in her back and felt pain. She testified she worked for a few hours until her boss, Ms. A[Redacted], sent her home at approximately 11:30 AM.

3. Employer submitted into evidence a text message Claimant sent to Ms. A[Redacted] at 4:16 AM on August 1, 2019. The message stated,

I see you called my car won't start but my niece said I can use her car so I will be there soon unless you don't need me

4. Claimant testified her boyfriend, Donald M[Redacted], gave her a ride to work that morning. Mr. M[Redacted] testified at hearing and corroborated Claimant's testimony.

¹ Claimant initially listed August 2, 2019 on the Workers' Claim for Compensation form. But at hearing, she testified the injury actually occurred on August 1, 2019. Nevertheless, the ALJ has considered whether the preponderance of evidence supports a compensable injury on either day.

5. Claimant sought treatment at the Rose Medical Center on August 2, 2019. The report states, "The patient states she injured her back while picking up trash at work (Shell station) yesterday morning." Examination showed pain to palpation in the paraspinal lumbar area, worse on the right side. The ER physician diagnosed "musculoskeletal back pain." He prescribed Valium, tramadol, and a Medrol Dosepak, and advised Claimant to return to the emergency department if her condition worsened.

6. Claimant returned to the emergency department on August 6, 2019 with complaints of worsening back pain and leg weakness. Claimant reported, "[she] was lifting trash at work 5 days ago and while twisting her back heard a pop." She underwent a lumbar MRI, which showed multilevel degenerative changes but no acute injury. The ER physician explained to Claimant the MRI showed nothing acute and her neurological examination was "reassuring." He diagnosed with "back pain" and discharged Claimant with instructions to return if her symptoms worsened.

7. Claimant saw her PCP, Dr. Jesse Sutherland, on August 8, 2019. The report indicates she "presented for follow-up after being seen at Rose last Thursday after injuring back. Hurd popping and back when lifting trash can. Has had no improvement in back pain since ER visit. Had an MRI at Rose. This is happened before; one month ago occurred but then improved in two days." Examination of her back showed tenderness and pain with twisting and bending. Dr. Sutherland diagnosed acute low back pain due to trauma. He prescribed Valium and Percocet, and instructed Claimant to return in a week. Claimant followed up with Dr. Sutherland on August 15, 2019. The report again notes she "presented for follow-up after being seen at Rose on August 6, 2019 after injuring her back a few days before. Heard popping and back when lifting trash can."

8. Employer disputes that Claimant worked on August 1, 2019. Ms. A[Redacted] testified she opened the store because Claimant could not come in due to car trouble. Ms. A[Redacted] testified she and Ms. G[Redacted] worked together the morning of August 1.

9. Ms. G[Redacted] testified at hearing and credibly corroborated Ms. A[Redacted]'s testimony they worked together on August 1, 2019. Claimant did not report to work that day.

10. Employer maintains "Daily Shift Report" forms documenting lottery ticket sales each day. The cashiers identify lottery tickets by number throughout each shift. Each cashier maintains their own log showing tickets they sold that day.

11. Employer submitted into evidence multiple Daily Shift Reports dating to April 2019. The last Shift Report form completed by Claimant was dated July 28, 2019. The logs from July 29, July 30, and July 31, 2019 were completed by other employees. The logs from August 1, 2019 (the alleged date of injury) were completed by Ms. A[Redacted] and Ms. G[Redacted] only. The logs from August 2 were completed by "Thomas," and "Joyce."

12. Each cashier logs into the cash registers with a unique password. The sales receipts printed by the registers show the cashiers' name or assigned number. Claimant was cashier #2.

13. Employer submitted into evidence multiple register receipts from July 28, 2019 through August 2, 2019. The last sales receipt showing Claimant's name or cashier number is dated July 28, 2019. Her name or number do not appear on any receipt from July 29, July 30, July 31, August 1, or August 2.

14. Claimant was paid every two weeks. Her paystub for the period July 15, 2019 through July 28, 2019 shows 15 hours of work. Claimant was also paid for 6.5 hours in the pay period from July 28, 2019 through August 11, 2019. Claimant points to the last paycheck as evidence she worked on August 1. But Ms. A[Redacted] credibly explained the 6.5 hours was intended to remedy an oversight for work done during the previous pay period. Claimant and Mr. M[Redacted] washed the parking lot outside of her normal shift on July 27, 2019. Because she was not clocked in when she washed the parking lot, the hours were not captured by the regular payroll process. Ms. A[Redacted] later realized she had forgotten to pay Claimant for the extra hours, and issued the paycheck for 6.5 hours. Ms. A[Redacted]'s testimony is corroborated by a note on the July 27 Daily Shift Report that states, "Thanks [Claimant] for washing the parking lot."

15. Claimant failed to prove she suffered a compensable injury on August 1 or August 2, 2019. The preponderance of persuasive evidence shows Claimant's last day worked was July 28, 2019. Claimant did not work on August 1 or August 2, 2019.

CONCLUSIONS OF LAW

To establish a compensable claim, a claimant must prove she suffered an injury arising out of and in the course of employment. Section 8-41-301(1)(b); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The "course of employment" element requires an injury occur within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). A claimant must prove entitlement to benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

As found, Claimant failed to prove she suffered a compensable injury on August 1 or August 2, 2019. The preponderance of persuasive evidence shows Claimant's last day worked was July 28, 2019. Claimant did not work on August 1 or August 2, 2019 and could not have suffered a compensable injury on either day.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: December 4, 2020

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-087-500-004**

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable injury arising out of the course and scope of his employment with Employer.
2. Whether Claimant proved by a preponderance of the evidence that he is entitled to payment of medical expenses.
3. Whether Claimant proved by a preponderance of the evidence that he is entitled to temporary partial disability benefits.
4. Whether Claimant proved by a preponderance of the evidence that he is entitled to permanent partial disability benefits.
5. Whether Claimant proved by a preponderance of the evidence that he is entitled to an award for disfigurement.

PROCEDURAL HISTORY

1. On November 4, 2019, Claimant filed an Application for Hearing in WC 5-087-500-003. The Application for Hearing was mailed to Employer at 1010 S. Joliet St., Aurora, CO 80012. On January 29, 2020, attorney Eduardo [Redacted], Esq., entered his appearance in that matter on behalf of Respondents and indicated his address as 1010 S. Joliet St., Suite 211, Aurora, CO 80012.

2. Claimant and Employer previously were set for hearing on March 24, 2020 in WC 5-087-500-003. The hearing was vacated by stipulation of the parties and an Order from ALJ Michelle Jones on March 23, 2020.

3. In the present matter, WC 5-087-500-004, Claimant filed an Application for Hearing on July 22, 2020 and mailed the Application to Hearing to Employer to 1010 S. Joliet St., Aurora, CO 80012.

4. On August 10, 2020, the Office of Administrative Courts mailed a Notice to Set to Employer at 1010 S. Joliet St., Aurora, CO 80012 and to Mr. [Redacted] also at 1010 S. Joliet St., Aurora, CO 80012. The Notice to Set was returned by the United States Postal Service notated as "unable to forward."

5. On September 9, 2020, the Office of Administrative Courts mailed a Notice of Hearing to Employer at 1010 S. Joliet St., Aurora, CO 80012 and 1838 S. Olathe St., Aurora, CO 80017.

6. On October 16, 2020, Claimant mailed a copy of his Case Information Sheet for the hearing to Employer at 1838 S. Olathe St., Aurora CO 80017, and to Mr. [Redacted] at 1010 S. Joliet St., Aurora, CO 80017.

7. Employer has not entered an appearance in this matter and did not appear for the hearing that took place on November 3, 2020.

FINDINGS OF FACT

1. Claimant was employed by Employer in November 2017. Claimant earned \$18.00 per hour and worked approximately 40 hours per week.

2. In November 2017, while installing a furnace while working for Employer, Claimant sustained a laceration to the index finger on his left hand while operating a bandsaw. Claimant was unable to state the exact date of the injury.

3. Claimant testified that he drove to urgent care and received 23 stitches in his finger. Claimant was unable to identify with the name of the urgent care he visited, other than to testify that it was on Mississippi Avenue and Chambers. Claimant did not submit medical records or other documentation from the urgent care where he received stitches. Claimant also testified that his finger was “broken.” Claimant testified that his medical expenses for urgent care were \$5,773.64, which correlate with the amount adjusted from Claimant’s medical bills for an emergency room visit on July 28, 2018, as discussed below.

4. Claimant testified that Employer did not have workers’ compensation insurance and did not pay for any of Claimant’s medical treatment. Claimant testified that he “filled out paperwork” for Employer but was unclear on the paperwork completed. Claimant testified that he provided his medical bills and medical records to Employer (through Employer’s attorney) and these were returned to Claimant.

5. Claimant testified that, as a result of his injury, he missed two days of work, and returned on restricted duty. Claimant did not submit medical records from his urgent care visit. Claimant continued to work for Employer for an additional eight months and continued to earn \$18.00 per hour. Approximately eight months after Claimant’s injury, voluntarily terminated his employment with Employer.

6. Claimant submitted medical reports from two dates: June 4, 2018, and July 28, 2018. Claimant also submitted photographs of a scar on his left index finger. The submitted records and photographs were admitted as Exhibit 1.

7. On June 4, 2018, Claimant was seen at the Medical Center of Aurora emergency department for a complaint of right flank pain and lower back pain. Claimant submitted only pages 1 and 2 of a six-page record, and associated billing information. The medical record from June 4, 2018 does not mention Claimant’s index finger or his work-related injury. The billing information indicates Claimant incurred medical expenses of \$2,208.01 for treatment on June 4, 2018. Claimant did not testify how his right flank pain and lower back pain was related to his November 2017 work injury.

8. On July 28, 2018, Claimant was seen at the Medical Center of Aurora emergency department. Claimant reported he had pinched his left index finger at work ten days earlier, and then again two days later. Claimant reported swelling and pain at the end of his finger. Claimant reported a history of a laceration at that spot. The ER Physician, Barry Sandler, M.D., diagnosed Claimant with an abrasion, abscess, neurovascular injury and paronychia (inflammation of skin around the nail). Although Claimant had previously injured this location, Claimant did not testify or offer other evidence as to how his pinched finger was related to or caused by his November 2017 work-related injury. Claimant incurred medical expenses in the amount of \$5,975.00 for his emergency room visit on July 28, 2017. The hospital medical bill indicates that \$5,773.64 was contractually adjusted and deducted from Claimant's bill, leaving a balance of \$201.36.

9. Claimant testified and demonstrated that he has decreased range of motion in his left index finger. Claimant did not present testimony or evidence that any physician has provided him with an impairment rating. Claimant testified that no physician, other than at the urgent care on his initial date of treatment indicated that he had any permanent disability as a result of his work-related injury.

10. Claimant has injury-related disfigurement consisting of two scars of approximately ½ inch on his left index finger. The ALJ finds Claimant should be awarded \$200.00 for disfigurement.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential*

Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). Proof of causation is a threshold requirement which an injured employee must establish by a preponderance of the evidence before any compensation is awarded. The question of causation is generally one of fact for determination by the ALJ." *Faulkner v. Industrial Claim Appeals*, 12 P.3d 844, (Colo. App. 2000)

Claimant has proven by a preponderance of the evidence that he sustained a work-related injury to his left index finger in November 2017, in the form of a laceration of his finger. Claimant credibly testified that he sustained a laceration of his left index finger while installing a furnace while working for Employer.

Reasonable and Necessary Medical Treatment.

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. See *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id.*, citing *Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970). However, when a later injury occurs as the result of another independent intervening cause, no compensability exists. *Owens, supra*, citing *Post Printing & Publishing Co., supra*. Whether a particular condition is the result of an independent intervening cause is a question of fact for resolution by the ALJ. *Faulkner, supra*; *Owens*, 49 P.3d at 1188-89.

Claimant has established by a preponderance of the evidence that the medical treatment he received at the unidentified urgent care facility was reasonable and necessary. Claimant received stitches in his finger to address a laceration of his finger. Claimant has failed to establish that any other specific medical treatment was reasonable, necessary, or related to his November 2017 injury.

Claimant has failed to establish by a preponderance of the evidence an entitlement to additional medical benefits. Claimant's emergency room visit on June 8, 2018 was for flank pain, unrelated to his November 2017 injury. Claimant failed to provide any evidence to establish how the June 8, 2018 emergency room visit was related to his work-related finger laceration. Similarly, Claimant has failed to establish that his July 28, 2018 emergency room visit was causally related to his November 2017 work-injury. The medical records indicate that Claimant pinched his left index finger sometime in July 2018, and subsequently developed an abscess. The evidence does not establish that this injury was related to the November 2017 injury, other than the fact that it was to the same finger. The subsequent injury was an independent intervening cause. Because Claimant's medical treatment on June 8, 2018 and July 28, 2018 was not related to his work-related injury, Respondents are not liable for the expenses associated with this treatment, and Claimant is not entitled to medical benefits for these treatments.

TEMPORARY DISABILITY BENEFITS

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-103 (1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has *caused* the disability and consequent partial wage loss. Section 8-42-103(1), C.R.S.; *Safeway Stores, Inc. v. Husson*, 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are

designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

Claimant has failed to establish by a preponderance of the evidence that he is entitled to temporary disability benefits. Claimant testified that he returned to work two days following his injury in November 2017, and that he continued to work to work 40 hours per week after returning. Claimant did not present evidence that he was “disabled” for three or more work shifts and did not present evidence that he sustained a difference in earnings after returning to work. Consequently, Claimant failed to meet his burden of establishing that he sustained an industrial injury causing a disability lasting more than three works shirts, and that the disability resulted in an actual wage loss.

PERMANENT PARTIAL DISABILITY BENEFITS

Under section 8-42-107(1)(a), when an injury results in permanent medical impairment, and the employee has an injury or injuries enumerated in the schedule specified in § 8-42-107(2), C.R.S., the employee is limited to the permanent impairment benefits specified in the schedule. The loss of an index finger at various levels is included within the scheduled injuries. § 8-42-107(2)(g-j), C.R.S. Entitlement to permanent impairment benefits requires that an authorized treating physician determine that the claimant has reached maximum medical improvement as defined in § 8-40-201 (11.5), C.R.S. The Workers’ Compensation Act requires that the claimant receive a medical impairment rating, which is then to be applied to the scheduled injury to determine permanent partial disability benefits. § 8-42-107(8)(d), C.R.S.

Claimant has failed to establish by a preponderance of the evidence that he is entitled to permanent disability benefits. Although Claimant demonstrated for the ALJ the loss of range of motion in his finger, and may well have a permanent impairment, Claimant did not present evidence that any physician has placed him at maximum medical improvement or that any physician assigned any permanent impairment rating for his left index finger. Because Claimant has not been placed at maximum medical improvement, his claim for permanent partial disability benefits is not ripe for determination.

Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is “seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view.” As found, Claimant has sustained disfigurement as a direct and proximate result of the November 2017 injury. Claimant should be awarded \$200.00 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to the index finger of his left hand arising out of the course and scope of his

employment with Employer. Employer is liable for Claimant's injury-related medical treatment and is liable for the expenses Claimant incurred through urgent care on or about the date of injury.

2. Claimant has failed to establish that his medical expenses on June 9, 2018 or July 28, 2018 were related to his work-related injury.
3. Claimant is not entitled to temporary partial disability benefits. Claimant's claim for temporary partial disability benefits is denied and dismissed.
4. Claimant's claim for permanent partial disability benefits is not ripe for determination. Claimant's claim for permanent partial disability benefits is therefore denied and dismissed without prejudice.
5. Employer shall pay Claimant \$200.00 for disfigurement.
6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: December 4, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that she is permitted to receive greater than 12 weeks of medical impairment benefits pursuant to §8-41-301(2)(b), C.R.S.

2. Whether Claimant is entitled to a disfigurement benefits in excess of the \$1,100.00 awarded by Prehearing Administrative Law Judge Michelle S. Sisk on May 6, 2020.

FINDINGS OF FACT

The parties agreed to the following stipulated facts:

1. On February 5, 2020 Claimant suffered an admitted work injury. Claimant is a dog groomer and was at work with her Employer's Assistant Manager, Ms. Amber M[Redacted]. Ms. M[Redacted] had brought her Great Dane dog, named Sir, to work. While Ms. M[Redacted] was grooming Sir, Claimant entered the room to obtain a nail trimmer. Ms. M[Redacted] attempted to hand Claimant a nail trimmer, while holding Sir on a leash. Sir then lunged at Claimant, bit her on the left breast and knocked her to the ground.

2. Castle Rock police responded to the scene and investigated the incident. Within their investigation, the General Manager, named Kimberly K[Redacted] stated that she too had been bitten by the same dog in the past.

3. On February 12, 2020 Officer Dave H[Redacted] issued Ms. M[Redacted] a municipal animal summons for one count of §6.02.160(A) Potentially Dangerous Animal, and one count of §6.02.070(A)(1) Licensing.

4. On March 5, 2020 Elizabeth W. Bisgard, M.D. provided a final evaluation of Claimant. Dr. Bisgard released Claimant from care and determined that she had reached Maximum Medical Improvement (MMI). She included a 7% whole person rating for psychological impairment.

5. On March 11, 2020 Ms. M[Redacted] pled guilty to owning one or more potentially dangerous animals in violation of §6.02.160 of the Castle Rock Municipal Code.

6. On April 17, 2020 Respondents filed a Final Admission of Liability (FAL) admitting to a 7% whole person impairment rating. Under the remarks section, Respondents stated that "PPD is limited to twelve weeks of medical impairment benefits pursuant to 8-41-301(2)(b)."

7. On April 28, 2020 Claimant submitted a request for disfigurement to the Division of Workers' Compensation.

8. On May 5, 2020 Claimant submitted her application for hearing on the matters of disfigurement, permanent partial disability and overcoming the cap under C.R.S. §8-41-301(2)(b).

9. On May 6, 2020 Claimant received an award of \$1,100.00 for her disfigurement by order of Prehearing Administrative Law Judge Michelle S. Sisk.

10. On May 6, 2020 Claimant amended her application for hearing to include "Overcoming Prehearing disfigurement award."

Ultimate Factual Findings

11. Claimant contends that she is not limited to 12 weeks of medical impairment benefits under §8-41-301(2)(b), C.R.S. because she was the victim of a crime of violence. She specifically asserts that Ms. M[Redacted]' dog Sir falls within the definition of a "deadly weapon." Claimant argues that Ms. M[Redacted] knew, or should have known, that Sir was a dangerous animal before the altercation. Moreover, she knew that Sir was capable of producing serious bodily injury and neglected to take adequate precautions to prevent him from injuring Claimant. Despite Claimant's contention, she has failed to prove that it is more probably true than not that she is permitted to receive greater than 12 weeks of medical impairment benefits pursuant to §8-41-301(2)(b), C.R.S. Instead, Claimant is limited to 12 weeks of medical impairment benefits because she was not the victim of a "crime" or "crime of violence" under Colorado law. The exception to the 12 week limitation in §8-41-301(2)(b), C.R.S. is thus inapplicable.

12. Initially, on February 5, 2020 Claimant suffered an admitted work injury. While Assistant Manager Ms. M[Redacted] was grooming her dog Sir, Claimant entered the room to obtain a nail trimmer. Ms. M[Redacted] attempted to hand Claimant a nail trimmer while holding Sir on a leash. Sir then lunged at Claimant, bit her on the left breast and knocked her to the ground. Claimant received a 7% whole person psychological impairment rating for her injuries. As a result of the incident, Ms. M[Redacted] pled guilty to owning one or more potentially dangerous animals in violation of §6.02.160 of the Castle Rock Municipal Code.

13. The penalty for the violation of municipal ordinance §6.02.160 was a minimum fine of \$100.00 up to a maximum of \$499.00. Castle Rock, CO Municipal Code §6.02.340(D). The terms "offense" and "crime" are synonymous and mean a violation of, or conduct defined by, any state statute for which a fine or imprisonment may be imposed. §18-1-104(1), C.R.S. However, no conduct shall constitute an offense unless it is described as an offense in this code or in another statute of this state. §18-1-104(1), C.R.S. The violation of a municipal ordinance thus does not fall within the definition of §18-1-104, C.R.S. See *Bovard v. People*, 99 P.3d 585, 591 fn. 10 (Colo. 2004) (noting that the violation of a municipal ordinance is neither a crime nor a

misdemeanor). Based on the preceding, Castle Rock, CO Municipal Code §6.02.160 is neither a criminal statute nor a State of Colorado statute. Ms. M[Redacted]' violation of the municipal code section was thus not a "crime" as contemplated by §8-41-301(2)(b), C.R.S.

14. In fact, although Ms. M[Redacted] was not charged with violating a State of Colorado statute, §18-9-204.5, C.R.S. specifically addresses the unlawful ownership of a dangerous dog. Section 18-9-204.5, C.R.S. provides in relevant part that the:

provisions of this section shall not apply to ... any dog that inflicts bodily or serious bodily injury to any veterinary health care worker, dog groomer, humane agency personnel, professional dog handler, or trainer each acting in the performance of his or her respective duties, unless the owner is subject to a court order ... and the owner has failed to comply with the provisions.

§18-9-204.5(6), C.R.S. Ms. M[Redacted] was not under a court order regarding her dog and Claimant was acting in the performance of her duties as a dog groomer at the time of the industrial injury. Therefore, §18-9-204.5, C.R.S. would not have applied to Ms. M[Redacted] and she would not have committed a "crime" under Colorado law as a result of the February 5, 2020 incident. The exception to the 12 week limit on medical impairment benefits is thus inapplicable. Accordingly, Claimant is limited to 12 weeks of medical impairment benefits.

15. Ms. M[Redacted] also did not commit a "crime of violence" under §16-1-104(8.5)(a)(I), C.R.S. The exception to the 12 week limit on medical impairment benefits in §8-41-301(2)(b), C.R.S. requires the claimant to be the victim of a crime of violence without regard to the intent of the perpetrator. "Crime of violence" is not defined in the Workers' Compensation Act, but is defined in the Colorado Code of Criminal Procedure. A "crime of violence" requires the defendant to use, or possess and threaten the use of, a deadly weapon during the commission or attempted commission of a first or second degree assault. However, Ms. M[Redacted]' dog Sir was not used as a deadly weapon.

16. The record reveals that Ms. M[Redacted] did not "use" or possess and threaten to "use" her dog Sir in a manner capable of producing death or serious bodily injury during the commission or attempted commission of a first or second degree assault. Instead, Ms. M[Redacted] was merely grooming Sir at the time of the incident. She specifically attempted to hand Claimant a nail trimmer, while holding Sir on a leash, when he lunged at Claimant. Ms. M[Redacted] conduct' does not reflect that she sought to "use" the dog in a manner capable of producing death or serious bodily injury. Ms. M[Redacted]' grooming of Sir thus did not render him a "deadly weapon" under §18-1-901(3)(e), C.R.S. Because a "crime of violence" contemplates the use of a "deadly weapon," Claimant was not the victim of a "crime of violence" under §8-41-301(2)(b), C.R.S. The exception to the 12 week limit on medical impairment benefits is thus inapplicable. Accordingly, Claimant is limited to 12 weeks of medical impairment benefits.

17. On March 5, 2020 Dr. Bisgard released Claimant from care and determined that she had reached MMI. In summarizing Claimant's history of medical treatment for her work injury, Dr. Bisgard referenced Claimant's care with R. Williams, PA-C on the date of the incident. PA-C Williams noted that Claimant's left breast had an "approximately 10cm linear and superficial laceration that split the epidermis approximately 5mm." Claimant also exhibited tenderness and other superficial lacerations. Moreover, Dr. Bisgard noted that Claimant had "significant scarring of the breast but does not fall under a functional impairment under the skin chapter" of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*). Finally, Claimant testified that the texture of the scarring is not smooth.

18. Claimant is not entitled to a disfigurement award in excess of the \$1,100.00 awarded by Prehearing Administrative Law Judge Michelle S. Sisk on May 6, 2020. As a result of her work injury, Claimant has a visible disfigurement to the body consisting of approximately four inches of scarring as well as abrasions on her left breast. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles her to additional compensation. §8-42-108 (1), C.R.S. Insurer shall pay Claimant \$1100.00 for that disfigurement. Accordingly, Prehearing Administrative Law Judge Michelle S. Sisk's disfigurement order issued on May 6, 2020 is affirmed. .

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Because the primary goal in construing statutory language is to determine and give effect to the intent of the General Assembly, the court looks to the plain and ordinary meaning of the words. *State v. Nieto*, 993 P.2d 493, 500 (Colo. 2000). If the language is plain and the meaning is clear, the statute must be applied as written, and the court need not resort to any other method of statutory interpretation. *Id.*

5. Section 8-41-301(2)(b) limits a claimant to 12 weeks of medical impairment benefits, inclusive of temporary disability benefits, except where the claimant was the “victim of a crime of violence” or suffered neurological brain damage as a result of the injury. The statute specifically provides:

where a claim is by reason of mental impairment, the claimant shall be limited to twelve weeks of medical impairment benefits, ...; except that this limitation shall not apply to any victim of a crime of violence, without regard to the intent of the perpetrator of the crime, ...nor to the victim of a physical injury or occupational disease that causes neurological brain damage.

§8-41-301(2)(b), C.R.S.

6. The phrase “crime of violence” is not defined in the Workers’ Compensation Act (Act). However, §16-1-104(8.5)(a)(I), C.R.S. of the Colorado Criminal Code defines “crime of violence.” See *Bralish v. Industrial Claim Appeals Office*, No. 4-455-119 (ICAO, June 5, 2002) (noting that “the ALJ correctly observed that the Code of Criminal Procedure contains a definition of the term “crime of violence”).

7. “Crime of violence” means:

a crime in which the defendant used, or possessed and threatened the use of, a deadly weapon during the commission or attempted commission of ...first or second degree assault, ..., or during the immediate flight therefrom, or the defendant caused serious bodily injury or death to any person, other than himself or herself or another participant, during the commission or attempted commission of any such felony or during the immediate flight therefrom.

§16-1-104(8.5)(a)(I), C.R.S.

8. “Deadly weapon” means:

- (I) A firearm, whether loaded or unloaded; or
- (II) A knife, bludgeon, or any other weapon, device, instrument, material, or substance, whether animate or inanimate, that, in the

manner it is used or intended to be used, is capable of producing death or serious bodily injury.

§18-1-901(3)(e), C.R.S.

9. As found, Claimant contends that she is not limited to 12 weeks of medical impairment benefits under §8-41-301(2)(b), C.R.S. because she was the victim of a crime of violence. She specifically asserts that Ms. M[Redacted]' dog Sir falls within the definition of a "deadly weapon." Claimant argues that Ms. M[Redacted] knew, or should have known, that Sir was a dangerous animal before the altercation. Moreover, she knew that Sir was capable of producing serious bodily injury and neglected to take adequate precautions to prevent him from injuring Claimant. Despite Claimant's contention, she has failed to prove by a preponderance of the evidence that she is permitted to receive greater than 12 weeks of medical impairment benefits pursuant to §8-41-301(2)(b), C.R.S. Instead, Claimant is limited to 12 weeks of medical impairment benefits because she was not the victim of a "crime" or "crime of violence" under Colorado law. The exception to the 12 week limitation in §8-41-301(2)(b), C.R.S. is thus inapplicable.

10. As found, initially, on February 5, 2020 Claimant suffered an admitted work injury. While Assistant Manager Ms. M[Redacted] was grooming her dog Sir, Claimant entered the room to obtain a nail trimmer. Ms. M[Redacted] attempted to hand Claimant a nail trimmer while holding Sir on a leash. Sir then lunged at Claimant, bit her on the left breast and knocked her to the ground. Claimant received a 7% whole person psychological impairment rating for her injuries. As a result of the incident, Ms. M[Redacted] pled guilty to owning one or more potentially dangerous animals in violation of §6.02.160 of the Castle Rock Municipal Code.

11. As found, the penalty for the violation of municipal ordinance §6.02.160 was a minimum fine of \$100.00 up to a maximum of \$499.00. Castle Rock, CO Municipal Code §6.02.340(D). The terms "offense" and "crime" are synonymous and mean a violation of, or conduct defined by, any state statute for which a fine or imprisonment may be imposed. §18-1-104(1), C.R.S. However, no conduct shall constitute an offense unless it is described as an offense in this code or in another statute of this state. §18-1-104(1), C.R.S. The violation of a municipal ordinance thus does not fall within the definition of §18-1-104, C.R.S. See *Bovard v. People*, 99 P.3d 585, 591 fn. 10 (Colo. 2004) (noting that the violation of a municipal ordinance is neither a crime nor a misdemeanor). Based on the preceding, Castle Rock, CO Municipal Code §6.02.160 is neither a criminal statute nor a State of Colorado statute. Ms. M[Redacted]' violation of the municipal code section was thus not a "crime" as contemplated by §8-41-301(2)(b), C.R.S.

12. As found, in fact, although Ms. M[Redacted] was not charged with violating a State of Colorado statute, §18-9-204.5, C.R.S. specifically addresses the unlawful ownership of a dangerous dog. Section 18-9-204.5, C.R.S. provides in relevant part that the:

provisions of this section shall not apply to ... any dog that inflicts bodily or serious bodily injury to any veterinary health care worker, dog groomer, humane agency personnel, professional dog handler, or trainer each acting in the performance of his or her respective duties, unless the owner is subject to a court order ... and the owner has failed to comply with the provisions.

§18-9-204.5(6), C.R.S. Ms. M[Redacted] was not under a court order regarding her dog and Claimant was acting in the performance of her duties as a dog groomer at the time of the industrial injury. Therefore, §18-9-204.5, C.R.S. would not have applied to Ms. M[Redacted] and she would not have committed a “crime” under Colorado law as a result of the February 5, 2020 incident. The exception to the 12 week limit on medical impairment benefits is thus inapplicable. Accordingly, Claimant is limited to 12 weeks of medical impairment benefits.

13. As found, Ms. M[Redacted] also did not commit a “crime of violence” under §16-1-104(8.5)(a)(I), C.R.S. The exception to the 12 week limit on medical impairment benefits in §8-41-301(2)(b), C.R.S. requires the claimant to be the victim of a crime of violence without regard to the intent of the perpetrator. “Crime of violence” is not defined in the Workers’ Compensation Act, but is defined in the Colorado Code of Criminal Procedure. A “crime of violence” requires the defendant to use, or possess and threaten the use of, a deadly weapon during the commission or attempted commission of a first or second degree assault. However, Ms. M[Redacted]’ dog Sir was not used as a deadly weapon.

14. As found, the record reveals that Ms. M[Redacted] did not “use” or possess and threaten to “use” her dog Sir in a manner capable of producing death or serious bodily injury during the commission or attempted commission of a first or second degree assault. Instead, Ms. M[Redacted] was merely grooming Sir at the time of the incident. She specifically attempted to hand Claimant a nail trimmer, while holding Sir on a leash, when he lunged at Claimant. Ms. M[Redacted] conduct’ does not reflect that she sought to “use” the dog in a manner capable of producing death or serious bodily injury. Ms. M[Redacted]’ grooming of Sir thus did not render him a “deadly weapon” under §18-1-901(3)(e), C.R.S. Because a “crime of violence” contemplates the use of a “deadly weapon,” Claimant was not the victim of a “crime of violence” under §8-41-301(2)(b), C.R.S. The exception to the 12 week limit on medical impairment benefits is thus inapplicable. Accordingly, Claimant is limited to 12 weeks of medical impairment benefits.

Disfigurement

15. Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if she is “seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view.” If scars are apparent in swimming attire a disfigurement award is appropriate. See *Twilight Jones Lounge v. Showers*, 732 P.2d 1230, at1232 (Colo. App. 1986).

16. As found, on March 5, 2020 Dr. Bisgard released Claimant from care and determined that she had reached MMI. In summarizing Claimant's history of medical treatment for her work injury, Dr. Bisgard referenced Claimant's care with R. Williams, PA-C on the date of the incident. PA-C Williams noted that Claimant's left breast had an "approximately 10cm linear and superficial laceration that split the epidermis approximately 5mm." Claimant also exhibited tenderness and other superficial lacerations. Moreover, Dr. Bisgard noted that Claimant had "significant scarring of the breast but does not fall under a functional impairment under the skin chapter" of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*). Finally, Claimant testified that the texture of the scarring is not smooth.

17. As found, Claimant is not entitled to a disfigurement award in excess of the \$1,100.00 awarded by Prehearing Administrative Law Judge Michelle S. Sisk on May 6, 2020. As a result of her work injury, Claimant has a visible disfigurement to the body consisting of approximately four inches of scarring as well as abrasions on her left breast. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles her to additional compensation. §8-42-108 (1), C.R.S. Insurer shall pay Claimant \$1100.00 for that disfigurement. Accordingly, Prehearing Administrative Law Judge Michelle S. Sisk's disfigurement order issued on May 6, 2020 is affirmed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is limited to 12 weeks of medical impairment benefits.
2. Prehearing Administrative Law Judge Michelle S. Sisk's disfigurement award of \$1100.00 issued on May 6, 2020 is affirmed.
3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative

Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <https://oac.colorado.gov/resources/oac-forms>.*

ISSUES

1. Whether Respondents' overcame the DIME opinions of Dr. Raneesh Shenoj by clear and convincing evidence with respect to Claimant's cervical and mental impairment ratings.
2. Whether Claimant overcame the DIME opinions of Dr. Raneesh Shenoj by clear and convincing evidence with respect to MMI, causation and/or permanent impairment.
3. Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability benefits from November 15, 2019 and ongoing.
4. Whether Claimant established by a preponderance of the evidence that he is permanently and totally disabled as a result of his March 3, 2019 injury.
5. Whether Claimant established by a preponderance of the evidence entitlement to a general award of additional authorized, reasonable, and necessary medical benefits, or to an award of *Grover* medical benefits causally related to his March 3, 2019 injury.

RELEVANT PROCEDURAL HISTORY

On May 1, 2020, Respondents applied for hearing on the issue of overcoming the DIME opinion of Dr. Raneesh Shenoj on permanent impairment. (Ex. JJ) That same day, Claimant filed a hearing application endorsing as issues for hearing compensability, medical benefits, average weekly wage, disfigurement, temporary total disability benefits, temporary partial disability benefits, permanent partial disability benefits, permanent total disability benefits, and death benefits. (Ex. KK) On May 20, 2020, PALJ Michelle S. Sisk issued a Prehearing Conference Order striking compensability and death benefits as issues for hearing and clarifying that because Claimant's prior request for temporary total disability benefits had been decided by ALJ Felter's November 14, 2019 Full Findings of Fact, Conclusions of Law, and Order Granting Summary Judgment, the temporary total disability benefit period at issue for hearing was limited to November 15, 2019 and ongoing. (Ex. LL)

This matter originally came to hearing before the ALJ on August 27, 2020, in Denver, Colorado. The hearing was initiated via videoconference and teleconference, it was digitally recorded, Claimant, *pro se*, was present by phone, and Respondents were represented by Mr. [Redacted], who appeared by videoconference. A Hindi/Punjabi to English interpreter translated as needed. The ALJ ultimately continued the August 27, 2020 hearing without taking evidence due to technical and interpreter issues. On September 9, 2020, the ALJ Kabler issued a Procedural Order addressing the areas of the Rescheduled Hearing (full day), Claimant's Participation at the Rescheduled Hearing (in terms of technology required, and Claimant participating virtually from the OAC), Pro

Se Advisement, Interpreter Use, Hearing Exhibits, Witnesses, and the Deposition of Kathleen D'Angelo, M.D.

Prior to hearing, Claimant requested additional deposition time to cross-examine Dr. D'Angelo. By way of history, Respondent began conducting the deposition on August 21, 2020 by telephone. During the first portion of the deposition, Claimant repeatedly interrupted the deposition calling Dr. D'Angelo and Respondent's counsel "liars," and was generally disruptive. Respondent's counsel disconnected Claimant and completed a portion of the deposition without Claimant's participation. On August 27, 2010, the ALJ ordered that the deposition be reconvened to permit Claimant to cross-examine Dr. D'Angelo. That portion of the deposition was completed on September 28, 2020. The ALJ initially allowed Claimant to cross-examine Dr. D'Angelo for one hour. At a telephone conference during the deposition, that time was extended an additional 20 minutes. Following the deposition, Claimant filed a motion requesting an additional 6 hours to cross-examine Dr. D'Angelo. After review of the transcript from the September 28, 2020 deposition, Claimant's motion was denied as unwarranted.

FINDINGS OF FACT

1. The Claimant was a taxi driver for the Employer on his date of injury, March 3, 2019, and the Employer was insured by Pinnacol Assurance on the date of injury. (Ex. GG)
2. On March 3, 2019, the Claimant was involved in a work-related motor vehicle accident while driving a taxi for the Employer. The Traffic Accident report indicates that the accident occurred (or the report was generated) at 12:33 p.m. (Ex. GG; Ex. S)
3. On March 4, 2019, the Claimant was provided a Designated Provider List by the Employer. The Claimant chose Rocky Mountain Medical Group (hereinafter (RMMG)) from the designated provider list as his authorized treating provider (ATP), and on March 6, 2019, the Claimant began care with Annu Ramaswamy, M.D. of RMMG. (Ex. GG).
4. On March 6, 2019, Dr. Ramaswamy provided the Claimant modified duty work restrictions limiting Claimant from cab driving. (Ex. GG)
5. On March 19, 2019, Respondents filed a General Admission of Liability (GAL), which admitted for TTD benefits beginning March 4, 2019. (Ex. GG)
6. On June 25, 2019, Dr. Ramaswamy released the Claimant to full duty work. (Ex. GG)
7. On June 28, 2019, Respondent-Insurer filed a GAL terminating TTD benefits as of June 24, 2019, secondary to Dr. Ramaswamy's full duty work release. (Ex. GG)
8. Drs. Lesnak, Reilly and Moe are ATPs within the chain of referrals. None of these ATPs placed the Claimant under work restrictions after June 25, 2019. (Ex. GG)

9. On July 17, 2019, the Claimant's personal care provider, Scott Sutton, M.D. of Denver Health Medical Center, authored a letter indicating that the Claimant could not drive long periods of time while under the influence of various medications (Ex. GG).

10. Dr. Ramaswamy re-evaluated the Claimant on August 6, 2019 (Exhibit I). The Claimant informed Dr. Ramaswamy he saw a physician at Denver Health, Dr. Sutton, who concluded that the Claimant could not work. Id. Dr. Ramaswamy disagreed, again determining that the Claimant could return to full duty work without restrictions. (Ex. GG).

2007 INJURY AND TREATMENT

11. On December 11, 2007, Claimant was involved in a motor vehicle accident while driving a taxi. (Ex. B).

12. Approximately 25 days after the December 11, 2007 accident, Claimant was seen at University Hospital for neck pain and chest pain. (Ex. B). On February 13, 2008, Claimant underwent a cervical MRI which showed a small disc protrusion on the left at C4-5 and straightening of the cervical lordosis which may have been due to muscle spasms. (Ex. A).

13. On February 28, 2008, Claimant saw Douglas Hammond, M.D. Claimant reported headaches, neck pain, low and mid-back pain, chest pain, and a "clicking" sound in his neck. Dr. Hammond diagnosed Claimant with traumatic headache, abdominal pain, chest wall rib sprain/strain, bilateral hand and forearm abrasions from airbag, cervical, thoracic, and lumbar strains with spasm, and cervical disc derangement. (Ex. B).

14. On April 24, 2008, Claimant was seen by Stephen Batuello, M.D., on referral from Dr. Hammond, for further evaluation. At that time, Claimant complained of clicking and a foreign body sensation in his neck, and pain radiating from his neck into his ears and temporal parietal region. Dr. Batuello noted that Claimant's pain syndrome was disproportionate to the findings on MRI. (Ex. C).

15. On June 2, 2008, Claimant saw Elizabeth Bryniarski, M.D., a neurologist, on referral from Dr. Hammond. Claimant reported memory issues, confusion, depression, anxiety, insomnia, fatigue, dizziness, blurred vision, swallowing difficulty, loss of balance, muscle cramping in the neck, arm numbness, tingling in both arms and legs, and neck pain. Dr. Bryniarski's examination did not demonstrate any cervical radiculopathy or myelopathy. (Ex. D).

16. On July 7, 2008, Claimant saw neurosurgeon John Oro, M.D. Dr. Oro noted that Claimant been through six physical therapy treatments and one chiropractic treatment since the December 11, 2007 accident. Claimant reported his neck pain had progressively increased since the accident, and also reported clicking throughout his neck, dizziness, episodes of numbness in his arms and legs, insomnia, memory problems, balance problems, anxiety, depression, and chest pain. Dr. Oro reviewed Claimant's prior MRI scan, which showed reversible cervical curvature and a small disk hernia at C4-5, and mild congenital stenosis of the mid-cervical spine. Dr. Oro recommended additional imaging studies. (Ex. E).

17. On October 6, 2008, Claimant saw Christopher Huser, M.D., of Metro Denver Pain Management, on referral from Dr. Hammond. At that point, Claimant described a complex pain history with bilateral neck pain with any movement, radiating to his occiput, left shoulder and occasionally pain shooting down both legs. Claimant also reported dizziness, diffuse shaking throughout his body, occasional tinnitus and a clicking sensation in his neck. Dr. Huser noted that Claimant was sent to his office because his first interventionalist felt he was not a candidate for injections. Dr. Huser diagnosed Claimant with a cervical strain and myofascial pain syndrome. Dr. Huser indicated that he felt the majority of Claimant's neck symptoms were attributed to myofascial pain and loss of cervical lordosis, which could be treated conservatively. Dr. Huser agreed claimant was not a candidate for interventional pain management. (Ex. F). Subsequent records from other providers indicate that Dr. Huser performed a cervical epidural injection at some point, with limited relief.

18. Claimant saw Dr. Bryniarski on November 19, 2008, at which time Claimant reported his symptoms had not improved, and he had an adverse reaction to a single dose of amitriptyline, including a panic attack. Dr. Bryniarski diagnosed claimant with post-traumatic headaches, whiplash injury, intermittent infrequent vertigo, clicking sounds in his throat, and anxiety with panic attacks. (Ex. D).

19. On December 22, 2008, Dr. Hammond examined Claimant and opined that Claimant had a 1% whole person impairment rating for chronic pain. He diagnosed Claimant with traumatic headaches, chest wall rib sprain/strain, traumatic vertigo, bilateral hand and forearm abrasions, chronic cervical and thoracic sprain/strain with spasms, lumbar sprain/strain with spasm, cervical disc derangement, insomnia, anxiety, depression, and esophageal discomfort with spasm. Dr. Hammond released claimant from care at maximum medical improvement. (Ex. G).

20. On approximately May 1, 2009, Claimant filed an appeal with the Social Security Administration in which he reported numbness in his left leg, back of his neck, and pain into his cervical spine and lower back. Claimant also reported memory loss. (Ex. H).

21. Claimant saw Dr. Batuello again on October 11, 2009, at which time Dr. Batuello noted that he could find no distinct etiology for Claimant's symptoms. (Ex. C).

22. On February 22, 2010, Claimant saw Dr. Oro for review of flexion/extension MRI scans. Dr. Oro noted that extension of Claimant's neck caused bulging of the C4-5 disk, and stenosis at C4-5, C5-6, and C6-7. Dr. Oro discussed with Claimant that treatment for Claimant's condition would be a 3-level anterior cervical discectomy and fusion (ACDF). (Ex. E).

23. On July 7, 2011, Claimant underwent an independent medical examination with Tashof Bernton, M.D. At that time, Claimant reported symptoms in his cervical, thoracic, and lumbar spine, left shoulder, throat, tingling in his fingers, left leg numbness, dizziness, and chest pain. Dr. Bernton reviewed Claimant's medical records and noted that multiple providers had examined Claimant and found no objective explanation for his physical symptoms. Dr. Bernton opined that "the most accurate assessment of injuries sustained

by this patient in the [December 11, 2007] motor vehicle accident is a cervical and possibly thoracic muscular strain.” Dr. Bernton found that Claimant’s neck range of motion was “within physiologic limits and has no evidence restriction and there is no palpable abnormal tone in the trapezius when the patient rotates his head.” Dr. Bernton further opined that Claimant “does not have permanent disability from the motor vehicle accident of December 11, 2017.” (Ex. I).

24. Dr. Bernton also opined that Claimant “has symptom magnification and/or somatoform problems in which emotional issues result in increased fixation on bodily symptoms and resultant physical complaints. The patient’s clinical course is classic for a somatic presentation including a pattern of increasing symptoms over time, presentation to the emergency room for physical symptoms diagnosed as anxiety, failure of physically based treatments to result in improvement and multiple negative diagnostic evaluations. Disability seeking behavior and identification with the disabled role may play a significant part in the patient’s pain complaints as well.” (Ex. I).

25. On February 14, 2012, Claimant saw Molly Buerk, PA-C at Denver Spine, for neck and lower back pain. Ms. Buerk diagnosed Claimant with brachial plexus lesions, unspecified myalgia, and myositis, sacroiliitis, and cervical spondylosis without myelopathy. Ms. Buerk’s record indicates Claimant was referred by Carolyn Burkhard, M.D.¹ (Ex. J).

26. On December 30, 2013, Claimant saw Scott Bainbridge, D.O. at Denver Spine. Claimant noted he was continuing to experience bilateral cervical pain and headaches with sternal and low back pain. He also reported numbness in his right leg and pain in his right heel. Dr. Bainbridge diagnosed claimant with lumbosacral and cervical spondylosis without myelopathy, and degeneration of lumbar or lumbosacral disc. He discussed with Claimant performing diagnostic blocks to determine if other treatment would be effective. (Ex. J).

27. On November 24, 2015, Claimant saw Levi Miller, D.O. , at Colorado Rehabilitation and Occupational Medicine. Dr. Miller noted that Claimant had been on disability since his December 11, 2007 accident. Claimant reported that he had been involved in a second accident on April 12, 2015, and that the “multitude of symptoms that he had in the past worsened, in particular neck and upper right chest pain.” Dr. Miller found Claimant’s cervical spine had “full range of motion in all cardinal directions.” Dr. Miller diagnosed Claimant with chronic pain syndrome, chronic neck pain, upper right anterior chest pain (consistent with costochondritis); EMG evidence of right tibial and superficial peroneal axial neuropathy, consistent with diffuse peripheral neuropathy. Dr. Miller scheduled claimant for trigger point injections, which were performed on December 1, 2015. (Ex. L).

28. On July 24, 2017, and December 1, 2017, Claimant was seen by Jonathan Scott, M.D., of Blue Sky Neurology. Claimant reported he had previously been recommended

¹ No records from Dr. Burkhard were offered or admitted into evidence.

to undergo a spinal fusion, but declined. Claimant reported he had been on disability since 2009. Dr. Scott diagnosed Claimant with neck pain, and noted that his pain was most consistent with musculoskeletal pain. Dr. Scott indicated that he did not consider Claimant a surgical candidate. He recommended an increased dose of gabapentin and increasing Claimant's dosage of Cymbalta. (Ex. M).

29. On March 27, 2018, Claimant saw Daniel Liebowitz, M.D., at Denver Health's Eastside Clinic. Dr. Liebowitz completed a medical form to permit Claimant to drive for Lyft, but noted he should not drive if sleepy or drowsy, or after taking tramadol or trazodone. Dr. Liebowitz also diagnosed claimant with, among other things, chronic neck pain, and recurrent major depressive disorder, in remission. (Ex. N).

30. On July 19, 2018, Claimant saw Lisa Roeske-Anderson, M.D. at Blue Sky Neurology. Dr. Roeske-Anderson reviewed Claimant's July 26, 2017 MRI and noted that it showed borderline narrow spinal canal with a small central disc at C4-5 without cord or root sleeve deformity. She found claimant had "Full cervical ROM with mild tenderness to palpation on left and a 'pulling' of left cervical region when he turns head to the right laterally. Mild discomfort with cervical extension but no perceived limitations." Dr. Roeske-Anderson referred Claimant for additional physical therapy and to a pain clinic for consideration of cervical injections. (Ex. M).

31. On October 1, 2018 and October 17, 2018, Claimant saw Giancarlo Checa, M.D., a pain physician. Claimant reported neck and chest pain, and pain radiating to his left arm, hand, and all fingers. Dr. Checa noted that Claimant's neck pain was mostly myofascial on exam. Dr. Checa noted normal range of motion. (The ALJ infers that Dr. Checa's range of motion examination was to Claimant's neck). Dr. Checa reviewed Claimant's 2014 MRI and noted he "did not see anything suspicious." Dr. Checa noted that Claimant was taking naproxen, gabapentin, tramadol, Flexeril, Cymbalta and trazodone. Dr. Checa reviewed Claimant's October 2, 2018 Lumbar MRI and noted a low-lying conus medullaris and a tight filum terminale or tethering of the cord. He referred Claimant to Adam Smith, M.D., for a second opinion. (Ex. P).

32. On October 26, 2018, Claimant saw Adam Smith, M.D., of Rocky Mountain Brain and Spine Institute. Claimant reported experiencing "[y]ears of neck and back pain." Claimant reported he had previously seen Dr. Oro who recommended ACDF, and Claimant declined the surgery. Claimant reported then-current symptoms including continued neck pain, extending into the shoulders and sternum, and left arm tingling and numbness, low back, and left leg pain, weakness, and numbness. Claimant rated his neck pain at a 5/10 which he described as "throbbing." Claimant reported difficulty holding his neck in a flexed position and clicking in his neck. Dr. Smith noted Claimant had limited range of motion of the neck with pain on flexion. Dr. Smith diagnosed Claimant with cervical and lumbar spondylosis and lipoma/fatty filum and tethered cord at L3-4. He indicated Claimant's July 26, 2017 MRI showed kyphosis and spondylotic changes at C4-5 and C5-6, with lesser changes at C3-4. Dr. Smith further opined that Claimant may eventually require ACDF at C4-5 and C5-6, and that his kyphosis may be due to the tethered cord. Dr. Smith recommended that Claimant undergo a minimally invasive procedure to remove the lipoma/fatty filum to decompress and untether the spinal cord.

While Dr. Smith noted the procedure may improve some symptoms, it was likely he also had a chronic pain condition. (Ex. Q).

33. On October 29, 2018, Dr. Smith performed surgery on Claimant. The surgery included a left L2, L3 and L4 hemilaminotomy and bilateral partial facetectomy, with intradural intramedullary resection of conus/filum, mass. Following surgery, Claimant saw Dr. Smith on December 4, 2018. At that time, Claimant continued to have neck pain extending into his shoulders and sternum, left arm tingling and numbness and rated his neck pain 5/10. Dr. Smith noted Claimant's left arm and leg numbness was "seemingly nondermatomal." Dr. Smith also noted Claimant had chronic pain syndrome. (Ex. Q).

34. On December 8, 2018, a new cervical MRI was read as showing protrusions and osteophytes at C4-5, C5-6, C6-7, canal narrowing at C4-5, severe left foraminal stenosis at C5-6, and moderate left and right foraminal narrowing at C6-7. (Ex. A).

35. On January 8, 2019, Claimant saw Dr. Smith in follow up. Dr. Smith noted that Claimant was "Doing OK" post-surgically, but continued to have pain symptoms "expected with his chronic pain syndrome." Claimant continued to complain of neck pain, into his shoulders and sternum, that he rated as 5/10 and described as throbbing. Claimant also complained that he felt his right ribs were higher than his left. Dr. Smith noted Claimant had limited range of motion of the neck with pain on flexion. Dr. Smith also noted that he had discussed with Claimant a C4-5 and C5-6 ACDF procedure. Dr. Smith noted the following: "Continues to be very anxious. Fearful body wide pain never getting better. Fearful that he will not have his pain meds. He states: 'I'm uncontrolled. I can't survive without pain medication. If someone stopped my pain medication, I would just go to the ER every day.'" Dr. Smith noted "each visit [Claimant] is more anxious. More signs of narcotic addiction. I think at this point he requires weaning off pain medications and control of his anxiety before pursuing any more surgery." Claimant was to follow-up in three months. (Ex. Q).

MARCH 3, 2019 WORK RELATED INJURY

36. On March 3, 2020, Claimant was transported from the scene of the automobile accident by ambulance to the Rose Medical Center Emergency Department, where he was examined by David Moon, M.D. Claimant's initial greet time at Rose Medical Center was 1:20 p.m. Claimant reported he was restrained during the collision, and had a history of hypertension, chronic neck, and back pain with a history surgery on his back. Claimant complained of left sided neck pain that was non-radiating, after what claimant described as a low-speed accident. Claimant reported no numbness or weakness of his arms or legs. On examination, Dr. Moon found left lateral paracervical neck tenderness, He specifically noted no midline vertebral tenderness, and no tenderness in the cervical, thoracic, or lumbar spine. Dr. Moon's records indicate no neurological deficits and "[n]o other signs of serious injury." Dr. Moon's clinical impression was "Neck muscle strain." Dr. Moon prescribed Tylenol, ibuprofen, and a muscle relaxer, and instructed Claimant to follow up with his personal doctor if his pain continued. Claimant was discharged home at approximately 1:35 p.m. (Ex. T).

37. On March 4, 2019, Employer completed a First Report of Injury or Illness which described Claimant's injury as a contusion of the skull. (Ex. V).

38. On March 6, 2019, Claimant saw Annu Ramaswamy, M.D. Claimant reported a dull pain in his chest, headaches, and hearing a "clicking" sound when he lifted his head while laying down. Claimant also reported neck pain, upper back pain, "electrical shocks" radiating from his neck to head, and mild lower back pain. Claimant reported he had pre-existing neck pain, and that a cervical fusion was recommended at some point. On examination, Dr. Ramaswamy noted tenderness in the cervical spine, and mild tenderness in the thoracic spine with mild trigger point activity. Dr. Ramaswamy diagnosed Claimant with a contusion of unspecified front wall of thorax, strain of muscle, fascia and tendon at neck level, and strain of muscle and tendon of the wall of the thorax. (Ex. V).

39. On March 20, 2019, Claimant returned to Dr. Ramaswamy. Claimant reported numbness in his left hand, occasional dizziness, nausea, and headaches, in addition to lower back, and neck pain. On examination, Dr. Ramaswamy noted tenderness in the left trapezius with trigger point activity; tenderness in the cervical spine; and tenderness in the lumbar spine. Claimant also reported subjective numbness in the left hand. Dr. Ramaswamy placed Claimant at modified duty and recommended that he not drive a taxicab. (Ex. V).

40. On April 10, 2019, Claimant saw Dr. Ramaswamy again. Claimant reported that 5-weeks from his injury, he was worsening, although he also reported being 10-20% better. Claimant again reported neck pain, lower back pain, left hand numbness and tingling, and right chest wall pain. Claimant also reported shortness of breath due to pain. Claimant reported that he was unable to work in any capacity. Dr. Ramaswamy noted that Claimant "is set up for delayed recovery based on his past history (10-year recovery from prior motor vehicle accident. The patient indicates that he needs to take all his medications on a regular basis and if he missed one or 2 doses, he will be in the emergency room. Therefore there is a significant history of chronic pre-existing pain with prior lumbar and cervical pathology." Dr. Ramaswamy recommended a cervical MRI based on Claimant's complaints of neck pain and left hand numbness, which claimant characterized as new since the March 3,2019 accident. (Ex. V).

41. On April 11, 2019, Claimant saw Dr. Smith for a scheduled 3 month follow up from his January 8, 2019 appointment. Dr. Smith's recitation of Claimant's symptoms, including is virtually identical to his complaints of January 8, 2019, including neck and low back pain, headaches, left arm numbness. He reported Claimant's neck range of motion as limited with pain on flexion. Dr. Smith's report does not mention Claimant's work-related injury or the March 3, 2019 automobile accident. (Ex. W).

42. On April 20, 2019, Claimant had a MRI of his cervical spine, which was compared to his MRI of December 8, 2018. The MRI showed a new C5-6 left paracentral disc extrusion and possible free disc fragment with mild indentation of the left side of the cord. (Ex. X).

43. Claimant returned to Dr. Ramaswamy on May 9, 2019. At that time, Claimant reported his condition was worsening. Dr. Ramaswamy opined Claimant was “presenting with diffuse pain and quite a bit of symptomatology with some somatic complaints. Pain behavior is present.” He also noted that the cervical spine MRI revealed a new disc protrusion at the left C5-6 interspace. Dr. Ramaswamy also noted that “some of [Claimant’s] subjective complaints outweigh objective findings.” Dr. Ramaswamy referred Claimant to Lawrence Lesnak, D.O., for a psychiatry consult. Dr. Ramaswamy also noted that he had received some prior medical records that he would review. (Ex. V).

44. On May 15, 2019, Claimant saw Lawrence Lesnak, D.O. on referral from Dr. Ramaswamy. Dr. Lesnak noted that Claimant provided “submaximal effort during my evaluation and frequently limited his activities because of pain/fear of pain.” Dr. Lesnak recommended that Claimant undergo an electrodiagnostic evaluation of his left arm, neck, and scapular region. Dr. Lesnak noted that “it seems quite clear that there is a significant amount of psychosocial factors that are currently affecting his symptoms, his recovery, as well as his overall presentation and perceived functional status.” Dr. Lesnak’s assessment included his opinion that “there is a likely presence of an underlying symptom somatic disorder/somatoform disorder,” and noted that Claimant exhibited a significant amount of anxiety. After conferring with Dr. Ramaswamy, Dr. Lesnak recommended that Claimant undergo a formal pain psychological evaluation and referred him to Kevin Reilly, Psy.D. Dr. Lesnak prescribed no medications, indicating that Claimant reported all of his current medications were prescribed for many years by his pre-accident physicians. (Ex. Y).

45. On May 22, 2019, Claimant returned to Dr. Ramaswamy. Claimant reported he did not notice any change in his condition, and reported ongoing neck and lower back pain, left lower extremity numbness and tingling, left arm numbness and tingling, and right leg pain. He also reported dizziness, chest wall discomfort and shortness of breath. Dr. Ramaswamy noted that Claimant presented with lower back pain, neck pain, left arm numbness/tingling, and left leg weakness in January 2019, based on his review of Dr. Smith’s records. Claimant reported he was 30% worse in regard to neck pain, lower back pain and left arm and leg symptoms. Dr. Ramaswamy referred Claimant for a psychological consult to Kevin Reilly, Psy.D., noting that Claimant had a history of anxiety and stated that if he stopped medication, he would be in the emergency room. Dr. Ramaswamy noted that “[s]trains typically resolve by now and the patient is presented with delayed recovery.” (Ex. V).

46. On June 3, 2019 and June 11, 2019, Claimant saw Kevin Reilly, Psy.D., for a neuropsychological consultation based on the recommendations of Dr. Ramaswamy and Dr. Lesnak. Dr. Reilly performed neuro-psychometric testing using an interpreter and conducted a clinical interview without an interpreter. Dr. Reilly opined that Claimant’s neuro-psychometric testing results could not be considered valid, because of symptoms magnification, exaggerated symptom reporting and negative response bias. Dr. Reilly concluded that Claimant’s “clinical presentation is strongly suggestive of a somatic symptoms disorder/chronic pain condition.” He diagnosed Claimant with somatic symptom disorder with predominant pain. Dr. Reilly found that Claimant presented with strong indications for “non-organic factors influencing symptoms production and/or

maintenance;" and "Symptom validity testing indicates exaggeration." He recommended that Claimant undergo biofeedback therapy that could be concluded within 8 sessions. (Ex. Z).

47. On June 5, 2019, Dr. Lesnak performed EMG testing on Claimant which did not show any evidence of pathology. Dr. Lesnak did not recommend any further diagnostic or interventional treatments and indicated that Claimant was medically safe to return to work as a cab driver without restrictions. (Ex. Y).

48. On June 12, 2019, Claimant saw Dr. Ramaswamy, and reported his condition was unchanged. Dr. Ramaswamy described Claimant as "almost in tears" when explaining his anxiety, which Claimant related to his pain level, and when discussing work status. Claimant reported that he did not see himself working "at all" due to his pain. Dr. Ramaswamy opined that Claimant's diagnoses related to his March 3, 2019 were cervical strain, lumbar strain with evidence for a chest wall contusion as well. He also noted that diagnostic testing did not reveal evidence of new pathology, and that his examination did not correlate with new pathology. Dr. Ramaswamy stated: "In summary, I'm unable to state that here is evidence for a new cervical spine diagnosis based on the patient's examination and diffuse pain. I would have a similar opinion in regards to the lumbar spine diagnosis. The electrical studies do not reveal evidence for an acute cervical radiculopathy. All of this is good news." Ex. V.

49. On June 25, 2019, Claimant saw Dr. Ramaswamy and reported he was no better. Dr. Ramaswamy noted that the MRI showed a disc herniation at the C5-6 space, and there was evidence of bulging at this level prior to his accident. Claimant reported that he was disabled. On examination, Dr. Ramaswamy noted that light touch to the Claimant's chest caused significant pain. He was unable to palpate spasms or trigger points in the cervical, thoracic, or lumbar region. He also noted that several of Claimant's testing, including supine and sitting straight leg raise were discrepant, and Waddell's maneuver suggested no physiologic findings. Dr. Ramaswamy diagnosed Claimant with anxiety disorder, in doing so he stated: "[Claimant] was diagnosed as having cervical and lumbar strains along with chest wall strain initially. His examination does not correlate with [a symptomatic]² disc (C5-6). He presented with some pain behavior and non-physiologic findings. We discussed that his anxiety is significant." Dr. Ramaswamy noted that physical therapy had not been helpful to Claimant. Dr. Ramaswamy discussed with Claimant that he was "unable to put forth an objective diagnosis that would preclude the patient from working full duty. The neuropsychological testing was invalid and therefore [Dr. Reilly] indicates that he cannot put forth an objective psychological diagnosis at this point." Similarly, Dr. Ramaswamy spoke with Dr. Lesnak who reported that Claimant's examination was not consistent with a cervical herniated disc. Dr. Ramaswamy cleared

² Dr. Ramaswamy's June 25, 2019 note states "does not correlate with asymptomatic disc (C5-6)." Based on the totality of Dr. Ramaswamy's opinions, that ALJ infers that this was a dictation/transcription error, and the proper interpretation of this entry is "does not correlate with a symptomatic disc (C5-6)."

Claimant for a return to full duty work. Claimant disagreed with Dr. Ramaswamy's opinion and refused to sign the M-164 form containing this recommendation. (Ex. V).

50. On June 28, 2019, Respondents filed a General Admission of Liability, admitting for medical benefits, and temporary total disability from March 4, 2019 through June 24, 2019, based on Dr. Ramaswamy's June 25, 2019 Physician Report of Worker's Compensation Injury. (Ex. BB).

51. On July 3, 2019, Claimant saw Dr. Reilly. Dr. Reilly noted Claimant was agitated and the appointment was of no therapeutic benefit because Claimant's goal was to say that Dr. Reilly's opinions and findings were incorrect, and that Claimant could not return to work. Dr. Reilly determined Claimant was unlikely to benefit from the previously recommended biofeedback, and that additional contact was "highly unlikely to provide any therapeutic benefit." (Ex. Z).

52. Claimant returned to Dr. Ramaswamy on July 9, 2019. Dr. Ramaswamy noted Claimant was presenting with significant anxiety and emotional distress. Dr. Ramaswamy reiterated he could find no objective diagnosis correlating with a restricted duty/off duty status. Due to Claimant's significant anxiety, Dr. Ramaswamy referred him to Dr. Moe for an evaluation for psychotropic medication to assist with his anxiety. He indicated he would defer to Dr. Moe's opinion on MMI, which would depend on any psychiatric treatment plan recommended by Dr. Moe. (Ex. V).

53. On August 5, 2019, Claimant saw Stephen Moe, M.D., a psychiatrist, on referral from Dr. Ramaswamy. Dr. Moe found "anxiety is far-and-away [Claimant's] most pressing psychiatric concern." Dr. Moe further stated on "multiple occasions during the session, he voiced the belief that a number of his symptoms represent severe problems involving his spine or his brain. In fact, it would not be an exaggeration to say that some degree of anxiety, and at times a quite high level of anxiety, attended just about every topic that [Claimant] and I discussed." Dr. Moe suspected that many of the features Claimant demonstrated since his March 2, 2019 accident were "in play" following the 2007 accident. He also opined that it was probable that Claimant's anxiety contributed to his prolonged disability after the 2007 accident and to his then-current circumstances. Dr. Moe diagnosed Claimant with adjustment disorder with depression and anxiety; somatic symptoms disorder; and illness anxiety disorder (formerly called Hypochondriasis). Dr. Moe recommended replacing Claimant's Cymbalta with Prozac to address his anxiety. Claimant returned to Dr. Moe for two additional sessions on August 21, 2019 and September 4, 2019. (Ex. CC).

54. On August 6, 2019, Claimant saw Dr. Ramaswamy. At that time, Claimant reported, alternatively, that his pain had decreased, that he had not changed at all since his injury, and that he was 20% better. Again, Dr. Ramaswamy was unable to identify any spasms or trigger points in Claimant's cervical, thoracic, or lumbar spine. Dr. Ramaswamy characterized Claimant's examination as "fairly benign" with objective findings that were "minimal at best." Dr. Ramaswamy noted that Claimant "begged me to place him on restrictions today." Dr. Ramaswamy did not place Claimant on work restrictions, finding no basis to do so. (Ex. V).

55. After seeing Claimant again on August 26, 2019, Dr. Ramaswamy stated “In regards to MMI status, once the patient stabilizes from the anxiety standpoint, MMI will follow.” On September 18, 2019, Dr. Ramaswamy noted “Dr. Moe has assessed somatic symptom disorder. From a physical standpoint, the patient would have reached MMI by now.” Dr. Ramaswamy further noted that Claimant’s “physical symptomatology has not improved over time and if anything he continues to worsen. Therefore, physical therapy would not be helpful in this situation.” (Ex. V).

56. On August 19, 2019, Dr. Ramaswamy authored a report responding to questions apparently from Insurer, which included a review of some of Claimant’s medical records prior to the March 3, 2019 accident. Dr. Ramaswamy indicated that Claimant “sustained strains of the cervical, thoracic and lumbar spine (myofascial pain) as related to the March 3, 2019 injury. These conditions have resolved at this point based on his examinations.” Dr. Ramaswamy noted that Claimant continued to have subjective pain complaints without objective findings. He also noted that it was possible that Claimant’s C5-6 disc herniation related to the March 3, 2019 accident, but there was no clinical evidence for discogenic pain, and that condition would be deemed asymptomatic. He indicated that Claimant had not reached MMI, which would depend on Dr. Moe’s opinions regarding Claimant’s psychiatric assessment and determination of causation. (Ex. DD).

57. On October 14, 2019, Claimant saw Dr. Moe. Dr. Moe opined that as of October 14, 2019, Claimant was at MMI from a psychiatric perspective. He recommended continuance of medications for three months, after which time further psychiatric treatment should be provided outside the worker’s compensation system. Dr. Moe then assigned Claimant a 5% whole person mental impairment rating. (Ex. EE).

58. On October 21, 2019, Dr. Ramaswamy noted Dr. Moe had placed Claimant at MMI from a psychiatric standpoint with a 5% whole person impairment. Claimant also presented with numerous symptoms which Dr. Ramaswamy characterized as “somatic symptomatology” and that Prozac had helped his anxiety. Before placing Claimant at MMI, Dr. Ramaswamy ordered chest CT scan to evaluate for chest pathology. (Ex. V).

59. On November 6, 2019, Dr. Ramaswamy authored a report to Insurer. Dr. Ramaswamy opined that Claimant was at MMI as of October 31, 2019. Dr. Ramaswamy indicated he could not put forth any objective diagnoses that then related to the March 3, 2019 work injury. He agreed with Dr. Moe’s 5% whole person impairment rating for psychological impairment and noted that the March 3, 2019 accident aggravated Claimant’s pre-existing anxiety and depression. Dr. Ramaswamy also noted that Claimant had no permanent physical condition related to the March 3, 2019 accident. (Ex. FF).

60. On November 14, 2019, ALJ Felter issued an order that Claimant was not entitled to temporary disability benefits after June 25, 2019, the date Dr. Ramaswamy released Claimant to full duty work. (Ex. GG). ALJ Felter’s relevant findings of fact are incorporated in this Order.

61. On March 15, 2020, Claimant underwent a Division Independent Medical Examination (DIME) performed by Raneesh Shenoi, M.D., to address MMI, permanent impairment and apportionment of cervical, thoracic, lumbar, and psychological conditions. Dr. Shenoi reviewed Claimant's medical records pre-dating his March 3, 2019 accident but did not conduct a review of pre-accident records. Dr. Shenoi opined that Claimant sustained a cervical strain as a result of the March 3, 2019 accident. She also noted that his examination was not consistent with a cervical radiculopathy, despite his new C5-6 disc extrusion. She found Claimant reached MMI on November 14, 2019. Dr. Shenoi opined that Claimant had a cervical strain with reactive issues of anxiety exacerbation following the March 3, 2019 accident. (Ex. HH).

62. Dr. Shenoi noted that Claimant did not sustain injury to the thoracic or lumbar spine. She assigned Claimant a 4% whole person impairment rating for specific disorder of the spine per Table 53 II B, an 8% impairment rating for cervical spine range of motion deficits; and a 5% whole person mental impairment based on Dr. Moe's impairment rating. The combined whole person rating for cervical spine and mental rating is 16%. Dr. Shenoi did not recommend work restrictions or further treatment, other than follow up with Dr. Moe for two months. (Ex. HH).

63. In a letter dated April 7, 2020, Dr. Shenoi noted that she had relied upon Dr. Moe's impairment rating for her assignment of a mental impairment rating to Claimant. (Ex. HH)

64. On April 13, 2020, Dr. Shenoi issued an Addendum to her DIME report, indicating that she had spent an additional 4 hours reviewing Claimant's medical records from before the March 3, 2019 accident. In that Addendum, Dr. Shenoi indicated she believed Claimant's cervical/neck strain from his 2007 Accident had resolved prior to the March 3, 2019 accident or had "gradually evolved into a host of additional symptoms." Dr. Shenoi noted that Claimant's records "reveal structural issues in the cervical spine, such as disc protrusions, congenital spine canal narrowing and degenerative disc disease that, in my opinion, would explain his ongoing chronic neck pain." Dr. Shenoi stated that her impairment rating of 12% for Claimant's cervical spine was unchanged, because "[d]espite his history of chronic neck pain, I do not believe there is a basis for apportionment from his prior accident(s) as I believe the condition of cervical/neck strain had resolved prior to the 03/03/19 MVA." Dr. Shenoi also indicated her opinion regarding mental impairment rating of 5% was unchanged. (Ex. HH).

65. In her report, Dr. Shenoi noted that "Upon reviewing [Claimant's] records after the 03/03/19 MVA, the ER records reflect he had "neck muscle strain." It is superimposed on pre-existing degenerative disc disease, disc protrusions, and spinal canal stenosis but nonetheless, it is a *new* neck strain in my opinion based on his history and injury mechanism on 03/03/19 MVA." (Emphasis original). (Ex. HH).

66. On April 30, 2020, Dr. Moe wrote a letter to Respondent's counsel entitled "Special Report." In that letter, Dr. Moe indicated that he had reviewed some of Claimant's pre-March 3, 2019 medical records. Based on his review of additional records, Dr. Moe stated:

Having been given the opportunity to review medical records of [Claimant] dating back to 2008, it is clear to me that the psychiatric symptoms and impairment with which he presented to me, along with the physical symptoms to which he attributed his psychiatric difficulties, reflected the perpetuation of a chronic and static condition. That is to say, neither [Claimant's] physical nor psychiatric condition changed in any material way as a result of the accident of 3/3/19.

Dr. Moe concluded: "I now believe that [Claimant] did not incur any mental impairment as a result of [the March 3, 2019] accident." (Ex. II).

67. On June 3, 2020, Kathleen D'Angelo, M.D., authored an "Occupational Medicine Record Review" at the request of Respondents. Dr. D'Angelo reviewed Claimant's medical records from January 12, 2008 through Dr. Shenoi's DIME Addendum dated April 30, 2020. Based on her review of records, Dr. D'Angelo opined that Claimant's only work-related injury was "cervical myofascial irritation." Dr. D'Angelo opined that Claimant's injury was "a self-limited issue" that required no treatment beyond his initial appearance at the emergency department on the date of the accident. Dr. D'Angelo opined that Claimant reached MMI on March 3, 2019 at the end of his emergency room visit. (Ex. MM).

68. Dr. D'Angelo testified by deposition that she disagreed with Dr. Shenoi's impairment rating and conclusion in her DIME report and addendum that Claimant had recovered from his 2007 injuries prior to the March 3, 2019 accident. Dr. D'Angelo testified because she considered Claimant an unreliable historian, and range of motion testing is subjective, that none of Dr. Shenoi's range of motion deficits should be considered in assigning Claimant an impairment rating. Dr. D'Angelo opined there was no objective evidence that Claimant's current cervical condition, pain or restrictions were caused, aggravated, or accelerated by the March 3, 2019 accident. Dr. D'Angelo also opined that Claimant would have had the same symptoms in April 2019 if the March 3, 2019 accident had not occurred.

69. On June 11, 2020, Claimant underwent a vocational assessment performed by Roger J. Ryan. Mr. Ryan was admitted qualified as an expert in the field of forensic vocational evaluation testified at hearing that Claimant was able and qualified to return to work in various employment settings that did not require Claimant to drive a vehicle as a condition of employment, such as a cashier, motor vehicle dispatcher, production assembler, and other positions. In total, Mr. Ryan identified 31 potential occupations Claimant could perform. Mr. Ryan also testified that such employment positions are available in the Denver area labor market. (Ex. PP).

70. Claimant testified at hearing sustained injuries to his brain, neck, and spine in the March 3, 2019 accident. Claimant also testified that he continues to experience pain and numbness in his hands and arms, and that he has an ongoing rib injury. Claimant testified that he is unable to focus, has deteriorated memory, and deteriorated eyesight, the ALJ was unable to determine if Claimant related the additional conditions solely to his March 3, 2019 accident or to the 2007 accident. Claimant testified that he was not

experiencing neck pain prior to March 3, 2019, and that his only treatment was for his back. The ALJ did not find Claimant's testimony credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

RESPONDENTS' CLAIMS

Whether Respondents overcame the DIME of Dr. Shenoj by clear and convincing evidence with respect to impairment rating and causation.

The determination and assessment of permanent impairment requires the DIME physician to diagnose the claimant's condition or conditions and determine their causal relationship to the industrial injury. See *Cordova v. Industrial Claim Appeals Office*, P.3d (Colo. App. No. 01CA0852, February 28, 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998) A DIME physician's findings regarding MMI, causation, relatedness, and impairment are binding on the parties unless overcome by "clear and convincing evidence." § 8-42-107(8) (b) (III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). This enhanced burden of proof for non-scheduled injuries reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998).

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Mental Impairment

Respondents have established by clear and convincing evidence that Dr. Shenoi's assignment of a 5% mental impairment rating is incorrect. Dr. Shenoi assigned Claimant a 5% whole person impairment rating for mental impairment based exclusively on the opinion of Dr. Moe. Dr. Shenoi conducted no analysis or evaluation to independently arrive at an opinion on mental impairment. Although Dr. Moe initially assigned a 5% mental impairment rating, after reviewing additional evidence, Dr. Moe revised his opinion and opined that Claimant did not incur any mental impairment as a result of the March 3, 2019 work-related injury. No evidence was presented to contradict or contest Dr. Moe's opinion in this regard. Given Dr. Shenoi's reliance on Dr. Moe's opinion, her assignment of a mental impairment rating does not constitute a "difference of opinion." Instead, the ALJ finds that it is highly probable and free from substantial doubt that Dr. Shenoi's assignment of a 5% impairment rating was incorrect. Claimant is not entitled to permanent disability benefits for mental impairment.

Physical Impairment

The substance of Respondents' contention is that Dr. Shenoi's assignment of physical impairment rating to the Claimant is incorrect because Claimant's impairment, if any, is not causally related to his March 3, 2020 accident. The ALJ finds that Respondents have established by clear and convincing evidence that Dr. Shenoi's physical impairment rating is incorrect. The evidence clearly and convincingly demonstrates that Claimant's neck complaints returned to pre-accident status by August 12, 2019 at the latest, and that his physical complaints after August 12, 2019 were not causally-related to his March 3, 2019.

Claimant has significant history of complaints of neck pain dating to his December 2007 automobile accident. During the six months before March 3, 2019, Claimant saw Dr. Checa (in October 2018) and reported neck symptoms virtually identical to those he reported after March 3, 2019, including myofascial neck pain, pain radiating to his left arm, hand, and fingers. Similarly, when Claimant saw Dr. Smith in October 2018, December 2018, and January 2019, he reported neck pain extending to his interscapular area and shoulders, with left arm tingling and numbness. At each visit with Dr. Smith, Claimant rated his neck pain 5/10.

After the March 3, 2019 injury, Claimant initially reported neck pain to the Rose Medical Center ER, which later evolved to headaches, upper back pain, lower back pain, chest pain and radiating pain down his left arm. During the first few months of treatment with Dr. Ramaswamy, Claimant had objective signs of an aggravation of his pre-existing chronic neck condition, including palpable trigger point activity in the cervical spine. By June 12, 2019, Dr. Ramaswamy was unable to palpate trigger point activity or spasms in his neck, although Claimant continued to complaint of significant and increasing neck pain and various other symptoms.

By June 25, 2019, Dr. Ramaswamy indicated that Claimant was not presenting with objective cervical or lumbar diagnoses that would relate to his March 3, 2019

accident, despite Claimant's continued complaints. By July 8, 2019, Claimant was presenting with only diffuse pain that Dr. Ramaswamy was unable to correlate with an objective diagnosis. By August 6, 2019, Claimant reported that his neck pain was a 2-3/10, which was less than the pre-injury levels Claimant reported to Dr. Smith in October 2018, December 2018, and January 2019, and consistent with his reports to Dr. Checa in October 2018. Dr. Ramaswamy obtained Claimant's prior medical records from Dr. Smith and, on August 6, 2019 noted that Claimant's symptoms were the "very similar" to his presentation before March 3, 2019.

The ALJ finds Dr. Ramaswamy's August 12, 2019 report credible and persuasive. In that report, Dr. Ramaswamy opined that Claimant's work-related conditions had resolved at that point in time, and that Claimant's subjective complaints of pain continued without objective findings. The ALJ similarly finds Dr. Ramaswamy's November 6, 2019 report credible and persuasive, and particularly his opinion that Claimant had no permanent impairment for any type of physical condition related to the March 3, 2019 work-injury.

Claimant's continued complaints of neck pain (and numerous other symptoms) fall into a familiar pattern that was evidenced throughout Claimant's medical records, including a tendency to magnify his symptoms. At least four different providers, (Dr. Ramaswamy, Dr. Lesnak, Dr. Reilly and Dr. Moe) found that Claimant engaged in some type of symptom magnification, somatoform disorder or that his complaints were non-physiologic. These findings were consistent with Claimant's pattern prior to the March 3, 2019 accident, as discussed by Dr. Bernton as early as 2011. The evidence indicates that Claimant had a significant history of anxiety about returning to work, and continually requested that Dr. Ramaswamy provide him with work restrictions.

Taking the evidence as a whole, the ALJ finds that it is highly probable and free from serious or substantial doubt that Claimant recovered from his March 3, 2019 work injury by at least August 12, 2019, and that physical symptoms and complaints that he exhibited after that date were not related to the March 3, 2019 work injury.

The ALJ finds Dr. Shenoi's opinion that Claimant had recovered from his 2007 cervical strain and sustained a new cervical strain in the March 3, 2019 accident credible. Dr. Shenoi also notes that Claimant was experiencing ongoing chronic neck pain prior to the March 3, 2019 accident as a result of a multitude of factors. However, her assignment of an impairment rating fails to consider the clear and uncontroverted evidence that Claimant had recovered from his March 3, 2019 cervical strain, and that he had returned to his physical baseline by August 2019. To the extent that Dr. Shenoi determined that Claimant's condition was causally related to his March 3, 2019 work injury, the ALJ finds that it is highly probable and free from serious or substantial doubt that her opinion is incorrect, and Claimant should not have been assigned a permanent impairment rating as a result of the March 3, 2019 work injury.

The ALJ finds that Respondents have established by clear and convincing that Dr. Shenoi's assignment of a permanent impairment rating for Claimant related to the March

3, 2019 work injury was incorrect. Claimant is not entitled to permanent impairment benefits.

CLAIMANT'S CLAIMS

Claimant seeks ongoing temporary total disability benefits, medical benefits, and permanent disability benefits. As set forth below, Claimant has failed to meet his burden of proof for establishing entitlement to these benefits.

Overcoming DIME

As a threshold issue, Claimant must establish by clear and convincing evidence that the DIME Physician's MMI opinion is incorrect to be entitled to TTD benefits or general medical benefits. Claimant has failed to meet this burden. MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools*, W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO, May 20, 2004). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI.

The party seeking to overcome the DIME physician's findings regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-*

Med, Inc. v. Industrial Claim Appeals Office, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club*, W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, *supra*.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café*, W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Claimant has failed to establish by clear and convincing evidence that Dr. Shenoï's opinion that Claimant reached MMI on November 14, 2019 is incorrect. Dr. Shenoï's opinion is consistent with the opinion of Dr. Ramaswamy and Dr. Moe. No physician has opined that Claimant did not reach MMI by November 14, 2019, and Claimant did not offer any credible evidence to establish that Dr. Shenoï's opinion on MMI is incorrect. Moreover, Claimant has failed to establish that Dr. Shenoï's impairment ratings were incorrect, or that she erred in determining that Claimant's only work-related injury was a cervical strain or failing to provide permanent impairment ratings for any other body parts.

Entitlement To TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove his industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999).

The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) TTD benefits ordinarily continue until terminated by the occurrence of one of the criteria listed in § 8-42-105 (3), C.R.S. These events include:

1) the employee reaching MMI; 2) the employee returning to regular or modified employment; 3) the attending physician releasing the employee to return to regular employment; or 4) the employee is released to return to modified employment and the employer makes a written offer for such, but the employee fails to begin such employment. *Bestway Concrete & TIG Ins. v. Industrial Claim Appeals*, 984 P.2d 680 (Colo. App. 1999).

“The statute provides that the opinion of the attending physician carries conclusive effect with respect to a claimant’s ability to perform regular employment. However, one attending physician’s release to work is not conclusive of the issue if multiple attending physicians render conflicting opinions.” *Bestway Concrete & TIG Ins, supra, citing Burns v. Robinson Dairy, Inc.*, 911 P.2d 661 (Colo. App. 1995). The term “attending physician” as used in § 8-42-105(3), C.R.S., refers to a physician within the chain of authorization who assumes care of the claimant. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997).

The only issue before this ALJ is whether Claimant is entitled to TTD benefits after November 14, 2019. By Order dated November 14, 2019, ALJ Felter found that Claimant was not entitled to TTD benefits after June 25, 2019, the date Claimant’s ATP, Dr. Ramaswamy released him to full duty work. Accordingly, the issue of TTD benefits through November 14, 2019 has been determined. Claimant has failed to establish by a preponderance of the evidence that he is entitled to temporary disability benefits after November 14, 2019 for several reasons. First, Claimant has failed to establish that Dr. Sheno’s determination that Claimant was at MMI on November 14, 2019 is incorrect. Because Claimant was at MMI on November 14, 2019, any entitlement to TTD benefits terminated on that date pursuant to § 8-42-105(3), C.R.S. Second, Claimant has not presented evidence that any authorized treating health care provider has reinstated work restrictions after November 14, 2019, or that he experienced any medical incapacity after November 14, 2019 that would prevent Claimant from working. Claimant’s claim for temporary disability benefits after November 14, 2019 is denied.

Entitlement To Additional Medical Benefits

Claimant asserts he is entitled to past and ongoing medical benefits. There are two possible avenues for Claimant to obtain past and ongoing medical benefits. Claimant must either establish by clear and convincing evidence that Dr. Sheno’s DIME opinion on MMI was incorrect, thereby entitling Claimant to general medical benefits; or establish an entitlement to post-MMI medical benefits (i.e., *Grover* medical benefits), by a preponderance of the evidence. As found, Claimant was at MMI on November 14, 2019. Accordingly, Claimant’s entitlement to ongoing medical benefits after that date requires Claimant to establish entitlement to *Grover* medical benefits, which Claimant has failed to do.

The need for medical treatment may extend beyond the point of MMI where a claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his

condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, WC No. 4-543-730, (ICAO, July 14, 2006).

Claimant has failed to establish by a preponderance of the evidence an entitlement to *Grover* medical benefits. Claimant sustained a neck strain as a result of his March 3, 2019 work-related accident. Although Claimant has presented medical documentation of treatment he received after reaching MMI, Claimant has offered no competent evidence that any treatment after reaching MMI was reasonably necessary to relieve the effects of his work-related injury or to prevent further deterioration of that condition. In other words, Claimant failed to establish that his post-MMI complaints and symptoms were causally related to his March 3, 2019 work injury. Claimant did not offer the opinion of any medical provider that any ongoing treatment would be reasonably necessary to relieve the effects of his March 3, 2019 injury or to prevent deterioration of that condition. Claimant's claim for *Grover* medical benefits is denied.

Entitlement to Permanent Total Disability Benefits (PTD)

Under §8-40-201(16.5)(a), C.R.S., permanent total disability means “the employee is unable to earn any wages in the same or other employment.” This definition was intended to tighten and restrict eligibility for permanent total disability benefits. *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). A claimant thus cannot obtain permanent total disability benefits if he is capable of earning wages in any amount. *Id.* at 556. Therefore, to establish a claim for PTD the claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. See §8-43-201, C.R.S. The phrase, “to earn any wages in the same or other employment,” “provides a real and non-illusory bright line rule for the determination whether a Claimant has been rendered permanently totally disabled.” *Lobb v. Indus. Claim Appeals Office*, 948 P.2d 115, 119 (Colo. App. 1997).

The Workers' Compensation Act defines “employment “as “[a]ny trade, occupation, job, position, or process of manufacture or any method of carrying on any trade, occupation, job, position or process of manufacture in which any person may be engaged.” § 8-40-201(8), C.R.S. “Wages” is the rate for which the employee is to be compensated for services. § 8 40 201(19), C.R.S. For purposes of PTD “any wages” means more than zero. See *McKinney v. Indus. Claim Appeals Office*, 894 P.2d 42 (Colo.

App. 1995). In ascertaining whether a claimant is able to earn any wages, test, which must be conducted on a case-by-case basis, is whether employment exists that is reasonably available to the claimant under his particular circumstances. *Bymer*, 955 P.2d at 557; *Holly Nursing v. ICAO*, 992 P.2d 701, 703 (Colo. App. 1999).

The claimant must demonstrate that his industrial injuries constituted a “significant causative factor” in order to establish a claim for PTD. *In Re Olinger*, W.C. No. 4-002-881 (ICAP, Mar. 31, 2005). A “significant causative factor” requires a “direct causal relationship” between the industrial injuries and inability to earn wages. *In Re of Dickerson*, W.C. No. 4-323-980 (ICAP, July 24, 2006); see *Seifried v. Industrial Comm’n*, 736 P.2d 1262, 1263 (Colo. App. 1986). The preceding test requires ascertaining the “residual impairment caused by the industrial injury” and whether the impairment was sufficient to result in PTD without regard to subsequent intervening events. *In Re of Dickerson*, W.C. No. 4-323-980 (ICAP, July 24, 2006). Resolution of the causation issue is a factual determination for the ALJ. *Id.*

Claimant has failed to establish that he is incapable of earning any wages in any capacity. The evidence establishes that Claimant is not subject to any work restrictions, and that his only impediment to returning to work is his own reluctance to do so. None of Claimant’s treating physicians have opined that Claimant is unable to work. With the exception of some limitation in motion of his cervical spine, Claimant has no functional impairment. Claimant’s cervical range of motion does not prevent him from earning any wages in any capacity. Mr. Ryan, Respondents’ vocational expert, credibly testified that Claimant maintains the ability to work in some capacity in a variety of positions, including positions that would not involve driving. Claimant’s testimony that he is unable to work is not credible. Claimant has failed to prove by a preponderance of the evidence that he is incapable of earning any wages, or that he is entitled to receive PTD benefits as a result of the admitted industrial injuries he sustained during the course and scope of his employment with Employer. Claimant’s claim for permanent total disability benefits is denied.

ORDER

It is therefore ordered that:

1. Respondents have established by clear and convincing evidence that Dime physician Dr. Shenoi’s assignment of a 5% whole person impairment for mental impairment is incorrect. Claimant is not entitled to permanent partial disability benefits for mental impairment.
2. Respondents has established by clear and convincing evidence that Dr. Shenoi’s assignment of a 4% whole person impairment for specific disorders of the cervical spine based on Table 53 II B of the AMA Guides to the Evaluation of Permanent Impairment and an 8% whole person impairment for loss of cervical range of motion is incorrect. Claimant is not entitled to permanent partial disability benefits.

3. Claimant has failed to establish by clear and convincing evidence that Dr. Shenoi's opinions that Claimant reached maximum medical improvement on November 14, 2019, or that claimant did not sustain any permanent impairment to his lumbar spine or thoracic spine are incorrect.
4. Claimant failed to establish by a preponderance of the evidence entitlement to temporary total disability benefits after November 15, 2019.
5. Claimant failed to establish by a preponderance of the evidence that he is permanently and totally disabled as a result of his March 3, 2019 injury.
6. Claimant failed to establish by a preponderance of the evidence entitlement to a general award of additional authorized, reasonable, and necessary medical benefits causally related to his March 3, 2019 injury.
7. Claimant failed to establish by a preponderance of the evidence an entitlement to Grover medical benefits causally related to his March 3, 2019 injury.
8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. DATED: December 7, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUE

A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant began working as a Landscape Foreman for Employer in approximately April 2019. He was hired to work 40 hours each week and earned \$14.00 per hour. Claimant's job duties include mowing lawns, working on landscaping machinery and cleaning leaves and gutters.
2. On April 25, 2020 Claimant sustained admitted industrial injuries to his right hand when a lawnmower fell on him.
3. Claimant missed time from work as a result of his injuries and treatment. Respondents admitted to Claimant's injury and paid Temporary Total Disability (TTD) and Temporary Partial Disability (TPD) benefits for Claimant's resulting wage loss. They specifically paid TPD benefits from May 5, 2020 through May 15, 2020. After Claimant's surgery, Respondents paid TTD benefits from May 16, 2020 through September 3, 2020. Respondents also acknowledged that Claimant earned an Average Weekly Wage of \$505.51.
4. Claimant is an hourly employee who is paid based on the number of hours he actually works in a week. By July 2019 Claimant's pay rate increased to \$20.00 per hour. Claimant asserts that his AWW should be based on his contract of hire at \$20.00 per hour for 40 hours each week or a total of \$800.00.
5. Claimant and Employer's owner Wayne M[Redacted] both testified that Claimant is a seasonal employee because landscaping is a seasonal profession in Colorado. They specifically agreed that the landscaping season runs from March or April through December and ends based on a lack of demand because of inclement winter weather.
6. Mr. M[Redacted] and Claimant both testified that there were some instances when Claimant did not work 40 hours per week and thus did not earn \$800.00. In fact, Claimant's wage records reveal some weeks where he earned \$800.00, some weeks where he earned less than \$800.00 and some weeks where he earned more than \$800.00. Mr. M[Redacted] and Claimant noted that there is a lower demand for landscaping services during snow in the winter and rainy days in the summer. Mr. M[Redacted] specified that the demand for landscaping slows down in November and December due to inclement weather and snow.

7. During the off-season Claimant does not seek other employment, but receives unemployment benefits. Claimant detailed that he received unemployment benefits in the amount of \$316.00 per week or \$632.00 every two weeks.

8. Respondents contend that Claimant earned an AWW of \$505.51. Reviewing Claimant's wage records from April 13, 2019 through January 3, 2020 reveals that he earned a total of \$26,286.40. Respondents reason that dividing \$26,286.40 by 52 weeks to account for the seasonal nature of Claimant's employment yields an AWW of \$505.51.

9. Claimant asserts that his AWW should be \$800.00 because he worked 40 hours per week and earned \$20.00 per hour. However, Claimant and Mr. M[Redacted] both testified that landscaping is a seasonal profession in Colorado. They agreed that the landscaping season runs from March or April through December because of inclement winter weather. Specifically, Claimant works 39 weeks out of a possible 52 weeks or 75% of the year. He does not work another job in the offseason, but receives unemployment benefits of \$316.00 per week. Claimant's request for an \$800.00 AWW is predicated on 52 weeks of full-time employment. However, because Claimant is a seasonal employee, \$800.00 is not an accurate reflection of his wage loss or diminished earning capacity.

10. However, Respondents contention that Claimant earned an AWW of \$505.51 also fails. Considering Claimant's wages from April 13, 2019 through January 3, 2020, he earned a total of \$26,286.40. Respondents reason that dividing \$26,286.40 by 52 weeks to account for the seasonal nature of Claimant's employment yields an AWW of \$505.51. However, Respondents' position fails to account for Claimant's increase in hourly wages from \$14.00 to \$20.00 by July 2019. Respondents' reliance on Claimant's wage records that include the time period when he earned \$14.00 per hour does not accurately reflect his diminished earning capacity. Accordingly, \$505.51 is not a fair approximation of his wage loss.

11. The proper method for calculating Claimant's AWW requires consideration of both the seasonal nature of his job and his raise to \$20.00 in July 2019. Claimant was hired to work 40 hours each week. The testimony of Mr. M[Redacted] and Claimant reflect that there were some weeks when Claimant did not work 40 hours per week and thus did not earn \$800.00. In fact, Claimant's wage records reveal some weeks where he earned \$800.00, some weeks where he earned less than \$800.00 and some weeks where he earned more than \$800.00. However, 40 hours per week is a reasonable representation of Claimant's typical work schedule.

12. Claimant was earning \$20.00 per hour when he suffered industrial injuries on April 25, 2020. Multiplying \$20.00 by 40 hours per week yields an AWW of \$800.00. However, the record reveals that the landscaping season runs from March or April through December. Specifically, Claimant works 39 weeks out of a possible 52 weeks or 75% of the year. Multiplying \$800.00 per week by 75% (.75) of the year yields an AWW of \$600.00. An AWW of \$600.00 considers both Claimant's hourly pay rate of \$20.00 as well as the seasonal nature of his employment. An AWW of \$600.00 thus constitutes a

fair approximation of Claimant's wage loss and diminished earning capacity. Accordingly, Claimant earned an AWW of \$600.00.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO*, 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed method will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.*, 867 P.2d 77, 82 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); see *In re Broomfield*, W.C. No. 4-651-471 (ICAO, Mar. 5, 2007). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine whether fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability instead of the earnings on the date of the injury. *Id.*

5. In *Campbell*, the court stated that "[a]lthough the authority under §8-42-102(3) is discretionary, we believe it would be manifestly unjust to base claimant's disability benefits in 1986 and 1989 on her substantially lower earnings in 1979." *Id.* at 82. Moreover, in *Pizza Hut* the court determined that the calculation of the claimant's AWW based upon employment that he did not hold at the time of his injury more accurately reflected his future earning capacity. The court specifically stated that "the fact that claimant was not concurrently employed by the hospital and the employer at the time of the injury does not preclude the exercise of discretion under §8-42-102(3)." *Pizza Hut*, 18 P.3d at 869. In *Benchmark/Elite, Inc. v. Simpson* 232 P.3d 777, 780 (Colo. 2010) the court reaffirmed that, in determining an employee's AWW, the ALJ may choose from two different methods set forth in §8-42-102, C.R.S. The court noted the first method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." *Id.* The court then explained that the second method for calculating an employee's AWW, referred to as the "discretionary exception," applies when the default provision "will not fairly compute the [employee's AWW]." *Id.*

6. As found, Claimant asserts that his AWW should be \$800.00 because he worked 40 hours per week and earned \$20.00 per hour. However, Claimant and Mr. M[Redacted] both testified that landscaping is a seasonal profession in Colorado. They agreed that the landscaping season runs from March or April through December because of inclement winter weather. Specifically, Claimant works 39 weeks out of a possible 52 weeks or 75% of the year. He does not work another job in the offseason, but receives unemployment benefits of \$316.00 per week. Claimant's request for an \$800.00 AWW is predicated on 52 weeks of full-time employment. However, because Claimant is a seasonal employee, \$800.00 is not an accurate reflection of his wage loss or diminished earning capacity.

7. As found, however, Respondents contention that Claimant earned an AWW of \$505.51 also fails. Considering Claimant's wages from April 13, 2019 through January 3, 2020, he earned a total of \$26,286.40. Respondents reason that dividing \$26,286.40 by 52 weeks to account for the seasonal nature of Claimant's employment yields an AWW of \$505.51. However, Respondents' position fails to account for Claimant's increase in hourly wages from \$14.00 to \$20.00 by July 2019. Respondents' reliance on Claimant's wage records that include the time period when he earned \$14.00 per hour does not accurately reflect his diminished earning capacity. Accordingly, \$505.51 is not a fair approximation of his wage loss.

8. As found, the proper method for calculating Claimant's AWW requires consideration of both the seasonal nature of his job and his raise to \$20.00 in July 2019. Claimant was hired to work 40 hours each week. The testimony of Mr. M[Redacted] and Claimant reflect that there were some weeks when Claimant did not work 40 hours per week and thus did not earn \$800.00. In fact, Claimant's wage records reveal some weeks where he earned \$800.00, some weeks where he earned less than \$800.00 and some weeks where he earned more than \$800.00. However, 40 hours per week is a reasonable representation of Claimant's typical work schedule.

9. As found, Claimant was earning \$20.00 per hour when he suffered industrial injuries on April 25, 2020. Multiplying \$20.00 by 40 hours per week yields an AWW of \$800.00. However, the record reveals that the landscaping season runs from March or April through December. Specifically, Claimant works 39 weeks out of a possible 52 weeks or 75% of the year. Multiplying \$800.00 per week by 75% (.75) of the year yields an AWW of \$600.00. An AWW of \$600.00 considers both Claimant's hourly pay rate of \$20.00 as well as the seasonal nature of his employment. An AWW of \$600.00 thus constitutes a fair approximation of Claimant's wage loss and diminished earning capacity. Accordingly, Claimant earned an AWW of \$600.00.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant earned an AWW of \$600.00.
2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <https://oac.colorado.gov/resources/oac-forms>.*

ISSUES

- I. Is Claimant's request for shoulder surgery barred, due to his failure to timely request a DIME?
- II. Alternatively, if not so barred, has Claimant shown, by a preponderance of the evidence, that he is entitled to reopen his claim based upon a worsening of his condition, and thus request a shoulder surgery?
- III. Has Claimant shown, by a preponderance of the evidence, that his admitted hip impairment rating should be converted to that of the Whole Person?
- IV. Is Claimant entitled to a general award of Post-MMI medical maintenance "Grover" benefits?
- V. What is Claimant's Average Weekly Wage?

PRELIMINARY PROCEDURAL ISSUE

As a threshold issue, Claimant offered oral statements, allegedly made by various authorized treatment providers, which in effect, told Claimant that he should not/ need not complain of pain in his shoulder, since the focus of his treatment was on the more serious injury to his hip. As a result, Claimant alleges that he followed their instructions, which resulted in a dearth of documented complaints about his shoulder prior to reaching MMI. As a corollary, Claimant also offered testimony from his brother, Michael V[Redacted], regarding similar alleged statements from ATPs while in his presence.

The ALJ then inquired of the parties whether such statements should be received, not only for their possible effect on the listener (Claimant), but as substantive evidence, under C.R.E. 801(d)(2)(c), as Admissions of a Party Opponent. The parties made their respective positions known, but no agreement was reached on this issue. As a result, the ALJ allowed this testimony to be heard, with the understanding that both parties would brief the issue, and the ALJ might then reconsider his ruling on what theory of admissibility, if any, would allow such statements to be considered by the fact finder. Additional pages over the customary 20-page limit would be permitted to fully brief this evidentiary issue.

In the opinion of the ALJ, both parties did an exceptional job in their position statements of outlining their respective positions, despite the lack of definitive case law in the context of statements by ATPs to Claimants. Someday, in the right case, at the right time, an interpretation of C.R.E. 801(d)(2)(c) will have to be decided by an ALJ in this context. Such matters as agency/employee relationships would be addressed. Appellate rulings would then be made, with the salutary effect of providing better

guidance to future litigants. Upon reflection, this is not the right case to send on that path. An apology is thus rendered by the ALJ at this time, for all the hard work by counsel on this issue.

Instead of admitting these statements as substantive evidence, the ALJ will admit such statements, not for the truth of the matter asserted, *but for the limited purpose of seeing what effect they had on the listener*, to wit: Claimant. As such, statements overheard by Michael V[Redacted] will be admitted as well, as being offered as corroborative of what Claimant indicates he heard. In effect, in this case, Claimant receives the full benefit of having the statements heard for the purpose for which they were offered, without such statements having to be received as substantive evidence. The ALJ hastens to add, however, that by admitting such testimony, it does not mean that such evidence is dispositive, pivotal, persuasive, or even to be believed at all. It just means that it is permitted to be stated by the witnesses.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury to Claimant's Hip

1. On February 22, 2019 Claimant, a custody control officer with the Colorado Department of Corrections, slipped and fell on his right side. At hearing, he indicated that his right hip "took most of the impact." He was transported to the hospital, and underwent a right hip surgery before being discharged on February 25, 2019. He was given a walker and was walking "comfortably" with it. (Ex. H p. 133).
2. In various consultations and at discharge, Claimant denied any other orthopedic complaints. (Ex F pp. 89, 93-94). At a February 23, 2019 exam, Claimant did not report any shoulder issues. *Id at 95*. Claimant did not report shoulder pain or any shoulder issue from February 22 through February 28, 2019 to any treatment provider while in the ambulance or in a hospital. (Ex. D, E, F).
3. Claimant's first visit to his ATP was on March 1, 2019. (Ex. C). He reported shoulder pain, among many other issues, and his initial diagnosis included a shoulder sprain or strain of the muscles and tendons of the rotator cuff of his right shoulder. *Id at 70*.
4. On March 8, 2019 Claimant went back to his ATP. He reported hand, upper/lower back, neck, knee, and hip pain, but no shoulder pain. *Id at 67*. N.P. Brendon Madrid examined his shoulders and found that they were of an equal height with "full range of motion" bilaterally. *Id at 68*.

No Mention in the Medical Records of Shoulder Pain

5. Claimant did not report shoulder pain or any shoulder issues to any physician or other treatment provider from March 2, 2019 until October 17, 2019. However, during

that same time frame, he did mention various pain issues, unrelated to his hip: his hands, knee, low back, and neck pain on March 8 (Ex. B p. 24); knee pain on April 10 & May 3 *Id* at 25-26; increased pain due to cold on May 9 (Ex. G p. 106); variations of his hip pain as 2019 progressed. (Ex. B.)

6. From February 19 until October 22, 2019, Claimant saw at least 13 medical providers. Except for his initial meeting on March 1, 2019 with N.P. Madrid, Claimant did not mention any shoulder issues to any of those medical providers.

7. As an example, Claimant went through months of physical therapy without mentioning any shoulder issues. (Ex. G). On May 12, 2019 he was discharged from PT after reporting that he was “exercising at home without difficulty.” *Id* at 102. He reported that he was using “free weights, a Nordic track and abdominal machine.” On May 3, 2019 he “tolerat[ed] all exercises well” including a reciprocal arm swing. *Id* at 110.

8. When Claimant’s reported hip pain was at its peak on March 1, 2019, at 7-10/10, 100% of the time, he reported right shoulder pain/aching. (Ex. B p. 23). By March 8, 2019 his hip pain was down to 5/10, 80% of the time, but he no longer reported shoulder pain. *Id* at 24. By April 10, 2019 his hip pain was 2/10 20-30% of the time. Such pain reports remained mostly the same through early May. *Id* at. 25-26.

9. By late May, 2019, Claimant’s hip pain was 1-2/10, 10- 20% of the time. *Id* at 27. On June 26, 2019 his hip pain had increased to 4-5/10 20-30% of the time; still no shoulder pain was reported. *Id* at 28. Hip pain was at 3-4/10, 30% of the time by July 24, 2019, and further down to 2-3/10, 20% of the time on August 22, 2019. These levels continued through the date of MMI, on September 25, 2019 *Id* at 29-31.

10. Claimant was not prescribed any pain medications that would have masked any shoulder pain after he was released from the hospital in late February 2019 through the present, due to his reported high sensitivity to those medications. According to his records, and his hearing testimony, the only pain medication he was on was aspirin “to prevent blood clotting.” (Ex. A p. 3).

New Complaints Arise

11. Claimant filed his first Application for Hearing on October 17, 2019. In this Application, Claimant Requested a reopening, along with authorization for right shoulder surgery. On October 22, 2019 he was seen for a one-time evaluation by Dr. Olson, who was still his ATP. (Ex. C p. 42). Claimant stated he was depressed, but Dr. Olson stated, “I personally did not see any indication that he was depressed” and noted Claimant’s Qpop showed “steady improvement.” Claimant’s depression scores at the time of MMI were “normal” and had not changed significantly for months. *Id* at 52.

12. Claimant had been “doing well psychologically” at MMI. *Id* at 54. Claimant also alleged shoulder pain in his pain diagram; however, he did not bring it up to Dr. Olson. (Ex. B, p. 32). On November 20, 2019 Claimant reported shoulder pain, but this time to Dr. Olson. Dr. Olson noted: “[a]gain, he never really brought up his shoulder to me.” (Ex. C p. 39). On June 3, 2020 Dr. Olson reiterated he was “surprised when [Claimant]

asked about his shoulder, as I had not heard that he was having shoulder pain.” (Ex. 10 p. 117).

Claimant’s Testimony at Hearing

13. At hearing, Claimant testified to constant and debilitating right shoulder symptoms after his date of injury. His shoulder never returned to the state it was in on February 22, 2019 and got worse as time went on. The shoulder pain “never really never stopped,” and he only had one or two pain free days from February 22, 2019 through October 15, 2020. Throughout the summer of 2019, Claimant stated his shoulder was limiting his activities. He was unable to swing his golf club due to shoulder pain. He started lifting weights in April 2019, doing the bench press at 25 pounds. He never moved up in weight, and eventually dropped weight in August before cutting out bench presses altogether. Claimant stated he had to use his left shoulder more than his right shoulder due to aches and inconveniences in his right shoulder.

14. Claimant indicated that while his shoulder hurt throughout the process, he had been told by his ATP(s) that the focus of the medical care was on his hip, and that addressing his shoulder complaints would, in effect, have to wait. As a result of these admonitions, Claimant declined to note his ongoing shoulder complaints on any of the pain charts provided. Claimant clarified that NP Madrid told him that once the hip was addressed, then they could move on to the shoulder issues. The sole occasion where he indicated shoulder pain on the pain chart was on March 1, 2019, after which he stopped even indicating it. He did, however, indicate on the pain chart on March 8, 2019 that his neck was hurting, but this only tangentially affected his shoulder.

15. At the time he was placed at MMI, Claimant’s shoulder was sore, but not exceptionally so. Once his post-MMI activities increased, so then did his shoulder pain. When he mentioned this to Dr. Olson, he was given an X-ray, then an MRI, which revealed the torn rotator cuff. As of the date of hearing, his shoulder is now worse than when he was placed at MMI.

16. Claimant testified that due to the hip surgery, one leg is slightly shorter than the other. As a result, he now suffers from lower back pain. While he thinks there is an association/correlation between his hip injury and his low back pain, he has never seen a medical doctor about this issue. He described certain activities which have been limited due to the back pain, including golf, bike riding, yard work, riding in a car for over two hours, as well as sitting in a chair for too long.

17. Claimant further testified to his belief that he suffers from some level of depression from this injury. While he was not prescribed medication for this, his ATP, Dr. Olson did recommend therapy for his condition. Claimant further indicates that he still suffers pain in his hip, ranging from a dull ache, to an occasional sharp pain. He would like the ability to return to a physician to address his psychological condition if needed, as well as to address the pain in his hip.

Michael V[Redacted]'s Hearing Testimony

18. Claimant lives with his brother, Michael V[Redacted]. Michael has been on disability since 1988, but holds a medical (but not financial) power of attorney on behalf of Claimant. As such, he was able to attend some of Steven's early medical appointments after the work injury. He indicated this included most of the medical appointments for the first month (March), and perhaps half of them the second month (April), and none thereafter. Michael testified that he was present when Steven was told by CCOM physicians that Steven's complaints about his shoulder would have to wait, as their current focus was on the hip injury. Michael did not hear anyone except CCOM physicians tell this to Steven.

19. Michael also testified that he was unaware of any injuries to Claimant's shoulder until the work injury, nor has Claimant suffered any shoulder injury since then. The two of them had shoveled some lava rock in their back yard at one point, but the rock is very light weight, and they were careful not to overdo it.

Dr. Failinger's IME

20. Orthopedist Mark Failinger, M.D., performed an IME of Claimant on May 13, 2020. Claimant told Dr. Failinger he always marked shoulder pain on his 2019 pain diagrams over the summer (Ex. A pp. 5-6). After considering Claimant's story of constant pain after the work injury, Dr. Failinger opined:

Upon careful review of the records, it is not with reasonable medical probability that any significant tearing occurred to the rotator cuff at the work incident of February 22, 2019. A tear of this size would be, with very high medical probability, that of a pre-existing chronic degenerative tear. Almost all rotator cuff tears are those of degeneration, with various injuries causing further tearing that can create some symptoms. If any significant tearing had occurred at the time of the work incident of 02/22/2019, significant pain levels would present (with reasonable medical probability) and be reported both in the post-injury timeframe when he was placing much of his weight on the right shoulder with use of a walker or crutches, or when the pain in the hip decreased to very low levels of 2/10 within 2 months after the injury. The patient stated the pain was present throughout the whole time period and there is no evidence in the records of such...

The patient likely sustained a minimal strain to the rotator cuff, with the initial single mention of symptoms disappearing, and resurgence of symptoms in October 2019. Any significant rotator cuff tear would not "hide" for an eight-month period of time and certainly would not be "masked" by hip pains that were in the very low ranges of only 2/10 within two months following his right hip fracture. Likewise, shoveling lava rock would exacerbate any rotator cuff tear that would have occurred in the fall of 02-22-2019 with high medical probability. Given the above, the onset of

symptoms in October 2019 are more reasonably due to ongoing degeneration rather than due to any pathology or injury created in the fall of 02-22-2019. (Ex. A pp. 18-20).

ATP Dr. Olson's Opinion

21. After considering Claimant's shoulder issue, including the referrals for evaluation to the orthopedist, Dr. Olson also opined that neither Claimant's shoulder complaints, nor the need for right shoulder surgery were work related. (Ex. C p. 35). He explained that it was "difficult to link the shoulder complaints to his fall" due to the documentation on the subsequent pain drawings – and that while it was "possible" to link the shoulder complaints to his fall, it was not "probable." *Id.*

22. The ALJ notes that there is no medical opinion in the record opining that Claimant's right shoulder complaints, or any proposed right shoulder surgery, is related to Claimants admitted work injury to his hip.

The Only Medical Benefit at Issue is the Shoulder Surgery

23. Claimant testified that the only benefits that were denied were the shoulder surgery and some physical therapy benefits. As Respondent noted during the Hearing, Claimant's only requested benefits in his interrogatory responses was the shoulder surgery. (Ex. K).

Conversion

24. The record establishes no off-schedule impairment. Claimant has had a small limp since his work-related hip surgery. And since MMI, it has mostly caused an ache with sometimes a little sharp pain in his hip. However, his low back does not bother him unless he's been walking around and moving for about two hours, and then it gets stiff. Similarly, if he sits for more than two hours, he will get that same ache. If he gets up and moves around, he alleviates it, so "it is really not an issue." He does have pain every day. He told Dr. Failing his pain was "mild soreness" with a 1/10 rating and that he did not feel he needed any treatment for his low back. (Ex. A, p. 4).

25. There are no restrictions or work-related diagnoses related to Claimant's low back in the record, even in the most recent treatment records. (Ex. 10 p. 126). His most recent restrictions are "he may work 12 hours per day. Until his shoulder is treated I would avoid weapons qualification at this time. Patient also limit and avoid running if possible." *Id.*

26. Claimant's low back pain appears to come and go according to activity. In 2020, he reported no low back pain on the following treatment dates: January 1, January 22; February 9; March 9, and April 1. (Ex. 10). Starting in May, 2020, he did begin reporting some back pain in the pain diagrams. (Ex. 10 pp. 140-147). However, this was referred to as hip pain only. *Id.* at 122. None of the physician reports in 2020 document *back* pain verbal reports from Claimant. (Ex. 10). He did tell his physicians that his hip bothers him, but not his low back. *Id.*

Average Weekly Wage

27. The ALJ notes that no explanation accompanies the wage exhibits offered by either party, save for Claimant's mention at hearing (which is borne out by the exhibits available) that he received an increase in his base pay, effective 7/1/2019, along with a 7% pay differential for working second shift. Respondents' Exhibits offer nothing in addition to what Claimant offers (Ex. 4, pp. 19-21). However, certain patterns appear, summarized thusly: The shift differential (SH2) is based upon base pay + overtime pay (OTP) for that pay period. (The SH2 is was noted to be .06858 in fiscal 2018, but increased to .07 in fiscal 2019). OT2, OT3, and SH3 are undecipherable, and while negligible in effect on AWW, do appear in gross wages. Claimant's receipt of overtime pay (thus affecting his SH2 pay) varied widely, from a high of \$831.66 (based upon his base pay of \$3806 for FY2018) to \$0 for each of the first 3 months of calendar year 2019. The ALJ notes further that this zero overtime trend precedes the date of injury, and thus cannot be attributed solely to the work injury itself. April, May, June of 2019 are absent from the record, whereupon only July of 2019 has been supplied.

28. Beginning in July, 2019, Claimant received a base rate of \$4,347, 1 hour of overtime at \$37.62, shift differential pay (presumably SH2) of \$306.12, and .5 hours of "Shift 2 overtime" –however that gets calculated- of \$1.42. Total gross pay is \$4,692.16 for July, 2019, *which the ALJ finds was Claimant's gross monthly pay prior to reaching MMI* in September, 2019. While hardly a "pattern", this single month of July is the only- and most recent-indicator of Claimant's overtime earnings potential. Times 12, and divided by 52 yields an AWW of \$1,082.81 at the time of MMI.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1)*. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201, C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias,

prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); see also *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, both Claimant and his brother Michael have testified that at least early in Claimant's treatment, he was told that, in effect, they were focusing in the more urgent and serious hip injury, and any shoulder complaints would be addressed later. The ALJ finds it is likely that some statements *to that general effect* were made, if only in passing, by NP Madrid, and perhaps another as well. It makes rational sense to triage the most pressing matter first. However, the effect of such statements has practical limits. ATPs are trained to address multiple injuries as appropriate, and to put it bluntly, the more injuries they treat, the more they get paid. And the sooner they treat a work-related injury, the easier it is to avoid losing one's medical license. The very notion that they would bring Claimant's hip all the way to MMI before even holding discussions on his shoulder is not persuasive to this ALJ.

D. As pointed out by Respondents, Claimant is trying to ride two horses here-and apparently he wants the ALJ to pick the best one for him. If Claimant knew his shoulder was hurting the entire time, and was 'preemptively rebuffed' by his ATPs in seeking shoulder care, his remedy was to seek a DIME. He didn't, and that ship has now sailed. If it really only began bothering him after MMI, then why emphasize these ATP statements which were made back in March and April of 2019? Claimant is no shrinking violet; instead, based upon his hearing demeanor, he appears to be an advocate for himself. And the more the ALJ believes Claimant, the more likely his claim for shoulder surgery should be dismissed outright, for failing to ask for a DIME.

E. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Reopening, Worsened Condition of Shoulder

F. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725

P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo*, W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.*, 765 P.2d 1033 (Colo. App. 1988). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen*, W.C. No. 4-543-945 (ICAO, July 19, 2004).

G. The only path for relief for Claimant is to reopen, on the theory that Claimant's shoulder deteriorated rapidly, shortly after being placed at MMI on September, 2019. To persuade the ALJ, Claimant's credibility is thereby damaged by his insistence that his shoulder hurt all along. But since Claimant wants the ALJ to pick a horse for him, the ALJ will abide. No medical evidence supports Claimant's claim that his shoulder issues (which are now very real, and should be addressed) are now linked to his work injury from February of 2019. Aside from the initial pain diagram on March 1, 2019, nothing in the record supports that Claimant tore his rotator cuff during his slip and fall. On the other hand, Respondents have presented a medical opinion of Dr. Failinger, which the ALJ finds to be sufficiently persuasive to rebut any lay opinion of Claimant. Claimant, consistent with the medical records, likely suffered a minor sprain of his shoulder during the fall, which returned to his pre-injury baseline in short order. Even more likely, Claimant has indeed suffered longstanding, degenerative changes to his rotator cuff, which may have become more symptomatic as a result of lifting weights once again (reduced weight or not), and possibly from the *motions* of shoveling lava rock (the low density of which is duly acknowledged herein). Claimant has not shown that his shoulder condition is linked to his work injury, and his request to reopen is therefore denied.

Conversion to Whole Person

H. The ALJ must determine the situs of a Claimant's "functional impairment." *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, *the mere presence of pain* in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

I. There is no medical evidence in the record, even as expressed in routine medical reports, much less as an expert opinion, that Claimant has a work-related back diagnosis. There are no medical restrictions in the record regarding Claimant's use of his back. Even Claimant's lay testimony does not support some level of permanent impairment of his back, as a result of his hip injury. His back issues come and go, depending upon his activity level. He walks with a small limp. While Claimant no doubt suffers from occasional back pain, there is insufficient evidence in the record, such as one might see from an ATP, that such pain is linked to his hip injury.

Grover Medical Benefits

J. The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, W. C. No. 4-543-730, (ICAO, July 14, 2006).

K. Claimant has stated, with reasonable record support, that he would like to have ongoing psychological therapy as recommended by his ATP, as well as treatment for pain in his hip which might occur on occasion. The ALJ finds such requests to be reasonable, related to his work injury, and potentially necessary to maintain Claimant at MMI. Therefore, the ALJ will award a general award of *Grover* Medical benefits, which may, of course, be challenged by Respondents once a specific request is made on Claimant's behalf. Nothing in this Order should be construed as authorizing treatment for Claimant's right shoulder.

Average Weekly Wage

L. As already noted in Finding of Fact #28, Claimant's Average Weekly Wage, at the time of MMI, is \$1,082.81.

ORDER

It is therefore Ordered that:

1. Claimant's Petition to Reopen is denied and dismissed.
2. Claimant's request for right shoulder surgery is denied and dismissed.
3. Claimant's request to convert his hip impairment rating to that of the Whole Person is denied and dismissed.
4. Claimant's request for a general award of Post-MMI medical maintenance benefits is granted.
5. Claimant's Average Weekly Wage is \$1082.81.
6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: December 8, 2020

/s/ William G. Edie

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-095-790-002**

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that left knee surgery recommended by Cary Motz, M.D., is reasonable, necessary, and related to Claimant's January 1, 2019 industrial injury.

FINDINGS OF FACT

1. Claimant was injured in the course and scope of his employment with Employer on January 1, 2019 when he fell from an airplane lift or loading trailer to the ground from a height of approximately 15-17 feet. (Ex. E).

2. On January 1, 2019, Claimant was seen at the UCHealth Emergency Department for pain in his right arm. Claimant reported falling from a lift and landing on his feet and hitting his right arm on the lift. Claimant reported no pain on palpation in his spine or legs. X-rays demonstrated a right ulnar and radial fracture. X-rays of Claimant's heels and spine were also taken, which were negative. Claimant was diagnosed with a forearm fracture of the right ulna and radius. (Ex. 4).

3. On January 2, 2019, Claimant underwent an open reduction internal fixation (ORIF) surgery on his right forearm. Following surgery, Claimant developed a pulmonary embolism which required admission to UCH from January 9, 2019 through January 12, 2019. (Ex. 4).

4. On January 7, 2019, Claimant was seen at Concentra by Allison Hedien, N.P. Claimant reported pain in his right heel and left knee and difficulty walking on them. Examination showed diffuse tenderness of the anterior, lateral, medial and posterior knee with pain on range of motion. Claimant was diagnosed with a left knee strain and prescribed a cane for assistance walking. (Ex. 6).

5. During the January 9, 2019 admission at UCH, Claimant was evaluated for effusion and pain in his left knee. X-rays of the left knee demonstrated no acute osseous (i.e., bony) abnormalities and large suprapatellar effusion. Claimant was diagnosed with leg/knee swelling and a soft tissue injury to the knee (Ligament), painful effusion, and gout. A CT scan of Claimant's left knee was performed that showed no apparent fractures and a moderate amount of joint effusion. The CT interpretation showed "tricompartamental degenerative osteoarthritis," and "areas of full-thickness cartilage fissuring at the central trochlea resulting in subchondral cyst formation." (Ex. 4).

6. On January 12, 2019, Claimant saw James Lendrum, M.D., at UCHealth for an orthopedic consult for left knee pain. Dr. Lendrum noted that Claimant's knee was aspirated with positive uric acid crystals. Dr. Lendrum recommended treatment for gout, and recommended a possible MRI of the left knee, although he expressed no concerns

for a ligamentous injury. Claimant reported that his knee did not feel unstable, and that he only had pain with ambulation. On examination, Dr. Lendrum noted obvious effusion in the left knee, without erythema, and mild tenderness to palpation over the patella and medial joint line. Claimant was diagnosed with a gout flare of the left knee. (Ex. 4).

7. On January 22, 2019, Claimant was seen by Allan Schmelzel, PA at the UCHealth orthopedic clinic. Claimant complained of some left knee pain and was given a hinged knee brace. He was instructed to return in four weeks, and if he had not improved with physical therapy and the brace, an MRI would be considered. (Ex. 4).

8. On February 7, 2019, Claimant had an MRI of his left knee performed at Health Images. The MRI showed a complex tear of the body of the medial meniscus with prominent horizontal component, a mild medial collateral ligament sprain, degenerative changes in the medial tibial plateau and trochlea, and prominent soft tissue nodules in the suprapatellar fat pad, suspected pigmented villonodular synovitis (PVNS). (Ex. 9).

9. On February 22, 2019, Claimant was seen by Amanda Cava, M.D., at Concentra. Dr. Cava noted that Claimant's reported symptoms included pain, decreased range of motion, stiffness, swelling tenderness and painful walking. Dr. Cava reviewed the results of Claimant's left knee MRI and diagnosed Claimant with Acute medial meniscal injury of the left knee and referred Claimant for an evaluation with Cary Motz, M.D. (Ex. 6).

10. On February 26, 2019, Claimant saw Dr. Motz. Claimant reported to Dr. Motz that his knee became more painful a few days after his work injury, and he started to develop some swelling and bruising. Dr. Motz reviewed Claimant's MRI and noted that there were some degenerative changes of the articular cartilage in the patellofemoral joint and medial tibial plateau. He also noted a medial meniscal tear and two small masses that could be an unusual localized PVNS. Dr. Motz examined Claimant's knee and found small effusion, limited range of motion and diffuse tenderness in the entire joint both medially and laterally. Dr. Motz noted that the possible PVNS was not related to Claimant's injury. Dr. Motz aspirated Claimant's knee and performed a steroid injection which improved Claimant range of motion and pain. Dr. Motz indicated he would not recommend surgery due to Claimant's history of a pulmonary embolism and then-current anticoagulation treatment. Consequently, he recommended conservative treatment, to include physical therapy. (Ex. 7).

11. On March 26, 2019, Claimant saw Dr. Motz. Dr. Motz reported the steroid injection from one month earlier had significantly improved Claimant's symptoms and his range of motion and pain were much improved. He recommended Claimant continue physical therapy and wean from his brace as tolerated. (Ex. 7)

12. Dr. Motz saw Claimant again on April 23, 2019, and noted Claimant's knee pain and function were much improved. He did not recommend surgery based on Claimant's history of pulmonary embolism. He indicated Claimant was approaching MMI, and that he would see Claimant again if his symptoms worsened. (Ex. 7).

13. On May 7, 2019, Claimant saw Dr. Cava at Concentra. Claimant's symptoms were improving with occasional limping. Dr. Cava recommended work restrictions including limiting walking and standing to 50% of the time, and no kneeling, squatting, or crawling. (Ex. 6).

14. On June 7, 2019, Claimant saw Dr. Cava. Dr. Cava noted Claimant's symptoms were located in the left anterior knee and included a feeling the knee was giving out, decreased range of motion, and swelling. Claimant reported he could walk about 20 minutes and had pain with walking. On examination, Dr. Cava noted mild swelling and limited range of motion of the left knee. She opined that Claimant's left knee was "nearing plateau" and that he needed to advance endurance for walking and standing. She amended Claimant's work restrictions to sitting 66% of the time, and no kneeling, squatting, or climbing ladders. (Ex. 6).

15. On August 12, 2019, Claimant returned to Dr. Cava, who noted Claimant's knee symptoms had improved, and that he felt weakness going up stairs. On examination, his knee showed no swelling or tenderness, but with crepitus on motion. (Ex. 6).

16. On September 12, 2019, Claimant saw Dr. Cava. Dr. Cava placed Claimant at maximum medical improvement and provided Claimant with an impairment rating for his wrist, elbow, shoulder, and left knee. With respect to the left knee, Dr. Cava assigned a 5% lower extremity impairment rating for a meniscal tear, and no impairment for range of motion (which she noted was normal). She also recommended future care to include a follow up with Dr. Motz for knee injections in the next three months if needed. (Ex. 6).

17. On March 10, 2020, Claimant saw Dr. Cava following shoulder surgery. Claimant reported swelling and sharp pain in his left knee, rated 6/10, "non constant." On examination, Dr. Cava noted joint swelling in Claimant's left knee and night pain. (Ex. 6).

18. On March 31, 2020, Respondents filed an Amended General Admission of Liability, admitting for temporary total disability benefits from January 2, 2019 through August 11, 2019, and from March 3, 2020, ongoing. (Ex. 1).

19. On April 7, 2020, Claimant saw Dr. Cava again, and reported his left leg was doing better, but he still experienced some pain. Dr. Cava referred Claimant to Dr. Motz for a follow up/maintenance visit for his left knee and to repeat an injection if recommended. (Ex. 6).

20. On May 12, 2020, Claimant saw Dr. Motz on referral from Dr. Cava. Dr. Motz noted that Claimant's knee had small effusion, and moderate joint tenderness, with full range of motion and no instability. Claimant reported pain in the left knee with a feeling of instability, popping, clicking, swelling and medial pain. Dr. Motz opined that Claimant had persistent symptoms which Dr. Motz attributed to his medial meniscal tear. He recommended an arthroscopy with partial medial meniscectomy and a limited debridement if there is a prominent mass of the anterior soft tissues. He noted that it is

possible it could be consistent with localized PVNS or synovitis. Dr. Motz indicated that Claimant was no longer on anticoagulation therapy. (Ex. 6).

21. On June 30, 2020, Claimant saw Dr. Cava. Dr. Cava noted Claimant had returned to Dr. Motz for worsening left knee problems and had undergone an IME on June 9, 2020. Claimant reported his left knee had buckled recently going down stairs and that he twisted his left ankle. She found left knee swelling and sharp pain medially. Claimant continued to follow up with Dr. Cava and reported improvement in his left knee over the next several months, although Dr. Cava noted trace swelling on examination several times. (Ex. 6).

22. On June 9, 2020, Claimant underwent an independent medical examination performed by Timothy S. O'Brien, M.D., at the request of Respondents. Dr. O'Brien was qualified as an expert in orthopedics, testified at hearing, and provided a report dated June 29, 2020. (Ex. A).

23. In his report, Dr. O'Brien opines that Claimant sustained a "very minor left knee strain/sprain/contusion" as a result of his January 1, 2019 work injury. Dr. O'Brien opined that there was an "insignificant" amount of energy "dissipated" to Claimant's left knee in his fall on January 1, 2019. The reasons for this, according to Dr. O'Brien is that Claimant sustained a forearm fracture, and that he "always had normal exam findings of the left knee. He has never had an effusion, which would be expected if he had an acute medial meniscus tear. He has never had substantial dysfunction. His MRI scan was essentially normal for age. The MRI scan did not demonstrate any soft tissue swelling or effusion. In fact, it is postulated that he has pigmented villonodular synovitis, which is an incurable and chronic waxing and waning progressive disease that is considered to be autoimmune in its origins. Its true etiology is unknow." (Ex. A, (emphasis added)).

24. Dr. O'Brien further opined that Claimant's left knee was "healed" as of April 23, 2019, and that "he did not require any further medical attention after that point in time, and in fact, sought none." Dr. O'Brien also opined that Claimant had a "pre-existing medial meniscal tear of his left knee that was extant prior to January 1, 2019 as was his degenerative arthritis of the patellofemoral joint and medial compartment as was his pigmented villonodular synovitis." (Ex. A).

25. Dr. O'Brien also opined that the procedure recommended by Dr. Motz is contraindicated. Dr. O'Brien also characterizes the fact that Claimant has a workers' compensation claim as a "comorbidity that adversely impacts treatment outcome in nearly every case." Without support, Dr. O'Brien opined that because Claimant has a worker's compensation claim, he is "much less likely to respond favorably to Dr. Motz's surgical intervention than he would be if there were no claim present in this treatment equation. The reason for this is that when a workers' compensation claim is being adjudicated, the incentivization is to be more ill not healthier. Workers' compensation codes pay more money if a person is sicker than it pays money to reward health. Therefore, there is a disincentive to recover from any treatment and that is why the presence of a workers' compensation claim is considered to be an adverse comorbidity." (Ex. A).

26. Dr. O'Brien testified that had Claimant sustained a meniscal tear during his fall there would be "massive bleeding," which was not noted at Claimant's initial ER visit. The ALJ does not find this testimony credible. Dr. O'Brien also testified regarding medical literature which he contended did not support the idea of performing surgery on Claimant. The medical literature attached to his report consists of abstracts and excerpts from various articles, rather than complete articles. The ALJ does not find the abstract medical articles to be of significant evidentiary value in determination of this matter. For example, several articles address whether MRI is useful or necessary in evaluation of patients with osteoarthritis (OA) and suspected meniscal tears. (2003 Bhattacharyya article, Ex. A, p. 13; 2008 (Concluding that data does not support the routine use of MRI for evaluation of meniscal tears in patients with osteoarthritis); England Article, Ex. A, p. 16-17 (Concluding that incidental findings on MRI are common in the general population and increase with age); 2011 Kemp Article, Ex. A, p. 17-18 (Concluding that given the predictability of MRI findings in patients over the age of 60 with severe osteoarthritis and meniscal symptoms, MRI is unnecessary). Given that the appropriateness of conducting an MRI is not an issue before the Court, the ALJ finds this information irrelevant.

27. Other articles address the efficacy of operative vs. non-operative treatment for degenerative osteoarthritis, degenerative meniscus, or some combination of the two. (2002 Moseley Article, Ex. A, p. 11; 2017 Sihvonen article, Ex. A., p. 11-12; 2009 Kirkley Article, Ex. A, p. 14-15; 2013 Yim Article, Ex. A, p. 17; 2013 Sihvonen article, Ex. A, p. 20; 2014 Katz article, Ex. A, p. 20-21). While the opinions expressed in these articles may be medically sound, it is not clear or persuasive that the conclusions of these studies have been uniformly adopted within the orthopedic surgery community, or whether the conclusions are directly applicable to Claimant's condition.

28. The ALJ does not find the medical literature excerpts to be compelling evidence that the surgery proposed by Dr. Motz, at least for a partial meniscectomy, is unreasonable or unnecessary.

29. Dr. O'Brien's report concludes that Claimant had a "minor injury that healed on or before April 23, 2019 by which time [Claimant] returned to his pre-injury level of function with no permanent partial disability and no need for ongoing medical authorization." (Ex. A). The ALJ finds Dr. O'Brien's opinions to be, in part, outside the area of his demonstrated expertise, lacking in credibility, and not persuasive.

30. Claimant testified he had been employed by Employer as a truck driver for approximately five years driving food to airplanes. On January 1, 2019, while loading a plane, Claimant fell approximately 15-17 feet from a platform, sustaining injuries. Claimant testified that before January 1, 2019, he had no prior problems with his left knee. After January 1, 2019, Claimant testified that he had difficulty bearing weight on his left knee, difficulty walking and not able to bend his knee fully. He testified that his condition improved after receiving the injection from Dr. Motz, which provided relief for 4-6 months. Claimant also testified that two to three weeks after he returned to full duty, his knee symptoms returned. Claimant also testified that he would like to undergo the surgery recommended by Dr. Motz. The ALJ finds Claimant's testimony credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be

considered a “medical benefit” it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant’s physical needs. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995); *Karim al Subhi v. King Soopers, Inc.*, W.C. No. 4-597-590, (ICAO, July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).” *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011).

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W.C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, W. C. No. 4-543-730, (ICAO, July 14, 2006).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services*, W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant’s request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No. 11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO, Feb. 12, 2009). The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. See *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Consequently, where the claimant asserts the claim should be reopened to award surgery, and the respondents have admitted liability for ongoing medical benefits after MMI, the claimant must show that the proposed surgery has a reasonable prospect for curing or improving his condition. See *Gonzales v. Industrial Claim Appeals Office*, 905 P.2d 16 (Colo. App. 1995); *Jones v. Indus. Claim Appeals Office*, 216 P.3d 619, 620 (Colo. App. 2009). Such proof is to be distinguished from proof of entitlement to ongoing medical treatment because it may relieve the effects of the injury or prevent deterioration of the condition. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

Claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Motz is reasonable, necessary, and related to his January 1, 2019 work injury. Claimant was placed at MMI by his authorized treating physician, Dr. Cava on September 12, 2019, with a recommendation that Claimant be afforded future medical care in the form of additional injections performed by Dr. Motz. Rather than recommend injections, Dr. Motz recommended arthroscopic surgery, in the form of a partial medial meniscectomy and limited synovial debridement. When Dr. Cava assigned Claimant a medical impairment rating associated with his left knee meniscal tear, the assignment implicitly incorporated her opinion that the injury was related to his January 1, 2019 work injury. Additionally, Dr. Cava assigned work restrictions related to Claimant's knee injury. When originally assessing Claimant's knee, Dr. Motz noted that Claimant's PVNS condition was not related to his work injury. The ALJ infers that by not including the meniscal injury in this statement, Dr. Motz attributed the medial meniscal tear to his work injury.

Respondents rely on the opinions of Dr. O'Brien, in which he opined that Claimant suffered only a minor injury to his left knee, that his meniscal tear was pre-existing, and that surgery is not reasonable, necessary, or related to his work injury. Dr. O'Brien's opinion is based, in part, on speculation and opinions outside the areas of his expertise. In addition, Dr. O'Brien's report demonstrates a significant bias against workers' compensation claimants in general. The ALJ does not find Dr. O'Brien's opinions persuasive or credible in several respects.

Dr. O'Brien speculates that Claimant's left knee meniscal tear was pre-existing. Claimant credibly testified he had no knee issues before January 1, 2019. No records were offered that pre-date Claimant's work injury from which an objective basis of comparison can exist. Although the ALJ finds it reasonable that Claimant's degenerative changes and PVNS pre-dated January 1, 2020, Dr. O'Brien's opinion with respect to the meniscal tear is merely speculation.

Dr. O'Brien's opinion forces significant enough to cause a meniscal tear were not "dissipated" to Claimant's knee is speculative, outside the area of his expertise, and not supported by the contemporaneous medical records. Because Dr. O'Brien was not qualified as an expert in biomechanics, accident reconstruction or physics, the ALJ does not credit his opinions regarding how forces were distributed within Claimant's body.

Moreover, Dr. O'Brien's assumption that the forces from the fall were primarily directed to Claimant's arm is also speculative. The Claimant's initial medical report from the UCH Emergency Department reports that Claimant "landed on feet and right arm on the lift." The UCH Emergency Department performed x-rays of Claimant's bilateral heels, which the ALJ infers indicates the force with which Claimant struck the ground with his feet was sufficient to at least elicit concerns of injuries to his feet, and not that the impact to his lower extremities was "insignificant" as speculated by Dr. O'Brien.

Dr. O'Brien's assertion that Claimant "never" had effusion or significant dysfunction is not supported by the record. To the contrary, Claimant's health care providers, including Dr. Cava and Dr. Motz, noted swelling of his left knee at multiple visits. Claimant was placed in a knee brace and required the use of a cane for ambulation. Further, Dr. Cava placed Claimant on work restrictions reflecting significant difficulty through September 12, 2019.

The ALJ finds that Dr. Cava's opinion on causation and Dr. Motz's implicit attribution to be credible, persuasive and supported by the evidence. The ALJ finds that Claimant established by a preponderance of the evidence that he sustained an acute injury to his medial meniscus as the result of his January 1, 2019 work injury.

With respect to the surgery recommended, Dr. Motz's records indicate that Claimant's PVNS is not related to his work injury. Accordingly, that injury, and treatment for that condition, is not reasonable, necessary, or related to his work injury. The ALJ cannot determine, however, whether that treatment is incidental to the work-related meniscus injury and makes no finding on that issue.

Dr. O'Brien's opinion that arthroscopic surgery for Claimant's injury is contraindicated is not persuasive. Dr. O'Brien testified that arthroscopic meniscal repair was indicated for patients younger than 18 year with acute injuries, but not for patients older than 35 with degenerative conditions. The opinion does not address whether arthroscopic surgery was indicated for patients of Claimant's age with acute injuries superimposed over pre-existing degenerative changes, which is the Claimant's condition. His testimony and the medical literature cited on this issue was not clear or persuasive. At best, the excerpts from literature represent generalizations derived from studies that address situations that may or may not be consistent with the Claimant's presentation.

Dr. O'Brien also opined that Claimant is not likely to benefit from surgery because he is a workers' compensation claimant. Dr. O'Brien's characterization of Claimant's workers' compensation claim as a "comorbidity" and the blanket assumption that workers' compensation claimants are universally motivated by secondary gain issues demonstrates that Dr. O'Brien's opinions are not unbiased. While secondary gain issues may exist in some circumstances, no credible evidence was offered to suggest that Claimant was malingering, exaggerating symptoms or that he was guided by any secondary motivation. Dr. O'Brien's opinion on this issue demonstrates that his opinions are not unbiased and undermines the credibility of his testimony.

The ALJ finds that Claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Motz for Claimant's left knee is reasonable, necessary, and related to his January 1, 2019 work injury.

ORDER

It is therefore ordered that:

1. Claimant proved by a preponderance of the evidence that left knee surgery recommended by Cary Motz, M.D., is reasonable, necessary, and related to Claimant's January 1, 2019 industrial injury.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: December 9, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury on February 3, 2020?
- II. If Claimant has suffered a compensable work injury, has she shown, by a preponderance of the evidence, that she is entitled to medical benefits which are reasonable, necessary, and related to her work injury?
- III. If Claimant has suffered a compensable work injury, has she shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability payments?
- IV. What is Claimants Average Weekly Wage?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Work Incident on February 3, 2020 / Subsequent Treatment

1. Claimant is a former barista for Employer. On February 3, 2020, Claimant reported that she slipped on a piece of ice and she fell. At hearing, Claimant stated that she had both hands full, dropped what she was carrying, and fell onto her left knee and right hand. She testified that she felt pain within the walking boot (from a prior injury) on her left foot, but this pain was different. Claimant testified that upon request of Employer, she worked the remainder of her shift on February 3, 2020.

2. Claimant presented to Concentra Medical Center the next day, February 4, 2020, and was seen by PA Mendy Peterson. She reported low back pain, right knee pain, left knee pain and bilateral neck pain- worse on the left where she hit her shoulder. Claimant stated that she hurt 'all over'. (Ex. C, p. 36). Claimant's physical examination was noted to be 'normal'. *Id* at 37. Claimant was diagnosed with a lumbar strain. She was prescribed cyclobenzaprine, and the file stated: "*PT is medically necessary to address objective impairment/functional loss and to expedite return to full activity.*" *Id.* (emphasis added).

3. On 2/4/2020, PA Peterson further noted: History and mechanism of injury were obtained directly from the patient, unless otherwise noted, and appear to be consistent with presenting symptoms and physical exam." Claimant's medical history was noted, but the only Assessment, initial encounter, was Lumbar Strain. MMI was anticipated for 3/20/2020, and further noted that "*Patient may work their entire shift,*" but with restrictions as follows: lift up to 10 lbs. *constantly*, push/pull up to 20 lbs. *constantly*

(up to 8 hours per day), bend *occasionally* (up to 3 hours per day), stand *frequently* (up to 6 hours per day), walk *frequently*. (Ex. C, p. 39) (emphasis added). Follow-up to be in 2-3 days. *Id.*

4. Claimant returned to Concentra on 2/6/2020, again with PA Peterson. Claimant still complained of left shoulder and right hip pain, and now bilateral hand pain, but still made no mention of left foot/ankle pain. It was noted that Claimant “continues PT with good progress as expected” (Ex. C, p. 40). PA Peterson also stated that Claimant “is going to see her foot doctor for her preexisting condition, as it is ‘not the same as it was before’”. Under Assessment, initial encounter, Claimant was now noted to have “Contusion, left hip”, “Lumbar strain”, and “Left Shoulder Sprain”. Claimant was continued on her medications and PT. It was again noted “*Patient may work their entire shift*”, now with loosened work restrictions from the previous visit. *Id.*

5. Claimant returned on 2/11/2020, and this time was seen by George Johnson, MD. Claimant still complained of left shoulder and right hip pain, but now mostly of her left foot. (Ex. C, p. 44). Dr. Johnson notes that Claimant was “not working due to restrictions.” Dr. Johnson also opined that Claimant’s left foot symptoms were not work related, but noted she was seeing her private foot doctor, Dr. Peck. Physical therapy was noted to improve her back and hip. At this time, her work restrictions were effectively removed, but was noted to be “very close” to being able to perform all her work duties, but was “not quite all the way yet”. *Id.* at 46.

6. On February 20, 2020, Claimant returned, and reported pain in her low back, right hip, bilateral hands and left ankle, all getting worse. PA Peterson noted that Claimant’s mechanism of injury was altered to now include her hands. PA Peterson also noted that Claimant had poor compliance with physical therapy. She documented that Claimant had not returned to work, but merely because *Claimant* felt she was ‘not ready’ to return to work. PA Peterson again opined that Claimant’s foot/ankle and hip complaints were not work-related. (Ex. C, p. 48). Claimant was then released to full duty on February 20, 2020. (Ex. C, p. 47). Claimant has not returned to work, despite the full duty release.

7. Claimant returned on February 27, 2020 and reported that her back and hip were back to “her normal”; however, she was still reporting ankle pain. Dr. Johnson again determined that her ankle pain was not work-related. (Ex. C, p. 53). Dr. Johnson placed Claimant at MMI with no impairment rating, full work, no permanent restrictions, no maintenance care and no medications. Dr. Johnson opined that any additional time off work would be due to her non work-related ankle surgery. *Id.* at 56.

Claimant Has Extensive Pre-Existing Complaints and Treatment

8. Claimant has pre-existing chronic low back pain with bilateral lower extremity symptoms dating back to at least 2001. (Ex. D, p. 81). As early as December 2010, it was noted that Claimant suffered from chronic low back pain for several years and heavy use of narcotics. (Ex. D, p. 58).

9. Claimant also had several instances of narcotics abuse resulting in suspected overdoses in 2011, 2012, and 2015. (Ex. D, pp. 61, 67, 70, 82).

10. Claimant presented to her physicians in May 2019, reporting an increase in pain and symptoms in her low back and bilateral hips and into her groin. Ex. E, p. 150). Claimant denied any falls, accidents or injuries. Claimant was diagnosed with a new onset of bilateral sacroiliitis with low back pain. (Ex. E, p. 151). Claimant had a flare in her chronic low back pain without any precipitating event.

11. Claimant returned to her treating physicians for her bilateral hand symptoms in June 2019. Claimant underwent a steroid injection and she reported a good response for her thumb arthritis. Claimant also reported a popping sensation in her left ring finger, but some in her middle finger. Claimant continued treating for her upper extremity symptoms. (Ex. E, p. 153).

Left Foot Surgery in September 2019, and ongoing Pain Complaints

12. Claimant underwent foot surgery in September 2019. (Ex. K, p. 224). Claimant reported that she continued not to do well after the surgery. She reported to Dr. Peck to be in a lot of pain in her foot and ankle as of January 30, 2020. (Ex. K, p. 223). As a result, Dr. Peck wrote Claimant a note, addressed to Whom It May Concern, stating:

I saw Katherine Pollock in the office today. Please allow her to be off work for 4-6 weeks. She needs to be non-weight bearing to her foot. (Ex. K, p. 220).

However, Claimant continued to work, despite Dr. Peck's recommendation. Three days later, Claimant fell at work, resulting in this claim.

Dr. Nagamani's IME Report

13. Dr. Kevin Nagamani performed a records review for Respondents on June 16, 2020 to address causation of Claimant's ongoing left ankle and foot complaints. (Ex. B, p. 29). Dr. Nagamani opined that the alleged work injury was not a cause or contributing cause to Claimant's current complaints to her left ankle. The MRI did not show any acute findings to claimant's left ankle. Dr. Nagamani opined that since Claimant was wearing a boot, any fall could not have caused any tearing of ankle ligaments. Dr. Nagamani opined while it *could be medically possible* to have tearing of tendons with a forceful contraction of the peroneal muscles while a person is wearing a boot, there was no evidence of this with the work incident. *Id* at 30. Dr. Nagamani opined that there was no treatment warranted for the ankle related to the February 3, 2020 alleged work injury. *Id*.

Dr. Lesnak's IME Report

14. Dr. Lawrence Lesnak performed an IME at Respondents' request on September 16, 2020. (Ex. A). Claimant reported to Dr. Lesnak that her ankle MRI

showed evidence of a bone chip, but that Dr. Peck had not recommended surgery. Claimant reported to him that Dr. Peck referred her for evaluation of her hands due to ongoing symptoms. Dr. Kobayashi provided an injection into the base of her left ring finger, which provided relief. Claimant also underwent an EMG studies of her bilateral upper extremities in May 2020 and Dr. Leppard told her she had worsening nerve damage. Claimant underwent carpal tunnel surgery, cubital tunnel release and right first CMC arthroplasty in June 2020. Claimant also reported that she was evaluated by Dr. Weinstein for her hip, but Dr. Weinstein did not recommend hip surgery. (Ex. A, p. 2).

15. After a review of Claimant's prior medical records, Dr. Lesnak opined that, based on the initial medical evaluation after the February 3, 2020 work incident, there is no documented evidence of any type of injury; only Claimant's subjective pain complaints. Dr. Lesnak opined that Claimant's complaints were essentially unchanged, compared to her pre-existing pain complaints to the same body parts. Specifically, Dr. Lesnak noted that all of Claimant's symptoms alleged after the alleged work injury were documented in medical records prior to the alleged work injury. (Ex. A, p. 25).

16. Dr. Lesnak also noted that Claimant completed a psychosocial screening test at her evaluation. Claimant demonstrated a very high level of somatic pain complaints. Dr. Lesnak opined that such results suggest the presence of an underlying somatic/somatoform disorder. Dr. Lesnak opined that individuals with these conditions frequently embellish and exaggerate their symptoms, rendering the individual's subjective complaints unreliable.

Claimant has Ongoing Issues with Opioids

17. In March 2020, PA Faron at Spinal Diagnostics and Pain replaced Claimant's oxycodone with Norco, to be used as-needed, but not to exceed four times per day. He provided a plan to reduce Claimant's pain medications. PA Faron noted that Claimant's current dosing was 'not a good idea'. (Ex. M, p. 321).

18. Claimant returned in May 2020, seeking additional medications. Claimant had been taking the Norco four times a day, but she was requesting more. Mr. Faron counseled Claimant that opiates were not a substitute for the other modalities to address her reported pain and symptoms. (Ex. M, p. 324).

19. Claimant presented to her treating physicians at Peak Vista for her musculoskeletal pain. On July 27, 2020, Claimant was discharged from the practice, because her PMDP (Prescription Drug Monitoring Program) and UDS (Urine Drug Screen) were both abnormal, including a positive result for oxycodone. The PDMP revealed prescriptions from both Mr. Faron from Spinal Diagnostics and Pain, and also from Dr. Kobayashi. It was noted that Claimant had also filled leftover prescription from a pain provider without notifying the office. Claimant was discharged due to her multiple violations. (Ex. L, p. 296).

Claimant Testified that She Was 100% Disabled

20. Claimant testified that she was 100 percent disabled for many years prior to the work incident. Claimant testified she then went back to work for some time before being found disabled once again after the work incident.

Dr. Lesnak Testifies at Hearing

21. Dr. Lesnak testified that Claimant had an extensive pre-existing medical history for low back and leg symptoms. She had hip symptoms, and chronic upper extremity symptoms, including surgery on her left upper extremity. Dr. Lesnak testified that Claimant already had been recommended for right upper extremity surgery in 2018 and 2019 due to progressive symptoms.

22. Dr. Lesnak testified that the left ankle MRI findings (which have been received into evidence and reviewed by the ALJ) after the work incident did not show any acute findings consistent with a new injury. He also testified that the hip MRI Claimant underwent in June 2020 did not reveal any abnormalities consistent with any type of acute injury or trauma.

23. Dr. Lesnak further testified that Claimant's documented complaints on and after the February 3, 2020 work incident were fairly consistent with her complaints prior to the incident. He noted that there was no evidence of any documented, reproducible, objective findings on exam on February 4, 2020. Dr. Lesnak concluded that while there was an incident on February 3, 2020, there was no resulting injury to Claimant. He opined that while Claimant testified that all of her symptoms were different after the fall, the medical records did not support this contention.

Average Weekly Wage

24. The sole wage document in the record appears to be a Colorado State Unemployment benefits form for Claimant. Although Claimant's name does not appear on the face of said document, the ALJ infers it belongs to Claimant, no objection having been lodged thereto. Claimant's gross wages from this Employer (identified as Pyramid Colorado Management) for calendar year 2019 are noted to be \$31,694.98. Such yearly income yields an AWW of \$609.52.

25. Respondent argues that Claimant earned \$6070.60 over 13 weeks yielding an AWW of \$466.97; however, the ALJ cannot identify the source of this assertion. Claimant, however, asserts that her annual compensation was based on 44 weeks of earnings, and not 52, having taken 8 weeks of personal leave from 9/4/19 to 11/4/2019. Therefore, Claimant argues her AWW should be increased commensurately. The ALJ finds insufficient documentary or testimonial evidence in the record to support this assertion; in fact, Claimant's best quarter for 2019 encompassed the month of September. *The ALJ finds Claimant's AWW to be \$609.52.*

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

4. In this instance, while Claimant has shown sufficient evidence to prove that a compensable work injury occurred, her overall credibility has been shown to be rather unpersuasive. The ALJ finds, among other instances, that Claimant has exaggerated her symptomology to her various providers, and has been inconsistent in the symptoms she has reported along the way. As recently as spring, 2020, there is compelling evidence of misuse of prescription medications. As a result of this-along with persuasive medical

evidence to the contrary-Claimant's assertion that her left foot was injured in the fall is simply unconvincing.

5. In contrast, the ALJ finds that Dr. Lesnak has testified sincerely, credibly, and to the best of his medical knowledge. The ALJ is largely persuaded by his reasoning, along with that of Dr. Nagamani; however as noted below, Claimant did suffer a compensable injury, albeit minor.

Compensability, Generally

6. To qualify for recovery under the Workers' Compensation Act of Colorado, a claimant must be performing services arising out of and in the course of her employment at the time of her injury. See § 8-41-301(1)(b) C.R.S. 2007. For an injury to occur "in the course of" employment, the claimant must demonstrate that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. See *Gregory v. Special Counsel, and Travelers Indemnity Co.*, W.C. 4-713-707 (2008); *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arise out of" requirement is narrower than the "in the course of" requirement. See *id.* For an injury to arise out of employment, the claimant must show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. See *id.* at 64-1-42; *Industrial Comm'n v. Enyeart*, 81 Colo. 521, 524-25, 256 P. 314, 315 (1927) (denying recovery to claimant who was injured when his steering gave out while he was driving across a bridge on his employer's property on his way home from work). The claimant must prove these statutory requirements by a preponderance of the evidence. See *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo.1985).

Compensability, as Applied

7. The ALJ finds, by a preponderance of the evidence, and consistent with the medical providers at Concentra, that Claimant suffered a compensable work injury as a result of her fall on 2/3/2020. No parties are seriously disputing that Claimant slipped and fell. In this case, the ALJ finds that Claimant suffered a lumbar strain, and some associated contusions, which had fully resolved by the time she was placed at MMI, with no impairment, and no work restrictions, by Dr. Johnson of 2/27/2020. The ALJ finds that any other lingering complaints, most notably Claimant's left foot/ankle, are not due to her 2/3/2020 slip and fall work accident. Instead, they are due to longstanding, preexisting issues that are not work-related. The ALJ further finds that Claimant's current complaints-any of them-do not represent an aggravation of her preexisting conditions. Claimant returned to her pre-injury baseline when she was placed at MMI by Dr. Johnson.

Medical Benefits, Generally

8. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However,

the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 293 (1951).

Medical Benefits, as Applied

9. As noted above, Claimant's providers at Concentra rendered the treatment which they felt was appropriate to treat her compensable work injuries. The ALJ concurs, and finds that medical treatment rendered by Concentra up through Claimant being placed at MMI by Dr. Johnson was reasonable, necessary, and related to her work injuries. Any other treatment sought beyond that date, or for any other conditions, is to be sought outside the Workers Compensation system.

Temporary Total Disability, Generally

10. C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The term "disability" as used in workers' compensation connotes two distinct elements. The first element is "medical incapacity" evidenced by loss or restriction of bodily function. The second element is loss of wage-earning capacity as demonstrated by the claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999) *Hendricks v. Keebler Co.*, W.C. No. 4-373-392 (June 11, 1999).

Temporary Total Disability, as Applied

11. As noted by Respondents, Claimant has taken a rather anomalous position that she was totally disabled prior to beginning work for Employer, and that she is now once again totally disabled as a result of her work injuries. While taking no position on Claimant's pre-employment status, the ALJ does not concur that Claimant has suffered *any* disability, however temporary, as a result of this slip and fall injury. Claimant's ATPs, with record support, felt that Claimant could return to full duties, with minor work restrictions, *the day following the work injury*. The ALJ concludes that Claimant could have continued her duties as a barista the next day, even with the very minor restrictions being recommended for a back strain and minor contusions. Instead,

Claimant elected to stay off of work entirely, with no attempt to even seek modifications. To the extent that Claimant may indeed have been unable to work, the ALJ finds it was due to her pre-existing foot conditions, and not from this slip and fall. It is duly noted that Dr. Peck recommended that Claimant stay off her feet for 4 to 6 weeks, a mere 3 days before she ignored his advice and fell. The ALJ finds that any wage loss suffered by Claimant was not due to her work injury; if Claimant suffered any involuntary wage loss at all, it was due to preexisting, non-work-related issues.

Average Weekly Wage

12. As noted in Findings of Fact #24, 25, the ALJ finds Claimant's Average Weekly Wage to be \$609.52.

ORDER

It is therefore Ordered that:

1. Claimant has suffered a compensable work injury.
2. Respondents are responsible for all reasonable, necessary, and related medical treatment, as noted above.
3. Claimants claim for Temporary Total Disability payments is denied and dismissed.
4. Claimant's Average Weekly Wage is \$609.52.
5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

ISSUES

1. Whether Respondents overcame by clear and convincing evidence the opinion of the Division Independent Medical Examination physician, Dr. Counts, as to relatedness of Claimant's shoulder, thoracic spine, and elbow symptoms.
2. Whether Respondents overcame, by clear and convincing evidence, the opinion of the Division Independent Medical Examination physician, Dr. Counts, as to maximum medical improvement.
3. Whether Respondents overcame the provisional opinion of the Division Independent Medical Examination physician, Dr. Counts, as to work related permanent impairment.
4. Whether Claimant completed all additional recommended treatment to support a request for a follow-up DIME per WCRP 11-7.
5. Whether Claimant may request a follow-up Division IME per WCRP 11-7.

FINDINGS OF FACT

1. Claimant is a 55-year-old male firefighter who sustained an admitted injury to his right shoulder while helping lift a 400-pound patient into an ambulance on April 20, 2018.

1. On April 23, 2019, Claimant saw Lori Long Miller, M.D., at US Health Works. Claimant reported pain in his right upper trapezius and upper thoracic paraspinals. On his pain diagram, Claimant circled his right rear scapular and shoulder area, and reported pain rating 6/10. Dr. Long Miller documented an essentially normal examination of Claimant's right shoulder, including documenting full shoulder AROM. Dr. Long Miller did not document an examination of the paraspinal muscle. Dr. Long Miller's documented examination of Claimant's right shoulder is a near-verbatim recitation of her examination of Claimant's left shoulder. She also noted a 2 cm non-tender mass consistent with a lipoma. Despite documenting a benign examination, Dr. Long Miller diagnosed with an "injury of right shoulder," and opined the injury was work-related and was unrelated to any pre-existing condition. Dr. Long Miller ordered physical therapy which was initiated that day. Dr. Long Miller indicated that the reasons for physical therapy included "decreased/impaired functional mobility/capacity, decreased joint range of motion," The goals for physical therapy included increasing Claimant's functional range of motion and decreasing pain, among others. Dr. Long Miller did not recommend any work restrictions. (Ex. 7).

2. On April 23, 2018, Claimant began physical therapy at US Health Works. Claimant reported headache, low back pain and that his shoulder "creaks." On

Examination, Claimant was found to have tenderness and spasm in his trapezius, supraspinatus, infraspinatus, and thoracic paraspinals. Scapular and shoulder pain began the day after the injury. Four trigger points were identified and treated with dry needling: right upper trap, deltoid, infraspinatus, and teres. It was noted that Claimant had good strength and range of motion, and his shoulder going was intact. Shoulder testing was negative. (Ex. E).

3. On April 24, 2018, Respondents filed an additional Employer's First Report of Injury which listed Claimant's body parts affected as "upper extremities – shoulder(s)." (Ex 2).

4. On May 7, 2018, Claimant returned to Dr. Long Miller noting his injury felt 75% better, and he had completed five physical therapy visit. Dr. Long Miller noted that Claimant reported no shoulder pain, weakness, tenderness, or restrictions in range of motion. Claimant also denied elbow pain. Again, Dr. Long Miller's examination of Claimant's right shoulder was identical to his left shoulder. She noted that Claimant was able to return to full duty and was not at maximum medical improvement. (Ex. 7).

5. On May 21, 2018, Claimant followed up with Dr. Long Miller, reporting tight pain in the right shoulder and posterior rib, without radiation, weakness, or elbow pain. On examination, Dr. Long Miller noted tenderness in the right trapezius muscle, but an otherwise normal examination of the right shoulder. Claimant denied elbow pain. Impingement testing of the right rotator cuff was negative. She diagnosed Claimant with a right shoulder strain with thoracic rib dysfunction and referred claimant for chiropractic treatment for his rib. (Ex. 7).

6. On May 21, 2018, Claimant began chiropractic treatment with Marc Cahn, DC initial evaluation. Claimant reported pain medial to his scapula and along the upper thoracic spine. Tenderness was noted in the right upper trapezius, upper trap, levator scapula, rhomboid and fourth costo-vertebral articulation. (Ex. 5).

7. On June 4, 2018, Claimant saw Dr. Long Miller, reporting his injury was 85% better. Dr. Long Miller noted Claimant was "slowly improving." Claimant had completed three chiropractic visits and nine physical therapy visits. Claimant also complained of pain with motion of his shoulder, but otherwise denied restrictions of the shoulder. Claimant also denied elbow pain. (Ex. 7).

8. On June 26, 2018, Claimant saw Dr. Long Miller, reporting his injury was the same, with nagging pain near the medial scapula with shoulder motion. Claimant again denied elbow pain. On examination, Dr. Long Miller noted tenderness of the right trapezius muscle and medial scapula border. Dr. Miller placed Claimant at MMI, with no permanent impairment and no restrictions. She recommended maintenance care to include chiropractic and massage therapy within 8 weeks. (Ex. 7).

9. On August 16, 2018, Claimant transferred his care to Peak Form Medical Clinic and saw Jennie Schulman, PA-C. Claimant reported that his right shoulder pain was symptomatic, and that physical therapy did not help his symptoms. Claimant

reported that his shoulder pain was aggravated with outward and upward movement of his right arm and with lifting and pushing, radiating to his right pectoral muscle. PA Schulman's right shoulder examination was normal with the exception of incomplete internal rotation, and decreased strength with opposed external rotation. Shoulder testing (Speed's, O'Brien's, Drop-arm, Empty can, Neer's, Hawkins', cross-arm, and crank tests) were negative. Claimant was diagnosed with a right rotator cuff strain and cervicgia. Claimant was referred for a right shoulder MRI. PA Schulman opined that Claimant's injury was work-related based on the information available at that time. PA Shulman also opined that Claimant was not at MMI. (Ex. 8)

10. On August 21, 2018, Claimant had a right shoulder MRI which showed generalized moderate tendinosis of the rotator cuff with a small high-grade tear of the infraspinatus and low- grade interstitial tearing of the subscapularis, no other rotator cuff tears, and moderate AC joint arthritis with moderate subacromial/ subdeltoid bursal fluid. (Ex. 5).

11. On August 27, 2018, Claimant saw Francis Thompson, M.D. at Peak Form Medical Clinic. Claimant reported right shoulder and neck pain since his April 20, 2018 accident. Dr. Thompson noted Claimant's right shoulder range of motion was limited in all planes due to pain. Speed's and O'Brien's tests were positive, other shoulder tests were negative. Dr. Thompson noted that the MRI showed generalized moderate tendinosis of the right rotator cuff with a small high-grade tear of the infra spinatus and a low-grade tear of the subscapularis. Dr. Thompson opined that Claimant's injuries were work-related. Claimant was referred to Dr. Mann at Cornerstone orthopedics for an orthopedic consultation (Ex. 8).

12. On August 30, 2018, Claimant saw Thomas Mann, M.D., on referral from Dr. Thompson. Claimant reported moderate, general right-sided shoulder pain from the scapula to the trapezius, neck and down into the biceps and hand. On examination, Dr. Mann found mild tenderness of the AC joint. He also noted pain through the impingement arc, 4/5 external rotation strength, and 5-/5 forward flexion and abduction. Speed's and O'Brien's were both equivocal. Dr. Mann reviewed Claimant's August 21, 2018 right shoulder MRI and interpreted it as showing tendinosis of the rotator cuff, fairly generalized and moderate, with a high-grade partial tear of the infraspinatus and low-grade interstitial tear of the subscapularis, moderate arthropathy, and no significant impingement. He also noted that he felt that Claimant's infraspinatus tear was not accounting for his symptoms. He performed a subacromial cortisone injection and recommended that Claimant do physical therapy. (Ex. 9).

13. Dr. Mann saw Claimant again on September 13, 2018. He noted that the cortisone injection helped some with Claimant's shoulder pain but not the pain in his upper back, neck, and scapular regions. On examination, he noted mild discomfort with impingement maneuvers. Dr. Mann indicated that the MRI changes of Claimant's right shoulder did not warrant surgery at that time. He also indicated that the partial infraspinatus tear may be amenable to platelet-rich plasma (PRP) injection as an alternative to surgery. At that time, Dr. Mann recommended against surgery, and referred Claimant to Dr. Kruse for dynamic ultrasound and possible PRP. (Ex. 9).

14. On September 21, 2018, Claimant returned to Peak Form and saw James Moses, M.D. Claimant reported right shoulder and neck pain, exacerbated with movement. Dr. Moses' examination of Claimant's right shoulder showed limited range of motion due to guarding, positive Speed's, and O'Brien's for pain in the right trapezius, positive empty can test for pain in the trapezius, and cross arm testing positive for pain in the superior shoulder (not the AC joint). Other shoulder testing was negative. Due to Claimant's cervical spine complaints and findings, and MRI of the cervical spine was ordered. (Ex. 7).

15. On September 26, 2019, Claimant had a cervical MRI which showed multi-level degenerative disc disease C4- C7 with mild to moderate bilateral foraminal narrowing at each level, mild canal stenosis C4- C5 and mild to moderate canal stenosis at C5- C6 and C6- C7.

16. On October 16, 2018, Claimant saw Justin Green, M.D., on referral from Dr. Moses, for evaluation for Claimant's cervical pain. Claimant reported overall Dr. Green's impression was cervical strain syndrome, myofascial neck pain, rule out cervical dystonia and facet syndrome. He doubted there was a cervical radiculopathy. Dr. Green noted that Claimant's rotator cuff tears appeared to be chronic. He recommended that Claimant have an EMG to rule out right arm radiculopathy and possible cervical facet injections or Botox if cervical dystonia. (Ex. 11).

17. On October 17, 2018, Dr. Green performed an EMG which was abnormal, showing a mild carpal tunnel syndrome without denervation, which he indicates was causally unrelated to Claimant's work injury. Otherwise, the EMG was normal. He prescribed a Medrol Dosepak and recommended that Claimant have a cervical ESI. (Ex. 11).

18. On October 26, 2018, Claimant returned to Dr. Moses for follow up, accompanied by a nurse case manager. Dr. Moses's assessment was right rotator cuff strain, "with partial thickness tears that appear chronic in nature since they do not correlate with his subjective complaints or physical exam" (no weakness or pain with provocative tests); cervicgia, with radicular symptoms, and ocular migraine (not likely work related). Dr. Moses recommended that Claimant follow up with Dr. Mann to determine if any further treatment of the shoulder was warranted, before moving to diagnostic epidural steroid injections for Claimant's neck. (Ex. 8).

19. On November 1, 2018, Dr. Mann saw claimant and noted he had been in physical therapy and had seen Dr. Green. Examination showed normal range of motion with some mild impingement findings, subtle discomfort on empty can and testing. Dr. Mann believed Claimant's neck was likely causing more of his symptoms. He also recommended that Claimant's neck be addressed before recommending any shoulder intervention other than rehabilitation. (Ex. 9).

20. On November 7, 2018, Claimant saw Jessica Moore-Scheeler, PA-C at Peak Form. PA Moore-Scheeler noted that Dr. Mann recommended proceeding with neck treatment and that no further shoulder treatment was warranted at that time.

Claimant was referred to Dr. Sorenson for the performance of a diagnostic and possibly therapeutic right sided epidural steroid injection. (Ex. 8).

21. On November 11, 2018, Claimant underwent a procedure to excise the lipoma on his right shoulder. (Ex. 5).

22. On November 30, 2018, Claimant saw Ashish Chavda, M.D. Claimant reported ongoing right neck pain with radiation into the right shoulder. (Ex. 10).

23. On December 12, 2018, Claimant was seen by Jennifer Becker, NP at Peak Form. Claimant's right shoulder examination was unchanged from previous examinations. (Ex. 8).

24. On February 6, 2019, Dr. Chavda performed a C7/T1 interlaminar epidural steroid block. (Ex. 10).

25. On February 7, 2019, Claimant was seen by Matthew Brodie, M.D., at Peak Form. Claimant reported pain radiating from his right lateral neck to his shoulder. He also reported that his right shoulder would get "jammed up" and "pops" with abduction greater than 90 degrees. On examination, Dr. Brodie noted reduced active range of motion in the right shoulder and discomfort and weakness on resisted abduction. (Ex. 8).

26. On February 18, 2019, Dr. Mann referred Claimant to Ryan Kruse, M.D., for a right shoulder diagnostic ultrasound and possible cortisone injection. (Ex. 9).

27. On February 28, 2019, Dr. Kruse performed a right subacromial bursa and supraspinatus tendon lidocaine injection and ultrasound. Dr. Kruse noted that Claimant's pain was diffuse and "not entirely all that focal" but he showed signs of impingement and supraspinatus tendinosis. The ultrasound was interpreted as showing focal high grade supraspinatus tendinosis without tear, infraspinatus and subscapularis tendinosis, and moderate AC joint arthropathy. He recommended Claimant undergo PRP injection. (Ex. 9).

28. On February 28, 2019, March 14, 2019, April 11, 2019, April 29, 2019, May 14, 2019, and May 28, 2019, Claimant was seen at Peak Form, without a significant change in symptoms or examination findings. (Ex. 8).

29. On April 5, 2019, Dr. Kruse performed a PRP injection at Claimant's supraspinatus tendon and subacromial bursa. (Ex. 9) Claimant returned to Dr. Kruse in follow up on April 25, 2019, and May 24, 2019, reporting continued pain over his shoulder, pain limited range of motion and that he did not feel any better. He also reported a painful "snapping" over the anterior shoulder. (Ex. 9).

30. On June 18, 2019, Claimant saw Dr. Brodie at Peak Form. Claimant reported improved pain and ROM, and some abnormal sensation in his distal right arm, below his elbow when he moved his shoulder. On examination, Dr. Brodie opined that Claimant's right shoulder appeared to be "riding higher than right side" and that he had full range of motion. Dr. Brodie noted that it was "very promising" that Claimant could

fully actively move his shoulder in all planes, although he remained weak and sore with right shoulder function. (Ex. 8).

31. On June 24, 2019, Claimant reported to Dr. Kruse that he was not better than he was prior to the PRP injection. He complained of increased "popping" throughout the shoulder. A repeat diagnostic ultrasound showed significant improvement of the prior tendon injury, with a small focal area of high- grade tendinosis of the deep fibers of the footprint. Dr. Kruse recommended consideration of a subacromial bursa injection or possible surgery with Dr. Mann. (Ex. 9 & 5).

32. On July 11, 2019, Dr. Mann reviewed Claimant's prior MRI findings and opined that Claimant would be a surgical candidate, given his ongoing symptoms. He recommended an arthroscopic evaluation, rotator cuff debridement and repair, subacromial decompression and bursectomy, after a repeat right shoulder MRI. He also indicated that the surgery would provide an objective evaluation of Claimant's shoulder pathology. A request for authorization of surgery was submitted to Insurer. (Ex. 9).

33. On July 19, 2019, Claimant had a repeat right shoulder MRI without contrast. The MRI demonstrated moderate tendinosis of rotator cuff with no focal-full thickness tear, arthritic changes of the glenohumeral joint; and chondral surface thinning with no grade 3 or 4 changes.

34. On July 22, 2019, Dr. Mann reviewed the July 19, 2019 shoulder MRI, which he opined showed some improvement. Dr. Mann recommended proceeding with the recommended surgery, which he indicated may include a distal clavicle resection. (Ex. 9).

35. On July 23, 2019, Dr. Brodie saw Claimant. Claimant reported pain in his upper back near his scapula and a grinding sensation. H also reported occasional sharp pain in the upper aspect of his right shoulder into his neck, and shoulder weakness secondary to pain. Dr. Brodie reviewed the MRI of Claimant's right shoulder and noted that it demonstrated degenerative changes in the and spurring of the AC joint, rotator cuff and biceps tendinosis, mild labral fraying, and degenerative changes to the glenohumeral joint, but no identified tears. Claimant had full shoulder range of motion with positive impingement signs. In addition, Dr. Brodie reviewed an 18-minute surveillance video provided by Respondents. Dr. Brodie noted that the surveillance showed Claimant using his right arm, including the shoulder, elbow, wrist, hand, and fingers for activities including lawn mowing, washing a car, climbing into a car and power washing. Dr. Brodie's impression was that the surveillance video did not provide evidence of pain-limited functionality regarding the right shoulder, right upper extremity, or cervical spine. He also noted that the Claimant's actions on the video demonstrated "greater functional capacity of the right shoulder when compared to examination findings demonstrated during my clinical examination today." He further opined that "[t]here is a mis-match, or lack of correlation, between the forces observed on the video and today's clinical examination findings, regarding strength." (Ex. O).

36. Mark Failinger, M.D., was qualified as an expert in the field of orthopedic and sports medicine, testified at hearing and issued three reports which were admitted into evidence. On August 16, 2020, Dr. Failinger performed an independent medical examination of Claimant at the request of Respondents. In his report related to that examination, Dr. Failinger opined that Claimant's diagnosis from his April 20, 2018 injury was a right upper thoracic/rhomboid strain. He opined that Claimant's right shoulder and cervical spine were not involved in the work-related injury. Dr. Failinger opined that the mechanism of Claimant's injury was not likely to cause the rotator cuff pathology identified in Claimant's MRI films. While Dr. Failinger agreed that Claimant appeared to be a reasonable candidate for shoulder arthroscopy, he did not believe that he would require rotator cuff repair, and that the surgery was not reasonably related to Claimant's work injury. Dr. Failinger indicated in his report and testimony that it was unlikely that Claimant injured his rotator cuff on April 20, 2018, because acute injuries to the rotator cuff do not typically lay dormant with symptoms emerging later. On August 16, 2020 report, he opined that evaluation by a spine specialist or physiatrist would be reasonable prior to placing the patient at MMI (presumably for Claimant's thoracic strain). (Ex. A).

37. On April 10, 2020, Dr. Failinger issued an Addendum to his prior report at request of Respondents, after reviewing additional records. Dr. Failinger reiterated that Claimant's thoracic pain may be reasonably work related given the consistency of symptoms reported in that area, and the mechanism of injury. Dr. Failinger also noted that Claimant's elbow "could possibly be strained" in the April 20, 2018 injury, but there were no reports of elbow or distal biceps discomfort. (Ex. A)

38. In his April 10, 2020 report, Dr. Failinger indicated the timing of Claimant's proposed surgery after conservative measures had failed indicated that "any other subsequent development of symptoms was more reasonably related to other etiologies or ongoing degeneration rather than to any acute injury that occurred at the work incident of 04-20-2018." He again reiterated that he did not believe the mechanism of injury was such that it would cause a rotator cuff or shoulder injury. He also opined that Claimant would be at MMI as of August 16, 2019 with respect to his thoracic strain, which could change if a spine specialist found positive thoracic findings that were related to the work incident. (Ex. B).

39. Dr. Failinger issued a second Addendum to his report on August 15, 2020. After revising a thoracic MRI dated July 1, 2020, and a clinic note from Dr. Castro on July 17, 2020, he reiterated that Claimant had a mild strain to the thoracic spine with unlikely acceleration of pre-existing degenerative disease. He opined that no further treatment would be necessary for Claimant's thoracic spine, and that Claimant was at MMI on August 1, 2018. He also opined that the medical records did not support a thoracic permanent impairment rating. (Ex. C).

40. At hearing Dr. Failinger testified generally consistent with his reports. He testified that September 5, 2019 was a "fairly reasonable" date for MMI. He further testified that even with a chronic tear in Claimant's shoulder, he could have no pain. He agreed that further evaluation of Claimant's thoracic spine was reasonable, and that it

was reasonable for Claimant to follow up with Dr. Mann. He concluded that a shoulder or scapular strain could explain Claimant's reports of shoulder pain.

41. Claimant saw Dr. Brodie again on August 22, 2019. Dr. Brodie noted that the Claimant's right shoulder pain and associated crepitus appeared to become symptomatic following surgical removal of Claimant's lipoma. On examination, he noted that Claimant had full and symmetrical scapular motion. (Ex. 8).

42. On September 9, 2019, Dr. Brodie reviewed Dr. Failinger's IME report and placed the Claimant at MMI. Dr. Brodie assigned a 10% right upper extremity impairment rating, which converts to a 6% whole person impairment. No permanent work restrictions were assigned. He also recommended that Claimant see a neurosurgeon for his cervical spine issues, which Dr. Brodie indicated were not considered work-related. (Ex. 8).

43. On September 11, 2019, Respondents filed a Final Admission of Liability admitting for a 10% LUE impairment rating. (Ex. EE).

44. On October 8, 2019, Insurer denied authorization for Claimant's proposed surgery pending an IME.

45. On October 15, 2019, Claimant was seen by Rachel Brakke, M.D. at CU Sports Medicine Boulder. Dr. Brakke reviewed the cervical spine MRI and noted moderate [canal and foraminal] stenosis at CS- C6 and C6- C7. Exam revealed a high riding right shoulder with tenderness over the upper trap and levator scapula. Dr. Brakke diagnosed Claimant with right upper trapezius and levator scapula trigger points. Degenerative disc disease worse at CS- C6 & C6- C7 with possible right sided radicular pain, and right sided muscle pain. Dr. Brakke recommended physical therapy. (Ex. 13).

46. On January 3, 2020, Claimant had a scapular x-ray performed which showed no acute abnormality. (Ex. W).

47. On January 15, 2020, Bryan Counts, M.D. performed a Division Independent Medical Examination (DIME) and issued a report dated February 1, 2020. Dr. Counts' examination of Claimant's right shoulder showed limitations in range of motion compared to Claimant's left shoulder, a positive painful arc, equivocal empty can and O'Brien's tests; positive Kennedy and Hawkins' tests, and mild crepitus over the bicipital groove. Examination of Claimant's right elbow showed active range of motion less than the left elbow, and a negative Tinel's test. Examination of the thoracic spine showed mild tenderness over the right paraspinal muscles, and limitations in range of motion. Based on his examination, Dr. Counts opined that Claimant's diagnosis was right shoulder strain and aggravation of underlying rotator cuff tendinosis, impingement syndrome right shoulder, glenohumeral and AC joint arthritis, right shoulder, thoracic strain, and degenerative changes to thoracic spine. He noted as "Not work-related" diagnoses – multi-level degenerative changes with foraminal narrowing and spinal stenosis cervical spine and mild carpal tunnel syndrome of the right wrist. (Ex. 5).

48. Dr. Counts opined that Claimant was not at MMI. He assessed that Claimant had then-current impingement of the right shoulder and problematic crepitus,

probably from the biceps tendon. He also noted that the next step in treatment “should be surgical, with subacromial decompression with probable distal clavicle resection and arthroscopic debridement of the rotator cuff.” (Ex. 5)

49. Dr. Counts noted that “causality should be addressed regarding the neck and thoracic pain.” He noted that the mechanism of injury could certainly injure the thoracic spine and recent plain film of the right scapula do show some degenerative changes.” He recommended a thoracic spine MRI. He also opined that Claimant’s mechanism of injury would not be expected to cause more than a transient aggravation of Claimant’s underlying degenerative changes. (Ex. 5)

50. Dr. Counts then assigned provisional impairment ratings for Claimant’s right elbow (2% whole person upper extremity rating for normalized range of motion deficits), right shoulder (8%) which combined for a total right upper extremity rating of 8% which converts to a 6% whole person impairment. Dr. Counts also assigned a 3% spine impairment for Claimant’s thoracic spine. Dr. Counts also noted that Dr. Brodie also assigned Claimant a 10% upper extremity rating, and no spine rating. (Ex. 5)

51. Dr. Counts reviewed Dr. Failinger’s IME report and agreed with Dr. Failinger’s assessment that Claimant’s cervical spine condition was not work-related. Dr. Counts disagreed that Claimant’s shoulder condition was not-work related, and indicated he discounted Dr. Long Miller’s initial examination, doubting that she performed range of motion testing because the range of motion was identical in both shoulders. He noted the physical therapist’s identification of trigger points and Claimant’s pain diagram on the same day contradicted Dr. Long Miller’s finding of no tenderness in the right shoulder. (Ex. 5).

52. On June 8, 2020, Claimant saw Bryan Castro, M.D. Dr. Castro’s impression was ongoing thoracic pain with radiating pain, and cervical pain with some element of cervical radiculopathy. Dr. Castro recommended a thoracic and cervical MRI to evaluate any neural encroachment. (Ex. W).

53. On July 1, 2020, Claimant had a thoracic MRI which was interpreted as showing multilevel degenerative changes. (Ex. X).

54. On July 17, 2020, Dr. Castro saw Claimant and noted that he had ongoing mid-thoracic and shoulder-blade pain medial to the rhomboid and levator scapula areas. He noted that the MRI showed no neural impingement or instability patterns. Dr. Castro’s impression was that Claimant’s thoracic and shoulder pain was myofascial in nature and that he saw no indication for surgical intervention. He referred Claimant back to Dr. Mann for consideration of further workup on Claimant’s shoulder. He also believed it would be reasonable for Claimant to continue physical therapy. (Ex. Z).

55. On July 20, 2020, Claimant returned to Dr. Mann. Dr. Mann reviewed Claimant’s prior records and imaging and opined that there was no indication for surgical intervention. Claimant was referred for an injection for scapulothoracic pain. (Ex. 9).

FACTS AND PROCEDURAL ISSUES RELATED TO CLAIMANT'S REQUEST FOR RULE 11-7 FOLLOW UP DIME

56. A few days before the October 8, 2020 hearing, Claimant filed a request for a DIME follow-up pursuant to WCRP 11-7 "DIME Follow Up" ("Follow-Up DIME" or "FUD"))

57. At hearing, Respondents disputed Claimant's legal authority to request a FUD. The ALJ determined at hearing that the issue was not endorsed as an issue for hearing, and the parties were directed to submit the issue to the prehearing unit for decision.

58. A prehearing conference was held before PALJ Elsa Martinez Tenriero on October 15, 2020, on Respondent's Motion to strike or stay the FUD. The PALJ also considered Claimant's Motion to Compel Respondents' to request the DIME follow up per Rule 11-7. On October 16, 2020, PALJ Tenriero issued an order denying Respondents' Motion and granting Claimant's motion to compel. On November 2, 2020, Respondent had filed a Motion to Reconsider with PALJ Tenriero, which was denied on November 10, 2020.

59. On November 12, 2020, the parties filed a Stipulation and Agreement agreeing to submit Respondents' appeal of PALJ Tenriero's October 16, 2020 and November 10, 2020 prehearing orders to the ALJ for consideration. The ALJ approved the Stipulation on November 12, 2020.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility,

the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Ripeness of Respondent's Claims

Claimants contend that the issues raised by Respondents, including the DIME opinions on MMI, impairment rating and causation are not ripe for hearing under *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002). Claimants assert because they have unilaterally requested a Follow Up DIME (FUD) under Rule 11-7, the DIME process is not "complete" and therefore the ALJ lacks jurisdiction to decide the issues of whether Dr. Counts' DIME opinions were incorrect in the first instance. Claimant's reliance on *Town of Ignacio* is misplaced. In *Ignacio*, the Court of Appeals addressed the issue of whether an ALJ could resolve issues of MMI in the absence of a DIME, and specifically whether a specialist who provided an MMI opinion qualified as an authorized treating physician. The Court concluded that because the exclusive method for challenging an ATP's MMI opinion was through a DIME, the ALJ did not have authority to determine MMI. Here, a DIME physician was selected and issued a report on whether Claimant was at MMI. The ALJ has located no authority, and Claimant has cited none, which divests the ALJ of jurisdiction over a challenge to a DIME's initial causation and MMI opinions based on the Claimant's attempt to schedule a Rule 11-7 FUD. Nor does the allegation that a Claimant has completed all additional recommended treatment divest the Respondents' of the ability to contest the DIME's initial opinions. The ALJ finds that Respondents' claims are ripe and the ALJ has jurisdiction to determine the issues raised by Respondents in their Application for Hearing.

OVERCOMING DIME OPINIONS

Overcoming DIME on MMI

Respondents contend that Dr. Counts' opinion that Claimant was not at MMI was incorrect. MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment

is reasonably expected to improve the condition.” Section 8-40-201(11.5), C.R.S. A DIME physician’s finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant’s condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant’s medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant’s condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO, May 20, 2004). Thus, a DIME physician’s findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI

The party seeking to overcome the DIME physician’s finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician’s rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician’s opinion, “there must be evidence establishing that the DIME physician’s determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, *supra*.

The rating physician’s determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Respondents contend Dr. Counts' determination that Claimant was not at MMI was incorrect for several reasons. First, Respondents contend Claimant did not sustain a work-related rotator cuff injury, and therefore any recommended surgery for that condition was not work-related. Next, Respondents contend Dr. Counts' implicit determination that Claimant sustained a work-related elbow injury (by virtue of his assignment of a provisional impairment rating) was incorrect. Finally, Respondents contend that Claimant's ongoing thoracic spine complaints were not work-related. Ultimately, Respondents argue that Dr. Counts' determination that Claimant was not at MMI was incorrect because the conditions that required further evaluation or treatment were not causally related to Claimant's April 20, 2020 work injury. Respondents have met their burden of establishing by clear and convincing evidence that Dr. Counts' DIME opinions are incorrect in some respects, and have not met their burden in others, as discussed below.

CAUSATION AND RELATEDNESS OF SHOULDER INJURY

Because the determination of whether Dr. Counts' opinions were correct is dependent upon whether his opinions on causation are correct, the ALJ first addresses those issues, before turning to the issue of MMI.

With respect to Claimant's shoulder, Dr. Counts diagnosed Claimant with a right shoulder strain, aggravation of underlying rotator cuff tendinosis, and impingement syndrome of the right shoulder. He did not opine that Claimant's rotator cuff pathology was caused by the April 20, 2018 work injury. The Claimant's medical records support Dr. Counts' opinions.

Despite what appeared to be a benign examination, Dr. Long Miller diagnosed Claimant with an "injury of right shoulder" at his initial visit and referred Claimant to physical therapy for improvement of motion and functionality of his shoulder. Various other providers identified areas of pain and limited mobility in Claimant's shoulder area, including the infraspinatus, supraspinatus, rhomboid, levator scapula, medial scapula, trapezius, and rotator cuff. Although Dr. Failinger testified that the mechanism of injury would not cause a shoulder injury, other providers did determine that Claimant sustained a shoulder sprain, and injury to the shoulder musculature. With respect to Claimant's shoulder impingement, Dr. Mann, Dr. Brodie, and Dr. Kruse each noted that Claimant showed signs of shoulder impingement on testing. Claimant's July 19, 2018 MRI showed a minimally subluxing biceps tendon complex. The ALJ does not find that the evidence unmistakable and free from serious or substantial doubt that Dr. Counts' opinion that Claimant sustained a shoulder impingement is incorrect. The ALJ also finds that

Respondents' have not established by clear and convincing evidence that Dr. Counts' opinion that Claimant sustained a work-related shoulder strain that aggravated underlying rotator cuff tendinosis was incorrect. Although Dr. Counts did not diagnose Claimant with a rotator cuff tear, the ALJ finds the evidence clear and convincing that Claimant did not sustain a rotator cuff tear as a result of his April 20, 2020 work injury.

CAUSATION AND RELATEDNESS OF ELBOW INJURY

Respondents have established by clear and convincing evidence that the DIME physician's determination that Claimant sustained an elbow injury as the result of his April 20, 2018 work injury was incorrect.

Dr. Counts assigned a 2% impairment rating for Claimant's right elbow for normalized range of motion deficits. The evidence is free from substantial doubt that Claimant sustained no work-related injury that contributed to any range of motion deficits in Claimant's right elbow. The only references to Claimant's elbow contained in the medical records are references in Dr. Long Miller's records in which Claimant denied issues with his elbow, and one reference in Dr. Brodie's records where the Claimant reported tingling below the elbow. As Dr. Failinger noted, although Claimant's elbow could possibly have been strained as a result of lifting a gurney, there has been no report of any elbow discomfort or distal biceps discomfort. No physician has diagnosed Claimant with an elbow injury, nor has any physician opined that any work-related injury Claimant sustained affected the range of motion in his elbow.

CAUSATION AND RELATEDNESS OF THORACIC INJURY

Dr. Counts also diagnosed Claimant with a thoracic strain. In his initial report, Dr. Failinger indicated that the Claimant's injury was likely a right upper thoracic/rhomboid strain, which he later referred to as a thoracic strain. Again, Claimant's treating providers noted pain tenderness and spasms in Claimant's thoracic musculature. While Dr. Counts did recommend a thoracic MRI which he characterized as useful to evaluate causation, he also noted that Claimant's impairment rating could be higher if moderate-to-severe thoracic pathology were identified on MRI. The ALJ finds that the evidence is not unmistakable and free from serious or substantial doubt that Dr. Counts' opinion that Claimant sustained a thoracic strain is incorrect.

MMI

Dr. Counts' report indicates that he found Claimant not at MMI for two reasons: First, that Claimant's shoulder required surgery; and second, that further evaluation of Claimant's thoracic spine injury was necessary. Both Dr. Counts and Dr. Failinger agreed that further evaluation of Claimant's thoracic spine was reasonable. The ALJ finds that Respondents have failed to establish by clear and convincing evidence that Dr. Counts' opinion that Claimant was not at MMI with respect to his thoracic spine was incorrect.

As found, Respondents have not established by clear and convincing evidence that Dr. Counts' opinion that Claimant sustained a shoulder strain and impingement was

incorrect. Dr. Counts' determination that Claimant was not at MMI was based, in part, on the opinion that surgery on Claimant's shoulder to include a subacromial decompression with probable distal clavicle resection and arthroscopic debridement of the rotator cuff. Although rotator cuff debridement is not causally related to Claimant's work injury, the ALJ infers from Dr. Counts' report, and Dr. Mann's recommendation for subacromial decompression and distal clavicle resection would be considered to address the Claimant's shoulder impingement. Dr. Failing did not specifically address whether consideration of a shoulder decompression at the time of Dr. Counts' DIME was reasonable. In addition, Dr. Mann indicated that surgery on Claimant's shoulder would help objectively identify the Claimant's shoulder pathology, which would further define the Claimant's condition. Because further evaluation and treatment was recommended which would further define or further treat Claimant's condition, the ALJ finds that the evidence is not unmistakable and free from serious or substantial doubt that Dr. Counts' opinion that Claimant was not at MMI with respect to his shoulder strain and shoulder impingement was incorrect.

Respondents have failed to establish by clear and convincing evidence that Dr. Count's opinion that Claimant was not at MMI with respect to his shoulder strain, shoulder impingement and thoracic strain was incorrect.

Impairment Ratings

Because Respondents have not overcome the DIME's opinion on MMI, Dr. Counts' non-binding, provisional impairment rating is not subject to review.

Appeal Of PALJ Ruling Re Rule 11-7 Follow Up DIME

Respondents contend Claimant lacked the legal authority to request an FUD because WCRP 11-7(A) does not provide a mechanism for a claimant to request an FUD, and that the authority and responsibility for requesting, scheduling, and paying for an FUD rests with respondents. Respondents also argue that the PALJ exceeded her authority in denying Respondents' motions and ordering a Rule 11-7 FUD because the determination of whether Claimant had "complete[d] all additional recommended treatment" requires a determination of fact beyond the authority of the prehearing unit. Respondents are technically correct.

At issue is Claimant's request for a FUD pursuant to WCRP 11-7 (A), which provides:

If a DIME physician determines that a claimant has not reached MMI and recommends additional treatment, a follow-up DIME examination shall be scheduled with the same DIME physician, unless the physician is unavailable or declines to perform the examination. The insurer shall file the Follow-Up DIME form after the claimant completes all additional recommended treatment.

Rule 11-7(A) does not provide a mechanism for a Claimant to unilaterally request an FUD. As such, Claimant's lacked the legal authority to unilaterally request an FUD, based on Claimant's contention that all recommended treatment had been completed.

The PALJ's determination of Claimant's motion to compel Respondents to request a FUD under Rule 11-7 necessarily required the PALJ to make the factual findings that the DIME had placed Claimant at MMI, and that all recommended treatment had been completed. Section 8-43-207.5, C.R.S., provides that the issues addressed in a prehearing conference before a PALJ are limited to: "Ripeness of legal, but not factual, issues for formal adjudication on the record before the director or an administrative law judge in the office of administrative courts; discovery matters; and evidentiary disputes."

As found, the DIME physician did not place Claimant at MMI and recommended additional treatment including surgery, and additional diagnostic testing of Claimant's thoracic spine. Once Dr. Mann rescinded his surgical recommendation, that treatment was effectively "completed." Claimant also completed the diagnostic studies related to his thoracic spine. However, this determination could not be made by the PALJ in the context of a prehearing conference because it required the resolution of factual issues. Because the PALJ's ruling required a determination of disputed evidence, the PALJ's ruling was in premature.

Notwithstanding, the evidence demonstrates that Dr. Counts' found Claimant was not at MMI and recommended additional treatment. Claimant completed this additional recommended treatment. Although Claimant is not empowered by Rule 11-7 to unilaterally request a FUD, the criteria for a Rule 11-7 Follow Up DIME are met. Consequently, the ALJ grants Claimant's Motion to Compel Respondents to request a Rule 11-7 Follow Up DIME.

ORDER

It is therefore ordered that:

1. Respondents have established by clear and convincing evidence that the DIME physician's determination that Claimant sustained a work-related injury to his right elbow was incorrect.
2. Respondents have not established by clear and convincing evidence that the DIME physician's determination that Claimant sustained a shoulder strain, shoulder impingement and thoracic strain as the result of his April 20, 2018 work-injury was incorrect.
3. Respondents' have not established by clear and convincing evidence that the DIME physician's opinion that Claimant was not at maximum medical improvement with respect to his shoulder strain, shoulder impingement and thoracic strain was incorrect.

4. Claimant's motion to compel Respondents to request a DIME follow up under WCRP 11-7 is granted.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: December 14, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUE

1. Whether Claimant established by a preponderance of the evidence that the Division Independent Medical Examination (DIME) Robert Kawasaki, M.D., incorrectly failed to assign Claimant an impairment rating for a distal clavicle coplaning procedure or subacromial decompression.
2. Whether Claimant established by clear and convincing evidence that Dr. Kawasaki incorrectly failed to assign Claimant a cervical spine impairment rating.
3. Whether Claimant's work-related permanent impairment is properly calculated based on the schedule set out in Section 8-42-107(1)(a), C.R.S., or based on the whole person pursuant to Section 8-42-107(8), C.R.S.
4. Whether Claimant is entitled to medical maintenance care.
5. Whether Claimant is entitled to disfigurement benefits.

FINDINGS OF FACT

1. Claimant has been employed by Employer as an assembler since 1969. Claimant's date of birth is April 13, 1947, and she is currently 73 years old.
2. On June 1, 2018 Claimant sustained an admitted injury to her left shoulder arising out of the course of her employment with employer.
3. Claimant initially received conservative therapy under the supervision of authorized treating physician Matt Miller, M.D., at Front Range Occupational Medicine. Conservative treatment included physical therapy at Fast Forward Physical Therapy.
4. Claimant saw Dr. Miller on July 5, 2018, July 16, 2018, July 22, 2018, at each visit, Dr. Miller documented Claimant's complaints of pain and symptoms in her left shoulder. Dr. Miller did not document complaints of cervical spine pain or restriction of motion in Claimant's cervical spine. Dr. Miller diagnosed Claimant with unspecified injury to a muscle/tendon of the rotator cuff. On August 22, 2018, Dr. Miller referred Claimant to Michael Hewitt, M.D., an orthopedic surgeon for evaluation of her left shoulder.
5. After evaluation, Dr Hewitt diagnosed Claimant with left shoulder partial-thickness rotator cuff tear, subacromial impingement and acromioclavicular arthropathy. He recommended Claimant undergo left shoulder surgery. (Ex. 6).
6. On December 5, 2018, Dr. Hewitt performed arthroscopic surgery on Claimant's left shoulder. The procedures performed included left shoulder arthroscopic

rotator cuff repair, left shoulder arthroscopic subacromial decompression, distal clavicle coplaning, and biceps tenolysis. Dr. Hewitt's post-operative diagnosis was left shoulder high-grade partial thickness rotator cuff tear (supraspinatus 90% undersurface tear); subacromial impingement; acromioclavicular arthropathy, and mild biceps tendinopathy with superior labral tear. (Ex. 6).

7. Claimant underwent physical therapy both before and after surgery. Physical therapy records admitted into evidence demonstrate that Claimant's physical therapy treatments were directed to her left shoulder. (Ex. 4).

8. On May 15, 2019, Dr. Miller placed Claimant at maximum medical improvement and assigned Claimant a 10% upper extremity rating for acromioclavicular decompression, and 10% impairment for upper extremity range of motion deficits, for a combined upper extremity rating of 20%. The upper extremity rating converts to a 12% whole person impairment. Dr. Miller indicated that he did not anticipate any ongoing medical needs. Claimant was returned to regular work duty without restriction. (Ex. 5).

9. Subsequently, Claimant requested a Division Independent Medical Examination (DIME), which was performed by Robert Kawasaki, M.D., on November 19, 2019, and a report was issued on December 8, 2019. Dr. Kawasaki agreed that Claimant reached MMI on May 15, 2019. He assigned Claimant a left upper extremity rating of 13% which converts to a 8% whole person impairment. (Ex. A).

10. Claimant reported to Dr. Kawasaki that she had stiffness in her shoulder and pain into her deltoid region. Claimant reported her neck was not injured although she had some neck pain that started 3 to 4 weeks prior to the DIME examination. Dr. Kawasaki's assessment was a left shoulder rotator cuff repair. He noted there was no indication of a specific injury to the cervical spine, and that the recent onset neck pain was unrelated to Claimant's workers' compensation claim. Dr. Kawasaki found no disorders for the Claimant's left shoulder beyond range of motion loss. Dr. Kawasaki wrote that Claimant's surgery included a distal clavicle coplaning which consisted of a shaving off a bone spur which was inferiorly directed from the distal clavicle. He noted that it was not an actual excision of the distal clavicle affecting the acromioclavicular joint, and therefore no impairment for distal clavicle excision was applicable. Dr. Kawasaki also indicated that Claimant should continue independent exercises for her shoulder strength and range of motion, and that no other specific maintenance medical care was apparently needed. (Ex. A).

11. On April 20, 2020, Claimant underwent an independent medical examination performed by Caroline Gellrick, M.D., at Claimant's request. Dr. Gellrick is board certified in Addiction Medicine and Level II accredited. Dr. Gellrick agreed with Dr. Kawasaki's assessment that Claimant was at MMI on May 15, 2019. Dr. Gellrick opined Claimant had a 16% upper extremity impairment rating (12% for range of motion deficits and a 5% for coplaning of the distal clavicle), which converts to a 10% whole person impairment. Dr. Gellrick also opined that Claimant has a 7% whole person impairment for cervical range of motion deficits, which she attributed to Claimant's left shoulder surgery. The combined left upper extremity and cervical spine impairment ratings

assigned by Dr. Gellrick Claimant's convert to a 16% whole person impairment. Dr. Gellrick did not opine that Claimant should receive an additional impairment rating for the subacromial decompression procedure performed by Dr. Hewitt. (Ex. 8).

12. Dr. Gellrick diagnosed Claimant with a left shoulder strain with loss of ROM, a supraspinatus tear, AC joint arthropathy, subacromial impingement, biceps tendinopathy, and SLAP tear. In addition, she diagnosed Claimant with "persistent pain radiating to the cervical spine with cervical spine tenderness with no separate injury on the job of the c-spine with loss of ROM." Dr. Gellrick's report indicates she attributed these conditions to Claimant's June 1, 2018 work injury. (Ex. 8)

13. Dr. Gellrick opined that a distal clavicle coplaning impairment rating, in addition to loss of shoulder motion, was appropriate. Dr. Gellrick indicated, based on past discussions with Dr. Hewitt, Claimant's shoulder surgery was not an extensive Mumford repair which takes 8-10mm of the distal clavicle, but a procedure to smoot out a sharp point to avoid disruption of a rotator cuff repair. Dr. Gellrick stated: "Dr. Hewitt has advised this examiner in the past this is considered for any impairment rating of zero to 5%, but not the full 10% of a distal clavicle repair." Dr. Gellrick wrote that her familiarity with the procedure was (apparently entirely) based on her past discussions with Dr. Hewitt. Dr. Gellrick acknowledged that Dr. Kawasaki's decision not to assign an impairment rating for distal clavicle coplaning followed the "strict Guidelines put forth with the Third Edition AMA Guides and the DOWC of Colorado." Dr. Gellrick noted that "Opinions of different DIME doctors can be seen to go either way as far as rating of clavicle or subacromial arthroplasty or not. In this case, Dr. Kawasaki stuck with upper extremity loss of function distally, not proximal. This examiner respectfully disagrees with Dr. Kawasaki, the patient has lost function proximally with the use of the L arm and L shoulder as is reflected if nothing else in the ROM loss." (Ex. 8)

14. Dr. Gellrick opined that she "respectfully disagrees with the opinions of Dr. Kawasaki" concerning the assignment of a cervical spine impairment rating. Dr. Gellrick relied upon the statement in Desk Aid 11 (Ex. 9), that in unusual cases with shoulder pathology, isolated cervical ROM can be considered without a Table 53 impairment. She indicated that Claimant had severe muscle spasm and tenderness in her cervical spine from the left shoulder surgery "which should be considered without a specific disorder." (Ex. 8)

15. Dr. Gellrick recommended maintenance treatment because Claimant is trying to work full duty and has been on her job for 51 years. She recommended periodic massage therapy, acupuncture, and dry needling for trapezius spasms, which she indicated were precipitated from the left shoulder toward the neck causing loss of cervical range of motion. (Ex. 8)

16. Claimant testified that when she returned to work, she was given and continued to work in a lighter job than she was doing at the time of her injury. Claimant credibly testified that she favors her left arm and avoid lifting her left arm, although she does not have difficulty using her left arm. She credibly testified that she has difficulty

with activities including curling her hair, bathing, dressing, reaching overhead, carrying groceries, and lifting her grandchildren.

17. Claimant testified that she has three surgical scars from her December 2018 surgery on her left arm. The scars are located on the outside and top of Claimant's left shoulder, consisting of arthroscopic punctures, measuring approximately one inch per scar. (Ex. 3). The ALJ finds Claimant should be awarded \$600.00 for disfigurement.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME Regarding Impairment Rating

Claimant seeks to overcome the DIME physician's impairment rating in several respects. First, Claimant asserts she is entitled to a whole person impairment for loss of range of motion to her cervical spine. Next, Claimant argues her left upper extremity impairment rating should include an additional impairment based on the distal clavicle coplaning procedure and/or subacromial decompression performed by Dr. Hewitt. Finally, Claimant seeks conversion of the assigned impairment rating to a whole-person impairment.

Cervical Spine Impairment Rating

The finding of a DIME physician concerning a claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Claimant has failed to prove by clear and convincing evidence that Dr. Kawasaki's determination that Claimant did not have a work-related cervical spine impairment was incorrect. Claimant argues that the absence of a specific Table 53 diagnosis does not preclude a cervical range of motion impairment under the DOWC Desk Aid #11 - Impairment Rating Tips, based on the statement under Spinal Rating 1 – that "In unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature, an isolated cervical range of motion impairment is allowed if it is well justified by the clinician. Otherwise, there are no exceptions to the requirement for a corresponding Table 53 rating." Claimant's argument rests on the premise that Claimant had severe shoulder pathology accompanied by treatment of the cervical musculature.

Dr. Kawasaki specifically addressed a cervical spine impairment, stating there was no indication for any cervical spine injury associated with Claimant's claim. Dr. Kawasaki indicated that Claimant's neck condition was of recent origin and not work-related. Accordingly, he did not provide an impairment rating for the cervical loss of range of motion. His conclusion is supported by Claimant's medical records.

Contrary to Claimant's assertion, the evidence does not demonstrate that Claimant developed neck pain and loss of range of motion of her cervical spine related to her left shoulder work injury. The evidence demonstrates that Claimant saw Dr. Miller on five occasions following her injury. Dr. Miller's records do not reflect any complaints of neck or cervical pain, or any range of motion deficits in Claimant's cervical spine, and that all examinations and treatment were geared toward Claimant's left shoulder. Similarly, the physical therapy records admitted into evidence also demonstrate treatment and complaints related to Claimant's left shoulder, with no indication of injury or impairment to Claimant's cervical spine. Dr. Hewitt's records do not include any mention of issues with Claimant's cervical spine. Although both Dr. Kawasaki and Dr. Gellrick reference Dr. Hewitt's August 17, 2018 evaluation in which Claimant's cervical spine showed mild restriction in rotation, the record was not admitted into evidence, and the evidence does not demonstrate that Dr. Hewitt attributed Claimant's then-existing mild restriction to her work-related shoulder injury. Claimant reported to Dr. Kawasaki that her cervical spine pain began three to four weeks prior to his evaluation and was not work related.

Dr. Gellrick's report states that Claimant had severe muscle spasms and tenderness in the cervical spine from the left shoulder as of the date of her examination, and she includes "persistent pain radiating to the cervical spine with cervical spine tenderness with no separate injury on the job of the C-spine with loss of ROM" in her diagnoses. Dr. Gellrick's report does not indicate why she attributed Claimant's cervical range of motion loss to her work-related injury, and her attribution of Claimant's cervical spine condition is not supported by Claimant's contemporaneous records from her treating providers. The ALJ does not find Dr. Gellrick's opinion in this regard credible or persuasive. Dr. Gellrick does not point to a specific error committed by Dr. Kawasaki, and her opinion that the cervical spine should be rated is based on the unsupported opinion that Claimant's cervical spine symptoms are causally related to her work-injury.

Claimant has failed to establish by a preponderance of the evidence that Dr. Kawasaki's determination that Claimant did not have a work-injury-related impairment of her cervical spine was incorrect.

Impairment Rating – Shoulder

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries, such as Claimant's shoulder. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of § 8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018). Claimant has the burden of showing the extent of her scheduled impairment by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc., and Indemnity Care ESIS Inc.*, W.C. No. 4-777-882 (ICAO, Nov. 5, 2010); *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (ICAO, June 5, 2007).

Claimant has not met her burden of establishing that she is entitled to an additional impairment rating based on the distal clavicle coplaning or subacromial decompression procedure. The DOWC Desk Aid #11 – Impairment Rating Tips (updated July 2020), states that "Providers may assign up to 10% upper extremity impairment for distal clavicular resection/excision." The evidence establishes that Dr. Hewitt did not perform a distal clavicular resection or excision, but a distal clavicle coplaning. Dr. Kawasaki indicated there only a resection of inferiorly directed distal clavicle exostosis was performed and not an actual excision of the distal clavicle affecting the acromioclavicular joint therefore the distal clavicle excision impairment did not apply. Dr. Gellrick's opinion on the nature of the procedure performed appears to be based entirely on her past discussions with Dr. Hewitt regarding similar procedures on other patients. Dr. Gellrick's report acknowledges that the procedure Claimant underwent was not a distal clavicle resection, but "coplaning to smooth out a sharp point..." Dr. Gellrick's opinion that a separate impairment rating is appropriate is also based on a past conversation with Dr. Hewitt. Given that Dr. Gellrick's opinion is apparently based on past conversations with Dr. Hewitt that were not directly related to Claimant, the ALJ does not find her opinions persuasive.

Claimant's argument that Dr. Kawasaki incorrectly interpreted the Desk Aid as prohibiting the assignment of an impairment rating, rather than giving the rating physician discretion to assign up to a 10% impairment rating is not persuasive. As acknowledged by Dr. Gellrick, Dr. Kawasaki strictly applied the AMA Guidelines. Again, although Dr.

Gellrick disagrees with Dr. Kawasaki's opinion, she does not identify any deviation from the AMA Guidelines or the Impairment Rating Tips.

With respect to Claimant's subacromial decompression, Claimant has failed to establish she is entitled to an additional impairment rating for the procedure. The July 2020 DOWC Desk Aid #11 – Impairment Rating Tips, provides: "In general, subacromial arthroplasty (a term used to describe acromioplasty or subacromial decompression) should be rated using range of motion. There are some situations when loss of range of motion alone may not adequately represent the extent of the impairment following subacromial arthroplasty. In those cases, up to 10% upper extremity impairment may be assigned. Make sure the rationale is provided in the report." (Ex. 9). Based on the DOWC's Impairment Rating Tips, Claimant would only qualify for an additional impairment rating based on the subacromial decompression if her functional impairment resulting from the procedure was not adequately represented by the associated loss of range of motion. Although Dr. Miller assigned a 10% impairment rating for the procedure, his report contains no rationale as to why Claimant's range of motion deficits did not adequately represent the impairment from the procedure. Neither Dr. Gellrick nor Dr. Kawasaki specifically addressed the issue, and neither provided a rationale as to why Claimant would be entitled to an impairment rating beyond loss of range of motion.

The ALJ finds that Claimant has failed to establish by a preponderance of the evidence that Dr. Kawasaki incorrectly failed to assign an additional impairment rating for either procedure performed (i.e., distal clavicle coplaning or subacromial decompression).

Conversion of Scheduled Impairment to Whole Person Impairment

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." See §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. See *Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998). When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. See §8-42-107(8)(c), C.R.S.

Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. See *Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. See *DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

The ALJ must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-

996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs*, W.C. No. 4-536-198 (ICAO June 20, 2005). *In re Claim of Barnes*, 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

Claimant has failed to establish by a preponderance of the evidence that her scheduled impairment rating for loss of use of the arm below the shoulder should be converted to a whole person impairment. The evidence at hearing demonstrated that Claimant experiences difficulty using her left arm, including using it above shoulder height, lifting things and household chores. Claimant described her difficulties as being related to her left arm. None of Claimant's treating providers documented any impairment beyond her left shoulder. Dr. Kawasaki expressly stated that Claimant had no disorders of the left shoulder beyond range of motion loss. Only Dr. Gellrick attributes Claimant's cervical spine range of motion loss to her work injury, although no persuasive rationale for this opinion was offered. The evidence does not establish that Claimant sustained any functional loss beyond her left shoulder. As such, Claimant is limited to the medical impairment benefits specified in § 8-42-107(2)(a), C.R.S.

Maintenance Medical Care (Grover Medicals)

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo.

App. 2003); *Anderson v. SOS Staffing Services*, W. C. No. 4-543-730, (ICAO, July 14, 2006).

Claimant has failed to establish by a preponderance of the evidence an entitlement to maintenance medical care. When he placed Claimant at MMI, Dr. Miller opined that future medical care was not anticipated. Similarly, Dr. Kawasaki opined that although Claimant would need to continue with independent range of motion and strength exercises for her shoulder, she was not on any medications for her left shoulder and there did not appear to be any specific maintenance needs. Dr. Gellrick opined that Claimant would benefit from treatment, to include massage therapy, acupuncture, and dry needling, which would be directed at Claimant's neck and cervical spine symptoms. Because the care recommended by Dr. Gellrick is directed at Claimant's non-work-related cervical spine condition, the treatment is not reasonably necessary to relieve the effects of her work-related shoulder injury or to prevent further deterioration of that condition. Accordingly, the ALJ finds that Claimant has failed to establish by a preponderance of the evidence that such maintenance care is appropriate.

Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained disfigurement as a direct and proximate result of her work injury, consisting of three approximately one-inch scars on her left shoulder. Claimant should be awarded \$600.00 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's request for an additional upper extremity impairment rating or distal clavicle coplaning and/or subacromial decompression is denied.
2. Claimant's request for a whole person impairment based on loss of range of motion of the cervical spine is denied.
3. Claimant's request to convert the 13% scheduled impairment for loss of use of the left arm below the shoulder to a whole person impairment rating is denied.
4. Claimant's request for maintenance medical care is.
5. Claimant is entitled to disfigurement benefits in the amount of \$600.00.
6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: December 16, 2020

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Watson, on the issue of Maximum Medical Improvement?
- II. If said DIME opinion has not been overcome, has Claimant shown, by a preponderance of the evidence, that the treatment/diagnostics recommended by Dr. Watson are reasonable, necessary, and related to his work injury.

PROCEDURAL BACKGROUND

A hearing between these parties was held in case WC 5-034-654-002 on September 12, 2019 by the undersigned ALJ. (a copy of the Order issued in connection has been admitted as Exhibit L in this case). The sole issue before the ALJ in that case was the reasonableness, necessity, and relatedness of the lumbar fusion surgery for Claimant's work injury of 12/6/2016. On December 3, 2019, this ALJ found that Claimant had not proven, by a preponderance of the evidence, that said proposed lumbar fusion surgery was reasonable and necessary, nor had he shown that it was related to the work injury.

Shortly after the ALJ issued his ruling (which was not appealed), the ATP, Dr. Daniel Olson, placed Claimant at MMI on January 20, 2020. A Whole Person Impairment rating of 27% was provided. Respondents then filed a FAL consistent with the ATP's report. Claimant then requested a DIME examination, which was performed by Dr. William Watson, MD on June 9, 2020. On June 9, 2020, Dr. Watson issued his DIME report, finding that Claimant was **not at MMI** (but providing a provisional Whole Person Impairment rating of 25%), by finding that Claimant's complaints in fact **were work-related**, and recommending a new CT myelogram and EMG study. Pending the results therefrom, he might recommend surgery. Respondents then filed this Application for Hearing.

At this time, the ALJ will take administrative notice of his prior Order in WC 5-034-654-002. Furthermore, the ALJ will re-adopt and incorporate by reference, all Findings of Fact 1 through 37, inclusive, but make Additional Findings of Fact, below. Consistent with the new issues and new evidence before the ALJ in this matter, entirely new Conclusions of Law will issue.

ADDITIONAL FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Additional Findings of Fact:

The DIME Examination

1. Dr. William Watson, MD, performed his DIME examination on June 9, 2020. He issued his written report that same date, finding that Claimant's lumbar complaints were work related, and finding Claimant not to be at MMI. The narrative portion of the report is over 15 pages, single-spaced. Claimant's medical history is detailed from at least 2008. Greater attention is provided to the medical care Claimant received after the work injury of 12/6/2016. Considerable time is devoted to his analysis of the competing opinions of Drs. Rauzzino and Castrejon.

2. The DIME notes, under Pertinent Issues from the Records:

The examinee returned to see Dr. Daniel Olson on December 30, 2019. Followup for low back pain. *He did hear form (sic) the judge and it was not favorable for him. The judge ruled against surgery.* He was given Toradol 60 mg IM. (Ex 1, p. 14)(emphasis added).

3. The DIME further notes, under Pertinent Medical Issues:

The examinee continues to have pain in the lower lumbar spine. He has pain going down both legs. On the right it is in the L5-S1 distribution and on the left down into the anterior aspect of the ankle and foot. He states that these are much like the symptoms he had before his injury on the left side which required a spinal cord stimulator. (Ex. 1, p. 15).

4. Under Discussion of Diagnostic Testing, the DIME notes that Claimant has had numerous CT myelograms of his lumbar spine, the most recent of which was on 8/23/2018. This revealed mild to moderate spinal stenosis at L4-L5, and mild to moderate foraminal stenosis also noted. At L5-S1 there was degenerative disc bulging, resulting in in mild spinal and moderately advanced bilateral foraminal stenosis.

5. Also noted under Diagnostic Testing:

An EMG evaluation done of February 18, 2019 by Dr. Dwight Caughfield did show chronic right L5-S1 radiculopathy with scattered small PSW/fibs and polyphasics however the presence of large PSWs in the peroneal would imply some ongoing axonal loss. *He recommended imaging correlation. Id at 16* (emphasis added).

6. Under Date and Discussion of MMI, the DIME stated:

I do not believe this individual is at maximal medical improvement. I believe further treatment is indicated.

The examinee prior to his injury of December 6, 2016 was having no spinal pain. He had never had radiation of the pain into the right leg only into the left. His EMG evaluation did specifically point to an L5-S1 chronic radiculopathy, however Dr. Dwight Caughfield said there may be evidence of ongoing axonal loss. Within reasonable medical probability I believe further care is indicated. *Id* at 16. (emphasis added).

7. Under Rationale for your Decision, the DIME states, in pertinent part:

....I believe he may be a candidate for further treatment and possible surgical intervention. I do believe that within reasonable medical probability *the accident [of 12/6/2016] was a new injury*. He of course had degenerative changes prior to this *but was not having any difficulty*.....He has not had a CT myelogram since August 23, 2018. *I would repeat this study and also his EMG with Dr. Caughfield*. After these are accomplished I would like to review them prior to making recommendations regarding possible surgical intervention. *Id* at 17 (emphasis added).

Dr. Rauzzino's Deposition

8. Dr. Michael Rauzzino was deposed on 11/2/2020. He testified that he 'believed' he had reviewed this ALJ's original Order in this case. However, he was not familiar with the DIME physician, Dr. Watson, nor had he reviewed the DIME report. However, he was asked if the medical records were consistent with certain general propositions put forth in the DIME report. He stated that the records were not consistent with Claimant not having spinal pain prior to the work injury, nor with radicular pain down only one leg prior to the injury.
9. Dr. Rauzzino felt that there was no structural basis to conclude that the work injury caused Claimant's bilateral symptoms. However, when asked his opinion about the results of the 2/18/2019 EMG as interpreted by Dr. Watson, he stated he had not seen such report, and it would have been 'greatly helpful' to have seen such report prior to opining on it. However, he still indicated that a repeat of such EMG would not be of assistance, since his complaints are not work-related. He also indicated that he had not seen the medical records from Dr. Lazar, who had performed lumbar surgery on Claimant in 2008. He was unaware whether such surgery was intended to address Claimant's right side or left side.

10. In the final analysis, Dr. Rauzzino did not believe that Claimant's complaints are truly radicular in nature; rather, they are too diffuse, and are the result of a diffuse somatic complaint, and without a corresponding motor deficit.

Dr. Watson's Deposition

11. The DIME physician, Dr. Watson, was deposed on 11/12/2020. He is level II accredited, and is board certified in Orthopedics. He is no longer actively performing surgeries; instead he sees primarily non-operative cases, and performs pre- and post-operative cases for Dr. Danylchuk. He also performs perhaps one to two IMEs per week [the record is unclear if said IMEs were generally on behalf of Insurers, injured parties, some of both, or for the Division].
12. Dr. Watson reviewed the process of conducting this DIME exam, and the results he reached. He lauded Dr. Caughfield's expertise, and opined that Claimant's pain generator, based on his report, was at L4-L5 and L5-S1, right side. He was familiar with Dr. Castrejon's and Dr. Rauzzino's opinions, but reiterated his belief that this was a new injury [of 12/6/2016], and that further diagnostics (EMG and CAT scan) were warranted. Depending on those results, he might recommend surgery. Alternatively, he might recommend physical therapy, facet blocks, epidural steroid injections, or medial branch blocks.
13. When asked on cross-examination if he was aware of certain facts, he acknowledged that he was unaware that this ALJ had previously ruled that the surgery was not related to the work injury, nor had he seen the ALJ's Order. [However, this ALJ notes in Fact #2 above, that the DIME report itself *did* note that the ALJ had declined the surgery request]. He acknowledged that he had not seen any deposition transcripts or hearing testimony from Drs. Rauzzino, Castrejon, Bess, or the Claimant. He only reviewed what had been provided to him.
14. When then asked if having this ALJ's opinion might change his conclusions, he concluded thusly:
- If he had information about the patient *that directly contraindicated the medical records* that I received, then it would make a difference. I would be interested in that. But if he had all the information, you know – in other words, no. I respect lay people's opinion about medical things. I don't think it's an exclusive thing for doctors, but I just guess, I don't know. (Depo transcript, pp. 15-16)(emphasis added).
15. When asked if, based on similar medical records, the ALJ's opinion would change his opinion, he answered:

No. No, it hasn't. *I reviewed all the records*, and it was my conclusion what my conclusion was. What I have said, though is, the Administrative Law Judge had different material than I had, which, you know, *I haven't been given everything*, obviously, so who knows. It might change my mind. *But if I had all the information that the Administrative Law Judge has, and he said that nothing more should be done, I respectfully disagree with that.* *Id* at p. 16 (emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the

testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The ALJ finds that Claimant was a reasonably consistent medical historian to his medical providers, and to the IMEs. Further, his hearing testimony is reasonably consistent as well. To allay the concerns of Dr. Watson, the ALJ has seen nothing in the record wherein Claimant has made statements which significantly contraindicate what is in the medical reports.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that each expert has rendered their opinions to the best of their ability, *based upon the information they were provided-and at the time it was provided*. What is clear from all of this is that, for various reasons, no two of the medical providers has had access to the exact same material, at the time they rendered their opinions. And, it is duly noted that as new information comes in, the target starts moving once again. Opinions can be revised or refined, or perhaps nothing changes. The real issue here is one of *persuasiveness*, in the context of the legal arena. However, in the end, once all the reports are reviewed, and all witnesses are deposed, in sequence, and all witnesses testify, it is the ALJ who has everything there is to be had in each case. Thus falls the burden of making decisions, despite the acknowledged deficit of medical training, compared with even a medical student in his early 20s. This irony is humbly noted, but we forge on.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe*, W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines*, W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME

physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office, supra*. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO November 21, 2008).

H. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

Musings on the DIME Process

I. The ALJ notes that, in order to truly effectuate the intent of the legislature in having a DIME opinion to which all should defer, the DIME *should* be provided with *all pertinent information* which could affect his/her decision. While this could prove overwhelming, especially given the compensation afforded DIME physicians compared with their IME counterparts, more information is better than less. The DIME can place little weight to it, but at least he has it. Which begs a significant question: *Who* should assure that the DIME has every piece of relevant data-the party who requests the DIME, or the opposing party? On a level field (wherein an informed, neutral DIME opinion is the objective) both parties should attempt to "win" at the DIME level- and thus tag their opponent with an enhanced burden of proof to overcome it. Thus, if a party wants to 'win the DIME', there is a process to enhance their case at the outset, to wit: request a Samms conference. This should assure the DIME has everything before the report ever gets written. In such fashion, there is ample time for processing the information and careful reflection by this neutral party. The Samms process is fair game for anyone truly seeking the best product. Foregoing this opportunity to do so, and then attempting a collateral attack on the DIME for not having all the relevant information is not the best practice, in the opinion of this ALJ. If one thinks such information is highly

pertinent, tell the DIME about it, and not the ALJ after the fact. To do so otherwise is risky business, by asking the ALJ to speculate on what the DIME might have valued the most.

J. The ALJ notes that his earlier Order of 12/3/2019 was based upon the best information available at the time. The burden of proof lay with Claimant at that hearing. The ALJ, of course, did not have the opinion of the DIME physician, either in writing, or as clarified in his deposition. While that Order was not appealed, and thus made final, Claimant sought a legally permissible remedy through the DIME process. If the legislature had intended the ALJ to have the final word, they could have done so. Putting aside any turf-related ego bruising to this ALJ, the DIME is now entitled to a legal presumption of validity, as noted above. This ALJ will not look for a way to defer to his own earlier opinion. This is a new ballgame. The burden of proof has now legally shifted, and now we move forward.

Overcoming the DIME: What is the DIME's Opinion?

K. Claimant's initial hearing testimony, as well as Dr. Rauzzino's hearing testimony was available at the time of the DIME request. Likewise, for the depositions of Drs. Castrejon and Bess. The ALJ's Order of 12/3/2019 (without an appeal) was also in the books. All such material might have been **relevant** for consideration by the DIME (had it been tendered via legal process), but there is insufficient evidence that any of it would have been **pivotal** in the DIME's opinion. Dr. Watson made it clear in his deposition that the only thing that *might* have changed his mind would have been statements by the Claimant that *contraindicated* the medical records. No such pivotal statements from Claimant have been brought to the fore by Respondents. Thus, after his deposition, Dr. Watson's DIME opinion remained intact, and the ALJ so finds. Dr. Watson opines that Claimant is not at MMI.

Overcoming the DIME: Is the DIME Opinion Clearly Wrong?

L. It is duly noted by the ALJ that all the medical experts testified consistent with their reports-albeit their testimony brought out greater detail for their respective rationales. Thus, there is nothing to persuade the ALJ that Dr. Watson somehow should have come out the other way, for lack of having their testimony. And as noted, Respondents had their remedy, via Samms conference, had they felt otherwise. Dr. Watson fielded the question about this ALJ's prior Order appropriately, and no – the ALJ did not have access to any smoking gun statements by Claimant. Dr. Watson is not only Level II accredited, he is board certified in Orthopedics, and still active in the practice. In the final analysis, what is before this ALJ is differing medical opinions. By law, the DIME trumps the others. His opinion on MMI is not highly probably incorrect, and the ALJ so finds. Claimant will now require more medical treatment to reach MMI.

Medical Benefits

M. Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-

101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a “medical benefit” it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant’s physical needs. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995); *Karim al Subhi v. King Soopers, Inc.*, W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006).

N. In this instance, the ALJ finds that Claimant has shown that the treatment recommendations by Dr. Watson in his DIME report are reasonable, necessary, and related to his work injury. Such treatment should include the diagnostics he recommended, including the EMG and CAT Scan, with follow-up treatment, possibly to include surgery, depending upon the diagnostic results.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Watson has not been overcome. Claimant is not at MMI.
2. Respondents shall pay for all reasonable, necessary, and related medical treatment to bring Claimant to MMI. Such treatment shall include, but not be limited to, the diagnostics as recommended by the DIME physician.
3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-007-434-001**

ISSUES

- Are Respondents entitled to request a follow-up DIME with Dr. Higginbotham, and if so, does the ALJ have jurisdiction to award medical benefits?
- Did Claimant prove by a preponderance of the evidence PRP injections recommended by Dr. Ghazi are reasonably needed to cure and relieve the effects of his admitted injury?

FINDINGS OF FACT

1. Claimant has worked as a chiropractor for approximately 30 years. He owns the Employer in this case.

2. Claimant suffered an admitted back injury on February 12, 2016 while moving heavy piece of office equipment.

3. Claimant received primarily conservative care for his injury. He was evaluated by Dr. Paul Stanton, an orthopedic surgeon, who determined Claimant was not a surgical candidate. Claimant was put at MMI by his ATP on March 9, 2017 with a 16% whole person rating for the lumbar and thoracic spines.

4. Claimant saw Dr. John Tyler, a physiatrist, on May 2, 2017. Dr. Tyler thought Claimant was an excellent candidate for trigger point injections followed by aggressive myofascial release techniques.

5. Claimant requested a DIME, which was performed by Dr. Thomas Higginbotham on September 12, 2017. Dr. Higginbotham determined Claimant was not at MMI and recommended the following treatment:

- aggressive deep tissue myofascial work with trigger point injections, as recommended by Dr. John Tyler,
- at least four sessions of biofeedback, and
- use a foam roller or tennis ball for auto massage.

6. Dr. Higginbotham recommended Claimant's ongoing care be managed by a physiatrist. He also opined Claimant did not appear to have a surgical condition, and epidural steroid injections and facet joint injections were "not indicated based on subjective complaints, physical examination and diagnostic studies."

7. Respondents elected not to contest the DIME, and filed a General Admission of Liability on November 1, 2017 conceding Claimant was not at MMI.

8. Claimant continued treating with Dr. Tyler after the DIME. His treatment was interrupted briefly to address injuries suffered in a motor vehicle accident. He resumed treatment and ultimately underwent a series of trigger point injections and myofascial release under Dr. Tyler's direction. The treatment provided temporary relief but no sustained improvement. Dr. Tyler referred Claimant to Dr. Usama Ghazi, also a physiatrist, for consideration of stem cell injections.

9. Dr. Tyler referred Claimant for biofeedback as recommended on March 1, 2018. There is no indication Claimant never pursued biofeedback. Claimant did not mention biofeedback in his discovery responses or at hearing. The ALJ infers Claimant is not interested in pursuing biofeedback.

10. Claimant saw Dr. Ghazi on October 12, 2018. Dr. Ghazi noted Claimant "has not had any diagnostic facet injections, sacroiliac joint injection, [or] interspinous ligament injections. He has not had rhizotomies or epidural steroid injections." Dr. Ghazi recommended a right sacroiliac joint injection and right sciatic nerve block for diagnostic and potentially therapeutic purposes. Depending on Claimant's response, he indicated he might consider additional injections or rhizotomy.

11. Dr. Ghazi requested authorization for the injections on October 22, 2018. Insurer had the request reviewed by Dr. Joseph Fillmore on October 30, 2018. Dr. Fillmore opined, "while not specifically stated in the Independent Medical Evaluation, I believe it is reasonable for diagnostic and therapeutic purposes to trial a right sacroiliac joint injection." Insurer approved the procedure, and Dr. Ghazi performed the injections on March 5, 2019.

12. Claimant received "100%" pain relief from the injections for approximately 10 days. Dr. Ghazi considered that an excellent diagnostic response, and recommended facet injections combined with a repeat SI joint injection. If Claimant again only received temporary relief, Dr. Ghazi indicated he would consider sacroiliac rhizotomy. He also noted Claimant was interested in platelet rich plasma (PRP) injection for the right sacroiliac joint "since the patient is a Doctor of Chiropractic Medicine and wants to focus on natural healing rather than neural ablations and repeated steroid injections in the future."

13. Dr. Ghazi performed the facet injection on July 9, 2019. Claimant returned to Dr. Ghazi on October 4, 2019 and reported significantly less pain. Dr. Ghazi further noted Claimant had been performing home exercises and gave him a refresher on some techniques. Dr. Ghazi remarked Claimant was a potential candidate for medial branch blocks/rhizotomies but Claimant wanted to maximize conservative care including home exercise.

14. Claimant returned to Dr. Ghazi on December 6, 2019. Claimant stated he had full relief from four to six weeks and then his pain returned. Claimant was regular performing home exercises and demonstrated "perfect form," which Dr. Ghazi considered on surprising given Claimant "is a chiropractor and well-versed in these spinal exercises." Although Dr. Ghazi opined Claimant was "certainly a candidate for rhizotomies," he and

Claimant decided to try PRP injections instead. Dr. Ghazi opined a PRP injection “would be a one-date procedure, rather than potentially for separate procedures and would be more cost-effective with no chance of causing spinal extensor weakness. From a medical standpoint, therefore, it makes sense. We will see if we can get this authorized.”

15. Dr. Jeffrey Raschbacher performed a Rule 16 peer review regarding the PRP injections. He recommended denial of the PRP injection as not reasonably necessary. He noted the MTGs and medical literature “do not support use of PRP in the setting.” He saw no substantial likelihood the injections would improve Claimant’s function. Insurer denied the PRP and Claimant requested a hearing.

16. On August 12, 2020, Respondents sent notice that a follow-up DIME appointment with Dr. Higginbotham had been set for September 3, 2020.

17. At a prehearing conference held on August 24, 2020, Respondents argued that they were entitled to a follow-up DIME because all treatment recommended by the DIME had been completed. Respondents argued Claimant’s Application for Hearing should be stricken and all medical benefit issues stayed until after the DIME was completed. Claimant argued *Williams v. Kunau*, 147 P.3d 33 (Colo. 2006) precludes a follow-up DIME until an ATP has placed the claimant at MMI a second time. PALJ Phillips agreed with Claimant’s argument and struck the follow-up DIME appointment.

18. Respondents filed a Renewed Motion to Strike the Application for Hearing and Proceed to Follow-Up Division IME Appointment on September 29, 2020. Claimant filed a response to the motion on October 9, 2020. At the commencement of the hearing, the ALJ informed the parties there had been insufficient time to review and consider the legal issues raised by Respondents’ Motion before the hearing. The ALJ’s preliminary impression was Claimant had the better argument, but the parties were advised no final determination had been made and were invited to address the issue in their post-hearing position statements.

19. Upon further review and reflection, the ALJ agrees the follow-up DIME should have been allowed to proceed because all of the treatment recommended by the DIME has been completed. And because a DIME is actively in progress, all medical benefit issues should be stayed pending receipt of the DIME report.

CONCLUSIONS OF LAW

Williams v. Kunau, 147 P.3d 33 (Colo. 2006) held that a follow-up DIME is a prerequisite to closing a claim when a DIME has previously determined a claimant is not at MMI. The claimant in *Williams* underwent a DIME that found he was not at MMI. The ATP subsequently put the claimant at MMI a second time, and the insurer filed a Final Admission of Liability without sending the claimant back to the DIME physician. The *Williams* court was tasked with determining whether the insurer could file and FAILED based on the ATP’s post-DIME MMI determination, or whether the claimant had to return to the DIME physician for a determination of MMI before the FAL could be filed.

Williams held it was improper to file an FAL based on the ATP's later MMI determination. The court held that once a DIME has found a claimant not at MMI, "the DIME process remains open and, when the treating physician makes a second finding of MMI, the employer or insurer may not file an FAL to close the case prior to returning the claimant to the independent medical examiner" The Court further stated that, "a second determination of MMI by the treating physician would not have any binding effect pending the independent medical examiner's follow-up examination, nor would it be the basis for filing of an FAL because the DIME process in the case is still open."

The procedures governing follow-up DIMEs are found in WCRP 11-7. Previous versions of the Rule contained no reference to any triggering event for a follow-up DIME. The version in effect on Claimant's date of injury provided:

11-7 IME FOLLOW-UP

Sections of this Rule 11 apply to follow-up procedures, as appropriate. If a Level II IME physician determines a claimant has not reached MMI and recommends further treatment a follow-up IME examination shall to the extent possible be scheduled with the original IME physician. The party requesting the follow-up appointment shall provide written notice on a Division prescribed form or a substantially similar form

This ALJ previously understood the procedural rules regarding follow-up DIMEs to operate in the manner as determined by PALJ Phillips, *i.e.*, the follow-up DIME is triggered by another determination of MMI by the ATP. Even though there has never been an explicit statute or rule to that effect, that has been the common understanding and practice for many years since the decision in *Williams*. Consistent with this interpretation, the previous Request/Notification for Follow-Up IME form included a section for the "New MMI Date (as provided by the treating physician)."

But the Division amended Rule 11-7 effective January 1, 2019, which now provides:

11-7 DIME FOLLOW-UP

(A) If a DIME physician determines that a claimant has not reached MMI and recommends additional treatment, a follow-up DIME examination shall be scheduled with the same DIME physician, unless the physician is unavailable or declines to perform the examination. The insurer shall file the Follow-Up DIME form **after the claimant completes all additional recommended treatment.** (Emphasis added).

The ALJ interprets the highlighted language as referring to the treatment recommended by the DIME. This conclusion is reinforced by contemporaneous changes to the Division's follow-up DIME form, which no longer contains any reference to a subsequent MMI determination by an ATP. The most reasonable inference is the Division

intended to address the situation presented here, and provide a mechanism by which a party can obtain a follow-up DIME without being beholden to the ATP.¹

Claimant argues issue should be controlled by the version Rule 11-7 in effect on the date of Claimant's injury. But the DIME rules are merely "procedural" and not "substantive." Accordingly, the rule changes apply to all open cases requiring a DIME regardless of the date of injury. *Arczynski v. Club Mediterranee of Colorado*, W.C. No. 4-156-147 (May 20, 2003).

In this case, the treatment recommended by Dr. Higginbotham was active release techniques in conjunction with trigger point injections, case management by a physiatrist, home exercises, and biofeedback. The recommendations other than biofeedback have been completed. And Claimant had made no effort to pursue biofeedback despite Dr. Tyler's referral in March 2018. The factual predicate for requesting a follow-up DIME under the current version of Rule 11-7(A)—completion of treatment recommended by the DIME—has been satisfied. Therefore, Respondents' request for a follow-up DIME should not have been stricken.

It is well established that ALJs lack jurisdiction to adjudicate curative medical benefits if a DIME has been requested but the report has not been received. Section 8-42-107(8)(b)(III); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995); *Hubbard v. University Park Care Center*, W.C. No. 4-907-314-02 (July 17, 2014); *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (January 27, 2006); *Eby v. Wal-Mart Stores Inc.*, W.C. No. 4-350-176 (February 14, 2001); *Anderson-Capranelli v. Republic Industries, Inc.*, W.C. No. 4-416-649 (November 25, 2002); *Cass v. Mesa County Valley School District*, W.C. No. 4-69-69 (August 26, 2005). Because Respondents' request for a follow-up DIME has been reinstated, adjudication of the disputed PRP injections is premature.

ORDER

It is therefore ordered that:

1. Respondents' request to set aside PALJ Phillips' August 26, 2020 Prehearing Conference Order striking the follow-up DIME is GRANTED. Respondents may schedule a follow-up DIME with Dr. Higginbotham. Respondents shall coordinate with Claimant's counsel to ensure Claimant's availability for the DIME appointment.
2. Claimant's request for PRP injections recommended by Dr. Ghazi is dismissed without prejudice pending the follow-up DIME report.
3. All issues not decided herein are reserved for future determination.

¹ Although Respondents are seeking the follow-up DIME here, one can also envision a situation where the claimant may want a follow-up DIME to obtain an impairment rating if an ATP refused to make a formal declaration of MMI.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

ISSUE

1. Whether Respondents have established by a preponderance of the evidence an entitlement to repayment of thirteen thousand forty-two dollars and 57/100 (\$13,042.57) for amounts overpaid to Claimant for temporary total disability benefits.

FINDINGS OF FACT

1. Claimant sustained an admitted work-related injury to his left wrist on October 25, 2017, and had an ORIF (open reduction internal fixation) surgery performed on his left wrist on October 27, 2018, which included the implantation of hardware. (Ex. G).
2. Respondent was entitled to temporary total disability benefits (TTD) beginning on October 26, 2017.
3. On April 27, 2018, Claimant's authorized treating physician, Scott Richardson, M.D., placed Claimant at maximum medical improvement. Dr. Richardson indicated Claimant was cleared to return to work full duty without restrictions. (Ex. A).
4. Insurer's claims representative, Brett B[Redacted] testified that Claimant was at full work duty and had hardware removal surgery on April 1, 2019, which resulted in the reinstatement of TTD benefits beginning on April 1, 2019.
5. On June 8, 2020, Claimant underwent a Division Independent Medical Examination (DIME) performed by David Orgel, M.D. Dr. Orgel placed Claimant at MMI effective April 9, 2020 with a 16% permanent impairment rating for Claimant's left upper extremity. (Ex. G). Claimant's entitlement to TTD benefits terminated on April 9, 2020, upon reaching MMI.
6. Claimant's average weekly wage (AWW) was \$645.60 per week, and he was entitled to AWW benefits of \$430.61 per week. (Ex. G).
7. Claimant was entitled to temporary total disability benefits (TTD) from October 26, 2017 to April 27, 2018 following the initial injury, and again from April 1, 2019 through April 9, 2020 between the removal of surgical hardware and the DIME physician placing him at MMI.
8. For the period of October 26, 2018 to April 27, 2018, Claimant was entitled to TTD benefits totaling \$11,257.38 (i.e., 26.148857 weeks x \$430.61 = \$11,257.38). (Ex. G)
9. For the period of April 1, 2019 through April 8, 2019, Claimant was entitled to TTD benefits totaling \$23,068.39 (i.e., 53.571458 weeks x \$430.61 = \$23,068.39). (Ex. G).

10. Based on Claimant's 16% permanent impairment rating for impairment of the left upper extremity, Claimant was entitled to permanent partial disability (PPD) benefits in the amount of \$9,902.80. (Ex. G).

11. In total, Respondent was entitled to TTD and PPD benefits in the amount of \$44,228.57.

12. Respondents' paid Claimant combined TTD and PPD benefits in the amount of \$57,271.14, resulting Claimant receiving \$13,042.57 in disability benefits to which he was not entitled. (i.e., \$57,271.14 - \$44,228.57 = \$13,042.57).

13. Claimant was provided proper notice of the hearing and did not appear.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Respondent's Entitlement to Repayment of Disability Benefits

Pursuant to § 8-43-303(1) C.R.S., upon a prima facie showing that the claimant received an overpayment in benefits, the award shall be reopened solely as to overpayments and repayment shall be ordered. No such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or overpayment. *Id.* In 1997, The General Assembly amended subsections (1) and (2)(a) of § 8-43-303 to permit reopening of an award on grounds of fraud and overpayment, in addition to the already statutory reopening methods of error, mistake, or change in condition. *Haney v. Shaw, Stone, & Webster*, W.C. No. 4-796-763 (ICAO July 28, 2011), citing *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds Benchmark/Elite, Inc., v. Simpson*, 232 P.3d 777 (Colo. 2010).

The 1997 amendments also provide that no such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or *overpayment*. *Haney*, at *1. The 1997 amendments added § 8-40-201(15.5) defining "overpayment" to mean:

[M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

There are thus three categories of possible overpayment pursuant to §8- 40-201(15.5). *In Re Grandestaff*, No. 4-717-644 (ICAP, Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO*, 219 P.3d 354, 358 (Colo. App. 2009). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney*, W.C. No. 4-796-763 (ICAP, July 28, 2011).

As found, Respondents have established by a preponderance of the evidence that Claimant received \$13,042.57 in disability benefits to which he was not entitled. Accordingly, Respondents are entitled to recover from Claimant the overpayment of \$13,042.57.

The parties have been unable to agree on a schedule for repayment of the above referenced \$13,042.57. When the parties are unable to agree upon such a schedule, the ALJ is empowered, pursuant to § 8-43-207(q), C.R.S., to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds, Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has discretion to fashion a remedy. Further, the ALJ has the authority to determine the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. See *Louisiana Pacific Corp. v. Smith*, 881P.2d 456 (Colo. App. 1994). No evidence exists in the record from which the ALJ can determine whether any payment schedule is appropriate.

ORDER

It is therefore ordered that:

1. Claimant shall repay to Respondents \$13,042.57 in overpaid benefits.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: December 18, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his April 3, 2015 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S.

FINDINGS OF FACT

1. Claimant is a 48 year-old former Truck Driver and Heavy Equipment Operator for Employer. On April 3, 2015 he sustained an admitted industrial injury to his right hip. Specifically, when the equipment Claimant was operating began to tip forward, he extended his right leg and injured his hip.

2. On April 8, 2015 Claimant visited Gary Zuehlsdorff, D.O. for an evaluation. Claimant reported that on April 3, 2015 the backhoe he was operating started "bucking around" and tipped forward as he was lifting a dumpster. He stuck out his right leg to brace himself and struck his head and left shin. His chief complaint to Dr. Zuehlsdorff was significant right-sided hip pain. After conducting a physical examination, Dr. Zuehlsdorff ordered an MRI of the right hip. The MRI revealed some acetabular impingement but no fractures or tears.

3. On April 17, 2015 Claimant returned to Dr. Zuehlsdorff for an evaluation. After reviewing the right hip MRI, Dr. Zuehlsdorff was "concerned about the very provocative test on external and internal rotation" and impingement. He thus referred Claimant to hip specialist Brian J. White, M.D.

4. Dr. White evaluated Claimant on April 29, 2015. He noted that the MRI revealed a labral tear. Dr. White remarked that Claimant had recently undergone gastric bypass surgery that allowed him to lose about 140 pounds to weigh 292 pounds. He recommended a diagnostic injection to ensure that Claimant was a candidate for a hip arthroscopy.

5. On June 19, 2015 Claimant underwent right hip surgery with Dr. White. The surgery specifically included a femoral osteotomy, acetabular trimming and labrum reconstruction. Claimant received physical and massage therapy following surgery.

6. On July 14, 2015 Claimant returned to Dr. Zuehlsdorff for an examination. He reported continued right hip pain following surgery. Claimant was unable to tolerate NSAIDs due to the previous gastric bypass procedure. Dr. Zuehlsdorff thus prescribed OxyContin and Valium. He referred Claimant to Yusuke Wakeshima, M.D. for pain management.

7. On September 8, 2015 Claimant again visited Dr. Zuehlsdorff for an examination. Claimant was progressing nicely and was “moving pretty well.” Dr. Zuehlsdorff also remarked that Claimant had no depression or anxiety.

8. On October 1, 2015 Claimant returned to Dr. White for an examination. Claimant was able to walk up to one to two miles per day. Dr. White remarked that Claimant’s range of motion in his hip was “nice and smooth” and he was able to walk with a non-antalgic gait.

9. On January 6, 2016 Claimant told Dr. White that he was doing very well and was walking over three miles per day. He felt 85% to 90% better. Claimant was walking without a limp and had no pain with range of motion. Dr. White expected an excellent long term recovery. He wrote a letter to Dr. Zuehlsdorff noting that Claimant could gradually resume work and return to full capacity over the next couple of months.

10. On January 11, 2016 Claimant returned to Dr. Zuehlsdorff for an examination. Dr. Zuehlsdorff recorded that Claimant was not suffering from panic, depression or anxiety. Claimant commented that he was feeling well and hip range of motion was “great.” Dr. Zuehlsdorff recommended work conditioning.

11. On March 6, 2016 Claimant again visited Dr. Zuehlsdorff for an evaluation. Claimant remarked that his pain, strength and range of motion were 95% improved. Dr. Zuehlsdorff determined that Claimant had reached Maximum Medical Improvement (MMI), assigned a 4% lower extremity rating for loss of right hip flexion and cleared him to work without restrictions. Dr. Zuehlsdorff did not assign any specific maintenance medical benefits.

12. On April 8, 2016 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Zuehlsdorff’s MMI and impairment determinations. Claimant did not object to the FAL and the claim closed.

13. After reaching MMI, Claimant did not return to work for Employer. He obtained a new job with Brannan Sand & Gravel as a Heavy Equipment Operator. Approximately two months after starting with Brannan he had another workplace injury on June 16, 2016. He specifically fell approximately eight to ten feet from a loader.

14. On June 16, 2016 Claimant visited Lon Noel, M.D. for an evaluation. Dr. Noel noted that Claimant had suffered a Workers’ Compensation injury in 2015. He underwent right hip surgery and made a “full recovery.” Dr. Noel noted that Claimant tripped and fell from a loader while working for Brannan. Claimant specifically fell eight to ten feet onto both knees and elbows. After considering Claimant’s medical history, performing a physical examination and reviewing x-rays, Dr. Noel diagnosed Claimant with a left knee contusion and a left hamstring strain.

15. Claimant subsequently underwent physical therapy. By July 18, 2016 Claimant noted to Dr. Noel that he could only perform 30 minutes of activity before his knee flared-up. Dr. Noel commented that Claimant’s left knee MRI revealed a “chondral

impaction/contusion injury.” He thus referred Claimant to Christopher Isaacs, M.D. for an orthopedic evaluation.

16. Dr. Isaacs ultimately recommended surgery in the form of a left knee arthroscopy and chondroplasty to treat patellofemoral compartment chondromalacia. On August 24, 2016 Claimant underwent the procedure. Claimant subsequently received post-surgical treatment for several months.

17. On January 6, 2017 Dr. Noel placed Claimant at MMI for the Brannon injury. He assigned a 16% left lower extremity impairment rating. Claimant received permanent work restrictions including up to 30 pounds of lifting occasionally, no crouching or squatting, minimal kneeling, 30 minutes of sitting or standing before changing positions, no repetitive stair climbing or descending and no use of heavy vibrating machinery. Maintenance medical recommendations included home exercise and over-the-counter medications.

18. On January 9, 2017 Claimant returned to Dr. Zuehlsdorff who was now practicing at Concentra Medical Centers. Dr. Zuehlsdorff noted that Claimant had been working for Brannon since leaving Employer after reaching MMI. Claimant reported that by August 2016 his right hip pain was similar to the levels he had previously experienced. Claimant did not assert a new injury, but a worsening of his original April 3, 2015 right hip injury. After considering Claimant’s history and performing a physical examination, Dr. Zuehlsdorff determined Claimant had sustained an exacerbation of his original injury and assigned work restrictions.

19. On January 11, 2017 Dr. Zuehlsdorff wrote an addendum to his January 9, 2017 medical report. He remarked that he had received a phone call from Claims Adjuster Jeanine. She informed him of the June 16, 2016 Brannon injury. Dr. Zuehlsdorff wrote that Claimant had not appraised him or the adjuster on Employer’s claim of the intervening injury. With the additional information, Dr. Zuehlsdorff explained “that this recent injury could have impacted his [right] hip and would probably have a hard time getting his [right] hip covered now.”

20. On April 26, 2017 Claimant returned to Dr. White for an examination. Dr. White commented that Claimant did very well after his initial right hip surgery. However, Claimant remarked that he had undergone left knee surgery and did not recover well. He specifically commented that “it really threw off his balance” and his right hip became sore. Claimant stated that his left knee was “terrible” and complained of left hip pain. Dr. White determined the right hip joint was fine and attributed Claimant’s symptoms to a muscle balance issue. He suspected a labral tear on the left side and recommended therapy for the right hip.

21. On June 8, 2020 Claimant filed a Petition to Reopen his April 3, 2015 claim. He asserted a change of condition. Claimant attached the April 26, 2017 record from Dr. White and the initial surgical report for the right hip procedure.

22. Claimant testified at hearing in this matter. He commented that when he reached MMI on March 6, 2016 for his injury with Employer, he felt “great” and “really strong.” Claimant explained that his job duties with Brannan were more difficult than his duties with Employer. The job with Brannan specifically involved hauling heavy equipment. Claimant commented that he had no issues with his hip when he began working for Brannan.

23. Claimant testified that, after he underwent surgery for the Brannan left knee injury, he was unable to move in his previous manner. Specifically, he was unable to climb onto a truck or trailer. Nevertheless, he performed some light duty work for Brannan after the injury. However, while performing light duty he started noticing some issues with his right hip when walking and getting in and out of his vehicle. Claimant compared his symptoms to the pain he had experienced at the time of his original hip injury.

24. Claimant explained that he “reinjured” his right hip after he hurt his left knee. He attributed his symptoms to “limping because of the knee” as well as the fact that he began to go into a depression because of suffering two Workers’ Compensation injuries within two years. The depression caused him to gain additional weight.

25. Claimant returned to Dr. Zuehlsdorff after the Brannan injury and was referred back to Dr. White. However, he did not return to Dr. White until he was able to receive coverage through Medicaid because the visit was not covered by Insurer. Claimant acknowledged that a right hip replacement was recommended, but he was not a candidate because of his weight. He now weighs approximately 400 pounds.

26. Claimant testified that he initially underwent gastric bypass surgery in 2014 and had a revision in 2017. He lost 150 pounds after the initial gastric bypass but none after the revision surgery. Claimant further clarified that, following his initial gastric bypass surgery, stomach pain curtailed his eating. However, the Oxycodone pain medication he began taking prevented him from experiencing the pain and allowed him to continue eating. Claimant specified that he received the Oxycodone through Medicaid after visiting Dr. White in 2017. The Oxycodone was not authorized by Insurer.

27. Claimant has failed to establish that it is more probably true than not that he should be permitted to reopen his April 3, 2015 Workers’ Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, on April 3, 2015 Claimant sustained an admitted industrial injury to his right hip. After receiving conservative treatment he underwent right hip surgery with Dr. White on June 19, 2015. On March 6, 2020 Dr. Zuehlsdorff determined that Claimant had reached MMI, assigned a 4% lower extremity rating for loss of right hip flexion and cleared him to work without restrictions. On April 8, 2016 Respondents filed a FAL consistent with Dr. Zuehlsdorff’s MMI and impairment determinations. Claimant did not object to the FAL and the claim closed.

28. Claimant did not subsequently return to work for Employer but obtained a new job with Brannan. Approximately two months after starting with Brannan he

suffered another workplace injury on June 16, 2016. Claimant underwent left knee surgery as a result of the Brannon injury and Dr. Noel placed him at MMI on January 6, 2017. Claimant returned to Dr. Zuehlsdorff on January 9, 2017 and remarked that by August 2016 his right hip pain had returned to the levels he had previously experienced. On June 8, 2020 Claimant filed a Petition to Reopen his April 3, 2015 claim. Claimant contends that he suffered a change in his right hip condition since reaching MMI on March 6, 2020 that is causally connected to his April 3, 2015 industrial injury. He attributes the worsening of his right hip condition to weight gain and depression. Claimant specifically asserts that the weight gain is work related because he overate due to depression as a result of multiple Workers' Compensation injuries. However, Claimant's contention fails because the June 6, 2016 Brannon injury constituted an intervening event that severed the causal connection to the April 3, 2015 injury and any relationship between Claimant's weight gain and his right hip condition is speculative.

29. The June 6, 2016 Brannon injury constituted an intervening event that severed the causal connection to the April 3, 2015 injury. Claimant had a good recovery following his right hip surgery with Dr. White. He reached MMI and was released to full duty with a nominal permanent impairment rating. Claimant was not awarded any specific post-MMI maintenance care and did not seek any post-MMI care for his right hip until after the intervening Brannon injury. In fact, Claimant acknowledged that he had good function at the time he began working for Brannon. However, after he underwent surgery for the Brannon left knee injury, he was unable to move as he had in the past. While working light duty for Brannon he began noticing issues with his right hip when walking and getting in and out of his vehicle. Claimant compared his symptoms to the pain he had experienced at the time of his original hip injury on April 3, 2015. In assessing Claimant on January 9, 2017 Dr. Zuehlsdorff determined he had sustained an exacerbation in his original injury and assigned work restrictions. However, Dr. Zuehlsdorff was unaware of the June 6, 2016 Brannon injury. After Dr. Zuehlsdorff received information about the Brannon injury he wrote an addendum report on January 11, 2017. He told Claimant that the intervening fall at Brannon could have impacted his hip and might result in difficulty getting coverage for additional medical care. Finally, the April 26, 2017 note from Dr. White reveals that some degree of right hip pathology was secondary to complications of his left knee injury. Specifically, Dr. White determined Claimant's right hip joint was fine and attributed Claimant's symptoms to a muscle balance issue. In conjunction with Claimant's testimony, the records from Drs. Zuehlsdorff and White reveal that the Brannon intervening injury increased Claimant's right hip symptoms and caused a need for medical treatment. The record thus reflects that the June 6, 2016 injury triggered the worsening of Claimant's right hip condition and severed the causal connection to the original April 3, 2015 industrial injury.

30. Claimant remarked that he "reinjured" his right hip after he hurt his left knee. He attributed his symptoms to "limping because of the knee." Claimant also explained that the depression of suffering two injuries caused him to gain additional weight. He detailed that, after his initial gastric bypass surgery, stomach pain reduced his eating. However, the Oxycodone pain medication he received through Medicaid after visiting Dr. White in 2017 prevented him from experiencing the pain and allowed him to continue eating. Despite Claimant's testimony, there is no medical evidence

establishing his mental health conditions or relating his weight gain to the conditions. In fact, Claimant's struggles with food and eating were an issue prior to the April 3, 2015 injury because he underwent gastric bypass surgery in 2014. Claimant's mental health and weight gains were never treated as compensable aspects of his original injury. Moreover, Claimant noted that physical inactivity, his medication regimen and his inability to work all contributed to his depression. However, the preceding explanations can be connected to the original work injury. Furthermore, the medication that allowed Claimant to overeat was not authorized by Insurer or recommended as a maintenance medical benefit. Claimant's inability to engage in physical activity also cannot be attributed to the original injury because he was released without any physical restrictions and began working for Brannan without any issues. Claimant was only unable to return to work after the Brannan injury on June 6, 2016. The preceding reveals that it is speculative to construct a causal relationship between Claimant's weight gain and right hip injury. Accordingly, Claimant's Petition to Reopen his April 3, 2015 Worker's Compensation claim based on a change in condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that he is

entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo*, W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen*, W.C. No. 4-543-945 (ICAO, July 19, 2004).

5. The existence of a weakened condition is insufficient to establish causation if the new injury is the result of an efficient intervening cause. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002); *In Re Lang*, W.C. No. 4-450-747 (ICAO, May 16, 2005). No liability exists when a later accident occurs as the direct result of an intervening cause. *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). However, the intervening event does not sever the causal connection between the injury and the claimant's condition unless the disability is triggered by the intervening event. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). If the need for medical treatment occurs as the result of an independent intervening cause, then the subsequent treatment is not compensable. *Owens*, 49 P.3d at 1188. The new injury is not compensable "merely because the later accident might or would not have happened if the employee had retained all his former powers." *In Re Chavez*, W.C. No. 4-499-370 (ICAO, Jan. 23, 2004). The determination of whether an injury resulted from an efficient intervening cause is a question of fact for the ALJ. *Id.*

6. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his April 3, 2015 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Initially, on April 3, 2015 Claimant sustained an admitted industrial injury to his right hip. After receiving conservative treatment he underwent right hip surgery with Dr. White on June 19, 2015. On March 6, 2020 Dr. Zuehlsdorff determined that Claimant had reached MMI, assigned a 4% lower extremity rating for loss of right hip flexion and cleared him to work without restrictions. On April 8, 2016 Respondents filed a FAL consistent with Dr. Zuehlsdorff's MMI and impairment determinations. Claimant did not object to the FAL and the claim closed.

7. As found, Claimant did not subsequently return to work for Employer but obtained a new job with Brannan. Approximately two months after starting with Brannan he suffered another workplace injury on June 16, 2016. Claimant underwent left knee surgery as a result of the Brannon injury and Dr. Noel placed him at MMI on January 6, 2017. Claimant returned to Dr. Zuehlsdorff on January 9, 2017 and remarked that by August 2016 his right hip pain had returned to the levels he had previously experienced. On June 8, 2020 Claimant filed a Petition to Reopen his April 3, 2015 claim. Claimant contends that he suffered a change in his right hip condition since reaching MMI on March 6, 2020 that is causally connected to his April 3, 2015 industrial injury. He

attributes the worsening of his right hip condition to weight gain and depression. Claimant specifically asserts that the weight gain is work related because he overate due to depression as a result of multiple Workers' Compensation injuries. However, Claimant's contention fails because the June 6, 2016 Brannan injury constituted an intervening event that severed the causal connection to the April 3, 2015 injury and any relationship between Claimant's weight gain and his right hip condition is speculative.

8. As found, the June 6, 2016 Brannan injury constituted an intervening event that severed the causal connection to the April 3, 2015 injury. Claimant had a good recovery following his right hip surgery with Dr. White. He reached MMI and was released to full duty with a nominal permanent impairment rating. Claimant was not awarded any specific post-MMI maintenance care and did not seek any post-MMI care for his right hip until after the intervening Brannon injury. In fact, Claimant acknowledged that he had good function at the time he began working for Brannan. However, after he underwent surgery for the Brannon left knee injury, he was unable to move as he had in the past. While working light duty for Brannan he began noticing issues with his right hip when walking and getting in and out of his vehicle. Claimant compared his symptoms to the pain he had experienced at the time of his original hip injury on April 3, 2015. In assessing Claimant on January 9, 2017 Dr. Zuehlsdorff determined he had sustained an exacerbation in his original injury and assigned work restrictions. However, Dr. Zuehlsdorff was unaware of the June 6, 2016 Brannan injury. After Dr. Zuehlsdorff received information about the Brannon injury he wrote an addendum report on January 11, 2017. He told Claimant that the intervening fall at Brannan could have impacted his hip and might result in difficulty getting coverage for additional medical care. Finally, the April 26, 2017 note from Dr. White reveals that some degree of right hip pathology was secondary to complications of his left knee injury. Specifically, Dr. White determined Claimant's right hip joint was fine and attributed Claimant's symptoms to a muscle balance issue. In conjunction with Claimant's testimony, the records from Drs. Zuehlsdorff and White reveal that the Brannan intervening injury increased Claimant's right hip symptoms and caused a need for medical treatment. The record thus reflects that the June 6, 2016 injury triggered the worsening of Claimant's right hip condition and severed the causal connection to the original April 3, 2015 industrial injury.

9. As found, Claimant remarked that he "reinjured" his right hip after he hurt his left knee. He attributed his symptoms to "limping because of the knee." Claimant also explained that the depression of suffering two injuries caused him to gain additional weight. He detailed that, after his initial gastric bypass surgery, stomach pain reduced his eating. However, the Oxycodone pain medication he received through Medicaid after visiting Dr. White in 2017 prevented him from experiencing the pain and allowed him to continue eating. Despite Claimant's testimony, there is no medical evidence establishing his mental health conditions or relating his weight gain to the conditions. In fact, Claimant's struggles with food and eating were an issue prior to the April 3, 2015 injury because he underwent gastric bypass surgery in 2014. Claimant's mental health and weight gains were never treated as compensable aspects of his original injury. Moreover, Claimant noted that physical inactivity, his medication regimen and his inability to work all contributed to his depression. However, the preceding explanations can be connected to the original work injury. Furthermore, the medication that allowed

Claimant to overeat was not authorized by Insurer or recommended as a maintenance medical benefit. Claimant's inability to engage in physical activity also cannot be attributed to the original injury because he was released without any physical restrictions and began working for Brannan without any issues. Claimant was only unable to return to work after the Brannan injury on June 6, 2016. The preceding reveals that it is speculative to construct a causal relationship between Claimant's weight gain and right hip injury. Accordingly, Claimant's Petition to Reopen his April 3, 2015 Worker's Compensation claim based on a change in condition is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request to reopen his April 3, 2015 Workers' Compensation claim based on a change in condition is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <https://oac.colorado.gov/resources/oac-forms>.*

DATED: December 21, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-096-951-003**

ISSUES

- Did Claimant prove by a preponderance of the evidence she is permanently and totally disabled?
- Did Claimant prove treatment from Dr. David Weinstein, including a right shoulder arthroscopy, is causally related to her admitted industrial injury?
- The parties reserved issues relating to treatment for Claimant's neck recommended by Dr. Douglas Crowther.

FINDINGS OF FACT

1. Claimant worked for Employer in the "nursing relief pool." Her duties included transporting patients to medical facilities in Colorado Springs or Denver.

2. Claimant suffered admitted injuries to her neck, upper back, and right shoulder on September 13, 2018 while transporting a combative patient to Parkview Hospital.

3. Claimant saw Employer's designated provider at Southern Colorado Clinic on September 14, 2018. She reported pain in her neck, upper back, right shoulder, and low back. PA-C Schwartz diagnosed cervical, thoracic, lumbar, and right shoulder "sprains" and "strains." He prescribed cyclobenzaprine and ibuprofen and referred Claimant for massage therapy. He released Claimant to work with no restrictions.

4. Claimant followed up with Dr. Terrence Lakin at Southern Colorado Clinic on September 27, 2018. She reported 6/10 pain. She was "working without restrictions but feels due to increased pain and working on the men's unit during one-on-one she may benefit from some restrictions." Examination showed spasm and trigger points in the paracervical muscles, pain to palpation of the upper and lower back muscles, and painful shoulder range of motion. Dr. Lakin administered trigger point injections and imposed work restrictions of "please keep off forensic units/high-risk patient contact."

5. Employer offered Claimant modified work in the staffing office. Her duties included answering phones, typing, and writing within her restrictions. The work was entirely sedentary and primarily involved picking up the telephone receiver, transferring callers, and writing phone messages by hand. Claimant's supervisor, Frankie M[Redacted], observed Claimant occasionally while she was working modified duty in the staffing office. Claimant never mentioned having any difficulty doing the work and exhibited no signs of pain or discomfort. Ms. M[Redacted] considered Claimant "a good employee" and "she did a very good job."

6. Claimant took FMLA leave around October 15, 2018 for unrelated reasons.

7. Claimant had a psychological evaluation with Dr. Herman Staudenmayer on November 21, 2018. She reported a history of depression and multiple life and family stressors. She did not feel the work accident was an "assault." She denied any psychological impact from the injury. Dr. Staudenmayer did not believe she required psychological counseling but thought she could benefit from self-regulation/relaxation training with biofeedback for pain management.

8. Claimant was evaluated by Dr. David Weinstein, an orthopedic surgeon, on February 15, 2019. She described constant pain in the right shoulder radiating to the right paracervical region around the shoulder blade. Dr. Weinstein reviewed images from a January 30, 2019 right shoulder MRI which showed "possible fraying" of the rotator cuff but no discrete tear. He opined Claimant's pain was primarily myofascial and saw no evidence of surgical pathology. He recommended conservative care including therapy, dry needling, and trigger point injections.

9. On March 11, 2019, Dr. Lakin changed Claimant's restrictions to lifting 5-10 pounds occasionally with the right arm, no over-shoulder activities with the right arm, and "do not overuse left arm to compensate." Claimant returned to modified duties in the staffing office on March 14, 2019.

10. Claimant returned to Dr. Staudenmayer on May 8, 2019. She reported depression, anxiety, and symptoms of PTSD. She was also experiencing significant family distress. She described the work accident in much more dramatic fashion than at the prior evaluation, using terms such as "acute terror," "extremely frightening," and "terrorizing." Her MMPI suggested somatization of emotional dysfunction and stress responses, possible amplification of symptoms as a cry for help, and a tendency to develop physical symptoms in response to stress. Dr. Staudenmayer diagnosed PTSD "with delayed expression" and recommended 12 sessions of counseling.

11. On May 14, and June 10, 2019, Claimant's ATP noted she was working with restrictions and having no issues.

12. On June 27, 2019, Claimant told PA-C Schwartz computer work was aggravating her neck pain. He encouraged her to raise her screen to eye level so she is not looking down, and use good posture and ergonomic technique at her workstation. Claimant requested the limitation to 8-hour shifts be continued.

13. Claimant received trigger point injections from Dr. Caughfield but reported no benefit. She had previously received no benefit from trigger point injections administered by Dr. Sparr.

14. On August 5, 2019, Dr. Lakin discharged Claimant for noncompliance. He noted she "appears much more comfortable" than her reported 8/10 pain level during the appointment. Claimant had exceeded the clinic's threshold for no-shows and rescheduling, which was also evident with other specialty clinics to which she had been referred. Dr. Lakin noted a similar pattern when he treated her for other injuries in the

past. As a result, he opined “I no longer believe that she is engaged in her care to make any progress.”

15. Claimant completed her therapy with Dr. Staudenmayer on September 9, 2019. Although Claimant was still complaining of stress and anxiety, Dr. Staudenmayer did not recommend any additional therapy and provided no psychological work restrictions.

16. Dr. J. Douglas Bradley took over as Claimant’s primary ATP on September 11, 2019. Examination showed tenderness around the right shoulder and neck musculature with decreased range of motion. Dr. Bradley restricted Claimant to no lifting over 5 pounds with the right arm.

17. Claimant participated in a Functional Capacity Evaluation (FCE) on November 4, 2019. The FCE assessed restrictions of 5-pounds lifting, frequent bilateral handling, frequent walking, occasional reaching with the left arm, no reaching with the right arm, and no fingering bilaterally. Claimant was described as cooperative and attempted all tasks except crouching and kneeling, which she declined because of right knee pain. The examiner noted, “the results of this evaluation suggest that [Claimant] gave a self-limited effort, with 16 of 19 consistency measures within the expected limits.” Claimant failed the grip testing and a positive REG score, which the evaluator stated, “is a probable indication of the submaximal or unreliable effort in the standard test.” Many attempted activities were described as “not tolerable” because of shoulder, neck, or knee pain. There was no objective verification of Claimant’s subjective reports of pain too severe to perform various activities. Accordingly, the accuracy of the FCE depends in large part on the reliability of Claimant’s reports.

18. Dr. Bradley placed Claimant at MMI on November 7, 2019 with a 20% combined whole person rating for the right shoulder and neck. Based on the FCE results, he opined Claimant could work up to eight hours per day with no lifting over 5 pounds, no overhead lifting, sit 30 minutes per hour, and stand/walk 30 minutes per hour. He also recommended she continue medications for at least six months.

19. On December 17, 2019, Respondent filed a Final Admission of Liability (FAL) admitting for Dr. Bradley’s rating and medical benefits after MMI.

20. Employer terminated Claimant in January 2020 because it could not accommodate a 5-pound right upper extremity lifting restriction on a permanent basis.

21. At her maintenance care visit in February 2020, Dr. Bradley referred Claimant to Dr. Scott Primack for evaluation and treatment of her shoulder and neck pain.

22. Claimant was evaluated by Dr. Primack on March 31, 2020. On exam, Dr. Primack noted reduced cervical range of motion but full motion of both shoulders. He found no specific shoulder injury. Dr. Primack opined Claimant remained at MMI and had no specific treatment recommendations. He opined there was “no reason why she cannot sit, stand, walk or lift up to 20 pounds occasionally and 15 pounds frequently.”

23. On June 30, 2020, Dr. Bradley adjusted Claimant's work restrictions to "return to full work/activity today. Patient may work entire shift. No reaching above shoulders with affected extremity(s). Unable to use power/impact/vibratory tool with right upper extremity."

24. Respondent obtained video surveillance of Claimant on March 3, 4, and 5, 2020. The video shows Claimant engaged in routine activities with no apparent pain or limitation. Although the activities are not physically demanding, they do show Claimant moving her right arm and neck more freely than she has reported or demonstrated on evaluations.

25. Respondent obtained an IME from Dr. Nicholas Kurz. Dr. Kurz ultimately issued to reports and testified at hearing. Dr. Kurz opined the FCE is an inaccurate representation of Claimant's capabilities because of her self-limiting and suboptimal effort during testing. He opined the activities shown on the surveillance video are inconsistent with the FCE results, Claimant's reported limitations, and the ranges of motion she demonstrated at the IME. Dr. Kurz persuasively explained the video surveillance shows Claimant can move her neck to both sides, bend and decide to bend with her cervical spine, looked down, and look up. He also noted Claimant used her right upper extremity normally to control a child, reach overhead, open doors, and reach out to grab branches with no apparent loss of function or pain. He noted records from multiple providers on multiple occasions documenting full neck and right shoulder range of motion. He opined Claimant has no work restrictions related to her September 13, 2018 work injury.

26. Claimant has a high school diploma from Central High School in Pueblo, Colorado. Her work history includes work and vegetable fields, weighing and bagging product in a meatpacking plant, work in a day care facility, and work at Estes Industries where she put wires inside a box. Claimant then underwent CNA training, obtained a CNA license, and worked as a CNA for Employer for almost 11 years. Claimant is proficient in both English and Spanish and previously provided translation services in a prior job.

27. Claimant had previous work-related injuries before September 2018: a left shoulder injury and right knee injury. She was released to full duty with no restrictions or permanent impairment from those injuries. Claimant had been working her regular job with no limitations at the time of her September 13, 2018 injury.

28. Katie Montoya conducted a vocational assessment on behalf of Respondent. Ms. Montoya considered the restrictions from Drs. Lakin, Bradley, Primack, and Kurz, and the FCE. Ms. Montoya opined it would be "difficult to find work" within the restrictions from the FCE. However, she noted "many reasons why using this FCE for permanent restrictions would not be representative of her work -related limitations, and I do not know that it is truly representative her overall abilities based on the self-limited effort." She opined the restrictions imposed by Dr. Lakin from March 2019 through the end of his treatment relationship would allow for the full range of light work. Similarly, she explained Dr. Primack's restrictions would also allow the full range of light work. Regarding Dr. Bradley's updated restrictions of no over-shoulder reaching and no use of power tools did not fit a specific exertional level but would be job specific. Ms. Montoya

discussed her general process of labor market research and her specific investigation for this case. She noted unemployment rates in Pueblo were not as favorable as they had been in February and March but have improved since the early months of the COVID-19 pandemic.

29. Rodney Wilson conducted a vocational evaluation on behalf of Claimant. Mr. Wilson relied primarily on the restrictions set forth in the FCE and Dr. Bradley's MMI report. Claimant told Mr. Wilson she was taking methocarbamol, trazodone, and amitriptyline, which made her drowsy and mentally foggy. Mr. Wilson emphasized high levels of unemployment in Claimant's labor market because of the pandemic. Consistent with Ms. Montoya's opinion regarding the employment-limiting effects of the FCE restrictions, Mr. Wilson opined Claimant is unable to earn any wages and is not consistently employable in the competitive labor market.

30. Dr. Kurz's and Ms. Montoya's opinions the FCE does not accurately represent Claimant's residual functional capacity are persuasive. The usefulness of an FCE largely depends on the effort the individual being tested. Claimant failed three validity measures, which indicates "probable submaximal effort." Moreover, the limitations outlined in the report are more extreme than would reasonably be expected based on Claimant's underlying pathology. For example, there is no persuasive reason Claimant would be precluded from all fingering bilaterally. Nor is the restriction of no reaching with the right arm consistent with Claimant's medical condition or abilities demonstrated on the video.

31. Although the ALJ credits some of Dr. Kurz's opinions, his conclusion Claimant has no injury-related limitations is unpersuasive because it is based on the unsupported supposition Claimant's injuries resolved within a few weeks. That is not consistent with the persuasive medical evidence, including documented (and admitted) permanent impairment caused by the work accident. Nevertheless, the fact Claimant suffered permanent medical impairment does not necessarily equate to a level of functional impairment consistent with permanent total disability. The restrictions outlined by Dr. Primack are reasonable and consistent with other persuasive evidence in the record. The preponderance of persuasive evidence shows Claimant can sustain competitive employment at the light exertional level. Although Claimant has described more severe impairment, she has probably embellished her limitations to appear more disabled than she truly is. Claimant's testimony and self-description of her limitations are given no weight the extent they conflict with the ability to perform light work.

32. Ms. Montoya's vocational opinions are credible and more persuasive than those offered by Mr. Wilson. Ms. Montoya persuasively opined Claimant is employable in a variety of light occupations such as cashier, crewmember, food preparation, monitor, companion, and delivery.

33. Claimant failed to prove she cannot earn any wages in the same or other employment.

34. Claimant was involved in a rear-end motor vehicle accident on August 10, 2020.

35. Claimant saw Dr. Weinstein on August 27, 2020 “for a new issue in regard to both of her shoulders.” Claimant told Dr. Weinstein the MVA “caused her neck to start bothering her and she had increase in bilateral shoulder pain.” Dr. Weinstein noted,

The patient has a history of a work-related right shoulder injury and states she had a baseline level of pain that she was able to tolerate. She also reported she had a baseline level of left shoulder pain that she was able to tolerate since 2005. The patient states **since the car accident she has had significant increase in her bilateral shoulder pain as well as her neck pain.** (Emphasis added).

36. On examination, Dr. Weinstein noted tenderness to palpation about the scapular rotator musculature. She had decreased strength, a positive Speed’s test, and positive impingement signs bilaterally. Claimant’s clinical findings were significantly worse than the previous evaluation in 2019. Dr. Weinstein ordered MRIs of both shoulders to evaluate rotator cuff pathology.

37. Claimant underwent an MRI of the right shoulder on September 15, 2020. It was interpreted as showing moderate rotator cuff tendinopathy, a 1.7 cm x 1.4 cm full-thickness supraspinatus tendon tear, and mild AC joint degenerative changes.

38. Claimant followed up with Dr. Weinstein on September 25, 2020. She reported her symptoms were unchanged since the previous evaluation. Dr. Weinstein noted myofascial tenderness over the right and left paracervical areas and scapular rotators bilaterally. The right shoulder was markedly tender over the subacromial space with a positive impingement sign. There was marked weakness with rotator cuff testing. Dr. Weinstein reviewed the MRI images, and appreciated a 2 cm x 1.5 cm full-thickness supraspinatus tear in the right shoulder. He also saw a high-grade partial tear of the tendon in the left shoulder. He recommended a right shoulder arthroscopic subacromial decompression with rotator cuff repair. He also planned to administer a cortisone injection to the left shoulder during surgery.

39. Claimant failed to prove the right shoulder surgery recommended by Dr. Weinstein is causally related to her September 2018 work accident. The January 30, 2019 right shoulder MRI showed only “possible fraying” of the rotator cuff with no discrete tear. Claimant’s examination of the time was consistent with myofascial pain, and Dr. Weinstein persuasively determined she was not a surgical candidate. By contrast, the September 15, 2020 right shoulder MRI shows a full thickness rotator cuff tear, for which Dr. Weinstein recommended surgery. Although the surgery is reasonably needed, the preponderance of persuasive evidence shows the rotator cuff tear was caused by the August 10, 2020 MVA and is entirely unrelated to the September 2018 work accident.

CONCLUSIONS OF LAW

A. Claimant failed to prove she is permanently and totally disabled

A claimant is considered permanently and totally disabled if she cannot “earn any wages in the same or other employment.” Section 8-40-201(16.5)(a), C.R.S. The term “any wages” means wages in excess of zero. *McKinney v. Industrial Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995). To prove permanent total disability, the claimant need not show that the industrial injury is the sole cause of her inability to earn wages. Rather, the claimant must demonstrate that the industrial injury is a “significant causative factor” in her permanent total disability. *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). In determining whether the claimant can earn wages, the ALJ may consider a wide variety of “human factors.” *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1988). These factors include the claimant’s physical condition, mental abilities, age, employment history, education, training, and the “availability of work” the claimant can perform within her commutable labor market. *Id.* Another human factor is the claimant’s ability to obtain and maintain employment within her limitations. See *Professional Fire Protection, Inc. v. Long*, 867 P.2d 175 (Colo. App. 1993). The ability to earn wages inherently includes consideration of whether the claimant can get hired and sustain employment. See e.g., *Case v. The Earthgrains Co.*, W.C. No. 4-541-544 (ICAO, September 6, 2006); *Cotton v. Econo Lube N. Tune*, W.C. No. 4-220-395 (ICAO, January 16, 1997). If the evidence shows the claimant cannot “sustain” employment, the ALJ can find she is not capable of earning wages. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866, 868 (Colo. App. 2001).

As found, Claimant failed to prove she is unable to earn any wages in the same or other employment. The FCE does not provide an accurate representation of Claimant’s functional capacity. Claimant’s subjective description of her limitations do not provide a reliable basis to determine her residual functional capacity. The preponderance of persuasive evidence shows Claimant can sustain employment at the light level, as opined by Dr. Primack. Ms. Montoya’s vocational opinions are credible and persuasive. As Ms. Montoya explained, Claimant can work and earn wages in a variety of occupations such as cashier, crewmember, food preparation, monitor, companion, and delivery. Claimant failed to prove she is permanently and totally disabled.

B. Claimant failed to prove the right shoulder surgery recommended by Dr. Weinstein is related to her work injury

The employer is liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The need for medical treatment may extend beyond maximum medical improvement (MMI) if the claimant requires periodic maintenance care to prevent further deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even where the respondents admit liability for medical benefits after MMI, they retain the right to challenge the compensability and reasonable necessity of specific treatment. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003). Where the

respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). An injury need not be the sole cause of a claimant's need for treatment so long as there is a "direct causal relationship" to the industrial accident. *Seifreid v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1996); *Munoz v. JBS Swift & Co. USA, LLC*, W.C. No. 4-780-871-03 (October 7, 2014). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant failed to prove the right shoulder surgery recommended by Dr. Weinstein is causally related to her September 2018 work accident. The January 30, 2019 right shoulder MRI showed only "possible fraying" of the rotator cuff with no discrete tear. Claimant's clinical examination of the time was consistent with myofascial pain, and Dr. Weinstein persuasively determined Claimant was not a surgical candidate. By contrast, the September 2020 right shoulder MRI shows a full thickness rotator cuff tear, for which Dr. Weinstein appropriately recommended surgery. Although the surgery is reasonably needed, the rotator cuff tear was caused by the August 10, 2020 MVA and is entirely unrelated to the September 2018 work accident.

ORDER

It is therefore ordered that:

1. Claimant's claim for permanent total disability benefits is denied and dismissed.
2. Claimant's claim for medical benefits in the form of right shoulder arthroscopic surgery recommended by Dr. Weinstein is denied and dismissed.
3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to

review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us

DATED: December 23, 2020

Administrative Law Judge
Office of Administrative Courts

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the total disc replacement revision surgery and anterior cervical fusion and discectomy at C5-6 requested by Brent Kimball, M.D. is reasonable, necessary and causally related to her August 24, 2016 industrial injury.

FINDINGS OF FACT

1. Claimant is a 35-year-old female who worked as a gymnastics instructor for Employer. Claimant's job duties included teaching, demonstrating and assisting students in the performance of gymnastic maneuvers. On August 24, 2016 Claimant suffered an admitted industrial injury to her neck during the course and scope of her employment. While spotting one of her students during a trick on the trampoline, Claimant turned her head and felt a pulling sensation in her neck. She gradually developed bilateral muscle soreness that progressively worsened.

2. Claimant subsequently received conservative treatment for her neck injury. She specifically underwent an Epidural Steroid Injection (ESI) from C7-T1 that worsened her symptoms. Claimant also performed cervical traction at home with minimal relief. Moreover, she received eight sessions of physical therapy with massage and dry needling. However, because conservative measures failed, Claimant underwent a Total Disc Replacement (TDR) performed by Brent Kimball, M.D., on May 1, 2017. Pre-operatively, Dr. Kimball noted that Claimant was not a good candidate for an Anterior Cervical Discectomy and Fusion (ACDF) based on her age and the likelihood of requiring additional surgery in the future.

3. On August 7, 2018 F. Mark Paz, M.D. determined that Claimant had reached Maximum Medical Improvement (MMI) as of May 8, 2018. At the time of Dr. Paz's examination, Claimant reported 6-7/10 neck pain located primarily on the left side. Dr. Paz recommended medical maintenance care including physical therapy, medications and follow-up with her surgeon once per year. He assigned Claimant a 21% whole person impairment rating.

4. On January 22, 2019 Claimant underwent a Division Independent Medical Examination (DIME) with Caroline Gellrick, M.D. Dr. Gellrick agreed with Dr. Paz's May 8, 2018 MMI determination and assigned Claimant a 30% whole person impairment rating. Claimant reported 7/10 pain that had started gradually with an increase in her activity since August 2018. Claimant noted that she was still receiving treatment for her lupus. Dr. Gellrick concurred with Dr. Paz's recommendations for medical maintenance care.

5. On March 27, 2019 Respondents filed a Final Admission of Liability (FAL). Respondents acknowledged that Claimant reached MMI on May 8, 2018, suffered a

30% whole person impairment rating and was entitled to receive medical maintenance benefits as outlined by Dr. Gellrick.

6. On February 7, 2020 Claimant returned to Dr. Kimball for a follow-up visit. Claimant noted a return of neck pain, with shooting pain into her left arm. X-rays demonstrated that Claimant had stable post-surgical changes at C5-6 and stable motion at C2-4.

7. On February 18, 2020 Claimant underwent an MRI of her cervical spine. The imaging revealed multilevel degenerative changes without significant spinal stenosis or foraminal narrowing. Claimant also had a normal cervical cord signal without foraminal narrowing or spinal stenosis.

8. On March 12, 2020 Claimant received bilateral facet injections from D. Jonathan Bernardini, M.D. based on a referral from Dr. Kimball. Dr. Bernardini noted Claimant reported 25% pain relief immediately following the procedure. However, by April 13, 2020 Claimant told Dr. Kimball that she had not experienced any relief from the injections. Dr. Kimball referred Claimant for an EMG of the upper extremities and noted the EMG was "essential to determining if her symptoms are coming from C5-6." He commented that the MRI and x-rays revealed Claimant's C5-6 level was stable.

9. Claimant returned to Dr. Bernardini on May 7, 2020 for bilateral C5-6 transforaminal steroid injections. Claimant reported that she experienced 100% relief of symptoms immediately following the injections. However, Claimant later reported to Dr. Kimball that she had only mild initial relief and within a few hours her pain had worsened. On May 12, 2020 Dr. Bernardini noted that Claimant exhibited no weakness, sensory deficits or myelopathic findings following a "thorough physical examination."

10. On June 29, 2020 Claimant returned to Dr. Kimball for an evaluation. Claimant reported 8-9/10 neck pain radiating to her head and into her bilateral shoulders and arms. Dr. Kimball remarked that Claimant's EMG from June 9, 2020 was unremarkable. He noted that Claimant exhibited full range of motion except for neck movement. Dr. Kimball reasoned that the origin of Claimant's pain was likely the C5-6 level. He thus proposed revision of the TDR and an ACDF of C5-6. Dr. Kimball expressed concern that adjacent levels might require surgical repair in the future. On July 22, 2020 Dr. Kimball submitted a request for prior authorization to perform a revision of the TDR and an ACDF at C5-6.

11. On July 28, 2020 Michael Janssen, D.O. provided a physician advisor opinion regarding the requested surgery. He explained that Claimant had no anatomical reasons for her subjective complaints 18 months after reaching MMI and her pain generator has not been identified. Dr. Janssen remarked that proceeding with surgery would not be consistent with the Cervical Spine Colorado Division of Workers' Compensation Medical Treatment Guidelines (*Guidelines*). He also noted that, based on the failure to identify the pain generator, Claimant's current condition was not work-related. Dr. Janssen noted that Claimant might have the same clinical outcome from an ACDF as her prior surgery due to the multilevel degenerative disc disease identified in her cervical spine.

12. On September 21, 2020 Claimant underwent an independent medical examination with Michael J. Rauzzino, M.D. Dr. Rauzzino thoroughly reviewed Claimant's extensive medical records and conducted a physical examination. Claimant reported constant and excruciating neck pain that radiated into her shoulders, arms and primarily the first two digits of her hands. She denied neck difficulties prior to her 2016 injury, but Dr. Rauzzino remarked that her pre-2016 medical records controverted her report. Dr. Rauzzino explained that Claimant's intake form endorsed a broad range of symptoms including every description of pain and pain-producing activity enumerated on the form. Although Claimant was essentially unable to move her neck in any direction during physical examination, at other times Dr. Rauzzino observed Claimant turn her head much more fully. Dr. Rauzzino detailed that Claimant's sensory examination was not consistent with the C5-6 dermatome. She instead reported a diffuse, non-anatomic range of sensory loss and pain over many areas. He administered a Computerized Outcomes Management Technologies (COMT) assessment. Claimant scored "Distressed-Somatic," that was consistent with patients who have a propensity for poor surgical outcomes.

13. Dr. Rauzzino summarized that none of Claimant's extensive treatment has improved her condition, but has worsened her symptoms over the past four years. He also noted that Claimant's EMG was negative, the cervical MRI showed no significant stenosis at the proposed surgical level and the artificial disc was functioning properly. Dr. Rauzzino remarked that, despite the objective findings, Claimant's subjective symptoms were non-physiologic and reflected a striking contrast to the benign objective findings. He concluded that there was no reasonable basis to believe that an ACDF at C5-6 would improve Claimant's condition, especially in the absence of any nerve root compression. Dr. Rauzzino explained that Claimant's work-related injury had been successfully treated with the TDR in 2017. Claimant's diffuse, non-anatomic symptoms were more likely due to her non-work related chronic fibromyalgia and SLE-like condition for which she had been receiving treating since 2007.

14. Claimant testified at hearing in this matter. She explained that she had obtained significant relief following her TDR surgery on May 1, 2017. However, she gradually began to develop increased pain. Her current symptoms specifically started in August of 2018 while she was working as a gymnastics coach demonstrating techniques, lifting athletes, and catching and spotting children weighting between 70-120 pounds. Claimant stopped working as a gymnastics instructor in April of 2020 due to the COVID-19 pandemic. Claimant noted that, if the surgery did not relieve her pain, there was no purpose in pursuing the ACDF.

15. Dr. Rauzzino testified at the hearing in this matter. He maintained that revising the TDR, removing the artificial disc at C5-6 and performing an ACDF was not reasonable, necessary and causally related to Claimant's August 24, 2016 admitted industrial injury. He considered the pain diagram Claimant completed for his independent medical examination and the radiology studies of her cervical spine. He explained that, based on Claimant's original injury and subsequent MRIs, he would have expected her to have C6 radiculopathy only on the left side. A C6 radiculopathy would correspond to sensory findings in only the first two digits of the left hand with discrete numbness up the arm. Based on the diffuse presentation of Claimant's

symptoms beyond the C5-6 dermatome, Dr. Rauzzino explained that there is no reasonable basis to believe that a fusion at C5-6 will relieve her pain.

16. Dr. Rauzzino commented that Claimant has reported a broad constellation of symptoms that have increased since her initial presentation. However, all objective testing and imaging reveals that the TDR and decompression were successful. Dr. Rauzzino specified that Claimant's recollection of her improvement following the TDR was inconsistent with his review of the medical records. Moreover, Claimant's neck pain and headaches never improved following the surgery. Dr. Rauzzino noted that Claimant's Waddell testing and COMT assessment suggested that she has reported non-anatomic pain and has a high likelihood of poor outcomes from treatment.

17. Dr. Rauzzino remarked that Dr. Kimball was satisfied with the placement of the artificial disc and the disc has not failed. He explained that an ACDF will cause abnormal stress on adjacent discs and they will wear out. He detailed that the TDR was devised to allow the disc to function normally and preserve motion in younger patients. Revising the TDR and performing an ACDF will not improve Claimant's current symptoms, but will degrade the condition of her cervical spine. Dr. Rauzzino noted that Dr. Kimball had already discussed the need for future surgeries if the ACDF was not performed because the procedure would likely lead to more problems at adjacent levels. He remarked that, if the artificial disc had failed, an ACDF would be appropriate. However, the radiographic evidence reflects that the artificial disc is functioning properly and the motion of the artificial disc has been maintained. Dr. Rauzzino noted that, prior to operating, C5-6 should be identified as the pain generator. However, the objective evidence reveals that C5-6 is not the root cause of Claimant's symptoms. Specifically, Claimant's negative EMG, imaging showing no nerve root compression and negative injection responses reveal that C5-6 is not her pain generator. The inability to identify the pain generator at other levels does not justify performing surgery at C5-6.

18. Dr. Rauzzino explained that proceeding with the ACDF would be inconsistent with the *Guidelines* because Claimant does not have any of the four indications for the surgery including a ruptured disc, spondylosis, spinal instability or non-radicular neck pain. Moreover, Claimant does not meet the standards in the *Guidelines* for revision surgery because they require functional outcomes that exceed a claimant's current status. Notably, the proposed surgery will require significant manipulation and changes to Claimant's spine that will cause adjacent discs to degrade more quickly and require additional treatment. Dr. Rauzzino summarized that the proposed TDR revision and ACDF is not causally related to Claimant's August 24, 2016 industrial injury. Finally, the procedure is not reasonable and necessary to cure or relieve the effects of Claimant's work-related injury.

19. Claimant has failed to demonstrate that is more probably true than not that the proposed TDR revision surgery and ACDF at C5-6 is reasonable, necessary and causally related to her August 24, 2016 industrial injury. Initially, on August 24, 2016 Claimant suffered an admitted industrial injury to her neck when she turned her head and felt a pulling sensation in her neck while spotting one of her gymnastics students. After receiving conservative treatment Claimant underwent a TDR performed by Dr. Kimball on May 1, 2017. Claimant reached MMI on May 8, 2018 with a 30% whole

person impairment rating. She subsequently developed renewed neck pain accompanied by shooting pain into her left arm. After a cervical spine MRI, Claimant received bilateral facet injections and bilateral C5-6 transforaminal steroid injections. By June 29, 2020 Claimant returned to Dr. Kimball and reported 8-9/10 neck pain radiating into her head, bilateral shoulders and arms. Dr. Kimball determined that Claimant's pain originated at the C5-6 level. On July 22, 2020 Dr. Kimball submitted a request for prior authorization to perform a revision of the TDR and ACDF at C5-6.

20. The medical records reveal that Claimant has reported a broad constellation of symptoms that have increased since her initial presentation. However, all objective testing and imaging reveals that the TDR and decompression were successful. Claimant's medical history includes extensive treatment for diffuse symptoms due to a chronic condition that began in 2007. After Claimant returned to her physical job duties as a gymnastics coach in 2018 she began experiencing gradually increasing pain and symptoms. While some symptoms were similar to those from her August 24, 2016 work-injury, they expanded beyond the areas that are physiologically consistent with her initial injury. After Claimant reported her symptoms to Dr. Kimball, he ordered comprehensive diagnostic testing to locate her pain generator. Although the diagnostic testing failed to identify Claimant's pain generator, Dr. Kimball nevertheless recommended a TDR revision and ACDF.

21. Despite Dr. Kimball's opinion, the persuasive medical opinions reflect that the proposed surgery is not reasonable, necessary and causally related to Claimant's August 24, 2016 industrial injury. Dr. Rauzzino persuasively concluded that the proposed revision TDR and ACDF is not causally related to Claimant's August 24, 2016 injury. Instead, Dr. Rauzzino determined that Claimant's diffuse symptoms are most likely related to her chronic fibromyalgia or SLE-like syndrome for which she has treated since 2007. He explained that Claimant's radiographs and MRI showed that the artificial disc from the TDR was functioning properly and there was no compression of her C6 nerve root. Dr. Rauzzino noted that Claimant's EMG testing of the C6 nerve root, which Dr. Kimball stated was essential to determining the pain generator, was normal. He also remarked that Claimant's facet and transforaminal injections provided no diagnostic response at C5-6. Furthermore, Dr. Rauzzino explained that Claimant's report of increasing and diffuse pain throughout her upper extremities, torso, neck and head are inconsistent with the expected physiologic presentation of a problem at C5-6.

22. Dr. Rauzzino summarized that Claimant's objective testing and subjective complaints were insufficient to justify proceeding with an ACDF pursuant to the *Guidelines*. Specifically, Claimant does not have any of the four indications for the surgery including a ruptured disc, spondylosis, spinal instability or non-radicular neck pain. Moreover, Claimant does not meet the standards in the *Guidelines* for revision surgery because they require functional outcomes that are expected to be better than a claimant's current status. Notably, the proposed surgery will require significant manipulation and changes to Claimant's spine that will cause adjacent discs to degrade more quickly and require additional treatment. Similarly, Dr. Janssen persuasively determined that Claimant's subjective complaints lacked objective anatomic correlation. He explained that Claimant had no anatomical reasons for her subjective complaints 18 months after reaching MMI and her pain generator was not identified. Dr. Janssen

remarked that proceeding with surgery would not be consistent with the Cervical Spine *Guidelines*. He also noted that, based on the failure to identify a pain generator, Claimant's current condition was not work-related. Accordingly, the medical records and persuasive medical opinions demonstrate that the proposed TDR revision and ACDF is not causally related to Claimant's August 24, 2016 industrial injury.

23. Although Dr. Kimball has attributed Claimant's current symptoms to the C5-6 level and her work-related injury, his opinion is not consistent with a complete review of the medical records and the results of Claimant's recent diagnostic testing. Dr. Kimball's conclusions are predicated on the assumption that Claimant's pain generator is C5-6. However, as Dr. Rauzzino explained, Claimant's presentation of symptoms is not consistent with an injury at C5-6 and the proposed ACDF at that level will not provide pain relief. Accordingly, the proposed TDR revision and ACDF is not causally related to Claimant's August 24, 2016 industrial injury. The procedure is also not reasonable and necessary to cure or relieve the effects of Claimant's work-related injury. Claimant's request for a TDR revision and ACDF is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the

employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier*, W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. The *Guidelines* were propounded by the Director pursuant to an express grant of statutory authority. See § 8-42-101(3.5)(a)(II), C.R.S. The *Guidelines* are the accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). In *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003) the court noted that the *Guidelines* shall be used by health care practitioners when furnishing medical treatment under the Workers' Compensation Act. See Section 8-42-101(3)(b), C.R.S.

6. The purpose of an ACDF is to relieve pressure on one or more nerve roots or the spinal cord. WCRP 17, Exhibit 8(G)(2)(b)(i)(A). Indications for ACDF include radiculopathy from a ruptured disc or spondylosis, spinal instability or patients with non-radicular neck pain meeting fusion criteria. *Id* at (G)(2)(b)(i)(C). The goal of TDR is maintaining physiologic motion at the treated cervical segment by inserting a prosthetic device into the cervical intervertebral space. *Id* at (G)(3). Notably, “re-operation is indicated only when the functional outcome following the re-operation is expected to be better, within a reasonable degree of certainty, than the outcome of other non-invasive or less invasive treatment procedures... Re-operation has a high rate of complications and failure and may lead to disproportionately increased disability.” *Id* at (G).

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the proposed TDR revision surgery and ACDF at C5-6 is reasonable, necessary and causally related to her August 24, 2016 industrial injury. Initially, on August 24, 2016 Claimant suffered an admitted industrial injury to her neck when she turned her head and felt a pulling sensation in her neck while spotting one of her gymnastics students. After receiving conservative treatment Claimant underwent a TDR performed by Dr. Kimball on May 1, 2017. Claimant reached MMI on May 8, 2018 with a 30% whole person impairment rating. She subsequently developed renewed neck pain accompanied by shooting pain into her left arm. After a cervical spine MRI, Claimant received bilateral facet injections and bilateral C5-6 transforaminal steroid injections. By June 29, 2020 Claimant returned to Dr. Kimball and reported 8-9/10 neck pain radiating into her head, bilateral shoulders and arms. Dr. Kimball determined that Claimant’s pain originated at the C5-6 level. On July 22, 2020 Dr. Kimball submitted a request for prior authorization to perform a revision of the TDR and ACDF at C5-6.

8. As found, the medical records reveal that Claimant has reported a broad constellation of symptoms that have increased since her initial presentation. However, all objective testing and imaging reveals that the TDR and decompression were successful. Claimant’s medical history includes extensive treatment for diffuse

symptoms due to a chronic condition that began in 2007. After Claimant returned to her physical job duties as a gymnastics coach in 2018 she began experiencing gradually increasing pain and symptoms. While some symptoms were similar to those from her August 24, 2016 work-injury, they expanded beyond the areas that are physiologically consistent with her initial injury. After Claimant reported her symptoms to Dr. Kimball, he ordered comprehensive diagnostic testing to locate her pain generator. Although the diagnostic testing failed to identify Claimant's pain generator, Dr. Kimball nevertheless recommended a TDR revision and ACDF.

9. As found, despite Dr. Kimball's opinion, the persuasive medical opinions reflect that the proposed surgery is not reasonable, necessary and causally related to Claimant's August 24, 2016 industrial injury. Dr. Rauzzino persuasively concluded that the proposed revision TDR and ACDF is not causally related to Claimant's August 24, 2016 injury. Instead, Dr. Rauzzino determined that Claimant's diffuse symptoms are most likely related to her chronic fibromyalgia or SLE-like syndrome for which she has treated since 2007. He explained that Claimant's radiographs and MRI showed that the artificial disc from the TDR was functioning properly and there was no compression of her C6 nerve root. Dr. Rauzzino noted that Claimant's EMG testing of the C6 nerve root, which Dr. Kimball stated was essential to determining the pain generator, was normal. He also remarked that Claimant's facet and transforaminal injections provided no diagnostic response at C5-6. Furthermore, Dr. Rauzzino explained that Claimant's report of increasing and diffuse pain throughout her upper extremities, torso, neck and head are inconsistent with the expected physiologic presentation of a problem at C5-6.

10. As found, Dr. Rauzzino summarized that Claimant's objective testing and subjective complaints were insufficient to justify proceeding with an ACDF pursuant to the *Guidelines*. Specifically, Claimant does not have any of the four indications for the surgery including a ruptured disc, spondylosis, spinal instability or non-radicular neck pain. Moreover, Claimant does not meet the standards in the *Guidelines* for revision surgery because they require functional outcomes that are expected to be better than a claimant's current status. Notably, the proposed surgery will require significant manipulation and changes to Claimant's spine that will cause adjacent discs to degrade more quickly and require additional treatment. Similarly, Dr. Janssen persuasively determined that Claimant's subjective complaints lacked objective anatomic correlation. He explained that Claimant had no anatomical reasons for her subjective complaints 18 months after reaching MMI and her pain generator was not identified. Dr. Janssen remarked that proceeding with surgery would not be consistent with the Cervical Spine *Guidelines*. He also noted that, based on the failure to identify a pain generator, Claimant's current condition was not work-related. Accordingly, the medical records and persuasive medical opinions demonstrate that the proposed TDR revision and ACDF is not causally related to Claimant's August 24, 2016 industrial injury.

11. As found, although Dr. Kimball has attributed Claimant's current symptoms to the C5-6 level and her work-related injury, his opinion is not consistent with a complete review of the medical records and the results of Claimant's recent diagnostic testing. Dr. Kimball's conclusions are predicated on the assumption that Claimant's pain generator is C5-6. However, as Dr. Rauzzino explained, Claimant's presentation of symptoms is not consistent with an injury at C5-6 and the proposed

ACDF at that level will not provide pain relief. Accordingly, the proposed TDR revision and ACDF is not causally related to Claimant's August 24, 2016 industrial injury. The procedure is also not reasonable and necessary to cure or relieve the effects of Claimant's work-related injury. Claimant's request for a TDR revision and ACDF is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a TDR revision and ACDF is denied and dismissed.
2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <https://oac.colorado.gov/resources/oac-forms>.*

DATED: December 23, 2020.

ISSUES

- What is the DIME's true rating?
- Did Respondents overcome the DIME's impairment rating by clear and convincing evidence?
- Did Claimant prove she is permanently and totally disabled?
- Claimant withdrew the endorsed issue of medical benefits after MMI.
- The parties agreed to reserve the issue of disfigurement.
- Respondents' counsel indicated Insurer has been paying Claimant TTD since the date of MMI and asked that a specific determination regarding any applicable offsets or overpayments be reserved pending a ruling on the PTD claim.

STIPULATIONS

The parties stipulated Claimant reached MMI on January 9, 2019. The parties further stipulated Claimant received Social Security retirement income in the amount of \$1,598 per month and was receiving Social Security income before the injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a stock and hub driver. Her duties included putting away stock, pulling stock transfers, and delivering parts. Before her work injury, Claimant had been retired for many years. She returned to work because she was board and looking for something to do other than play golf.

2. Claimant suffered an admitted injury on April 5, 2018 when a brake rotor fell out of a box and landed on her left foot. She suffered a crush injury and displaced first metatarsal fracture.

3. Claimant underwent an open reduction with internal fixation of the left foot first metatarsal shaft on April 18, 2018. Claimant currently has a titanium locking plate and screws in her left foot which prevents motion of her great toe joint.

4. Claimant received authorized treatment through Concentra Medical Center. Initially, she seemed to heal relatively well from the injury and surgery. However, she eventually developed symptoms in the left foot consistent with sympathetic nerve pain.

5. Dr. Shimon Blau, a physiatrist, evaluated Claimant on August 28, 2018. Based on the clinical findings, Dr. Blau opined, "I have a high suspicion for CRPS in this

patient I recommend further testing for workup for this including a triple phase bone scan, autonomic testing battery including QSART and stress thermogram.”

6. Claimant underwent a triple phase bone scan on September 12, 2018, which was “equivocal” for CRPS.

7. Dr. Tashof Bernton performed autonomic testing and stress thermography on September 24, 2018. Physical examination of the left lower extremity demonstrated atrophy of the left calf. Dr. Bernton observed the left foot appeared slightly discolored compared to the right with some reticular pattern on the skin. He also noted slight fusiform swelling of the toes and marked hyperalgesia over the foot and lower leg. Hair and nail appearance were symmetric. The autonomic testing battery was consistent with “high probability of dysautonomia.” The thermogram showed temperature asymmetry consistent with CRPS. Dr. Bernton opined, “Both [tests] met criteria for complex regional pain syndrome. With two positive objective diagnostic tests, the patient meets criteria for confirmed the complex regional pain syndrome per the Colorado Workers’ Compensation Treatment Guidelines.”

8. Dr. Bernton recommended sympathetic blocks, adjustment of Claimant’s medications, and a compound topical cream.

9. Claimant was evaluated by Keith Meier, NP, at Concentra on September 26, 2018. She described constant severe sharp and burning pain. On examination, the left foot was discolored (a “bluish tone”) and had a “shiny” appearance. The foot was cool to the touch and extremely sensitive to light touch. NP Meier documented similar clinical findings on October 11, 2018.

10. Claimant had a lumbar sympathetic block on November 13, 2018, which provided no benefit.

11. Dr. Blau placed Claimant at MMI on January 7, 2019. He assigned a 25% whole person rating for CRPS under Table 1, page 109 of the *AMA Guides* because “she has difficulty walking long distances greater than about 30 to 45 minutes as well as a lot of difficulty walking on any services that are not level.” Dr. Blau recommended ongoing maintenance care, including physician follow-up and medications. Claimant was instructed to “follow up with Dr. Pineiro . . . for final MMI determination status.”

12. Claimant saw Dr. Piniero on January 9, 2019. She agreed Claimant was at MMI, pending confirmation from her psychologist. At the time of the appointment, had been on temporary work restrictions of sedentary work only, no more than two hours per day. Dr. Piniero converted the temporary work restrictions to permanent restrictions.

13. On April 9, 2019, Claimant saw Dr. Richard Gordon, a physiatrist who replaced Dr. Blau at Concentra. She described constant burning, aching, stabbing pain in the left foot and said the foot “stays cold and is purple.” Claimant reported difficulty donning and doffing socks on the left foot and could not fully weightbear, causing her to walk on the outside of the foot. On examination, Dr. Gordon noted no atrophy of the foot, but weakness with multiple motions. She reported hypersensitivity to light touch “with

rapid withdrawal, and at which point, the patient became tearful.” He noted “skin of both feet appears reddish purple and practically identical. To the touch, there were no obvious skin temperature changes.” He diagnosed CRPS but opined, “this is a tentative diagnosis based on the fact that her triple phase bone scan was negative, she had no significant improvement with lumbar sympathetic nerve blocks, and no consistent and reproducible findings on today’s physical exam. I am hesitant to rely on the results of the thermography and autonomic testing solely to diagnose CRPS.”

14. Respondents requested a DIME to challenge Dr. Blau’s rating, and Dr. Justin Green was selected as the DIME physician. Claimant saw Dr. Green on April 29, 2019. Dr. Green diagnosed CRPS likely Type I. He opined, “there is consistent documentation that supports a work-related traumatic injury requiring surgical intervention and subsequent development of Complex Regional Pain Syndrome.” He agreed with January 9, 2019 as the date of MMI and with Dr. Blau’s 25% impairment rating. He further opined, “I am also in agreement with work restrictions no greater than two hours daily of work with 90% of the time in a seated position, preferably with the leg elevated.”

15. Claimant followed up with Dr. Gordon on May 7, 2019. He reiterated his doubts regarding the diagnosis of CRPS, noting symmetrical discoloration in both feet and “no obvious temperature change when comparing side to side.”

16. On May 21, 2019, Dr. Gordon noted Claimant was working at two hours per day at Hearts and Horses Therapeutic Riding and “she is tolerating this fairly well.” On exam, he noted the left foot was erythematous and slightly dusky when compared to the right foot. It was also slightly cooler than the right foot. He noted no atrophy but did not test strength “secondary to the patient’s previous exaggerated pain behavior, which resulted in the fixation of exam.” Claimant ambulated with a cane. He recommended a TENS unit and suggested Claimant consider a repeat lumbar sympathetic nerve blocks with a different provider than who had administered the first block.

17. On June 4, 2019, Dr. Gordon noted the TENS unit was not helpful and “actually made her left foot pain and paresthesias worse. She has decided that she does not want to proceed with the repeat left lumbar sympathetic nerve block and does not want to be considered for a spinal cord stimulator.” She had recently started a compound cream, which was helpful.

18. Dr. Bernton re-evaluated Claimant on November 20, 2019. He noted “clear objective findings consistent with [CRPS],” including marked hyperalgesia over the first toe, objective atrophy of the left calf, marked range of motion loss not associated with any orthopedic injury, and slight discoloration of the left foot. Dr. Bernton opined “given the diagnostic tests, the only diagnosis that explains the patient’s current symptoms and objective findings is complex regional pain syndrome.”

19. Dr. Carlos Cebrian performed an IME for Respondents. He initially evaluated Claimant on December 14, 2018. He later provided a supplemental report dated October 31, 2019 after reviewing records. He also testified via deposition. Dr.

Cebrian disputes the diagnosis of CRPS. He explained there is a “clinical diagnosis” and a “confirmed diagnosis.” For patients such as Claimant who may meet the initial criteria for clinical CRPS, a confirmed the diagnosis is still required, which should include a finding that “no other diagnosis better explains the signs and symptoms.” Dr. Cebrian opined Claimant was taking medications with anticholinergic affects and did not properly follow the pre-testing protocol regarding such medications. He opined it is medically probable Claimant’s positive thermogram and QSART are “false positives,” and Claimant does not have CRPS. He noted the triple phase bone scan and sympathetic blocks were not diagnostic of CRPS. He opined Claimant complained of isolated pain to a small area of the distal portion of the left foot, which is atypical for CRPS. He also cited Dr. Gordon’s examination findings which led Dr. Gordon to question the diagnosis of CRPS. Ultimately, Dr. Cebrian opined Claimant has neuropathic pain but not CRPS.

20. Dr. Bernton convincingly refuted Dr. Cebrian’s opinions regarding CRPS in a narrative report and his deposition testimony. He noted the thermography results were “strongly positive” and the autonomic testing battery showed a “high probability” of dysautonomia. He explained Dr. Cebrian “goes out of his way to construct a very improbable scenario in which, in his opinion, the patient does not have complex regional pain syndrome.” He opined, “The patient has a number of clinical findings which would not be explained by any of the hypotheses put forth by Dr. Cebrian.” Dr. Bernton strongly disagreed with the argument Claimant’s test results represented a “false positive.” He disagreed Claimant was taking anticholinergic medications, but even if she were, that could produce a false negative, but not a false positive. He also pointed out Dr. Cebrian’s examination documented significant temperature asymmetries in the left foot, which refutes Dr. Cebrian’s conclusions and “strongly supports” the diagnosis of CRPS. After reviewing the physical examination documented in Dr. Cebrian’s report, Dr. Bernton testified, “he’s essentially diagnosed Complex Regional Pain Syndrome here.”

21. Dr. Bernton’s opinions regarding the diagnosis of CRPS are credible and persuasive.

22. Respondents obtained video surveillance of Claimant on multiple dates in November 2018, December 2018, January 2019, and June 2019. The video shows Claimant standing and walking with no apparent difficulty on multiple dates. On June 3, 2019, Claimant is shown standing on her balcony smoking six cigarettes over two hours. There is no chair or anything else on which to sit on the balcony. Claimant then went to the grocery store and walked with slight limp with no cane. She next went to Applebee’s where she remained for more than two hours until reporting to work at Hearts and Horses. Time records show she worked her full two-hour shift that day. On June 4, 2019, Claimant was first seen standing normally on her balcony smoking two cigarettes within twenty minutes. Approximately 10 minutes later, Claimant walked around while getting gas with no significant limp and did not use a cane. But when she attended her appointment at Concentra later that morning, she began using a cane and walking slowly with a pronounced limp. Claimant used a cane to go up and down the stairs and curb at Concentra. After leaving Concentra, she visited the office at her apartment complex, and again used the cane and walked with a pronounced limp. However, when Claimant got out of her vehicle at home a few minutes later, she did so without a cane and walked

normally with only a slight limp. Less than ten minutes later, she was filmed smoking on her balcony, walking with a normal stride swaying and shifting her weight between her feet without issue. In total, she was shown standing and smoking on six occasions over three and one-half hours after returning home.

23. Claimant attempted to explain away the video surveillance by testifying her symptoms “wax and wane” and the video was taken on “good days.” She testified the pain increases when she is up and about for any significant time. She testified on June 4, 2019, “I had my leg up all morning long. You know, and, if I have my leg up all morning or all afternoon long, then I can do some things.” Claimant’s testimony regarding the video is unpersuasive. Claimant was filmed on numerous occasions in multiple locations. She was repeatedly shown on her balcony smoking cigarettes with no chair, stool, or footrest in sight. She went to Applebee’s and sat for prolonged periods of time with no indication she needed to elevate her leg. She repeatedly walked without an assistive device and displayed only a minimally antalgic gait. On June 4, she gingerly hobbled into Concentra using a cane but was observed at other times that same day standing walking with no apparent difficulty. Based on the extensive video footage, the ALJ finds Claimant has probably embellished her reported functional limitations to appear more disabled than she truly is. As a result, Claimant’s testimony and self-described limitations are not a useful or persuasive tool for determining her residual functional capacity.

24. Respondents took Dr. Green’s deposition on April 28, 2020. Dr. Green had the opportunity to review additional medical records, including reports from Dr. Cebrian and Nurse Meier. He also reviewed the video surveillance before the deposition. Dr. Green maintained his opinion Claimant suffers from CRPS and qualifies for an impairment rating under the Station and Gait section on pages 107 and 109 of the *AMA Guides*. The pertinent portions of the *AMA Guides* provide:

| <p>Station and Gait The ability to stand and walk provides criteria for evaluating spinal cord disorders affecting the lower extremities. These criteria are:</p> <table border="1"> <thead> <tr> <th>Description</th> <th>% Impairment of the Whole Person</th> </tr> </thead> <tbody> <tr> <td>1. Patient can rise to a standing position and can walk <i>but</i> has difficulty with elevations, grades, steps, and distances</td> <td>5-20</td> </tr> <tr> <td>2. | Description | % Impairment of the Whole Person | | | | | | | | | | | | | | | | | | | | | | |
| 1. Patient can rise to a standing position and can walk <i>but</i> has difficulty with elevations, grades, steps, and distances | 5-20 | | | | | | | | | | | | | | | | | | | | | | |
| 2. Patient can rise to a standing position and can walk with difficulty <i>but</i> is limited to level surfaces. There is variability as to the distance the patient can walk | 25-35 | | | | | | | | | | | | | | | | | | | | | | |
| 3. Patient can rise to a standing position and can maintain it with difficulty <i>but</i> cannot walk | 40-60 | | | | | | | | | | | | | | | | | | | | | | |
| 4. Patient cannot stand without a prosthesis or the help of others | 65 | | | | | | | | | | | | | | | | | | | | | | |
| A. Spinal Cord and/or Brain | % Impairment of the Whole Person | | | | | | | | | | | | | | | | | | | | | | |
| Station and gait | | | | | | | | | | | | | | | | | | | | | | | |
| Can stand but walks with difficulty | 5-20 | | | | | | | | | | | | | | | | | | | | | | |
| Can stand but walks only on the level | 25-35 | | | | | | | | | | | | | | | | | | | | | | |
| Can stand but cannot walk | 40-60 | | | | | | | | | | | | | | | | | | | | | | |
| Can neither stand nor walk | 65 | | | | | | | | | | | | | | | | | | | | | | |

25. Given the minimal difficulties with standing and walking objectively demonstrated on the video, Dr. Green reduced the rating to 10%. Dr. Green opined Claimant’s appearance in the video was inconsistent with her presentation at the DIME

or her self-reported condition. He specifically noted “the extent of the surveillance [] that appeared to be relatively consistent as to her activity levels and method of gait.” His rationale for reducing the rating from 25% to 10% rating was, “The description [] is, patient can rise to a standing position and can walk but has difficulty in elevation, grades, steps, and distances. I think that more likely fits what I saw in surveillance.”

26. Dr. Green’s final rating is 10% whole person as set forth in his deposition.

27. Claimant has performed some work activity since the injury. She initially returned to modified duty with Employer on June 1, 2018 with sedentary restrictions per Dr. Nystrom at Concentra. Claimant never worked a full eight hours of modified duty. Claimant alleged she was in too much pain to even work four hours per day. Because of her reported worsening, Dr. Nystrom reduced Claimant’s restrictions to four hours per day on August 2, 2018 and reduced them again to two hours per day on August 26, 2018. Claimant claimed she could not even tolerate two hours per day of sedentary work. Employer did not question her allegations and allowed her to leave early if she requested.

28. On March 12, 2019, Claimant was informed by Caitlin Smyth, a vocational case manager at Corvel, that Employer “is no longer able to accommodate her for light duty at the store so they have asked that I find her a placement.” Corvel placed Claimant in a transitional work program at Hearts and Horses, a nonprofit organization. Claimant started the position on March 25, 2019, performing receptionist duties. Hearts and Horses did not question Claimant’s reported symptoms or limitations and allowed her to leave early or miss shifts whenever she requested.

29. No persuasive evidence corroborates Claimant’s allegations she could not consistently tolerate working two hours per day in sedentary positions. Opinions in the record limiting Claimant to no more than two hours per day are not credible and given no weight in assessing her residual functional capacity.

30. Multiple treating and examining providers have opined Claimant can work part-time or full-time at the sedentary or light level.

31. On May 7, 2019, Dr. Gordon opined Claimant could work “a sedentary position with a lifting/carrying limitation of 20 pounds.” On June 4, 2019, Dr. Gordon reiterated Claimant can work in a sedentary position, and opined, “she can gradually increase up to 4 hours per day over the next 2 to 3 weeks and then up to an eight-hour workday. She may want to consider seeking a vocational rehabilitation specialist for assistance in job placement.”

32. Dr. Cebrian opined Claimant can work eight hours per day in the sedentary or light category.

33. NP Meier testified via deposition on August 25, 2020. He testified Claimant’s appearance on the video was significantly different than her presentation at medical appointments:

A. The surveillance was surprising to me. I mean, I admit that. . . .

Q. . . . Why do you say it was surprising?

A. [Claimant's] presentation and clinic was, you know, that she appeared to be in a significant amount of pain with a significant limp, using her cane. When I saw the video, there were several instances where I didn't see her using a cane. From what I can observe from the video, she didn't appear to be having much favoring of her leg at all at a gas station, walking kind of across the island, putting gas in her car, et cetera.

34. NP Meier agreed with Dr. Cebrian Claimant can work full time at the sedentary or light level. He testified that, "When I read Dr. Cebrian's note and looked and observed her, watching the video myself, it did seem prudent to go ahead and change the restrictions off of what I saw her in the video being able to physically do."

35. Dr. Green had initially provided severe restrictions of working no more than two hours per day with her leg elevated. But he rescinded those restrictions during his deposition based on the video and additional medical records. He testified Claimant could work at least four to six hours per day at the sedentary level, with a progression to eight hours over several weeks depending on clinical progress. Once she reached six- or eight-hour shifts, Dr. Green would impose additional limitations of no prolonged standing or walking, the ability to change positions every 20 to 30 minutes, and the ability to elevate her leg if needed during her rest breaks. He also testified Claimant could possibly progress to light level work.

36. Dr. Bernton testified the video did not change his opinion regarding Claimant's diagnosis of CRPS. He noted "subtle gait antalgia" in the video, which he indicated was consistent with her presentation to him.¹ Although Dr. Bernton suggested he disagrees with Dr. Cebrian's opinion Claimant can perform the full range of light work, he specifically declined to offer any opinion regarding Claimant's specific work restrictions or functional capacity.

37. Katie Montoya performed a vocational evaluation for Respondents. Claimant described an extremely restricted lifestyle because of her foot pain. Claimant told Ms. Montoya she keeps her foot elevated by using a pillow and sitting in a recliner. She alleged her work at Hearts and Horses was "difficult" because she could not elevate her foot sufficiently. Claimant initially stated she was doing "fine" with getting to work and attending her scheduled shifts, although Claimant's attorney "reminded" her of missing work on several occasions. On further prompting from her attorney, Claimant stated weather changes cause her pain to flare severely. Claimant stated it took more than 20 minutes that day to put on her shoe because of severe pain and swelling. Claimant alleged she had cut the sides of her shoes to alleviate pressure on her foot. Claimant stated she needs her son or grandson to bring groceries into her apartment. She stated she had recently driven to Estes Park but simply "looked, and then came home." She stated she could not walk around in Estes Park and needed to elevate her foot. Claimant

¹ This is not entirely consistent with Dr. Berton's initial report, wherein he described Claimant's gait as "significantly antalgic." In any event, the ALJ agrees with Dr. Bernton's assessment that Claimant demonstrated "subtle" gait abnormalities in the video.

stated Hearts and Horses allowed her to elevate her foot on a waste basket but claimed that was not high enough. Claimant told Ms. Montoya she used a cane “all the time.”

38. Ms. Montoya reviewed various medical opinions regarding Claimant’s work tolerance, from only two hours per day to a full range of light work as opined by Dr. Cebrian. She opined the primary issue seemed to be the number of hours Claimant could tolerate. She noted Claimant had a “fairly good skill base from her prior work activities” that would transfer to a variety of sedentary jobs, including purchasing, inventory, and customer service. She opined it “would be likely difficult to obtain and maintain [work] with only two hours of workday available; however, even if she were at four hours per day opportunities would be available with increased options if able to work full time.”

39. Ms. Montoya reviewed the video surveillance after submitting her initial report. She accurately noted Claimant was filmed driving, running errands, standing, and socializing. Ms. Montoya observed multiple occasions where Claimant walked in and out of stores and restaurants without a cane. Additionally, she repeatedly stood on her porch outside in what probably were colder temperatures and appeared to be putting her full weight on the left foot. She appeared to be wearing regular tennis shoes in at least one video. Ms. Montoya observed Claimant sitting a barstool her restaurant with no attempt to elevate her foot. She noted Claimant did not appear to have difficulty ambulating, although conceded that was a “non-medical opinion.” Claimant went to Applebee’s in more than one video and was seen walking outside (“again no cane”) and standing and smoking. She noted Claimant was out running errands are going to Applebee’s for periods longer than two hours.

40. Ms. Montoya was “surprised at the level of activity and movement noted based on my conversation with [Claimant]. It was also surprising in light of her comments to me as well as what is noted in the medical record how frequently she was out and about around town without a cane.”

41. Michael Fitzgibbons performed a vocational evaluation on behalf of Claimant. During their interview, Claimant described severe limitations similarly to those she relayed to Ms. Montoya. Claimant told Mr. Fitzgibbons she uses a cane “most of the time” to assist with ambulation. She stated she had difficulty with prolonged sitting and “spending any time on her feet at all.” She stated she kept her left leg elevated most of the time to alleviate pain. Mr. Fitzgibbons could not identify any competitive jobs where two hours of sedentary activity was adequate for any employer. Crediting Claimant’s self-described severe functional limitations and alleged difficulty tolerating two hour shifts in a sedentary position with an accommodating employer, Mr. Fitzgibbons opined Claimant cannot sustain employment and earn wages in any occupation.

42. Ms. Montoya issued an updated report on June 26, 2020 after reviewing additional medical records, including Dr. Green’s deposition and updated opinions from NP Meier. She referenced increasing work-from-home employment opportunities as the job market changes in response to the ongoing pandemic. She also cited COVID screener positions at many offices (medical and otherwise) with limited physical demands

and “it would not appear those will be eliminated anytime soon.” Ms. Montoya reiterated her opinion Claimant can return to work “should she desire to do so.”

43. Mr. Fitzgibbons issued a supplemental report, also on June 26, 2020. He noted Claimant had missed more shifts while working at Hearts and Horses than is generally acceptable in the competitive labor market. He pointed out the unemployment rate has decreased approximately 300 to 400% in Larimer County since February 2020. He opined older workers are the most likely to become chronically unemployed and least likely to be hired during economic downturns. He opined the surveillance video did not conclusively show Claimant engaging in any activities inconsistent with her described symptoms and limitations. Mr. Fitzgibbons concluded Claimant cannot work or earn a wage without professional vocational assistance.

44. Ms. Montoya and Mr. Fitzgibbons testified via deposition consistent with their reports.

45. Dr. Berton’s opinions regarding the diagnosis of CRPS are credible and more persuasive than the contrary opinions offered by Dr. Cebrian.

46. Respondents failed to overcome the 10% DIME rating by clear and convincing evidence.

47. Ms. Montoya’s vocational opinions and conclusions are credible and more persuasive than the contrary opinions offered by Mr. Fitzgibbons.

48. Claimant failed to prove she is permanently and totally disabled.

CONCLUSIONS OF LAW

A. Respondents failed to overcome the DIME’s 10% whole person rating

A DIME’s determination regarding whole person impairment is binding unless overcome by “clear and convincing evidence.” Section 8-42-107(8)(C). Clear and convincing evidence is “unmistakable and free from serious or substantial doubt.” *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME’s conclusions must demonstrate it is “highly probable” the impairment rating is incorrect. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Determining a claimant’s injury-related diagnoses is an “inherent” part of performing a rating, and the DIME’s findings in this regard are entitled to presumptive weight in the context of whole person impairment. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). If the DIME issues multiple or conflicting opinions concerning MMI or whole person impairment, the ALJ must determine the DIME’s true opinion as a matter of fact. *Magnetic Engineering v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). Depending on the circumstances, the DIME’s true “findings and determinations” may be found in the DIME report(s) or testimony at a deposition or hearing. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005); *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1998).

As found, the DIME's true rating is 10% as set forth in Dr. Green's deposition. Dr. Green rescinded the 25% rating contained in his original report after reviewing of the video surveillance.

Respondents failed to overcome the DIME's 10% whole person rating by clear and convincing evidence. Dr. Berton's opinions regarding Claimant's diagnosis of CRPS are credible and more persuasive than the contrary opinions offered by Dr. Cebrian. As Dr. Berton explained, the thermogram results were "strongly positive" and the autonomic testing battery showed a "high probability" of dysautonomia. Both tests support the diagnosis of CRPS. Multiple providers documented clinical signs consistent with CRPS, including Dr. Cebrian himself. Claimant satisfies the diagnostic criteria for CRPS set forth in the MTGs. The DOWC "recommends" CRPS be rated under Table 1, Section A, p. 109 of the *AMA Guides*. Dr. Green appropriately used the "Station and gait" section of Table 1 to rate Claimant's impairment. The original 25% rating was incorrect considering Claimant's functionality demonstrated by the video. Dr. Green's decision to assign a 10% rating is reasonable based on the evidence available to him, which includes not just the video but also voluminous medical records and his personal examination of Claimant. The minimum category of ratable impairment under the Station and gait section of Table 1 is "Can stand but walks with difficulty," which corresponds to a rating of 5%-20% whole person. Claimant demonstrated a mildly antalgic gait at numerous points on the video and it is reasonable to conclude she has some degree of difficulty with ambulation. The ALJ also notes 10% is at the lower end of the available range in that category. The decision of where an individual falls within the applicable range is largely a judgment call, and the 10% selected by Dr. Green is well within his zone of discretion as the rating physician.

B. Claimant failed to prove she is permanently and totally disabled

A claimant is considered permanently and totally disabled if she cannot "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means wages in excess of zero. *McKinney v. Industrial Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995). Evaluation of a claimant's ability to earn wages is not limited to "full-time" work; the ability to sustain part-time work in a competitive, non-sheltered work environment precludes a permanent total disability award. *E.g., Work v. Adams County*, W.C. No. 4-191-303 (August 30, 2020). To prove permanent total disability, the claimant need not show that the industrial injury is the sole cause of her inability to earn wages. Rather, the claimant must demonstrate that the industrial injury is a "significant causative factor" in her permanent total disability. *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986).

In determining whether the claimant can earn wages, the ALJ may consider a wide variety of "human factors." *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1988). These factors include the claimant's physical condition, mental abilities, age, employment history, education, training, and the "availability of work" the claimant can perform within her commutable labor market. *Id.* Another human factor is the claimant's ability to obtain and maintain employment within her limitations. See *Professional Fire Protection, Inc. v. Long*, 867 P.2d 175 (Colo. App. 1993). The ability to

earn wages inherently includes consideration of whether the claimant can get hired and sustain employment. See e.g., *Case v. The Earthgrains Co.*, W.C. No. 4-541-544 (ICAO, September 6, 2006); *Cotton v. Econo Lube N. Tune*, W.C. No. 4-220-395 (ICAO, January 16, 1997). If the evidence shows the claimant cannot “sustain” employment, the ALJ can find she is not capable of earning wages. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866, 868 (Colo. App. 2001).

Claimant failed to prove she is permanently and totally disabled. The persuasive evidence shows Claimant can sustain at least part-time work in a variety of sedentary occupations. Ms. Montoya’s vocational opinions and conclusions regarding Claimant’s ability to earn wages are persuasive. Claimant has sedentary-level transferrable skills from her previous work in purchasing, inventory, and customer service. Given Claimant’s prior work history and transferrable skills, Ms. Montoya persuasively opined Claimant has viable work options at the sedentary level even if limited to four-hour shifts. The severe initial restrictions from Dr. Pineiro and Dr. Green are not credible in light of the functional abilities objectively shown by the video. NP Meier, Dr. Green, and Ms. Montoya credibly expressed their “surprise” regarding Claimant’s demeanor and activities demonstrated on the video as compared to her prior in-person presentations. Most providers who have seen the video (including Dr. Green) have opined Claimant can work at least at the sedentary level and possibly the light level. Dr. Bernton repeatedly declined to offer any opinion regarding Claimant’s work capacity. As a result, Claimant lacks persuasive support from any treating or examining provider for a specific set of limitations that would rule out all work. Of course, a claimant is not required to provide medical opinion evidence and can support a claim by any competent evidence. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). But the persuasive non-medical evidence does not support her claim either. After observing Claimant’s tolerance for prolonged standing and her ability to walk with only a mildly antalgic gait on several occasions using no assistive device, the ALJ is not persuaded she needs to elevate her leg with a frequency or in a posture than could not be accommodated in sedentary jobs. Nor will Claimant likely need excessive breaks or miss work beyond customary tolerances if working at the sedentary level. While the ALJ does not doubt Claimant experiences pain from her CRPS, the preponderance of persuasive evidence fails to demonstrate a level of functional impairment or disability sufficient to prevent her from earning “any wages” at the same or other employment.

ORDER

It is therefore ordered that:

1. Respondents’ request to set aside the DIME’s 10% rating is denied and dismissed.
2. Insurer shall pay Claimant PPD benefits based on a 10% whole person rating. Insurer may take credit for any temporary disability benefits paid after Claimant reached MMI on January 9, 2019.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all indemnity benefits not paid when due, but only to the extent Insurer's liability for those benefits is not satisfied by application of the credit referenced in the preceding paragraph.

4. Claimant's claim for permanent total disability benefits is denied and dismissed.

5. The issues of disfigurement, offsets, and overpayment are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

WORKERS' COMPENSATION NO. WC 5-097-502-001**

ISSUE

1. Whether Respondents have overcome by clear and convincing evidence the DIME Physician's assignment of a 10% whole person permanent impairment for emotional disturbance related to a brain injury.
2. Whether Respondents have overcome by clear and convincing evidence the DIME Physician's opinion that Claimant sustained work-related a neck injury and was not at MMI for her neck condition.
3. Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on January 2, 2019 arising out of the course of her employment with Employer. Claimant has been employed as a flight attendant for Employer for approximately twenty years. On January 2, 2019, Claimant struck her forehead on a galley counter inside an airplane while performing her preflight duties. Although Claimant had a brief period of "blacking out" she did not fall or break the skin and completed her shift. Over the next few days, Claimant began experiencing headaches, nausea, and cognitive issues.
2. On January 7, 2019, Claimant saw Erick Hennessy, PA-C, at Concentra in Layton, Utah. Claimant reported she was doing her routine duties when she turned and struck her head on a counter. She reported experiencing headaches and nausea two days later, and some mental difficulties. Claimant also reported mild pain in the posterior neck bilaterally, with intermittent symptoms. Claimant reported no significant past medical history. On examination, PA Hennessy noted Claimant's neck was supple, with normal lordosis, no tenderness and full range of motion. On the same date, a Physician's Initial Report of Work Injury or Occupational Disease was completed indicating Claimant's diagnosis was post-concussional [sic] syndrome and contusion of unspecified part of head. Claimant was authorized to return to work on modified activity, including no activities requiring depth perception, no climbing ladders, may not work in safety sensitive position and may not work at heights. (Ex. F).
3. On January 10, 2019, Claimant saw PA Hennessy, with an assessment of head contusion and post-concussion syndrome. Claimant reported no change in her post-concussion syndrome, and no significant medical history. On examination, PA Hennessy found neck stiffness, but no joint pain, no muscle pain, and no neck pain. Examination of the cervical spine showed normal lordosis, no tenderness and full range of motion. Claimant's work restrictions were continued. (Ex. F).

4. On January 17, 2019, Claimant saw PA Hennessy again. Claimant reported feeling better. PA Hennessy noted Claimant had no joint or muscle pain (under Review of Systems). Examination of Claimant's cervical spine showed normal lordosis, no tenderness and full range of motion. Claimant reported no significant medical history. (Ex. F).
5. On January 25, 2019, Claimant returned to PA Hennessy, reporting she had a setback that week, which appeared to be related to cognitive issues, such as concentration and carrying on conversations. Examination of Claimant's cervical spine showed normal lordosis, no tenderness and full range of motion. (Ex. F).
6. On February 1, 2019, Claimant saw PA Hennessy for post-concussion syndrome, reporting no change in her condition. Claimant reported neck pain and stiffness, but no joint pain, no back pain, and no muscle weakness. PA Hennessy did not document an examination of Claimant's cervical spine, but noted her neck was "supple and symmetric." (Ex. F).
7. On February 8, 2019, Claimant saw PA Hennessy again. At that time, Claimant reported no joint or muscle pain, and no complaints of neck pain or stiffness were documented. PA Hennessy did not document an examination of Claimant's cervical spine, but noted her neck was "supple and symmetric." (Ex. F).
8. On February 20, 2019, PA Hennessy noted that Claimant was 75% of the way toward meeting the physical requirements of her job, and his assessment was post-concussion syndrome and head contusion. PA Hennessy did not document any complaints of neck pain or stiffness, and his musculoskeletal review was negative. Again, PA Hennessy did not document an examination of Claimant's cervical spine, but noted her neck was "supple and symmetric." Claimant noted having difficulties with emotional stress. (Ex. F).
9. On March 1, 2019, Claimant was seen by Barry Gardner, M.D., at Concentra in Layton, Utah. Claimant reported sleep disturbance, concentration decrease and depressive syndrome, but no headaches. Dr. Gardner's musculoskeletal review was negative, and no cervical spine examination was performed. Claimant reported no significant medical history. (Ex. F).
10. On March 19, 2019, Claimant saw PA Hennessy again. Claimant reported improvement, especially on physical activities. She was referred for a physical medicine and rehabilitation (PMR) consult. Claimant reported she was fine "physically," but her memory and cognitive function did not seem normal. PA Hennessy did not document any complaints of neck pain or stiffness, and his musculoskeletal review was negative. Again, PA Hennessy did not document an examination of Claimant's cervical spine, but noted her neck was "supple and symmetric." (Ex. F).
11. On April 29, 2019, PA Hennessy noted that Claimant was 50% of the way toward meeting the physical requirements of her job. It was noted that Claimant was originally referred to a PMR physician who did not treat head injuries or post-concussion syndrome, so it was recommended that Claimant see Jeffery Randle, M.D. PA Hennessy did not

document any complaints of neck pain or stiffness, and his musculoskeletal review was negative. PA Hennessy did not document an examination of Claimant's cervical spine, but noted her neck was "supple and symmetric." Claimant reported cognitive issues when she was overstimulated or under stress. (Ex. F).

12. On May 15, 2019, Claimant saw Dr. Randle at Salt Lake Orthopedic Clinic for evaluation of post-concussion syndrome. Claimant reported symptoms including cognitive issues, and difficulty with loud noise, crowds and being exposed to a lot of movement. Claimant reported a previous history of a traumatic brain injury five years earlier with migraine headaches. Claimant did not report a history of chronic neck pain. Dr. Randle's found Claimant's cervical spine range of motion "grossly limited with pain," with normal strength and muscle tone. He diagnosed Claimant with post-concussion syndrome and recommended neuropsychological testing and speech therapy. (Ex. J).

13. On June 18, 2019, Claimant saw Dr. Randle. Dr. Randle noted Claimant's cervical spine range of motion was "grossly limited with pain," and diagnosed Claimant with cervicgia (i.e., neck pain). He indicated he would see Claimant again after she had begun neuropsychological counseling. Dr. Randle indicated that speech therapy could provide Claimant with strategies for her memory and to decrease her stress. (Ex. J).

14. On July 5, 2019, Claimant underwent a speech pathology evaluation performed by Maria Gurrister, M.S., and began a course of speech therapy which concluded on October 3, 2019. On October 3, 2019, Ms. Gurrister found Claimant's overall function was within normal limits and her prognosis for further improvement was favorable with Claimant's use of strategies learned during speech therapy. Ms. Gurrister noted that no further speech therapy services were warranted.

15. On July 22, 2019, Claimant returned to Dr. Randle. He again recommended Claimant schedule neuropsychological testing. Dr. Randle noted Claimant's cervical spine range of motion was "grossly intact," and diagnosed Claimant with cervicgia and post-concussion syndrome. Dr. Randle's record from this date indicates that Claimant was recommended to undergo physical therapy for "postconcussion syndrome – cervical 5th vertebrae" for four to six weeks. Claimant did not receive the recommended physical therapy. (Ex. J).

16. On October 10, 2019, Dr. Randle saw Claimant for follow up for post-concussion syndrome. Claimant reported speech therapy had been helpful and that she did not get neuropsychological testing. Claimant reported occasional cognitive issues, but otherwise was doing well. Dr. Randle diagnosed Claimant with work-related post-concussion syndrome and cervicgia and placed her at maximum medical improvement. He also authorized Claimant to return to work on that date, with no functional limitations or restrictions. Dr. Randle did not find Claimant had any permanent impairment and assigned no impairment rating for any condition. (Ex. J).

17. On November 25, 2019, Claimant began treatment with chiropractor Clint J. Grover, D.C. From November 25, 2019 through February 24, 2020, Claimant saw Dr. Grover on 14 occasions. Claimant testified she self-referred to Dr. Grover for neck pain.

18. Dr. Grover's records purport to document complaints of stiffness, tightness, discomfort in twenty-three different areas of Claimant's body, including her lower, mid, and upper back; right, left, front and back of her head; left, right and back of her neck; both clavicles; both TMJ; left and right trapezius; right shoulder; right and upper chest; right elbow; pubic region; right triceps; and bottom of her right foot. In his records, Dr. Grover indicates Claimant reported visual analog scale (VAS) pain ratings for as many as 17 different body parts at a given appointment. Portions of Dr. Grover's records include statements that Claimant reported her discomfort had improved or declined from the previous visit, although the records demonstrated the opposite. In other instances, Dr. Grover documents complaints in areas where Claimant testified she had no recollection of having problems. For example, Claimant testified she had no recollection of TMJ or jaw issues, pelvic pain, or chest pain. Dr. Grover, however, documented that Claimant had right sided TMJ complaints occurring between 60-90% of the time at every visit, complaints in the "pubic region" at all but two visits, and chest pain on multiple occasions.

19. When questioned about the various areas Dr. Grover documented as complaints, Claimant testified that she did not "know where all this is coming from." Claimant testified she does not relate any complaints involving body parts other than her neck to her work injury. Claimant testified she stopped seeing Dr. Grover because he was not a "standard chiropractor." The ALJ finds Dr. Grover's records lack any indicia of accuracy, reliability, or credibility. (Ex. I).

20. In January 2020, Claimant began seeing Keith McGoldrick, Ph.D., at Beehive Neuropsychology. Claimant reported her cognitive symptoms and headaches were increased with stress, loud noises, crowded environments, and visually stimulating environments, which caused her anxiety. Claimant also reported having anxiety and panic attacks related to stressful situations. Claimant saw Dr. McGoldrick through February 2020. (Ex. K).

21. On February 14, 2020, Claimant saw Khoi Pham, M.D. for a Division independent medical examination (DIME). Dr. Pham reviewed Claimant's medical history but was not aware Claimant had a history of neck pain or that she had received a 5% cervical spine impairment rating prior to January 2, 2019. Dr. Pham diagnosed Claimant with post-concussive syndrome, adjustment disorder with anxiety and depressed mood, and "cervicalgia. ? sprain." (Ex. 1).

22. Dr. Pham found Claimant was at MMI for her post-concussive syndrome and noted she had a mild concussion that should heal "realistically by now (even with a history of a prior concussion in 2010)." He noted she had a normal head CT and a completely normal neurological exam. He believed her persistent cognitive/memory complaints as well as visual disturbances were from adjustment disorder. He also noted that Claimant's history of depression with ADD could interfere with appropriate recovery. Dr. Pham assigned Claimant a 10% whole person impairment for her head injury under the AMA Guides for Nervous System either Disturbances of Complex, Integrated Cerebral Functions or Emotional disturbances. Dr. Pham included with his report a page from the AMA Guides indicating that the impairment rating assigned was for "mild to moderate emotional disturbance under unusual stress." (Ex. 1).

23. On examination of Claimant's cervical spine, Dr. Pham noted "I don't think the patient is at MMI for her cervicalgia. She has significant decreased ROM (esp. flexion) of her cervical spine that I could not explain (no palpable muscle spasm, no evidence of myelo-radiculopathy on exam)." He further stated:

"Notes from Concentra stated that she had normal ROM of the cervical spine on several visits. However, Dr. Randle's notes did document patient's neck pain and decreased ROM. As a matter of fact, he wanted her to have some PT to the neck which she apparently did not have. Reportedly, she had chiropractic treatment as well as massage therapy since and she still can't flex her neck more than 10 degrees today. So until the neck issue is resolved, the patient is NOT at MMI."

Dr Pham did not assign a provision impairment rating for Claimant's neck "due to persistent neck issue." (Ex. 1).

24. Dr. Pham testified by deposition and was offered and accepted as an expert in neurology. Dr. Pham testified Claimant did not disclose to him her history of chronic migraines or neck pain. Dr. Pham testified there was no indication in Claimant's medical records of complaints of neck pain in the first 4 ½ months after her injury. He also opined if there had been a significant neck issue, Concentra would have referred Claimant to physical therapy for her neck, which did not occur. He testified he did not know whether the Claimant had any neck complaints or neck problems prior to her January 2019 work injury, nor was he aware of any prior impairment rating for her neck, and that information would be helpful in understanding Claimant's neck issues.

25. On June 30, 2020, Claimant saw Lawrence Lesnak, D.O., for an independent medical examination requested by Respondents. Dr. Lesnak was offered and accepted as an expert in physical medicine and rehabilitation and testified by deposition consistent with his report. (Ex. A).

26. Claimant initially reported to Dr. Lesnak that she had no history of neck pain, or neck symptoms, but also disclosed prior neck injuries in 2011 and 2015. Claimant reported she was continuing to have complaints of pain in her neck and left occipital/temporal region. Claimant reported confusion when stressed and difficulty with bright lights. She also reported neck stiffness. Dr. Lesnak opined that Claimant had a high level of somatic pain complaints during his "psychosocial" testing and testified that the mechanism of bending forward and striking your forehead on a countertop is not one that would cause or aggravate cervical spine pathology. (Ex. A).

27. Dr. Lesnak opined that Dr. Pham provided an erroneous impairment rating by assigning Claimant a 10% whole person impairment rating for her brain injury. Dr. Lesnak opined that there was "absolutely no evidence to suggest" that Claimant had an organic brain syndrome, which he opined was a prerequisite to assigning an impairment rating for Claimant. Ultimately, Dr. Lesnak opined that Claimant was at MMI and that there was "no medical evidence to support that [Claimant] has sustained any type of permanent functional impairments" from her work-injury. (Ex. A).

28. Claimant testified at hearing. Claimant testified she told Dr. Pham she had prior neck problems and a history of chronic migraines as part of the DIME examination. She testified did not recall whether she told Dr. Pham she had a previous permanent impairment rating for her neck. She also testified that she repeatedly told providers at Concentra that she had prior neck issues and that her neck was examined at Concentra. Claimant testified that prior to her January 2019 injury, she was not receiving active treatment for her neck. She testified she had previously had physical therapy and massage for her neck, and that she would, but that she would stretch or use heat if it were irritated.

29. On November 10, 2019, Respondents filed a Final Admission of Liability and admitted for TTD benefits in the amount of \$18,279.87 for the period of January 7, 2019 through October 9, 2019, at the rate of \$463.62 per week. The rate of \$463.62 reflects an admitted average weekly wage of \$695.43 per week. Respondents' FAL was based on Dr. Randle's opinion on October 10, 2019 that Claimant was at MMI without permanent impairment, and that Claimant was able to return to work on October 10, 2019.

30. Claimant's employment wage records reflect that during the calendar year 2018, Claimant earned gross wages of \$48,563.62, or \$933.92 per week.

31. Respondents' calculation of Claimant's AWW is, apparently based on the period of October 1, 2018 through January 1, 2019, a total of six pay periods, and includes four pay periods for which Claimant received no wages. Respondents' calculation not a fair approximation of Claimant's average weekly wage.

PRIOR TREATMENT

32. Claimant sustained work-related injuries on November 2, 2013 as the result of turbulence in an airplane, in which she struck her head, twisted her neck, and injured her lower back. Claimant reported to her health care providers that she had immediate diffuse head and neck pain, and intermittent upper and lower limb paresthesia into the upper arm and ulnar digits. Following that injury, Claimant was seen at LDS Hospital and diagnosed with cervical and lumbar myofascial strains. On December 19, 2013, Claimant reported to Utah Care that she had a prior work-related whiplash injury in July 2011 from which she had never fully recovered, and that she had a history of neck pain that had "been going on for years." Examination demonstrated that Claimant cervical range of motion was 60% of normal in flexion, extension, and rotation. She was diagnosed with aggravation of chronic neck pain, with right upper limb radiation into the ulnar digits for which she received a series of trigger point injections. (Ex. C, D).

33. On September 26, 2014, in an appointment with Douglas Shepherd, M.D., at Utah Care, Claimant reported that she had sustained an injury to her neck during a flight in June 2013 in which she was "bounced around." She reported receiving approximately six weeks of physical therapy for that injury and denied ongoing/residual symptoms from that incident. (Ex. D).

34. On September 26, 2014, Dr. Shepherd assigned Claimant a 5% whole person impairment for her cervical spine injuring, including a disc extrusion at C-4-5 resulting in

mild stenosis, with several levels of annular tears. He noted that Claimant's cervical range of motion was 50% of normal in extension, and 70% of normal in all other planes of movement. He noted that he could not apportion the Claimant's impairment without records from previous injuries in June 2013 and July 2011. He also noted that Claimant had been placed at "medical stability" as of June 20, 2014 at the latest. (The ALJ infers that "medical stability" is the equivalent of maximum medical improvement).

35. On June 29, 2015, Claimant saw Dr. Shepherd for her neck and back pain. Claimant reported that she continued to have neck and low back pain, and increasing flareups occurring 2-3 times per month, lasting up to three days. She reported working but missing up to 6 days per month due to symptoms. On examination, Dr. Shepherd noted that Claimant's cervical range of motion was about 40% of normal in flexion, and 70-80% of normal in all other planes. Claimant also reported that her symptoms were aggravated by stress or overexertion. Dr. Shepherd recommended she continue independent exercises and follow up as needed. (Ex. D)

36. Claimant returned to Dr. Shepherd on March 10, 2016, reporting recurrent/progressive neck pain with some headaches. She reported diffuse aching pain over the posterior neck and head, with occasional symptom radiation to the right elbow. Dr. Shepherd reported Claimant's cervical range of motion was approximately 60% of normal. Claimant was provided a trial of Mobic and prescribed a Medrol Dosepak and received trigger point injections. She was diagnosed with cervical myofascial pain syndrome, cervicalgia, chronic pain generation, and degeneration of cervical intervertebral disc. Dr. Shepherd recommended an epidural steroid injection for Claimant's ongoing symptoms, which he attributed to her November 2013 work injury. (Ex. D)

37. On June 24, 2016, Claimant was seen at Intermountain Bountiful Clinic, in Utah. Claimant reported ongoing neck pain, which she reported triggered migraine headaches. She was diagnosed with chronic neck/thoracic pain with migraine headaches.

38. Claimant testified that prior to January 2, 2019, she had received chiropractic treatment for her neck, but no records were produced or admitted into evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON MMI, CAUSATION AND IMPAIRMENT

The Act defines MMI as “a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” § 8-40-201(11.5), C.R.S. Where disputes exist on whether a Claimant has reached MMI, the ALJ must resolve that issue.

Under § 8-42-107 (8)(b)(III), C.R.S., a DIME physician's opinions concerning MMI and whole person impairment carry presumptive weight and may be overcome by clear and convincing evidence. “Clear and convincing evidence means evidence which is stronger than a mere ‘preponderance’; it is evidence that is highly probable and free from serious or substantial doubt.” *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). Accordingly, a party seeking to overcome a DIME's MMI determination and/or whole person impairment rating must present “evidence demonstrating it is ‘highly probable’ the DIME physician's MMI determination or impairment rating is incorrect and such evidence must be unmistakable and free from serious and substantial doubt. *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001); *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). Whether a party has overcome the DIME physician's opinion is a question of fact to be resolved by the ALJ. *Metro Moving & Storage*, 914 P.2d at 414.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation, and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014).

DR. PHAM'S OPINION REGARDING TBI

Respondents assert that Dr. Pham incorrectly assigned a 10% whole person impairment rating for Claimant. The ALJ finds that Respondents have not met their burden of establishing that Dr. Pham's opinion that Claimant is entitled to a 10% whole person impairment rating is incorrect. Dr. Pham determined Claimant qualified for an impairment rating based on "mild to moderate emotional disturbance under unusual stress." Claimant's contemporaneous medical records demonstrate that she experienced post-concussion symptoms consistently from the January 7, 2019 through at least February 2020. Claimant consistently reported difficulties coping with stressful situations which resulted in reported cognitive issues and emotional responses, such as panic attacks and anxiety. Dr. Lesnak testified that the *AMA Guides* require an organic brain syndrome for the assignment of an impairment rating under Claimant's circumstances, but do not point to any specific section of the *AMA Guides* imposing such a requirement. The ALJ finds Dr. Pham's opinion that Claimant sustained a 10% whole person impairment credible. The ALJ does not find it "highly probable" that Dr. Pham's opinion

is incorrect, or that the evidence contrary to Dr. Pham's opinion to be free from unmistakable and free from serious or substantial doubt. Claimant is entitled to a 10% whole person impairment for emotional disturbance due to her post-concussion syndrome.

DR. PHAM'S OPINION REGARDING NECK INJURY

Respondents assert that Dr. Pham incorrectly attributed Claimant's reported neck pain to her work injury, and therefore improperly based his opinion that Claimant was not at MMI on the existence of that condition. Dr. Pham found that Claimant had "cervicalgia" (i.e., cervical or neck pain), and that cervicalgia must be addressed before Claimant could be found to be at MMI. Inherent in Dr. Pham's opinion is a determination that the symptoms Claimant reported at the DIME examination were causally related to her January 2, 2019 work injury. The ALJ finds that Respondents have met the burden of establishing by clear and convincing evidence that Dr. Pham's opinion that Claimant's then-existing cervicalgia was work-related is incorrect.

Although Dr. Pham diagnosed Claimant with cervicalgia, neither his report nor testimony offer any explanation as to how Claimant's cervicalgia symptoms in February 2020 were causally related to her January 2019 work injury. Dr. Pham's report indicates that he could not find an explanation for her cervical pain. His diagnosis of "cervicalgia" (i.e., neck pain), is qualified with "? Sprain," from which the ALJ infers that Dr. Pham questioned whether Claimant had sustained a cervical sprain. The evidence demonstrates that Claimant struck her head on a counter, with enough force to cause a bump on her head, but not to break the skin or cause her to fall. Dr. Lesnak testified, credibly, that the mechanism of bending forward and striking your forehead on a countertop is not one that would cause or aggravate cervical spine pathology. Claimant offered no evidence to explain what pathology caused Claimant's reported neck stiffness and pain, and neither Dr. Pham nor Dr. Randle include any such rationale in their respective records.

Moreover, the evidence demonstrates, to the extent Claimant had neck symptoms related to her January 2, 2019 work injury, those symptoms were subjective, minor, and resolved within a relatively short time frame. Claimant reported mild neck stiffness and pain to Concentra on January 7, 2019, January 10, 2019, and February 1, 2019. Examinations on those dates of treatment, which Claimant testified were performed, did not demonstrate any restriction in range of motion, much less the significant limitations reported to Dr. Pham and Dr. Randle. Her records from Concentra document no complaints of neck pain after February 1, 2019. On March 19, 2019, Claimant reported that she felt fine "physically." At her final visit to Concentra on April 29, 2019, Claimant reported no neck pain, and no findings were made with respect to her neck. Although Claimant reported neck issues on three occasions, and was examined for them, the Concentra providers identified no objective injury, made no diagnosis of a neck injury, and recommended no treatment for her neck. The ALJ finds credible Dr. Pham's testimony that had Claimant had a significant cervical spine injury, Concentra would have recommended treatment, which did not occur.

When Claimant saw Dr. Randle on May 15, 2019, her complaints of neck pain were significantly different than those reported at her last Concentra visit two weeks earlier. Claimant reported tenderness to palpation of her cervical paraspinal musculature and grossly limited range of motion with pain (as opposed to no symptom and full range of motion on April 29, 2019). No explanation was offered by Claimant for the seemingly sudden emergence of neck pain on May 15, 2019 when she saw Dr. Randle, given that she had not reported neck-related issues since February 1, 2019, three and one-half months earlier. Dr. Randle did not document any explanation as to how Claimant's reported neck symptoms were related to her work injury four months earlier. By July 22, 2019, Dr. Randle noted Claimant's cervical range of motion was intact. Dr. Randle's records also do not indicate that he was aware of Claimant's prior chronic neck pain. When Dr. Randle placed Claimant at MMI and included within his diagnosis of work-related conditions "cervicalgia" he noted that Claimant had no permanent impairment and assigned no impairment rating.

Given the Claimant's prior chronic neck pain, her failure to report that condition to her treating providers or Dr. Pham, the lack of objective findings supporting a neck injury, the lack of a specific diagnosis of pathology that would cause cervicalgia, the relatively minor mechanism of injury, the resolution of the reportedly minor neck pain and stiffness after one month, Dr. Pham's admitted inability to explain the cause of Claimant's decreased range of motion, and Dr. Randle's opinion that Claimant was at MMI on October 10, 2019 without the assignment of an impairment rating for her neck, the ALJ finds the evidence free from serious and substantial doubt and it is highly probable that Dr. Pham's causation and MMI determination with respect to Claimant's neck is incorrect. The ALJ finds that Dr. Randle's opinion that Claimant was at MMI for her neck on October 10, 2019 without permanent impairment is correct.

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. (2020) requires the ALJ to determine a Claimant's AWW based on his or her earnings at the time of injury. The ALJ must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO*, 18 P.3d 867, 869 (Colo. App. 2001). The objective when calculating the AWW is to arrive at a "fair approximation of the claimant's wage loss and diminished earning capacity." *Campbell v. IBM Corp.*, 867 P.2d 77, 82 (Colo. App. 1993).

On November 10, 2019, Respondents filed a FAL admitting to TTD benefits for the period of January 7, 2019 through October 9, 2019, at the adjusted rate of \$463.62 per week (reflecting an admitted AWW of \$695.43 per week). Although Claimant's wage records for the year 2018 are in the record, Respondents offered no evidence as how Respondents arrived at its calculation for Claimant's AWW. Claimant contends her an AWW based on her gross pay for the calendar year preceding her injury is a fair approximation of her wage loss. For the calendar year 2018, Claimant earned gross wages of \$48,563.62, or \$931.36 per week. The ALJ finds that Claimant's average weekly wage was \$931.36 per week.

Respondents contend that in addition to proving the appropriate calculation for AWW, Claimant must also prove an entitlement to TTD benefits. Counsel for Respondents sent Claimant's counsel an email on September 15, 2020, which indicated that "Respondents will be taking the position at the upcoming hearing that the Claimant was never temporarily disabled for this claim. As a result, we will not be agreeing to any increased in TTD benefits, even if the average weekly wage is adjusted." Respondents argue that this email is sufficient to endorse the "issue" for hearing. The ALJ finds Respondents' position without merit. Respondents admitted to TTD benefits from January 7, 2019 through October 9, 2019, did not endorse the issue of withdrawal of the FAL, and have not sought to reopen the issue. Claimant is not required to establish entitlement to TTD as a condition of seeking an increase in AWW.

Section 8-43-203(2)(b)(II) provides that a claim will be automatically closed "as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the admission in writing and request a hearing on any disputed issues that are ripe for hearing, including selection of an independent medical examiner pursuant to section 8-42-107.2." The statute further provides that in cases where a DIME is requested "pursuant to section 8-42-107.2, the claimant is not required to file a request for hearing on disputed issues that are ripe for hearing until after completion of the division's independent medical examination." Section 8-43-203(2)(d), C.R.S., provides that once a case is closed under subsection (2) "the issues closed may only be reopened pursuant to section 8-43-303." Thus, once a claim is closed by an FAL issues resolved by the FAL are not subject to further litigation unless reopened under § 8-43-303, C.R.S. *Leewaye v. Industrial Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007).

Respondents filed a Final Admission of Liability on November 10, 2019, admitting for TTD Benefits for the period of January 7, 2019 through October 9, 2019. Claimant then requested a DIME. After completion of the DIME process, Respondents filed an Application for Hearing endorsing PPD benefits and other issues, and Claimant filed her Response to Application for Hearing, endorsing multiple issues, including "average weekly wage" and "Temporary Total Disability benefits from 1/02/19 to statute." Notwithstanding, Claimant has not argued for or presented evidence to establish an entitlement to TTD benefits before January 7, 2019 or after October 9, 2019. Instead, Claimant seeks a determination that Respondents' calculation of AWW was incorrect.

If Claimant sought to expand the admitted time frame for TTD benefits, Respondents' position would be correct. But Claimant has not done so. Because the issue of entitlement from January 7, 2019 through October 9, 2019 has been admitted, Respondents may not relitigate that specific issue unless the issue is reopened under §8-43-303, C.R.S. Section 8-43-303 provides for reopening on the grounds of fraud, overpayment, an error, a mistake, or a change in condition. Respondents, as the proponent of reopening the issue, would bear the burden of proof to establish grounds for reopening. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO, Mar. 7, 2012). However, Respondents Application for Hearing does not endorse the issue of reopening or withdrawal of the FAL, and Counsel's email indicating that it would take the position that

Claimant was “never temporarily disabled” is not sufficient to constitute an endorsement of the issue for hearing.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish by clear and convincing evidence that Dr. Pham’s assignment of a 10% whole person impairment for emotional disturbance is incorrect. Claimant is entitled to a 10% whole person permanent impairment rating as assigned by Dr. Pham.
2. Respondents have established by clear and convincing evidence that Dr. Pham’s determination that Claimant’s cervical symptoms at the time of his examination were causally related to her January 2, 2019 work injury, and his opinion that Claimant was not at MMI for cervicalgia is incorrect. Claimant was at MMI for cervicalgia on October 10, 2019 without any permanent impairment for such injury.
3. Claimant’s Average Weekly Wage is \$931.36 per week.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: October 5, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Has the claimant demonstrated, by a preponderance of the evidence, that she is incapable of earning wages in the same or other employment as a result of the admitted January 4, 2017 injury and is therefore entitled to an award of permanent total disability (PTD) benefits?

Has the claimant sustained a serious permanent disfigurement to areas of her body normally exposed to public view, resulting in additional compensation?

At hearing, the parties agreed to reserve the endorsed issue of whether a recommended medical treatment (specifically a compound cream) was reasonable, necessary, and related to the admitted January 4, 2017 work injury.

FINDINGS OF FACT

1. The claimant worked for the employer as a dental biller. This job entailed reviewing billing, communicating with dentists about the billings, making corrections, preparing invoices, and providing customer service to patients. The claimant's office was in one building and the main clinic was in another building. As a result, she would walk between these buildings on a daily basis to obtain billing records.

2. On January 5, 2017, the claimant was walking between the two buildings. There had been a snowstorm, and the sidewalks had not yet been shoveled. As a result, the claimant did not recognize where the sidewalk ended, and unexpectedly stepped off the curb, twisting her right ankle.

3. On January 6, 2017, an x-ray of the claimant's right ankle showed moderate tibiotalar effusion, tibiotalar degenerative joint disease with a chronic appearing osteochondral lesion, demineralization, but no acute fracture.

4. The claimant's authorized treating physician (ATP) for this claim is Dr. James McLaughlin. The claimant was first seen by Dr. McLaughlin on January 6, 2017. At that time, the claimant reported continuing pain in her right ankle. The claimant was already using Tramadol related to a prior thoracic spine injury. As a result, Dr. McLaughlin recommended the use of ibuprofen. He also recommended the use of an ankle brace.

5. On January 25, 2017, a magnetic resonance image (MRI) of the claimant's right ankle showed a bone contusion at the lateral talar head neck junction, evidence of the dorsal breaking from the talus, and a mild midfoot sprain.

6. On February 14, 2017, the claimant returned to Dr. McLaughlin. On that date, Dr. McLaughlin referred the claimant to Dr. Christopher Copeland, a foot and ankle orthopedist.

7. On March 2, 2017, the claimant was seen by Dr. Copeland. At that time, the claimant reported right ankle pain, instability, weakness, and decreased range of motion. Dr. Copeland diagnosed a right ankle sprain, and opined the claimant might have impingement symptoms in the ankle. Dr. Copeland recommended the use of a CAM boot and consideration of a therapeutic injection.

8. On May 16, 2017, the claimant returned to Dr. Copeland. At that time, the claimant reported burning pain in her right ankle. Dr. Copeland noted that the claimant's pain was primarily on the anterior ankle and the presence of a palpable dorsal talar spur. On that date, Dr. Copeland administered a therapeutic injection to the claimant's right ankle.

9. On May 22, 2017, the claimant was seen by Dr. McLaughlin. At that time, the claimant reported that the injection administered by Dr. Copeland initially resulted in better function, particularly with walking. However, that relief wore off after an hour or two, and she had increased pain thereafter.

10. The claimant returned to Dr. Copeland on June 15, 2017, and reported "a couple of hours" of relief from the injection. On that date, Dr. Copeland recommended a right ankle arthroscopy with possible open excision of the bone talus and nerve decompression.

11. Dr. Copeland performed the recommended surgery on July 5, 2017. The procedure included right ankle arthroscopy with extensive debridement, excision of bone of the distal tibia, and excision of bone of the dorsal talus that involved an additional incision.

12. On August 17, 2017, the claimant was seen by Dr. McLaughlin and reported that she was feeling better and physical therapy was helpful. Dr. McLaughlin noted that the claimant would be returning to work the next day. He listed work restrictions of four hours of sit down duty, elevate the right leg, and park close to work.

13. On August 31, 2017, the claimant returned to Dr. McLaughlin and reported that working for four hours was painful. Dr. McLaughlin kept the claimant on a four hour work restriction, but added that every 15 minutes she should elevate the leg and alternate heat and cold.

14. On October 26, 2017, the claimant was seen by Dr. Copeland who noted that the claimant was experiencing nerve pain. Although Dr. Copeland noted that he did not believe that the claimant had complex regional pain syndrome (CRPS), he recommended the claimant undergo electromyography (EMG) testing.

15. On November 8, 2017, Dr. McLaughlin opined that the claimant had nerve entrapment, with ongoing adjustment disorder and depression. On that date, Dr. McLaughlin also noted that the claimant was scheduled to see Dr. Brittnay Matsumura.

16. The claimant was first seen by Dr. Matsumura on November 9, 2017. On that date, Dr. Matsumura recorded the claimant's reports of a fire-like sensation in her right foot and that the right foot gets cold. Dr. Matsumura listed the claimant's diagnoses as right ankle injury, chronic pain of the right ankle, neuropathic pain of the right ankle, and adjustment disorder with depressed mood. Following her examination of the claimant, Dr. Matsumura opined that the exam was not consistent with a diagnosis of CRPS and did not clearly indicate a specific peripheral nerve issue.

17. On November 30, 2019, Dr. Joel Dean administered EMG and nerve conduction studies (NCS). Following the testing, Dr. Dean noted evidence of a peroneal nerve injury. He further noted that it could be due to lumbosacral radiculopathy or cervical myelopathy.

18. On November 7, 2017, Dr. McLaughlin discussed with the claimant additional testing for CRPS. Such testing would include a bone scan, thermography, and quantitative sudomotor axon reflex test (QSART). Dr. McLaughlin also opined that the claimant's exam seemed to indicate focal nerve entrapment. On that same date, the claimant reported that her employment with the employer had ended as the employer was "going 'a different direction' ". Dr. McLaughlin noted his preference that the claimant get back to work and listed the claimant's work restrictions as two hours of "sit down duty", and a recommendation that the claimant "park close to work".

19. On January 12, 2018, a three phase bone scan showed "relative decreased uptake in the right ankle and foot when compared to the left". The radiologist, Dr. Roy Erb, noted that this could support a diagnosis of CRPS, but not "the classical pattern."

20. Based upon the results of the three phase bone scan, on January 15, 2018, Dr. McLaughlin requested authorization for a Functional Capacity Evaluation (FCE). He also recommended the claimant undergo QSART and thermography testing.

21. On January 29, 2018, the claimant attended an FCE with Marty Haraway, OTR. In the FCE report, Therapist Haraway found that the claimant met, and slightly exceeded, the demands of her current sedentary job. Therapist Haraway recommended that the claimant would be able to sit for at least two hours at a time, followed by standing for up to 30 minutes. It was also the opinion of Therapist Haraway that the claimant was able to walk up to 15 minutes at a time; and was able to occasionally bend, squat, crouch and kneel. Therapist Haraway also recommended occasional lifting and carrying up to 15 pounds and occasional pushing and pulling up to 10 pounds.

22. On February 26, 2018, the claimant returned to Dr. Matsumura. At that time, Dr. Matsumura reviewed the results of an Autonomic Testing Battery and thermography studies. Dr. Matsumura noted that both tests were positive and met the criteria of a CRPS diagnosis. Dr. Matsumura recommended that the claimant undergo a sympathetic blockade.

23. On March 29, 2018, Dr. Kenneth Lewis administered a right L3 lumbar sympathetic block.

24. On April 3, 2018, Dr. McLaughlin took the claimant off of all work, pending the completion of the sympathetic blocks.

25. On April 5, 2018, Dr. Lewis repeated the right L3 lumbar sympathetic block. A third right L3 lumbar sympathetic block was administered by Dr. Lewis on April 12, 2018.

26. On April 10, 2019, the Social Security Administration notified the claimant that pursuant to the Social Security Act, she was deemed disabled from the date of April 13, 2018.

27. On May 9, 2018, the claimant was seen by neurosurgeon, Dr. Giancarlo Barolat. At that time, the claimant reported her pain as a burning, lightning bolt sensation. She also reported hypersensitivity in her right foot. Dr. Barolat noted that Dr. Lewis had recommended a spinal cord stimulation procedure. After his examination of the claimant, Dr. Barolat opined that the claimant was an excellent candidate for a neurostimulation trial. He also opined that given the claimant's symptoms, it would be appropriate to place the stimulator on the claimant's sciatic nerve.

28. Prior to the authorization of the nerve stimulator the claimant attended a psychological independent medical examination (IME) with Dr. Stephen Moe. In addition, the claimant attended an IME Dr. Kathleen D'Angelo. Subsequently, the nerve stimulator was authorized by the respondent.

29. Following a one week trial, on July 16, 2019, Dr. Barolat implanted the recommended and authorized sciatic nerve stimulator. The medical records after that date indicate that the claimant did well with the nerve stimulator.

30. The claimant testified that the paddle for the nerve stimulator was implanted in the back of the claimant's right thigh at the sciatic nerve. The battery was implanted at the top of the claimant's right thigh.

31. The claimant also testified that following the implantation of the nerve stimulator, the claimant went from being bedridden to being able to be up a little at a time.

32. On November 12, 2019, Dr. McLaughlin placed the claimant at maximum medical improvement (MMI). In addition, Dr. McLaughlin assessed a permanent whole person impairment rating of 31 percent.¹ With regard to permanent work restrictions, Dr. McLaughlin recommended the claimant undergo an additional FCE.

33. On December 18, 2019, the respondent filed a Final Admission of Liability (FAL) admitting for the MMI date of November 21, 2019.

34. On February 17, 2020, the claimant was seen by Therapist Haraway for the second FCE. Therapist Haraway listed the claimant's physical tolerances to include: alternate between sitting and standing every 30 minutes; walk up to 15 minutes at a time;

¹ 20 percent whole person for the CRPS diagnosis; 13 percent whole person related to mental health; and the scheduled impairment of five percent for the claimant's right lower extremity (which converts to two percent whole person).

occasionally carry up to ten pounds; occasionally push and pull up to 12 pounds; and occasional crouching and squatting. Therapist Haraway opined that if the claimant is allowed to manage her symptoms she would be reliable in a sit down job. With regard to managing symptoms, Therapist Haraway listed “minimum elevating, laying down, taking off her shoe, alternating positions”. In addition, it was noted in the FCE report that the claimant might miss work days if her pain “exacerbated to the point of needing to lay down or [cannot] concentrate on anything but the pain.”

35. On February 24, 2020, the claimant returned to Dr. McLaughlin. Based upon the recommendations listed by Therapist Haraway in the FCE, Dr. McLaughlin assigned permanent work restrictions as follows:

max lifting 15 pounds, 5 pounds routinely, carrying 10 pounds max, walking 15 minutes at a time with smooth surfaces and less if not, max standing 30 minutes at a time, avoid crawling, kneeling, and squatting with no ladders. May miss days, probably about 4 to 8 per month, due to pain control and issues. May need to lie down throughout the day.

36. On March 2, 2020, the claimant attended a vocational assessment with Torrey Beil. In her March 31, 2020 report, Ms. Beil opined that the claimant had training and experience that was relevant in jobs with a consistent hiring need. In addition, Ms. Beil noted that the claimant’s prior training and work experience was “particularly valuable in the current job market.” She also opined that the claimant’s training and experience could be applicable in sedentary and part-time positions.

37. Ms. Beil issued a second report on June 2, 2020. In that report, Ms. Beil listed a number of skills the claimant possesses that could be applied to employment. In addition, Ms. Beil opined that because of the claimant’s skills and experience, the claimant would be qualified to apply for positions in medical offices and clerical positions and listed six such open positions. Ms. Beil also noted that the claimant had expressed a desire to work from home. Ms. Beil opined that this was a reasonable option for the claimant and would allow for more flexibility in her pain management.

38. Ms. Beil’s testimony was consistent with her written reports. Ms. Beil confirmed her opinion that the claimant is capable of obtaining employment and earning a wage. Ms. Beil reviewed positions in billing, medical reception, and medical clerk that did not exceed the claimant’s medical restrictions. Ms. Beil testified that the claimant could start with PRN or part-time employment. Ms. Beil testified that, in her opinion, the claimant is able to work from home, which would be an ideal situation for the claimant. Ms. Beil also testified that she finds no medical report that states that the claimant must miss four to eight days per month. Similarly, she finds no medical report that requires the claimant has to take naps.

39. On July 6, 2020, the claimant was seen by Bob Van Iderstine for a vocational evaluation. In a report dated July 9, 2020, Mr. Van Iderstine opined that due to her work restrictions, the claimant would not be able to sustain employment. He specifically referenced Dr. McLaughlin’s statements that the claimant may miss work four to eight days per month due to pain control issues, and she would need to lie down

throughout the day to manage her pain symptoms. Mr. Van Iderstine opined that employers would not allow for that number of missed days per month. Nor would employers accommodate the claimant's need to lie down during her work day.

40. Mr. Van Iderstine's testimony was consistent with his written report. Mr. Van Iderstine testified that it is his opinion that the claimant is not able to return to employment. This is due to her pain issues and the work restrictions outlined by Dr. McLaughlin. It is not reasonable for her to return to the workforce because of her injury and limitations due to her injury. He noted that the claimant uses the nerve stimulator; micro current; and medications, which, in his opinion are not compatible with working in a workplace. Mr. Van Iderstine reiterated Dr. McLaughlin's statement that the claimant could miss four to eight workdays a month because of her pain. Mr. Van Iderstine also pointed to the claimant's work restrictions as listed in the FCE.

41. Mr. Van Iderstine testified that the claimant would not be able to stay on a work schedule because she has to lie down throughout the day and has other pain modalities and medications to treat her pain. In addition, it is his belief that employers will not tolerate four to eight days off per month. Mr. Van Iderstine also noted that the claimant has a limited ability to focus. As a result, it is his opinion that the claimant would not be able to meet production demands or quotas.

42. Mr. Van Iderstine also testified that in his opinion, the claimant is not capable of working outside of her home. Similarly, the claimant is not capable of working from home because certain productivity is expected. Mr. Van Iderstine does not believe that the claimant could not work in a "gig economy" type job (such as Lyft or Uber) because of her issues with driving.

43. The claimant provided testimony regarding her prior work experience. The claimant held certification with the Internal Revenue Service from 1990-1993. The claimant was an accounts receivable manager for the Daily Sentinel for 11 years, starting in June 1998. In that position, she measured ads for the newspaper for billing verification, created reports, and helped customers with billing questions. At one time, she was sending out 1800 bills in a month for that employer. She also worked as a human resources administrator at Cabela's where her duties included maintaining employee files, processing payroll, doing all scheduling, and helping set up for functions. The claimant also worked as a billing administrator for General Surgeons of Western Colorado for one year. During that employment, she posted payments, resubmitted insurance claims, followed up with claims, and handled collections

44. The claimant testified that her current symptoms include feelings of buzzing and tingling. She still spends a lot of her time in bed and generally her pain dictates her activity level. She also testified that the "fiery poker feeling" has been better since she received the nerve stimulator. However, that feeling has not fully resolved. Since using the nerve stimulator, the claimant sometimes experiences extreme muscle spasms in her thigh, causing her to scream. Her calf is always in spasm, but it varies in intensity.

45. The claimant also utilizes a micro current machine. This device involves the use of pads on the claimant's foot and her back, with different programs to relieve her

pain. The claimant uses the micro current machine 4 to 5 times per week, and up to 2 to 3 times per day.

46. The claimant noted that when blood pools in her foot, she has increased pain. Standing with weight on her right foot is incredibly painful. It is a struggle for the claimant to wear shoes, but the claimant feels she has to in cold weather. In addition, the claimant has tenderness at her surgical scar on the top of her right foot and to the right side. The claimant is able to wear a Hoka running shoe, because the shoelaces are on the side, so there is no extra pressure on the top of her foot. She can wear the Hoka shoe for 15 to 20 minutes. She can also wear slides from Under Armour. With the slides, she moves the slide from her scar to avoid pressing on that area.

47. The claimant further testified that she has days when she stays in bed, and uses medication, micro current, pain meds, and sleep, to manage her pain. Some food and anxiety will increase her pain. Other times, the pain increases for no reason. The claimant testified that on a “bad day” her pain is so bad she is unable to put her shoe on, is taking narcotics, and would be unable to sit at a desk. She further testified that on those days she would not be able to go to a workplace. In addition, on such a day, the claimant would not be able to interact with customers or produce work product. The claimant does not believe that she could work from home, even if she had no set schedule and no production requirements.

48. The claimant testified that she has not sought employment because she has been spending her days maintaining her pain.

49. The claimant obtained a certificate for medical coding through self-paced and online classes at home. This was before the nerve stimulator was implanted. The employer paid for the coding certification. The claimant did not use the coding training in her job with the employer. The claimant does not believe that her coding certification will increase the likelihood that she will be able to work. That is because to do medical coding you need to be proficient and fast. With her pain, she cannot do that.

50. The claimant can drive, but only if she has to. This is because it is painful to push on the gas. Mostly the claimant’s roommate will drive her places. The claimant is waiting for authorization for adaptive driving, which would include hand controls. If she obtains these hand controls, she would not have to use her feet to drive. The claimant does not believe that getting hand controls for her car will increase the likelihood that she will be able to work. That is because of her pain. For example, the claimant cannot drive with the nerve stimulator on.

51. The claimant is the guardian of her 20-month-old granddaughter. The claimant’s roommate does all of the childcare and cooking in their home. The roommate also takes the granddaughter to daycare four days a week. The claimant is able to play with her granddaughter. She is only able to be her granddaughter’s guardian because of her roommate. She became a guardian so that her granddaughter did not go into foster care. This is a short-term arrangement, “hopefully just for a few more months.”

52. The ALJ credits the medical records, the claimant's testimony regarding her ongoing symptoms, and the opinions of Dr. McLaughlin and Mr. Van Iderstine over the conflicting opinions of Ms. Beil. The ALJ finds that the claimant has demonstrated that it is more likely than not that she is incapable of earning a wage as a result of her occupational injury. The ALJ recognizes that the claimant has prior experience and skills that would be useful in seeking employment. However, the claimant's myriad of injury related physical limitations and need for accommodations lead the ALJ to find that it is more likely than not that the claimant is not capable of earning a wage.

53. Disfigurement was appropriately endorsed for hearing. The ALJ left the evidence open so that the claimant could provide photographs of her alleged disfigurement. Based upon the photographs received (and entered into evidence as the claimant's exhibit 17), the ALJ finds and concludes that as a result of the January 5, 2017 work injury, the claimant has a visible disfigurement to the body consisting of scarring and skin discoloration. More specifically:

a) On the claimant's right foot there are areas of discoloration with a scar measuring approximately one and one-half inch in length.

b) On the back of the claimant's right thigh, at the site of the implanted paddle, there is a scar that is approximately three inches in length. In addition, the scar has a railroad pattern running the entire length of the scar.

c) At the site of the implanted battery pack, there is a scar that measures approximately three inches in length. This scar also has a railroad pattern running the entire length of the scar.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. In order to prove permanent total disability, claimant must show by a preponderance of the evidence that he is incapable of earning any wages in the same or other employment. Section 8-40-201(16.5)(a), C.R.S. (2012). A claimant therefore cannot receive PTD benefits if he is capable of earning wages in any amount. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. *Lobb v. ICAO*, 948 P.2d 115 (Colo. App. 1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). In weighing whether claimant is able to earn any wages, the ALJ may consider various human factors, including claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. R.E. 12 v. Bymer*, 955 P.2d at 550, 556, 557 (Colo. 1998). The critical test is whether employment exists that is reasonably available to claimant under his particular circumstances.

5. The claimant is not required to establish that an industrial injury is the sole cause of his inability to earn wages. Rather the claimant must demonstrate that the industrial injury is a "significant causative factor" in his permanent total disability. *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Under this standard, it is not sufficient that an industrial injury create some disability which ultimately contributes to permanent total disability. Rather, Seifried requires the claimant to prove a direct causal relationship between the precipitating event and the disability for which the claimant seeks benefits. *Lindner Chevrolet v. Industrial Claim Appeals Office*, 914 P.2d 496 (Colo. App. 1995), rev'd on other grounds, *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996).

6. The respondents are not required to prove the existence of a job offer to refute a claim for permanent total disability benefits. *Black v. City of La Junta Housing Authority*, W.C. No. 4-210-925 (ICAO, December 1998) (claimant is not permanently totally disabled even though respondents' vocational expert was unable to identify a single job opening available to claimant); *Beavers v. Liberty Mutual Fire Ins. Co.*, (Colo. App. No. 96 CA0275, September 5, 1996) (not selected for publication); *Gomez v. Mei Regis*, W.C. No. 4-199-007 (September 21, 1998). Rather, the claimant fails to prove permanent total disability if the evidence establishes that it is more probable than not that the claimant is capable of earning wages. *Duran v. MG Concrete Inc.*, W.C. No. 4-222-069 (September 17, 1998).

7. As found, the claimant has demonstrated, by a preponderance of the evidence, that she is incapable of earning wages in the same or other employment as a result of the January 4, 2017 injury. Therefore, the claimant has successfully demonstrated by a preponderance of the evidence that she is permanently and totally disabled and she is entitled to an award of permanent total disability (PTD) benefits. As

found, the medical records, the claimant's testimony regarding her ongoing symptoms, and the opinions of Dr. McLaughlin and Mr. Van Iderstine are credible and persuasive.

8. Section 8-42-108 (1), C.R.S. provides that a claimant may be entitled to additional compensation if, as a result of the work injury, she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

9. As found, the claimant has permanent impairment on her right foot and right thigh as described above. Therefore, the ALJ orders that the respondent shall pay the claimant \$1,500.00 for that disfigurement. The respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore ordered:

1. The respondents shall pay the claimant permanent total disability (PTD) benefits.
2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
3. The respondent shall pay the claimant \$1,500.00 for her permanent disfigurement.
4. All matters not determined here are reserved for future determination.

Dated this 29th day of December 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that the right ankle revision surgery as proposed by Dr. Shank, is reasonable, necessary, and related to Claimant's admitted work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Initial Work Injury

1. Claimant suffered an admitted injury on January 22, 2019 when she slipped and fell on ice in the Employer parking lot. According to the Employer's First Report of Injury WC1, the initial complaint was to her right ankle only. The WC1, while lacking in detail, indicates that Employer was informed of the incident the same day. (Ex. M, p. 221).

2. However, instead of pursuing Workers Compensation, Claimant initially reported to Champions Family Medical on January 28, 2019, complaining of persistent swelling and stabbing pain in her right ankle. (Ex. B, p. 28). X-rays were essentially normal (Ex. K, p. 201). On January 30, 2019, Claimant was referred to podiatry, still reporting pain. Ex. B, p. 30).

3. A MRI of Claimant's right ankle was taken on March 27, 2019. Under IMPRESSION, several things were noted:

1. Torn anterior talofibular ligament
2. Torn anterior band of the tibiofibular ligament suggesting an ankle sprain.
3. High-grade partial longitudinal tear of the peroneus brevis tendon
4. High-grade partial tear of the posterior tibialis tendon, appears chronic. No retraction.
5. No acute osseous abnormalities.
6. Tendonopathy in the peroneus longus tendon without complete tear. (Ex. L, p. 209).

4. Claimant was then referred to the Hansen Clinic. By this time, the MRI had revealed "a few things", and her right ankle pain persisted. (Ex. C, p. 37). Podiatrist

Mark Mauer noted that Claimant had “Mild calvaneal varus while standing which is partially correctable with a block test.” *Id* at 38.

5. After the MRI was reviewed, Dr. Mauer suggested several conservative therapy options, including an ankle brace, but also noted:

I had a long discussion with the patient regarding *surgical options* which would include peroneus brevis to longus tendon transfer lateral ankle stabilization with or without first metatarsal dorsiflexion osteotomy and to likely include ankle arthroscopy with synovectomy. *Id* at 39. (emphasis added).

6. Claimant returned to Dr. Mauer on April 15, 2019. Claimant had followed the recommended conservative treatment regimen, but continued to report the same symptoms, now to include a burning sensation while driving. (Ex. C, p. 41). It was agreed to continue conservative treatment, with the addition of a Medrol dosepak. *Id*.

7. Claimant returned on May 20, 2019, reporting “a lot worse” pain over the posterior and lateral aspects of her right ankle. She was also placed into a cam boot at this appointment. (Ex. C, p. 46).

Workers Compensation Treatment

8. On July 11, 2019, Claimant then presented to Dr. John R. Shank, MD with the Colorado Center for Orthopedic Excellence. Focus at this appointment was on the right ankle, although she reported symptoms to her left ankle as well, albeit less severe. Conservative measures had not provided relief. At this time, Dr. Shank indicated to Claimant that her peroneal tendon pathology would not likely heal with conservative treatment. Risks were assessed and discussed, and Claimant indicated that she would like to proceed with surgery. (Ex. D, pp. 49-50).

9. On August 12, 2019, Dr. Shank performed surgery on Claimant’s right-ankle described as: right-ankle modified Brostrom-Gould with repair of both the anterior talofibular ligament and calcaneofibular ligaments; right-ankle arthroscopic debridement extensive of tibia and talus; right peroneal debridement with repair; right peroneal tendon sheath tenosynovectomy; and right-ankle arthroscopic synovectomy. (Ex. E, p. 98).

10. Dr. Shank then performed surgery on Claimant’s left ankle on February 12, 2020. (Ex. E, pp. 103-105).

11. On April 15, 2020, Wallace Larson, MD, performed an IME for Respondents. At the examination, Claimant advised Dr. Larson that she continued to have right-ankle pain. Dr. Larson opined that Claimant had reached MMI with respect to her right ankle injury. (Ex. I. p. 173).

Claimant's Reported Right Ankle Symptoms Persist

12. Claimant was seen by Dr. Shank on May 21, 2020. Claimant reported pain in her right foot and right ankle in the peroneal tendon sheath and musculature. Dr. Shank ordered a repeat right-ankle MRI. (Ex. D p. 83).

13. Dr. Shank again evaluated Claimant on June 9, 2020. He reviewed diagnostic studies of the right ankle, noting that the right-ankle MRI revealed degenerative changes of the peroneal tendon, intact Bostrom repair, medial talar dome osteochondral defect, and normal peroneal longus tendon. (Ex. D, p.85).

14. In his report for this June 9, 2020 visit, Dr. Shank discussed the possibility of additional right-ankle surgery Dr. Shank stated:

At this point, we discussed with Konnie peroneal tendon surgeries *can be* very difficult to recover from. There is *not* a surgical treatment that will give her a *normal* tendon. If she feels as if she has had no improvement from the surgery, we discussed a right peroneal tendon transfer with debridement and repair versus an allograft reconstruction. She is going to think about her options. If she would like to proceed with surgical treatment, she will contact me. I discussed with the patient the goal of *any* surgical treatment is to *improve her symptoms* and *may not* give her a normal ankle. She is going to think about her options and contact us. *Id* at 85-86. (emphasis added).

15. Claimant contacted Dr. Shank by telephone on June 30, 2020, and advised Dr. Shank of her decision:

Konnie contacted our office, stating she would like to proceed with revision peroneal tendon surgery. I have discussed with her in the past peroneal tendon debridement and repair, tenosynovectomy with either transfer or allograft reconstruction with semitendinosus allograft. The patient is going to think about which options she would prefer if she has a major tear or near rupture of her peroneal tendons. She will likely be nonweightbearing for two to four weeks depending on the extent of the surgery. Risks and benefits of the surgery were discussed including risks of infection, bleeding, damage to tendons, nerves, vessels, ligaments, risk of ongoing pain, neurovascular injury, DVT, wound complications, chronic pain, chronic stiffness, need for additional surgery in the future, risks of sural neurapraxia, ongoing peroneal tendon pain, and ongoing symptoms. The patient will be limited weightbearing for two to four weeks. We will proceed with surgical treatment at the patient's convenience. (Ex. D, p. 93).

Right Ankle Revision Surgery Not Authorized

16. On July 2, 2020, Dr. Shank's office requested right-ankle surgical authorization *Id* at 96. Respondents initially denied authorization for the right-ankle surgery proposed by Dr. Shank on July 13, 2020. (Ex. F, p. 107). A final denial was issued on September 11, 2020. *Id* at 113.

17. After yet another visit on September 10, 2020, Dr. Shank noted:

...The patient states that *she is doing well with her left side*. Her right side has continued to struggle. She notes ongoing pain about the lateral aspect of her ankle, both adjacent to the Brostrom repair site and peroneal tendon sheath. The patient states that prior to her work related injury on 1/22/2019, where she slipped on the ice at Elements Massage, she had no significant bilateral symptoms. Again, her left side is doing well. She continues to have right-sided pain. We have discussed a possible revision surgery on the right side in the past. *She has had extensive therapy and other treatments postoperatively and continues to have pain*. (Ex. 1, p. 1)(emphasis added).

18. Under PLAN, Dr. Shank noted:

At this point I discussed with Konnie, I don't know if a revision surgery will help her pain, it is *certainly an option* for her. We discussed today a revision right ankle arthroscopy with peroneal tendon debridement/repair, possible transfer, possible allograft reconstruction. However, I discussed with Konnie there is a *chance* that revision surgery will not help her. It is *very difficult* to recreate a normal peroneal tendon sheath. *The patient certainly has no hindfoot varus to realign on exam*. I am not quite sure why the outside medical records suggest an osteotomy as she has no varus. I have encouraged her to perform additional physical therapy, revision is certainly a treatment option for her if she elects to proceed with this, however she *may* wind up with the same amount of pain as she does now. There is *certainly a chance* that surgical treatment could worsen her symptoms as well. She is going to think about her options. I am happy to see her back at any point in the future to further discuss. I think *both her ankle injuries were directly related to her work-related injury* at Elements Massage. *Id* at 2. (emphasis added).

Dr. O'Brien's IME and Hearing Testimony

19. Respondents commissioned an IME with Timothy O'Brien, MD on August 17, 2020. (Ex. J).

20. In his IME report dated August 31, 2020, Dr. O'Brien opined that right-ankle surgery proposed by Dr. Shank was neither reasonable, necessary, nor related to the admitted work injury.

21. Dr. O'Brien also testified at hearing. He is a board-certified orthopedic surgeon whose surgical subspecialties included ankle and foot surgery.

22. Dr. O'Brien testified that Claimant has a varus/equinovarus deformity in her right foot, a relatively rare genetic condition. This condition is unrelated to any injury, and causes a person's foot to turn inward. As a result, the arch actually increases as the person ages, in contrast to the typical person, whose feet tend to flatten with time. Dr. O'Brien's opinion that Claimant has varus deformity in right-heel and forefoot was based on his examination of Claimant at the IME appointment and his review of podiatrist records.

23. A report from Claimant's personal care physician dated April 25, 2018 documented swelling in Claimant's lower extremities. (Ex. A, pp. 2-4). Dr. O'Brien testified that these findings were "very consistent with this equinovarus deformity. "

24. Dr. O'Brien testified that the surgery proposed by Dr. Shank would likely fail in its aim to decrease symptoms because the proposed surgery does not address the pre-existing varus/equinovarus deformity. Unless this condition is corrected, he opined, "*peroneal tendons cannot be rescued.*" Dr. O'Brien testified that Claimant's, genetic equinovarus deformity has likely been the cause of Claimant's right-foot and ankle symptoms, since before the work injury and thereafter. Accordingly, the right ankle/foot surgeries performed and recommended are "*doomed to fail because the equinovarus has to be corrected.*"

25. Dr. O'Brien testified that varus/equinovarus deformities result in "attrition" of ankle tendons, which often manifest as tendon inflammation on MRI.

26. Dr. O'Brien further opined that, "*The amount of peroneal deterioration that has existed for many years in Ms. Benson's foot was demonstrated in that first MRI scan...the vast majority of it was preexisting, a personal health issue.*" However, he further noted: "*..I'm not denying the fact that there was an injury and it did produce the need for [the initial right ankle] surgery.*"

27. Dr. O'Brien testified that the surgery proposed by Dr. Shank would not, likely, reduce Claimant's symptoms and could increase symptoms because the surgery is not designed to address the underlying source of symptoms which is the unrelated varus/equinovarus deformity in Claimant's right ankle/foot. "*[I]f you don't address the hindfoot and forefoot boney deformities, there is no way you can get the peroneal tendon healthy enough to stop generating pain.*" Dr. O'Brien opined that Dr. Shank "really may not have fully appreciated the amount of varus that exists."

28. Dr. O'Brien testified that that Claimant's symptoms will likely worsen with the surgery proposed by Dr. Shank, because the situs of surgery does not have much subcutaneous fat. A second, revision surgery will de-vascularize the foot/ankle, traumatize nerves, and "*create more pain generation than relieve pain.*"

29. When defining the "necessary" component of the proposed surgery, Dr. O'Brien opined:

Well, it's not necessary from the standpoint that orthopedic surgeons typically when we use that nomenclature *necessary* we mean that *life or limb is at risk*. So, *necessary* surgery literally means you're trying to preserve the body or part of the body. (Transcript, p. 38)(emphasis added).

30. Dr. O'Brien characterized a number of Claimant's reported symptoms as "nonorganic", despite the failure of her numerous providers declining to so designate in their reports. He alluded to demographically controlled studies tending (in the tens of thousands) to show that persons being treated under Workers Compensation fare less well than those receiving similar treatments in a non-comp setting. He stated that inherent in the Workers Comp system is the potential for secondary gain, since "If they get well, then they get zero dollars at the time of their settlement. We only give people money if the[y] do less well. So, what...the comp system does is actually pay for ill health, not good health." (Transcript, p. 70).

31. Dr. O'Brien did not review the actual MRI images (reading the summaries instead), since he was not a treating physician. For that same reason, he did not offer specific alternatives for treatment, other than certain conservative modalities. However, he eventually conceded:

Well, obviously *surgical options shouldn't be ignored*, but I would tell her *because she has an open claim* that that open claim can create—until that is closed, it can create a framework wherein *none* of the things that we traditionally use are going to be very beneficial, which is why I always try to help people who have an open claim understand that their—probably their—their biggest beneficiary as far as enhancing health is that they control their own destiny a lot more than a physician. But as long as the claim is open, I will tell people that the statics [sic. statistics] show they're not going to respond as favorably to therapy, to an injection, to surgery, whatever it is. *People with an open claim don't do as well.* (Transcript, p. 79)(emphasis added).

Claimant Testifies at Hearing

32. Claimant testified that she slipped on ice coming into work upon leaving her car. She did not fall, grabbing her car instead, but noticed pain in her ankles after slipping. She thought it was just an ankle sprain, so did not intend to file a Workers

Compensation claim initially; instead she sought treatment with her personal physician. Only when she realized the situation was more serious at the Hanson Clinic did she seek treatment through Workers Comp. She eventually wound up with Dr. Shank.

33. The initial surgery he performed on her right ankle seemed to help. However, once she became more active again, she developed more pain. There was more swelling and discoloration. This issue still persists, to the point of having to remove her shoe, due to swelling, on a daily basis. Her job as a massage therapist involves a lot a standing, which she cannot tolerate due to the pain. She described her frustration at not being able to work, and is now concerned she might not be able to return to her job as a massage therapist due to the ongoing pain. Ice therapy provides some, but limited relief. She also is awakened by the pain at night regularly.

34. Claimant discussed the pros and cons of the revision surgery with Dr. Shank. At this point, she wants to proceed with it. She has complete faith in Dr. Shank, and feels the pain will not go away without surgery. She is willing to take the chance on it, since there has not been a viable alternative suggested, because "I'm willing to try anything." Claimant acknowledged that the surgery will not give her a "normal ankle"; rather, it is hoped it might alleviate her symptoms, primarily pain. However, she understands that it might not even reduce her pain; it theoretically could even make it worse.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1)*. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201, C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182,

1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); see also *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, the ALJ finds Claimant to be credible in recounting the work incident, and in describing her ongoing symptoms to her medical providers and IMEs to the best of her abilities. As ascribed by Dr. O'Brien, *any* injured worker who enters the Workers Comp system can be tainted by the possibility, however remote, of seeking some sort of secondary gain. While that is no doubt correct on occasion, there is certainly no reason in this case to pigeonhole Claimant in such fashion. The pain Claimant is describing is very real, and the ALJ does not attribute it to nonorganic factors. Claimant is not satisfied with collecting TTD payments; instead, she is willing to undergo the additional pain and rehab from a revision surgery, even with uncertain result, in an effort to gain greater long term function and return to work. That is the antithesis of seeking a secondary gain. Similarly, were Claimant driven by such ulterior motives (subconsciously or otherwise), she would not have deferred putting in a comp claim the same day she fell. She actually tried to "shake it off," until it became clear there was damage that had to be addressed. Likewise, while Claimant also had a *left* ankle surgery, she reported good results from that – once again, not a sign of seeking secondary gain.

D. Dr. O'Brien, while highly credentialed, and no doubt sincere in his beliefs, has placed undue emphasis on secondary gain issues. As such, his overall *persuasiveness* has been diminished; such is the price of being unyielding on issues that one might more credibly equivocate.

E. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits, Generally

F. Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment,

or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the Claimant's physical needs. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995); *Karim al Subhi v. King Soopers, Inc.*, W.C. No. 4-597-590, (ICAO, July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006).

Medically Necessary

G. Suffice it to say, the ALJ does not share Dr. O'Brien's definition of medically necessary, as outlined in his deposition. Were this the case, few orthopedic surgeries that are performed on a daily basis- comp or not-would meet his definition of *necessary*. This revision surgery is not being proposed to save Claimant's life, nor to save her limb. It is, however, intended to cure or relieve the effects of her work injury, and it is certainly associated with Claimant's current physical needs – needs which were wrought by her work injury. At this point, no viable alternative exists to relieve Claimant of her condition, other than a second crack at a surgery. Unless that occurs, Claimant could be permanently unable to perform any job requiring her to be on her feet.

Related to Work Injury

H. At one point, Dr. O'Brien intimated, without overtly expressing, that Claimant's condition could be attributed to her congenital equinovarus condition- which Dr. O'Brien opined was more severe than noted by Dr. Shank. Suffice it to say, even if one accepted his opinion on the degree of severity of Claimant's underlying condition, that is the underlying condition that Claimant brought to work with her on January 22, 2019. Prior to this work injury, Claimant had no ankle problems in her life, and now she does. Even Dr. O'Brien later conceded that the original right ankle surgery by Dr. Shank was reasonable, necessary, and related to her work injury, and the ALJ concurs. The records also indicate Claimant was compliant with conservative measures leading up to this point. The ALJ also finds that Claimant's current condition is related to her original work injury, and not due to some intervening cause.

Is the Revision Surgery Reasonable?

I. Time will tell, but Claimant has earned the right to find out. She understands the difficulties in recovering from ankle surgery, having now done so once already on each ankle. She understands that the results are uncertain, having experienced a partial failure once already on the right side. She understands that the goal of this revision procedure is to alleviate some of the pain, and not to provide her

with a 'normal' ankle – those days are gone for good. The ALJ cannot accept at face value Dr. O'Brien's proposition that revision surgeries are always doomed to fail, just because the first attempt provides the best chance of success. Were this correct, no one would ever perform a revision. Instead, it would always be "Game over, and accept your fate." The other problematic proposition put forth by Respondents is that someone in Claimant's shoes cannot get on the true path to recovery *unless and until* they accept that their Workers Comp claim has now been *closed* – thus foreclosing surgical alternatives. This circular reasoning is simply not persuasive.

J. Lastly, Dr. O'Brien has opined that the revision surgery as being proposed by Dr. Shank is doomed to fail, due to Dr. Shank's failure to first address Claimant's underlying equinovarus condition. Dr. Shank - and Dr. Mauer, for that matter – took note of what they perceived as mild equinovarus in Claimant. In each instance, they saw the MRI images, which Dr. O'Brien did not. The ALJ finds and concludes that Claimant's treating physician is in the best position to decide if this underlying condition must be addressed as a condition precedent to the revision surgery. The treating physician would then decide if and how this might be accomplished. *If in the opinion of Dr. Shank*, after re-reviewing Claimant's *current condition* (after being denied the procedure last summer) this equinovarus condition should be addressed first (or concurrently), then the ALJ finds that to be a reasonable adjunct to the revision surgery.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for right ankle revision surgery being proposed by Dr. Shank.
2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

Colorado Springs, Colorado 80906

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-140-431-001**

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on April 14, 2020 he suffered an injury arising out of and in the course and scope of his employment with the employer.
2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to reasonable and necessary medical treatment related to the work injury.
3. If the claim is found compensable, what is the claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. The claimant has worked for the employer for approximately 13 years. In 2020, the claimant was paid \$26.00 per hour and he worked 40 hours per week. The claimant's job duties include setting concrete forms, laying the forms out, and packing out the forms. The position involves a great deal of climbing and heavy lifting. The claimant testified that prior to April 12, 2020, he was able to perform all of his normal job duties.
2. The claimant testified that on April 12, 2020, he was working for the employer setting forms. Specifically, he was placing a brick ledge. The claimant testified that the brick ledge was made of lumber and plywood and measured three feet tall and 14 feet long. He estimates that it weighed between 100 and 110 pounds. The act of placing the brick ledge involved setting it down and into place.
3. The claimant also testified that while he was placing the brick ledge, he felt a strain in his right arm and instant pain. This pain was located in the claimant's right bicep. The claimant assumed that the pain would lessen and he went about his normal day. However, the pain continued and on April 14, 2020 the claimant reported the incident to the employer on that date¹.
4. The claimant's authorized treating provider (ATP) for this claim is Dr. Craig Stagg. The claimant was first seen by Dr. Stagg on April 16, 2020. On that date the claimant reported pain and grinding in his right shoulder that began while the claimant was doing heavy lifting. Dr. Stagg diagnosed an acute shoulder strain and ordered an x-ray to rule out a rotator cuff injury. In addition, Dr. Stagg recommended the use of a sling and over-the-counter pain medication.

¹ The records of the Division of Workers' Compensation list April 14, 2020 as the claimant's date of injury. Therefore, the ALJ does not correct the date to April 12, 2020 when restating the findings and opinions of medical providers.

5. An x-ray of the claimant's right shoulder was taken on April 16, 2020. The x-ray showed severe glenohumeral degenerative joint disease.

6. On April 23, 2020, Dr. Stagg recommended magnetic resonance imaging (MRI) of the claimant's right shoulder. In addition, Dr. Stagg referred the claimant for an orthopedic consultation with Dr. Mitch Copeland.

7. On April 27, 2020, an MRI of the claimant's right shoulder showed severe glenohumeral degenerative joint disease with moderately severe glenoid version with extensive grade 4 chondromalacia and subchondral cystic changes and synovitis. In addition, the MRI showed chronic tearing of the posterior, superior, and anterior labrum with tendinopathy and partial thickness tearing of the biceps tendon, and the articular surface of the distal supraspinatus and infraspinatus tendons were without full thickness tear or retraction.

8. On April 29, 2020, the claimant was seen by Dr. Copeland. At that time, the claimant reported that he started having right shoulder symptoms after heavy lifting on April 14, 2020. The claimant listed his symptoms as pain, popping, grinding, locking, and decreased range of motion. The claimant described his pain as aching, stabbing, and throbbing. Dr. Copeland reviewed the results of the MRI and listed the claimant's diagnoses as: a tear of right glenoid labrum, right rotator cuff tendinopathy, and osteoarthritis of the right glenohumeral joint. Dr. Copeland noted that the claimant would eventually need a shoulder replacement, but given the claimant's age, that was not a current recommendation. Dr. Copeland recommended and administered a steroid injection on that same date.

9. On May 1, 2020, the claimant returned to Dr. Stagg who noted the MRI results and that Dr. Copeland had administered an injection. Dr. Stagg also noted the claimant had a degenerative labral tear. At that time, Dr. Stagg referred the claimant to physical therapy.

10. On May 27, 2020, the claimant returned to Dr. Copeland. At that time, Dr. Copeland recommended that the claimant stop working in manual labor. In addition, he recommended the claimant undergo a platelet rich plasma (PRP) injection.

11. On June 2, 2020, Dr. Jon Erickson reviewed the request for a PRP injection to the claimant's right shoulder. In his report, Dr. Erickson noted that the claimant had advanced glenohumeral osteoarthritis, as evidenced by the "complete loss of articular cartilage on the medial humeral head". Dr. Erickson did not find evidence of acute trauma to the claimant's right shoulder. In addition, he did not find evidence on the MRI of any aggravation or worsening of the condition of the claimant's right shoulder. Dr. Erickson recommended denial of the requested PRP injection. Based upon Dr. Erickson's report, the respondents denied authorization for the PRP injection.

12. On June 10, 2020, the claimant was seen by Dr. Stagg. In the medical record of that date, Dr. Stagg noted that although the claimant was asymptomatic prior to the injury at work, "the x-ray and MRI findings predate the injury" of April 14, 2020. On that date, Dr. Stagg referred the claimant to Dr. Ellen Price for pain management.

13. The claimant testified that he was seen by Dr. Price and she administered acupuncture. In addition, Dr. Price recommended the use of a TENS unit.

14. On June 30, 2020, Dr. Erickson was asked to reconsider his opinion regarding the PRP injection. In his report of that date, Dr. Erickson noted Dr. Copeland's opinion that a PRP injection would be "the most appropriate treatment" of the claimant's right shoulder condition. Dr. Erickson disagreed with this statement and noted that it could be reasonable to consider an intra articular steroid injection to treat the claimant's symptoms. Dr. Erickson reiterated his opinion that the degenerative arthritis in the claimant's right shoulder was not caused by the claimant's work activities.

15. In a July 15, 2020 medical record, Dr. Stagg agreed with Dr. Copeland's recommendation of a PRP injection.

16. Subsequently, Dr. Copeland referred the claimant to Dr. Sean Grey in Fort Collins, Colorado. On October 15, 2020, the claimant was seen by Dr. Grey. On that date, the claimant reported experiencing right shoulder pain since April 2020. The claimant also reported that for approximately a year he had experienced reduction in his shoulder range of motion and some stiffness. Dr. Grey listed the claimant's diagnoses as osteoarthritis of the right glenohumeral joint, abrupt increase in right shoulder pain with underlying arthrosis, and potential biceps tendon tear. Dr. Grey recommended the claimant undergo right shoulder surgery. That surgery would include arthroscopy and debridement with CAM procedure.

17. At the request of the respondents, Dr. Mark Failing conducted a review of the claimant's medical records. In his October 15, 2020 report, Dr. Failing identified the claimant's diagnoses as: severe degenerative joint disease of the right shoulder with degenerative labrum, rotator cuff tendinosis, and biceps tendinosis. Dr. Failing opined that these diagnoses were not related to the claimant's April 2020 incident at work. Dr. Failing also opined that the claimant did not sustain a new injury on April 14, 2020. Dr. Failing described the condition of the claimant's right shoulder as "significant severe preexisting degenerative joint disease". Dr. Failing noted that for a shoulder in this condition, symptoms "can occur at any time with or without use of the shoulder."

18. Dr. Failing noted that there was no indication that on April 14, 2020, the brick ledge fell or that there was "other impact or sheer force applied to the shoulder." It is Dr. Failing's opinion that the findings on imaging are all preexisting and were not worsened by the claimant's work activities on April 14, 2020. Dr. Failing also noted that a total shoulder arthroplasty may be the only reasonable option for the claimant's right shoulder symptoms. He further noted that a total shoulder arthroplasty would treat the claimant's preexisting severe degenerative joint disease and not any pathology created on April 14, 2020.

19. The claimant continued working for the employer from April 14, 2020 through November 17, 2020. During that time, the claimant worked as a foreman. The claimant testified that this was less physically demanding than his regular position.

20. The claimant testified that on November 18, 2020, Dr. Gray performed surgery to his right shoulder.

21. The ALJ credits the medical records and the opinions of Drs. Erickson and Failing. The ALJ is not persuaded by the claimant's testimony regarding the nature and onset of his right shoulder symptoms. The ALJ places specific weight on the opinion of Dr. Failing that symptoms "can occur at any time with or without use of the shoulder" when there is "significant severe preexisting degenerative joint disease" in that shoulder. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that in April 2020, he suffered an injury to his right shoulder at work. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that his working conditions aggravated, accelerated, or combined with the preexisting arthritis to necessitate medical treatment of his right shoulder.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it

“aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that his work activities aggravated, accelerated, or combined with a preexisting condition to necessitate medical treatment. As found, the medical records and the opinions of Drs. Erickson and Failing are credible and persuasive.

ORDER

It is therefore ordered the claimant’s claim for workers’ compensation benefits is denied and dismissed.

Dated this 30th day of December 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: <https://oac.colorado.gov/resources/oac-forms>.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. 5-024-075-002 and 5-075-911-002**

ISSUES

The hearing addressed two separate workers' compensation claims.¹ Those claim numbers are WC 5-024-075, with a date of injury of August 7, 2016; and WC 5-075-911, with a date of injury of April 29, 2018.

WC 5-024-075

Whether the claimant has demonstrated, by a preponderance of the evidence, that she suffered a change in condition to warrant the reopening of a workers' compensation claim related to an admitted injury that occurred on August 7, 2016.

WC 5-075-911

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on April 29, 2018, she suffered an injury arising out of and in the course and scope of her employment with the employer.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she has received to her back and/or bilateral knees is reasonable, necessary, and related to her work injury.

3. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she has received to her back and/or bilateral knees is authorized.

4. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits and/or temporary partial disability (TPD) benefits.²

5. If the claimant proves a compensable injury, what is the claimant's average weekly wage?

¹ The claimant has a third workers' compensation claim (WC 5-072-588) regarding an incident in March 2018 involving her right small toe. That incident is not at issue in this order.

² At hearing, the claimant did not designate specific dates for which she believes she would be entitled to TTD or TPD benefits. The ALJ notes that in the Application for Hearing (AFH) for both WC 5-024-075-002 and WC 5-075-911-002, the endorsed dates listed for both TTD and TPD benefits are "4/30/18 to TBD".

FINDINGS OF FACT

1. The claimant was employed with the employer as a wildfire firefighter. In this position, the claimant regularly took part in training exercises. On August 7, 2016, the claimant was engaged in such training. The claimant testified that while she was rolling a 200 pound tractor tire in training, she felt a pinch in her back. The claimant also testified that she also injured her knees on that date.

2. The claimant received medical treatment for her low back related to the August 7, 2016 incident. The claimant's diagnoses were consistently listed as lumbar strain with L5-S1 radiculopathy.

3. On September 12, 2016, the respondents filed a General Admission of Liability (GAL). Subsequent GALs were filed on October 25, 2016, and November 8, 2016, respectively. It was during this time that the claimant was released to full duty with no work restrictions.

4. On November 15, 2016, the claimant's authorized treating provider (ATP) James Pitts, PA-C with Animas Surgical Hospital, placed the claimant at maximum medical improvement (MMI). PA Pitts also noted that the claimant was released to full duty with no work restrictions. In addition, PA Pitts determined the claimant had no permanent impairment.

5. Based upon PA Pitts's November 15, 2016 report, on November 16, 2016, the respondents filed a Final Admission of Liability (FAL). In the FAL, the respondents admitted for the MMI date of November 15, 2016 and no permanent impairment.

6. The claimant did not object to the November 16, 2016 FAL.

7. On April 29, 2018, the claimant was engaged in training that was similar to the training she performed on August 7, 2016. The claimant testified that she was instructed to flip a 200 pound tractor tire seven to eight times. Then she was instructed to carry a roll of 100 feet of five inch fire hose.

8. The claimant testified that immediately following that training, she felt sore. However, during the night she awoke with pain.

9. On April 30, 2018, the claimant sent a text message to her coworker, Timothy H[Redacted] that stated:

Wow. Looks great. Another hard day and hard workout. Carried 25 ft of 5 inch two times across Bay outside and rolled big as (*sic*) tire about 10 times. Seth said since I have a full release there is no reason why I can't do it. So I did. Let's see how I feel tomorrow..*(sic)* I love and miss you all. See you tomorrow hopefully.garden (*sic*) looks great. Tell them all I am proud of them and you also. I love you Tim. Thanks for all your hard work.

10. Mr. H[Redacted] responded via text message as follows:

Your text was a little confusing about the tire. If I remember right, Captain R[Redacted] made it crystal clear no one was to flip the tire and if someone got hurt doing it there would be disciplinary action. Don't screw yourself. Love you.

11. On April 30, 2018, the claimant sent a text message to Chief R[Redacted]. Specifically, the text message stated:

Chief, this is Rachael. Hey I am at work. I don't want to cause anymore (*sic*) strife, but today for PT Seth had us flip the tire outside from North to South bays and carry a 50 foot 5 inch hose from North to South Bay. I tried telling him that you said no tire, but he was [adamant] on my full release and I need to participate. I did flip that tire around 8 times and carry that 150 pound 5 inch and I am lying in bed with a back ache and my knees are sore. Sir, I have been on antibiotics this shift for a respiratory infection, didn't want to say anything due to trying to go to daughters (*sic*) graduation. I don't want this to go anywhere. I did what asked because I want my [crew] to know I can do my job when the time comes, but training like this is going to lead me [to] being out of work. All I ask is you talk to him on my days off. My days off should be sufficient to heal from my soreness to attend my next shift. I don't want to be off of work for this. Please.

12. Captain Seth S[Redacted] was the claimant's direct supervisor in April 2018. At the time of his testimony, Captain S[Redacted] was no longer employed by the employer. Captain S[Redacted] specifically testified that he worked as the employer's training officer at the time of the alleged April 29, 2018 injury. He also testified that the claimant did not communicate to him that she had worsening symptoms related to the August 2016 lumbar strain.

13. Captain S[Redacted] testified that on April 29, 2018, the claimant did not go on any calls or participate in any fire-related activities. Captain S[Redacted] oversaw the training exercises conducted on April 29, 2018. He further testified that the claimant may have flipped the tire a maximum four times. He explained that this was a relay drill, with each team member taking a turn to flip the tire until it reached the necessary distance. No team member flipped the tire the entire distance. Captain S[Redacted] testified that he did not require the claimant to engage in this specific drill. Captain S[Redacted] personally observed the claimant engage in these training exercises. During that time, Captain S[Redacted] did not observe the claimant engaging in pain behaviors, and the claimant did not report any pain during the training. In addition, although they worked together over the next 24 hours, the claimant did not report any pain or injury to Captain S[Redacted].

14. Deputy Chief Kevin R[Redacted], was the employer's Deputy Chief of Operations and EMS at the time of the alleged April 29, 2018 incident. At the time of his testimony, Chief R[Redacted] was no longer employed with the employer. Chief R[Redacted] testified that on April 29, 2018 there were no fire calls prior to the physical training exercises. With regard to the claimant's August 2016 injury, Chief R[Redacted]

testified that after returning to full duty, the claimant did not report any worsening problems.

15. The April 29, 2018 shift log was entered into evidence and is consistent with the testimony of Captain S[Redacted] and Chief R[Redacted].

16. On April 30, 2018, the claimant sought treatment with her chiropractor, Dr. Jeremy Rowse at La Mesa Chiropractic Center. At that time, the claimant reported worsening right upper back pain and left and right neck pain due to training at work. In addition, the claimant reported a decrease in her SI joint pain. There is no report of low back or knee issues having occurred on April 29, 2018.

17. On May 1, 2018, the claimant was seen by Wendy Stevens, NP with Animas Surgical Hospital Urgent Care. At that time, the claimant reported back pain. The medical record of that date also lists a report of “chronic knee pain” that was “aggravated”. Specifically, the claimant’s “knees give her pain off and on in general.” In addition, the claimant reported that her “back hurts more than normal but she does take Ultram 2x/ day for chronic low back pain”.

18. On May 10, 2018, the claimant sought treatment with her primary care provider (PCP), Dr. Daniel Sabol. At that time, the claimant reported flipping a tire “8 times” and having to lift 150-pound weights and while doing so, she experienced severe pain in her low back. The claimant also reported a “hostile work environment and unnecessary overworking”.

19. On May 14, 2018, the claimant returned to Dr. Sabol, and reported knee pain. However, the claimant did not relate her knee symptoms to a specific incident or injury.

20. On May 16, 2018, x-rays of the claimant’s bilateral knees showed degenerative changes in both knees that included mild to moderate narrowing of the patellofemoral joint space and the medial and lateral knee joint compartments. The x-rays also showed “tiny” patellar and osteoarthritic spurs.

21. Also on May 16, 2018, the claimant was seen at Animas Surgical Hospital by Robert Hill, PA. Mr. Hill diagnosed a lumbar strain and bilateral knee pain. Mr. Hill noted that the knee x-rays showed arthritis. Mr. Hill opined that the claimant’s knee pain was “ultimately [a] secondary effect of osteoarthritis”. He also noted that although it could have been exacerbated by the claimant’s “recent injury”, the “osteoarthritis cannot be really considered caused by work itself”.

22. Mr. Hill and Dr. Alexander Shermer with Animas Occupational Medicine³ are the claimant’s authorized treating providers (ATPs) for the April 29, 2018 incident.

23. On July 19, 2018, Dr. Patrick McLaughlin administered a sacroiliac (SI) joint injection. However, the claimant later reported that the injection did not provide any relief.

³ It appears that Animas Occupational Medicine is part of Animas Surgical Hospital.

24. On June 25, 2018, magnetic resonance imaging (MRI) scans were performed on both of the claimant's knees. The results of both of the MRIs showed no acute injury.

25. On August 21, 2018, Dr. McLaughlin administered a lumbar transforaminal epidural steroid injection (TFESI) at the L4-L5 and L5-S1 levels. This injection did not provide the claimant with any relief.

26. On September 5, 2018, the claimant was seen by Dr. Garreth Hammond, an orthopedic surgeon, who reviewed the MRI scans and noted that the meniscal tears were not large enough to warrant surgery. At that time, Dr. Hammond recommended a formal rheumatology consultation.

27. On November 15, 2018, the claimant underwent surgery to her left knee with Dr. Jay Lucas.

28. Throughout 2018 and 2019, the claimant continued to seek treatment with her PCP, Dr. Sabol. During this time, the claimant reported a variety of issues that included knee, hand, shoulder, back and hip pain; pain and swelling of the left knee; depression; "on and off lower back pain"; runny nose, sneezing, and cough; SI joint pain. During this period, Dr. Sabol diagnosed knee pain, lumbar degenerative disc disease, right sided sciatica, and chronic pain.

29. In a medical record dated November 13, 2019, Dr. Sabol noted that the claimant "had an ablation on October 31 at the L3-4 and L5 areas. She has not necessarily felt a difference yet."

30. On September 24, 2018, the claimant attended an independent medical examination (IME) with Dr. Elizabeth Bisgard. In connection with the IME, Dr. Bisgard reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In her September 30, 2018 report, Dr. Bisgard listed the claimant's diagnoses as: L4-5 minor degenerative disc disease at the L3-4 through L5-S1 with low grade posterior disc protrusions at each level; chondromalacia, bilateral knees with evidence of bilateral meniscus tears; stress, anxiety, and depression.

31. Dr. Bisgard opined that the onset of bilateral knee symptoms was not due to an occupational injury. In support of this opinion, Dr. Bisgard noted that the claimant did not experience knee issues until the middle of the night. Dr. Bisgard noted that the timing of the onset of symptoms is not consistent with a work related injury. In addition, Dr. Bisgard opined that the claimant did not sustain a work injury on April 29, 2018. Dr. Bisgard further opined that this is "an issue of fitness for duty rather than a work injury."

32. In her report, Dr. Bisgard also noted that the claimant shows a pattern of psychological driven pain. This would account for the failure of injections in providing the claimant with pain relief. Dr. Bisgard further explained that with psychologically driven pain the underlying issue is not addressed by injections and medications. Dr. Bisgard recommended the claimant seek counseling outside of the workers' compensation system.

33. Based upon the opinions of Dr. Bisgard, the respondents denied liability for the alleged April 29, 2018 injury.

34. On October 12, 2018, Dr. McLaughlin authored a letter following his review of Dr. Bisgard's IME report. Dr. McLaughlin noted that the claimant's injection treatment had ruled out sacroiliac (SI) joint strain, lumbar radiculitis, and lumbar disc pain. However, the claimant's pain generator has not been determined. Dr. McLaughlin also noted that it does not appear that the claimant was injured at work on April 29, 2018. In support of that statement, Dr. McLaughlin noted the lack of MRI findings and the lack of response to treatment for lumbosacral and bilateral knee etiologies. Dr. McLaughlin recommended that the claimant undergo formal psychological and psychiatric evaluation. In addition, he recommended rheumatologic testing.

35. On February 23, 2019, Dr. Bisgard authored a letter after she was asked to review additional medical records. Dr. Bisgard stated that these additional documents did not change the opinions expressed in her September 30, 2018 report.

36. On March 2, 2020, the claimant filed an Opposed Petition to Reopen the August 7, 2016 claim. In that Petition, the claimant marked that the reason she was requesting that her claim be reopened was due to a change in medical condition.

37. The claimant argues that because the respondents admitted liability for the August 7, 2016 training/lifting incident, then they should also be liable for the alleged April 29, 2018 incident.

38. Dr. Bisgard's testimony was consistent with her written reports. Dr. Bisgard testified that the claimant was appropriately placed at MMI on November 15, 2016 for the August 7, 2016 injury. Dr. Bisgard further testified that the claimant's 2016 condition was completely resolved. In support of this statement, Dr. Bisgard noted that the claimant had returned to full duty with no maintenance medical treatment and no permanent impairment rating.

39. Dr. Bisgard testified that based upon her review of the claimant's medical records, there has been no worsening of the claimant's condition related to that 2016 injury. In fact, in comparing the August 25, 2016 and May 10, 2018 MRIs, imaging shows the claimant's condition has actually improved. Dr. Bisgard explained that the claimant does not have disc herniations. Rather, the claimant has disc protrusions, which are anatomically different.

40. Dr. Bisgard also testified that the condition of the claimant's knees is not related to her work activities on April 29, 2018. In addition, that work training did not aggravate the preexisting condition of the claimant's knees. The claimant has discoid meniscus in both knees. This is an anatomical anomaly that is prone to meniscus tears. Dr. Bisgard testified that she agreed with Dr. Hammond's statement that the condition of the claimant's knees is age appropriate, and not work related.

41. The claimant's employment with the employer was terminated on May 13, 2019. The claimant testified that she did not work between April 29, 2018 through May 13, 2019.

42. Laura X[Redacted], Administrative Manager for the employer testified that the employer did not provide the claimant with health insurance.

43. During her testimony, the claimant alleged that some medical records are missing or have been omitted. However, she was unable to communicate what specific documents she believes are missing. She also alleged that her medical providers have falsified records.

44. With regard to the development and timing of her symptoms, the ALJ does not find the claimant to be credible or persuasive.

45. The ALJ specifically credits the opinion of Dr. Bisgard that the condition of the claimant's knees was not caused by her working conditions. The ALJ finds no persuasive evidence on the record that the claimant's current knee conditions are in any way related to her August 7, 2016 injury. Additionally, the ALJ is not persuaded that the claimant's knees were injured on April 29, 2018.

46. With regard to the August 7, 2016 injury, the ALJ credits the medical records and the opinions of Dr. Bisgard. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she has experienced a worsening of her condition to warrant the reopening of the 2016 workers' compensation claim.

47. With regard to the alleged April 29, 2018 incident, the ALJ credits the medical records and the opinions of Drs. Bisgard and McLaughlin. The ALJ also credits the testimony of Captain S[Redacted] and Deputy Chief R[Redacted] over the contrary testimony of the claimant. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that on April 29, 2018, she suffered an injury arising out of and in the course and scope of her employment with the employer. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that her work activities on April 29, 2018 aggravated, accelerated, or combined with any preexisting condition to produce a disability requiring medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

WC 5-024-075

4. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g., Standard Metals Corporation v. Gallegos*, 781 P.2d 142 (Colo. App. 1989); see also *Amin v. Schneider National Carriers*, W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission*, 646 P.2d 399 (Colo. 1981).

5. A change in condition refers to "a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

6. As found, the claimant has failed to demonstrate by a preponderance of the evidence that her condition, as related to the admitted August 7, 2016 injury, has changed and/or worsened. Therefore, that claim shall not be reopened. As found, the medical records and the opinions of Dr. Bisgard are credible and persuasive.

WC 5-075-911

7. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it

“aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory, supra*.

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she suffered an injury arising out of and in the course and scope of her employment with the employer on April 29, 2018. As found, the claimant has failed to demonstrate by a preponderance of the evidence, that her work activities on April 29, 2018 aggravated, accelerated, or combined with any preexisting condition to produce a disability requiring medical treatment. As found, the medical records, the opinions of Drs. Bisgard and McLaughlin, and the testimony of Captain S[Redacted] and Deputy Chief R[Redacted] are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant’s request to reopen the August 7, 2016 claim is denied and dismissed.
2. The claimant’s claim related to an alleged date of injury of April 29, 2018 is denied and dismissed.

Dated this 31st day of December 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts** 1525 Sherman St., 4th Floor, Denver, CO 80203, or via email at oac-ptr@state.co.us. Use of this email address constitutes filing with the Denver Office of Administrative Courts and therefore complies with Section 8-43-301(2), C.R.S. and OACRP 26. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S.

ISSUES

- Did Claimant prove by a preponderance of the evidence his claim should be reopened based on fraud or mutual mistake of material fact?

FINDINGS OF FACT

1. Claimant worked for Employer as a Special Finance Manager. He suffered admitted injuries on March 31, 2009 when he was hit in the head with a garage door. Claimant had gone to Auto Trim Specialists to obtain a repair estimate. The entrance to the shop was a garage door that opened manually. When Claimant opened the garage door and stepped into the shop, the door came back down and hit him on the head. Claimant did not fall or lose consciousness, although he claimed to be “dazed” momentarily. Claimant suffered no lacerations, bruises, or other visible trauma from the accident.

2. Claimant reported the injury to his manager but did not seek medical attention for three days.

3. Claimant was evaluated by Lisa Keller, PA-C on April 3, 2009. He reported a dull headache and neck soreness. Ms. Keller observed no lacerations, contusions, or swelling to Claimant’s skull. Ms. Keller ordered imaging studies, which showed degenerative changes in Claimant’s neck but no fractures or other acute injuries. A head CT showed a small old infarct but no acute findings. Ms. Keller referred Claimant to Dr. Van Sickle, a neurosurgeon.

4. Dr. Van Sickle ordered another cervical MRI, which showed multilevel degenerative changes, primarily at C4-5 and C5-6. Dr. Van Sickle saw no evidence of trauma to the cervical spine. He thought Claimant was suffering from very mild post-concussive syndrome. He diagnosed degenerative disc disease without myelopathy and opined Claimant was not a surgical candidate.

5. Claimant was referred to Dr. McNutt for evaluation of headaches. The headaches were described as bioccipital, temporal, and frontal region “squeezing” cephalgia. Claimant also reported about six episodes of paroxysmal dizziness with or without activity but more often with movement, more “orthostatic” in nature. Dr. McNutt diagnosed a concussion with very mild post-concussive syndrome. Dr. McNutt concurred with Dr. Van Sickle’s opinion Claimant was not a surgical candidate for his neck. He referred Claimant to physical therapy to work on cervicogenic issues with some vestibular rehab work.

6. Claimant saw Dr. Jason Peragrine on June 30, 2009. Dr. Peragrine diagnosed cervical facet and degenerative disk disease and cervical spondylosis. He

treated Claimant with a series of injections. Claimant reported limited benefit from the injections.

7. Claimant participated in physical, therapy, occupational therapy, and speech therapy with some benefit. Claimant attended cognitive therapy from June 19, 2009 to August 6, 2009. The records indicate he made no improvement and was noncompliant with his homework.

8. Claimant had an IME with Dr. Victor Chang, a physiatrist on September 8, 2009. Dr. Chang opined Claimant suffered a concussion and met the criteria for post-concussive syndrome. He opined Claimant's ongoing cognitive symptoms were more likely related to factors other than the concussion. He noted mild left cerebellar deficits that were unrelated to the work injury but might contribute to Claimant's balance problems. He "suspected" vestibular involvement from the injury.

9. Claimant underwent neuropsychological testing with Dr. Michael Greher on September 17, 2009. Claimant's performance suggested a possible mild decline from his presumed premorbid levels. His primary deficit was with processing speed. Claimant was also experiencing significant depression and anxiety, emotional lability, and a tendency to dwell on physical complaints and health concerns. Dr. Greher opined Claimant had a "handful" of frank cognitive deficits. This was characterized as a possible mild traumatic brain injury, a.k.a. concussion. Dr. Greher recommended psychotherapy and referral to a psychiatrist for psychotropic medications. He recommended continuing speech/cognitive rehabilitation therapy, if it was helpful, but with the caveat that cognitive symptoms were more likely a function of factors such as depression rather than the possible concussion. He doubted Claimant would have permanent cognitive or emotional deficits, or permanent vestibular impairment.

10. On October 23, 2009, Claimant saw Dr. Janice Birney for evaluation of bilateral hearing loss and tinnitus, as well as in balance problems. Dr. Birney indicated audiometric testing performed on September 28, 2009 showed evidence of hearing loss at the bottom end of the normal range, but no significant asymmetry.

11. Dr. Jill Castro took over as Claimant's primary ATP in November 2009. She made several referrals including: to physical therapy to work on balance, coordination, and myofascial pain in the neck; to Dr. Kenneally for cognitive training; to Dr. Politzer for evaluation of vision treatment; massage therapy; follow up with Dr. Peragrine; and referral to Dr. Howard Entin, a psychiatrist.

12. Claimant started treating with Dr. Entin in December 2009. Claimant denied mood swings despite having been treated for depression and bipolar disorder for nearly 10 years. Dr. Entin diagnosed cognitive disorders, pre-existing insomnia, depressive disorder, and post-concussive syndrome.

13. Claimant had continued working after the injury but left his job in a fall of 2009. He was offered COBRA. Insurer initially admitted for TPD. Dr. Castro took Claimant

off work on January 4, 2010 and Insurer admitted for TTD. Based on Claimant's average weekly wage, Insurer paid TTD at the maximum rate based on Claimant's date of injury.

14. In January 2010, Dr. Castro referred Claimant to Dr. William Choi for a surgical consultation regarding his neck. Dr. Choi initially saw Claimant in January 2010. Dr. Choi did not recommend surgery at that time.

15. Claimant had a follow-up IME with Dr. Chang on April 15, 2010. Dr. Chang noted overall improvement since the last IME. He noted Claimant's head cognitive, emotional, and physical symptoms, all of which were intertwined. Neuropsychological testing had shown deficits consistent with a concussion, although emotional and characterological factors were contributory. Dr. Chang thought Claimant's depression and anxiety issues were more consistent with an adjustment disorder as opposed to being related to the concussion. The headaches were consistent with tension-type and cervicogenic headaches which probably contributed to, and were worsened by, Claimant's emotional state. He recommended repeat neuropsychological evaluation with an expanded evaluation of Claimant's emotional state, because he suspected much of Claimant's remaining cognitive and physical symptoms were secondary to his ongoing emotional issues. Dr. Chang noted a prior left cerebellar infarct with examination findings consistent with residual deficits. Claimant also had obstructive sleep apnea. Dr. Chang opined these conditions are unrelated to the work injury but may be contributing to Claimant's dizziness and imbalance, daytime fatigue, and concentration difficulties. He expected Claimant would reach MMI within the next 3-4 months, but would likely require maintenance treatments afterwards, particular for his emotional issues.

16. Dr. Douglas Scott performed a record review for Respondents on April 22, 2010. He noted many inconsistencies in the records regarding Claimant's history. Dr. Scott saw no indication of any acute injury to either Claimant's head or neck. He opined Claimant's neck condition was chronic and pre-existing. He was skeptical about the plausibility of the described mechanism of injury because there was no sign of external injury to Claimant's scalp. He noted Claimant was not knocked unconscious, not knocked to the ground, and did not need emergency care. Dr. Scott opined the described biomechanical force did not correlate with the multiple symptoms reported by Claimant.

17. Claimant returned to Dr. Entin on June 14, 2020. Dr. Entin and noted improvement in Claimant's headaches since a recent rhizotomy. Claimant reported some decreased balance but "minimal" vertigo. Claimant's moods were improved, and his anxiety was manageable. Under "Goals/Plan," Dr. Entin wrote "maintenance care," terminology commonly used by providers to identify treatment after MMI.

18. Claimant mentioned to his PCP he had been experiencing erectile dysfunction (ED) since the injury. Claimant was referred to a urologist on September 13, 2010. The urologist concluded the ED issues were caused by blood flow, and not related to the industrial injury. At some point, Dr. Entin advised Claimant to seek treatment for this condition under his private health insurance because it was not injury-related. Claimant strongly disagreed with Dr. Entin, based on a Google search.

19. Claimant returned to Dr. Choi in late 2010. Dr. Choi ordered a cervical MRI, which showed only degenerative changes, unchanged from the previous MRIs. Dr. Choi recommended a C5-7 fusion to treat pain related to Claimant's DDD. Dr. Choi's office requested authorization for surgery on November 3, 2010. Respondents timely denied the request and applied for a hearing. On November 9, 2010, Dr. Choi's then obtained authorization for surgery from Claimant's private health carrier, Blue Cross/Blue Shield.

20. Dr. Choi performed the surgery on November 16, 2010. He removed osteophytes and addressed other degenerative changes. No acute or traumatic abnormalities were found. In his deposition, Dr. Choi confirmed the surgery showed only degenerative changes.

21. Claimant saw Dr. Douthit for an IME at Respondents' request on December 13, 2010. Dr. Douthit opined the indications for surgery had been "marginal." He opined Claimant's cognitive issues were a sign of symptom magnification. He opined the DDD and foraminal stenosis was consistent with Claimant's age and preexisted the March 31, 2009 work accident. Dr. Douthit concluded the surgery was not related to the industrial accident.

22. ALJ Bruce Friend presided over a hearing regarding the neck surgery on April 12, 2011. Judge Friend issued Findings of Fact, Conclusions of law, and Order dated May 25, 2011 finding the surgery was not reasonably necessary or related to the industrial injury. Judge Friend found the opinions of Dr. Scott and Douthit credible and persuasive. Judge Friend found there was no sign of any acute injury to Claimant's neck from the work accident.

23. Claimant followed up with Dr. Castro on April 18, 2011. Dr. Castro noted Claimant was 85% improved and recommended he wean from his medications. She indicated she would see Claimant back in the clinic "as needed."

24. On September 23, 2011, Dr. Castro completed a WC164 form and listed Claimant's only treatment as "maintenance meds for pain/HA/sleep [illegible]."

25. Claimant filed a *pro se* Petition to Review Judge Friend's Order. The ICAO affirmed the Order on November 7, 2011. The ICAO found no error in Judge Friend's credibility determination and held his findings and conclusions were supported by substantial evidence. Claimant did not appeal to the Court of Appeals, and ALJ Friend's Order became final.

26. Daniel Galloway, Esq. entered his appearance on behalf of Claimant. In late 2011. Mr. Galloway also represented Claimant in a third-party personal injury suit against the property owner of Auto Trim Specialists. Respondents intervened in the third-party litigation to advance and protect its subrogation interest. Tom Condas, Esq. represented Respondents in the third-party case.

27. The third-party case went to mediation before Judge Sandy Brooke on January 28, 2012. Mr. Galloway represented Claimant. The suit settled for \$110,000.

Insurer's lien at that time was \$200,000, but it agreed to compromise its subrogation claim for \$20,000.

28. Mr. Galloway referred Claimant to Dr. David Zierk for an integrated psychological and vocational evaluation. Dr. Zierk evaluated Claimant on December 7, 2011 and January 4, 2012. Dr. Zierk noted an extensive list of conditions Claimant attributed to the work accident including "dizziness, headaches, diminished mental functioning, and neck pain." Claimant also reported "fatigue, vestibular-related nausea, lightheadedness, and dizziness, tinnitus, visual problems, depression, anxiety, irritability, and difficulties performing complex cognitive tasks and mental functioning." Dr. Zierk opined Claimant was "struggling with anxious depression with an underlying stress-related condition, confounded by labyrinthine concussion with peripheral vestibulopathy and somatic preoccupations." He opined these conditions were related to the work accident. He opined Claimant displayed "persistent problems with perceptual processing, memory, information processing abilities, concentration, and executive functioning and sustained mental energy that undermine his ability for adaptive functioning in vocational and avocational settings." He opined these limitations were related to the work accident. Zierk concluded, "when the perplexing and multidimensional nature of [Claimant's] medical condition is carefully evaluated, it becomes clear that he can no longer effectively and dependably sustain work performance in any capacity."

29. On December 11, 2011, Respondents' counsel wrote to Dr. Castro to ask about her current treatment recommendations and whether Claimant was at MMI. The letter also enclosed copies of primarily pre-injury medical records and a copy of Judge Friend's final Order.

30. Dr. Castro responded on January 10, 2012. She stated, "he is at MMI and has been followed in our clinic for medical maintenance. As of our clinic visit of April 18, 2011, he was 85% improved overall. He still required medications to maintain that, but was able to reduce the use of those. He has completed his cognitive therapy and biofeedback therapy. He still reports headaches on a daily basis, and occasional word finding or memory problems." Dr. Castro noted Claimant's diagnosis was "closed head injury and associated headaches." She assessed a 10% whole person rating under the "Episodic Neurological Disorders" section of Table 1 on page 106 of the *AMA Guides*. She recommended 2-4 office visits per year "for medical maintenance of medications of allowed him to maintain improved function." She opined Claimant had no permanent work restrictions and could work "as tolerated." She concluded, "as [Claimant] has completed the recommended medical treatment for his work-related injury, no further medical interventions are recommended." Dr. Castro completed a WC164 form stating Claimant had reached MMI on "4/18/01." Dr. Castro did not complete any rating worksheets.

31. After receiving Dr. Castro's response, Respondent's counsel wrote to Dr. Entin to inquire about psychiatric MMI. Dr. Entin provided a lengthy narrative report dated April 2, 2012. He opined Claimant sustained a mild traumatic brain injury with post-concussive syndrome. He felt Claimant was consistent in his reporting of post-injury headaches, visual problems, vertigo, neck pain, and cognitive difficulties. Dr. Entin opined "I originally placed him at MMI on June 14, 2010. I believe this is a reasonable date to

have placed him at psychiatric MMI and note that all treatment since then has been part of Maintenance Care.” Dr. Entin completed a Mental Impairment Worksheet and explained his rationale for the various components in the narrative report. Dr. Entin assessed a 5% whole person psychiatric impairment. He did not believe there was sufficient evidence to support apportionment.

32. Claimant’s counsel was copied on the letters to Dr. Castro and Dr. Entin regarding MMI.

33. Respondents filed a Final Admission of Liability (FAL) on April 11, 2012 based on Dr. Castro and Dr. Entin’s reports. The FAL adopted Dr. Castro’s April 18, 2011 MMI date. The FAL computed the value of the impairment ratings as \$35,849.35 (10% physical) and \$17,924.68 (5% psychiatric). However, the FAL also noted benefits were capped at \$75,000 pursuant to § 8-42-107.5, and Claimant had already been paid \$107,139.96 in TTD and TPD. The FAL claimed an overpayment of \$38,775.87 which “will be applied towards any future benefits.” The complete reports of Dr. Castro and Dr. Entin were attached, including Dr. Entin’s mental impairment worksheets.

34. Respondents’ Exhibit S is an indemnity payment log regarding Claimant’s claim. Eli Jackson, Insurer’s claim representative, credibly testified the ledger shows all indemnity payments made to or on Claimant’s behalf, including the final settlement. No indemnity checks are outstanding. Mr. Jackson explained two payments for Respondents’ vocational evaluator were inadvertently coded as indemnity payments and captured on the payment report. Excluding the two erroneous entries and the final settlement payment, the indemnity payments shown on the log total \$107,139.96, which exactly matches the amount of TTD and TPD shown on the FAL.

35. Claimant testified he could not accurately recall all payments he received during his claim. Claimant presented no persuasive evidence to dispute the indemnity log.

36. Claimant timely objected to the April 11, 2012 FAL and initiated the DIME process. The DIME Application listed the body parts to be evaluated as “Neck, Back, Shoulders, Brain, Psychiatric and all conditions related to brain/psychiatric injuries. Neurological disorders.” The Application also listed other issues for the DIME to address as: “Permanent impairment for neck condition. Neck related to initial accident, but ALJ determined neck surgery not reasonable and necessary. Impairment for brain injury. Ongoing care for psychiatric and physical conditions. Restrictions from psychiatric and physical perspective.” Claimant’s filings in response to the FAL reflect his disagreement with the FAL and the ratings from Dr. Castro and Dr. Entin.

37. Claimant applied for a hearing simultaneously with his DIME Application. The parties subsequently agreed to hold all issues in abeyance pending completion of the DIME process.

38. The Division issued a DIME Panel composed of Dr. Jade Dillon, Dr. Jeffrey Raschbacher, and Dr. Marc Steinmetz. Dr. Steinmetz was selected as the DIME

physician. Claimant did not schedule the DIME. Instead, Claimant abandoned the DIME and applied for a hearing on permanent total disability (PTD) benefits.

39. On June 18, 2012, Claimant counsel wrote to Respondents' counsel to note Claimant's disagreement with April 18, 2011 MMI date and request an amended FAL. Mr. Galloway stated, "Dr. Castro makes it clear [Claimant] was not at MMI in April 2011."

40. Claimant was awarded Social Security disability benefits in June 2012.

41. Claimant saw Dr. Lynn Parry for an IME on July 4, 2012. Dr. Parry documented a lengthy history of Claimant's treatment and cataloged numerous ongoing problems he believed were related to the accident. Dr. Parry noted "two major residual problems secondary to his industrial accident that have not been adequately addressed. Primarily his nausea and vestibular dysfunction." Dr. Parry opined Claimant was not at MMI and recommended he return to vestibular therapy.

42. Dr. Henry Roth performed an IME for Respondents on March 4, 2013. Dr. Roth had previously issued several Rule 16 reports on the claim. Claimant completed a lengthy questionnaire before the evaluation. Dr. Roth spent one hour and 43 minutes with Claimant conducting the interview and examination. Dr. Roth also reviewed hundreds of pages of medical records and ultimately issued a 94-page report. Claimant's chief complaints were headaches, facial pain, neck pain, problems thinking, changed behavior, depression, sleep disturbance, nausea, and vision problems. Claimant complained "bitterly" about headaches and his vision. Dr. Roth opined none of Claimant's ongoing complaints were related to the accident. He opined the injury mechanism was minor and insufficient to injure Claimant's visual system, auditory system, vestibular system, or cause cognitive impairment.

43. Dr. Chang issued a supplemental IME report on March 18, 2013. He opined Claimant suffered a concussion and the accident, "but his ongoing symptoms should not be considered as a manifestation of the concussion itself." He noted Claimant's presentation was "atypical for MTBI," and concluded, "[Claimant's] symptoms are not related to the concussion. It is more probable than not that his ongoing symptoms are related to mental/behavioral and/or motivational factors." He also opined Administrative issues commonly seen in litigation" were also likely contributing to Claimant's presentation. He did not think Claimant had any permanent impairment related to a concussion but agreed with Dr. Entin's decision to provide a 5% rating for "a mental/behavioral condition related to the work injury." He opined any residual symptoms of the MTBI had resolved and no further treatment was expected to improve Claimant's condition. Dr. Chang disagreed with Dr. Zierk's conclusion Claimant could not work in any capacity. He also commented,

[Claimant] has previously submitted 2 large binders that detailed his treatment since his injury. At first, I thought these binders were prepared by an attorney's office, as the contents were very organized and had numerous cross-references. I later discovered that these binders had been prepared by [Claimant] himself, which I found to be quite impressive for any person.

The ability for a layperson to obtain, organize, cross-reference, draw conclusions, and rebut opinions made by medical providers and legal experts was, in my professional opinion, something that would be difficult for any non-legal professional to complete. This compilation of work submitted by [Claimant] demonstrated a high degree of cognitive functioning, including attention to detail, organizational skills, and complex deductive reasoning. These abilities would indicate readiness to perform in a competitive workplace.

44. The parties attended a settlement conference with PALJ Sue Purdie on March 26, 2013. Both parties were represented by counsel at the settlement conference. A hearing was pending on the issues of PTD, medical benefits after MMI, waiver, overpayment, and offsets. The parties agreed to settle the claim for a lump sum of \$182,500 plus a contingent Medicare Set-Aside (MSA). The parties agreed to leave the medical portion of the claim open pending a response from the Centers for Medicare and Medicaid Services (CMS) regarding the proposed MSA. Respondents retained the right to fund an MSA per CMS requirements or leave Claimant's medical benefits open indefinitely.

45. The settlement documents stated

Claimant sustained or alleges injuries or occupational disease as arising out of and in the course of employment with the employer on or about March 31, 2009 including, but not limited to, head, neck, shoulder, back, knee, psychological, cognitive, and G.I. System. Other disabilities, impairments and conditions that may be the result of these injuries or diseases but that are not listed here are, nevertheless, intended by all parties to be included in and resolved FOREVER by this settlement.

Respondents waived any overpayments and agreed to pay \$182,500 "in addition to all benefits that have been previously paid to or on behalf of the Claimant." Consistent with requirements of the Act, the settlement agreement provided it could only be reopened on the grounds of "fraud or mutual mistake of material fact." The agreement also stated, "Claimant has reviewed and discussed the terms of the settlement with claimant's attorney, has been fully advised, and understands the rights that are being given up in this settlement."

46. Claimant executed the agreement on April 26, 2013, and it was approved by the Division on May 9, 2013. Respondents paid a lump sum of \$182,500.

47. Guy Easton prepared a MSA proposal for submission to CMS. The total proposed MSA was \$32,178. Claimant had the opportunity to review the MSA before submission to CMS and raised no objections. CMS issued an approval letter on June 27, 2013. CMS determined the proposed MSA was insufficient and required a total of \$102,126 to protect Medicare's interests. Insurer exercised its rights under the settlement to not fund the MSA at that time.

48. Insurer continued covering medical care rendered by ATPs. Ultimately, Respondents agreed to fund a self-administered structured MSA under the terms required by CMS. The MSA was funded with a lump sum payment \$8,881 for “seed money,” plus \$4,238 per year for 22 years, if Claimant is living. The parties’ filed a Joint Motion to Amend the Settlement Documents on April 29, 2015, which was approved by the Division on May 21, 2015.

49. If the settlement is reopened, Claimant will owe Respondents at least \$214,639.96 (\$107,139.96 TTD/TPD paid – \$75,000 “cap” = \$32,139.96 overpayment + \$182,500 lump sum = \$214,639.96), plus the cost of the MSA. Respondents can also pursue an additional overpayment based on Claimant’s receipt of SSDI benefits.

50. Claimant treated with Dr. Entin over the next several years after settlement. In January 2020, Claimant contacted Dr. Entin and demanded he change the rating. Dr. Entin noted Claimant “seems manic and paranoid.” Claimant believed Dr. Entin was “the cause of his current suffering because I did not rate his sexual dysfunction, and that would have given him \$100K more.”

51. On February 4, 2020, Dr. Entin documented Claimant “continues to harass [my] office – accusing me of ‘lying.’” Dr. Entin called Claimant and asked him to refrain from further contact. Dr. Entin noted Claimant “has grandiose notions that he can get \$100K more if I fill out forms ‘correctly’ from 10 years ago.” Dr. Entin told Claimant he was willing to speak to an attorney about Claimant’s work-related injuries but would no longer speak with Claimant directly. Claimant continued to make threats and Dr. Entin hung up.

52. On February 10, 2020, Dr. Entin spoke with Mr. Galloway regarding Claimant’s behavior. Mr. Galloway indicated Claimant had been harassing and threatening him too. Dr. Entin suggested Mr. Galloway speak with Claimant and provide “a reality check that an increased impairment rating would not have changed his settlement and therefore we have nothing further to offer him.” Dr. Entin and Mr. Galloway agreed they would notify the police if Claimant continued his harassing and threatening behavior.

53. On February 24, 2020, Dr. Entin received a copy of a letter Claimant had sent to Mr. Galloway. Dr. Entin described the letter as “abusive, threatening, full of lies and misconceptions, paranoid, rambling.” He and Mr. Galloway filed police reports.

54. Dr. Roth persuasively testified that, even though he thinks Claimant should have received no rating, Dr. Castro appropriately applied the *AMA Guides*, Level II training, and Division guidance to rate the impairment *she* believed Claimant had. Dr. Roth offered similarly persuasive opinions regarding Dr. Entin’s rating. Dr. Roth’s persuasively opined Claimant has no ratable permanent impairment beyond that rated by Dr. Castro and Dr. Entin.

55. Claimant was represented by counsel through much of his claim, including from April 2012 (when the FAL was filed) through the date of the settlement. Claimant neither argued nor suggested he was not adequately informed of the progress of his case.

In fact, the record documents several instances of communication between Claimant and his counsel. Additionally, Claimant previously prepared two cross-referenced binders with medical documentation for Dr. Chang. The persuasive evidence shows Claimant was aware of and participated in the tactical and strategic decisions regarding his case through the time of settlement.

56. Claimant alleges multiple instances of “fraud, misrepresentation, or concealment,” including:

- “Someone had to cut and paste Claimant’s name” onto another patient’s medical record and gave it to Dr. Douthit for his IME.
- Respondents “manufactured” evidence, including a prescription made by a physician who never treated Claimant, “with the intent Dr. Roth would act upon false information and produce opinions and reports.”
- Judge Friend’s May 25, 2011 FFCLC was “altered and falsified by a second author.” This allegedly falsified Order was then allegedly used to influence and limit benefits that might otherwise have been available to Claimant.
- Respondents’ counsel “recklessly” misrepresented to Dr. Castro that Judge Friend found “the neck is not a compensable component” of his claim.
- Respondents did not regularly send copies of Claimant’s medical records to Dr. Castro or Dr. Entin.
- Respondents intentionally presented “incomplete” medical files to ATPs and IMEs to induce them to act to Claimant’s detriment.
- Respondents concealed medical records from Claimant’s attorney.
- Dr. Roth produced reports for Respondents without having “all medical records.”
- Respondents violated *Samms* by corresponding with Claimant’s ATPs.

57. None of these allegations are supported by persuasive evidence.

58. The report from Dr. Stagg was merely an error. Dr. Roth noted in his IME it “was probably in reference to the wrong patient,” because it described Claimant as five-months post-surgery in September 2010, two months before his surgery date. There is no persuasive reason to believe Dr. Douthit relied on that erroneous report.

59. There is no persuasive evidence Respondents “manufactured” the prescription from Dr. Daeke or otherwise played any part in its generation.

60. Claimant refers to multiple “versions” of Judge Friend’s May 25, 2011 Order. Claimant believes the version at Ex. 18-1 to 18-4 is the “real” Order. The ALJ disagrees.

The version referenced by Claimant is incomplete and contains no findings pertinent to the issue being decided, *i.e.*, Respondents' liability for the surgery recommended by Dr. Choi. Judge Friend's true order is located at multiple places in the exhibits and pleadings, including at 18-5 through 18-15. It is then reproduced twice at 18-16 through 18-40, with slightly different formatting. At the time of Judge Friend's FFCLO, the OAC served its orders electronically in Word format. The small formatting differences in the multiple copies of the Order were probably the result of the document being opened and printed on a computer with a different version of Word, or different installed fonts. There is no persuasive evidence anyone "altered" or "falsified" Judge Friend's Order.

61. Respondents' counsel did not "misrepresent" Judge Friend's order to Dr. Castro. More important, counsel gave Dr. Castro a copy of the order, allowing her to make her own determination regarding its content and significance. It was reasonable for Respondents' counsel to provide Dr. Castro a copy of the Order because a work-related neck surgery would typically entitle Claimant to an automatic cervical spine rating. Claimant's counsel was copied on correspondence from Respondents' counsel to Dr. Castro and Dr. Entin.

62. Respondents had the right to send written correspondence to Dr. Castro and Dr. Entin. Respondents' counsel followed the established and appropriate practice of sending written correspondence to Claimant's ATPs, with copies to Claimant's counsel. The rule in *Samms* prohibits *ex parte* verbal communication with a treating physician without notice to the claimant's attorney. Furthermore, § 8-42-107(8)(b)(II)(C)(2009) requires the respondents to "*request in writing* that an authorized treating physician determine whether the employee has reached maximum medical improvement," before it can invoke an 18-month DIME. Respondents' IMEs had opined Claimant was at MMI and Respondents planned to request an 18-month DIME had Dr. Castro and Dr. Entin not declared Claimant at MMI. Accordingly, Respondents were following a process specifically mandated by the Act to obtain Dr. Castro and Dr. Entin's opinions regarding MMI. Claimant presented no persuasive evidence of any improper communication between Respondents and any ATP.

63. Claimant argues Respondents fraudulently concealed material information regarding his medical condition by failing to timely exchange medical records. Even assuming there were instances where Respondents neglected to send copies of medical records to Claimant's counsel within fifteen days of receipt as required by WCRP 5-4, there is no persuasive evidence any such failures were intentional. In fact, on January 26, 2012, Claimant's counsel advised Insurer's claims adjuster she was sending records to an outdated mailing address. The most reasonable inference is that the adjuster simply made a mistake. Claimant repeatedly assumes Respondents actions were intentional and motivated by malice but presented no persuasive evidence to support his supposition. And while the exchange of some medical records may have been inadvertently delayed, there is no persuasive evidence any important records remained unexchanged by the time the parties entered into the settlement agreement. Accordingly, untimely exchange of records during the claim could have played no role in Claimant's decisionmaking process when negotiating and agreeing to the settlement.

64. No statute or procedural rule requires Respondents to routinely provide copies of medical records to any ATP.

65. Dr. Roth reviewed hundreds of pages of medical records and authored a 94-page report. The fact his report may contain some minor errors or omissions is neither surprising nor suggestive of any material mistake that would warrant reopening Claimant's settlement.

66. Claimant alleges Respondents erroneously relied on Dr. Castro's reports and filed a FAL based on an incorrect MMI date. This argument lacks merit. Respondents accurately interpreted Dr. Castro's reports as determining MMI as of April 18, 2011. Dr. Castro's April 18, 2011 narrative report states Claimant was 85-95% improved and was advised to wean off narcotics. Dr. Castro recommended no additional treatment reasonably intended to improve Claimant's condition, and no follow-up appointment was scheduled. Dr. Castro indicated she would only see Claimant in the future "as needed." In her January 10, 2012 report, she indicated Claimant "is at MMI and *has been* followed in our clinic for medical *maintenance*. As of our clinic visit of April 18, 2011, he was 85% improved overall. He still required of medications to *maintain* that but was able to reduce the use of those." (Emphasis added). She also completed a WC164 form stating Claimant had reached MMI on "4/18/01" and required maintenance medications. The date of "4/18/01" was probably an error because it would be impossible for Claimant to have reached MMI eight years before his work injury. The most reasonable inference is that drawn by Respondents—Dr. Castro determined Claimant at MMI as of April 18, 2011.

67. Claimant also disputes the underlying premise that he was at MMI on April 18, 2011. Although a mutual mistake about MMI could be sufficient to reopen a claim depending on the circumstances,¹ Claimant presented no persuasive evidence to show Dr. Castro was wrong about MMI. To the contrary, Dr. Castro persuasively opined Claimant had completed therapy and other active treatment and had transitioned into "maintenance" mode with medications.

68. The primary treatment recommendations after April 18, 2011 were made by Dr. Parry, who saw Claimant from July 2012 through February 2013. On July 4, 2012, Dr. Parry opined, "[Claimant] has two major residual problems secondary to his industrial accident that have not been adequately addressed. Primarily his nausea and vestibular dysfunction. . . . He needs to return to vestibular therapy to work on his visual sensitivity as well as his visual dependents. . . . He is really not at maximum medical improvement until he has been adequately treated for all the components of his traumatic brain injury, of which the vestibular/ocular components are a significant contributor." Contrary to Dr. Parry's assertions, the persuasive evidence fails to demonstrate additional vestibular therapy would reasonably have been expected to improve Claimant's situation. Claimant had previously participated in vestibular therapy with minimal improvement. There is no persuasive reason to expect a different outcome from a return to therapy. More important, Claimant failed to prove his ongoing dizziness and nausea were causally related to the

¹ *E.g., Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Jaterka v. Johnson & Johnson*, W.C. No. 4-984-216-02 (March 22, 2017).

work accident. Dr. Scott and Dr. Roth persuasively explained there was no biologically plausible mechanism by which the minor head trauma would have damaged Claimant’s visual, auditory, or vestibular systems. Claimant was diagnosed with endolymphatic hydrops, which was not related to the injury. Dr. Roth and Dr. Chang persuasively opined no further treatment after April 18, 2011 was reasonably expected to improve any injury-related medical condition. Claimant failed to prove the parties were mutually mistaken about MMI.

69. More important, even if Dr. Castro’s MMI date were a “mistake,” it was not mutual because Claimant disagreed with MMI all along.

70. Claimant argues Dr. Castro’s rating was incorrect and he should have received a 95% whole person rating for his headaches. He also believes he should have received a cervical spine rating. Claimant’s arguments regarding Dr. Castro’s rating fail for multiple reasons. Dr. Castro appropriately used the Episodic Neurological Disorders table from the AMA Guides to rate Claimant’s headaches. The pertinent sections provide:

| Description | % Impairment of the Whole Person | Episodic neurological disorders |
|--|----------------------------------|---|
| 1. An episodic neurological disorder is of slight severity and under such control that most of the activities of daily living can be performed | 5-15 | Slight interference with daily living 5-15 Moderate interference with daily living 20-45 |
| 2. An episodic neurological disorder is of such severity as to interfere moderately with the activities of daily living | 20-45 | Requires constant supervision or confinement 50-90 |
| 3. An episodic neurological disorder is of such severity and constancy as to limit activities to supervised or protected care or confinement | 50-90 | Totally incapacitated for daily living 95 |
| 4. An episodic neurological disorder is of such severity and constancy as to totally incapacitate the individual in terms of daily living | 95 | |

71. The Division’s Impairment Rating “Tips” state, “if the individual has a closed head injury the highest applicable rating from this table is the only rating used.” Claimant misinterprets this to mean an individual with a head injury must always receive the highest possible rating under Table 1. As Dr. Roth explained, the provision in the Tips means the physician *can give only one* rating from that table, and it must be the *highest applicable rating appropriate to the individual case*. In Claimant’s case, that was 10%. The highest rating of 95% applies to an individual who is “totally incapacitated for daily living,” which clearly would not apply to Claimant.

72. Claimant argues he should have received a cervical impairment rating. However, Dr. Roth persuasively opined Claimant suffered no cervical injury that caused

any ratable impairment. But, even if we assume Claimant could have qualified for a Table 53 rating for “six months of medically documented pain and rigidity,” the nonwork-related cervical fusion performed by Dr. Choi permanently altered his anatomy and superseded any potential impairment caused by the work accident. And it would have been impossible to obtain cervical range of motion measurements unaffected to the loss of motion inherently caused by the fusion. Dr. Castro’s decision not to provide a cervical rating was reasonable in light of Judge Friend’s order finding the cervical fusion was not work-related.

73. Claimant’s arguments regarding Dr. Entin’s rating are similarly without merit. Dr. Entin’s April 2, 2012 report thoroughly and persuasively explained the basis for his rating. Moreover, Dr. Chang persuasively opined Dr. Entin’s rating was appropriate.

74. More important, Claimant was fully aware of Dr. Castro and Dr. Entin’s ratings and had lodged his disagreement long before the settlement. Claimant had timely contested the FAL based on those ratings. Even if there were a mistake regarding Dr. Entin’s rating, it was not mutual.

75. Contrary to Claimant’s argument, the FAL was not defective merely because there were no attached worksheets relating to Dr. Castro’s rating. Dr. Castro completed no worksheets, and the respondents are only required to attach worksheets *if they exist*. *E.g., Stolz v. IBM Corporation*, W.C. No. 4-845-221 (October 3, 2012); *Aguilar v. Colorado Flatwork, Inc.*, W.C. No. 4-741-897 (August 3, 2009), *aff’d Aguilar v. Industrial Claim Appeals Office*, 09CA1792 (Colo. App. May 20, 2010)(NSOP) (insurer under no obligation to demand that the ATP prepare worksheets, which otherwise did not exist, so they could be attached to an FAL). Dr. Castro and Dr. Entin’s complete reports were attached to the FAL.

76. Claimant failed to prove fraud or any mutual mistake of material fact to justify reopening the settlement.

CONCLUSIONS OF LAW

The Workers’ Compensation Act permits injured workers to settle all or part of their claim. Section 8-43-204(1), C.R.S. (2009). But all final settlements are subject to reopening “on the ground of fraud or mutual mistake of material fact.” The party seeking to reopen a settlement bears the burden of proof by a preponderance of the evidence. Section 8-43-303(4), C.R.S.

To prove fraud, it must be shown that (1) the party misrepresented or concealed a material existing fact that in equity and good conscience should be disclosed; (2) the party knew it was making a false representation or concealing a material fact; (3) the other party was ignorant of the existence of the true facts; (4) the party making the representation or concealing a fact did so with the intent to induce action on the part of the other party; and (5) the misrepresentation or concealment caused damage to the other party. *Morrison v. Goodspeed*, 60 P.2d 458 (Colo. 1937); *Ingels v. Ingels*, 487 P.2d 812, 815 (Colo. App. 1971); *Beeson v. Albertson’s, Inc.*, W.C. No. 3-968-056 (April 30, 1996). To succeed on

a claim for fraudulent concealment or nondisclosure, a party must show the other party had a duty to disclose material information. *Poly Trucking, Inc. v. Concentra Health Servs., Inc.*, 93 P.3d 561, 563–64 (Colo. App. 2004).

As found, Claimant failed to prove fraud relating to the settlement or any other aspect of his claim. There is no persuasive evidence of any intent on Respondents' part to deceive, misrepresent, or conceal material information. Claimant has misinterpreted many events, and otherwise relies solely on supposition and unfounded assumptions that any technical mistake in the handling of his claim by Respondents must have been deliberate with intent to harm him.

A mistake is "mutual" if it is reciprocal and common to both parties. *Maryland Casualty Co. v. Buckeye Gas Products Co.*, 797 P.2d 11 (Colo. 1990); *Cary v. Chevron U.S.A., Inc.*, 867 P. 2d 117 (Colo. App. 1993). A mistake is "material" when it goes to "the very basis of the contract." *England v. Amerigas Propane*, 395 P.3d 766, 771 (Colo. 2017). "In other words, the mistake of fact must relate to a material aspect of the contract such that, but for the mistake, the party seeking rescission would not have entered the contract." *Id.* The mistake must pertain to a past or present fact not an opinion or prophecy about the future. *Gleason v. Guzman*, 623 P.2d 378 (1981). A mistake may be found where parties settle a claim without being fully informed concerning the "extent, severity and likely duration" of the injury. *Id.* The mistake must not relate to a fact regarding which the party seeking relief bears the risk.

Claimant has presented multiple issues on which he believes Respondents were mistaken. But regardless of Respondents' perspective on those issues, there is no persuasive evidence Claimant was affected by any of the alleged "mistakes." One need only review Dr. Zierk and Dr. Parry's detailed reports to appreciate the wide variety of symptoms and diagnoses Claimant attributed to his accident long before the settlement was consummated. Claimant never believed Judge Friend's determination regarding causation of the neck surgery was correct. Claimant never believed Dr. Castro's MMI and impairment determinations were correct. Claimant never agreed with the MMI date on the FAL. Claimant never agreed with Dr. Entin's rating. Claimant never agreed with Dr. Douthit or Dr. Roth's opinions. Far from relying on their assessments, Claimant actively disputed them throughout his claim. As noted by Dr. Chang, Claimant compiled two binders of cross-referenced medical records regarding his case. Claimant was intimately familiar with his medical condition and probably understood his case better than anyone else. He has presented no persuasive new evidence that was unavailable or unknown to him when he agreed to settle. At most, Claimant has shown unilateral mistakes by Respondents, but nothing that can reasonably be deemed mutual.

Disagreements regarding the medical conditions caused by the accident, the nature and duration of injury-related treatment, and the extent of Claimant's injury-related disability drove the parties to the negotiating table and ultimately toward settlement. The settlement was a compromise to resolve disputes over whether Respondents were liable for the wide range of conditions Claimant sought to have covered under his claim. The present litigation is essentially an attempt to relitigate disputes that were well-known to both parties before the claim settled. After considering the entire record, the ALJ

concludes Claimant failed to prove fraud or a mutual mistake of material fact to support reopening the settlement.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his settlement denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: December 31, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUE

1. Whether Claimant established by a preponderance of the evidence that she was the common-law spouse of Decedent, and therefore entitled to death benefits.

PROCEDURAL MATTERS

Prior to hearing, Respondents moved for the appointment of a guardian ad litem (GAL) for Decedent and Claimant's minor son, pursuant to § 8-43-207(1)(I), C.R.S. Respondents' motion was addressed in a pre-hearing conference before ALJ Sandberg on August 10, 2020. On August 10, 2020, ALJ Sandberg denied Respondents' motion without prejudice, finding no apparent conflict and no showing that Claimant was not able to appropriately serve in her capacity as mother and guardian of the Son.

At the August 25, 2020 hearing, Respondents renewed their motion. The ALJ found no evidence to demonstrate the existence of a present conflict of interest between Claimant and the Son, or that Claimant, as the biological mother and legal guardian of the Son, is unable to serve in those capacities. The ALJ therefore found no basis for the appointment of a GAL and denied Respondents' motion.

FINDINGS OF FACT

1. While in the course and scope of his employment with Employer, Decedent died on August 29, 2019 as the result of an electrical accident.
2. Respondents admitted liability to dependent death benefits for the Son, Decedent's biological son, who was born on September 29, 2018. Claimant and Decedent are the biological parents of the Son.
3. Decedent was undocumented and used several different names, including [Decedent's names and aliases redacted].
4. Claimant alleges she was Decedent's common-law spouse and seeks death benefits under the Colorado Workers' Compensation Act.
5. Claimant's Exhibit 5 is a handwritten note (partially in Spanish and partially in English) dated March 3, 2018. Claimant testified that the handwritten note was written by Decedent and given to Claimant. The letter includes the question "Te casarias conmigo" – Spanish for "will you marry me." Claimant circled the answer "Si" (Spanish for "yes")
6. On September 29, 2018, the Son was born. (Ex. 1).
7. On approximately May 14, 2019, Decedent completed an employment application for Employer, and identified his address as "105 Longs Peak, Unit [illegible], Brighton

Colorado, 80601. On his “New Hire Form,” Decedent identified Claimant as his spouse and provided her telephone number for his “emergency contact.” Also, on May 14, 2019, Decedent completed an Employment Eligibility Verification in which he listed his address as 9743 WCR 16, Apt. 8, Ft. Lupton, CO 80601. Decedent’s paycheck stubs from Employer indicated his address was 105 Longs Peak, Brighton, CO 80601. (Ex. 2).

8. On May 24, 2019, Decedent completed a Form W-4 for Employer. On the Employee’s Withholding Allowance Certificate, Decedent marked his marital status as “Married.” (Ex. 2).

9. On June 31, 2019, Claimant received a Notice of Tenant Rent Change from the Jefferson County Housing Authority, which indicated Claimant’s address was 5354 Allison St., #B24, Arvada, CO 80002. (Ex. A).

10. On July 9, 2019, Decedent completed an additional Form W-4 for Employer. On the Employee’s Withholding Allowance Certificate, Decedent marked his marital status as “Married, but withheld at higher Single rate.” (Ex. 2).

11. On August 5, 2019, Claimant wrote a handwritten letter to Jefferson County Human Services, which states:

To Whom it May Concern: I [Claimant] am requesting my Medicaid’s household to be ended as I got a better job and my husband and I are moving in since we’ll have 2 incomes we won’t be able to qualify. Please send any further correspondent to my new address 1870 Eaton St., Lakewood, CO 80214.”

(Ex. 6).

12. On August 29, 2019, the Decedent died in a work-related accident.

13. On September 5, 2019, a Certificate of Death was completed, which identified Claimant as Decedent’s spouse. Claimant was identified as the “informant” indicating she provided the information contained within the Certificate of Death. (Ex. 1).

14. In conjunction with Decedent’s funeral, Claimant authored an Obituary for Decedent, which indicates that Claimant and Decedent were married “on October 29, 2017 in Brighton, Colorado.” (Ex. 7).

15. Claimant’s Exhibit 8 consists of six photographs, including photographs of Decedent with the Claimant and their Son on Father’s Day, and photographs of Claimant, Decedent, the Son and Claimant’s three other children. (Ex. 8).

16. On December 9, 2019, Ms. G[Redacted] wrote a letter in which indicated that she knew Claimant and Decedent to be a married couple. (Ex. 9).

17. Decedent’s father, Luis R[Redacted] and mother-in-law Griselda R[Redacted] created a gofundme.com page in which the Son’s name is incorrectly stated. (Ex. 10).

18. At hearing, Claimant testified regarding her relationship with Decedent. Claimant testified that she considered herself to be the common-law spouse of Decedent. Claimant testified that she and Decedent did not have a formal marriage ceremony and did not obtain a marriage certificate. Claimant did not change her name or use Decedent's surname. Claimant testified that her social media accounts did not list her as married.

19. Claimant testified that she and Decedent lived together from March 2018 until the time of his death. Claimant testified that in late 2018, Decedent worked out-of-state, in South Dakota, and they communicated during those times. Claimant testified that although they lived together, at times she would kick him due to drinking and going out with his friends.

20. Breanna F[Redacted] testified at hearing and is friend and former co-worker of Claimant. Ms. F[Redacted] testified she formerly worked with Claimant at a law firm ending in approximately October 2018. At the time, Ms. F[Redacted] saw Claimant daily at work, and approximately once per month on weekends. Ms. F[Redacted] indicated she would see Claimant outside of work in social settings, and at Claimant's home. She testified that until Claimant met Decedent, Claimant lived alone with her children. She testified that both Claimant and Decedent would attend social gatherings, including at Ms. F[Redacted]' home and Claimant's mother's home. She testified Claimant introduced Decedent as Claimant's "husband." Ms. F[Redacted] testified that she did not see Claimant wear a wedding ring. Ms. F[Redacted] understood Decedent to be Claimant's husband.

21. Dominique G[Redacted] testified at hearing and was a former co-worker and friend of Claimant. Ms. G[Redacted] testified she saw Claimant and Decedent together at dinners and family events at Claimant's mother's home that Ms. G[Redacted] attended. She testified Decedent was present at a gender reveal party for the Son at a park. She testified that Claimant's mother was at the gender reveal party, and that she had not met Decedent's parents other than at Decedent's funeral. She testified that Claimant and Decedent lived together at an apartment in Arvada or Westminster, Colorado. Ms. G[Redacted] understood Decedent to be Claimant's husband.

22. Decedent's step-mother, Griselda R[Redacted], testified at hearing. Ms. R[Redacted] testified that her address is 7678 Weld County Road, Ft. Lupton, Colorado. Ms. R[Redacted] has been married to Decedent's father since November 2015 and did not meet Decedent before she married Decedent's father. Ms. R[Redacted] testified she first learned of Claimant in December 2018, when Decedent informed her that he was going to be a father. Ms. R[Redacted] testified that after the Son was born, Decedent stated he was going to move in with Claimant. Ms. R[Redacted] testified Decedent referred to Claimant by her first name, or as the mother of his baby. Ms. R[Redacted] testified Decedent did not tell her that he was married or that he had proposed. Ms. R[Redacted] testified Decedent only lived with Claimant for approximately one week. Ms. R[Redacted] testified she has met Claimant approximately 4 times, at Ms. R[Redacted]'s home. Ms. R[Redacted] has not attended or been invited to the Son's birthday parties, and other than buying clothes for the Son when he was born, has not sent birthday cards or birthday gifts to the Son. Ms. R[Redacted] testified that following Decedent's death,

she, and Decedent's father created a fund-raising page on the website gofundme.com. (Ex. 10).

23. Decedent's father, Luis R[Redacted], testified at hearing. Mr. R[Redacted] testified his address is 7678 Weld County Road, #17, Thornton, Colorado. Mr. R[Redacted] testified he had a good relationship with Decedent before he passed away and that they talked nearly every day on the phone. Mr. R[Redacted] testified Decedent was open with him and he knew of Decedent's relationship with Claimant, but that he did not meet Claimant in person until shortly after the Son was born.

24. Mr. R[Redacted] testified that Decedent moved out of Mr. R[Redacted]'s home approximately 8 months after Mr. R[Redacted] married Ms. R[Redacted] in November 2015 and would occasionally stay at Mr. R[Redacted]'s home after that for 1-2 weeks at a time. He testified Decedent lived for a time with a friend named Sergio Dominguez (although the time frame was not clear). He also testified Decedent lived with a different friend at 9743 Weld Count Road 16, Apt. 8, Ft. Lupton, Colorado. He did not testify as to the timeframe when Decedent lived at this address. Mr. R[Redacted] testified Decedent did not tell him he was married and referred to Claimant by her first name or as "the mother of my son." He testified Decedent did not refer to Claimant as his "wife" or "girlfriend."

25. Mr. R[Redacted] testified that the address 105 Longs Peak, Brighton, Colorado 80601 was an address where he lived with Decedent and Mr. R[Redacted]'s other child for five years before he married Ms. R[Redacted] In 2015. Mr. R[Redacted] testified that Decedent did not invite him or Ms. R[Redacted] to gatherings with Claimant and that he and not socialized with Claimant and Decedent together. Mr. R[Redacted] testified that he did not live at 105 Longs Peak in 2019.

26. Mr. R[Redacted] testified that he is familiar with Decedent's handwriting, and that he does not believe the handwriting on Exhibit 5 was Decedent's.

27. Claimant testified in rebuttal that she had been to Decedent's parents' home with Decedent and the Son, and Ms. R[Redacted] would not come out of her room the visit. Claimant also testified that she had asked Decedent to invite his family to gatherings. Claimant testified that she was not aware that Decedent had stayed at his father's house after arguments.

CONCLUSIONS OF LAW

EVIDENTIARY ISSUES

Application of § 13-90-102, C.R.S.

At trial, Respondents objected to Claimant's testimony based on the application of Colorado's so-called "Dead Man's Statute," which places limitations on the testimony that an witness may provide as it relates to oral statements made by a deceased person. Specifically, § 13-90-102, C.R.S., provides:

Subject to the law of evidence, in any civil action or proceeding in which an oral statement of a person incapable of testifying is sought to be admitted into evidence, each party and person in interest with a party shall be allowed to testify regarding the oral statement if:

- (a) The statement was made under oath at a time when such person was competent to testify.
- (b) The testimony concerning the oral statement is corroborated by material evidence of a trustworthy nature.
- (c) The opposing party introduces uncorroborated evidence of related communications through a party or person in interest with a party; or
- (d) Such party or person testifies against his or her own interests.

Respondents contend that Claimant's testimony on three oral statements by Decedent should be excluded under the Dead Man's Statute:

- 1) That Decedent asked Claimant to marry him, talked about wanting to marry her, and said they were married.
- 2) That Decedent told Claimant's work friends they were married.
- 3) Statements about Decedent's relationship with his father and step-mother.

Such statements are to be excluded unless one of the conditions set forth in 13-90-102(1)(a-d) apply. Here, only section (b) is applicable. Under the statute, "Corroborated by material evidence" means corroborated by evidence that supports one or more of the material allegations or issues that are raised by the pleadings and to which the witness whose evidence must be corroborated will testify. Such evidence may come from any other competent witness or other admissible source, including trustworthy documentary evidence, and such evidence need not be sufficient standing alone to support the verdict but must tend to confirm and strengthen the testimony of the witness and show the probability of its truth. § 13-90-102 (3)(a), C.R.S. The Dead Man's Statute does not require that a decedent's statements be overheard by a disinterested party, but only requires that "the corroborating evidence be material to the underlying issue and tend to confirm, strengthen and show the probable truthfulness of the party's testimony." *In re Claim of Botello*, W.C. No. 4-962-974-01 (ICAP, Nov. 13, 2017).

With respect to Claimant's testimony that Decedent talked about wanting to marry her, and told Claimant they were married, the ALJ ruled at hearing that Claimant's testimony that Decedent verbally asked her to marry him was inadmissible. With respect to the remaining issues, Claimant's Exhibit 2 consists of forms completed by Decedent in which he expressly stated that Claimant was his spouse, and forms completed prior to any controversy in which Claimant indicated he was married. Next, Exhibit 5 is a handwritten note Claimant testified was written by Decedent in which he asked Claimant to marry him in Spanish, and indicated he would be the "best friend" to Claimant's children. Given Decedent's representation to Employer that Claimant was his spouse, and the marriage request in Exhibit 5, (both of which were created before Decedent's

death, and before any controversy arose concerning their purported marital status), the ALJ finds that Claimant's testimony that Decedent said they were married to be corroborated by material evidence of a trustworthy nature.

With respect to Claimant's testimony that Decedent told Claimant's work' friends that they were married. The record does not reflect that Claimant testified specifically that Decedent told her work friends they were married, and the ALJ's findings do not rest on any such testimony. Instead, Ms. F[Redacted] who testified that she interacted with both Decedent and Claimant, and that Decedent was introduced as Claimant's husband. Accordingly, any objection

Claimant's testimony regarding Decedent's statements about his relationship with his father and step-mother, on the other hand, are not admissible. Such statements are not corroborated by other material evidence of a trustworthy nature. Claimant's statements in this regard were offered in rebuttal to the testimony of Decedent's father and step-mother, however, those statements do not constitute "uncorroborated evidence of related communications through a party or person in interest with a party." Although Decedent's father's and step-mother's testimony was uncorroborated, neither the father or step-mother are "persons in interest with a party," as they have no direct financial interest in the outcome of this proceeding and have no other significant and non-speculative financial interest that makes their testimony, standing alone, untrustworthy." As such, the ALJ does not consider the Claimant's testimony regarding Decedent's statements of his relationship with his father to be admissible. However, Claimant's testimony of her observations of those relationships is admissible.

APPLICABLE LEGAL STANDARDS

The purpose of the Workers' Compensation Act of Colorado (Act) §§8-40-101, *et seq.* C.R.S., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. The claimant bears the burden of proving by a preponderance of the evidence that she is entitled to death benefits. § 8-43-201(1), C.R.S.; *Faulker v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of a claimant nor in favor of the rights of respondents. §8-43-201, C.R.S. A workers' compensation claim is decided on its merits. §8-43-201, *supra*.

In accordance with section 8-43-215, C.R.S., this decision contains specific findings of fact, conclusions of law and an order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible, or implausible testimony or unpersuasive arguable

inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice, or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Under § 8-42-115, C.R.S, where death proximately results from an industrial injury, the decedent's dependents are entitled to receive the decedent's workers' compensation benefits. Where one or more dependent is entitled to receive a decedent's benefits, the benefits are to be apportioned in a "just and equitable" manner. § 8-42-121, C.R.S. According to § 8-41-503, C.R.S., dependency shall be determined as of the date of the industrial injury. Under section 8-41-501(1)(a), C.R.S., a widow is presumed wholly dependent unless it is shown that she was voluntarily separated and living apart from the spouse at the time of the injury or death or was not dependent in whole or in part on the deceased for support. Such presumptions may be rebutted by competent evidence. § 8-41-501(1), C.R.S.

Claimant bears the burden of proof to establish, by a preponderance of the evidence, that a common-law marriage existed between her and Decedent. *Valencia v. Northland Ins. Co.*, 514 P.2d 789, 790 (Colo. App. 1973). "A common law marriage is established by the mutual consent or agreement of the parties to be husband and wife, followed by a mutual and open assumption of a marital relationship." *Estate of Wires v. Medina*, 765 P.618 (Colo. App. 1988). "The determination of whether a common law marriage exists turns on issues of fact and credibility, which are properly within the province of the finder of fact." *Id.* Courts consider myriad factors in determining whether a common-law marriage exists. The two most important factors include "cohabitation and reputation among persons in the community that the parties hold themselves out as man and wife." *In re Claim of Botello, supra*. Other relevant evidence includes maintenance of joint bank accounts, use of a common surname, joint ownership of property, filing joint tax returns, representation of marital status on tax documents, evidence that the decedent provided financial support to claimant and children. *People v. Lucero*, 747 P.2d 660, (Colo. 1987) (citations omitted); *In Re Claim of Ramos*, WC No. 4-439-791 (ICAP Jan. 31, 2002); *Marquez v. LVI Environmental Services, Inc.*, W.C. No. 4-425-155 (April 5, 2001); *In re Claim of Ortega*, W.C. No. 4-661-263-02 (ICAP, Apr. 17, 2018). There is, however, "[t]here is no determinative single form of evidence required. The ultimate determination 'turns on issues of fact and credibility, which are properly within the trial court's discretion.'" *Lucero, supra*. Ultimately, the question is whether the parties agreed to be married, and that agreement is evidenced by actual behavior. *Marquez, supra*.

The very nature of a common law marital relationship makes it likely that in many cases express agreements will not exist. The parties' understanding may be only tacitly

expressed, and the difficulty of proof is readily apparent. Courts have recognized that “the agreement need not have been in words.” *Smith v. People*, 64 Colo. 290, 293, 170 P. 959, 960 (1918); see also *Rocky Mountain Fuel Co. v. Reed*, 110 Colo. 88, 130 P.2d 1049 (1942). Then the issue becomes what sort of evidence is sufficient to prove the agreement. If the agreement is denied or cannot be shown, its existence may be inferred from evidence of cohabitation and general repute. See, e.g., *Graham v. Graham*, 130 Colo. 225, 227, 274 P.2d 605, 606 (1954); *James v. James*, 97 Colo. 413, 414, 50 P.2d 63, 64 (1935).

Claimant has established by a preponderance of the evidence that she and Decedent agreed to be married. Claimant testified that Decedent gave her the letter admitted as Exhibit 5, in which Decedent posed the question “Te casarias conmigo?” (Spanish for “will you marry me?”). Claimant accepted this proposal. Although Mr. R[Redacted] testified that he did not believe the handwriting was his son’s handwriting, the ALJ does not find his testimony on this issue persuasive. Consequently, Claimant has established the first element of a common law marriage.

The second factor, the “mutual and open assumption of a marital relationship” is the subject of conflicting evidence. Claimant testified she and Decedent lived together beginning in March 2018 and except for times when Decedent worked out-of-state, and when he left the home due to arguments, they cohabitated. Claimant’s testimony was corroborated by the testimony of Ms. G[Redacted], who testified that Claimant and Decedent lived together in an apartment in Arvada or Westminster. (Claimant’s apartment was located in Arvada). Ms. F[Redacted] testified that Claimant lived in alone with her children until she met Decedent, after which she lived with him. Both Ms. G[Redacted] and Ms. F[Redacted] testified that Decedent was present at social functions with Claimant, and their son’s gender reveal party, and that they both understood them to be married.

In employment paperwork, Decedent listed his address in May 2019 as 105 Longs Peak, Brighton, Colorado. Mr. R[Redacted] testified that Claimant lived at this address with Mr. R[Redacted] prior to Mr. R[Redacted]’ marriage to Ms. R[Redacted] in 2015. Mr. R[Redacted] did not live at 105 Longs Peak in May 2019, and no evidence was admitted indicating Decedent lived at this address in May 2019. Mr. R[Redacted] testified Decedent moved from that address approximately eight months after he married Ms. R[Redacted] and moved into various residences with friends. In his employment paperwork, Claimant also listed his address as 9743 WCR 16, Apt. 8, Ft. Lupton, CO 80601, which Mr. R[Redacted] testified was an address of one of Decedent’s friends. However, Respondents offered no persuasive evidence to indicate that Decedent did not cohabitate with Claimant after March 2018.

The evidence also shows Decedent and Claimant represented to others that they were married. In his May 2019 employment paperwork, Decedent identified Claimant as his “spouse,” and listed her as one of his emergency contacts. On tax documents, Decedent twice checked boxes indicating he was “married.” In paperwork submitted to the Jefferson County Human Services, Claimant referenced her “husband” whom she

identified in testimony as Decedent. Ms. F[Redacted] testified that Claimant introduced Decedent as her “husband.” Additionally, Claimant testified that Decedent provided financial support for their son and for rent. Claimant testified, credibly, that Decedent was not included on her lease and that they did not have a joint bank account due to Decedent’s legal status in the United States.

Decedent apparently did not inform his father and mother-in-law that he considered Claimant to be his spouse. The ALJ, however, does not find this evidence dispositive. The evidence demonstrated only that Decedent did not affirmatively represent himself as married to them. Such evidence does not contradict the evidence that Decedent held himself out as married to others, including his employer and the IRS. Moreover, Claimant’s friends believed Claimant and Decedent to be married, based on their interactions with both. Based on this evidence, Decedent’s financial support for his son and Claimant, and the couple’s cohabitation, the ALJ finds it more likely than not that Claimant and Decedent were common-law married.

Based on the totality of the evidence, Claimant has established by a preponderance of the evidence that she and Decedent were common-law spouses under Colorado law. Accordingly, the ALJ finds that Claimant was a dependent of Decedent at the time of Decedent’s work-related death and is therefore entitled to Decedent’s death benefits.

Apportionment of Death Benefits

Where one or more dependent is entitled to receive a decedent’s benefits, the benefits are to be apportioned between such dependents in a “just and equitable” manner. § 8-42-121, C.R.S. Based on the totality of the evidence, the ALJ apportions Decedent’s death benefits twenty-five percent (25%) to Claimant, and seventy-five percent (75%) to the minor child. Pursuant to § 8-42-122, C.R.S., the ALJ may provide for the manner and method of safeguarding payments due to dependents who are not capable of fully protecting their own interests. Although no GAL is appointed in this case, the ALJ directs that the benefits due to the minor child, Ian Elias R[Redacted], shall be deposited into and remain in a separate and distinct savings account in a national or state bank insured by the federal deposit insurance corporation or its successor, and may only be used for the benefit of the minor child, as directed, and determined by Claimant, the minor child’s legal guardian. Benefits due to the Minor Child shall not be comingled in with other funds in said account, including the benefits payable to Claimant.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that she was the common-law spouse of Decedent at the time of Decedent’s work-related death.

2. Claimant was a dependent of Decedent and entitled to death benefits due to Decedent.
3. Decedent's death benefits are apportioned 25% to Claimant and 75% to Ian Elias R[Redacted].
4. Benefits for the minor child, Ian Elias R[Redacted], shall be deposited into and remain in a separate and distinct savings account in a national or state bank insured by the federal deposit insurance corporation or its successor, and may only be used for the benefit of the minor child, as directed, and determined by Claimant, the minor child's legal guardian. Benefits due to the Minor Child shall not be comingled in with other funds in said account, including the benefits payable to Claimant.
5. Respondents shall pay statutory interest at the rate of 8% per annum on compensation benefits not paid when due
6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- I. What is Claimant's Average Weekly Wage, insofar as it might affect her TTD payments?

STIPULATIONS

The parties have agreed that the sole issue before the ALJ is AWW, and not any issue of overpayments.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked for Employer as an emergency room nurse. She began her employment on April 1, 2019. She sustained an admitted injury on June 26, 2019. Respondents then admitted to an AWW of \$1,181.09. (Ex. A, p. 1). Claimant worked up until the date of her injury on June 26, 2019.

2. Claimant was placed at MMI on August 4, 2020. (Ex. B, p. 5). She was paid temporary total disability (TTD) benefits from June 27, 2019 through August 3, 2020, based upon the admitted AWW of \$1,181.09. *Id.* Respondents filed a Final Admission of Liability on August 13, 2020, alleging an overpayment of \$787.39, to be credited against future benefits. (Ex. B, p. 6). Claimant timely objected, and filed this Application for Hearing.

3. Claimant testified at hearing. She said she was hired to work full-time, with a typical schedule of 3 days per week, 12 hours per shift. She earned \$35.59 per hour. Claimant also earned shift differential for working nights and evenings, which is apparently at a rate of \$3.40 on her paystubs. (Ex. 3, p. 9). Claimant testified she did not recall her date of her termination. She testified she did not return to work at any time after her date of injury.

4. Claimant was paid in bi-weekly intervals. Claimant testified that she missed one week of work for the pay period with a paycheck date of May 17, 2019. She testified during that week she had to take care of her mother in California. She took the week of leave without pay, designated in paycheck records as 35.5 hours of "LWOP." (Ex. C, pp. 28, 33). She testified she did not remember if she did not have enough PTO to cover her leave, or if she took LWOP because she would not have enough to "cover it in the long run." She later clarified, by a question by the ALJ, that she had not worked long enough to accrue PTO sufficient to cover her time off at that time. She further testified if she had kept working through the time she was placed at MMI, she would

have had accrued sufficient time to cover her time off.

5. Claimant was, however, uncertain of the precise accrual method of PTO utilized by Employer. She did not know exactly how much PTO the Employer would provide. She further admitted that when she earlier testified she would have accumulated enough time to cover a week off with PTO had she worked longer past the date of injury, she was in fact guessing based upon “other employers.” She stated she was “shooting in the dark” by assuming as much for Employer.

6. Claimant did not have a written contract stipulating how many weeks she was to work per year; merely that she was hired as a full time employee. Claimant testified she did not have memory of taking paid sick leave time off during her employment, but she did not dispute she had that option, since it is listed on her paychecks. She also stated that having PTO was “part of the package” of her employment at Parkview. She admitted that when she was hired she knew she had PTO, paid sick leave, and LWOP she could take.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d

1205 (1936); CJI, Civil 3:16 (2007). In this instance, the ALJ finds Claimant's testimony to be sufficiently credible, and consistent with the documents submitted by the parties. The ALJ will not require a written contract of employment outlining the precise accrual methods of time off (whether paid or not), nor does her lack of precise memory on such methods preclude Claimant from putting forth a sufficient case.

Average Weekly Wage, Generally

4. Where the Claimant is earning an hourly wage at the time of the injury, the AWW is to be determined by multiplying the hourly rate by the number of hours in a day the claimant would have worked but for the injury, then multiplying that sum by the number of days in a week the Claimant would have worked. Colo. Rev. Stat. § 8-42-102(2)(d) (2003). However, 8-42-102(3) provides that an ALJ may diverge from the statutorily-prescribed methods of calculating the AWW if, for any reason, they will not fairly compute the AWW. The ALJ has wide discretion to decide whether the statutorily-prescribed methods will fairly calculate the AWW, and if not, to devise a method which will fairly determine the AWW. Because the ALJ's authority is discretionary, appellate courts may not interfere with the AWW determination unless there is an abuse of discretion. An abuse occurs if the order is beyond the bounds of reason, as where it is contrary to the law or not supported by substantial evidence. *Pizza Hut v. Indus. Claim Appeals Office*, 18 P.3d 867 (Colo. Ct. App. 2001). *Vance v. The Brown Schs/Cedar Springs Behavioral Health*, W.C. No. 4-558-130 (I.C.A.O. Aug. 17, 2004).

Average Weekly Wage, as Applied

5. The facts in this case are not in serious dispute. The wage records submitted by the parties agree with one another. The parties agree (with the ALJ's concurrence - now that there is no issue of enhanced earnings potential between injury and MMI, such as in the *Pizza Hut* case) that today's task is to determine AWW *on the date of injury*. Claimant is requesting her AWW be set at \$1,333.77. Claimant's calculation is based upon using her entire wages from the start of her employment through the pay period with a paycheck date of July 12, 2019. The total wages she earned was \$14,671.46. The wages were earned over six pay periods, or 12 weeks. Claimant is requesting her AWW be calculated dividing her total wages by 11 weeks to specifically exclude the one week of work she took off without pay. [$\$14,671.46 / 11 \text{ weeks} = \$1,333.77$].

6. Respondents argue that utilizing Claimant's wages earned over the entirety of her employment should be considered the best approximation her current AWW. If her entire \$14,671.46 in gross earnings are divided by the 12 weeks over which she worked, her AWW would be \$1,222.62. Respondents dispute Claimant's contention that a whole week should be removed from the calculation to account for Claimant's one week leave without pay.

7. The ALJ in this case will focus on Claimant's *average earnings at the time of injury*. As such, Claimant has the better argument. Although Claimant could not

specifically articulate the exact method of accruing paid time off vs. unpaid time off, an examination of Respondent's Exhibit C, pages 28, 29, 30 provide a more readable summary. As time went on, Claimant indeed did *accrue paid time off*, the longer she worked there. This is consistent with most any employment arrangement, the lack of a formal document admitted for the record notwithstanding. As but one example, Claimant utilized 10 hours of *paid time off*, for the period ending 5/31/19 (Ex. C, p. 28, towards the bottom of the page).

8. Thus, like any new employee with insufficient leave accrued in the bank, Claimant was vulnerable to being docked without pay early in her tenure. Whether it was voluntary on her part to forego the 35.5 hours pay, or go "in the hole" and make it up later is not necessary to determine here. Either way, that lost week was an aberration in earnings, wrought solely by her lack of sufficient tenure to accrue the needed *paid* time off. That unpaid week aside, an examination of the remaining pay periods show a reliably tight pattern of hours worked, and resultant pay. And, it is noted, Claimant had begun to accrue *paid* time in her bank by the time she got hurt.

9. Taking Respondents' argument to an extreme, consider the following hypothetical: Claimant worked for one week only, then took the following week without pay (due to a family emergency), then became injured *immediately* upon returning to begin her third week on the job. This would result in her AWW being effectively cut in half, if one were to divide by both weeks on the payroll. As such, this would not be the best approximation of her wages at the time of injury. The ALJ further finds that there is insufficient evidence to infer that Claimant demonstrated a *regular pattern* of taking unpaid leave, such as would reduce her earnings rate on an ongoing basis. The unpaid leave week was an aberration in her weekly earnings; therefore, it will be disregarded, resulting in an AWW of \$1333.77.

ORDER

It is therefore Ordered that:

1. Claimant's Average Weekly Wage is \$1,333.77.
2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory

reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

| In the Matter of the Workers' Compensation Claim of: [REDACTED] , Claimant, vs. [REDACTED] , Employer, and [REDACTED] , Insurer, Respondent. | |
| FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER | |

CASE NUMBER:

WC 4-950-946-002

In this order, [Redacted], will be referred to as “the claimant”; and [Redacted], will be referred to as “the employer” or “the respondent”. Also in this order, “the ALJ” refers to the Administrative Law Judge; “C.R.S.” refers to Colorado Revised Statutes; “OACRP” refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and “WCRP” refers to Workers’ Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to post-maximum medical improvement (MMI) maintenance medical treatment to prevent further deterioration to her physical condition pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).
2. The issue of disfigurement was endorsed for hearing. However, at the December 2, 2020 hearing, the claimant withdrew the issue on the record.

PROCEDURAL HISTORY

1. This matter was set for hearing pursuant to the claimant’s August 26, 2020 Application for Hearing.
2. A telephonic hearing regarding this matter commenced on December 2, 2020 before ALJ Cassandra M. Sidanycz. On that date, the claimant participated and proceeded *pro se*. The respondents were represented by [Redacted], Esq.
3. The claimant did not offer exhibits. The respondent offered exhibits A through C.

4. The claimant notified the ALJ that she had not yet received the respondent's exhibits. The claimant asserted that she has difficulty with proper delivery of her U.S. Mail.

5. The ALJ determined that the respondent had acted reasonably in mailing the proposed exhibits to the claimant in advance of the hearing.

6. As the claimant did not have the exhibits to effectively make any objections, the respondent's counsel agreed to immediately email the exhibits to the claimant. However, the claimant was utilizing her cellular phone to participate in the hearing and asserted that she could not review the exhibits while also participating in the hearing.

7. The ALJ determined that a continuance was necessary to allow the claimant adequate time to review the respondent's exhibits.

8. Although this was the claimant's Application for Hearing, counsel for the respondent agreed to confer with the claimant to find an agreeable hearing date and file a hearing confirmation. The ALJ instructed the parties to set the hearing on the December 2020 Grand Junction docket.

9. A hearing confirmation was filed by the respondent's counsel on December 7, 2020, which confirmed a hearing date and time of December 30, 2020 at 8:30 a.m. The ALJ notes that the certification of mailing states that a copy of the hearing confirmation was emailed to the claimant.

10. On December 8, 2020, the Grand Junction Office of Administrative Courts (OAC) emailed a Notice of Hearing to the parties. That notice identified the hearing date and time to be December 30, 2020 at 8:30 a.m. The notice also informed the parties that the hearing would be held "via telephone or Google Meets".

11. On December 28, 2020, the Grand Junction OAC emailed the parties a Google Meets invitation. Again, the hearing was set for December 30, 2020 at 8:30 a.m.

12. At 4:08 p.m. on December 29, 2020, the claimant emailed all recipients of the Google Meets invitation. In that email, the claimant requested that the hearing be vacated.

13. Due to the late nature of this communication, the ALJ determined that the claimant's communication would be interpreted as a motion, and addressed at the hearing.

14. On December 30, 2020, at 8:30 a.m., counsel for the respondent appeared in the Google Meet. The claimant did not appear. As the prior December 2, 2020 hearing was conducted via telephone, the ALJ attempted to reach the claimant by telephone.

15. The ALJ tried the claimant at two different telephone numbers and made a total of three attempts to reach the claimant. The claimant did not answer.

16. The ALJ determined that the claimant failed to appear for the hearing.

17. The ALJ considered the claimant's motion to vacate the hearing. The ALJ was not persuaded by the reasons outlined in the claimant's December 29, 2020 email. Absent any further clarifying information from the claimant, that motion was denied.

18. The respondent's exhibits A through C were admitted into evidence. No witnesses were called to testify.

FINDINGS OF FACT

1. The claimant suffered an injury at work on October 8, 2013. The respondent admitted liability for this injury.

2. On June 26, 2020, Dr. David Elfenbein performed a Division-sponsored independent medical examination (DIME). In his July 8, 2020 report, Dr. Elfenbein opined that the claimant reached maximum medical improvement (MMI) on October 3, 2018. Dr. Elfenbein assessed a permanent impairment rating of 11 percent for the claimant's right upper extremity. Dr. Elfenbein further opined that no maintenance medical treatment was necessary.

3. On July 28, 2020, the respondent filed a Final Admission of Liability (FAL) admitting for the MMI date of October 3, 2018 and the scheduled impairment rating of 11 percent for the claimant's right upper extremity.

4. In the FAL, the respondent denied post-MMI medical treatment.

5. On August 26, 2020, the claimant filed an Application for Hearing endorsing the issues of post-MMI medical treatment and disfigurement.

6. The claimant did not appear at the December 30, 2020 hearing.

7. There is no persuasive evidence in the record to support a finding that the claimant is in need of post-MMI maintenance medical treatment to prevent further deterioration to her physical condition. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she is entitled to post-MMI maintenance medical treatment

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer.

Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she is entitled to post-MMI maintenance medical treatment.

ORDER

It is therefore ordered:

1. The claimant's request for post-MMI maintenance medical treatment is denied and dismissed.
2. The endorsed issue of disfigurement is hereby withdrawn.

Dated this 31st day of December 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant established by a preponderance of the evidence that his right upper extremity scheduled permanent impairment rating should be converted to a whole person impairment rating.
2. Whether Claimant established by a preponderance of the evidence that he is entitled to receive reasonable, necessary, and related medical maintenance benefits designed to relieve the effects of his work-related injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n*, 795 P.2d 705 (1988)
3. Whether Claimant established by a preponderance of the evidence an entitlement to a disfigurement award pursuant to § 8-42-108, C.R.S.
4. Whether Respondents established by a preponderance of the evidence that they are entitled to an overpayment in the amount of \$282.42 for payment of temporary total disability (TTD) benefits.
5. Whether Respondents established by a preponderance of the evidence an entitlement to reimbursement for Claimant's failure to attend a scheduled IME exam.

FINDINGS OF FACT

1. On October 2, 2018 Claimant sustained an admitted industrial injury in the form of a right rotator cuff tear. Claimant underwent surgical repair for this injury on December 26, 2018 performed by Garth Nelson, M.D.
2. On March 2, 2019 Claimant re-tore his right rotator cuff when he slipped on snow attempting to enter his car.
3. Respondents denied Claimant's re-injury to his right rotator cuff was related to his October 2, 2018 work-injury. The matter proceeded to hearing before ALJ Peter Cannici where the issue of relatedness of the surgery was addressed. On May 5, 2020, ALJ Cannici issued an Order finding the March 2, 2019 injury constituted a compensable consequence of Claimant's original industrial injury. (Ex. 6)
4. On May 19, 2019, Claimant underwent an independent medical examination at Respondents' request. The examination was performed by John Raschbacher, M.D. Dr. Raschbacher opined that Claimant was at MMI on October 2, 2019, and that his March 2, 2019 injury was not work-related. He opined Claimant did not require any maintenance care as a result of his October 2, 2018 injury, and that any impairment Claimant sustained was the result of his March 2, 2019 injury. (Ex. 4).

5. On July 10, 2019, Claimant underwent right rotator cuff repair performed by Dr. Nelson to address the re-tear of his right rotator cuff. The operative report indicates that a 4-inch coronal incision was made over Claimant's right shoulder. (Ex. 2).

6. After the July 10, 2019 surgery, Claimant received no post-surgical treatment beyond a home exercise program and follow-up visits with this authorized treating physicians. Claimant performed a home exercise program directed by Dr. Nelson. Dr. Nelson saw Claimant on July 18, 2019, August 29, 2019, September 26, 2019, October 24, 2019, November 21, 2019, December 17, 2019, January 21, 2020, February 28, 2020, March 24, 2020, May 5, 2020, and June 25, 2020. At these visits, Dr. Nelson assessed Claimant and directed Claimant's home exercise program (HEP). Dr. Nelson's records of these visits are sparse and provide very little information about Claimant's condition at these visits. (Ex. H).

7. On September 6, 2019, Claimant reported to Kimberley Siegel, M.D., his authorized treating physician, that he had not done physical therapy after his previous three rotator cuff surgeries performed by Dr. Nelson. Claimant reported he had done well in self-directed rehabilitation and had always returned to full activity after the surgeries performed by Dr. Nelson. On February 21, 2020, Dr. Siegel reported that Claimant had expressed no interest in attending physical therapy because he had rehabilitated following the prior surgeries on his own. (Ex. G).

8. Following his July 10, 2019 surgery, Claimant remained in an immobilizer for his right shoulder until approximately October 24, 2019. (Ex. G). Claimant completed pain diagrams during this time for Dr. Siegel, reporting pain in his anterior and posterior right shoulder and right trapezius areas. Dr. Raschbacher testified at hearing that pain complaints of this type are typical post-surgical complaints.

9. On January 31, 2020, Claimant saw Dr. Raschbacher again for a IME requested by Respondents. Claimant reported he did not do any physical therapy following his July 10, 2019 surgery, and was currently doing a home exercise program. Claimant reported increased pain with the use of his right, soreness when his right shoulder was away from his body, avoiding reaching and keeping his hand lower than his chest. Claimant reported that he sleeps without difficulty, as long as he does not lie on his right side. Dr. Raschbacher opined that Claimant's then-current condition was unrelated to his employment and his October 2, 2018 injury. Dr. Raschbacher opined that Claimant had not yet reached MMI and that no impairment rating could be done at that time. Dr. Raschbacher opined that Claimant's primary medical treatment at that time would include a home exercise program and orthopedic follow up. (Ex. 3).

10. On May 11, 2020, Claimant saw Dr. Siegel. Claimant reported burning and biting sensations in his shoulder for the previous three weeks after reaching to pick up a piece of paper. Claimant also reported that his shoulder pain intermittently interrupted his sleep. Dr. Siegel determined Claimant was at maximum medical improvement (MMI) on May 11, 2020 and assigned Claimant an 11% right upper extremity impairment for range of motion deficits, which converts to a 7% whole person impairment. Dr. Siegel did not normalize Claimant's range of motion measurements due to existing restrictions of motion in the left

shoulder. Dr. Siegel found no basis for apportionment of Claimant's injury and recommended permanent work/activity restrictions to include maximum lifting/carrying with the right arm of 10 pounds, with no overhead lifting of more than 3 pounds with the right arm, and 10 pounds with both arms, and no forceful pulling or pushing with the right arm. Dr. Siegel did not recommend maintenance medical care after MMI and indicated that "no additional medical treatment [was] reasonably expected to improve his condition at [that] time." (Ex. 1).

11. On May 20, 2020, Respondents filed a Final Admission of Liability admitting for Dr. Siegel's 11% upper extremity impairment rating. Claimant was paid temporary total disability ("TTD") from May 11, 2020 through May 12, 2020, at an average weekly wage of \$987.84. The FAL notes an overpayment of \$282.24, which equates to two days of TTD benefits. (Ex. A).

12. On June 25, 2020, Claimant saw Dr. Nelson for a follow up visit. Claimant reported difficulty shifting his car. Dr. Nelson agreed with Dr. Siegel's MMI opinion and with permanent restrictions limited to light lifting. He indicated that he did not anticipate any further surgeries and had no further appointments scheduled. Dr. Nelson's medical record does not indicate that further maintenance treatment was recommended. (Ex. 3).

13. Respondents scheduled a follow-up IME with Dr. Raschbacher on August 4, 2020. Notice of the IME was sent to Claimant's counsel by email (pleadings@kaplanmorrell.com) on July 28, 2020, at 4:18 p.m. (Ex. N). Claimant did not attend the appointment, and Respondents incurred a no-show expense of \$1,122.00. (Ex. O, P). On October 21, 2020, PALJ Sandberg issued a Prehearing Order granting Respondents' request to add this issue to the present hearing. (Ex. D).

14. On October 6, 2020, at a one-year surgical follow-up, Dr. Nelson noted that Claimant continued to experience pain/weakness with reaching – right worse than left. He noted again that Claimant was at MMI with permanent restrictions with minimal reaching/lifting, and that Claimant had moderate LOM (loss of motion) of the right shoulder vs. full range of motion (FROM). Dr. Nelson's medical record from that date does not include any recommendation for further treatment of Claimant's right shoulder (Ex. H).

15. On October 13, 2020, Claimant again saw Dr. Raschbacher for an IME requested by Respondents. On his pain diagram for this IME, Claimant indicated pain on the outside of his right shoulder, his right scapula, right trapezius, and right chest area. Dr. Raschbacher also opined that "it is more likely than not that Mr. Newton has been coached with respect to location of pain in order to further a contention that his shoulder rating should be converted to a whole person impairment." He further opined that Claimant had no neck pathology or significant pathology medial, as it were, to the shoulder joints that would provide a basis for conversion from scheduled upper extremity to whole person impairment." Finally, Dr. Raschbacher opined that Claimant did not need maintenance care and Claimant should be well versed in a home-exercise plan. (Ex. 3).

16. Claimant testified at hearing that he continues to experience limitations in the use of his right arm and shoulder. Specifically, Claimant has difficulty reaching overhead to put on clothes, which causes pain on the outside of his shoulder, he cannot push a shopping cart with his right arm and cannot open or close heavy doors with his right hand. Claimant also testified he has difficulty holding his right arm at an angle to the side or backward and can hold it straight overhead without significant difficulty. Claimant testified that he believes his right shoulder continues to degrade and he is concerned that it will continue to do so. Claimant testified that he did not learn that he was scheduled for an IME with Dr. Raschbacher on August 4, 2020 until the evening of August 4, 2020, and that he had not been on his email for the previous few days.

17. Dr. Raschbacher was qualified as an expert in the field of occupational medicine and testified at hearing. Dr. Raschbacher testified that the shoulder joint is made up of four different components – the sternoclavicular joint (“SC” joint); acromioclavicular joint (“AC” joint); glenohumeral joint; synovial joint. He testified that the trapezius is not part of the shoulder musculature. He testified that Claimant did not have any complaints outside the shoulder, into his back or neck.

18. Claimant called Sander Orent, M.D., in rebuttal to Dr. Raschbacher’s testimony. Dr. Orent testified that the shoulder consists of a “ball-and-socket” joint which is the glenoid and the humeral head, the labrum, and surrounding the joint capsule. He testified that the AC joint and SC joint, and not the articulation of the scapula and the ribs. He further testified that the trapezius is a part of the shoulder girdle.

19. As the result of his work injury, Claimant underwent two surgeries on his shoulder on December 26, 2018 and July 10, 2019. As a result of these surgeries, Claimant has two surgical scars on his right shoulder. One scar measures approximately four and one-quarter inches long. The scar is visibly distinct from the surrounding skin. Claimant’s second scar is approximately one inch in length and is visibly distinct from the surrounding skin. The ALJ finds that Claimant should be awarded \$1,100 for disfigurement.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Conversion of Scheduled Impairment to Whole Person Impairment

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." See §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. See *Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998).

When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. See §8-42-107(8)(c), C.R.S.

Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. See *Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. See *DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

The ALJ must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional

impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs*, W.C. No. 4-536-198 (ICAO June 20, 2005). *In re Claim of Barnes*, 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

Claimant has established by a preponderance of the evidence that his right upper extremity rating should be converted to a whole person impairment. Section 8-42-107(2)(a), C.R.S., provides that a loss of use of the “arm at the shoulder” is a scheduled impairment, but does not include the shoulder itself. In other words, the section 8-42-107(2)(a) defines the anatomical extent of the arm. If an impairment extends beyond the proximal termination of the arm into the shoulder, Claimant is entitled to whole person impairment. Claimant's medical records and testimony, demonstrate that Claimant has intermittent difficulty sleeping due to his right shoulder, has difficulty pushing and pulling objects, and difficulty dressing and difficulty using his shoulder joint to move his arm overhead, and to the side. Additionally, Claimant's medical records demonstrate issues with his trapezius and scapular area. The situs of these impairments extend is beyond arm, and into the shoulder, trapezius, and scapular areas. Accordingly, the ALJ finds that Claimant has established by a preponderance of the evidence that his scheduled right upper extremity permanent impairment rating should be converted to a whole person impairment.

Grover Medical Benefits

Respondents are liable to provide such medical treatment “as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury.” § 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995).

An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, W. C. No. 4-543-730, (ICAO, July 14, 2006).

Claimant has failed to establish by a preponderance of the evidence he is entitled to reasonable, necessary, and related medical maintenance benefits designed to relieve the effects of his work-related injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n*, 795 P.2d 705 (1988). Claimant's authorized treating physicians, Dr. Siegel and Dr. Nelson did not recommend additional treatment after Claimant reached MMI. Dr. Siegel specifically noted that Claimant no additional medical treatment was reasonably expected to improve his condition. Claimant's fear of degeneration of his shoulder is not sufficient, in and of itself, to establish that it is more likely than not that additional treatment will either relieve the effects of this work injury or prevent further deterioration. Given that no treating provider has recommended or suggested the possibility of additional treatment, the ALJ finds that Claimant has failed to establish by a preponderance of the evidence and entitlement to *Grover* medical benefits.

Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained disfigurement as a direct and proximate result of the October 2, 2018 injury. Claimant should be awarded \$1,100 for disfigurement.

Respondent's Entitlement to Repayment of Disability Benefits

Pursuant to § 8-43-303(1) C.R.S., upon a *prima facie* showing that the claimant received an overpayment in benefits, the award shall be reopened solely as to overpayments and repayment shall be ordered. No such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or overpayment. *Id.* In 1997, The General Assembly amended subsections (1) and (2)(a) of § 8-43-303 to permit reopening of an award on grounds of fraud and overpayment, in addition to the already statutory reopening methods of error, mistake, or change in condition. *Haney v. Shaw, Stone, & Webster*, W.C. No. 4-796-763 (ICAO July 28, 2011), *citing Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds Benchmark/Elite, Inc., v. Simpson*, 232 P.3d 777 (Colo. 2010).

The 1997 amendments also provide that no such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or *overpayment*. *Haney*, at *1. The 1997 amendments added § 8-40-201(15.5) defining “overpayment” to mean:

[M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

There are thus three categories of possible overpayment pursuant to §8-40-201(15.5). *In Re Grandstaff*, No. 4-717-644 (ICAP, Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO*, 219 P.3d 354, 358 (Colo. App. 2009). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney*, W.C. No. 4-796-763 (ICAP, July 28, 2011).

Respondents have established by a preponderance of the evidence an entitlement to repayment of \$282.24 for overpayment of TTD benefits. Claimant was placed at MMI on May 11, 2020, and his right to TTD benefits thus terminated on that date pursuant to § 8-42-105 (3)(a), C.R.S. Respondents paid Claimant TTD benefits for both May 11, 2020 and May 12, 2020, dates for which Claimant was not entitled to TTD benefits. Respondents appropriately withheld \$282.24 from Claimant’s payment of PPD benefits.

Payment Of IME No-Show Fees

Neither the Workers Compensation Act, nor the WCRP rules require a claimant to reimburse a respondent for a cancellation fee associated with a missed IME appointment. Respondents incorrectly contend that § 8-43-404, C.R.S., permits the employer to recover the costs paid should a claimant fail to attend an examination. Section 8-43-404 (1)(b)(I), requires an employer or insurer request an examination to pay a claimant’s estimated costs of attending the examination. Section 8-43-404 (1)(b)(II), C.R.S., provides: “If an employer pays estimated expenses under this paragraph (b) and the claimant does not attend the examination, the employer or insurer may recover the costs paid for the employee's expenses from future indemnity benefits.” Thus, the Act only permits the employer to recover amounts paid to the claimant for attendance, and do not address the charges for a missed IME appointment. The Act does not address recovery of costs for payment of cancellation charges by the physician in the event of a cancelled or no-show examination.

This issue was addressed in *In re Claim of Fahler*, W.C. No. 5-111-049 (ICAO, Aug. 17, 2020), as follows:

“Here, we agree with the ALJ that §8-43-404(1)(b)(II), C.R.S. does not require the claimant to reimburse the respondents for the \$917.50 cancellation fee associated with a missed IME appointment. To interpret §8-

43-404(1)(b)(II), C.R.S. as the respondents are proposing, would require us to read words into the statute. However, we are precluded from reading nonexistent provisions into the Act. *Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374, 377 (Colo. App. 2016). The clear intent of §8-43-404(1)(b)(II), C.R.S. is to allow the employer or insurer to recover the advanced expenses made specifically to the claimant for his or her lodging, travel, and hotel costs associated with attending an IME, when the claimant misses such IME. Additionally, as found by the ALJ, we too are unaware of any Workers' Compensation Rule of Procedure that requires the claimant to reimburse the respondents for the costs of the missed IME." (Additional citations omitted).

Respondents argue that repayment of the IME cancellation fee is also warranted under C.R.C.P. 37 as a discovery sanction. The ALJ finds no discovery violation in this instance. No evidence was presented to indicate whether the IME date had been coordinated with Claimant's counsel prior to sending the notice or if the IME was unilaterally scheduled by Respondents. Respondents sent notice of the August 4, 2020 IME on July 28, 2020 at 4:18 p.m. to Claimant's counsel at pleadings@kaplanmorrell.com (the ALJ notes that Claimant's counsel's direct email address is britton@kaplanmorrell.com according to the certificate of service). Claimant's counsel was effectively provided four business-days-notice. Claimant credibly testified that he had not checked his email for a few days before the evening of August 4, 2020, and thus did not receive notice of the IME until after it was scheduled. When Claimant received notice of the re-scheduled IME he attended. The evidence does not demonstrate that Claimant knowingly or intentionally missed the August 4, 2020 IME with Dr. Raschbacher. The ALJ finds no discovery violation and the evidence demonstrates only a miscommunication. The ALJ finds no discovery violation or other legal basis for ordering Claimant to pay the cancellation fee for the missed August 4, 2020 IME. Respondent's request for reimbursement of the IME cancellation fee is denied.

ORDER

It is therefore ordered that:

1. Claimant's 11% permanent impairment rating for the right upper extremity is converted to a 11% whole person rating.
2. Claimant's request for a general order of medical maintenance benefits is denied and dismissed.
3. Respondents shall pay Claimant \$1,100.00 for disfigurement.
4. Respondents appropriately asserted a \$282.24 overpayment of Claimant's TTD benefits.

5. Respondent's request for reimbursement of \$1,122.00 for the August 4, 2020 IME cancellation fee is denied and dismissed.
6. Respondents shall pay statutory interest at the rate of 8% per annum on compensation benefits not paid when due.
7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: December 31, 2020.

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203
