

ISSUES

Whether the claimant was covered by the employer's workers' compensation policy on February 7, 2019.

The claimant's application for hearing in this matter endorsed other issues (including compensability and penalties). However, pursuant to an order issued by the ALJ on October 4, 2019, those additional issues were bifurcated and held in abeyance pending the outcome of the current issue. The only issue before ALJ at this time relates to the coverage of the claimant on February 7, 2019.

STIPULATED FACTS

At hearing, the parties submitted the following stipulated facts:

1. The employer is a limited liability company (LLC).
2. The claimant is a member of the LLC and owns more than 10 percent of the membership interest of the LLC. The claimant controls, supervises, and manages the LLC.
3. The employer obtained a workers' compensation policy with the insurer that was effective on August 8, 2016.
4. On August 9, 2016, the claimant signed a "Rejection of Coverage by Corporate Officers or Members of a Limited Liability Company (LLC)" form.
5. On August 9, 2016, the insurer received the claimant's rejection of coverage.

FINDINGS OF FACT

1. The employer operates a promotion products business. The claimant has operated the employer business for 11 years. The claimant's job duties include everything from accounting, communicating with customers, and delivering product.
2. The claimant testified that prior to August 2019 the employer did not have workers' compensation coverage. The claimant also testified that the employer received notification from the State of Colorado that workers' compensation coverage was required for the company.
3. The claimant contacted his insurance agent, Ken R[Redacted], regarding obtaining such a policy. Mr. R[Redacted] is an agent with the insurer. He informed the claimant that the insurer does provide workers' compensation insurance policies. The

claimant requested a quote for a policy. Mr. R[Redacted] prepared a premium estimate for the employer of \$240.00.

4. The application for a workers' compensation policy for the employer listed the claimant as the Owner/CEO. In addition, the application was notated to indicate that the claimant was to be excluded from the policy. The application also noted a premium of \$240.00. The employer paid the insurer the premium of \$240.00.

5. The employer's workers' compensation policy became effective on August 8, 2019. The policy included an exclusions section that stated that the policy did not cover the claimant.

6. As indicated in the stipulated facts, on August 9, 2016, the claimant executed a document in which he refused coverage as an "owner" of the employer business. Language included in that form states, in part:

I hereby elect to reject workers' compensation coverage based on C.R.S. § 8-41-202 (Non-agricultural).

By signing this form, you are acknowledging your rejection of all benefits under the Workers' Compensation Act. You are further acknowledging that you are an owner of . . . at least 10% of the membership of the LLC at all times, and control, supervise or manage the business affairs of the . . . LLC. (*emphasis in the original*).

7. Despite signing the form identified above, the claimant testified that he believed that he was covered by the policy. The claimant also testified that he did not understand the document he signed.

8. The claimant also testified that in the days after he signed the rejection of coverage document he contacted Mr. R[Redacted] to tell him that he did not wish to proceed. The claimant further testified that he has not signed any document in which he rescinded his rejection of coverage.

9. On February 11, 2019, the claimant contacted Mr. R[Redacted] regarding filing a claim for an occupational injury. On the employer's behalf, Mr. R[Redacted] completed and filed an Employer's First Report of Injury. The body parts affected were listed as "multiple upper extremities". Thereafter, the claimant received some medical treatment.

10. On May 13, 2019, the claimant attended an independent medical examination (IME) with Dr. Jonathan Sollender.¹ At the time of the IME, the claimant reported symptoms in his bilateral hands and wrists. Those symptoms included numbness and tingling. In addition, the claimant report pain in his bilateral forearms.

¹ Although the issues of causation and compensability are not at issue at this time, the ALJ notes the report of Dr. Sollender to assist with an understanding of the overall timeline of events.

11. On May 28, 2019, the insurer denied the claimant's claim pending the completion of the IME process. Thereafter on June 13, 2019, the insurer denied the claimant's claim. The reason provided was that the injury was not work related.

12. Later the claimant learned from respondents' counsel² that the insurer would continue to deny the claim because the claimant had refused coverage, as evidenced by the document signed on August 9, 2016.

13. The claimant argues that he should have been covered by the employer's policy because he believed he was covered and he did not understand that he was excluded. The ALJ is not persuaded by the claimant's assertions. The claimant executed a document in which he rejected coverage. He has not rescinded that rejection.

14. At hearing, the claimant presented documents pertaining to an audit conducted by a third party on behalf of the insurer. In forms relating to that audit, the claimant included himself as an "employee". Similarly, the employer reported to the Colorado Department of Labor, Division of Unemployment Insurance that the claimant was an employee. As the ALJ understands the claimant's arguments, these documents demonstrate that the claimant believed he was an employee of the employer.

15. Mr. R[Redacted] testified by deposition. Mr. R[Redacted] testified that the claimant was not to be covered by the employer's workers' compensation policy. Mr. R[Redacted] also testified that, in his experience, owners of limited liability companies typically reject coverage for themselves because it results in monetary savings. Mr. R[Redacted] prepared a quote for the estimated premium, for the employer with the claimant excluded from coverage. The policy was issued excluding the claimant. Mr. R[Redacted] testified that the claimant has not expressed to him, verbally or in writing, that he intended to revoke his rejection of coverage.

16. Debra B[Redacted], Underwriting Team Manager with the insurer also testified by deposition. Ms. B[Redacted] testified that in the application for a workers' compensation policy the claimant was to be excluded from the policy. Ms. B[Redacted] also testified that the premium for the employer would have been approximately \$184.00 more if the claimant had been included in the coverage. Ms. B[Redacted] testified that the insurer has not received revocation of the claimant's rejection of coverage.

17. The ALJ does not find the claimant's testimony to be credible or persuasive. The claimant first asserts that he did not understand the impact of signing the revocation, but also asserts that he instructed his insurance agent to withhold the form.

18. The ALJ credits the documents entered into evidence and finds that the claimant has failed to demonstrate that it is more likely than not that he was covered by the employer's workers' compensation policy.

² The claimant was unrepresented at that time.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (the Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. Section 8-42-202, C.R.S., provides:

(1) Notwithstanding any provisions of articles 40 to 47 of this title to the contrary, a corporate officer of a corporation or a member of a limited liability company **may elect to reject the provisions of articles 40 to 47 of this title**. If so elected, said corporate officer or member shall provide written notice on a form approved by the division through a rule promulgated by the director of such election to the worker's compensation insurer of the employing corporation or company, if any, by certified mail. If there is no workers' compensation insurance company, the notice shall be provided to the division by certified mail. Such notice shall become effective the day following receipt of said notice by the insurer or the division.

(2) A corporate officer's or member's election to reject the provisions of articles 40 to 47 of this title **shall continue in effect** so long as the corporation's or company's insurance policy is in effect or until said officer or member, **by written notice to the insurer, revokes the election to reject said provisions**.

(3) Nothing in this section shall be construed to limit the responsibility of corporations or limited liability companies to provide coverage for their employees as required under articles 40 to 47 of this title. An election to reject coverage pursuant to this section may not be made a condition of employment.

(4) For the purposes of this section:

(a) "Corporate officer" means the chairperson of the board, president, vice-president, secretary, or treasurer who is an owner of at least ten percent of the stock of the corporation and who controls, supervises, or manages the business affairs of the corporation, as attested to by the secretary of the corporation at the time of the election.

(b) "Member" means an owner of at least ten percent of the membership interest of the limited liability company at all times and who controls, supervises, or manages the business affairs of the limited liability company. (*emphasis added*).

5. A business owner "who exercises his right to reject coverage under [Section] 8-41-202 is not considered an employee under the Act." *Boyle v. Red Mountain Builders, Inc.*, W.C. No. 4-778-626, (ICAO Feb. 18, 2010) *citing Kelly v. Mile Hi Single Ply, Inc.* 890 P.2d 1161 (Colo. 1995).

6. Section 8-41-202, C.R.S. was introduced in 1983 in response to business owners' complaints that the Act's self-coverage requirement "unduly burdened their operations." *Kelly* at 1163. This amendment "provided two primary benefits for small business owners: the right to reject compensation coverage and to avoid its premiums, and the corresponding right to choose their coverage without unnecessary duplication from the compensation scheme." *Kelly* at 1164.

7. The ALJ concludes that the claimant was not covered by the employer's workers' compensation policy as a result of the claimant's rejection of coverage. The statute is very clear that such a rejection continues until the individual revokes their refusal of coverage in writing. The ALJ further concludes that the claimant did not revoke his rejection in writing. Therefore, the claimant continued to be excluded from coverage.

8. As the ALJ understands the claimant's argument, he believed he was covered by the employer's policy, and therefore he should be covered. The ALJ finds nothing in Section 8-42-202, C.R.S that provides for consideration of a claimant's belief or understanding. On the contrary, the statute is quite clear that once the rejection of coverage is executed, it can only be undone by a written revocation. Therefore, regardless of what the claimant thought or believed, he was not covered by the employer's policy.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated this 2nd day of January 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**FINDINGS OF FACT,
CONCLUSIONS OF LAW, AND ORDER**

In the Matter of the Workers' Compensation Claim of:

[Redacted],
Claimant,

vs.

[Redacted],
Employer,

and

[Redacted],
Insurer,
Respondents.

Hearing in this matter was held on October 30, 2019 before Administrative Law Judge Kimberly Turnbow at the Office of Administrative Courts in Denver, Colorado. Claimant was represented by [Redacted], Esq. Respondents, [Redacted], were represented by [Redacted], Esq. The proceedings were digitally recorded in courtroom 3 from 1:30 p.m. until 2:04 p.m. The Judge then held the record open until November 25, 2019 so that the parties could conduct the post-hearing deposition of Dr. Timothy O'Brien on November 11, 2019, and submit position statements.

In this order, the ALJ refers to [Redacted] as "Claimant," [Redacted], as "Employer," [Redacted], as "Insurer," and Employer and Insurer collectively as "Respondents."

The ALJ admitted Claimant's exhibits 1 through 13, and Respondents' exhibits A through J which into evidence without objection.

Also in this order, "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2019); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

The issues to be determined by this decision are the following issues:

- Whether Claimant has proven by a preponderance of the evidence that she suffered a compensable injury on March 10, 2018?
- If Claimant suffered a compensable injury, has she proven that her ongoing medical conditions are causally related to the alleged work injury?
- If Claimant suffered a compensable injury, has she proven an entitlement to ongoing reasonable, necessary, and causally related medical benefits?

STIPULATION

The parties reached the following stipulations:

1. Claimant's average weekly wage is \$644.00.

PROPOSED FINDINGS OF FACT

Based upon the evidence presented at hearing, Respondents request the ALJ find as fact:

1. Claimant originally reported her injury to the employer as a non-work injury, and obtained wage benefits for five months under a Short Term Disability Policy.
2. Claimant testified that she received short term disability for her injury from March through July 2018.
3. Claimant's short term disability report does not mention any work injury. Rather, the Disability Report is blank where it asks about whether the injury was work related. Claimant testified that she told the short term disability adjuster that her injury was work-related, but this information does not appear in the call transcript information.
4. When Claimant's short term disability benefits ended, she returned to work full duty.
5. Claimant then filed her workers' claim for compensation on March 20, 2019.
6. Claimant filed her workers' claim for compensation over a year after the alleged injury of March 10, 2018, and just one week before she gave notice to quit her job with Employer.
7. Claimant's wage records show that Employer last paid Claimant March 24, 2019. Claimant began her employment with Cherry Creek Schools as a health tech on April 8, 2019.

8. Claimant testified that she injured her left shoulder on March 10, 2018 while lifting a trash can.

9. Claimant's initial medical reports do not mention a work-related injury. Rather, they repeatedly confirm ongoing neck complaints for approximately one year prior to the alleged injury.

10. Claimant's initial medical reports describe Claimant felt numbness in her left arm which began with no specific precipitating event or incident.

11. On March 11, 2018 Claimant reported to Dr. Elma Kreso that she felt something vibrating in her left shoulder while she was at work the day before. Claimant stated that she was drilling when the vibrating feeling occurred, and that she had experienced the same issues in the past. Claimant reported the same issue had happened two weeks earlier, and she used apap with icy hot. Claimant also reported she had this same issue four or five times in the past, and the first time was about one year prior to this visit.

12. On March 14, 2018 Claimant returned to Dr. Kreso and reported that she felt like an electric shock was heading down her arm when she turned her head to the left.

13. Dr. Kreso ordered cervical spine x-rays and opined that they did not show anything concerning, just some arthritis.

14. Claimant attended physical therapy with Jason Delavan on March 19, 2018. Mr. Delavan notes that Claimant reported she had sporadic left sided neck pain for about a year, but felt that the pain had gotten worse in the past one to two weeks. Claimant did not report any work-related mechanism of injury nor did she allege an incident involving lifting a trash can.

15. At hearing Claimant repeatedly testified that she disagreed with the medical records and that they were incorrect. The ALJ is not persuaded by Claimant's testimony that her medical records are in error.

16. The persuasive evidence supports a finding that Claimant had longstanding complaints to her left shoulder and neck that were not work related. Dr. Kreso and Therapist Delavan outline Claimant's reports of symptoms for about a year prior to her alleged work injury.

17. Claimant testified that she never had any left shoulder and neck complaints in the past. However, Claimant's complaints of back pain date back to 2009. In a pain questionnaire from 2009, Claimant reported that she had back pain. Claimant also had complaints of neck pain with left shoulder radiation at an appointment with Dr. Freeman on January 28, 2011. Claimant reported that she had been experiencing chest pain for four or five years, and that the pain usually started in the chest and traveled up to the neck with left shoulder radiation.

18. Dr. O'Brien testified that Claimant's medical records indicated that Claimant had prior complaints of shoulder pain, and that she might have received a prior injection.

19. When questioned about these prior complaints of pain, Claimant testified that she did not remember them. The ALJ finds these medical records more persuasive than Claimant's testimony.

20. During Claimant's testimony, she became confused as to which shoulder was injured. Claimant's medical history also mentions a right shoulder injury during her treatment with Dr. Jared White. Both Claimant's testimony and the medical report from Dr. White are inconsistent with an alleged left shoulder injury.

21. Dr. O'Brien opined that Claimant had revised her historical input regarding the mechanism of her injury as the March 11, 2018 reports do not mention dumping garbage into a dumpster, Claimant's revised mechanism of injury.

22. Dr. O'Brien remarked on inconsistencies in Claimant's reporting. For example, when Claimant saw Dr. White on May 14, 2018, she reported a six-month history of left shoulder pain that dated back to a lifting episode with a trash can. Dr. O'Brien explained that this would place the onset of Claimant's symptomatology in December 2017, not on March 10, 2018 as she alleges. Dr. O'Brien's testimony was consistent with his opinions expressed in his medical report.

23. Dr. O'Brien testified that Claimant's medical records were not consistent with the history she provided to him during his IME. Dr. O'Brien further testified that not only were there inconsistencies in the records themselves, but there were inconsistencies between the records and the reporting provided at the time of his examination.

24. Dr. O'Brien testified that on examination, Claimant's muscular development in both arms was the same, but that there was a dramatic difference in grip strength, which was only explained by nonorganic factors. Dr. O'Brien testified that the rest of the examination was essentially normal.

25. Dr. O'Brien testified that Claimant's examination demonstrated only nonorganic or magnified pain.

26. Dr. O'Brien testified that Claimant had a normal musculoskeletal exam to her neck and shoulder and that her subjective complaints of pain at the time of his examination were all non-organically based. Dr. O'Brien further testified that there was no work injury documented in the records, and that there was no isolated event that could explain the onset of Claimant's symptoms. Dr. O'Brien ultimately testified that he did not believe an occupational exposure caused her symptoms, and that she did not have any injury.

27. Claimant did not introduce opinions from any of her physicians that causally-related injuries to her alleged work injury.

28. Claimant's physicians found her condition to be degenerative. In an off-work note dated July 2018, Dr. Hancock wrote that Claimant "is being treated by Dr. Hancock for numbness and tingling in arms per *degenerative spinal condition*."

29. Dr. Jared White believed that the majority of Claimant's shoulder symptoms were actually stemming from her cervical spine. Dr. White opined that Claimant had mild symptoms on physical examination with mild complaints of actual shoulder pain. He

suspected “that the majority of the patient’s pain is secondary to her cervical spine with radiculopathy causing numbness in the first through third digits.” Dr. White did not even refer Claimant for a left shoulder MRI, but rather referred her for a cervical MRI. As evidenced above, the cervical MRI revealed degenerative changes.

30. The Cervical Spine MRI performed on June 7, 2018 revealed a disc protrusion at C4-C6 producing central stenosis, multilevel disc degeneration and facet arthropathy.

31. The Left Shoulder MRI performed on February 20, 2019 revealed no rotator cuff tear. Rather it showed mild ac joint osteoarthritis, minimal supraspinatus tendinosis, no muscle edema or atrophy, mild degeneration and fraying of the posterior labrum, and no bone contusion or fracture. There were no cartilage defects or reactive bone marrow edema. There was no joint effusion. These findings are not traumatic in nature, but rather show that Claimant had a degenerative condition. Dr. O’Brien concluded Claimant had profoundly positive nonorganic physical findings on his examination. Additionally, claimant had historical revisions of her mechanism of injury and absence of reporting of any type of work-related injury contemporaneous to the onset of her symptoms.

32. Dr. Shenoj reviewed the left shoulder MRI and opined that there was no rotator cuff tear, but rather mild inflammation of the bursa, which was not surgical or serious.

33. Dr. O’Brien opined that the imaging reports, including the MRI scan and the cervical spine CT, demonstrated chronic age-related degenerative changes and demonstrated no evidence of any type of acute injury. Dr. O’Brien testified that the diagnostic imaging reports showed arthritis of the neck with longstanding degenerative changes, and that there was no evidence of an acute injury such as a fracture or dislocation. During his examination, Dr. O’Brien found no redness, bruising, or swelling in the left shoulder area. Claimant’s range of motion was bilaterally symmetric and full.

34. Ultimately, Dr. O’Brien opined that Claimant’s onset of symptomatology on March 10, 2018 was a manifestation of her personal health and in no way causally related to any work activity or isolated injury event that occurred on that date.

35. The ALJ finds that Claimant has not proven by a preponderance of the evidence that she suffered a compensable injury on March 10, 2018.

CONCLUSIONS OF LAW

The purpose of the Workers’ Compensation Act of Colorado (Act), sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers’ compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The claimant bears the burden of proving by a preponderance of the evidence that there is a direct causal relationship between the employment and the alleged injuries. Section 8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The determination of whether there is a sufficient nexus or causal relationship between the claimant's employment and the injury is generally one of fact. *Hembry v. Industrial Claim Appeals Office* 878 P.2d 114 (Colo. App. 1994). The mere temporal relationship between the claimant's movements and the onset of symptoms does not necessitate a causal connection between the symptoms and the industrial event. *Scully v. Hooters*, W.C. No. 4-745-712, 2008 WL 4790420, at *3 (Oct. 27, 2008). There is no presumption that an injury that occurs in the course of a workers' employment also arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106 (1968).

Claimant has not persuaded the ALJ that her complaints of left arm tingling while at work are causally connected to her employment, and arise out of the employment. Claimant had complained of this condition multiple times throughout the prior decade, and the temporal relationship of numbness occurring at work does not necessitate a finding of a causal relationship to the employment.

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 2993.

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2013). See *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

After reviewing all the evidence, the ALJ finds that claimant did not prove that she suffered a compensable injury. Specifically, the following evidence confirms that a work-injury did not occur:

- Claimant failed to report the alleged injury to her employer until her workers' claim for compensation was filed on March 20, 2019, over a year after the alleged injury;
- Despite alleging an incident where Claimant was lifting a trash can, Claimant's medical records do not support that a trash can lifting incident ever occurred on March 10, 2018;
- Claimant's own reports of injury throughout the initial medical records indicate that she had suffered from this condition for about a year prior to the alleged event on March 10, 2018, and that she had been treating it with icy hot and acetaminophen;
- Claimant's testimony lacked credibility throughout the hearing. She repeatedly denied the information contained in her medical and short term disability records;
- Claimant falsely testified that she had no prior neck or left shoulder problems;
- Claimant's medical records indicate a longstanding, chronic history of neck and left shoulder complaints;
- The medical records and diagnostic testing supports a finding that these symptoms are chronic and degenerative in nature;
- None of Claimant's medical providers opined regarding the causal relationship between Claimant's injuries and her employment; and
- Dr. O'Brien credibly testified that Claimant did not sustain a work-injury, that her reports of injury were inconsistent, that her examination was essentially normal, and that there were only findings of nonorganic pain.

The ALJ concludes that Claimant failed to prove that an accident occurred which caused the need for a medical treatment and produced a work injury. The ALJ finds it more likely Claimant suffered from a personal condition which was pre-existing and not exacerbated by any activity or incident at work. The ALJ further concludes that Claimant did not sustain a compensable injury arising out of and in the course of her employment on March 10, 2018.

ORDER

The ALJ orders the following:

1. Claimant failed to prove by a preponderance of the evidence that she suffered a compensable injury on March 10, 2018. As a result, this claim is denied and dismissed with prejudice.

ENTERED this 6th day of January 2020.

/s/ Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, #400
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary total disability (“TTD”) benefits for the period of September 22, 2018 to January 4, 2019 and from March 30, 2019 until termination by law?
- Whether claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary partial disability (“TPD”) benefits for the period of August 4, 2018 to September 21, 2018?
- Whether respondents have established that claimant committed a volitional act that resulted in her termination of employment pursuant to Sections 8-42-103(1)(g) and 8-42-105(4), C.R.S.
- The parties stipulated at hearing to an average weekly wage of \$520.00.
- The parties stipulated at hearing that if temporary disability benefits are awarded, the following amounts shall be paid by respondents:
 - TPD benefits in the amount of \$337.61 for August 4, 2018 to September 21, 2018.
 - TTD benefits in the amount of \$742.68 for September 22, 2018 to October 6, 2018.
 - TTD benefits in the amount of \$174.01 for October 7, 2018 to October 24, 2018 due to an employment offset allowed by respondents of \$717.00.
 - TTD benefits in the amount of \$3,565.75 for October 25, 2018 to January 4, 2019.
 - TPD benefits in the amount of \$1,323.57 for January 5, 2019 to March 29, 2019.
 - TTD benefits in the amount of \$11,291.54 for March 30, 2019 to November 12, 2019.

FINDINGS OF FACT

1. Claimant was employed by employer as a tire technician. Claimant began working for employer in September 2017. Claimant’s job duties included tire repair and tire replacement, stock tires, inventory count, cleaning the restrooms and showers, maintaining the grass area and maintenance of the shop.

2. Claimant sustained an admitted injury on August 4, 2018 when she smashed her hand in a tire jack. Claimant lacerated her left index finger and was treated at the emergency room. Claimant was discharged from the ER and instructed to follow up with an occupational medicine doctor within one week. Claimant was instructed by the ER physician to keep her wound covered until healed. Claimant was examined by Dr. Fitzgerald on August 6, 2018. Dr. Fitzgerald provided claimant with work restrictions that limited claimant to light duty work for one week on August 6, 2018.

3. At the time of claimant's injury, claimant was working the overnight shift for employer. Claimant had started working the overnight shift on July 23, 2018. Claimant's overnight shifts would last from 11:00 p.m. until 7:30 a.m. Following claimant's injury, claimant continued working the overnight shift initially, but due to the fact that claimant was on light duty, and no other technicians were scheduled to work the overnight shift, claimant was switched to a different shift. Claimant testified at hearing that when she was on light duty, she would have to apologize to customers and wait for the next technician to arrive if her work duties required her to perform work that was outside of her restrictions.

4. According to the wage records, claimant worked the night shift on August 6 through August 10, 2018. Claimant filed a complaint with her employer on August 13, 2018 against her manager, Mr. H[Redacted]. According to the complaint, Mr. H[Redacted] became argumentative with claimant because he wanted her to perform shop duties that she was unable to perform due to her light duty work status. Claimant requested to be anonymous in the complaint.

5. Claimant had been written up on two occasions prior to her work injury. Claimant was initially written up by Mr. H[Redacted] on April 9, 2018 when she called in sick. Mr. H[Redacted] noted in the write up that claimant had called in, been late or left early in her shifts 10 times since January 19, 2018. Claimant was written up again on July 6, 2018 for not emptying the trash barrels at the store prior to her shift or after her shift.

6. After claimant filed her complaint against her manager, claimant was written up by employer on August 24, 2018. In the August 24, 2018, claimant was written up for being late or leaving early four days since August 16, 2018 and having a no call/no show on August 22, 2018.

7. Notably, claimant's first day back with employer was August 15, 2018 at which time she was scheduled to work the overnight shift. Claimant testified at hearing that the shifts for employer were from 7:00 a.m. to 3:30 p.m. and from 3:00 p.m. to 11:30 p.m. with the overnight shift being from 11:00 p.m. until 7:30 a.m. with each shift including a ½ hour meal break. Respondents cross-examined claimant regarding the scheduled start and end times for the shifts for employer, but the ALJ finds claimant's testimony in this regard to be credible and persuasive as it would provide for three 8 hour shifts with some overlap between the shifts. Moreover, claimant's testimony is consistent with the time records entered into evidence that show shifts from 7:00 a.m. to 3:30 p.m., 3:00 p.m. to 11:30 p.m. and from 11:00 p.m. to 7:30 a.m.

8. Claimant testified at hearing that she was late for work on August 15, 2018 and had left work early on August 16, 2018 after her son began throwing up. Claimant testified she contacted the supervisor on duty in the store before leaving early on August 16, 2018 and was not spoken to about an issue with her leaving early until August 24, 2018.

9. Claimant's schedule changed from the overnight shift to the day shift on or about August 22, 2018. Claimant testified that when she had her shift change from the overnight shift to the day shift, she was not notified of it other than her scheduled start time was changed on the posted schedule. Claimant testified that when her schedule changed, she spoke to her supervisor and informed him that she would not be able to make be at her employer at the scheduled start time of 7:30 due to the fact that she had to get her kids to school.

10. With regard to the no call/no show incident on August 22, 2018 that claimant was written up for on August 24, 2018, claimant testified that she was scheduled to work the overnight shift on August 21, 2018 to 7:00 a.m. on August 22. Claimant testified that the schedule had her working the August 22, 2018 shift starting at 7:00 a.m., which would have kept her at the tire shop for a total of 17 hours from 11:00 p.m. the night before until 3:00 p.m. the next day. Claimant testified that she spoke to her supervisor about this scheduling mistake and she was told to go home after her shift and return the next day at 7:00 a.m.

11. According to the employment records entered by employer at hearing and the arguments made by claimant in the position statement, claimant was scheduled to work on August 22, 2018 at 10:00 a.m. for an 8 ½ hour shift after her overnight shift ended. This would have required claimant to work a full shift, drive home and be off for less than 3 hours before returning for another full shift. Insofar as employer scheduled claimant to work this shift in this manner, the ALJ finds the request unreasonable and finds no credible evidence of any extenuating circumstances that would explain a rational basis to request the claimant work such a schedule.

12. While there is some contradictions between claimant's testimony regarding her scheduled start time on August 22, 2018 and the employment records reported start time, The ALJ finds the neither schedule is a reasonable request of an employee who is changing from overnight shifts to day shifts.

13. The ALJ credits claimant's testimony with regard to the no call/no show incident on August 22, 2018 as it is corroborated by the time records that were entered into evidence at hearing. Moreover, no testimony was provided by respondents to explain the no call/no show incident beyond what was explained by claimant in her testimony at hearing. The ALJ further finds that the request by employer to have the claimant work two 8 hour shifts with less than a three hour break between the shifts, ostensibly due to a change in the schedule to be unreasonable, if that was the intent of the employer. Instead, claimant logged a total of 7.4 hours on the overnight shift stretching from the night of August 21, 2018 to the morning of August 22, 2018, followed

by 8.49 hours on August 23, 2018. Claimant was then written up for the no call/no show when she went to work on August 24, 2018.

14. According to the employment records, claimant had two more instances of being late after August 24, 2018. The first occurred on September 7, 2018 (which was documented by employer as occurring on September 8, 2018, but the time reports appear to have this incident occurring on September 7) and the second on September 17, 2018. According to the employer records, claimant last worked for employer on September 19, 2018 and was terminated on September 21, 2018.

15. According to the "Additional Comments" on claimant's termination paperwork filled out by Mr. H[Redacted], claimant had been "very problematic through the course of her employment since I have started here as the Tire Shop Manager ... Many times I have tried to do anything I can to help accommodate any troubling situation, much more than any other Employee. There are other occasions I should have documented attendance or behavioral issue (the main issues) but chose not to hoping that she would improve her career. This is also why I have been more attentive in making sure I am properly noting any issues I have to help give the broader scope of what I have had to deal with." At the end of the additional comments, the author noted that claimant "is currently on light duty due to an incident in which the adjustable portion of a jack stand, when released, pinched and damaged her index finger while she was doing some work in the shop roughly 4-5 weeks ago.... We are also waiting on the claims adjuster so she can go through therapy to be able to get back to full work responsibility."

16. After being terminated from her employment by Employer, claimant began working for Planet Fitness for a period of time. Claimant was subsequently terminated from her position with Planet Fitness on March 29, 2019. Claimant testified she was terminated from Planet Fitness due to missing work.

17. Claimant was referred for therapy of her hand on March 12, 2019 by Dr. Czpala. Claimant reported to Dr. Czpala on March 27, 2019 that she thought the therapy was helpful initially, but the pain had not really improved. Claimant was provided with work restrictions by Dr. Czpala on June 12, 2019 of no lifting more than 20 pounds. Claimant was also referred to Dr. Lewis and Dr. Rooks for evaluation and treatment. Claimant continues to be under active care for the injury.

18. The ALJ credits claimant's testimony at hearing that she received permission on August 16, 2019 to leave early when her son was throwing up. The ALJ further credits claimant's testimony that she was advised to not work the 10:00 a.m. shift on August 22, 2019. The ALJ further finds claimant's testimony credible that she spoke to Mr. H[Redacted] about issues involving her ability to appear at work for the 7:00 a.m. shifts due to the school schedule for her children. The ALJ finds this testimony corroborated by the employee comments on the August 24, 2018 write up where claimant notes that she had spoken to Mr. H[Redacted] on three occasions about her schedule and he had originally allowed her permission to show up at a set time after her scheduled start time.

19. Under the circumstances of this case, the ALJ finds that respondents have failed to establish that claimant was responsible for her termination of employment. The ALJ credits claimant's testimony that she had permission to leave early on August 16, 2018 and was not required to show up for her shift on August 22, 2018 after just finishing her overnight shift. The ALJ further finds claimant's testimony credible that she had originally be provided with permission to work a schedule that allowed her to take care of her child care responsibilities when her shift changed as this is reflected in her comments after being written up. While claimant was terminated for other issues as reflected in Mr. H[Redacted]' notes in the termination paperwork, including "behavioral issues (the main issues)", no credible evidence was presented at hearing to establish what the behavioral issues were and to what extent they played a part in claimant's termination and whether those behavioral issues constituted a volitional act on the part of claimant.

20. With regard to the issue of temporary disability benefits, the ALJ notes that claimant's lost time from work for the period of August 4, 2018 through September 21, 2018 was according to claimant, related to issues other than her injury, including her having to leave work early for a sick child. Additionally, according to the time reports entered into evidence at hearing, on August 13 and August 14, 2018, claimant was not at work due to "vac". The ALJ interprets these records to mean claimant had taken vacation during these two days and the missed time from work was not due to her work injury. The ALJ therefore determines that claimant has failed to establish that it is more likely than not that the wage loss prior to September 21, 2018 was related to claimant's work injury.

21. The ALJ finds that claimant had not been released to return to work regular duty as of the time of her termination of employment and was still under work restrictions as established by Dr. Fitzgerald at the time she was terminated from her work with employer. Due to the fact that claimant was under work restrictions at the time of her termination, and those work restrictions resulted in a loss of wages for employer, claimant is entitled to an award of temporary total disability benefits beginning September 22, 2018.

22. Once the temporary disability benefits have been established by claimant effective September 22, 2018, those benefits continue until there is a basis for termination of the benefits pursuant to the Colorado Workers' Compensation Act. The ALJ finds that there is no credible evidence of a basis for terminating the temporary disability benefits established by the record, and therefore orders that temporary disability benefits in the amounts established by the stipulation of the parties be paid beginning September 22, 2018.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

4. As found, claimant has failed to establish by a preponderance of the evidence that her wage loss for the period of August 4, 2018 through September 21, 2018 was related to her work injury. As found, claimant's testimony during that she was required to leave work early on August 16, 2018 for a sick child and for vacation time. Due to the fact that claimant has failed to establish that her loss of earnings was related to the work injury, claimant's request for TPD benefits during this period of time is denied.

5. Claimant was terminated from work by employer on September 21, 2018. Claimant was under work restrictions as established by Dr. Fitzgerald that limited

claimant to light duty work as of the time of her termination. As found, claimant has established by a preponderance of the evidence that she is entitled to an award of TTD benefits commencing September 22, 2018 and continuing until terminated by law or statute.

6. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases “where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury.” In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term “responsible” reintroduced into the Workers’ Compensation Act the concept of “fault” applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of “fault” as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, “fault” requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. See *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

7. As found, respondents have failed to establish that claimant committed a volitional act that resulted in her termination of employment. As found, claimant’s testimony that she had permission to leave work early on August 16, 2018 is found to be credible under the circumstances. As found, claimant’s testimony that she did not violate the no call/no show policy by failing to show up for work at 10:00 a.m. on August 22, 2018 after finishing her overnight shift a few hours earlier is found to be credible. As found, claimant’s testimony that she had spoken to her supervisor and been given initial permission to work a schedule that allowed for her early morning child care is found to be credible.

8. Therefore, the ALJ orders respondents to provide claimant with temporary disability benefits pursuant to the stipulated amounts set forth beginning September 22, 2018 and continuing until terminated by law or statute.

ORDER

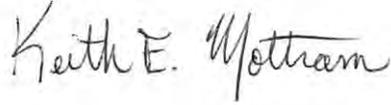

It is therefore ordered:

1. Respondents shall pay claimant temporary disability benefits pursuant to the stipulated amounts as reflected in this Order for the periods of September 22, 2018 and continuing until terminated by law or statute.

2. Claimant’s request for TPD benefits for the period of August 4, 2018 through September 21, 2018 in the amount of \$337.61 is denied and dismissed.

3. All issues not herein decided are reserved for future determination.

Dated: January 6, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-110-490-001**

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the knee surgery recommended by Dr. William Sterett is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted April 4, 2019 work injury.

STIPULATIONS

At hearing, the parties stipulated that if the left knee surgery is found reasonable, necessary, and related to the work injury, the claimant is entitled to temporary total disability (TTD) benefits beginning June 15, 2019 and ongoing.

In addition, the parties agreed to hold in abeyance the following issues: 1) whether the claimant was responsible for termination of his employment; and 2) whether the claimant is entitled to TTD benefits from April 4, 2019 through June 14, 2019.

FINDINGS OF FACT

1. The claimant worked at the employer's restaurant in Vail, Colorado. The claimant began his employment in June 2018 as a sous chef. However, the claimant was later promoted to the position of Executive Chef.

2. On April 4, 2019, the claimant was at work performing his normal job duties and assisted one of his coworkers with dumping a large pot of boiled potatoes. During this process, the claimant was standing on a drain cover, and the drain cover moved. This resulted in the claimant's left foot slipping into the drain, causing his left knee to twist. The claimant testified that his left foot slipped four to six inches into the drain. The claimant reported the incident to the employer. The claimant testified that prior to the April 4, 2019 incident he had not experienced left knee pain or other symptoms.

3. At the direction of the employer, the claimant sought medical treatment in the emergency department (ED) with Vail Health on April 8, 2019. At that time, the claimant was seen by Dr. Mark Brownson and reported aching pain and swelling in his left knee. An x-ray of the claimant's left knee was taken. Based upon the x-ray, Dr. Brownson diagnosed a sprain of the claimant's left medial cruciate ligament (MCL). The claimant was provided crutches and a knee brace.

4. The claimant testified that his employment with the employer ended on April 9, 2019.

5. Subsequently, the claimant began treatment with Lucia London, CNP with Vail Health/Occupational Health. This provider is the claimant's authorized treating provider (ATP) for this claim. The claimant was first seen by Ms. London on April 17, 2019. At that time, Ms. London diagnosed "possible knee meniscus pain". Ms. London recommended ice, a hinged knee brace, crutches, and over the counter medications. In addition, Ms. London ordered a magnetic resonance image (MRI) of the claimant's left knee.

6. On May 2, 2019, an MRI of the claimant's left knee showed mild insertional quadriceps tendinosis without tear. The radiologist, Dr. Trystain Johnson, noted that it was an "unremarkable exam" and there was no meniscal tear.

7. On May 3, 2019, the claimant returned to Ms. London. On that date, Ms. London noted that the MRI was normal. However, the claimant was reporting continued left knee pain and a "clunking" sensation. Ms. London recommended physical therapy and referred the claimant to Vail Summit Orthopaedics for consultation.

8. On May 8, 2019, the claimant was seen at Vail Summit Orthopaedics by Jonathan Walker, PA-C. At that time, the claimant reported ongoing left knee pain. Mr. Walker recommended conservative treatment including physical therapy and a steroid injection. On that same date, Dr. William Sterett administered an intra-articular injection.

9. On May 24, 2019, the claimant returned to Ms. London and reported that since the injection administered by Dr. Sterett "[t]here has been absolutely no improvement in pain". Ms. London continued to recommend physical therapy, ice, and pain medications.

10. On May 31, 2019, the claimant returned to Dr. Sterett and reported that he had relief from the injection that lasted one to two days. In addition, the claimant was experiencing "locking and catching like symptoms". Dr. Sterett recommended that the claimant undergo a left knee diagnostic arthroscopy, lysis of adhesion, with synovectomy. On June 3, 2019, a request for authorization of the recommended surgery was submitted to the insurer.

11. The respondents filed a General Admission of Liability (GAL) on June 27, 2019. However, as reported in the other medical records, it appears that the recommended left knee surgery was denied by the respondents.

12. The claimant was again seen by Dr. Sterett on August 21, 2019. At that time, Dr. Sterett noted that the claimant had significant pain relief from the prior steroid injection. He opined that the claimant's left knee symptoms were possibly caused by a hypertrophic fat pad; or a cartilage contusion; or a meniscus tear. Dr. Sterett again recommended that the claimant undergo surgical intervention involving a left diagnostic arthroscopy and synovectomy. On August 22, 2019, a request for authorization of the recommended surgery was submitted to the insurer.

13. On September 16, 2019, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Lesnak opined that the claimant suffered a possible acute left knee sprain, but that sprain had been resolved. Dr. Lesnak did not believe that the claimant was in need of any additional medical treatment, including further injections or surgery. Dr. Lesnak also opined that the claimant had reached maximum medical improvement (MMI). Dr. Lesnak's testimony by deposition was consistent with his written report.

14. Dr. Lesnak testified that the claimant suffered a left knee sprain. Dr. Lesnak also testified that the recommended surgery is not reasonable, necessary, or related to the admitted work injury. In support of this opinion, Dr. Lesnak noted that the claimant had a normal MRI of his left knee that showed no evidence of any trauma or injury. In addition, Dr. Lesnak relied upon the May 24, 2018 medial report in which Ms. London recorded that the injection provided "absolutely no improvement in pain". Therefore, it is the opinion of Dr. Lesnak that the injection was not diagnostic. Dr. Lesnak also noted that the claimant presented with a normal exam at the IME, and demonstrated normal function.

15. The ALJ credits the medical records and the opinion of Dr. Lesnak over the contrary opinion of Dr. Sterett and finds that the claimant has failed to demonstrate that it is more likely than not that the recommended left knee surgery is reasonable, necessary, and related to the admitted work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the left knee arthroscopic surgery recommended by Dr. Sterett is reasonable, necessary, and related to the admitted work injury. As found, the opinion of Dr. Lesnak and the medical records are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for a left knee arthroscopic surgery, as recommended by Dr. Sterett, is denied and dismissed.

Dated this 7th day of January 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course and scope of her employment with employer?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment she received from Dr. Stagg was reasonable and necessary to cure and relieve the claimant from the effects of the industrial injury?

FINDINGS OF FACT

1. Claimant is employed by employer as a stocker. Claimant testified she reported to work on May 28, 2019 to work the 2:00 a.m. to 10:30 a.m. shift. Claimant testified she clocked in and walked to the bathroom. Claimant testified she went blank and when she came to, she was struggling to get up. Claimant testified she looked around for a cone that would indicate the floor was wet, but did not see a cone. Claimant reported the incident to "Ryan", the night lead.

2. Store video of the incident was entered into evidence in the case. The video shows the floor being mopped by an employee. Claimant later walks into the area and slips and falls into the wall, landing on her left knee and then stands up.

3. Claimant reported the incident to Melissa J[Redacted], an assistant manager, and was referred for a urinalysis test. Claimant testified that Ryan began to explain what had happened and Ms. J[Redacted] said, "don't worry, there is a camera there." In the incident report, it is noted claimant complains of upper back pain.

4. Claimant was evaluated by Dr. Stagg on June 4, 2019. Dr. Stagg noted claimant reported she was at work when she slipped on a wet floor, landing on her right hip. Claimant reported she was not sure if she hit her head or not, and denied losing consciousness. Claimant complained of some occipital pain along with aches in her shoulders, arms and right hip that had gotten worse in the ensuing several days. Dr. Stagg recommended a computed tomography ("CT") scan of the head and neck and provided claimant with modified duty work restrictions.

5. The CT scans were performed on June 7, 2019. The CT scan of the head showed no intracranial abnormalities and no trauma. The CT scan of the neck showed no traumatic fractures or acute alignment abnormalities. Severe degenerative disc disease and facet degenerative joint diseases was noted at the C5-C6 level.

6. Claimant returned to Dr. Stagg on June 10, 2019. Claimant reported upper back pain with intermittent numbness into both hands and both legs. Claimant

reported an episode lasting about 20 minutes where she had some contracture of both hands three to four days prior. Claimant reported that since the injury, she had tingling sensations in both feet, but denied any back pain. Claimant was instructed to decrease her dosage of ibuprofen and provided with Lidoderm patches. Claimant was referred for an x-ray of the right hip and a magnetic resonance image (“MRI”) of the cervical spine. Claimant was also referred to Dr. Price for follow up and referred for physical therapy.

7. Claimant underwent the x-ray of the right hip on June 10, 2019. The x-ray was normal.

8. Claimant’s claim for benefits was subsequently denied by respondent.

9. Respondent referred claimant for an independent medical evaluation (“IME”) with Dr. Bernton on September 3, 2019. Dr. Bernton reviewed claimant’s medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Bernton also reviewed the surveillance of claimant’s fall in performing the IME. Dr. Bernton noted claimant had received a release to return to work from her primary care physician.

10. Dr. Bernton noted that claimant complained of pain in her right leg along with tingling in both legs and both arms. Claimant also complained of bad headaches and dizziness as well as numbness in her bilateral hands. Claimant noted she had pain in her right groin and when she walks, her pain increased and claimant complained of shooting pains.

11. Dr. Bernton opined in his report that claimant did not sustain a work injury when she fell on May 28, 2019. Dr. Bernton opined in his report that while there were potential physical systemic problems which could result in some of claimant’s multiple symptoms, there was no medical basis on which claimant’s symptoms could be related to the slip and fall incident. Dr. Bernton noted that the surveillance video did not show a mechanism of injury for claimant’s right hip or an injury to the cervical spine. Dr. Bernton opined in his report that claimant has not had an occupational injury requiring medical care or resulting in impairment or disability.

12. Dr. Bernton testified consistent with his IME report at hearing. Dr. Bernton testified that in order to determine if it is possible for an accident to cause an injury, you have to go further and determine that they type and magnitude of the force did cause the particular problem. Dr. Bernton opined that there was no reasonable connection between claimant’s subjective reports of pain in her right leg and right groin and the fall that showed claimant going down on her left knee in the surveillance video.

13. Dr. Stagg testified as well in this case. Dr. Stagg testified consistent with his medical records. Dr. Stagg testified that when claimant came under his care, she reported having a fall at work, landing on her right hip and maybe hit her upper shoulder and was not sure if she hit her head or not. Dr. Stagg noted claimant complained of various subjective complaints including tingling sensations in both feet, intermittent numbness in her hands and legs with continued right hip pain and cervical pain, along

with an incident where she had contractures of both her hands. Dr. Stagg testified he recommended an MRI of claimant's cervical spine and referred claimant to a neurologist for electrodiagnostic studies, along with a physical medicine and rehabilitation specialist and to begin physical therapy. Dr. Stagg noted that he had not seen claimant since June 10, 2019 and was forwarded the surveillance video along with the report from Dr. Bernton.

14. Dr. Stagg testified regarding the foundation of his September 27, 2019 report in which he notes his conclusions on reviewing the video and the report from Dr. Bernton. Dr. Stagg noted in that report that the video shows the claimant slipping with her left knee hitting the ground and does not depict claimant losing consciousness. Dr. Stagg testified that what he observed on the video was claimant sipped with her right foot, went down and directly hit her left knee, with her elbow and maybe her shoulder hitting the wall. Dr. Stagg testified that the fall did not show much trauma or a large hit at the left elbow. Dr. Stagg also testified that there was no head injury in the video.

15. Dr. Stagg testified that when claimant's right foot slipped out, she could have strained a muscle, but she did not fall onto her right side. Dr. Stagg testified that claimant's fall could have caused a sort of whiplash injury, but he did not see her head move a lot during the fall.

16. In this case, claimant had an incident occur at work when she slipped on March 28, 2019. This incident is depicted in the video surveillance that was entered into evidence at hearing.

17. Claimant's testimony at hearing is inconsistent with the fall depicting on the surveillance video in that claimant testified she went blank after the fall and was on the floor when she woke up. The ALJ credits the surveillance video over the claimant's testimony at hearing regarding the nature of the fall.

18. The ALJ noted that accident history provided by claimant to her physicians is inconsistent with the accident depicted in the video. Claimant reported to Dr. Stagg that she fell, landing on her right hip. The surveillance in this case does not depict claimant landing on her right hip. Moreover, the video does not depict claimant striking her head in the fall.

19. The ALJ credits the video surveillance entered into evidence along with the opinions expressed by Dr. Bernton in his IME report and finds that claimant has failed to establish that it is more probable than not that she sustained a work related injury arising out of and in the course of her employment with employer. The ALJ further notes that the medical records in this case do not demonstrate evidence of an acute injury being caused by the May 28, 2019 incident, as the x-rays and MRI scans were interpreted as being normal.

20. The ALJ finds that claimant has failed to establish that it is more probable than not that the medical treatment she received falling the slip and fall incident on May

28, 2019 was reasonable medical treatment necessary to cure and relieve claimant from the effects of her work injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with “a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra*.

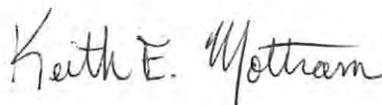

4. As found, claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of her employment with employer. As found, claimant’s report of the slip and fall incident to her treating physicians was not supported by the surveillance video of the incident entered into evidence in this case. As found, the ALJ credits the surveillance video along with the opinions expressed by Dr. Bernton over claimant’s testimony presented at hearing and finds that claimant has failed to meet her burden of proof in this case.

ORDER

It is therefore ordered:

1. Claimant's claim for benefits is denied and dismissed.

Dated: January 7, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-088-776-002**

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury to her low back.
2. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury to her bilateral upper extremities.
3. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical benefits to treat her low back and her bilateral upper extremities.

FINDINGS OF FACT

1. Claimant is a 48-year-old female employed by Employer as a baker. Claimant has been employed by Employer as a baker for approximately 20 years. Claimant worked for approximately 17 years at store No. 30 before transferring to store No. 124 on July 29, 2018.

2. On July 2, 2018, Claimant reported to her manager that her wrists hurt after repetitive motion molding dough. A statement made by assistant manager John H[Redacted] indicated that Claimant reported to manager Liz R[Redacted] on July 2, 2018 that she hurt her wrist while rolling out bread. Mr. H[Redacted] indicated that he contacted Claimant on July 5, 2018 and that Claimant stated that she was fine and nothing was wrong. On July 8, 2018, Claimant stated that she had a sore wrist again and requested medical treatment. Mr. H[Redacted] noted that Claimant worked July 2, 3, 4, and 5 and had off July 6, and 7. Employer filled out a report of injury form. See Exhibits 2, 3, 4, A.

3. On July 9, 2018, Claimant was evaluated by Matthew Lugliani, M.D. Claimant reported that she had been a bread maker for 18 years at King Soopers and reported progressively worsening bilateral wrist pain and mid and low back pain after kneading a new type of dough and after lifting racks. Claimant denied any acute incident. Claimant reported pain at a 7-8/10. Claimant was given a wrist support with thumb. Occupational therapy and chiropractic therapy was requested. Dr. Lugliani opined that the objective findings were consistent with a work related mechanism of injury noting that Claimant constantly used her wrist and hands. Dr. Lugliani noted objective findings present with swelling and weakness. Dr. Lugliani noted work restrictions of maximum lifting of 5 pounds and no pinching. See Exhibits 5, C.

4. On July 16, 2018, Dr. Lugliani evaluated Claimant. Claimant reported that she had made gains and requested work restrictions be advanced. Dr. Lugliani changed the work restrictions to include using wrist splints only. Dr. Lugliani recommended

Claimant continue with therapy and chiropractic care. He recommended Claimant follow up with her primary care provider regarding her high blood pressure. See Exhibits 5, C.

5. On July 30, 2018, Dr. Lugliani evaluated Claimant. Dr. Lugliani recommended an EMG/nerve conduction study and also recommended a job duties analysis specialist. Dr. Lugliani noted the referral reason was for the bilateral wrist pain and to rule out overuse injury. Dr. Lugliani advanced Claimant to full duty work without restrictions. See Exhibits 5, C.

6. On August 13, 2018, Dr. Lugliani evaluated Claimant. Claimant reported that she was working full duty and felt better. Claimant also reported that she changed grocery stores to see if she could get more help. Dr. Lugliani noted concern for carpal tunnel syndrome but that both the EMG and the job duties analysis had been denied. Dr. Lugliani also noted that occupational therapy and chiropractic care had been denied. Dr. Lugliani noted that Claimant would continue with medications. See Exhibits 5, C.

7. On August 15, 2018, a Job Demand Analysis and Risk Factor Analysis report was completed by Jill Adams. Ms. Adams noted that Claimant had transferred to another store and was not interviewed but that other bakery associates/bakers were observed. Ms. Adams noted that 85-90% of Claimant's job duties involved baking tasks. Specifically, removing frozen doughs from freezer area putting them on carts and rolling carts to the baking area. Placing pan liners on baking sheets and opening plastic bags to remove dough and place dough on baking sheet that either needs to be placed on baking racks or is already on baking racks. Rolling racks into the rising oven, then rolling the rack into the baking oven. Once baked, rolling the rack to another location. Ms. Adams noted that if the dough was inadvertently left out to thaw, then kneading the dough by hand before putting into the rising oven. Ms. Adams noted that a baker employee would be responsible for loading, rising, and baking approximately 10-15 racks of dough per work shift. Ms. Adams also noted 10-15% of job desks involved stocking, 1-5% involved cleaning, and 1-2% involved customer service. Ms. Adams opined that there were no primary risk factors or secondary risk factors for force, repetition, awkward posture, computer work, or cold working environment. Ms. Adams found 2 pounds of pinch force or 10 pounds of hand force 3 times or more per minute for approximately 2 hours and 33 minutes over an 8-hour work shift. Ms. Adams found bilateral lifting 10 pounds or more approximately 104 times in an 8-hour work shift. See Exhibits 6, D.

8. On September 11, 2018, Claimant underwent an independent medical evaluation performed by John Burris, M.D. Claimant reported the insidious onset of bilateral hand pain and low back pain several months ago with no specific inciting workplace event. Claimant reported a recent change in her work activities over the last 3-4 months with a new process of making bread. Claimant reported the bread dough arrives in a large bulk/brick and that she has to cut and mold into individual loafs by hand. Claimant also reported having to repetitively move/rotate trays of bread weighing between 5-10 pounds on a rack or proofer. Claimant reported her pain seemed to be improving since moving to a different store and being provided a helper. Claimant reported she is not doing the same activities. Claimant reported pain at an 8/10. Dr. Burris reviewed

medical records and the job demands analysis. Dr. Burris also performed a physical examination. Dr. Burris found extreme pain behaviors and somatic focus through the physical examination. On lumbar spine examination, he found diffuse superficial tenderness without localization, full range of motion, and no muscle spasm or trigger points. Dr. Burris found that Claimant could walk heel to toe without difficulty and had a negative seated straight leg raise. In the bilateral upper extremities, Dr. Burris found no hypersensitivity, full range of motion in all joints, diffuse tenderness without localization throughout the distal forearms extending into the hands, and diffuse pain complaints with finkelstein's maneuver. See Exhibits 7, I.

9. Dr. Burris assessed diffuse myofascial complaints. Dr. Burris noted Claimant's report of the pains being associated with workplace activities in the bakery but he opined that after careful review of the jobsite evaluation, there were no potential physical risk factors for the development of an upper extremity disorder related to the workplace. Dr. Burris opined that the nature of the forces involved with repetitively moving racks of 5-10 pounds of bread trays was not sufficient to cause an injury. Dr. Burris also opined that on examination, Claimant had diffuse non-dermatomal subjective complaints out of proportion to her examination, which revealed no objective findings. Dr. Burris could not find a specific diagnosis given the diffuse complaints. Dr. Burris also opined that the diffuse complaints were suggestive of a non-work related possible systemic/rheumatologic disorder. See Exhibits 7, I.

10. On October 19, 2018, Claimant was evaluated by LPN Tresha Boone at Kaiser. Claimant reported hand pain and low back pain, both at an 8/10 on the pain scale. Claimant reported that she developed mid and low back pain and bilateral wrist pain over the summer after a work process changed and required new repetitive motions and lifting. Claimant reported that her pains had been found not work related by an occupational medicine specialist and she wanted a letter stating that she had never previously had problems with mid, low back, or wrist pain. On October 19, 2018, Craig Robbins, M.D., Claimant's primary care provider, issued a report. Dr. Robbins indicated that Claimant was a patient at Kaiser and had no history of being treated for wrist pain or back pain. See Exhibits 1, F.

11. On November 9, 2018, Claimant was evaluated at Kaiser. Claimant reported that she was appealing a determination that she did not have a work related injury and wanted to continue treatment. Claimant was referred to physical therapy. Claimant was assessed with tendinitis of the bilateral wrists and with low back pain. See Exhibits 1, F.

12. On November 28, 2018, Claimant was evaluated at Kaiser. Claimant reported bilateral wrist pain, left greater than right, since July of 2018 from repetitive motion with her hands after kneading bread dough daily. Claimant reported that after kneading dough, her bilateral wrists began to swell and had pain. Claimant reported that her low back pain started with aching and more recently got worse with spasms. Claimant reported that she had been bending down and lifting trays into racks at work when the problem began and that it was worse with bending, lifting, and sit-to-stand. Claimant also

underwent physical therapy on November 28, 2018. At therapy, she reported her low back pain started in August with aching type pain after bending down and lifting trays in racks at work but more recently had gotten worse with spasms. See Exhibits 1, F.

13. On December 21, 2018, Claimant was evaluated at Kaiser and reported bilateral wrist pain. Claimant reported that it had been going on since July of 2018 after kneading bread dough. Claimant reported the pain was better in both hands as she was now doing lighter work. Claimant was diagnosed with bilateral tendinitis of the wrists. Claimant also underwent therapy on December 21, 2018 for her bilateral wrists and low back. Claimant reported she had been doing her home exercise program and that her low back pain was decreased. Claimant also reported that she was having less pain in both her hands and was doing lighter work. See Exhibits 1, F.

14. On January 17, 2019, Claimant was evaluated at Kaiser by Julia Pierce, M.D. Claimant reported low back pain that started in May of 2018. Claimant reported precipitating factors were recent heavy lifting and the change in the weather. Dr. Pierce noted that Claimant had a prior history of back problems and had recurrent self-limited episodes of low back pain in the past. Claimant underwent x-rays of her lumbar spine. The results showed small anterior marginal osteophytes at L2-3 and L3-4. Dr. Pierce opined that the x-rays showed arthritis at two levels, which was likely the source of Claimant's pain. Dr. Pierce recommended conservative treatment with back stretches and medication. See Exhibits 1, F.

15. On February 3, 2019, Claimant underwent an MRI of her lumbar spine. The results showed mild levoscoliosis with exaggerated lumbar lordosis, and mild disc degeneration at L4-5. AT L2-3 Claimant had mild broad based disc protrusion and mild bilateral facet arthropathy with mild fluid signal in the facet joints bilaterally. At L3-4 there was a mild broad based disc protrusion with bilateral facet arthropathy contributing to mild bilateral foraminal narrowing. There was mild fluid signal in the facet joints bilaterally with no significant canal stenosis. At L4-5 there was mild circumferential disc bulge with bilateral facet and ligamentous hypertrophy and resultant mild canal narrowing with moderate bilateral foraminal stenosis. At L5-S1 there was a broad based disc protrusion with bilateral facet and ligamentous hypertrophy as well as moderate to severe bilateral foraminal narrowing without canal stenosis. Dr. Pierce provided the impression of L5-S1 moderate to severe bilateral foraminal narrowing with compression of the L5 nerve roots and L4-5 moderate bilateral foraminal narrowing. She recommended a referral to neurosurgery. See Exhibits 1, 8, H, F.

16. On February 20, 2019, Claimant underwent nerve conduction studies and a needle electromyography. The results showed relative slowing of the median nerve in the right wrist (carpal tunnel) segment. Claimant had poor tolerance to the nerve conduction and needle portions of testing. Peter Bergmann, M.D. noted that it was a very limited study due to Claimant's poor tolerance but that she had moderate right median neuropathy at the right wrist and presumably at the wrist on the left as well given her symptoms. Dr. Bergmann opined that Claimant's lower extremities showed normal nerve conduction with needle EMG of L5 and S1 normal. See Exhibits 1, 8, F, G.

17. On March 11, 2019, Ranee Shenoi, M.D. evaluated Claimant. Claimant reported lower and middle back pain that began in June of 2018 with no trauma. Dr. Shenoi noted limited lumbar range of motion on flexion and extension. Mild lumbar scoliosis and pain with facet loading of the right and left. Dr. Shenoi noted that Claimant had diffuse tenderness to palpation in the lumbar spine and had an abnormal gait pattern. Dr. Shenoi noted straight leg testing negative in seated, but very painful in supine bilaterally. Dr. Shenoi recommended bilateral L4-5 transforaminal epidural steroid injections but Claimant vehemently refused injections. Dr. Shenoi opined that surgical consultation was not indicated at the time. See Exhibits 1, F.

18. Claimant continued to treat at Kaiser with continued reports of bilateral wrist and low back pain. She also continued to undergo therapy. See Exhibit 1.

19. On April 24, 2019, at a therapy visit, Claimant reported that she had been on vacation and doing more walking and playing with grandkids than working on her home exercise program. Claimant reported that her back was doing all right, but then her pain came back. Lumbar traction was done and Claimant was encouraged to continue working on her home exercise program and following her pain rules. See Exhibit F.

20. On June 7, 2019, Claimant underwent an independent medical evaluation performed by Douglas Scott, M.D. Claimant reported pain and swelling in both forearms, wrists, and hands left worse than right. Claimant also reported low back pain with pain and numbness over the outside and inside of her legs and the bottoms of both feet. Claimant reported that she worked as a baker, which required her to constantly flex up and down at the waist to adjust product. Claimant also reported swelling and pain in both hands from handling and cutting blocks of frozen bread dough. Dr. Scott reviewed medical records and the job demands analysis. Dr. Scott also performed a physical examination. On exam, Dr. Scott found positive swelling in the left more than the right forearm, tenderness over both the medial and lateral epicondyles at the elbows, positive finkelsteins at both wrists, sensitivity to tapping over the carpal tunnels, and decreased grip strength. Dr. Scott found increased lumbar lordosis, stiff walking bent forward in forward flexion, negative straight leg raising signs, and decreased sensation to light touch over both legs and feet in L4, L5, and S1 dermatomes. See Exhibits 9, J.

21. Dr. Scott assessed: probable pre-existing bouts of low back pain due to underlying and pre-existing lumbar spine degenerative disc and joint disease; radiographic evidence of degenerative disc and facet disease at two levels with bilateral foraminal stenosis at L4, L5, and S1 nerve roots; possible work related aggravation of an asymptomatic low back condition from bending and lifting product in the bakery in July of 2018; history of hypertension; history of pre-diabetes; electrodiagnostic evidence of moderate median nerve conduction slowing at the right carpal tunnel and presumption of the same in the left carpal tunnel, possibly related to history of pre-diabetes versus flexor tenosynovitis or both; clinical diagnosis of tendonitis causing pain and swelling in the arms, wrists, and hands; possible work related aggravation of asymptomatic tendonitis of the hands and wrists from molding and cutting dough at work; possible development of

mild medial and lateral epicondylitis from molding and cutting dough at work; and rule out rheumatologic disorder with blood testing. See Exhibits 9, J.

22. Dr. Scott noted reports of specific onset for bilateral upper extremity problems with improvement when in modified duty and at a different store. Dr. Scott noted that Claimant had repetitive awkward wrist and hand postures with force as a required part of the job and that he observed signs of swelling on exam. Dr. Burris noted only pre-diabetes as a possible condition that could contribute to carpal tunnel and tendinopathy but noted no prior signs or other contributing employment, sports, recreational, or avocational activities. Dr. Burris opined that Claimant's hand work with frozen dough either activated a previously asymptomatic tendonitis/epicondylitis in both arms or caused a new condition of tendonitis/epicondylitis in both arms due to tasks that required forceful grip, extreme wrist radial/ulnar positions with elbows in awkward postures. Dr. Scott also opined that Claimant probably activated her asymptomatic low back degenerative disc and joint disease by forward bending and lifting at work in July of 2018. Dr. Scott recommended Claimant continue with treatment including blood testing for diabetes and inflammation including sed rate and CRP, continue physical therapy, continue home exercise program, and avoiding certain actions. See Exhibits 9, J.

23. On August 7, 2019, Dr. Scott issued an updated addendum. Dr. Scott reviewed additional medical records. Dr. Scott opined that Claimant's hand work with the frozen dough either activated a previously asymptomatic tendonitis/epicondylitis in both arms or caused that as a new condition. See Exhibits 9, J.

24. Rule 17, Exhibit 5 of the Medical Treatment Guidelines concerning Cumulative Trauma Conditions was entered into evidence. The guidelines indicate that mechanisms of injury for the development of cumulative trauma related conditions have been controversial. However, repetitive awkward posture, force, vibration, cold exposure, and combinations thereof are generally accepted as occupational risk factors for the development of cumulative trauma related conditions. The guidelines indicate that evaluation of cumulative trauma related conditions require an integrated approach that may include ergonomics assessment, clinical assessment, past medical history, and psychosocial evaluation on a case-by-case basis. The guidelines include a chart indicating that after diagnosis and job duties are considered, but if neither primary nor secondary risk factors are present, then the case is probably not job related. Under general principles of medical causation, the guidelines indicate that treatment for a work related condition is covered when: 1) the work exposure causes a new condition; or 2) the work exposure activates or exacerbates a previously asymptomatic latent medical condition; or 3) the work exposure combines with, accelerates, or aggravates a pre-existing symptomatic condition; or 4) the work exposure combines with a pre-existing comorbid condition, such as diabetes, to render the occurrence of a cumulative trauma condition more probable in combination with the work related exposure. It goes on to state that the provider should consider: "is it medically probable that the patient would need the recommended treatment if the work exposure had not taken place?" See Exhibit K.

25. Prior to July of 2018, Claimant underwent regular medical care and treatment. At her annual examinations with her primary care provider, Claimant was assessed with being in the pre-diabetic range with an increased risk for diabetes and Claimant had high value blood sugar results in November of 2014, November of 2015, November of 2016, and November of 2017. At her annual examination in November of 2018, Claimant's HGBA1C level was down to 5.5, and considered normal as it was below 5.7. However, for the four years prior, her level was elevated and she was in the pre-diabetic range. See Exhibit 1.

26. On February 27, 2012, Claimant was evaluated for a lump at her left wrist and was found to have a left wrist cyst below the thumb on the palmar side that was approximately 1 cm. The provider assured Claimant that the cyst was benign and diagnosed ganglion cyst. See Exhibit 1.

27. Other than the left wrist ganglion cyst in 2012, Claimant had no other no other problems with her bilateral wrists documented in her medical records. Claimant had no prior problems with her low or mid back documented in the medical records. See Exhibit 1.

28. Prior to July of 2018, Claimant received a behavior notice from Employer. The notice indicated that Claimant had produced product for sale from the bakery that was not up to standards and that Claimant had been coached on product quality before. The notice also indicated that future problems could result in actions up to and including terminations. See Exhibit M.

29. Claimant testified at hearing. Claimant reported that she has worked for Employer for 19 years with no other jobs or volunteer work. Claimant testified that she works the night shift from midnight until 8:30 a.m. Claimant testified that she had no other hobbies involving her hands like knitting, gardening, etc. Claimant testified that she is not diabetic or pre-diabetic but that she takes high blood pressure medicine. Claimant testified that as a baker, she has to proof the product, and then bake it. Claimant testified that proofer was broken and that when she put product on racks in the proofer, only the top racks would proof and the bottom racks would not. Claimant testified that she had to move the racks more frequently because of this problem and that her back started hurting. Claimant testified that after the proofer broke, she used it for four months. Claimant testified that when the proofer was working, she just had to put the shelves in and push the cart into the proofer but because it was broken, she had to bend more. Claimant testified that she had to move the shelves all night long, and every 30 minutes. Claimant testified that each tray that went onto a shelf on the proofer was approximately 5 pounds and that there were 10 trays/racks.

30. Claimant also testified that in the summer of 2018 the product for different bread was bad and that after thawing it overnight to get it soft, she had to mold it with her hand. Claimant testified that after a few months of molding the bad product her hands hurt. Claimant testified that she had to roll her hand to mold the product and that it made her hands swell. Claimant testified that she rolled dough all night long and lifted the

shelves all night long. Claimant testified that she did a lot of lifting and that a lot of it was light stuff but that a 20-35 pound box of product would be the heaviest. Claimant testified that in August of 2018 she transferred to a different store where she had more help and where the proofer worked. Claimant testified that since she has been at the new store, her hands were getting better and her back was also getting better. Claimant also testified that she often worked overtime because there were not enough bakers.

31. Trish C[Redacted] testified at hearing. Ms. C[Redacted] is a bakery manager for Employer and was Claimant's supervisor during the summer of 2018. Ms. C[Redacted] also has performed the job of baker previously and was the person observed during the job demands analysis as Claimant had moved stores. Ms. C[Redacted] testified that the trays that go onto the proofer weigh approximately 5 pounds. Ms. C[Redacted] testified that there is a bakery plant that makes all of the product and ships it frozen to the store. Ms. C[Redacted] testified that the bread is thawed overnight and is then placed on the baking sheets before going into the proofer. Ms. C[Redacted] testified that typically 70 loaves of French bread are baked and needed every day, but that Claimant was making only 45-50. Ms. C[Redacted] testified that normally the product would not need any kneading and would just be placed on baking sheets after it thaws, but she testified that Claimant kept claiming that the dough was stuck together and needed to be kneaded back together. Ms. C[Redacted] testified that even if Claimant was kneading, it would have only been approximately 15 minutes per day and that Claimant would not have had time to do all her other job duties if she was consistently kneading product or kneading dough for 4 hours per day. Ms. C[Redacted] also testified that although Claimant started her shifts at midnight, the dough would not thaw until 6 a.m. and that Claimant wouldn't be able to work on the loaves of bread until that time. Ms. C[Redacted] testified that she did not observe Claimant kneading the dough but that Claimant would place two half-loaves close together and that it would form itself together while proofing. Ms. C[Redacted] also testified that Claimant was swapping out or rotating the proofer trays because Claimant believed only the top racks were proofing, but that maintenance found nothing wrong with the proofer. Ms. C[Redacted] testified that Claimant spent approximately 5 hours per day on other items like cookies, donuts, etc and not on the bread racks. Ms. C[Redacted] testified that Claimant worked overtime when their part time baker would be on vacation. She testified that Claimant is in and out of a freezer during her shifts, but estimated Claimant would be in for 5 minutes at a time and in-out for approximately 1.5-2 hours total in 5 minute increments during her shift. Ms. C[Redacted] testified that the job demands analysis did not show kneading bread or cycling trays.

32. Elizabeth R[Redacted] testified by deposition. Ms. R[Redacted] was the store manager for Employer and managed the store where Claimant was working during the summer of 2018. Ms. R[Redacted] was Claimant's store manager for approximately 6 years. Ms. R[Redacted] testified that Claimant reported to her that Claimant's wrist hurt. Ms. R[Redacted] testified that Claimant's last day at her store was July 28, 2018 and that Claimant went to a different store on July 29, 2018. Ms. R[Redacted] testified that claimant changed stores because of discipline and conversations about Claimant's performance and testified that Claimant did not like her. Ms. R[Redacted] testified that

Claimant would not speak to her without a union representative and that after written write-ups, there would be a grievance filed, and the write-ups would be thrown out. Ms. R[Redacted] testified that Claimant called corporate and made false claims in the months before Claimant left her store. Ms. R[Redacted] testified that she called maintenance several times after Claimant said the proofer was broken and that they came several times but found nothing wrong. Ms. R[Redacted] testified that no other stores were having trouble with the bread loaves and rolls sticking together and that she made calls to check. Ms. R[Redacted] testified that she found out that after taking the product out of the freezer, Claimant was letting it sit and thaw on the floor for over four hours, and then was putting it back into the freezer, which was causing the problem of the product sticking together. Ms. R[Redacted] testified that the product is supposed to come off the truck into the large freezer at the back of the store, and that Claimant is supposed to take it from the freezer to the baker freezer and put it into the freezer without leaving it out on the floor to thaw. Ms. R[Redacted] told Claimant to stop letting the product thaw on the floor to stop the problem. Ms. R[Redacted] testified that since Claimant left her store, there had been no problems with the proofer and no complaints about it not working. Ms. R[Redacted] also testified that while Claimant was at her store, the other baker there did not have problems with product consistency like Claimant did. Ms. R[Redacted] testified that Claimant reported to her that she had to pull the bottom two pans up on the proofer and switch them out because the proofer was not working.

33. Ms. R[Redacted] testified that even after Claimant left the dough out and caused it to stick together, Claimant would not have to knead it back into a product. Ms. R[Redacted] testified that Claimant would maybe have to tuck the ends or put pieces together. Ms. R[Redacted] testified that Claimant only had to roll/form on the shepherders loaves and that Claimant would have to make four loaves of that type per day. Ms. R[Redacted] estimated the shepherders loaves would take 10, 15 minutes.

34. The dough for Employer's baker products is made by Employer's central bakery plant. The plant freezes individual loaves of bread and places the frozen loaves into a box. The boxes are then shipped to Employer's grocery stores where the boxes are put in the main freezer. The baker employee then has to transfer the frozen bakery dough boxes to the bakery freezer. The dough has to be thawed before it can go into the proofer and then the oven. To thaw the dough, the baker has to place the loaves in the bakery refrigerator overnight. Then, once thawed, the loaves are placed on the baking trays that are slid onto baking racks and pushed into the proofer. The baker's job duties to not normally require any kneading or rolling of dough and the thawed dough is placed directly onto the bakery trays already formed and ready to bake.

35. Dr. Scott testified at hearing. Dr. Scott indicated that Claimant had no chronic health problems and no outside activity that could cause her problems. Dr. Scott noted a concern that Claimant was pre-diabetic, but noted a normal result in November of 2018. Dr. Scott testified that there was no evidence that the wrist problems and the median nerve slowing were a result of diabetes. Dr. Scott testified that Claimant had a body mass index of 33, which was not high enough to cause compression in the wrist and was on the low end of obesity. Dr. Scott testified that the grip, grasp, force, and

awkwardness at the baker caused the flexor/extensor tenosynovitis and that with the change in the product and Claimant's increased hand work to cut, mold, and stretch it, cause problems. Dr. Scott testified that it was logical that Claimant was getting better now that she was at a new store and removed from the kneading type activity. Dr. Scott opined that it was medically probable that the new force required to knead the product caused Claimant's bilateral upper extremity symptoms.

36. Dr. Scott opined that Claimant had pre-existing degenerative conditions in her lower back. However, he opined that Claimant's work activity aggravated these underlying pre-existing conditions and caused them to be symptomatic. Dr. Scott noted that Claimant had no prior back pain in her medical records. Dr. Scott opined that the MRI showed a broad based disc protrusion at L5/S1 but that the bulge got bigger or protruded more because of work activity. Dr. Scott opined that a person can have a normal EMG but still have symptoms of nerve root pathology and he believed that Claimant had some compression where the nerve root comes out in her lumbar spine. Dr. Scott opined that foraminal narrowing was not caused by lifting but happens over time where the hole the nerve root comes out of narrows. Dr. Scott testified that given Claimant's age and body habitus, he would not be surprised if she had back pain in July of 2018.

37. Dr. Burris also testified at hearing. Dr. Burris testified that at his independent medical evaluation, Claimant did not tell him about the proofer or moving the baking sheets. Dr. Burris testified that the baking sheets were 5 pounds which is not very much weight and would place no stress on structural elements of the spine. Dr. Burris testified that moving 5-pound trays was not sufficient enough of force to cause an injury or to injure the human spine. Dr. Burris also pointed out that Claimant had no radiation of her low back complaints until more than five months out from the reported injury so there was no nerve being pinched. Dr. Burris testified that the tunnels nerves exit out of in the spinal canal can tighten over time, develop bony growths, and degenerate. Dr. Burris testified that it was not unusual and that 80% of the population over the age of 50 has abnormalities in the lumbar spine. Dr. Burris testified that Claimant still has back pain now and at similar levels despite having left the store. Dr. Burris opined that Claimant's work activities did not aggravate, accelerate, or cause her low back problems.

38. Dr. Burris also testified that Claimant had many very strong non-work related risk factors for carpal tunnel. He testified her age, gender, body mass index, genetics, and the psychosocial issues including her relationship with her supervisor were strong risk factors. Dr. Burris testified that Claimant had no primary or secondary risk factors identified by the job demands analysis. Dr. Burris testified that if Claimant made kneading motions not captured by the job demand analysis, then the motions could cause the problems in the bilateral wrists but that here there was no measure of force, duration, or information helpful to determine if they did. Dr. Burris opined that the bilateral upper extremity problems were idiopathic and due to Claimant's non-occupational risk factors.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlanda*, 811 P.2d 379, 383 (Colo.

1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc.*, W.C. No. 4-588-675, (ICAO, Sept. 1, 2006).

Bilateral upper extremities

Claimant has established by a preponderance of the evidence that her bilateral upper extremity conditions are work related. It is more likely than not that Claimant's work activities caused her conditions or aggravated an underlying asymptomatic condition in her bilateral upper extremities. The testimony provided shows that, although due to her own fault of letting bread thaw and re-freeze, Claimant began kneading dough during the time frame at issue. Claimant had a new onset of symptoms and swelling due to her work activities. Claimant has no outside activities likely to cause her condition. It is true that Claimant has several risk factors for developing bilateral wrist or upper extremity conditions including her age, gender, her obesity, and her pre-diabetic status. Claimant was pre-diabetic with high levels for the four years prior to the alleged injury. However, the ALJ finds it more likely than not that these co-morbidities combined with Claimant's work exposure to render the occurrence of a cumulative trauma condition probable. It is true, as pointed out by Dr. Burris and the job demands analysis, that Claimant does not meet the primary or secondary risk factors for the development of the conditions per the medical treatment guidelines. However, the guidelines are merely guidelines. Given Claimant's other risk factors that likely combined with her work exposure to cause this condition, the fact that primary or secondary risk factors were not met is not ultimately conclusive. Because she let the dough sit out, thaw, and re-freeze, the dough could not just simply be placed on the baking sheets like normal. The dough had to be remolded to some degree. Claimant not only performed her regular duties that required significant upper extremity use but also began to remold the dough that she had caused to stick together. Although the force, repetition, and other factors do not meet primary or secondary risks under the guidelines, the ALJ finds that Claimant has established, more

likely than not, that her bilateral upper extremity conditions are work related. Claimant is thus entitled to reasonable, necessary, and causally related medical benefits to treat her bilateral upper extremities.

Low back/lumbar spine

Claimant has failed to meet her burden to show, more likely than not, that her low back condition was caused by or aggravated/accelerated by her employment with Employer. Dr. Burris testified persuasively that bending and lifting five-pound trays was not sufficient to cause an alteration to the anatomy of the low back or cause an injury. Dr. Burris further testified that if Claimant's back pain had been caused by or aggravated by increased bending to lift the five-pound trays if the proofer was broken, Claimant's back pain would have improved shortly after transferring to the "significantly easier" Baker position at Store No. 124. However, Claimant's back condition actually continued to get worse after switching to Store No. 124, despite not having to bend down to lift the bakery trays. Radiation of the back pain did not begin until several months following the alleged date of injury. The imaging notes pre-existing non-work related degenerative conditions in Claimant's low back. The narrowing of Claimant's foramen is a degenerative issue that takes time to develop. Although Claimant may have had symptoms of her pre-existing non-work related degenerative back condition while at work, she has failed to establish that her duties at work caused the symptoms or that her duties at work aggravated or accelerated her condition. Rather, the persuasive evidence establishes it to be more likely that Claimant had the continued progression of a non-work related degenerative condition and disease in her low back.

There was significant testimony regarding the proofer and whether or not it was working in the summer of 2018. It appears that the proofer was working as no other employees besides Claimant found a problem with it. However, even assuming Claimant rotated baking sheets due to her belief the proofer was not working correctly, there still would not be sufficient activity to cause or aggravate/accelerate an underlying degenerative condition of the low back. Claimant has failed to meet her burden. Claimant's request for reasonable and necessary medical treatment for her low back is denied, as the condition is not work related.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that her bilateral upper extremity conditions are work related.
2. Claimant has failed to establish by a preponderance of the evidence that her low back condition is work related. Claimant's request for reasonable and necessary treatment to treat her low back is denied, as the condition is not work related.

3. Claimant has established by a preponderance of the evidence an entitlement to medical treatment that is reasonable, necessary, and causally related to treat her bilateral upper extremity conditions.

4. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 8, 2020

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[REDACTED],
Claimant,

v.

[REDACTED],
Employer,

and

[REDACTED],
3805225
Insurer,
Respondents.

A hearing in this matter was held on hearing that took place on July 28, 2019, before Administrative Law Judge Kimberly Turnbow at the Office of Administrative Courts in Denver, Colorado. The proceeding was digitally recorded in Courtroom 4 beginning at approximately 8:30 a.m.

[Redacted], Esq. represented Claimant who appeared in person. [Redacted], Esq. represented Respondents.

Hereinafter the ALJ refers to [Redacted] as "Claimant," [Redacted] as "Employer," [Redacted] as "Insurer," and Insurer and Employer collectively as "Respondents." Also in this Order, "ALJ" or "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2019), and "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1.

At hearing, the ALJ admitted Claimant's Exhibits 1-17 and Respondents' Exhibits A-Y and AA-CC without objection. Interpretation services were provided at hearing by Maria Bravo of Foreign Locals, LLC.

ISSUES

- Whether Claimant met his burden to overcome the DIME by clear and convincing evidence regarding causation and relatedness of his cervical spine.
- Whether Claimant met his burden to prove by a preponderance of the evidence that his right carpal tunnel syndrome and subsequent surgery was related to his work-injury on June 24, 2015.
- Whether Claimant met his burden to prove by a preponderance of the evidence that he is entitled to higher right upper extremity impairment rating.
- Whether Claimant met his burden to prove he has a permanent functional impairment to a body part not listed on the list of scheduled disabilities.

STIPULATIONS

- The issue of overpayment was continued until a hearing on the issue of permanent total disability takes place.
- The right carpal tunnel surgery was denied by Respondents.
- Claimant received right carpal tunnel surgery on October 25, 2016 despite the denial.

FINDINGS OF FACT

1. On June 24, 2015 Claimant injured his right shoulder while working for Employer as a plumbing apprentice. Claimant reported the injury to Employer who gave him a designated provider list.

2. On June 26, 2015, Claimant attended an initial examination with his designated provider at Cherry Creek Family Practice. Claimant complained of feeling a locking sensation in his right shoulder while pulling a bucket of concrete with soreness in his shoulder and mid-back which started several hours later. Claimant initially did not report neck or cervical spine pain. Claimant denied having injured himself previously. X-rays of his t-spine and right shoulder were negative for acute injuries. Claimant's provider took him off work until his follow-up visit on July 6, 2015, and referred him to physical therapy.

3. On July 6, 2015 Claimant continued to report right shoulder and t-spine pain of 6/10, with intermittent numbness into his right hand. His provider diagnosed a thoracic strain and probable right rotator cuff injury. Physical examination revealed a normal spine aside for t-spine pain. Claimant was to continue physical therapy and follow up in one month.

4. On July 27, 2015, due to continued complaints of shoulder pain, Claimant's provider referred him for an orthopedic shoulder evaluation with Dr. John Reister. Claimant there complained of "global pain from his neck" through his medial parascapular region. Dr. Reister hypothesized that often times persistent bursitis tended to "tighten up all the muscles in the posterior triangle of the neck and aggravate degenerative disk disease."

5. On August 4, 2015, Claimant underwent an MRI which revealed a near complete undersurface supraspinatus tendon tear with possible posterior superior labral tear. Dr. Reister recommended Claimant undergo right shoulder arthroscopy with extensive labral debridement, bicipital tendon resection, followed by open rotator cuff repair with acromioplasty and bicipital tendon tenodesis. Insurer approved the surgery which Dr. Reister performed on September 21, 2015.

6. On August 18, 2015, Respondents filed a general admission of liability admitting to medical benefits and lost wages.

7. On November 19, 2015, Claimant returned to Dr. Kreutter reporting 5/10 shoulder pain with movement and ongoing neck pain which radiated into his right trapezius. Claimant requested a referral to continue therapy on his neck. He denied any numbness or tingling. Dr. Kreutter referred Claimant for additional physical therapy and kept him off from work.

8. On December 21, 2015, Claimant reported to Dr. Kreutter that he was having right hand/forearm jerks every now and then and that he never had this before. Claimant complained of right dorsal forearm pain with radiating pain into his shoulder and hand. He was not working and denied sustaining any new injury. Dr. Kreutter referred Claimant for evaluation of his forearm pain.

9. On February 18, 2016, Claimant returned to Dr. Kreutter reporting slow progress with his range of motion and strength. He now complained of *left* shoulder pain. Claimant thought he may now have a left shoulder RTC injury and asked Dr. Kreutter if he would authorize left shoulder surgery. Dr. Kreutter told Claimant his left shoulder pain was not related to his work injury. Dr. Kreutter recommended Claimant undergo aggressive physical therapy to avoid possible frozen shoulder.

10. On March 28, 2016, Dr. Levi Miller performed a neurological evaluation on Claimant. Claimant underwent an assessment which indicated psychosocial limitations could be delaying his recovery and that further evaluation might be necessary. Dr. Miller opined that Claimant's right upper extremity tremor/myoclonic jerk was of unknown etiology. He thought it unlikely that Claimant's tremor was from a right shoulder injury or cervical radiculopathy, but rather suspected a psychogenic component.

11. On March 29, 2016 Claimant underwent a c-spine MRI which showed evidence of degenerative change at C5-6 and C6-7 with disk osteophyte complexes

narrowing both central canal and neural foramen. At his C6-7 level he had moderate bilateral foraminal encroachment which “likely accounts for [Claimant’s] symptoms in his right hand, as well as the lancinating pain down his right arm.” Dr. Miller believed Claimant’s degenerative conditions could have been aggravated by the industrial injury and recommended Claimant undergo C5-6, C6-7 transforaminal ESIs for cervical radiculopathy.

12. On September 14, 2016, Dr. Reister reevaluated Claimant for his continued complaints of biceps tic, noting that during his twenty years of performing shoulder surgeries, he had not seen anything like it. He recommended Claimant undergo an MRI neurogram to further elucidate the issue. Results of the MRI neurogram were normal. Despite the results, Dr. Reister still recommended Claimant undergo a second surgery due to his continued complaints. Right shoulder tenodesis takedown surgery was requested on October 24, 2016, and performed on October 25, 2016. Surgical notes suggested that Claimant’s musculotaneous nerve was not in fact compressed.

13. However, along with the right shoulder tenodesis takedown surgery performed by Dr. Reister, Claimant also underwent right carpal tunnel release surgery by Dr. Tanya Oswald on the same date. This surgery was not requested for pre-authorization, nor was it authorized.

- On October 31, 2016, Dr. Peter Weingarten completed a physician advisor review for the shoulder surgery requested by Dr. Reister and opined that he had never encountered a situation in which a patient’s bicep tendon was too tight after rotator cuff repair and biceps tenodesis. However, he felt the only option was to proceed as Dr. Reister suggested and opined that the surgery should be approved.
- On November 23, 2016, Dr. Jonathan Sollender conducted a physician advisor’s review regarding the recently performed carpal tunnel release surgery and right shoulder musculocutaneous nerve release procedure. *Respondents’ Exhibit Q*, at 465. While he did believe that the right shoulder tenodesis “takedown” was reasonable and related, he did not believe the right carpal tunnel surgery was related to claimant’s work injury. He recommended approving the shoulder surgery, but denying the right CTS surgery.

14. On January 19, 2017 Claimant returned to Dr. Reister for further examination of his right shoulder and with complaints of left shoulder pain. Dr. Reister believed Claimant’s jerking issue was as yet impossible to diagnose. He noted Claimant’s complaints of left shoulder pain and wrote that he was “very, very uninterested in reoperating on [Claimant] for any particular reason at this timeframe, as the results we have had so far are not good. He did heal his rotator cuff, MRI proven.”

15. On January 24, 2017, Claimant returned to Dr. Miller for C7-T1 interlaminar

ESI injections. Claimant reported no improvement from the injections during his follow up-examination with Dr. Kreutter on February 20, 2017. Due to a lack of improvement in his neck pain, Claimant requested he be evaluated by a spine surgeon. He continued to complain of pain in his T12-L1 area on the left.

16. On April 24, 2017, Claimant reported for neurological consultation with Dr. Maxwell Matson for his complaints of involuntary right arm movement. Claimant alleged onset of involuntary movement post rotator cuff repair on September 21, 2015 with progressive symptomology. Dr. Maxwell believed Claimant's etiology likely originated in dysfunction in the lateral cord of his brachial plexus, however, further work-up was needed. He prescribed Klonopin and referred Claimant for an EMG with Dr. Pitzer.

17. On June 21, 2017, Dr. Miller performed C2-3 and C3-4 ESI injections for Claimant's continued complaints of neck pain. During follow up examination on July 7, 2017, Claimant noted only 10% improvement during the anesthetic phase with no lasting relief. Dr. Miller recommended against any further c-spine injections as cervical transforaminal, interlaminar, and facet injections had not provided benefit.

18. A July 13, 2017 EMG showed no active denervation. Dr. Pitzer noted that Claimant's twitching suppressed with distraction and he thought that there might have been a voluntary or subconscious component to Claimant's movements. However, Claimant's right brachialis muscle showed moderately increased polyphasic potentials and a moderately decreased interference pattern, so Dr. Pitzer recommend possible Botox injections into claimant's brachialis.

19. On October 5, 2017, Dr. Allison Fall conducted a Respondents' sponsored IME of Claimant. She opined that Claimant likely had a significant somatic component to his work-injury and that his subjective complaints were not consistent with objective findings. Dr. Fall opined Claimant was at MMI as of April 4, 2017, with impairment only to Claimant's right shoulder. She also believed Claimant's October 25, 2016 right carpal tunnel release and right musculocutaneous nerve release were not medically reasonable, necessary, or related to the original work-injury. Dr. Fall opined that Claimant did not have a work-related injury to his cervical spine as it had been ruled out as the cause of his ongoing symptomology due to numerous failed treatment modalities.

20. On October 17, 2017, Claimant returned for examination with Dr. Kreutter. After reviewing Dr. Fall's IME report, he opined that Claimant had reached MMI for his right shoulder injury as of April 4, 2017. However, Dr. Kreutter believed Claimant also injured his c-spine during the incident and required an impairment rating for such. He did not provide an opinion on how the described mechanism of injury could have caused an injury or what specific diagnosis Claimant had as a result. Dr. Kreutter noted Claimant's range of motion was distinctly less that it was at his last visit. "In fact [Claimant] barely moved the neck." Dr. Kreutter assigned Claimant a 6% whole person impairment for his c-spine based on a table 53 rating without range of motion. He agreed that Claimant's right bicep jerk movements were of unknown etiology and did not believe it required an

impairment rating.

21. On April 17, 2018, Dr. Caroline Gellrick completed a DIME of Claimant.

- She agreed with Dr. Fall's assessment that Claimant's c-spine was not related to his work-injury as complaints of neck pain did not start until well after his inciting injury.
- Likewise, Claimant demonstrated the mechanism of injury to Dr. Gellrick for approximately 20 minutes and at no time did she observe a mechanism of injury that would have caused an injury to Claimant's c-spine.
- Dr. Gellrick believed Claimant should have his left shoulder symptoms, left hand paresthesias, neck pain, and hypertension treated by his PCP.
- She assigned an impairment for his thoracic spine and right shoulder as those complaints were present since day one of his injury.
- She gave Claimant a 13% right upper extremity rating and a 5% whole person impairment rating for Claimant's t-spine.
- She believed Claimant should abstain from lifting over 20 pounds past chest height and that he should stay off ladders and mechanized equipment.
- Dr. Gellrick opined that an FCE may be warranted in order to obtain more formal restrictions and that she believed Claimant had attained MMI as of April 14, 2017.

22. On October 10, 2018, Dr. John Hughes performed a Claimant sponsored IME. Claimant reported pain in his right posterior neck, right scapula, right shoulder, right biceps, right hip, low back, and right leg with occasional numbness into his right foot. Dr. Hughes noted Claimant's cervical spine ranges of motion appeared "quite guarded and are inconsistent with informal observation of head and neck movement with maximum flexion and extension." Dr. Hughes was unable to use any range of motion measurements as they were too "extreme." He agreed with Dr. Gellrick that Claimant initially complained of a t-spine injury, however, he disagreed with her as to the site of residual impairment. He believed it was in Claimant's c-spine versus his t-spine and assigned a 6% impairment rating based on Dr. Kreutter's assignment of a table 53 rating.

23. Claimant testified at hearing that he immediately felt a pulling sensation in his right shoulder and, despite medical records to the contrary, immediate pain in his neck. Claimant complained of initial onset of right finger numbness and a "jerk" in his right bicep after his first shoulder surgery. Despite four years of not working, two surgeries, extensive physical therapy, massage therapy, chiropractic care, facet injections, interlaminar injections, epidural steroid injections, and numerous diagnostic

tests, Claimant noted continued and similar pain in his shoulder, neck, and scapular unchanged since the original date of injury. Despite video evidence to the contrary, Claimant testified to significant limitation looking up and to the sides due to his neck pain.

24. Dr. Allison Fall testified as an expert in physical medicine and rehabilitation during hearing. Dr. Fall is Level II accredited with emphasized training on causation. She opined Claimant was experiencing delayed recovery from his work injury. Dr. Fall did not believe Claimant's cervical spine or right CTS were related to his work-injury. She did not believe there was a mechanism of injury sufficient to have caused Claimant's cervical spine complaints or right CTS complaints. She disagreed with Dr. Reister's theory that Claimant aggravated the "posterior triangle" of his neck as there was no objective evidence substantiating such hypothesis. Had this theory been correct, Claimant would have improved from conservative treatment, but he did not. Dr. Fall noted Claimant's inconsistent range of motion measurements, delayed recovery, severe subjective complaints, and a complete lack of correlating objective findings lead her to believe Claimant suffered from psychogenic overlay in the presentation of his symptoms. However, objective findings and Claimant's description of a corresponding mechanism of injury led her to believe that he did have a work-related rotator cuff tear of his right shoulder. She opined Claimant was adequately compensated with an extremity rating for his right shoulder impairment.

25. Dr. Fall disagreed with Dr. Hughes' assessment that Claimant's c-spine and right CTS were related to the work-injury. Dr. Hughes failed to adequately address causation in regards to those body parts, in contradiction to the requirements of Level II providers. Dr. Fall believed that Dr. Hughes gave an impairment rating for any body part Claimant complained of, regardless of whether there was a sufficient mechanism of injury to have caused such injury. She disagreed with Dr. Millers' hypothesis of C7 compression as diagnostics were negative, injections directed at Claimant's C7 failed to produce improvement, and there were no findings during physical examination supporting this theory. She also disagreed with Dr. Miller's opinions that Claimant's stenosis and/or nerve root irritation explained his symptoms as diagnostic tests proved otherwise.

26. Dr. Fall did not believe Claimant's right CTS was affected by the work-injury or subsequent treatment/surgery. She concluded there was no mechanism of injury described by Claimant or documented in medical records sufficient to establish relatedness of his right CTS, and that Dr. Hughes failed to address the mechanism of injury and/or causation in his assessment of relatedness. She did not believe the right CTS surgery was an emergency operation and saw no evidence in the medical records indicating such.

27. Dr. Fall did not believe there was any evidence to indicate Claimant should have a higher impairment rating for his right upper extremity. In fact, she believed video surveillance showed Claimant to be moving without functional limitation and consistent with a person who has an improving right shoulder rotator cuff repair. She believed Claimant's functional impairments were adequately reflected in the impairment ratings

assigned by Dr. Gellrick, and found no basis to include additional body parts, increase Claimant's impairment ratings, or convert his scheduled impairment to a whole person rating.

28. Dr. John Raschbacher completed an IME of Claimant on October 2, 2018 to address his work-related conditions, MMI, and impairment. Claimant complained of entire back pain, right hip, neck, and right shoulder pain. Dr. Raschbacher believed Claimant sustained an injury to his right shoulder and that his thoracic pain would certainly be explained by the rotator cuff tear alone and not actually present in the form of a strain. He believed Claimant's described mechanism of injury was consistent with a right shoulder injury, but that Claimant likely had secondary gain issues regarding claims for other body parts. After physical examination, he assigned claimant a 10% impairment rating for his right upper extremity.

29. Dr. Raschbacher testified as an expert in occupational medicine at hearing. Dr. Raschbacher did not believe Claimant's cervical spine was a work related condition nor did he believe it required an impairment rating. He testified that Claimant's cervical spine condition was not caused, aggravated, or accelerated by any work-related injury and that Claimant's cervical spine had been diagnostically ruled out as the cause of claimant's ongoing complaints. He did not believe Dr. Hughes appropriately applied the AMA Guides to permanent impairment with regard to Claimant's C-spine and CTS as no causation evaluation was ever completed. Dr. Raschbacher did not believe Dr. Gellrick erred in her assessment of Claimant nor did he think Claimant's right CTS or subsequent surgery should be included. He credibly testified that Claimant properly received a right upper extremity rating for the injury he received and that video surveillance contradicted Claimant's presentation in court.

STATEMENT OF LAW

The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1) C.R.S.* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201, C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with

resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990). Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); see also *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

Where a party presents expert opinions, the weight, and credibility, of the opinions are matters exclusively within the discretion of the ALJ as the fact-finder. *Cordova v. Industrial Claim Appeals Office*, P.3d (Colo. App. No. 01CA0852, February 28, 2002). The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990). Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); see also *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

A DIME physician's findings of causation, MMI, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a Claimant's medical condition, the party challenging the DIME must demonstrate that the physician's determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Farris Indust. Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, *supra*.

Claimant failed to meet his burden to overcome the DIME by clear and convincing evidence as he failed to provide evidence that was "unmistakable and free from serious doubt" that the DIME physicians determinations in regards to causation and relatedness of his cervical spine were "highly probably incorrect."

Dr. Gellrick found that the work incident on June 24, 2015 did not cause an injury to Claimant's c-spine. True to the requirements in any casual analysis, Dr. Gellrick had Claimant demonstrate the mechanism of injury to her for over 20 minutes and no mechanism of injury sufficient to have caused an injury to Claimant's cervical spine was observed. Claimant did not sustain an injury to his neck as all diagnostic tests were negative and none of his degenerative conditions were shown to have been exacerbated

by the incident. Likewise, Dr.'s Fall and Raschbacher agreed with Dr. Gellrick and disputed Dr. Hughes' opinions on causation of Claimant's alleged c-spine symptoms.

The Division IME's opinion regarding causation is entitled to no special weight where the industrial injury does not result in an injury outside the schedule of disabilities. In *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998) the court, citing *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996), noted that whether a particular component of the Claimant's overall medical impairment was caused by the industrial injury is an inherent part of the rating process under the AMA Guides. Therefore, the *Egan* court determined that in order to challenge and overcome the causation conclusion by the DIME physician, a party must present clear and convincing evidence. However, the *Egan* court further explained that the statutory scheme, requiring causation questions to be challenged through a DIME, applies only to injuries resulting in whole person impairment. When there is a dispute concerning causation or relatedness in a case involving only a scheduled impairment, the ALJ will continue to have jurisdiction to resolve that dispute. The Division IME physician's causation determination is not afforded any special weight in a scheduled disability.

In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. See *Metro Moving and Storage Co. v Gussert*, 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998).

The DIME is required to rate a Claimant's impairment in accordance with the AMA Guides. § 8-42-107 (8) (c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). Section 8-42-101(3.5) (a) (II), C.R.S. states, "The director shall promulgate rules establishing a system for the determination of medical treatment guidelines and utilization standards and medical impairment rating guidelines for impairment ratings as a percent of the whole person or affected body part based on the revised third edition of the 'American Medical Association Guides to the Evaluation of Permanent Impairment,' in effect as of July 1, 1991." The Impairment Rating Tips, produced as required by that section of the Act, are readily available to the parties and to an ALJ, and are proper subjects for judicial notice. See *Miller v. Century Link*, W.C. No. 4-843-356 (January 11, 2013); *Kurtz v. JBS Carriers*, W.C. No. 4-797-234 (December 7, 2011); *Davis v. Mohawk Industries*, W.C. No. 4-674-003 (July 21, 2011); *Ortiz v. Service Experts, Inc.*, 4-657-974 (January 22, 2009). "The Impairment Rating tips, and other rating protocols, have been rendered by the General Assembly as part of a judge's inherent duty and power to find and apply the law." *Serna v. SSC Pueblo Belmont Op Co., LLC*, W.C. No. 4-922-344-01 (December 1, 2015). "We extend deference to the Workers' Compensation Division's interpretation of the AMA Guides as set forth in the Impairment Rating Tips. These Tips were written at the direction of the statute, section

8-42-101(3.5) (a) (II). The questions of whether the DIME physician has correctly applied the rating protocols, and ultimately whether the rating itself has been overcome by clear and convincing evidence, are questions of fact for the ALJ. *McLane Western Inc. v. Industrial Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999); *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000).

For purposes of determining levels of medical impairment pursuant to articles 40 to 47 of this title a physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings. Section 8-42-101(3.7) C.R.S.

Principles of Causation of Occupational Neck Pain provide that causation is a medical/legal analysis in the workers compensation system. The information in the Medical Treatment Guidelines pertaining to causation addresses only the evidence related to the medical analysis of causation. Actual cases may vary from the evidence presented based on specific circumstances of the claim. Work-related conditions may occur from the following: • a specific incident or injury, • aggravation of a previous symptomatic condition, or • a work-related exposure that renders a previously asymptomatic condition symptomatic and subsequently requires treatment. All of these conditions must be determined based on the specifics of the work related injury or exposure. The complaint of pain alone is generally not compensable in this system. To apply these standards, the clinician must first make a specific cervical diagnosis that is substantiated by reproducible physical exam findings. *AMA Treatment Guides, Rule 17, Exhibit 8(f), at 14.*

Under Table 53(II)(B), the examiner may assign an impairment value for impairment or a specific disorder of the lumbar or cervical regions of the spine, so long as the medical evidence establishes the presence of a specific diagnosis, objective pathology, and 6 months of medically documented pain and rigidity. *Bryant v. Transit Mix Concrete and Travelers Indemnity Co.*, W.C. No. 5-058-044-001, June 5, 2019.

Section 8-42-107(1), C.R.S., provides that a claimant is limited to a scheduled disability award if the Claimant suffers an “injury or injuries” described in § 8-42-107(2). *Strauch v. PSL Swedish Healthcare System, supra*. 917 P2d 366. Where a claimant suffers an injury or injuries not enumerated in § 8-42-107(2), the claimant is entitled to whole person impairment benefits under § 8-42-107(8), *Mountain City Meat Co. v. Oqueda*, 919 P.2d 246 (Colo. 1996).

The term “injury” as used in the statute refers to the manifestation in a part or parts of the body which have been impaired or disabled as a result of the industrial accident. *Mountain City Meat Co. v. Industrial Claim Appeals Office*, 904 P.2d 1333 (Colo.App.1995) (*cert. granted* October 30, 1995). The statute then refers to an injury resulting in a “loss” set forth in the schedule. The statute does not refer to the particular site of the injury or the medical reason for the loss; rather, it refers to the portion of the body that sustains the ultimate loss. See *e.g. McKinley v. Bronco Billy's*, 903 P.2d 1239

(Colo.App.1995).

The determination whether a claimant has suffered a functional impairment that is listed on the schedule of disabilities is a factual question to be resolved by the ALJ. See *Jones v. Adolph Coors Co.*, 689 P.2d 681 (Colo.App.1984). This determination is distinct from, and should not be confused with, the treating physician's rating of physical impairment under the *AMA Guides*. Nevertheless, that rating may be considered by the ALJ in determining whether the claimant's functional impairment is fully described on the schedule of disabilities. *Id.*

Dr. Hughes and Dr. Kreutter believed Claimant's functional impairment from the shoulder injury resided in his c-spine, while Drs. Gellrick, Ogsbury, Fall, and Raschbcher believed it was in Claimant's t-spine. Clearly these physicians disagree on the residual site of Claimant's functional impairment. However, mere disagreement alone is insufficient to establish that the DIME physicians determinations in these regards were highly probably incorrect nor is there evidence in the record "unmistakable and free from serious or substantial doubt" showing Dr. Gellrick made a mistake in her causation assessment for Claimant's c-spine. Dr. Gellrick specifically excluded Claimant's c-spine from the claim after observing the mechanism of injury and completing a thorough causation evaluation. She believed Claimant's residual functional impairment from his shoulder injury was in his t-spine and assigned a 5% whole person impairment rating for his thoracic spine.

Even if this ALJ were to find Claimant's c-spine related, he is not entitled to a permanent impairment rating. In order to assign a table 53 impairment rating for a c-spine injury, the guidelines require a specific diagnosis substantiated by reproducible physical examination while the Act proscribes that an individual shall not receive an impairment rating for pain without anatomical or physiological correlation. Numerous providers hypothesized, but were unable to ultimately render a specific diagnosis for Claimant's c-spine which were either reproducible during physical examination or corroborated by objective testing. Claimant failed to gain any substantial improvement despite exhaustive attempts to treat with conservative treatments and no diagnosis was ever made as all diagnostic tests were negative. The only benefit received was elimination of the c-spine as the cause of his subjective pain complaints. Without a specific diagnosis, even if related, Claimant has failed to establish he is entitled to a permanent impairment rating for his c-spine.

An employer or insurer shall not be liable for treatment provided pursuant to article 41 of title 12, C.R.S., unless such treatment has been prescribed by an authorized treating physician. Section 8-43-404(7), C.R.S.

Under § 8-43- 404(5)(a), C.R.S., the employer has the right in the first instance to designate the authorized provider to treat a claimant's compensable condition. If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. Section 8-43-404(7), C.R.S.; *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228

(Colo. App. 1999).

In *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990), a division of the court of appeals held that medical treatment provided in emergency situations constitutes an exception to the statutory rule that the employer has a right of first selection of the treating physician. Generally speaking, the “emergency doctrine” requires that a claimant establish the existence of a bona fide emergency requiring treatment. 2 Larson, *Workmen's Compensation Law*, § 61.12(f) (1997); *Lucero v. Jackson Ice Cream*, W.C. No. 4-170-105, January 6, 1995.

Claimant failed to meet his burden to prove by preponderance of the evidence that his right CTS and subsequent surgery was related to the June 24, 2015 work-incident. The record contains no persuasive evidence supporting a conclusion of relatedness as out of the more than ten physicians who saw Claimant, only Dr. Hughes, an expert retained and paid for by Claimant, opined that his right CTS and surgery was work-related. Even then, Dr. Hughes failed to describe how it could be related to the work-injury other than opining that Claimant complained of difficulty opening his right third digit upon initial examination.

To the contrary, Drs. Gellrick, Kreutter, Fall, and Raschbacher all concluded that Claimant’s right CTS and subsequent surgery was unrelated to the June 24, 2015 bucket lifting incident. They found no corresponding and appropriate mechanism of injury to have caused, aggravated, or accelerated this condition. Likewise, the record contains no persuasive evidence that Claimant’s right CTS was caused, aggravated, or accelerated by the treatment Claimant received for his shoulder. Both Drs. Fall and Raschbacher credibly testified that this did not happen and no expert made persuasive contradictory assertions.

Even if the ALJ were to find Claimant’s right CTS and subsequent surgery related, Respondents are not liable for the costs associated with the right CTS surgery. Respondents are only liable for authorized treatment. The parties stipulated and the evidence shows that the right CTS surgery was not, and is still not authorized. Additionally, the emergency doctrine is not applicable in the current matter as both Drs. Fall and Raschbacher credibly testified that the right CTS surgery was non-emergent and the ALJ finds no persuasive evidence to the contrary.

Claimant failed to prove by a preponderance of the evidence that he is entitled to a higher right upper extremity impairment rating. Claimant would have the court believe he can only move his head by moving his entire body and that he is unable to lift his arm to shoulder height without grimacing in pain. The ALJ finds this not credible. The only physician to give Claimant an impairment rating higher than a 13% was Claimant’s retained expert, Dr. Hughes. However, Dr. Hughes inappropriately applied the guides to permanent impairment when assigning an impairment for Claimant’s right CTS (in addition to not providing a causation analysis) and was the clear outlier when he assigned a 23% right upper extremity impairment rating. Contrary to Dr. Hughes and Claimant’s

assertion, Claimant's right rotator cuff tear was appropriately treated and adequately healed. Claimant underwent an extensive amount of conservative treatment and invasive procedures with little to no benefit noted subjectively, now over four years post injury. Claimant exhibited unrestricted range of motion in his shoulder and neck when observed on video surveillance and lost or lessened his myoclonic jerk when he was distracted. Nonetheless, at his impairment rating appointments he presented with significantly limited range of motion and voluntary jerking movements. Unfortunately, Claimant's likely voluntary movements caused him to undergo a second surgery which showed his musculotaneous nerve was not compressed and failed to provide him appreciable relief. Claimant properly received a 13% right upper extremity impairment rating for his shoulder injury and failed to prove it more likely than not that his right upper extremity rating should be increased.

The ALJ finds and concludes Claimant's right shoulder injury resulted in functional impairment contained on the list of scheduled disabilities. Claimant sustained a disability to his right arm at the shoulder. Claimant has been compensated for any other functional impairment as a result of the shoulder injury by Respondent's admission to the 5% whole person impairment rating he was given by Dr. Gellrick. Claimant continued to complain of pain and functional limitation which extended into his back, Dr. Gellrick thoroughly examined Claimant and believed the functional impairment was to his t-spine and assigned the appropriate rating. Any other subjective complaint by Claimant of functional limitation to different body parts are unsubstantiated by persuasive evidence.

Claimant did not present persuasive evidence that more likely than not he sustained an injury to a body part not on the list of scheduled disabilities for which he has not already been compensated. It is not the situs of the injury, rather, the situs of functional impairment which is essential in determining the body part permanently impaired. The portion of Claimant's body which sustained the ultimate loss was Claimant's right shoulder. No objective evidence of acute pathology was found within Claimant's neck or mid-back despite numerous diagnostic and treatment modalities. Likewise, Claimant's subjective complaints of functionally limiting pain is uncorroborated by objective testing or physical examination, and is contradicted by his behavior on video surveillance. Throughout the duration of his claim, Claimant's pain complaints continued to expand to other body parts without medical explanation. Claimant's c-spine/neck pain complaints are not corroborated by any persuasive evidence.

ORDER

The ALJ orders the following:

1. Claimant's claim to include his cervical spine as part of the work-injury is denied and dismissed.
2. Claimant's claim for inclusion of his right CTS and subsequent surgery is denied and dismissed.
3. Claimant's claim to increase his right upper extremity impairment rating is denied and dismissed.
4. Claimant's claim to convert his right upper extremity rating to a whole person impairment rating is denied and dismissed.

Dated January 9, 2020

1525 Sherman, #400
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that his admitted scheduled permanent impairment rating should be converted to a whole person impairment rating.

FINDINGS OF FACT

1. Claimant is a 41-year-old male who works for Employer as welder. Claimant's job requires going up and down trailers, lifting, and carrying heavy parts.

2. On September 10, 2018, Claimant sustained an admitted industrial injury when an 800-pound piece of equipment dropped on his left foot. Claimant immediately sought emergent care and was diagnosed with a crush injury to his left foot with 2-5th proximal phalanx fractures and a displaced distal 1st toe fracture. No other trauma or injury was noted. That same day Claimant underwent a closed reduction and percutaneous pinning of Claimant's left foot toes 2 through 5 proximal phalanx fractures and great toe distal phalanx fracture.

3. Claimant subsequently attended follow-up appointments with the surgeon, Dr. Taylor, and began treatment with podiatrist James Yakel, D.P.M. and Ryan Reiss, N.P. Claimant complained of left foot pain and anxiety. Dr. Yakel ultimately determined Claimant's toes had become gangrenous and amputated all five of Claimant's toes on his left foot on December 14, 2018.

4. Claimant continued to treat with Dr. Yakel and NP Reiss for his left foot. The medical records document reports of left foot symptoms including nerve pain, shaking, sensitivity, numbness and temperature changes. Claimant was referred to Greg Reichhardt, M.D. to help manage Claimant's ongoing pain issue.

5. Claimant first presented to Dr. Reichhardt on March 27, 2019. Dr. Reichhardt noted Claimant had significant pain at the distal residual limb and significant phantom limb sensation in all of the digits and, at times, an aching feeling throughout his left leg. Dr. Reichhardt noted Claimant's gait, balance, and coordination were normal.

6. Dr. Reichhardt reexamined Claimant on April 23, 2019. Claimant complained of continued pain in left leg mostly over the left distal foot. Claimant reported to Dr. Reichhardt that, on a good day, he would walk all day without pain but on a bad day he could only walk approximately two hours without pain. He further reported that he had been running and playing soccer. Claimant informed Dr. Reichhardt of a new complaint of right knee pain that began three days prior without specific injury. Dr. Reichhardt opined Claimant's right knee issues were not related to the work injury.

7. On May 21, 2019, NP Reiss noted Claimant had insisted on returning to work last week due to financial reasons and did so, but now was experiencing increased foot pain. He noted Claimant had some developed some right knee pain unrelated to the work injury and had not been playing soccer or increasing his activity since.

8. On May 22, 2019, Claimant reported 4/10 left foot pain, tingling and tenderness to Dr. Reichhardt. Dr. Reichhardt noted Claimant had undergone some testing for complex regional pain syndrome (CRPS), the results of which were negative.

9. On June 17, 2019, NP Reiss noted that Claimant informed him he needed to go back to work for financial reasons, and that Claimant wished to proceed with closing out his workers compensation claim and receiving an impairment rating.

10. Dr. Reichhardt reevaluated Claimant on July 2, 2019. Claimant continued to report some pain over the left forefoot. Claimant also completed a pain diagram for this visit which noted only left foot pain. There is no reference in this medical report to any issues or complaints of pain or dysfunction beyond Claimant's left foot. Dr. Reichhardt's impression was, in relevant part, left foot pain due to a crush injury, anxiety secondary to the injury, and opioid use with tapering advised. Dr. Reichhardt noted Claimant had returned to work essentially full-time and was tolerating the work and felt safe climbing ladders. Dr. Reichhardt opined Claimant reached maximum medical improvement (MMI). He recommended work restrictions of sitting for 15 minutes every two hours of standing and walking, and maintenance care in the form of tapering opioid medications and 12 follow-up visits over the next three years. Dr. Reichhardt assigned 30% left foot impairment rating (8% whole person) for the toe amputations.

11. Respondents filed a Final Admission of Liability (FAL) on July 10, 2019 admitting to a 30% scheduled impairment rating and reasonable, necessary and related maintenance care per Dr. Reichhardt's July 2, 2019 report.

12. Claimant continued to see NP Reiss and Dr. Reichhardt as maintenance care and began tapering of his opioid medications. Claimant continued to report left foot pain and restlessness. The medical records do not document reports of other symptoms or complaints regarding any other areas. On October 8, 2019, NP Reiss noted Claimant had no difficulty with his gait. Dr. Reichhardt noted normal gait on October 14, 2019 and October 31, 2019.

13. On November 13, 2019, Albert Hattem, M.D. performed an independent medical record review at the request of Respondents. Dr. Hattem opined that Claimant sustained a left foot injury only and did not qualify for a whole person impairment as Claimant did not suffer from any functional loss, sufficiently altered gait, pain or any other conditions. In support of this opinion, Dr. Hattem noted Claimant's trauma was only to his left foot and, with the exception of right knee pain which he agreed was unrelated to the work injury, there was no record of pain complaints to areas other than the left foot. Dr. Reichhardt further noted CRPS had been ruled out and Dr. Reichhardt had observed Claimant's gait to be normal on multiple occasions.

14. At hearing, Claimant testified he still experiences left foot pain and his injury has limited his ability to do the things he used to do, such as jumping on trailers, moving and working quickly, going to the gym and playing soccer, and balancing on uneven ground. He also testified that his injury has affected his "relations" with his wife. Claimant testified that he is afraid his foot might "go out" when lifting items and that he can no longer go out and have fun with his wife and walk around stores without taking a break. Claimant testified these issues are the result of his left foot pain.

15. Other than the aforementioned right knee complaints which Dr. Reichhardt determined were unrelated to Claimant's work injury, the medical records are devoid of complaints of symptoms affecting areas other than Claimant's left foot and lower extremity.

16. The ALJ credits the opinions of Drs. Reichhardt and Hattem, as supported by the medical records, and finds Claimant failed to prove by a preponderance of the evidence his work injury resulted in functional impairment to an area of the body the scheduled list of injuries.

17. Claimant failed to meet his burden of proof to establish his scheduled impairment rating should be converted to a whole person impairment rating.

18. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact

finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Whole Person Conversion

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. See §8-42-107(8)(c), C.R.S.

The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body may be considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

As found, Claimant failed to prove it is more probable than not he suffered functional impairment beyond the list of scheduled injuries. Claimant's injury, while severe, was limited to his left foot. With the exception of right knee pain, which Dr. Reichhardt and Dr. Hattem credibly opined was unrelated to the work injury, the medical records do not document complaints or findings in areas other than the left foot and leg. Dr. Reichhardt consistently noted normal gait and balance at his examinations subsequent to Claimant's placement at MMI. Claimant has returned to work performing his normal duties with minimal restrictions. To the extent Claimant continues to

experience pain and suffers from functional limitations, there is insufficient credible and persuasive evidence the situs of fictional impairment extends to an area beyond the list of scheduled injuries. Accordingly, based on the totality of evidence, Claimant is not entitled to conversion of his scheduled impairment rating to whole person rating.

ORDER

1. Claimant's request for conversion of his 30% scheduled left foot impairment to 8% whole person impairment is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 9, 2020

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-109-584-001 & 5-078-213**

ISSUES

- Did Claimant prove by a preponderance of the evidence a left shoulder injury she suffered on May 17, 2019 is a separate injury rather than a compensable consequence of her original May 20, 2018 injury?

FINDINGS OF FACT

1. Claimant works for Employer as an Emergency Medical Officer and firefighter. She suffered an admitted injury to her right shoulder on May 20, 2018 (W.C. No. 5-078-213).

2. Dr. Terrance Lakin is Claimant's primary ATP. Claimant received extensive treatment for the right shoulder, including surgeries on July 25, 2018 and February 6, 2019, both performed by Dr. Kobayashi.

3. Claimant had restrictions because of the work injury that prevented her from performing her regular job. Employer accommodated Claimant's restrictions with "light duty."

4. Claimant attended multiple sessions of physical therapy at Synergy Physical Therapy & Wellness. By May 2019, she was nearing the end of her rehabilitation and appeared to be approaching MMI.

5. On May 13, 2019, Claimant saw PA-C Terry Schwartz in Dr. Lakin's office. She had finished the approved therapy sessions and "isn't sure it's helping anymore." She recently started massage therapy was wanted to see a chiropractor. Claimant reported pain in the right scapular area, upper back, and neck when using her right shoulder. Despite her ongoing symptoms, Claimant wanted her work restrictions liberalized because she was "running out of light-duty time." PA-C Schwartz noted neither he nor Claimant knew the exact requirements of her job, which "creates a dilemma to determine when she has reached full duty status. I explained that we would have to use standard lifting guidelines for the general public . . . adjusted for what [Dr. Lakin] perceives as firefighter requirements." PA-C Schwartz planned to have his office staff contact Dr. Kobayashi about Claimant's restrictions.

6. The next day, Dr. Lakin referred Claimant for functional capacity testing at Synergy to evaluate her work capacity and readiness to return to regular duty. Dr. Lakin spoke by phone with the physical therapist at Synergy regarding functional testing. He noted Claimant was still on restrictions because using the right shoulder "has seemed to aggravate myofascial pain up to now," but Dr. Kobayashi had cleared Claimant to "advance" her lifting limitations.

7. Claimant went to Synergy for testing on May 17, 2019. She reported the shoulder was 80% functional and wanted to get back to work full duty without restrictions. The therapist evaluated Claimant's work capacity by "trial[ing] higher level activities for duties related to being a firefighter." The testing was relatively vigorous, including activities such as swinging a 25-pound sledgehammer, lifting 75 pounds to shoulder height, and pulling a heavy sled. The therapist noted Claimant's strength "quickly fatigues," and she would benefit from work hardening.

8. Claimant returned to Dr. Lakin on May 28, 2019 and reported she had injured her left shoulder during the functional capacity assessment at Synergy. Dr. Lakin opined,

Injury to left shoulder 5/17/2019 . . . is a separate injury. MOI was out of the ordinary for assessment/care of her right shoulder injury. Right shoulder will be closed out, MMI, and rating will be completed. Left shoulder should be a new injury claim.

9. Claimant filed a new workers' compensation claim for the left shoulder with a May 17, 2019 date of injury (W.C. No. 5-109-584).

10. Respondent denied the 2019 claim and accepted liability for the left shoulder injury under the original 2018 claim (W.C. No. 5-078-213). Respondent has covered all requested benefits relating to the left shoulder under the original claim, including left shoulder surgery on July 3, 2019 and TTD benefits.

11. Claimant's motivation for pursuing the left shoulder injury as a separate claim is to "reset the clock" regarding her eligibility for light duty work under Employer's policies.

12. Claimant failed to prove she suffered a separate compensable injury on May 17, 2019. The functional capacity testing was ancillary to authorized medical treatment and directly related to Claimant's admitted right shoulder injury. The left shoulder injury is a compensable consequence of the May 2018 admitted injury under the quasi-course of employment doctrine.

CONCLUSIONS OF LAW

To prove a compensable injury, a claimant must prove the injury occurred while performing service arising out of and in the course of his employment. Section 8-41-301(1)(b). Injuries sustained while pursuing authorized treatment for a compensable work-related injury are compensable under the "quasi-course of employment" doctrine. *Travelers Insurance Company v. Savio*, 706 P.2d 1258 (Colo. 1985); *Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo. App. 1993). Although these injuries occur outside the time and space limits of normal employment, they are nevertheless related to the employment in the sense that they are necessary or reasonable activities that would not have been undertaken but for the compensable injury. *Turner v. Industrial Claim Appeals Office*, 111 P.3d 534 (Colo. App. 2004). Because the employer must provide medical treatment for a compensable injury and an injured employee must submit

to it, the treatment becomes an implied part of the employment contract, and injuries sustained while attending authorized treatment are considered compensable consequences of the original injury and not a separate injury claim. *Price Mine Service, Inc. v. Industrial Claim Appeals Office*, 64 P.3d 936 (Colo. App. 2003).

As found, Claimant failed to prove she suffered a separate compensable injury on May 17, 2019. The ALJ agrees with Respondent that the left shoulder injury suffered during the functional capacity testing is a compensable consequence of the May 2018 injury, and should be covered under the claim denominated W.C. No. 5-078-213. Even though the FCE was not medical “treatment” *per se*, it was certainly ancillary to treatment. One of an ATP’s primary responsibilities is to determine an injured worker’s limitations and restrictions during recovery from an injury. See *e.g.*, §§ 8-42-105; 8-42-106; WCRP 18-6(G)(2)(a), (b); DOWC Form WC164 – Physician’s Report of Workers’ Compensation Injury. Treating providers frequently send injured workers for functional capacity evaluations (FCEs) or similar testing to help establish their work capacity, and carriers routinely cover FCEs without question. According to the WC Fee Schedule, an FCE is a medical benefit payable under HPCPS 97750.¹

The ALJ has no question the May 17, 2019 functional testing was a compensable medical benefit obtained in the natural progression of authorized treatment for Claimant’s 2018 injury. The testing was undertaken on direct referral from the ATP, and its sole purpose was to assess Claimant’s safe work capacity and residual restrictions *resulting from the work injury*. As such, it was a direct and natural consequence of the original injury.² The fact that the physical therapist was more aggressive than necessary or expected does not change the analysis or the outcome. Injuries sustained because of medical negligence are covered under the quasi-course doctrine just like any other injury resulting from authorized treatment. *Hennig v. Crested Butte Anthracite Mining Co.*, 21 P.2d 1115 (Colo. 1933); *Hascek v. CPI Corp.*, W.C. No. 3-699-359 (November 17, 2005). Dr. Lakin’s legal opinion that the therapy injury represents a “new injury” is not persuasive as it is outside his area of expertise and reflects a misunderstanding of the law.

ORDER

It is therefore ordered that:

1. Claimant’s claim for workers’ compensation benefits in W.C. No. 5-109-584 is denied and dismissed.

¹https://www.colorado.gov/pacific/sites/default/files/2020_CO_WC_Medical_Fee_Schedule_version_0107_2020.xlsx

² The functional assessment was neither required nor requested by Employer, and the injury might not be compensable at all absent the quasi-course doctrine. Typically, a determination that an injury was not a “direct and natural” consequence of the original injury results in a finding of non-compensability. See, *e.g.*, *Travelers’ Insurance Company v. Savio*, 706 P.2d 1258 (Colo. 1985) (bad faith by insurance carrier); *Schreiber v. Brown & Root, Inc.*, 888 P.2d 274 (Colo. App. 1993) (unauthorized medical treatment); *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1052 (Colo. App. 2002) (“litigation stress”); *Lang v. Southern Ute Tribe*, W.C. 4-450-747 (May 16, 2005) (injuries during FCE arranged by claimant’s attorney).

2. Respondent shall continue covering the May 17, 2019 left shoulder injury under W.C. No. 5-078-213.

3. All issues **relating to W.C. No. 5-078-213** not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 9, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-104-509-001**

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on February 13, 2019.
2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injury.
3. A determination of Claimant's Average Weekly Wage (AWW).
4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period March 25, 2019 until terminated by statute.

FINDINGS OF FACT

1. Claimant worked for Employer as an Insulation Installer. He explained that he injured his lower back while riding in a company box truck during a snowstorm from a job site in Castle Rock to Employer's headquarters in Denver. During the trip, the truck pulled over several times due to snow and ice build-up on the windshield wipers. Claimant's co-worker Pascacio T[Redacted], the driver of the truck, instructed him to get out of the truck and clear snow and ice from the windshield. Claimant noted that he was required to jump down about 4-5 feet off the truck to the ground. He jumped down about 4-5 times to clean the ice and snow from the windshield during the trip to Denver.
2. On March 20, 2019 Claimant visited the UC Health Emergency Room for an evaluation. In an "after visit summary" Jessica Paisley, M.D. diagnosed Claimant with acute bilateral low back pain with left-sided sciatica.
3. On March 25, 2019 Claimant visited the Mile High Primary Care Clinic for an evaluation. He reported lower back pain that began approximately one week earlier. Claimant could not recall a specific event that caused his lower back pain. Kevin Scott, M.D. diagnosed Claimant with lower back pain, prescribed medications and recommended a lumbar spine MRI.
4. On April 6, 2019 Claimant underwent a lumbar spine MRI. The MRI revealed a L3-L4 disc protrusion, an L4-L5 left asymmetric disc bulge, mild left neural foraminal narrowing and mild facet arthropathy of the lower spine.
5. Claimant again visited Dr. Scott on April 10, 2019 and received a work excuse. Dr. Scott wrote that Claimant was under his care for a back injury and issued restrictions of no lifting, bending or twisting until evaluated by a spine surgeon. On April

11, 2019 Dr. Scott's office issued a health summary that noted lower back pain and listed Claimant's medications. None of Dr. Scott's records contained any reference to a work-related injury.

6. On April 22, 2019 Claimant visited Authorized Treating Physician (ATP) Brenden Matus, M.D. at Workwell Occupational Medicine for an initial evaluation. Claimant reported lower back pain that began on March 13, 2019. He specifically explained that he had been climbing up and down from his work truck in blizzard conditions to clean the windshield wipers. Claimant noted that "when he would jump down from the truck he would slide a bit." Several days later on March 19, 2019 Claimant lifted a two-part 16-foot ladder and felt a pulling sensation in his back. After performing a physical examination, Dr. Matus determined that Claimant may have suffered a lower back strain. However, he also remarked that Claimant did not have a "significant mechanism of injury, but he certainly does have a mechanism that was in the workplace and no other competing mechanism that was outside of work." Dr. Matus recommended physical therapy and prescribed medications. He also suggested an orthopedic surgery evaluation.

7. On April 26, 2019 Claimant presented to Stephen Pehler, M.D. for an orthopedic evaluation. Claimant reported lower back pain with left leg radiculopathy and left-sided groin pain. Despite severe pain complaints, Claimant performed well on his lower extremity motor testing. Dr. Pehler reviewed Claimant's MRI and recommended a transforaminal lumbar epidural steroid injection.

8. At Claimant's May 7, 2019 evaluation with Dr. Matus, he reported an inability to maintain a position for more than 10 – 20 minutes. He also stated his pain was so severe that it caused nausea and vomiting. Claimant reported loose stools and diarrhea that he believed were connected to his pain. Dr. Matus remarked that Claimant required a mental health evaluation and referred him for a psychiatry evaluation.

9. At a June 19, 2019 evaluation with Dr. Matus Claimant reported he fell out of a chair at home two nights prior while holding his child on his lap. Claimant noted a sharp pain with the inability to stand. On July 3, 2019 Claimant again visited Dr. Matus and reported worsening symptoms including numbness and sharp pain in the center of his back. Dr. Matus again recommended a depression-screening tool and referred Claimant for a psychiatric evaluation. He continued work restrictions because Claimant had not demonstrated any functional progress.

10. Claimant has a prior work injury from November 5, 2015 in which he fell off the back of a garbage truck and hit his head. He treated extensively for the injury over approximately two years. Medical records document that he was frequently non-compliant with medical treatment recommendations and eventually discharged by his neurologist and physical medicine specialist Kristin Mason, M.D. for non-compliance.

11. On August 11, 2019 Lawrence A. Lesnak, D.O. performed a records review of Claimant's claim. Dr. Lesnak concluded that there was no medical evidence that Claimant suffered a compensable injury at work on March 13, 2019. He reasoned that

Claimant had a long history of “psychologic” symptom diagnoses that would suggest his subjective complaints tend to be unreliable. Dr. Lesnak explained that “in cases such as this, the initial medical history obtained by any healthcare provider frequently is the most accurate.” Claimant did not report a specific inciting event that was responsible for his back and leg symptoms to Dr. Scott on March 25, 2019. Furthermore, the April 6, 2019 lumbar MRI did not reflect any recent or traumatic injury to Claimant’s lumbar spine. The MRI merely revealed typical age-related degenerative changes. Dr. Lesnak thus summarized that Claimant’s medical treatment and diagnostic testing for his lower back and leg symptoms were unrelated to any March 13, 2019 work incident.

12. Claimant testified at the hearing in this matter. He remarked that suffered a lower back injury on March 13, 2019 when he was returning from a job site. He was jumping in and out of the truck to clean off the windshield because the wipers were freezing up. Claimant noted his back was then aggravated on March 19, 2019 when he lifted a heavy ladder. Claimant commented he initially reported his injury to Employer’s Production Manager Edgar V[Redacted] on Friday, March 15, 2019 via telephone and/or text message. He subsequently reported his injury to supervisor Mike B[Redacted] on Wednesday March 20, 2019 in person after he had reported to the emergency room at UC Health. Claimant explained that neither Mr. V[Redacted] nor Mr. B[Redacted] took any action in response to his report of an injury. Specifically, Claimant testified that he told Mr. V[Redacted] that he was “feeling under the weather on March 15, 2019” and subsequently sent both Mr. V[Redacted] and Mr. B[Redacted] multiple text messages to which neither responded.

13. Mr. V[Redacted] testified at the hearing in this matter. He explained that Claimant called him on March 15, 2019 but only told him that he was “under the weather” and did not report any specific incident or injury that occurred on March 13, 2019. In fact, Claimant never reported any work injury. Mr. V[Redacted] also confirmed that he exchanged several text messages with Claimant and the two men had played phone tag for the next several days until Claimant presented to the office on March 20, 2019 after his emergency room visit. It was Mr. V[Redacted]’ understanding that the emergency room visit was not the result of any work-related incident. Although Claimant had sent Mr. V[Redacted] several text messages and called him numerous times, he never sent either a text or voice message stating that he had injured his back at work on March 13, 2019 or March 19, 2019. Notably, when Mr. V[Redacted] asked Claimant verbally if his injury was work-related, Claimant responded in the negative.

14. Mr. V[Redacted] first learned that Claimant was alleging a work-related injury on or about March 25, 2019. He investigated the claim by obtaining witness statements from the crewmembers who had worked with Claimant on March 13, 2019. None of the crewmembers confirmed an incident or injury in writing with Mr. V[Redacted]. Claimant also sent a text message on March 20, 2019 to Employer’s General Manager, Eric, confirming that he had also told Mr. B[Redacted] that his injury was not work related.

15. On October 1, 2019 Dr. Lesnak testified through a post-hearing evidentiary deposition in this matter. He maintained that there was no medical evidence to suggest Claimant suffered a compensable lower back injury while working for Employer on March

13, 2019. Dr. Lesnak specified that many of Claimant's subjective complaints were not supported by objective examination findings in either the 2015 claim or the current 2019 claim. He also stated that the medical records contained an absence of objective and reproducible findings on physical examination. Despite therapy and treatment, Claimant's symptoms progressed over time, which was inconsistent with the expected course after an injury. Notably, he explained that Claimant exhibited many expanding complaints that "really didn't make sense and fit the injury." Dr. Lesnak also testified that, although he had reviewed written witness statements from co-workers who denied seeing Claimant sustain any injury on March 13, 2019, the statements were not crucial to his opinion on causation. Instead, the statements simply provided additional information to the overall analysis regarding the reliability of Claimant's presentation and history. Moreover, the April 6, 2019 MRI did not reflect any recent or traumatic injury to Claimant's lumbar spine. The MRI merely revealed typical age-related degenerative changes. Finally, Claimant's reported symptoms after cleaning the truck's windshield and lifting the ladder involved tiredness and no specific pain. Dr. Lesnak commented that the reports of symptoms following the preceding activities did not "really seem to correlate." Therefore, Dr. Lesnak summarized that Claimant did not suffer a compensable lower back injury on March 13, 2019.

16. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on February 13, 2019. Initially, Claimant asserts that he injured his lower back on March 13, 2019 when he repeatedly climbed up and down from his work truck in blizzard conditions to clean the windshield. ATP Dr. Matus determined that Claimant may have suffered a lower back strain but remarked that Claimant did not have a "significant mechanism of injury" Nevertheless, Dr. Matus reasoned that Claimant "certainly does have a mechanism that was in the workplace and no other competing mechanism that was outside of work." Despite Claimant's testimony and Dr. Matus' opinion, the medical records, in conjunction with the persuasive opinion of Dr. Lesnak, reflect that Claimant likely did not suffer a lower back injury during the course and scope of his employment with Employer on March 13, 2019.

17. The medical records reveal that Claimant did not report a work-related injury to medical providers until he visited Dr. Matus for an examination on April 22, 2019. On March 25, 2019 Claimant visited Dr. Scott and reported lower back pain that began approximately one week earlier. Claimant could not recall a specific event that caused his lower back pain. Furthermore, although Claimant testified that he reported his lower back injury to Employer shortly after the incident, the credible testimony of Mr. V[Redacted] demonstrates that Claimant did not report his injury and there were no witnesses to a March 13, 2019 event. Notably, Claimant called Mr. V[Redacted] on March 15, 2019 but only told him that he was "under the weather" and did not report any specific incident that occurred on March 13, 2019. Although Claimant had sent Mr. V[Redacted] several text messages and called him numerous times, he never stated that he had injured his back at work on March 13, 2019 or March 19, 2019. Furthermore, when Mr. V[Redacted] asked Claimant verbally if his injury was work-related, Claimant responded in the negative. Mr. V[Redacted] also investigated the claim and none of Claimant's crewmembers from March 13, 2019 confirmed an incident or injury in writing. Finally,

Claimant sent a text message on March 20, 2019 to Employer's General Manager, Eric, confirming that he had also told Mr. B[Redacted] that his injury was not work related.

18. The persuasive medical opinion of Dr. Lesnak also reflects that it is unlikely Claimant suffered a lower back injury while working for Employer. Dr. Lesnak specified that the medical records contain an absence of objective and reproducible findings on physical examination. Claimant also did not report a specific inciting event that was responsible for his back and leg symptoms to Dr. Scott on March 25, 2019. Furthermore, the April 6, 2019 lumbar MRI did not reflect any recent or traumatic injury to Claimant's lumbar spine. The MRI merely revealed typical age-related degenerative changes. Finally, despite therapy and treatment, Claimant's symptoms progressed over time, which was inconsistent with the expected course after an injury. Notably, Dr. Lesnak explained that Claimant exhibited many expanding complaints that "really didn't make sense and fit the injury." He thus summarized that Claimant's medical treatment and diagnostic testing for his lower back and leg symptoms were unrelated to any March 13, 2019 work incident. Based on the medical records and persuasive opinion of Dr. Lesnak, Claimant likely did not suffer a lower back injury while working for Employer on March 13, 2019. Accordingly, Claimant's claim is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on February 13, 2019. Initially, Claimant asserts that he injured his lower back on March 13, 2019 when he repeatedly climbed up and down from his work truck in blizzard conditions to clean the windshield. ATP Dr. Matus determined that Claimant may have suffered a lower back strain but remarked that Claimant did not have a “significant mechanism of injury” Nevertheless, Dr. Matus reasoned that Claimant “certainly does have a mechanism that was in the workplace and no other competing mechanism that was outside of work.” Despite Claimant’s testimony and Dr. Matus’ opinion, the medical records, in conjunction with the persuasive opinion of Dr. Lesnak, reflect that Claimant likely did not suffer a lower back injury during the course and scope of his employment with Employer on March 13, 2019.

8. As found, the medical records reveal that Claimant did not report a work-related injury to medical providers until he visited Dr. Matus for an examination on April

22, 2019. On March 25, 2019 Claimant visited Dr. Scott and reported lower back pain that began approximately one week earlier. Claimant could not recall a specific event that caused his lower back pain. Furthermore, although Claimant testified that he reported his lower back injury to Employer shortly after the incident, the credible testimony of Mr. V[Redacted] demonstrates that Claimant did not report his injury and there were no witnesses to a March 13, 2019 event. Notably, Claimant called Mr. V[Redacted] on March 15, 2019 but only told him that he was “under the weather” and did not report any specific incident that occurred on March 13, 2019. Although Claimant had sent Mr. V[Redacted] several text messages and called him numerous times, he never stated that he had injured his back at work on March 13, 2019 or March 19, 2019. Furthermore, when Mr. V[Redacted] asked Claimant verbally if his injury was work-related, Claimant responded in the negative. Mr. V[Redacted] also investigated the claim and none of Claimant’s crewmembers from March 13, 2019 confirmed an incident or injury in writing. Finally, Claimant sent a text message on March 20, 2019 to Employer’s General Manager, Eric, confirming that he had also told Mr. B[Redacted] that his injury was not work related.

9. As found, the persuasive medical opinion of Dr. Lesnak also reflects that it is unlikely Claimant suffered a lower back injury while working for Employer. Dr. Lesnak specified that the medical records contain an absence of objective and reproducible findings on physical examination. Claimant also did not report a specific inciting event that was responsible for his back and leg symptoms to Dr. Scott on March 25, 2019. Furthermore, the April 6, 2019 lumbar MRI did not reflect any recent or traumatic injury to Claimant’s lumbar spine. The MRI merely revealed typical age-related degenerative changes. Finally, despite therapy and treatment, Claimant’s symptoms progressed over time, which was inconsistent with the expected course after an injury. Notably, Dr. Lesnak explained that Claimant exhibited many expanding complaints that “really didn’t make sense and fit the injury.” He thus summarized that Claimant’s medical treatment and diagnostic testing for his lower back and leg symptoms were unrelated to any March 13, 2019 work incident. Based on the medical records and persuasive opinion of Dr. Lesnak, Claimant likely did not suffer a lower back injury while working for Employer on March 13, 2019. Accordingly, Claimant’s claim is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s claim for Workers’ Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you

mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: January 9, 2020.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that her average weekly wage (“AWW”) should be increased based on concurrent employment?
- Whether claimant has proven by a preponderance of the evidence that she is entitled to an award for disfigurement?
- Whether claimant has proven by a preponderance of the evidence that respondents claim of an overpayment of temporary disability benefits (and subsequent offset of permanent partial disability benefits) was improper based on claimant having failed to receive the temporary disability checks issued by respondents?
- Whether respondents have proven by a preponderance of the evidence that the interest should be waved pursuant to Section 8-43-410(2), C.R.S.?

FINDINGS OF FACT

1. Claimant sustained a compensable injury arising out of and in the course of her employment with employer on October 22, 2015.
2. Respondents filed a final admission of liability (“FAL”) on March 1, 2019 admitting to an impairment rating of 18% whole person. The FAL admitted to an average weekly of \$593.18. This AWW was based on claimant’s earnings with employer and did not take into consideration any concurrent employment. Claimant testified she did not discuss her concurrent employment with the insurance adjuster. Claimant testified that her manager for employer was aware of her concurrent employment. This testimony was contradicted by Ms. Robinson, the General Manager and Human Resources (“HR”) manager for employer. Ms. Robinson testified she was unaware of claimant having a second job.
3. Claimant testified that at the time she was injured, she was also working for a concurrent employer, Retredia A&M Services performing housekeeping services. Claimant testified this was the same type of work she performed for employer. Claimant testified she earned approximately \$300 per week working for her concurrent employer. According to the W2 forms entered into evidence at hearing, claimant earned \$3,617.75 working for her concurrent employer in 2015.
4. The wage records entered into evidence from the concurrent employment document claimant’s earnings in 2015. Claimant testified that the nature of her employment was seasonal and she would work more hours during the busy season than the low season. Claimant testified that the low season was generally the months of April, May, August, September and October.

5. Claimant testified she would have returned to work for her concurrent employer in November if she had not been injured. The wage records show claimant worked for her concurrent employer in September 2015 and then again in January 2016. Claimant testified she was unable to continue to work for her concurrent employer due to her injury involved in this claim.

6. Claimant testified at hearing that she did not receive many of her temporary total disability (“TTD”) checks including her checks between December 28, 2015 and June 23, 2016. Claimant testified that she did not keep a record of the checks that she deposited. Claimant testified that she mostly used Wells Fargo, but deposited a few checks at Yampa Valley Bank.

7. Respondents presented the testimony of Ms. M[Redacted], the adjuster for insurer. Ms. M[Redacted] testified insurer admitted to an AWW of \$593.18 on December 28, 2015 based on claimant’s earnings on the 12 weeks prior to the work injury. Ms. M[Redacted] testified she only recently learned of claimant’s concurrent employment. Ms. M[Redacted] testified she did not ask claimant about concurrent employment when speaking with claimant. Ms. M[Redacted] testified as to her conversations with claimant and discussions regarding her change of address during the claim.

8. Ms. M[Redacted] testified as to checks that were issued to claimant that did not clear, and the measures insurer took to issue stop payments on those checks and reissue checks to claimant. Ms. M[Redacted] testified she did not recall if those checks were returned through the mail or not. Ms. M[Redacted] testified five checks did not clear, and she reissued a check for \$113.66 (four checks for \$20 and one for \$33.66) to cover those checks. Ms. M[Redacted] testified there were two other checks issued on October 6, 2017 and October 19, 2017 that were not cashed. Ms. M[Redacted] testified that when she was advised in 2017 that claimant had not received the checks, she reissued the checks and sent the checks via overnight mail. According to the payment logs, these checks were issued on November 6, 2017 and cashed on November 8, 2017.

9. Copies of two checks, one dated December 28, 2015 for \$3,331.44 and a second dated May 13, 2016 in the amount of \$1,393.45 were entered into evidence at hearing. This first check was negotiated at Wells Fargo, the second check was negotiated at Yampa Valley Bank. Both checks contain a signature endorsement that is similar to claimant’s signature as reflected in her authorization for release of employment information entered into evidence by respondents. The ALJ does not credit claimant’s testimony at hearing that she did not receive or negotiate the temporary disability benefits reflected in these payments.

10. The ALJ credits the testimony of Ms. M[Redacted] and the payment logs entered into evidence and finds that insurer has issued temporary disability benefits to claimant amounting to \$54,240.83 as reflected in the March 1, 2019 final admission of liability (“FAL”). The respondents are therefore entitled to credit for the temporary

disability benefits paid as reflected in the indemnity logs and the FAL filed by respondents.

11. The ALJ credits the testimony of Ms. M[Redacted] and the indemnity logs entered into evidence over the testimony of claimant that she did not receive the checks. The ALJ notes that the checks were cashed and when checks were reported as missing to the insurer, new checks were issued in a timely manner and sent to claimant. Those checks were almost immediately cashed. The evidence presented at hearing does not establish that claimant failed to receive any of the benefits listed on the indemnity log as claimed by respondents in the FAL filed on March 1, 2019. Claimant's testimony in this case that

12. Following claimant's injury, claimant underwent surgery on her low back. As a result of the surgery, claimant has a surgical scar on her back measuring three and one-half (3 ½) inches in length and one-quarter (¼) inch in width. Claimant also demonstrated that she now walks with a limp. Respondents presented surveillance of claimant that they contend demonstrates claimant walking without a limp. Additionally, Ms. Robinson testified at hearing that she has not noticed claimant walking with a limp when she sees claimant at work.

13. Based on the evidence presented at hearing, the ALJ finds that claimant has proven that it is more likely than not that her AWW should be increased based on the concurrent employment. Respondents argue that the AWW should be increased by \$100.51 based on claimant's earnings between June 12, 2015 and September 17,,2015. This does not take into consideration the nature of claimant's employment with her concurrent employer, however.

14. Based on the evidence presented at hearing, it is apparent that claimant was earning more from her concurrent employment during the busy times with her concurrent employment. For instance, during the six weeks between June 11 and July 22, 2015, claimant earned a total of \$1,296 for an average of \$216.00 per week. However, if you include the 10 weeks prior to claimant's injury, claimant earned \$156.10 per week.

15. Based on the evidence presented at hearing, and using the discretion allowed to the ALJ for calculating a fair AWW by the Colorado Workers' Compensation Act, the ALJ determines that claimant's AWW should be increased by the \$156.10 claimant was earning per week in the 10 weeks prior to her work injury. The ALJ notes that Ms. M[Redacted] testified that she calculated claimant's AWW by using the wages for the 12 weeks prior to her work injury. The ALJ notes that 10 weeks is more appropriate for the concurrent employment based on the wage records from her concurrent employer that shows consistent work for the concurrent employer in the 10 weeks prior to her injury.

16. The ALJ finds claimant has proven by a preponderance of the evidence that the industrial injury resulted in a disfigurement that is normally exposed to public view based on the surgical scar and the altered gait. The ALJ credits claimant's

presentation at hearing over the testimony of Ms. Robinson and the surveillance video and finds that claimant has proven it is more probable than not that her gait was altered as a result of the injury and subsequent surgery.

17. Respondents argue that they should be relieved of paying interest pursuant to Section 8-43-410(2), C.R.S. for the increased AWW due to the fact that they were unaware of claimant's concurrent employment. The ALJ is not persuaded.

18. Section 8-43-410(2), C.R.S. provides that interest shall be paid on all awards under the Workers' Compensation Act. This provision allows for the ALJ to relieve the insurance company of paying the interest upon application and satisfactory showing to the ALJ of terms under which the ALJ may relieve the employer or insurance carrier from having to pay the interest of an award.

19. Despite the fact that the claimant did not inform the insurance carrier of the concurrent employment in this case, the ALJ finds that the claimant does not need to volunteer this information, especially in cases where the claimant is initially not represented by counsel, or risk being denied interest on payments that should have been issued.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. "Overpayment" means money received by a claimant that exceeds the amount that should have been paid. Section 8-40-201(15.5), C.R.S. Claimant alleges

in this case that certain temporary disability checks were never received by claimant, and therefore, respondents should not be entitled to claim an overpayment of benefits for these checks.

4. As found, the testimony of Ms. M[Redacted] and the indemnity logs entered into evidence are determined to be more credible and persuasive than the testimony of claimant at hearing that she did not receive certain checks from respondents in this case. As found, the testimony of Ms. M[Redacted] that certain issues regarding checks was brought to her attention by claimant and she reissued checks to claimant in these instances is determined to be credible and persuasive. As found, the indemnity logs establish that \$54,280.83 in temporary disability was paid to claimant and those checks were cashed. As found, insufficient evidence was presented to establish by a preponderance of the evidence that claimant did not receive the benefits listed in the indemnity log.

5. As found, claimant's testimony that she did not receive temporary disability benefits for a period of time is found to be not persuasive. The evidence presented at hearing demonstrates that checks issued on December 28, 2015 and January 3, 2016, for \$3,331.44 and \$1,393.45 respectively, were negotiated by claimant based on the signature on the back of the checks is found to be more credible and persuasive than claimant's contrary testimony at hearing.

6. The ALJ must determine an employee's AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

7. As found, the ALJ determines that the best method for determining claimant's AWW is to use the claimant's wages from claimant's concurrent employment for the 10 weeks prior to the injury and combine that amount to the AWW for claimant's work with employer as reflected in the FAL.

8. As found, claimant's AWW should be increased by \$156.10 based on claimant's concurrent employment for an AWW of \$749.28.

9. As found, claimant has proven by a preponderance of the evidence that she sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles claimant to additional compensation. Section 8-42-108 (1), C.R.S.

10. Pursuant to Section 8-42-108(1), the ALJ awards claimant disfigurement benefits in the amount of \$1,210.04 for claimant's surgical scar and altered gait.

11. Section 8-43-410(2), C.R.S. provides in pertinent part:

Every employer or insurance carrier shall pay interest at the rate of eight percent per annum upon all sums not paid upon ... the date the employer

or insurance carrier became aware of an injury.... Upon application and satisfactory showing to the director or an administrative law judge of the valid reasons therefor, said director or administrative law judge, upon such terms or conditions as the director or administrative law judge may determine, may relieve such employer or insurer from the payment of interest after the date of the order therefor....

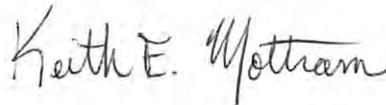

12. As found, respondents have failed to establish by a preponderance of the evidence a satisfactory showing of circumstances that the relieve respondents of the obligation to pay claimant interest on benefits not paid in this case. Despite the fact that claimant did not volunteer information to respondents about her concurrent employment, these facts alone do not establish, in this case, a satisfactory basis for relieving respondent of the obligation to pay interest to claimant in this case.

ORDER

It is therefore ordered:

1. Respondents shall pay claimant temporary disability benefits based on an AWW of \$749.28. Respondents are entitled to a credit for temporary benefits already paid.
2. Respondents shall pay claimant disfigurement benefits in the amount of \$1,210.04.
3. Respondents request for a waiver of interest due to claimant pursuant to Section 8-43-410(2) is denied.
4. All issues not herein decided are reserved for future determination.

Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that a right shoulder reverse total arthroplasty recommended by Dr. Provencher is reasonable, necessary, and causally related to Claimant's May 22, 2017 work injury.

FINDINGS OF FACT

1. Claimant is a 71-year-old male employed by Employer as a tunnel maintenance employee. Prior to his May 22, 2017 work injury, Claimant had been employed as a tunnel maintenance employee for approximately 4 years.

2. As a tunnel maintenance employee, Claimant's job duties involved the operation and maintenance of the Eisenhower Johnson Memorial Tunnel. Claimant's crew was responsible for operating and maintaining the outsides of the tunnel during both winter and summer conditions. Claimant was required to operate heavy equipment including snowplows. Claimant was also regularly required to shovel snow. The position also required Claimant to assist containing fire activity and to assist with accidents in the tunnel.

3. Claimant's job description as a tunnel worker is classified as heavy, with exertion of up to 100 pounds of force occasionally and/or up to 50 pounds of force frequently and/or up to 20 pounds of force constantly to move objects. See Exhibit 3.

4. On May 22, 2017, Claimant sustained an admittedly compensable work related injury.

5. The diagnoses ultimately involve the right biceps and the right shoulder. Respondents dispute that a right shoulder replacement is causally related to the work injury on May 22, 2017. Respondents do not dispute that a right biceps injury occurred.

6. On May 22, 2017, Claimant signed and completed an Employee Incident Statement on May 22, 2017. Claimant's description on the form indicated that he was loading an old advance warning sign on 1-ton truck to be recycled and that he lost his grip on the sign straining his right arm (arm bicep). See Exhibit 1.

7. On May 22, 2017, Michael Ruygrok, M.D. evaluated Claimant at St. Anthony Summit Medical Center emergency department. Claimant reported right arm pain and stated, "I think I tore a bicep." Claimant reported that he was lifting a heavy road sign into his truck when the sign fell out of the truck and struck his right hand. Claimant reported

feeling an immediate pop in his right proximal biceps. Claimant reported discomfort and swelling over his proximal biceps. Claimant denied pain in his right hand and denied any other trauma or complaints. Dr. Ruygrok assessed rupture of the right proximal biceps with a history and exam consistent with a rupture of the proximal biceps muscle. Dr. Ruygrok opined that the flexor function of Claimant's elbow was intact, but that there was deformity and pain over the biceps muscle. On examination, Claimant had swelling and tenderness over the proximal bicep. Claimant's right shoulder and right elbow were examined and had no tenderness to palpation. Dr. Ruygrok found no other signs of trauma. Dr. Ruygrok recommended Claimant follow up with occupational health for management. See Exhibit 5.

8. On May 23, 2017, Employer filled out a first report of injury form. The statement indicates that Claimant was loading a 4x4, 24-pound icy road sign over the rear tailgate into the bed of a 1-ton truck when he lost his grip, the sign slipped, and he caught it straining his right bicep. See Exhibit 2.

9. On May 23, 2017, PA Lindsey Larson evaluated Claimant. Claimant reported a right arm injury and right arm pain and weakness. Claimant reported difficulty using his right extremity and difficulty with lifting. Claimant reported that he was lifting up a sign at work when he felt and heard a pop in his right shoulder in his biceps tendon area. Claimant reported that this felt the same as a prior torn left biceps tendon that he had. Claimant reported that he had pain right away and that he had limited use and strength of his shoulder afterwards. On examination of the right shoulder, PA Larson found a visible shorted bicep muscle on the right side and tenderness to palpation over the tendon insertion site. PA Larson also found limited active range of motion in flexion, internal rotation, and abduction. Claimant had an increase in pain with resisted range of motion and had no active range of motion in any place above the shoulder level. PA Larson discussed that Claimant seemed clinically to have a complete proximal biceps tendon rupture. She also was worried about possible rotator cuff dysfunction given Claimant's limited range of motion in the glenohumeral joint. PA Larson referred Claimant to orthopedics for further imaging, evaluation, and treatment. See Exhibit 7.

10. On May 23, 2017, Claimant underwent x-rays of his right shoulder with the indication being acute pain of the right shoulder and trauma. No evidence of fracture or dislocation was found. Degenerative narrowing of the glenohumeral joint was found, as was early osteophyte formation in the inferior aspect of the humeral head. No unusual soft tissue calcifications or swelling was found. See Exhibit 6.

11. On June 7, 2017, Thomas Hackett, M.D. evaluated Claimant. Claimant reported that he was discharging a 4x4 metal road sign into the back of a work truck, when he was throwing it over the lift gate, but the sign didn't make it, and slid back down. Claimant reported that he held out his right hand and that the corner of the sign went into his right palm and jerked his right shoulder downward with his elbow locked and his arm in extension. Claimant reported that he felt and heard a pop in his right shoulder and had pain and weakness ever since that injury. Claimant denied any pain or difficulty with the right shoulder prior to his injury and stated that he had no problems with his right arm in

the past. Claimant reported his biggest complaints as pain and weakness as well as loss of range of motion. Dr. Hackett performed a physical examination and reviewed x-rays. Dr. Hackett found decreased active and passive range of motion of the shoulder and positive impingement signs. Dr. Hackett also found a Popeye deformity and prominence of the biceps. Dr. Hackett recommended an MRI. See Exhibit 8.

12. On June 13, 2017, Steve Yarberry, M.D. evaluated Claimant. Claimant reported that on May 21, 2017 he was throwing a sign into the back of a truck and did not throw it high enough. Claimant reported that the sign slid back and that he caught it with his right hand and felt a pop. Claimant reported that since then he had pain in his right shoulder. Claimant reported difficulty turning doorknobs, difficulty using the extremity, difficulty with fine motor skills, and difficulty with grasping. Dr. Yarberry noted the problem story as a CDOT worker who injured his right shoulder throwing a sign into the back of a tall truck. Dr. Yarberry provided the impression of clinical right biceps tendon injury and probable rotator cuff injury as well. Dr. Yarberry agreed that an MRI should be performed and opined that Claimant would probably need surgery to have a satisfactory result. See Exhibit 7.

13. On June 14, 2017, Claimant underwent an MRI of his right shoulder. The impression provided was full thickness tearing of the distal supraspinatus and subscapularis tendons from greater and lesser tuberosities with medial retraction with tear defect over about 4x5 cm wide area, long biceps tendon tear and retraction, and degenerative fraying tearing of margins of labrum near circumferentially. See Exhibit 9.

14. On June 28, 2017, Dr. Hackett evaluated Claimant. Dr. Hackett reviewed the recent MRI and noted that it showed a tear of the long head of the biceps tendon, a chronic appearing rotator cuff tear of the supraspinatus with a full thickness tear retracted at the level of the glenoid with significant fatty atrophy and infiltration of the supraspinatus muscle belly, and a full thickness tear of the subscapularis with retraction and some mild fatty atrophy infiltrative changes as well. Dr. Hackett opined that based on the MRI it appeared that Claimant's rotator cuff tear had been there for a long time and would not be amenable to rotator cuff repair. Dr. Hackett noted that Claimant's shoulder was symptomatic now although the tears had likely been there chronically. Dr. Hackett opined that the long head of the biceps tendon rupture was likely new and that inflammation within the shoulder was new. Dr. Hackett recommended treating non-operatively with injection and physical therapy focused on scapular stabilization. Dr. Hackett discussed that if injection and therapy did not improve symptoms, the surgical option available to Claimant would likely be a reverse total shoulder arthroplasty given the significant atrophy in the rotator cuff. Dr. Hackett assessed rotator cuff arthropathy, long head of biceps tendon rupture, and likely acute on chronic exacerbation of shoulder pain. See Exhibit 8.

15. On September 19, 2017, Dr. Yarberry evaluated Claimant. Claimant reported decreased activity levels, decreased range of motion, and difficulty using his right extremity. Claimant reported that he had been going to physical therapy and felt that he had improvement. Dr. Yarberry opined that Claimant had good range of motion but still had chronic 4/10 level pain in the right shoulder. Claimant reported he could not

sleep on the shoulder and that certain arm positions were painful. On right shoulder examination, Claimant had good range of motion and normal strength and tone. Claimant was tender in the right suprascapular area, at the top of the humeral head, and was tender midway down the right arm over the biceps tendon. Dr. Yarberry opined that Claimant did not appear to have much discomfort from the rupture of the biceps tendon. See Exhibit 7.

16. On October 17, 2017, Dr. Yarberry evaluated Claimant. Claimant reported that he felt they were making some progress with his pain in the right shoulder and that his shoulder was getting stronger. Claimant reported decreased range of motion and difficulty using his right extremity and pushing. On examination, Dr. Yarberry found some tenderness in the scapular area and the in the biceps tendon anteriorly. Dr. Yarberry found a lack of full forward flexion and abduction, but symmetrical with the left shoulder. See Exhibit 7.

17. On October 23, 2017, orthopedic consultant William Ciccone, M.D. performed an independent medical evaluation. Claimant reported injuring his right shoulder when working and trying to throw a sign up into a truck. Claimant reported that the sign did not quite make it, the corner of the sign fell back and hit his hand, and the sign pulled on his shoulder making a pop in the shoulder. Claimant reported increased pain at that time to the anterior aspect of his shoulder and that he reported the injury and went to the Emergency department. Claimant reported no prior history of shoulder problems. Claimant reported the pain was worse with overhead reaching, sleep, work, lifting, pushing, and pulling. Claimant reported that he had trouble dressing, vacuuming, driving, and cooking. Dr. Ciccone reviewed medical records and performed a physical examination. Dr. Ciccone provided the impression of right shoulder long head biceps tear and right shoulder chronic rotator cuff tear. Dr. Ciccone noted that Claimant had a previous history of right shoulder pain and reported on December 22, 2016 that he had on and off shoulder pain in the past. Dr. Ciccone noted that Claimant underwent physical therapy and felt improved with restored normal range of motion by January 3, 2017. See Exhibit 12.

18. Dr. Ciccone opined that Claimant did not aggravate or accelerate any of Claimant's chronic rotator cuff pathology and that Claimant suffered tearing of the long head of the biceps as a result of the May 22, 2017 injury. Dr. Ciccone noted that the MRI scan did not reveal any acute rotator cuff pathology, only chronic tearing associated with muscle atrophy and that it was clear from the records that Claimant had a previous history of intermittent shoulder pain associated with restrictions. Dr. Ciccone opined that given the severity of the chronic pathology noted in the right shoulder, intermittent shoulder pain and restrictions with activities would be expected. Dr. Ciccone pointed out that prior to May 22, 2017, Claimant already had right shoulder pain intermittently severe enough to require narcotic medications and time off work. Dr. Ciccone opined that the need for a possible right shoulder replacement was not created by the work injury. See Exhibit 12.

19. On November 21, 2017, Dr. Yarberry evaluated Claimant. Claimant reported he had a shoulder injection on October 27 and was doing great with almost no

pain, good range of motion, and improved strength. Dr. Yarberry noted that Claimant was upbeat and doing very well after a second steroid injection. See Exhibit 7.

20. On February 20, 2018, Dr. Yarberry evaluated Claimant. Claimant reported that he continued to improve, but was still weak. Claimant reported that he could not get his Jeep into reverse unless he used his left arm to help. Claimant reported that he could not lift a bag filled with groceries. Claimant also reported that he fell down cross-country skiing and couldn't get up with his poles/arms until he took his skis off. See Exhibit 7.

21. On February 23, 2018, Dr. Hackett evaluated Claimant. Claimant reported that a steroid injection helped with the pain and that physical therapy was helping him to make gradual progress. Claimant reported having minimal pain in his shoulder. Claimant had pretty good active range of motion and no significant weakness on examination. Dr. Hackett recommended continuing with conservative management and physical therapy. See Exhibit 8.

22. On March 21, 2018, Dr. Yarberry evaluated Claimant. Claimant had stopped taking meloxicam due to a bleeding ulcer. Claimant reported his shoulder pain was a 4/5 on the pain scale. Claimant reported that since stopping meloxicam he had bad pain in his shoulder, as well as pain in the back and the knee. Dr. Yarberry noted that surgery had not been recommended yet. Dr. Yarberry provided an impression indicating Claimant's pain had definitely returned, not taking a long acting NSAID and he planned voltaren cream as well as restarting oxycodone. See Exhibit 7.

23. In response to a March 21, 2018 letter from Insurer, Dr. Yarberry opined that Claimant did not injure his shoulder while cross-country skiing, but that he did have trouble getting back up due to shoulder weakness. Dr. Yarberry noted that Claimant had injured his right shoulder about one year ago and had a slow recovery with pain and weakness being the main problems. Dr. Yarberry noted that Claimant had the symptoms especially when reaching overhead with the right arm. Dr. Yarberry opined that Claimant was not able to do full duty work or perform his preinjury lifting duties and questioned whether Claimant would ever return to his pre-injury capacity. Dr. Yarberry opined that Claimant was slowly improving with physical therapy. See Exhibit 7.

24. On May 31, 2018, Matthew Provencher, M.D. evaluated Claimant. Claimant reported feeling an acute pain and pop in his right shoulder after a heavy piece of material slipped while loading it into the back of a truck and catching it on his outstretched arm. Claimant reported no prior problems with his lifting activities before and that he was able to do full activities. Dr. Provencher noted that the right shoulder pain had been present for one year and was described as acute on chronic. Dr. Provencher had x-rays performed and found them to demonstrate rotator cuff arthropathy including a high riding humeral head, decreased joint space, and osteophyte formation. Dr. Provencher reviewed an outside MRI provided by Claimant that demonstrated a high riding humeral head in the setting of chronic appearing massive cuff tear with retraction almost to the level of the glenoid with evidence of inferior osteophytes on both the glenoid and humeral head as well as evidence of AC joint arthrosis. Dr. Provencher noted that Claimant's

presentation was consistent with a massive rotator cuff tear of the right shoulder with the development of rotator cuff arthropathy type changes. Dr. Provencher planned to obtain a new MRI and opined that the most likely surgical option was a reverse total shoulder replacement. Dr. Provencher noted findings of a more chronic appearing rotator cuff but insufficiency now after an acute type of event. Dr. Provencher noted that it was felt this was related to Claimant's initial injuries as he was working full time without restrictions and lifting heavy signs without any restrictions before and that this was more probably than not related to the injury in question. Dr. Provencher opined that the reverse total shoulder arthroplasty was medically necessary and justified as related to the injury on a more probable than not basis and to a high degree of medical certainty. See Exhibit 8.

25. Dr. Yarberr evaluated Claimant between May of 2018 and September of 2018. During this time, he noted that Claimant's pain continued to exist and that Claimant was using narcotics to help control the pain. On September 21, 2018, Dr. Yarberr noted that not much had changed, that orthopedics had recommended a shoulder replacement, and that an IME felt Claimant had degenerative changes already. Dr. Yarberr found that Claimant had decreased range of motion on physical examination. Dr. Yarberr noted that the main issue was pain control and that Claimant had better pain relief when he was doing physical therapy, so Dr. Yarberr again recommended physical therapy. See Exhibit 7.

26. On August 3, 2018, Dr. Ciccone performed another independent medical evaluation. Claimant reported that since his prior evaluation with Dr. Ciccone, he had injections that previously worked but were no longer working. Claimant reported continued pain involving the whole shoulder that hurt with reaching and lifting. Dr. Ciccone reviewed his previous independent medical evaluation, medical records, and performed a physical examination. Dr. Ciccone again opined that the work injury did not cause the need for shoulder replacement. Dr. Ciccone again pointed out to a history of shoulder pain in the past with minor activities that had previously required medications and therapy to resolve. Dr. Ciccone noted that the long standing pre-existing rotator cuff pathology was the reason for the need for shoulder replacement. Dr. Ciccone opined that the shoulder problems Claimant was having were a result of the natural history of the rotator cuff degeneration occurring in his right shoulder. Dr. Ciccone opined that Claimant seemed to have reached his baseline with no pain and improvement in range of motion and strength and that it would be expected that Claimant would have intermittent and increasing bouts of shoulder pain and restrictions as is the natural history of rotator cuff pathology. Dr. Ciccone opined that the course was consistent in this case with a minor injury to the shoulder that resolved, just as Claimant's prior non-work related injury did with physical therapy and injections. Dr. Ciccone opined that the shoulder replacement would have been necessary regardless of the work event. See Exhibit 12.

27. On October 8, 2018, Dr. Provencher's PA, Samantha DelNegro, evaluated Claimant. PA DelNegro opined that Claimant had unfortunately suffered permanent aggravation of an injury to the right shoulder that was asymptomatic before his work related incident. PA DelNegro noted that because surgical intervention had been denied,

the best and likely only option would be to consider repeat steroid injections, although she opined that surgical intervention was the best option going forward. See Exhibit 8.

28. On November 21, 2018, Dr. Yarberry evaluated Claimant. Claimant reported that he received another steroid injection in the right shoulder that really helped his pain. Claimant also reported that he had been attending physical therapy and was working on strengthening. See Exhibit 7.

29. On January 23, 2019 and March 5, 2019, Dr. Yarberry evaluated Claimant. Dr. Yarberry found Claimant's range of motion of the right shoulder to be fair and the same as the left at the January visit and found the range of motion to be good at the March visit, again symmetrical with the left side. See Exhibit 7.

30. On March 25, 2019, Dr. Provencher evaluated Claimant. Dr. Provencher provided the impression of rotator cuff arthropathy and opined that a massive rotator cuff tear in combination with shoulder arthritis is known as rotator cuff arthropathy, more common with advanced age. He noted stages of the condition included mild without shoulder instability whereas more advanced disease was associated with shoulder instability and migration of the head of the shoulder upwards and that atrophy of the shoulder muscles was a common finding. Dr. Provencher opined that Claimant had traumatic right rotator cuff arthropathy felt to be related to the industrial injury on a more probable than not basis. See Exhibit 8.

31. On April 16, 2018, Dr. Yarberry evaluated Claimant. Claimant noted that Claimant had a long-standing right shoulder injury that was work related and that Claimant was waiting for a hearing to see if the recommended total shoulder replacement would be approved. Dr. Yarberry agreed with Dr. Provencher that Claimant would probably benefit from a steroid injection while waiting for a hearing that had been postponed several times. See Exhibit 7.

32. On May 16, 2019, Dr. Yarberry evaluated Claimant. Dr. Yarberry noted that Claimant needed a shoulder replacement but there was a question of who would pay for it. Dr. Yarberry noted that a recent shoulder injection helped with pain relief. See Exhibit 7.

33. Prior to the May 22, 2017 admitted work injury, Claimant was diagnosed with right shoulder joint pain and with impingement syndrome of the right shoulder.

34. On December 22, 2016, Claimant was evaluated at Kaiser. Claimant reported right shoulder pain, worsening for two days, since shoveling very heavy snow. Claimant reported a history of off and on again right shoulder pain and reported that in the past he was told he may have rotator cuff issues and had responded well to physical therapy. Claimant reported that he almost dropped an iron skillet and felt his right arm was a little weaker. Claimant reported his pain was worse when lifting arm side to side, that it was waking him at night, and that he was taking Mobic for arthritis. Claimant was diagnosed with right shoulder joint pain with a recommendation for oxycodone at night

and physical therapy. He was also diagnosed with right rotator cuff syndrome and it was recommended that if he did not improve in 4-6 weeks an orthopedic evaluation should be considered. See Exhibit 11.

35. On December 27, 2016, Claimant was evaluated at Kaiser. Claimant reported numbness in his right fingers and a history of right shoulder pain since a few days before December 22 when shoveling snow. It was noted that Claimant started a Medrol dose pack and took oxycodone, which had not been as helpful as it was in the past. Claimant wanted to try to get right shoulder injections. Patricia Dietzgen, D.O. noted that recent x-rays showed AC and shoulder arthritis. Dr. Dietzgen diagnosed right shoulder joint pain, osteoarthritis of the right shoulder, and impingement syndrome of the right shoulder. She noted that Claimant may need shoulder AC joint injections and that they made phone calls to try to get Claimant into orthopedics for possible injections, but that all clinics were booked for the next 10 days or more. See Exhibit 11.

36. On December 29, 2016, Claimant called Kaiser. Claimant reported severe pain in his right shoulder that had been going on for one week and that oxycodone and gabapentin had not helped. Claimant reported pain at a 6/10 and that he had to sleep on the floor and couldn't work due to the pain. Claimant wanted to know if he could schedule an injection for that day. See Exhibit 11.

37. On January 3, 2017, Claimant reported that he was much better after physical therapy for his right shoulder pain. Claimant reported that physical therapy was helping and his pain and range of motion were improved. Claimant asked to return to work without restrictions. Claimant was diagnosed with right shoulder joint pain and right shoulder impingement syndrome. Paperwork was completed allowing Claimant to return to work and Claimant was prescribed medication. Claimant was given information on shoulder exercises and stretches. See Exhibit 11.

38. On February 23, 2017, Claimant reported that his right shoulder was improving slowly with no weakness and that he was continuing therapy on his right shoulder. Claimant asked for a refill of his oxycodone for pain. Claimant's exam was found positive for joint pain. See Exhibit 11.

39. Claimant testified at hearing in this matter. Claimant reported that on the date of injury he went to throw a sign up into the back of a truck, which was over his head, and that the sign didn't make it and came back down hitting his palm which was extended and locked. Claimant testified that he immediately felt really bad pain and heard a pop. Claimant testified that he tried to work through it, but couldn't, and immediately went into the bathroom area where he stripped off all of his winter clothes and shirt and looked at his shoulder. Claimant testified that he immediately knew there was damage and that he was still having significant pain so he went upstairs and reported it to a supervisor. Claimant reported that he then went to the emergency room where he was treated that day and released. Claimant testified that he has had continuous and debilitating pain in his right shoulder since May 22, 2017 and that with pain medication the pain is somewhat

tolerable. Claimant testified that he has a significant decrease in his abilities and range of motion.

40. Claimant testified that in the beginning of treatment for this work injury, physical therapy and medication mitigated the pain, but that he reached a point where it wouldn't get any better and it started hurting worse again. Claimant testified that he has not returned to work and absolutely could not perform the physical requirements of the job. Claimant testified that before May 22, 2017 he was in excellent physical condition and could do all the physical work at his job without any difficulty whatsoever. Claimant testified that about six months before his work injury, he had right shoulder pain. Claimant testified that he was skiing and developed numbness and pain in his right arm and hand and that he was given nerve pain medication that made the pain relent. Claimant testified that his pain lasted about ten days and that after the nerve medication and three to four days, his pain began to normalize and he went back to work and continued to perform his full duties. Claimant testified that he was never referred for injection of his right shoulder before May 22, 2017 and that right shoulder surgery was never recommended prior to May 22, 2017.

41. Dr. Ciccone testified by deposition as an expert in orthopedic surgery. Dr. Ciccone testified that if a rotator cuff tear is chronic, an MRI will show muscle atrophy and fatty replacement of the muscle and that in Claimant's case, the rotator cuff tear was chronic. Dr. Ciccone also testified that Claimant had a finding of a high riding humeral head, which meant that the bones did not align well anymore because the rotator cuff wasn't functional. Dr. Ciccone testified that there were no medical reports indicating the rotator cuff was acute. Dr. Ciccone testified that the biceps tendon has two heads, a long head that goes into the shoulder joint, and a short head that attaches to the scapula outside the shoulder joint. Dr. Ciccone testified that when someone had a long head biceps injury, it's usually due to chronic rotator cuff pathology because the biceps becomes uncovered when the rotator cuff retracts and tears. Dr. Ciccone noted that Claimant was referred to an orthopedic specialist in December of 2016 for chronic recurrent injury, degenerative joint disease and rotator cuff tear and opined it was likely that was the same rotator cuff tear seen on MRI in this case. Dr. Ciccone testified that a rotator cuff tear will not naturally heal on its own, but that they tend to get larger and become associated with fatty atrophy and loss of muscle. Dr. Ciccone also testified that it was common for pain to wax and wane over time with a rotator cuff tear. Dr. Ciccone agreed that a total shoulder replacement would be more appropriate as compared to a rotator cuff repair surgery since the rotator cuff was so chronic and retracted. Dr. Ciccone opined that the need for the total shoulder replacement was not related to the work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable for medical treatment that is reasonably necessary to cure or relieve an employee from the effects of a work injury. §8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of his employment. §8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Treatment for a condition not caused by employment is not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need

for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, W.C. No. 4-649-298 (May 15, 2007).

The credible evidence establishes that Claimant's right shoulder rotator cuff pathology and symptoms were not caused, aggravated, or accelerated by the May 22, 2017 work injury where Claimant tore his biceps tendon. Claimant's is not found credible or persuasive. Claimant reported to several medical providers that he had no right shoulder problems prior to May 22, 2017. This is demonstrably false. Not only did he have prior right shoulder problems, medical records demonstrated significant diagnoses, treatment, medications, and exercise/stretching recommendations.

Dr. Provencher, Dr. Hackett, PA DelNegro, and Dr. Yarberry based their opinions on subjective information provided by Claimant that he had no prior right shoulder problems. Their opinions did not have the full benefits of prior medical records establishing prior diagnoses and history of right shoulder joint pain, osteoarthritis of the right shoulder, impingement syndrome of the right shoulder, and right shoulder rotator cuff syndrome. Just months before the May 22, 2017 incident, Claimant's doctor at Kaiser attempted to get Claimant an orthopedic evaluation to evaluate for possible right shoulder injections, but noted the clinics were all booked for the next 10 days or more. Claimant treated for his right shoulder for two months from December of 2016 to February of 2017. At his initial appointment on December 22, 2016, Claimant reported right shoulder pain worse since shoveling heavy snow and reported a history of on and off right shoulder pain. Claimant also reported that he had been told in the past that he may have rotator cuff issues and had responded well in the past to physical therapy. This is not, as argued by Claimant, a history of one bout of prior right shoulder pain. Rather, this is a report from Claimant himself that before December 2016 he had on and off right shoulder pain. Claimant also argues that this one "prior bout" of right shoulder pain was isolated and short-lived. However, as found above, by February 23, 2017 Claimant reported that his right shoulder was improving slowly with no weakness and that he was continuing therapy. His examination on February 23, 2017 was positive for joint pain and Claimant asked for a refill of oxycodone. Claimant was not doing fine on February 23, 2017 nor was his right shoulder pain short lived. Rather, the right shoulder pain was documented throughout two months and still existed on February 23, 2017 when Claimant asked for more pain medication. Claimant had not healed from a single short-lived bout of right shoulder pain. The testimony of Dr. Ciccone that rotator cuff pathology does not heal is persuasive.

Further, as found above, when Claimant was initially injured he reported on his Employee Incident Statement that he strained his right arm (arm bicep). At the emergency room that same day, Claimant reported that he thought he tore a bicep. Claimant denied any other trauma or pain at the emergency room and the examination found no tenderness to palpation in the right shoulder, although deformity and pain was found in the biceps. Not only do the medical records contradict Claimant's reports, but Claimant's testimony at hearing is also inconsistent with prior medical records. Claimant testified that he developed pain and numbness while skiing six months before his work injury and that he had pain for ten days but that nerve medication helped his pain

normalize. The medical records show two months of active treatment, physical therapy, recommendations for stretches/exercises, and show at his last appointment he requested oxycodone and had a positive examination. Claimant's subjective reports cannot be relied upon in this case to any degree of certainty. Thus, the opinions of medical providers who used Claimant's subjective reports, in part, also cannot be relied upon.

Dr. Ciccone is found credible and persuasive and his opinion is consistent with the overall weight of the medical evidence. Claimant has failed to establish that the right shoulder reverse total arthroplasty is causally related to the May 22, 2017 work injury. Rather, the need for shoulder replacement is related to his chronic and long-standing rotator cuff issues and degeneration in his right shoulder that pre-dated May 2017. The injury on May 22, 2017 did not accelerate or aggravate his need for right shoulder surgery. Rather, after the biceps injury, Claimant's right shoulder rotator cuff pain and restrictions continued to wax and wane like they did prior to the work injury. Claimant's right shoulder problems are the result of the natural progression of rotator cuff degeneration and Claimant would have needed a right shoulder reverse arthroplasty regardless of the work incident on May 22, 2017. Claimant has failed to meet his burden and his request for right shoulder reverse total arthroplasty is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that the right shoulder reverse total arthroplasty recommended by Dr. Provencher is causally related to Claimant's May 22, 2017 work injury. His request for surgery is denied and dismissed.

2. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 10, 2020

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course and scope of his employment with employer?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary partial disability ("TPD") benefits?
- If claimant has proven a compensable injury, what is claimant's average weekly wage ("AWW")?

FINDINGS OF FACT

1. Claimant is employed by employer part time as a sales and service representative working 28-30 hours per week. Claimant testified he is paid \$14.49 per hour by employer. Claimant testified he will push a product cage out on to the stage floor to stock shelves with various products. Claimant will stock 2 stores per day normally.
2. Claimant testified at hearing that on September 30, 2018, he arrived at King Soopers to stock and stage shelves with product for employer. Claimant testified he arrived at approximately 4:30 a.m. and the store was not yet open, so the doors needed to be manually opened for claimant by an employee of King Soopers.
3. Claimant testified that an employee by the name of M[Redacted] unlocked the door and manually opened the sliding automatic doors for claimant to enter the building. Claimant testified the doors prematurely shut and the doors struck claimant on his right side. Claimant testified M[Redacted] apologized to him, but claimant was pretty much in shock as he never saw the door closing. Claimant testified he felt instant pain from the top of his neck, down to his biceps and into his fingers. Claimant testified he buckled down to the table in front when he was struck by the door. Claimant testified he proceeded to go about his work, but was having difficulty performing his job duties while at King Soopers, but his pain was too much. Claimant testified he reported his injury to "S[Redacted]", an employee at King Soopers. Claimant testified S[Redacted] apologized to him.
4. Claimant testified he completed his shift, but did not back stock his shelves due to the pain. Claimant testified his pain continued at the same level that day despite taking numerous aspirin. Claimant testified he did not seek medical treatment because he was hoping his pain would go away. Claimant testified he continued to self treat his injury with ice packs. Claimant did not report his injury to employer.

5. Claimant testified his pain in the back of his shoulder, neck, chest and bicep began getting worse after September 30, 2018 to the point that he could not raise his hand above his head and could not wash his hair. Claimant eventually reported his injury to his regional manager, Ms. A[Redacted], on November 1, 2018. Claimant was referred to Concentra Medical Center by Employer.

6. Claimant testified he told Dr. Villavicencio that he had been hit by a door and was having pain in his neck, shoulder, biceps and hand and could not feel his fingers. Claimant testified he had never injured his neck, left shoulder, left bicep or left hand prior to September 30, 2019. Claimant testified that he is currently on restrictions that limit him to 4 hours per day.

7. Claimant was examined by Physician's Assistant ("PA") Liedtke and Dr. Villavicencio on November 1, 2018. PA Liedtke recorded an accident history of having a coworker close a door on him 5 weeks ago, striking his right anterior shoulder. Claimant reported pain in the anterior/posterior shoulder and right side of his neck since then along with some intermittent numbness in the right third digit. Claimant reported a pain level of 5/10 that would go up with lifting. Claimant underwent an x-rays of the right shoulder and was diagnosed with a contusion of the right shoulder, strain of the trapezius muscle on the right and a cervical strain. Claimant was provided with work restrictions of no lifting over 15 pounds and no pushing or pulling over 20 pounds and was referred for physical therapy.

8. Claimant returned to Dr. Villavicencio on November 6, 2018. Dr. Villavicencio performed an examination and recommended a magnetic resonance image ("MRI") of the right shoulder. Examination of the shoulder revealed tenderness in the glenohumeral joint, in the trapezius muscle, in the anterior shoulder and in the superior shoulder. Dr. Villavicencio noted claimant had full range of motion of his right shoulder.

9. Claimant returned to Dr. Villavicencio on November 13, 2018. Claimant reported his pain was a 2/10. Dr. Villavicencio continued claimant's work restrictions. Claimant again returned to Dr. Villavicencio on December 4, 2018. Claimant reported he was having more pain in the scapular and thoracic muscle area and had a palpable knot. Dr. Villavicencio recommended trigger point injections. Dr. Villavicencio modified claimant's restrictions to allow for lifting up to 25 pounds and pushing/pulling up to 50 pounds.

10. Claimant continued to treat with Dr. Villavicencio and was eventually referred to Dr. Failing for surgical consultation. Dr. Failing evaluated claimant on April 11, 2019. Claimant reported to Dr. Failing that his shoulder was hit by an automatic door and he did not seek treatment for 30 days. Claimant reported he had neck and back pain and numbness ever since. Dr. Failing examined claimant and diagnosed him with right shoulder contusion, right shoulder myofascial pain, and a small chance of a rotator cuff tear. Dr. Failing noted that it would be most unusual to have any significant structural damage from the contusion from a door that closed on him. Dr. Failing recommended an MRI be performed.

11. Claimant underwent the MRI of the right shoulder on July 25, 2019. The MRI demonstrated moderate tendinosis with mild to moderate undersurface and interstitial tearing of the supraspinatus tendon. Mild tendinosis with mild undersurface and interstitial tearing of the infraspinatus tendon was also shown. No full-thickness rotator cuff tear was identified. Moderate tendinosis with moderate interstitial tearing of the intra-articular portion of the long head of the biceps tendon was also noted, along with mild biceps tenosynovitis.

12. Claimant returned to Dr. Failinger on August 8, 2019. Dr. Failinger noted that the MRI showed a severely macerated and torn biceps tendon with dislocation from the upper groove. Dr. Failinger also noted mild cuff tendinosis and some mild changes in the labrum. AC joint arthritis was noted as well. Dr. Failinger recommended that claimant obtain a nerve conduction study prior to any surgery. Claimant indicated he would like to avoid surgery and requested a cortisone injection as this was previously recommended by Dr. Villavicencio. Dr. Failinger noted he did not believe a cortisone injection would be helpful, but agreed to try it as a form of treatment in an effort to treat claimant's symptoms.

13. Claimant was evaluated by Dr. Chan on September 10, 2019. Dr. Chan noted claimant's accident history and the results of the MRI scan. Dr. Chan diagnosed claimant with a biceps tendon laceration and recommended a tomographic study to delineate what is a frank neuropathic lesion that might account for the patient's ongoing symptomology.

14. Respondents obtained an independent medical examination ("IME") with Dr. D'Angelo on September 23, 2019. Dr. D'Angelo reviewed claimant's medical records and obtained a history from claimant in connection with her IME. Dr. D'Angelo noted in her report that claimant's findings on MRI were consistent with a chronic shoulder impingement. Dr. D'Angelo opined in her report that claimant's findings were not causally related to his September 2018 mechanism of injury.

15. Claimant returned to Dr. Chan on September 26, 2019. Dr. Chan noted that claimant's MRI showed a rather significant amount of degenerative type changes over the right shoulder area. Dr. Chan recommended an electromyogram and nerve conduction velocity ("EMG/NCV") study. The EMG/NCV showed evidence of mild right carpal tunnel syndrome. The EMG/NCV showed no evidence of right cervical radiculopathy, brachial plexopathy or neurogenic thoracic outlet syndrome.

16. Claimant returned to Dr. Failinger on October 10, 2019. Dr. Failinger noted that claimant indicated he could no longer live with the pain and would like to push on with the surgery. Dr. Failinger noted that the cortisone injection was not helpful and agreed that claimant was a candidate for shoulder surgery as he had been cleared in terms of the cervical spine. Dr. Failinger noted that he would wait on the surgery until after claimant's upcoming court hearing.

17. Dr. D'Angelo testified at hearing in this case consistent with her IME report. Dr. D'Angelo testified that the interstitial tears that were noted on the MRI along

with macerations and tendinosis. Dr. D'Angelo testified that the impingement syndrome claimant was diagnosed with and the MRI findings were not related to an acute injury.

18. Claimant's claim for benefits in this case is complicated by the failure to report the injury or seek treatment for the injury for 32 days. While claimant testified that he was hoping his pain would improve during this time, claimant still waited over a month before informing his employer of the injury. The ALJ further notes that the physicians in this case, including Dr. D'Angelo and Dr. Chan, specifically note the degenerative nature of the findings on MRI, which Dr. D'Angelo testified is not consistent with an acute injury.

19. The ALJ credits the medical records in this case, along with the opinions expressed by Dr. D'Angelo in her IME report and testimony and finds that claimant has failed to establish that it is more probable than not that he sustained a compensable work injury to his shoulder on September 30, 2018 when the automatic doors closed on him as he was entering the store at 4:30 a.m. The ALJ credits the opinions of Dr. D'Angelo that the MRI reports and medical records fail to establish that claimant sustained an acute injury to his shoulder consistent with the mechanism of injury claimant described to Dr. Villavicencio and in his testimony at hearing.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical

condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with “a preexisting disease or infirmity to produce disability or need for treatment. See *H & H Warehouse v. Vicory*, *supra*.

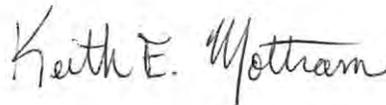

4. As found, claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of her employment with employer. As found, claimant failed to report his injury to his employer for 32 days after his alleged injury. As found, the testimony of Dr. D’Angelo that claimant’s findings of the MRI were not consistent with an acute injury. As found, claimant has failed to establish by a preponderance of the evidence that he sustained an injury arising out of his employment with employer on September 30, 2018 when the doors closed on him while he was entering the store.

ORDER

It is therefore ordered:

1. Claimant’s claim for benefits is denied and dismissed.

Dated: January 13, 2020

Keith E. Mottram
Administrative Law Judge

You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that on July 26, 2018, she suffered an injury arising out of and in the course and scope of her employment with the employer.

FINDINGS OF FACT

1. The claimant has worked for the employer for approximately 12 years. At the time of the hearing, the claimant's job duties included hanging signage and oversight of the Bullseye Playground

2. On July 26, 2018, the claimant was working the night shift, completing inventory. The claimant testified that during that shift she and her coworkers were using rolling chairs. At one point, the claimant was standing and moved to sit in her chair. However, the chair rolled and the claimant fell onto the floor.

3. It is the claimant's testimony that she fell on her right hip and right elbow and then fell back "snapping" her neck and striking her head on the floor. The claimant also testified that because she struck her head with such force, her hair clip broke. The claimant further testified that she asked to go home, but Mr. G[Redacted] denied her the opportunity to do so.

4. Mr. G[Redacted] was present on July 26, 2018, when the claimant chair rolled. He testified that the claimant landed on her buttocks. When Mr. G[Redacted] asked how she was, the claimant responded that she was "fine". Mr. G[Redacted] also testified that the claimant indicated that she could continue working.

5. During her next scheduled shift, the claimant spoke to Ms. McCoy regarding the July 26, 2018 chair related incident. The claimant testified that she communicated with Ms. M[Redacted] so that her injury would be reported and she could obtain medical treatment. As of the date of the hearing, the claimant continued to work her regular job duties for the employer without work restrictions.

6. During her testimony, Ms. M[Redacted] agreed that the claimant did notify her of the July 26, 2018 chair incident. However, Ms. M[Redacted] testified that the claimant was reporting the incident because it was the claimant's belief that the use of wheeled chairs was "stupid". During their discussion, M[Redacted] began an injury report. However, the claimant indicated to Ms. M[Redacted] that she was not injured and she did not want Ms. M[Redacted] to file a report. Ms. M[Redacted] did not complete the report. Ms. M[Redacted] testified that at that time she was relatively new in her position and did not know that a report was to be filed regardless of the wishes of the employee. Subsequently, the claimant again approached Ms. M[Redacted] related

to the July 26, 2018 incident. Ms. M[Redacted] testified that the claimant approached her and complained that “someone” had filed a report. Ms. M[Redacted] further testified that the claimant was upset that a claim had been filed. Despite this, Ms. M[Redacted] provided the claimant with the claim number.

7. Ms. A[Redacted] was also approached by the claimant regarding the July 26, 2018 chair related incident. Ms. A[Redacted] testified that the claimant spoke with her on approximately July 28, 2018 because Ms. A[Redacted] was the manager on duty. Ms. A[Redacted] testified that the claimant voiced her opinion that inventory was not handled professionally and referenced the use of wheeled chairs. The claimant also relayed to Ms. A[Redacted] that she had fallen out of her chair. The claimant indicated that she was “fine” and her focus was on the use of the wheeled chairs. Ms. A[Redacted] notified the store manager, Mr. Moats. At that time, Mr. Moats instructed Ms. A[Redacted] to complete an incident report, and Ms. A[Redacted] did so. Sometime thereafter, Ms. A[Redacted] learned that the claimant was unhappy that a report was filed regarding the July 26, 2018 incident. The ALJ finds the version of events described by Mr. G[Redacted], Ms. M[Redacted], and Ms. A[Redacted] to be more persuasive than the claimant’s testimony.

8. The claimant testified that her current symptoms include pain and pinching in her right hip, pain in her back, elbow, and head. The claimant also testified that she continues to experience nine out of ten and ten out of ten pain. The claimant has not sought medical treatment related to the July 26, 2018 incident. When asked why she has not sought treatment of these symptoms, the claimant testified that she was waiting for a claim number. The claimant also testified that her prior workers’ compensation doctor (who had treated the claimant regarding prior claims) was no longer practicing. It is unclear to the ALJ why the claimant has not sought any medical treatment of her symptoms since the July 26, 2018 incident. No medical provider has made recommendations for medical treatment.

9. Prior to the incident at issue, the claimant sustained an admitted work injury on February 20, 2015. The claimant first received medical treatment for that injury on February 24, 2015. On January 7, 2016, the claimant suffered a second admitted work injury. The claimant first received medical treatment related to that injury on January 18, 2016.

10. While treating for the February 20, 2015 and January 7, 2016 work injuries, the claimant reported a variety of symptoms to her medical providers. Those symptoms included: right hip pain, gluteal region pain, pain on the right side of her face and jaw, neck pain, upper back pain, mid back pain, low back pain, buttock pain, left leg pain, right leg pain, right knee pain, right arm pain, left wrist pain, and right ankle pain.

11. The medical records entered into evidence indicate that the claimant reported nine out of ten and ten out of ten pain for many months prior to the July 26, 2018 incident.

12. On November 5, 2019, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Lesnak opined that the claimant did not suffer any injuries on July 26, 2018. In support of his opinion, Dr. Lesnak noted that the claimant's reported symptoms are the same as those she reported to medical providers prior to July 26, 2018.

13. The ALJ credits the medical records and the opinions of Dr. Lesnak. In addition, the ALJ credits the testimony of Mr. G[Redacted], Ms. M[Redacted], and Ms. A[Redacted]. The ALJ does not find the claimant's testimony to be credible or persuasive. The claimant has failed to demonstrate that it is more likely than not that on July 26, 2018 she suffered an injury arising out of her employment with employer. Although the claimant did fall when attempting to sit on the wheeled chair, she did not sustain an injury necessitating medical treatment. As of the date of the hearing, the claimant has had no treatment related to the July 26, 2018 incident. Additionally, her reported symptoms are identical to those she had prior to July 26, 2018.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on July 26, 2018, she suffered an injury arising out of and in the course and scope of her employment with the employer. While an incident did occur on that date, the claimant did not suffer an injury necessitating medical treatment. As found, the opinions of Dr. Lesnak and the testimony of Mr. G[Redacted], Ms. M[Redacted], and Ms. A[Redacted] are credible and persuasive.

ORDER

It is therefore ordered that the claimant’s claim for workers’ compensation benefits related to a July 26, 2018 incident is denied and dismissed.

Dated this 14th day of January 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Whether respondents have overcome the opinion of the Division-sponsored Independent Medical Examination (“DIME”) physician by clear and convincing evidence regarding whether claimant’s right shoulder was a compensable component of the April 16, 2015 work injury?

- Whether respondents have overcome the opinion of the DIME physician by clear and convincing evidence that claimant is not at maximum medical improvement (“MMI”)?

FINDINGS OF FACT

1. Claimant sustained an admitted injury on April 16, 2015 to his right hand and wrist while employed with employer. Claimant was injured while using a wire cutter to snip wires when he felt pain shoot up his arm. Claimant testified he did not report his injury right away, but after it happened again, he reported the injury to his boss.

2. Claimant had a prior injury to his lumbar spine involving the same employer with a date of injury of September 2014. Claimant received medical treatment for this prior injury and was eventually placed at maximum medical improvement (“MMI”) with no permanent impairment.

3. Claimant continued to treat with Dr. Gilman for periodic low back complaints on March 2, 2015, shortly before his work injury. Claimant’s symptoms included cervical spine pain, right upper extremity pain with numbness, weakness and atrophy. Dr. Gilman noted that the symptoms could be the result of nerve root irritation coming from claimant’s cervical spine. Claimant testified that after consultation, the doctor recommended against the nerve root blocks.

4. Following claimant’s work injury, claimant was referred for medical treatment to his right upper extremity by employer. Claimant was initially treated by Dr. Sofish. Dr. Sofish referred claimant to Dr. Burnbaum for electrodiagnostic testing. Dr. Burnbaum evaluated claimant on May 4, 2015 and reported complaints from claimant of bilateral wrist pain since the work injury. Dr. Burnbaum performed an EMG that was reported as normal.

5. Claimant was eventually referred to Dr. Viola for surgical consultation. Dr. Viola and Physicians’ Assistant (“PA”) Lueders evaluated claimant on March 1, 2016. Dr. Viola noted claimant continued to use a thumb spica splint at night, which he noted was the only thing that relieved the pain. Dr. Viola reviewed the diagnostic studies and diagnosed claimant with a torn ligament between the scaphoid and the lunate and a loss of cartilage throughout the wrist. Dr. Viola recommended surgery involving a four

corner fusion package. Claimant underwent surgery under the auspices of Dr. Viola on April 20, 2016. Claimant testified at hearing that he did not have shoulder pain following the surgery by Dr. Viola.

6. Claimant returned to Dr. Viola on May 2, 2016. Claimant reported he was having occasional sharp pain through his arm to his digits. Claimant eventually had the pins removed from his wrist on June 17, 2016, which involved a right capitate deep hardware removal and a right triquetrum deep hardware removal.

7. Claimant returned to Dr. Viola on June 17, 2016. Claimant reported still getting occasional zingers down the dorsal medial aspect of his right hand with digit motion. Dr. Viola recommended claimant undergo an MRI of his left thumb.

8. Claimant again returned to Dr. Viola on July 18, 2016. Dr. Viola noted claimant reported his pain was doing well and would come and go and get worse at night. Dr. Viola noted claimant continued to have a partial tear of the ligament in the left thumb and recommended a left trigger thumb surgery. The surgery was performed by Dr. Viola on August 10, 2016.

9. Following claimant's surgery, claimant reported to his physical therapist on August 15, 2016 that he was having numbness on his back, upper arm, anterior lateral forearm and right thumb. Claimant reported to his therapist that he would experience changes in sensation of the right thumb with different shoulder position. The therapist noted claimant had a sensory disturbance on the right in the C6 dermatome.

10. Claimant reported to Dr. Viola on August 29, 2016 that he had severe radicular pain down his right arm. Claimant reported pain at the base of his right neck which extended down into his arm and causing numbness into the dorsal aspect of the hand. Dr. Viola recommended an MRI of the cervical spine.

11. Claimant underwent the MRI on September 7, 2016. The MRI showed degenerative disc at the C3-C4, C4-C5, C5-C6 and C6.C7 levels.

12. Claimant was evaluated by Dr. Evans on September 9, 2016. Claimant reported to Dr. Evans that he had numbness and pain down his right arm and hand with a burning sensation into his right hand. Dr. Evans noted an injury of June 16, 2016 when his right shoulder popped and then flared afterward. Dr. Evans also noted claimant reported right shoulder blade pain after he visited a chiropractor in January 2016.

13. Claimant underwent a cervical intralaminar epidural steroid injection on September 21, 2016 under the auspices of Dr. Evans.

14. Claimant was examined by Dr. Sofish on October 5, 2016. Dr. Sofish noted claimant felt that the weakness to his right arm may have been from a chiropractic manipulation he experienced related to a work injury about two years ago.

15. Claimant returned to Dr. Evans on November 2, 2016 and reported he had some improvement after the injection, but continued to experience right arm pain and numbness. Dr. Evans recommended additional epidural steroid injections and diagnosed claimant with possible complex regional pain syndrome.

16. Claimant underwent additional injections to the C5-C7 levels on November 21, 2016. Claimant testified that following this injection, he went home and sat on his couch. Claimant testified as he got up from his couch, he was pushing himself up when he felt a pop in the front of his right shoulder.

17. Claimant returned to Dr. Sofish on November 29, 2016. Dr. Sofish made no mention of the shoulder pain or any incident in which claimant attempted to stand up from the couch causing his shoulder to pop.

18. Claimant was examined by Dr. Burnbaum on December 12, 2016. Dr. Burnbaum noted claimant was complaining of burning in his right hand up to his forearm with an area of numbness on the lateral aspect of his right shoulder. Dr. Burnbaum noted claimant reported worsening burning symptoms when abducting at the shoulder while supinating. Dr. Burnbaum diagnosed claimant with a right sided brachial plexus problem with involvement of the radial nerve, the axial nerve, and also the lateral antebrachial cutaneous sensory nerve. Dr. Burnbaum hypothesized that this could be a stretch injury from the chiropractic adjustment.

19. Claimant returned to Dr. Sofish on January 23, 2017. Dr. Sofish noted that they were waiting on an MRI of the right shoulder to see if they can explain what appears to be a brachial plexopathy to the right arm. Dr. Sofish noted that the operating surgeon for the wrist fusion felt claimant may have a brachial plexus injury with the arm extended during surgery.

20. Claimant underwent the MRI of the shoulder on February 13, 2017. Dr. Sofish noted on February 27, 2017 that the MRI showed inflammation to the brachial plexus which resulted in right forearm paresthesias, pain and decreased grip strength. Dr. Sofish recommended claimant be seen by a neurologist.

21. Claimant returned to Dr. Viola on April 2, 2017. Dr. Viola reviewed the MRI and opined that claimant had a partial thickness tear of the supraspinatus tendon along with abnormal hyperintensity at C5, C6 and C7 consistent with multi-focal neuritis and evidence of teres minor consistent with denervation.

22. Claimant was evaluated by Dr. Corenman on April 13, 2017. Dr. Corenman noted that claimant underwent the wrist surgery on April 20, 2016, and within two weeks of the procedure, claimant felt an electrical burning, severe discomfort in the right shoulder as well as a new onset of electrical burning and severe pain in the right radial wrist and dorsal hand. Claimant noted he had discomfort in his dorsal hand prior to the surgery, but his post-surgery discomfort was much different and more severe in nature. Claimant reported to Dr. Corenman that after his cervical epidural steroid injection on November 21, 2016, he was getting off the couch in late November and

recalls a pop sensation associated with increased right shoulder pain. Dr. Corenman performed a physical examination of claimant and noted claimant did have a Horner syndrome indicating some type of potential sympathetic involvement that could be a complex regional pain syndrome. Dr. Corenman recommended claimant undergo a block of the ganglion stellate. Dr. Corenman also recommended claimant be seen by Dr. Millett for his shoulder problem.

23. Claimant was examined by Dr. Millett and PA Davis on May 9, 2017. Dr. Millett noted claimant reported his shoulder felt fine until November 2016 when he was at home and got up from the couch, applied weight to his arm and experienced a popping sensation. Dr. Millett recommended an MRI of the right shoulder. The MRI was performed on June 5, 2017 and Dr. Frangiamore contacted claimant by telephone on behalf of Dr. Millett on June 16, 2017 and advised claimant that the MRI showed a moderate amount of rotator cuff tendinosis without any full thickness tearing. Dr. Frangiamore recommended physical therapy, anti-inflammatories or corticosteroid injections. Dr. Frangiamore contacted claimant again on June 19, 2017 and advised claimant that he could consider arthroscopic surgery to treat his shoulder condition.

24. Claimant underwent another epidural steroid injection with Dr. Evans on May 9, 2017. Claimant was then diagnosed with CRPS type I and underwent a right stellate ganglion block on May 16, 2017.

25. Respondents obtained a records review independent medical examination ("IME") with Dr. Failinger on June 26, 2017. Dr. Failinger issued an IME report that diagnosed claimant with chronic cervical spine degenerative disc disease, bilateral wrist pain, status post multiple surgeries; left trigger thumb release; and right shoulder AC joint degenerative joint disease with no apparent symptomatology, with rotator cuff tendinosis and apparent possible partial-thickness tear and possible biceps tendinitis. Dr. Failinger further opined that claimant's recommended right shoulder surgery was not, with a very high degree of medical probability, related to the April 16, 2015 industrial injury. Dr. Failinger opined that the rotator cuff and the AC joint were degenerative in nature and not related to the work injury of April 16, 2015.

26. Respondents obtained an IME with Dr. Lesnak on August 9, 2017. Dr. Lesnak reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Lesnak diagnosed claimant with subjective complaints of constant burning sensation throughout his right shoulder girdle and proximal right upper arm diffusely with associated numbness and frequent locking of his right shoulder, worse with any right upper arm adduction or internal rotation activities. Dr. Lesnak specifically opined that there was no evidence that claimant sustained injuries to his right shoulder or cervical spine associated with his work injury. Dr. Lesnak opined that claimant might have sustained an aggravation of a pre-existing right wrist degenerative changes and may have aggravated his left trigger thumb as a result of the April 16, 2015 work injury.

27. Dr. Lesnak opined that claimant was at maximum medical improvement ("MMI") as it pertained to the April 16, 2015 work injury. Dr. Lesnak opined that

claimant did not need any post-MMI medical treatment. Dr. Lesnak opined that claimant was capable of returning to work without restrictions.

28. Claimant was examined by Dr. Sofish on August 10, 2017. Dr. Sofish noted that claimant was status post right wrist fusion with complex regional pain syndrome to the right upper lower forearm and wrist. Dr. Sofish also diagnosed hypoesthesias to the right radial forearm and internal derangement/brachial plexus injury to the right shoulder.

29. Dr. Sofish reviewed the report from Dr. Lesnak and placed claimant at MMI on September 26, 2017. Dr. Sofish provided claimant with a permanent impairment rating of 30% of the upper extremity. Dr. Sofish opined that claimant did not need any maintenance medical treatment or permanent restrictions.

30. Respondents filed a final admission of liability ("FAL") based on the report from Dr. Sofish on October 20, 2017. The FAL admitted for the 30% upper extremity impairment rating and denied post-MMI medical treatment. Claimant timely objected to the FAL and requested a Division-sponsored Independent Medical Evaluation ("DIME").

31. Dr. Stagg performed the DIME on February 28, 2018. Dr. Stagg reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his DIME. Dr. Stagg noted that claimant reported an incident about 10 weeks prior to his work injury when he had an episode of increased pain in his right upper extremity and on the day of the injury, he had more increasing pain into his left ring finger and hand.

32. Dr. Stagg noted claimant's medical treatment with Dr. Sofish and his eventual surgery with Dr. Viola. Dr. Stagg further noted claimant's treatment with Dr. Corenman and his possible CRPS diagnosis. Dr. Stagg diagnosed claimant with an aggravation of underlying degenerative arthritis of the right wrist with subsequent surgical intervention and development of a neurologic injury with probable brachial plexus per Dr. Burnbaum, related to claimant's positioning during surgery. Dr. Stagg further noted that claimant had onset of shoulder pain after that same positioning. Dr. Stagg noted that claimant's symptoms from his left trigger thumb had resolved.

33. Dr. Stagg opined that claimant's left upper extremity had been adequately treated and needed no further treatment. Dr. Stagg opined, however, that claimant was not at MMI due to the fact that he needed further testing for CRPS and needed consideration of surgery for the left shoulder. Dr. Stagg opined that if, after testing, there was no evidence of CRPS, claimant should be evaluated by an orthopedic shoulder specialist to determine if the neurologic problems are related to the brachial plexus. Dr. Stagg opined that the shoulder problems were aggravated by positioning during claimant's surgery.

34. Dr. Stagg also provided a provisional impairment rating of 28% whole person.

35. Claimant was referred to Dr. Bernton for testing related to the potential CRPS diagnosis. Dr. Bernton evaluated claimant and performed the testing on June 19, 2018. Dr. Bernton noted that persistent asymmetry of 1 degree Centigrade was seen during the testing. Dr. Bernton noted that this was in the radial nerve distribution and not in a non-dermatomal distribution, and thus, it did not meet the criteria for complex regional pain syndrome. Dr. Bernton noted that possible brachial plexopathy or radial nerve pathology could account for the findings, but they were not consistent with CRPS.

36. Claimant returned to Dr. Lesnak on June 19, 2018. Dr. Lesnak again reiterated that there was no evidence of a right shoulder injury related to claimant's work injury. Dr. Lesnak noted that there was no current clinical evidence of sympathetic dysautonomia, including CRPS type 1 or type 2. Dr. Lesnak disagreed with Dr. Stagg's assertion that claimant may have CRPS as claimant had no specific subjective complaints or documented exam findings to meet the criteria for a diagnosis of CRPS. Dr. Lesnak further noted that claimant had complaints of shoulder issues several months prior to his work injury and did not report specific shoulder problems until 2 years after his shoulder injury.

37. Dr. Lesnak noted that while Dr. Stagg opined that claimant's shoulder symptoms could be caused by the positioning of the shoulder during surgery based on his review of the orthopedic surgery note, claimant had reported to Dr. Lesnak that the symptoms began when claimant attempted to rise from the couch later that day. Dr. Lesnak again opined that claimant had reached MMI as of September 26, 2017 and did not require any further medical treatment.

38. Respondents sent a letter to Dr. Sofish on July 18, 2018 attaching the June 19, 2018 IME report from Dr. Lesnak and Dr. Bernton's June 19, 2018 report. Dr. Sofish indicated in the report that he agreed with Dr. Lesnak and Dr. Failing that claimant's right shoulder complaints were unrelated to the April 16, 2015 work injury. Dr. Sofish further opined that he agreed with Dr. Bernton's opinion that the test results did not meet the diagnostic criteria for CRPS. Dr. Sofish indicated that it was his opinion that claimant had reached MMI as of September 26, 2017.

39. The ALJ credits the opinions expressed by Dr. Stagg in his DIME report that claimant is not at MMI and finds that respondents have failed to overcome that opinion by clear and convincing evidence. The ALJ notes that Dr. Stagg recommended additional testing including testing for CRPS, but also recommended that if the CRPS testing did not show evidence of CRPS, claimant should undergo additional testing to determine if the neurologic problems are related to the brachial plexus. This has not yet been accomplished.

40. The ALJ further notes that Dr. Stagg opined that claimant's shoulder issues were related to the position claimant's arm was in during surgery performed after his work injury. The ALJ notes that Dr. Stagg reviewed and considered all of the medical evidence provided to him during his DIME examination. Dr. Stagg reviewed the records from Dr. Millett relating to the treatment of claimant's shoulder and the onset of

shoulder symptoms. Dr. Stagg also noted the records from Dr. Viola discussing claimant's treatment and surgeries and based his opinion on his review of the medical records.

41. Dr. Lesnak notes in his reports that there were no documentation of any right shoulder complaints involving claimant's right shoulder until March, 2017, nearly two years after the injury. However, Dr. Evans noted on September 9, 2016 that claimant had an incident in June, 2016, around the same time as the surgery to remove the pins from claimant's wrist occurred, when claimant had symptoms involving his right shoulder popping and then flared up afterward. The ALJ notes that the report from Dr. Evans notes this took place on June 16, while the surgery to remove the pins took place June 17, but finds that there is documentation that this shoulder popping incident is what Dr. Stagg is referencing in his report to indicate that the shoulder condition was related to the position of claimant's shoulder during the surgery.

42. Following this incident in June 2016, claimant began seeking treatment for ongoing problems in his upper extremity that the physicians explored as either stemming from his cervical spine or his shoulder. Claimant began complaining of symptoms radiating down his right upper extremity that resulted in the treatment claimant then received. The ALJ finds that the opinion of Dr. Stagg that claimant's shoulder issues developed due to the position of claimant's right upper extremity during the surgery are consistent with claimant's report to Dr. Evans of developing symptoms in his shoulder in June 2016 associated with a popping. While there was also testimony that claimant had another popping incident when standing up from the couch, this was after claimant was getting treatment for his right upper extremity symptoms and the ALJ does not find that this incident represents an intervening event that severs respondents liability for ongoing medical treatment, especially in light of the opinions expressed by Dr. Stagg in his DIME report.

43. In this case, based on the review of the DIME report from Dr. Stagg and the corresponding medical records, the ALJ finds and concludes that respondents have failed to establish that it is most likely true and free from substantial doubt that Dr. Stagg erred in finding claimant not at MMI for the effects of the April 16, 2015 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. Likewise, Respondents have the burden of proving any affirmative defenses raised at hearing by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.,

2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2008).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra*. A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

4. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, based on the review of the DIME report issued by Dr. Stagg and the medical records entered into evidence, the ALJ finds that respondents have failed to overcome the opinion of Dr. Stagg that claimant was not at MMI by clear and convincing evidence. As found, the medical records that document claimant experiencing a pop and symptoms in his shoulder around the same time as the June 17, 2016 pin removal surgery is consistent with the opinion expressed by Dr. Stagg in his report that the shoulder issues began based on the position of claimant's shoulder during the surgery.

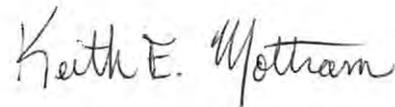

ORDER

It is therefore ordered that:

1. Respondents are liable for the reasonable medical treatment necessary to cure and relieve the claimant from the effects of the industrial injury, including the treatment recommended by Dr. Stagg in his DIME report. Respondents request for a finding that the opinion from Dr. Stagg that the claimant is not at MMI be overcome by clear and convincing evidence is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 14, 2020

Keith E. Mottram
Office of Administrative Courts
Administrative Law Judge
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the sustained a compensable injury arising out of and in the course of his employment with employer?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable and necessary to cure and relieve the claimant from the effects of the industrial injury?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary total disability ("TTD") or temporary partial disability ("TPD") benefits?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that he is entitled to an award of penalties for failure to file notice of the injury with the Division of Workers' Compensation?
- If claimant has proven a compensable injury, what is claimant's average weekly wage ("AWW")?
- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that he suffered a disfigurement in an area normally exposed to public view?
- If claimant has proven that respondents failed to file proper notice with the Division of Workers' Compensation, whether respondents have proven by a preponderance of the evidence that the penalty was cured pursuant to Section 8-43-304(4), C.R.S.?

FINDINGS OF FACT

1. Claimant is employed by employer as a home health physical therapist. Claimant testified his job duties included driving a company vehicle from Steamboat Springs to various clients in the area. Claimant testified he was paid by employer \$42 per hour. Claimant testified he would normally drive approximately 120 miles per day. Claimant testified that on April 10, 2018 he drove from Steamboat Springs to Grandby, a distance of 75 miles, and pulled up to a patient's home. Claimant testified he reached into the passenger seat to grab his work bag and lifted the bag over the console in the car to carry the bag out of the car and into the patient's home. Claimant testified that as he was walking around his car to the trunk of his car and into the patient's house, he felt pain in his low back. On cross examination, claimant testified he felt pain in his buttock between picking up his bag and getting to the back of his car. Claimant testified on

cross-examination that the movement of getting the bag settled was when he felt the pain.

2. Claimant testified that when he got into his patient's home, he stretched his back on the patient's floor, then worked with the patient. Claimant testified he then drove to his next patient who was approximately one mile away. Claimant testified by the time he got to the second patient's house, he had to lay down on the patient's couch. Claimant testified he then went to take the blood pressure of the patient, and as he knelt down, he felt excruciating pain and had to lie down again. Claimant testified he needed help getting back into his car, and at that point contacted his supervisor and drove back to Steamboat Springs.

3. Claimant testified that while driving back to Steamboat Springs, his pain became very severe and when he got back to the employer, he could not stand without support. Claimant testified that he tried to get a walker out of the back of his car, but needed help from a co-worker, Mr. S[Redacted].

4. Mr. S[Redacted] testified consistent with claimant's testimony. Mr. S[Redacted] testified that on April 10, 2018, he came out of the building and noticed claimant at his car trying to get something out of the back of her car. Mr. S[Redacted] testified he walked over and helped claimant get the walker out of his car and helped claimant into the building. Mr. S[Redacted] testified that claimant was in severe pain, and was crying and yelling. Mr. S[Redacted] testified claimant's daughter eventually picked claimant up and he helped claimant into the back of her sports utility vehicle.

5. Claimant testified at hearing that he had pre-existing issues with his low back, including problems with the L5 area for which he received 3 epidural injections in the late 1990's. Claimant denied that he had any back problems that kept him from working prior to April 10, 2018. Claimant testified that his pre-existing pain in his back was a nagging pain that could be managed.

6. Claimant testified he was referred by employer to Dr. Harrington for medical treatment. Claimant was initially evaluated by Dr. Harrington on April 10, 2018. Claimant reported an injury occurring at approximately 9:00 a.m. when he was driving to a therapy appointment. According to Dr. Harrington's notes, claimant was able to walk up and check on a couple of patients, but his pain progressed and then seemed to spread down his leg to his right leg and right groin. Claimant reported pain over his sacroiliac ("SI") joint which seemed to involve more his piriformis area. Dr. Harrington provided claimant with a valium and tramadol, and referred claimant for physical therapy.

7. Claimant testified that he had severe pain over the next two days and Dr. Harrington instructed claimant to go to the emergency room ("ER") on April 12, 2018. Claimant was examined by Dr. Powers at the Yampa Valley Medical Center on April 12, 2108. Dr. Powers noted that claimant had a history of L5 disc problem in 1998 resulting in multiple injections but now surgery. Claimant reported a several day history of right buttock pain radiating to the right lower leg. Claimant denied low back pain or any

history of trauma. Dr. Powers noted claimant worked as a physical therapist but did not think he injured himself on the job. Dr. Powers obtained an x-ray of the lumbar spine and recommended a magnetic resonance image ("MRI") be performed. However, claimant was too claustrophobic to complete the MRI. The x-ray revealed suspected mild right hip arthropathy and L5-S1 degenerative disc disease and lower lumbar facet osteoarthritis. Claimant was subsequently sedated and the MRI was able to be completed. The MRI demonstrated moderate to severe right foraminal stenosis with right L4 nerve root compression. This was noted to be secondary to a right far lateral disc-osteophyte complex and hypertrophic arthrosis of the facet joints. Mild bilateral foraminal stenosis L3-4, mild left foraminal stenosis L4-5 and L5-S1, and mild to moderate right foraminal stenosis at the L5-S1 level was also noted.

8. Claimant was examined by Dr. Devin and physicians assistant ("PA") Nyquist while at the hospital. Claimant reported to Dr. Devin that he had an acute onset of right sided sciatica beginning approximately one week ago while at work. Claimant reported a history of right sided "SI joint" pain for many years with a previous L5 injection around 1998. Claimant reported his current episode began after driving an hour in his car on Monday, April 9 to see PT patients in Grand Lake. Claimant reported his pain worsened when he saw patients throughout the day, and quickly progressed to the point he was barely able to walk. Claimant reported pain starting in the right thigh, radiating to the groin/scrotum, down the thigh and most significant in the anterior lower leg. Claimant reported he saw Dr. Harrington the next day, Tuesday, April 10. Dr. Devin noted that claimant's MRI showed severe right L4-L5 foraminal stenosis with compression of the exiting L4 nerve root. Dr. Devin diagnosed claimant with a lumbar disc herniation with lumbar spondylosis with myelopathy. Dr. Devin recommended a transforaminal epidural steroid injection ("ESI") to the right L4 nerve root and recommended gabapentin.

9. Claimant was seen by Dr. Siegel on April 13, 2018. Dr. Siegel noted claimant had been recently admitted to the hospital with intractable leg pain. Dr. Siegel noted that claimant's pain began April 9, and stated that it was likely from the work he does which requires quite a bit of travelling in a car. Dr. Siegel noted significant degenerative changes at the L5-S1 level with bilateral foraminal stenosis. Dr. Siegel diagnosed claimant with a herniated nucleus pulposus lumbar spine; degenerative disc disease of the lumbar spine with lumbar stenosis; and right lower extremity radiculitis. Dr. Siegel likewise recommended a transforaminal ESI. Claimant underwent the transforaminal ESI under the auspices of Dr. Siegel on April 13, 2018.

10. Dr. Harrington noted that following the ESI, claimant's pain was well controlled and claimant was discharged from the hospital.

11. Claimant testified that when he did not recall giving intake information to the ER.

12. Claimant developed a spinal headache related to a spinal fluid leak after the ESI and returned to Dr. Siegel on April 20, 2018. Claimant had a lumbar epidural

blood patch at L4-5 and reported to Dr. Siegel on May 1, 2018 that his headache was 100% relieved.

13. Claimant returned to Dr. Devin on April 27, 2018 and reported that the blood patch had resolved his headache. Claimant continued to report discomfort down his right leg, but noted it was markedly improved from where it was before. Dr. Devin noted claimant was progressing nicely and recommended starting physical therapy. Dr. Devin noted claimant's further treatment could include another injection or surgery. Dr. Devin reported that if surgical intervention was performed, the surgery would consist of a right L4 hemilaminotomy.

14. Dr. Devin subsequently requested authorization for the surgery on May 8, 2018. The surgery was denied by respondents. Claimant made arrangements for his personal insurance to cover the cost of the surgery and on May 29, 2018 Dr. Devin performed a right L4 hemilaminectomy and right L4 foraminotomy with a right L4-5 discectomy. As a result of the surgery, claimant has a surgical scar on his back measuring 1 ½ inches in length and ½ inch in width.

15. Claimant returned to Dr. Devin on July 9, 2018 for evaluation. PA Nyquist noted that claimant reported doing well overall since his initial post-operative period. Claimant reported immediate significant relief of his right lower extremity symptoms, but felt he had plateaued in his progress. Claimant was released to return to work full duty.

16. Claimant returned to Dr. Devin on December 13, 2018.

17. Claimant testified that he was off of work for employer between April 10, 2018 through June 6, 2018 when he returned to work performing office work. Claimant testified he worked 40 hours per week when he returned. Claimant testified he began seeing patients again on July 16, 2018.

18. Claimant testified that he received medical and employment releases from employer on April 16, 2018.

19. Ms. L[Redacted], a claims representative for employer testified at hearing in this case. Ms. L[Redacted] testified she was the representative for claimant's workers' compensation case in this matter. Ms. L[Redacted] testified that she did not recall speaking to the employer prior to May 9, 2018. Ms. L[Redacted] testified she did not see a workers' claim for compensation form involving this claim between April 10, 2018 and May 15, 2018.

20. A Workers Compensation First Report of Injury was filed by employer on April 12, 2018. The First Report of Injury does not indicate the last day the claimant worked. A notice of contest was filed by employer on May 16, 2018. Claimant did not request a hearing on penalties until May 15, 2019.

21. The ALJ credits the medical records and reports regarding the onset of claimant's symptoms over claimant's testimony at hearing and finds that claimant's discomfort began while driving to see patients on the morning of April 10, 2018. The

ALJ notes that there is some discrepancies in the ER records about whether the pain started a week prior, or on April 9 as opposed to April 10, but finds that the accident history establishes that the original onset of symptoms began while driving on April 10, 2018 and then increased as claimant got out of the car to meet with his patients. This pain progressed between claimant's first and second appointment and then continued to progress as claimant drove back to Steamboat Springs according to claimant's testimony.

22. The ALJ credits the accident history of the pain developing while driving over claimant's testimony at hearing that the pain developed after he got out of the car and was putting on his bag. The ALJ notes that the accident history of pain developing while claimant is driving to the patients as opposed to after he gets out of the car is consistent between claimant's reported history to Dr. Harrison on the date of the injury, the report to the ER which denied any history of trauma, and to Dr. Devin on April 12 where he reported an onset of pain after driving an hour in his car which worsened as he saw his patients. Likewise, Dr. Siegel reported an accident history of intractable right leg pain related to the work he does which requires quite a bit of traveling in a car.

23. The issue in this case is whether the development of pain that occurs when claimant is traveling in a car for work is a compensable work injury where the claimant has a history of low back complaints and degenerative findings on radiographic studies.

24. In this case, claimant has established the onset of symptoms occurring while claimant is at work. Claimant has failed to establish, however, how the condition arose out of his employment with employer. There is insufficient evidence presented at hearing that claimant's symptoms were related to any job duty that claimant performed. The mere fact that the symptoms presented themselves during a time in which claimant is at work is insufficient to establish a compensable work injury under the Colorado Workers' Compensation Act. The claimant must also establish that the injury arose out of his employment with employer. In this case, claimant has failed to establish how riding in the car contributed to his development of symptoms in a way that would constitute a compensable injury.

25. Notably, none of the physicians in this case have related claimant's symptoms to the lifting of the bag that claimant testified to at hearing. Likewise, while claimant mentioned in his history to some of the physicians that he related the onset of pain as being the result of his driving, none of the physicians have indicated how the driving resulted in the diagnosis of a herniated disk in his back and the resultant treatment for the herniated disk, including the surgery.

26. In this case, based on the evidence presented at hearing, the ALJ determines that claimant's symptoms developed while he was driving on April 10, 2018. What claimant has failed to establish is that the development of those symptoms related to his work with employer. None of the physicians have established that the driving, even if the driving was prolonged, aggravated or accelerated claimant's underlying

condition causing the need for treatment. Because claimant has failed to establish this element of his case, claimant's claim for benefits must be denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. See *H & H Warehouse v. Vicory, supra*.

4. A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. (2017). The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work-related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968); Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct

causal relationship between the employment and the injuries. Section 8-43-201, C.R.S. 2002; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

5. In this case, the ALJ finds that claimant's pain developed while driving on April 10, 2018. As found, the ALJ credits the medical records over claimant's testimony to establish this factual finding. However, there is no credible evidence that the pain in this case was related to the driving or to any other action claimant was performing on behalf of employer on April 10, 2018. As found, claimant had a pre-existing condition involving his low back and there is a lack of evidence to establish that the manifestation of symptoms related to claimant's low back condition was related to his employment with employer.

6. The ALJ would further note that this does not involve a case where some unexplained event occurred causing an injury, such as an unexplained fall. The ALJ recognizes that unexplained falls are compensable under the Colorado Workers' Compensation Act pursuant to *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Under the unexplained falls line of cases, the unexplained fall is a "neutral risk" that results in a compensable injury.

7. In this case, there is no "neutral risk" that resulted in claimant's onset of symptoms related to claimant's employment with employer. Claimant's symptoms were related to the underlying condition of his lumbar spine and simply became symptomatic on April 10, 2018. However, there is insufficient evidence to establish that any work duties claimant performed on April 10, 2018 led to the symptoms developing.

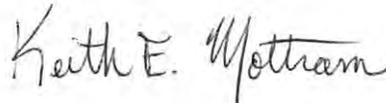

8. Based on the foregoing reasoning, claimant's claim for benefits must be denied.

ORDER

It is therefore ordered:

1. Claimant's claim for benefits is denied and dismissed.

Dated: January 15, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable right upper extremity injury during the course and scope of her employment with Employer on July 4, 2019.
2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her July 4, 2019 industrial injury.

FINDINGS OF FACT

1. Claimant is a New York-based actress and Employer is a theater located in Aspen, Colorado. Employer conducted auditions in the New York City area for a play commencing on July 1, 2019 and ending on August 3, 2019. Claimant auditioned and received a role in the play.

2. On May 29, 2019 Claimant executed an employment contract with Employer. In pertinent part, the contract provides that Claimant's employment would begin on July 1, 2019 at 10:00 a.m. Claimant was required to report to Employer's rehearsal studio located at 403 AABC, Aspen, CO 81611. Because Claimant was required to travel over 100 miles to effectuate her employment, Employer provided roundtrip airfare and housing accommodations. Notably, the employment contract did not provide for transportation after Claimant arrived in Aspen.

3. Claimant's employment duties required her to attend rehearsals and performances at Employer's studio and theater. Claimant remarked that the studio was approximately 4.7 miles from her housing. She was not required by her employment contract to work anywhere aside from the theater or rehearsal studio. In fact, Claimant was never required to travel as part of her employment with Employer. Finally, Employer did not dictate how employees should travel from their residences in Aspen to rehearsals or performances.

4. Claimant is a member of the Actors' Equity Association (AEA). The AEA is a union that provides rules governing employment contracts between actresses and theaters. AEA Rule 27 provides in pertinent part, "[i]n all cases where there is no available public transportation . . . within ¼ mile by normal transportation route to the theater, the Producer shall, at the Producer's own expense, furnish roundtrip transportation (including gas) to the Actor for all performances, rehearsals, and/or meals as the case may require in accordance with a pre-arranged schedule." Claimant's residence in Aspen and Employer's studio were located within ¼ mile of public transportation.

5. As an alternative to walking or taking public transportation Employer offered bicycles to employees. Employees were not required to use bicycles and usage was not encouraged by Employer. Claimant elected to check out a bicycle from Employer. She signed a waiver form acknowledging that she was borrowing the bicycle as a convenience and understood that Employer's insurance policies "do not include any coverage on this bicycle or me while this bicycle is in my possession."

6. On July 4, 2019 Claimant was riding her bicycle from her residence to rehearsal when the front wheel abruptly stopped. She fell and fractured a bone in her right wrist. The accident occurred prior to work hours and off Employer's premises.

7. Claimant testified at the hearing in this matter. She explained that, in addition to attending rehearsals at the studio, she prepared for her role by practicing in her lodging facilities. Claimant's co-actor and roommate in Aspen Alice Sherman confirmed that she worked with Claimant outside of rehearsals to practice their roles. Ms. Sherman also noted that the director of the show gave the actors homework in preparation for the next rehearsal.

8. Employer's General Manager Daniel B[Redacted]also testified at the hearing in this matter. He explained that employees were not required to work outside of rehearsals. Mr. B[Redacted]remarked that a free bus and bicycles were available to employees, and employees were only required to arrive at work. Stage Manager Warren W[Redacted] confirmed that Employer did not dictate a method of travel to and from show rehearsals. However, he commented that actors' typically prepare for their roles outside of rehearsals.

9. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable right upper extremity injury during the course and scope of her employment with Employer on July 4, 2019. Initially, Claimant sustained a right upper extremity injury when she had a bicycle accident riding from her lodging to a rehearsal. The record reflects that Claimant was going to work and there were no special circumstances warranting recovery. Claimant conferred no benefit to Employer through travel and was not sent on business trips or required to travel off Employer's premises to effectuate her employment. Once Claimant arrived in Aspen, travel was in no way contemplated by her employment contract with Employer. In fact, Claimant's employment duties only required her to attend rehearsals and performances at Employer's rehearsal studio and theater.

10. Claimant's obligations under her contract and the conditions of her employment also did not create a "zone of danger." She was able to choose any number of way to get to her rehearsals and shows including riding free public transportation. Claimant elected to check out a bicycle from Employer. She signed a waiver form acknowledging that she was borrowing the bicycle as a convenience and understood Employer's insurance policies "do not include any coverage on this bicycle or me while this bicycle is in my possession." Finally, Claimant's fall occurred outside of working hours and off Employer's premises. Although Claimant and Ms. Sherman testified that they prepared for their roles outside of rehearsals in the lodging provided

by Employer, Claimant was not required by her employment contract to work anywhere aside from the theater or rehearsal studio. In sum, there was no causal connection between Claimant's employment and her injury. Claimant's travel on July 4, 2019 conferred no benefit to Employer outside of her mere arrival at work. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "time" limits of employment include a reasonable interval before and after working hours while the employee is on the employer's property. *In Re Eslinger v. Kit Carson Hospital*, W.C. No. 4-638-306 (ICAP, Jan. 10, 2006). The "place" limits of employment include parking lots controlled or operated by the employer that are considered part of employer's premises. *Id.*

5. Generally, injuries sustained by employees while they are traveling to or from work are not compensable because such travel is not considered the performance of services arising out of and in the course of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). However, injuries incurred while traveling are compensable if “special circumstances” exist that demonstrate a nexus between the injuries and the employment. *Id.* at 864. In ascertaining whether “special circumstances” exist the following factors should be considered:

- Whether travel occurred during working hours;
- Whether travel occurred on or off the employer's premises;
- Whether travel was contemplated by the employment contract; and
- Whether obligations or conditions of employment created a “zone of special danger” out of which the injury arose.

Id. In considering whether travel is contemplated by the employment contract the critical inquiry is whether travel is a substantial part of service to the employer. *See id.* at 865.

6. “Special circumstances” may be found where the employment contract contemplates the employee’s travel or the employer delineates the employee’s travel for special treatment as an inducement. *See Staff Administrators Inc. v. Reynolds*, 977 P.2d 866, 868 (Colo. 1999). “Special circumstances” may also exist when the employee engages in travel with the express or implied consent of the employer and the employer receives a special benefit from the travel in addition to the employee’s mere arrival at work. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259, 1260 (Colo. App. 1992). The essence of the travel status exception is that when the employer requires the claimant to travel beyond a fixed location to perform his job duties the risks of the travel become the risks of the employment. *Breidenbach v. Black Diamond, Inc.*, W.C. No. 4-761-479 (ICAO, Dec. 30, 2009).

7. In considering whether travel was contemplated by the employment contract, case law reflects that the exception applies when a claimant is required by an employer to come to work in an automobile that is then used to perform job duties. The vehicle confers a benefit to the employer beyond the employee’s mere arrival at work. *See Whale Communications v. Osborn*, 759 P.2d 848 (Colo. App. 1988). As explained in 1 A. Larson, *Workmen’s Compensation Law*, §17.50 (1985), “[t]he rationale for this exception is that the travel becomes a part of the job since it is a service to the employer to convey to the premises a major piece of equipment devoted to the employer’s purposes. Such a requirement causes the job duties to extend beyond the workplace and makes the vehicle a mandatory part of the work environment.”

8. There is no requirement under the Act that a claimant must be on the clock or performing an act “preparatory to employment” in order to satisfy the “course of employment” requirement. *In re Broyles*, W.C. No. 4-510-146 (ICAP, July 16, 2002). As noted in *Ventura v. Albertson’s, Inc.*, 856 P.2d 35, 38 (Colo. App. 1992):

The employee, however, need not be engaged in the actual performance of work at the time of injury in order for the “course of employment” requirement to be satisfied. Injuries sustained by an employee while taking a break, or while leaving the premises, collecting pay, or in retrieving work clothes, tools, or other materials within a reasonable time after termination of a work shift are within the course of employment, since these are normal incidents of the employment relation.

9. The “arising out of” requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee’s work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlanda*, 811 P.2d 379, 383 (Colo. 1991). Nevertheless, the employee’s activity need not constitute a strict duty of employment or confer a specific benefit on the employer if it is incidental to the conditions under which the employee typically performs the job. *In Re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). It is sufficient “if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment.” *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9, 12 (Colo. App. 1995). Incidental activities include those that are “devoid of any duty component, and are unrelated to any specific benefit to the employer.” *In Re Rodriguez*, W.C. 4-705-673 (ICAO, Apr. 30, 2008). Whether a particular activity has some connection with the employee’s job-related functions as to be “incidental” to the employment is dependent on whether the activity is a common, customary and accepted part of the employment as opposed to an isolated incident. *See Lori’s Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995).

10. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable right upper extremity injury during the course and scope of her employment with Employer on July 4, 2019. Initially, Claimant sustained a right upper extremity injury when she had a bicycle accident riding from her lodging to a rehearsal. The record reflects that Claimant was going to work and there were no special circumstances warranting recovery. Claimant conferred no benefit to Employer through travel and was not sent on business trips or required to travel off Employer’s premises to effectuate her employment. Once Claimant arrived in Aspen, travel was in no way contemplated by her employment contract with Employer. In fact, Claimant’s employment duties only required her to attend rehearsals and performances at Employer’s rehearsal studio and theater.

11. As found, Claimant’s obligations under her contract and the conditions of her employment also did not create a “zone of danger.” She was able to choose any number of way to get to her rehearsals and shows including riding free public transportation. Claimant elected to check out a bicycle from Employer. She signed a waiver form acknowledging that she was borrowing the bicycle as a convenience and understood Employer’s insurance policies “do not include any coverage on this bicycle or me while this bicycle is in my possession.” Finally, Claimant’s fall occurred outside of working hours and off Employer’s premises. Although Claimant and Ms. Sherman

testified that they prepared for their roles outside of rehearsals in the lodging provided by Employer, Claimant was not required by her employment contract to work anywhere aside from the theater or rehearsal studio. In sum, there was no causal connection between Claimant's employment and her injury. Claimant's travel on July 4, 2019 conferred no benefit to Employer outside of her mere arrival at work. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: January 15, 2020.

ISSUES

- I. What is Claimant's Average Weekly Wage (for TTD purposes) at the time of his injury, based upon his hourly rate?
- II. What is Claimant's Average Weekly Wage (for TTD purposes) at the time his health care benefits were terminated by Employer?
- III. What is Claimant's Average Weekly Wage (for PPD purposes) based upon the replacement costs of his employer-supplied health and medical insurance?
- IV. Disfigurement

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked as a full time ramp agent for Employer. Claimant was a member of a union. Claimant's wages were determined as a result of a collectively bargained agreement. All full-time employees are scheduled to work 40 hours per week. (Ex. 8, p. 55). Claimant testified that he received scheduled raises twice per year. The first was in May and the second on the anniversary of his hire in November.
2. Claimant sustained an admitted industrial injury to his low back December 27, 2016 as a result of a fall on ice. At the time of his injury, Claimant was earning \$19.30 per hour, based on a recent raise in November, 2016. (Ex. 8, p. 50).
3. At hearing, Claimant testified that at the time of his injury, Claimant had group health insurance through Employer, including family coverage for health, dental and vision insurance.
4. Claimant was placed on leave of absence with Employer. As a result, his medical, dental and vision coverage ended on November 29, 2017. (Ex. 9, p. 59)
5. Claimant was offered COBRA continuation coverage for his family plan. Claimant's monthly cost of continued coverage for the family plan, which Claimant had on the date of injury, was \$1,657.58 for medical, \$143.17 for dental and \$17.18 for vision totaling \$1,817.93 per month.

6. This \$1817.93 monthly cost converts to \$419.52 on a weekly basis. [$\$1817.93 \times 12 = \$21,815.16 \div 52 = \$419.52$]. Claimant proposes this figure to be added to his hourly wages to compute his Average Weekly Wage.
7. Claimant testified that he did not elect COBRA continuation coverage. Claimant and his family ultimately obtained insurance coverage through his spouse's employer, Advance Circuits, effective February 2, 2019.
8. Two letters, each from the HR Department of Advanced Circuits, and each dated June 25, 2019, were admitted in the respective parties' exhibit packets. Claimant's Ex. 11 outlined the monthly insurance cost for \$1927.22 for medical, and \$87.46 for dental. Respondents' Ex. D outlines the monthly family medical cost to Claimant's wife at being \$590 monthly. Exhibit D is unclear whether or not dental insurance is included in the monthly premium; however, at hearing, Claimant testified to his belief that the \$590 figure (for which his wife paid monthly premiums through her employer) encompassed health only, and the additional monthly premium for dental insurance cost \$87.46.
9. Following Claimant's medical treatment, which included surgery for Claimant's lumbar spine, Claimant was placed at MMI on March 28, 2018. Claimant was later assigned a 26% whole person impairment rating from the Division Independent Medical Examiner.
10. Respondents filed their most recent Final Admission of Liability ("FAL") on March 8, 2019. Respondents admitted liability for an AWW of \$700.21, with a corresponding TTD rate of \$466.81. For purposes of the issues relevant to the present claim, Respondents admitted liability for temporary disability benefits from June 6, 2017 through March 27, 2018 at the admitted TTD rate of \$466.81. Respondents additionally admitted liability for PPD benefits at the admitted TTD rate of \$466.81.
11. At hearing, Claimant testified that he was released from care with permanent restrictions of no lifting greater than 20 pounds. Claimant's job duties with Employer require him to lift 70 pounds. As a result, Claimant has not been able to return to his regular job with Employer while still maintaining his employment status. Claimant testified that he has started performing some work as a driver, earning substantially less than his earnings with Employer. Claimant testified that his hourly employment with Employer *at the time of MMI* was \$21.29.

Disfigurement

12. By agreement of the parties, the presiding ALJ was shown the scar Claimant received as a result of his work injury. In summary, said scar is 'visible in a beach setting', one inch by $\frac{1}{4}$ ", very discolored, but smooth.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007). In this instance, the ALJ finds Claimant’s testimony to be credible, and consistent with the documents submitted by the parties.

Average Weekly Wage, Generally

4. Where the Claimant is earning an hourly wage at the time of the injury, the AWW is to be determined by multiplying the hourly rate by the number of hours in a day the claimant would have worked but for the injury, then multiplying that sum by the number of days in a week the Claimant would have worked. Colo. Rev. Stat. § 8-42-102(2)(d) (2003). However, 8-42-102(3) provides that an ALJ may diverge from the statutorily-prescribed methods of calculating the AWW if, for any reason, they will not fairly compute the AWW. The ALJ has wide discretion to decide whether the statutorily-prescribed methods will fairly calculate the AWW, and if not, to devise a method which will fairly determine the AWW. Because the ALJ’s authority is discretionary, appellate courts may not interfere with the AWW determination unless there is an abuse of discretion. An abuse occurs if the order is beyond the bounds of reason, as where it is contrary to the law or not supported by substantial evidence. *Pizza Hut v. Indus. Claim*

Appeals Office, 18 P.3d 867 (Colo. Ct. App. 2001). *Vance v. The Brown Schs/Cedar Springs Behavioral Health*, W.C. No. 4-558-130 (I.C.A.O. Aug. 17, 2004).

Average Weekly Wage, Hourly Rate, as Applied

5. At the time the *Pizza Hut* claimant was placed at MMI, he was earning considerably more as a result of taking a new job which reflected additional training. He had only been at this job a short while when placed at MMI. In upholding claimant's increased AWW to reflect the new position at MMI, the Court noted: "Moreover, a significant wage increase that occurs post-injury does not establish a lack of impairment, *nor does it mean that the claimant has not suffered a future wage loss related to the impairment.*" *Id.* at 869. It was further noted that claimant's future diminution in earning capacity was especially relevant due to that claimant's testimony "*as to the possible limitations he may face*" *Id.* (emphasis added). The ALJ finds that the reasoning in *Pizza Hut* should apply in this instance.

6. In this instance, Claimant's testimony, undisputed factually, is that his hourly wage *at the time of MMI* would have been \$21.29, had he continued working, uninjured. The ALJ finds this figure to be a reliable figure, based upon reasonable projections from the union contract. Additionally, the testimony is that Claimant has work restrictions which will likely prevent him from reassuming his position as a baggage handler; he might have to accept a lower-paying position within the company at future date. The objective herein is to most accurately project Claimant's diminution in potential earnings. Therefore, the ALJ finds the *wage component (at MMI)* of Claimant's AWW to be $\$21.29 \times 40 = \mathbf{\$851.60}$.

7. Further (for TTD purposes) *at the time Claimant was injured*, his AWW was **\$772.00**.

Average Weekly Wage, Health and Dental, as Applied

8. Respondents cite *Schelly v. ICAO*, 961 P.2d. 547 for the proposition that the additional [AWW] value of medical benefits should be based upon the additional *costs to Claimant*, and not to the *Employer*. The ALJ concurs with this reasoning. Advances Circuits' medical and dental coverage is a known, ascertainable, additional cost to Claimant, [more accurately, to Claimant's *household*, but for which Claimant derives a comparable benefit] based upon the documents in evidence. Based upon limited evidence available [and hearing nothing to the contrary], the ALJ assumes, and finds, that the quality and coverage of the health plans from Southwest and Advanced Circuits are similar. The weekly medical cost *to Claimant* is therefore $\$590 \times 12 = \$7080 \div 52 = 136.15$. The weekly dental cost to Claimant is therefore $\$87.46 \times 12 = \$1049.52 \div 52 = \$20.18$. The *AWW value* of medical and dental coverage combined is therefore combined to be **\$156.33**.

Average Weekly Wage, Summarized

9. The ALJ finds and concludes that Claimant's Average Weekly Wage (for PPD purposes) is **\$1,007.93** at the time of MMI. From November 29, 2017, until Claimant reached MMI, his Average Weekly Wage is $\$772 + 156.33 = \mathbf{\$928.33}$.

Disfigurement

9. The ALJ finds and concludes that as a result of this work injury, Claimant has a visible disfigurement to the body consisting of the scar as described in Finding of Fact #12. Claimant has suffered a serious permanent disfigurement to parts of the body normally exposed to public view, which entitled Claimant to additional compensation, pursuant to C.R.S. 8-42-108(1). The ALJ Orders that Insurer shall pay Claimant \$400.00 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

Offsets

10. The issue of offsets is not before this ALJ. While Respondent's Exhibit C is difficult to read and interpret, it suggests the *possibility* that Claimant was partially compensated by Southwest for much of 2018. The parties are encouraged to investigate further, and apply any offsets which might be applicable.

ORDER

It is therefore Ordered that:

1. Claimant's Average Weekly Wage is **\$1007.93** for purposes of all calculations of Workers Compensation benefits upon reaching MMI.
2. Claimant's Average Weekly Wage at the time of injury was **\$772.00**.
3. Claimant's Average Weekly Wage from November 29, 2017 until he reached MMI is **\$928.33**.
4. Respondents shall pay Claimant's Disfigurement benefits in the amount of **\$400.00**.
5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is *recommended* that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: January 15, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on May 26, 2019.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical treatment for his May 26, 2019 injury including a right shoulder surgery recommended by Dr. Foulk.

FINDINGS OF FACT

1. Claimant is a 62-year-old male employed by Employer as a Ramp Lead. Claimant typically works Thursday through Monday and has Tuesdays and Wednesdays off. On Thursdays, he works as Relief Lead, on Fridays and Saturdays he works in Pet Safe, and on Sundays and Mondays he works as Lead Mail. Claimant typically works from 6:00 a.m. to 2:30 p.m.

2. As Lead Mail, Claimant is responsible for a crew that works in Employer's mail facility. The crew sorts, scans, and sets up carts of mail to be loaded onto airplanes. The work is fast paced and Claimant is responsible to get all the mail scanned and closed out 90 minutes before the flight is scheduled to depart so the weight of mail being added to the plane is known. After the cut off time, Claimant cannot add any items. If the crew misses the cutoff or the mail sits too long, the post office can repossess the items and then Employer will not be paid for the items.

3. Claimant testified that after carts full of mail are dropped outside the mail facility, his crew pulls the carts into the mail facility building, sorts it out and scans it, then puts it into carts to be sent to the airplanes. Claimant testified that a cart full of mail weigh approximately 1,000 to 1,200 pounds. Claimant testified that he pulls the carts one at a time to turn them around to be hooked to the tractor/mule, and that he has to push back and pull out on the cart handles to get them to hook onto the tractor/mule. Claimant testified that all day long he is moving carts, hooking them up, and sorting/scanning mail.

4. On May 26, 2019, Claimant was working as Lead Mail. Claimant testified that they were really busy that day and that he had 6-7 people working in the mail facility. Claimant testified that a good day would mean he had 9-12 people and that on a bad day he would have only 5-6 people.

5. Claimant testified that as he was pushing/pulling carts he felt pain in his shoulder and did not feel very good. Claimant testified that because they were so busy, the crew did not take a lunch that day and that instead of punching out at 2:30, they all punched out at 2:00 p.m. since no one received a lunch break. Claimant testified that he

could not find his supervisor to report his shoulder pain but that by the time he got home his pain was really bad so he called his supervisor's cell phone to report. Claimant testified that he did not feel a specific pop, click, lock or catch that day. Claimant testified that the back part of his right upper shoulder hurt and that it was a specific area of new pain that day.

6. Claimant testified that the supervisor indicated Claimant should do paperwork the next morning. Claimant testified that the next morning he was really sore and that he went in and filled out paperwork to report the injury.

7. Claimant testified that he requested to see Dr. Foulk at Panorama Orthopedic and Spine Center as he had treated with Panorama previously. Claimant testified that he had a prior left shoulder issue where Concentra had him do physical therapy but that physical therapy hurt and he found out later that he had a tear. Due to his past left shoulder issues, Claimant wanted to see Dr. Foulk at Panorama and he received approval.

8. It took one week for Claimant to get an appointment at Panorama and he went there for his first evaluation in this case.

9. Claimant testified that he had no right shoulder problems like this prior to May of 2019. Claimant testified as to his history of wrestling at the collegiate, high school, and Olympic trial levels and his work as a high school wrestling coach. He also testified that he played in a senior softball league as a pitcher and that his team won the state championship three years ago. Claimant testified that he lifts weights and does mostly cross fit type workouts with cardio, stair steps, and light weights on repetitions. Claimant testified that it helps him in his job to stay conditioned because his job is very physical. Claimant testified that he had never previously injured his right shoulder and that now, after May 26, 2019, he is unable to throw the ball or play softball. Claimant also testified that he is now unable to do push-ups because it is very painful.

10. Claimant testified that he returned to work May 27, 2019 but had restrictions and was mainly just scanning. He testified, however, that even when just scanning he often had to spin, lift, or push packages, which hurt his shoulder. Claimant testified that it hurt his shoulder but he did what he could. Claimant testified that after he received new restrictions he was off work and had not returned.

11. Claimant testified that he has a little bit of improvement in his shoulder and that he wants surgery to fix what is going on. Claimant has not yet undergone physical therapy or injections in his right shoulder.

12. On Employer's First Report of Injury, Employer noted that Claimant was assisting co-workers scanning and loading mail into and out of carts due to shortage of manpower and that when Claimant arrived home, he felt pain in the back of his right shoulder. On the Worker's Claim for Compensation form, Claimant indicated that the injury occurred working mail, pushing, pulling, and moving mail cart. See Exhibits 1, 3.

13. On June 3, 2019, Claimant was evaluated at Panorama Orthopedic and Spine Center by Hector Mejia, M.D. Claimant reported acute pain in his right shoulder that occurred on May 26, 2019. Claimant reported he was at work performing his normal duties when he felt a sharp pain in his shoulder and that the pain was increased with lifting, sports, pushing/pulling, twisting/turning, and lifting weights. Claimant reported no prior injury to the right shoulder. Dr. Mejia noted that x-rays showed no fractures, dislocations, or bony lesions and showed preserved glenohumeral joint space and AC joint space without any loose body or significant arthritic changes. Dr. Mejia diagnosed acute right shoulder pain. Dr. Mejia noted that the subjective and objective findings were consistent with a rotator cuff injury but that he was unsure of a strain versus a partial tearing. Dr. Mejia recommended an MRI of the right shoulder. See Exhibits 12, D, E.

14. On June 11, 2019, Claimant called Panorama indicating that a surgeon that did his cochlear implants advised him that he could not undergo MRIs. Claimant was scheduled to follow up with Dr. Foulk. See Exhibit 12.

15. On June 18, 2019, Douglas Foulk, M.D. evaluated Claimant. Claimant reported pain with movement of his arm including pulling, pushing, and lifting. Claimant also reported difficulty with sleep, and weakness in his right arm. Dr. Foulk had Claimant undergo right elbow x-rays which showed narrowing of the joint space and osteoarthritis of the elbow. Dr. Foulk diagnosed chronic right shoulder pain and right tennis elbow. Dr. Foulk noted a possible right rotator cuff tear based on Claimant's history and physical findings. Dr. Foulk recommended an arthrogram with x-rays since Claimant could not have an MRI. Dr. Foulk also recommended physical therapy and a strap for the right elbow. Dr. Foulk placed work restrictions of no bag scanning or lifting with the right arm. See Exhibits 12, D.

16. On June 24, 2019, Claimant underwent an arthrogram of his right shoulder. The findings showed contrast conforming to the glenohumeral joint, no contrast present within the subacromial subdeltoid bursa, and no obvious cartilage defect identified off the humeral head. Dedicated radiographs of the right shoulder were recommended. See Exhibits 14, E.

17. On June 24, 2019, Claimant underwent right shoulder radiographs following the arthrography injection to the right shoulder. The findings included chronic mild degenerative changes at the acromioclavicular joint. They also showed contrast residing with the glenohumeral joint capsule as expected, stenting to the subscapularis recess and into the biceps tendon sheath. No contrast was identified within the subacromial/subdeltoid bursa. There was no radiographic signs of a full thickness rotator cuff tear or a significant articular sided partial-thickness tear. The radiologist noted that a partial thickness bursal surface tear might not be visible. The findings also noted no loose bodies and no significant narrowing of the subacromial outlet. The final impression indicated no radiographic evidence for rotator cuff tear, no narrowing of the subacromial outlet, and contrast visualized within the subacromial-subdeltoid bursa. See Exhibit E.

18. On June 26, 2019, Claimant underwent physical therapy. Claimant reported that he was pushing/pulling carts all day on May 26 and had the onset of right shoulder and elbow problems. Claimant reported right shoulder pain, back of the upper arm pain, lateral elbow pain, and pain in the forearm. Claimant reported that prior to the onset, he was able to use his right arm for heavy level job with no problems. See Exhibits 12, F.

19. On July 1, 2019, Dr. Foulk evaluated Claimant. Dr. Foulk reviewed the arthrogram. Dr. Foulk diagnosed acute pain of right shoulder and incomplete rotator cuff tear or rupture of right shoulder not specified as traumatic. Dr. Foulk advised Claimant that he had a partial rotator cuff tear and that although he had a 10-pound restriction at work, due to repetitive overuse, work activities had aggravated Claimant's right shoulder and caused the rotator cuff tear. Dr. Foulk opined that rotator cuff tears could develop based on repetitive use of the arm even with lighter weight amounts in older patients and that Claimant had been performing these duties for over 30 years. Dr. Foulk recommended a right shoulder arthroscopy with debridement, decompression, evaluation, and possible rotator cuff repair. Dr. Foulk opined that although an arthrogram was a good test to rule out a full thickness tear, the arthrogram could not evaluate a deep bursal-sided thickness tear, which was his main concern. Dr. Foulk opined that for further evaluation, Claimant would require an arthroscopy. See Exhibits 12, D.

20. On July 9, 2019, Claimant underwent physical therapy on his right elbow. Claimant reported his arm had been less achy and that he had less tenderness on the lateral epicondyle. Claimant reported that he had not been doing any lifting with his arm. See Exhibits 12, F.

21. On September 18, 2019, Lawrence Lesnak, D.O. performed an independent medical evaluation. Dr. Lesnak found no significant psychosocial factors affecting Claimant's symptoms, recovery, and perceived function. Claimant reported that on May 26, 2019 he was shorthanded and was scanning mail and pushing and pulling many large wheeled freight carts loaded with mail. Claimant reported that after approximately six hours of work, he began to notice some pain in his right posterior shoulder/scapular region and that he completed his work shift two hours later and went home. Claimant reported he began to notice increased symptoms later that day and called his supervisor to report. Claimant reported that he was evaluated at Panorama one week later and underwent a right shoulder arthrogram and was told he had a possible rotator cuff tear and maybe some other abnormalities and that surgery had been recommended and denied. Claimant reported that he had intermittent/frequent right posterior shoulder/lateral scapula pain and soreness that seemed to be worse with any type of forward pushing activities away from his body such as when he does pushups. Claimant also reported increased pain with any throwing motions involving his right arm/shoulder. Claimant reported no prior right shoulder injuries or treatment. Claimant reported hobbies including playing organized softball and coaching high school wrestling. See Exhibit A.

22. Dr. Lesnak reviewed medical records and performed a physical examination. Dr. Lesnak found full active and passive range of motion of each shoulder

joint without evidence of scapular or pseudo scapular winging. Dr. Lesnak found rotator cuff impingement signs negative bilaterally including Hawkins' sign, Neer's sign, and crossed shoulder adduction maneuvers. Dr. Lesnak found increased right posterior shoulder/lateral superior scapular pains reproduced with right shoulder abduction activities and external rotation activities. Dr. Lesnak also found full active and passive range of motion of each elbow joint and no tenderness to palpation over either lateral or medial elbows. On muscle testing, Dr. Lesnak found 5/5 strength throughout the upper extremities bilaterally including the bilateral rotator cuff musculature. Dr. Lesnak found no pain behaviors or non-physiologic findings. Dr. Lesnak noted that Claimant had some tenderness to deep palpation in the area of his right posterior shoulder/right superolateral scapular region but no distinct trigger points or muscle spasms were identified. See Exhibit A.

23. Dr. Lesnak provided the impression of subjective complaints of intermittent/frequent right posterior shoulder/superolateral scapular pain and soreness and subjective complaints of occasional mild residual right lateral elbow soreness. Dr. Lesnak noted that Claimant's reports did not indicate any type of repetitive or frequent overhead activities on May 26, 2019. Dr. Lesnak also noted that the radiologist who reviewed the arthrogram of the right shoulder found no radiographic evidence for rotator cuff tear nor were any abnormalities found on the study. Dr. Lesnak noted, however, that Dr. Foulk nonetheless recommended a right shoulder diagnostic arthroscopy despite the fact that Claimant underwent absolutely no conservative treatment whatsoever directed at his right shoulder including physical therapy, injection trials, etc. Dr. Lesnak opined that Claimant did not have any current clinical evidence of rotator cuff impingement sings or of a full thickness right rotator cuff tear. Dr. Lesnak opined that Claimants' symptoms appeared to be primarily from an extra articular soft tissue etiology involving the right posterior shoulder girdle/scapular musculature. Dr. Lesnak opined that regardless of causality, Claimant was not currently a candidate for a diagnostic right shoulder arthroscopy but that an adequate trial of physical therapy directed at the right shoulder as well as possible diagnostic/therapeutic right shoulder corticosteroid injection trial should be considered prior to consideration of any type of surgical intervention directed at the right shoulder. See Exhibit A.

24. Dr. Lesnak also opined that Claimant did not sustain any intra-articular right shoulder injury as a result of any of his work activities that he may have been performing on May 26, 2019. Dr. Lesnak also opined that the description of the onset of symptoms as well as what was documented in the medical records was not consistent with any type of occupational disease or cumulative trauma disorder. Dr. Lesnak opined that Claimant's non occupational related activities were much more likely to cause or aggravate any type of symptomatic intra-articular shoulder joint pathology. Dr. Lesnak opined that it was possible that Claimant may have sustained an extra articular right posterior shoulder/scapular soft tissue strain injury that could possibly be related to some increased pushing/pulling activities at work on May 26, 2019. However, he opined that this type of extra articular soft tissue injury would have completely resolved by this time. See Exhibit A.

25. On October 18, 2019, Dr. Foulk evaluated Claimant. Claimant reported continued pain and weakness in his shoulder and that he was unable to throw a ball without pain and discomfort. Dr. Foulk noted that they were unable to obtain additional diagnostic imaging due to Claimant's medical history and that the only imaging they could do was an arthrogram. Dr. Foulk opined that based on the result of the arthrogram, the duration of symptoms following a work related injury, and the correlating physical exam indicating probable rotator cuff tear, proceeding with surgery was best for Claimant. Dr. Foulk noted that Claimant had been given a reasonable amount of time to heal, but continued to have shoulder pain and weakness. Dr. Foulk again recommended proceeding with an arthroscopy surgery. See Exhibit 12.

26. In 2003, Claimant was evaluated and underwent a physical examination. Claimant reported right lateral shoulder pain for the past week that developed after lifting a bag at work. Claimant was assessed with deltoid muscle strain. The examination noted mild tenderness in the right shoulder over the superior and lateral deltoid with negative impingement signs and normal range of motion. Claimant was advised that a deltoid strain should resolve in 1-2 weeks. No further treatment of the right shoulder is mentioned in any medical records submitted. See Exhibits 13, B.

27. On January 9, 2017, Claimant noticed left shoulder pain onset while pushing a load on a dolly. Claimant reported that he was performing a lot of lifting and carrying while at work when he began to experience pain in the shoulder. Claimant was assessed with incomplete tear of left rotator cuff and with pain in the left shoulder and he ultimately underwent a left shoulder surgery on March 22, 2017. Claimant was released at maximum medical improvement with no restrictions on December 26, 2017. See Exhibit C.

28. Dr. Foulk and Dr. Lesnak both testified by deposition in this case.

29. Dr. Lesnak testified as an expert in physical medicine and rehabilitation. Dr. Lesnak testified that Claimant reported having to push and pull some of the large wheeled freight carts and that after six hours of work noticed some pain in the back of his right shoulder blades, the posterior aspect of his right shoulder in the scapular area. Dr. Lesnak testified that typically scapular pains, posterior shoulder pains, were muscular myofascial in etiology. Dr. Lesnak testified that after removed from the environment purportedly causing symptoms, he would expect to see symptoms to improve and resolve but that Claimant's shoulder symptoms had not resolved. Dr. Lesnak testified that Claimant's pain with pushing activities and pushing away from his body would suggest more soft tissue muscle symptoms of the scapular region.

30. Dr. Lesnak testified that the arthrogram test was basically normal, showing no evidence of any rotator cuff tears, and no evidence of narrowing at the subacromial outlet. Dr. Lesnak also testified that on his examination of Claimant's shoulder he found negative impingement signs but had pain in the posterior and lateral scapular region, again suggesting that Claimant may have some soft tissues of the muscles that are irritated with activity. Dr. Lesnak also testified that he did not see any impingement documentation from Dr. Mejia or Dr. Foulk. Dr. Lesnak also testified that Claimant did not

have much, if any, treatment for his right shoulder. He testified that Claimant did not have right shoulder physical therapy and did not have any injections. Dr. Lesnak opined that the surgery was not appropriate because there was no evidence on diagnostic tests that there is a rotator cuff tear and that there was no evidence of positive impingement on examinations. Dr. Lesnak testified that without clinical findings or positive studies, there was no indication for surgery diagnostic or otherwise.

31. Dr. Lesnak testified that if Claimant had a deep-sided bursal tear, there would be objective findings on examination including positive impingement signs. He opined Claimant does not have those. Dr. Lesnak also testified that a deep-sided bursal partial thickness rotator cuff tear would not present as posterior lateral scapular symptoms. Dr. Lesnak testified that given Claimant's age and activity level his whole life the chances that Claimant had some type of partial little tear in his right shoulder were pretty high. Dr. Lesnak testified, however, that Claimant was asymptomatic and that even if there were a tear, it would be unrelated to work activities and surgery would absolutely not be appropriate. Dr. Lesnak testified that Claimant had subjective complaints with a normal examination other than tenderness and discomfort. Dr. Lesnak recommended independent exercise program focusing on strengthening the shoulder girdle musculature outside the shoulder joint itself. Dr. Lesnak testified that Claimant was pushing and pulling carts when developed symptoms and was not doing overhead activities or throwing things overhead so the mechanism as described does not put any increased stresses on the rotator cuff tendons. Dr. Lesnak testified that there is no way pushing or pulling carts, even if heavy, could cause a rotator cuff pathology or even aggravate pre-existing rotator cuff pathology. Dr. Lesnak testified that it could cause some inflammation of extra-articular muscles, soft tissues, scapular muscles, but not rotator cuff pathology. Dr. Lesnak also testified that regardless of causality there is no indication for surgery at this point.

32. Dr. Foulk testified as an expert in orthopedic surgery. Dr. Foulk testified that when he first examined Claimant on June 18, Claimant had some decrease in active range of motion measurements, some diminishment in the rotator cuff strength tests, and some generation of pain when Claimant performed resistive tests on the strength of the rotator cuff. Dr. Foulk noted that the arthrogram test performed was the only test they really could do because of Claimant's cochlear implants. Dr. Foulk testified that the arthrogram was an incomplete test and was the standard before MRI was given to providers technologically. Dr. Foulk opined that after contrast material is injected, x-rays are taken and if the contrast material leaks out of the shoulder, they assume the leak went through a hole or tear in the rotator cuff. Dr. Foulk testified that the arthrogram can demonstrate full tears but has difficulty demonstrating partial tears because it is only essentially imaging the rotator cuff on one surface, the deeper or articular surface and that the test does not give any imaging of the top surface of the rotator cuff. Dr. Foulk testified that the rotator cuff was a very thick tendon and that the arthrogram was a good test if there was a full thickness tear, but that the test did not eliminate the possibility of a significant partial grade tear occurring from the top surface. Dr. Foulk testified that Claimant's arthrogram showed that the contrast stayed in the shoulder joint, and thus

indicated there was no full thickness tear in the rotator cuff. Dr. Foulk testified that Claimant could still have a high-grade partial thickness rotator cuff tear.

33. Dr. Foulk testified that there was really only one other way to determine whether Claimant had a more significant partial thickness tear without doing surgery, by doing a diagnostic ultrasound of the shoulder. Dr. Foulk opined that a diagnostic ultrasound could be a good test if it were done in the correct way and interpreted by a highly skilled interpreter of musculoskeletal ultrasound, but opined there were not many people around that can do that test, therefore he does not order them for diagnostic purposes that often. Dr. Foulk testified that based on the symptoms, physical examination, and the fact that the symptoms had not gone away with time and modified activity/rest, it was likely there was damage to some degree within Claimant's rotator cuff. Dr. Foulk testified that usually an injury to the shoulder is treated conservatively with anti-inflammatories, modified activity, ice, heat, creams, and physical therapy. If the injury doesn't resolve, then they hope to do imaging to guide the providers. Here, however, Dr. Foulk testified that they were kind of stuck because they were lacking full detailed imaging. Dr. Foulk testified that an arthroscopy would let them physically go into and look at the structure and determine what needs to be done, which is what he recommended.

34. Dr. Foulk testified that you could put someone through three to four months of physical therapy twice a week at a cost of \$150, \$200 a physical therapy visit and run up an eight, nine, or ten thousand dollar physical therapy bill. He testified, however, that he did not feel like it was probably appropriate in this case and that he had a gut feeling in Claimant's case because Claimant had problems with the contralateral shoulder that they treated. Dr. Foulk testified that they often are forced to send patients to physical therapy a lot in this day and age and in the end, most of the time, they end up scoping the shoulder and repairing the rotator cuff. Dr. Foulk testified that this particular case involved a traumatic acute onset event. Dr. Foulk testified that this case was different from a patient who might present saying that they had pain in their shoulder for the last several months unrelated to anything they could think of. Dr. Foulk testified he would use physical therapy quite frequently in that type of situation, but that Claimant's situation was a traumatic acute onset event. Dr. Foulk testified that they treat acute injuries a little differently than they treat chronic pain and that they wanted rapid evaluation and treatment in this case to allow for a more rapid return to the work environment. Dr. Foulk testified that the working diagnosis was partial rotator cuff tear. He testified that patients can have near full thickness rotator cuff tears and still have normal arthrograms and that sometimes in arthroscopy they look at the rotator cuff on the deep surface and it looks normal, but then they look at the tendon from the top surface and it is almost completely eroded through. Dr. Foulk testified that Claimant's prior deltoid strain in 2004 was a different diagnosis than a rotator cuff tear.

35. Dr. Foulk testified that he disagreed that pushing and pulling large carts could not cause Claimant's symptoms. Dr. Foulk testified that considering the types of equipment used in an airline industry, the weights involved, and the repetition of which the carts were moved and mobilized and the awkwardness of the carts, sometimes due to weight sometimes because you're moving it by yourself, they were very much the kinds

of events that could strain and/or tear the rotator cuff. Dr. Foulk testified that he had taken care of a large number of Employer patients over the years who work in those jobs and opined that was exactly how rotator cuff injuries occur. Dr. Foulk also testified that Claimant's age played significantly into Claimant's presentation and that it was not very common to see rotator cuff tears in young patients, but significantly more common to see damage to the rotator cuff in the fourth, fifth, and sixth decade of life. Dr. Foulk testified that it was irrelevant that Claimant was a softball player, a wrestling coach, and a prior collegiate wrestler.

36. Dr. Foulk opined that if Claimant had just a strain, it would have resolved and that strains are typically six to ten weeks and typically resolve relatively quickly. Dr. Foulk testified that the longer the symptoms persist, it is more likely other conditions like a tear or partial tear. Dr. Foulk strongly disagreed that no rotator cuff impingement signs were shown on physical examination of Claimant. Dr. Foulk also testified that it was possible to have a partial thickness rotator cuff tear and not have positive impingement signs on examination. Dr. Foulk testified that there were certain corticosteroid injections that could be done for diagnostic and therapeutic purposes but not to determine that there was a rotator cuff tear, rather to rule out another explanation for the pain. Dr. Foulk testified that you could do a glenohumeral joint injection, an acromioclavicular joint injection and that you could go through that but it would not rule out or rule in a rotator cuff tear.

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing

condition that is unrelated to the employment. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc.*, W.C. No. 4-588-675, (ICAO, Sept. 1, 2006).

Claimant has established, by a preponderance of the evidence, that he sustained a right shoulder injury on May 26, 2019 while in the course and scope of his employment with Employer. Prior to May 26, 2019, Claimant was working in a heavy job with no problems and he had no prior right shoulder issues other than a minor strain 16 years prior. Claimant had onset of pain on May 26, 2019 after a heavy work shift where he was required to sort, scan, lift, move, push, and pull heavy bags and carts of mail. Claimant is credible that prior to his work shift, he had no problems with his right shoulder and was very active and that his problems and symptoms developed acutely on a specific day, May 26, 2019, while at work and performing heavy work duties. Dr. Foulk is persuasive that the type of activity Claimant was performing could injure a shoulder and cause symptoms. Dr. Foulk and Dr. Mejia both documented similar findings consistent with an injury to the rotator cuff on their examinations following May 26, 2019. Although possible that Claimant could have injured his right shoulder in other activities, Claimant's testimony is credible that he developed acute and new pain in his shoulder on May 26, 2019 while at work. The new acute pain and symptoms that developed at work on May 26, 2019 are more likely due to the strenuous work activities than to the natural progression of some type of pre-existing condition. As testified by Dr. Foulk, the activities Claimant was performing on May 26, 2019 likely injured Claimant's right shoulder. Claimant has established, more likely than not, that he injured his right shoulder on May 26, 2019 and that his symptoms are not just progression of a pre-existing non-work related condition.

Claimant has failed to establish, by a preponderance of the evidence, that he sustained a right elbow injury on May 26, 2019. As found above, the initial reports included new right shoulder symptoms on May 26, 2019 and did not initially mention the right elbow. There is insufficient indication of acute right elbow pain on May 26, 2019 for the ALJ to conclude that an injury to the right elbow occurred. Further, diagnostic imaging of the right elbow showed osteoarthritis and narrowing of the joint space, more consistent with a degenerative non-work related condition.

Medical Benefits

Respondents are liable for medical treatment that is reasonably necessary to cure or relieve an employee from the effects of a work injury. §8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of his employment. §8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Claimant has established that he sustained a work related right shoulder injury on May 26, 2019. Claimant is thus entitled to reasonable and necessary medical treatment for his right shoulder. Claimant is still symptomatic in his right shoulder and two orthopedic doctors have concluded that his symptoms are consistent with rotator cuff pathology. Claimant is entitled to additional treatment and diagnostics to treat his right shoulder. At this time, however, Claimant has failed to establish that the shoulder arthroscopy recommended by Dr. Foulk is reasonable and necessary, although a right shoulder arthroscopy might become reasonable and necessary in the future. Due to Claimant's cochlear implants, the imaging in this case is not ideal. However, Dr. Foulk and Dr. Lesnak both have opined that there are other conservative measures and/or diagnostic tests that can be performed prior to surgery. Although surgery could be diagnostic, the ALJ finds that other measures are more reasonable at this time. Dr. Foulk noted a diagnostic ultrasound could be performed. Although Dr. Foulk testified that there are very few qualified individuals that can adequately perform this type of diagnostic test, Dr. Foulk as an authorized provider can certainly refer Claimant to someone he believes is qualified to perform such a test. Further, although Dr. Foulk suspects that physical therapy and/or injections will probably not help and that Claimant will eventually need surgery anyways, there is the possibility that those more conservative treatment mechanisms will help therapeutically and/or diagnostically. The weight of the evidence establishes that there are multiple reasonable options prior to surgery that exist to help define and/or treat Claimant's right shoulder condition, Claimant has not yet shown that a diagnostic surgery is appropriate when more reasonable options exist. Therefore, his request for surgery is denied at this time.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable right shoulder injury on May 26, 2019.
2. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable right elbow injury on May 26, 2019.
3. Claimant has established, by a preponderance of the evidence, an entitlement to reasonable and necessary medical treatment for his right shoulder.
4. Claimant has failed to establish, by a preponderance of the evidence, that the right shoulder arthroscopy recommended by Dr. Foulk is reasonable and necessary at this time.
5. Any issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 16, 2020

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on May 13, 2019, he suffered injuries to his left wrist and low back that arose out of and in the course and scope of his employment with the employer.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment of his left wrist and low back, including treatment with Dr. Craig Stagg, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

STIPULATION AND RESERVED ISSUES

1. The parties have reached a stipulation regarding the claimant's average weekly wage (AWW) as follows: prior to August 1, 2019, the claimant's AWW was \$813.30. Beginning August 1, 2019, the claimant's AWW is \$973.74.

2. The parties reserved the issue of whether a specific left wrist surgery recommended by Dr. James Rose is reasonable, necessary, and related.

3. The parties reserved the issue of whether the claimant is entitled to temporary total disability (TTD) benefits.

FINDINGS OF FACT

1. The employer manufactures batteries including car batteries and industrial batteries. The claimant began his employment with the employer in March 2013. During his employment, the claimant worked as a route driver. His job duties included loading and unloading batteries at customer locations. The claimant testified that the batteries varied in weight from 15 to 175 pounds. The claimant also testified that on a normal day he could lift between 30 and 100 batteries.

2. The claimant suffered an admitted injury to his right wrist in December 2018.

3. The claimant testified that on May 13, 2019, he began to experience pain in his left wrist and low back. The claimant believes that this occurred because he was overcompensating for his injured right wrist. The claimant also testified that he reported his left wrist and low back symptoms to David Garcia, Assistant Area Manager. Thereafter, the employer scheduled an appointment for the claimant at St. Mary's Occupational Health¹.

¹ The claimant has also been treating with St. Mary's Occupational Health for his right wrist.

4. On May 15, 2019, the claimant was seen at St. Mary's Occupational Health by Dr. Craig Stagg. At that time, the claimant reported that he had developed pain in his left wrist and low back earlier in the week. Dr. Stagg noted that the claimant believed that his symptoms were related to lifting. Dr. Stagg diagnosed a lumbar strain and a wrist strain. Dr. Stagg ordered an x-ray of the claimant's left wrist and referred him to physical therapy for his low back symptoms. In addition, Dr. Stagg placed the claimant on modified duty with no lifting, pushing, or pulling over 20 pounds.

5. On May 15, 2019, an x-ray of the claimant's left wrist was noted to be a normal study.

6. The claimant returned to Dr. Stagg on June 5, 2019, and reported that his left wrist and back symptoms were improving. At that time, Dr. Stagg recommended occupational therapy and continued physical therapy.

7. On July 3, 2019, the claimant was seen by Dr. Stagg. At that time, the claimant reported that his symptoms were improving, but he had some weakness in his left wrist. The claimant was concerned that he had injured his left wrist in the same manner he injured his right wrist. The claimant requested that Dr. Stagg refer him to Dr. James Rose for consultation regarding his left wrist, because the claimant had seen Dr. Rose regarding his right wrist. It is notable that on this same date, Dr. Staff returned the claimant to full duty with no restrictions.

8. The claimant was first seen by Dr. Rose regarding his left wrist on July 17, 2019. At that time, the claimant reported left wrist pain and popping. Dr. Rose observed that the claimant's physical exam was "relatively benign". However, given that the claimant was complaining of symptoms similar to those in his right wrist, Dr. Rose recommended a left wrist magnetic resonance image (MRI).

9. On July 18, 2019, Dr. Rose performed surgery on the claimant's **right** wrist. That surgery was a right wrist arthroscopy with triangular fibrocartilage complex (TFCC) debridement and scapholunate ligament debridement.

10. On July 30, 2019, an MRI of the claimant's left wrist showed "signal heterogeneity involving the membranous component of the scapholunate ligament, suspicious for central perforation/tear". The MRI also showed there was no discrete tear of the TFCC.

11. On July 30, 2019, Dr. Rose administered an intra-articular injection to the claimant's left wrist.

12. On August 1, 2019, the claimant sought treatment at the Veterans Affairs (VA) Western Colorado Health Care System. The claimant testified that he was establishing care following the closure of the employer's Grand Junction location. The claimant was seen by Dr. Jim Blankenship. The claimant reported his active medical problems as low back pain and right wrist pain. The claimant reported to Dr. Blankenship that he had experienced chronic low back pain for years and was requesting a referral to a chiropractor. The claimant also reported that his right wrist

was treated through a workers' compensation claim. At that time, the claimant did not report issues with his left wrist.

13. On August 16, 2019, the claimant returned to Dr. Rose and reported that his left wrist had not improved. Dr. Rose noted that the claimant's left wrist MRI was similar to the right. However, Dr. Rose also noted that there was no clinical or radiographic evidence of instability in the claimant's left wrist. Therefore, Dr. Rose did not recommend surgical intervention on the left. Dr. Rose referred the claimant to occupational therapy.

14. On September 27, 2019, the claimant returned to Dr. Rose. The claimant reported that he had not yet begun occupational therapy. The claimant also reported that his wrist symptoms had worsened because of vibrations caused by driving a side by side while hunting with his father. Dr. Rose continued to recommend occupational therapy.

15. On August 30, 2019, the claimant was seen by Dr. Stagg and reported that his low back pain was "on and off", but his left wrist continued to bother him. The claimant further reported that Dr. Rose had recommended conservative treatment of his left wrist.

16. On November 13, 2019, the claimant returned to Dr. Stagg and stated that he had increasing pain in his low back and left wrist. At that time, Dr. Stagg noted that "on the day of injury [the claimant] was doing repetitive lifting of heaving batteries".

17. On November 12, 2019, the claimant attended an independent medical examination (IME) with Dr. John Burriss. In connection with the IME, Dr. Burriss reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Burriss noted that his exam of the claimant's left wrist and low back was normal for both body parts. Dr. Burriss assessed the claimant with left wrist pain and low back pain. Dr. Burriss noted that the claimant's subjective left wrist and low back complaints were out of proportion to the results of the physical exam. Dr. Burriss also opined that there was no mechanism of injury that occurred on May 13, 2019 to cause an injury to either the claimant's left wrist or his low back. In support of this opinion, Dr. Burriss noted that the claimant was under a five-pound lifting restriction on May 13, 2019.²

18. Dr. Burriss' testimony by deposition was consistent with his written report. Dr. Burriss testified that he would expect the claimant's pain complaints to lessen, as the claimant is not working. However, the claimant has reported increased pain. Dr. Burriss testified that if the presumption is that the claimant's symptoms are caused by his work duties, then it does not make sense for the claimant's symptoms to persist. Dr. Burriss

² On November 21, 2019, Dr. Burriss issued a supplemental report specifically addressing a left wrist surgery proposed by Dr. Rose. As that specific medical treatment is not currently before the ALJ, the content of that report is not addressed this time.

also testified that the claimant has a history of low back pain that dates back to high school. In addition, the claimant's complaints are of chronic and "nonspecific" low back pain. With regard to the claimant's left wrist, Dr. Burris noted that the claimant had full range of motion at the IME. In addition, Dr. Burris noted that the MRI of the claimant's left wrist did not show tears or perforations involving the TFCC. Dr. Burris opined that the claimant does not have a TFCC injury. Dr. Burris also noted in his testimony that as recently as November 6, 2019, Dr. Rose did not find instability in the claimant's left wrist. Finally, Dr. Burris testified that there is no scientific support of the theory that an injured upper limb will result in compensation and overuse of the contralateral limb.

19. The ALJ credits the medical records and the opinions of Dr. Burris and finds that the claimant has failed to demonstrate that it is more likely than not that he suffered injuries to his left wrist or his low back on May 13, 2019. The ALJ is unable to conclude that it is more likely than not that the claimant's work duties and his specific activities on May 13, 2019 are the proximate cause of any disability or need for medical treatment. Although it would appear that the claimant had some preexisting condition in his low back, the ALJ is not persuaded that the claimant's job duties aggravated, accelerated, or combined with that low back condition to necessitate treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has failed to demonstrate that it is more likely than not that he suffered injuries to his left wrist or low back on May 13, 2019. As found, the medical records and the opinions of Dr. Burris are credible and persuasive.

ORDER

It is therefore ordered that the claimant’s claim related to a date of injury of May 13, 2019, is denied and dismissed.

Dated this 17th day of January 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-095-749-002**

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on November 6, 2018.
2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical treatment for his November 6, 2018 injury.
3. Determination of Claimant's average weekly wage (AWW).
4. Whether Claimant has established, by a preponderance of the evidence, an entitlement to temporary total disability benefits (TTD) from November 6, 2018 through the date of hearing December 17, 2019 plus interest.
5. Whether Claimant has established an entitlement to penalties and/or additional payments under Sections 8-43-304(1) for failure to timely file an Employer's First Report of Injury as required by 8-43-101(1); under 8-43-408 for failure to provide workers' compensation insurance; under 8-43-304(1) for failure to timely pay temporary total disability (TTD) benefits as required by 8-42-105(2)(a); and under 8-43-203(2)(a) for failure to timely admit/deny liability.

FINDINGS OF FACT

1. Claimant is a 36-year-old male who was employed by Employer as a painter.
2. Claimant was hired on October 15, 2018 and his pay rate at the time of hire was \$16.00 per hour. Claimant testified that he expected to work full time hours and to work 40 hours per week. See Exhibit 2.
3. Employer paid Claimant weekly. On October 19, 2018, Employer paid Claimant for 16 hours of work. On October 26, 2018, Employer paid Claimant for 46 hours of work. On November 6, 2018, Employer paid Claimant for 26.5 hours of work. See Exhibit 6.
4. On November 6, 2018, Claimant was sent to a single family home to repaint the exterior of the home. Claimant was scheduled to begin at 8:00 a.m. Claimant has no memory of that day. At approximately 8:30 a.m., Employer's manager/owner Eric H[Redacted] arrived at the home and found Claimant on the ground and unresponsive next to a ladder. Mr. H[Redacted] called 911. It is unclear how Claimant fell from the ladder and it is unclear what time he fell or how long he was unconscious.

5. Records indicate that Longmont Fire Department EMTs were dispatched at 8:46 a.m. and arrived at 8:51 a.m. The records indicate that upon arrival Claimant was lying supine on a cement walkway with a frame ladder found flipped over 2 feet from Claimant. The records indicate Claimant was in severe distress with blunt trauma, head injury, and altered mental status and unconsciousness. Claimant had cheyne stokes breathing pattern and had an abrasion to the left occipital region of the head but with skull intact upon palpation. Claimant had several track marks to both forearms and possibly right inferior knee, suspected to be consistent with IV drug use. The records indicate the cause of injury was a fall 8 feet or less. The EMTs noted possible head injury with bleeding in the brain, possible polypharm overdose, seizures, stroke, and altered mental status of unknown etiology. Claimant was placed in a c-collar, put onto a stretcher, and transported to hospital. See Exhibit 9.

6. At the emergency room, an intraosseous line was placed as there was no vein access due to evidence of intravenous drug abuse. Claimant was also intubated and vomitus in the airway was suctioned out. Claimant underwent an emergent CT of the brain, cervical spine, abdomen, and pelvis. Claimant also was emergently evaluated by neurosurgery. The CT scan of his brain showed a right sided subdural hematoma with midline shift and evidence of herniation with a critical result of unknown or worsening intracranial hemorrhage. The CT of his cervical spine, abdomen, and pelvis showed no evidence of acute abnormality. A urine toxicology screen was performed and was positive for cannabis, cocaine, and opioids. A blood-testing screen also showed extremely high levels of glucose at 183 mg/dL, 166 mg/dL, and 199 mg/dL. The assessment was severe traumatic brain injury with intracranial bleed. See Exhibit 10.

7. Neurosurgeon Allen Nanney, M.D. performed urgent surgery after evaluating Claimant in the emergency room and recognizing a very poor neurologic exam. Dr. Nanney performed a right decompressive frontotemporoparietal hemicraniectomy with evacuation of subdural hematoma. Claimant's own bone was removed and placed in storage for hopeful future replacement. In surgery, Dr. Nanney noted the temporal lobe to be quite damaged and some of the inferior frontal lobe to be as well. A drainage tube was placed and secured as well. Claimant was then taken to the intensive care unit after surgery. See Exhibit 10.

8. Emergency room records indicate that Claimant's supervisor was interviewed at the emergency room and reported that he found Claimant unresponsive but breathing at 8:30 a.m. after starting the job around 8:00 a.m. He reported the fall was unwitnessed and that Claimant was found on concrete beneath an 8-foot ladder. The supervisor reported that Claimant appeared overmedicated at work. Medical records noted that Claimant had stigmata of intravenous drug abuse on his arms bilaterally. See Exhibit 10.

9. Following surgery, and that same day, it was noted that Claimant had drainage from his craniotomy that had filled 2 JP bulbs since returning from the operating room. See Exhibit 10.

10. On November 28, 2018, Dr. Nanney performed another surgery. This procedure was a cranioplasty replacement bone flap due to Claimant's right sided cranial defect after craniectomy for traumatic brain injury. See Exhibit 10.

11. On January 2, 2019, Claimant filed a Workers' Claim for Compensation. Employer filed an Employer's First Report of Injury on January 24, 2019. Employer also filed a Notice of Contest on January 24, 2019 indicating contested/denied for further investigation for causation, pre-existing medical conditions, and facts concerning the incident and noted no insurance coverage was known at that time. See Exhibit 3.

11. After discharge from Longmont United Hospital, Claimant underwent inpatient occupational therapy at Northern Colorado Rehabilitation Hospital for eleven days. See Exhibit 8.

12. On February 1, 2019, Claimant was evaluated at Aasha Brain Clinic. Claimant's aunt reported that Claimant was on a six-foot step ladder at work when the ladder brace broke 2-3 inches from the rivet and Claimant fell sustaining a severe traumatic brain injury. Claimant reported things looked blurry, he had headaches, light bothered his eyes, he had pressure in his brain, he had low energy and felt tired a lot, and that he had trouble remembering things. It was recommended that Claimant follow up with neuro-ophthalmology and avoid bright lights and loud environments. Vestibular therapy was also recommended. See Exhibit 8.

13. On May 14, 2019, Claimant was evaluated at Aasha Brain Clinic. He reported that he had undergone a successful eye surgery, vitrectomy, which had improved his vision significantly. Claimant reported feeling better and reported a desire to find a way to return to work on a full time basis. Claimant reported feeling 80 percent recovered. The assessment and plan noted that Claimant had improved symptom score and it was recommended that Claimant undergo functional neurocognitive testing. See Exhibit 8.

14. Claimant underwent neurocognitive testing on May 23, 2019. Claimant had scores below average on verbal memory, visual memory, and reaction time. His processing speed score was in the average range, and Claimant had promising signs on processing speed and reaction time that boded well for possible future cognitive recovery. The theme throughout testing was Claimant's desire to work. Claimant was noted to be a young man with very low symptom load and very high motivation to work and it was noted that his scores might improve with time and rehab. Claimant was found to be a good candidate for vocational rehabilitation to work on some realistic options for work and possible work training. A treatment plan developed focusing on vocational rehabilitation, cognitive rehabilitation, and any physical rehabilitation deemed necessary was recommended. See Exhibit 8.

15. On June 25, 2019, Claimant was evaluated at Aasha Brain Clinic. Claimant reported he opted against physical therapy based on good healing. He also reported that he had started applying for jobs and was ready to move forward with scheduling an

appointment with a job coach. Claimant reported feeling better overall with no new symptoms. Claimant continued to report that he had headaches and felt like he was moving at a slower speed, but reported very low levels of those problems. See Exhibit 8.

16. On July 22, 2019, Claimant was evaluated at Aasha Brain Clinic. Claimant reported that his neck pain was recurrent and that he had difficulty sleeping. Claimant reported that he had opted to file for disability. He reported headaches, neck pain, and trouble falling asleep. On examination, Claimant's attention was slow, yet improved as were his responses and language. Claimant's word finding was compromised, yet improved. See Exhibit 8.

17. On September 30, 2019, Claimant was evaluated at Aasha Brain Clinic. Claimant reported that his follow up visit with his eye surgeon was completed with no further surgery recommended, that he had no new symptoms, and that his disability application had been filed but that a decision was still pending. Claimant reported trouble balancing, headaches, trouble falling asleep, and feeling sad. His reports were all at low levels for each of the problems. See Exhibit 8.

18. Eric H[Redacted] appeared at hearing on behalf of Respondent, Sunrise Painting, Inc. Mr. Hoagland testified that he hired Claimant on approximately October 16, 2018 as a journeyman level painter. Mr. Hoagland testified that on the day of injury he sent Claimant to a one level exterior re-paint job. Mr. Hoagland testified that Claimant was supposed to be at the job at 8:00 a.m. and that he arrived at approximately 8:30 a.m. after running errands and found Claimant unconscious on the ground next to the ladder. He testified that he called 911. Mr. Hoagland testified that he did not have workers' compensation on the date of the injury. Mr. Hoagland testified that he took the net pay from Claimant's three paychecks and divided it by 3 to get an average weekly wage of \$415.17

19. Claimant also testified at hearing. Claimant testified that he started working for Respondent as a painter with duties including painting, masking, taping, caulking, etc. Claimant testified that he does not remember much about November 6, 2018 and that he woke up in the hospital sometime in December. Claimant testified that he was paid \$16 per hour and that he expected to work full time hours of 40 hours per week. Claimant testified that he was not yet back to work for medical reasons. He testified that initially, he could not see and that he now had vision impairment. He also testifies that he has headaches several times per day where he lays in bed and has pain and disorientation. He also testified that he gets tired and has balance issues. Claimant testified that he could not paint at all now and wouldn't climb a ladder now because of his balance issues.

20. At hearing, Mr. Hoagland presented an October 21, 2019 Order of Discharge signed by United States Bankruptcy Judge Joseph Rosania Jr. The Order indicates that a discharge under 11 U.S.C. 727 was granted to: Eric William H[Redacted] dba World Minerals, fods Sunrise Painting Inc., ods Zen Painters Inc., ods Erik H[Redacted] Painting Inc. It is unclear from the Order what debts were discharged or

listed in the bankruptcy proceeding. It is also unclear how much, if any, money the trustee will pay creditors. See Exhibit A.

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

Claimant has established, by a preponderance of the evidence, that he sustained a compensable injury on November 6, 2018. On November 6, 2018, Claimant was at a residential home at the direction of Respondent Employer to perform a painting job. Claimant sustained a traumatic fall from a ladder while performing work duties. The injury that occurred was within the time and place limits of employment and during a painting activity connected to Claimant's work duties. The fall caused disability requiring medical treatment. Claimant has established he sustained a compensable injury.

Medical Benefits

Respondents are liable for medical treatment that is reasonably necessary to cure or relieve an employee from the effects of a work injury. §8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of his employment. §8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Claimant has established that he sustained a work related injury on November 6, 2018 after falling from a ladder while painting. The extensive and extreme medical treatment that Claimant has undergone has been reasonably necessary to help cure and relieve Claimant from the effects of his work injury. Respondent shall be liable for all reasonable and necessary medical treatment in this case. Claimant did not include in

evidence any medical bills or receipts. Although it is clear Claimant has undergone extensive medical treatment in relation to this injury, the monetary amount of medical benefits cannot be determined from the evidence.

Average Weekly Wage

Section 8-42-102(2) requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp.*, *supra*.

In the present case, Claimant had a very short period of employment prior to his injury. Records and testimony indicate that Claimant was hired on either October 15, 2018 or October 16, 2018. Later that week, on October 19, 2018, Employer paid Claimant for 16 hours of work. This partial week likely does not reflect any agreement or average weekly wage of Claimant and is not considered. The first full week of employment, from October 20, 2018 through October 26, 2018, Employer paid Claimant for 46 hours of work. The next week of employment would have been from October 27, 2018 through November 2, 2018. However, there is no paycheck dated November 2. The only additional paycheck is dated November 6, 2018, the date of Claimant's injury. This final paycheck paid Claimant for 26.5 hours of work. The ALJ finds that the two paychecks in consideration, October 26, 2018 and November 6, 2018 paid Claimant for 72.5 hours of work over a two week time period and find the November 6, 2018 paycheck was for the week prior to injury, ending November 2, 2018. This averages to 36.25 hours per week at an agreed wage of \$16 per hour and amounts to an average weekly wage of \$580. Although Claimant testified that he expected to work full time, and 40 hours per week, the records do not reflect any such agreement. In the week prior to being injured Claimant worked only 26.5 hours. The ALJ finds that a fair approximation of Claimant's wage loss and diminished earning capacity is based on the average hours Claimant worked prior to his injury, excluding the initial shortened week in which he was hired. Claimant's average weekly wage is \$580.00.

Temporary Total Disability (TTD)

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity

evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant has established by a preponderance of the evidence an entitlement to TTD benefits from the date of his injury and through the December 17, 2019 hearing. Claimant sustained an industrial injury that caused a disability lasting more than three work shifts and caused him to leave work and lose wages. Claimant initially had severe medical incapacity and continued to the date of hearing to have medical incapacity and the inability to resume his prior work, causing continued wage loss. Claimant has not been placed at maximum medical improvement by a provider nor has he returned to modified or regular employment. Claimant has not been released to return to regular employment nor has he been released to modified employment and been offered such and failed to begin. Although vocational rehabilitation has been suggested and noted in the records, Claimant has not returned to work and has shown an entitlement to TTD benefits. With an AWW of \$580, as found above, Claimant's TTD rate is \$386.67 per week. From the date of injury through the date of hearing, and from November 6, 2018 through December 17, 2019, there were 58 weeks and 1 day. Claimant's entitlement to TTD for this period of time is \$22,482.10. As Claimant is successful on the merits of the claim, the ALJ also awards amount of 8% interest for these TTD benefits as they were not paid during this time period. The interest amounts to \$1,316.35. Employer thus is ordered to pay TTD benefits in the amount of \$23,798.45

Penalties

Claimant has endorsed various penalties that are addressed below:

8-43-304(1) for failure to timely file Employer First Report as required by 8-43-101(1)

Section 8-43-101(1), C.R.S. requires Employer to report a lost time injury within ten days after notice or knowledge that an employee has a lost time injury. Employer is required to report the injury on forms prescribed by the division.

As found above, Claimant was injured on November 16, 2018. Employer filed a First Report of Injury on January 24, 2019. Employer was aware of Claimant's injury on

the date the injury occurred. Employer's manager/member found Claimant unresponsive, called 911, and later provided a statement at the hospital. Employer knew immediately that Claimant had sustained a lost time injury that would last more than three work shifts. Employer thus had the duty to file a First Report of Injury within ten days and by November 26, 2018. Employer did not file a report until January 24, 2019. The report was 59 days late.

Section 8-43-304(1), C.R.S. provides that any Employer who violates articles 40 to 47 of the WC Act for which no penalty has been specifically provided shall be punished by a fine of not more than one thousand dollars per day for each offense to be apportioned at the discretion of the administrative law judge between the aggrieved party and the Colorado uninsured employer fund with the amount apportioned to the aggrieved party being a minimum of twenty five percent of any penalty assessed.

There is no specific penalty amount provided for an Employer's failure to timely file a first report of injury. Although late, Employer did eventually file a first report of injury as required by statute. The ALJ finds that a penalty amount of \$100 per day is appropriate, for a penalty of \$5,900 due to late filing. Of that penalty amount, Employer shall pay \$1,475 to Claimant and \$4,425 to the Colorado Uninsured Employer Fund.

8-43-408 failure to provide WC insurance

Section 8-43-408, C.R.S. provides that if an employer is subject to the WC Act and at the time of injury has not complied with the insurance provisions of the WC Act, shall in addition to any compensation paid or ordered, shall pay an amount equal to twenty five percent of the compensation or benefits to which the employee is entitled to the Colorado Uninsured Employer Fund.

Respondent Employer does not dispute that it was uninsured on November 6, 2018 when Claimant was injured. Employer was subject to the WC Act on that date and had an employee that sustained an injury. Thus, Employer is required to pay twenty five percent of the compensation or benefits to which Claimant is entitled to the Colorado Uninsured Employer Fund. Claimant has established an entitlement to \$23,798.45 in TTD benefits as well as \$2,450 in penalties. The total amount of compensation/benefits to which Claimant is entitled has been established as \$ 26,248.45. Employer is required to pay an amount equal to twenty five percent of the compensation or benefits to which Claimant is entitled to the Colorado Uninsured Employer Fund. Thus, the ALJ orders that Employer pay the Colorado Uninsured Employer Fund \$6,562.11 under this section.

8-43-304(1) failure to timely pay TTD benefits as required by 8-42-105(2)(a)

Section 8-42-105(2)(a), C.R.S. requires that the first installment of temporary total disability benefits payments shall be paid no later than the date that liability for the claim is admitted by Employer. However, it provides that if the Employer denies liability, the issue then goes to hearing.

The ALJ declines to award penalties under this section. Here, Employer denied liability so no temporary total disability payments were due or required to be paid. By filing a notice of contest, the matter proceeded to hearing and Claimant has been found successful and has established a compensable injury. However, benefits were not previously due as the matter was contested and Claimant has not established that Respondent failed to timely pay TTD benefits and interest has been awarded on the TTD benefits.

8-43-203(2)(a) Failure to timely admit/deny liability

Section 8-43-203(1)(a), C.R.S. provides: The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee . . . within twenty days after a report is, or should have been filed with the division pursuant to section 8-43-101, whether liability is admitted or contested; except that, for purpose of this section, any knowledge on the part of the employer, if insured, is not knowledge on the part of the insurance carrier. Section 8-43-203(2)(a), C.R.S. provides that if such notice is not filed, "the employer, or if insured, the employer's insurance carrier, may become liable to the claimant, if successful on the claim for compensation, for up to one day's compensation for each failure to so notify." The claimant bears the burden of proof to establish the circumstances justifying the imposition of the penalty. See *Pioneer Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005)

Under § 8-43-203(1)(a), knowledge of an insured may not be imputed to the insurer. See *State Compensation Insurance Fund v. Wilson*, 736 P.2d 33 (Colo. 1987); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Thus, an insurer is not responsible for admitting or denying liability until twenty days after it has knowledge of information that would require the employer to file a first report of injury with the DOWC under § 8-43-101, C.R.S. Those circumstances include injuries that result in "lost time from work for the injured employee in excess of three shifts or calendar days." The mere knowledge that the claimant sustained an injury, and that the injury resulted in restrictions and modified duty, does not establish that the claimant missed work as a result of the injury, or the number of days missed. See *Ralston Purina-Keystone v. Lowry*, 821 P.2d 910 (Colo. App. 1991); *Atencio v. Holiday Retirement Corp.*, W.C. No. 4-532-443 (ICAO, Nov. 15, 2002).

A First Report of Injury should have been filed by November 26, 2018. Thus, within twenty days after that report should have been filed with the Division, Employer also was required to notify the Division and the employee in writing whether liability was admitted or denied. Thus, by December 16, 2018 notice of whether Employer was admitting or denying liability was required. As found above, Employer did not file a denial of liability until January 24, 2019. Thus, the denial of liability was 39 days late. A specific penalty, if Claimant is successful on the claim for compensation of up to one day's compensation for each day's failure to so notify is provided by statute. Fifty percent of any penalty is required to be paid to the subsequent injury fund and fifty percent to the Claimant.

Here, the denial of liability was 39 days late. The ALJ finds it appropriate to order a penalty of \$50 per day, slightly less than one day's compensation, for each of the 39

days the admission/denial was late. This amounts to a penalty of \$1,950 of which Employer is ordered to pay \$975 (half) to Claimant and \$975 (half) to the subsequent injury fund.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable injury on November 6, 2018.

2. Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical benefits for his November 6, 2018 injury.

3. Claimant's average weekly wage is \$580.00.

4. Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits from November 6, 2018 through December 17, 2019. Respondent-Employer shall pay Claimant temporary total disability benefits in the amount of \$22,482.10 plus \$1,316.35 in interest, for a total of \$23,798.45.

5. Claimant has established an entitlement to penalty payments in the amount of \$2,450.

6. Thus, it is ordered that Respondent-Employer shall pay the sum of \$26,248.45 in compensation and benefits to Claimant.

7. It is further ordered that Respondent-Employer shall pay the sum of \$10,987.11 to the Colorado Uninsured Employee Fund. The check shall be payable to the Division of Workers' Compensation, [633 17th Street, Suite 900, Denver, CO 80202](#), Attention Iliana Gallegos, Revenue Assessment Officer.

8. It is further ordered that Respondent shall pay the sum of \$975.00 to the Subsequent Injury Fund. The check shall be payable to the Division of Workers' Compensation, [633 17th Street, Suite 900, Denver, CO 80202](#), Attention Gina Johannesman, Trustee Special Funds Unit.

9. All issues not determined herein are reserved for future determination.

In lieu of payment of the above compensation and benefits to the Claimant, the Respondent-Employer shall:

a. Deposit the sum of **\$38,210.56** with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, 633

17th Street, 9th Floor, Denver, Colorado 80202, Attention: Gina Johannesman / Trustee Special Funds Unit; **or**

b. File a surety bond in the sum of **\$38,210.56** with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received

prior approval of the Division of Workers' Compensation; or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation, penalties and benefits awarded.

IT IS FURTHER ORDERED: That the Respondent-Employer shall notify the Division of Workers' Compensation, and counsel for the Claimant, of payments made pursuant to this order.

IT IS FURTHER ORDERED: That the filing of any appeal, including a petition to review, shall not relieve the Respondent-Employer of the obligation to pay the designated sum to the Claimant, to the trustee or to file the bond as required by paragraph (b) above. §8-43-408(2), C.R.S.

IT IS FURTHER ORDERED: That any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or Order authorizing distribution provides otherwise.

IT IS FURTHER ORDERED: That pursuant to § 8-42-101(4), C.R.S., any medical provider or collection agency shall immediately and forthwith cease and desist from any further collection efforts from the Claimant because the Respondent-Employer is solely liable and responsible for the payment of all medical costs related to the Claimant's work injury.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 21, 2020

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUE

- I. Whether Claimant established by a preponderance of the evidence that the arthroscopic surgery recommended by Dr. Stull, an authorized treating physician, is reasonable, necessary, and related to Claimant's industrial injury.

STIPULATIONS

- At the commencement of the hearing, the parties stipulated that Claimant's AWW would be increased to \$1,400.00 per week effective January 21, 2019.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a credible witness and his testimony is both persuasive and consistent with the medical records in the case.
2. The Claimant has been a thirteen-year delivery driver for Respondent Bimbo Bakeries.
3. This is an admitted injury arising as a result of a slip and fall occurring on January 21, 2019, while Claimant was in the course and scope of employment. While working, Claimant injured his right knee when he slipped on ice and twisted and/or hyperextended his knee.
4. Claimant was sent for medical treatment to CareNow and underwent conservative care with Dr. Bianca Bryant-Greenwood. *Exhibit 5*.
5. On February 27, 2019, Claimant underwent an MRI, which established the presence of degenerative problems in his right knee. The MRI also found the presence of an irregular degenerative tear of the medial meniscus, a non-displaced horizontal tear of the anterior horn of the lateral meniscus, and a mild MCL strain accompanied by degenerative edema, along with severe degenerative changes in the medial and patellofemoral to compartments. *Exhibit 9, BS 91*.
6. On March 1, 2019, pursuant to a referral from Dr. Bryan-Greenwood, Claimant was evaluated by Dr. Phillip Stull, an orthopedic surgeon. Dr. Stull noted that Claimant had no significant knee symptoms prior to his injury of January 21, 2019. But, after his work injury, Dr. Stull noted Claimant complained of pain as well as mechanical symptoms which included grinding, popping, and locking

(emphasis added). Dr. Stull also performed a physical examination and reviewed Claimant's MRI. His impression/diagnosis was that Claimant's work injury resulted primarily in a medial meniscus tear, which was causing most of his symptoms, even though he also had underlying arthritis. After his assessment, he discussed treatment options with Claimant and concluded that arthroscopic surgery was warranted and had the best chance of getting him back to his preinjury status. After thoughtful consideration, Claimant chose to undergo arthroscopy of his right knee, which Dr. Stull also thought was reasonable and advised Claimant of such. *Exhibit 6, BS 71 – 72.*

7. Dr. Stull requested authorization for the arthroscopic surgery, however, his request for authorization was declined by the carrier based on the subsequent IME performed by Dr. Failinger, as set forth below.
8. On April 11, 2019, Dr. Mark Failinger performed an Independent Medical Examination (IME) on behalf of Respondents. Dr. Failinger opined that Dr. Stull's operative treatment of the meniscus was inappropriate due to the nature of Claimant's physical problems, which Dr. Failinger stated did not include mechanical symptoms, such as locking. In so opining, he stated in his report that he was relying on the Medical Treatment Guidelines ("*Guidelines*"), Rule 17, Exhibit 6. *Exhibit H.*
9. Dr. Failinger stated in his report that when there is an aggravation of osteoarthritis, which he concluded occurred in this case, arthroscopic surgery is only appropriate if there is a "loose body causing locking." In his report, he gives the impression that he is quoting the complete section of the *Guidelines*, which supports his opinion. He provides the following in his report:

[A]rthroscopic debridement and lavage are not recommended unless there is a loose body causing locking, according to the Guidelines. There are situations where an arthroscopy may be appropriate, as mentioned above, where the arthritis is not nearly as advanced and there may be an extension of meniscus tear, but that does not appear to be medically probable given the severely advanced stage of arthritis.

Exhibit F, BS 14-15.

10. However, Dr. Failinger did not quote the entire section of the *Guidelines* upon which he used to support his opinion that the surgery was not appropriate. The full quote from the *Guidelines* provides:

[A]rthroscopic debridement is not recommended "unless there is meniscal or cruciate pathology or a large loose body causing locking" (emphasis added). *RHE H, p. 27; Guidelines, (2)(a)(viii)(A).*

11. Moreover, Claimant reported to Dr. Stull during his March 1, 2019, evaluation that he had locking in his knee and Dr. Stull noted the locking in his report. Therefore, Claimant's symptoms are consistent with a meniscal or cruciate

pathology causing locking. Moreover, Dr. Bryant-Greenwood stated in her July 29, 2019, report that Claimant “continues to report mechanical issues with his knee joint that includes a sensation of catching with knee extension.” Therefore, based purely on the above section of the *Guidelines*, the surgery recommended by Dr. Stull is supported by the *Guidelines*.

12. On May 14, 2019, Dr. Stull appealed the denial, which was based on Dr. Failinger’s initial IME report. Dr. Stull stated in his appeal that it was his opinion that the need to perform the arthroscopy is related to Claimant’s work injury. He further concluded that although Claimant has underlying degenerative changes in his knee, Claimant likely tore his meniscus due to the work accident, and it is the tear that necessitated the need for surgery. However, since the surgery had been denied, and Claimant still had ongoing symptoms, Dr. Stull provided Claimant a cortisone injection in order to see if that would provide some relief while the appeal was pending. *Exhibit 6, BS 67-68*.
13. Despite Dr. Stull’s appeal, and the failure of the cortisone injection to relieve Claimant’s symptoms, Dr. Stull’s request for authorization continued to be denied.
14. On June 12, 2019, Claimant returned to Dr. Bryant-Greenwood. She reported that Claimant had undergone conservative care, which included intra articular joint injections, and long-term management, including physical therapy. However, despite the conservative care, Claimant continued to have ongoing symptoms. Dr. Bryant-Greenwood again concluded Claimant had clinical findings and imaging results of meniscal pathology, which warranted surgical intervention. *Exhibit 8, BS 87*.
15. In her June 12, 2019, report, Dr. Bryant-Greenwood also commented on Dr. Failinger’s April 11, 2019, IME. Dr. Brant-Greenwood noted that she also reviewed the *Guidelines*. She also concluded that while she agreed Claimant has an underlying arthritic condition, the work accident caused an acute injury, which is causing Claimant’s current symptoms and for which he needs the surgery recommended by Dr. Stull. She also noted that based on page 74 of the *Guidelines* regarding “Aggravated Osteoarthritis, [Claimant] does have by clinical findings and imaging results, meniscal pathology that would warrant and likely benefit from surgical intervention. She also astutely noted that the language providing for surgery when “there is meniscal or cruciate pathology or a large loose body causing locking” was missing from Dr. Failinger’s initial IME report. Therefore, she referred Claimant back to orthopedist Dr. Stull to address the meniscal pathology. See *Claimant’s Exhibit 8, BS 87; the Guidelines, page 74; Respondents’ Exhibit H, BS 27*.
16. Claimant credibly testified to ongoing symptomatology, which impacts both his activities of daily living and his ability to function in the work place. This includes problems descending stairs or walking on a flat surface with a 10-degree incline. He also indicated that any bending from the floor is affected and that he would have problems getting into his delivery truck. He also testified that he is unable to kneel.

17. Claimant contends in his proposed order that the *Guidelines* also support the surgical recommendation based on the following provision which provides:

In summary, there is strong evidence that partial meniscectomy provides no clear benefit over initial exercise therapy for patients with an isolated degenerative meniscal tear. Therefore, it is **not recommended**. (Emphasis in original.) *It may be appropriate for the patients who continue to have significant functional deficits of activities of daily living or work duties after 6 weeks of therapy.* (Emphasis added by Claimant in his Proposed Order.)

Medical Treatment Guidelines Rule 17, Exhibit 6, p. 92 – 93; See also Respondents' Exhibit H, pages 31-32.

18. Therefore, Claimant contends that because he continues to have significant functional deficits of activities of daily living or work duties after 6 weeks of therapy, the *Guidelines* support the surgery recommended by Dr. Stull.
19. However, Claimant's position merely isolates a section of *Guidelines* that supports his position if there is "an isolated degenerative meniscal tear." Moreover, what the *Guidelines* give in one situation or section, they can take away in another. For example, after indicating surgery may be appropriate for patients that continue to have significant functional deficits, Section 2(f)(vi) of the *Guidelines* provide that surgery is not recommended if Claimant also suffers from severe arthritis in the knee. The section specifically provides:

Operative Treatment: Repair of meniscus, partial or complete excision of meniscus, or meniscus allograft. Debridement of the meniscus is **not recommended** in patients with severe arthritis, as it is unlikely to alleviate symptoms (emphasis in original).

See Guidelines, Section 2(f)(vi), page 93; See also Respondents' Exhibit, H, page 32.

20. Therefore, although the initial section cited by Claimant indicates arthroscopic surgery may be reasonable and necessary under the *Guidelines* for an isolated degenerative meniscal tear when conservative treatment fails, the subsequent section indicates arthroscopic surgery is not recommended if Claimant also has severe arthritis. And, in this case, Claimant has severe arthritis.
21. As demonstrated by the various sections of the *Guidelines*, the words, phrases, and sections of the *Guidelines* cannot be read in isolation. The analysis and treatment protocols are dependent upon the diagnosis and/or pathology. Therefore, if the diagnosis or pathology is aggravated osteoarthritis, and there are degenerative tears to the meniscus, arthroscopic meniscus surgery is only recommended if there is "meniscal or cruciate pathology or a large loose body causing locking." On the other hand, if the diagnosis or pathology is an acute meniscal tear, caused by a traumatic incident, then arthroscopic meniscus surgery can be appropriate, unless there is also "severe arthritis." The

distinction in treatment recommendations under the *Guidelines* based on the primary cause of the symptoms was discussed by Dr. Failinger in his Addendum, dated July 23, 2019, as well as his deposition.

22. Dr. Failinger also noted that a more detailed review of the right knee MRI scan report documented “extensive subchondral marrow edema and mild sclerosis of the medial femoral condyle and to a lesser extent (sic?) in the medial tibial rim. It stated ‘both areas with associated chronic-appearing Grade IV cartilage loss’ and diffuse osteophytosis Grade IV chondromalacia of the patellofemoral joint with lateral compartment cartilage.” *RHE F*, p. 13. (Emphasis in original IME report.)
23. Dr. Failinger diagnosed Claimant with severe degenerative joint disease of the right knee including patellofemoral joint and medial compartment. Dr. Failinger noted that Claimant had “longstanding and essentially end-stage arthritis.” *RHE F*, p. 14.
24. Dr. Failinger, a Board Certified Orthopedic surgeon, also provided evidentiary deposition testimony in this matter. Dr. Failinger was accepted as an expert in orthopedic surgery, and as to his specialized knowledge and training as a Level 2 accredited physician. Dr. Failinger testified that degenerative joint disease is the loss of articular cartilage in the knee. He stated that once the layer of cartilage is lost, the knee is essentially down to the bone. *Depo. Tr. pp. 7-8*.
25. Dr. Failinger also indicated Claimant had significant and advanced arthritis that was medically unlikely to have been caused by the January 21, 2019 industrial injury. Dr. Failinger further noted that it was his opinion that there was no evidence Claimant incurred acute or new pathology in his right knee on January 21, 2019. *RHE F*, p. 14; *Depo Tr.*, pp. 9-10.
26. However, Dr. Failinger concluded in his deposition that the work accident did cause some of Claimant’s symptoms and that he should be entitled to some additional medical treatment under this claim to help reduce his symptoms and increase his function. *Depo Tr.*, p. 15. Dr. Failinger also recommended that Claimant consider a cortisone injection or possibly viscosupplementation. Nevertheless, Dr. Failinger expressly opined that the arthroscopic surgery proposed by Dr. Stull was not medically appropriate. *RHE F*, pp. 14-15.
27. Dr. Failinger testified that that Claimant’s severe degenerative and chronic arthritis was the probable cause of Claimant’s symptoms, and was so advanced that the arthroscopic procedure could not be anticipated to improve Claimant’s condition to within a reasonable degree of medical probability. *RHE F*, p. 14.
28. However, during cross-examination, Dr. Failinger also testified that he did not doubt that Claimant’s work accident caused the degenerative changes in his knee to become symptomatic. *Depo. Tr. p. 28-29*.
29. Dr. Failinger further opined that the only medically appropriate surgical procedure that should be considered to treat Claimant’s symptoms is a total knee replacement, after conservative measures had been exhausted. However, Dr. Failinger concluded that a total knee replacement procedure would be done to

address the preexisting pathology and would not be related to the January 21, 2019 industrial injury. *RHE F*, p. 15.

30. In support of his opinions, Dr. Failinger identified isolated sections of the *Guidelines*. Dr. Failinger explained in his testimony, “The *Guidelines* were built, my understanding is, so that this constant volume of trying to things over and over that don’t have a reasonable chance of helping a patient, to try to curb that in somewhat.” *Depo. Tr.* p. 17.
31. However, Dr. Failinger agreed that Dr. Stull was not violating the orthopedic standard of care by recommending the arthroscopic meniscus surgery. He also testified that this merely constituted a difference of medical opinion between competent medical professionals. Furthermore, he does not dispute that competent medical professionals can disagree about treatment based on their clinical judgement. *Exhibit 10, BS 117, lines 10 – 18*. This is the case here. *Id.*, *BS 125*.
32. Dr. Failinger agreed that despite the presence of degenerative problems which probably pre-existed the happening of the injury, there is no way to establish that the Claimant would have symptoms but for the slip and fall which occurred on January 21, 2019. Thus, he did not know whether the knee would have ever gone out, despite the presence of degenerative conditions. *Id.*, *BS 126, lines 19 – 23*.
33. Moreover, during his deposition, Dr. Failinger testified that Claimant’s locking or catching symptoms were not raised until after he performed his IME on April 11, 2019. *Depo. Tr. pg. 31*. However, this contention is not accurate. As found, the March 1, 2019, report from Dr. Stull indicates Claimant was complaining of “locking” in his right knee. Furthermore, in his report, Dr. Failinger indicates he reviewed the March 1, 2019, report from Dr. Stull. He also quotes a portion of Dr. Stull’s report, but does not quote the portion that specifically documents Claimant’s mechanical knee symptoms, which included locking. In addition, in his initial report, Dr. Failinger failed to quote the entire portion of the *Guidelines*, which indicates surgery may be appropriate when there is “meniscal or cruciate pathology” that is causing locking. See *Ex. F, and Ex. H, the Guidelines, Section (2)(a)(viii)(A)*, *BS 27*. Consequently, the ALJ does not find Dr. Failinger’s ultimate opinion, as set forth in his reports and deposition, to be persuasive as to whether the surgery is reasonable, necessary, and related to the work accident based on the omissions in his initial report.
34. Moreover, the ALJ finds Dr. Failinger’s ultimate opinion and application of the *Guidelines* to be untenable when considering his ultimate conclusion. For example, Dr. Failinger agrees Claimant’s work accident resulted in an injury that necessitated the need for medical treatment. He then uses isolated portions of the *Guidelines* to conclude that the *Guidelines* do not support the surgery recommended by Dr. Stull because the chance of success is limited due to Claimant’s co-existing arthritis. He further concludes that the surgery recommended by Dr. Stull is not reasonable and necessary because the proper procedure based on Claimant’s pathology and symptoms is a knee replacement.

However, he goes on to conclude that the need for a knee replacement is not related to Claimant's industrial accident and resulting injury. In essence, Dr. Failing is attempting to apply the *Guidelines* in a manner that leaves Claimant without a medical remedy to treat the symptoms and functional impairment caused by the work accident.

35. The ALJ finds Claimant's right knee symptoms, for which Dr. Stull has recommended arthroscopic surgery, were caused by his work accident when he slipped, fell, and injured his knee.
36. Claimant's accident aggravated, accelerated, and combined with his preexisting asymptomatic arthritis in his right knee and caused it to become symptomatic. The accident also resulted in an acute injury to his meniscus, and possibly other cartilage and/or ligaments, in his right knee. Therefore, the accident caused Claimant's current symptoms of pain and locking, i.e., mechanical symptoms, in his knee. The surgery recommended by Dr. Stull is to reduce Claimant's pain and mechanical problems in his knee, which were caused by the work accident. Therefore, the surgery recommended by Dr. Stull is to cure Claimant from the effects of his work accident.
37. Although there is a difference of opinion as to whether the surgery is reasonable and necessary, the ALJ credits Dr. Stull's and Dr. Bryan-Greenwood's opinions, over Dr. Failing's, as to whether the surgery is reasonable, necessary, and related.
38. Claimant was present during the testimony of Dr. Failing. He is aware that Dr. Failing disputes the opinion of Dr. Stull, but he still wants to undergo the arthroscopic surgery recommended by Dr. Stull.
39. The surgery recommended by Dr. Stull is found to be reasonable, necessary, and related to Claimant's work accident.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The ALJ has considered, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that the arthroscopic surgery recommended by Dr. Stull, an authorized treating physician, is reasonable, necessary, and related to Claimant's industrial injury.

Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

Moreover, the ICAO has noted that pain is "a typical symptom from the aggravation of a pre-existing condition" and Claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.*, WC 3-998-279 (ICAO February 16, 2001).

Claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on

the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

In this case, Claimant and Respondents rely on different sections of the *Guidelines* to support their respective positions. When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the *Medical Treatment Guidelines* because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the *Guidelines* is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the *Guidelines*, and treatment recommendations contained in the *Guidelines*, such weight as he determines it is entitled to considering the totality of the evidence. See *Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

The ALJ finds and concludes that the *Guidelines* do not provide a concise and persuasive treatment recommendation based on the facts of this case and the entire record. However, to the extent the *Guidelines* support the surgery recommended by Dr. Stull because Claimant's symptoms include locking in his knee, they are accepted as persuasive. To the extent the *Guidelines* do not support the surgery because Claimant has co-existing arthritis, they are not found to be persuasive.

The ALJ finds and concludes Claimant established by a preponderance of the evidence that:

- Claimant's right knee symptoms, for which Dr. Stull has recommended arthroscopic surgery, were caused by his work accident when he slipped, fell, and injured his knee.
- Claimant's accident aggravated, accelerated, and combined with his preexisting asymptomatic arthritis and caused it to become symptomatic. The accident also resulted in an acute injury to his meniscus. Therefore, the accident caused Claimant's current symptoms of pain and locking, i.e., mechanical symptoms, in his knee.
- The surgery recommended by Dr. Stull is reasonably expected to reduce Claimant's pain and mechanical problems in his knee, which were caused by the work accident. Therefore, the surgery recommended by Dr. Stull is to cure Claimant from the effects of his work accident.
- Although there is a difference of opinion as to whether the surgery is reasonable and necessary, the ALJ credits the opinions of Drs. Stull and Bryan-Greenwood, over Dr. Failing's, as to whether the surgery is reasonable, necessary, and related.
- The surgery recommended by Dr. Stull is reasonable, necessary, and related to Claimant's work accident.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The surgery recommended by Dr. Stull is reasonable, necessary, and related. The surgery shall be paid for by Respondents, subject to the Colorado Medical Fee Schedule.
2. The stipulation of the parties increasing the Claimant's AWW to \$1,400.00 is approved and is effective from the date of injury.
3. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.
4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 22, 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury to her left knee on June 5, 2019?
- II. If said injury is compensable, is Claimant entitled to a general award of medical benefits incurred for this injury, including Penrose Hospital Emergency Room, CCOM, Colorado Springs Imaging, Colorado Sport and Spine, and Dr. Michael Simpson, MD?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Incident

1. Claimant works for the [Redacted] ("DOC") as a trainer for parole officers. She has had that title for the past five years. Claimant works at the building located at 888 Garden of the Gods in Colorado Springs, CO. Her entire tenure with DOC is 18 years.
2. At hearing, Claimant testified she was walking from the employee parking lot into the office building on June 5, 2019 at about 7:30 a.m. She testified she was walking down the handicap ramp when she stumbled on "something", but was unable to identify what it was. She had a bag in her left hand.
3. She said she grabbed the railing with her right hand, and her "left leg felt funny, so I took a few more steps." She testified that all of a sudden she heard a loud pop and felt intense pain in her knee and could not go any further. At no point did she fall to the ground.
4. Claimant testified she was at the far [upper] end of the ramp at the time her knee popped. Claimant testified that after the incident, she retrieved her cell phone out of her bag and called for help from her office. When no one answered, she called her friend, Theresa F[Redacted], who also had not yet arrived at work.
5. While waiting for Ms. F[Redacted] to arrive, Donald C[Redacted], another co-employee asked her if she needed any assistance. She told him that she could not put weight on her leg so he went to get a wheelchair for her. The Claimant testified that she was very upset while standing on the ramp and, in fact, was crying.
6. Claimant testified at hearing that prior to coming into view of the security camera she had an "earlier stumble". She testified she did not feel any pain in the left knee with

the stumble, but her leg “felt funny. It felt weird and somewhat funny.” Claimant did not recall twisting her left knee during this stumble.

7. Claimant did not specifically testify to twisting or torqueing her left knee at any time either during the reported ‘stumble’ or while walking down the ramp.

Surveillance Video partially depicts this Incident

8. Color Video of the reported incident was recorded by the building’s security camera. The camera appears to be mounted near the building entrance where Claimant works, and partially captures persons walking down the ramp from the front, and towards the left side of the walker. Claimant testified she observed the video for the first time on or after June 24, 2019. (Ex. 1). The ALJ has viewed this video [which has no sound component], but which is of comparatively high quality. The time capture on the video shows it to begin at 7:45:38 a.m.
9. The security video shows Claimant [lower body only] first walk into the frame from street level and place her right hand on the handrail going down the concrete ramp. Claimant is then obstructed for several seconds by tree branches and bushes. Up until that point in the video, it is not possible to see if Claimant is limping, but her right hand appears at all times to be using the railing to her right for some level of support or balance. While she is still obscured, it is not possible to see what occurred, although her walking cadence is not seriously disrupted before she comes back into view, and continuing down the ramp. Once she comes back into view – for the first time, mostly a full body view – Claimant has a slight limp, favoring her left leg. Then Claimant is seen dropping her right hand from the railing and taking two steps.
10. Claimant then appears to take one additional step and immediately and suddenly lift her left leg. Her entire body jolts in response. At that same time, she grabs the concrete retaining wall with her right hand, and the guardrail to her left with her left hand. She does not walk any further. From when the video starts until she stops walking takes about 11 seconds. She then stands at the rail until a co-worker arrives.
11. While Claimant was standing at the handrail and calling Ms. F[Redacted] for assistance, several other persons are seen in the video walking close by Claimant as they walked into the building. Claimant does not appear to try to contact any of those people for help.

Initial Medical Treatment / Referral to Dr. Simpson

12. Ms. F[Redacted] took Claimant to the emergency room at Penrose St. Francis. Upon her release, she then to CCOM for treatment that same day, and saw NP Joyce. (Ex. 13).

13. In the First Report of Injury dated June 5, 2019 Claimant was asked to describe in her own handwriting exactly what happened to cause the accident. She reported "I was walking down ramp tripped. When landing on left leg a loud pop happened on my left knee. I caught myself with my left arm on the hand railing. At that point I was unable to bear weight on my left knee stood at the railing until CPO C[Redacted] got me." (Ex. J, p. 135).
14. On 6/5/19, NP Joyce placed work restrictions on the Claimant to include sitting 95% of the time; use of crutches for all ambulation; no pushing, pulling, lifting, carrying, kneeling, squatting, stairs or ladders. NP Joyce also referred the Claimant for an MRI.
15. MRI of the Claimant's left knee revealed a full thickness radial tear of the posterior horn/root of the medial meniscus, grade 2 medial compartment chondromalacia and a small joint effusion with a moderate-sized leaking Baker's cyst. The MRI did not estimate the age of the meniscus tear. (Ex. 14). Upon receipt of the MRI results, N.P. Joyce referred the Claimant to Dr. Michael Simpson, an orthopedic surgeon. Dr. Simpson specializes in the diagnosis and treatment of knee injuries. He has treated thousands of patients with meniscus conditions.
16. Dr. Simpson's initial medical record (Ex.15) reflects "patient states she was at work and she tripped and caught herself on the left leg. She did hear and feel a pop and caught herself on a railing".

Dr. Simpson's Deposition Testimony

17. At his deposition, Dr. Simpson testified that he did not personally take the history of the injury from the Claimant. His normal practice is to review the computer notes before seeing the patient. (Depo. Dr. Simpson pp. 35-36).
18. Dr. Simpson recommended surgery to repair the meniscal root tear. He testified that if, during surgery, he determined that the root could not be repaired he would then remove the torn portion of the meniscus in an attempt to relieve the Claimant's pain. Dr. Simpson disagreed with Dr. Failing regarding the amount of arthritis in the Claimant's left knee. Dr. Simpson testified that he would not characterize the Claimant's preexisting (but theretofore asymptomatic) arthritis as 'significant', 'severe' or 'excessive'. (Depo. Dr. Simpson p. 17).
19. Dr. Simpson explained that there is a significant difference in a general meniscal tear and a root tear of the posterior horn of the meniscus. He explained that, in his experience, root tears do not typically have a dramatic trauma at the onset of symptoms. Most have a trivial or minor incidence of trauma wherein the individual then begins having pain. It is not until the tear becomes a full thickness tear which "gets all the way to the edge" of the meniscus that there is a significant onset of pain, since only this portion of the meniscus is vascularized.

20. Dr. Simpson testified that some root tears are painful even if they are not displaced in the knee joint. He opined that the Claimant likely had some degeneration, and the start of a meniscal tear, prior to the event on 5/6/19. The stumble/trip on the handicap ramp resulted in additional tearing of the meniscal root after the Claimant had taken a few steps.
21. When asked whether the Claimant's root tear preexisted this incident, Dr. Simpson opined that since the Claimant had no symptoms in her left knee prior to this incident and there was no evidence to suggest a root tear prior to this incident. (Depo. Dr. Simpson p. 20).
22. Dr. Simpson also opined that there is really no way to know whether not the small joint effusion and leaking Baker's cyst seen on the 6/11/19 MRI were acute or chronic without an imaging study showing they existed prior to the incident of 6/5/19.
23. Dr. Simpson disagreed with Dr. Failinger (Respondent's IME physician) that the pain generator in this case is likely the Claimant's preexisting arthritis. Dr. Simpson opined that based on the Claimant's history and exam and her lack of prior complaints, symptoms or treatment to the left knee, the Claimant's left knee pain is more likely a result of the meniscal root tear rather than the preexisting arthritis.
24. Dr. Simpson based this opinion on the sudden onset of pain on 6/5/19, the fact that the pain was sharper and worsened with flexion of the knee and the fact that the pain was more localized in the joint line and was worse with weightbearing. Additionally, the MRI scan did not show evidence of any bone marrow edema, a large effusion, synovitis or inflammation of the joint lining in the knee, all of which might otherwise suggest the Claimant suffered from osteoarthritis. He opined that if an individual had more severe degeneration/arthritis, one would generally see overload or change to the bone as well as inflammation in the joint. (Depo. Dr. Simpson p. 23-24).

25. Dr. Simpson reviewed the security video multiple times at his deposition. Dr. Simpson testified Claimant did not tear her meniscus in the incident on the video. (Depo Dr. Simpson, pp. 42-43). Dr. Simpson testified that in order to suffer a meniscal tear one ordinarily needs to twist the knee while it is bearing weight. Dr. Simpson testified that the visible portion of the video of Claimant walking down the ramp does not show any mechanism of injury to the knee. The video does not show the requisite twisting while bearing weight. (Depo. Dr. Simpson. pp. 41-42).

Claimant's Previous Descriptions of the Work Incident

26. Claimant gave a recorded statement to the claim adjuster, Lisa Biggs, on June 10, 2019. (Ex. L). At hearing, Claimant testified it was a "lengthy conversation." Claimant testified she was being as detailed as she could be about the incident. In the audio recording, Claimant, again, reported the injury causing incident to Ms. Biggs as one

single motion where she grabbed the railing, heard a pop and couldn't bear weight (Ex. L).

27. Claimant was asked in an interrogatory to explain how she claims she was injured. Under oath Claimant stated, "I was walking down the sloped ramp outside of the building and tripped (and caught myself on the railing). I felt immediate pain and heard and felt a loud pop in my left knee". (Ex. M, p. 2). Claimant did not report an earlier "trip and stumble".

Claimant's IME, Dr. Hall

28. On September 12, 2019, Claimant underwent an Independent Medical Examination (IME) by Dr. Timothy Hall at her request. He was provided with a copy of the security video.
29. Dr. Hall's history of the incident reflects "she reports that prior to what was seen on the video, she had tripped and stumbled on 'something' although is not sure what. She as a consequence of that grabbed the rail with her left hand and then took a couple of 'normal steps' and then as she put her foot down left side, she felt and heard a pop in the left knee and simply could no longer weight bear/walk".
30. Dr. Hall opined the Claimant's meniscal root tear is a result of her stumble on the handicap ramp. He disagrees with Dr. Failing's opinion that the Claimant's current left knee pain is due to the preexisting degeneration in her knee, rather than her torn meniscal root.

Number one is, she doesn't have that much degenerative change. I think that's the main one.

The other one is, these - - usually when degenerative problems become symptomatic, they become symptomatic more insidiously, meaning they slowly ramp up over time. *It's unusual for, all of a sudden, these relatively asymptomatic degenerative changes to become so – so symptomatic that someone can barely walk* (Depo. Dr. Hall p. 11) (emphasis added).

31. Dr. Hall continued:

And...if there was no more acute pathology, you would think, if this just was an exacerbation of underlying arthritis, that that would clear relatively quickly with time, because *if there really is no dramatic or significant pathology, just a circumstance where a pre-existing problem got aggravated, you wouldn't expect it to last this long*, especially with this rather minimal level of arthritic disease (Dep. Dr. Hall, p. 12) (emphasis added).

32. Dr. Hall testified that the fact that the Claimant's knee has continued to swell since the injury is more consistent with an injury to the root of her meniscus than degeneration. He testified that one would need torque on a loaded knee to tear the radial horn of the meniscal root. He explained that the Claimant's left knee would have been loaded when she stumbled and placed her left knee in front of her to stop herself from falling.
33. Dr. Hall further testified that it is unlikely that walking alone would cause a tear in the knee.
34. Dr. Hall testified he could not tell whether Claimant had a pre-existing tear in the root of her meniscus prior to the event, but he opined that most people who have a radial tear would have symptoms.

Respondent's IME, Dr. Failinger

35. Claimant was also examined by Dr. Mark Failinger. Dr. Failinger is board certified in orthopedic surgery and sports medicine. Sixty percent (60%) of Dr. Failinger's practice is devoted to the treatment of knee conditions. Three quarters of his practice is workers' compensation patients.
36. Dr. Failinger reviewed Claimant's medical records and the security video. He opined the video does not show a mechanism of injury. (Ex. A, pp. 11-12; Depo Dr. Failinger, p. 13).
37. Dr. Failinger testified Claimant did not trip over an object and she did not twist her knee. He testified that when one looks at the video to explain the root tear, this also does not seem to have occurred on the video. He explained there is not a twisting of a fully weighted knee, which is needed to result in the injury.
38. Instead what is seen is a sudden unweighting of Claimant's knee. Dr. Failinger explained that one cannot tear a meniscus with an unweighted knee. In the video, he opines that Claimant is walking down the ramp with an antalgic gait which means she already has a limp when she is first seen entering the picture. Then the limp appears a little more pronounced, and suddenly, she takes the weight off her knee as if there is pain. (Depo Dr. Failinger, p. 13). Dr. Failinger explained that is not a plausible mechanism in any way for tearing a meniscus.
39. According to Dr. Failinger, Claimant comes into view at the point of 7:45:44 on the video. At that point she already has a mild limp. At 7:45:48 Claimant suddenly goes down and takes the weight off her left knee. She does not go into a fall with all her weight, most of her weight, or even half her weight on the left knee. There is no tripping over her own feet, there is no catching her foot. It hits suddenly and then she unweights the knee before anything else happens that could have caused a meniscus tear. (Depo Dr. Failinger, p. 17).

40. Dr. Failinger opined that the root tear probably pre-existed the described event. He explained the mechanism that could cause a tear in a meniscus is a weighted knee where the two bones have trapped the meniscus and a twist occurs causing a tear.
41. Dr. Failinger testified the video does not show any sort of twist on a weighted knee. There is no mechanism of injury. There is no probability or possibility that Claimant suffered a work injury walking on the minimally inclined ramp. (Ex. A, p. 11).
42. Dr. Failinger testified that Claimant did not give him the same history she gave to Dr. Hall. Claimant did not report to Dr. Failinger a history involving an earlier tripping event that occurred higher up the ramp. Dr. Failinger does not interpret Claimant's report to either the emergency room provider or to N.P. Valerie Joyce on the June 5, 2019 date of injury as describing two events on the ramp. (Failinger Depo. p. 29). He later admitted that since one cannot see what occurred on the video while Claimant was concealed by the tree branches, that Claimant could have experienced two events [in rapid succession].
43. In his report, Dr. Failinger opined that the MRI does not show significant effusion, which would be consistent with an acute tear. (Ex A, p.11). Dr. Failinger had not reviewed the actual MRI scans as of the date of his report or the date of his deposition. (Dr. Failinger Depo. p. 10). Although during his deposition, Dr. Failinger offered to review the actual scan, there is no evidence of record that he actually did so during his deposition. At no time during his deposition were the parties off the record [for him to review the scan]. In fact, in later questioning by Claimant's counsel, he references seeing only the MRI report. (Depo Dr. Failinger, p. 45).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and

resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. In this instance, the ALJ finds Claimant to have testified sincerely, and to the best of her abilities. Respondents infer that Claimant has now embellished her version of events to maintain consistency with the video evidence and expert testimony. The ALJ does not draw such an inference. Claimant supplied sufficiently consistent versions of the mechanism of injury, and of the symptoms she experienced, to match her objective findings by imaging and physical examinations. The details supplied will vary somewhat with the context of the questions by providers, experts, or attorneys. This is especially so when a person is still under the exciting influence and pain of a recent injury. Only experts and attorneys are concerned with causation, and after the fact. In this instance, Claimant is a long-term employee in law enforcement, with existing medical benefits, and the ALJ finds insufficient motivation for her to supply unwarranted embellishment.

E. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As will be addressed forthwith, the ALJ finds that the medical experts involved have each provided medical opinions to the best of their abilities; thus their opinions will be evaluated in terms of persuasiveness, as opposed to credibility per se.

F. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Compensability

G. It is the Claimant's burden to prove a causal relationship between the industrial injury and the medical condition for which she seeks benefits. Section 8-43-301, C.R.S. 2001; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). However, the claimant is not required to prove causation by medical certainty. Rather it is sufficient if the Claimant presents evidence of circumstances indicating with reasonable probability that the condition for which she seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

H. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an injury arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(l)(b)*, C.R.S.

I. The phrases "arising out of" and "in the course of" are not synonymous and a Claimant must meet both requirements for the injury to be compensable. *Younger v. City and County of Denver*, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17, 20 (Colo. 1988).

J. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

K. The "in the course of" requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando*, 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.*, 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

L. This injury occurred within the time and place limits of Claimant's employment relationship with Employer and during an activity, specifically going from her parked car on Employer's premises and entering her work building. She had a choice to use the stairs or the ramp, and chose the latter. However, the question remains whether Claimant's condition and need for surgery resulted from her work-related activities on June 5, 2019, or rather was the result of his pre-existing left knee condition.

M. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999

(Colo. App. 2004). A claimant may be compensated if a work-related injury “aggravates, accelerates, or combines with” a worker’s pre-existing infirmity or disease to “produce the disability for which workers’ compensation is sought.” *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker’s employment simply because it is partially attributable to the worker’s pre-existing condition. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Indus. Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986)(“[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.”)

Compensability, as Applied

N. In this instance, Dr. Failinger has opined that Claimant’s complaints likely stem from rather severe degenerative arthritis. Dr. Hall, and Dr. Simpson think her pain complaints are more consistent with the torn medical meniscus near the posterior horn. The ALJ finds Drs. Hall and Simpson to be more persuasive. While Claimant had some degree (as is common) of degenerative arthritis, there is no evidence that her knee was symptomatic until June 5, 2019 – at which time it became very symptomatic, and has remained that way ever since.

O. There is no way of knowing to what degree her meniscus might have been damaged prior to that date, but June 5 is the date it became symptomatic. In fact, due to her meniscus’ possibly fragile state, it would require far less of a twisting, torquing motion to damage it further [over the edge], possibly loosening it from its mooring. No dramatic stumble or fall was observed, but nor would one be needed to trigger her symptoms. A minor stumble or miss-step behind the bushes would be sufficient, and the ALJ finds that this is what occurred. This is especially likely, since *Claimant already had a mildly antalgic gait when she came back into view from behind the bushes*. She was fine driving into work and getting out of her car. After stumbling, she was protecting her knee for a couple steps before things really started hurting. *Claimant’s medial meniscus became permanently aggravated while Claimant was walking down the ramp*. Her obvious, instant distress can be seen on the video. The ALJ finds that it now requires medical treatment as a direct result.

P. Respondents argue that because Claimant had pre-existing damage to her knee (which is certainly possible, but not firmly established either way) that she must show that a “special hazard” of employment existed that precipitated this injury. The ALJ will not apply the “special hazard” analysis here, since the evidence already shows that Claimant either stumbled, or miss-stepped, on the ramp sufficient to cause this injury.

Medical Benefits

Q. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

R. Claimant went to the emergency room at Penrose on an emergent basis. She then was sent by her employer to CCOM who then referred her for an MRI, physical therapy and to an orthopedic surgeon, Dr. Simpson (all within the chain of referral). The ALJ finds that all such treatment was reasonable, necessary, and related to Claimant's compensable work injury. Therefore, all bills from Penrose Hospital, CCOM, CCOM Physical Therapy, Colorado Springs Imaging and Dr. Simpson are to be paid by the Respondents. The ALJ further finds that the surgery proposed by Dr. Simpson is reasonable, necessary, and related to her work injury. As such, Respondents are to pay for said surgery, and all prescribed aftercare.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury to her left knee on June 5, 2019.
2. Respondents shall pay for all reasonable, necessary, and related medical expenses incurred in connection with her work injury.
3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

ISSUES

- Did Claimant overcome the DIME's MMI determination by clear and convincing evidence?
- Did Claimant overcome the DIME's whole person impairment rating by clear and convincing evidence?
- If Claimant overcame the DIME, what is the correct rating?

FINDINGS OF FACT

1. Claimant worked for Employer performing janitorial services. She injured her low back on February 9, 2017 while throwing a bag of garbage over a wall into a dumpster.

2. Employer referred Claimant to CCOM for authorized treatment. She was diagnosed with a lumbar strain and referred to physical therapy. An MRI on March 16, 2017 showed degenerative disc disease, but nothing acute and no indication for surgery. Claimant received conservative care, including chiropractic, acupuncture, medications, and injections. She underwent a functional capacity evaluation (FCE) on February 28, 2018 that demonstrated the ability to work at the light physical demand level.

3. Dr. Jay Neubauer at CCOM put Claimant at MMI on March 29, 2018, with an 11% whole person rating. The rating was a combination of a 5% Specific Disorder impairment under Table 53(II)(B) and 6% for range of motion deficits.

4. Respondents requested a DIME to challenge Dr. Neubauer's rating. Dr. Michael Janssen was selected as the DIME physician.

5. Dr. Janssen evaluated Claimant on June 26, 2018. He agreed with Dr. Neubauer that Claimant reached MMI on March 29, 2018. He also agreed Claimant has 5% whole person impairment under Table 53 (II)(B). He took range of motion measurements and concluded they showed 0% impairment. Accordingly, Dr. Janssen's final rating was 5% whole person.

6. Dr. Robert Messenbaugh, an orthopedic surgeon, has performed multiple IMEs for Respondents regarding this claim. In his first IME report dated October 11, 2017, Dr. Messenbaugh supported the treating providers' determination Claimant suffered a compensable lumbar strain and was not at MMI.

7. Dr. Messenbaugh saw Claimant again on January 7, 2019. He agreed she reached MMI on March 29, 2018, and assigned a 10% whole person impairment. The rating was composed of 5% under Table 53(II)(B) and 5% for range of motion deficits.

8. Dr. Messenbaugh issued an addendum report on March 7, 2019. He opined Dr. Janssen's rating was incorrect because the measurements recorded on the DIME worksheet correspond to a 2% impairment. He opined the correct rating "should be somewhere between 7% and the 11% provided by Dr. Neubauer."

9. At hearing, Dr. Messenbaugh opined the variation in Claimant's range of motion measurements from different providers (*i.e.*, 6%, 5%, 2%) falls within the expected range of day-to-day variability. He confirmed the measurements from his IME were taken with a goniometer per *AMA Guides* criteria.

10. The ALJ agrees with Dr. Messenbaugh's analysis regarding Dr. Janssen's range of motion measurements.

11. Claimant presented no persuasive evidence she was not at MMI on March 29, 2018 as determined by Dr. Neubauer, Dr. Janssen, and Dr. Messenbaugh. Claimant failed to overcome the DIME's MMI determination by clear and convincing evidence.

12. Claimant proved Dr. Janssen's 5% rating is highly probably incorrect. Claimant overcame the DIME by clear and convincing evidence.

13. Claimant proved by a preponderance of the evidence she suffered 11% whole person impairment.

CONCLUSIONS OF LAW

A DIME's determination regarding MMI and whole person impairment are binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(C). This is a higher standard of proof than the typical "preponderance" standard. Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Maximum medical improvement (MMI) is defined as the point when any medically determinable physical or mental impairment from the industrial injury has become stable and no further treatment is reasonably expected to improve the claimant's condition. Section 8-40-201(11.5). As found, Claimant failed to overcome the DIME's MMI determination by clear and convincing evidence. Three Level II physicians agree Claimant reached MMI on March 29, 2018 and no physician has opined to the contrary. Although a Claimant is not required to present expert opinion to prove her case, there must be some persuasive evidence that her condition has not plateaued and pointing to some additional treatment reasonably expected to improve her condition. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). The ALJ sees no such evidence on the present record.

A DIME physician must rate impairment consistent with the *AMA Guides*. Section 8-42-101(3.7); *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2003).

The DIME's deviation from the rating protocols is evidence from which the ALJ can determine the DIME's rating was overcome. *Wilson v. Industrial Claim Appeals Office, supra; McCardie v. Transit Concrete Co.*, W.C. No. 4-964-260-01 (January 19, 2018).

As found, Claimant overcame Dr. Janssen's rating by clear and convincing evidence. Dr. Janssen clearly erred by assigning a 0% rating for lumbar range of motion. As Dr. Messenbaugh persuasively explained, the measurements Dr. Janssen documented at the DIME were valid and correspond to 2% rating. Dr. Janssen should have given a 7% rating based on the DIME evaluation. The 5% rating he assigned is highly probably incorrect.

When a DIME's impairment rating has been overcome "in any respect," the proper rating becomes a factual matter for the determination based on a preponderance of the evidence. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (October 14, 2016). The only limitation is that the ALJ's findings must be supported by the record and consistent with the *AMA Guides* and other rating protocols. *Serena v. SSC Pueblo Belmont Operating Company LLC*, W.C. 4-922-344-01 (December 1, 2015). In determining the rating, the ALJ can take judicial notice of the contents of the *AMA Guides*, Level II Curriculum, the Division's Impairment Rating Tips (Desk Aid #11), and other such documents promulgated by the Division of Workers' Compensation. *Id.*

All three Level II physicians who have reviewed Claimant's case applied the same rating methodology: 5% under Table 53(II)(B) combined with range of motion deficits.¹ Claimant's range of motion will likely fluctuate from day-to-day, as evidenced by the slightly different measurements obtained by Dr. Neubauer, Dr. Janssen, and Dr. Messenbaugh. The ALJ concludes Dr. Neubauer's measurements are the best representation of Claimant's permanent impairment because they were taken closest to MMI.

ORDER

It is therefore ordered that:

1. Claimant's request to overcome the DIME regarding MMI is denied and dismissed.
2. Claimant's request to set aside the DIME's impairment rating is granted.
3. Insurer shall pay Claimant PPD benefits based on Dr. Neubauer's 11% whole person rating.
4. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

¹ Although Dr. Janssen gave 0% for range of motion, the ALJ is confident he would have given an additional 2% had he properly analyzed the rating tables.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 29, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable right knee injury during the course and scope of her employment with Employer on January 31, 2020.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment for her January 31, 2020 industrial incident.

FINDINGS OF FACT

1. Claimant works for Employer as a Merchandizing Specialist. Her job duties involve organizing product orders and returns, performing cycle counts and preparing items for distribution.

2. On November 30, 2015 Claimant obtained treatment for chronic knee pain from Craig Anthony, M.D. at St. Anthony's Family Medicine Center North. Dr. Anthony reported that Claimant presented with chronic right knee pain that began after bending down to pick something off the floor. His physical examination revealed right knee swelling, tenderness to palpation over the proximal lateral patella and upward radiating pain. Dr. Anthony suspected an ACL injury but x-rays only revealed mild tricompartmental osteoarthritis. He provided Claimant with an excused absence note and stated Claimant could return to full duty work.

3. On December 28, 2015 Claimant returned to Dr. Anthony for an examination. Dr. Anthony recounted that Claimant was experiencing worsening right knee symptoms including instability, locking and popping. Claimant specifically reported her knee felt unstable, locks, pops and gives out. A physical examination revealed mild tri-compartmental osteoarthritis and tenderness with a McMurray test. Dr. Anthony discussed a possible arthroscopic debridement and referred Claimant for an orthopedic evaluation. However, Claimant did not follow-up with treatment.

4. Claimant testified that she received an injection into her right knee in late 2015 or early 2016. She did not receive any further right knee treatment until December 2019.

5. On December 9, 2019 Claimant obtained right knee treatment from Tam Minh This Nguyen, PA-C at St. Anthony's Family Medicine North. PA-C Nguyen reported that Claimant injured her right knee on November 21, 2019 when someone fell and struck the inside of her right knee with his or her shoulder. Claimant's knee condition was improving without treatment until she experienced a pop on Thanksgiving Day. Claimant subsequently felt a constant throb in her medial right knee. She disclosed

her chronic knee pain and noted she had undergone a cortisone injection in the past. A physical examination revealed right knee swelling and tenderness to palpation. PA-C Nguyen and her supervising doctor Bruce Williams, M.D., suspected patellar tendonitis. They instructed Claimant to wear a knee brace while at work, continue NSAIDs and undergo x-rays.

6. Claimant testified the November 21, 2019 incident occurred while in a mosh pit at a concert. She explained that her right knee condition improved and returned to baseline for pain and functionality without any further medical treatment. Claimant did not undergo the recommended x-rays but utilized a knee brace while at work and continued to take NSAIDs.

7. Claimant remarked that she stopped wearing a knee brace in early January 2020 but continued to wear a knee compression sleeve. She commented that she was able to walk without any assistive device, climb ladders, kneel down, squat, bend and lift in excess of 60 pounds. Nevertheless, Claimant worked her full duties before and after the mosh pit incident.

8. Claimant explained that on the morning of January 31, 2020 she was reading a cycle count sheet while hastily walking through Employer's facility. She struck her right foot against a roll of dense carpet-like material that was improperly positioned in the walkway. Claimant specified that she struck the inside of her right big toe. The force pushed her right foot outward and caused intense burning pain in the interior or medial side of her right knee. After a moment, she slowly lowered herself to the ground. Eventually a coworker arrived and helped Claimant into a chair. Claimant then called Employer's nurse line and was referred for treatment.

9. Later on January 31, 2020 Claimant visited Lisa Grimaldi, PA-C at Concentra Medical Centers. PA-C Grimaldi recorded that she had difficulty understanding the exact mechanism of Claimant's injury. She noted that Claimant developed right knee pain when she was walking and hit something hard with her right foot. Claimant then went forward and hit her right knee, but did not strike the ground. PA-C Grimaldi noted Claimant's pain at a level of 10/10. Claimant had difficulty walking, arrived in a wheelchair and was using a cane to ambulate. Claimant noted she had chronic knee pain for years and used a knee brace. Physical examination was difficult because Claimant experienced pain with all movements. Claimant underwent x-rays that were normal. PA-C Grimaldi administered a Toradol injection and prescribed medication, a "hinged" knee brace, pain gel and physical therapy. She also assigned work restrictions.

10. Claimant initially denied any prior right knee injuries during the evaluation with PA-C Grimaldi. However, while at the appointment, a medical assistant overheard Claimant discussing a right knee injury with her husband that occurred at a "mosh pit" in November 2019. Because the medical assistant relayed the information to PA-C Grimaldi, she asked Claimant again about prior injuries. Claimant acknowledged she had suffered a right knee injury a couple of months earlier when she was in a mosh pit.

At hearing, Claimant explained that her husband pressured her not to disclose her right knee problems to her medical providers.

11. On February 1, 2020 Claimant visited Marc Passo, M.D. at Arvada Emergency and Urgent Care. Dr. Passo reported that Claimant was experiencing right knee pain from a trip and fall at work one day earlier. Claimant disclosed she injured her right knee in November 2019, but her condition improved without any acute medical intervention. X-rays were again normal and a physical examination revealed right knee swelling.

12. On February 3, 2020 Misty Merritt filed Employer's First Report of Injury on behalf of Respondents. Ms. Merritt reported that Claimant injured her right knee on January 31, 2020. The document noted that at the time of injury Claimant was walking and looking at a piece of paper. She then tripped over a bag that was sitting on the floor.

13. On February 4, 2020 Claimant returned to Concentra and was evaluated by Janine Kennedy, PA-C under the supervision of Authorized Treating Physician (ATP) Amanda Cava, M.D. PA-C Kennedy reported that Claimant was utilizing crutches and needed adjusted restrictions to allow her to return to work. A physical examination revealed limited flexion and extension. PA-C Kennedy requested Claimant's medical records regarding her prior right knee treatment. She diagnosed Claimant with a sprain or strain of the right knee or lower extremity. PA-C Kennedy instructed Claimant to continue physical therapy and use the brace and crutches. She limited Claimant to sedentary work only,

14. On February 11, 2020 Claimant returned to PA-C Kennedy for an evaluation. During the physical examination Claimant demonstrated limited flexion and extension. PA-C Kennedy referred Claimant for an MRI and instructed her to continue physical therapy and medications.

15. On February 17, 2020 Claimant underwent a right knee MRI. The MRI revealed a large medial meniscus bucket-handle tear with moderately advanced patellofemoral chondromalacia and arthritis.

16. On February 27, 2020 Claimant was evaluated by John Papilion, M.D. Dr. Papilion reported that Claimant injured her right knee while walking in a warehouse at work when she caught her right foot, twisted her right knee and fell to the ground. Claimant developed significant swelling within 24 hours and has been unable to extend the knee since the incident. Although Claimant disclosed a right knee injection approximately five years earlier, she did not mention the November 2019 mosh pit incident. Dr. Papilion diagnosed an incarcerated bucket-handle tear of the right medial meniscus. He determined that Claimant required surgery to address her ongoing right knee issues and noted she could not extend her knee due to the locked meniscus. On February 28, 2020 Dr. Papilion requested authorization to perform surgery on Claimant's right knee.

17. On March 11, 2020 Respondents filed a Notice of Contest.

18. On March 12, 2020 Claimant provided a recorded statement to Sue Massey on behalf of Respondents. Claimant disclosed her chronic knee pain, stated that she had received a cortisone injection in the past and noted she injured her right knee in a mosh pit incident in November 2019. She relayed that on January 31, 2020 she was reading a cycle count sheet while walking through her store when she struck her right foot against a roll of floor dry material. Claimant specified that she did not trip or strike her knee, but instead slowly lowered herself to the ground.

19. On March 16, 2020 Claimant returned for an evaluation with PA-C Kennedy at Concentra. PA-C Kennedy noted that Claimant had suffered a knee sprain with a large bucket handle tear of the medial meniscus. She remarked that the requested medical records for prior right knee injuries “did not supply much information as there was a limited knee exam done at the time and no imaging and therefore do not support a significant prior knee injury.” PA-C Kennedy summarized that Claimant had not made any further progress in physical therapy and still could not fully flex or extend her right knee.

20. On March 19, 2020 Respondents sent a denial of the requested right knee surgery to Dr. Papilion.

21. On July 14, 2020 Claimant underwent an independent medical evaluation with Timothy O’Brien, M.D. Dr. O’Brien recorded that on January 31, 2020 she was pushing a cart, struck her right foot and jolted her right knee. She did not fall, but slowly lowered herself to the ground. Dr. O’Brien remarked that Claimant did not twist her knee or slip. Claimant did not describe hitting her knee but only her foot. He reviewed Claimant’s medical records and conducted a physical examination. Dr. O’Brien explained that Claimant was not a “credible, reliable, or trustworthy examinee and therefore her representation that she sustained a work injury on January 31, 2020 by hitting her foot against an object should not be supported.” He detailed that Claimant was not forthcoming with Dr. Papilion at her first evaluation, with PA-C Grimaldi on January 31, 2020 or with PA-C Kennedy on February 4, 2020. Dr. O’Brien commented that Claimant should have apprised the three examiners that she sustained an injury requiring treatment weeks earlier. Furthermore, Claimant made historical revisions and exhibited inconsistencies about the mechanism of her January 31, 2020 injury. Moreover, in 2015 Claimant “had significant symptomology following an innocuous daily activity such as leaning forward” that was consistent not only with osteoarthritis but also a meniscus tear. In fact, the examiner in 2015 suggested arthroscopic surgery might be indicated and initiated an orthopedic referral, but Claimant did not follow through. Dr. O’Brien determined that it was medically probable that Claimant had a meniscus tear in 2015.

22. Dr. O’Brien also explained that Claimant’s described mechanism of injury on January 31, 2020 would not have caused a meniscus tear. Specifically, kicking something with the foot or hitting the knee after kicking something with the foot is not an injury mechanism that produces a meniscus tear. Dr. O’Brien detailed that meniscus

tears occur when the foot remains planted and the body rotates through a knee that is either actively flexing or extending. He noted that many times meniscus tears occur on fields of play such as soccer and football. Dr. O'Brien summarized that the most contemporaneous historical input provided by PA-C Grimaldi on the date of the incident "was not consistent with that type of injury mechanism that would produce a meniscus tear." He determined that Claimant had a pre-existing bucket-handle meniscus tear. Accordingly, Claimant did not suffer a right knee meniscus tear while working for Employer on January 31, 2020.

23. On November 5, 2020 Respondents sent a letter to ATP Dr. Cava asking her to review Dr. O'Brien's independent medical examination and complete a questionnaire. On December 3, 2020 Dr. Cava submitted answers. The first question inquired whether Claimant suffered a work related injury on January 31, 2020. Dr. Cava stated that, after considering Claimant's pre-existing injuries and the "very mild mechanism" that occurred on January 31, 2020, her "meniscal tear was not work-related." Question number six asked about Claimant's permanent work restrictions. Dr. Cava responded "[a]s the meniscal injury is not work-related, any permanent work restrictions should come from personal physician," Finally, Dr. Cava agreed that Claimant's symptoms constituted a "personal health issue."

24. On December 7, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. O'Brien. He maintained that Claimant did not suffer an industrial injury to her right knee while working for Employer on January 31, 2020. He remarked that Dr. Papilion over-interpreted the MRI findings and they did not reflect surgical intervention by way of arthroscopy was emergent or necessary. Instead, the bucket handle meniscus tear shown on the MRI was not caused by the January 31, 2020 incident because there was no evidence of an acute injury. Instead, Dr. O'Brien reasoned that Claimant had some type of meniscus tear dating back to 2015 that was substantial enough to result in a wobbly and very unstable knee. He detailed that Claimant's symptoms included right knee locking, popping, instability and giving way. Dr. O'Brien noted that Claimant's complaints in 2015 constituted "classic symptoms" for a medial meniscus. In fact, the treatment provider at the time suggested an orthopedic referral and possible arthroscopic surgery. Moreover, Claimant suffered another substantial injury in a mosh pit in November 2019. Dr. O'Brien remarked that when Claimant visited PA-C Nguyen on December 9, 2019 at St. Anthony's Family Medicine North she stated that she was shouldered in the knee when another person was falling. The mechanism was also described as an aversion injury where the knee was flexed laterally. Dr. O'Brien explained that, although Claimant did not specifically mention the mosh pit, there was an event in which someone fell into Claimant's right knee and forced the knee outward. He characterized the accident as "a tackling type of injury" that would occur on a football or soccer field. He remarked that "this is a classic injury for something that would consistently produce a meniscus tear." Dr. O'Brien summarized that Claimant had a meniscal tear in 2015 and developed similar symptoms as a result of the November 2019 mosh pit incident.

25. Dr. O'Brien also explained that Claimant's January 31, 2020 mechanism of injury would not have caused a meniscus tear. He commented that, because

Claimant's foot was in motion, she was in a single-leg stance on the left moving her foot forward on the right at the time her foot impacted the object. Her right foot could not have been planted on the ground. The preceding action could not have produced a tear because the meniscus tears when the foot is planted and there is torsion and sometimes direct loading of the knee. Meniscus tears can only be produced in the lab when the foot is stationary. Dr. O'Brien detailed that the January 31, 2020 incident did not involve any torsion. He remarked that, when any individual kicks an object, there is a straightforward force that loads the patellofemoral joint. In contrast, the mosh pit incident created a load between the femorotibial part of the knee that compressed the meniscus. Dr. O'Brien further reasoned that the right knee MRI revealed arthritis at the patellofemoral joint. When she kicked an immovable object, she loaded the arthritic patellofemoral joint, not the femorotibial joint or meniscus. Claimant's right knee pain was thus consistent with her underlying arthritic condition at the patellofemoral joint that manifested itself when her foot struck an immovable object. Nevertheless, Claimant did not suffer an injury on January 31, 2020 because there was no bruising and the right knee appeared normal. Moreover, the MRI scan did not reflect any evidence of an acute injury. Although Claimant had pain in her arthritic joint, there was no new tissue breakage or yielding. Accordingly, Claimant did not suffer an injury to her right knee meniscus while working for Employer.

26. Dr. O'Brien concluded that, within a reasonable degree of medical probability, Claimant did not suffer an injury that required medical treatment as a result of the January 31, 2020 work incident. He summarized that Claimant had some type of meniscus tear dating back to 2015 that was substantial enough to result in a wobbly and very unstable knee. Moreover, Claimant suffered another substantial injury in a mosh pit in November 2019. Finally, Dr. O'Brien did not believe Dr. Papilion knew about Claimant's medical history and over-interpreted the MRI scan. Furthermore, the mechanism and forces created by kicking an object would not have caused a meniscus tear. Although Claimant may have been more susceptible to pain as a result of kicking an object due to significant right knee degeneration, she did not suffer a right knee injury. Accordingly, Claimant did not suffer an industrial injury to her right knee while working for Employer on January 31, 2020.

27. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable right knee injury during the course and scope of her employment with Employer on January 31, 2020. Initially, Claimant explained that on the morning of January 31, 2020 she was reading a cycle count sheet while hastily walking through Employer's facility. She struck her right foot against a roll of dense carpet-like material and immediately experienced right knee pain. Employer referred Claimant to Concentra for medical treatment. Medical providers diagnosed Claimant with a sprain or strain of the right knee or lower extremity. Claimant subsequently received conservative treatment in the form of physical therapy and medications. A February 17, 2020 right knee MRI revealed a large medial meniscus bucket-handle tear with moderately advanced patellofemoral chondromalacia and arthritis. Dr. Papilion subsequently diagnosed an incarcerated bucket-handle tear of the right medial meniscus. On February 28, 2020 Dr. Papilion sought authorization to perform surgery on Claimant's right knee. Respondents denied the surgical request.

28. The record reveals that Claimant had the following significant pre-existing right knee problems prior to the January 31, 2020 incident:

- Claimant's previous right knee issues dated back to at least 2015 and included a positive McMurray's test with referral to an orthopedic specialist regarding possible surgical intervention;
- Claimant had ongoing popping in her knee where she would feel like she would need to fall down at times;
- Claimant had an injury to her right knee in November of 2019 when it was impacted by another person's shoulder in a mosh pit. Medical records reveal Claimant presented with bruising and swelling of her right knee after the incident;
- On Thanksgiving Day 2019 Claimant again sought treatment for pain in her right knee after it popped while simply walking and she had to sit down due to significant pain.
- Claimant was continuing to treat for pain associated with her right knee issues on January 31, 2020. She had been wearing a knee sleeve or brace and took Ibuprofen for pain shortly before the work incident.

29. In addition to Claimant's pre-existing right knee symptoms, the persuasive opinions of Drs. O'Brien and Cava also reflect that it is unlikely Claimant suffered a right knee injury during the course and scope of her employment with Employer on January 31, 2020. Dr. O'Brien maintained that the bucket handle meniscus tear shown on the MRI was not caused by the January 31, 2020 incident because there was no evidence of an acute injury. Instead, Dr. O'Brien specified that Claimant's significant right knee symptoms in 2015 were consistent with a meniscus tear. He detailed that Claimant's symptoms included right knee locking, popping, instability and giving way. Moreover, Claimant suffered another substantial injury in a mosh pit in November 2019. Dr. O'Brien explained that, although Claimant did not specifically mention the mosh pit, there was an event in which someone fell into her right knee and forced the knee outward. He remarked that "this is a classic injury for something that would consistently produce a meniscus tear." Dr. O'Brien summarized that Claimant had a meniscal tear in 2015 and developed similar symptoms as a result of the November 2019 mosh pit incident. The persuasive opinion of Dr. O'Brien thus reveals that Claimant's right knee meniscus tear likely preceded the January 31, 2020 work incident.

30. Claimant's January 31, 2020 mechanism of injury also likely would not have caused a meniscus tear. Dr. O'Brien commented that the January 31, 2020 event could not have produced a tear because the meniscus tears when the foot is planted and there is torsion and sometimes direct loading of the knee. He remarked that, when an individual kicks an object, there is a straightforward force that loads the

patellofemoral joint. In contrast, the mosh pit incident created a load between the femorotibial part of the knee that compressed the meniscus. Dr. O'Brien further reasoned that the right knee MRI revealed arthritis at the patellofemoral joint. Claimant's right knee pain was very consistent with her underlying arthritic condition at the patellofemoral joint that manifested itself when her foot struck an immovable object. Nevertheless, Claimant did not suffer an injury on January 31, 2020 because there was no bruising and the right knee appeared normal. Moreover, the MRI scan did not reflect any evidence of an acute injury. Although Claimant had pain in her arthritic joint, there was no new tissue breakage or yielding. Furthermore, ATP Dr. Cava persuasively agreed with Dr. O'Brien's assessment. On December 3, 2020 Dr. Cava submitted answers to Respondents' questionnaire. The first question inquired whether Claimant suffered a work related injury on January 31, 2020. Dr. Cava stated that, after considering Claimant's pre-existing injuries and the "very mild mechanism" that occurred on January 31, 2020, her "meniscal tear was not work-related." Based on Claimant's pre-existing right knee condition as well as the persuasive opinions of Drs. O'Brien and Cava, Claimant did not likely suffer an injury to her right knee meniscus while working for Employer. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); cf. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) (“right to Workers’ Compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment”). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when

making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable right knee injury during the course and scope of her employment with Employer on January 31, 2020. Initially, Claimant explained that on the morning of January 31, 2020 she was reading a cycle count sheet while hastily walking through Employer's facility. She struck her right foot against a roll of dense carpet-like material and immediately experienced right knee pain. Employer referred Claimant to Concentra for medical treatment. Medical providers diagnosed Claimant with a sprain or strain of the right knee or lower extremity. Claimant subsequently received conservative treatment in the form of physical therapy and medications. A February 17, 2020 right knee MRI revealed a large medial meniscus bucket-handle tear with moderately advanced patellofemoral chondromalacia and arthritis. Dr. Papilion subsequently diagnosed an incarcerated bucket-handle tear of the right medial meniscus. On February 28, 2020 Dr. Papilion sought authorization to perform surgery on Claimant's right knee. Respondents denied the surgical request.

9. As found, the record reveals that Claimant had the following significant pre-existing right knee problems prior to the January 31, 2020 incident:

- Claimant's previous right knee issues dated back to at least 2015 and included a positive McMurray's test with referral to an orthopedic specialist regarding possible surgical intervention;
- Claimant had ongoing popping in her knee where she would feel like she would need to fall down at times;
- Claimant had an injury to her right knee in November of 2019 when it was impacted by another person's shoulder in a mosh pit. Medical records reveal Claimant presented with bruising and swelling of her right knee after the incident;
- On Thanksgiving Day 2019 Claimant again sought treatment for pain in her right knee after it popped while simply walking and she had to sit down due to significant pain.
- Claimant was continuing to treat for pain associated with her right knee issues on January 31, 2020. She had been wearing a knee sleeve or brace and took Ibuprofen for pain shortly before the work incident.

10. As found, in addition to Claimant's pre-existing right knee symptoms, the persuasive opinions of Drs. O'Brien and Cava also reflect that it is unlikely Claimant suffered a right knee injury during the course and scope of her employment with Employer on January 31, 2020. Dr. O'Brien maintained that the bucket handle meniscus

tear shown on the MRI was not caused by the January 31, 2020 incident because there was no evidence of an acute injury. Instead, Dr. O'Brien specified that Claimant's significant right knee symptoms in 2015 were consistent with a meniscus tear. He detailed that Claimant's symptoms included right knee locking, popping, instability and giving way. Moreover, Claimant suffered another substantial injury in a mosh pit in November 2019. Dr. O'Brien explained that, although Claimant did not specifically mention the mosh pit, there was an event in which someone fell into her right knee and forced the knee outward. He remarked that "this is a classic injury for something that would consistently produce a meniscus tear." Dr. O'Brien summarized that Claimant had a meniscal tear in 2015 and developed similar symptoms as a result of the November 2019 mosh pit incident. The persuasive opinion of Dr. O'Brien thus reveals that Claimant's right knee meniscus tear likely preceded the January 31, 2020 work incident.

11. As found, Claimant's January 31, 2020 mechanism of injury also likely would not have caused a meniscus tear. Dr. O'Brien commented that the January 31, 2020 event could not have produced a tear because the meniscus tears when the foot is planted and there is torsion and sometimes direct loading of the knee. He remarked that, when an individual kicks an object, there is a straightforward force that loads the patellofemoral joint. In contrast, the mosh pit incident created a load between the femorotibial part of the knee that compressed the meniscus. Dr. O'Brien further reasoned that the right knee MRI revealed arthritis at the patellofemoral joint. Claimant's right knee pain was very consistent with her underlying arthritic condition at the patellofemoral joint that manifested itself when her foot struck an immovable object. Nevertheless, Claimant did not suffer an injury on January 31, 2020 because there was no bruising and the right knee appeared normal. Moreover, the MRI scan did not reflect any evidence of an acute injury. Although Claimant had pain in her arthritic joint, there was no new tissue breakage or yielding. Furthermore, ATP Dr. Cava persuasively agreed with Dr. O'Brien's assessment. On December 3, 2020 Dr. Cava submitted answers to Respondents' questionnaire. The first question inquired whether Claimant suffered a work related injury on January 31, 2020. Dr. Cava stated that, after considering Claimant's pre-existing injuries and the "very mild mechanism" that occurred on January 31, 2020, her "meniscal tear was not work-related." Based on Claimant's pre-existing right knee condition as well as the persuasive opinions of Drs. O'Brien and Cava, Claimant did not likely suffer an injury to her right knee meniscus while working for Employer. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street,

4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <https://oac.colorado.gov/resources/oac-forms>.*

DATED: January 29, 2021.

- If Claimant overcame the DIME, what is the correct rating?

FINDINGS OF FACT

1. Claimant worked for Employer performing janitorial services. She injured her low back on February 9, 2017 while throwing a bag of garbage over a wall into a dumpster.

2. Employer referred Claimant to CCOM for authorized treatment. She was diagnosed with a lumbar strain and referred to physical therapy. An MRI on March 16, 2017 showed degenerative disc disease, but nothing acute and no indication for surgery. Claimant received conservative care, including chiropractic, acupuncture, medications, and injections. She underwent a functional capacity evaluation (FCE) on February 28, 2018 that demonstrated the ability to work at the light physical demand level.

3. Dr. Jay Neubauer at CCOM put Claimant at MMI on March 29, 2018, with an 11% whole person rating. The rating was a combination of a 5% Specific Disorder impairment under Table 53(II)(B) and 6% for range of motion deficits.

4. Respondents requested a DIME to challenge Dr. Neubauer's rating. Dr. Michael Janssen was selected as the DIME physician.

5. Dr. Janssen evaluated Claimant on June 26, 2018. He agreed with Dr. Neubauer that Claimant reached MMI on March 29, 2018. He also agreed Claimant has 5% whole person impairment under Table 53 (II)(B). He took range of motion measurements and concluded they showed 0% impairment. Accordingly, Dr. Janssen's final rating was 5% whole person.

6. Dr. Robert Messenbaugh, an orthopedic surgeon, has performed multiple IMEs for Respondents regarding this claim. In his first IME report dated October 11, 2017, Dr. Messenbaugh supported the treating providers' determination Claimant suffered a compensable lumbar strain and was not at MMI.

7. Dr. Messenbaugh saw Claimant again on January 7, 2019. He agreed she reached MMI on March 29, 2018, and assigned a 10% whole person impairment. The rating was composed of 5% under Table 53(II)(B) and 5% for range of motion deficits.

8. Dr. Messenbaugh issued an addendum report on March 7, 2019. He opined Dr. Janssen's rating was incorrect because the measurements recorded on the DIME worksheet correspond to a 2% impairment. He opined the correct rating "should be somewhere between 7% and the 11% provided by Dr. Neubauer."

9. At hearing, Dr. Messenbaugh opined the variation in Claimant's range of motion measurements from different providers (*i.e.*, 6%, 5%, 2%) falls within the expected range of day-to-day variability. He confirmed the measurements from his IME were taken with a goniometer per *AMA Guides* criteria.

10. The ALJ agrees with Dr. Messenbaugh's analysis regarding Dr. Janssen's range of motion measurements.

11. Claimant presented no persuasive evidence she was not at MMI on March 29, 2018 as determined by Dr. Neubauer, Dr. Janssen, and Dr. Messenbaugh. Claimant failed to overcome the DIME's MMI determination by clear and convincing evidence.

12. Claimant proved Dr. Janssen's 5% rating is highly probably incorrect. Claimant overcame the DIME by clear and convincing evidence.

13. Claimant proved by a preponderance of the evidence she suffered 11% whole person impairment.

CONCLUSIONS OF LAW

A DIME's determination regarding MMI and whole person impairment are binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(C). This is a higher standard of proof than the typical "preponderance" standard. Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the impairment rating is incorrect. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Maximum medical improvement (MMI) is defined as the point when any medically determinable physical or mental impairment from the industrial injury has become stable and no further treatment is reasonably expected to improve the claimant's condition. Section 8-40-201(11.5). As found, Claimant failed to overcome the DIME's MMI determination by clear and convincing evidence. Three Level II physicians agree Claimant reached MMI on March 29, 2018 and no physician has opined to the contrary. Although a Claimant is not required to present expert opinion to prove her case, there must be some persuasive evidence that her condition has not plateaued and pointing to some additional treatment reasonably expected to improve her condition. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). The ALJ sees no such evidence on the present record.

A DIME physician must rate impairment consistent with the *AMA Guides*. Section 8-42-101(3.7); *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2003).

The DIME's deviation from the rating protocols is evidence from which the ALJ can determine the DIME's rating was overcome. *Wilson v. Industrial Claim Appeals Office, supra; McCardie v. Transit Concrete Co.*, W.C. No. 4-964-260-01 (January 19, 2018).

As found, Claimant overcame Dr. Janssen's rating by clear and convincing evidence. Dr. Janssen clearly erred by assigning a 0% rating for lumbar range of motion. As Dr. Messenbaugh persuasively explained, the measurements Dr. Janssen documented at the DIME were valid and correspond to 2% rating. Dr. Janssen should have given a 7% rating based on the DIME evaluation. The 5% rating he assigned is highly probably incorrect.

When a DIME's impairment rating has been overcome "in any respect," the proper rating becomes a factual matter for the determination based on a preponderance of the evidence. *Newsome v. King Soopers*, W.C. No. 4-941-297-02 (October 14, 2016). The only limitation is that the ALJ's findings must be supported by the record and consistent with the *AMA Guides* and other rating protocols. *Serena v. SSC Pueblo Belmont Operating Company LLC*, W.C. 4-922-344-01 (December 1, 2015). In determining the rating, the ALJ can take judicial notice of the contents of the *AMA Guides*, Level II Curriculum, the Division's Impairment Rating Tips (Desk Aid #11), and other such documents promulgated by the Division of Workers' Compensation. *Id.*

All three Level II physicians who have reviewed Claimant's case applied the same rating methodology: 5% under Table 53(II)(B) combined with range of motion deficits.¹ Claimant's range of motion will likely fluctuate from day-to-day, as evidenced by the slightly different measurements obtained by Dr. Neubauer, Dr. Janssen, and Dr. Messenbaugh. The ALJ concludes Dr. Neubauer's measurements are the best representation of Claimant's permanent impairment because they were taken closest to MMI.

ORDER

It is therefore ordered that:

1. Claimant's request to overcome the DIME regarding MMI is denied and dismissed.
2. Claimant's request to set aside the DIME's impairment rating is granted.
3. Insurer shall pay Claimant PPD benefits based on Dr. Neubauer's 11% whole person rating.
4. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

¹ Although Dr. Janssen gave 0% for range of motion, the ALJ is confident he would have given an additional 2% had he properly analyzed the rating tables.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 29, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Zuehlsdorff for Claimant's Whole Person Impairment Rating?
- II. Has Claimant, by a preponderance of the evidence, shown that he is entitled to Medical Maintenance Benefits?

STIPULATIONS

Claimant's Average Weekly Wage is \$1,233.00. The ALJ accepted this stipulation.

EVIDENTIARY ISSUES ARISING DURING THE HEARING

Dr. Basse's IME Report

As already noted, Claimant's Exhibits 1 through 6, and Respondents' Exhibits A through M were admitted without objection. As such, they are rightly before the ALJ, and have all been reviewed to assist in rendering a decision for everything at issue in this case. The single, unamended, DIME report was issued 5/10/19.

However, during the examination of the DIME physician, Dr. Zuehlsdorff, it was revealed that Claimant's attorney, without leave of the Division or OAC, had, one day prior to the hearing, sent two items to the DIME physician for his review and possible impressions, to wit:

- 1) The IME report of Dr. Basse, dated 8/20/19 {Ex L}, and
- 2) Neuropsychological testing results from Lisa Townsend, Psy.D, dated 7/3/19 and 8/7/19 {Ex. K}.

The DIME physician himself had recommended the neuropsychological testing in his DIME report. There was also a brief telephonic conversation between the DIME physician and Claimant's attorney for the sole purpose of confirming receipt of these reports. When asked, both Claimant's attorney and the DIME physician freely confirmed this transaction, and opined that nothing inappropriate had occurred by transmitting and receiving these documents for review.

Respondents' attorney then asked that the DIME physician's entire testimony be stricken as a sanction for unauthorized communication with the DIME physician. At that time, this ALJ declined to do so, stating:

THE COURT:Well, I'm not prepared to strike his entire testimony. There is some concern that this was sent ultra vires, as it were, and without knowledge of the Court or Opposing Counsel. So it is a concern.

What I am prepared to do is simply redact or *disregard anything to do with this witness commenting on anything from Dr. Basse's report*. I'm prepared to do that.

.....What I will do, Ms. [Redacted], is allow you to brief the issue [of striking the entire testimony of the DIME physician]. And if you have case law that says that's an appropriate sanction, I'll reconsider my ruling. (Hearing transcript, pp. 140-141) (emphasis added).

Upon further research and review of the record, the ALJ is unaware of any case law mandating such a result. Had Claimant's attorney conveyed these reports through authorized channels, there is little doubt they could have been viewed and critiqued by the DIME physician anyway. Such comparison would likely have relevance to the central issue in this case. And, not without reason, and knowing the DIME physician would testify by phone, Claimant's attorney felt it to be far more efficient to send the reports up one day in advance, since there would be no meaningful way ask the DIME's impressions during the hearing. Nonetheless, the rules regarding contact with the DIME physician are there for a reason, and one should not 'profit' from a breach of those rules, even if such breach was done in good faith- as the ALJ concludes here. For that reason, the initial ruling, as announced above, will remain in effect, and the ALJ will admit the testimony of the DIME physician, but sans any comparison or critique of Dr. Basse's report.

Neuropsychological Reports

The analysis of what to do with the unauthorized transmission of the neuropsychological reports (Ex. K) is somewhat different. Once again, the ALJ concludes this occurred in good faith, but erroneously. However, in this case, Respondent's counsel chose to cross-examine the DIME physician in some detail over the contents of this report, and invited his opinion of the contents. The ALJ finds that this document was effectively litigated by consent of both parties. More to the point, however, is the conclusion of the DIME physician, as noted on Pages 173-174 of the hearing transcript.

THE WITNESS: My DIME opinion is still my DIME opinion at this point. This....neither one of these records which I have been given – it sounds like maybe shouldn't have or whatever, I don't quite understand the reasoning on that. But *neither one of thoseeither Dr. Basse's report or this neuropsych eval – changed my opinion as so stated in the DIME at this time*. (emphasis added).

THE COURT: Okay. *Nor anything else that you might have recommended?*

THE WITNESS: *No*.

The ALJ therefore will therefore admit the questioning of the DIME physician on the neuropsychological examination by both parties, and finds that the DIME physician was not unduly influenced by the transmission of these reports.

Medical Records of Claimant / Possible Preexisting Conditions

As cross-examination of the DIME physician progressed, it became increasingly clear during the hearing that certain medical records of Claimant had been admitted by the ALJ, but *had not been conveyed by Respondents to the DIME physician* during the DIME protocol. In summary, such records occasionally referenced headaches and other similar symptoms which were noted *prior to* Claimant's industrial injury. The ALJ notes that this was due to apparent *inadvertence* by Respondents (presumably support staff), since this time *Respondents'* attorney was caught by surprise - but also in good faith.

As a result, the DIME physician was cross-examined, by telephone, about reports which he had never seen, and which therefore could not form the basis of his written DIME report. In the final analysis, while this time-consuming process was allowed to proceed, the ALJ will not fault the DIME's failure to note such preexisting reports in his written report- since he was unaware of their existence, *and through no fault of his*. Far more importantly, as the hearing progressed, and such reports were discussed, *it became clear that such reports had no significant effect on his final opinion of his Impairment Rating*. So now, on with the show.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Injury and related Testimony

1. Claimant is currently 60 years old. He supervises offenders in the laundry department at the Employer. He sustained an admitted work injury on October 26, 2017 while at work when a table fell on him hitting his head and upper back. (Ex. G, pp. 48, 111).

2. This injury occurred in an institutional laundry when a large heavy seven-foot folding table was leaning against the wall, and it was accidentally dislodged by one of the offenders. It then fell and struck Claimant while he was kneeling down, knocking him to the ground. Claimant indicated that he was dazed by the force of the blow, and was also propelled downward into the concrete floor striking his head. He immediately began experiencing symptoms of pain, disorientation, dizziness, buzzing in his ears, with concomitant headaches and memory loss. At hearing, Claimant estimated the table to weigh approximately 200 pounds.

3. Claimant testified that he did have a prior work related injury in 2011 that resulted in a left shoulder surgery; however, the headache and mental symptoms he

experienced after the injury of October 26, 2017, were completely different from any symptoms he suffered from previously. Claimant also testified that he continued to treat with Dr. Olson right up until the day before this hearing. He testified that his wife and children noticed that he continues to appear distracted and has momentary memory loss. He also testified that his ongoing symptoms of dizziness, headaches and buzzing in his ears continued up until the date of this hearing.

4. Claimant confirmed that he was released to return to his normal work duties following the October 26, 2017 incident, and he did so. In testifying about his symptoms, Claimant stated that they are “fluctuating,” that if he turns his head to the left he has “ringing” in his ear, he still has pain in his thoracic back and neck, and stated that when his neck hurts he gets a headache, and his memory issues have “just been here and there”. He described his headaches as being “periodic”.

Treatment with ATP Dr. Olson

5. Claimant treated for this work injury with Dr. Daniel Olson at CCOM. Claimant has also been seeing Dr. Olson for maintenance care for a prior 2011 work injury to his shoulder. During his initial evaluation on October 26, 2017, Claimant reported feeling dazed but did not lose consciousness. “He noticed a headache, as well as some unsteadiness with his gait. He still notices some nausea but has not thrown up. He also notices some discomfort in his upper back and neck area. His pain level is 5.” (Ex. G, p. 111).

6. Claimant was noted to be “alert and oriented...His mental status is sharp and he answers questions quickly and speech is coherent. Cerebellar testing was normal...He was able to perform a tandem gait without difficulty. He is able to balance on each foot separately...Palpation to the back of his head does not show any particular taken [sic] the scalp.” *Id.* Claimant was diagnosed with a concussion, which was anticipated to resolve. Due to his continued nausea and headache, Claimant was referred for a CT scan. *Id.* at 112.

7. The brain CT scan from October 26, 2017, showed “mild chronic small vessel ischemic change. No acute findings.” *Id.* at. 117.

Claimant Placed at MMI with Impairment Rating for Thoracic Spine Only

8. After receiving almost a year of conservative treatment, including physical therapy, massage therapy, and acupuncture, Claimant was placed at maximum medical improvement (MMI) by Dr. Olson on August 29, 2018. (Ex. G, pp. 55-56). In the August 29, 2018 MMI report, Dr. Olson noted, “He also brought up some headaches but he really has not been complaining of it. He states he has occasional memory lapses.” Despite these complaints as noted, Dr. Olson provided Claimant with a permanent rating of 10% whole person for his thoracic spine only. *Id.* at 49.

9. According to Dr. Olson's deposition testimony, Claimant's primary complaint during the course of his treatment was thoracic back pain.

10. Dr. Olson testified that post-concussive symptoms usually clear up in three months. He indicated it was not until Claimant's last visit, on August 29, 2018 that Claimant mentioned to him that he was having memory issues. He also stated that he did not recall Claimant "complaining as much about the neck pain. That's why – or the headaches. I guess that's why I did not rate them when I did my impairment rating." He did not diagnose Claimant with post-concussive syndrome, nor opine that Claimant's current cognitive or headache complaints were related to the October 26, 2017 work injury.

Respondents request a DIME to challenge the 10% Impairment Rating by Dr. Olsen for Thoracic Spine

11. Claimant subsequently attended a Division IME (DIME) with Dr. Gary Zuehlsdorff on May 10, 2019. Dr. Zuehlsdorff notes, under Current Subjective:

The patient notes primarily he has right mid thoracic pain and somewhat mid scapular in right paravertebral are that he would rate at 4-8/10 constant. Secondly, the right side of his neck and really points more to the suboccipital region and a little bit of the upper lateral aspect of his neck that he also would rate about a 4-8/10 and maybe a little bit less than the thoracic, but numerically he does not state that. Thirdly, he feels he has basically right and frontal headaches especially when his occipital neck area flares up, and these are intermittent. He claims they really come on when his occipital neck area kicks up. He will get some nausea with these but no real double or blurry vision or aura. No hemiplegic type symptoms or signs either, and he has not vomiting. He also denies lightheadedness, dizziness, vertigo, and balance issues. (Ex. J, p. 150).

12. Dr. Zuehlsdorff agreed Claimant had reached MMI as per Dr. Olson, however, instead of noting the MMI date as August 29, 2018 as provided by Dr. Olson, he instead lists it as September 4, 2018, which is the date of Dr. Olson's impairment rating report. Dr. Zuehlsdorff provided Claimant with a 6% whole person rating for his thoracic spine. *Id.* at 152. He also diagnosed Claimant with post-concussive syndrome and provided him with a 10% whole person rating for "Episodic Neurologic Disorders" primarily for his reports of headaches for "slight interference with daily living". *Id.* Those two ratings then combined for a 15% Whole Person Impairment Rating.

13. Dr. Zuehlsdorff recommended maintenance care only for Claimant's post-concussive syndrome, including a brain MRI, neuropsych evaluation, and soft treatment modalities to the right suboccipital region, including acupuncture, stim unit, injections, and medications such as Elavil which had been proven to be effective in post-concussive syndrome headaches. He also opined that after the workup and treatments

have been accomplished, a possibility for recalculating the impairment provided under Episodic Neurological Disorders could be a possibility. *Id.* at 153.

14. Dr. Zuehlsdorff felt Claimant had an episodic neurological disorder component of his occipital headaches, which also included some of his concussive symptoms. He also felt that Claimant might have had some sleep alteration from this injury. However, he saw only four dates in the record prior to the date of injury noting headaches, the most recent from April 12, 2014. He also opined that there was no cervical spine injury to warrant a spinal rating for impairment. He opined Claimant's headaches arose from cervical spine pathology, which he felt was the actual cause of Claimant's current symptoms.

15. When questioned specifically about records [some of which Dr. Zuehlsdorff had received, some of which he apparently did not] reflecting headache symptoms predating the work injury, Dr. Zuehlsdorff elaborated:

In review of the record, there are four dates in the record prior to the date of injury noting headaches, but there's very little in each of those records reflecting that. And the most recent notation of anything in a headache prior to this injury was 4/12/14, which was three-and-a-half years before this date of injury. And there's nothing in that time span.

And.....there's always a possibility we don't have all records, but, in the absence of that data to support that, if somebody is having an ongoing, chronic debilitating headache syndrome, I would think the records would be much more replete with evidence of that and not have a three-and-a-half-year gap before this injury before he starts having headaches again.

So, in my opinion, the pre-existing headache complex is not the current complex. It is not the cause of the current complex. (Hearing transcript, pp. 135-136) (emphasis added).

16. Dr. Zuehlsdorff also testified as to his normal procedure for preparing for a Division Independent Medical exam and the amount of time he spent with Claimant. He also testified that based upon the description of the industrial injury, he would say that he had at least a low moderate type of injury. 'If not a more middle moderate'. He also testified that it is not uncommon in the occupational medicine field to focus on the orthopedic injuries more intensely than the subtleties of a head injury. He went on to describe the symptoms one might experience with a mild head injury and they included visual difficulties, blurry vision, double vision, trouble focusing, memory loss and difficulty analyzing information and tinnitus. He used the example of the standard bell curve and explained that head injuries can often fall outside the outlier of the standard bell curve. He stated that it is unfair and unwise to always believe that mild head injury symptoms will resolve quickly. He testified that just because someone may have had head injury symptoms before such as headaches, that does not rule out a secondary and more serious injury. His diagnosis, reiterated at hearing, was: "number one, right sided headaches, occipital concussive injury secondary to contusive mechanism of table falling onto the right side of the head and right sided the thoracic area."

Prior Medical Records

17. Medical records show Claimant has a reported history of headache complaints and sleep issues prior to the date of injury:

- 5/1/04 – Claimant complained of restless sleep, loud snoring...a score of 17/24 indicating severe hypersomnolence per patient report,...and morning headaches. (Ex. D, p. 34). A sleep study showed a mild component of apnea. Recommendations for a sleep latency test to assess for narcolepsy and/or evaluation by a sleep medicine physician were made. *Id*
- 4/27/12 – Claimant reported “pain in neck and pain in headache. He gets headaches with it occasionally.” He was referred for a cervical spine MRI. (Ex. B, p. 12)
- 5/6/12 – Claimant reported waking up with “severe headache” and had limited balance, right after a fall which injured his shoulder. (Ex. A, p. 1) There is nothing indicating any follow-up treatment for these symptoms.
- 9/25/12 – Claimant continues treatment for his shoulder injury from the fall. Claimant reported frequent headaches. “[F]inds positioning his head and neck at night when he is sleeping clearly aggravates his neck and causes headaches.” It was noted the cervical MRI showed moderate stenosis at C4-5 and C5-6. (Ex. B, p. 11). No follow-up treatment was noted for his headaches.
- 10/18/12 – Claimant attended a DIME for a prior left shoulder injury from September 15, 2011. Claimant reported he wakes up with a headache when he lays on his back and has pressure on his neck. (Ex. C, p. 15). He reported the headaches are “very severe, has caused vomiting, and he cannot focus his eyes during the headache.” Headache episodes have lasted for a day and a half.” *Id*. The DIME’s diagnosis of Claimant included “chronic neck pain” and “recurrent severe headaches, migraine-like episodes”. *Id*. at 21. The DIME concluded, however, that any headaches were *not related* to the shoulder injury.
- 10/16/13 – Claimant noted a history of headaches on an intake form. (Ex. E, p. 37)
- 4/2/14 – Claimant noted symptoms including “headaches” and “loss of sleep”. (Ex. G, p. 114). No follow-up treatment for headaches was indicated.
- 7/11/14 – Claimant again notes a history of headaches on an intake form. (Ex. E, p. 36) No follow-up treatment for headaches was indicated.
- 1/8/15 – Claimant notes a history of headaches, anxiety and depression. (Ex. F, p. 39). No follow-up treatment was mentioned for headaches.
- 2/16/15 – Review of Claimant’s symptoms notes “headaches, sleep loss, anxiety, tinnitus”. (Ex. A, pp. 2, 4). No headache follow-up.

- 3/31/15 – Claimant notes headaches and neck pain symptoms. (Ex. D, p. 33). No headache follow-up treatment.
- 9/4/15 – Claimant notes a history of headaches, anxiety and depression. (Exhibit F, p. 38). No headache follow-up treatment noted.

Objective Testing

18. After the DIME, Dr. Olson referred Claimant for a brain MRI, neuropsychological evaluation and prescribed Elavil as recommended by the DIME. The brain MRI performed on June 27, 2019, showed only degenerative changes. Findings were “no evidence of acute intracranial hemorrhage mass effect or acute ischemia. Mild diffuse parenchymal atrophy of the cerebrum and cerebellum. Several focal areas of increased T2 signal in the periventricular and subcortical white matter both cerebral hemispheres likely chronic microvascular ischemia.” (Ex. G, p. 115).

19. The neuropsychological evaluation performed was performed by Dr. Lisa Townsend upon referral from Dr. Olson over dates from July 2019 and August 2019. Dr. Townsend notes that Claimant’s self-reported concussion symptoms are “elevated” and “cannot be explained.” (Ex. K, p. 162). She opined that one explanation could “be associated with early neurologic symptoms unassociated with concussion.” *Id.* She opined that Claimant’s pattern of test scores “most likely associated with non-concussion etiologies and mild anxiety/sleep.” *Id.*

Dr. Rachel Basse’s IME

20. At hearing, Dr. Rachel Basse, was accepted as an expert in physical medicine and rehabilitation and chronic pain medicine, Level II Accredited. She performed an Independent Medical Examination (IME) of Claimant in August 2019. As part of her IME, Dr. Basse took a history from Claimant, reviewed medical records, and performed a physical examination of Claimant.

21. Dr. Basse opined that Claimant does not have post-concussive syndrome related to the October 26, 2017 incident. She explained that while Claimant had some acute concussion symptoms immediately after the incident, like feeling dazed, had a headache, had some unsteadiness, he did not have any retrograde or anterograde amnesia, had no loss of consciousness, was able to give a clear and concise history on the date of injury, able to answer questions quickly and sharply, which indicates that any concussive event that occurred was mild.

22. She explained this is supported by the fact Claimant was able to continue his full-time, regular duty work without the need for brain rest or because his symptoms were precluding his ability to work. Dr. Basse explained that the natural course of a mild concussive event is complete recovery over a course of days to months. She explained that even a moderate concussion usually only took three to four months to recover.

23. Dr. Basse testified that there are other potential causes explaining his current symptoms. She explained that the CT scan from October 26, 2017 noted small ischemic changes, which she explained were changes in the brain due to less blood flow. Also, Claimant's sleep impairments were important in relation to cognitive issues, of which medical records showed was an issue prior to the date of injury. In her IME report, Dr. Basse noted that Claimant reported he has had insomnia since 2011. (Ex. L, p. 185).

24. Dr. Basse opined there are other explanations for ringing in the ears besides a concussion. Dr. Basse's opinion is supported by the fact that Claimant previously reported [after a 2012 shoulder injury] ringing in his ears prior to the date of injury in this matter. (See Ex. A, pp. 2, 4).

25. She also explained that there are other explanations for Claimant's current headaches other than from a concussion, including neck pain, cervical spine issues, like nerves or facet joints, arthritis, age, but that they are not likely due to concussion from the October 26, 2017 incident, based on his initial presentation and the normal course of recovery expected for this type of concussion.

26. Dr. Basse agreed with the DIME that Claimant's headaches were cervicogenic, but opined they were not the result of the October 26, 2017 incident. *Id* at 188. She testified that Claimant had previously reported headaches with neck pain since 2012, and headaches associated with sleep loss in 2014. Dr. Basse opined that early on, Claimant's headaches may have been related to his concussion from the October 26, 2017 incident, but his current headaches are not.

27. Dr. Basse stated that the neuropsychological evaluation objectively supports her opinion that Claimant's cognitive issues were not caused from a concussion, as the neuropsychologist opined Claimant's "pattern of test scores most likely associated with non-concussion etiologies and mild anxiety/sleep."

28. Dr. Basse also explained the brain MRI from June 27, 2019 showed mild diffuse parenchymal atrophy of the cerebrum and the cerebellum and chronic ischemia. She explained the cerebrum is the matter in the brain and the cerebellum is the smaller part in the back that controls motor and balance. She explained the MRI showed mild but diffuse atrophy or decreased in size atrophy of these areas throughout. She further opined it continued to show chronic microvascular ischemia, or decreased blood flow to the area and as a result become defunct.

29. Dr. Basse explained that these results were significant, as they show there is something else going on, and that there is a non-concussive, non-traumatic explanation for Claimant's current cognitive symptoms.

30. Dr. Basse opined that Dr. Zuehlsdorff's diagnosis of post-concussive syndrome as a result of the October 26, 2017 work injury was not supported by the medical evidence. She explained there was no documentation in the medical records to support that Claimant had a concussive event to the extent that it would be expected to have lasted this long, and to this degree. She explained Claimant's initial symptoms were consistent with a mild concussive event, which is supported by: 1) subsequent

course of full-time regular duty work, 2) the lack of significant complaints early on in the medical records, and 3) the objective diagnostic studies, including the MRI and the neuropsychological study, which results are not consistent with a concussion.

31. Dr. Basse opined Claimant does not have a post-concussive syndrome as a result of the October 26, 2017 event. Therefore, a 10% whole person permanent impairment rating for episodic neurological disorders is not proper in this case. She also opined that, based on her examination, Claimant's thoracic impairment rating would be 5% whole person, as his range of motion was slightly improved from Dr. Zuehlsdorff's measurements. (Ex. L, pp. 188-189).

32. Dr. Basse opined that Claimant does not require any ongoing maintenance care for his work-related injuries from October 26, 2017.

Maintenance Care

33. Claimant testified that Dr. Olson continues to prescribe ibuprofen and Flexeril [cyclobenzaprine] for this injury. Claimant mentioned no other medications or treatment modalities recommended by Dr. Olson for maintenance care in this claim. However, Claimant also testified that these are the same prescriptions, along with tramadol, he was receiving under his prior 2011 claim which he testified gave him headaches and caused dizziness.

34. The ALJ takes administrative notice of the fact Respondent has admitted to maintenance care for the 2011 work injury.

35. Claimant further testified that none of the other treatment he received under the present claim eliminated his pain - massage therapy "felt good but never really eliminated the pain" ; physical therapy "just hurt more"; acupuncture provided only temporary relief ; chiropractic therapy "just made matters worse for me"

36. The DIME physician did not recommend any maintenance care for this injury, except for treatment for claimant's post-concussive syndrome. He did not recommend any maintenance care directed to Claimant's thoracic back. (Ex. J, pp. 152-153).

37. Several of the medical maintenance treatment modalities recommended by the DIME report were adopted by the ATP, to include the neuropsychological exam and the brain MRI. As noted by Dr. Zuehlsdorff, the results therefrom did not change his DIME opinion on Impairment or MMI-*nor would other diagnostics*. Due to the passage of time, Dr. Zuehlsdorff felt that the effective window for certain treatments or diagnostic may have already opened and closed. There is secondhand information that the Elavil was discontinued by Claimant, and that Claimant found other modalities ineffective. Cognitive rehabilitation was recommended, but nothing in the record indicates if it was followed through.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a worker's compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this case, the ALJ finds Claimant to be sincere, forthright, and credible at every stage of the process. He was candid with all medical practitioners, including the independent examiners. While unable to precisely articulate the difference between his prior headache symptoms, and those since the injury, he credibly has characterized them as qualitatively different.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ as well. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ finds that there are [as is commonly the case] sincere differences in medical opinion - often driven by sincere differences in medical

philosophy - which do not necessarily reflect on one's *credibility*. Rather, the ALJ must determine who is more *persuasive* in their assessments, remaining mindful of the burden of proof.

Overcoming a DIME Opinion, Generally

E. The finding of a Division Independent Medical Examiner (DIME) may be overcome only by clear and convincing evidence. (CRS 8-42-107(8)(c). "Clear and convincing" evidence is stronger than a preponderance, is unmistakable, and is free from serious or substantial doubt. *Martinez v. Triangle Sheet Metal, Inc.* (W.C. 4-595-741, ICAO, October 8, 2008), *citing Dilco v. Koltnow*, 613 P. 2d 318 (1980). A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* (W.C. 4-782-625. ICAO May 24, 2010). The question whether a party has overcome the DIME by clear and convincing evidence is one of fact for the ALJ's determination. *Metro Moving and Storage Co. V. Gussert*, 914 P.2d 411 (Colo. App. 1995).

F. The decisions of a DIME physician are only to be given presumptive effect when provided by the statute. Maximum Medial Improvement is defined at 8-40-201(11.5), C.R.S. as: "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." When a course of treatment has a reasonable prospect of success and a claimant willingly submits to such treatment, a finding of MMI is premature. *See, Reynolds v. ICAO*, 794 P.2d 1080 (Colo. App.1990). The definition of MMI found in the above section contains two components or requirements for a finding of MMI; first, that the condition resulting from the injury be stable and secondly, that no further treatment is reasonably expected to improve the condition. The use of the conjunctive "and" in the definition of MMI connotes that both stability of the condition and the absence of further treatment reasonably expected to improve the condition must be present in order for MMI to exist. However, in this case, MMI is not at issue.

G. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert*, 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998).

Overcoming the DIME Impairment Rating for Episodic Neurological Disorders

H. The issue here is fairly narrow. Dr. Basse freely admitted she had a differing medical opinion than Dr. Zuehlsdorff, and that having different medical opinions did not render one opinion right and the other wrong. Her primary criticism of the DIME is that he did not have complete information when he rendered his opinion. Such a

critique might have carried greater weight had the DIME physician not testified at hearing – but he did. While both parties bear some responsibility for this lack of pertinent information [and which has been addressed by the ALJ at the beginning of this Order], the ALJ is satisfied that the DIME has now had time to digest the pertinent records. He has articulated that his DIME opinion has not changed - nor would it, even if his other medical maintenance recommendations were followed. Dr. Zuehlsdorff was simply not impressed by the neuropsych evaluation results [despite having recommended it]. *But he did not fail to consider them-despite both parties' failure to inform him via a Samms conference.* When confronted with a handful of additional records (none of which were apparently serious enough to warrant follow-up treatment by the physicians involved) wherein Claimant reported headaches, he indicated his analysis did not change. He felt, and still does, that Claimant's current complaints stem from this work accident, and not from periodic complaints of headaches or sleep issues occasionally occurring since a 2011 injury. Is it possible, perhaps even equally possible, that Dr. Basse is correct? Yes it is. But Respondents have a higher burden than that.

I. The DIME report itself has considerable detail. Much time was spent analyzing the medical history what was provided through proper channels. His physical examination appears to have been thorough. Lest he be accused of bias, his spinal Impairment Rating actually went down from that posited by the ATP. He made recommendations for follow-up treatment, some of which were adopted by the ATP. In the final analysis, Respondents disagreed with the Impairment Rating by the ATP. They then requested a DIME, with the expectation that the results of said exam would be presumptively valid, and only to be overcome by clear and convincing evidence. This is what occurred. In the end, the sincerely differing opinions of Dr. Zuehlsdorff, and those of Drs. Olson and Basse are exactly that - differing opinions. The ALJ has not been persuaded that the DIME opinion [as expressed in writing, and by phone testimony] is highly probably incorrect. To the contrary, substantial evidence supports the DIME's opinion.

Medical Maintenance Benefits

J. The issue here is also a narrow one. No medical maintenance is being requested for Claimant's spinal injury- just his cognitive issues. The primary diagnostics requested by Dr. Zuehlsdorff (brain MRI and neuropsych eval) were completed, and changed nothing. Dr. Zuehlsdorff himself felt that the window for certain modalities had perhaps already closed. It is unclear what those modalities were. There is conflicting evidence of what treatment might have been rejected, or deemed undesirable by Claimant. Cognitive rehabilitation was recommended, but that was almost a year ago from the date of this Order.

K. Because of the great uncertainty of what ongoing treatment might be effective at this juncture, the ALJ will refrain from specifying any modalities. Those would best be determined by his ATP, who, despite the DIME result, has Claimant's best interests in mind. For that reason, the ALJ will order only a general award of medical maintenance benefits, the specifics of which are to be determined by the ATP.

ORDER

It is therefore Ordered that:

1. Respondents have not overcome the DIME opinion of Dr. Zuehlsdorff.
2. Respondents shall pay for medical maintenance benefits, as determined by the ATP.
3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: January 30, 2020

Colorado Springs, Colorado 80906

ISSUES

- I. Whether Dr. Yamamoto is an authorized provider based on Dr. Anderson-Oeser's referral.
- II. Whether Claimant has made a "proper showing" for a change of physician to Dr. Yamamoto pursuant to §8-43-404(5)(a)(VI)(A), C.R.S.

PRELIMINARY ISSUES

Objection to Respondent's Exhibit A:

At hearing, Claimant objected to the admission of Respondent's Exhibit A, a voicemail message from Diana O[Redacted], the referral coordinator at Dr. Anderson-Oeser's office, to Marleen Kordik, Respondent's counsel's paralegal, on the basis that it was an impermissible ex-parte communication with a treating physician contrary to *Samms v. District Court, Fourth Judicial Dist. of State of Colo.*, 908 P.2d 520 (1995).

The voicemail message is primarily a statement by Ms. O[Redacted] that Dr. Anderson-Oeser cannot accept Claimant's case and become a treating physician.

Samms allows a defense attorney to conduct informal interviews of a treating physician in the absence of a plaintiff or plaintiff's counsel as part of discovery when plaintiff is given notice of the proposed interview. *Id.* at 526. The holding in *Samms* does not apply to the voicemail message from Ms. O[Redacted] for several reasons. First, on August 2, 2019, when Ms. O[Redacted] left the voicemail message for Ms. Kordik, Dr. Anderson-Oeser was not a treating physician. The parties' Stipulation provides that Dr. McCranie shall remain the treating physician until the initial visit with Dr. Anderson-Oeser. (*Exhibit D*) The initial visit with Dr. Anderson-Oeser was not set to occur until August 14, 2019. (*Exhibit 7*) Second, the voicemail message from Ms. O[Redacted] was not an informal interview of Dr. Anderson-Oeser by defense counsel. Third, the voicemail message from Ms. O[Redacted] was not left for Ms. Kordik as part of discovery. The voicemail message was nothing more than an administrative function, via a statement, that Dr. Anderson-Oeser could not accept Claimant's case and therefore there would be no appointment on August 14, 2019.

Claimant also objected by asserting the voicemail was hearsay. Colorado Rule of Evidence 801 applies "only to statements of fact which could be considered true or false," and which derive evidentiary value

because of their character. See *People v. Phillips*, 315 P.3d 136, 160 (Colo. App. 2012). Moreover:

[i]mperative declarations, such as orders or instructions, which by their nature can be neither true nor false, cannot be offered for their truth.... Since there is no need to cross-examine the declarant of an imperative statement other than to determine whether the statement was in fact made, these utterances ordinarily fall outside the purview of the hearsay rule.

People v. Phillips at 160-161.

In this case, the purpose of the voicemail was to establish that the statement was made and that Claimant's counsel had notice on August 5, 2019, that someone from Dr. Anderson-Oeser's office called and stated Dr. Anderson-Oeser cannot accept Claimant's case, and despite having that notice, Claimant still showed up at Dr. Anderson-Oeser's office 9 days later. Therefore, the ALJ finds that Ms. O[Redacted]'s voicemail was a declaration or command and not covered by the hearsay rule.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted work related injury on June 22, 2016, when he was struck by a pickup truck while flagging for a road construction project on Highway 119. (*Exhibit B and C*)

Referral to Dr. Yamamoto

2. Dr. Kathy McCranie is the authorized provider for this claim.
3. On June 27, 2019, the parties agreed to a change of physician from Dr. McCranie to Dr. Anderson-Oeser. (*Exhibit D*) The parties' Stipulation utilizes the language set forth in §8-43-404(5)(a)(VI)(B), C.R.S. that Dr. McCranie shall remain the designated provider until Claimant's initial visit with Dr. Anderson-Oeser. Dr. Anderson-Oeser did not sign the Stipulation. (*Exhibit D*)
4. Claimant's initial visit to obtain medical treatment and establish a doctor-patient relationship with Dr. Anderson-Oeser was scheduled for August 14, 2019. (*Exhibit 7*)
5. Dr. Anderson-Oeser provided testimony via her deposition. Dr. Anderson-Oeser was asked whether she previously agreed to take over Claimant's care. In response to that question, she responded: "Initially when I received a few notes and I said, okay, I guess I'll see Mr. Clark." (Anderson-Oeser Depo. p. 4-5) Therefore, Dr. Anderson-Oeser did not explicitly agree to take over Claimant's case, but she did

agree to see Claimant, and an appointment was scheduled for her to see Claimant on August 14, 2019. *Id.*

6. Dr. Anderson-Oeser testified that after she agreed to see Claimant, “a huge box of [medical records] arrived in my office unexpectedly.” Dr. Anderson-Oeser stated that based on the volume of records that were sent to her regarding Claimant, there was no way she could take over Claimant’s care because she had just switched over to a new Electronic Medical Record (EMR) system, did not have a transcriptionist, and had to learn a new dictation system. Therefore, she told her staff to contact whomever sent Claimant to her and let them know that she could not take the case. (*Anderson-Oeser Depo. p. 5*)
7. On August 2, 2019, Diana O[Redacted] from Dr. Anderson-Oeser’s office called and left a voicemail message for Respondent’s counsel’s paralegal, Marleen Kordik, cancelling the August 14, 2019, appointment by stating that Dr. Anderson-Oeser was unable to accept and take over Claimant’s case. Ms. O[Redacted] concluded the message by saying that they could either send the medical records back or destroy them. (*Exhibit A*)
8. That voicemail message was forwarded to Claimant’s counsel on August 5, 2019 and again on August 12, 2019. (*Exhibit E*)
9. Despite Claimant’s counsel being notified on August 5, 2019, and August 12, 2019, that Dr. Anderson-Oeser could not take over Claimant’s treatment, Claimant showed up at Dr. Anderson-Oeser’s office on August 14, 2019.
10. Claimant testified that he was told by a staff member at Dr. Anderson-Oeser’s office that Dr. Anderson-Oeser could not take over Claimant’s claim. When asked on direct examination if he discussed options with Curtis Stepan, an owner of Ascent Medical Consultants where Dr. Anderson-Oeser is employed, regarding seeing Dr. Anderson-Oeser at a later date, Claimant testified that he was under the impression that Dr. Anderson-Oeser was not taking over his case so he did not have the option to see her at a later date.
11. Dr. Anderson-Oeser testified that she did not perform an evaluation of Claimant on August 14, 2019. (*Anderson-Oeser Depo. p. 6*) She also testified that she never met him or even saw him on that date. (*Anderson-Oeser Depo. p. 6*) And, there is no indication she reviewed the “huge box of medical records” to assess Claimant’s medical needs, if any, as a new treating physician. Therefore, there was no “visit,” i.e., medical appointment, with Claimant and Dr. Anderson-Oeser.
12. Moreover, Dr. Anderson-Oeser did not undertake any action to medically treat Claimant. Thus, Dr. Anderson-Oeser never became a treating physician or an authorized treating physician. As a result, any action she took was not in the normal progression of providing medical treatment or authorized medical treatment.
13. However, after a phone conference between Claimant, Claimant’s counsel, and Curtis Stepan, Claimant left Dr. Anderson-Oeser’s office that day with a referral to Dr. Yamamoto. (*Stepan Depo.*) Dr. Anderson-Oeser testified that she was under the mistaken belief that Dr. Yamamoto was Claimant’s treating physician so she referred Claimant back to Dr. Yamamoto. (*Anderson-Oeser Depo. pp. 5-7*) Thus, Dr.

Anderson-Oeser was not attempting to treat Claimant, by altering his treatment or the management of his treatment, but was merely attempting to keep the status quo when she wrote a referral for Claimant to go back to Dr. Yamamoto.

14. Due to Dr. Anderson-Oesser's refusal to treat Claimant, and her mistaken belief about Dr. Yamamoto's status, her referral was made in error and not in the normal progression of providing medical treatment. Moreover, the referral was not made and based on her exercising her independent medical judgment because she had not medically evaluated Claimant, or his case, which would be a prerequisite to making a referral to another medical provider in the normal progression of medical treatment. In other words, a physician does not use their independent medical judgment in making a referral, when the referral is not based on the underlying facts of the case.
15. The ALJ finds that Dr. Anderson-Oeser never became a treating physician; therefore, the referral was not made in the normal progression of treatment.
16. The ALJ also finds that Dr. Anderson-Oeser never became an authorized treating physician; therefore, the referral was not made in the normal progression of authorized treatment.
17. The ALJ also finds that the referral was not based on Dr. Anderson-Oeser's independent medical judgment; therefore, the referral is not a valid referral.
18. Claimant argues that Dr. Anderson-Oeser failed to cancel the August 14, 2019 appointment in accordance with §8-43-404(5)(a)(IV)(E), C.R.S. Claimant's argument is misplaced because §8-43-404(5)(a)(IV)(E), C.R.S. applies to a one time change of physician made within ninety days of the date of injury pursuant to §8-43-404(5)(a)(III), C.R.S. There is no similar statutory provision for a change of physician made under §8-43-404(5)(a)(VI)(A), C.R.S.
19. The ALJ finds that because Dr. Anderson-Oeser never became a treating physician or an authorized treating physician, and because her referral was not based on her independent medical judgment, and because her referral was not made within the normal progression of providing Claimant medical treatment, Dr. Yamamoto is not an authorized treating physician pursuant to her referral.

Dr. Yamamoto's Prior Role was Limited to Clearing Claimant for Surgery

20. Claimant was previously sent to Dr. Yamamoto for the limited purpose of clearing Claimant for surgery under this workers' compensation claim on two occasions. The limited purpose visits occurred on January 18, 2018, and May 22, 2019. (*Exhibit 5 and 6*)
21. The examination notes from January 18, 2018, indicate Claimant saw Dr. Yamamoto for a "pre-op" exam, since Dr. McCranie did not perform those types of examinations. The note further indicates Claimant was seen by Gina Hutchins, a Nurse Practitioner, who then consulted with Dr. Yamamoto. The report indicates Claimant was cleared for surgery on February 6, 2018. The WC164 form from that visit also indicates Claimant was cleared for surgery on February 6, 2018, and that no return appointment date was set, since Dr. Yamamoto's role was limited in scope to merely clearing Claimant for surgery. On May 22, 2019, Claimant returned to Dr.

Yamamoto for another limited evaluation to clear Claimant for surgery. Although just the WC164 form was submitted into evidence, the form also indicates there was no return appointment date set, since “Claimant [was] followed by Dr. McCranie” (See *Exhibit 5 and 6*) This is consistent with Dr. Yamamoto’s role being limited to just providing a pre-op examination.

22. There is a lack of credible and persuasive evidence in the record that Dr. Yamamoto was an authorized treating physician to treat Claimant for his work related injuries. While he did see Claimant twice previously to medically evaluate and clear Claimant for surgery, there is no referral in the record from an authorized physician for Dr. Yamamoto to become an authorized treating physician to treat Claimant for his work related injuries. The only information contained in the record is Dr. Yamamoto’s reports that indicate he saw Claimant for the limited purpose of medically clearing Claimant for surgery. Therefore, the ALJ finds that Dr. Yamamoto is not authorized to treat Claimant for his work related injuries, except for the limited purpose of providing the pre-operative evaluations that have already been provided.

Change of Physician

23. Claimant was given a list of physicians pursuant to §8-43-404(5). (*Exhibit J*) Claimant initially refused treatment (*Exhibit J, bate stamp 138*) but ultimately obtained treatment at Concentra in Boulder with Dr. Meza on June 23, 2016. (*Exhibit F*)
24. On February 9, 2017, Dr. Meza referred Claimant to Dr. Tentori, another Concentra physician, stating that because of Claimant’s ongoing symptoms and care, he would best be served by a delayed recovery specialist. (*Exhibit F, bate stamp 16-20*) At that time, Claimant was also treating with Dr. Tobey, Dr. Castro, Dr. Hatzidakis, and Mark Babcock. With regard to the change of physician from Dr. Meza to Dr. Tentori, Mark Babcock, Claimant’s treating therapist, noted that this was an “understandable” referral given the protracted nature of Claimant’s case. Claimant expressed concern with having to “start over” with a new physician. (*Exhibit H, bate stamp 102*)
25. On May 16, 2017, after reviewing medical records from Dr. Kawasaki, Dr. Richards, Dr. Tobey, and Dr. Castro, Dr. Tentori referred Claimant to Dr. McCranie for pain management. (*Exhibit F, bate stamp 21-27*)
26. Claimant began seeing Dr. McCranie for pain management on August 18, 2017. (*Exhibit G, bate stamp 37-42*) In order to familiarize herself with Claimant’s extensive treatment history prior to her psychiatric consult, Dr. McCranie reviewed records from Dr. Meza, Dr. Richards, Dr. Tobey, Dr. Kawasaki, Dr. Castro, Mark Babcock, and Dr. Tentori, among others. (*Exhibit G, bate stamp 31-36*)
27. On December 21, 2017, Dr. Tentori noted that he was leaving Concentra. He further noted that given the “significant complexity of this claim”, he was referring ongoing primary care to Claimant’s involved psychiatrist, Dr. McCranie. (*Exhibit F, bate stamp 28-30*) The following month, on January 5, 2018, Claimant told Dr. Robinson, Claimant’s treating psychologist, that he was hoping to stay with Dr. McCranie on the medical side and for medications. “I don’t want any new doctors. It takes a long

time for them to get to know me, and I have to spell everything out all over again. I'm doing well...." (*Exhibit I, bates stamp 106*)

28. On average, Claimant sees Dr. McCranie once per month. (*Exhibit G*) Throughout her treatment of Claimant, Dr. McCranie has managed Claimant's medications, has made referrals and/or recommended follow-ups with Dr. Hatzidakis, Dr. Tobey, Dr. Gutterman, Dr. Hammerberg, Dr. Richards, Dr. Chan, and Dr. Robinson. She has also made referrals for MRIs, physical therapy, Botox, neurologic evaluation, injections, and has verbally consulted with Claimant's other treating physicians regarding his care and their recommendations. (*Exhibit G*)
29. Claimant testified at hearing that he has several authorized treating physicians and that none of those physicians has refused to treat him.
30. Claimant testified that he does not think Dr. McCranie cares about him, that she does not treat all of his injuries, and that she does not have his medical issues at hand. However, Claimant's testimony is contrary to prior statements he made to other treating providers. For example, on September 24, 2018, Claimant told Dr. Robinson that Dr. McCranie had referred him for Botox and to a neurosurgeon. "It is a sure-fire fact that she cares about me". (*Exhibit I, bates stamp 109*) Claimant also reported to Dr. Robinson on August 24, 2018 that Dr. McCranie was "very responsive" to his complaints about headaches and that he thinks "she really cares about my comfort". (*Exhibit I, bates stamp 107*) On January 11, 2019, Claimant reported to Dr. Robinson that Dr. McCranie "has been really helpful in getting Dr. Hammerberg to see me" and on January 18, 2019, Claimant stated that "Dr. McCranie has been really helpful, always trying one more new thing to help me." (*Exhibit I, bates stamp 116-117*) As recent as May 3, 2019, Claimant reported to Dr. Robinson that Dr. McCranie "has been nice" and that if Dr. Hatzidakis recommends injections, she would approve them. (*Exhibit I, bates stamp 114*)
31. Contrary to Claimant's positive statements about Dr. McCranie set forth above, Claimant testified that Dr. McCranie abruptly took him off his pain medications and that he complained about it to Dr. Tentori. However, Claimant failed to mention that he was sent to Dr. McCranie so she could manage his pain medications because Dr. Tobey, who was previously prescribing his pain medications, did not want to continue prescribing and managing Claimant's pain medications. (*Exhibit F, bates stamp 23*) Moreover, a review of Dr. McCranie's medical reports indicates she did not abruptly stop his pain medication. Her reports demonstrate the following:
 - On June 12, 2017, Dr. McCranie began reviewing Claimant's medical records in order to take over his care and determine possible treatment recommendations.
 - On August, 18, 2017, Dr. McCranie formally took over Claimant's pain management and medication management when she evaluated Claimant. At the first appointment, Claimant rated his overall pain at a 6. After evaluating Claimant, she created a treatment plan. As part of that plan, she required Claimant to sign an opioid agreement. Pursuant to the agreement, Claimant was not to use alcohol or marijuana. Regarding his medications, she required Claimant to taper off his use of his benzodiazepine, valium, by cutting his

remaining pills in half and reducing his use until he ran out. She discussed the rationale with Claimant. She advised him that the combination of opioids and benzodiazepine causes respiratory depression and can lead to overdose and death. She also discussed the eventual goal of tapering his opioid medication. She further told him that the short-acting opioid medication he was taking was not generally recommended for the treatment of headaches as it can worsen headaches by causing rebound headaches. She further discussed the option of a slow taper of oxycodone versus switching to other types of opioid medications. And, for the time being, she recommended Claimant decrease the use of his oxycodone down to 2½ tablets per day over the next two weeks and prescribed Claimant 37 tablets, and then she would consider switching to a different pain reliever such as Nucynta or Burtans in two-weeks. She also increased his gabapentin, continued his amitriptyline, and recommended cyclobenzaprine at bedtime. (She further noted that the PDMP was reviewed and it noted Claimant had gone to the emergency room on August 11, 2017, one week earlier, and was prescribed 15 tablets of oxycodone.) (*Exhibit G, bate stamp 37-42*)

- On September 11, 2017, Claimant returned to Dr. McCranie. After the initial modification of medications, he rated his overall pain as going down, from 6 to 4. At this visit, he said “he threw away any remaining valium and has not used any benzodiazepines.” He also indicated he stopped using alcohol and marijuana. Based on Claimant’s progression, Dr. McCranie told Claimant to continue using oxycodone, 2 tablets per day, and then go down to 1½ tablets per day after his epidural steroid injection later that week. She also had him increase his gabapentin and amitriptyline. She also prescribed a new medication, sumatriptan, for his headaches, and considered adding an anti-inflammatory medication after his epidural steroid injection. (*Exhibit G, bate stamp 43-46*)
- On September 15, 2017, Dr. McCranie also noted that she reviewed the results of his August 18, 2017, drug screen and it was positive for the prescribed medications, as well as alcohol metabolites and cotinine. (*Exhibit G, bate stamp 47*)
- On October 2, 2017, Claimant returned to Dr. McCranie. At that time, he still rated his overall pain level at a 4. Although he was still using 1½ tablets of oxycodone per day, Dr. McCranie recommended tapering down to 1 tablet per day, but yet she added diclofenac sodium and increased his sumatriptan. (*Exhibit G, bate stamp 48-50*)
- On November 3, 2017, Claimant returned to Dr. McCranie. At that visit, she did not modify his medications or taper down his opioid use. She did, however, indicate that further tapering of the opioids would be evaluated at the next visit. (*Exhibit G, bate stamp 52-54*)
- On November 20, 2017, Claimant returned to Dr. McCranie. At this appointment, Dr. McCranie tapered his oxycodone down from 1 tablet per day to ½ tablet per day. (*Exhibit G, bate stamp 55-57*)

- In February of 2018, Claimant underwent shoulder surgery. His surgeon prescribed additional opioids. Approximately 10 weeks after surgery, Dr. McCranie again began tapering Claimant off his opioids.
- On April 20, 2018, Claimant was seen by Dr. McCranie. At this appointment, she recommended that Claimant should stop taking his oxycodone, but continue tapering down his use of the hydrocodone. Claimant was to return for a follow up appointment in one month at which time she anticipated reducing his opioid use. Her plan was to reduce his opioid use down to 1 tablet every day, for two weeks, and then 1 tablet, twice a week, during physical therapy, unless he had completed physical therapy. At the end of the appointment, she also had Claimant undergo another urine drug screen. (*Exhibit G, bates stamp 66-68*)

32. On May 4, 2018, Claimant was evaluated by his psychologist, Dr. Robinson. According to Dr. Robinson's notes, Claimant complained about the following:

- "I'm out of all of my medications for pain and sleep."
- "I feel awful."
- "My equilibrium is off."
- "I had to have my sons over to care of Crow."
- "I'm not eating. Yesterday I had a spare rib."
- "I can't eat breakfast."
- "I tried to eat oatmeal this morning and only had a couple of bites. I sometimes eat a smoothie with two tablespoons of protein powder, and that makes me feel awful."
- "I don't have any energy, and it's probably that I don't eat."

After that appointment, Dr. Robinson's assessment included the following: "He has a low quality of life and is constantly worried. He is reluctant to shop for groceries."

Claimant's Exhibit 14, bates stamp 284.

33. On May 18, 2018, Claimant returned to Dr. McCranie. Dr. McCranie noted that his drug screen was consistent with the prescriptions he was taking, but positive for marijuana. At this time, Dr. McCranie had tapered Claimant's opioid use down to 1 hydrocodone tablet per day. Consistent with the treatment plan outlined in her prior report, she reduced Claimant's hydrocodone down to 1 tablet twice per week for use after physical therapy appointments. She indicated that she would continue the hydrocodone for 1 more month, and then terminate it. But, she also recommended tapering his gabapentin and starting Topamax for his headaches. She also prescribed Claimant Imitrex for his headaches. (*Exhibit G, bates stamp 69-73*)
34. On June 15, 2018, Claimant was evaluated by Dr. McCranie. At that visit, she noted Claimant had completely tapered off his hydrocodone, but that he had started using marijuana 2-3 times a week. At that visit, she also modified some of this other

medications and they discussed return to work issues. (*Exhibit G, bates stamp 74-77*)

35. On September 8, 2018, Dr. McCranie wrote a letter to Respondent's counsel after being asked to review additional medical records and surveillance video of Claimant. After watching the video, Dr. McCranie stated the following:

On April 28, 2018, Claimant was seen at a boatyard. Shortly thereafter, he was seen driving a truck pulling a boat. He was viewed lifting his dog out of the truck while carrying a bag in his right hand. He stood and talked for some time with another individual. He was seen moving his left upper extremity freely below shoulder level while gesturing.

Dr. McCranie also stated that on May 5, 2018, additional surveillance video demonstrated the following:

He was seen walking his dog and smoking early in the morning. Later, he was seen in a speedboat on the water. He was wearing sunglasses, but no hat. Approximately a couple of hours were noted with him in the speed boat with a couple of companions and the boat moving quickly and bouncing along the water. After the boat docked, he was seen bending and walking on the dock. He drove the truck with a trailer, backed it up into the water. He was then viewed pushing the boat onto the trailer with his two companions. While attaching and unloading the boat, he was viewed lifting both arms overhead, squatting, again reaching overhead with his right upper extremity on several occasions. While unloading the boat, he was also seen freely using both arms in a forward extended position and below shoulder level to load items into the back of a truck. During all of these surveillance videos, no pain behaviors were observed.

(*Exhibit G, bates stamp 81-82*)

36. Dr. McCranie's observations were in stark contrast with Claimant's contentions the same day when he saw his psychologist, Dr. Robinson, and gave the impression that he could barely do anything.¹

¹ May 4, 2018, report from Dr. Robinson lists Claimant's complaints as follows:

- "I'm out of all of my medications for pain and sleep."
- "I feel awful."
- "My equilibrium is off."
- "I had to have my sons over to care of Crow."
- "I'm not eating. Yesterday I had a spare rib."
- "I can't eat breakfast."
- "I tried to eat oatmeal this morning and only had a couple of bites. I sometimes eat a smoothie with two tablespoons of protein powder, and that makes me feel awful."
- "I don't have any energy, and it's probably that I don't eat."

37. After reviewing the surveillance video, Dr. McCranie concluded in her September 8, 2018, letter that:

It is my opinion that the patient's abilities, as noted on this video, are greater than that which he reports to his providers. Therefore, future restrictions should be based on objective data such as the patient's surgical intervention and not the patient's subjective complaints. In reviewing these videos, there would be no restrictions in sitting, standing, walking, reaching, pushing, or driving. I would like to confer with Dr. Hatzidakis as to whether there is an objective anatomical reason to limit lifting based on the patient's surgical Intervention. Based on video surveillance, it appears the patient is currently capable of lifting at least 15 to 20 pounds.

(Exhibit G, bates stamp 81-82)

38. However, after reviewing the surveillance video, Dr. McCranie did not abruptly reduce his medications or change the manner in which she was treating Claimant for his work related injuries. For example, at Claimant's next appointment on October 15, 2018, Dr. McCranie increased his Topomax, and recommended a neurological evaluation with Dr. Hammerberg to see if there were any other medications that might help Claimant with his headaches.
39. Moreover, Dr. McCranie has continued treating Claimant in a thorough and diligent manner. There is no indication Dr. McCranie overreacted to the surveillance video in any way. In fact, there is no indication the surveillance video has had a negative impact, or an unwarranted impact, on the treatment being provided to Claimant by Dr. McCranie or the relationship between Dr. McCranie and Claimant.
40. Claimant also testified that he felt like Dr. McCranie was stopping his other doctors from treating him, such as preventing Dr. Tobey from providing Claimant injections. However, a review of Claimant's medical records indicates Dr. Tobey had previously performed cervical facet injections from C2 through C7, essentially injecting every facet level in the cervical spine, and provided epidural steroid injections and occipital nerve blocks, all without benefit. Moreover, based on the medical records, it appears Claimant merely asked about the prior injections provided by Dr. Tobey and he agreed with Dr. McCranie that additional injection treatment for his cervical spine was not warranted. *(Respondent's Exhibit G, bates stamp 98)* Therefore, Claimant's contention that Dr. McCranie prevented Dr. Tobey from providing additional injections is not accurate.
41. Overall, the ALJ does not find Claimant's testimony to be credible, reliable, or persuasive.
42. Claimant filed a Request for Change of Physician form seeking to change from Dr. McCranie to another provider on nine separate occasions. Six of the requests were filed between January 31, 2019 and March 28, 2019, which is almost one per week. Each of the six requests requested a change of physician from Dr. McCranie to Dr. Yamamoto. *(Exhibit 14)* Claimant contends that the mere volume of requests

provides additional evidence to support a proper showing that a change of physician is warranted. However, the ALJ does not find the mere volume of Claimant's requests to be credible or persuasive evidence that supports a change of physician.

43. Claimant has failed to make a "proper showing" to warrant a change of physician pursuant to §8-43-404(5)(a), C.R.S. Claimant testified that he no longer trusts Dr. McCranie and that he wants to treat with Dr. Yamamoto. However, evaluating Claimant's need for reasonable and necessary medical treatment while protecting Respondent's interest in being apprised of the course of treatment for which it may ultimately be liable in this protracted and complex claim suggests that Claimant has and continues to receive reasonable and necessary medical care from his authorized providers. Claimant has failed to produce credible and persuasive evidence that he reasonably developed a mistrust of Mr. McCranie. He has also failed to produce sufficient evidence that Dr. McCranie provided inadequate care or otherwise rendered unreasonable care. Claimant's assertions regarding his dissatisfaction with Dr. McCranie's medical treatment and recommendations are insufficient to constitute a proper showing warranting a change of physician, especially when Claimant's assertions are based on a mischaracterization of the medical record.
44. Claimant has been receiving adequate and appropriate medical treatment from Dr. McCranie for more than 2 years in this complex case. Dr. McCranie has routinely seen Claimant for follow-up appointments and has made appropriate referrals to other physicians, as necessary. Claimant's testimony - which the ALJ does not find to be reliable, credible, or persuasive - that he does not like Dr. McCranie and that Dr. Yamamoto is a pleasant guy is not sufficient to support a change of physician.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a

conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 p.3d 558 (Colo. App. 2000). When determining credibility, the ALJ has considered, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Dr. Yamamoto is an authorized provider based on Dr. Anderson-Oeser's referral.

Referral to Yamamoto

A medical provider becomes authorized if another authorized physician refers Claimant for services in the normal progression of authorized medical treatment. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985); *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999). Authorized providers include those whom Claimant has initially selected and those to whom an ATP refers Claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995). The critical question is whether the authorized physician who made the referral exercised independent medical judgment regarding the advisability of the referral. The mere fact the claimant requested the referral does not necessarily establish the referral occurred outside the normal progression of authorized treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

As found, pursuant to the Stipulation, Dr. McCranie was to remain Claimant's authorized treating physician until Dr. Anderson-Oeser took over Claimant's medical treatment by physically evaluating Claimant at a formal "visit," i.e., medical appointment. Thus, pursuant to the Stipulation, Dr. Anderson-Oeser would not become an authorized treating physician until she actually started treating Claimant. This required her to personally evaluate Claimant in her office and begin treating Claimant by reviewing his medical records, performing a physical examination, and actively applying her medical expertise and judgment to make treatment recommendations, which could include referrals to other physicians. However, Dr. Anderson-Oeser never actively started treating Claimant in any manner. There was no "visit." Therefore, the triggering event to make her a treating physician never occurred. The mere fact that Claimant visited her office and visited with some staff, after Claimant's attorney was told Dr. Anderson-Oeser could not take over his treatment, is insufficient to make Dr. Anderson-Oeser a treating physician.

Claimant argues that Dr. Anderson-Oeser failed to cancel the August 14, 2019, appointment in accordance with §8-43-404(5)(a)(IV)(E), C.R.S. Claimant's argument is misplaced. Section 8-43-404(5)(a)(IV)(E), C.R.S. applies to a one time change of physician made within ninety days of the date of injury pursuant to §8-43-404(5)(a)(III), C.R.S. There is no similar statutory provision for a change of physician made under §8-43-404(5)(a)(VI)(A), C.R.S.

Moreover, Claimant's attorney was notified, via the voicemail from Ms. O[Redacted], that Dr. Anderson-Oeser would not take over Claimant's care. Despite being notified of such, Claimant's attorney still had Claimant go to Dr. Anderson-Oeser's office on August 14, 2019. While Claimant's attorney argued that the voicemail message did not specifically say, "the August 14, 2019, appointment with Dr. Anderson-Oeser had been cancelled," there is no other reasonable conclusion to be drawn from the voicemail message, other than, the August 14, 2019, appointment had been cancelled. And, when Claimant showed up on August 14, 2019, the appointment had been cancelled and Claimant did not have an appointment or "visit" with Dr. Anderson-Oeser, sufficient to make Dr. Anderson-Oeser a treating physician or an authorized treating physician.

Furthermore, the testimony of Dr. Anderson-Oeser combined with the testimony of other members of her office, resulted in the ALJ finding and concluding that the referral to Dr. Yamamoto was not based on the independent medical judgment of Dr. Anderson-Oeser, but was based on the information provided to her by Claimant, via her staff, and Claimant's attorney, via her staff. This is further supported by the fact that Dr. Anderson-Oeser never reviewed his medical records, interviewed Claimant, evaluated Claimant, or took any other action to form the basis of any medically based treatment recommendations. According to Dr. Anderson-Oeser, the referral to Dr. Yamamoto was to keep the status quo, since she erroneously thought Dr. Yamamoto was managing Claimant's care, and merely keeping the status quo in this case is not tantamount to the provision of medical treatment. Therefore, the referral was not the provision of medical treatment based on Dr. Anderson-Oeser's independent medical judgement. Consequently, the referral was not made in the normal progression of Dr. Anderson-Oeser's treatment of Claimant since she was not treating him, via the use of her independent medical judgment.

Consequently, the ALJ finds and concludes Claimant has failed to establish by a preponderance of the evidence that Dr. Anderson-Oeser made a valid referral to Dr. Yamamoto. Therefore, Claimant failed to establish that Dr. Yamamoto is an authorized treating physician who can treat his work related injuries.

Any prior authorization regarding Dr. Yamamoto was limited.

Claimant also failed to establish by a preponderance of the evidence that Dr. Yamamoto is an authorized treating physician based on the two pre-surgical evaluations he provided Claimant.

As found, Claimant was previously sent to Dr. Yamamoto for the limited purpose of clearing Claimant for surgery under this workers' compensation claim on two

occasions. The limited purpose visits occurred on January 18, 2018, and May 22, 2019. Moreover, as found, the examination notes from January 18, 2018, indicate Claimant saw Dr. Yamamoto for a “pre-op” exam, since Dr. McCranie did not perform those types of examinations. The notes further indicate Claimant was seen by Gina Hutchins, a Nurse Practitioner, who then consulted with Dr. Yamamoto. The examination notes indicate Claimant was cleared for surgery on February 6, 2018. The WC164 form from that visit also indicates Claimant was cleared for surgery on February 6, 2018, and that no return appointment date was set, since Dr. Yamamoto’s role was limited in scope to merely clearing Claimant for surgery. As also found, on May 22, 2019, Claimant returned to Dr. Yamamoto for another limited evaluation to clear Claimant for surgery. Although just the WC164 form was submitted into evidence, the form also indicates there was no return appointment date set, since “Claimant [is] followed by Dr. McCranie.” (See *Exhibit 5 and 6*) This is consistent with Dr. Yamamoto’s role being limited to just providing a pre-op examination.

There is a lack of credible and persuasive evidence in the record that Dr. Yamamoto was authorized to treat Claimant for his work related injuries. While he did see Claimant twice previously to obtain medical clearance for surgery, there is no referral in the record from an authorized physician to Dr. Yamamoto for those examinations or for him to become a treating physician. The credible and persuasive evidence in the record establishes that any referral to Dr. Yamamoto was merely a limited referral for a pre-surgical evaluation to medically clear Claimant for surgery. *Gamboa v. ARA Group, Inc.*, W.C. No. 4-016-924 (November 20, 1996); *Clark v. Hudick Excavating, Inc.*, W.C. No. 4-524-162 (November 5, 2004); *Steele v. Charles Berardi & James Berardi*, W.C. No. 4-441-620 (June 15, 2001); *Gail v. U.S. West Service Link, Inc.*, W.C. No. 3-957-994 (June 18, 1991); *Benien v. Color Star Growers of Colorado, Inc.*, W.C. No. 4-226-236 (April 29, 1998). Therefore, the mere fact that Dr. Yamamoto saw Claimant for a very limited purpose does not establish that he was an authorized treating physician to treat Claimant for his work injuries. *Id. at 2*.

Therefore, Claimant has failed to establish by a preponderance of the evidence that the limited evaluations performed by Dr. Yamamoto caused him to become an authorized treating physician, beyond the pre-surgical evaluations that have already been provided.

II. Whether Claimant has made a “proper showing” for a change of physician to Dr. Yamamoto pursuant to §8-43-404(5)(a)(VI)(A), C.R.S.

Change of Physician

A claimant is not entitled to medical treatment by a particular physician. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994); *Vigil v. City Cab Co.*, W.C. No. 3-985-493 (May 23, 1995). Section 8-43-404(5)(a), C.R.S. allows Claimant to choose a treating physician from a list of providers proffered by Employer. Once Claimant has selected a treating physician, he may not change the physician without the insurer’s permission or “upon the proper showing to the division”. §8-43-404(5)(a), C.R.S.; *In re Tovar*, W.C. No. 4-597-412 (July 24, 2008). Because §8-

43-404 (5)(a), C.R.S. does not define “proper showing” the ALJ has discretionary authority to determine whether the circumstances warrant a change of physician. *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006). The ALJ’s decision regarding a change of physician should consider the claimant’s need for reasonable and necessary medical treatment while protecting the respondent’s interest in being apprised of the course of treatment for which it may ultimately be liable. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). An ALJ is not required to approve a change of physician for a claimant’s personal reasons including “mere dissatisfaction”. *Yeck, supra.*; *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985); *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006); *In re Mark*, W.C. No. 4-570-904 (June 19, 2006); *Pohlod v. Colorado Springs School District 11*, W.C. No. 4-621-629 (May 2, 2007). Where an employee has been receiving adequate medical treatment, a Judge is not required to allow a change of physician. See *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (December 5, 1995); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (August 23, 1995); *Guynn v. Penkhus Motor Co.*, W.C. No. 3-851-012 (June 6, 1989).

Claimant’s request for a change of physician is based primarily upon his characterization of the care being provided by Dr. McCranie. However, based on a thorough review of the record, the ALJ finds and concludes Claimant’s request for a change of physician is based primarily on his mischaracterization of the care being provided by Dr. McCranie.

As found, Dr. McCranie has been managing Claimant’s medical treatment and prescription medications for over 2 years. Moreover, as found above, her care has been comprehensive, thoughtful, and effective in managing Claimant’s medication usage and overall care.

Furthermore, Claimant has numerous treating physicians. There is no need to change physicians to assure proper treatment in light of the fact that he has multiple physicians to attend to him. *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006)

Therefore, the ALJ finds and concludes Claimant has failed to establish, by a preponderance of the evidence, that Claimant is entitled to a change of physician. As found, Claimant has failed to make a “proper showing” to warrant a change of physician pursuant to §8-43-404(5)(a), C.R.S. Claimant testified that he no longer trusts Dr. McCranie and that he wants to treat with Dr. Yamamoto. However, evaluating Claimant’s need for reasonable and necessary medical treatment while protecting Respondent’s interest in being apprised of the course of treatment for which it may ultimately be liable in this protracted and complex claim suggests that Claimant has and continues to receive reasonable and necessary medical care from his authorized providers. Moreover, Claimant’s contentions and negative characterization regarding the care being provided by Dr. McCranie are not found to be credible, reliable, or persuasive. Claimant has failed to produce, credible, reliable, or persuasive evidence that he reasonably developed a mistrust of Dr. McCranie. He has also failed to produce sufficient evidence that Dr. McCranie provided inadequate care or otherwise rendered unreasonable care. Consequently, Claimant’s alleged disagreement and alleged

dissatisfaction with Dr. McCranie's medical treatment and recommendations are insufficient to constitute a proper showing warranting a change of physician.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Dr. Yamamoto is not an authorized treating physician to treat Claimant for his work related injuries.²
2. Claimant's request for a change of physician is denied and dismissed.
3. Any issues not resolved in this Order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 31, 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

² As found above, any authorization of Dr. Yamamto was limited to the pre-surgical evaluations and not to actively treat Claimant for his work related injuries.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-111-492-001**

ISSUES

- Did Claimant prove she suffered a compensable injury on June 28, 2019?
- If Claimant proved a compensable injury, did she prove that Dr. Anaya and Dr. Khosla are authorized providers?
- Did Claimant prove Respondent is liable for treatment she received from Parkview Medical Center from June 28 through June 30, 2019, including reimbursement of \$198.94 for a bill Claimant paid from the emergency room physician?
- The parties stipulated to an average weekly wage of \$1,733.
- The parties agreed to reserve temporary disability benefits pending the decision regarding compensability.

FINDINGS OF FACT

1. Claimant works for Employer as the Director of Admissions, a position she has held for 14 years.

2. Claimant's job is very sedentary, requiring long periods of static sitting. Her shift starts at 7:00 AM, and she usually takes her first break at approximately 10:00 AM. Most days, she takes a brief 10-minute walk around the facility to relieve stiffness she develops after sitting in one spot for hours. She may walk inside or outside, depending on the weather. Claimant is a manager, and frequently asks if anyone under her supervision wants to walk with her. This provides an opportunity to discuss various topics, including current work projects and personal matters, which, in turn, fosters camaraderie and improves Claimant's ability to manage her employees.

3. Employer maintains information on its intranet regarding the importance of regular breaks during a workday. This information is readily available to all employees, including Claimant. One article states brief breaks "actually help you stay focused on your task," and many of one's "best ideas" occur during periods of "diffuse mode thinking." Another article advises the "best time" for a break is "mid-morning," and "the only requirement is that you derive pleasure from the task [performed during the break]." One article suggests taking "hourly laps around the office," and another lists "a 20-minute stroll" as one of "16 productivity-boosting activities for your break."

4. On June 28, 2019, Claimant intended to walk her usual route during her 10:00 AM break. A co-worker planned to accompany her but was called away briefly. While waiting for the co-worker, Claimant "warmed up" with some light stretching and "leg swings." She inadvertently caught her left leg on a nearby chair, which caused Claimant

to lose her balance and fall backward. She hit her head on a sink or exposed plumbing under the sink behind her.

5. Claimant was taken by ambulance to the Parkview Medical Center emergency department, where she was diagnosed with a closed head injury and admitted for observation. She was released on Sunday evening, June 30, 2019.

6. Treatment at Parkview Medical Center from June 28 through June 30, 2019 was reasonably necessary emergency treatment for Claimant's injuries.

7. Claimant followed up with her primary care physician, Dr. Lawrence Anaya, the next day, July 1, 2019. A physician at the hospital had suggested she see Dr. Rakesh Khosla, a concussion specialist. Claimant was already familiar with Dr. Khosla, having seen him previously for an unrelated issue. She asked Dr. Anaya about it and he agreed Dr. Khosla would be a good doctor for her injury. Dr. Anaya's office arranged an appointment with Dr. Khosla to take place the following day.

8. Claimant had her initial appointment with Dr. Khosla on July 2, 2019. He diagnosed a concussion, prescribed medication, and took Claimant off work.

9. Maria W[Redacted] is Employer's in-house workers' compensation specialist. She processes newly reported incidents and injuries within DHS, and, with Employer's TPA (Broadspire), handles the claims from inception through claim closure.

10. Employer sent Claimant two automated emails on June 28 with general information regarding the claim process, including a designated provider list. Ms. W[Redacted] emailed Claimant the designated provider list again on July 1. The emails informed Claimant, "if you have sought initial treatment at an Emergency Room, you must follow-up with an Authorized Treating Provider from the attached Designated Provider List within one (1) business day."

11. On July 3, 2019, Ms. W[Redacted] spoke with Claimant by phone regarding the status of her injury and her medical providers. Claimant had not been checking her work email and had not seen the previous messages. Ms. W[Redacted] explained Employer generally requires injured workers to follow up with a designated ATP after completing any emergency treatment for an injury. Claimant said she had already seen her primary care provider, Dr. Anaya, who directed her to a head injury specialist, Dr. Khosla. Ms. W[Redacted] told Claimant she would "need to check with Broadspire" about how Claimant should proceed since she had already seen her personal providers. After the conversation ended, Ms. W[Redacted] resent the documents, including the designated provider list. The email stated, "I will be sure to keep everyone updated on Broadspire's decision regarding compensability. . . . I have included the Workers' Compensation Policy and appropriate ATP list if this claim moves forward."

12. Sometime between July 8 and July 15, 2019, Ms. W[Redacted] learned that Broadspire had denied the claim. She left Claimant a voicemail relaying Broadspire's decision and indicating Claimant should not go to the designated provider because the claim was being denied.

13. Claimant continued treating with Dr. Khosla in July and August 2019 under her health insurance (Kaiser). Dr. Khosla referred Claimant to Centura Rehab for physical therapy. She has seen no provider on Employer's designated ATP list.

14. On August 19, 2019, Claimant paid a \$198.94 bill from the Parkview ER physician by personal check. As noted, the treatment Parkview, including the ER treatment, was reasonably necessary and related to the work accident.

15. Claimant proved she suffered a compensable injury on June 28, 2019 arising out of and in the course and scope of her employment.

16. Claimant proved the bill from the Parkview ER physician was for reasonably necessary emergent treatment for the compensable injury.

17. Claimant proved Dr. Khosla became authorized on July 15, 2019 after the voicemail message from Ms. W[Redacted].

18. Claimant failed to prove Dr. Khosla was authorized before July 15, 2019.

19. Claimant failed to prove Dr. Anaya is authorized.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To prove a compensable injury, a claimant must prove the injury occurred while performing service arising out of and in the course of her employment. Section 8-41-301(1)(b). The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower, and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001) The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Rather, the question is whether the activity is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Id.* at 210. Whether an injury arises out of and in the course of employment are questions of fact for the ALJ. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998).

The Act imposes additional limitations on the compensability of injuries occurring during recreational activities. Section 8-40-201(8) defines "employment" to exclude "the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or

program.” Similarly, § 8-40-301(1) defines the term “employee” as excluding a person “while participating in recreational activity, who at such time is relieved of and is not performing any duties of employment.”

In *White v. Industrial Claim Appeals Office*, 8 P.3d 621 (Colo. App. 2000), the court held that the statutory term “recreational activity” should be given its plain and ordinary meaning, which can be “easily discerned by reference to a standard dictionary.” The *American Heritage College Dictionary* (3d Ed. 1993) defines “recreation” as “refreshment of one’s mind or body through activity that amuses or stimulates; play.” In determining whether an activity is “recreational,” the ALJ should consider the factors enumerated in *Price v. Industrial Claim Appeals Office*, 919 P.2d 707 (Colo. 1996), including whether the activity occurred during working hours, whether the injury occurred on the employer’s premises, whether the employer initiated the activity, whether the employer exerted control over the employee’s participation in the activity, and whether the employer stood to benefit from the employee’s participation in the activity. Whether an activity was “recreational” is a question of fact for determination by the ALJ. *Lopez v. American Lumber Construction*, W.C. No. 4-434-488 (October 29, 2003).

After considering the totality of circumstances, the ALJ concludes that Claimant’s injuries arose out of and within the course of her employment. In reaching this conclusion, the ALJ finds the following factors particularly significant: The accident occurred during the workday while Claimant was “on the clock.” It occurred on Employer’s premises in the area where Claimant generally works, and Claimant had no nonwork-related reason to be there performing the activity. Breaks are a common and expected element of most people’s workday. Indeed, Employer extolls the virtues of breaks as “productivity boosters” and encourages employees to consider brief walks on their breaks.

The walk Claimant intended to take was not a “recreational activity” within the meaning of § 8-40-201(8). Claimant’s walks were primarily intended to combat stiffness caused by long hours of static sitting, and also allowed Claimant to “recharge” and maintain focus on her work. She frequently used the walks to connect with employees under her supervision. The mere fact that Claimant enjoyed the walks does not change the fact they were reasonably ancillary to her employment. That an activity has some tendency to “refresh” the employee or entails some element of enjoyment does not necessarily convert it into a “recreational activity.” The recreational activity exclusion has primarily been applied to activities such as refereeing a volleyball game, lifting weights, playing sports such as hockey, basketball and volleyball, a weekend camping trip, and skiing. Although a walk during the workday could be “recreational” depending on the circumstances, it is a much less natural fit than games, sports, or other activities commonly referred to as recreation. In any event, the ALJ is persuaded Claimant’s planned walk was not “recreation.”

The Colorado courts have long recognized that ministerial activities such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water, and keeping warm have been held to be incidental to employment under the “personal comfort” doctrine. E.g., *Ocean Accident & Guaranty Corp. v. Pallaro*, 180 P. 95 (Colo. 1919; *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988);

Industrial Commission v. Golden Cycle Corporation, 246 P.2d 92 (Colo. 1952). The doctrine is based on the assumption that “personal comfort” is necessary to maintain an employee’s health, and is indirectly conducive to the employer’s purposes. *Ocean Accident & Guaranty Corp v. Pallaro*, *supra*. The doctrine extends to discretionary activities that have no duty component and provide no specific benefit to the employer. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The list of activities that have been found incidental to employment under this doctrine is long and varied, including things such as arising from a chair, returning to work after a smoke break, walking to an adjacent building for a cup of coffee, driving across the street to get lunch from a food truck, and vaulting over a railing and garbage can while on a smoke break. *Geist v. Liberty Mutual Group*, W.C. No. 4-839-225 (April 15, 2011); *Even v. The Mining Exchange*, W.C. No. 4-892-465 (April 29, 2013); *Rodriguez v. Exempla Healthcare, Inc.*, W.C. No. 4-705-673 (April 30, 2008); *Padilla-Roldan v. Allstate Insurance Company*, W.C. No. 4-579-973 (June 30, 2005); *Wallace v. Personnel Pool, Inc.*, W.C. No. 4-455-463 (May 8, 2001). The ALJ agrees with Claimant her intended walk was an incident of employment under the “personal comfort” doctrine.

B. Respondent is liable for the Parkview hospital treatment from June 28 through June 30, 2019, including direct reimbursement to Claimant for the ER physician bill.

Respondents are liable for emergency treatment without regard to the right of selection or prior authorization. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). As found, Claimant proved the treatment she received after being transported to Parkview Medical Center by ambulance was reasonably necessary emergent treatment for the industrial injury. Additionally, Respondents must reimburse Claimant directly for any compensable medical treatment she paid from her own pocket. Section 8-42-101(6)(a), (b); WCRP 16-10(F).

C. Dr. Khosla became authorized as of July 15, 2019; Dr. Anaya is not authorized.

Respondents must cover all authorized medical treatment reasonably necessary to cure or relieve the effects of an industrial injury. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). “Authorization” refers to the physician’s legal authority to treat the injury at the respondents’ expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Under § 8-43-404(5)(a), the employer has the right to choose the treating physician in the first instance. Where, as here, a claimant receives emergency treatment, the employer’s opportunity to designate is tolled until the emergency ends and the employer receives notice the claimant needs additional treatment. *Sims v. Industrial Claim Appeals Office*, *supra*. It is well established that an employer does not lose the right to designate a treating physician merely because it denies a claim. *Yeck v. Industrial Claim Appeals Office*, 966 P.2d 228 (Colo. App. 1999).

Once the employer has exercised its right of selection, the claimant may not unilaterally change physicians without prior approval from the respondents or an ALJ. Such permission may be express or implied, and a physician becomes authorized if the

“employer has expressly or impliedly conveyed to the employee the impression” that she has permission to treat with the physician. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Employer timely exercised its right to choose a physician after Claimant was released from the hospital, and sent a designated provider list at least four times. Without more, that would be the end of the inquiry. But Employer subsequently conveyed to Claimant the impression she could continue treating with Khosla after Broadspire denied the claim. Ms. W[Redacted] initially explained Employer’s general policy that injured workers must follow up with a designated provider after emergency treatment has concluded. But when Claimant asked what she should do since she had already seen her personal providers, Ms. W[Redacted] indicated she would “have to check with Broadspire.” The next communication from Ms. W[Redacted] indicated Claimant “should not” see a designated provider because the claim was denied. The ALJ concludes a reasonable person in Claimant’s position would have assumed she had permission to keep seeing Dr. Khosla after receiving Ms. W[Redacted]’ voicemail.

Dr. Khosla became authorized when Ms. W[Redacted] left the voicemail. Before that, Employer had done or said nothing that could reasonably be deemed permission to see her own providers. It is not clear exactly when Ms. W[Redacted] left Claimant the voicemail. Ms. W[Redacted] credibly testified it was sometime between July 8 and July 15, 2019, and Claimant presented no other persuasive evidence on this point. Claimant has the burden prove whether and when Dr. Khosla became authorized. Based on the evidence presented, the ALJ cannot say to the level of “more probably true than not” that the phone call occurred on any date before July 15, 2019. Thus, the ALJ concludes any treatment provided by Dr. Khosla was authorized on or after July 15, 2019, and any treatment before that date was not authorized.

Dr. Anaya is not authorized. Claimant did not have the right to select a physician when she saw Dr. Anaya on July 1, 2019, and there is no persuasive evidence she saw him or was referred to him after Ms. W[Redacted] left the voicemail.

ORDER

It is therefore ordered that:

1. Claimant’s claim for workers’ compensation benefits in W.C. No. 5-111-492 is compensable.
2. Claimant’s average weekly wage is \$1,733.
3. Respondent shall cover all reasonably necessary treatment from authorized providers to cure or relieve the effects of Claimant’s compensable injury, including, but not limited to the charges from Parkview Medical Center for June 28, 2019 through June 30, 2019, and treatment by or on referral from Dr. Khosla on or after July 15, 2019.
4. Claimant’s request for medical benefits for treatment from Dr. Khosla before July 15, 2019 is denied and dismissed

5. Claimant's request for medical benefits for treatment from Dr. Anaya is denied and dismissed.

6. Respondent shall reimburse Claimant \$198.94 for the Parkview ER physician bill.

7. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: January 31, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment recommended by Dr. Kirk Clifford (including additional sacroiliac (SI) joint injections and an SI joint fusion) is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI).
- Whether the claimant has demonstrated, by a preponderance of the evidence, that his claim should be reopened pursuant to Section 8-43-303, C.R.S. due to a worsening of his condition.
- If the claimant's claim is reopened, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment recommended by Dr. Kirk Clifford (including additional SI joint injections and an SI joint fusion) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.
- Whether the respondent has demonstrated, by a preponderance of the evidence, that the claimant experienced an intervening event on October 29, 2017 that was sufficient to sever the respondent's liability and terminate the claimant's maintenance medical care.

FINDINGS OF FACT

1. The claimant was employed as a firefighter with the employer for 26 years. The claimant's duties included responding to emergency services calls. Each year the claimant underwent a "fit for duty" test.

Prior Medical Treatment

2. On May 23, 1999, the claimant suffered a work injury to his low back. On October 26, 1999, Dr. Jeff Bowman assessed a 9 percent whole person impairment rating for an L5-S1 disc derangement and chronic right sacroiliitis. Dr. Bowman noted that the claimant had a "long standing history of chronic left sided hip pain with chronic sacroiliitis requiring orthotics due to pedal abnormalities with gait and also reported a history of low back pain secondary to compensatory changes from irregular gait".

3. Thereafter, on January 17, 2004, the claimant felt a pop in his back and experienced right leg radiculopathy. After undergoing various modes of treatment to his low back, on March 23, 2005, the claimant underwent an L5-S1 transforaminal lumbar interbody fusion.

4. On January 12, 2006, Dr. Donald Corenman determined that the claimant had reached maximum medical improvement (MMI) for the January 17, 2004 injury. At that time, Dr. Corenman assessed a 23 percent whole person impairment. However, he also determined that the claimant did not have any permanent work restrictions. The claimant testified that he did not have any back issues and he was able to perform all of duties as a firefighter following the recovery from the 2006 surgery and prior to the February 1, 2015 injury.

Admitted February 1, 2015 Injury

5. The claimant was injured while working his normal duties as a fire captain on February 1, 2015. On that date, the claimant and his coworkers responded to an emergency services call involving an unconscious individual on the second floor of a home. It was necessary to transport the individual down the stairs in a sling-type apparatus. The claimant was not involved in the transport down the stairs. However, he was waiting to assist his coworkers in transferring the individual onto a gurney. During that transfer, the individual began to slip from the sling and the claimant reached across the gurney in an attempt to catch him. It was during that movement that the claimant was injured. The claimant testified that he tore the bicep tendon in his right shoulder and injured his back.

6. On February 5, 2015, the claimant's authorized treating physician, Dr. Craig Stagg, issued a WC 164 form outlining various work restrictions for the claimant including no lifting, carrying, pushing, or pulling over 30 pounds. At that time, Dr. Stagg referred the claimant to Dr. Corenman for consultation.

7. On February 12, 2015, a magnetic resonance image (MRI) of the claimant's lumbar spine showed evidence of his prior L5-S1 fusion; a mild to moderate circumferential disc bulge with bilateral foraminal annular tearing at the L3-L4 level; and a mild circumferential disc bulge with left foraminal annular tearing at the L4-L5 level.

8. The claimant was seen by Dr. Corenman on February 12, 2015. At that time, the claimant reported that on February 1, 2015 the experienced increased right SI joint pain after reaching to assist his coworkers. The claimant also reported that he developed pain that radiated down his right leg. Dr. Corenman opined that the claimant's pain was caused by the small annular tears at the L4-5 and L3-L4 levels. In addition, Dr. Corenman noted that if the claimant did not improve in five to six weeks, an epidural steroid injection could be pursued.

9. Subsequently, on April 6, 2015, Dr. Corenman administered transforaminal epidural steroid injections (TFESI) at the L4-5 and S1 levels. On April 23, 2015, the claimant returned to Dr. Corenman and reported that he did not experienced any relief from the injections. The claimant also reported that he had right SI joint pain and right leg S1 nerve root pain.¹

¹ The ALJ recognizes the anatomical difference between treatment of the claimant's S1 spinal level and the sacroiliac (SI) joint.

10. On June 17, 2015, the claimant underwent an independent medical examination through the Fire and Police Pension Association (FPPA). In a report to the FPPA, Dr. Robert Messenbaugh opined that the claimant was “permanently occupationally disabled” due to his chronic lumber spine disc pathology. Dr. Messenbaugh also opined that the claimant was “no longer capable of safely, effectively, consistently, and reliably (*sic*) capable of performing his required duties as a fire captain.” Following that FPPA report, the claimant’s employment with the employer ended.

11. The claimant continued to treat with Dr. Corenman who administered various injections and facet blocks. Dr. Thos Evans also administered injections, including a right SI joint injection on October 5, 2015.

12. On November 4, 2015, Dr. Evans performed medial branch radiofrequency ablation (RFA) at the left L3-4 and L4-5 levels. Thereafter on November 4, 2015, Dr. Evans performed right L5-S1 medial branch RFA and right S1, S2, and S3 lateral branch RFA.

13. On March 10, 2016, Dr. Stagg determined that the claimant had reached maximum medical improvement (MMI) for the February 1, 2015 injury. Dr. Stagg also determined that apportionment was necessary due to the claimant’s prior injury, which resulted in a 1 percent whole person impairment for this injury.²

14. On October 8, 2016, Dr. Evans authored a letter in which he reported that injections to the claimant’s facets, discs, and SI region were successful. In that same letter, Dr. Evans recommended a right L4-5 and L5-S1 TFESI.

15. On October 10, 2016, the claimant attended a Division Sponsored Independent Medical examination (DIME) with Dr. John Aschberger. In connection with the DIME, Dr. Aschberger reviewed the claimant’s medical records, obtained a history from the claimant, and completed a physical examination. In his DIME report, Dr. Aschberger noted significant findings of pelvic asymmetry. Dr. Aschberger opined that the claimant’s asymmetric pelvis could be the source of the claimant’s SI joint symptoms. In addition, Dr. Aschberger recommended no additional injections until the claimant’s pelvic dysfunction is corrected. Dr. Aschberger assessed a permanent impairment rating of 2 percent for the claimant’s spine. When combined with an impairment rating for the claimant’s right upper extremity, Dr. Aschberger assessed a whole person impairment rating of 8 percent.

16. The claimant continued to experience low back pain with radicular symptoms and returned to Dr. Evans on March 24, 2017. At that time, the claimant reported to Dr. Evans that he did not accurately report his relief from a prior injection. The claimant clarified that he experienced better than 80 percent relief following the RFA performed in April 2016 for two to three months. Dr. Evans diagnosed sacroiliitis

² Dr. Stagg also assessed permanent impairment of the claimant’s right shoulder for a total whole person impairment of 6 percent.

and recommended a right SI joint injection. The recommended right SI joint injection was administered by Dr. Evans on April 11, 2017.

17. The claimant returned to Dr. Evans on May 24, 2017 and reported 80 percent relief of his right leg radicular symptoms following the SI joint injection. At that time, Dr. Evans recommended a repeat right SI joint injection.

18. The respondent asked Dr. Kathy McCranie to review the reasonableness and necessity of the repeat right SI joint injection recommended by Dr. Evans. On September 25, 2017, Dr. McCranie issued a report in which she opined that the injection was reasonable and necessary. However, Dr. McCranie noted that the Colorado Medical Treatment Guidelines (MTG) require that certain steps are to be taken before and after such an injection, to properly document the claimant's pain reports and functional gains.

19. The recommended repeat right SI joint injection was administered by Dr. Evans on October 10, 2017. However, the pre and post injection documentation addressed in Dr. McCranie's report were not performed.

20. On November 16, 2017, the claimant was seen by Dr. Robert McLaughlin. At that time, the claimant reported that he had fallen while working for his new employer, Rocky Mountain Gun Club (RMGC). At the time of that appointment, the claimant had been working for RMGC for approximately one year. The claimant reported to Dr. McLaughlin that on October 29, 2017, he slipped on a slippery floor at work and fell onto his right and left buttocks and low back. The claimant also reported a new feeling of pain down his right leg. Dr. McLaughlin ordered an x-ray of the claimant's pelvis which showed no acute changes. Dr. McLaughlin opined that the claimant's recent fall might have exacerbated the claimant's preexisting lumbar spine condition. At that time, a referral was made for chiropractic treatment.

21. On December 8, 2017, Dr. McLaughlin noted that the claimant continued to complain of radicular pain down his right leg. The claimant also reported numbness in his right foot. At that time, Dr. McLaughlin opined that the claimant's SI joint was causing these symptoms.

22. On December 15, 2017, the claimant was seen by Dr. Stagg who noted that the claimant remained at MMI for his 2015 work injury.

23. On January 19, 2018, Dr. McLaughlin noted that the claimant was at MMI for the October 29, 2017 injury. It appears that Dr. McLaughlin made this determination of MMI based upon the claimant's report that he had returned to his "baseline". Dr. McLaughlin also noted that the claimant had long-term chronic pain in the lumbar spine and SI joint.

24. The claimant continued to report his low back and SI joint symptoms to Dr. Stagg. On May 21, 2018, Dr. Stagg referred the claimant to surgeon Dr. Kirk Clifford for consultation.

25. The claimant was first seen by Dr. Clifford on May 24, 2018. The claimant reported to Dr. Clifford that the SI joint injection was the most effective treatment of his symptoms. Dr. Clifford opined that the claimant's right SI joint was the claimant's pain generator. As a result, he recommended a right SI joint injection.

26. On June 4, 2018, Dr. Timothy O'Brien conducted a medical records review and issued a report in which he recommended denial of the right SI joint injection. In support of his opinion, Dr. O'Brien noted that the claimant experienced only two months of relief from the prior injection. In addition, Dr. O'Brien opined that the claimant's SI joint was not injured at the time February 1, 2015 work injury.

27. Based upon the opinion of Dr. O'Brien, the respondent initially denied authorization for a right sided SI joint injection. Subsequently, Dr. McCranie reviewed additional medical records and issued reports on August 30, 2018 and August 31, 2018. In her reports, Dr. McCranie recommended that the SI joint injection proceed. However, Dr. McCranie again recommended that the injections comply with the MTG and properly document the claimant's pain reports and functional gains.

28. On November 28, 2018, Dr. Clifford administered a right SI joint injection. On December 10, 2018, the claimant reported to Dr. Stagg that the injection provided 24 hours of improvement. The claimant also reported that he had received more relief from past injections. However, the pre and post injection documentation as recommended by Dr. McCranie were not performed.

29. The claimant returned to Dr. Clifford on December 19, 2018, and reported that he had 80 percent relief for two to four hours following the injection. At that visit, Dr. Clifford recommended that the claimant undergo a right sided SI joint fusion. On March 8, 2019, Dr. McLaughlin agreed with the recommended fusion. However, Dr. McLaughlin recommended that the claimant first undergo a diagnostic right SI joint injection.

30. Subsequently, Dr. Clifford also recommended a left sided SI joint injection. That left SI joint injection was administered by Dr. Clifford on May 29, 2019.

31. Dr. Clifford testified by deposition in this matter regarding his treatment recommendations. Dr. Clifford testified that the claimant has bilateral SI joint pain. Dr. Clifford reiterated that he has recommended that the claimant undergo a repeat right-sided SI joint injection. Dr. Clifford explained that the basis for this recommendation is that the claimant experienced 70 percent relief immediately following the last injection, with 80 percent improvement for "a few hours". Dr. Clifford also testified that he has recommended a right sided SI joint fusion to address the claimant's symptoms. Dr. Clifford explained that a repeat SI joint injection that provides 80 percent relief would

indicate that an SI joint fusion would be a treatment option for the claimant. In addition, Dr. Clifford opined that the claimant is also a candidate for a left sided SI joint fusion.

32. On June 11, 2019, the claimant attended an independent medical examination (IME) with Dr. Brian Reiss. In connection with the IME, Dr. Reiss reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Reiss opined that the claimant's SI joint is not his pain generator. In support of this opinion, Dr. Reiss noted that the injections administered to the claimant have not diagnosed a pain generator. In addition, the injections have not been documented in accordance with the MTG. For example, there has been no definitive documentation of the claimant's pain level and function immediately prior to and after the injections. Nor have there been any pain diaries kept to document the success of each injection. As a result of these factors, Dr. Reiss noted that an SI joint fusion would not be indicated for the claimant pursuant to the MTG. Dr. Reiss also noted that the claimant has a long history of SI joint related issues beginning in 1999.

33. On August 2, 2019, Dr. McCranie reviewed Dr. Reiss' IME report and issued her own report in which she agreed with Dr. Reiss. Specifically, Dr. McCranie noted her agreement that the claimant remains at MMI for the February 1, 2015 work injury. Dr. McCranie also agreed that the claimant is not a candidate for an SI joint fusion. Finally, Dr. McCranie noted that pursuant to the MTG, SI joint fusions are not indicated for mechanical back pain.

34. On August 27, 2019, Dr. Reiss was asked to review additional medical records. Upon completing that review, Dr. Reiss issued a report in which he reiterated that repeat SI joint injections are not indicated pursuant to the MTG. In addition, an SI joint fusion is not indicated pursuant to the MTG. Dr. Reiss stated that his opinions were unchanged. On September 23, 2019, Dr. Reiss issued a reported after he was provided the transcript of Dr. Clifford's deposition. Dr. Reiss again stated his opinion that repeat SI joint injections and/or an SI joint fusion were not indicated. Based upon Dr. Reiss' opinions, the respondent denied authorization for both SI joint injections and an SI joint fusion.

35. Dr. Reiss' testimony by deposition was consistent with his written reports. Dr. Reiss reiterated his opinion that an SI joint fusion was not indicated for the claimant. In support of this opinion, Dr. Reiss noted that the MTG do not recommend an SI joint fusion to treat low back pain. Dr. Reiss also noted his opinion that a repeat SI joint injection is not indicated. It is the opinion of Dr. Reiss that such an injection would not be useful, given that ultimately an SI joint fusion is not indicated. Dr. Reiss testified that it is his understanding that the claimant has changed his position regarding the effectiveness of various injections he has received. Dr. Reiss also testified that it is still unclear that the SI joint is the claimant's pain generator.

36. The claimant testified that the most effective treatment of his symptoms occurred with the first SI joint injection. In addition, the claimant recalls that following the injections, he experienced 95 to 100 percent improvement in his pain symptoms. However, this pain relief was for a short period of time. The claimant also testified that his current symptoms include an inability to sit for very long because of his pain.

37. With regard to the October 29, 2017 incident at RMGC, the claimant testified that he slipped and landed on his “backside”. The claimant also testified that that incident did not cause any permanent impact to his condition.

38. The ALJ credits the medical records and the opinions of Drs. Reiss and McCranie over the contrary opinions of Dr. Clifford and finds that the claimant has failed to demonstrate that it is more likely than not that the recommended SI joint injections and SI joint fusion are reasonable and necessary to cure and relieve the claimant from the effects of the work injury. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not the claimant’s condition has worsened.

39. The ALJ credits the medical records and finds that the respondent has successfully demonstrated that it is more likely than not that the claimant’s slip and fall on October 29, 2017 was an intervening event necessitating the need for medical treatment. Specifically, the ALJ finds that the October 29, 2017 incident resulted in the need for the claimant to be seen by Dr. McLaughlin, an x-ray, and a referral to chiropractic treatment which establish evidence of a new injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

4. Section 8-43-303(1) provides that “any award” may be reopened within six years after the date of injury “on the ground of fraud, an overpayment, an error, mistake, or a change in condition.” Reopening for “mistake” can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g., Standard Metals Corporation v. Gallegos*, 781 P.2d 142 (Colo. App. 1989); see also *Amin v. Schneider National Carriers*, W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission*, 646 P.2d 399 (Colo. 1981).

5. A change in condition refers to “a change in the condition of the original compensable injury or to a change in the claimant’s physical or mental condition which can be causally connected to the original compensable injury.” *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

6. As found, the claimant has failed to demonstrate by a preponderance of the evidence that his condition has worsened. As found, the medical records and the opinions of Drs. Reiss and McCranie are credible and persuasive.

7. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

8. The Colorado Workers’ Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers’ Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: “In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these ‘Medical Treatment Guidelines.’ This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a

reasonable cost.” WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG “set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate.”

9. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. See *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); see also *Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTD); see also *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

10. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the SI joint injections and SI joint fusion constitute reasonable and necessary medical treatment. As found, the medical records and the opinions of Drs. Reiss and McCranie are credible and persuasive.

11. If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant’s condition is severed. See *Post Printing & Publishing Co. v. Erickson*, 94 Colo. 382, 384, 30 P.2d 327, 328 (1934). Respondents are only liable for subsequent injuries which “flow proximately and naturally” from the compensable injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

12. As found, the respondent has demonstrated by a preponderance of the evidence that on October 29, 2017, the claimant suffered an intervening event that was sufficient to sever the respondent’s liability and terminate claimant’s maintenance medical care. As found, the medical records are credible and persuasive.

ORDER

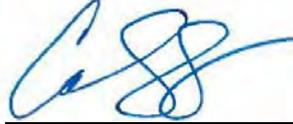

It is therefore ordered:

1. The claimant’s request that his claim be reopened is denied and dismissed.

2. The claimant’s request for medical treatment recommended by Dr. Clifford (including additional SI joint injections and an SI joint fusion) is denied and dismissed.

3. On October 29, 2017, the claimant suffered an intervening event that was sufficient to sever the respondent's liability and terminate the claimant's maintenance medical care.

Dated this 3rd day of February 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- I. The determination of Claimant's average weekly wage under Section 8-42-102(2), C.R.S., or Section 8-42-102(3), C.R.S., to establish a fair approximation of Claimant's wage loss and diminished earning capacity.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a credible witness and her testimony is both persuasive and consistent with the wage and medical records in the case.
2. Claimant has been employed in Employer's bakery department since approximately August 20, 2016.
3. The number of hours Claimant worked each workday varied. In addition, on some days, Claimant would work overtime. (*Exhibit 1*)
4. Shortly before her injury, Claimant's base rate of pay was \$11.50, per hour, plus overtime.
5. But about one week before her injury, on approximately January 8, 2018, Claimant's base rate of pay was increased to \$12.00 per hour, plus overtime.
6. On January 16, 2018, Claimant suffered a compensable injury for which liability has been admitted.
7. The General Admission of Liability ("GA") admits for an AWW of \$431.19. (*Exhibit 1*)
8. According to the notes on the GA, Respondent calculated Claimant's AWW by using Claimant's wages from a 20-day period, December 25, 2017 to January 13, 2018, which totaled \$1,231.74. According the GA, the admitted "AWW of \$431.12 is more reflective of what she makes." (*See Exhibit C, pp. 39-45*)
9. But a review of Claimant's wage records shows that using the specific 20-day period selected by Respondent - and the wages earned during that period - is not a fair and accurate method to calculate Claimant's AWW. Respondent's calculation is not fair and accurate for several reasons. First, it appears Claimant did not work for the first four days of the 20-day period used by Respondent to calculate Claimant's AWW.¹ Second, around two-thirds of the days used by Respondent to calculate Claimant's AWW did not include Claimant's increased hourly rate of pay in effect on the day of her injury. As a result, the information used by Respondent led to the understatement of Claimant's AWW.

¹ It looks like Claimant did not work on Christmas, 12/25/17, but was paid the equivalent of 3 hours, which was designated as "LHCHS" time and not "REG" - for regular time - and not "OT" - for overtime.

10. The exhibits, and Claimant's credible testimony, established that in 2017, Claimant's total earnings were \$25,058.86. (*Exhibit A*) However, in 2017, Claimant missed about 4½ weeks of work, towards the end of the year, for a non-work-related health problem.
11. Claimant argues that a fair approximation of her AWW would be to take her total earnings for 2017, which were \$25,058.86, and divide them by 48 weeks, because Claimant missed about a month from work in 2017. That method leads to an AWW of \$522.06.
12. Respondent argues that Claimant's admitted AWW is correct and rejects the calculation other than the one prepared by the adjuster. Alternately, Respondent argues that if one divides the total earnings of 2017 by 52 weeks, the proper AWW is \$481.90.
13. Claimant's wage records reveal she missed work from November 27, 2017, through December 28, 2017, which is 4 weeks and 4 days.² (*Exhibit A, pg. 2*) However, there was no credible and persuasive evidence presented that Claimant consistently developed a non-work related health problem every year that caused her to miss a block of 4½ weeks of work each year. In other words, there was no evidence submitted that Claimant consistently took an unexpected 4½ week sabbatical, or extra vacation, every year. Therefore, dividing Claimant's 47½ weeks of earnings during 2017, by 52 weeks, is not a fair and accurate method to calculate Claimant's AWW.
14. Dividing her total earnings in 2017 by 47½ weeks results in an average weekly wage (AWW) of \$527.55.
15. But the purpose of Section 8-42-102(2), C.R.S. and 8-42-102(3), C.R.S. is to establish a fair approximation of Claimant's wage loss and diminished earning capacity due to the work accident. Moreover, the proposed AWW calculations set forth by Claimant and Respondent both fail to fairly approximate Claimant's wage loss and diminished earning capacity.
16. Using Claimant's total earnings from 2017 does not fairly approximate her wage loss from this injury because:
 - i. During the first half of 2017, Claimant was only being paid \$11.00 per hour;
 - ii. During the second half of 2017, Claimant was only being paid \$11.50 per hour; and
 - iii. At the time of her injury in January 2018, Claimant was being paid \$12.00 per hour.
12. Thus, the best way to fairly approximate Claimant's wage loss and diminished earning capacity because of her work injury is to:

² The wage records show Claimant was paid 5.42 hours of sick time, totaling, \$62.33, for November 27, 2017. It also looks like Claimant was paid 3 hours of holiday pay, totaling \$34.50, for December 25, 2017, for Christmas. (*See Respondent's Exhibit A, bate stamp 002.*)

- i. Use the actual hours claimant worked during the 47½ weeks she worked in 2017,
 - ii. Adjust her 2017 total earnings by using the rate of pay in effect on the date she was injured, which is \$12.00 per hour, plus overtime, and
 - iii. Divide her adjusted total earnings by 47½ weeks.
13. In 2017, Claimant worked 1,959.43 regular hours, 210 overtime hours, and 48.42 “other hours,” which resulted in \$1,833.33 in “other earnings.” (*Exhibit A, p. 9.*)
14. The adjusted total earnings calculation based on the hours Claimant worked in 2017, during the 47½ week period, based on \$12.00 per hour, plus overtime, is as follows:
- i. Claimant’s 1,959.43 regular work hours, at \$12.00 per hour, equals \$23,513.16.
 - ii. Claimant’s 210 overtime hours, at \$18.00 per hour, equals \$3,780.00.
 - iii. Claimant’s “other earnings” equals \$1,833.33.³
- Therefore, Claimant’s total adjusted gross earnings for 2017, based on her 2018 hourly rate of pay of \$12.00, plus overtime, is \$29,126.49.
14. The next step is to divide Claimant’s adjusted gross earnings by the number of weeks she worked, during 2017, which is 47½. As a result, Claimant’s adjusted AWW is \$613.19.⁴
15. Based on the unique circumstances of this case, a fair approximation and determination of Claimant’s AWW is \$613.19.
16. An AWW of \$613.19 is a fair approximation of Claimant’s wage loss and diminished earning capacity due to her work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the need for any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S.

³ The hourly rate used to determine Claimant’s “Other Earnings” on her wage records is unclear. The ALJ thus used the actual earnings paid to Claimant in 2017 for her “Other Hours” and “Other Earnings”, which equals \$1,833.33, and not adjusted for any increase in pay that occurred in 2017 and the beginning of 2018.

⁴ \$29,126.49 / 47½ weeks = \$613.19.

A preponderance of the evidence is what leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence dispositive of the issues involved. The ALJ has not addressed every piece of evidence leading to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Substantial Evidence

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010); *Leeway v. Indus. Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office*, 131 P.3d 1172 (Colo. App. 2005).

Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions therein. See *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001).

The ALJ makes the rational choice to accept Claimant's testimony and the plausible inferences drawn therefrom. A claim may be supported by lay testimony alone. See *Lymburn v Symbois Logic*, 952 P.2d 831 (Colo. App. 1997).

I. The determination of Claimant's average weekly wage under Section 8-42-102(2), C.R.S., or 8-42-102(3), C.R.S. to establish a fair approximation of Claimant's wage loss and diminished earning capacity.

Section 8-42-105(1), C.R.S., provides that a Claimant's TTD rate is sixty-six and two-thirds percent of her AWW.

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. But under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in

calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra*.

Based on a totality of the evidence presented at hearing, and the unique facts of this case, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that her AWW is \$613.19 under §8-42-102(3), C.R.S. The ALJ finds and concludes that the AWW of \$613.19 is a fair approximation of Claimant's wage loss and diminished earning capacity because of her work injury. As a result, Claimant's TTD rate is \$408.79.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

- A. Claimant's average weekly wage is \$613.19.
- B. Claimant's TTD and TPD rates from the date of her injury ongoing shall be based on this average weekly wage.
- C. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

Any issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 3, 2020.

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- I. Whether Respondents proved by a preponderance of the evidence Claimant's indemnity benefits should be reduced by 50% for the willful violation of a safety rule pursuant to §8-42-112(1)(b), C.R.S.
- II. Whether Respondents proved by a preponderance of the evidence Claimant is responsible for his termination.

FINDINGS OF FACT

1. Claimant worked for Employer as a hardware sales associate. Claimant began his employment for Employer on January 13, 2016. Claimant's primary job duties included providing customer service and maintaining the store's appearance. It is undisputed Claimant was not an asset protection associate or member of management.

2. Claimant sustained an admitted industrial injury on February 9, 2019. Claimant observed an individual he suspected of shoplifting exit through the self-checkout area with a shopping cart of power tools. The cashier in the area made eye contact with Claimant and pointed to the individual, which Claimant believed was an indication the individual did not pay for the items. Claimant proceeded to follow the individual out of the store to the suspect's vehicle located in the store's parking lot.

3. Claimant testified he followed the individual outside with the intention of asking for a receipt. Claimant later testified that, if the suspect did not produce a receipt, his plan was to take the suspect and the stolen items back into the store. Claimant approached the suspected shoplifter while he was loading tools into the passenger side of his vehicle and asked for a receipt. At that time the suspect punched Claimant, ran to the other side of the vehicle and got into the driver's seat. Claimant proceeded to pull the shopping cart of items in front of the vehicle and followed the individual to the driver's side. Claimant testified a customer was standing in front of the suspect's vehicle and Claimant feared the suspect was going to strike the customer with the vehicle. Claimant testified he reached inside of the suspect's vehicle and put the vehicle in neutral. The suspect was able to put the vehicle in drive and drove off with Claimant hanging onto the driver's side window. Claimant hung onto the window for approximately 100 feet before letting go. Claimant sustained injuries to his head and extremities.

4. Employer terminated Claimant on February 15, 2019. Employer terminated Claimant for violating its Asset Protection External Policy. The written Progressive Disciplinary Notice terminating Claimant states Claimant committed "a major work rule

violation by chasing or apprehending a customer without being authorized, pursuing or apprehending a customer in a manner that creates a safety risk to associates or others.”

5. Exhibit H is Employer’s Asset Protection External Policy, updated September 2018. Per the policy, the only associates authorized to make external theft and fraud apprehensions are (1) asset protection associates who have successfully completed Employer’s required apprehension training and (2) salaried members of management who have received prior written approval from the Senior Director of Operations and completed the required apprehension training. The policy sets forth the guidelines for authorized associates in approaching and apprehending suspected thieves. The policy states one of its purposes is to help ensure the safety of associates, customers and others. The policy further provides that any violation may result in disciplinary action up to and including termination. The policy was in place at the time of Claimant’s work injury.

6. In outlining the requirements for certification of authorized asset protection, the policy refers to completing Class #3675- External Policy within Employer’s online training database, Knowledge Depot.

7. Exhibit J is a transcript of the Knowledge Depot training courses completed by Claimant since the date of hire. The transcript does not include Class #3675 - External Policy. The transcript reflects Claimant successfully completed Class #4012 - Loss Prevention Basics successfully completed on January 29, 2016. Claimant testified he did not specifically remember taking the Loss Prevention Basics class; however, he did not dispute the accuracy of the transcript.

8. Kevin G[Redacted], Operations Manager, testified on behalf of Employer. Mr. G[Redacted] testified that, pursuant to Employer’s Asset Protection External Policy, only trained asset protection associates are allowed to confront a suspected shoplifter. Mr. G[Redacted] testified that if a sales associate suspects shoplifting, the sales associate should provide customer service in the aisles to deter theft or contact asset protection. Mr. G[Redacted] testified that the policy is addressed at employee orientation and during trainings completed on the Knowledge Depot system. Mr. G[Redacted] testified that the Loss Prevention Basics course covers an associate’s basic responsibilities in loss prevention as well as how to handle external shoplifting. Mr. G[Redacted] testified that violation of the policy is enforced by termination and Employer has terminated other employees for violation of the policy. Mr. G[Redacted] further testified that it is common knowledge that associates are not supposed to pursue shoplifters and the policy is verbally enforced by managers.

9. Claimant testified he was never provided the Asset Protection External Policy during his employment and was unaware of policy prior to his termination. Claimant testified that if he had known there was a rule prohibiting his actions he would have abided by such rule. Claimant testified that, on multiple occasions, he and associates asked suspected shoplifters for receipts. He testified that, when a customer was suspected of shoplifting, the procedure was to contact asset protection associate if an

asset protection associate was on duty at the time. If not, sales associates would follow the suspect and ask for a receipt. Claimant testified that on prior occasions the head of security had instructed Claimant and other sales associates to go to the parking lot to write down license plate numbers. Claimant testified regarding an incident at work the night prior to his work injury when multiple associates covered emergency exits to prevent known shoplifters from exiting the store until the police arrived. Claimant testified he and other sales associates were praised by management for their efforts.

10. The ALJ finds Claimant's testimony more credible and persuasive than the testimony of Mr. G[Redacted].

11. The ALJ finds that, while Respondents adopted a reasonable rule regarding apprehending suspects that, in part, was for the safety of employees, Respondents failed to prove it is more likely than not Claimant was aware of the rule and willfully violated the rule.

12. The ALJ finds that the preponderant evidence fails to establish Claimant was aware of Employer's policy and reasonably expected that his actions would result in his termination. Respondents failed to prove it is more likely than not Claimant is responsible for his termination.

13. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Safety Rule Violation

Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re Alverado*, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Willful conduct may be proven by circumstantial evidence including evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimant's conduct. See *In re Heien*; W.C. No. 5-059-799-01 (ICAO, Nov. 29, 2018).

Respondents need not establish that an employee had the safety rule in mind and decided to break it. *In re Alverado*, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* However, willfulness will not be established if the conduct is the result of thoughtlessness or negligence. *In re Bauer*, W.C. No. 4-495-198 (ICAO, Oct. 20, 2003). "Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez*, W.C. No. 4-561-352 (ICAO, Apr. 29, 2004). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc.*, 907 P.2d at 719.

An employer's failure to enforce its safety rule may render the rule unavailable as a basis to reduce compensation/impose a reduction of benefits. *Lori's Family Dining, Inc.* 907 P.2d at 719 ("The most frequent ground for rejecting imposition of a penalty, whether it be for violation of a safety rule or willful misconduct, is the lack of enforcement of the rule or policy by an employer with knowledge of and acquiescence in its violation").

As found, Respondents failed to meet their burden to establish Claimant willfully failed to obey a reasonable and known safety rule. The ALJ is persuaded Employer adopted the Asset Protection External Policy, which provides that only trained asset protection associates and certain members of management are authorized to make external apprehensions. The policy is, in part, for the safety of employees and is reasonable in its application and aim. Nonetheless, Respondents failed to prove by a preponderance of the evidence Claimant knew of the policy and willfully violated the policy.

Claimant credibly testified he was not aware of the policy prior to his termination. While the Knowledge Depot transcript confirms Claimant successfully completed a loss prevention basics course, there is no indication on the transcript Claimant completed the external policy course, which, as referenced in the policy, is a separate course. Although Mr. G[Redacted] testified the external policy is addressed in the loss prevention basics course, there is insufficient credible and persuasive evidence as to what the loss prevention basics course actually entailed and what was actually made known to Claimant. Claimant credibly testified that, on multiple occasions, he and other sales associates approached suspected shoplifters and asked for receipts, which is what Claimant did on the date of the work injury. There is insufficient credible and persuasive evidence Claimant was aware he was not permitted to follow the suspected shoplifter into the parking lot on the day of the work injury and ask the suspect for a receipt. While Claimant acknowledged he was aware of the procedure to call an asset protection associate when there he suspected shoplifting, he further stated his understanding was that such procedure applied when the asset protection associate was on duty. Claimant credibly testified there was no asset protection associate on duty at the time. Moreover, Claimant followed the suspected shoplifter to the parking lot to ask for a receipt, which Claimant had done in the store on multiple prior occasions. While the Asset Protection Policy provides only authorized persons are permitted to apprehend suspected shoplifters, the preponderant credible and persuasive evidence does not establish Claimant knew Employer's policy and deliberately violated the rule.

Responsible for Termination

Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v.*

Digital Equipment, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus “responsible” if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep’t of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

Violation of an employer’s policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). An “incidental violation” is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be “responsible” for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer’s expectations may result in termination. See *Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992) (claimant disqualified from unemployment benefits after discharge for unsatisfactory performance when aware of expectations, even if not explicitly warned that job was in jeopardy). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

As found, Respondents failed to prove by a preponderance of the evidence Claimant is responsible for his termination. Claimant credibly testified he was not aware of Employer’s policy and, had he been aware, he would not have taken the actions he took that lead to sustaining the work injury. Claimant credibly testified he and other sales associates, on multiple prior occasions, asked suspected shoplifters for receipts. Thus, while Claimant’s decision to follow the suspect to the parking lot to ask for a receipt was a volitional act, the credible and persuasive evidence does not establish it is more likely than not he reasonably expected such actions to cause his termination.

ORDER

1. Respondents failed to prove by a preponderance of the evidence Claimant willfully violated a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. Claimant’s benefits shall not be reduced by 50%.
2. Respondents failed to prove by a preponderance of the evidence Claimant is responsible for his termination. Respondents shall pay Claimant temporary total disability benefits as admitted until terminated by law.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she should be permitted to reopen her January 15, 2014 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the periods July 17, 2019 through November 11, 2019 and November 20, 2019 until terminated by statute.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of \$485.60.

FINDINGS OF FACT

1. On January 15, 2014 Claimant suffered an admitted industrial injury when she twisted her left ankle. She received medical treatment through Robert Anderson-Oeser, M.D. at Concentra Medical Centers. Claimant underwent left ankle surgery with James Davis, D.P.M.

2. Claimant subsequently reached Maximum Medical Improvement (MMI). She received a 6% left lower extremity impairment rating.

3. On September 27, 2016 Claimant underwent a Division Independent Medical Examination (DIME) with John J. Aschberger, M.D. Dr. Aschberger determined that Claimant reached MMI on July 5, 2016 and assigned a 6% left lower extremity impairment rating.

4. On December 9, 2016 Respondents filed a Final Admission of Liability (FAL) consistent with the 6% lower extremity rating and acknowledged that Claimant was entitled to receive medical maintenance benefits.

5. Claimant subsequently received medical maintenance treatment from Dr. Anderson-Oeser about once every one to two months. Dr. Anderson-Oeser noted that Claimant suffered persistent left ankle pain but her condition remained stable.

6. Claimant explained that while shopping at Party City on June 24, 2019 she turned and her left ankle "snapped." However, Claimant visited Dr. Anderson-Oeser on June 10, 2019 and reported that "yesterday" when she was walking in a store, she turned and her left ankle "popped." She subsequently experienced severe left ankle

pain. Claimant testified that the specific pain differed from her prior left ankle symptoms.

7. On July 9, 2019 Dr. Davis took Claimant off work because of left ankle pain. He recommended a job where Claimant could remain seated with limited walking.

8. On July 17, 2019 Claimant filed a Petition to Reopen based on a worsening of condition. Claimant attached a note from Dr. Davis to the Petition. Dr. Davis remarked that Claimant had “a new twisting type injury to the left foot and ankle.” He concluded that Claimant’s “current injury appears to be related to her previous injury and a flare-up of the previous conditions.”

9. On August 8, 2019 Claimant underwent a left ankle MRI. The MRI revealed a chronic sprain of the anterior talofibular ligament with mild adjacent soft tissue edema that “may represent a mild acute superimposed on chronic sprain.” The MRI also reflected a small ganglion cyst of indeterminate age.

10. After additional medical treatment with Dr. Anderson-Oeser, Claimant underwent left ankle surgery with Dr. Davis on October 25, 2019. Dr. Davis stated in his operative report that Claimant’s left ankle injury at work that caused chronic pain and instability. Because of the failure of conservative treatment, Dr. Davis recommended surgical repair of the lateral collateral ligaments of the left ankle. In his post-operative diagnosis, Dr. Davis noted that Claimant exhibited an anterior talofibular ligament rupture and a calcaneofibular ligament rupture.

11. On October 16, 2019 Claimant underwent an independent medical examination with John Schwappach, M.D. Dr. Schwappach issued a report on October 27, 2019. He remarked that Claimant “appears to have an exacerbation of her previous left ankle injury.” Dr. Schwappach determined that Claimant had reached MMI with no additional impairment. Claimant’s range of motion was identical to Dr. Aschberger’s previous findings.

12. Dr. Schwappach also testified at the hearing in this matter. He commented that Claimant had been doing well prior to her June 2019 left ankle injury. Claimant recounted that in June 2019 she had been standing in a store, turned to the left and experienced a “popping” sensation in her left ankle. Claimant subsequently suffered increased pain, discomfort and acute disability. Dr. Schwappach determined that the June 2019 incident constituted a new injury.

13. Dr. Schwappach explained that the August 8, 2019 MRI revealed a new, acute left ankle injury. The MRI reflected that Claimant’s injury was well healed with no injury to the inside of her left ankle. The major tendons of the foot were in good position. The MRI demonstrated that the ligament on the outside of Claimant’s left ankle was thickened as a result of her prior injury. The MRI demonstrated new, mild soft tissue edema that was unrelated to the structural integrity of the left ankle. Dr. Schwappach summarized that Claimant’s prior left ankle injury was completely intact. The left ankle soft tissue edema thus constituted a new injury unrelated to the January 15, 2014

twisting accident. Specifically, there was no evidence of effusion, intraarticular loose bodies or tibial tear. All of the preceding would have existed if Claimant's original injury had been aggravated in June 2019. Dr. Schwappach concluded that Claimant did not aggravate her prior left ankle injury and remained at MMI.

14. Claimant has failed to establish that it is more probably true than not that she should be permitted to reopen her January 15, 2014 Workers' Compensation claim based on a change in condition. Initially, Claimant asserts that she suffered a worsening of her January 15, 2014 left ankle injury as a result of the June 2019 event. Dr. Davis determined that Claimant's June 2019 injury "appear[ed] to be related to her previous injury and a flare-up of the previous conditions."

15. In contrast, Dr. Schwappach persuasively explained that Claimant suffered a new left ankle injury in June 2019 that was unrelated to her prior January 15, 2014 Workers' Compensation claim. In his October 27, 2019 report, Dr. Schwappach remarked that Claimant suffered an exacerbation of her previous left ankle injury. However, during his testimony Dr. Schwappach noted that Claimant suffered increased pain, discomfort and acute disability as a result of the June 2019 incident. He detailed that the August 8, 2019 MRI revealed a new, acute left ankle injury. The MRI reflected that Claimant's original injury was well healed with no damage to the inside of her left ankle. The MRI demonstrated new, mild soft tissue edema that was unrelated to the structural integrity of the left ankle. Dr. Schwappach summarized that Claimant's prior left ankle injury remained intact and the left ankle soft tissue edema constituted a new injury unrelated to the January 15, 2014 twisting accident. Specifically, there was no evidence of effusion, intraarticular loose bodies or a tibial tear. All of the preceding would have existed if Claimant's original injury had been aggravated in June 2019. Dr. Schwappach concluded that Claimant did not aggravate her prior left ankle injury but remained at MMI.

16. Based on the medical records and persuasive testimony of Dr. Schwappach, the June 2019 accident constituted an intervening injury that severed the causal connection to Claimant's original January 15, 2014 work-related incident. The intervening event triggered Claimant's disability. Accordingly, Claimant has failed to establish that she suffered a worsening of her left ankle condition that is causally related to the January 2014 accident. Accordingly, Claimant's request to reopen her January 15, 2014 Workers' Compensation claim based on a change in condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197

Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo*, W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen*, W.C. No. 4-543-945 (ICAO, July 19, 2004).

5. The existence of a weakened condition is insufficient to establish causation if the new injury is the result of an efficient intervening cause. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002); *In Re Lang*, W.C. No. 4-450-747 (ICAO, May 16, 2005). No liability exists when a later accident occurs as the direct result of an intervening cause. *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). However, the intervening event does not sever the causal connection between the injury and the claimant's condition unless the disability is triggered by the intervening event. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). If the need for medical treatment occurs as the result of an independent intervening cause, then the subsequent treatment is not compensable. *Owens*, 49 P.3d at 1188. The new injury is not compensable "merely because the later accident might or would not have happened if the employee had retained all his former powers." *In Re Chavez*, W.C. No. 4-499-370 (ICAO, Jan. 23, 2004). The determination of whether an injury resulted from an efficient intervening cause is a question of fact for the ALJ. *Id.*

6. As found, Claimant has failed to establish by a preponderance of the evidence that she should be permitted to reopen her January 15, 2014 Workers' Compensation claim based on a change in condition. Initially, Claimant asserts that she suffered a worsening of her January 15, 2014 left ankle injury as a result of the June 2019 event. Dr. Davis determined that Claimant's June 2019 injury "appear[ed] to be related to her previous injury and a flare-up of the previous conditions."

7. As found, in contrast, Dr. Schwappach persuasively explained that Claimant suffered a new left ankle injury in June 2019 that was unrelated to her prior January 15, 2014 Workers' Compensation claim. In his October 27, 2019 report, Dr. Schwappach remarked that Claimant suffered an exacerbation of her previous left ankle injury. However, during his testimony Dr. Schwappach noted that Claimant suffered increased pain, discomfort and acute disability as a result of the June 2019 incident. He detailed that the August 8, 2019 MRI revealed a new, acute left ankle injury. The MRI reflected that Claimant's original injury was well healed with no damage to the inside of her left ankle. The MRI demonstrated new, mild soft tissue edema that was unrelated to the structural integrity of the left ankle. Dr. Schwappach summarized that Claimant's prior left ankle injury remained intact and the left ankle soft tissue edema constituted a new injury unrelated to the January 15, 2014 twisting accident. Specifically, there was no evidence of effusion, intraarticular loose bodies or a tibial tear. All of the preceding would have existed if Claimant's original injury had been aggravated in June 2019. Dr. Schwappach concluded that Claimant did not aggravate her prior left ankle injury but remained at MMI.

8. As found, based on the medical records and persuasive testimony of Dr. Schwappach, the June 2019 accident constituted an intervening injury that severed the causal connection to Claimant's original January 15, 2014 work-related incident. The intervening event triggered Claimant's disability. Accordingly, Claimant has failed to establish that she suffered a worsening of her left ankle condition that is causally related to the January 2014 accident. Accordingly, Claimant's request to reopen her January 15, 2014 Workers' Compensation claim based on a change in condition is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request to reopen her January 15, 2014 Workers' Compensation claim based on a change in condition is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or

service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment of his right thumb, right wrist, and right hand; (including a right trigger thumb release recommended by Dr. Richard Knackendoffel); is reasonable, necessary, and related to the admitted August 27, 2018 work injury.

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment of his left upper extremity is reasonable, necessary, and related to the admitted August 27, 2018 work injury.

FINDINGS OF FACT

1. The claimant worked for the employer installing fiber cable in residences. On August 27, 2018, the claimant was performing his normal job duties when he fell while walking up an inclined area outdoors. The claimant testified that he tripped on a piece of rebar that was sticking out of the ground. At that time, the claimant held a splicer in his left hand and his tool bag in his right hand. As he was falling, the claimant dropped the tool bag and struck his right shoulder and right arm on pieces of river rock. The claimant reported the fall to the employer. The insurer has admitted liability for the claimant's August 27, 2018 fall.

2. The claimant received medical treatment on August 27, 2018. The claimant first sought treatment at West Elk Walk-In Clinic. At that time, the claimant was seen by Candi Lobenstein, NP. The medical record of that date indicates that the claimant was complaining of right shoulder pain. On exam, Ms. Lobenstein noted that the claimant's right shoulder was sitting lower than his left, but she did not believe it to be an anterior dislocation. In addition, Ms. Lobenstein observed that the claimant had full range of motion of this right hand, could make a fist, and moved both his wrist and forearm normally. Due to the condition of the claimant's right shoulder, Ms. Lobenstein immediately referred the claimant to the emergency room.

3. Also on August 27, 2018, the claimant was seen by Dr. Peter Pruett in the emergency department at Delta County Memorial Hospital. An x-ray of the claimant's right shoulder showed no evidence of a dislocation or subluxation. However, the x-ray did show significant degenerative joint disease and chronic deformity of the humeral head. Dr. Pruett opined that the claimant suffered an injury to his right rotator cuff. The claimant was provided a shoulder immobilizer and prescribed pain medications. In addition, Dr. Pruett recommended that the claimant obtain an orthopedic consultation.

4. On August 28, 2018, the claimant began treatment with Dr. Terry Wade. Dr. Wade is the claimant's authorized treating physician (ATP) for this claim. On that date, the claimant reported severe right shoulder pain. On exam, Dr. Wade noted that the claimant had virtually no range of motion of his right shoulder and tenderness on palpation. Dr. Wade also noted that the claimant had full range of motion in his right hand, but was reporting tingling in his index, middle, and ring finger. Dr. Wade ordered a magnetic resonance image (MRI) of the claimant's right shoulder.

5. On September 4, 2018, an MRI of the claimant's right shoulder showed marked arthrosis of the glenohumeral joint, a large cystic lesion on the supraspinatus, advanced degeneration of the acromioclavicular (AC) joint, and tendinosis of both the subscapularis and the biceps tendon.

6. On September 11, 2018, the claimant returned to Dr. Wade. In addition to his right shoulder symptoms, the claimant informed Dr. Wade that "his right thumb will not bend properly". Dr. Wade opined that the claimant suffered a right rotator cuff tear and referred the claimant for an orthopedic consultation. Dr. Wade did not state an opinion regarding the claimant's right thumb/hand complaints.

7. On September 19, 2018, the claimant was seen by Dr. Richard Knackendoffel for consultation regarding his right shoulder symptoms. At that time, the claimant reported his right shoulder symptoms as pain, numbness, tingling, locking, swelling, weakness, and decreased range of motion. The claimant also reported that he was experiencing locking in his right thumb with numbness and tingling in his right hand.

8. Dr. Knackendoffel opined that the severe glenohumeral arthritis in the claimant's right shoulder was aggravated by the August 27, 2018 fall. Dr. Knackendoffel recommended a computed tomography (CT) scan of the claimant's right shoulder. In addition, he opined that the claimant would benefit from a reverse total shoulder arthroplasty. With regard to the claimant's right hand and thumb, Dr. Knackendoffel opined that the claimant had right trigger thumb. On that same date, Dr. Knackendoffel administered steroid injections to both the claimant's right thumb and right carpal tunnel.

9. On September 27, 2018, the claimant returned to Dr. Knackendoffel and reported that the right thumb injection did not provide any relief. On that date, Dr. Knackendoffel continued to diagnose a right trigger thumb. In addition, Dr. Knackendoffel recommended that the claimant undergo a right trigger thumb release.

10. On January 19, 2019, the claimant attended an independent medical examination (IME) with Dr. Mark Failinger. In connection with the IME, Dr. Failinger reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Failinger opined that the claimant's preexisting right shoulder condition of severe degenerative joint disease was exacerbated by the August 27, 2018 fall. Dr. Failinger also opined that the claimant's right trigger thumb was not related to the claimant's fall at work. Therefore, it was the opinion of Dr. Failinger that the recommended trigger thumb release would be

reasonable and necessary to treat the claimant's symptoms, but unrelated to the work injury. Dr. Failinger did not address any left sided symptoms or issues in his IME report.

11. After he had an opportunity to review the claimant's imaging studies, Dr. Failinger issued an addendum to his IME report. In that addendum, Dr. Failinger changed his opinion regarding the relatedness of the condition of the claimant's right shoulder to the fall on August 27, 2018 fall. Specifically, Dr. Failinger specifically noted his opinion that the need for a right shoulder replacement was due to the claimant's preexisting severe and ongoing degenerative joint disease. In support of this opinion, Dr. Failinger noted that the imaging studies showed that the claimant's rotator cuff was intact.

12. Initially the respondents denied authorization for the recommended right shoulder surgery. However, following a hearing, ALJ Keith Mottram determined that the surgery was reasonable, necessary, and related to the work injury.

13. On June 10, 2019, the claimant was seen by Dr. Wade. At that time, Dr. Wade noted that the claimant reported that he was a "having left shoulder and left arm pain secondary to overuse".

14. On June 24, 2019, the claimant returned to Dr. Wade. In the medical record of that date, Dr. Wade noted that the claimant wanted to return to Dr. Knackendoffel regarding his left shoulder symptoms. Dr. Wade opined that these left sided symptoms were the result of the "nonuse" of the claimant's right arm and shoulder.

15. On June 27, 2019, the claimant was seen by Dr. Knackendoffel and reported symptoms in his left shoulder and left hand. The claimant described the symptoms as pain, numbness, tingling, weakness, decreased range of motion, and stiffness. Dr. Knackendoffel ordered x-rays of the claimant's left shoulder and left hand. Dr. Knackendoffel noted that the x-rays showed osteoarthritis of the claimant's left glenohumeral joint and left metacarpal trapezial joint. On that date, Dr. Knackendoffel administered a steroid injection the claimant's left wrist. Dr. Knackendoffel did not indicate an opinion regarding the cause of the claimant's left sided symptoms.

16. On July 18, 2019, the claimant returned to Dr. Wade and continued to report left shoulder symptoms including pain and weakness. On that date, the claimant was taken off of all work.

17. On July 23, 2019, the claimant returned to Dr. Knackendoffel and reported that the injection to his right thumb in February 2019 was helpful. On that date, Dr. Knackendoffel administered a second injection into the claimant's right thumb. The claimant was also provided with a thumb brace.

18. On August 20, 2019, Dr. Knackendoffel submitted a request for authorization of a right trigger thumb release.

19. On September 5, 2019, the respondents notified the claimant that treatment of his right shoulder (including reverse total shoulder replacement) was authorized. In addition, the claimant was notified that treatment of the claimant's left shoulder and right trigger thumb was denied as it is the respondents' position that such treatment is unrelated to work injury.

20. On September 13, 2019, Dr. Sean Gray performed a right reverse total shoulder arthroplasty with allograft reconstruction of the glenoid.

21. The respondents asked Dr. Failinger to review additional medical records. Dr. Failinger was asked to opine as to whether the claimant's left sided symptoms were related to the August 27, 2018 work injury. On November 24, 2019, Dr. Failinger issued an addendum to his IME report. In that report, he opined that the claimant's left shoulder symptoms are not related to the claimant's fall onto his right shoulder on August 27, 2018. Dr. Failinger also opined that the claimant's limited use of his right upper extremity (and therefore additional use of this left upper extremity) did not cause the condition of the claimant's left shoulder. Dr. Failinger noted that it is likely that the claimant has the same degenerative condition in his left shoulder that was discovered in his right shoulder. Dr. Failinger also noted that greater use of one limb does not cause degenerative changes in that limb. Nor would said use of the claimant's left arm cause the symptoms reported by the claimant. Dr. Failinger went on to note that injury from "overuse" is a scientific fallacy. Dr. Failinger's testimony was consistent with his written reports.

22. Dr. Knackendoffel testified that he diagnosed the claimant with severe osteoarthritis in his right shoulder. Dr. Knackendoffel confirmed that he recommended the reverse right total shoulder replacement. In addition, he confirmed that he referred the claimant to a shoulder specialist, Dr. Grey, to perform the surgery due to the degenerative condition of the shoulder.

23. Dr. Knackendoffel also testified that he diagnosed a right trigger thumb. With regard to causation, Dr. Knackendoffel testified that the claimant's fall on August 27, 2018 could have caused the trigger thumb. He explained that trigger thumb is caused by an inflammation of the tendon and the tendon sheath. He also noted that the claimant's fall could have aggravated his right thumb condition, resulting in the triggering. Dr. Knackendoffel also noted that he recommended the trigger release because the claimant did not improve after conservative treatment of injections.

24. With regard to the claimant's left shoulder symptoms, Dr. Knackendoffel testified that the primary cause of those symptoms is underlying osteoarthritis. Dr. Knackendoffel agreed that the claimant's fall onto his right shoulder did not directly result in the current condition of the claimant's left shoulder. Dr. Knackendoffel testified that he agreed with Dr. Wade's opinion that the condition of the claimant's left shoulder was caused by overuse.

25. The ALJ credits the medical records and the opinions of Dr. Failinger over the contrary opinions of Dr. Knackendoffel and Dr. Wade. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that that medical treatment of his right thumb, right wrist, and right hand; (including a right trigger thumb release recommended by Dr. Knackendoffel); is reasonable, necessary, and related to the admitted August 27, 2018 work injury. The ALJ finds that the claimant has also failed to demonstrate that it is more likely than not that medical treatment of his left upper extremity is reasonable, necessary, and related to the admitted August 27, 2018 work injury.

26. The ALJ specifically credits the opinion of Dr. Failinger that greater use of one limb does not cause degenerative changes in the contralateral limb. While using one arm more than the other might result in soreness and fatigue, the ALJ finds that such “overuse” would not result in the degenerative condition of the claimant’s left upper extremity.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2018).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that medical treatment of his right thumb, right wrist, and right hand; (including a right trigger thumb release recommended by Dr. Richard Knackendoffel); is reasonable, necessary, and related to the admitted August 27, 2018 work injury. As found, the claimant has also failed to demonstrate, by a preponderance of the evidence, that medical treatment of his left upper extremity is reasonable, necessary, and related to the admitted August 27, 2018 work injury. As found, the medical records and the opinions of Dr. Failing are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for medical treatment of his right thumb, right wrist, and right hand; (including a right trigger thumb release recommended by Dr. Knackendoffel); is denied and dismissed.

2. The claimant's request for medical treatment of his left upper extremity is denied and dismissed.

Dated this 3rd day of February 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment recommended by Dr. Kirk Clifford (including additional sacroiliac (SI) joint injections and an SI joint fusion) is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI).
- Whether the claimant has demonstrated, by a preponderance of the evidence, that his claim should be reopened pursuant to Section 8-43-303, C.R.S. due to a worsening of his condition.
- If the claimant's claim is reopened, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment recommended by Dr. Kirk Clifford (including additional SI joint injections and an SI joint fusion) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.
- Whether the respondent has demonstrated, by a preponderance of the evidence, that the claimant experienced an intervening event on October 29, 2017 that was sufficient to sever the respondent's liability and terminate the claimant's maintenance medical care.

FINDINGS OF FACT

1. The claimant was employed as a firefighter with the employer for 26 years. The claimant's duties included responding to emergency services calls. Each year the claimant underwent a "fit for duty" test.

Prior Medical Treatment

2. On May 23, 1999, the claimant suffered a work injury to his low back. On October 26, 1999, Dr. Jeff Bowman assessed a 9 percent whole person impairment rating for an L5-S1 disc derangement and chronic right sacroiliitis. Dr. Bowman noted that the claimant had a "long standing history of chronic left sided hip pain with chronic sacroiliitis requiring orthotics due to pedal abnormalities with gait and also reported a history of low back pain secondary to compensatory changes from irregular gait".

3. Thereafter, on January 17, 2004, the claimant felt a pop in his back and experienced right leg radiculopathy. After undergoing various modes of treatment to his low back, on March 23, 2005, the claimant underwent an L5-S1 transforaminal lumbar interbody fusion.

4. On January 12, 2006, Dr. Donald Corenman determined that the claimant had reached maximum medical improvement (MMI) for the January 17, 2004 injury. At that time, Dr. Corenman assessed a 23 percent whole person impairment. However, he also determined that the claimant did not have any permanent work restrictions. The claimant testified that he did not have any back issues and he was able to perform all of duties as a firefighter following the recovery from the 2006 surgery and prior to the February 1, 2015 injury.

Admitted February 1, 2015 Injury

5. The claimant was injured while working his normal duties as a fire captain on February 1, 2015. On that date, the claimant and his coworkers responded to an emergency services call involving an unconscious individual on the second floor of a home. It was necessary to transport the individual down the stairs in a sling-type apparatus. The claimant was not involved in the transport down the stairs. However, he was waiting to assist his coworkers in transferring the individual onto a gurney. During that transfer, the individual began to slip from the sling and the claimant reached across the gurney in an attempt to catch him. It was during that movement that the claimant was injured. The claimant testified that he tore the bicep tendon in his right shoulder and injured his back.

6. On February 5, 2015, the claimant's authorized treating physician, Dr. Craig Stagg, issued a WC 164 form outlining various work restrictions for the claimant including no lifting, carrying, pushing, or pulling over 30 pounds. At that time, Dr. Stagg referred the claimant to Dr. Corenman for consultation.

7. On February 12, 2015, a magnetic resonance image (MRI) of the claimant's lumbar spine showed evidence of his prior L5-S1 fusion; a mild to moderate circumferential disc bulge with bilateral foraminal annular tearing at the L3-L4 level; and a mild circumferential disc bulge with left foraminal annular tearing at the L4-L5 level.

8. The claimant was seen by Dr. Corenman on February 12, 2015. At that time, the claimant reported that on February 1, 2015 the experienced increased right SI joint pain after reaching to assist his coworkers. The claimant also reported that he developed pain that radiated down his right leg. Dr. Corenman opined that the claimant's pain was caused by the small annular tears at the L4-5 and L3-L4 levels. In addition, Dr. Corenman noted that if the claimant did not improve in five to six weeks, an epidural steroid injection could be pursued.

9. Subsequently, on April 6, 2015, Dr. Corenman administered transforaminal epidural steroid injections (TFESI) at the L4-5 and S1 levels. On April 23, 2015, the claimant returned to Dr. Corenman and reported that he did not experienced any relief from the injections. The claimant also reported that he had right SI joint pain and right leg S1 nerve root pain.¹

¹ The ALJ recognizes the anatomical difference between treatment of the claimant's S1 spinal level and the sacroiliac (SI) joint.

10. On June 17, 2015, the claimant underwent an independent medical examination through the Fire and Police Pension Association (FPPA). In a report to the FPPA, Dr. Robert Messenbaugh opined that the claimant was “permanently occupationally disabled” due to his chronic lumber spine disc pathology. Dr. Messenbaugh also opined that the claimant was “no longer capable of safely, effectively, consistently, and reliably (*sic*) capable of performing his required duties as a fire captain.” Following that FPPA report, the claimant’s employment with the employer ended.

11. The claimant continued to treat with Dr. Corenman who administered various injections and facet blocks. Dr. Thos Evans also administered injections, including a right SI joint injection on October 5, 2015.

12. On November 4, 2015, Dr. Evans performed medial branch radiofrequency ablation (RFA) at the left L3-4 and L4-5 levels. Thereafter on November 4, 2015, Dr. Evans performed right L5-S1 medial branch RFA and right S1, S2, and S3 lateral branch RFA.

13. On March 10, 2016, Dr. Stagg determined that the claimant had reached maximum medical improvement (MMI) for the February 1, 2015 injury. Dr. Stagg also determined that apportionment was necessary due to the claimant’s prior injury, which resulted in a 1 percent whole person impairment for this injury.²

14. On October 8, 2016, Dr. Evans authored a letter in which he reported that injections to the claimant’s facets, discs, and SI region were successful. In that same letter, Dr. Evans recommended a right L4-5 and L5-S1 TFESI.

15. On October 10, 2016, the claimant attended a Division Sponsored Independent Medical examination (DIME) with Dr. John Aschberger. In connection with the DIME, Dr. Aschberger reviewed the claimant’s medical records, obtained a history from the claimant, and completed a physical examination. In his DIME report, Dr. Aschberger noted significant findings of pelvic asymmetry. Dr. Aschberger opined that the claimant’s asymmetric pelvis could be the source of the claimant’s SI joint symptoms. In addition, Dr. Aschberger recommended no additional injections until the claimant’s pelvic dysfunction is corrected. Dr. Aschberger assessed a permanent impairment rating of 2 percent for the claimant’s spine. When combined with an impairment rating for the claimant’s right upper extremity, Dr. Aschberger assessed a whole person impairment rating of 8 percent.

16. The claimant continued to experience low back pain with radicular symptoms and returned to Dr. Evans on March 24, 2017. At that time, the claimant reported to Dr. Evans that he did not accurately report his relief from a prior injection. The claimant clarified that he experienced better than 80 percent relief following the RFA performed in April 2016 for two to three months. Dr. Evans diagnosed sacroiliitis

² Dr. Stagg also assessed permanent impairment of the claimant’s right shoulder for a total whole person impairment of 6 percent.

and recommended a right SI joint injection. The recommended right SI joint injection was administered by Dr. Evans on April 11, 2017.

17. The claimant returned to Dr. Evans on May 24, 2017 and reported 80 percent relief of his right leg radicular symptoms following the SI joint injection. At that time, Dr. Evans recommended a repeat right SI joint injection.

18. The respondent asked Dr. Kathy McCranie to review the reasonableness and necessity of the repeat right SI joint injection recommended by Dr. Evans. On September 25, 2017, Dr. McCranie issued a report in which she opined that the injection was reasonable and necessary. However, Dr. McCranie noted that the Colorado Medical Treatment Guidelines (MTG) require that certain steps are to be taken before and after such an injection, to properly document the claimant's pain reports and functional gains.

19. The recommended repeat right SI joint injection was administered by Dr. Evans on October 10, 2017. However, the pre and post injection documentation addressed in Dr. McCranie's report were not performed.

20. On November 16, 2017, the claimant was seen by Dr. Robert McLaughlin. At that time, the claimant reported that he had fallen while working for his new employer, Rocky Mountain Gun Club (RMGC). At the time of that appointment, the claimant had been working for RMGC for approximately one year. The claimant reported to Dr. McLaughlin that on October 29, 2017, he slipped on a slippery floor at work and fell onto his right and left buttocks and low back. The claimant also reported a new feeling of pain down his right leg. Dr. McLaughlin ordered an x-ray of the claimant's pelvis which showed no acute changes. Dr. McLaughlin opined that the claimant's recent fall might have exacerbated the claimant's preexisting lumbar spine condition. At that time, a referral was made for chiropractic treatment.

21. On December 8, 2017, Dr. McLaughlin noted that the claimant continued to complain of radicular pain down his right leg. The claimant also reported numbness in his right foot. At that time, Dr. McLaughlin opined that the claimant's SI joint was causing these symptoms.

22. On December 15, 2017, the claimant was seen by Dr. Stagg who noted that the claimant remained at MMI for his 2015 work injury.

23. On January 19, 2018, Dr. McLaughlin noted that the claimant was at MMI for the October 29, 2017 injury. It appears that Dr. McLaughlin made this determination of MMI based upon the claimant's report that he had returned to his "baseline". Dr. McLaughlin also noted that the claimant had long-term chronic pain in the lumbar spine and SI joint.

24. The claimant continued to report his low back and SI joint symptoms to Dr. Stagg. On May 21, 2018, Dr. Stagg referred the claimant to surgeon Dr. Kirk Clifford for consultation.

25. The claimant was first seen by Dr. Clifford on May 24, 2018. The claimant reported to Dr. Clifford that the SI joint injection was the most effective treatment of his symptoms. Dr. Clifford opined that the claimant's right SI joint was the claimant's pain generator. As a result, he recommended a right SI joint injection.

26. On June 4, 2018, Dr. Timothy O'Brien conducted a medical records review and issued a report in which he recommended denial of the right SI joint injection. In support of his opinion, Dr. O'Brien noted that the claimant experienced only two months of relief from the prior injection. In addition, Dr. O'Brien opined that the claimant's SI joint was not injured at the time February 1, 2015 work injury.

27. Based upon the opinion of Dr. O'Brien, the respondent initially denied authorization for a right sided SI joint injection. Subsequently, Dr. McCranie reviewed additional medical records and issued reports on August 30, 2018 and August 31, 2018. In her reports, Dr. McCranie recommended that the SI joint injection proceed. However, Dr. McCranie again recommended that the injections comply with the MTG and properly document the claimant's pain reports and functional gains.

28. On November 28, 2018, Dr. Clifford administered a right SI joint injection. On December 10, 2018, the claimant reported to Dr. Stagg that the injection provided 24 hours of improvement. The claimant also reported that he had received more relief from past injections. However, the pre and post injection documentation as recommended by Dr. McCranie were not performed.

29. The claimant returned to Dr. Clifford on December 19, 2018, and reported that he had 80 percent relief for two to four hours following the injection. At that visit, Dr. Clifford recommended that the claimant undergo a right sided SI joint fusion. On March 8, 2019, Dr. McLaughlin agreed with the recommended fusion. However, Dr. McLaughlin recommended that the claimant first undergo a diagnostic right SI joint injection.

30. Subsequently, Dr. Clifford also recommended a left sided SI joint injection. That left SI joint injection was administered by Dr. Clifford on May 29, 2019.

31. Dr. Clifford testified by deposition in this matter regarding his treatment recommendations. Dr. Clifford testified that the claimant has bilateral SI joint pain. Dr. Clifford reiterated that he has recommended that the claimant undergo a repeat right-sided SI joint injection. Dr. Clifford explained that the basis for this recommendation is that the claimant experienced 70 percent relief immediately following the last injection, with 80 percent improvement for "a few hours". Dr. Clifford also testified that he has recommended a right sided SI joint fusion to address the claimant's symptoms. Dr. Clifford explained that a repeat SI joint injection that provides 80 percent relief would

indicate that an SI joint fusion would be a treatment option for the claimant. In addition, Dr. Clifford opined that the claimant is also a candidate for a left sided SI joint fusion.

32. On June 11, 2019, the claimant attended an independent medical examination (IME) with Dr. Brian Reiss. In connection with the IME, Dr. Reiss reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Reiss opined that the claimant's SI joint is not his pain generator. In support of this opinion, Dr. Reiss noted that the injections administered to the claimant have not diagnosed a pain generator. In addition, the injections have not been documented in accordance with the MTG. For example, there has been no definitive documentation of the claimant's pain level and function immediately prior to and after the injections. Nor have there been any pain diaries kept to document the success of each injection. As a result of these factors, Dr. Reiss noted that an SI joint fusion would not be indicated for the claimant pursuant to the MTG. Dr. Reiss also noted that the claimant has a long history of SI joint related issues beginning in 1999.

33. On August 2, 2019, Dr. McCranie reviewed Dr. Reiss' IME report and issued her own report in which she agreed with Dr. Reiss. Specifically, Dr. McCranie noted her agreement that the claimant remains at MMI for the February 1, 2015 work injury. Dr. McCranie also agreed that the claimant is not a candidate for an SI joint fusion. Finally, Dr. McCranie noted that pursuant to the MTG, SI joint fusions are not indicated for mechanical back pain.

34. On August 27, 2019, Dr. Reiss was asked to review additional medical records. Upon completing that review, Dr. Reiss issued a report in which he reiterated that repeat SI joint injections are not indicated pursuant to the MTG. In addition, an SI joint fusion is not indicated pursuant to the MTG. Dr. Reiss stated that his opinions were unchanged. On September 23, 2019, Dr. Reiss issued a reported after he was provided the transcript of Dr. Clifford's deposition. Dr. Reiss again stated his opinion that repeat SI joint injections and/or an SI joint fusion were not indicated. Based upon Dr. Reiss' opinions, the respondent denied authorization for both SI joint injections and an SI joint fusion.

35. Dr. Reiss' testimony by deposition was consistent with his written reports. Dr. Reiss reiterated his opinion that an SI joint fusion was not indicated for the claimant. In support of this opinion, Dr. Reiss noted that the MTG do not recommend an SI joint fusion to treat low back pain. Dr. Reiss also noted his opinion that a repeat SI joint injection is not indicated. It is the opinion of Dr. Reiss that such an injection would not be useful, given that ultimately an SI joint fusion is not indicated. Dr. Reiss testified that it is his understanding that the claimant has changed his position regarding the effectiveness of various injections he has received. Dr. Reiss also testified that it is still unclear that the SI joint is the claimant's pain generator.

36. The claimant testified that the most effective treatment of his symptoms occurred with the first SI joint injection. In addition, the claimant recalls that following the injections, he experienced 95 to 100 percent improvement in his pain symptoms. However, this pain relief was for a short period of time. The claimant also testified that his current symptoms include an inability to sit for very long because of his pain.

37. With regard to the October 29, 2017 incident at RMGC, the claimant testified that he slipped and landed on his “backside”. The claimant also testified that that incident did not cause any permanent impact to his condition.

38. The ALJ credits the medical records and the opinions of Drs. Reiss and McCranie over the contrary opinions of Dr. Clifford and finds that the claimant has failed to demonstrate that it is more likely than not that the recommended SI joint injections and SI joint fusion are reasonable and necessary to cure and relieve the claimant from the effects of the work injury. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not the claimant’s condition has worsened.

39. The ALJ credits the medical records and finds that the respondent has successfully demonstrated that it is more likely than not that the claimant’s slip and fall on October 29, 2017 was an intervening event necessitating the need for medical treatment. Specifically, the ALJ finds that the October 29, 2017 incident resulted in the need for the claimant to be seen by Dr. McLaughlin, an x-ray, and a referral to chiropractic treatment which establish evidence of a new injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

4. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. E.g., *Standard Metals Corporation v. Gallegos*, 781 P.2d 142 (Colo. App. 1989); see also *Amin v. Schneider National Carriers*, W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission*, 646 P.2d 399 (Colo. 1981).

5. A change in condition refers to "a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

6. As found, the claimant has failed to demonstrate by a preponderance of the evidence that his condition has worsened. As found, the medical records and the opinions of Drs. Reiss and McCranie are credible and persuasive.

7. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

8. The Colorado Workers' Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the

director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG "set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

9. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. See *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); see also *Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTD); see also *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

10. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the SI joint injections and SI joint fusion constitute reasonable and necessary medical treatment. As found, the medical records and the opinions of Drs. Reiss and McCranie are credible and persuasive.

11. If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. See *Post Printing & Publishing Co. v. Erickson*, 94 Colo. 382, 384, 30 P.2d 327, 328 (1934). Respondents are only liable for subsequent injuries which "flow proximately and naturally" from the compensable injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

12. As found, the respondent has demonstrated by a preponderance of the evidence that on October 29, 2017, the claimant suffered an intervening event that was sufficient to sever the respondent's liability and terminate claimant's maintenance medical care. As found, the medical records are credible and persuasive.

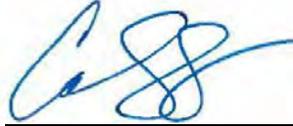

ORDER

It is therefore ordered:

1. The claimant's request that his claim be reopened is denied and dismissed.
2. The claimant's request for medical treatment recommended by Dr. Clifford (including additional SI joint injections and an SI joint fusion) is denied and dismissed.

3. On October 29, 2017, the claimant suffered an intervening event that was sufficient to sever the respondent's liability and terminate the claimant's maintenance medical care.

Dated this 4th day of February 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment of his right thumb, right wrist, and right hand; (including a right trigger thumb release recommended by Dr. Richard Knackendoffel); is reasonable, necessary, and related to the admitted August 27, 2018 work injury.

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment of his left upper extremity is reasonable, necessary, and related to the admitted August 27, 2018 work injury.

FINDINGS OF FACT

1. The claimant worked for the employer installing fiber cable in residences. On August 27, 2018, the claimant was performing his normal job duties when he fell while walking up an inclined area outdoors. The claimant testified that he tripped on a piece of rebar that was sticking out of the ground. At that time, the claimant held a splicer in his left hand and his tool bag in his right hand. As he was falling, the claimant dropped the tool bag and struck his right shoulder and right arm on pieces of river rock. The claimant reported the fall to the employer. The insurer has admitted liability for the claimant's August 27, 2018 fall.

2. The claimant received medical treatment on August 27, 2018. The claimant first sought treatment at West Elk Walk-In Clinic. At that time, the claimant was seen by Candi Lobenstein, NP. The medical record of that date indicates that the claimant was complaining of right shoulder pain. On exam, Ms. Lobenstein noted that the claimant's right shoulder was sitting lower than his left, but she did not believe it to be an anterior dislocation. In addition, Ms. Lobenstein observed that the claimant had full range of motion of this right hand, could make a fist, and moved both his wrist and forearm normally. Due to the condition of the claimant's right shoulder, Ms. Lobenstein immediately referred the claimant to the emergency room.

3. Also on August 27, 2018, the claimant was seen by Dr. Peter Pruett in the emergency department at Delta County Memorial Hospital. An x-ray of the claimant's right shoulder showed no evidence of a dislocation or subluxation. However, the x-ray did show significant degenerative joint disease and chronic deformity of the humeral head. Dr. Pruett opined that the claimant suffered an injury to his right rotator cuff. The claimant was provided a shoulder immobilizer and prescribed pain medications. In addition, Dr. Pruett recommended that the claimant obtain an orthopedic consultation.

4. On August 28, 2018, the claimant began treatment with Dr. Terry Wade. Dr. Wade is the claimant's authorized treating physician (ATP) for this claim. On that date, the claimant reported severe right shoulder pain. On exam, Dr. Wade noted that the claimant had virtually no range of motion of his right shoulder and tenderness on palpation. Dr. Wade also noted that the claimant had full range of motion in his right hand, but was reporting tingling in his index, middle, and ring finger. Dr. Wade ordered a magnetic resonance image (MRI) of the claimant's right shoulder.

5. On September 4, 2018, an MRI of the claimant's right shoulder showed marked arthrosis of the glenohumeral joint, a large cystic lesion on the supraspinatus, advanced degeneration of the acromioclavicular (AC) joint, and tendinosis of both the subscapularis and the biceps tendon.

6. On September 11, 2018, the claimant returned to Dr. Wade. In addition to his right shoulder symptoms, the claimant informed Dr. Wade that "his right thumb will not bend properly". Dr. Wade opined that the claimant suffered a right rotator cuff tear and referred the claimant for an orthopedic consultation. Dr. Wade did not state an opinion regarding the claimant's right thumb/hand complaints.

7. On September 19, 2018, the claimant was seen by Dr. Richard Knackendoffel for consultation regarding his right shoulder symptoms. At that time, the claimant reported his right shoulder symptoms as pain, numbness, tingling, locking, swelling, weakness, and decreased range of motion. The claimant also reported that he was experiencing locking in his right thumb with numbness and tingling in his right hand.

8. Dr. Knackendoffel opined that the severe glenohumeral arthritis in the claimant's right shoulder was aggravated by the August 27, 2018 fall. Dr. Knackendoffel recommended a computed tomography (CT) scan of the claimant's right shoulder. In addition, he opined that the claimant would benefit from a reverse total shoulder arthroplasty. With regard to the claimant's right hand and thumb, Dr. Knackendoffel opined that the claimant had right trigger thumb. On that same date, Dr. Knackendoffel administered steroid injections to both the claimant's right thumb and right carpal tunnel.

9. On September 27, 2018, the claimant returned to Dr. Knackendoffel and reported that the right thumb injection did not provide any relief. On that date, Dr. Knackendoffel continued to diagnose a right trigger thumb. In addition, Dr. Knackendoffel recommended that the claimant undergo a right trigger thumb release.

10. On January 19, 2019, the claimant attended an independent medical examination (IME) with Dr. Mark Failinger. In connection with the IME, Dr. Failinger reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Failinger opined that the claimant's preexisting right shoulder condition of severe degenerative joint disease was exacerbated by the August 27, 2018 fall. Dr. Failinger also opined that the claimant's right trigger thumb was not related to the claimant's fall at work. Therefore, it was the opinion of Dr. Failinger that the recommended trigger thumb release would be

reasonable and necessary to treat the claimant's symptoms, but unrelated to the work injury. Dr. Failinger did not address any left sided symptoms or issues in his IME report.

11. After he had an opportunity to review the claimant's imaging studies, Dr. Failinger issued an addendum to his IME report. In that addendum, Dr. Failinger changed his opinion regarding the relatedness of the condition of the claimant's right shoulder to the fall on August 27, 2018 fall. Specifically, Dr. Failinger specifically noted his opinion that the need for a right shoulder replacement was due to the claimant's preexisting severe and ongoing degenerative joint disease. In support of this opinion, Dr. Failinger noted that the imaging studies showed that the claimant's rotator cuff was intact.

12. Initially the respondents denied authorization for the recommended right shoulder surgery. However, following a hearing, ALJ Keith Mottram determined that the surgery was reasonable, necessary, and related to the work injury.

13. On June 10, 2019, the claimant was seen by Dr. Wade. At that time, Dr. Wade noted that the claimant reported that he was a "having left shoulder and left arm pain secondary to overuse".

14. On June 24, 2019, the claimant returned to Dr. Wade. In the medical record of that date, Dr. Wade noted that the claimant wanted to return to Dr. Knackendoffel regarding his left shoulder symptoms. Dr. Wade opined that these left sided symptoms were the result of the "nonuse" of the claimant's right arm and shoulder.

15. On June 27, 2019, the claimant was seen by Dr. Knackendoffel and reported symptoms in his left shoulder and left hand. The claimant described the symptoms as pain, numbness, tingling, weakness, decreased range of motion, and stiffness. Dr. Knackendoffel ordered x-rays of the claimant's left shoulder and left hand. Dr. Knackendoffel noted that the x-rays showed osteoarthritis of the claimant's left glenohumeral joint and left metacarpal trapezial joint. On that date, Dr. Knackendoffel administered a steroid injection the claimant's left wrist. Dr. Knackendoffel did not indicate an opinion regarding the cause of the claimant's left sided symptoms.

16. On July 18, 2019, the claimant returned to Dr. Wade and continued to report left shoulder symptoms including pain and weakness. On that date, the claimant was taken off of all work.

17. On July 23, 2019, the claimant returned to Dr. Knackendoffel and reported that the injection to his right thumb in February 2019 was helpful. On that date, Dr. Knackendoffel administered a second injection into the claimant's right thumb. The claimant was also provided with a thumb brace.

18. On August 20, 2019, Dr. Knackendoffel submitted a request for authorization of a right trigger thumb release.

19. On September 5, 2019, the respondents notified the claimant that treatment of his right shoulder (including reverse total shoulder replacement) was authorized. In addition, the claimant was notified that treatment of the claimant's left shoulder and right trigger thumb was denied as it is the respondents' position that such treatment is unrelated to work injury.

20. On September 13, 2019, Dr. Sean Gray performed a right reverse total shoulder arthroplasty with allograft reconstruction of the glenoid.

21. The respondents asked Dr. Failinger to review additional medical records. Dr. Failinger was asked to opine as to whether the claimant's left sided symptoms were related to the August 27, 2018 work injury. On November 24, 2019, Dr. Failinger issued an addendum to his IME report. In that report, he opined that the claimant's left shoulder symptoms are not related to the claimant's fall onto his right shoulder on August 27, 2018. Dr. Failinger also opined that the claimant's limited use of his right upper extremity (and therefore additional use of this left upper extremity) did not cause the condition of the claimant's left shoulder. Dr. Failinger noted that it is likely that the claimant has the same degenerative condition in his left shoulder that was discovered in his right shoulder. Dr. Failinger also noted that greater use of one limb does not cause degenerative changes in that limb. Nor would said use of the claimant's left arm cause the symptoms reported by the claimant. Dr. Failinger went on to note that injury from "overuse" is a scientific fallacy. Dr. Failinger's testimony was consistent with his written reports.

22. Dr. Knackendoffel testified that he diagnosed the claimant with severe osteoarthritis in his right shoulder. Dr. Knackendoffel confirmed that he recommended the reverse right total shoulder replacement. In addition, he confirmed that he referred the claimant to a shoulder specialist, Dr. Grey, to perform the surgery due to the degenerative condition of the shoulder.

23. Dr. Knackendoffel also testified that he diagnosed a right trigger thumb. With regard to causation, Dr. Knackendoffel testified that the claimant's fall on August 27, 2018 could have caused the trigger thumb. He explained that trigger thumb is caused by an inflammation of the tendon and the tendon sheath. He also noted that the claimant's fall could have aggravated his right thumb condition, resulting in the triggering. Dr. Knackendoffel also noted that he recommended the trigger release because the claimant did not improve after conservative treatment of injections.

24. With regard to the claimant's left shoulder symptoms, Dr. Knackendoffel testified that the primary cause of those symptoms is underlying osteoarthritis. Dr. Knackendoffel agreed that the claimant's fall onto his right shoulder did not directly result in the current condition of the claimant's left shoulder. Dr. Knackendoffel testified that he agreed with Dr. Wade's opinion that the condition of the claimant's left shoulder was caused by overuse.

25. The ALJ credits the medical records and the opinions of Dr. Failinger over the contrary opinions of Dr. Knackendoffel and Dr. Wade. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that that medical treatment of his right thumb, right wrist, and right hand; (including a right trigger thumb release recommended by Dr. Knackendoffel); is reasonable, necessary, and related to the admitted August 27, 2018 work injury. The ALJ finds that the claimant has also failed to demonstrate that it is more likely than not that medical treatment of his left upper extremity is reasonable, necessary, and related to the admitted August 27, 2018 work injury.

26. The ALJ specifically credits the opinion of Dr. Failinger that greater use of one limb does not cause degenerative changes in the contralateral limb. While using one arm more than the other might result in soreness and fatigue, the ALJ finds that such “overuse” would not result in the degenerative condition of the claimant’s left upper extremity.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2018).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that medical treatment of his right thumb, right wrist, and right hand; (including a right trigger thumb release recommended by Dr. Richard Knackendoffel); is reasonable, necessary, and related to the admitted August 27, 2018 work injury. As found, the claimant has also failed to demonstrate, by a preponderance of the evidence, that medical treatment of his left upper extremity is reasonable, necessary, and related to the admitted August 27, 2018 work injury. As found, the medical records and the opinions of Dr. Failing are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for medical treatment of his right thumb, right wrist, and right hand; (including a right trigger thumb release recommended by Dr. Knackendoffel); is denied and dismissed.

2. The claimant's request for medical treatment of his left upper extremity is denied and dismissed.

Dated this 4th day of February 2020.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-102-664-001**

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related mental impairment injury.
2. Whether Claimant's claim for compensation is barred pursuant to the statute of limitations in § 8-43-103(2), C.R.S.

FINDINGS OF FACT

1. Claimant is a 38-year-old male who was employed by Employer as a Deputy Sheriff. Claimant began his employment with Employer on August 18, 2008 as a Deputy Sheriff I. Claimant was supervised throughout his employment by Patrol Division Commander Kurt C[Redacted]. See Exhibit B.
2. As a Deputy Sheriff, Claimant's job duties included the requirement to wear a sidearm. Claimant also was required to have available to him in his patrol cruiser an AR-15 rifle and a 12-gauge shot gun.
3. Commander C[Redacted] testified that the number one purpose for the firearms was to allow Claimant to use those firearms against armed offenders who posed a threat to either Claimant or to innocent people and to, if needed, engage in a firefight with them.
4. Claimant was required to be proficient in firearm use. Claimant completed target practice using human silhouettes. Commander C[Redacted] testified that human silhouettes were used because that is what Claimant would be shooting at if he were required to use his firearm.
5. As part of his job duties, Claimant was required to participate in numerous training programs.
6. The training programs included "force on force" a defensive tactics program. This program included training on how to arrest suspects, what to do if the suspects became combative, how to defend oneself if attacked by a suspect, and how to keep oneself from being disarmed. See Exhibit B.
7. The training programs included an annual program "active shooter" which trained deputies on what to expect in an active shooter incident. This program included training where Claimant actually exchanged gunfire with simulated suspects in different scenarios. See Exhibit B.

8. The training programs also included “select firearm class.” This program included training on how to use a fully automatic gun, or machine gun. See Exhibit B.

9. The training programs also included “bulletproof mind” which focused on psychological, emotional, and tactical preparation for law enforcement situations where gunfire is exchanged. See Exhibit B.

10. Claimant also became a member of Employer’s All-Hazards Response Team (AHRT), commonly known as the county’s SWAT team between August of 2010 and November of 2011. As a member of the AHRT team, Claimant was required to undergo a one week 80 hour training program. In training, Claimant participated in scenario based situations included large active shooter drills. To be a member of the AHRT team Claimant had to fulfill psychological, physical, and ethical conditions.

11. The standard operating guideline manual for AHRT includes guidelines as to the use of deadly force and specifically provides that a member of AHRT may use deadly force when it is to protect the officer or others from what is reasonably believed to be a threat of death or serious bodily harm. Commander C[Redacted] testified that this provision in the AHRT manual was to address the exchange of gunfire with armed defenders. See Exhibit B.

12. Claimant testified that he had training during his employment as a Deputy Sheriff to prepare him for situations when he would be involved in the exchange of gunfire.

13. Commander C[Redacted] testified that given the nature of what law enforcement officers are asked to do, the sheriff’s office in particular has reasonable belief that it will be necessary for its deputies to use firearms they are issued or they purchase themselves in exchange of gunfire incidents to protect themselves or other citizens from armed suspects.

14. Commander C[Redacted] testified that this type of training is universal throughout law enforcement agencies and is not unique to Employer’s county. He testified that training starts at the academy level and progresses throughout every officer’s career. Commander C[Redacted] testified that it would not be unusual for Claimant to be involved in the potential of exchanged gunfire especially given Claimant’s specialty assignment to AHRT.

15. During his first year of employment as a Deputy Sheriff from August of 2008 through August of 2009, Claimant was rated in a performance appraisal at a 2.62. A rating of 2.0 is considered developing and a rating of 3.0 is considered proficient. See Exhibit 3.

16. During his second year of employment from August 2009 through August 2010, Claimant was rated in a performance appraisal at a 2.75. See Exhibit 4.

17. During his third year of employment from August of 2010 through November of 2011, Claimant was rated in a performance appraisal at a 3.0. See Exhibit 5.

18. On November 16, 2011, Claimant was recommended for and promoted to the position of Deputy Sheriff II. See Exhibit 6.

19. On December 12, 2011, while working as a Deputy Sheriff, Claimant was dispatched to perform a welfare check. The dispatch was not as an emergency situation but a situation in which a man might need medical assistance. When Claimant went to the front door, a man opened the door holding a firearm pointed at Claimant and held Claimant at gunpoint for some time. Claimant was able to backtrack to his patrol truck and the man ultimately fired at Claimant and the patrol truck four or five times. The man was eventually placed under arrest for attempted murder.

20. Employer completed an internal investigation of Claimant's conduct during the shooting incident and concluded that Claimant acted in accordance with Employer's policies during the shooting event.

21. Claimant testified credibly that he had the onset of psychological symptoms approximately two months following the December 2011 shooting. Claimant testified that his symptoms included daily recurrent involuntary and intrusive distressing memories of the shooting. Claimant for no apparent reason began imagining how it would be if a bullet entered his head. Claimant developed intense psychological distress when seeing something that resembled shooting either in real life or not in real life. This included firearms in hands, or killing of person in a fiction book. Claimant began having marked physiological reactions to external cues resembling the shooting and would have tightened muscles, fingers, trembling arms, and the like. Claimant began having persistent and exaggerated negative feelings about others in the world like believing no one could be trusted. Claimant began living in a persistent negative emotional state having anger and fear daily. Claimant began feeling detached and estranged from others. Claimant began to develop a persistent inability to experience positive emotions and became at almost all times irritable having angry outbursts with little provocation. Claimant began to always be on the lookout for threats and began to be startled by unexpected things like loud unexpected noises. Claimant began having trouble sleeping.

22. Claimant testified that he believed his symptoms would just be a temporary thing and that he lost the pleasure of going to work during this time. Claimant testified that things that had been a source of pride and accomplishment for him prior to the shooting became a burden that he avoided.

23. After his involvement in the shooting incident, Claimant's performance appraisal rating went down. From November of 2011 through November of 2012 he was rating at a 2.12. Included in this appraisal were statements that Claimant had been involved in a traumatic incident towards the end of 2011 and that after he did not seem to be the same person. It also included a statement that Claimant's detail in some of his reports had improved but it could be due to Claimant wanting to stay in the patrol room

and not interact with others. The appraisal also contained a statement indicating that Claimant did a good job when he put his mind and heart into his work but that he was very proactive, and in the last year had gone to performing a bare minimum level. See Exhibit 8.

24. Claimant testified that he felt like no one he attempted to talk to could really relate to his experience and that no one he talked to had actually been in a situation like he had. Claimant testified that after the shooting he began approaching cars on routine traffic stops with his gun pulled because he didn't want to be caught empty handed again. Claimant testified that he also began to stop pulling cars over because he didn't want to be in a situation and tried to avoid stopping cars and only responded to calls. Claimant testified that before the shooting, he rarely took time off work and looked for opportunities to work overtime, but that after the shooting he worked just the minimum amount of hours required and used up most if not all of his accumulative leave.

25. In June of 2013, the man who shot at Claimant on December 12, 2011 was sentenced to prison. Claimant testified at the sentencing hearing and reported that the incident had changed him. Claimant testified that attending the sentencing hearing for this man while in uniform had become a goal that Claimant wanted to achieve before he would honor himself to take steps to leave law enforcement.

26. Shortly after the sentencing hearing, and on August 5, 2013, Claimant submitted a letter of resignation to Employer. Claimant indicated that his last day of employment would be August 23, 2013. Claimant testified that he viewed his symptoms as burnout and that it did not cross his mind that it might be considered an injury. Claimant testified that at the time he resigned the symptoms he was experiencing made it difficult for him to perform his job duties as a Sheriff Deputy.

27. Claimant testified that between 2013 and 2017 the frequency and intensity of his symptoms changed somewhat better or worse depending on time and situations. Claimant testified that some symptoms including sleep disturbance or hypervigilance partially lost intensity but that other symptoms like persistent negative emotional state and persistent negative beliefs about others in the world became stronger and more set in.

28. Claimant testified that in the summer of 2017 he began to track a debate in Colorado about first responders who struggled with posttraumatic stress disorder (PTSD). Claimant testified that was when it occurred to him that what he was struggling with might not just be something that comes with the job or that he needed to get over.

29. Claimant testified that prior to January of 2018, he considered returning to a career in law enforcement and took preliminary steps in the application process but realized that his problems had not gone away and that, even if hired, he would be in the same position as he was back in 2012 and 2013.

30. In January of 2018, Claimant moved to Poland. Claimant testified that in Poland he underwent a psychological evaluation and a psychiatric assessment.

31. On November 30, 2018, Claimant underwent a psychological assessment performed by Ewa Cwalina. Dr. Cwalina is identified as a psychologist and behavioural and cognitive psychotherapist with certificate number PTPPB 67 from the Polish Association for Behavioural and Cognitive Psychotherapies. Dr. Cwalina noted that the psychological assessment demonstrated that Claimant suffered from PTSD developed as a consequence of the incident that happened on December 12, 2011 during the performance of his professional duties. Dr. Cwalina advised Claimant to undergo individual psychotherapy and to be provided consultation by a psychiatrist. The plan was noted to include brief eclectic psychotherapy 16 hourly sessions, reassessment of Claimant's mental status, and a further intervention plan if needed. See Exhibits 11, 15, C.

32. A medical certificate dated December 28, 2018 was entered into evidence. This certificate indicates that Claimant was a patient and had been diagnosed with enduring personality change after catastrophic experience and PTSD. It was authored by Adrian Kostulski, PhD, M.D., psychiatrist and specialist in adult and child psychiatry, 1349768. See Exhibit 12.

33. On February 18, 2019 Claimant filed a Worker's Claim for Compensation. Claimant indicated that he had a date of injury of December 12, 2011, that the injury involved mental health problems of PTSD, and that the injury occurred due to being held at gunpoint and being shot at. See Exhibit A.

34. On March 29, 2019, Respondents filed a Notice of Contest denying liability for the claim. See Exhibit A.

35. On May 2, 2019, Claimant filed an Application for Hearing endorsing the issue of compensability of the claim. See Exhibit A.

36. Claimant testified credibly at hearing. Claimant was clear, concise, organized, and provided consistent answers.

37. Similarly, Commander C[Redacted] testified credibly at hearing.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Statute of Limitations

Section 8-43-103(2) of the WC Act provides that the right to compensation and benefits provided by the WC Act shall be barred unless, within two years after the injury...a notice claiming compensation is filed with the division. This period is extended by one year if a "reasonable excuse" exists for not bringing the claim within three years. See 8-43-102(2), C.R.S. The statute of limitations begins to run when the claimant, as a reasonable person, should recognize the nature, seriousness and probable compensable character of the injury. *City of Durango v. Dunagan*, 939 P.2d 496, 498 (Colo. App. 1997) *City of Boulder v. Payne*, 426 P.2d 194, 196 (Colo. 1967). The determination of when a claimant recognized the probable compensable character of her injury is a question of fact for the resolution of the ALJ. *Kersteins v. All American Four Wheel Drive*, W.C. No. 4-865-825 (ICAO, August 1, 2013). A "compensable" injury for purposes of the statute of limitations is one which is "disabling." *Payne*, 426 P.2d at 197. A "disability" is found in workers compensation cases under two circumstances; one such circumstance is a "medical incapacity" as evidenced by the loss or impairment of body function, the second is a temporary loss of earning capacity evidenced by the inability to perform regular employment. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). This second circumstance creating disability may be shown by an inability to work or by restrictions which impair the claimant's ability to perform regular job duties. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

The weight of the evidence establishes that Claimant should have recognized the nature, seriousness, and probable compensable character of the December 12, 2011 shooting incident by August 23, 2013 when he left employment because the symptoms he was experiencing made it difficult for him to perform his job duties. As found above, Claimant credibly testified that he had significant psychological symptoms that began approximately two months after the shooting that continued to August of 2013 (and to date) and that caused him to resign. Claimant attributed the symptoms to the December 2011 shooting incident. As a result of the significant psychological issues that followed the shooting, Claimant resigned shortly after the shooter was sentenced to prison as his psychological condition had become disabling and caused him difficulty with performing his normal duties as a Deputy Sheriff. The evidence established that by August 23, 2013, Claimant should have recognized the probable compensable character of his injury.

In August of 2013, there was a provision of the WC Act that would have allowed Claimant to file a claim for compensability of a mental impairment injury. Specifically, the provisions of Section 8-41-301(2), C.R.S. that were in effect in August of 2013 provided that:

A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances.

In August of 2013, Claimant could have filed a claim for a compensable mental impairment injury and he would have had to establish that the psychologically traumatic event was generally outside of his usual experience and that the event would have evoked significant symptoms of distress in a worker in similar circumstances. However, as found above, Claimant did not submit a claim for compensation until February 18, 2019. Since he should have recognized the probable compensable nature of the December 12, 2011 shooting incident by August 23, 2013, Claimant would have had two years following August of 2013 in which to file a claim (or three years if a reasonable excuse existed). The statute of limitations would thus have run by August 23, 2015 or August 23, 2016. Claimant failed to file a claim during the applicable time limitation.

Claimant argues that PTSD first became compensable under a change in 8-41-301(2), C.R.S. that became effective July 1, 2018. He also argues that before that date, the symptoms he was experiencing were not compensable under the WC Act. He thus argues that he had no way of filing a claim sooner and argues that the statute of limitations should begin to run for his injury on July 1, 2018 because before that date, a reasonable person in his situation would assume that the injury did not have a probable compensable character.

It is true, as pointed out by Claimant, that 8-41-301(2), C.R.S. changed effective July 1, 2018. After that date, mental impairment consisting of a psychologically traumatic

event began to include an event *within* a worker's usual experience if a worker is diagnosed with PTSD by a licensed psychiatrist or psychologist and if a worker experiences exposure to certain listed events. The events include the attempt by another person to cause the worker serious bodily injury or death through the use of deadly force and the worker reasonably believes the worker is the subject of the attempt. See § 8-41-301(3), C.R.S.

This change may have made it easier for Claimant to establish a mental impairment claim had his condition become disabling on or after July 1, 2018. However, as found above, his condition became disabling by August 23, 2013. Claimant's arguments that his symptoms were not compensable and that he could not have filed a claim sooner than after the change in law are rejected. Although the change in law makes it easier in some circumstances to establish a mental impairment claim, the ability to file a claim for mental impairment existed prior to July 1, 2018 and existed on the date Claimant should have recognized the probable compensable nature of his injury in August of 2013. Thus, Claimant had at maximum until August of 2016 to file a claim. There is no indication the change in statute was intended to retroactively cover all possible mental impairment claims where a worker was disabled prior to July 1, 2018. Rather, the date of the disabling compensable injury would have to be on or after July 1, 2018 for the change in law to be applicable. Claimant's arguments are thus rejected. His claim is barred by the statute of limitations.

Compensability

Even assuming that Claimant's claim is not barred by the statute of limitations, Claimant did not present sufficient evidence to establish by preponderant evidence that his mental impairment is compensable. The shooting incident and any disability therefrom occurred prior to July 1, 2018 so the provisions of § 8-41-301(2), C.R.S. in effect prior to July 1, 2018 would apply to his case.

The requirement to establish a claim of mental impairment include establishing that there was a psychologically traumatic event generally outside of a worker's usual experience that would evoke significant symptoms of distress in a worker in similar circumstances. See § 8-41-301(2), C.R.S. In determining whether the traumatic event would generally be considered outside of a worker's usual experience, one looks at what the worker's occupational actually is, and compares whether that traumatic event would be considered unusual. *Ashton v. City and County of Denver*, W.C. No. 5-010-884 (ICAO June 8, 2017). Testimony from Commander C[Redacted] presented at hearing indicated that it would not be unusual that Claimant would experience an exchange of gunfire. There was insufficient evidence or follow up to indicate whether being shot at would be unusual, for example, how many deputies on the force had been shot at? How frequent were shootings? The evidence, as presented, would not have allowed the ALJ to conclude that being shot at was outside the usual experience (although it might have been). Similarly, there was insufficient evidence presented to indicate that other workers (deputies) in a similar circumstance (who had been previously shot at in the line of duty) had significant symptoms of distress similar to Claimant.

Claimant's claim is barred by the statute of limitations. Additionally, and in the alternative, Claimant failed to establish preponderant evidence to support a compensable mental impairment claim.

ORDER

It is therefore ordered that:

1. Claimant's claim is barred by the statute of limitations at § 8-43-103(2), C.R.S. His claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 5, 2020

Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-112-736-001**

ISSUES

1. Whether Respondents have established, by a preponderance of the evidence, that Claimant was responsible for the termination of her employment on August 15, 2019 after failing to return multiple phone calls and messages from Employer.
2. Whether Respondents' petition to terminate temporary total disability (TTD) benefits should be granted.

FINDINGS OF FACT

1. Claimant is a 50 year-old female who was employed by Employer as a customer service specialist. Claimant was employed by Employer for approximately 4 and was in the position of customer service specialist for approximately 1 year.
2. Claimant's job duties involved placing phone calls to customers and documenting responses or complaints with customer service provided by Employer's dealership. She used a normal phone and hand wrote the responses. Claimant is right handed.
3. On March 21, 2019, Claimant sustained a compensable work related injury to her right shoulder after she sustained a fall at work.
4. Claimant underwent medical treatment and continued to work her regular job duties from March 21, 2019 through July 9, 2019 without any restrictions. Ultimately, her surgeon recommended and scheduled a right shoulder rotator cuff repair surgery. See Exhibits D, E.
5. On June 6, 2019, authorized treating provider James Rafferty, D.O. recommended that Claimant proceed with right shoulder surgery with Dr. Coonan and to follow up with him one week post-operation. See Exhibits 2, F.
6. On July 2, 2019, Claimant underwent a pre-operative evaluation with surgeon William Cooney, M.D. Dr. Cooney noted in his July 2, 2019 report that with regards to Claimant's work and work restrictions post surgically, she would not work until her follow up appointment with him. He also noted that depending on the surgery and the potential modifications to her regular duty work, they may consider return to work shortly after the follow up appointment. He noted that Claimant would be in a shoulder immobilizer for 6 weeks after surgery which might limit her ability to type, use a mouse, and do other functional work-related detail. See Exhibit E.
7. After the pre-operative evaluation, Employer asked Claimant how long she would be out of work following surgery. Claimant reported to Employer that her doctor

indicated she would initially be off work three weeks and then she would have a post-operative evaluation where the doctor would let her know how much additional time off work was needed, but that the doctor estimated about six weeks off work.

8. On July 10, 2019, Claimant underwent surgery performed by Dr. Cooney. The procedure included extensive debridement of the right shoulder, subacromial decompression with acromioplasty, and rotator cuff repair. See Exhibit E.

9. Respondents began paying TTD benefits on July 10, 2019 as Claimant was off work due to surgery. See Exhibit B.

10. On July 23, 2019, Claimant underwent her first post-operative evaluation with surgeon Dr. Cooney. Claimant reported that her symptoms were improved and that her post-operative pain had been mild. Claimant reported that she was taking oxycodone and Tylenol for post-operative pain control and that she had been complaint with splint immobilization. Dr. Cooney refilled her oxycodone and discussed weaning from pain medications over the next few weeks. Dr. Cooney removed her sutures. Dr. Cooney opined that Claimant could remove her sling to perform gentle range of motion of her right elbow, hand, and wrist. Dr. Cooney advised Claimant that she needed to remain in her splint for 4 more weeks but could take it off for showers and to stretch her elbow, hand, and wrist. Dr. Cooney noted that she could begin physical therapy in one week and provided her a prescription. Claimant was advised that the rotator cuff repair involved a long and slow require and that full recovery of her shoulder with unrestricted activity could be as long as 4-6 months. Dr. Cooney noted that Claimant was currently off work and that they would keep her off work for now but he anticipated that Claimant may be able to return to one-handed duty after her next visit. He noted Claimant would return for follow up with him in 5 weeks. See Exhibit E.

11. Claimant testified that at the July 23, 2019 post-operative evaluation she received a letter from Dr. Cooney indicating that she would be off work for 5-6 more weeks and that her daughter took that report to Employer within two days of the appointment. There is no report in evidence indicating that Claimant was to be off work for 5-6 more weeks. Rather, the reports in evidence indicate that on July 23 she was still off work, but that she would follow up with Dr. Cooney in 5 weeks.

12. On August 7, 2019, Claimant received a voicemail from Employer's owner Peter V[Redacted] asking for Claimant to call him. The message indicates he was calling to see what was going on with Claimant especially since she was supposed to get back to work a week or so ago and that he didn't know what was going on. See Exhibit 1.

13. Claimant testified that she believed Mr. V[Redacted] thought she was due back to work because she had previously told him she would be off work for three weeks following surgery before a further post-operative evaluation to see what additional time was needed.

14. Claimant testified that she called Mr. V[Redacted] back and that she was confused as to why he indicated on the voicemail that he did not know what was going

on with Claimant since her daughter had taken Mr. V[Redacted] the most doctor's recent report that Claimant believed said Claimant would be off work for 5-6 additional weeks.

15. Claimant testified that when she called Mr. V[Redacted] back and spoke to him, he seemed to be pretty mad and was questioning her as to why another 5-6 weeks was needed, told her that she was putting Employer in a bind, and asked her why don't you just come back to work. Claimant testified that she responded by telling him she was also in a bind, was in a lot of pain, was not on vacation, and that it had been hard on her too. Claimant testified that the conversation ended with him saying good luck and with her saying that she would keep him posted. Claimant testified that she felt intimidated after that phone call.

16. On August 8, 2019, Dr. Rafferty evaluated Claimant. Claimant reported that she was doing well. Claimant reported that she had no pain at rest but shoulder discomfort if her shoulder was jarred or moved. Claimant reported no pain as she sat in the exam room that day. Claimant reported she was happy with her progress overall. Dr. Rafferty noted that Claimant was in a sling, but had begun physical therapy. Claimant reported that she was using ibuprofen and occasionally oxycodone at night for pain. Dr. Rafferty advised Claimant to discontinue Tylenol given Claimant's concern about side effects and to continue physical therapy. Dr. Rafferty advised Claimant to continue with the sling. Dr. Rafferty opined that Claimant was able to return to modified duty work that day with temporary restrictions of no use of the right upper extremity, wearing sling at all times, and no walking on uneven or slippery surfaces. Dr. Rafferty also provided the restriction of no safety sensitive tasks when using oxycodone. See Exhibits 2, 3, F.

17. Claimant testified that when she got home she saw the report that Dr. Rafferty had released her to work and that she was confused because she believed her surgeon had told her she could not return to work. She testified that on August 8, 2019 she called her surgeon Dr. Cooney's office and called the insurance adjuster. Claimant testified that she told the insurance adjuster about the call from Employer the day prior. Claimant testified that the insurance adjuster told her that Employer shouldn't be calling Claimant and should be directing any questions to the adjuster. Claimant testified that the insurance adjuster told Claimant that the adjuster would call the surgeon and Dr. Rafferty to get everyone on the same page and that the adjuster would get back to Claimant. Claimant also testified that the adjuster advised her not to contact Employer.

18. Claimant testified that between the call with the adjuster on August 8, 2019 and August 14, 2019, Employer called her multiple times. She testified that Employer's owner Mr. V[Redacted] left her more than one message during that time. A message in evidence shows that office manager Tammy left Claimant at least one message during that timeframe and on August 13, 2019. Claimant testified that she did not respond to Employer because she was waiting to hear back from the insurance adjuster. Claimant testified that she didn't know what to tell Employer and that she had been intimidated on the August 7, 2019 call, was just waiting for the adjuster to get back to her, and was scared to call Employer back. See Exhibit 1.

19. On August 14, 2019, Employer issued a letter to Claimant. The letter indicated that they had been trying to reach Claimant for the past several days. The letter noted that Employer received a physician's report on August 8, 2019 releasing Claimant to come back to work on August 8 but that Claimant did not report for work on that day and had not reported to work for the past 5 work days with no call to anyone at Employer's dealership. The letter noted that office manager Tammy N[Redacted] had left Claimant a few messages over the past several days with no return call and that owner Peter V[Redacted] had left her a message to return his call on August 12, left several messages on August 13, and again left two messages that day on August 14. Mr. V[Redacted] indicated in the letter that as of 12:15 p.m. on August 14, 2019 he had not received any communication from Claimant. He noted that Claimant's job was essential to the success of the dealership and noted that Claimant could consider the letter as notice of termination of her employment. See Exhibits 7, C, H.

20. On August 15, 2019, Mr. V[Redacted] filled out an employee performance document noting Claimant was the employee and the type of offense was absenteeism and abuse of sick leave. In the details, Mr. V[Redacted] listed that Claimant was released to work by her doctor stating she could come back to work on August 8. He indicated Claimant had not shown up for work as of August 15, 2019. He also noted that he had called and left Claimant several messages to discuss the situation with the first message on the evening of August 8. He noted that on August 12 he left three messages for Claimant to get back to Employer about her work status. He indicated that on August 13, he left two more messages and that office manager Tammy N[Redacted] left a message. He indicated that on August 14 he called Claimant again and let her know that her job was in jeopardy and that he left her two messages the morning of August 14. Mr. V[Redacted] noted that after numerous attempts with no reply he terminated Claimant's employment effective August 15, 2019. See Exhibits 7, C, I.

21. On August 15, 2019, Shana G[Redacted], Claims Representative for Insurer, sent an email to Claimant and to Employer's office manager. The email indicated that she had not heard back from surgeon Dr. Cooney's office regarding a request to modify Claimant's restrictions. The letter noted that she had previously discussed with Claimant and Ms. N[Redacted] that the authorized treating physician (Dr. Rafferty) determines work restrictions. Ms. G[Redacted] noted that Dr. Rafferty advised that Claimant could work at modified duty and that Employer had advised that they had modified duty available which she had advised Claimant of the day prior. See Exhibit 1.

22. On August 27, 2019, Dr. Cooney evaluated Claimant. Claimant reported overall feeling well, that she was pleased with her progress, and that her shoulder was feeling good. Claimant reported no pain while at rest. Claimant reported that certain shoulder movements caused pain. Claimant reported that she was still taking oxycodone at night but that she also takes it for her Lupus pain, which was prescribed by her rheumatologist. Dr. Cooney did not refill Claimant's oxycodone. Claimant also reported that her rheumatologist started her on prednisone for her joint pain related to lupus. Dr. Cooney discharged Claimant from her sling and advised her to be careful now that she was out of the sling. Claimant reported to Dr. Cooney that physical therapy was going well and Dr. Cooney encouraged Claimant to work on pulleys and wall walks at home for

gentle stretching. Claimant was encouraged to continue to follow her work restrictions provided by her workers' compensation doctor. See Exhibits 3, E.

23. On September 17, 2019, Dr. Rafferty evaluated Claimant. Again, Claimant reported that she continued to do well. Claimant reported that she was attending physical therapy at least twice per week and that she had improved range of motion. Claimant reported still having moderate pain in her shoulder especially with elevation of her arm and that she was unable to sleep on her right side without discomfort. Claimant reported that she was not using any pain medications. Dr. Rafferty again recommended she continue physical therapy. See Exhibit 2.

24. On October 9, 2019, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation with the Division of Workers' Compensation. The petition noted that Respondents paid TTD benefits through October 9, 2019 but that Respondents were requesting to terminate compensation because Claimant voluntarily resigned when Employer had modified duty available to her at full wages. Respondents noted reliance on Rule 6-4(c). See Exhibit C.

25. Claimant testified that her normal job duties involve calling customers and that she uses her right hand to pick up the phone and dial the phone number. She testified that she normally then moves the phone to her left hand and writes the customers' responses manually with her right hand and that what she writes has to be legible. She testified that was her job and what she did all day. Claimant testified that she was never trained to write responses on a computer and always hand wrote them. Claimant testified that the person in the position before her typed the reports but that she always handwrote them because no one could figure out how to open the prior employee's system. Claimant testified that she never used a headset.

26. Claimant testified that she never received a letter from Employer indicating that they had a modified job for her. Claimant also testified that she did not receive the termination letter dated August 14, 2019 and that she saw it for the first time when her attorney showed it to her.

27. Tammy N[Redacted], Employer's office manager testified at hearing. Ms. N[Redacted] supervised Claimant and is familiar with Claimant's job duties as a customer relations specialist. Ms. N[Redacted] testified that in August of 2019 she called Claimant because she wanted to talk with Claimant to tell Claimant that they could modify Claimant's job duties. Ms. N[Redacted] testified that Mr. V[Redacted], Employer's owner, could not get a hold of Claimant. Ms. N[Redacted] testified that Claimant did not call her back. Ms. N[Redacted] testified that between herself and the owner, there were probably ten to eleven attempts to contact Claimant to advise Claimant they could accommodate her to allow Claimant to return to work.

28. Ms. N[Redacted] testified that she knew in August of 2019 that Claimant's restrictions were no use of the right arm. Ms. N[Redacted] testified that Claimant could have completed her job duties even with that restriction. Ms. N[Redacted] testified that Claimant could have typed with her left hand, dial phone numbers with her left hand, and

could have had a headset to make calls. Ms. N[Redacted] acknowledged that Claimant was not left-handed and may have been a lot slower, but that they could have accommodated Claimant's restrictions had Claimant returned their calls.

29. Ms. N[Redacted] testified that Claimant never returned to work. Ms. N[Redacted] testified that Claimant was separated from employment with Employer. Ms. N[Redacted] testified that the separation had nothing to do with Claimant's work restrictions but was due to Claimant's failure to return Employer's phone calls.

30. Ms. N[Redacted] testified that Claimant advised her prior to surgery that she would probably be out of work for 5-7 weeks following surgery. She testified that Employer then received a note from Claimant's doctor indicating Claimant could return to work on August 8, 2019 with restrictions and that Employer received this note on August 8th or 9th.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Termination for Cause

Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act “volitionally” or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus “responsible” if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep’t of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

A claimant may act volitionally, and therefore be “responsible” for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer’s expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

Respondents have established, by a preponderance of the evidence, that Claimant was responsible for the termination of her employment. Their request to terminate TTD benefits is granted. Any wage loss Claimant sustained was not due to her industrial injury but due to her failure to communicate with Employer. Respondents have established that Claimant’s termination was due to Claimant’s volitional decision not to return multiple phone calls and messages from her Employer.

As found above, Claimant spoke with Employer’s owner Mr. V[Redacted] on August 7, 2019 and ended the conversation by telling him she would keep him posted on her work status. The next day, August 8, 2019, Claimant’s authorized treating physician Dr. Rafferty released Claimant to modified duty work. Although Claimant disagreed with Dr. Rafferty’s release and testified that she was confused because she thought her

surgeon still wanted her to remain off work, claims adjuster Ms. G[Redacted] noted that she discussed with Claimant that Dr. Rafferty was the person who determined work restrictions.

Claimant argues that Dr. Cooney's July 23, 2019 report indicates that she was to remain off work for another five to six weeks. That is not consistent with what is in the report. The July 23, 2019 report indicates that Dr. Cooney anticipated that Claimant may be able to return to one-handed duty after her next visit. Her next visit was two weeks later on August 8, 2018 with Dr. Rafferty. At that visit, Dr. Rafferty did what Dr. Cooney had anticipated and he released Claimant to work modified duty work that day with temporary restrictions of no use of the right upper extremity, wearing sling at all times, and no walking on uneven or slippery surfaces. Dr. Rafferty also provided the restriction of no safety sensitive tasks when using oxycodone. Claimant testified that another reason she couldn't work was because she was restricted from driving because she was on oxycodone. This is rejected. On August 8, 2019, Claimant reported using oxycodone only occasionally at nighttime. Dr. Rafferty did not restrict driving. He restricted driving while using oxycodone, which Claimant was only using occasionally at night. Further, Dr. Cooney's August 27, 2019 report supports the inference that he agreed with the release to work provided by Dr. Rafferty on August 8, 2019. On August 27, 2019 Dr. Cooney recommended Claimant continue with her work restrictions.

Claimant disagreed with her release to work and she subjectively did not believe she could perform her job duties. However, Claimant had full volitional control over her decision to ignore Employer's multiple phone calls and messages between August 8, 2019 and August 14, 2019. Claimant's testimony that the claims adjuster advised her not to talk to Employer is not found credible or persuasive. Rather, the claims adjuster discussed with Claimant that Dr. Rafferty determined work restrictions and advised Claimant on August 14, 2019 that Employer had modified duty available.

Employer was left in a situation where it received a doctor's report indicating Claimant could return to work on August 8, 2019 but Claimant failed to return multiple calls and messages to coordinate any kind of return or modified job. Although Claimant testified she was intimidated by owner Mr. V[Redacted] due to the August 7, 2019 phone conversation, she did not present any testimony indicating she was intimidated by office manager Ms. N[Redacted]. Claimant also testified that she ended her August 7, 2019 phone call with Mr. V[Redacted] by telling him she would keep him updated and by him wishing her luck. If Claimant had made one return phone call to let Employer know what was going on, i.e. that she believed the release to work was incorrect and different from what her surgeon had recommended and that she was working with the claims adjuster to sort things out, she might not be in this predicament. Instead, she completely refused to communicate with Employer even after Insurer advised her that Dr. Rafferty's restrictions controlled and that Employer had modified work available. Failure to communicate and return multiple calls and messages is a volitional decision on Claimant's part and Respondents have established that she was responsible for her termination.

Claimant focuses a significant part of her argument on a portion of the WC Act that allows TTD benefits to be terminated when an attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. See § 8-42-105(3), C.R.S. Although that is one way Respondents in general can seek to terminate TTD, that is not why the specific Respondents in this case are seeking termination of TTD benefits. Here, they are seeking termination of benefits based on Claimant's failure to communicate with Employer and failure to return numerous phone calls and messages. If Employer had offered modified employment in Claimant to writing and Claimant had failed to show up, then they could have terminated her TTD benefits. However, that does not preclude Employer from seeking to terminate Claimant's TTD benefits on other grounds including, specifically in this case, Claimant's failure to communicate with Employer.

ORDER

It is therefore ordered that:

1. Respondents have established, by a preponderance of the evidence, that Claimant was responsible for the termination of her employment on August 15, 2019.
2. Respondents' petition to terminate temporary total disability (TTD) benefits is granted.
3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

- I. What is the opinion of the DIME physician?
- II. Once the DIME opinion has been determined, have Respondents, by clear and convincing evidence, overcome the DIME opinion on the assigned Whole Person Impairment Rating?
- III. If the DIME opinion has been overcome, what Whole Person Impairment Rating should be assigned, as determined by the ALJ?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained an admitted work injury to his left eye on November 6, 2018 when hot grease splashed into his eye while working for the Employer. Claimant explained at hearing that a co-worker, for some unknown reason, had dropped a bucket into a deep fryer from approximately chest height, causing the grease to splash and strike Claimant in the face, particularly his left eye. Claimant went to the Emergency Room at Mount San Rafael hospital almost immediately after the incident.

2. The emergency room record states that Claimant had hot grease from a fryer splash into his eye at work and he was not having a "foreign body sensation" and pain of the left eye with decreased vision. It was noted that Claimant does not wear contact or glasses. Physical examination documented 'injected' conjunctiva of the left eye.

3. Claimant's left eye visual acuity was 20/70 whereas his right eye was 20/20, both tests done without corrective lenses. While no corneal abrasion was noted to be present, his discharge instructions were to treat it as such. He was prescribed erythromycin ointment, and instructed to follow up with an ophthalmologist. (Ex. 4, pp. 19-21).

4. Claimant went to Rocky Mountain Eye Center the next day on November 7, 2019 for evaluation. (Ex. 5). Claimant reported that he was splashed in the eye with hot grease at work the day prior. He was given antibiotic ointment for his left eye at the emergency room, was told he had a corneal abrasion, and to follow up with the ophthalmologist. *Id.* at 23.

5. The intake note documents, "[Claimant] states that he has a pretty severe headache, lots of discharge, it is effecting (sic) his vision, not so much as blurry, but

cloudy.” Claimant further indicated that his left eye was now “very sensitive to the light.” *Id.* Visual acuity examination now reported 20/25 vision of the right eye and 20/200 vision of the left eye. *Id.* at 24.

6. Claimant first went to his ATP, Dr. Douglas McFarland, on November 9, 2018. (Ex. 6). Dr. McFarland documented that Claimant reported a co-worker dropping a fryer basket from about chest height into the fryer, causing grease to splash in his eye. *Id.* at 32-33. Dr. McFarland noted, “[Claimant] reports feeling left-sided headaches and pressure behind his eye. He also reports the light bothers him.” *Id.* at 33. Dr. McFarland provided a diagnosis of photophobia in addition to the left corneal burn.

7. Claimant followed up at the Rocky Mountain Eye Center on November 14, 2018. (Ex. 5, p. 28). The history of present illness indicated that Claimant’s condition was improving; however, he continued to have some degree of ongoing light sensitivity, discomfort, and blurriness. Visual acuity examination documented that Claimant’s left eye was now 20/70. *Id.* at 29. The provider indicated Claimant’s corneal abrasion had healed. He also gave Claimant a prescription for glasses. *Id.* at 30. At hearing, Claimant testified that he had never worn glasses or contacts in his life prior to this work event, and that he seldom had headaches prior to this incident.

8. The ophthalmologist’s note did not mention anything about Claimant’s ongoing headaches at the November 14, 2018 visit, while Dr. McFarland documented the ongoing headaches from his visit the same day. (Ex. 6, p. 35). The review of symptoms documents Claimant’s reported, ongoing light sensitivity and resulting headaches. *Id.* at 36. In his ‘Patient Instructions’, Dr. McFarland stated: “Remain off work for now. He will be finishing up his eye drops on Saturday and I think he may have some further improvements in his eyes without the irritation of the drops.” *Id.*

9. Dr. McFarland examined Claimant again on November 21, 2018. (Ex. 6, p. 38). During the physical examination, Claimant asked that Dr. McFarland not shine the light directly in his eyes due to concern of making his headaches worse. Dr. McFarland did re-check Claimant’s vision with a “pinhole” and measured Claimant’s right eye to be a normal 20-20, but the left eye to decrease to 20-40 *Id.* Dr. McFarland kept the diagnosis of photophobia and added “Tension-type headache” to the assessment. *Id.* As of November 30, 2018, Claimant reported that his eyes were still very sensitive and “causing him to have headaches,” albeit slightly improved. *Id.* at 43.

10. Dr. McFarland placed Claimant at MMI on January 15, 2019, noting that the vision was improved and ‘near normal.’ (Ex. 6, p. 47). Claimant continued to report some vision change. Dr. McFarland kept the assessment of corneal burn, photophobia, and tension-type headaches. *Id.* “He says at times exposure to light does seem to cause a headache.” Dr. McFarland declined to assign any impairment rating. *Id.*

11. Claimant then requested a DIME examination. (Ex. 7). The DIME physician, Dr. Anjmun Sharma, performed a physical examination, which revealed the abnormal ocular motility and binocular diplopia. *Id.* There was no nystagmus or any

other neurological concerns. His final diagnoses included corneal abrasion and tension headaches. *Id* at 53. The DIME report was clear that any refractive error was not caused by the work injury. It was equally clear that any headaches that Claimant suffered from were not due to traumatic brain injury. *Id* at 52. There was no mental impairment. *Id*.

12. The paragraph under **Impairment Rating, with Apportionment if Necessary** reads, in its entirety and unedited, as follows:

In this case, no apportionment is necessary. There is only one system that I think for which rating can be offered to this patient and is not the visual system rather the complaint of headaches. Referencing table 1 chapter 4, page 109 of the AMA Guide we can look the brain injury. The patient does not necessary to have brain injury but he does have headaches. This would fall under the criteria of evaluation for headaches. While it is not clear to me why the patient has headaches. I do not have a reason why. I do not know what underlying condition could possibly exist, that cause his headaches. The patient however is complaining number of subjective symptoms but there are not any consistent objective findings to really support an impairment to be given, but nevertheless, he does have a visual acuity which is refractive error, which needs to be managed with glasses. This is a pre-existing long-standing issue. There is no impairment that can be given just for having refractive error. For headaches possibly the improvement can be given in this case I will refer to chapter 4, table 1, page 109. We can refer to this as episodic neurological disorders. That is slight interference with daily living, which ranges from 5 to 15 %. The only thing that could really assign in good faith after review of this case is probably a final whole person impairment of 10% for episodic neurological disorders for the brain. I cannot provide any other impairment. I do not find any other significant body parts that are claim related for which impairment can be assigned. This is the final whole person impairment of 10%.

It is apparent to this ALJ from the grammatical non-sequiturs in the preceding paragraph that the DIME physician used some sort of voice-recognition dictation software, and then did not proofread his own work. Confusion has now ensued in trying to divine his intent.

13. Respondents subsequently retained Dr. Allison Fall to perform a records review and to provide her written opinion regarding Claimant's impairment rating and the DIME report. (Ex. A). Dr. Fall states in her report that a subjective complaint is not to be rated without correlating objective findings per the *AMA Guides*. Dr. Fall provided no specific citation other than simply stating "the *AMA Guides*." *Id* at 2. After an exhaustive search of the *AMA Guides*, for such citation, the ALJ was unable to locate such a citation *in the AMA Guides*. Dr. Fall, however, makes no reference in her report to the *Division of Workers' Compensation Desk Aid #11, Impairment Rating Tips ("Rating Tips")*.

14. Dr. Fall indicated that physicians are instructed in the Level II reaccreditation course that they may rate headaches if caused by a brain injury utilizing the “episodic neurologic deficits” but, again, this subjective headache is of unknown cause, and there was no work-related traumatic brain injury.” (Ex. A, p. 2). She indicated that Dr. Sharma did not know what underlying condition that could possibly exist that caused the headaches. Dr. Fall further went on to indicate that there was no diagnosis of neurological headaches and Claimant does not have a traumatic brain injury. *Id.*

15. Dr. McFarland responded via letter to Respondents regarding question of permanent impairment. He found that it was “not medically probable” that Claimant’s ongoing headaches were work related. (Ex. B). Dr. McFarland felt that Claimant’s headaches might be related to visual strain caused by Claimant’s pre-existing visual impairment.

16. Dr. McFarland indicated that at the time he saw Claimant on January 15, 2019, it did not appear that the occasional headaches were being caused by the eye injury nor did it appear that the headaches were frequent or severe enough to be considered an impairment. Dr. McFarland went on to say that it was not appropriate for Dr. Sharma to assign an impairment rating for headaches related to the patient’s eye injury of November 6, 2018. Dr. McFarland did not believe there was any basis for causation of the headaches related to the reported injury.

17. Dr. McFarland indicated that as Dr. Sharma says, the cause of the headaches is not known. Dr. McFarland indicated that the statement by itself shows a lack of causation of the headaches related to the reported injury. Dr. McFarland went on to say that the patient may have headaches because of visual strain related to his pre-existing visual impairment, but that condition was not caused by the reported injury. (Ex. B, p. 4).

18. Claimant testified at hearing that his ongoing headaches significantly affect his activities of daily living. Claimant now has difficulty reading for more than short periods of time before the reading will cause him to have a headache. Claimant testified that he remains significantly sensitive to light, which he indicated limits his ability to participate in activities outdoors, especially activities such as playing in the snow with his grandson, given how bright the white snow can be.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). In this instance, the only witness is the Claimant. While Claimant has no medical background, the ALJ finds that Claimant has been sincere in his testimony regarding the symptoms he has experienced since his work injury.

Overcoming the DIME as to the assigned Impairment Rating, Generally

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect and that said opinion is "free from substantial doubt." *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable

medical opinion. *Qual-Med v. Industrial Claim Appeals Office, supra*. A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools W.C. No. 4-782-625* (ICAO, May 24, 2010).

E. If the DIME physician offers ambiguous or conflicting opinions concerning MMI or impairment, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Stephens v. North & Air Package Express Services*, W. C. No. 4-492-570 (February 16, 2005), *aff'd*, *Stephens v. Industrial Claim Appeals Office*, Colo. App. 05CA0491 (Jan. 26, 2006) (NSOP).

What does the DIME Report actually Say?

F. In this case, the ALJ is tasked with figuring out what Dr. Sharma is really saying in his DIME report. The ALJ summarizes the position of Dr. Sharma as follows:

1. Claimant's eye injury has completely healed.
2. Claimant is now at MMI.
3. Claimant continues to suffer from tension headaches.
4. Claimant's refractive errors with visual acuity are pre-existing, and not work-related.
5. Claimant has not suffered a traumatic brain injury.
6. There are no objective symptoms of Claimant's tension headaches; one must therefore assume they occur as self-reported by Claimant.
7. There is no mental impairment.
8. The DIME physician cannot identify an underlying medical condition which would cause the headaches suffered by Claimant.
9. The DIME physician cannot link the headaches to any particular cause, whether or not any objective symptoms have been identified.
10. Nonetheless, the DIME has noted the temporal correlation between the work injury to Claimant's eye, and the headaches he now reports.
11. It is *possible* to assign an Impairment Rating for Claimant's headaches; if so, it must come only from Chapter 4, Table 1, page 109 of the AMA Guides, under *episodic neurological disorders*.
12. As a result of Claimant's *headaches*, he suffers from a slight interference with daily living, for which a possible range of Impairment Ratings is from 5% to 15% of the Whole Person. In this case, the DIME chose the midpoint of 10%.

Has the DIME Report been overcome?

G. While Dr. Fall did not identify where in the *AMA Guides* the requirement appears to correlate subjective complaints with objective findings, such requirement does appear in the Division's *Rating Tips*. Under General Principles, paragraph 1 reads as follows:

1. Impairment Ratings Based on Objective Pathology: **Impairment ratings are given when a specific diagnosis and objective pathology is identified.** (Reference: C.R.S. §8-42-107(8)(c)) In cases with multiple symptoms, the clinician must determine whether separate diagnoses are established which warrant an impairment rating OR the impairment rating provided for a specific diagnosis incorporates the accompanying symptoms of the patient. (emphasis added).

H. The ALJ references, then, C.R.S. 8-42-107(8)(c), [applicable to ATPs, but for which no exception can be identified for its applicability to a DIME as well] which reads in pertinent part:

.....For purposes of determining medical impairment, the physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation....(emphasis added).

I. In this case, Dr. Sharma was explicit (at least in this ALJ's interpretation) that no objective findings appear in the record that support the existence of the headaches. There was no anatomic or physiologic correlation, by his own analysis. There is no identified underlying condition. While the ALJ has found Claimant to be sincere in his recounting of recurring headaches, they are, in effect, intermittent, but *chronic pain*. The headaches are subjective, and lacking any anatomic or physiologic correlation. They are not related to any *specific diagnosis*.

J. Claimant makes an appealing argument in support of the DIME, to wit: The DIME has assigned an Impairment Rating, ipso facto, he has found causation. The ALJ simply cannot concur with this reasoning. The DIME himself hedged on assigning an Impairment Rating at all, even while limiting himself to *episodic neurologic disorders* under the *AMA Guides* – if at all.

K. The ALJ finds and concludes, by clear and convincing evidence, that the DIME physician erred in assigning an Impairment Rating for headaches, without requiring some anatomic or physiologic correlation. There was no underlying specific diagnosis to link to any episodic neurological disorder. The DIME report is highly probably incorrect, and has therefore been overcome. As such, the ALJ concludes that this amounts to more than a mere difference in medical opinion between Dr. Sharma, and Drs. Fall and McFarland.

Impairment Rating to be Assigned, Generally

L. Where the ALJ determines that the DIME physician's rating has been overcome, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ. The only limitation is that the ALJ's findings must be supported by the record and consistent with the *AMA Guides* and other rating protocols. Thus, once the ALJ determines that the DIME's rating has been overcome in

any respect, the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (September 5, 2001). Further, the ALJ is not required to reject every other component of a DIME physician's rating. *Lee v. J. Garlin Commercial Furnishings*, W.C. No. 4- 421-442 (December 17, 2001). Nor is the ALJ is precluded from crediting any part of the DIME physician's rating. Rather, where the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *McNulty v. Eastman Kodak Company*, W. C. No. 4-432-104 (September 16, 2002); *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (March 19, 2004).

Impairment Rating in this case, as Applied

M. In this instance, the ALJ is persuaded by the reasoning of the ATP, Dr. McFarland, and Dr. Fall, that there is no established correlation between the headaches Claimant complains of and his work injury. It is certainly possible that they are caused by Claimant's lack of corrective lenses, and his refusal to obtain them. There could also still be some unknown, undiagnosed condition that causes his headaches; however, in this instance, insufficient evidence exists to link Claimant's headaches to the work injury, despite the temporal correlation. This compensable left eye injury has completely healed, with no need for medical maintenance benefits. The ALJ, therefore, assigns a Whole Person Impairment Rating of 0%.

ORDER

It is therefore Ordered that:

1. The DIME report has been overcome.
2. Claimant's Whole Person Impairment Rating is 0%.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: February 6, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

| | |
|---|--|
| STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1525 Sherman Street, 4th Floor, Denver, CO 80203 | <p style="text-align: center;">▲ COURT USE ONLY ▲</p> |
| In the Matter of the Workers' Compensation Claim of: [Redacted], Claimant, vs. [Redacted], Employer, and [Redacted], Insurer, Respondents. | |
| <p>CASE NUMBER:</p> <p>WC 4-845-025-03</p> | |
| <p>FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER</p> | |

Hearings in this matter were held on May 3, 2018, August 6, 2018 and January 7, 2019, before Kimberly Turnbow, Administrative Law Judge. This matter was digitally recorded from 1:30 p.m. to 5:00 p.m. on May 3, 2018, from 8:40 a.m. to 5:03 p.m. on August 6, 2018, and from 1:35 p.m. to 5:03 p.m. on January 7, 2019, each time in Courtroom 3 of the Office of Administrative Courts in Denver, Colorado.

[Redacted], Esq. represented Claimant who was present and [Redacted], Esq. represented Respondents.

The ALJ admitted Claimant's Exhibits 1 through 36 and Respondents' Exhibits A through WW without objection.

Claimant testified on his own behalf, and presented the in-person testimony of [Redacted], Claims Representative Tameria S[Redacted], and Christopher Ryan, M.D. Respondents presented the in-person testimony of Albert Hattem, M.D.

In this order, the ALJ refers to Jimmy Graham as "Claimant," APT Service, Inc. as "Employer," and Pinnacol Assurance as "Insurer." The ALJ refers to Employer and Insurer collectively as "Respondents." Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2019); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

- Whether Claimant proved by a preponderance of the evidence that he had a change of condition after maximum medical improvement (MMI).
- Whether Claimant proved by a preponderance of the evidence that his condition has worsened and he is no longer at MMI.
- If Claimant is no longer at MMI, whether he is entitled to temporary total disability (TTD) benefits.
- If Claimant is no longer at MMI, whether he is entitled to continued maintenance medical benefits.
- If Claimant is no longer at MMI, and is entitled to continued maintenance medical benefits, the identity of his authorized provider.
- Whether Respondents established by a preponderance of the evidence the affirmative defenses of waiver and/or laches.
- The parties stipulated to hold in abeyance the issue of whether Claimant is permanently and totally disabled.

FINDINGS OF FACT

1. On December 11, 2010, Claimant suffered an admitted injury while working for Employer as a tow truck driver.

2. The work injury aggravated Claimant's pre-existing underlying spondylosis, stenosis, and degenerative disc disease. Claimant underwent conservative treatment and diagnostic testing under Dr. Frederick Zimmerman's care. Claimant's December 28, 2010 non-contrast MRI of his cervical spine showed broad based disc bulges at C5-6 and C6-7, smaller bulging discs at C3-4, C4-5, and a minimal bulging disc at C7-T1.

3. Claimant experienced bilateral symptoms, left worse than right, radiating to his left and right shoulders, and sometime tingling into his left fingers and the right elbow.

4. Dr. Zimmerman referred Claimant to orthopedic surgeon Dr. David Wong, and neurosurgeon, Dr. Steven Johnson. On February 1, 2011, Drs. Wong and Johnson performed a single level fusion and discectomy at C6-7. The surgery was a routine single level fusion that was completed uneventfully and without complications.

5. On September 22, 2011, Dr. Zimmerman placed Claimant at MMI.

- Dr. Zimmerman assigned Claimant a whole body impairment rating of 15%. The doctor noted that Claimant would experience permanent waxing and waning of his symptoms and accounted for that in his impairment rating.

- Dr. Zimmerman imposed work restrictions of 20 pound lift and 40 pound push/pull occasionally, limit driving to one hour at a time, no more than 3 times per day, and infrequent bending, squatting and kneeling. A functional capacity evaluation placed Claimant in the light to medium category.
- Dr. Zimmerman recommended maintenance medical care of six months of Percocet; six months of follow up visits with his psychologist; and a 1-year gym pass with three to four trainer visits.

6. On November 10, 2011, Dr. Zimmerman revised his September 22, 2011 report, increasing Claimant's impairment rating to 19% for reduced cervical range of motion (ROM) and neurological symptoms. The doctor noted that Claimant was also having psychological difficulty coping with his level of function.

7. On December 14, 2011, Respondents filed a Final Admission of Liability per Dr. Zimmerman. On January 12, 2012, Claimant filed a hearing application on PPD and disfigurement. On March 12, 2012, the OAC rejected Claimant's application for failure to set. Thus, the claim closed on January 12, 2012.

8. Claimant's condition improved, and he was able to return to full time work with Employer.

9. Claimant has a number of conditions that interplay with his work injury and his recovery from it.

- Claimant has age related arthritis, more advanced than an average man his age, throughout his cervical spine at multiple levels. The nature of the disease is to naturally worsen over time.
- Claimant is a long-time smoker which limited treatments available to him and delayed his healing process.
- Claimant has significant, non-work related arthritis and osteoarthritis diffusely throughout his body, including both knees and lumbar spine. In 2017 Claimant saw a knee surgeon and on January 25, 2017 he had a lumbar spine fusion.
- Claimant is diabetic. His medical history is significant for poorly controlled diabetes, which can cause neuropathy, diabetic mellitus, and polyneuropathy.
- Claimant's medical history also includes decreased lung function from smoking, hepatitis C, and respiratory depression from living at an altitude of 9000 feet.
- Claimant has a prior methamphetamine addiction. Claimant's methamphetamine addiction was problematic because the potential for cross-addiction and relapse existed with prolonged use of narcotics. Medication changes and adjustments, including use of neuropathic drugs in lieu of narcotics, rhizotomies, and other forms of long-term pain control, were made throughout the course of treatment in effort to avoid relapse and to maintain MMI.

- Over the course of his treatment, Claimant's pain medications included but were not limited to: Percocet, Valium, Oxycodone, Celebrex, medical marijuana, Tramadol, and Marinol.

10. Claimant's symptoms continued to wax and wane as anticipated, due to activity level, changes in weather and medications, and progression of underlying, pre-existing disease. On October 11, 2011, Claimant was working 40 hours per week without major difficulty. Dr. Carbaugh noted in November 2011 that Claimant was looking into other business opportunities. On January 19, 2012, Claimant discontinued Percocet and continued only on Valium. Dr. Zimmerman told Claimant to return in three months for his next maintenance visit.

11. Intervening events also complicated treatment and recovery. These included a motor vehicle collision with an elk, and working at an ergonomically incorrect work station. On December 13, 2011 Claimant hit an elk with his car driving at 55 miles per hour. The accident killed the elk, put a ten inch dent in his vehicle, and left his vehicle un-drivable. Claimant sought treatment from his personal physician who determined that the fusion remained intact. Dr. Wong opined this aggravated Claimant's condition, and that he might be experiencing mechanical pain from levels above and below the fusion and he also had chronic problems from old pathology with some new radicular symptoms.

12. On March 22, 2012, Claimant reported having "more good days than bad." At Claimant's request, Dr. Zimmerman relaxed his permanent driving restriction on April 19, 2012. Claimant's medications were stable with prescriptions of Oxycodone for severe pain (for flare-ups from barometric changes in the weather and storms) and Valium. On June 29, 2012, Claimant complained of persistent bilateral neck and shoulder pain with burning into the upper arms, into the left hand and numbness in the left thumb, index and middle fingers, and bicep weakness. Dr. Wong noted that Claimant had "an episode last week where he felt light headed with wobbly legs for 30 seconds."

13. Due to ongoing complaints and concerns related to cervical stenosis, Dr. Wong recommend a cervical MRI and referred Claimant to Dr. Johnson. A cervical MRI was done with contrast on July 11, 2012, Dr. Johnson reviewed the MRI which "showed no evidence of a new problem in the [entire] cervical area that would explain [Claimant's] recent symptoms." Dr. Johnson copied his report to Drs. Zimmerman and Wong and attributed Claimant's increased symptoms to his office setting job and suggested ergonomic changes to keep his neck in neutral position. On July 19, 2012, Dr. Zimmerman opined that the MRI showed no abnormality. Claimant's cervical ROM was normal in all directions. Notably, neither Dr. Zimmerman, Dr. Johnson nor Dr. Wong opined that Claimant's condition worsened or that he was no longer at MMI. Nor did the physicians suggest that Claimant had a "new" disc bulge adjacent to the fusion at T1-2 or that any of his pre-existing bulges had worsened.

14. On August 14, 2012, Claimant told Dr. Carbaugh he was concerned about a worsening structural problem in his neck. When questioned about "the possible etiology of increased pain," Claimant responded he was not going to the gym regularly and was not compliant with his diabetes requirements. Claimant had relief from neck symptoms but tingling in the left upper extremity and more frequent paresthesia with numbness, after

waking up in the morning. Dr. Zimmerman prescribed 4 to 6 maintenance physical therapy visits.

15. On September 6, 2012, Claimant quit his job with Employer due to conflicts with a co-employee. His symptoms continued to wax and wane. Dr. Zimmerman continued physical therapy, prescribed Celebrex and recommended medial branch blocks if pain persisted. Claimant responded well to Celebrex finding it very helpful in controlling pain.

16. On January 17, 2013, Dr. Zimmerman reported: “[a]s part of the maintenance, I recommend proceeding with bilateral C4-5, C5-6 radiofrequency neurotomy to treat pain. [Claimant] remains at MMI dated 9/22/11 for his original neck injury.” The doctor anticipated adjusting Claimant’s impairment rating to account for the procedure. On January 23, 2013, Claimant underwent the maintenance rhizotomy which initially provided relief. Dr. Hattem testified that the rhizotomy was performed as maintenance because it was done “to maintain [Claimant] at his current stable condition.”

17. Claimant experienced weather-related increased symptomology.

- He reported that he could “feel the snow coming in” which increased his pain.
- Claimant could feel his shoulders tense and a knot on the left side of his neck when barometric pressure dropped.
- Claimant reported that “he [was] sore from weather changes.”
- Claimant cancelled an appointment with Dr. Zimmerman because he was “hurting today with winter storms coming in,” which caused neck stiffness and increased pain.
- Dr. Carbaugh noted Claimant “again clearly identifie[d] changes in the weather as a prominent trigger for increased headache activity.”
- Dr. Zimmerman reported that Claimant lived in the mountains at 9000 feet and daily afternoon storms caused increased neck pain and headaches.
- Dr. Wong identified changes in weather and barometric pressure caused increased symptoms of arthritis.

18. On March 21, 2013, Claimant presented for repeat ROM measurements and Dr. Zimmerman noted that Claimant was “hurting” and complained of persistent neck pain due to winter storms. Dr. Zimmerman wrote that Claimant was at MMI for the revision as of that day “3/21/13” with 7% impairment for loss of ROM. It is undisputed that Dr. Zimmerman did not take Claimant off of MMI. Rather, based on the totality of the evidence, the ALJ finds that Dr. Zimmerman intended to convey that Claimant had fully recovered from the rhizotomy procedure as of March 21, 2013.

19. Claimant did not file a petition to reopen for worsening of medical condition

and attach a copy of the “new” MMI date or impairment rating. Nor did he apply for hearing on MMI, TTD or PPD (for additional 7% impairment). Instead, Claimant continued to receive PPD benefits from Insurer for the admitted 19% impairment rating from September 22, 2011 through November 8, 2013. Over the following several years Claimant continued to receive medical maintenance care, without alleging that his condition worsened or that he was not at MMI and should be receiving TTD or pre-MMI treatment.

20. Several medical records mention that Claimant was working with his attorney to build a Permanent Total Disability (PTD) case. These include but are not limited to

- Retaining a vocational expert, Cynthia Bartman, who issued a vocational report on May 2, 2013.
- In June 2013, Claimant told Dr. Carbaugh he was pursuing a “permanent total disability” case.
- On March 25, 2014, Dr. Cohen noted Claimant was trying to build a permanent total disability claim.
- On July 5, 2016, Dr. Zimmerman reported that Claimant continued to do well and was pursuing a permanent total disability claim.
- Claimant also testified that his counsel had scheduled a number of settlement conferences with Respondents, but that Respondents had not participated or had cancelled.

21. On April 30, 2013, Insurer sent Dr. Zimmerman a letter confirming that he placed claimant at MMI on September 22, 2011 with six months of maintenance care. Dr. Zimmerman responded with more maintenance recommendations, but did not state that he had taken Claimant off of MMI or that the September 22, 2011 MMI date had changed.

22. On May 2, 2013, Claimant’s counsel contacted Insurer by telephone inquiring whether it would be filing a new FAL accounting for Dr. Zimmerman’s March 21, 2013 MMI date and additional 7% impairment rating. Insurer responded that it would not be filing a new FAL because Dr. Zimmerman did not take claimant off of MMI and that the claim was closed. Tameria S[Redacted], managed Claimant’s claim for Insurer beginning in 2015. Ms. S[Redacted] testified that an Insurer is not obligated to admit or take any position when an ATP gives an additional impairment without taking claimant off MMI, even if the ATP places a claimant “back at MMI.” She also testified that Dr. Zimmerman billed the rhizotomy using the code for a medical maintenance procedure.

23. On May 2, 2013 Claimant’s expert, Cynthia Bartman, issued a vocational report concluding that since reaching MMI on September 22, 2011, Claimant had good and bad days and his pain level had a direct correlation to the weather pattern. She documented Claimant’s specific pain complaints which did not include right-sided symptoms. Ms. Barman cited “new” work restrictions in response to a questionnaire signed by Dr. Zimmerman that day, after completing it by phone with Claimant who “agreed to all of the responses.” It is unclear what prompted Dr. Zimmerman’s completion of the form or

if he based it solely upon Claimant's input, and whether or not he considered Claimant's pre-existing cervical disease, non-work related back condition, diabetes, hepatitis C, and lung condition. Dr. Zimmerman never changed Claimant's permanent work restrictions other than removing/reducing the driving restriction. Dr. Zimmerman also completed a cost determination for a Medicare set-aside. The ALJ finds that if the questionnaire and cost determination indicated a worsened condition, Dr. Zimmerman, who authored both documents, had the opportunity to take Claimant off MMI rather than continue to provide maintenance for the next three years.

24. On May 15, 2013, Insurer sent a second letter to Dr. Zimmerman confirming that Dr. Zimmerman placed Claimant at MMI on September 22, 2011. Again, Dr. Zimmerman did not state that he had taken claimant off of MMI or that there was a new MMI date.

25. On June 12, 2013, Dr. Rashbacher performed a physician adviser ("PA") report, opining that Claimant "remained at MMI" since 9/22/11 and that continued care "directed at other anatomic structures" was "well beyond the maintenance period." On June 18, 2013, Dr. Carbaugh reported Claimant was taking Percocet for peak pain periods, Claimant associated increased pain with activity and changes in weather/barometric pressure, and he was pursuing a "permanent total disability" case and hoped for a "rapid resolution." On July 7, 2013, Claimant complained of disabling headaches. Dr. Zimmerman administered a left occipital nerve block, resumed medical marijuana for pain and discontinued Oxycodone, suggesting Tramadol as a rescue medication.

26. On August 12, 2013, Dr. Wong reported that it was 2 ½ years post-fusion and Claimant consistently reported experiencing "good times and bad times" with residual discomfort mostly in the neck and the top of shoulder area. Claimant's symptoms were aggravated by mechanical activities and weather changes, but the fusion was solid. Dr. Wong assessed cervicgia, multifactorial symptom complex, and mechanical neck pain secondary to degenerative changes with no signs of instability. He noted that Claimant could have had radicular irritation to the arm from levels above his fusion, but there was no evidence of major radiculopathy stemming from C6 or T1-2. In response to Claimant's specific questions, Dr. Wong indicated that only 1 in 10 to 1 in 5 patients require operative treatment for adjacent level disease and "weather and barometric pressure [was] an aggravating factor for arthritis." Dr. Wong explained that "arthritis at adjacent levels can worsen over time" but that it was statically unlikely Claimant would need another surgery.

27. On December 12, 2013, Claimant complained of two episodes of burning pain, one down the RUE two weeks prior and one down the LUE over Thanksgiving. The symptoms lasted 2 hours and self-resolved. No narcotics were prescribed due to Claimant's reliance on medical marijuana. Dr. Zimmerman encouraged Claimant to "find other physicians for pain management who may be willing to accept his low narcotic use" and he scheduled a cervical MRI. On December 23, 2013, Claimant underwent a cervical MRI without contrast which did not show a disc bulge at T1-2, adjacent to the fusion. The radiologist's impression was prior fusion without evidence of complication, mild degenerative disk disease, and spondylosis in the mid cervical spine. Per Dr. Zimmerman, the MRI showed degenerative disc disease and spondylosis with no evidence of disk herniation or nerve root impingement. Claimant reported difficulty with his disability from

an emotional standpoint. A referral was made to Dr. Cohen for “maintenance psychological counseling.” On February 6, 2014, Claimant was “doing pretty well” and rated his pain a 4/10. He was prescribed Marinol. Claimant continued to report “he [was] doing very well” and on March 13, 2014, Dr. Zimmerman noted a “[h]istory of myofascial pain and headaches sensitive to barometric changes, relatively stable” with minimal exacerbations over the last month. Chronic RUE radiculopathy pain was controlled on medications. Dr. Cohen recommended Claimant stay busy with hobbies or light duty employment to keep his mind off the pain.

28. Per Dr. Cohen’s notes on March 25, 2014, Claimant was trying to build a permanent total disability claim. On March 9, 2014, Joseph Fillmore, M.D., did a PA, noting Claimant reached MMI on 9/22/11 and that Marinol should be denied as maintenance because it was illegal under Federal law. Dr. Gellrick performed a PA on April 18, 2014, and on May 1, 2014 she evaluated Claimant on referral by Dr. Zimmerman whom she noted was trying to manage Claimant’s ongoing pain complaints, while also attempting to differentiate them from pain related to diabetic mellitus disease as Claimant was not following his sugars closely. Dr. Gellrick opined that diabetic polyneuropathy may be contributing to upper extremity symptoms and recommended an EMG to delineate the cause of neuropathy. She suggested Claimant avoid the use of substances that could cause a relapse and that pain medications be monitored and/or changed over time to account for addiction, diabetes, lung function from smoking, hepatitis C, and respiratory depression from living at an altitude of 9000 feet. She further opined that if Dr. Zimmerman recommended more rhizotomies to maintain pain, his recommendation should be followed and that Celebrex or other NSAIDs could be increased to help with pain management. On April 24, 2014, Claimant expressed concern that Insurer denied payment for continued use of Marinol because the effectiveness of that had allowed him to discontinue all narcotic use and he did not want to become addicted again to narcotics. On May 22, 2014, Claimant was reportedly doing “so-so.” On July 1, 2014, Claimant was struggling with poor pain control. A repeat rhizotomy was considered and Claimant requested a referral to Dr. Wong. On July 29, 2014, Dr. Cohen reported Marinol provided Claimant with the most benefit but Insurer would not authorize it. On August 7, 2014, Claimant had no significant benefit from injections.

29. Albert Hattem, M.D., performed his first Respondent sponsored IME on September 8, 2014 and agreed with Dr. Wong that Claimant’s ongoing complaints were “multi-factorial”: persistent pain was related to non-work related degenerative cervical spine arthritis, addiction disorder with ongoing opioid dependency, behavioral issues, and somatization disorder. He recommended Claimant wean off benzodiazepine and opioids and that detoxification be achieved within 6 to 9 months. At his October 9, 2014 evaluation, Claimant’s neck and upper extremity pain was stable. Claimant ran out of Percocet but said he used it infrequently, as needed. On October 16, 2014, Dr. Zimmerman stated he would not wean Claimant off of narcotics because: “[i]n order to maintain [his] level of function, the current pain medications are necessary. I have worked with [Claimant] for over 4 years and based on trial and error, I have determined that this is likely the lowest medication regimen to maintain his level of function.”

30. From March 21, 2013, the date that Dr. Zimmerman stated Claimant was at

MMI for the rhizotomy and increased his impairment for the maintenance rhizotomy, through October 16, 2014, Dr. Zimmerman saw Claimant a total of 16 times where his medical records for each visit repeats the same sentence: “cervical spondylosis status post bilateral C4-5 and C5-6 radiofrequency neuropathy, placed at MMI on 3/21/13.”

31. Beginning the next visit, on October 23, 2014 and continuing through January 28, 2016, Dr. Zimmerman saw Claimant a total of 10 times where his medical record for each visit repeats the same sentence: “cervical spondylosis status post bilateral C4-5 and C5-6 radiofrequency neuropathy, placed at MMI on . . . 6/21/13” not 3/21/13. As with the March 21, 2013 MMI date used in records from March 21, 2013 through October 9, 2014, Dr. Zimmerman’s records from October 23, 2014 through January 28, 2016 all repeat the wrong MMI date of 6/21/13.¹ Throughout treatment, Dr. Zimmerman also provided “physician work activity status reports,” which repeatedly provide different MMI dates that do not correlate to this claim. In total, thirty-three of Dr. Zimmerman’s records physician work activity status reports contain thirty-three different and erroneous MMI dates.

32. Dr. Zimmerman referred Claimant to Dr. Aschberger for an EMG of the left UE to determine if there was overlying peripheral neuropathy secondary to diabetes and also recommended four to six therapy visits to evaluate and treat “lumbar radiculitis down the left LE.” On November 12, 2014, Dr. Aschberger concluded that the EMG was consistent with Claimant’s history and that remote C-5-C6 radicular changes were mild. On February 18, 2014 and March 15, 2015, Claimant’s pain was fairly well managed on medications. On April 2 2015, Claimant reported “doing okay” since discontinuing Percocet. His neck and LUE pain remained unchanged and tolerable, and he had recurrent headaches from barometric changes. On June 25, 2015, he received injections for headaches. On September 24, 2015, Dr. Zimmerman noted that Claimant presented for his 3-month follow up with unchanged neck pain and episodes of locking up with stiffness when he woke up over the last 2 years but were increasing in frequency. Claimant stated Dr. Cohen offended him by opining there was nothing acute to justify continued treatment, so Claimant requested an evaluation with a new psychologist, Dr. George Rossi, who had treated one of Claimant’s friends who also had a WC claim. Dr. Zimmerman referred Claimant to Dr. Rossi for 4 to 6 visits of maintenance psychological counseling.

33. On October 13, 2015, Dr. Sharma performed a PA opining that Claimant remained at MMI as of 9/22/11 and no further maintenance care was needed. On November 19, 2015, Claimant reported his neck pain had become more problematic in recent weeks. Claimant inquired about a repeat radiofrequency neurotomy, and Dr. Zimmerman declined, stating that the last one was performed on January 23, 2013, and another one would be “outside of the 12-15 month grace period for maintenance. Any further rhizotomies will need to be performed outside of workers’ compensation.” Claimant did not see Dr. Zimmerman again until January 28, 2016 and “as usual, the winter months caused increased neck pain and stiffness.” Dr. Zimmerman recommended an additional six counseling sessions with Dr. Rossi. On February 19, 2016, Michael Janssen, D.O., performed a PA and recommended that facet blocks and rhizotomies “may be palliative to

¹ The parties stipulated that the “6/21/13” MMI date was a typo or error. Claimant does not claim he was placed at MMI by Dr. Zimmerman on 6/21/13.

continue to relieve [Claimant's] symptomatology from a maintenance standpoint" for current level/adjacent level disease." It is undisputed that although Dr. Zimmerman expressly stated that the rhizotomy would have to be done outside of WC, Insurer authorized and paid for the April 27, 2016 maintenance rhizotomy. As with the first rhizotomy, Dr. Zimmerman did not take claimant off MMI. On 5/20/16, Claimant was "doing fairly well"; on May 27, 2016, he was feeling "pretty good."

34. On June 9, 2016, Dr. Sharma performed a PA, again opining Claimant remained at MMI since 9/22/11, and had "exhausted all medical care at this point." On June 16, 2016, Claimant complained of a headache possibly related to withdrawal from quitting smoking. On July 5, 2016, Dr. Zimmerman reported that Claimant continued to do well and was pursuing a permanent total disability claim due to combined neck and back symptoms. Claimant experienced psychological problems, and Dr. Zimmerman recommended continued medications and an independent exercise program. Dr. Sharma performed another PA on August 10, 2016, opining that Claimant had undergone extensive maintenance treatment after being placed at MMI on 9/22/11 and recommended Metformin be denied because Claimant took it in 2010 for diabetes and there was no correlation between the work injury and diabetes. Gary Gutterman, M.D., performed a psych IME on August 16, 2016, summarized the care provided by Drs. Carbaugh, Cohen and, Rossie, and opined that no further treatment would provide Claimant with pain management strategies.

35. On August 16, 2016, Dr. Zimmerman reported that Claimant was concerned about chronic degenerative changes in the cervical spine. He sought authorization to schedule new cervical MRI to determine if the underlying degenerative process had advanced; and to send Claimant to Dr. Wong to review the MRI and the psych IME for treatment options. On August 25, 2016, Insurer denied the request for prior authorization for psychological treatment, attaching Dr. Gutterman's IME to the denial. Brian Mathwich, M.D., performed a PA on August 31, 2016, stating that "Dr. Zimmerman is requesting an MRI as the patient is concerned about chronic degenerative changes which are not considered work related and no MRI should be completed under workers' compensation for chronic degenerative changes." He concluded that "all maintenance care should be discontinued at this time."

36. On September 1, 2016, Ms. S[Redacted] denied authorization of payment for a gym pass renewal, medications, MRI of the cervical spine, and follow up with Dr. Zimmerman, using the routine Insurer form that states "the condition for which the care is requested is not compensable" and attaching Dr. Mathwich's PA. After September 28, 2016, Ms. S[Redacted] authorized payment for prescription medication on 8/31/16, 9/11/16, 9/16/16, 10/4/16, and 11/5/16. She received no additional requests for prior authorization from any provider.

37. On September 22, 2016, Claimant's attorney sent a certified letter to Insurer stating that Claimant would treat with Dr. Ryan if Insurer did not authorize the MRI and visits with Drs. Wong and Zimmerman by September 26, 2016. Claimant did not send the letter via certified mail to Drs. Wong or Zimmerman. On September 27, 2016, Ms. S[Redacted] received a phone call from Dr. Wong's office requesting authorization for payment of an evaluation by Dr. Wong which Ms. S[Redacted] denied. On September 28,

2016, Insurer sent a letter to Dr. Wong, copying Claimant, denying authorization for the MRI and continued maintenance care with Drs. Zimmerman and Wong. Neither physician appealed. Per Ms. S[Redacted], after September 27, 2016, none of the five ATPs, neither Dr. Wong, Dr. Zimmerman, Dr. Johnson, Dr. Gellrick, Dr. Aschberger, nor anyone from their offices, communicated in any manner to Insurer that any physicians refused to treat Claimant because Insurer denied authorization for payment for continued care.

38. On June 16, 2016, Claimant filed a petition to reopen for error, mistake, and “change of medical condition” but crossed out the word “medical,” attaching a letter alleging Claimant was PT because of a change of financial condition. On June 16, 2016, Insurer denied the petition to reopen. Ms. S[Redacted] testified that there was no other action required of Insurer to deny the petition.

39. On December 8, 2017, Claimant applied for hearing on PT, medical benefits and reopening. Claimant did not endorse MMI, TTD, or increased PPD. The parties went to prehearing where PALJ Erickson ordered that Respondents could pursue recovery of attorneys’ fees because PT was not ripe since MMI was 9/22/11.

40. On February 23, 2018, ten weeks before the initial day of hearing in this matter, Claimant moved to add MMI and TTD.

41. Claimant called Dr. Ryan as a medical expert at hearing. Claimant sought treatment from Dr. Ryan at his attorney’s suggestion.

- Claimant saw Dr. Ryan for treatment on at least four occasions:
 - November 10, 2016 for 2 ½ hours,
 - December 16, 2016 for 2 hours,
 - March 29, 2017 for 1 ½ to 2 hours, and
 - August 17, 2017, for an unspecified amount of time.
- Dr. Ryan did not create or maintain *any* record of *any* of these visits. Thus, no records exist to confirm what, if any, treatment Dr. Ryan may or may not have performed, or what, if any, observations he may or may not have made of Claimant’s condition. Dr. Hattem testified that the standard of care required doctors to complete reports every time they saw a patient.

42. Dr. Ryan admitted he did not provide any actual medical treatment: “I was going to provide medical care for him, and there was a difficult circumstance. I didn’t want to involve myself honestly, in the administrative aspects of the claim. Probably not a very good treating physician workers’ compensation, but I’d like to say, I really don’t do that anymore.” He also testified that he “wasn’t really sure what [his] role was going to be,” and that he was “pinch-hitting.”

43. Dr. Ryan issued his first opinions in a letter dated November 6, 2017. There

he opined Claimant was at MMI on 9/22/11, needed additional maintenance care and increased permanent work restrictions to account for a few “bad” days per month. He also opined that Dr. Zimmerman’s treatment was “reasonable, necessary, logical and compassionate, demonstrating exceptional skill under very challenging conditions,” and that Dr. Zimmerman should remain the ATP.

44. On January 19, 2018, Dr. Ryan gave a second and inconsistent opinion that Claimant’s July 11, 2012 MRI was “concrete evidence” of a worsened condition and “the reason that [Dr. Ryan] recommended a follow up high resolution cervical MRI scan.” But Dr. Ryan had not recommended a high resolution MRI in his first opinion, he recommended simply an “updated” MRI.

45. At the August 16, 2018 hearing, Dr. Ryan gave his third and fourth opinions. On direct, he testified he did not know if Claimant reached MMI after the purported July 11, 2012 worsening. But on cross, he testified Claimant reached MMI on March 21, 2013, but a second worsening occurred, although he did not know when, where or how, and Claimant reached MMI again by April 26, 2016, the date of the second maintenance rhizotomy. He also testified he considered himself to be Claimant’s ATP as of the first time he saw Claimant.

46. Dr. Ryan’s opinion changed for the fifth and several more times during the second day of hearing. Dr. Ryan first testified he did not know whether Claimant reached MMI by September 22, 2011. Claimant’s condition worsened on July 11, 2012, and Dr. Zimmerman erred by placing Claimant at MMI again on March 21, 2013, because Claimant never reached MMI. When asked whether Claimant was at MMI on March 21, 2013, Dr. Ryan testified “[t]hat’s a tough one, I don’t know.” When asked “is he at MMI today,” Dr. Ryan stated: “there are too many questions. I don’t know.” However, when asked “has he ever been at MMI since July of 2012,” Dr. Ryan testified that Claimant had experienced multiple worsenings and MMI dates “back and forth.” However, he could not identify when any of the multiple worsenings or multiple MMI dates occurred.

47. The ALJ observed that throughout Dr. Ryan’s testimony, he used the terms “worse” and “worsening” both colloquially and as a term of art. He testified,

You know honestly, I didn’t really pay attention to Colorado workers’ compensation in terms of art. It was sloppy use of language. You know, you guys live in this world, and you know when somebody says something it is supposed to mean something. You know, I didn’t – I didn’t really attach any significance. I probably should have, but I didn’t.

48. Dr. Ryan did not understand the case. His testimony was littered with expressions such as, “I have more questions than answers,” “I’m not prepared to say right now,” “If I recall, and I don’t recall very well,” “I honestly can’t tell you if that was the case or not,” and “You know, gees, was he at MMI or not?” He also testified that he was unable to answer hypothetical questions. When asked if a procedure was performed as maintenance, Dr. Ryan responded, “As to whether that were [sic] something that changed his MMI status, I don’t think there’s enough information to be able to say.” When asked

when Claimant's conditioned for the second time, Dr. Ryan responded, "And that's my arbitrary solution to that problem...I mean its' sloppy. I don't know how else to solve this problem."

49. Dr. Ryan based his opinion that Claimant's condition worsened on an inaccurate understanding of the facts.

- First, Dr. Ryan testified that the July 11, 2012 MRI showed a T1-2 disc bulge adjacent to the fusion that was not present on the December 23, 2010 MRI, and that the MRIs were comparable because they both were performed with contrast. Per Dr. Ryan, the fact that the T1-2 disc bulge was no longer present on the December 23, 2013 MRI was not relevant because the third MRI was the only one performed without contrast, and comparing a non-contrast MRI to a contrast MRI is like "comparing apples to oranges."
 - The ALJ rejects Dr. Ryan's opinion because the December 23, 2013 MRI, like the 12/28/13 MRI, was done without contrast. The only MRI done with contrast was performed on July 11, 2012. The most important basis for Dr. Ryan's opinion was his erroneous understanding that the first two MRIs were done with contrast but the third MRI was not.
- The second bases for his opinion were: (i) Claimant had "new" symptoms of headaches and right sided neck, extremity and thumb pain that he did not have a year or two before the alleged July 11, 2012 worsening; (ii) these "new" symptoms were continuous and unexplainable; and (iii) previous left sided symptoms were "remedied" by the February 2011 fusion.
 - Dr. Ryan misapprehended that facts. Claimant had left greater than right sided symptoms, in the right neck, shoulder, arm, hand, trapezius, elbow and upper extremity, days after his injury which continued pre and post fusion; (ii) He also had left greater than right numbness on February 8, 2012 attributed to the elk MVA and increased symptoms in July 2012, with one complaint of thumb pain, explainable by an ergonomically deficient work station; and (iii) left sided symptoms were never "remedied." Claimant continued to have good and bad days with waxing and waning of left greater than right symptoms and headaches, from weather changes and storms, and also from changes in medications to avoid addiction, level of activity, natural progression of underlying cervical disease and osteoarthritis, residing at high altitude, withdrawal from trying to quit smoking and diabetic polyneuropathy, throughout the claim. Dr. Ryan conceded that it was "certainly possible" to attribute the new and increased symptoms from the summer of 2012, to the MVA with the elk in December 2011.

50. Dr. Hatter performed a second IME on April 3, 2018. He testified "*there is absolutely no objective evidence of worsening.*"

- Claimant underwent typical maintenance care, including rhizotomies, and his

condition and the 3 MRIs, never changed.

- His symptoms waxed and waned as anticipated at his September 22, 2011 MMI. “Claimant’s pain “has waxed and waned and waxed and waned. His condition really hasn’t changed over the years.” “There is no objective evidence for any changes...There is no objective evidence I could find that he is worse.”
- In his 26 years of experience, it was extremely unusual to see a single level fusion requiring ten years of maintenance care. “[Claimant] had some trigger point injections, some medications, a couple of rhizotomies. Just typical things that we do as maintenance care. He had it for a lot – lot longer than most patients who have this type of surgery.”
- The 7% impairment for loss of ROM for the “maintenance rating” on March, 21 2013, was not confirmation that Claimant’s condition worsened and was not objective evidence of a worsened condition. Rather, it was simply a reflection that Claimant’s ROM on that specific day and was likely impacted by the weather.
- Dr. Hattem agreed with Drs. Zimmerman, Janssen and Gellrick that neither rhizotomy improved Claimant’s condition and that both were done as maintenance.

51. The ALJ is most persuaded by the totality of the evidence and consistent opinions of Drs. Hattem, Zimmerman, Wong, and Johnson, that Claimant reached MMI on September 22, 2011 and his condition never worsened.

52. The ALJ finds Dr. Ryan not credible. His opinion contained significant factual errors. His opinion changed numerous times resulting in him rendering unreliable and contradictory opinions. Dr. Ryan disagreed with all of the physicians involved in this claim, including Dr. Zimmerman, who Dr. Ryan initially claimed demonstrated “exceptional skill under very challenging conditions” and opined “should remain the ATP.”

53. The ALJ specifically finds that Claimant did not prove by a preponderance of the evidence that his condition has worsened or that he is no longer at MMI.

54. The ALJ specifically finds that Claimant did not prove by a preponderance of the evidence that he is entitled to additional medical maintenance care.

CONCLUSIONS OF LAW

Petition to Reopen

At any time within 6 years of the date of injury, an ALJ may reopen any award on the ground of fraud, overpayment, error or mistake, or change in condition. Section 8-43-303(1) C.R.S. A change of condition refers to a change of mental or physical condition which is causally connected to the original injury. A claim may not be reopened for change

of financial or economic condition. *Lucero v. Climax Molybdenum*, 732 P.2d. 642 (Colo. 1987). The question of whether a claimant is permanently and totally disabled is determined as of the date claimant reached MMI. *Colorado AFL –CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995). MMI does not mean that a claimant’s symptoms or condition will not change. As defined in section 8-40-201(11.5), C.R.S., MMI “means a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” Respondents’ obligation to provide medical benefits to cure the industrial injury terminates at MMI. Thereafter, respondents are only responsible for medical benefits to maintain or prevent a deterioration of claimant’s condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant bears the burden of proof in seeking to reopen a claim. *Richards v. ICAO*, 996 p.2d. 756 (Colo. App. 2000). WCRP 7-2(A) requires that a petition to reopen be filed stating the basis for reopening and supporting documentation must accompany the request.

As found, the supporting documentation attached to Claimant’s petition was a letter stating Claimant had a change in financial condition and was now permanently totally disabled. No medical records were attached, and the letter did not state that Claimant’s medical condition worsened. It does not mention Claimant’s medical condition. As found, Claimant applied for hearing on the issues of reopening, PT and MB. He did not endorse MMI or TTD (and he has never endorsed PPD which was not an issue for hearing). It was not until after the PALJ granted Respondents’ motion to pursue recovery of attorneys’ fees because the issue of PT was ripe at MMI in 2011, that Claimant moved to add the issues of MMI and TTD, 10 weeks before hearing commenced on 5/3/18.

Claimant represented to the ALJ that Claimant had to “wait” for Dr. Ryan’s 11/6/17 report until he could apply for hearing on 12/8/17 on worsening of medical condition. But Dr. Ryan’s 11/6/17 report does not opine that Claimant’s condition worsened. It opines that Claimant reached MMI on 9/22/11, needed additional medical maintenance care and his permanent work restrictions should be increased. The first time Dr. Ryan opined Claimant’s condition worsened was on 1/19/18 after Claimant applied for hearing on 12/8/17. Dr. Ryan proceeded to give one contradictory opinion after another: (i) claimant’s condition worsened on 7/11/12 and he reached MMI on 3/21/13 and then it worsened again, but he does not know when, where or how, but claimant was at MMI again by the second rhizotomy on 4/26/16; (ii) claimant may not have been at MMI on 9/22/11 and was never at MMI; (iii) after claimant’s condition worsened on 7/11/12, he has never again been at MMI and the 3/21/13 MMI date is erroneous; and (iv) after the 7/11/12 worsening, claimant has multiple MMI dates and multiple worsenings “going back and forth” but Dr. Ryan can provide no information on when, why and how any of the worsenings occurred or what the dates are that he repeatedly reached MMI after each worsening.

Dr. Ryan himself initially claimed Dr. Zimmerman’s treatment was reasonable, necessary, logical and compassionate, demonstrating exceptional skill under very challenging conditions and should remain the ATP. Drs. Wong and Johnson are very well regarded surgeons. All three physicians provided maintenance care to claimant for 3-5 years post MMI. They were fully aware of the MRI findings, copied each other on their medical reports, and repeatedly examined Claimant and listened to his pain complaints. If

any of them at any time believed Claimant's condition worsened, they would have said so. Drs. Wong and Johnson were not narrowly focused on doing surgery. During his last visit, Dr. Wong answered all of Claimant's questions and recommended specific conservative care including comprehensive pain rehabilitation, chronic pain management, and rhizotomy to maintain Claimant's level of functioning and try to improve his pain. Dr. Johnson recommended ergonomic changes to Claimant's work station. These are not surgical recommendations. Rather, Claimant's surgeons found ways to maintain Claimant's pain in the face of numerous complicating factors.

In February 2011, Claimant had a single level fusion without complications. He did well with surgery that he was placed at MMI seven months later. He returned to work 40 hours per week at a desk job and continued to work that job for 14 months, from 7/1/11 through 9/6/12. His condition did not permanently worsen on 7/11/12. He is genetically predisposed to arthritis and osteoarthritis and has it diffusely throughout his body in his neck, back and both knees. The nature of this condition is to naturally progress over time. That the condition did progress is supported by his later lumber spine fusion for the same condition he has in his neck. He also had multiple disc bulges in his lumbar spine and was referred to a surgeon for his bilateral knee osteoarthritis. In addition to natural progression of disease, his symptoms were aggravated by the MVA with the elk because he was still complaining about them when he saw Dr. Wong a few months later. His symptoms were aggravated again by the ergonomically deficient work station in July 2012. But after both intervening events, his symptoms continued to wax and wane and he continued to have good and bad days. He also has uncontrolled diabetes which causes peripheral neuropathy. He experienced weakness, numbness, and tingling in his upper extremities and sometimes his hands or fingers, he also experienced these same symptoms radiating down his lower extremities and asked Dr. Bess to refer him for an EMG for his left foot to assess diabetic peripheral neuropathy.

Both rhizotomies, done on 1/23/13 and 4/26/16, were done as maintenance. Claimant's symptoms continued to wax and wane pre and post both rhizotomies. Where the authorized treating physician issues conflicting opinions concerning MMI, it is for the ALJ to resolve the conflict. *Blue Mesa Forest v. Lopez*, 92 P.2d 821, 833 (Colo. App. 1996). The ALJ rejects the belated claim that the new 3/21/13 MMI date and 7% rating for loss of ROM after the first rhizotomy supports a worsening of condition or that it was error or mistake for Insurer to not file a new FAL, which the law does not require. *Pavelko v. Southwest Heating & Cooling*, W.C. No. 4-897-489 (Sept. 4, 2015) (holding that rhizotomy was done as maintenance to relieve claimant's symptoms, not to improve his underlying work related medical condition, even though claimant had a recalculated impairment rating). *See also, Crowell v. New Hampshire Ins. Co.*, W.C. No. 4-777-591 (ICAO December 30, 2011) (rhizotomy as maintenance).

Moreover, the recent allegation that Insurer should have filed a new FAL for this increased rating appears to be an after-thought. Claimant did not endorse PPD as a hearing issue and consequently would not be entitled to the additional 7% rating.

Finally, Dr. Hattem and the seven physician advisors did address MMI. Drs. Sharma, Mathwich, Raschbacher and Gutterman expressly opined that Claimant remained at MMI as of 9/22/11 and all maintenance care should be discontinued. Drs. Gellrick,

Janssen and Fillmore made specific treatment recommendations to address pain and symptoms for claimant to maintain his 9/22/11 MMI.

The ALJ finds and concludes that Claimant did not meet his burden of proof to establish a worsening of condition or that Claimant does not remain at MMI. The ALJ declines to reopen this case.

The ALJ declines to address the additional issues.

ORDER

It is therefore ordered that:

1. Claimant's petition to reopen for error, mistake and/or change of medical condition is denied and dismissed.
2. Claimant's claim that Dr. Christopher Ryan is or ever has been his authorized treating physician is denied and dismissed.
3. Claimant's claim for any further medical maintenance care, including cervical MRI and follow up with Dr. Zimmerman and Dr. Ryan and psychological care is denied and dismissed.
4. Claimant's claim for TTD benefits is denied and dismissed.

DATED: February 7, 2020

/s/ Kimberly Turnbow
Administrative Law Judge
Office of Administrative Court
1525 Sherman St., 4th Floor
Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-032-582-002**

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he is incapable of earning any wages and is entitled to receive Permanent Total Disability (PTD) benefits as a result of admitted industrial injuries that he sustained during the course and scope of his employment with Employer on November 25, 2016.
2. Whether Claimant is entitled to a disfigurement award pursuant to §8-42-108, C.R.S.

FINDINGS OF FACT

Claimant's Initial Injury and Treatment

1. Claimant was born on August 16, 1958 and he is currently 61 years old. He lives in Aurora, Colorado and is in the commutable labor market for the Denver Metropolitan Area. His last employment was with Employer.
2. On November 25, 2016 Claimant suffered a admitted industrial injuries when he fell from a trash dumpster. A lumbar CT revealed an acute burst fracture. Claimant thus underwent a T11-L-3 fusion surgery on November 26, 2016 performed by Bernard Guiot, M.D. at Littleton Adventist Hospital. Barton Goldman, M.D. testified that Claimant had a relatively unstable spine as a result of the fracture and the surgery was successful in re-stabilizing his spine through instrumentation. A head CT showed a bilateral subarachnoid hemorrhage, right greater than left. A Spanish-speaking RN evaluated Claimant and noted that he had some mild cognitive deficits on testing, but was likely close to his usual level of functioning. Claimant did not demonstrate overt signs or symptoms of post-concussive syndrome.
3. Upon discharge from Littleton Adventist Hospital, Claimant was admitted to Spaulding Rehabilitation Hospital. At Spaulding Claimant underwent a Spanish-Language SLUMS test for cognitive ability. His score of 25/30 placed him in the range of minimal cognitive impairment. The results corresponded to his reports that he had returned to normal in terms of memory, attention and organizational abilities.
4. Beginning February 15, 2017 Claimant received conservative treatment from Authorized Treating Physician (ATP) J. Tashof Bernton, M.D. On August 29, 2017 Dr. Bernton determined Claimant had reached Maximum Medical Improvement (MMI) and assigned a 44% whole person impairment rating. He assigned the following work restrictions: (1) alternate sitting and standing at will; (2) rare to occasional lifting, twisting, or bending; and (3) maximum lifting of 10 pounds on an occasional basis.
5. On December 14, 2017 Respondents filed a final Admission of Liability (FAL) consistent with Dr. Bernton's MMI and impairment determinations. Included in the

44% whole person impairment was a 7% rating for the residual effects and brain impairment from Claimant's subarachnoid hemorrhage.

Claimant's Extensive Pre-Existing Conditions

6. Claimant suffers from an extensive list of pre-existing conditions that are unrelated to his November 25, 2016 work injury. The conditions include end-stage renal disease since 2013 for which he requires dialysis three times per week. Claimant also suffers from type 2 diabetes mellitus with proliferative diabetic retinopathy, hypertension, hyperlipidemia, hyperthyroidism and 70% right internal carotid stenosis. He also has congenital lumbosacral stenosis particularly involving L3-5 and diffuse idiopathic skeletal hyperostosis (DISH) resulting in substantial static immobility of T3-12 as well as fused sacroiliac joints.

7. One of the most significant pre-existing issues facing Claimant is his end stage renal failure. Claimant's end-stage renal failure associated with long-standing hypertension, diabetes and hyperlipidemia progressed to the point where he required dialysis treatment three times per week in November of 2013. Further complicating Claimant's serious kidney condition is his long-standing non-compliance with treatment. Multiple instances of non-compliance resulting in hospital visits occurred prior and subsequent to Claimant's work injury. Dr. Goldman explained that the multiple hospitalizations from complications of Claimant's pre-existing conditions would "negatively affect his health in every which way. It's going to negatively affect his cognition it's going to negatively affect his balance, it's going to negatively affect his immune system...if it happens more than once or twice, it's going to create a chronic cascade that's going to lead to a global deterioration of health."

8. In considering Claimant's ability to work and the effects of his November 26, 2016 industrial injuries, Dr. Goldman explained, "the main factor in terms of the patient's inability to work was already established at the time and before this injury, independent of this particular injury." Although Dr. Goldman acknowledged that "there is no doubt that there's temporary disability...occurring in the year following this injury, at least until the patient is at MMI. But within medical probability Claimant] would have been or by this point in time would be unable to work."

9. Dr. Goldman's opinion that Claimant was disabled and unable to work independent of his work injury is supported by the determination of the Social Security Administration that Claimant became disabled on November 15, 2016 or shortly prior to the November 25, 2016 work injury. Claimant had applied for Social Security disability benefits based on his end-stage kidney failure and need for dialysis.

10. Claimant also suffered significant spinal stenosis prior to his industrial injury and developed further adjacent segment disease after his injury and initial surgery. He treated conservatively with Dr. Bernton for the condition from approximately February to August of 2019. However, Dr. Guiot and Dr. Bernton advised Claimant against further conservative treatment and strongly recommended additional surgery to decompress Claimant's spine and possibly extend the fusion. Dr. Goldman concurred that the

recommended surgery is the only treatment likely to improve Claimant's condition and prevent further deterioration. Because Claimant has refused the surgery, Dr. Bernton placed him at MMI and provided work restrictions.

Claimant's Cognitive Issues

11. Claimant testified at the hearing in this matter that he struck his head on November 25, 2016 and may have been unconscious for about five minutes. He explained that he suffers from occasional dizziness and his industrial injury has negatively impacted his short-term memory.

12. Claimant has undergone several head CT scans. A November 25, 2016 head CT scan showed a right greater than left bilateral subarachnoid hemorrhage. A repeat head CT performed on the same day showed the condition was stable with no new intracranial hemorrhage or significant mass effect. A follow up head CT on July 17, 2017 revealed no evidence of acute intracranial abnormality and a resolution of the previous hemorrhage.

13. Dr. Bernton testified that the subarachnoid hemorrhage, Claimant's memory complaints and dizziness suggest that Claimant's complicated mild traumatic brain injury on November 25, 2014 caused his cognitive issues. However, Dr. Bernton did not conduct any cognitive testing during his entire course of treatment with Claimant. He testified that he never received nor reviewed any medical records from Littleton Adventist, Spaulding Rehab, or DaVita. Although Dr. Bernton remarked that there were no prior diagnoses of uremic encephalopathy in the medical records, the UC Health records list final diagnoses of encephalopathy and delirium on several occasions after Claimant's hospitalizations for poorly managed end-stage renal failure. In fact, one of Claimant's hospitalizations for elevated toxin levels occurred on August 26-27, 2017 or just two days prior to Dr. Bernton's impairment rating and MMI determination.

14. In contrast, Dr. Goldman explained that Claimant's subjective complaints and CT scans are indications that he should undergo cognitive testing. Dr. Goldman testified that Littleton Adventist conducted an evaluation and concluded that, although Claimant had mild cognitive deficits, he was likely close to his usual level of functioning. In reviewing the records from Spaulding, Dr. Goldman noted that Spanish language cognitive testing revealed a very minimal cognitive event that was improving. In addition, Dr. Goldman summarized that the medical records reveal that the November 25, 2016 injury did not substantially contribute to any of Claimant's cognitive issues.

15. Dr. Bernton testified that acknowledged that Claimant suffered cognitive impairment when BUN levels increased. However, the condition is reversible long as long as Claimant continues dialysis and maintains his Blood Urea Nitrogen (BUN) levels within a normal range. Nevertheless, Dr. Bernton recognized that very high levels over a period of time may cause chronic residual symptoms.

16. To the extent Claimant suffers from cognitive deficiencies, Dr. Goldman explained that they are the result of chronic uremic encephalopathy. The condition was caused by multiple instances of significant toxin and urea and urea build-up because Claimant's failure to comply with kidney dialysis treatment recommendations. The medical records reflect multiple instances of extremely high BUN values and creatinine levels. Dr. Goldman reviewed records from Spaulding, Littleton Adventist, DaVita and UC Health. The following chart details Claimant's excessive BUN and creatinine levels at various times from 2013-2017:

| Exhibit & Bates number | Date | Medical Provider | BUN (blood urea nitrogen) value Normal range: 7 – 25 mg/dL | Creatinine value Normal range: 0.70-1.30 mg/dL |
|---|-------------|--|---|---|
| Ex. 17, bates no. 974 | 11/25/2013 | St. Joseph Hospital | 126 | 9.8 |
| Ex. 17, bates no. 980 | 11/26/2013 | St. Joseph / Da Vita | 130 | 10 |
| Ex. 17, bates no. 978 | 11/27/2013 | St. Joseph / Da Vita | 82 | 7.8 |
| Ex. 8, bates no. 516 | 4/14/2016 | UC Health | 60 | 6.68 |
| Ex. 8, bates no. 517 | 04/15/2016 | UC Health | 69 | 7.78 |
| Ex. 8, bates nos. 524 & 528 | 04/16/2016 | UC Health | 56 | 7.23 |
| Ex. 8, bates no. 477 | 08/26/2016 | UC Health | 91 | 12.0 |

Claimant's Education and Vocational Background

17. Claimant was born in Mexico and briefly attended school there through 3rd grade. He subsequently worked on cattle ranches in Mexico. Claimant immigrated to the United States in 1981 and has lived in the United States for approximately 38 years. Claimant does not read or speak English and can read little Spanish.

18. Claimant has previously worked in a casino where he cleaned the kitchen and supervised 20 dishwashers. He subsequently worked as an auto parts delivery driver and transported parts weighing approximately 10 pounds. Claimant then worked for a company that manufactured hubcaps for about five years. He subsequently relocated from California to Kansas and worked in a slaughterhouse. Claimant also worked for a couple of years installing doors in mobile homes. After moving to South Dakota, Claimant again worked in a slaughterhouse. Beginning in 2002, he worked as a janitor and auto detailer at Employer. Claimant continued to work for Employer until his November 25, 2016 industrial injury.

Vocational Evaluations

19. On June 24, 2018 Vocational Expert Doris Shriver prepared a Workers' Compensation Evaluation for Claimant. Ms. Shriver considered Claimant's physical restrictions of: (1) alternating sitting and standing at will; (2) not performing more than rare to occasional lifting/twisting/bending; and (3) maximum lifting not to exceed 10 pounds on an occasional basis. Based on her review of Claimant's educational background, prior work experience and medical records, Ms. Shriver concluded that Claimant was unable to earn any wages in any capacity. She specified that Claimant's weaknesses in employability include his limited understanding of the English language, low reading comprehension, limited fine motor skills and physical limitations. Ms. Shriver explained that, because Claimant cannot sustain production and pace on a consistent basis, prospective employer will not pay him. Ms. Shriver thus concluded that Claimant could not earn any wages or perform any of the potential job positions identified by Patricia Anctil in her vocational report.

20. In determining that Claimant is unable to obtain employment, Ms. Shriver only considered Claimant's work with Employer in his vocational history because other work experience was not relevant. She also did not perform a transferable skills analysis. Her assessment of physical activity did not include any objective validity testing. Ms. Shriver also relied on testing in English to evaluate Claimant's academic functioning and abilities despite recognizing that Claimant is a monolingual Spanish speaker. Furthermore, without specifically testing Claimant's ability to count money or use a cash register, Ms. Shriver determined that he could not work a position that requires counting change or operating a cash register.

21. In contrast, Vocational Expert Patricia Anctil employed a recognized methodology in accordance with professional industry standards. Ms. Anctil met with the Claimant on November 12, 2018 and obtained information about his work history and education. She also spoke with him about his activities of daily living, physical capacities,

medical situation, medications, language skills and ability to handle money. During her interview, Ms. Anctil also obtained additional information from Claimant as they discussed the job titles she had identified from the Dictionary of Occupational Titles (DOT). Using the additional information, Ms. Anctil performed a transferable skills analysis. After she obtained automated responses, Ms. Anctil adjusted Claimant's profile utilizing his work restrictions. Ms. Anctil then contacted employers to obtain specific information about available jobs in Claimant's commutable labor market to determine whether they matched his skills and physical capabilities. Ms. Anctil noted that Ms. Shriver did not obtain a complete job history from Claimant, review DOT titles with Claimant, perform a transferable skills analysis or consider labor market research by contacting prospective employers.

22. Considering Claimant's significant physical limitations, monolingual Spanish speaking ability, vocational history, low education level and requirements for modified sedentary employment, Ms. Anctil identified job positions in Claimant's commutable labor market. The job positions she identified included the following:

(1) McDonalds take out window order taker and cashier – Ms. Anctil determined the employer hires monolingual Spanish speakers and they are able to accommodate workers with certain hours. Claimant could then attend his dialysis treatment and use a stool to alternate sitting and standing. This is an unskilled position and Ms. Anctil was able to verify that the physical requirements do not exceed Claimant's physical restrictions.

(2) CPI Cards Assembler – This employer, produces high security plastic cards. Ms. Anctil noted that the employer offers entry-level positions not requiring computer tasks or education. They employ non-English speaking employees and provide on the job training. Some basic English skills are required but they provide ESL classes. The physical demands require lifting one six-pound sleeve of cards at a time. The job can be performed seated, standing or alternating positions. There is no bending and the job is classified as sedentary.

(3) Dawn industries plastic part assembly – This position requires working with small plastic parts. The production rate is self-paced, the duties are mostly performed while sitting and there is occasional standing. Positions with this employer can include polisher, assembler and shipping. From experience, Ms. Anctil is aware that this employer is willing to provide reasonable accommodations, including no lifting over five pounds and no repetitive upper extremity use. She determined that the positions are unskilled and within the Claimant's demonstrated aptitude levels.

Using accepting methods in the field of vocational rehabilitation, Ms. Anctil assessed the information she obtained and concluded that there are employment options based upon the Claimant's specific circumstances that would allow him to earn a wage in his commutable labor market.

23. Dr. Goldman considered Ms. Ancil's vocational report and specifically reviewed the job positions she identified for Claimant. He testified that Claimant could perform the McDonald's takeout window position, the CPI card assembler work and the Dawn Industries assembler duties. Dr. Goldman concluded that the preceding jobs are appropriate considering Claimant's restrictions, work-related injury and comorbidities.

Factual Summary

24. Claimant has failed to prove that it is more probably true than not that he is incapable of earning any wages and is entitled to receive PTD benefits as a result of his November 25, 2016 admitted industrial injuries. Initially, on November 25, 2016 Claimant suffered a burst fracture and bilateral subarachnoid hemorrhage when he fell from a trash dumpster at work. He subsequently underwent T11-L3 fusion surgery. Claimant received a 44% whole person impairment rating. Claimant asserts that his industrial injury rendered him unable to earn any wages in any capacity. However, to the extent Claimant is unable to work, his industrial injury did not constitute a significant causative factor in rendering him disabled. Moreover, in considering Claimant's physical abilities, education, vocational training, former employment, mental capabilities and availability of work within his commutable labor market the record, reflects that Claimant is capable of earning wages.

25. Claimant's contention that he is unable to earn wages fails because his industrial injury is not a significant causative factor in rendering his disabled. He suffers from pre-existing, independently disabling medical conditions. The conditions include end-stage renal failure and complications due to chronic non-compliance with medical treatment recommendations. Dr. Bernton testified that Claimant's subarachnoid hemorrhage, subjective memory complaints and dizziness suggest that his November 25, 2016 work accident caused his cognitive issues. Although Dr. Bernton remarked that there were no prior diagnoses of uremic encephalopathy in the medical records, the UC Health records list final diagnoses of encephalopathy and delirium on several occasions after Claimant's hospitalizations for poorly managed end-stage renal failure. In contrast, Dr. Goldman noted that Littleton Adventist conducted an evaluation and concluded that, although Claimant had mild cognitive deficits, he was likely close to his usual level of functioning. In reviewing the records from Spaulding, Dr. Goldman noted that Spanish language cognitive testing showed a minimal and improving cognitive event. Moreover, to the extent Claimant suffers from cognitive deficiencies, Dr. Goldman explained that they are the result of chronic uremic encephalopathy. The condition was caused by multiple instances of significant toxin and urea build-up because of Claimant's failure to comply with kidney dialysis treatment recommendations. The medical records from Spaulding, Littleton Adventist, DaVita and UC Health reflect multiple instances of extremely high BUN values and creatinine levels. Accordingly, based on the medical records and persuasive opinion of Dr. Goldman, Claimant has minimal to no residual cognitive impairment from his work injury. Any cognitive deficits can be attributed to Claimant's chronic uremic encephalopathy due to multiple instances of significant build-up of toxins because of his failure to follow kidney dialysis treatment recommendations.

26. In considering Claimant's ability to work and the effects of his November 25, 2016 industrial injuries, Dr. Goldman explained, "the main factor in terms of [Claimant's] inability to work was already established at the time and before this injury, independent of this particular injury." Dr. Goldman opinion that Claimant was disabled and unable to work independent of his work injury is supported by the determination of the Social Security Administration that Claimant became disabled on November 15, 2016 or shortly prior to the November 25, 2016 work injury. Claimant had applied for Social Security disability benefits based on end-stage kidney failure and need for dialysis. Accordingly, based on Claimant's extensive pre-existing conditions, his November 25, 2016 industrial accident did not constitute a significant causative factor in his ability to earn wages. Claimant has not demonstrated a direct causal relationship between his industrial injuries and inability to earn wages.

27. Alternatively, the persuasive vocational records reveal that Claimant is capable of obtaining employment and earning wages. Ms. Ancil completed a thorough vocational assessment and identified several job positions in Claimant's commutable labor market through her labor market research and direct contact with potential employers. She performed a transferable skills analysis. Considered jobs from the DOT, adjusted Claimant's profile utilizing his work restrictions and contacted employers to obtain specific information about available jobs. Considering Claimant's significant physical limitations, monolingual Spanish speaking ability, vocational history, low education level and requirements for modified sedentary employment, Ms. Ancil identified job positions in Claimant's commutable labor market. The job positions she identified included the following: (1) McDonalds take out window order taker and cashier; (2) CPI Cards assembler; and (3) Dawn Industries plastic part assembler. Dr. Goldman considered Ms. Ancil's vocational report and specifically reviewed the job positions she identified for Claimant. He testified that Claimant could perform the McDonald's takeout window position, the CPI card assembler work and the Dawn Industries assembler duties. Dr. Goldman concluded that the preceding jobs are appropriate considering Claimant's restrictions, work-related injury and comorbidities.

28. In contrast, based on her review of Claimant's educational background, prior work experience and medical records, Ms. Shriver concluded that Claimant was unable to earn any wages in any capacity. She specified that Claimant could not maintain a production pace and perform any of the potential job positions identified by Ms. Ancil in her vocational report. However, Ms. Shriver only considered Claimant's work with Employer in his vocational history because other work experience was not relevant. She also did not perform a transferable skills analysis. Her assessment of physical activity did not include any objective validity testing. Ms. Ancil confirmed that Ms. Shriver did not obtain a complete job history from Claimant, review DOT titles with Claimant, perform a transferable skills analysis or consider labor market research by contacting prospective employers. Considering Claimant's vocational attributes and human factors including age, education, work history, transferable skills, communication skills and work restrictions, Claimant is capable of earning wages in some capacity. The record reflects that employment exists that is reasonably available to Claimant under his particular circumstances. Accordingly, Claimant's request for PTD benefits is denied and dismissed.

29. Claimant underwent a disfigurement evaluation at the hearing in this matter. As a result of his November 25, 2016 admitted industrial injuries and subsequent surgery, Claimant sustained permanent disfigurement. The disfigurement consists of an approximately eight inch long vertical scar on the center of his back. Claimant further exhibited a noticeable limp. The disfigurement is serious, permanent and normally exposed to public view. Accordingly, Claimant is entitled to receive a disfigurement award in the amount of \$2,600.00. .

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Permanent Total Disability Benefits

4. Prior to 1991 the Act did not define PTD. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 553 (Colo. 1998). Under the prevailing case law standard the ability of a claimant to earn occasional wages or perform certain types of gainful work did not preclude a finding of PTD. *Id.* at 555. A PTD determination prior to 1991 “turned on the claimant’s loss of earning capacity or efficiency in some substantial degree in a field of general employment.” *Id.*

5. In 1991 the General Assembly added a definition of PTD to the Act. See §8-40-201(16.5)(a), C.R.S. Under §8-40-201(16.5)(a), C.R.S. PTD means “the employee

is unable to earn any wages in the same or other employment.” The new definition of PTD was intended to tighten and restrict eligibility for PTD benefits. *Bymer*, 955 P.2d at 554. A claimant thus cannot obtain PTD benefits if he is capable of earning wages in any amount. *Id.* at 556. Therefore, to establish a claim for PTD a claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. See §8-43-201, C.R.S. The phrase, “to earn any wages in the same or other employment,” “provides a real and non-illusory bright line rule for the determination whether a claimant has been rendered permanently totally disabled.” *Lobb v. Indus. Claim Appeals Office*, 948 P.2d 115, 119 (Colo. App. 1997). Finally, there is no requirement that respondents must locate a specific job for a claimant to overcome a prima facie showing of permanent total disability. *Hennenberg v. Value-Rite Drugs, Inc.*, W.C. No. 4-148-050 (ICAO, Sept. 26, 1995); *Rencehausen v. City and County of Denver*, W.C. No. 4-110-764 (ICAO, Nov. 23, 1993).

6. The term “employment” is defined in the Workers’ Compensation Act in §8-40-201(8), C.R.S. This section states that employment is, “[a]ny trade, occupation, job, position, or process of manufacture or any method of carrying on any trade, occupation, job, position or process of manufacture in which any person may be engaged.” Section 8-40-201(19), C.R.S. defines “wages” as the money rate for which the employee is to be compensated for services. For purposes of PTD “any wages” means more than zero. See *McKinney v. Indus. Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995) (determining that the ability to earn wages in “any” amount is sufficient to disqualify a claimant from receiving PTD benefits).

7. Although a claimant is not required to establish that an industrial injury is the sole cause of his inability to earn wages, he must nonetheless prove that the industrial injury is a “significant causative factor” in his permanent disability. *In Re Grant*, W.C. No. 4-905-009-006 (ICAO, Mar. 18, 2019). A “significant causative factor” requires a “direct causal relationship” between the industrial injuries and a PTD claim. *In Re of Dickerson*, W.C. No. 4-323-980 (ICAO, July 24, 2006); see *Seifried v. Industrial Comm’n*, 736 P.2d 1262, 1263 (Colo. App. 1986). The preceding test requires the ALJ to ascertain the “residual impairment caused by the industrial injury” and whether the impairment was sufficient to result in PTD without regard to subsequent intervening events. *In Re of Dickerson*, W.C. No. 4-323-980 (ICAO, July 24, 2006). Resolution of the causation issue is a factual determination for the ALJ and must be upheld if supported by substantial evidence in the record. *In Re Grant*, W.C. No. 4-905-009-006 (ICAO, Mar. 18, 2019).

8. In ascertaining whether a claimant is able to earn any wages, the ALJ may consider various “human factors,” including a claimant’s physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Bymer*, 955 P.2d at 556; *Holly Nursing v. ICAO*, 992 P.2d 701, 703 (Colo. App. 1999). The critical test, which must be conducted on a case-by-case basis, is whether employment exists that is reasonably available to the claimant under his particular circumstances. *Bymer*, 955 P.2d at 557. Ultimately, the determination of whether a Claimant suffers from a permanent and total disability is an issue of fact for resolution by the ALJ. *In Re Selvage*, W.C. No. 4-486-812 (ICAO, Oct. 9, 2007). The ALJ is entitled

to the “widest possible discretion” in determining the issue of PTD. *In Re Grant*, W.C. No. 4-905-009-006 (ICAO, Mar. 18, 2019).

9. As found, Claimant has failed to prove by a preponderance of the evidence that he is incapable of earning any wages and is entitled to receive PTD benefits as a result of his November 25, 2016 admitted industrial injuries. Initially, on November 25, 2016 Claimant suffered a burst fracture and bilateral subarachnoid hemorrhage when he fell from a trash dumpster at work. He subsequently underwent T11-L3 fusion surgery. Claimant received a 44% whole person impairment rating. Claimant asserts that his industrial injury rendered him unable to earn any wages in any capacity. However, to the extent Claimant is unable to work, his industrial injury did not constitute a significant causative factor in rendering him disabled. Moreover, in considering Claimant’s physical abilities, education, vocational training, former employment, mental capabilities and availability of work within his commutable labor market the record, reflects that Claimant is capable of earning wages.

10. As found, Claimant’s contention that he is unable to earn wages fails because his industrial injury is not a significant causative factor in rendering his disabled. He suffers from pre-existing, independently disabling medical conditions. The conditions include end-stage renal failure and complications due to chronic non-compliance with medical treatment recommendations. Dr. Bernton testified that Claimant’s subarachnoid hemorrhage, subjective memory complaints and dizziness suggest that his November 25, 2016 work accident caused his cognitive issues. Although Dr. Bernton remarked that there were no prior diagnoses of uremic encephalopathy in the medical records, the UC Health records list final diagnoses of encephalopathy and delirium on several occasions after Claimant’s hospitalizations for poorly managed end-stage renal failure. In contrast, Dr. Goldman noted that Littleton Adventist conducted an evaluation and concluded that, although Claimant had mild cognitive deficits, he was likely close to his usual level of functioning. In reviewing the records from Spaulding, Dr. Goldman noted that Spanish language cognitive testing showed a minimal and improving cognitive event. Moreover, to the extent Claimant suffers from cognitive deficiencies, Dr. Goldman explained that they are the result of chronic uremic encephalopathy. The condition was caused by multiple instances of significant toxin and urea build-up because of Claimant’s failure to comply with kidney dialysis treatment recommendations. The medical records from Spaulding, Littleton Adventist, DaVita and UC Health reflect multiple instances of extremely high BUN values and creatinine levels. Accordingly, based on the medical records and persuasive opinion of Dr. Goldman, Claimant has minimal to no residual cognitive impairment from his work injury. Any cognitive deficits can be attributed to Claimant’s chronic uremic encephalopathy due to multiple instances of significant build-up of toxins because of his failure to follow kidney dialysis treatment recommendations.

11. As found, in considering Claimant’s ability to work and the effects of his November 25, 2016 industrial injuries, Dr. Goldman explained, “the main factor in terms of [Claimant’s] inability to work was already established at the time and before this injury, independent of this particular injury.” Dr. Goldman opinion that Claimant was disabled and unable to work independent of his work injury is supported by the determination of the Social Security Administration that Claimant became disabled on November 15, 2016

or shortly prior to the November 25, 2016 work injury. Claimant had applied for Social Security disability benefits based on end-stage kidney failure and need for dialysis. Accordingly, based on Claimant's extensive pre-existing conditions, his November 25, 2016 industrial accident did not constitute a significant causative factor in his ability to earn wages. Claimant has not demonstrated a direct causal relationship between his industrial injuries and inability to earn wages.

12. As found, alternatively, the persuasive vocational records reveal that Claimant is capable of obtaining employment and earning wages. Ms. Anctil completed a thorough vocational assessment and identified several job positions in Claimant's commutable labor market through her labor market research and direct contact with potential employers. She performed a transferable skills analysis. Considered jobs from the DOT, adjusted Claimant's profile utilizing his work restrictions and contacted employers to obtain specific information about available jobs. Considering Claimant's significant physical limitations, monolingual Spanish speaking ability, vocational history, low education level and requirements for modified sedentary employment, Ms. Anctil identified job positions in Claimant's commutable labor market. The job positions she identified included the following: (1) McDonalds take out window order taker and cashier; (2) CPI Cards assembler; and (3) Dawn Industries plastic part assembler. Dr. Goldman considered Ms. Anctil's vocational report and specifically reviewed the job positions she identified for Claimant. He testified that Claimant could perform the McDonald's takeout window position, the CPI card assembler work and the Dawn Industries assembler duties. Dr. Goldman concluded that the preceding jobs are appropriate considering Claimant's restrictions, work-related injury and comorbidities.

13. As found, in contrast, based on her review of Claimant's educational background, prior work experience and medical records, Ms. Shriver concluded that Claimant was unable to earn any wages in any capacity. She specified that Claimant could not maintain a production pace and perform any of the potential job positions identified by Ms. Anctil in her vocational report. However, Ms. Shriver only considered Claimant's work with Employer in his vocational history because other work experience was not relevant. She also did not perform a transferable skills analysis. Her assessment of physical activity did not include any objective validity testing. Ms. Anctil confirmed that Ms. Shriver did not obtain a complete job history from Claimant, review DOT titles with Claimant, perform a transferable skills analysis or consider labor market research by contacting prospective employers. Considering Claimant's vocational attributes and human factors including age, education, work history, transferable skills, communication skills and work restrictions, Claimant is capable of earning wages in some capacity. The record reflects that employment exists that is reasonably available to Claimant under his particular circumstances. Accordingly, Claimant's request for PTD benefits is denied and dismissed.

Disfigurement Benefits

14. Section 8-42-108, C.R.S. provides that a claimant may obtain additional compensation if he is seriously disfigured as the result of an industrial injury. As found, Claimant underwent a disfigurement evaluation at the hearing in this matter. As a result

of his November 25, 2016 admitted industrial injuries and subsequent surgery, Claimant sustained permanent disfigurement. The disfigurement consists of an approximately eight inch long vertical scar on the center of his back. Claimant further exhibited a noticeable limp. The disfigurement is serious, permanent and normally exposed to public view. Accordingly, Claimant is entitled to receive a disfigurement award in the amount of \$2,600.00.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for PTD benefits is denied and dismissed
2. Claimant shall receive a disfigurement award in the amount of \$2,600.00.
3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

ISSUES

- I. Whether the viscosupplementation injections for the left knee are reasonable and necessary medical treatments, which are related to Claimant's work-related injury of March 31, 2019.
- II. Whether Claimant is entitled to temporary total disability benefits from May 24, 2019 through October 8, 2019.
- III. Whether Claimant is at-fault for her termination on May 24, 2019 and not entitled to temporary total disability benefits between May 24, 2019 and October 8, 2019.

STIPULATIONS

- A. Respondents stipulated at the beginning of the hearing that the right knee injections ordered by Dr. Failinger have been approved.¹ (*Hearing Transcript, p. 9, ll. 20-23*)

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant worked for Employer as a Hotel Restaurant Manager. Claimant's job responsibilities are set forth in her job description. The physical requirements of her job required her to:
 - Lift and carry objects, 30-40 pounds.
 - Push and pull objects from 50-100 pounds.
 - Sitting 10%, walking 40%, standing 30%, 20% bending, kneeling, lifting, and climbing.(*Exhibit H, pp. 141-142*)
2. Claimant has two workers' compensation claims involving the same Employer and the same body parts. The date of injury for the first claim is April 13, 2018. The date of injury for the second claim is March 31, 2019.

¹ Respondents contend the left knee injections were not approved because a formal request for approval had only been made in association with Claimant's April 13, 2018, claim, but not under the March 31, 2019, claim. (*Hearing Transcript, p. 10, ll. 1-7*)

Viscosupplementation Injections

3. On April 13, 2018, Claimant fell at work and injured her right shoulder and both knees. Respondents have admitted liability for this claim.
4. Claimant came under the care of Dr. Mark Failinger, an orthopedic surgeon, for the April 13, 2018, work injury and he is an authorized treating physician (ATP). Under the first Claim, Claimant underwent left shoulder surgery, which was performed by Dr. Failinger.
5. On January 17, 2019, Dr. Failinger ordered - or requested authorization for - viscosupplementation injections for Claimant's left knee. (*Exhibit 3*) It does not appear Respondents authorized this injection.
6. On approximately March 15, 2019, Dr. Failinger released Claimant from his care. However, it is not clear whether he released her from his care for all of her injuries.
7. On March 31, 2019, Claimant fell again while working for Employer, and reinjured her right shoulder and both knees. Claimant indicated at hearing, and to her medical providers, that both of her knees were worse after the second fall of March 31, 2019. Respondents have admitted liability for this second accident. The second accident has been assigned W.C. No. 5-105-117.
8. On April 5, 2019, Claimant treated at Concentra with Dr. Draper for the injuries she sustained in the second accident on March 31, 2019. Claimant reported to Dr. Draper that she slipped on a slippery floor while walking out of the walk-in cooler. A co-worker grabbed her right arm to prevent her from falling, but such attempt was unsuccessful. Claimant fell and landed on her right hand and both of her knees. Claimant reinjured her right shoulder and both of her knees. Claimant was diagnosed, in part, with a knee contusion, and a right shoulder injury. Claimant was put on restricted duty, which included no reaching above her shoulder, constantly wear her shoulder sling, and to perform only seated work. (*Exhibit 9*)
9. On April 9, 2019, Claimant returned to Concentra, and was seen by Richard Shouse, a Physicians' Assistant (PA). At this appointment, PA Shouse noted Claimant reinjured her right shoulder and suffered a contusion to her left knee. He also noted Claimant had been released from care approximately 2 weeks before the second injury and only had a little pain, which was limited to her shoulder, when she overworked it. He further noted that since the second injury, Claimant's left knee pain was worse. The second injury also resulted in Claimant limping. Based on his assessment, he ordered left knee x-rays, and referred Claimant back to Dr. Failinger to evaluate and treat Claimant. He also continued Claimant's work restrictions. (*Exhibit 10*)
10. The second accident resulted in compensable injuries to Claimant's right shoulder and both of her knees.
11. On May 21, 2019, Claimant returned to Concentra and was seen by PA Shouse. At this appointment, PA Shouse noted Claimant had continued knee pain and that the status of Claimant's left knee MRI was pending, but that Claimant was

only “25% of the way toward meeting the physical requirements of her job.” Therefore, he continued Claimant’s work restrictions. Claimant was directed to follow up with Dr. Failinger the following week for the second injury to her left knee. It was also noted that her knee was worse with excessive walking and standing. (*Exhibit 11*)

12. On May, 23, 2019, while on restricted duty, Claimant was suspended from work. At the time of her suspension, Claimant was on modified duty and could not perform the full physical requirements of her job due to the second work injury that occurred on March 31, 2019.
13. On June 4, 2019, Claimant returned to Concentra for a recheck, and was seen by Mr. Shouse, the Physicians’ Assistant. Claimant was not seen by one of her attending physicians, such as Dr. Failinger or Dr. Draper. It was noted, however, that Claimant was scheduled to see two of her attending physicians, Drs. Failinger and Draper on June 13, 2019, and June 21, 2019, respectively. (*Exhibit 5*)
14. On June 13, 2019, Claimant saw Dr. Failinger for her left knee, and other injuries, under the second claim. As noted on the report from this visit, the “Injury Date” is March 31, 2019. At this appointment, Dr. Failinger noted that Claimant recently had an MRI of her left knee on May 17, 2019, but he could not view the MRI due to a technical problem. However, he recommended Claimant undergo viscosupplementation for both knees. He also indicated that he would try to obtain approval for the viscosupplementation injections, for the left and right knee, through “work comp.” (*Exhibit 13*) Therefore, Dr. Failinger recommended Claimant undergo viscosupplementation injections for her left knee. He also did not return Claimant to full duty at this appointment.
15. The ALJ finds Dr. Failinger’s opinions regarding Claimant’s inability to work full duty, based on not returning her to full duty, and Claimant’s need for the left knee injections to treat the March 31, 2019, injury to be credible and persuasive.
16. On September 13, 2019, at the request of Respondents, Claimant attended an independent medical exam with Dr. David Elfenbein, an orthopedic surgeon. Dr. Elfenbein noted that Claimant had first been hurt while working for Employer on April 13, 2018, which involved injuries to her right rotator cuff, right knee, and left knee. He further noted that she had returned to work in October 2018. He further noted that while working for Employer, Claimant apparently sustained a second work-related injury of March 31, 2019, in which she again slipped on the floor, hit both knees as well as her hands. (*Exhibit 1*)
17. Dr. Elfenbein addressed specific questions posed to him by Respondents. Question number one asked: “In your medical opinion is the reported injury industrially caused or aggravated by the March 31, 2019 mechanism of injury? His response stated: “Her patellofemoral chondromalacia bilaterally was aggravated by the March 31, 2019 fall causing contusions of the knees”. (*Exhibit 1*)

18. The third question posed to him was: "Discuss fully the industrial diagnosis, the significance and how the patient's job is the proximate cause of the diagnosis". Dr. Elfenbein responded "In addition, she did have symptoms in her knees prior to the March 31, 2019 fall though it was worse on the left. After the fall, it remained worse on the left but was increased bilaterally. The chondromalacia patella was not caused by the fall however, the contusions sustained in the fall directly on the knees caused increased inflammation and pain from the chondromalacia patella". (*Exhibit 1*)
19. The eighth question posed to Dr. Elfenbein asked: "What treatment is warranted and further needed if baseline is not met?" In response, he concluded:
- Revision right rotator cuff repair, viscosupplementation injections both knees. Though viscosupplementation injection is not indicated for patellafemoral issues, in this case, since she has not responded long term to the cortisone, it is reasonable to try the viscosupplementation and see how she responds." (*Exhibit 1*)
20. Dr. Elfenbein's opinion is found to be credible and persuasive.
21. The ALJ finds that the viscosupplementation injections prescribed by Dr. Failinger, an ATP, for the left knee are reasonable and necessary. The ALJ also finds that need for such treatment arises from the March 31, 2019, work accident.

TTD and Termination for Cause

22. On April 5, 2019, following Claimant's second work-related injury on March 31, 2019, one of her authorized attending physicians, Dr. Draper, placed Claimant on restricted duty. The work restrictions assigned by Dr. Draper limited Claimant to: "no reaching above shoulders with affected extremity, wear sling and right upper extremity constantly, no use of the right upper extremity." Claimant was also restricted to performing "seated duties only." (*Exhibit 4*). These restrictions precluded Claimant from performing her regular job duties.
23. On June 4, 2019, Claimant was seen by Mr. Shouse, a Physicians' Assistant. However, although Mr. Shouse is an authorized provider, he is not an attending physician. Therefore, his comment on Claimant's ability to return to full duty is insufficient to terminate TTD. Moreover, his comment regarding Claimant's ability to perform full duty is inconsistent with the work restrictions provided by the attending physicians, Drs. Draper, Failinger, and Pook, none of whom returned Claimant to full duty at this time.
24. On June 13, 2019, Claimant saw Dr. Failinger, another one of her authorized attending physicians, for her left knee, and other injuries, under the second claim. As noted in the report from this visit, the "Injury Date" is March 31, 2019. At this appointment, Dr. Failinger noted that Claimant recently had an MRI of her left knee on May 17, 2019, but he could not view the MRI due to a technical problem. However, he recommended Claimant undergo viscosupplementation for both knees. He also indicated that he would try to obtain approval for the viscosupplementation injections, for the left and right knee, through "work comp."

(*Exhibit 13*) Therefore, Dr. Failinger recommended Claimant undergo viscosupplementation injections for her left knee. Moreover, he also did not did not return Claimant to full duty at this appointment.

25. On July 9, 2019, Claimant returned to Concentra and was evaluated by Dr. Pook. At this appointment, Dr. Pook, an additional attending physician, continued Claimant's work restrictions that precluded Claimant from performing her regular job duties.
26. Claimant continued to be under physician assigned work-related restrictions up to, and including, October 8, 2019. (*See Claimant's Exhibits 6, 7 and 8*)
27. Pursuant to the General Admission of Liability filed by Respondents on October 18, 2019, Respondents have admitted and acknowledged that Claimant was entitled to TTD from October 8, 2019 and continuing.
28. Employer contends they have a policy that dictates that three (3) written disciplinary warnings to an employee within a 12-month period will result in termination. In this matter, the Employer had issued written warnings to Claimant on May 31, 2018, July 26, 2018, and May 24, 2019. For purposes of this hearing, Claimant did not contest the validity of the written warnings issued on May 31, 2018 or July 26, 2018. However, Claimant did contest the factual basis for the written warning premised upon her alleged conduct of May 23, 2019.
29. Claimant testified that on May 23, 2019, she was scheduled to work. Claimant was also scheduled to have an appointment with her worker's compensation physician, Dr. Mark Failinger, at noon. Claimant acknowledged that most requests for time off from work went through an electronic system utilized by Employer and known as Unifocus.
30. However, Claimant acknowledged that she had failed to timely submit a request for time off through the Unifocus platform. As a result, Claimant approached the General Manager, Niels V[Redacted], to seek time off. This occurred around 11:00 a.m. on May 23, 2019.
31. Claimant further testified she advised her General Manager that the restaurant was fully staffed, meaning that there were sufficient servers, bartenders and support staff to run the restaurant without problems, and that she needed to leave for a worker's compensation related medical appointment.
32. Claimant testified that General Manager, Niels V[Redacted], replied "Kevin is on the schedule at 10, contact him" referring to Kevin F[Redacted], the rooftop Bar Manager.
33. Claimant understood General Manager, Niels V[Redacted], to mean that she should contact Kevin F[Redacted] so that he could cover any problems requiring a manager's intervention while she was gone and at her medical appointment.
34. Claimant further testified that Mr. F[Redacted] had served as her back up on prior occasions when she needed to leave work during her shift.

35. Claimant sent a text message to Kevin F[Redacted] at 11:07 a.m. stating "I have a doctor's appointment. The restaurant is fully staffed. I'm having you as my backup person."
36. Claimant did not receive any response from Mr. F[Redacted]. But, she reasonably assumed he would cover for her as he had done in the past.
37. Claimant informed her staff that she was leaving for a doctor's appointment and that Kevin F[Redacted] was the backup manager.
38. Claimant then left the restaurant and began walking to her parked vehicle, approximately three (3) blocks away. Before arriving at her parked vehicle, Claimant received a text message or phone call from the Assistant General Manager (AGM), Alison M[Redacted], asking of Claimant's whereabouts. In response, Claimant called Ms. M[Redacted] who told Claimant that she must return to the restaurant because there was no manager in the restaurant. Therefore, Claimant immediately returned to the restaurant.
39. The time between when Claimant left the restaurant and returned to the restaurant after her communication with the Assistant General Manager, Ms. M[Redacted], was about 20 minutes.
40. Upon her return to the restaurant, AGM Ms. M[Redacted] and GM Niels V[Redacted] met with Claimant to discuss the circumstances of her leaving the restaurant.
41. Claimant testified that she was never instructed that Mr. F[Redacted] was expected to be physically present in the restaurant, as opposed to being present in his office, while he was covering for her.
42. Later that day, at approximately 1:30 p.m., Kevin F[Redacted] came to the restaurant and inquired of Claimant how her doctor's appointment had gone, indicating an awareness of her text message, and that he was able to cover for her.
43. Claimant's testimony is found to be credible and persuasive.
44. Respondents called General Manager Mr. Niels V[Redacted] as a witness.
45. Mr. V[Redacted] corroborated that he was approached by Claimant on May 23, 2019, to request time off from work to go to her doctor's appointment.
46. Mr. V[Redacted] contends that he told Claimant to contact Kevin F[Redacted] to see if Mr. F[Redacted] would come in early to work to cover Claimant's managerial shift. He further testified that Mr. F[Redacted] was scheduled to work at 1:00 p.m. that day.
47. Mr. V[Redacted] testified that it is desirable to have a manager on the floor during "peak periods" by that it is always necessary to have a manager in the building. He did not define what constituted a "peak period." Mr. V[Redacted] specifically claimed that Claimant was the only manager in the building at the time and that Mr. F[Redacted] was not scheduled to work until 1:00 p.m., because the rooftop bar did not open until 3:00 p.m.

48. Mr. V[Redacted], testified that a manager's presence in the hotel building was required to assist with decision-making and potential comp voids.
49. Shortly after the conversation with Claimant, Mr. V[Redacted] testified that he walked up to the restaurant and noted no management presence. At that point, he said he contacted Assistant General Manager, Alison M[Redacted], to find out where management was.
50. Mr. V[Redacted], testified that his exact instructions to Claimant were "that she needed to get in contact with Mr. F[Redacted]."
51. However, Mr. V[Redacted], was unable to confirm whether or not Mr. F[Redacted] was at the hotel at the time that Claimant left.
52. The manager work schedule was introduced for the week encompassing May 23, 2019, which such schedule reflected that Bar Manager, Kevin F[Redacted], was scheduled to work at 10:00 a.m. on May 23, 2019. (*Exhibit 16*) Such exhibit directly refutes Mr. V[Redacted]' testimony that Mr. F[Redacted] was scheduled to work at 1:00 p.m. and that Mr. F[Redacted] was not onsite and covering for Claimant.
53. Mr. V[Redacted], testified that Claimant was suspended on May 24, 2019, because "she left the property without permission from her direct report."
54. Mr. V[Redacted], testified that a subsequent investigation also concluded that Claimant left the property without permission from her direct report.
55. He also testified that as a result, Claimant was issued a written warning. However, because this was her third written warning, Claimant was terminated.
56. Claimant's Exhibit 15 constitutes a page from the Employer's "Associate Handbook" (employment manual), which sets forth the criteria for leaving property during work hours. Such manual requires that an employee obtain permission before leaving the property, punch out when leaving the property and punch back in when returning, checking with a manager at the time of return, and leave company property on the premises.
57. No written policy was introduced by either party supporting Respondents' contention that a manager was required to be on the restaurant floor.
58. The ALJ finds that Respondents failed to establish that Mr. F[Redacted], the Bar Manager, was not present in the hotel when Claimant left for her medical appointment.
59. The ALJ finds that Employer did not have a policy that a manager must be "on the floor" of the restaurant at all times, though there was an unwritten policy that a manager must be present in the building.
60. The ALJ notes that both the GM and AGM were present in the building at the time Claimant left for her medical appointment.
61. The ALJ finds that the GM granted permission to Claimant to attend her appointment with the only condition being that Claimant contact Bar Manager, Mr. F[Redacted], which Claimant did.

62. The ALJ finds that General Manager, Niels V[Redacted]', testimony regarding Kevin F[Redacted]'s schedule on May 23, 2019 is not credible.
63. The ALJ finds that Claimant complied with the Employer's policy for leaving the work premises during a scheduled shift.
64. Mr. V[Redacted] also testified that Employer has a "three-strike" rule that requires termination after three written warnings in a 12-month period.
65. However, the Disciplinary Action Forms provide:

Note Any Three (3) Written Warnings within a 12-month period is grounds for Suspension/Termination
(emphasis in original).

(Exhibit G – J)

66. Moreover, the Disciplinary Action Form from March 2, 2019, indicates that:

The type of disciplinary action taken will depend on the specific circumstances, seriousness of the problem and the likelihood of improvement over time.

(Exhibit G)

67. Therefore, although three written warnings are grounds for suspension or termination, the Exhibits submitted by Respondents do not indicate that termination is mandatory upon three written warnings. As indicated in the March 2, 2019 Form, the type of action taken will depend upon the "specific circumstances, seriousness of the problem and the likelihood of improvement over time." Therefore, whether termination is appropriate is discretionary and based upon the specific circumstances.
68. Thus, the ALJ finds that even if Claimant violated a company policy on May 23, 2019, termination was not mandatory.
69. The ALJ finds that Employer's characterization of Claimant's actions on May 23, 2019, their policy, and their reasoning, (i.e., application of their policy and basis for terminating Claimant) is not found to be credible.
70. The ALJ finds that Claimant did have the approval to go to her doctor appointment and reasonably arranged for Mr. F[Redacted] to cover for her while she was gone as requested by management.
71. The ALJ finds Claimant did not violate a company policy on May 23, 2019.
72. Moreover, once it appeared there might have been a misunderstanding about the coverage needed, based on the statements made to Claimant by Mr. V[Redacted], Claimant was contacted by phone before she reached her car to drive to her medical appointment and immediately came right back to work. The total amount of time Claimant was out of the office due to the possible misunderstanding was approximately 20 minutes.
73. Employer's actions of terminating Claimant were not reasonable under the circumstances.

74. Claimant is not at-fault for her termination.
75. Respondents have failed to establish by a preponderance of the evidence that Claimant is responsible for her termination.
76. The ALJ further finds that Claimant was under injury-related work restrictions from May 23, 2019 and continuing through reinstatement of her TTD benefits on October 9, 2019 by General Admission of Liability dated October 18, 2019.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the viscosupplementation injections for the left knee are reasonable, necessary medical treatments, which are related to Claimant's work-related injury of March 31, 2019.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

As found:

- On March 31, 2019, Claimant fell again while working for Employer, and reinjured her right shoulder and both knees. Both of her knees hurt more after the second fall of March 31, 2019. Respondents admitted liability for this second accident.
- On April 9, 2019, Claimant returned to Concentra, and was seen by Richard Shouse, a Physicians' Assistant. At this appointment, PA Shouse noted Claimant reinjured her right shoulder and suffered a contusion to her left knee. He also noted Claimant had been released from care approximately 2 weeks before the second injury and only had a little pain, which was limited to her shoulder, when she overworked it. He further noted that since the second injury, Claimant's left knee pain was worse. The second injury also resulted in Claimant limping. Based on his assessment, he ordered left knee x-rays, and referred Claimant back to Dr. Failinger to evaluate and treat Claimant.
- On June 13, 2019, Claimant saw Dr. Failinger for her left knee, and other injuries, under the second claim. As noted on the report from this visit, the "Injury Date" is March 31, 2019. At this appointment, Dr. Failinger noted that Claimant recently had an MRI of her left knee on May 17, 2019, but he could not view the MRI due to a technical problem. However, he recommended Claimant undergo viscosupplementation injections for both knees. He also indicated that he would try to obtain approval for the viscosupplementation injections, for the left and right knee, through "work comp." Therefore, Dr. Failinger recommended Claimant undergo viscosupplementation injections for her left knee due to her second injury of March 31, 2019.
- On September 13, 2019, at the request of Respondents, Claimant attended an independent medical exam with Dr. David Elfenbein, an orthopedic surgeon. Dr. Elfenbein noted that Claimant had first been hurt while working for Employer on April 13, 2018, which involved injuries to her right rotator cuff, right knee, and left knee. He further noted that she had returned to work in October 2018. He further noted that while working for Employer, Claimant apparently sustained a

second work-related injury of March 31, 2019, in which she again slipped on the floor, hit both knees as well as her hands.

- Dr. Effenbein addressed specific questions posed to him by Respondents. Question number one asked: “In your medical opinion is the reported injury industrially caused or aggravated by the March 31, 2019 mechanism of injury? His response stated: “Her patellofemoral chondromalacia bilaterally was aggravated by the March 31, 2019 fall causing contusions of the knees”.
- The third question posed to Dr. Effenbein was: “Discuss fully the industrial diagnosis, the significance and how the patient’s job is the proximate cause of the diagnosis”. Dr. Effenbein responded “In addition, she did have symptoms in her knees prior to the March 31, 2019 fall though it was worse on the left. After the fall, it remained worse on the left but was increased bilaterally. The chondromalacia patella was not caused by the fall however, the contusions sustained in the fall directly on the knees caused increased inflammation and pain from the chondromalacia patella”.
- The eighth question posed to Dr. Effenbein asked: “What treatment is warranted and further needed if baseline is not met?” In response, he concluded:

Revision right rotator cuff repair, viscosupplementation injections both knees. Though viscosupplementation injection is not indicated for patellafemoral issues, in this case, since she has not responded long term to the cortisone, it is reasonable to try the viscosupplementation and see how she responds.

The ALJ finds Dr. Effenbein’s opinion that the viscosupplementation injections for Claimant’s left knee are reasonable, necessary, and related to the March 31, 2019, work accident to be credible and persuasive.

The ALJ finds Dr. Failinger’s opinion that the viscosupplementation injections for Claimant’s left knee are reasonable, necessary, and related to the March 31, 2019, work accident to be credible and persuasive.

The ALJ finds the opinions of Drs. Failinger and Effenbein to be credible and persuasive because they are consistent with Claimant’s testimony and the remainder of Claimant’s medical record.

Respondents argue that the left knee injections cannot be ordered to be provided by the ALJ because Dr. Failinger failed to make a formal request for approval or failed to request prior authorization. However, Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). As noted in *Repp v. Prowers Medical Center*, W.C. No. 4-530-649 (September 12, 2005), aff’d, Case No. 05CA2085 (Colo. App. May 11, 2006) (not selected for official publication), the purpose of prior

authorization under the Workers' Compensation Rules of Procedure, 16, 7 Code Colo. Reg. 1101-3, is to facilitate a determination of the reasonableness of treatment in advance of the treatment being provided, by directing the physician to submit a request for prior authorization, which is either granted or denied by the insurer. The rule merely protects the provider from providing treatment that the insurer might consider not reasonable, necessary, or related. Therefore, even though Rule 16 addresses "authorization" for treatment, the purpose of the rule is to establish the "reasonableness and necessity" of treatment recommended by an authorized treating physician before the treatment is provided. Thus, if authorization is granted, this confirms payment for the procedure will be made and that litigation can be avoided if Respondents do not object to the treatment. Accordingly, Claimant is not precluded from having the issue of the left knee viscosupplementation injections - which have been recommended and prescribed by her authorized treating physician Dr. Failinger - adjudicated by an ALJ merely because Dr. Failinger did not complete a formal request for prior authorization pursuant to Rule 16. Moreover, Respondents' argument seems specious. If Respondents merely required a formal Rule 16 request from Dr. Failinger in order to authorize the treatment, they could have just asked for it.

Respondents also contend that the ALJ lacks jurisdiction to order treatment recommended solely by an IME and not an authorized treating physician. *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (May 15, 2018); *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (May 4, 1995). Respondents' contention regarding the law is correct. However, as found, Dr. Failinger is an authorized treating physician and he has recommended Claimant undergo viscosupplementation injections for her left knee. Therefore, Respondents' contention that the ALJ is without jurisdiction to award the injections is inapplicable to the facts of this case.

Consequently, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that Dr. Failinger, who is an authorized treating physician, prescribed and recommended viscosupplementation injections for Claimant's left knee on June 13, 2019. The ALJ further finds and concludes Claimant has established by a preponderance of the evidence that the left knee injections are reasonable, necessary, and related to the March 31, 2019, work accident.

II. Whether Claimant is entitled to temporary total disability benefits from May 24, 2019 through October 8, 2019.

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical

incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions that impair Claimant's ability to effectively and properly perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that Claimant must produce evidence of medical restrictions, Claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997).

As found:

- Claimant's March 31, 2019 work injury resulted in Claimant being provided restrictions that precluded her from performing all physical aspects of her job duties.
- Claimant worked for Employer as a Hotel Restaurant Manager. The physical requirements of her job required her to:
 - Lift and carry objects, 30-40 pounds.
 - Push and pull objects from 50-100 pounds.
 - Sitting 10%, walking 40%, standing 30%, 20% bending, kneeling, lifting, and climbing.
- On April 5, 2019, following Claimant's second work-related injury on March 31, 2019, one of her authorized attending physicians, Dr. Draper, placed Claimant on restricted duty. The work restrictions assigned by Dr. Draper limited Claimant to: "no reaching above shoulders with affected extremity, wear sling and right upper extremity constantly, no use of the right upper extremity." Claimant was also restricted to performing "seated duties only." These restrictions precluded Claimant from performing her regular job duties.
- On June 4, 2019, Claimant was seen by Mr. Shouse, a Physicians' Assistant. Although Mr. Shouse is an authorized provider, he is not an attending physician. Therefore, his comment on Claimant's ability to return to full duty is insufficient to terminate TTD. Moreover, his comment regarding Claimant's ability to perform full duty is inconsistent with the work restrictions provided by the attending physicians, Drs. Draper, Failing, and Pook, none of whom returned Claimant to full duty at this time.
- On June 13, 2019, Claimant saw Dr. Failing, another one of her authorized attending physicians, for her left knee, and other injuries, under the second claim. At this appointment, Dr. Failing noted that Claimant recently had an MRI of her left

knee on May 17, 2019, but he could not view the MRI due to a technical problem. Regardless, he did not return Claimant to full duty at this appointment.

- On July 9, 2019, Claimant returned to Concentra and was evaluated by Dr. Pook. At this appointment, Dr. Pook, an additional attending physician, continued Claimant's work restrictions and these restrictions still precluded Claimant from performing her regular job duties.
- Claimant continued to be under physician assigned work-related restrictions up to, and including, October 8, 2019.

Therefore, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability benefits as of May 24, 2019.

III. Whether Claimant is at-fault for her termination on May 24, 2019, and not entitled to temporary total disability benefits from May 24, 2019 to October 8, 2019.

Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a Claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). Moreover, Claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish Claimant was responsible for her termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. See *Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish Claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, Claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if she was aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if

Claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. See *Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992) (claimant disqualified from unemployment benefits after discharge for unsatisfactory performance when aware of expectations, even if not explicitly warned that job was in jeopardy). Ultimately, the question of whether Claimant was responsible for her termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

The ALJ found the following:

- The Employer failed to establish that they had a policy that a manager must be “on the floor” of the restaurant at all times, though there was an unwritten policy that a manager must be present in the building. The ALJ found that both the GM and AGM were present in the building at the time Claimant left for her medical appointment. The ALJ further found that the GM granted permission to Claimant to attend her appointment with the only condition being that Claimant contact Bar Manager, Mr. F[Redacted], which Claimant did, so he could cover for her.
- General Manager, Niels V[Redacted]’, testimony regarding Kevin F[Redacted]’s schedule on May 23, 2019, and that he was not scheduled to work when Claimant left for her medical appointment was not credible. The ALJ also found Claimant complied with the Employer’s policy for leaving the work premises during a scheduled shift.
- Mr. V[Redacted] also testified that Employer has a “three-strike” rule that requires termination after three written warnings in a 12-month period. However, the ALJ found that whether termination is appropriate is discretionary and based upon the specific circumstances of each matter. Therefore, even if Claimant violated the company policy on May 23, 2019, which the ALJ found she did not, termination was not mandatory.
- Moreover, Claimant did not volitionally violate any policy of the Employer. Furthermore, once Claimant was advised - while walking to her car to drive to her medical appointment - that they wanted her to come back because they wanted to have a manager on the floor, she immediately turned around came back to work. Claimant did not continue on to her work related medical appointment. In the end, Claimant missed about 20 minutes from work.
- The Employer’s characterization of Claimant’s actions on May 23, 2019, their termination policy, and their reasoning, (i.e., application of their termination policy), for terminating Claimant was neither reasonable nor credible.

Therefore, the ALJ finds and concludes Respondents have failed to establish by a preponderance of the evidence that Claimant is responsible for her termination. The

ALJ further finds that Claimant established by a preponderance of the evidence she was under injury-related work restrictions from May 23, 2019 and continuing through reinstatement of her TTD benefits on October 9, 2019 by General Admission of Liability dated October 18, 2019. Consequently, Claimant is entitled to temporary total disability benefits from May 24, 2019, through October 8, 2019.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay for Claimant to undergo the left knee viscosupplementation injections with Dr. Failingner.
2. Respondents shall pay Claimant temporary total disability benefits from May 24, 2019, through October 8, 2019.
3. Respondents shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.
4. The issue of unemployment offsets is reserved for future determination.
5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 11, 2020.

WORKERS' COMPENSATION NO. WC 4-997-454-002**

ISSUES

- Are Claimant's claims for additional indemnity and medical benefits closed by a May 1, 2018 Final Admission of Liability (FAL)?
- Did Claimant prove entitlement to permanent total disability benefits by a preponderance of the evidence?
- Did Claimant prove entitlement to a general award of medical benefits after MMI by a preponderance of the evidence?
- Did Claimant prove a basis to amend the admitted average weekly wage (AWW) of \$744.91?
- Did Respondent prove Claimant received an overpayment of \$45,141.01 or \$58,191.83?
- Did Respondent prove PPD benefits paid in 2016 based on the DIME's 18% rating are now an overpayment because the claim was reopened and Claimant ultimately received a lower rating when she returned to MMI in February 2018?
- Did Respondent prove Claimant received an overpayment of TTD benefits from March 16, 2017 through April 23, 2018?
- If the ALJ finds Claimant received an overpayment, the parties agreed to reserve the specific repayment terms for future determination.

FINDINGS OF FACT

1. Claimant worked for Employer as a CAO Coordinator. The job entailed tasks such as ordering groceries, assembling end caps, and stocking product. The work was physically demanding and required lifting and moving boxes of products, as well as prolonged standing and walking.

2. Claimant suffered an admitted injury to her low back on October 8, 2014 while stocking 12-packs of soda. She heard a "pop" in her back and experienced immediate low back pain and left leg "sciatica."

3. Claimant had significant low back problems before the October 2014 work injury, dating to at least 2006. She had an L4-5 decompression in 2008. Her symptoms returned in 2012, and she underwent several lumbar ESIs. Eventually, she had a second L4-5 decompression on April 9, 2014 with Dr. Todd Thompson. Claimant did relatively well after the second surgery, with resolution of her leg symptoms and less low back pain. Claimant returned to work with no restrictions and worked without restriction until the

October 2014 accident. She used Percocet daily to manage the residual low back pain. A September 4, 2014 report¹ from Claimant's PCP, Dr. Willis, shows active prescriptions for oxycodone-acetaminophen 10/325 every 6 hours, and 300 mg gabapentin per day.

4. Employer referred Claimant to CCOM after the work accident. She initially saw Stephen Byrne, PA-C, who opined she had aggravated her underlying pre-existing condition. Eventually she came under the care of Dr. Daniel Olson, who served as the primary ATP.

5. A lumbar MRI on November 30, 2014 showed 4 mm of anterolisthesis at L4-5 with moderate-to-severe facet arthropathy, but no recurrent disc herniation or central stenosis.

6. Claimant saw Dr. Thompson on January 12, 2015, who recommended a lumbar fusion. Claimant was hesitant to have a fusion and requested a second opinion.

7. Claimant saw Dr. David Wong for a second opinion on March 30, 2015. Dr. Wong noted the spondylolisthesis was "mildly unstable" on flexion-extension x-rays. He also thought the facet joints were probable pain generators. Dr. Wong gave Claimant two options: (1) continue conservative care, including facet injections, possible SI joint injections, and therapy, or (2) an L4-5 decompression and fusion. Claimant wanted to consider her options because she was "not particularly keen on additional surgery."

8. Claimant had an IME with Dr. John Raschbacher on May 20, 2015 at Respondent's request. Dr. Raschbacher opined Claimant's symptoms were causally related to the October 8, 2014 accident, which he believed had aggravated her pre-existing low back problems. He thought Claimant might be a surgical candidate but recommended she try additional conservative care first.

9. Claimant agreed with Dr. Raschbacher's recommendation and decided to try the conservative care option instead of surgery. She had an SI joint injection, trigger point injections, and a lumbar ESI, but received insufficient benefit to justify additional injections.

10. Claimant ultimately declined to pursue the fusion, and Dr. Olson put her at MMI on October 26, 2015, with a 16% whole person impairment rating. Dr. Olson also assigned permanent restrictions of lifting 10 pounds frequently and 20 pounds occasionally, avoid frequent bending and allowance for frequent postural shifts.

11. Claimant saw Dr. Joseph Fillmore for a DIME on January 26, 2016. Dr. Fillmore agreed with Dr. Olson and Dr. Raschbacher that Claimant's low back symptoms were caused by the October 2014 work accident. He agreed she was at MMI on October 26, 2015. He also agreed with Dr. Olson's rating methodology but calculated an 18% rating based on slight differences in range of motion measurements. Dr. Fillmore opined

¹ This is the last report in evidence pre-dating the October 8, 2014 work accident.

apportionment was not indicated despite the prior back surgeries because “she went back to work full-time with occasional pain and without restrictions.” (Emphasis in original).

12. Respondent filed a Final Admission of Liability (FAL) on March 30, 2016 based on Dr. Fillmore’s rating. The FAL admitted for reasonably necessary post-MMI medical treatment. Claimant did not contest the FAL, and the claim closed.

13. The PPD award for the 18% rating was \$54,347.90. Respondent made two regular bi-weekly PPD payments, and the remainder of the award was paid by lump sum. Had Claimant not requested a lump sum, the PPD would have paid from October 26, 2015 through January 7, 2018, at the rate of \$484.44 per week.

14. Claimant’s symptoms acutely worsened in January 2016. Dr. Olson referred her back to Dr. Wong, and Claimant decided to pursue the fusion surgery because she could not tolerate her ongoing symptoms.

15. Dr. Wong performed an L4-5 revision decompression and instrumented fusion on May 26, 2016. The surgery was covered by Claimant’s health insurance.

16. The surgery was marginally helpful, and Claimant remained symptomatic thereafter. On November 29, 2016, Dr. Wong documented residual low back pain and leg symptoms including weakness, numbness, and tingling in the foot and leg.

17. Dr. Henry Roth performed an IME for Respondent on January 30, 2017.² Although Dr. Roth was not impressed with the surgical outcome, he nevertheless opined the May 26 fusion was reasonably necessary and causally related to the work accident. He agreed Claimant was at MMI in October 2015 as determined by Dr. Fillmore but acutely worsened in January 2016 and came off MMI. He opined Claimant reached MMI again on November 26, 2016, six months after the surgery. He recommended no maintenance care through the claim, because he thought Claimant had returned to her preinjury “baseline chronic low back pain personal circumstance.” He added, “She certainly can continue to see her PCP for the same medications and medical attention she was receiving prior to the worker’s compensation claim of 10/8/14.”

18. Dr. Roth issued an addendum report on March 6, 2017 after reviewing additional records. He concluded, “There is no change to my opinions as previously offered.”

19. On March 8, 2017, Respondent filed a General Admission of Liability (GAL) reopening the claim and commencing TTD effective the day of surgery, May 26, 2016. The “remarks” section of the GAL stated:

A portion of the prior PPD paid is credited towards TTD benefits from 5/26/16 - 3/1/17 in the amount of \$19,377.60. A lump-sum discount of

² Dr. Roth’s report is misdated January 30, 2016.

\$1,339.86 was taken. That leaves the remaining PPD paid of \$33,630.44 which is reserved as a credit against future PPD benefits.

20. Claimant briefly returned to modified work in March 2017. She was primarily “facing,” which involves pulling product forward to the front edge of shelves and ensuring labels are facing forward. The work flared her pain significantly. She worked approximately two weeks until Dr. Olson took her off work on April 11, 2017. Employer terminated Claimant in January 2018 because she could not return to regular duties.

21. Claimant saw Dr. Wong the last time on April 17, 2017. He noted she was taking baclofen, amitriptyline, gabapentin 300 mg, diazepam, and oxycodone. He ordered spine x-rays. The report contains minimal discussion, but combined with Claimant’s testimony and other records, the ALJ infers of the fusion appeared solid and Dr. Wong saw no obvious indication for additional surgery. He released Claimant to follow-up “PRN.”

22. Claimant started treating with Dr. Dwight Caughfield in late 2016 or early 2017.³ On April 19, 2017, Dr. Caughfield documented Claimant’s pain was “unchanged” with low back pain radiating to the left leg and foot. Her pain level was 7/10, increasing to 9/10 with activity, and decreasing to 6/10 with lying down. Claimant was having depression related to her chronic pain, for which she was taking duloxetine (Cymbalta). Physical examination showed decreased sensation to pinprick and light touch on the left leg, calf, and ankle, and 4/5 strength with left foot dorsiflexion. Dr. Caughfield recommended an EMG and L5-S1 selective nerve root blocks.

23. On May 23, 2017, Dr. Olson noted the oxycodone, baclofen, and gabapentin were helping Claimant’s pain but her Claimant feel “zoned out.” He referred Claimant for psychotherapy to help with her “frustration” and ongoing chronic pain.

24. Dr. Ford performed spinal injections on May 31, 2017. Claimant received excellent relief of her back and leg symptoms for the duration of the anesthetic.

25. Claimant saw Dr. Caughfield for the EMG on June 27, 2017. Her back pain was unchanged, but her leg pain was getting worse. Claimant’s depression was also worsening and her psychologist had suggested increasing the duloxetine. Dr. Caughfield increased the duloxetine from 60 mg to 90mg per day and discontinued amitriptyline. The EMG did not show radiculopathy, but Dr. Caughfield opined Claimant’s response to the injections “would indicate nerve root active involvement.” He recommended Claimant follow up with Dr. Wong “to discuss options.”

26. Claimant saw Dr. Olson later that day. She was having trouble getting her medications approved. She had been off gabapentin for three weeks and was noticing numbness and tingling in her right leg, similar to the symptoms in her left leg. She was worried she might not be able to drive safely if it continued to get worse.

³ Dr. Caughfield’s initial note is not in the record.

27. Claimant saw Dr. Olson a final time on August 1, 2017. Her husband had been transferred and she was moving to Florida. Dr. Olson recommended claimant follow-up with a “work comp doctor as well as back specialists” in Florida.

28. Respondent authorized Claimant to see Dr. Roger Arumugam, an occupational medicine physician in Florida. Her initial visit was on August 29, 2017. Dr. Arumugam performed a brief examination and renewed Claimant’s medications.

29. Claimant was seen at the Florida Hospital Heartland on November 3, 2017 after she fell at home. X-rays showed no acute injury to the low back, and she was released with instructions to follow up with her regular treating physicians. This fall produced a temporary symptomatic exacerbation but no permanent change to Claimant’s condition.

30. At the January 8, 2018 appointment with Dr. Arumugam, Claimant requested different medications or treatment to relieve her pain. Dr. Arumugam increased the amitriptyline to 75 mg per day.

31. Respondent obtained video surveillance of Claimant on January 9 and 16, 2018. The video shows Claimant shopping at multiple stores with her mother, including Walmart, Michael’s, and a grocery store. Claimant enters and exits a Chevy Tahoe several times, loads groceries into her vehicle, and carries groceries into her home. At one point, Claimant carries several bags of groceries in one hand with a case of bottled water in the other. Claimant demonstrated no overt pain behaviors or any observable difficulty performing the activities depicted in the video.

32. Dr. Arumugam referred Claimant to Dr. Witiford Reid, a pain management specialist in Sebring, Florida. At her February 1, 2018 appointment, Claimant described constant and worsening back pain, and numbness, tingling, and burning her legs. She also reported muscle spasms in her lower back and legs. She indicated her pain was worsened by sitting, turning, and bending, and made better by laying down. The pain was interfering with her sleep and making her depressed and irritable. Dr. Reid prescribed tizanidine for the muscle spasms, gabapentin 1500 mg per day for neuropathic pain, and amitriptyline 75 mg at bedtime. He also performed transforaminal ESIs at L3-4, L4-5, and L5-S1. Dr. Reid anticipated performing a series of ESIs.

33. On February 7, 2018, Dr. Reid requested authorization for the second set of ESIs. Dr. Frank Polanco performed a Rule 16 review on February 14, 2018, and recommended Respondent deny the second set of ESIs because there was insufficient documentation of “substantial and sustained pain relief and functional improvement.

34. Dr. Arumugam put Claimant at MMI on February 26, 2018. His report did not address impairment or post-MMI treatment. He opined Claimant could “go back to any job description where she can pace herself.”

35. Because Dr. Arumugam was not Level II accredited and did not address impairment, Respondent arranged for Claimant to return to Colorado for an impairment evaluation with Dr. John Burriss. Claimant saw Dr. Burriss on April 3, 2018. Claimant

described pain throughout her low back, extending down the back of the left leg to the foot and down the back of the right leg to the knee. She also endorsed numbness in both legs. She described constant pain from 4-10/10, depending on activity. Her pain was worse with prolonged walking, sitting, bending, or lifting, and better when laying down. Claimant told Dr. Burris she had fallen several times because her left leg frequently gave out. Dr. Burris opined,

Her examination today is obscured by pain behaviors, is significantly inconsistent with her activity and motion seen on the video surveillance, and reveals no objective findings or signs of radiculopathy.

Given her lack of response to the extensive treatment provided, including multiple injections and surgeries, it is not reasonable to expect benefit from additional treatment. Thus, she reached MMI at her 3/16/2017 evaluation with Dr. Roth.⁴

36. Dr. Burris calculated a 16% whole person impairment rating, but opined apportionment was indicated. He ultimately assigned a 1% whole person rating after apportionment. Dr. Burris opined Claimant required no further injury-related medical treatment and required no work restrictions.

37. Respondent filed an FAL on May 1, 2018 based on Dr. Burris' report. The FAL took the position Claimant was at MMI on March 16, 2017 with a 1% whole person impairment, as opined by Dr. Burris. Respondent denied liability for post-MMI medical care and asserted an overpayment of \$45,141.01. Respondent's rationale for the overpayment was set forth in the "remarks" section of the FAL:

Per Dr. Burris' medical report dated 4/3/2018, claimant is awarded an impairment rating of 1% to the whole person. Impairment is calculated as follows: $400 \times 1.46 \text{ age factor} = 584 \times 1\% = 5.84 \times \$484.44 = \$2,829.13$. She was paid TTD to 04/23/18. There is an OP of TTD/TPD in the amount of \$45,141.01 as TTD was paid to 04/23/18 and total PPI previously paid was \$53,008.04. Total OP of indemnity is \$45,141.01 for which we will pursue reimbursement.

38. Claimant objected to the FAL and filed a DIME Notice and Proposal on May 9, 2018. The parties could not agree on a DIME physician, and Claimant filed a DIME Application on June 12, 2018. The DIME Unit received the Application but did not issue a DIME Panel. Respondent's counsel's paralegal contacted the DIME Unit in mid-July 2018, and learned the Division had rejected Claimant's DIME Application. Respondent did not convey that information to Claimant's counsel. In mid-September 2018, Claimant's counsel's paralegal (Tammy Garcia) contacted the DIME Unit to ask about the status of the DIME Application. Ms. Garcia was told the Division had rejected the DIME Application

⁴ There is no evidence of a March 16, 2017 evaluation with Dr. Roth. It appears Dr. Burris was incorrectly referring to Dr. Roth's March 6, 2017 addendum report, which was simply a record review, with no additional evaluation.

because Claimant had already had a DIME and Respondent would need to file the request. Claimant took no further action regarding the DIME process.

39. On October 9, 2018, Respondent applied for a hearing seeking to recover the claimed overpayment. Claimant filed a Response to the Application for Hearing on October 12, 2018, endorsing medical benefits, average weekly wage, permanent total disability, and overpayment. A hearing on Respondent's application was set for March 21, 2019 in Colorado Springs. On March 14, 2019, the parties agreed to withdraw the application for hearing without prejudice and vacate the hearing.

40. Claimant filed an Application for Hearing that same day, March 14, 2019, endorsing medical benefits, average weekly wage, and permanent total disability. Respondent filed a Response on April 12, endorsing several issues, including overpayment.

41. Claimant participated in two vocational evaluations in connection with her claim for PTD benefits. Katie Montoya evaluated Claimant for Respondent via Skype on January 7, 2019. Rodney Wilson subsequently evaluated Claimant at her counsel's request on February 23, 2019. Both experts testified at hearing to elaborate on the opinions expressed in their respective reports.

42. Mr. Wilson opined Claimant cannot reliably earn any wages and is permanently and totally disabled because of the work accident. He noted Claimant's inability to tolerate modified duty when she tried to return to work in March 2017. He relied on the last specific restrictions from Dr. Olson, dated March 28, 2017 that Claimant could lift a maximum of 10 pounds, walk no more than an hour, and avoid extensive bending. He emphasized Claimant's need for narcotic pain medications as a major impediment to obtaining and maintaining employment. According to Mr. Wilson, the combination of Claimant's ongoing symptoms, depression, and the sedating effects of medications will make it impossible for her to maintain gainful employment in any occupation.

43. Ms. Montoya opined Claimant can work in a variety of semi-skilled occupations at the sedentary-light level, with limitations on pace, i.e., no production work and no quick-paced environments. Ms. Montoya did not consider any psychological limitations because Claimant neither mentioned nor exhibited any emotional or cognitive difficulties during the vocational interview.⁵ Ms. Montoya noted Dr. Arumugam's admonition that Claimant "pace herself" is the only treating source opinion in the record regarding current permanent restrictions. Claimant told Ms. Montoya her doctor⁶ had completed a medical source statement for her Social Security disability claim, but Ms. Montoya did not have the report.⁷ Claimant said her doctor limited her to 10-20 pounds lifting, which Ms. Montoya incorporated into her analysis because it was consistent with Dr. Olson's permanent restrictions from 2015. Ms. Montoya opined some employers might refuse to hire Claimant if they knew she was taking narcotics but that is not universally true, particularly with a note from the prescribing physician. Ms. Montoya

⁵ Claimant demonstrated no apparent cognitive deficits during her testimony at hearing.

⁶ The ALJ presumes Claimant was referring to her PCP.

⁷ No such document was offered into evidence at hearing.

considered a 30-40 mile radius around Claimant's home as a reasonable commutable labor market. She indicated the job titles she relied on had "fairly consistent availability" during the period of her review. Claimant is relatively young, with a college education and acquired skills from past work that would transfer to a range of sedentary-light jobs. Ms. Montoya identified multiple suitable administrative and clerical positions, both full-time and part-time. Representative occupations include receptionist, PBX operator, office assistant, patient registration representative, hotel desk clerk, restaurant host, retail cashier, and bank teller.

44. Dr. Burris testified at hearing consistent with his report. He noted Claimant appeared to "move freely with no evidence of difficulty" in the video, which differed greatly from the "significant pain behaviors" she displayed in his office. He opined there was no objective basis for any work restrictions and saw nothing to prevent Claimant from performing "any activity she wants to do." He did not recall Claimant mentioning or demonstrating any mental problems or limitations. Dr. Burris opined Claimant requires no further injury-related treatment because she has returned to her preinjury "baseline" and none of the treatment she received through her claim made any significant difference in symptomology or function.

45. Dr. Burris' opinion that Claimant has no limitations despite a lumbar fusion and residual back and leg symptoms is unreasonable and unpersuasive. Ms. Montoya's assessment Claimant can perform sedentary-light work with pace-related limitations is reasonable and appropriate.

46. The opinions offered in Ms. Montoya's report and testimony regarding Claimant's ability to work are credible and persuasive. The ALJ agrees Claimant can work and earn wages within her commutable labor market as discussed by Ms. Montoya. Claimant failed to prove she is permanently and totally disabled.

47. Claimant proved entitlement to a general award of medical benefits after MMI. She has not returned to her preinjury "baseline" as opined by Dr. Roth and Burris. Claimant's current symptoms are greater than before the accident, and she requires more medication to manage her pain. Her level of function is lower than before the accident. Claimant credibly testified she takes amitriptyline (for sleep and pain), tizanidine (for muscle spasms), duloxetine (for depression and pain), and hydrocodone (for pain). Before the accident, she was only taking hydrocodone and 300 mg per day of gabapentin. The most recent prescription for gabapentin was 1500 mg per day from Dr. Reid in February 2018. It is unclear why gabapentin was stopped, but the last dose is a significant change from the preinjury level. Claimant's medications are reasonably necessary to relieve the effects of her industrial injury and prevent deterioration of her condition.

48. Claimant presented no persuasive evidence of entitlement to any specific medical benefits. Although her medications are reasonably necessary, she did not prove they are being prescribed by an authorized provider. There is no persuasive evidence of any other specific treatment recommended by any authorized provider.

49. Claimant failed to prove a basis to amend the admitted AWW of \$744.91. She was an hourly worker whose wages fluctuated from week to week. Claimant was an hourly worker whose wages fluctuated from week to week. It is not clear what period Respondent used to calculate the admitted AWW, but the ALJ is satisfied it fairly approximates her typical preinjury earnings. For example, Claimant averaged \$739.10 in the 12 weeks before the accident and \$745.21 in the 13 weeks before the accident. Other periods produce similar results. The admitted AWW provides a fair approximation of Claimant's preinjury wages and her injury-related wage loss.

50. Respondent failed to prove an overpayment of \$45,141.01 or \$58,191.83.

51. Respondent failed to prove Claimant received an overpayment of TTD or TPD benefits from March 16, 2017 through February 25, 2018 based on Dr. Burris' retroactive determination of MMI. Dr. Burris is not an authorized treating physician and has no authority to declare MMI.

52. Respondent proved Claimant received an overpayment of \$3,944.73 in TTD benefits after Dr. Arumugam put her at MMI on February 26, 2018. Respondent paid Claimant \$3,944.73 in TTD from February 26, 2018 through April 23, 2018 (57 days ÷ 7 x \$484.44 = \$3,944.73).

53. Respondent failed to prove a PPD overpayment of \$30,801.31. The prior PPD award was based on binding determinations of MMI and impairment by an uncontested DIME. Claimant's case was subsequently reopened because her condition worsened after MMI. Payment for the 18% rating gave Respondent a credit against any future rating, but did not convert the previously admitted and paid rating into an overpayment.

CONCLUSIONS OF LAW

A. Threshold question: Are the issues endorse by Claimant closed?

Respondent has raised a threshold jurisdictional defense that this claim was closed by the May 1, 2018 FAL because Claimant did not timely request a hearing on ripe and disputed issues. The disagrees with this argument. Claimant objected to the FAL and filed a DIME Notice and Proposal within the requisite 30-day window. Claimant subsequently filed a DIME application on June 12, 2018, which was rejected by the DIME Unit. The reason for rejecting the application is not entirely clear, but it appears the DIME Unit mistakenly believed Claimant was requesting a so-called "follow-up" DIME, which would have to be requested by Respondent and scheduled with Dr. Fillmore (who conducted a previous DIME in 2016). For unknown reasons, the DIME Unit neglected to notify either party it had rejected the application. Claimant did not learn the application had been rejected until calling the DIME Unit to inquire about the status in mid-September 2018. Respondent requested a hearing on October 8, 2018, and Claimant filed a Response to Application for Hearing on October 19, 2018 endorsing medical benefits, average weekly wage, and permanent total disability benefits.

The DIME Notice and Proposal is the only “jurisdictional” prerequisite to a DIME. Once the DIME process is initiated by a timely Notice and Proposal, the Act imposes no jurisdictional time limits on completion of the process. Subsequent steps, such as the notice of failed IME negotiation, the application, and scheduling or completing the DIME are not jurisdictional. See e.g., § 8-42-107.2(2)(b); *Adams v. Manpower*, W.C. No. 4-389-466 (August 2, 2005); *Reichert v. Maxtor*, W.C. No. 4-585-635 (April 4, 2005); *Romero v. Gerald Martin, LTD.*, W.C. No. 4-55*-142 (March 8, 2004).

Moreover, § 8-43-203(2)(b)(II)(A) provides that initiation of the DIME process tolls the requirement to request a hearing on ripe and disputed issues “until the [DIME] process is terminated for any reason.” Respondent acknowledges the tolling provision but argues the DIME process terminated when the DIME Unit rejected Claimant’s June 12, 2018 application. The ALJ disagrees for several reasons. First, there was no legal justification for rejecting Claimant’s DIME application. The prior DIME with Dr. Fillmore was complete in 2016 and the claim was closed by an uncontested FAL. Respondent subsequently agreed to reopen the claim based on a worsened condition. Claimant’s June 12, 2018 application requested a new DIME in response to a new MMI determination, not a “follow-up” DIME. The DIME Unit should have issued a new panel after receiving Claimant’s application. The DIME Unit then compounded its error by failing to notify either party it had rejected the application. Claimant did not know the application had been rejected until she made a phone inquiry in September 2018. Finally, the DIME Unit did not purport to terminate the DIME process. Rather, it told Claimant that Respondent would need to file the DIME application. The ALJ sees no event or circumstance that could reasonably be deemed “termination” of the DIME process at any time before Claimant filed her Response to Application for Hearing on October 18, 2018. The issues Claimant has endorsed for hearing are not closed.

B. Claimant’s request to proceed with a DIME

Claimant’s December 16, 2019 Supplemental Position Statement requested, for the first time, that the pending proceedings be suspended and held in abeyance so she can complete the DIME process.

A claimant generally has a due process right to a DIME. *Whiteside v. Smith*, 67 P.3d 1240 (Colo. 2003). Nevertheless, a party may waive its right to a DIME through inaction, delay, or similar conduct. E.g., *Munoz v. JBS Swift & Company*, W.C. No. 4-780-871 (March 1, 2010); *Rodriguez v. Safeway Stores, Inc.*, W.C. No. 4-712-019 (June 3, 2009); *Stein v. Community Agriculture Alliance*, W.C. No. 4-533-782 (October 5, 2004); *Shouland v. Argenbright Security*, W.C. No. 4-415-403 (June 16, 2004).

Waiver is the intentional relinquishment of a known right, and may be explicit or implicit. An explicit waiver occurs when a party states its intention to abandon an existing right or privilege. An implied waiver is demonstrated by conduct that is inconsistent with assertion of the right. *Johnson v. Industrial Commission*, 761 P.2d 1140 (Colo. 1998). To constitute an implied waiver, the conduct must be free from ambiguity and clearly manifest the intent not to assert the right. *Burlington Northern Railroad Co. v. Stone*

Container Corporation, 934 P.2d 902 (Colo. App. 1997). A waiver requires full knowledge of all the relevant facts. *Johnson, supra*.

The ALJ agrees with Respondent that Claimant waived her right to pursue a DIME. As found, Claimant learned the DIME Unit rejected her application in mid-September 2018, but took no further action to advance the DIME process for well over a year. In fact, Claimant took no action at all until Respondent forced the issue by filing an Application for Hearing on October 9, 2018. Instead of addressing the DIME at that time, Claimant endorsed permanent total disability and the parties prepared for hearing. Claimant made no request or otherwise mentioned the DIME as the case moved toward hearing. More important, Claimant said nothing about pursuing a DIME during the first two hearings, or even during the third hearing on December 6, 2019. Claimant's initial post-hearing position statement dated November 12, 2019 did not mention pursuing a DIME. When Claimant filed her position statement, she had every reason to believe the record was complete the case was ready for an order. That the undersigned convened the December 6 hearing *sua sponte* does not change the fact that Claimant was content to let the matter proceed to decision without asking for a DIME. Not until Claimant's December 16, 2019 supplemental position statement did she broach the subject of pursuing the DIME for the first time.

Claimant's decision to litigate permanent total disability was inconsistent with a desire to pursue a DIME. A DIME serves but two functions: (1) to review a determination of MMI and (2) to review a determination regarding whole person impairment. Both issues were rendered moot by Claimant's decision to litigate permanent total disability. Questions of permanency are premature until a claimant reaches MMI, and litigating PTD evidenced Claimant's intent to accept the determination of MMI. Likewise, endorsing and trying only the issue of PTD shows Claimant was unconcerned with and elected not to pursue any issue relating to PPD.

Allowing Claimant to move forward with the DIME now would be highly prejudicial to Respondent. In reasonable and detrimental reliance on Claimant's silence regarding the DIME process, coupled with her active pursuit of a PTD claim, Respondent incurred considerable expense and inconvenience defending the claim, including expert witness charges and attorney fees for multiple hearings.

Taken together, Claimant choice to litigate the claim for PTD benefits through to closing argument unambiguously evidences her intent to abandon the DIME, to accept MMI as of February 26, 2018, and to forgo any opportunity to dispute permanent partial impairment. Claimant's Motion to hold the hearing process in abeyance and complete a DIME is DENIED.

C. Permanent total disability

A claimant is considered permanently and totally disabled if she cannot "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means wages in excess of zero. *McKinney v. Industrial Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995). To prove permanent total disability, the claimant

need not show the industrial injury is the sole cause of her inability to earn wages. Rather, the claimant must demonstrate that the industrial injury is a “significant causative factor” in her permanent total disability. *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). It is not sufficient that an industrial injury merely creates *some* disability that ultimately contributes to permanent total disability. Rather, *Seifried* requires the claimant to prove a “direct causal relationship” between the industrial injury and the disability. *Lindner Chevrolet v. Industrial Claim Appeals Office*, 914 P.2d 496 (Colo. App. 1995).

In determining whether the claimant can earn wages, the ALJ may consider a wide variety of “human factors.” *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1988). These factors include the claimant’s physical condition, mental abilities, age, employment history, education, training, and the “availability of work” the claimant can perform within her commutable labor market. *Id.* Another human factor is the claimant’s ability to obtain and maintain employment within her limitations. See *Professional Fire Protection, Inc. v. Long*, 867 P.2d 175 (Colo. App. 1993). The ability to earn wages inherently includes consideration of whether the claimant can be hired and sustain employment. See e.g., *Case v. The Earthgrains Co.*, W.C. No. 4-541-544 (ICAO, September 6, 2006); *Cotton v. Econo Lube N. Tune*, W.C. No. 4-220-395 (ICAO, January 16, 1997). If the evidence shows the claimant cannot “sustain” employment, the ALJ can find she is not capable of earning wages. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866, 868 (Colo. App. 2001).

As found, Claimant failed to prove she is permanently and totally disabled. The persuasive evidence demonstrates Claimant can sustain employment in a variety of sedentary-light occupations. The ALJ does not doubt Claimant suffers residual pain and associated limitations from her back injury. But the question is whether those limitations are severe enough to render her totally disabled as opposed to merely partially disabled. There is insufficient persuasive evidence to support a finding of permanent total disability under Colorado’s strict “any wages” standard. The record is devoid of any detailed opinion from a treating provider regarding Claimant’s current limitations and activity tolerances. Ms. Montoya adequately accounted for Dr. Arumugam’s “restriction” regarding self-paced work by eliminating jobs with production requirements or fast-paced environments. Although one of Claimant’s doctors completed a medical source statement for her Social Security claim, no such report is in evidence. According to Claimant, her doctor thinks she can tolerate lifting 10-20 pounds, which Ms. Montoya used in conducting her labor market research. Similarly, Dr. Olson had limited Claimant to modified light work when she reached MMI the first time in 2015, which also supports Ms. Montoya’s analysis. Admittedly, Claimant testified to limitations — such as frequent postural changes, needing to lie down, and remaining in bed for several days during flare-ups — that would significantly erode (and probably eliminate) all work. But the ALJ is also impressed by the lack of apparent limitation or difficulty during any of the activities shown on the surveillance video, including carrying armloads of groceries after a long day of shopping. Although Claimant does not have to support her claim with expert testimony, in this case the ALJ is not inclined to base the RFC determination solely on her testimony without corroboration from an examining or treating medical source.

D. General award of medical benefits after MMI

Respondents are liable for authorized medical treatment reasonably needed to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, she is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expeditors, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI or prove a particular course of treatment has been prescribed to obtain a general award of *Grover* medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

A pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravated, accelerated, or combined with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was the proximate result of an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved a probable need for future treatment to relieve the effects of her industrial injury. Claimant is currently taking amitriptyline, tizanidine, duloxetine, and hydrocodone. These medications are reasonably needed and related to the industrial injury. Although Claimant had pre-existing back problems, the work injury substantially aggravated her pre-existing condition, and she has never returned to "baseline."

E. Average weekly wage

Section 8-42-102(2) provides compensation shall be paid based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

As found, Claimant did not prove a basis to change the admitted AWW of \$744.91. Claimant was an hourly worker whose wages fluctuated from week to week. It is not clear

what period Respondent used to calculate the admitted AWW, but the ALJ is satisfied it fairly approximates Claimant's typical preinjury earnings. For example, Claimant averaged \$739.10 in the 12 weeks before the accident and \$745.21 in the 13 weeks before the accident. One can arbitrarily choose some other number of weeks to produce slightly different figures. Claimant raised no objection to the admitted AWW for over four years, and provided no explanation for why she believes it is inaccurate or inappropriate. Based on the record presented, the ALJ sees no reason to disturb the admitted AWW.

F. Overpayment

Section 8-40-201(15.5) defines an overpayment as:

[M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits

The statute creates three categories of overpayments. The first category is for overpayments created when a claimant receives money "that exceeds the amount that should have been paid"; the second category is for money that a claimant "was not entitled to receive"; and the third category is for money received that "results in duplicate benefits because of offsets." *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009).

Respondent has the burden to prove Claimant received an overpayment. *City and County of Denver v. Industrial Claim Appeals Office*, 58 P.3d 1162 (Colo. App. 2002).

The May 1, 2018 FAL claimed an overpayment of \$45,141.01. Respondent's post-hearing brief alleges an overpayment of \$58,191.83. Regardless of the amount, the claimed overpayment rests on two factors: (1) TTD benefits paid after Dr. Burris's MMI date of March 16, 2017, and (2) the 18% PPD award paid based on Dr. Fillmore's DIME rating in 2016 before the claim was reopened.

Respondent's first theory of overpayment can be resolved quickly. Under § 8-42-105(3)(a), TTD benefits "shall continue" until the injured worker reaches MMI. Section 8-42-107(8)(b)(I) provides that only "an authorized treating" can determine a claimant has reached MMI (absent a DIME). Dr. Burris never treated Claimant and was not "an authorized treating physician." Rather, Dr. Burris evaluated Claimant under § 8-42-107(8)(b.5)(I)(B) because she lived out of state when her ATP put her at MMI in February 2018. Dr. Burris' role was strictly limited to determining Claimant's impairment rating; he had no authority to determine MMI. Accordingly, Claimant was entitled to ongoing MMI benefits until Dr. Arumugam put her at MMI on February 26, 2018. TTD benefits before February 26, 2018 were not an overpayment.

Respondent actually paid TTD through April 23, 2018. The TTD Claimant received from February 26, 2018 through April 23, 2018 is an overpayment of \$3,944.73.

Respondent's second theory of overpayment presents a more challenging question. For the reasons set forth below, the ALJ concludes the 18% DIME rating from Claimant's first MMI date in October 2015 is not an overpayment, notwithstanding the 1% assigned by Dr. Burris when she got back to MMI in February 2018.

Three provisions of the Act are central to the ALJ's analysis. First, §§ 8-42-107(8)(b)(III) and 107(8)(c) provide that the DIME's determinations regarding MMI and whole person impairment are binding unless overcome by clear and convincing evidence. Section 8-43-203(2)(b)(II)(A) provides that an uncontested FAL closes a claim "as to the issues admitted." Sections 8-43-303(1) and (2)(a) allow a claim to be reopened for, *inter alia*, a change of condition or an overpayment. But the reopening statute explicitly states that "No such reopening shall affect the earlier award as to monies already paid except in cases of fraud or overpayment." The question thus becomes, does the caveat "except in cases of . . . overpayment" mean a claimant can be forced to repay a PPD award she received based on an uncontested DIME rating simply because she received a lower rating at a subsequent MMI date?

Respondent cited no case addressing this particular fact pattern, and the ALJ is aware of none. But two cases are instructive. The first is *Mesa Manor v. Industrial Claim Appeals Office*, 881 P.2d 443 (Colo. App. 1994), which held that a claimant can receive concurrent awards of PPD and TTD after a claim is reopened based on a change of condition. As pertinent here, *Mesa Manor* stands for the proposition that reopening for a change of condition does not negate a prior PPD award based on the prior rating.

The next helpful case is *Cooper v. Industrial Claim Appeals Office*, 109 P.3d 1056 (Colo. App. 2005). The claimant in *Cooper* received a lump sum PPD award based on an admitted rating, but later died before the PPD otherwise would have paid out at the weekly rate. The respondents argued the portion of the PPD award that covered weeks after the claimant's death was an "overpayment" because she no longer suffered any loss of earning capacity. The court rejected that argument because the PPD award "became a vested right" once the lump sum was paid. The upshot of *Cooper* is that an uncontested PPD award paid by lump sum is a "vested right" and does not become an overpayment based on subsequent changes in the claimant's physical condition.

Mesa Manor and *Cooper*, combined with the binding nature of an uncontested DIME and the statutory prohibition on affecting "monies already paid" persuade the ALJ that Claimant's prior PPD award is not an "overpayment." A subsequent change in the degree of permanency after reopening does not negate a vested permanency benefit paid for a prior MMI date.

The caselaw cited in Respondent's brief does not mandate a different conclusion. True, many of those cases involved overpayments created by retroactive MMI dates or reduced ratings assigned by DIMEs. *E.g.*, *Marquez v. Americold Logistics*, W.C. No. 4-896-504-04 (August 7, 2014); *Mattorano v. United Airlines*, W.C. No. 4-861-379-01 (July 25, 2013). Some resulted from ALJ determinations that removed the legal basis upon which TTD or PPD benefits had previously been paid. *E.g.*, *Joshue v. Anheuser-Busch*, W.C. No. 4-954-271-04 (June 17, 2016). It is by now well established that payments made

under a GAL or a contested FAL can become overpayments based on subsequent developments before the case is closed. *E.g., Franco v. Denver Public Schools*, W.C. No. 4-818-579-05 (November 13, 2014). And there is no dispute respondents can retroactively recover overpayments created by offsets or payment errors. *E.g., Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009); *Garrett v. Trinidad Drilling U.S.A., Inc.*, W.C. No. 4-704-929 (January 16, 2008). But all the cases cited by Respondent are distinguishable from Claimant's case based on three crucial differences: (1) they all involved payments made before a claim was closed, (2) none involved PPD paid based on an uncontested DIME, and (3) none involved a new rating at a subsequent MMI date after a case was reopened.

As previously noted, §§ 8-43-303(1) and (2)(a) provide that reopening for a change of condition shall not "affect the earlier award as to monies already paid except in cases of fraud or overpayment." The exception clause was added to the reopening statute in 1997, and changed a rule that had previously been in effect for decades.⁸ Of course, the General Assembly is free to change the statute whenever it pleases, but it is important to bear in mind *how* the Act was amended in 1997. The General Assembly could have simply deleted the sentence relating to "monies already paid." But it did not. Rather, the General Assembly *added* the exception relating to fraud and overpayments, thereby affirming the original rule with caveats. The statute must be interpreted and applied in a way that gives effect to both the rule and the exceptions. *E.g., Henderson v. RSI, Inc.*, 824 P.2d 91 (Colo. App. 1991) (courts must construe the entire statutory scheme in a way that gives consistent, harmonious, and sensible effect to all its parts).

The exception clause relating to overpayments only makes sense if read in conjunction with the provision allowing a case to be reopened "solely as to overpayments." The right to reopen a claim and collect an overpayment would be meaningless if the respondents could not reach money already paid, because by definition overpayments were "already paid." But Respondent's position here is that Claimant's entire 18% award immediately became an overpayment when the claim was reopened, which she must now repay to the extent it was not offset against some additional liability that accrued after the case was reopened. If Respondent is correct, and Claimant's prior rating based on an uncontested DIME became an overpayment *simply because her claim was reopened* for a change of condition, the exception would essentially swallow the rule and read the first clause out of the statute. Indeed, the logic of Respondent's argument would mean even if Claimant received the *identical* 18% rating when she reached MMI the second time in February 2018, there would still be an "overpayment" of PPD because she was three years older and the age factor would reduce the corresponding award. The ALJ is unpersuaded the General Assembly intended such results.

Claimant was at MMI on October 26, 2015 with an 18% whole person impairment determined by a DIME. Neither party challenged the rating and it became binding by as a matter of law. The rating was admitted, paid in full, and became a "vested right." There

⁸ This provision has been included in the Act in some form since at least 1921. *E.g., Colorado Fuel & Iron Co. v. Industrial Commission*, 275 P. 910 (Colo. 1929).

is no indication the rating was miscalculated, paid erroneously, or subject to any unclaimed offset. Claimant's condition subsequently worsened, and she was no longer MMI as of May 26, 2016. The original MMI date was not rescinded or amended. Claimant had surgery and reached MMI again on February 26, 2018. At that time, she received a 1% rating. Respondent had already paid Claimant for an 18% rating, so they owed no additional PPD based on Dr. Burris' 1% rating. But Dr. Burris' rating did not convert the prior award into an overpayment.

ORDER

It is therefore ordered that:

1. Claimant's Motion to hold the hearing process in abeyance and attend a DIME is denied.
2. Claimant's claim for permanent total disability benefits is denied and dismissed.
3. Claimant's request to amend the admitted average weekly wage of \$744.91 is denied and dismissed.
4. Respondent shall cover medical treatment from authorized providers reasonably needed to relieve the effects of Claimant's industrial injury or prevent deterioration of her condition.
5. Respondent's claim for an overpayment of \$45,141.01 or \$58,191.83 is denied and dismissed.
6. Respondent's claim for an overpayment of PPD based on the previously admitted 18% DIME rating is denied and dismissed.
7. Respondent's claim for an overpayment of TTD from March 16, 2017 through February 25, 2018 based on Dr. Burris' MMI determination is denied and dismissed.
8. Claimant shall repay Respondent the TTD overpayment of \$3,944.73 from February 26, 2018 through April 23, 2018. The specific payment terms are reserved for future determination if the parties cannot reach an agreement.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-024-706-002**

ISSUES

- Claimant is seeking a general award of medical benefits after MMI.
- Disfigurement.
- Claimant presented an unpaid medical bill, but Respondent's counsel only learned about the bill a few days before the hearing. Respondents' counsel indicated she would transmit the bill to the claims adjuster for review. The ALJ explained to Claimant she can request a hearing regarding the bill in the future should Insurer decline to cover it.

FINDINGS OF FACT

1. Claimant suffered an admitted right knee injury on June 6, 2016 in a slip and fall accident.

2. Claimant underwent multiple surgical procedures on her right knee, including revision of a pre-existing total knee arthroplasty on September 7, 2016, a right knee saphenous nerve decompression with neuroma excision on April 19, 2017, and placement of a hinged knee implant on November 17, 2018.

3. Dr. James Fox was Claimant's primary ATP. Dr. Fox put Claimant at MMI on May 29, 2019. Dr. Fox opined Claimant required "maintenance" treatment including periodic follow-up with her surgeons and ongoing pain management with Dr. Chen.

4. Respondent filed a Final Admission of Liability (FAL) on July 1, 2019. The FAL denied liability for medical treatment after MMI.

5. Claimant timely objected to the FAL and requested a hearing on medical benefits, medical benefits after MMI, and disfigurement.

6. Respondents filed an amended FAL on January 5, 2020, eighteen days before the hearing. The amended FAL admitted for medical benefits after MMI consistent with Dr. Fox's recommendations. The ALJ interprets the FAL as admitting to a general award of reasonably necessary and related medical treatment after MMI from authorized providers, consistent with § 8-42-107(8)(f).

7. After a thorough advisement and lengthy discussion on the record, Claimant agreed the January 5, 2020 amended FAL resolves the endorsed issue of medical benefits after MMI.

8. Claimant has received two previous disfigurement awards relating to her right knee.

9. The first disfigurement award was entered on July 27, 2015 by Administrative Law Judge Cannici in connection with a different injury (W.C. No. 4-740-567-01). Judge Cannici awarded \$2,500 for disfigurement, described as:

[A]n approximately 5 inch long scar across her right knee and approximately 3 inch long scar below her right knee. Claimant's right knee also bows inward and she exhibited a slight limp.

10. Claimant received another disfigurement award on May 8, 2018 from Administrative Law Judge Michelle Jones. The award from Judge Jones is the only prior award relating to the June 6, 2016 injury, because Judge Cannici's award was in a previous claim. Judge Jones knew of Judge Cannici's 2015 disfigurement award, and awarded \$300 for additional scarring associated with the September 2016 arthroplasty revision surgery and the April 2017 neuroma excision.

11. At the January 23, 2020 hearing, Claimant demonstrated visible disfigurement consisting of: (1) a 9 inch long by $\frac{1}{4}$ inch to $\frac{1}{2}$ inch wide discolored, irregular, partially raised, partially indented surgical scar on the midline of the right knee. (2) The overall noticeability of the aforementioned scar is enhanced by numerous small staple scars running along its length. (3) A $\frac{1}{4}$ inch wide discolored, irregular, partially raised, partially indented surgical scar, originating at approximately the tibial tuberosity and traversing medially and superiorly approximately 5 inches. (4) Three 1-inch diameter discolored, irregular, partially raised, partially indented surgical scars, originating at approximately the tibial tuberosity and traversing laterally and superiorly approximately 5 inches. Scars 1, 3, and 4 combine to create the appearance of a downward arrow on Claimant's right knee. (5) Noticeable swelling about the right knee and lower leg. (6) Four "blotchy" areas of discoloration on the upper abdomen relating to a post-surgical infection. (7) A small bump on the mid left shin. (8) A significant limp favoring the injured right leg.

12. Claimant gave the ALJ a photograph of her right knee dated August 18, 2018, before the most recent November 17, 2018 surgery. (Ex. 1). The scar on the midline of Claimant's knee is considerably larger and more noticeable now than before the last surgery. The scar on the medial knee appears similar to when observed by Judge Jones, so no additional disfigurement will be awarded for that. There is no indication the lateral knee scars were considered previously, nor does it appear Judge Cannici or Judge Jones appreciated swelling of the knee. Judge Cannici described a "slight" limp, whereas this ALJ observed a significant limp. Neither prior order mentions any scarring on the abdomen or left shin.

13. The ALJ finds Claimant should be awarded \$3,000 for additional disfigurement caused by the June 6, 2016 accident and not considered by Judge Cannici or Judge Jones.

CONCLUSIONS OF LAW

Respondents are liable for authorized medical treatment reasonably needed to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, she is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expeditors, Inc.*, 77 P.3d 863 (Colo. App. 2003). If an authorized treating physician recommends medical treatment after MMI and there is no conflicting medical opinion in the record, the respondents shall admitted for related, reasonably necessary medical benefits by an authorized treating physician. Section 8-42-107(8)(f).

As found, Claimant agreed on the record the January 5, 2020 amended FAL adequately resolved her endorsed issue regarding medical benefits after MMI.

Section 8-42-108(1) provides for additional compensation if a claimant is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." The compensation to be awarded is left to the ALJ's discretion, subject to the maximum applicable award for the claimant's date of injury. *E.g.*, *Landers v. Federal Express*, W.C. No. 4-989-931-02 (December 19, 2016). The maximum disfigurement award for a June 6, 2016 date of injury is \$4,840.14, or \$9,678.66 if the claimant has "extensive facial scars or facial burn scars, extensive body scars or burn scars, or stumps due to loss or partial loss of limbs." The \$2,500 previously awarded by Judge Cannici does not affect the maximum disfigurement payable in this claim, because it was paid in a different claim. The ALJ only referenced Judge Cannici's prior order to help determine what disfigurement pre-dated the June 2016 accident. Judge Jones' May 2018 award counts against the maximum limit because it was awarded on this claim.

As found, Claimant suffered visible disfigurement to parts of the body normally exposed to public view. The disfigurement compensated by this ALJ was caused by the June 6, 2016 accident and not considered by any prior judge. The ALJ concludes Claimant should be awarded \$3,000 for additional disfigurement, beyond what was previously awarded by Judge Cannici and Judge Jones.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant \$3,000 for additional injury-related disfigurement beyond that previously observed by Judge Cannici or Judge Jones.
2. Insurer shall cover reasonably necessary and related medical treatment after MMI from authorized providers.
3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 12, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that on November 20, 2018, he suffered an injury arising out of and in the course and scope of his employment with the employer.
- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment, including a recommended cervical surgery, is reasonable, necessary, and related to the work injury.
- If the claimant proves a compensable injury, what is the claimant's average weekly wage (AWW)?
- At hearing, the claimant withdrew the endorsed issue of temporary total disability (TTD) benefits.

FINDINGS OF FACT

1. The claimant has been employed with the employer, or its predecessors, for approximately 30 years as a heavy equipment operator. The claimant's job duties include operating loaders, bulldozers, backhoes, and excavators.

2. On November 7, 2018, the claimant sought chiropractic treatment with Dr. Rita Peterson. The claimant testified that he sought treatment with Dr. Peterson because he had pain in his neck and left shoulder after he pulled a wrench at work. The November 7, 2018 medical record identified the claimant's symptoms as pain in his neck and left shoulder, with numbness down his left arm. Dr. Peterson opined that the claimant had "a disc injury at C5-6". Dr. Peterson recommended the claimant undergo steroid injections with his personal care provider. The claimant did not obtain the recommended injections.

3. On November 15, 2018, the claimant returned to Dr. Peterson and reported "not much improvement" in his symptoms. On that date, Dr. Peterson recommended an orthopedic referral. The claimant testified that he did not return to Dr. Peterson because his symptoms improved.

4. The claimant testified that on November 20, 2018, he was assigned to operate a front-end loader. While operating that equipment the claimant drove over a pile of frozen dirt clods. The claimant testified that this caused him to be jarred from side to side. The claimant also testified that following the jarring incident, he experienced numbness and tingling in his left arm. The claimant continued to perform his normal job duties and completed his scheduled shift.

5. The claimant testified that he reported this incident to his supervisor, Glen M[Redacted]. The claimant further testified that Mr. M[Redacted] prepared a written report of the incident the following day, November 21, 2018. The report prepared by Mr. M[Redacted] was dated November 26, 2018, and indicated that on November 21, 2018, the claimant “jammed his neck”.

6. On approximately November 29, 2018, the claimant was laid off due to a seasonal slowdown. Between November 20, 2018 and the lay off on November 29, 2018, the claimant worked his normal duties. The claimant testified that on the day he was laid off he requested medical treatment from John Mueller, Superintendent. However, the claimant did not receive medical treatment on that date. The claimant returned to work on or about February 13, 2019.

7. During the period when the claimant was laid off, his symptoms included numbness and tingling in his left arm. The claimant testified that over time his symptoms became worse.

8. Following the November 20, 2018 incident, the claimant first received medical treatment on March 8, 2019. The claimant testified that this delay was caused by the employer’s failure to schedule an appointment for him.

9. On March 8, 2019, the claimant was seen by Dr. Lori Fay with Work Partners. At that time, the claimant reported that he jarred his neck and had neck pain with numbness and tingling into his left arm. Dr. Fay diagnosed paresthesia of the skin and cervicgia. Dr. Fay ordered an x-ray of the claimant’s cervical spine and an electromyography (EMG) study.

10. On April 2, 2019, Dr. Mitchell Burnbaum administered an EMG study of the claimant’s left upper extremity. In his report, Dr. Burnbaum noted that he found no evidence of carpal tunnel and nothing to suggest issues at the brachial plexus. Dr. Burnbaum opined that the claimant had a root compression at the C6 level. However, Dr. Burnbaum did not believe that the claimant was a surgical candidate. Dr. Burnbaum recommended physical therapy and a magnetic resonance image (MRI) of the claimant’s cervical spine.

11. On June 5, 2019, the claimant reported to Dr. Fay that his symptoms were stable and his pain was at zero out of ten. On that same date, Dr. Fay ordered an MRI of the claimant’s cervical spine and made a referral to Dr. Kirk Clifford for a surgical consultation.

12. On June 12, 2019, an MRI of the claimant’s cervical spine showed congenital narrowing of the spinal canal, with degenerative changes resulting in mild to moderate spinal stenosis at C5-6 and C6-7, with mild spinal stenosis at C3-4. The MRI also showed multilevel neural foraminal narrowing due to degenerative facet and uncinat process osteophytes, at levels C5-6 and C6-7.

13. On July 2, 2019, the claimant was seen in Dr. Clifford's practice, Western Colorado Spine. At that time, the claimant was seen by Jason Bell, PA-C. Mr. Bell diagnosed a left lateral disc herniation at the C5-6 level and recommended surgical intervention. However, Mr. Bell noted that as a smoker, the claimant would have to be nicotine free for six weeks prior to undergoing any surgery.

14. On August 12, 2019, the claimant was seen by Dr. Clifford and reported that his symptoms had worsened. Dr. Clifford noted that the claimant had a left C5-6 herniated disc with cervical radiculopathy. Dr. Clifford recommended the claimant undergo a C5-6 anterior cervical discectomy and fusion. On August 19, 2019, a request for authorization of the recommended surgery was submitted to the insurer. On September 19, 2019, the respondents filed a Notice of Contest of the claimant's claim.

15. On October 4, 2019, the claimant attended an independent medical examination (IME) with Dr. Anant Kumar. In connection with the IME, Dr. Kumar reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Kumar opined that the claimant suffered a minor trauma that does not necessitate surgical intervention. In support of this opinion, Dr. Kumar noted that the claimant is neurologically intact. In addition, Dr. Kumar diagnosed the claimant with degenerative disc disease of the cervical spine.

16. Dr. Kumar's testimony by deposition was consistent with his written report. Dr. Kumar testified that the claimant has age related stenosis that was not caused or aggravated by an acute injury. Dr. Kumar clarified that he reviewed the imaging studies and not just the radiology reports. Based upon his review of the claimant's MRI, Dr. Kumar opined that the claimant has a disc osteophyte complex, which is a "degenerative bony spur". Dr. Kumar further opined that the claimant has a chronic condition rather than an acute condition. In addition, Dr. Kumar testified that the symptoms the claimant reported to him were the same as those reported to Dr. Peterson on November 7, 2018. Dr. Kumar further opined that treatment of the claimant's cervical spine condition does not require interventional treatment. In addition to the issue of causation, Dr. Kumar opined that the mechanism of injury reported by the claimant would not cause the level of degenerative changes present in the claimant's spine.

17. Based upon the opinions of Dr. Kumar, the respondents denied authorization of the recommended surgery. The respondents continue to contest the claimant's claim.

18. In 2018, the claimant's total earnings from this employment was \$64,070.41. The claimant has calculated an average weekly wage (AWW) of \$1,346.83. The claimant calculated this AWW based on the premise that prior to November 20, 2018; there were 333 days in 2018.¹ The respondents calculated the

¹ The ALJ calculates that 333 days is equal to 47.57 weeks. When the claimant's total wages of \$64,070.41 is divided by 47.57 weeks, it results in an average of \$1,346.87.

AWW as \$1,054.40. This calculation is based upon the claimant's hourly rate of \$26.36 at 40 hours per week.

19. The ALJ credits the medical records and the opinions of Dr. Kumar over the contrary opinions of Dr. Clifford and finds that the claimant has failed to demonstrate that it is more likely than not that he suffered a work injury. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that his preexisting spinal condition was aggravated or accelerated by his alleged November 20, 2018 mechanism of injury. The claimant was complaining of identical symptoms when he treated with Dr. Peterson prior to the date of the alleged injury. The ALJ is not persuaded by the claimant's testimony that he suffered an injury when he drove his loader over frozen dirt clods.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting

disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the claimant has failed to demonstrate by a preponderance of the evidence, that his preexisting spinal condition was aggravated or accelerated by his alleged November 20, 2018 mechanism of injury. As found, the medical records and the opinions of Dr. Kumar are credible and persuasive.

ORDER

It is therefore ordered the claimant’s claim for workers’ compensation benefits is denied and dismissed.

Dated this 14th day of February 2020.

ALJ Cassandra M. Sidanycz
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Rook for Whole Person Impairment rating?
- II. Has Claimant shown, by a preponderance of the evidence, that he is entitled to a general award of ongoing Medical Maintenance Benefits?
- III. Has Claimant shown that he is entitled to a change of physician?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

History of the Work Injury

1. Claimant sustained an admitted injury for the Employer on May 29, 2017. (Ex. 3). At that time, Claimant was employed by the City of Colorado Springs as a police officer, and had been so employed for 16 years.
2. Claimant testified at hearing. On the day of the injury, he was acting as a training officer and was on patrol, seated in the passenger seat of the police vehicle. He hand his trainee then responded to a disturbance around noon. The trainee parked the police vehicle behind a pickup truck, which had been described as the one involved in the disturbance. The driver of the truck put his vehicle in reverse, striking Claimant's vehicle. It knocked the Claimant's vehicle backward approximately 15 feet, bending the push bumper of the police vehicle back into the hood.
3. The driver of the truck sped off, and Claimant and the trainee pursued the suspect, with trainee still driving. The suspect then rammed another vehicle, at which point the suspect exited his vehicle, then carjacked another vehicle. At this point Claimant, saw that the suspect had an AK-47. Claimant then exited his vehicle, gun drawn, and went across the hood of the vehicle that the suspect carjacked. The suspect was able to flee the scene.
4. The Claimant did not know initially if he had been hurt, either by the suspect striking his vehicle initially, or when he went across the hood of the carjacked vehicle. He did fill out an injury report with the Employer either that evening or the next morning, as his neck was sore, and by the next day, the soreness had increased.

Prior Injuries

5. Claimant had previously sustained a work injury in a 2010 car crash to the middle of his back, just to the right side, for which he received physical therapy through the Employer's occupational clinic. A MRI was ordered after that event, and Claimant continues to have a little bit of pain in his mid-back, just to the right of his spine since that injury.
6. Claimant did not sustain any injuries to his neck at the time of this 2010 injury. At the time of this May 29, 2017 injury, Claimant testified he was not having any other physical problems other than to his mid back, with a little bit of burning pain.

Treatment for this Work Injury

7. On May 31, 2017, Claimant was first seen in the Employer's occupational clinic by P.A. Homberger. Claimant was complaining of neck pain. Upon physical examination, there was left-sided cervical paraspinal tenderness and tightness. P.A. Homberger diagnosed him with a cervical strain, and referred him to physical therapy. The pain diagram (pain level 5/10) was marked for (sharp) left sided cervical pain. (Ex. 13, pp. 107-108).
8. The Claimant's first physical therapy visit was on June 6, 2017. At that time, Claimant noted constant, sharp, neck pain that had decreased somewhat since the initial injury. Pain was aggravated with wearing his vest, and increased at night. Assessment was left sided muscle strain with kyphosis, and massage therapy was initiated. (Ex. 17, p. 202).
9. Claimant treated on June 12 and June 14 of 2017 by the Employer's physical therapists. He continued with left sided neck pain, and had a new complaint of right sided neck pain when wearing his camera that hung down from his neck. (Ex. 17, p. 201). On June 14, 2017, the Claimant reported having pain along the left side of his neck. The physical therapist observed *tightness* along the left side of the cervical spine. (Ex. 17, p. 200).
10. The Claimant continued to see P.A. Homberger, and was treated by physical therapists in the Employer's occupational clinic until October 4, 2017. The clinic notes and physical therapy for dates of service of 6/21/2017 through 10/4/2017 indicate ongoing left sided neck pain and tightness, and left sided occipital pain with tightness in the Claimant's sub-occipital musculature.
11. The Claimant was examined by Dr. Jay Neubauer on July 18, 2017. At that time, Claimant noted constant left sided neck pain that was mild in the morning but increased with work activities throughout the day. Dr. Neubauer noted tenderness along the left paraspinous muscles. (Ex. 13, p. 100).

12. P.A. Homberger's note of October 4, 2017 indicates the Claimant was complaining of ongoing pain. Upon examination, P.A. Homberger noted left cervical paraspinal *tightness* and left occipital tenderness and tightness. Treatment plan was to continue physical therapy, medication, heat therapy and to schedule an MRI of the cervical spine. (Ex. 13, p. 94).
13. MRI of the cervical spine was performed on October 12, 2017 with Colorado Springs Imaging. That MRI showed mild spondylosis of the C5-6 and C6-7 disc spaces with minimal posterior osteophyte formation. The facet joints were normal. (Ex. 18, p. 208).
14. Claimant followed up with P.A. Homberger on November 6, 2017 with increased neck pain. P.A. Homberger noted that Claimant stated that by day three of his shift, the pain would increase, and that he had a constant dull pain at the base of his neck, which bothered him the most. Physical examination showed left sided cervical paraspinal tenderness and *tightness* along with left occipital tightness and tenderness. He also demonstrated good range of motion on this date. P.A. Homberger, at that point, elected to have the Claimant change physical therapists, and the Claimant was sent to Falcon Physical Therapy. PA Homberger opined that Claimant was not at MMI as of that date, but could continue to work full-duty, the only restriction being without a shirt-held camera. (Ex. 13, p. 90).
15. Claimant was seen at Falcon Physical Therapy on eight occasions. He started physical therapy there on November 15, 2017. At that time, he complained of pain, *stiffness*, and pain in the left cervical region. Physical examination showed decreased range of motion, pain and decreased muscle strength. Pain was 2/10. (Ex. 16, p. 175). Claimant had physical therapy on November 17, 22, 24, 29, and December 1 and 6. Although the physical therapy was helping, Claimant reported having ongoing continuation of his pain and restriction in range of motion after four shifts on the job.
16. Claimant returned to P.A. Homberger on December 20, 2017. He was having continuing pain and *tightness* and tenderness in both the cervical paraspinal muscles and left occipital tenderness and tightness. P.A. Homberger referred the Claimant to Dr. Abercrombie, a chiropractor. P.A. Homberger noted: "He is not currently at MMI and his date of MMI is unknown due to continued symptoms requiring active medical tx [treatments]." (Ex. 13, p. 85).
17. Claimant treated with Alliance Health Partners between January 26, 2018 and September 20, 2018. Dr. Abercrombie's initial examination report note of January 26, 2018 opined that the Claimant had a left sided cervicothoracic strain/sprain complex with chronic articular involvement of the lower cervical facets and upper thoracic facets/costovertebral joints. (Ex. 15, p. 142). Examination revealed loss of cervical range of motion and *tightness* along the left cervicothoracic region. The Claimant had tenderness across the left trapezial ridge and levator scapulae.

18. Dr. Abercrombie sent an updated report on February 10, 2018 noting improvement but need for additional visits. (Ex. 15, p. 136).
19. Claimant returned to see Dr. Abercrombie on April 2, 2018. He had completed the additional visits, and had continued to improve his left sided lower neck and upper back pain with a 70% improvement overall. Nonetheless, Dr. Abercrombie suggested additional chiropractic visits. (Ex. 15, p. 132).
20. Claimant returned to P.A. Homberger on April 27, 2018. At that time, Claimant was feeling better, but still had the constant dull pain/*tightness*. The spot at the base of the skull on the left side was bothering him the most. On physical examination, P.A. Homberger noted ongoing *tightness* and tenderness of the left cervical paraspinals and tenderness of the left occipital area of the scalp. Pain was 2/10. Claimant was still not at MMI. He was to follow up in a month and continue with chiropractic treatment. (Ex. 13, p. 81).
21. Claimant had ongoing chiropractic care with Dr. Abercrombie, and ongoing follow up examinations with P.A. Homberger, which lasted until September 20, 2018. Claimant improved with the chiropractic treatments, but continued to have left-sided neck pain, which was worse upon the end of the workweek. Dr. Abercrombie's examination of Claimant on September 20 noted mild *tightness* across the cervical extensors; specifically splenius services and across the sub-occipital musculature of the splenius capitis. There was minimal joint restriction at C2-C3 to motion palpation, with minimal reproducible pain patterns. Dr. Abercrombie opined that Claimant had full range of motion in all cervical planes. Dr. Abercrombie noted if the Claimant regressed, he would be happy to see him back. Claimant might also be a candidate for supportive ongoing care. (Ex. 15, p. 119).

Claimant placed at MMI

22. Claimant was seen by P.A. Homberger on October 5, 2018. He was placed at MMI without restrictions, without impairment and without medical maintenance care. P.A. Homberger noted that the Claimant had ongoing tenderness and *tightness* in the left occipital area, but did not note any tenderness or tightness in the cervical paraspinals musculature. Pain at this visit was 1/10. (Ex. 13, p. 70).
23. At hearing, Claimant testified that his pain has always been in the same location since the injury. After the October 5 visit, the Claimant testified that he was in a lot of pain and emailed P.A. Homberger to obtain relief. It took a little while for her to get back to him, but P.A. Homberger authorized a one-time visit to Occupational Health.
24. Claimant saw Dr. Nicholas Kurz for a one-time visit on April 5, 2019. Dr. Kurz' agreed with P.A. Homberger's assessment that the Claimant had not sustained any permanent

physical impairment of his neck from the May 29, 2017 injury. Dr. Kurz also concurred with PA Homberger's MMI date of October 5, 2018. At hearing, Dr. Kurz testified that this visit was not for range-of-motion testing but rather for confirmation of P.A. Homberger's opinion. (Ex. 13, p. 64).

25. Thereafter, Employer filed a Final Admission of Liability ("FAL") dated May 21, 2019. (Ex. 3, pp. 3-13, attaching Dr. Kurz' April 5 report). Claimant timely objected to the Final Admission of Liability and requested a DIME evaluation on the issues of MMI and PPD.

DIME Examination and Report

26. The DIME doctor, Dr. Jack L. Rook, examined the Claimant on August 12 2019. His DIME report was issued August 13, 2019. (Ex. 11, pp. 36-51). His Dr. Rook concurred with the ATP's MMI date [October 5, 2018], but then his narrative actually [mis]stated that the Claimant reached MMI on *April 9, 2019*. This April date actually coincides with the date Dr. Kurz himself examined Claimant, but which then concurred with PA Homberger's MMI date of 10/5/2018. {The ALJ finds that Dr. Rook intended to place Claimant at MMI on 10/5/2018 – a date not being disputed by Respondents}.

27. Dr. Rook also found that Claimant was entitled to a whole person physical impairment rating of 13%. He found that Table 53(II)(B) should apply Further, Dr. Rook was of the opinion that the Claimant should be entitled to ongoing medical maintenance care, since Claimant derived considerable benefit from the chiropractic sessions, but his condition began to deteriorate due to the demands of the job once the treatments ended. (Ex. 11, pp. 47-48).

28. Dr. Rook's pertinent clinical diagnosis was

1. Chronic left-sided neck pain:
 - Myofascial pain syndrome involving left-sided suboccipital, paracervical, upper trapezius, levator scapula, and scalene musculature.
 - Likely component of upper cervical facet mediated pain.
 - Negative upper extremity neurological examination.

29. Respondent timely objected to Dr. Rook's DIME report and requested a hearing on overcoming the DIME opinions of Dr. Rook. Claimant then filed a Response to the Application for Hearing, seeking ongoing medical maintenance and a change of physician.

Respondents' Evidence in Support of Overcoming the DIME

30. Respondents' evidence consists of the additional medical report of Dr. Kurz dated October 3, 2019, (Ex. A, pp. 1-4), Dr. Kurz sworn testimony at the hearing, and Dr. Kurz' medical report concerning his examination of the Claimant of April 5, 2019.
31. At hearing, Dr. Kurz testified that he had reviewed both the reports of Dr. Hall (who had performed an IME for Claimant, as noted below) dated May 1, 2019 and Dr. Rook's DIME report of August 12, 2019. He disagreed with Drs. Hall and Rook's determination that the Claimant was entitled to a Table 53(II)(B) physical impairment rating. Dr. Kurz indicated that in his opinion there was no documentation of *objective* evidence on the patient's *MRI* of any facet issues; therefore, the MRI did not support a finding of facet-mediated pain. Specifically, Dr. Kurz identified pain with cervical extension as an indicator of facet-mediated pain, which he felt was lacking in the records to date. Doctor Kurz reasoned that all of the Claimant's complaints were at the occiput, so he did not believe that the Claimant had any facet involvement as a result of the injury sustained.
32. Regarding Dr. Rook's explanation that Claimant's discontinuation of chiropractic treatment resulted in a significant worsening of his symptoms, Dr. Kurz noted that Claimant saw Dr. Abercrombie on September 20, 2018 and reported minimal pain and had full range of motion. Claimant then saw Paula Homberger at the OHC on October 5, 2018 (more than two weeks later) and had basically the exact same presentation. As such, Dr. Kurz testified that the lack of interval change between September 20, 2018, and October 5, 2018, does not support Claimant's assertions to Dr. Rook that if Claimant went two weeks without chiropractic treatment, he suffered a significant increase in his neck pain.
33. Dr. Kurz also testified that he thought that the treatment that Claimant received was in excess of that which would be recognized by the Medical Treatment Guidelines. If he had been involved in the case, he would have considered placing the Claimant at MMI in August of 2017. However, he testified that the Claimant was correctly placed at maximum medical improvement on October 5, 2018:

Question (by Mr. Chambers): "All right, You believe that—did you believe that Mr. Lindvall was correctly placed at max medical improvement on October 5, 2018?"

Answer (by Dr. Kurz): "Yes." (Transcript, p. 24).

34. Dr. Kurz testified that, in his opinion, in interpreting Table 53 of the AMA Guides, the Claimant really did not have a medically documented injury, since the MRI demonstrated no objective injury, just "old stuff." Dr. Kurz reasoned that, since the MRI was normal, there was no objective evidence of an injury. He opined that Claimant's ongoing pain complaints at this time were not causally related to this motor vehicle

accident. Dr. Kurz suggested that an explanation for Claimant's increased pain following his originally being placed at MMI may have more to do with his ergonomic situation in his cruiser, but he further defined this as "ergonomic" pain which he believes does not necessarily rise to a compensable incident.

35. Dr. Kurz further opined further that the Claimant did not qualified for a Table 53(II)(B) rating, as the Claimant did not demonstrate six months of medically documented rigidity and that his pain improved.

36. Further, Dr. Kurz testified that in order to qualify for a Table 53(II)(B) rating, the rigidity must not ever be resolved, *i.e.*, of a permanent nature:

It has to be for a six-month continuous duration. *And we kind of assume that he's stuck with that, it's not going to go away.* And if you're at the definition of MMI and you still have a stiff neck with reduced range of motion and function and you don't have a disc or intervertebral problem, then that's why that [Table 53] II (B) category is there." (Transcript, p. 67) (emphasis added).

Claimant's IME by Dr. Hall

37. Dr. Timothy Hall performed an IME at the request of the Claimant. (Ex. 12). Dr. Hall reviewed the medical records regarding the 2010 injury, and the medical records of the care and treatment given to the Claimant from his May 29, 2017 injury. This included Dr. Kurz' report of April 5, 2019. He also performed a physical examination on the Claimant.

38. Dr. Hall disagreed with Dr. Kurz' position that "his MMI date stands and he is advised to follow up with his PCP privately for these complaints that are unrelated to his previous date of injury." He noted that Dr. Kurz seemed to feel that the Claimant did have a problem and should see someone but that the issues were not related to the compensable on the job injury - even though he has had no new injuries and the complaints seem to be the same.

39. Dr. Hall opined that that while the Claimant was at MMI while receiving the treatment from Dr. Abercrombie prior to October 5, 2018, he had deteriorated without the treatment, and as of the date that he saw him (May 1, 2019), he was no longer at MMI. Dr. Hall thought that the Claimant needed to return to Dr. Abercrombie for treatment and possibly have facet blocks in the upper left cervical region for diagnostic purposes. Dr. Hall gave a provisional physical impairment rating of 9% whole person impairment with 4% for a Table 53 rating and 5% for loss of range of motion. Dr. Hall opined that the Claimant needed ongoing medical care.

Medial Branch Blocks after the IMEs were Conducted

40. Claimant was referred to Dr. Kenneth Finn, MD, by Dr. Abercrombie. At this point, it was through Claimant's private health insurance. On November 26, 2019, the intake report noted that Claimant reported his pain was 1/10 at best, 9/10 at worst, 3/10 at average, and 4/10 *today* [Nov. 26]. The examination showed limited range of motion in all directions, most symptomatic was extension and left side rotation. Dr. Finn concluded that "Patient likely has facetogenic pain in the upper segments." No radiculopathy was noted. (Ex. 10, p. 29). Medial branch blocks were performed on December 3, 2019. (Ex. 10, p. 26).
41. At hearing, Claimant described the relief from those injections as immediate, but the pain had begun to return by the date of the hearing to approximately 3/10.

Testimony of DIME Physician, Dr. Rook

42. Dr. Rook testified that he had sat through the testimony by Dr. Kurz, and had reviewed Dr. Kurz' additional report of October 3, 2019. He had also reviewed the reports of Dr. Finn. Nothing that had been presented to him since his DIME report of August 12, 2019 changed his opinions as contained therein.
43. Regarding the Table 53 rating, Dr. Rook stated that he disagreed with Dr. Kurz' opinion that the Claimant did not sustain a medical injury on May 29, 2017. He also disagreed with Dr. Kurz that Claimant was not entitled to a Table 53 rating. According to Dr. Rook, the medical records demonstrate on an ongoing basis the constant complaints of neck pain and the objective findings by the medical providers of tightness in the neck, the ongoing findings of loss of range of motion, and tenderness in the cervical spine and sub-occipital area.
44. Dr. Rook testified that he performed a physical examination, consistent with the AMA Guides, which demonstrated ongoing muscle *tightness*, muscle spasms, and diminished cervical range of motion. According to Dr. Rook, the Claimant "fulfills every requirement for an impairment rating utilizing the AMA Guides". Dr. Rook noted that even Dr. Kurz' evaluation describes tightness in Claimant's neck muscles, tenderness in his neck muscles, and ongoing complaints of cervical *discomfort*. He conceded that the MRI results [standing alone] did not support a finding of facet-mediated pain.
45. Dr. Rook felt that this is a classic example of "an individual who has six months of medically documented—well documented pain, rigidity, which is recognized by his range of motion loss and ongoing range of motion loss through the medical records"

Claimant's Testimony in Support of Change of Physician

46. At hearing, Claimant testified that he no longer wished to treat with PA Homberger because he felt that it took too long to get the MRI, and he definitely felt that that he would have improved more quickly if he had seen Dr. Abercrombie earlier. Then, Claimant was asked to read his answer to Interrogatory 3 in its entirety.

Q. Please state the physician with whom you no longer wish to treat.

A. I do not want to treat with the City of Colorado Springs Occupational Health Clinic. I do not want to treat with Paula Homberger...PA because of her delay in referring me to Dr. Abercrombie for chiropractic treatment; I do not want to treat with Dr. ...Nicholas Kurz, DO, because Dr. Kurz does not think I need any treatment. I do not trust the providers at the OCC clinic and disagree with their assessments.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Act, Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's

testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, the ALJ finds Claimant to be sincere and credible at all times pertinent. Claimant has consistently informed all medical providers, both treating and expert witnesses, of the symptoms he was experiencing in an effort to get well and remain at work. Claimant also testified credibly at hearing.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ finds that – as is often the case – the medical practitioners in this case have expressed sincere opinions, based upon sincerely differing medical philosophies. The task of the ALJ here, therefore, is not so much to judge *credibility* per se, but rather *persuasiveness*, attenuated by the burden of proof imposed.

Overcoming a DIME opinion, Generally

E. The finding of a Division Independent Medical Examiner (DIME) may be overcome only by clear and convincing evidence. (CRS 8-42-107(8)(c)). “Clear and convincing” evidence is stronger than a preponderance, is unmistakable, and is free from serious or substantial doubt. *Martinez v. Triangle Sheet Metal, Inc.* (W.C. 4-595-741, ICAO, October 8, 2008) citing *Dilco v. Koltnow*, 613 P. 2d 318 (1980). A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* (W.C. 4-782-625. ICAO May 24, 2010). The question whether a party has overcome the DIME by clear and convincing evidence is one of fact for the ALJ’s determination. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

F. The decisions of a DIME physician are only to be given presumptive effect when provided by the statute. Maximum Medial Improvement is defined at Section 8-40-201(11.5), C.R.S. as: “a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” When a course of treatment has a reasonable prospect of success and a claimant willingly submits to such treatment, a finding of MMI is premature. See, *Reynolds v. ICAO*, 794 P.2d 1080 (Colo. App. 1990). Here, there is no evidence that the care and treatment that Dr. Finn is presently giving to the Claimant is designed to improve the condition but rather

presently the evidence suggests that such treatment is designed to maintain the Claimant's present functioning and is more in the nature of medical maintenance.

G. Section 8-42-107(8)(c), C.R.S., provides that the DIME physician's finding of medical impairment "may be overcome only by clear and convincing evidence." Under this statute, the question of whether the DIME physician properly applied the *AMA Guides* in determining the impairment rating, and whether the rating was overcome by clear and convincing evidence are questions of fact to be determined by the ALJ. See, *Metro Moving and Storage Co. v. Gussert*, supra. Proof of deviation from the rating protocols provides some evidence from which the ALJ may infer that the DIME physician's rating has been overcome. If the DIME has deviated in the application of the *AMA Guides*, then the ALJ must consider the deviation in the context of all other relevant evidence, and need not find that the rating has been overcome unless the deviation casts substantial doubt on the overall validity of the rating.

Overcoming Dr. Rook's DIME opinion, as Applied

H. Table 53 permits the examiner to rate specific disorders of the cervical, thoracic and lumbar spine if the injured person has an intervertebral disc or other soft-tissue lesion which is not operated on, "with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with none to minimal degenerative changes on structural tests." In *McLane Western Inc. v. Industrial Claims Appeals Office*, 996 P.2d 263 (Colo. App. 1999), the Colorado Court of Appeals held that the *AMA Guides* do not require that the pain and rigidity occur before MMI in order to award a rating under Table 53.

I. The Division of Workers' Compensation Desk Aid #11 for Impairment Rating Tips provides that the Claimant must have *objective* pathology, and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Loss of range of motion is applied to the Impairment Rating only once a Table 53 rating has been established. To summarize, if the medical evidence establishes the presence of a specific diagnosis, objective pathology and six months of medically documented pain and rigidity, the claimant is entitled to a Table 53 rating.

J. Dr. Kurz argues for an objective standard as to "rigidity" under Table 53. He also opines that any rigidity under Table 53 not only be of at least 6 months duration, but it must also be of a *permanent* nature. The ALJ does not agree with this interpretation. Table 53(II)(B) does not require - either implicitly or explicitly - that the six months of medically documented rigidity be *objective*. *Bryant v. Transit Mix Concrete*, W.C. No. 5-058-044 (decided June 5, 2019), found that neither the *AMA Guides* nor Desk Aid #11 state that there must be six months of medically documented rigidity which must be *objective*. Rather, ICAO's interpretation of "objective pathology" cited to in Desk Aid #11, is that such language is referring to the "identification of a problem, injury, disorder, condition, or disease that can be identified by virtue of objective signs or

analysis". In reversing and remanding this very undersigned ALJ, ICAO found in *Bryant*, that the term "objective pathology" is in addition to the "six months of medically documented pain and rigidity." One trip to the woodshed is sufficient for this ALJ, but thank you anyway for the opportunity.

K. In this case, Claimant demonstrated *rigidity*, in the form of *tightness*, beginning in June of 2017 (as observed by his physical therapist), continuing at least through September of 2018 (as observed by Dr. Abercrombie). Call it 16 months, minimum. In fact, the *tightness* was still observed by the DIME physician in August, 2019. The ALJ concludes that Table 53 does not require such *rigidity* to be *permanent*. Pain was documented since his first visit, up through the DIME examination.

L. Dr. Rook found that there was evidence of an *objective* pathology, by diagnosing myofascial pain syndrome, and likely facet-mediated pain, due to soft tissue damage to Claimant's neck. While such diagnosis was not directly confirmed by the MRI, the ALJ finds that substantial evidence in the medical record still supports such an objective diagnosis, despite the lack of imaging in support.

M. No serious challenge has been made to the range-of-motion figures compiled by Dr. Rook, nor how he reached his combined 13% whole person impairment rating once he determined [correctly, as found by the ALJ] that Table 53 (II)(B) should be applied to Claimant. Any differences in range of motion constitute a mere difference in medical opinion, insufficient to overcome the DIME opinion. The ALJ concludes that the Respondent has failed to overcome Dr. Rook's DIME impairment rating by clear and convincing evidence and that the 13% impairment rating determined by Dr. Rook should stand.

Medical Maintenance Benefits, Generally

N. The Court of Appeals has established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission*, 759 P. 2d 705 (Colo. 1988). Citing *Grover*, the Court reaffirmed that "before an order for future medical benefits may be entered there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work related injury or occupational disease." Thus, Claimant does not have to prove the need for a specific medical benefit and respondents remain free to contest the reasonable necessity of any future treatment, he must prove the probable need for some treatment after MMI due to the work injury. If Claimant reaches this threshold, the court stated, as the second step, that the ALJ should enter "a general order, similar to that described in *Grover*", supra.

Medical Maintenance Benefits, as Applied

O. In this claim, based upon the reports of Dr. Hall and Dr. Finn, the report and testimony of Dr. Rook and the Claimant's testimony as to the improvement he has felt with the ongoing treatment by Dr. Abercrombie and Dr. Finn, the ALJ concludes that

the Claimant has introduced *highly persuasive* evidence to substantiate his claim for post MMI maintenance medical benefits. Indeed, all of the doctors who have seen the Claimant since he was placed at MMI have indicated a need for ongoing medical maintenance treatment. The ALJ concludes such opinions and testimony substantially outweigh the opinions of Dr. Kurz and PA Homberger. Claimant has proven, by a preponderance of the evidence, that he is entitled to ongoing medical maintenance benefits.

Change of Physician, Generally

P. A claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." § 8-43-404(5)(a), C.R.S.; *In Re Tovar*, W.C. No. 4-597- 412 (ICAO, July 24, 2008); *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d570 (Colo. App. 1996). Because § 8-43-404(5)(a), C.R.S. does not define "proper showing" the ALJ has discretionary authority to determine whether the circumstances presented warrant a change of physician. *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503- 150 (ICAO, May 5, 2006). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.* An ALJ is not required to approve a change of physician simply for personal reasons including a claimant's "mere dissatisfaction" in the provider. *In Re Mark*, W.C. No. 4-570-904 (ICAO, June 19, 2006). Nonetheless, the ALJ is not precluded from considering a claimant's subjective perception of his relationship with the physician. *Gutierrez v. Denver Public Schools*, W.C. No. 4-688- 075 (December 18, 2008).

Change of Physician, as Applied

Q. In this case, Claimant is actually not requesting a formal change in physician, away from Dr. Kurz and PA Homberger at Employer's Occupational Health Clinic, and on to a different ATP. Instead, Claimant argues that Dr. Abercrombie, and also Dr. Finn, by virtue of Dr. Abercrombie's referral therefrom, are now de facto Authorized Treating Physicians. The ALJ finds this reasoning persuasive. According to the sincere and best professional judgment of Dr. Kurz and PA Homberger, there is nothing they can personally offer Claimant at this point. The ALJ agrees that there is no further need for their involvement in Claimant's treatment. Claimant needs continued chiropractic treatment, and in his discretion, facet injections. Both of Employer's providers thought Dr. Abercrombie would be a good choice (and Claimant concurs) to continue with treatment, but they felt that causation was lacking, ergo, Claimant should pay privately. The DIME physician (and ALJ) have now concluded otherwise.

R. Claimant testified that he has no faith in the occupational clinic and P.A. Homberger, as his referral to a specialist was significantly delayed. Nor does he have faith in any care and treatment by Dr. Kurz based upon the one-time examination by Dr. Kurz of the Claimant. In this instance, the ALJ does take note of Claimant's subjective perception of his relationship with Employer's Occupational Clinic, who have stated they

have nothing more to offer him. Dr. Abercrombie, therefore, is an authorized treating chiropractor in this Claimant's claim, and Dr. Abercrombie has referred the Claimant for additional treatment with Dr. Finn. As such there is no need for the ALJ to order a change of physician in this matter. The ALJ concludes that the treatment of this Claimant by Dr. Abercrombie and Dr. Finn, which has been provided since MMI, is reasonably necessary and authorized medical treatment for which the Respondent is responsible for the cost of, pursuant to Section 8-42-101.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Rook has not been overcome. Claimant's Whole Person Impairment Rating is 13%.
2. Claimant is entitled to *Grover* Medical Maintenance Benefits, payable by Employer.
3. Dr. Abercrombie, and his referrals, including Dr. Finn, are Authorized Treating Providers.
4. Respondents are responsible for payment of all treatment rendered by Dr. Abercrombie and his referrals since MMI.
5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: February 14, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- I. Whether Claimant established, by a preponderance of the evidence, that her scheduled impairment should be converted to a whole person.
- II. The extent of Claimant's scheduled or whole person impairment.
- III. Whether Claimant has established, by a preponderance of the evidence, that she is entitled to maintenance medical benefits.

STIPULATIONS

- The parties stipulated that Claimant's average weekly wage is \$890.64.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant worked for Southern Glazer's Wine and Spirits in the warehouse and "pulled" bottles to fill orders, lifted pallets, and lifted cases. She testified that she did this for 5 years.
2. On December 7, 2017, at approximately 8:15 p.m., Claimant reached down to lift an empty pallet with her left hand. The empty pallet weighed more than she expected and while she was lifting it up she felt something pop in her left wrist and she then had the immediate onset of pain and burning in her left hand.
3. On December 8, 2017, Claimant presented to Concentra and was seen by Dr. Karen Larson. At her initial appointment, Claimant reported that she:

[R]eached down to lift an empty pallet which weighed more than she anticipated and hurt the left wrist. She was using the left hand alone. She felt immediate pain then burning in her hand. She was then unable to grip things after that. The pain is at the base of the thumb and over the anterior wrist. Unable to lift liquor bottles after that.

Claimant also complained of throbbing pain that went up to her elbow, as well as some swelling of her hand.

Dr. Larson provided Claimant work restrictions, and prescribed physical therapy, ibuprofen for swelling and pain, and a wrist splint. She also requested Claimant to follow up for recheck before returning to work on Monday night.

4. Claimant continued treating with Dr. Larson, and she became Claimant's primary treating physician for her work injury.
5. On January 5, 2018, Claimant returned to see Dr. Larson. At that time, her assessment of Claimant's condition included i) Left thumb sprain, ii) Left wrist sprain, and iii) tenosynovitis, de Quervain. However, Claimant had continued pain, tenderness, and limited range of motion. Therefore, because Claimant had not improved, she ordered an MRI, required Claimant to continue wearing her splint at all times, and to also use a sling. (*Ex 1, p. 23*)
6. On January 16, 2018, Claimant underwent an MRI. The MRI report indicated the following:
 - i. Constellation of findings consistent with ulnar abutment syndrome resulting in moderate grade partial thickness tear of the TFC.
 - ii. Mild to moderate osteoarthritis of the first carpometacarpal joint.
(*Exhibit 2, p. 60*)
7. On January 19, 2018, Claimant returned to Dr. Larson. Claimant had continued pain and limited grip strength. Dr. Larson also reviewed the MRI report which indicated Claimant also had a tear of her triangular fibrocartilage complex (TFCC). Therefore, she referred Claimant to Dr. Bierbrauer, a hand specialist.
8. On January 25, 2018, Claimant was evaluated by Dr. Bierbrauer. Upon physical examination, Dr. Bierbrauer noted Claimant was tender over the extensor carpi ulnaris tendon and the radial styloid. He further noted that Claimant had a positive Finkelstein's maneuver. He also reviewed the MRI. It was his assessment that the MRI demonstrated degenerative changes of the TFCC consistent with Claimant's age and use with no evidence of an acute traumatic event to the TFCC. However, he also diagnosed Claimant was suffering from Kienbock's disease of the lunate.
9. Dr. Bierbrauer concluded that:

In my judgment, the patient has left wrist Kienbock's disease, although this is likely chronic and not related to her most recent injury. In addition, she has a new onset ulnar and radial-sided wrist pain consistent with both the extensor carpi ulnaris tendonitis and de Quervain's tendonitis. I suggested injections for both of these tendonitis issues and she agrees.
10. On February 8, 2018, Claimant returned to Dr. Bierbrauer and reported no relief from the injections. Claimant still had pain and limited range of motion. Based on Claimant's lack of response to the injections, Dr. Bierbrauer concluded the following:

In my judgment, the patient's chronic left wrist pain. It is seeming more likely that the symptoms are coming from her Kienbock's disease. Unfortunately, given her lack of any significant ulnar positive or negative variance and lack of significant collapse of the lunate, I do not really have any

further surgical options for her. Although core decompression of the radius is possible, this reads like necessary surgery or surgery for surgery sake and there is no direct correlation between core decompression of the radius and lunate improvement with Kienbock's disease. The disease likely has a self-sustaining course either towards improvement or towards worsening regardless of any further surgical intervention at this time given the unusual variance of her DRUJ.

He further concluded that a second opinion might be warranted with someone else who might be able to find something that he cannot. But, in his opinion, he did not think Claimant required, or would benefit from, surgical intervention at this time. He further concluded that job retraining may be helpful since continued physical labor might make it worse. (*Ex. 3, pp. 61-62*)

11. On June 11, 2018, Claimant was evaluated by another hand specialist, Dr. Kulvinder Sachar, for a second opinion. It does not appear that he had Dr. Bierbrauer's report and diagnosis of Kienbock's disease. Based on his evaluation of Claimant and review of her MRI films, Dr. Sachar thought the MRI findings were more consistent with ulnocarpal impaction syndrome. However, Dr. Sachar could not provide a firm diagnosis because Claimant's anatomic abnormalities were not consistent with her clinical complaints. Therefore, based on his inability to provide a firm diagnosis, and Claimant's lack of any response to the prior injection performed by Dr. Bierbrauer, Dr. Kulvinder did not think Claimant was a surgical candidate.
12. On July 19, 2018, in anticipation of being placed at MMI, Claimant underwent a functional capacities evaluation (FCE) at Select Physical Therapy. (*Cl. Ex. 5*) The FCE lasted three hours. Based on Claimant's performance during the FCE, it was concluded that Claimant exhibited consistent performance throughout the evaluation. It was further concluded that Claimant's consistent performance during the FCE, combined with her physiologic responses (heart rate and respiratory rate), movement and muscle recruitment patterns, and both aware and unaware observation, the results of the FCE were considered to be an accurate representation of Claimant's functional abilities. Based on the FCE, it was concluded that Claimant's remaining left handed grip strength was negligible. (*Ex 5, pp. 72-74*) Based on the results of the FCE, the physical therapist reported that Claimant will need modification of her activities of daily living including "dressing, grooming, bathing, hygiene, cooking, laundry, only using right hand for these activities." (*Ex. 5, p. 68*)
13. Consistent with the findings of the FCE, Claimant testified that her activities of daily living, such as dressing, grooming, bathing, hygiene, cooking, and laundry have to be done with her right hand only. She also testified that she has a difficult time zipping clothes, using buttons, tying her shoes, and cutting her food.
14. On July 24, 2018, Dr. Larson placed Claimant at MMI. Based on her evaluation and examination of Claimant, she provided Claimant 43% impairment rating of the left

upper extremity, or 26% whole person.¹ She noted that Dr. Sachar had not recommended a fusion of the left wrist because adding this to the right wrist fusion would “essentially leave her completely disabled.” (*Ex. 1, p. 1*) In assessing Claimant’s impairment, Dr. Larson assigned an impairment rating for both abnormal wrist motion as well as decreased grip strength.

15. Given the number of times Dr. Larson saw and evaluated Claimant, combined with the fact that she had an FCE performed which also documented Claimant’s limited grip strength, and the FCE was found to be valid, Dr. Larson’s assessment of the degree of Claimant’s decreased grip strength, and decision to rate it, is found to be reasonable and supported by the overall medical record. Therefore, the ALJ finds Dr. Larson’s opinion regarding the Claimant’s overall impairment rating to be credible and persuasive.
16. Claimant was being prescribed Tramadol for pain by Dr. Larson. She testified that Dr. Larson told her that she would have to get her pain medication from the VA after she was placed at MMI. Claimant said that there was no difference between her pain levels pre MMI and post MMI. Moreover, Dr. Larson prescribed Claimant Tramadol in her final visit with the Claimant on July 24, 2018. In addition, in the FCE, Claimant’s pain was reported at 9.5 at worst and 6 at best. Claimant also testified that she has had to seek treatment through the VA for her admitted injury. She stated that they have given her medications and have also provided her a new splint, which she was wearing at the time of the hearing. Thus, Claimant is in need of additional medical treatment to relieve her from the effects of her work injury or prevent further deterioration. Therefore, Claimant is in need of maintenance medical treatment.
17. Respondents did not file a Final Admission of Liability for the impairment rating provided by Dr. Larson. Instead they timely requested a Colorado Department of Labor Independent Medical Exam. Dr. Stanley Ginsburg was chosen as the physician.
18. The DIME took place on January 3, 2019 with Dr. Ginsburg. Dr. Ginsburg indicated in his exam that Claimant noted that at rest, there was a throbbing in her wrist, fingers and forearm. (*Ex 7, p. 116*) He also indicated Claimant had a prior work related injury to her right wrist that resulted in a fusion in 1987. Dr. Ginsburg pointed out the FCE that was done on July 18, 2019 demonstrated that she “was unable to use her left hand for any bilateral lifting or unilateral left hand carrying. (*Ex 7. p. 119*) He agreed with the determination that Claimant reached maximum medical improvement. In assessing Claimant’s impairment, he provided Claimant a 19% wrist impairment rating for abnormal range of motion and an additional 4% for impairment to her ulnar nerve, which combined to a 22% upper extremity impairment, or 13% whole person impairment. (*Ex. 7*) However, it appears he had a difficult time fully examining Claimant’s wrist and hand due to severe pain complaints

¹ The parties agreed at hearing that Dr. Larson made an error in her conversion and that the actual whole person conversion of 43% upper extremity should be 23%. However, Claimant, in her proposed order indicates that after further review, the parties have agreed that the original rating of 26% was the correct conversion.

and the fact that Claimant often pulled away while he was trying to perform his examination. Based on his inability to perform a complete examination, he merely noted that Claimant's "Grip seemed equal bilaterally" and did not provide Claimant a rating for her decreased grip strength in the same manner as Dr. Larson.

19. Dr. Ginsburg also indicated that there was no need for future medical treatment, despite Dr. Larson prescribing Claimant Tramadol when placing Claimant at MMI and Claimant's ongoing pain complaints. Moreover, Dr. Ginsburg indicated that Claimant should return to the VA for treatment for her left wrist.
20. Respondents filed a Final Admission of Liability for the upper extremity rating of 22% of Dr. Ginsburg on March 19, 2019. Respondents did not admit for treatment after the date of MMI.
21. Claimant testified that Dr. Ginsburg did not do any testing of her wrist or hand at the time of his exam. She further testified that he did not use any instrument to measure her range of motion. She stated that it was her opinion that Dr. Larson was more thorough and also had known her and examined her for other injuries prior to this claim. She further testified that Dr. Larson did use an instrument to measure range of motion. However, Dr. Ginsburg's impairment rating worksheet was included as part of his DIME report and it does contain range of motion measurements regarding Claimant's left wrist and such measurements are different than those recorded by Dr. Larson. Therefore, it appears Dr. Ginsburg did perform range of motion measurements and did not merely adopt another physician's range of motion measurements.
22. The primary difference between the rating provided by Dr. Larson and the rating provided by Dr. Ginsburg is that Dr. Larson provided Claimant a rating for her decreased grip strength and Dr. Ginsburg decided to rate any decrease in grip strength or hand weakness via an ulnar nerve rating.
23. Claimant timely objected and filed an Application for Hearing.
24. Claimant's testimony, as well as her statements contained in the medical records, are found to be credible regarding her ongoing pain, limitations in performing her activities of daily living, and her restrictions. Thus, the injury to Claimant's left wrist is disabling. And, the resulting disability is more significant due to her preexisting disability involving her right wrist. However, her functional impairment is limited to her left hand and wrist and does not extend beyond the shoulder. Therefore, Claimant's functional impairment is on the schedule.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder has considered, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established, by a preponderance of the evidence, that her scheduled impairment should be converted to a whole person.

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of an "arm at the shoulder" as

well as the loss of an “arm above the hand including the wrist. See §8-42-107(2)(a) and §8-42-107(2)(a.5), C.R.S.

When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. See §8-42-107(8)(c), C.R.S. Therefore, the dispositive issue is whether Claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. See *Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether Claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), or a loss of an arm above the hand including the wrist under §8-42-107(2)(a.5), or a whole person medical impairment compensable under §8-42-107(8)(c), is determined on a case-by-case basis. See *DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

The Judge must thus determine the situs of Claimant’s “functional impairment.” *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit Claimant’s ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O’Connell v. Don’s Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

Moreover, although the opinions and findings of the DIME physician may be relevant to this determination, the ALJ is not required to afford it any special weight. See *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000). It is only after the ALJ determines Claimant sustained whole person impairment that the DIME physician’s rating becomes entitled to presumptive effect under § 8-42-107(8)(c), C.R.S. 2001. See *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998) (DIME provisions do not apply to the rating of scheduled injuries).

In order to determine whether Claimant’s rating is on the schedule or not, the focus is on the location of the functional impairment that was caused by the accident and the resulting injury. As found, Claimant’s functional impairment is limited to her left hand and wrist. The fact that Claimant has difficulties performing activities of daily living, such as dressing, grooming, bathing, hygiene, cooking, laundry, and work activities does not establish Claimant has functional impairment beyond the arm at the shoulder in this case. Moreover, the fact that Claimant has a difficult time zipping clothes, using buttons, tying her shoes, cutting her food and working because of her work injury to her left wrist does not establish Claimant has functional impairment beyond the schedule in this case.

The ALJ is mindful that Claimant’s disability is significant. However, conversion of a scheduled rating is not based on the extent of the disability caused by the work injury, but rather the location of the underlying functional impairment of the anatomical

structures or body systems that were altered by the injury. And, as found in this case, Claimant's functional impairment is limited to her left hand and wrist. Consequently, based on the totality of the evidence, Claimant has failed to establish by a preponderance of the evidence that her wrist injury has resulted in functional impairment that is beyond the schedule and should be converted to a whole person rating.

II. The extent of Claimant's scheduled impairment.

Claimant has the burden of showing the extent of her scheduled impairment by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc. and Indemnity Care ESIS Inc.*, W.C. No. 4-777-882 (ICAO, Nov. 5, 2010); *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (ICAO, June 5, 2007).

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of §8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018).

As found, on July 24, 2018, Dr. Larson placed Claimant at MMI. Based on her evaluation and examination of Claimant, she provided Claimant a 43% impairment rating of the left upper extremity, or 26% whole person. In assessing Claimant's impairment, Dr. Larson assigned an impairment rating for both abnormal wrist motion as well as decreased grip strength. Given the number of times Dr. Larson saw and evaluated Claimant, combined with the fact that she had an FCE performed which also documented Claimant's limited grip strength, and the FCE was found to be valid, Dr. Larson's assessment of the degree of Claimant's decreased grip strength, and decision to rate it, is found to be reasonable and persuasive since it is supported by the overall medical record. Dr. Ginsburg, however, seemed to dismiss Claimant's limited grip strength due to his inability to fully evaluate Claimant's left hand and wrist due to severe pain and the fact that Claimant would often pull away during the examination. Therefore, the ALJ credits and finds Dr. Larson's opinion regarding the Claimant's overall impairment rating to be more credible and persuasive when compared to Dr. Ginsburg's.

The ALJ finds and concludes Claimant established by a preponderance of the evidence that she sustained a 43% scheduled impairment to her left upper extremity due to her work injury.

III. Whether Claimant has established, by a preponderance of the evidence, that she is entitled to maintenance medical benefits.

The need for medical treatment may extend beyond the point of MMI where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, W. C. No. 4-543-730, (ICAO, July 14, 2006).

As found, Claimant was being prescribed Tramadol for pain by Dr. Larson before being placed at MMI. Moreover, on the date she was placed at MMI, Dr. Larson prescribed Claimant Tramadol to continue taking after she was placed at MMI. Moreover, in the FCE, Claimant's pain was reported at 9.5 at worst and 6 at best. Claimant also credibly testified that she has had to seek treatment through the VA for her admitted injury and that they have prescribed her medications and also provided her a new splint, which she was wearing at the time of the hearing. Thus, Claimant is in need of additional medical treatment to relieve her from the effects of her work injury or prevent further deterioration.

Therefore, Claimant established by a preponderance of the evidence that she is in need of future medical treatment to relieve her from the effects of her work injury and to prevent further deterioration of her condition. Thus, Claimant established she is entitled to maintenance medical treatment.

ORDER

Based upon the foregoing specific findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's injury resulted in a functional impairment that is set forth on the schedule within the meaning of section 8-42-107(2)(a).

2. Claimant's request to convert her scheduled rating to a whole person rating is denied and dismissed.
3. Claimant's injury resulted in a 43% scheduled impairment. Respondents shall pay Claimant medical impairment benefits based upon a 43% scheduled impairment of her left upper extremity.
4. Claimant's request for a general award of maintenance medical treatment is granted.
5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 20, 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- I. Whether Claimant has presented any issues that are not jurisdictionally barred.
- II. Whether Respondents may claim an overpayment in the amount of \$198,620.48.
- III. What terms of repayment, if any, should be ordered.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted work related injury on September 10, 2012.
2. On May 31, 2019, respondents filed a final admission of liability following the completion of a Division IME. In that Final Admission of Liability respondents admitted for the following benefits:
 - TTD benefits from 12.19.12 – 11.11.13 in the amount of \$35,663.44.
 - Medical benefits in the amount of \$29,964.27.
 - PPD for an 18% scheduled impairment rating in the amount of \$9,995.73.
 - Disfigurement benefits in the amount of \$1,000.
 - AWW of \$1,141.67.
 - MMI date of 11.12.13 as found by Division IME Physician Stephen Lindenbaum.
 - All other benefits not specifically admitted were noted to be denied.

See, Respondents' Exhibit L.
3. In the May 31, 2019, Final Admission of Liability, Respondents also asserted an overpayment in the amount of \$198,620.48. *See Respondents' Exhibit L.*
4. On July 25, 2019, claimant filed an application for hearing endorsing the following issues:
 - Compensability
 - Medical benefits including authorized provider and reasonable and necessary.
 - AWW

- Disfigurement
- PTD
- Penalties

See, Respondents' Exhibit M.

5. Claimant's July 25, 2019 application for hearing was struck for discovery violations pursuant to a prehearing conference order entered by PALJ John H. Sandberg on August 27, 2019. *See, Respondents' Exhibit O.*
6. Claimant thereafter filed a subsequent application for hearing on September 17, 2019, endorsing the same issues as in the July 25, 2019 application for hearing, but limiting the penalty allegation to the following:

Fraud, supervisor Ron [Redacted], Hector [Redacted] [sic], [Redacted], [Redacted] ie: changing medical records/documents ie; dates and times on x-ray films. I have no proof of this but that's what took place!! [sic] have courtroom testimony, If [sic] we ever get to court, I will explain the ugly, egregious actions of workers comp. doctors injured workers are subject to by this work com. system.

See, Respondents' Exhibit P.

7. This hearing then proceeded on January 21, 2020, at which time Respondents raised a jurisdictional argument, noting that the claim was now closed whereas Claimant had not timely filed his application for hearing as required by C.R.S. As such, Respondents argued that all issues endorsed by Claimant on both the July 25, 2019 application for hearing and the September 17, 2019 application for hearing were closed as a matter of law and that the Office of Administrative Courts and this ALJ did not have jurisdiction to hear the issues Claimant endorsed.
8. Claimant was heard on this issue, and this ALJ advised Claimant that he was proceeding *pro se* and offered Claimant the opportunity to seek counsel, which he declined. Claimant was further advised that this ALJ was required to hold Claimant to the same standards of law and procedure as an attorney even though he was proceeding *pro se*.
9. Claimant was permitted to present argument and addressed various inequities he believed existed in the workers' compensation system.
10. In their October 11, 2019 response to application for hearing, Respondents endorsed the additional issue of an overpayment that had been documented in the May 31, 2019 final admission of liability. *See, Respondents' Exhibit R.* At hearing Respondents noted that they wanted to proceed to address the overpayment issue since the one year statutory limitation was approaching in May of 2020. That overpayment was specifically related to the continuance of TTD payments made to claimant after the Division IME's date of MMI, November 12, 2013. The overpayment totaled \$198,620.48.
11. At hearing claims representative, Debra [Redacted] testified as to the calculation of

the overpayment, the reason for the overpayment, and the authenticity of the payment history records submitted by Respondents at Respondents' Exhibit S. That testimony and the payment history establishes that Claimant was overpaid in TTD benefits by \$198,620.48 after offsets were taken for his admitted PPD award.

12. Claimant testified as to his income and other available resources to repay the overpayment. Claimant testified that at this time he does not have any additional funds to make any repayment and was currently living in his RV and getting food assistance from shelters in order to survive.
13. Claimant testified that he has not worked since the industrial injury, but that he does receive social security benefits, which he estimated to be approximately \$1,100.00 to \$1,200.00 per month.
14. Claimant also testified that his monthly expenses exceed his monthly social security benefits. Claimant estimated some of his monthly expenses are as follows:
 - Mobile home – RV – space is \$500.00 per month during the winter months and \$1,000.00 per month during the summer months. Therefore, the average monthly rental fee to park and live in his RV is \$750.00.
 - Propane for his RV runs between \$120.00 and \$200.00 per month, but yet that cost is dependent upon whether he runs his furnace in the winter, which is currently broken.
 - His monthly gas expenses for his Chevy Tahoe truck average \$400.00 to \$550.00 per month and his insurance is approximately \$100.00 per month.
 - Costs associated with maintaining his truck and RV vary and he makes repairs when necessary and when he has the money. For example, last year he purchased new tires for \$1,200. He also spent \$120.00 for new brake pads and calipers for one wheel, since he could not afford to fix all of them.
15. Claimant's monthly expenses exceed his monthly social security benefits before the cost of food is taken into consideration.
16. Claimant also testified that because his monthly expenses exceed his monthly income, he relies upon food assistance from shelters for food.
17. Claimant also testified that since he has been unable to work since his industrial injury, and that his income is limited to his social security benefits, he has had to sell off certain items of personal property to help make ends meet.
18. The ALJ finds Claimant's testimony regarding his current financial situation at this time to be credible and persuasive regarding his inability to repay the overpayment.
19. Claimant's date of birth is February 15, 1954. Therefore, as of the date of this Order, Claimant is 66-years-old.
20. Based on Claimant's financial situation at this time, Claimant does not have sufficient income or resources to pay back the overpayment. Moreover, Claimant does not have sufficient income or resources at this time from which the ALJ can fashion a reasonable payment plan for Claimant to pay back the overpayment. Lastly, there is no indication Claimant's financial situation is expected to improve in

the near future. Therefore, Claimant lacks the ability to repay the overpayment at this time.

CONCLUSIONS OF LAW

Based upon the foregoing specific findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Issues Raised at Hearing

An uncontested final admission of liability automatically closes a case “as to the issues admitted in the final admission.” C.R.S. 8-43-203(2)(b)(II). Accordingly, the failure to properly contest a final admission of liability closes the claim on all admitted issues. *Dyrkopp v. ICAO*, 30 P.3d 821(Colo. App. 2001).

Courts have treated provisions for objecting to and contesting a final admission as jurisdictional. *Roddam v. Rocky Mountain Recycling*, W.C. No. 4-367-003 (ICAO, Jan. 24, 2005) (citing *Town of Ignacio v. Indus. Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *Dalco Industries, Inc. v. Garcia*, 867 P.2d 156 (Colo. App. 1993).

In *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261 (Colo. App. 2004), the Court stated that “we conclude that a claimant has thirty days after the date an employer files an FAL to file an application for hearing...” *Id.* at 264. If the claimant does not do so, the issues admitted in the final admission are closed. *Id.* See also *Berg v. Indus. Claim Appeals Office*, 128 P.3d 270 (Colo. App. No. 04CA1130, August 11, 2005) (case automatically closes unless claimant files an objection to the final admission within thirty days and requests a hearing on any disputed issues that are ripe); *Newbrey v. Valley Excavating, Inc.*, W.C. No. 4535.529 (ICAO, Jan. 18, 2006).

Claimant can be barred from pursuing additional compensation after a final admission of all liability if a timely objection and application for hearing on the issues is not filed. C.R.S. § 8-43-203 (2) (b) (II). *Peregoy v. ICAO*, 87 P.3d 261 (Colo. App. 2004). That statute puts it in these terms: “the claimant may contest this admission if the claimant feels entitled to more compensation.” If the claimant does not do so in a timely manner, “the case will be automatically closed as to the issues admitted.” *Id.*; see, e.g. *Heib v. Devereux Cleo Wallace*, W.C. No. 4-626-898 (ICAO March 15, 2017). “Applying time limits to a claimant’s right to contest closure is rational and advances that purpose.” [emphasis supplied] *Olivas-Soto v. ICAO*, 143 P.3d 1178 (Colo. App. 2006), citing *Peregoy, supra*.

“An issue is ripe for hearing when it is real, immediate, and fit for adjudication.” *Youngs v. Industrial Claim Appeals Office*, 297 P.3d 964, 969 (Colo.App. 2012) (quoting *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3d 1178 (Colo.App. 2006). The term “fit for adjudication” refers to a disputed issue concerning which there is no legal impediment to immediate adjudication. See *Maestas v. Wal Mart Stores, Inc.*, W.C. 4-717-132 (Jan. 22, 2009) (quoting *Olivas-Soto v. Genesis Consolidated Services*, W. C. No. 4-518-876) (November 02, 2005), *affd Olivas-Soto v. Industrial Claim Appeals Office, supra*)).” *McMeekin v. Memorial Gardens and Reliance National Indemnity*, W.C. No, 4-384-910 (September 30, 2014).

In *Dyrkopp v. Industrial Claim Appeals Office*, 30 P.3d 821, 822 (Colo. App. 2001), the Court of Appeals held that an admission for PPD benefits constitutes an implicit denial of liability for PTD benefits because both types of benefits “compensate for a claimant's permanent loss of earning capacity.”

Moreover, section 8-43-203 (2) (b) (II) is part of a statutory scheme designed to promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a

legitimate controversy. *Dyrkopp v. Industrial Claim Appeals Office* 30 P.3d 821(Colo. App. 2001); *Cibola Construction v. Industrial Claim Appeals Office*, 971 P.2d 666 (Colo. App. 1998). An order, whether resulting from an admission, an agreement, or a contested hearing constitutes an "award." Thus, after such an award becomes final by the exhaustion of, or the failure to exhaust, review proceedings, no further proceedings to increase or decrease any such benefits beyond those granted by the order are authorized, unless there is an appropriate further order entered directing that those proceedings be reopened. *Brown and Root, Inc. v. Indus. Claim Appeals Office*, 833 P.2d 780, 783 (Colo. App. 1991). The final admissions of liability filed by the respondents were uncontested and the matter was therefore closed." *Feeley v. Century Communications and Sentry Insurance Company*, W.C. No. 4-393-063 (July 6, 2007).

Here, Claimant failed to file his application for hearing until July 25, 2019, 55 days after the final admission of liability was filed. Claimant admitted at hearing that he had failed to timely file the application for hearing.

As for the penalty endorsed by claimant, he did not provide any evidence on this issue that would support a finding of a violation of the Act. "Penalties may be imposed against an employer who '(1) violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or the Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or the Panel.'" *Fera v. Indus. Claim Appeals Office of State*, 169 P.3d 231, 234 (Colo. App. 2007), *as modified on denial of reh'g* (June 21, 2007).

Pursuant to the plain language of section 8-43-304(5), C.R.S., "[a] request for penalties shall be filed with the director or administrative law judge within one year after the date that the requesting party first knew or reasonably should have known the facts giving rise to a possible penalty." "Under the plain language of § 8-43-304(5), a request for penalties must be filed within one year of the date a party 'first' knows or reasonably should know 'the facts giving rise to a possible penalty.'" *Spracklin v. Indus. Claim Appeals Office*, 66 P.3d 176, 178 (Colo. App. 2002).

Here, Claimant failed to provide any specific evidence regarding the vague penalty allegation that would support a violation of the Act, or a violation of a duty or order entered by the OAC, the DOWC, the Director or the ICAO Panel. The imaging referred to by claimant, yet not produced, would have occurred over the one year limitation.

Pro se litigants must adhere to the same principles and procedures as those who are qualified to practice law. Further, *pro se* parties must be prepared to accept the consequences of their own tactical and procedural errors. *Manka v. Martin*, 200 Colo. 260, 614 P.2d 875 (1980); *Rosenberg v. Grady*, 843 P.2d 25 (Colo. App. 1992).

Section 8-42-113.5(1)(c), C.R.S. provides that the insurer is authorized to seek an order for repayment of an overpayment, and ALJs are expressly granted authority in § 8-43-207(q), C.R.S., to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds*, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has

discretion to fashion a remedy. Further, the ALJ's schedule for recoupment of an overpayment will not be disturbed absent an abuse of discretion. See *Louisiana Pacific Corp. v. Smith*, 881 P.2d 456 (Colo. App. 1994). An abuse of discretion is not shown unless the order is beyond the bounds of reason, as where it is contrary to law or unsupported by the evidence. See *Pizza Hut v. Industrial Claim Appeals Office*, 18 P.3d 867 (Colo. App. 2001).

The Court of Appeals and the ICAO have addressed circumstances of overpayment similar to those in this claim. In *Turner v. Chipolte Mexican Grill*, W.C. No. 4-893-631-07 (February 8, 2018) the claimant was ordered to pay back a \$97,641.12 overpayment that had accrued following a Division IME back date of MMI. The Court of Appeals upheld the ICAO holding in *Turner v. ICAO and Chipolte Mexican Grill*, 18CA0392 (Colo. App. 11.29.18)(not selected for publication).

As was the case in *Turner*, Respondents have established by a preponderance of the evidence in this matter an overpayment for TTD paid after the date of MMI assigned by the Division IME, and as documented in the final admission of liability, in the amount of \$198,620.48. Moreover, since Respondents have established an overpayment, the ALJ must look at fashioning a remedy, such as schedule for recoupment of the overpayment.

However, in this case, the ALJ concludes Claimant established by a preponderance of the evidence that he lacks the financial ability to pay back the overpayment at this time. Moreover, the ALJ concludes that based on Claimant's current financial condition, he also established by a preponderance of the evidence that he lacks the ability to make scheduled payments, in any amount, to pay back the overpayment at this time.

ORDER

IT IS, THEREFORE, ORDERED THAT:

- A. The issues endorsed for hearing by Claimant are dismissed with prejudice for lack of jurisdiction and case closure.
- B. Claimant's allegations related to penalties are dismissed with prejudice based on lack of evidence of a violation, jurisdiction, and case closure.
- C. Respondents' request for an overpayment order is granted. Claimant has been overpaid in the amount of \$198,620.48.
- D. Respondents' request for an order requiring Claimant to repay the overpayment at this time, in some fashion, is denied since Claimant does not have sufficient income or resources at this time to begin paying back the overpayment.
- E. Should Claimant's claim be reopened and he is awarded additional disability benefits, Respondents may seek to recover the overpayment from such benefits.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 21, 2020.

WORKERS' COMPENSATION NO. WC 5-071-467-002**

ISSUES

- Did Claimant prove a basis to amend the admitted average weekly wage (AWW) by a preponderance of the evidence? If so, what is the appropriate AWW?
- Did Claimant prove Respondents should be penalized under § 8-43-304(1) for failing to pay interest on Claimant's PPD award as required by this ALJ's July 18, 2019 Summary Order and § 8-43-410(2)?

FINDINGS OF FACT

1. Claimant suffered an admitted injury on February 3, 2017.
2. Claimant was earning \$22 per hour at the time of his injury. He was paid hourly, every other week. His wages fluctuated based on available work in any week. In the year before the work accident, Claimant's bi-weekly paychecks ranged from a high of \$1,796 and a low of \$946.
3. Respondents calculated the admitted AWW of \$806.75 by averaging Claimant's earnings over the 26 pay periods (52 weeks) before the date of injury.
4. Claimant requests an AWW of \$871.75, based on his earnings in the six weeks before the accident. In the alternative, Claimant requests \$829.12, based on the six weeks before and six weeks after the accident.
5. Claimant failed to prove his AWW is \$871.75 or \$829.12. The admitted AWW of \$806.75 fairly approximates Claimant's earnings at the time of injury and accounts for his injury-related wage loss.
6. Claimant's ATP, Dr. Thomas Centi, placed him at MMI on March 14, 2017 without impairment. Respondents filed a Final Admission of Liability (FAL) on March 22, 2018 based on Dr. Centi's MMI report. Claimant timely objected to the FAL and requested a DIME.
7. Dr. William Watson performed the DIME on September 4, 2018. Dr. Watson determined Claimant reached MMI on March 14, 2017 and was not entitled to an impairment rating. Respondents filed an FAL based on Dr. Watson's DIME report.
8. Claimant applied for a hearing to challenge the DIME's determination regarding impairment. On July 18, 2019, the undersigned ALJ issued a Summary Order finding Claimant overcame the DIME by clear and convincing evidence. The ALJ ordered that "Insurer shall pay Claimant PPD benefits based on an 8% whole person thoracic rating," and "Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due."

9. On July 26, 2019, Insurer filed an FAL based on the Summary Order. The FAL admitted for an AWW of \$806.75, and \$25,172.42 in PPD benefits from March 14, 2027 (the MMI date) through February 16, 2018. Insurer paid the PPD in a lump sum when it filed the FAL, but specifically denied any interest on the PPD award. Insurer's rationale was set forth in the "Remarks" section as:

Per the attached to Summary Order from ALJ Patrick Spencer, dated 07/18/2019, the injured worker has reached MMI and was awarded an 8% w/p impairment rating. I have also attached the original DIME report from Dr. Watson dated 9-04-2018 that will confirm the MMI date. The Summary Order dated 7-18-2019 also states that the insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due. PPD benefits were not due prior to the 7-18-2019 Summary Order, so no interest admitted or paid pursuant [to] *Dr. Pepper Bottling Co. v. Industrial Commission*, 134 Colo. 238, 301 P.2d 710 (1956) (retroactive compensation due and payable when it is ordered); cited in *Trujillo v. CF&I Steel Corporation*, W.C. 3-516-592 (ICAO March 9, 1987) and *Reed v. City of Colorado Springs*, W.C. No. 4-528-594 (ICAO February 4, 2009).

10. Claimant's PPD benefits were "due" on the date of MMI, and continuing every two weeks through February 16, 2018.

11. Insurer was required to pay the accrued statutory interest no later than Monday, August 19, 2019 (30 days from July 18, 2019 was a Saturday). As of the hearing, Insurer had paid no interest, and no additional evidence was submitted to show they have paid any interest since the hearing. This results in a delay of 187 days through the date of this Order.

12. Claimant proved Insurer should be penalized \$100 per day for violating the July 18, 2019 order to pay interest on the PPD award and for violating § 8-43-410(2). The total penalty is \$18,700 through the date of this order (\$100 x 187 days). The penalty shall continue accruing at the rate of \$100 per day until Insurer pays the interest retroactive to the date of MMI.

CONCLUSIONS OF LAW

A. Average weekly wage

Section 8-42-102(2) provides compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

As found, Claimant did not prove a basis to change the admitted AWW of \$806.75. Claimant was an hourly worker whose wages fluctuated based on the work available in any given week. There is no persuasive evidence of a pay raise or other distorting factor that would warrant using only the 6 weeks before the injury as suggested by Claimant. Nor is the ALJ inclined to utilize post-injury wages. This ALJ generally considers the 12 or 16 weeks before the accident to be fairly representative of a claimant's preinjury earnings absent a compelling reason to use a longer or shorter period. But either measure (12 or 16 weeks) results in a lower number than the admitted AWW. Even if we exclude the December 23, 2016 paycheck on the supposition it was distorted by the holidays, the resulting 12-week average would be only slightly different from the admitted AWW. After considering all the evidence presented, the ALJ sees no reason to disturb the admitted AWW of \$806.75.

B. General standards governing penalties

Section 8-43-304(1) provides that an insurer "who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director," shall be punished by penalties of up to \$1,000 per day.

The assessment of penalties is governed by an objective standard of negligence, and involves a two-step analysis. First, the ALJ must determine whether the insurer or employer violated the Act, a rule, or an order. Second, the ALJ must determine whether the violation was objectively reasonable. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003). An insurer acts unreasonably if it fails to take action that a reasonable insurer would take to comply with the statute, a rule or an order. *Pioneers Hospital, supra*. To be objectively reasonable, an insurer's action (or inaction) must be predicated on "a rational argument based in law or fact." *Diversified Veterans Corporate Center v. Hewuse, supra*. Because the analysis involves an objective standard, the claimant need not show the insurer knew or should have known its actions were unreasonable. *Pueblo School District No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996). All parties are presumed to know the law, and a claimant can establish a *prima facie* showing of unreasonable conduct by proving an insurer violated the statute or a rule of procedure. If the claimant makes a *prima facie* showing, the burden shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*; *Human Resource Co. v. Industrial Claim Appeals Office*, 984 P.2d 1194 (Colo. App. 1999). To prove a rational basis in law or fact, a party must present admissible evidence, such as sworn testimony or documents; it cannot rest simply on arguments or statements of counsel. *E.g., Kelly v. Kaiser-Hill Company LLC*, W.C. No. 4-332-063 (August 11, 2000)

C. Claimant proved Respondents should be penalized

Claimant argues Respondents should be penalized for violating the July 18, 2018 Summary Order directing Insurer to pay statutory interest on all benefits not paid when due. Nonpayment of interest also implicates § 8-43-410(2), a self-executing provision that requires respondents to “pay interest at the rate of eight percent per annum on all sums not paid upon the date fixed by the award of the director or administrative law judge for the payment thereof.”

As found, Claimant proved Respondents should be penalized because their refusal to pay interest was not objectively reasonable.

The courts long ago decided that past-due benefits were “due” for interest purposes on the date on which the claimant first became entitled to the benefit, not the date of an order after litigation. In *Beatrice Foods Co., Inc. v. Padilla*, 747 P.2d 685 (Colo. App. 1987), the parties had engaged in protracted litigation and appeals regarding whether the claimant could reopen a settlement. Eventually the claimant was awarded past-due TTD benefits with interest retroactive to the date the TTD was originally owed. The respondents appealed the award of interest, but the court affirmed, holding “interest on an award of compensation is a matter of statutory right and applies automatically on the date payment is due.” *Id.* at 687. The court also held that interest must be amortized so “each past due weekly payment accrues interest from the date it was due until the day it was paid.”

Several years later, in *Subsequent Injury Fund v. Industrial Claim Appeals Office*, 899 P.2d 220 (Colo. App. 1994), the court of appeals rejected the argument that interest on a retroactive award should be limited to the date the claimant filed his petition to reopen, as opposed to the date he became disabled. The court noted, “The purpose of § 8-43-410(2) is not to impose a penalty or to award an additional benefit. Instead, the statute is intended to secure to claimants the value of the benefits to which they are entitled. Although here the payment of full benefits was not ordered until after the petition to reopen had been filed, the claimant would not receive the full value of those benefits unless he also received the interest.”

This rule has been applied to TTD, PPD, PTD, and even medical benefits. *Esquibel v. Denver Public Schools*, W.C. No. 4-329-119 (February 11, 1999) (PPD); *Herb v. Mariner Post Acute Network*, W.C. No. 4-496-527 (May 19, 2003) (TTD); *Sallee v. El Paso County School District No. 11*, W.C. No. 3-966-142 (June 13, 1994) (medical bills); *Seeman v. Ouray County*, W.C. No. 3-054-722 (November 16, 1990) (PTD).

The ICAO has repeatedly held that respondents owe interest on PPD benefits retroactive to MMI. There are multiple cases on point, but two decisions are particularly pertinent and persuasive. The facts in *Esquibel v. Denver Public Schools*, W.C. No. 4-329-119 (February 11, 1999) were very similar to Claimant’s case, and also involved PPD benefits awarded by an ALJ after a hearing. The respondents in *Esquibel* had previously paid no PPD benefits because the ATP assigned a zero rating, and the claimant pursued a DIME. The ALJ awarded PPD based on a 9% whole person rating but neglected to

include a clause regarding interest. The claimant argued the ALJ erred by failing to award interest on the PPD benefits “from the date of MMI.” The respondents argued an award of interest was not proper because the ALJ did not “fix the date for the commencement” of PPD benefits. The ICAO agreed with the claimant and held,

Section 8-43-410(2), C.R.S. provides that “an employer shall pay interest at the rate of 8% per annum upon all sums not paid upon the date fixed by the award.” Interest is a statutory right and applies automatically on the date the payment is due. *Beatrice Foods Co., Inc. v. Padilla*, 747 P.2d 685 (Colo. App. 1987). Interest is designed to secure to claimants the value of the benefits to which they are entitled. *Subsequent Injury Fund v. Industrial Claim Appeals Office*, 809 P.2d 1098 (Colo. App. 1991). The date payment is due is the date on which the claimant becomes entitled to the benefits, **not the date of the ALJ’s order**. *Subsequent Injury Fund v. Industrial Claim Appeals Office*, 899 P.2d 220 (Colo. App. 1994); *Fuentez v. Hewlett Packard*, W.C. No. 4-201-920 (December 18, 1998).

Here, the ALJ determined that the claimant reached MMI on May 16, 1994. Consequently, permanent partial disability benefits became due and owing on that date. Section 8-42-107(8)(d), C.R.S.; *Fuentez v. Hewlett Packard*, *supra*. Although the ALJ did not expressly determine a specific date for the commencement of permanent partial disability benefits, that date is determined by operation of law and is implicit in the order. Thus, interest must be awarded on the permanent partial disability benefits commencing May 16, 1994. (Emphasis added).

The ICAO addressed a very similar situation in *Latshaw v. Baker Hughes, Inc.*, W.C. No. 4-842-705-01 (December 17, 2013). In *Latshaw*, the ALJ had ordered the respondents to pay PPD benefits based on an 11% whole person rating plus 8% interest “on compensation benefits not paid when due.” The ICAO rejected the respondents’ appeal regarding the award of interest, using nearly identical language as in *Esquibel*. The Panel also reiterated that PPD benefits “**become due at MMI**, and a, permanent partial disability benefits not paid when due accrued interest at the rate of eight percent per annum.” (Emphasis added).

Numerous other cases affirm benefits are “due” when the claimant first becomes entitled to them, regardless of whether the benefits are ultimately paid voluntarily or under an ALJ order. *E.g.*, *Keel v. Transportation Technology Services*, W.C. No. 4-897-030-02 (April 1, 2014) (“Interest is a statutory right and applies automatically on the date payment is due. The date payment is due is the date on which the claimant becomes entitled to the benefits, and not necessarily the date of the ALJ’s order.”); *see also Herb v. Mariner Post Acute Network*, W.C. No. 4-496-527 (May 19, 2003).

The cases cited by Respondents in the FAL do not support their position. All three cases dealt with timeliness of petitions to reopen, and hinged on interpretation of the phrase “due and payable” in the reopening statute. None involved payment of interest on past-due indemnity benefits. In *Dr. Pepper Bottling Company v. Industrial Commission*,

301 P.2d 710 (Colo. 1956), the court held that the statute of limitations for reopening ran from the date a PPD award was actually paid by the insurer, which, because of litigation, occurred long after the PPD would have paid out had payments commenced on the date of MMI. The court reasoned, *for purposes of the reopening statute*,¹ an award cannot be considered “due and payable,” before any benefits were actually paid to the claimant. *Dr. Pepper* said nothing about interest on an award of past-due PPD, and cannot reasonably be divorced from its context of reopening.

Trujillo v. CF&I Steel Corporation, W.C. No. 3-516-592 (March 9, 1987) addressed the reopening statute of limitations relating to medical benefits. The Panel held that the employer’s voluntary payment for medical treatment constituted an admission that the benefits “became ‘due and payable’ for purposes of the statute of limitations on the date such care was provided. . . . [A]n employer’s voluntary provision of medical care after a case is closed constitutes an admission the claimant was owed such care.” The Panel, in dicta, went on to state that benefits did not become “due and payable” when the claimant asked the employer to provide medical care. The rationale was based on the fact the claim had been closed, so no benefits were due or payable unless the case was reopened. Although *Trujillo* had nothing to do with payment of interest on past-due benefits awarded by an ALJ, it is noteworthy that the Panel considered the benefits “due” on “the date such care was provided,” rather than when claimant asked for it to be covered, or when the employer paid for the care. That supports the general proposition that the “due” date for benefits is not determined by administrative issues or litigation status.

Finally, in *Reed v. City of Colorado Springs*, W.C. No. 4-528-594 (February 4, 2009), the ICAO held that the claimant’s petition to reopen was untimely because it was filed more than six years after the date of injury and more than two years after the last compensation (PPD) became “due or payable.” The Panel noted that the last PPD benefits were due or payable when the PPD award would have paid out under the terms of the FAL (presumably based on the MMI date). The ALJ in *Reed* found the claimant *would have been* entitled to additional PPD benefits based on “conversion,” *except* he had already reached the \$60,000 benefit cap. Thus, no additional PPD was due or payable under the ALJ’s order because the claimant could receive no additional compensation. The Panel did not address whether or when interest would have been payable had the ALJ awarded additional PPD benefits, and the case cannot be fairly read as authority for that issue.

Respondents’ reliance on three cases interpreting an unrelated section of the Act regarding reopening, while ignoring decades of case law directly on point, was not “objectively reasonable.” Respondents’ novel interpretation could have been raised on

¹ The court acknowledged the context of its decision at least three times: “*Certainly under these circumstances, in the absence of an adjudication on any issue of permanent disability, it cannot be said that compensation was due and payable in any amount. Within the meaning of the [reopening] statute, the full sum was due and payable upon the entry of the final order of the commission, and from and after that date the statute of limitations began to run. . . . We hold that a payment of compensation cannot be ‘due and payable’ under the pertinent statute when it has never been considered or ordered by the commission.*” *Id.* at 712 (emphasis added).

appeal of the Summary Order² or in a petition for relief from payment of interest under § 8-43-410(2). But its interpretation does not support the unilateral withholding of interest required by statute and ordered by an ALJ.

Respondents also argue their actions were objectively reasonable because the Summary Order did not explicitly “fix a date upon which such ordered sums became due.” An ALJ’s order need not explicitly “fix” a due date because the due date is determined by statute. Section 8-42-107(8)(d) provides that PPD benefits “shall be paid . . . beginning on the date of maximum medical improvement.” In fact, had the ALJ ordered Claimant’s PPD benefits were originally due on some date *other than MMI*, the order would likely have been reversed on appeal.

The ALJ is not persuaded by Respondents’ argument the Summary Order was “ambiguous” regarding interest. Identical or substantially similar language to the clause in the Summary Order has been routinely included in orders for decades. *E.g., Boring v. King Soopers*, W.C. No. 3-705-514, 3-736-756, 3-758-426 (November 18, 1987). The Order merely recited well-established law that Respondents owe interest on all benefits not paid when due. Claimant would have been entitled to interest even if the Order did not mention it. *E.g., Collett v. Pacesetter Corporation*, W.C. No. 4-414-586 (May 6, 2002) (“interest is a statutory right which automatically applies to an award without any action by the claimant” or the ALJ).

Nor is the ALJ persuaded by Respondents’ reliance on WCRP 5-6(A), which provides that “Benefits awarded by order are due on the date of the order.” This argument is unavailing for several reasons. First, the right to interest on past-due benefits is created by statute, and the Director has no authority to enact rules that contravene the statute. *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). In any event, there is no indication the Division intended to depart from the statute or overrule established case law when enacting Rule 5-6(A). Rather, the first sentence regarding “benefits awarded by order” is simply meant to clarify that insurers or employers must pay all benefits awarded by order *within 30 days of the order*. It does not alter the date those benefits were *originally* “due” for purposes of determining interest owed. Respondents’ proposed interpretation would result in an anomalous situation where a claimant would only receive interest on delayed benefits if paid voluntarily, but never on benefits awarded by an ALJ. That would create a perverse incentive to litigate all benefits to avoid payment of interest. There is no persuasive reason to think the Division intended such a result.

D. Amount of penalties

Although penalties are mandatory when the statutory criteria are met, the ALJ has wide discretion in determining the amount of any penalty. *Crowell v. Industrial Claim Appeals Office*, 298 P.3d 1014 (Colo. App. 2012). Two important purposes of penalties are to punish the violator and deter future misconduct. *May v. Colorado Civil Rights*

² Under CRCP 11(a), arguments must be “warranted by existing law or a good faith argument for the extension, modification, or reversal of existing law.”

Commission, 43 P.3d 750 (Colo. App. 2002). The penalty should be sufficient to discourage future violations, but should not be constitutionally excessive or “grossly disproportionate” to the violation found. *Colorado Dept. of Labor & Employment v. Dami*, 442 P.3d 94 (Colo. 2019). When assessing proportionality, the ALJ should “consider whether the gravity of the offense is proportional to the severity of the penalty, considering whether the fine is harsher than fines for comparable offenses in this jurisdiction or than fines for the same offense in other jurisdictions. In considering the severity of the penalty, the ability of the regulated individual or entity to pay is a relevant consideration. And the proportionality analysis should be conducted in reference to the amount of the fine imposed for each offense, not the aggregated total of fines for many offenses.” *Id.* at 103. The ALJ can also consider factors such as the reprehensibility of the conduct involved and the harm to the non-violating party. *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005); *Pueblo School Dist. No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996). Actual prejudice or harm to the claimant is relevant but is not dispositive, particularly where the violation is not explained by the evidence. *Strombitski v. Man Made Pizza, Inc.*, W.C. No. 4-403-661 (July 25, 2005).

The ALJ knows of only one case where penalties were imposed for nonpayment of interest. In *Horton v. Wal-Mart Stores, Inc.*, W.C. No. 4-583-068 (November 5, 2004), the respondents were penalized \$50 per day for failing to timely pay interest on past-due TTD as ordered by an ALJ. The total penalty imposed was \$450 (\$50 x 8 days). In upholding the amount of the penalty, the Panel explained,

[T]he ratio of the amount of the penalty to the amount of interest withheld is roughly 16.5 to 1. While this ratio appears substantial, the daily penalty imposed by the ALJ represents only 10 percent of the maximum daily penalty authorized by § 8-43-304(1). Although the amount of wrongfully withheld interest is small and there is no showing of substantial prejudice to the claimant, the overall impact of the insurer’s conduct could be very significant if it continued delaying interest payments over a long period of time and engaged in such conduct in many cases. Thus, deterrence and punishment considerations support the imposition of the penalty and militates against finding an abuse of discretion. . . . [O]ne of the principal purposes of § 8-43-304(1) is to secure voluntary cooperation with the Act so as to avoid the necessity of litigation.

Moreover, the respondents’ conduct represents disregard of an ALJ’s lawful order to pay interest. Violation of a specific order is an aggravating factor tending to justify a larger penalty than might otherwise be imposed for a late payment.

Applying those factors to Claimant’s case suggests a daily penalty at least as large as that imposed in *Horton*. Insurer is Colorado’s workers’ compensation insurer of last resort,³ and covers more employers than the insurer in *Horton*. A blanket policy by Insurer refusing to pay interest on past-due benefits awarded by ALJs will affect numerous injured

³ Section 8-45-101(2)(f).

workers throughout Colorado. Although Claimant demonstrated no specific harm from the refusal to pay interest, some harm can be presumed based on the time value of money. See *Subsequent Injury Fund v. Industrial Claim Appeals Office*, 899 P.2d 220 (Colo. App. 1994). Claimant has been deprived of several thousand dollars for many months, and Insurer clearly has no intention of voluntarily paying the interest. Forcing Claimant to litigate this issue contravenes the General Assembly's express intent that workers' compensation benefits be delivered quickly and efficiently "without the necessity for any litigation." Moreover, Insurer's refusal to pay interest here is directly contrary to a final order. The workers' compensation system itself is harmed when parties fail to obey lawful orders issued after a full and fair evidentiary hearing. If parties can thumb their noses at ALJ orders with impunity, the integrity of the adjudicative system will be compromised. The ALJ also considers it significant that Respondents avail themselves of other possible remedies, such as appealing the July 18, 2019 order or invoking the statutory procedure to request relief from the obligation to pay interest under § 8-43-410(2).

The law in effect at the time of the *Horton* decision allowed penalties up to \$500 per day. The legislature amended the penalty statute effective August 11, 2010, and doubled the limit to \$1,000 per day. This reflects the General Assembly's intent to increase the level of punishment for those who violate the Act and necessitate litigation. *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005) (discussing 1991 amendment increasing the penalty limit from \$100 to \$500 per day). Accordingly, the ALJ concludes it is appropriate to double the daily penalty imposed in *Horton*, and impose a penalty of \$100 per day for Insurer's failure to pay interest pursuant to the July 18, 2019 Summary Order.

E. Apportionment of penalties

Section 8-43-304(1) provides that penalties shall be apportioned between the aggrieved party and the Colorado Uninsured Employer Fund created in § 8-67-105. The specific apportionment is left to the ALJ's discretion, except the aggrieved party must receive at least 25% of any penalty assessed. As noted previously, many of the factors the ALJ considered in setting the amount of the penalty relate to the need to deter future misconduct, protect injured workers generally, and defend the integrity of the system. In light of those "macro-level" considerations, the ALJ concludes it is appropriate to apportion the penalties 50-50 between Claimant and the Uninsured Employer Fund.

ORDER

It is therefore ordered that:

1. Claimant's request to amend the admitted average weekly wage of \$806.75 is denied and dismissed.
2. Insurer shall pay penalties of \$18,700 from August 19, 2019 through the date of this order. This represents \$100 per day for 187 days. Insurer shall pay fifty percent (50%) of the penalties to Claimant and 50% to the Colorado Uninsured Employer Fund.

3. Insurer shall pay penalties of \$100 per day commencing February 22, 2020 and continuing at the same rate until the unpaid interest on the PPD award retroactive to the date of MMI is paid in full. Insurer shall pay fifty percent (50%) of the penalties to Claimant and 50% to the Colorado uninsured employer fund.

4. Payments for the Colorado Uninsured Employer Fund shall be made payable to the Division of Workers' Compensation and sent to 633 17th Street, 9th Floor, Denver, CO, 80202, Attention: Iliana Gallegos, Revenue Assessment Officer.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 21, 2020

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-045-590-002**

ISSUES

1. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Gary Zuehlsdorff, D.O. that he has reached Maximum Medical Improvement (MMI) on August 7, 2018 for his admitted right hip injury.

2. Whether Claimant has presented a preponderance of the evidence that he is entitled to receive Permanent Partial Disability (PPD) benefits for a right knee injury and psychological impairment as a result of his admitted April 30, 2017 right hip injury.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his April 30, 2017 industrial injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.*, 759 P.2d 705 (Colo. 1988).

4. Whether Claimant has proven by a preponderance of evidence that his admitted 18% scheduled right hip rating should be converted to a 10% whole person impairment.

FINDINGS OF FACT

1. Claimant works for Employer in various facilities performing cleanup and snow removal duties. On April 30, 2017 Claimant sustained an admitted work-related injury during the course and scope of his employment. He was specifically shoveling snow when he slipped on ice and fell on his right hip.

2. Claimant was transported by ambulance immediately after the injury on April 30, 2017. Paramedic records note Claimant was walking on the sidewalk when he slipped and fell. He landed on his right leg. Claimant was admitted to St. Anthony's Hospital on April 30, 2017. Records note Claimant was shoveling snow at Red Rocks when he slipped and fell. Right hip and right pelvis x-rays showed a comminuted and angulated proximal metaphyseal fracture with probable interchanteric component. Patrick Joseph McNair, M.D. evaluated Claimant and recommended surgery to repair the fracture.

3. Claimant was hospitalized from April 30, 2017 to May 5, 2017. On May 1, 2017 Dr. McNair performed surgery in the form of an open reduction and internal fixation for Claimant's right femur fracture. After discharge on May 5, 2017 Claimant was transferred to in-patient rehab and remained there until May 11, 2017.

4. X-rays from June 21, 2017 showed the hardware was in place with evidence of callous formation. Dr. McNair determined that Claimant's fracture was well-aligned,

stable, and fixated with the plate and screws in appropriate position. Claimant had early callus formation but not union of the fracture. Claimant reported minimal pain and was non-weight bearing with the assistance of a wheelchair. Dr. McNair noted essentially full range of motion of the hip and knee but there was quad and gastric atrophy. He recommended that Claimant could progress to 50% weight bearing.

5. Claimant again visited Dr. McNair on August 9, 2017. Claimant complained of pain in his right knee and lower back after long days. X-rays revealed that the femoral shaft and peritrochanteric femur fracture were healed. Dr. McNair noted that Claimant was doing remarkably well and ready to begin physical therapy. He remarked that Claimant's right knee pain was coming from a weak quad.

6. On September 19, 2017 Claimant told Authorized Treating Physician (ATP) Kathryn G. Bird, D.O. that he got stiff and tight with sharp pain in his right knee. Claimant's right hip was also sore. Dr. Bird instructed Claimant to continue his physical therapy. She decreased Claimant's restrictions to walking no longer than 20 minutes at a time.

7. On October 4, 2017 Dr. McNair remarked that Claimant was weight bearing without assistive devices for ambulation. Claimant reported a sharp pinching pain on the lateral aspect of his right hip while climbing stairs. Dr. McNair noted persistent quad atrophy that had improved. X-rays reflected a solidly united fracture. Dr. McNair again determined that Claimant's knee pain was related to quad atrophy and would improve with his quad strengthening through therapy. Dr. McNair commented that the hip pinching was due to the hardware and should improve with time. However, in the future Claimant could consider plate removal that would require another six months of recovery.

8. On November 9, 2017 Dr. Bird noted that Claimant reported improvement but continued to limp and experienced pain. He was performing his regular job duties despite restrictions. Dr. Bird commented that Claimant might be released at his next visit after he again visited Dr. McNair. Dr. Bird released Claimant to full duty employment.

9. Dr. Bird examined Claimant again on January 31, 2018. Claimant reported continuing pain, a weak thigh and a limp. Claimant complained that he was not progressing with his therapy at Panther Therapy and his therapy sessions were only 35 minutes. Based on Claimant's complaints, Dr. Bird recommended a series of more aggressive therapy sessions at Concentra. She delayed a determination of Maximum Medical Improvement (MMI) to complete additional therapy. Claimant remained at full duty employment.

10. On February 14, 2018 Claimant commented that his right knee had become more painful. Dr. McNair noted full range of motion of the knee, stable to provocative testing, no lateral joint line tenderness and some medial joint line tenderness. Claimant's hip was tender but had full range of motion and excellent strength. Dr. McNair remarked that Claimant's challenge continued to be strength and fatiguing that created persistent patellofemoral pain. He remarked that Claimant's injury would take two years of recovery or until April 2019 with aggressive therapy.

11. On March 12, 2018 Dr. McNair noted that Claimant's fracture had healed and his remaining symptoms were soft tissue related. Dr. McNair recommended a diagnostic ultrasound to determine if Claimant was having mechanical irritation over the IT band from his plate and whether he should consider hardware removal or injections. Dr. McNair referred Claimant to Scott J. Primack, D.O. for an ultrasound and possible injections.

12. Dr. Primack evaluated Claimant on April 27, 2018. He noted discomfort at the anterior compartment and lateral aspect of the right hip with some knee soreness. He recommended and performed a sonographic analysis for both hips. Based on the analysis Dr. Primack recommended consideration of regenerative medicine in the form of Plasma Rich Protein (PRP) injections. He remarked that the injections would create better muscle contraction at that level of the gluteal musculature.

13. On May 2, 2018 Claimant visited Dr. Bird for an evaluation. Dr. Bird noted that Claimant was quite upset and depressed about his continued pain. Claimant remarked that he had been told he would not be allowed to do more therapy. Dr. Bird explained that they would continue to do therapy as long as he was making functional gains. She recommended anti-depressant medication and visiting a psychologist to develop coping mechanisms. Dr. Bird provided prescriptions for transportation, sertraline and more lidocaine patches.

14. Claimant underwent a right knee MRI on May 18, 2018. The MRI revealed the following: very subtle findings in the medial meniscal body raising suspicion of a possible meniscal tear; additional horizontal peripheral tear at the junction of the body and posterior horn without extension to the meniscal articular surface; focal mild bone marrow edema along the periphery of the medial femoral condyle; and no cruciate or collateral ligament injury.

15. On May 25, 2018 Claimant underwent right hip PRP injections with Dr. Primack. On June 15, 2018 Dr. Primack noted that Claimant had completed a significant amount of rehabilitation. He performed a repeat ultrasound and noted improvement with less fluid. Dr. Primack determined that Claimant was experiencing significant sonographic improvement despite the apparent lack of clinical progress.

16. On July 11, 2018 Dr. Bird noted that Claimant had last visited Dr. Primack three weeks to one month earlier. Based on Dr. Primack's PRP rehab sheet, Claimant was prepared to begin eccentric strengthening exercises for the next six weeks. Dr. Bird referred Claimant to physical therapy based on the post PRP protocol to learn home exercises. Dr. Bird released Claimant to full duty employment.

17. On July 31, 2018 Claimant completed his 34th and final therapy session with Concentra since January 2018. Claimant had "reached 95% of his goals at this visit." He was able to squat with good form, ambulate at work for 30 to 40 minutes, single right leg stand and had begin hopping. Claimant could lift and carry 20 pounds from floor to waist for 30 feet and go up and down stairs. Therapist Peck noted that Claimant was able to return to full work with regular participation in essential job functions.

18. On August 7, 2018 Claimant returned to Dr. Bird for an examination. Dr. Bird concluded that Claimant had reached MMI for his April 30, 2017 work injury. She explained that Claimant returned to functional status but continued to experience pain. Dr. Bird commented that, if Claimant's pain continued, he could again visit Dr. Primack or consider Dr. McNair's other options of a steroid injection or hardware removal. She assigned an 18% scheduled impairment rating for Claimant's right hip. However, Dr. Bird did not comment on the situs of Claimant's functional impairment. Dr. Bird recommended maintenance treatment in the form of visiting Dr. Primack and Dr. McNair for possible injections or hardware removal. She released Claimant to full duty with no permanent restrictions.

19. On October 18, 2018 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Bird's MMI and impairment determinations.

20. On December 11, 2018 Claimant returned to Dr. McNair for an evaluation. X-rays revealed that Claimant's fracture was fully healed with no evidence of hardware failure. Dr. McNair noted that Claimant had undergone extensive physical therapy. He further remarked that Claimant would always have a right leg that was painful. Dr. McNair recommended three possible treatment options. The first option was to see Dr. Primack again about possible injection therapy and consideration of more physical therapy. The second option was to visit Dr. Ellman for a consultation to check for any type of labral injury to the hip. The third option was plate removal, but Dr. McNair cautioned that it would be six months or longer before the screw holes were solid and stable.

21. On July 5, 2019 Claimant underwent a Division Independent Medical Examination (DIME) with Gary Zuehlsdorff, D.O. Dr. Zuehlsdorff diagnosed Claimant with the following: (1) right lateral hip pain with anterior thigh pain that was most likely consistent with retained hardware irritation; (2) right knee pain syndrome consistent with patellofemoral syndrome from primary gait abnormality secondary chronic hip pain; (3) probable adjustment disorder with anxiety; and (4) diffuse lumbar mechanical back pain likely secondary to gait abnormality.

22. Dr. Zuehlsdorff agreed with Dr. Bird that Claimant had reached MMI on August 7, 2018. He specifically commented, "I would concur and hold to the date of MMI, at least at this time, as given originally by Dr. Bird of 08/07/2018." Dr. Zuehlsdorff later detailed:

As I stated above, I would hold to Dr. Bird's date of MMI; however, if he goes onward to another surgery, MMI would have to be rescinded at that time until he hit MMI post the second surgery. However, I would hold to MMI at this time concurrent with the original date of 08/07/2018, given the above.

Dr. Zuehlsdorff further discussed a possible second surgery for hardware removal.

23. Dr. Zuehlsdorff assigned Claimant a 24% lower extremity impairment for his right hip. The impairment converts to 10% whole person rating. Dr. Zuehlsdorff did not address the situs of Claimant's right hip functional impairment. He also did not provide

impairment ratings for Claimant's knee, lumbar spine or psychological issues. Dr. Zuehlsdorff specifically stated "[w]ith regard to the knee, I see no impairable entity or diagnosis at this time...[w]ith regard to the back, again, I see no impairable entity here."

24. Dr. Zuehlsdorff recommended medical maintenance treatment. The recommendations included a hip joint MRI and psychological care with consideration of psychotropic medication and counseling. Dr. Zuehlsdorff also suggested additional therapy to treat Claimant's knee pain, lumbar symptoms and gait abnormality. He discussed that Claimant would most likely require a second surgery for hardware removal in the future.

25. Respondents filed a FAL on June 26, 2019 consistent with Dr. Zuehlsdorff's August 7, 2018 MMI determination and 24% lower extremity impairment rating. The FAL also acknowledged maintenance treatment based on Dr. Zuehlsdorff's DIME report.

26. On September 20, 2019 Claimant visited Sander Orent, M.D. for an independent medical examination. Claimant reported continued pain in the hip, back, knee and anterior thigh at the location of the implanted hardware designed to stabilize the femur. On physical examination, Dr. Orent noted tenderness in Claimant's knee and thigh, with restricted range of motion in the lumbar region. Dr. Orent explained that Claimant's treatment was incomplete and he had not reached MMI. Dr. Orent recommended a second orthopedic opinion regarding removal of the hardware or pain management. He recommended an injection for the right hip and treatment for the right knee. Dr. Orent also suggested psychological treatment. He thus explained that Dr. Zuehlsdorff erroneously failed to provide an impairment rating for Claimant's right knee and psychological symptoms. He did not discuss the situs of functional impairment for Claimant's hip injury.

27. From August 2018 until January 2020 Claimant did not obtain maintenance medical treatment at Concentra. Claimant visited Dr. Bird at Concentra in January 2020 to discuss recommended psychological treatment. Dr. Bird mentioned placing a referral for Claimant to visit a psychologist.

28. Claimant testified at the hearing in this matter. He explained that he continues to have a significant limp. Claimant remarked that he still has significant problems with stairs and cannot return to many of his prior activities. He commented that, although Dr. Bird released him to full duty with no restrictions, he is unable to perform his job duties. Claimant noted Employer has prohibited him from shoveling snow.

29. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Zuehlsdorff that he reached MMI on August 7, 2018 for his admitted right hip injury. Initially, Claimant suffered an admitted right hip injury when he slipped on ice and fell on his right hip while shoveling snow for Employer on April 30, 2017. Claimant subsequently underwent surgery with Dr. McNair for his right femur fracture. During follow-up treatment Claimant reported pain in his right knee and lower back. Dr. McNair attributed Claimant's right knee pain to a weak quad. By February 14, 2018 Dr. McNair noted full range of motion of the knee, stable to provocative testing, no

lateral joint line tenderness and some medial joint line tenderness. Claimant's hip was tender but had full range of motion and excellent strength. Claimant underwent 34 physical therapy sessions and received right hip PRP injections. On August 7, 2018 Dr. Bird concluded that Claimant had reached MMI for his April 30, 2017 admitted right hip injury. She explained that Claimant had been able to return to a functional status but continued to experience pain. Dr. Bird assigned an 18% scheduled impairment rating for Claimant's right hip.

30. On July 5, 2019 Claimant underwent a DIME with Dr. Zuehlsdorff. Dr. Zuehlsdorff diagnosed Claimant with the following: (1) right lateral hip pain with anterior thigh pain; (2) right knee pain syndrome from primary gait abnormality secondary to constant and chronic hip pain; (3) probable adjustment disorder with anxiety; and (4) diffuse lumbar mechanical back pain likely secondary to gait abnormality. Dr. Zuehlsdorff agreed with Dr. Bird that Claimant had reached MMI on August 7, 2018. He assigned Claimant a 24% lower extremity impairment rating for his right hip. Dr. Zuehlsdorff did not provide impairment ratings for Claimant's knee, lumbar spine or psychological issues. He specifically stated "[w]ith regard to the knee, I see no impairable entity or diagnosis at this time...[w]ith regard to the back, again, I see no impairable entity here."

31. In contrast, Dr. Orent explained that Claimant's treatment was incomplete and he had not reached MMI. Dr. Orent recommended a second orthopedic opinion regarding removal of the hardware or pain management. He proposed a right hip injection and right knee care. Dr. Orent also suggested psychological treatment. He thus explained that Dr. Zuehlsdorff erroneously failed to provide an impairment rating for Claimant's right knee and psychological symptoms. Despite Dr. Orent's opinion, Claimant has failed to demonstrate that Dr. Zuehlsdorff improperly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) or otherwise erred in concluding that Claimant reached MMI on August 7, 2018. Dr. Orent's determination is simply a difference of medical opinion regarding the extent of Claimant's impairment. Notably, Dr. Bird also persuasively explained that Claimant reached MMI on August 7, 2018. Moreover, Dr. McNair determined that Claimant would take approximately two years or by approximately April 2019 to recover from his work injury. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Zuehlsdorff's August 7, 2018 MMI determination is incorrect.

32. Claimant has failed to present a preponderance of the evidence that he is entitled to receive Permanent Partial Disability (PPD) benefits for a right knee injury and psychological impairment as a result of his admitted April 30, 2017 right hip injury. During follow-up treatment after right femur surgery Claimant reported pain in his right knee and lower back. Dr. McNair attributed Claimant's right knee pain to a weak quad. By February 14, 2018 Dr. McNair noted full range of motion of the knee, stable to provocative testing, no lateral joint line tenderness and some medial joint line tenderness. When Dr. Bird determined that Claimant had reached MMI on August 7, 2018 she explained that he had been able to return to functional status but continued to experience pain. She assigned an 18% scheduled rating for Claimant's right hip but no other impairment. Dr. Zuehlsdorff assigned Claimant a 24% lower extremity impairment for his right hip. He did not provide impairment ratings for Claimant's knee, lumbar spine or psychological issues. Dr.

Zuehlsdorff specifically stated “[w]ith regard to the knee, I see no impairable entity or diagnosis at this time...[w]ith regard to the back, again, I see no impairable entity here.”

33. In contrast, Dr. Orent explained that Claimant warranted an impairment rating for his right knee and psychological symptoms. On physical examination, Dr. Orent noted tenderness in Claimant’s knee and thigh, with restricted range of motion in the lumbar region due to leg discomfort. He recommended additional right knee and psychological treatment. However, the bulk of the persuasive medical evidence reflects that ratings for Claimant’s right knee and psychological symptoms are not warranted. Accordingly, Claimant is not entitled to an additional impairment rating for his right knee and psychological symptoms.

34. Claimant has established that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his April 30, 2017 industrial injury or prevent further deterioration of his condition. Dr. Zuehlsdorff recommended medical maintenance treatment including a hip joint MRI, psychological care with consideration of psychotropic medication and counseling. Dr. Zuehlsdorff also suggested additional therapy to treat Claimant’s knee pain, lumbar symptoms and gait abnormality. He discussed that Claimant would most likely require a second surgery for hardware removal in the future. Dr. Orent recommended a second orthopedic opinion regarding removal of the hardware or pain management. He proposed an injection for the right hip and treatment for the right knee. Dr. Orent also suggested psychological treatment. The treatment recommended by Dr. Orent is virtually identical to the maintenance care proposed by Dr. Zuehlsdorff. The only distinction is that Dr. Zuehlsdorff recommended a right hip joint MRI and Dr. Orent suggested a right hip injection. All of the care recommended by Dr. Orent can be completed as maintenance treatment. Accordingly, Claimant has established that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance benefits as outlined in the June 26, 2019 FAL.

35. Claimant has failed to prove that it is more probably true than not that his admitted 24% scheduled hip rating should be converted to 10% whole person impairment. Dr. Bird assigned an 18% scheduled rating and Dr. Zuehlsdorff assigned Claimant a 24% lower extremity impairment for his right hip. None of the medical providers in the claim specifically addressed the situs of functional impairment. However, Dr. Bird remarked that Claimant was able to return to a functional status but continued to experience pain. Although Claimant experienced pain to parts of the body beyond the schedule, he has not established that his symptoms constituted functional impairment. Accordingly, Claimant suffered an 18% scheduled right hip impairment as a result of his April 30, 2017 admitted industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1),

C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio*, W.C. No. 4-660-149 (ICAO, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola*, W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett*, W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; see *Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to

parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." See *Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Zuehlsdorff that he reached MMI on August 7, 2018 for his admitted right hip injury. Initially, Claimant suffered an admitted right hip injury when he slipped on ice and fell on his right hip while shoveling snow for Employer on April 30, 2017. Claimant subsequently underwent surgery with Dr. McNair for his right femur fracture. During follow-up treatment Claimant reported pain in his right knee and lower back. Dr. McNair attributed Claimant's right knee pain to a weak quad. By February 14, 2018 Dr. McNair noted full range of motion of the knee, stable to provocative testing, no lateral joint line tenderness and some medial joint line tenderness. Claimant's hip was tender but had full range of motion and excellent strength. Claimant underwent 34 physical therapy sessions and received right hip PRP injections. On August 7, 2018 Dr. Bird concluded that Claimant had reached MMI for his April 30, 2017 admitted right hip injury. She explained that Claimant had been able to return to a functional status but continued to experience pain. Dr. Bird assigned an 18% scheduled impairment rating for Claimant's right hip.

9. As found, on July 5, 2019 Claimant underwent a DIME with Dr. Zuehlsdorff. Dr. Zuehlsdorff diagnosed Claimant with the following: (1) right lateral hip pain with anterior thigh pain; (2) right knee pain syndrome from primary gait abnormality secondary to constant and chronic hip pain; (3) probable adjustment disorder with anxiety; and (4) diffuse lumbar mechanical back pain likely secondary to gait abnormality. Dr. Zuehlsdorff agreed with Dr. Bird that Claimant had reached MMI on August 7, 2018. He assigned Claimant a 24% lower extremity impairment rating for his right hip. Dr. Zuehlsdorff did not provide impairment ratings for Claimant's knee, lumbar spine or psychological issues. He specifically stated "[w]ith regard to the knee, I see no impairable entity or diagnosis at this time...[w]ith regard to the back, again, I see no impairable entity here."

10. As found, in contrast, Dr. Orent explained that Claimant's treatment was incomplete and he had not reached MMI. Dr. Orent recommended a second orthopedic

opinion regarding removal of the hardware or pain management. He proposed a right hip injection and right knee care. Dr. Orent also suggested psychological treatment. He thus explained that Dr. Zuehlsdorff erroneously failed to provide an impairment rating for Claimant's right knee and psychological symptoms. Despite Dr. Orent's opinion, Claimant has failed to demonstrate that Dr. Zuehlsdorff improperly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) or otherwise erred in concluding that Claimant reached MMI on August 7, 2018. Dr. Orent's determination is simply a difference of medical opinion regarding the extent of Claimant's impairment. Notably, Dr. Bird also persuasively explained that Claimant reached MMI on August 7, 2018. Moreover, Dr. McNair determined that Claimant would take approximately two years or by approximately April 2019 to recover from his work injury. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Zuehlsdorff's August 7, 2018 MMI determination is incorrect.

Right Knee and Psychological Impairment

11. PPD benefits do not require a showing of actual wage loss but are instead based on the potential loss of future earning capacity. *Duran v. Industrial Claim Appeals Office*, 883 P.2d 477 (Colo.1994); *see also Hussion v. Indus. Claim Appeals Office*, 991 P.2d 346 (Colo. App.1999). The Workers' Compensation system is premised on the assumption that the future earning capacity of a partially disabled worker will be less than that of a non-disabled worker. *Business Ins. Co. v. BFI Waste Sys. of N. Amer., Inc.* 23 P.3d 1261, 1265 (Colo. App. 2001). The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, with regard to an extremity impairment, the claimant bears the burden to prove a scheduled rating by a preponderance of the evidence. *Delaney v. Indus. Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Burciaga v. AMB Janitorial Serv, Inc.*, W.C. No. 4-777-882 (ICAO, Nov. 5, 2010).

12. As found, Claimant has failed to present a preponderance of the evidence that he is entitled to receive Permanent Partial Disability (PPD) benefits for a right knee injury and psychological impairment as a result of his admitted April 30, 2017 right hip injury. During follow-up treatment after right femur surgery Claimant reported pain in his right knee and lower back. Dr. McNair attributed Claimant's right knee pain to a weak quad. By February 14, 2018 Dr. McNair noted full range of motion of the knee, stable to provocative testing, no lateral joint line tenderness and some medial joint line tenderness. When Dr. Bird determined that Claimant had reached MMI on August 7, 2018 she explained that he had been able to return to functional status but continued to experience pain. She assigned an 18% scheduled rating for Claimant's right hip but no other impairment. Dr. Zuehlsdorff assigned Claimant a 24% lower extremity impairment for his right hip. He did not provide impairment ratings for Claimant's knee, lumbar spine or psychological issues. Dr. Zuehlsdorff specifically stated "[w]ith regard to the knee, I see no impairable entity or diagnosis at this time...[w]ith regard to the back, again, I see no impairable entity here."

13. As found, In contrast, Dr. Orent explained that Claimant warranted an impairment rating for his right knee and psychological symptoms. On physical examination, Dr. Orent noted tenderness in Claimant's knee and thigh, with restricted range of motion in the lumbar region due to leg discomfort. He recommended additional right knee and psychological treatment. However, the bulk of the persuasive medical evidence reflects that ratings for Claimant's right knee and psychological symptoms are not warranted. Accordingly, Claimant is not entitled to an additional impairment rating for his right knee and psychological symptoms.

Medical Maintenance Benefits

14. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.*, 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expeditors, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); see *Karathanasis v. Chilis Grill & Bar*, W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 919 P.2d 701, 704 (Colo. App. 1999).

15. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of his April 30, 2017 industrial injury or prevent further deterioration of his condition. Dr. Zuehlsdorff recommended medical maintenance treatment including a hip joint MRI, psychological care with consideration of psychotropic medication and counseling. Dr. Zuehlsdorff also suggested additional therapy to treat Claimant's knee pain, lumbar symptoms and gait abnormality. He discussed that Claimant would most likely require a second surgery for hardware removal in the future. Dr. Orent recommended a second orthopedic opinion regarding removal of the hardware or pain management. He proposed an injection for the right hip and treatment for the right knee. Dr. Orent also suggested psychological treatment. The treatment recommended by Dr. Orent is virtually identical to the maintenance care proposed by Dr. Zuehlsdorff. The only distinction is that Dr. Zuehlsdorff recommended a right hip joint MRI and Dr. Orent suggested a right hip injection. All of the care recommended by Dr. Orent can be completed as maintenance treatment. Accordingly, Claimant has established that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance benefits as outlined in the June 26, 2019 FAL.

Conversion of Hip Rating

16. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS*, W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. See *In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars*, W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.*, W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots*, WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry*, W.C. 4-609-719 (ICAO, Dec. 28, 2006).

17. Under § 8-42-107(2)(w), C.R.S. the "loss of the leg at the hip joint" is a scheduled impairment. However, impairment to the "lower extremity" is not listed on the schedule. Consequently, a physician's "lower extremity" impairment rating is not conclusive of whether a claimant sustained a scheduled injury. The issue requires a determination whether the claimant suffered functional impairment beyond the leg at the hip. *Webb v. Circuit City Stores, Inc.*, W.C. No. 4-467-005 (ICAO, Aug. 16, 2002). The claimant bears the burden to prove by a preponderance of evidence that the situs of the functional impairment is not on the schedule. *Strauch v. PSL Swedish Healthcare Sys.*, 917 P.2d 366 (Colo. App. 1996).

18. As found, Claimant has failed to prove by a preponderance of the evidence that his admitted 24% scheduled hip rating should be converted to 10% whole person impairment. Dr. Bird assigned an 18% scheduled rating and Dr. Zuehlsdorff assigned Claimant a 24% lower extremity impairment for his right hip. None of the medical providers in the claim specifically addressed the situs of functional impairment. However, Dr. Bird remarked that Claimant was able to return to a functional status but continued to experience pain. Although Claimant experienced pain to parts of the body beyond the schedule, he has not established that his symptoms constituted functional impairment. Accordingly, Claimant suffered an 18% scheduled right hip impairment as a result of his April 30, 2017 admitted industrial injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant reached MMI on August 7, 2018 for his April 30, 2017 admitted industrial injury.

2. Claimant is not entitled to receive PPD benefits for a right knee injury and psychological symptoms for his admitted April 30, 2017 industrial injury.

3. Claimant shall receive reasonable, necessary and related medical maintenance benefits as outlined in the June 26, 2019 FAL.

4. Claimant suffered an 18% scheduled right hip impairment as a result of his April 30, 2017 admitted industrial injury.

5. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: February 27, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-101-519-002**

ISSUES

- Did Claimant prove she suffered a compensable injury on January 24, 2019?
- If Claimant proved a compensable injury, did she prove entitlement to reasonably necessary medical benefits, including reimbursement for a September 18, 2019 orthopedic evaluation with Dr. Craig Davis?
- Did Claimant prove entitlement to temporary partial disability (TPD) benefits from February 19, 2019 through March 20, 2019?
- Did Claimant prove entitlement to temporary total disability (TTD) benefits commencing March 21, 2019?
- The parties stipulated to an average weekly wage (AWW) of \$410.10.

FINDINGS OF FACT

1. Claimant works as an assistant manager at the Family Dollar store in Rocky Ford. She has worked there for six years. Her duties included opening and closing the store, making deposits, stocking product, and unloading trucks.

2. On January 24, 2019, Claimant was stocking Coffee-Mate on a high shelf using a rolling ladder. She was coming down from the ladder and accidentally stepped on a case of coffee left on the floor. She tried to maneuver her foot around the coffee but her ankle gave out when she stepped to the floor, causing her to fall onto her right side and buttocks. She instinctively put her right arm out to brace her fall. Claimant remained on the floor for a few moments, and when she rolled over to get up, she smacked her right knee on the floor. Claimant's knee and ankle hurt, but she felt no pain in her right shoulder or neck immediately after the fall.

3. Claimant texted her manager to report the incident. The manager texted back and asked if Claimant was okay. Claimant replied, "I'm fine." She then contacted the district manager, who advised her to call Employer's 1-800 number to report the incident. There was ultimately a delay in filing the report because it turned out Claimant's supervisor had to report the accident rather than Claimant.

4. Claimant worked the next couple of days and her neck and right shoulder started hurting badly. She forced the issue with her manager and eventually received a referral to Rocky Ford Family Health Center.

5. Claimant had seen Dr. Michael Sells, a chiropractor, twice before the accident for right upper back and neck pain. On January 5, 2019, she reported "Dull pain: 8/10" on an "intermittent to frequent" basis, aggravated by lifting and decreased with

NSAIDs and massage. Dr. Sells documented, "Patient reports (R) sided neck and upper back pain for 3 weeks due to heavy lifting. Patient reports using massage and NSAIDs for palliative relief, and reports lifting increases pain." Physical examination showed "fixation" at multiple spinal levels from the neck to the sacrum. There was no indication of muscle spasm. Cervical range of motion was "normal" in all planes. Claimant "responded well" to chiropractic manipulation.

6. Claimant was improved by her next appointment with Dr. Sells on January 18, 2019. Her pain had decreased to 6/10. Physical exam findings were essentially the same as at the previous visit, and Dr. Sells again indicated Claimant "responded well" to manipulation.

7. Claimant's next chiropractic appointment was January 25, the day after the accident. She told Dr. Sells she had "fall[en] off a ladder work last night." The remainder of the report is essentially identical to the report from January 18.

8. Claimant had her first visit with Rocky Ford Family Health on January 29, 2019. She saw NP-C Heather Elliott, who has served as the primary ATP since then. Claimant was no longer having any ankle pain, but reported pain in her right knee, neck, and right shoulder. Physical examination showed tenderness and muscle spasm in the right trapezius, and reduced cervical range of motion because of pain and guarding. Right shoulder range of motion was full without pain. Nurse Elliott diagnosed neck and trapezius strains with muscle spasms, and a right knee contusion. She prescribed muscle relaxers and recommended NSAIDs, ice, and stretching. She imposed work restrictions of no lifting over 15 pounds, no repetitive lifting over 5 pounds, limited use of the right arm "to comfort" and 10-minute rest breaks every hour.

9. Claimant did not mention the pre-injury neck pain or chiropractic treatment to Nurse Elliott. She testified the neck pain before the accident was primarily "soreness" and was "a lot different" than what she experienced after the accident, so she did not think it was pertinent.

10. Claimant followed up with Nurse Elliott on February 5, 2019 and reported no improvement in the right shoulder and neck pain. Claimant described "excessive swelling on neck area that tends to get worse with activity." The swelling improved with ice and heat, but "when she goes back to work the swelling comes back." Claimant was trying to stay within her the work restrictions, but sometimes had to handle heavy items at checkout. She also described "popping" in the neck when turning her head. Physical examination again showed right trapezius spasm and guarding, and reduced cervical range of motion. The right anterior shoulder was tender, and right shoulder ROM was reduced. X-rays of Claimant's neck showed mild degenerative changes but no acute pathology. Nurse Elliott referred Claimant to physical therapy and maintained her work restrictions.

11. Nurse Elliott's February 12 report documented Employer was not following the restrictions. Claimant was having difficulty reaching behind her and reaching out at shoulder level. She was having right elbow pain "due to compensating for injured muscles

in the right shoulder/neck.” Physical exam findings were unchanged, with muscle spasm, guarding, and reduced range of motion. Nurse Elliott put Claimant in a sling and completely restricted any work with the right arm. She encouraged Claimant to speak with HR about enforcing her restrictions, but noted, “If you are unable to accommodate these restrictions, she will need to be allowed off of work.” Nurse Elliott instructed Claimant to start PT “as soon as it is approved.”

12. Claimant’s next appointment with Nurse Elliott was February 19, 2019. Her symptoms had not improved, and she was developing soreness on her left side because of compensating for the immobilized right arm. Claimant was still having “excessive swelling” around her right shoulder and neck. Nurse Elliott noted PT still had not been approved, even though “the order has been in since 2/5/19 and we have contacted Sedgwick multiple times to follow up on approval.” Nurse Elliott opined, “She is having new pains related to having to modify her movement at work to accomplish the tasks she is given at work. She is sometimes working more than 8 hours and this is having a negative effect on her healing process. I am restricting her to 4 hours of work per day until she starts to show improvement with physical therapy after it is approved.”

13. On February 28, 2019, Claimant’s symptoms were no better. She was still having popping in her neck with range of motion. Physical therapy had “finally” been approved and was scheduled to start the next week.

14. At the initial PT appointment on March 6, the therapist documented “swelling along bilateral upper traps (base of neck) and reduced strength with right shoulder flexion and abduction.” On March 8, the therapist noted, “Pt is noticeably swollen and bilat[eral] shoulders, R>L.” The March 11, 2019 report showed, “Swelling has increased over the course of several days. Pt’s job duties exacerbate muscle damage. Active inflammation is evident with swelling.” The last note from March 20, 2019 documented, “hydrotherapy is exacerbating her cervical and bilateral shoulder swelling symptoms. Her pain remains for the rest of the day following treatment sessions and continues to be exacerbated by work duties.”

15. Claimant followed up with Nurse Elliott on March 21, 2019 and explained PT was not helping. Her pain was worse and interfering with her sleep. Claimant still had “significant swelling” around her neck. She was not taking the muscle relaxer during the day because it was too sedating. Nurse Elliott ordered a cervical MRI and took Claimant off work. She explained, “Physical therapy and conservative management are not improving function or pain, she is actually worsening. I am taking her out of work, even with the reduced hours there is not adequate adjustment of her tasks to allow her to heal.”

16. Claimant underwent cervical and right shoulder MRIs on April 25, 2019. The cervical MRI showed mild to moderate multilevel degenerative changes with no acute findings. The shoulder MRI showed a Type 2 SLAP tear and mild inflammation of the subacromial-subdeltoid bursa.

17. After reviewing the MRI reports, Nurse Elliott referred Claimant to Dr. David Weinstein for a right shoulder surgical evaluation. She kept Claimant off work “until cleared by ortho.”

18. Respondents did not authorize the evaluation with Dr. Weinstein. Instead, they scheduled an IME with Dr. Wallace Larson.

19. Claimant saw Dr. Larson on June 20, 2019. His reported exam findings were entirely benign with no “objective” evidence of neck or right shoulder pathology. Dr. Larson opined the SLAP tear is probably an incidental finding because Claimant has no symptoms typically associated with SLAP tears. Even if the SLAP tear were symptomatic, Dr. Larson believes it is pre-existing and not caused by the work accident. He opined Claimant suffered a mild ankle sprain but no neck or shoulder injury. He thought Claimant’s reported symptoms were out of proportion to the accident, and there is “no objective medical evidence of any specific anatomic injury.” Dr. Larson concluded Claimant was at MMI and required no further treatment. He saw no “objective” basis for any work restrictions.

20. Claimant returned to Nurse Elliott on August 1, 2019 to review Dr. Larson’s report. Nurse Elliott wrote,

[S]he was able to carry out all of her job functions without pain for 6 years prior to this injury. She would regularly [lift] 36lb of dog food, cases of water to re-stock shelves. At the time of the injury, and up to present, she is no longer able to lift without pain, so her injury was clearly caused by the fall she sustained at work. . . . I am not an orthopedic specialist, so I made a referral for the appropriate specialist to evaluate and treat this patient when her injury was not responsive to conservative treatment with activity restriction, medication, and physical therapy. I feel that this patient was denied treatment by the appropriate provider when the referral to Dr. Weinstein was denied by Sedgwick.

21. She added, “This patient has had a muscle strain and/or spasm at the neck level since the time of injury, and it is independent of the SLAP tear of the shoulder. This is also an injury that did not respond as I would have expected with reduction of activity, medication and physical therapy, which is additionally why I have referred her to an orthopedic specialist for evaluation and treatment.” Nurse Elliott referred Claimant to Dr. Craig Davis “for a second opinion on the causality of your injury and her recommendations for treatment.”

22. Claimant followed up with Nurse Elliott on September 3, 2019. Insurer had not approved the appointment with Dr. Davis, so she gave Claimant the contact information so she could schedule it herself. Claimant was struggling financially because she was out of work and not receiving disability benefits. There was a new manager at her store and Claimant wanted to try working again. Nurse Elliott stated, “I advised we try and send her back to work with restrictions now that there is a new manager and hopefully

they will comply with restrictions at this time.” Nurse Elliott spoke with the new manager by phone and received assurances they would abide by Claimant’s restrictions.

23. Claimant contacted the new store manager but was not offered modified duty. Claimant has remained off work through the date of the hearing.

24. Claimant saw Dr. Davis on September 18, 2019. Her most bothersome symptoms were pain in the right side of her neck, the right trapezius, and the right parascapular area. She also complained of persistent swelling in the supraclavicular area “which she says is much larger than it ever was prior to her injury.” She was not having much pain in the right shoulder itself. Claimant’s right paraspinal and trapezial areas were tender to palpation, but shoulder range of motion was full with excellent strength. Impingement signs were negative. Dr. Davis did not think Claimant needed surgery. He opined,

This patient has a neck strain related to her accident at work. I think her current myofascial symptoms in the neck and right trapezial area are a direct result of her work-related injury. She has significant prominence of the soft tissues in the supraclavicular area on both sides of her neck. Some of this appears to be physiologic in nature but it’s possible the right side is more prominent just due to muscle spasm underneath or behind it related to her neck strain. Again, I think this is a direct result of her work-related injury.

25. Dr. Davis recommended a cervical MRI and referral to a physiatrist “depending on the findings of the MRI.”¹ Dr. Davis was willing to treat Claimant if she wanted, but thought it made more sense to see someone in Colorado Springs, closer to where she lives.

26. Dr. Larson testified for Respondents in a deposition on November 19, 2019. He conceded Claimant “might” have suffered minor shoulder and neck strains from the accident, but opined she had fully recovered, with no objective evidence of ongoing pathology. He reiterated the SLAP tear is probably an incidental finding and warrants no treatment. He opined the supraclavicular “prominence” described by Dr. Davis is “probably just her anatomy . . . most likely adipose tissue.”

27. Despite some minor inconsistencies, Claimant’s testimony was generally credible and supported by the persuasive evidence of record.

28. Dr. Davis and Nurse Elliott’s opinions are more persuasive than the contrary opinions expressed by Dr. Larson.

29. Claimant proved she suffered a compensable injury on January 24, 2019.

¹ Dr. Davis did not know Claimant had already had a cervical MRI in April 2019. Regardless, the ALJ considers it unlikely the MRI would have altered Dr. Davis’ opinion because it confirms his assessment of a primarily myofascial, soft-tissue injury.

30. The evaluations and treatment Claimant received under the direction of Nurse Elliott since January 29, 2019 were reasonably necessary to cure and relieve the effects of her compensable injury. The evaluation with Dr. Davis was reasonably necessary and related to the injury.

31. Claimant suffered a partial wage loss because of her injury commencing February 19, 2019 when Nurse Elliott restricted her work hours. Respondents owe Claimant \$625.61 in TPD benefits, calculated as follows:

| Pay period end: | Wages: | TPD owed: |
|------------------------|---------------|------------------|
| 3/23/2019 | \$295.25 | \$349.97 |
| 3/9/2019 | \$536.03 | \$189.45 |
| 2/23/2019 | \$690.92 | \$86.19 |
| Total TPD: | | \$625.61 |

32. Claimant proved she suffered a total wage loss commencing March 21, 2019 when she was taken off work. Although she was released work with restrictions in September 2019, Employer never offered modified work.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). An injury need not be dramatic or serious to support a finding of compensability. Even a “minor strain” or a “temporary exacerbation” of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant’s work activities and caused her to seek medical treatment. *E.g.*, *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved by a preponderance of the evidence she suffered a compensable injury on January 24, 2019 when she fell to the floor. Although Claimant received chiropractic treatment for neck and upper back pain shortly before the accident, the evidence shows at a minimum she aggravated a pre-existing condition, and more probably, suffered new neck and shoulder strains because of the fall. While the reported pre-injury symptoms were similar, there were new clinical findings after the work accident including reduced cervical range of motion, muscle spasm, and swelling. The chiropractic records do not mention right shoulder pain, which has been a significant component of her pain complaints since the accident. Furthermore, Claimant worked a relatively demanding job before the accident without limitation. Admittedly, Claimant failed to

mention the pre-injury neck pain to Nurse Elliott at the outset, but the evidence supports her testimony the post-accident symptoms were different and worse than before. In light of the other evidence in the record, the ALJ is willing to give Claimant the benefit of the doubt she did not purposefully hide the history to manipulate the course of her claim.

The ALJ credits Dr. Davis and Nurse Elliott's opinions that Claimant at least suffered neck and right shoulder strains because of the work accident and reasonably required conservative treatment. The etiology and clinical significance of the SLAP tear is unclear, and Dr. Larson may be right that the tear is merely an incidental finding. But Claimant has not asked the ALJ to award surgery or other treatment specifically directed to the SLAP tear, so that question can be left for another day.

B. Medical benefits

Respondents are liable for medical treatment reasonably needed to cure or relieve the effects of an industrial injury. Section 8-42-101. Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury, or suggest a course of treatment. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000); *Walker v. Life Care Centers of America*, W.C. No. 4-953-561-02 (March 30, 2017); *Jacobson v. American Industrial Service/Steiner Corp.*, W.C. No. 4-487-349 (April 24, 2007). Respondents must reimburse a claimant directly for any compensable medical treatment they pay from their own pocket. Section 8-42-101(6)(a), (b); WCRP 16-10(F).

As found, the evaluations and treatment Claimant received under Nurse Elliott's direction since January 29, 2019 were reasonably necessary to cure and relieve the effects of her compensable injury. The ALJ also concludes the referral to Dr. Davis was reasonably necessary to assess her condition and explore potential treatment options. Claimant paid for the evaluation with Dr. Davis, and is entitled to reimbursement.

C. Temporary partial disability benefits

A claimant is entitled to TPD benefits if an injury proximately causes them to earn less than their pre-injury wage. Section 8-42-106. As found, Claimant suffered a partial wage loss because of her injury. Based on the stipulated AWW of \$410.10, Respondents owe Claimant \$625.61 for TPD benefits from February 19 through March 20, 2019.

D. Temporary total disability benefits

A claimant is entitled to TTD benefits if the injury caused a disability, the disability caused the claimant to leave work, the claimant missed more than three regular working days, and suffered an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the wage loss to obtain TTD benefits. *Id.*

As found, Claimant proved entitlement to TTD benefits commencing March 21, 2019 when she was taken off work. The decision to take Claimant off work was appropriate because Employer was not following her restriction and she was not

improving. Although she was released back to work with restrictions in September 2019, Employer offered no modified work.

ORDER

It is therefore ordered that:

1. Claimant's claim for an injury on January 24, 2019 is compensable.
2. Insurer shall cover all reasonably necessary medical treatment from authorized providers to cure or relieve the effects of Claimant's injury.
3. Insurer shall reimburse Claimant for the September 18, 2019 evaluation with Dr. Craig Davis.
4. Claimant's average weekly wage is \$410.10, per the parties' stipulation.
5. Insurer shall pay Claimant TPD benefits from February 19, 2019 through March 20, 2019 in the total amount of \$625.61.
6. Insurer shall pay Claimant TTD benefits at the weekly rate of \$273.40, commencing March 21, 2019 and continuing until terminated according to law.
7. Insurer shall pay Claimant statutory interest of 8% per annum on all temporary disability benefits that were not paid when due.
8. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 24, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- I. Whether Claimant established by a preponderance of the evidence she suffered compensable injury to her right knee and low back arising out of and in the course of her employment on September 11, 2018.
- II. If compensable, whether Claimant established by a preponderance of the evidence entitlement to medical benefits for her right knee and/or low back, including right knee surgery recommended by William Cooney, M.D.
- III. If compensable, whether Claimant established by a preponderance of the evidence that she is entitled to a change of medical providers.
- IV. If compensable, whether Claimant established by a preponderance of the evidence entitlement to temporary total disability (TTD) benefits from September 12, 2018 to December 17, 2018.
- V. If Claimant proved entitlement to TTD benefits, whether Respondents established by a preponderance of the evidence that Employer's modified employment offer terminated Claimant's right to TTD after October 1, 2018.
- VI. If compensable, whether Respondents provided by a preponderance of the evidence Claimant's December 21, 2018 accident in a store parking lot was an efficient intervening injury severing claimant's right to disability and medical benefits.

STIPULATIONS

The parties stipulated that Claimant's average weekly wage (AWW) is \$801.04.

FINDINGS OF FACT

1. Claimant is a 51-year-old woman. Claimant alleges she sustained an industrial injury to her right knee and low back while working for Employer on September 11, 2018.

Prior Medical History

2. Claimant has a history of prior right knee issues and treatment. On April 21, 2017, Claimant sought treatment with William P. Cooney, M.D., reporting right knee swelling, popping and pain after climbing rocks in Mexico, slipping, and twisting her right knee. On examination, Dr. Cooney noted moderate effusion and some lateral joint line tenderness. Dr. Cooney assessed Claimant with right knee pain and effusion and a

possible diagnosis of lateral meniscus tear. He aspirated the right knee and administered a cortisone injection. Dr. Cooney noted if the injection did not provide relief he would proceed with an MRI to look for a lateral meniscus tear. Claimant was to schedule a right knee MRI in the event her condition did not improve.

3. Claimant did not seek further evaluation or treatment of her right knee until the alleged work injury. Claimant testified she experienced relief from the injection administered by Dr. Cooney in April 2017 and did not have any additional right knee issues until the alleged work injury. Claimant testified that between seeing Dr. Cooney in April 2017 and the date of the alleged work injury she was able to continue working and exercising.

4. Claimant testified she experienced low back muscle strains at work in February 2013 and January 2017. The incidents did not result in any missed time from work. Claimant testified she did not have any low back issues leading up to the alleged work injury.

Employment Issues and Demotion

5. Claimant began her employment with Employer in 2011 as a patient care attendant. She was subsequently promoted for floor nurse and, in July 2016, charge nurse. As charge nurse Claimant was responsible for managing the daily operational needs for a med-surg oncology unit. Claimant also served on two leadership committees.

6. Prior to her promotion to charge nurse Claimant received accolades from Employer. Approximately one year after her promotion to charge nurse, Claimant began receiving verbal and written correction actions for her work performance and behavior. In August 2017, Claimant received a verbal coaching for indicating that she had verified chemotherapy calculations but actually failing to do so. On July 23, 2018, Claimant was coached for “cornering” associates, making them feel bullied, intimating the manager supported her behavior, and lack of follow-through on commitments to staff. On August 8, 2018, Claimant received a written Corrective Action Form for “inappropriate service behaviors,” including displaying a lack of integrity related to lying during a conference with a manager and a co-worker.

7. Leslie K[Redacted], Director of the department, requested that the human resources department conduct an investigation of the department and of Claimant. Abigail H[Redacted] and Jonathon X[Redacted] conducted the investigation. Mr. X[Redacted] testified the investigation included interviewing over 30 members of the unit, including Claimant and Claimant’s supervisor. Mr. X[Redacted] testified that the investigation confirmed issues with Claimant’s work performance and involvement in bullying.

8. Claimant received a written Final Corrective Action during a meeting with Ms. H[Redacted] and Ms. K[Redacted] on August 31, 2018. The Corrective Action noted

Claimant received the disciplinary action for a demonstrated pattern of lying, bullying, threatening staff and lack of willingness to be a resource to staff. Claimant was demoted from the charge nurse position to a floor nurse, resulting in a reduction in pay and removal from the shared governance committee. Claimant was required to attend bullying training with other members of the department on September 11, 2018. During the August 31, 2018 meeting Claimant became weepy and distraught and requested time to consider whether she would accept the demotion.

9. On September 4, 2018, Claimant spoke with Mr. X[Redacted], Ms. H[Redacted], and Ms. K[Redacted] by phone. Dr. X[Redacted] testified Claimant sounded upset, emotional, weepy, distraught, and indecisive about her future. Mr. X[Redacted] testified Claimant asked several times if Employer would rip up her final warning. She also asked if she could transfer departments, and was informed that was not an option. Claimant requested and received additional time to process how she wished to proceed.

10. Claimant ultimately returned to work as a floor nurse on September 10, 2018. That morning, she briefly met with Mr. X[Redacted], Ms. K[Redacted] and her supervisor, Keith N[Redacted], to discuss Employer's expectations of Claimant as a floor nurse moving forward. Mr. X[Redacted] observed Claimant looking upset. Claimant worked her entire shift that day.

Alleged Work Injury September 11, 2018

11. Claimant worked her normal shift on September 11, 2018 beginning at 7:00 a.m. Claimant, along with other members of the unit, attended anti-bullying training from 9:30 a.m. to 11:00 a.m.

12. Claimant alleges she sustained a work injury at approximately 12:12 p.m. on September 11, 2018. Claimant alleges she spent more than an hour on her knees attempting to unclog the catheter of a patient who was seated in a chair. Claimant testified she called Dr. D[Redacted] and Eric W[Redacted], a nurse, for assistance. Claimant testified she left the room to retrieve a urology cart and as she was pushing the cart back into the room, slipped on saline solution on the floor. Claimant testified she grabbed the handle of the ante room door and the cart to prevent herself from falling. Claimant stated that as she did so, she twisted her lower body and right knee.

13. Claimant acknowledged that Dr. D[Redacted] and Mr. W[Redacted] were in the room at the time but neither observed the alleged incident. Claimant testified she did not experience any right knee or low back pain immediately after the alleged incident. Claimant proceeded to perform her regular job duties and finish her shift at 7:00 p.m. Claimant testified she began feeling generally "unwell" after the alleged incident, including experiencing some nausea. Claimant testified she attributed the feeling to stress and having not yet eaten lunch. She informed Mr. N[Redacted] she was not feeling great, she had waited too long to eat, she had too much caffeine, she felt nauseous, and she had vomited. Claimant did not inform Mr. N[Redacted] of the alleged incident, any pain in back or knee pain, or any alleged work injury. Claimant did not

report the alleged incident to anyone that day. Claimant testified that upon completion of her shift she went home, took a bath, took some over-the-counter pain medication and went to sleep.

14. Claimant testified she subsequently woke up in significant pain. At 7:10 a.m. on September 12, 2018 Claimant emailed Mr. N[Redacted]. She stated that the day prior she slipped on urine during attempts to irrigate a catheter and later awoke with back and knee pain. She noted her belief that the combination of slipping and being hunched over on her knees for more than an hour took a toll. Claimant reported to Mr. N[Redacted] she had requested an appointment to see her personal physician. She also apologized for being “so emotional” the day prior, noting she had not been sleeping well and had a very difficult few weeks. Mr. N[Redacted] replied via email and advised Claimant to contact the Occupational Health Department if she was claiming a work injury. Claimant did so.

15. On September 12, 2018, Claimant signed a document provided to her by Employer specifying Dr. Woo at SCL Health as the primary care physician at Employer’s on-site health facility. The document does not list other designated providers. The document states, in relevant part,

Designated Medical Providers: Under the Colorado Worker’s Compensation Act, employers may select specific physicians to treat work related injuries. William Woo, M.D. in SCL Health Associate Occupational Health Services is the designated **primary** care physician for the LMC, GSMC and SJH worker’s compensation program. Other designated **specialist** medical providers are listed in the Associate Occupational Health Services office. These physicians have been carefully chosen because of their expertise in treating people who have been injured on the job (emphasis not added).

16. Employer completed a First Report of Injury or Illness on September 14, 2018, noting a date of injury of September 11, 2018.

17. Claimant first presented to Dr. Woo on September 17, 2018 with complaints of right knee, right shoulder and back pain. Claimant reported slipping on fluid and bracing herself on the wall using her right side. Claimant reported that she did not fall, but twisted her body. Claimant reported experiencing pain in her right low back, right lateral knee and right shoulder several hours later. Claimant admitted prior episodes of tweaking her low back, but the medical record contains no mention of prior right knee issues. Dr. Woo noted Claimant was anxious and tearful, which she related to lack of sleep and personal stress. On examination of the back, Dr. Woo noted minimal back extension, guarded and slow right/left side bending, and tight right paralumbar muscles and tenderness at the right SI. On examination of the right knee Dr. Woo noted “excellent” range of motion for extension and flexion, seemingly stable ligaments, no laxity with LCL testing, mild tenderness with palpation over the lateral knee, and pain at the lateral knee with McMurray’s testing. Dr. Woo assessed Claimant with a work-

related right shoulder strain, right knee strain, and right lumbar strain with possible SI involvement. He prescribed Claimant Dapro and physical therapy and assigned work restrictions of 20 pounds lifting/pushing/pulling, no bending and twisting at the waist, and alternating sitting and standing as needed.

18. On September 25, 2018, Employer sent Claimant a Temporary Alternate Work Assignment via certified mail. Dr. Woo reviewed and signed off on the assignment as complying with Claimant's work restrictions. The offer of modified employment entailed performing secretarial duties for 12-hour shifts for a total of 36 hours per week at \$33.38 per hour. Prior to the alleged work injury Claimant worked 12-hour shifts and was earning \$33.38 per hour as a floor nurse. The modified duty position was set to begin on October 1, 2018. Claimant received and declined Employer's offer of modified work. Claimant testified she declined the offer because she did not feel she could sit through a 12-hour shift.

19. On September 27, 2018, Mark A. Levstik, D.O. evaluated Claimant for recurrent depressive disorder and completion of FMLA documentation. Claimant admitted to work stress and difficulty sleeping. Claimant went on a leave of absence under FMLA retroactive September 15, 2018 to October 31, 2018.

20. On October 5, 2018, Claimant completed an Employee Report for Insurer. Regarding the alleged injury, Claimant reported spending 30 minutes on her knees attempting to irrigate a catheter, then slipping on urine while retrieving a cart. Claimant stated she did not fall on the floor. In response to the question "Have you returned to work?" Claimant wrote, "No, but not due to WC injury." Claimant testified she did not indicate her time off was due to the alleged injury because she was emotional and upset and was not in a rush to return to work because she wanted to heal. Claimant testified she was aware she would not be able to pursue a leave of absence under FMLA if she noted that the leave of absence was due to a work injury. Claimant testified she wanted time to heal "mentally and spiritually."

21. Dr. Woo reexamined Claimant on October 8, 2018. Claimant continued to report right low back and right lateral knee pain. On examination, Dr. Woo noted tenderness to palpation at the right lumbosacral junction and right SI area, tenderness to palpation at lateral right knee, good extension and flexion, and some laxity of the right ACL. He continued Claimant's restrictions.

22. Respondents filed a Notice of Contest on October 9, 2018.

23. Claimant began physical therapy on October 15, 2018. At a follow-up examination with Dr. Woo on October 25, 2018, Claimant reported 50% improvement with some remaining pain in the low back and significant improvement in the right knee. By November 15, 2018, Claimant was reporting to Dr. Woo 75% overall improvement. On November 29, 2018, Claimant reported to Dr. Woo experiencing momentary locking of her right knee earlier that week. Claimant continued conservative treatment.

24. Claimant requested a transfer to a different department. Claimant returned to work on modified duty on December 18, 2018.

25. At reexamination on December 17, 2018, Dr. Woo noted Claimant felt 85-90% improved. Claimant reported experiencing some swelling when her knee that resolved after diminishing her activities. She reported occasional popping of the right knee but no pain. Dr. Woo noted Claimant was not currently inhibited from doing any activities and had been exercising and lost seven pounds. He continued Claimant on work restrictions and recommended she complete her remaining four sessions of physical therapy. Claimant testified at hearing that she did not recall telling Dr. Woo she had improved 85-90%.

December 21, 2018 Incident

26. On December 21, 2018, Claimant was doing some personal shopping and fell in the parking lot of a store. Claimant testified her right knee locked, causing her to fall on her right knee. Claimant contacted the occupational nurse and was scheduled to see Dr. Woo a week earlier than the previously scheduled follow-up.

27. Dr. Woo examined Claimant on December 27, 2018. Claimant reported that her right knee locked or gave out as she was walking in a parking lot, aggravating her right low back symptoms. She reported experiencing some initial swelling of her right knee. On examination Dr. Woo noted some tenderness at the right low back area. With fairly good low back range of motion. The right knee had no appreciable swelling, but some knee joint cystic prominence at the anterolateral knee with full flexion. He further noted some tenderness with LCL stressing, but no overt laxity and no locking or pivot shift with McMurray's testing. Dr. Woo referred Claimant for an MRI of the right knee and continued Claimant on restrictions and physical therapy.

28. Claimant underwent a right knee MRI on January 2, 2019. The radiologist's impression was: 1. Suspected lateral meniscus tear with dissecting laminating component allowing for lateral joint line meniscal cysts. 2. No acute ligamentous disruption. 3. Mild arthritic type chondromalacia especially at the patellofemoral interval.

29. Claimant returned to Dr. Woo for a follow-up evaluation on January 14, 2019, reporting locking and giving out of the right knee and some continued low back pain. Dr. Woo noted the right knee MRI demonstrated a laminar-type of tear of the lateral meniscus. He referred Claimant for a lumbar MRI and a physiatrist evaluation for the low back, and an orthopedic evaluation for the right knee.

30. On January 16, 2019, Claimant underwent a lumbar spine MRI. The radiologist's impression was: 1. Multilevel lumbar degenerative changes including moderate spinal narrowing including both lateral recesses as well as moderate right neural foraminal narrowing at L4-5. 2. Posterior left transverse annular fissure of the L5-S1 disc potentially contributing to central low back pain.

31. On January 21, 2019, Claimant saw Dr. Cooney per Dr. Woo's referral. Regarding the mechanism of injury, Dr. Cooney noted, "Back in September 2018 patient spent an hour and (*sic*) a deep crouch and on her knees while taking care of a patient. As she was getting up she slipped on the floor which was wet and twisted her right leg." On examination, Dr. Cooney noted swelling laterally as well as joint line tenderness laterally and reproducible mechanical symptoms laterally. He noted the right knee MRI demonstrated a complex lateral meniscus tear with associated parameniscal cyst and early patellofemoral chondral change. He opined consideration of a knee arthroscopy with presumed partial meniscectomy and parameniscal cyst decompression was warranted. He referred Claimant to Dr. Gerlach for a spine consultation.

32. On January 30, 2019, Claimant presented to Nicholas K. Olsen, M.D. per referral of Dr. Woo. Claimant reported injuring her lumbar spine after spending an hour on her knee flushing a clotted catheter and in the process slipping on a wet floor. He noted the lumbar spine MRI demonstrated grade 1 spondylolisthesis at L4-5 with right greater than left foraminal stenosis and annular fissure at L5-S1. He opined that, based on his clinical examination, the more likely pain generator was the annular fissure at L5-S1. He noted the grade 1 spondylolisthesis was likely chronic and longstanding. Dr. Olsen recommended flexion/extension films, aquatic therapy, and a possible epidural steroid injection in the future.

33. On February 25, 2019 Dr. Cooney issued a letter stating his opinion that Claimant sustained a new work-related injury on September 11, 2018 because Claimant was "essentially symptom-free" since his April 2017 evaluation of her up until the alleged work injury.

34. On April 18, 2019, Claimant saw Matthew R. Gerlach, M.D. per the referral of Dr. Cooney. Claimant reported feeling pain in her right leg while lifting a patient at work on September 11, 2018, then that same day slipping on a wet floor and twisting her right leg, immediately feeling severe right leg pain. Dr. Gerlach noted MRI findings of L4-5 spondylolisthesis, hypertrophic facet degeneration, and severe lateral recess stenosis. He opined that Claimant's radiating right leg pain followed an L5 nerve root pattern and correlated with the L4-5 spinal stenosis and spondylolisthesis. He recommended conservative treatment and consideration of surgery at L4-5 in the event conservative treatment failed.

35. On July 8 2019, Kathleen D'Angelo, M.D. conducted an Independent Medical Examination (IME) at the request of Respondents. Dr. D'Angelo took a detailed history from Claimant, performed a thorough record review, and examined Claimant. Regarding the mechanism of injury, Claimant reported slipping on a wet floor, twisting, and catching herself on a cart. Dr. D'Angelo opined that, at most, Claimant suffered an aggravation of underlying right knee osteoarthritis, which by medical definition should have been short-lived and temporary. Dr. D'Angelo opined that the lateral meniscus tear demonstrated on MRI was chronic and degenerative. Dr. D'Angelo explained that traumatic meniscus tears generally occur with other associated ligamentous tears and are generally are vertical tears. She noted that degenerative meniscal lesions are

common, strongly associated with the presence of osteoarthritis in the knee, and present in a significant percentage of patients 50 years old and older. Dr. D'Angelo noted Dr. Cooney previously diagnosed Claimant with a lateral meniscus tear and, in April 2017 Claimant had similar knee complaints as she had at the time of the IME. She explained that the proper treatment for a degenerative tear is activity, which is why Claimant functioned well after the aspiration and injection. Dr. D'Angelo opined that surgery for Claimant's degenerative lateral tear was not reasonable and necessary, as studies demonstrate there is no benefit from surgical intervention for degenerative meniscus tears.

36. Dr. D'Angelo further opined that Claimant's lumbar MRI showed nothing but degenerative findings which predated and were incidental to her alleged work injury. Dr. D'Angelo cited medical literature to explain that the MRI finding of degeneration was the result of normal aging and not associated with pain, and that the facet joint arthropathy (OA of the facet joint) is a common finding linked to low back pain, progressing with age, and commonly seen in the general population without an unusual injury or trauma. Finally, she noted that annular fissures occur in early stages of spinal degeneration and are not indicative of a traumatic injury. Dr. D'Angelo stated that in her medical opinion Claimant's lumbar spine pain was not causally related to her alleged work injury.

37. On August 15, 2019, Dr. Woo issued a letter to Respondents' counsel stating he agreed with Dr. D'Angelo's assessment that Claimant has a chronic lateral meniscus tear. Dr. Woo explained that the MRI findings indicate chronic changes, specifically, the parameniscal cysts on the anterolateral joint line. He also agreed that Claimant's right knee condition was at MMI at the time of her MRI, and no medical care or restrictions for the right knee were related to the alleged work injury. Dr. Woo noted he agreed the lumbar MRI findings revealed only chronic degenerative changes, but stated he could not conclude solely from the MRI that Claimant's lumbar condition as a whole was unrelated to the alleged work injury.

38. On August 21, 2019, Dr. Woo issued a second letter to Respondents' counsel stating that, if Claimant had been receiving care for a low back condition prior to the work incident, this would suggest elements of symptomatic low back degenerative changes with intermittent or persistent episodes of symptoms. Could be a pre-existing condition, but again reiterated the work-relatedness would be based on the facts of what precipitated the need for treatment for low back pain.

39. Dr. Cooney testified at pre-hearing evidentiary deposition. Dr. Cooney testified as an expert in orthopedic surgery, specializing in knees and shoulders. Dr. Cooney is not Level II accredited. Dr. Cooney continued to opine Claimant sustained an acute lateral meniscus tear as a result of the September 11, 2018 incident. He clarified that when he examined Claimant in April 2017 he did not actually suspect Claimant sustained a lateral meniscus tear. He explained that lateral meniscus tear was listed as a possible diagnosis for insurance companies in the event Claimant were to schedule an MRI in the future. Dr. Cooney testified that if Claimant had a meniscus tear at the time, neither the aspiration nor the injection would have provided relief. He testified that

if Claimant was suffering from a more significant condition at the time he would have expected Claimant to return to him for treatment sooner. Dr. Cooney testified that the MRI revealed a lateral meniscus tear with a parameniscal cyst and some early patellofemoral arthritis. He explained that the parameniscal cyst would suggest the tear did not happen within a week or two of his January 2019 evaluation of Claimant; however, Dr. Cooney was unaware of how long it generally takes such cysts to develop.

40. Dr. Cooney testified that traumatic tears can occur without an ACL injury and do not have to take any particular shape or configuration. He explained that the normal cartilage on the lateral side of Claimant's knee supports a conclusion the tear is traumatic. Dr. Cooney testified the MRI demonstrated early osteoarthritis that did not have any implication in causing a degenerative meniscus tear. He disagreed with Dr. D'Angelo that Claimant's symptoms are more related to ongoing arthritis versus a meniscus tear. Dr. Cooney opined that, given the mechanism of injury, MRI results, and persistent symptoms, it is reasonable for Claimant to undergo a right knee arthroscopy.

41. On cross-examination, Dr. Cooney testified his opinion was based on the MRIs, his reports, and the report of Dr. D'Angelo. He testified he did not review any of Claimant's other medical reports or the medical studies cited by Dr. D'Angelo. Dr. Cooney testified he was unaware Claimant provided a different mechanism of injury to him than she did to other providers. He testified, however, that twisting of the knee would be a common cause of a meniscus tear. Dr. Cooney further testified that if Claimant sustained a traumatic meniscus tear on September 11, 2018 she would have pain and possible some mechanical symptoms. He explained it would not be unusual to have full pain-free range of motion a few days later. Dr. Cooney testified he was unaware Claimant had reported significant improvement by December 17, 2018, and she had an incident involving her knee on December 21, 2018. Despite being made aware of such information at hearing, Dr. Cooney did not change his opinion regarding the relatedness of Claimant's condition or need for treatment.

42. Dr. D'Angelo testified by post-hearing evidentiary deposition. Dr. D'Angelo testified as a Level II accredited expert in internal medicine and occupational medicine. After the July 8, 2019 IME, Dr. D'Angelo reviewed additional records, including records regarding Claimant's employment issues, Dr. Gerlach's report, Dr. Woo's August 15, 2019 and August 21, 2019 reports, and Dr. Cooney's deposition testimony. Dr. D'Angelo continued to opine Claimant's right knee diagnosis is a degenerative lateral meniscus tear that predated the alleged work injury. Dr. D'Angelo explained that if Claimant truly sustained an acute lateral meniscus tear during her shift on September 11, 2018, she would have become acutely symptomatic and could not have done the activities she told Dr. D'Angelo she completed prior to the end of her shift. Dr. D'Angelo concluded that Claimant had a degenerative tear by mechanism, structure, and findings on the MRI. Dr. D'Angelo explained that the MRI revealed multiple cysts, which are commonly seen with degenerative tears, as well as degenerative changes in all three compartments of the knee.

43. Dr. D'Angelo discussed Claimant's well-documented improvement between the date of the alleged injury and December 17, 2018, noting that Claimant's condition on December 17, 2018 was classic for resolution of an exacerbation of a degenerative tear. With respect to the December 21, 2018 incident, Dr. D'Angelo opined Claimant's fall in the parking lot was not related to the alleged work injury. She reiterated her opinion that right knee surgery is not reasonable, necessary or related.

44. Regarding Claimant's low back condition, Dr. D'Angelo testified that all of the findings identified on the lumbar MRI are degenerative. She continued to opine Claimant's low back issues are degenerative in nature and unrelated to Claimant's alleged work injury. Dr. D'Angelo opined Claimant did not sustain any work injury on September 11, 2018.

45. Claimant testified at hearing she was not upset regarding her demotion in August 2018 and that the employment issues are unrelated to her reporting of a work injury. She testified that she continues to experience pain and a locking sensation in her right knee, as well as low back pain when sitting for extended periods of time. Claimant testified she no longer rides bikes or exercises as she did prior to the alleged work injury. Claimant is currently working for Employer in an on-call basis. Claimant is requesting a change in authorized treating physicians. She testified she is dissatisfied with Dr. Woo's treatment and feels he does not listen to her concerns or adequately assess her. She further testified Dr. Woo prescribed her a NSAID that caused her problems. Claimant requests a change of physician to Dr. Caroline Gellrick, who she has researched online.

46. The ALJ finds the opinions of Drs. D'Angelo and Woo more credible and persuasive than the opinions of Dr. Cooney

47. The ALJ finds the testimony of Mr. X[Redacted] more credible and persuasive than Claimant's testimony.

48. Claimant failed to prove by a preponderance of the evidence she sustained a compensable industrial injury to her right knee and low back on September 11, 2018. The preponderant credible and persuasive evidence establishes Claimant's right knee and low back conditions are pre-existing and were not caused, aggravated or accelerated by the alleged September 11, 2018 work incident.

49. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the

necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a

pre-existing condition that is unrelated to the employment. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.*, WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to prove by a preponderance of the evidence she sustained a compensable work injury during the course and scope of her employment for Employer. Claimant alleges she slipped and twisted her low back and right knee on September 11, 2018. The record clearly demonstrates Claimant was in the midst of employment issues with her Employer at the time of the alleged injury. Claimant had returned to work just one day prior to the alleged injury after taking time off due to being distraught over a recent demotion. Claimant's testimony that she was not upset over the demotion is not credible, as Mr. X[Redacted] credibly testified to his observation of Claimant's behavior, and both the medical records and Claimant's September 12, 2018 email to Mr. N[Redacted] refer to Claimant being emotional and stressed. Claimant admitted to taking a leave of absence under FMLA after sustaining the alleged work injury because she was emotional and upset and wanted time to heal mentally and spiritually. This further calls into question Claimant's motives and her credibility as to an alleged work injury.

In addition to the employment issues, the credible and persuasive medical evidence does not establish Claimant more than likely sustained acute injuries to her right knee and low back. Claimant acknowledges she did not feel any right knee or low back pain until hours after the alleged work injury and she was able to continue performing her normal work duties for several hours. Claimant notified Mr. N[Redacted] she was generally not feeling well, but made no mention to him of the alleged slipping incident or any issues with her right knee or low back. Dr. D'Angelo credibly explained that, had Claimant actually sustained an acute meniscus tear, she more than likely would have been acutely symptomatic and unable to continue performing at least some of her regular job duties. Dr. D'Angelo conducted a comprehensive review of Claimant's medical records and employment records in issuing a causation analysis. She credibly opined Claimant did not sustain a work injury on September 11, 2018, explaining that Claimant's lumbar and knee MRIs demonstrate only chronic, degenerative changes. Dr. D'Angelo credibly explained Claimant's presentation and response to treatment further support her conclusion that Claimant's symptoms and need for treatment are the result of pre-existing, degenerative changes that are unrelated to any alleged work incident. The totality of the credible and persuasive evidence does not establish Claimant more than likely sustained a compensable work injury that caused disability or the need for treatment.

As Claimant failed to meet her burden to prove she sustained a compensable industrial injury, the remaining issues of medical benefits, TTD, intervening injury, and change of physician are moot.

ORDER

1. Claimant failed to prove by a preponderance of the evidence she sustained a compensable industrial injury on September 11, 2018. Claimant's claim for benefits is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 25, 2020

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-119-027-002**

ISSUES

- Did Claimant prove by a preponderance of the evidence that Colorado has jurisdiction over his workers' compensation claim?
- Did Claimant prove entitlement to reasonably necessary medical treatment to cure and relieve the effects of his injuries?

STIPULATIONS

Respondents stipulated Claimant was in the course and scope of employment with Employer at the time of the accident in Georgia on June 25, 2019, and that the accident arose out of Claimant's employment.

FINDINGS OF FACT

1. Claimant is an over-the-road truck driver. He lives in Colorado Springs, Colorado.

2. Employer is a trucking company based in Union, Missouri. Employer has no operations in Colorado.

3. On April 15, 2019, Claimant received an e-mail from Nicholas R[Redacted] in Employer's recruiting department, thanking Claimant for his interest in the company, and providing a link to Employer's online job application. Later that day, Claimant completed the application, via his cell phone, from his home in Colorado Springs.

4. No persuasive evidence was presented to show Employer contacted Claimant regarding prospective employment. Nor is there any persuasive evidence Employer actively recruits employees from Colorado or has any other Colorado-resident employees other than Claimant. Based on the evidence presented, the ALJ infers Claimant made the first contact, and the e-mail from Mr. R[Redacted] was in response to that initial contact from Claimant.

5. On the morning of April 16, 2019, Employer reviewed Claimant's driving record through the MVR Express system. The ALJ infers Employer was satisfied with the report, because a few hours later, Employer's Representative Karen Y[Redacted] sent Claimant a welcome e-mail packet. The e-mail started with "Welcome to the Climate Express Family!!!!!!!!!! We appreciate what you [sic] and value your employment with us. Have a safe trip in and see you soon!!!" [Exclamations in original].

6. Before starting work for Employer, Claimant had to attend an orientation at Employer's facility in Union, Missouri. The orientation included a driving test, a drug test, and paperwork. The welcome e-mail described Claimant lodging arrangements (at

Employer's expense) during the orientation. Employer also provided a company car for Claimant's use during the orientation. The e-mail confirmed, "You should be in your truck and on the road the 2nd day or the morning of the 3rd. Once orientation is complete, you will be assigned a truck and routed through your house as soon as possible."

7. Ms. Y[Redacted] enclosed another two-page document with more details regarding the orientation process and daily schedule. At the top of the first page, the document stated, "Congratulations You Made it! Welcome to the Climate Express Team!" The document ended with "**Congratulations!!! You are now part of the team!!! We look forward to working with you.**" [Bold in original].

8. Employer provided Claimant a one-way bus ticket for travel from Colorado Springs to St. Louis, Missouri.

9. Claimant believed he was hired and "got the job" when he read the welcome e-mail packet. Claimant believed he was Employer's employee when he left Colorado because they had sent him the bus ticket, a hotel voucher, and the "letter of congratulations." Claimant knew he had to pass the driving test and drug test before he could start driving for Employer, but he thought he had been hired before he left Colorado. Claimant testified he would not have travelled to Missouri for orientation if he did not think he had been hired.

10. Claimant departed Colorado Springs on April 17 and arrived in St. Louis on April 18, 2019. He went to Employer's facility after arriving in Missouri to start the orientation process. He completed multiple documents on April 18, including a "New Hire Acceptance Sheet," a direct deposit form, and a W-4 withholding form. Employer arranged for Claimant to give a urine sample that same day, which he passed. On Friday, April 19, Claimant passed a written test and the driving test.

11. Claimant returned to Employer's facility on Monday, April 22, 2019 to complete additional paperwork, including the Employment Eligibility Verification Form I-9. He was assigned a truck and began driving that same day. Employer made various notations in Claimant's employment file that his "date of hire" was April 22, 2019.

12. Claimant was involved in motor vehicle accident on June 25, 2019 while making deliveries in Georgia. He suffered injuries that required medical treatment and caused him to miss work.

13. Claimant has an active workers' compensation claim in Missouri for the June 25, 2019 accident. MEM, Employer's workers' compensation insurer in Missouri, has paid temporary disability benefits and covered medical treatment.

14. On October 3, 2019, Claimant filed a Worker's Claim for Compensation form with the Colorado Division of Workers' Compensation, seeking benefits for his injuries under Colorado law. Respondents denied the claim on the basis Colorado lacks jurisdiction over Claimant's injuries.

15. Claimant failed to prove Employer purposefully availed itself of the privilege of conducting business in Colorado or had any significant contacts with Colorado other than Claimant living here when he applied for work. Accordingly, Colorado does not have personal jurisdiction over Employer.

CONCLUSIONS OF LAW

Colorado's "extraterritorial" jurisdiction over injuries occurring in another state is governed by § 8-41-204, which provides,

If an employee who has been hired or is regularly employed in this state receives personal injuries in an accident or an occupational disease arising out of and in the course of such employment outside of the state, the employee, or such employee's dependents in case of death, shall be entitled to compensation according to the law of this state. This provision shall apply only to those injuries received by the employee within six months after leaving this state, unless, prior to the expiration of such six month period, the employer has filed with the division noticed that the employer has elected to extend such coverage for a greater period of time.

Claimant asserts Colorado jurisdiction under the theory he was hired in Colorado and the injury occurred within six months after he left the state. Whether an employee was "hired . . . in this state" is a contract question generally governed by the same rules as other contracts. *Denver Truck Exchange v. Ferryman*, 407 P.2d 805 (Colo. 1957). The essential elements of a contract are competent parties, subject matter, legal consideration, mutuality of agreement, and mutuality of obligation. *Id.* The place of contracting is generally determined by the parties' intention and is usually the place where the offer is accepted, or the last act necessary to the meeting of the minds or to complete the contract is performed. The ultimate criterion of the place where the contract is deemed to have been made is the place where the last act necessary to complete it was done. *Id.* Nevertheless, in the context of workers' compensation claims, overly technical application of the "contract of hire" requirement is not appropriate. The general rule announced in *Denver Truck Exchange* has been tempered so that a contract of hire may be deemed formed, even though not every formality attending commercial contractual arrangements is observed, as long as the fundamental elements of contract formation are present. *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996).

Claimant argues the facts of his case are "remarkably similar" to the facts in *Miner v. Youngquist Brothers Oil & Gas, Inc.*, W.C. No. 4-951-385-01 (June 19, 2015) and *Huffman v. Multiple Concrete*, W.C. No. 4-876-455-03 (February 20, 2013). Colorado jurisdiction was found in those cases, and Claimant naturally reasons the same result should obtain in his case.

The ALJ agrees the evidence shows Claimant was "hired . . . in this state," as was found in the *Huffman* and *Miner* cases. But that is not the end of the analysis. Claimant's argument overlooks a critical development since those cases were decided, namely, the Supreme Court's decision in *Youngquist Brothers Oil & Gas, Inc. v. Miner*, 390 P.3d 389

(Colo. 2017). *Youngquist* held that even where the requirements of § 8-41-204 are met, the exercise of jurisdiction over a particular employer must comport with substantive due process based on the employer's contact with Colorado. The court held,

Specific jurisdiction is properly exercised where the injuries triggering litigation arise out of and are related to activities that are significant and purposefully directed by the defendant at residents of the forum. To determine whether the defendant has sufficient minimum contacts, we consider (1) whether the defendant purposefully availed himself of the privilege of conducting business in the forum state, and (2), whether the litigation arises out of the defendant's forum-related contacts. The "purposeful availment" requirement ensures that a defendant will not be haled into a jurisdiction solely as a result of random or fortuitous contacts or the unilateral activity of [a third-party]. Single or occasional acts related to the forum may not be sufficient to establish jurisdiction if the nature and quality and the circumstances of their commission create only an attenuated affiliation with the forum. [Internal quotations and citations omitted].

In Claimant's case, there is no persuasive evidence Employer "purposefully availed" itself of the privilege of doing business in Colorado or had sufficient "minimum contacts" to subject itself to Colorado jurisdiction. Employer is not based in Colorado and there is no persuasive evidence it conducts any business in this state. Employer's only contact with Colorado is the happenstance that Claimant lived here when he applied for work. Employer did not actively recruit Claimant or any other Colorado citizen. *Youngquist* instructs it is not enough for an employee unilaterally to reach out to a non-resident employer and seek employment. Rather, the employer must reach into Colorado to seek the employee, or otherwise conduct business here. Otherwise, Colorado lacks subject matter jurisdiction, notwithstanding that the employee was hired in Colorado.

The facts in Claimant's case are not appreciably different from those in *Youngquist*, which the Supreme Court found were insufficient to support personal jurisdiction over the employer. Accordingly, Claimant's claim must also be denied for lack of jurisdiction.

ORDER

It is therefore ordered that:

1. Claimant's claim for Colorado workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: February 25, 2020

s/ Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the cervical facet injections as recommended by Dr. Stanton, are reasonable, necessary, and related to the original work injury of October 14, 2016?

II. Has Claimant shown, by a preponderance of the evidence, that the right shoulder surgery as recommended by Dr. Weinstein, is reasonable, necessary, and related to the original work injury of October 14, 2016?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. On October 14, 2016, Claimant was working for Employer. Claimant testified that he was walking down a small hill, then slipped on a patch of grass. Claimant testified that his feet went out from under him and he fell backwards, hitting his low back. He also braced himself with his left arm. Claimant testified that his head snapped to the left and behind him. Claimant immediately reported the injury to his employer.

2. Claimant initially treated at Penrose St. Francis Hospital the same day. (Ex. H) Claimant reported to ER personnel that he had low back pain after a fall to his back. Claimant complained of pain radiating down his right leg along with left shoulder pain with numbness in his left upper extremity. *Id.* Claimant did not report or complain of any neck pain. Examination revealed a supple neck with no midline tenderness. *Id.* at 69.

3. On October 17, 2016, Claimant was evaluated by Dr. Baptist at Colorado Springs Health Partners. (Ex. I, p. 73). Claimant complained of pain in his low back, left shoulder, and arm with numbness. Claimant again denied neck pain. Dr. Baptist noted that the neck was supple and appearance was normal. *Id.* at 75. There was no tenderness and full range of motion of the cervical spine.

4. Claimant's first report of neck pain occurred on October 20, 2016 when he was treated by Dr. Baptist. (Ex. I, p. 77). Claimant reported that his neck was hurting, and his left upper extremity symptoms were more constant. Dr. Baptist noted left paraspinal and upper trapezius tenderness and spasm. Claimant was referred for a cervical MRI.

5. Claimant underwent an MRI of the cervical spine on October 25, 2016. (Ex. N). The MRI showed a small disc protrusion posterolaterally on the left at C6-7, with probable impingement of the left C7 nerve. Also noted were a right sided uncinat spurting at C4-5 with moderate lateral recess stenosis, and mild right foraminal stenosis with crowding of the right C6 nerve. On November 3, 2016, Dr. Baptist noted that the cervical MRI findings did not really explain Claimant's left upper extremity symptoms; however, Claimant was referred to a neurosurgeon for a surgical opinion. (Ex. I, p. 80). He was also referred to physical therapy.

6. Claimant attended 20 physical therapy sessions between November 8, 2016 and January 27, 2017 with Total Function Physical Therapy. The initial assessment included neck, left shoulder, and back pain, with possible signs of cervical radiculopathy in his upper left arm, and decreased range of motion in his neck and shoulder. Conservative treatment followed, including manual therapy, cervical distraction, and right-sided C4-7 lateral glides.

7. On December 8, 2016, Claimant returned to Dr. Baptist. At that time, Claimant's chief complaints included a pain sensation on the neck going down the left arm. Claimant was released to work for modified duty. Restrictions included no lifting, carrying, pushing, or pulling over 5 pounds and no use of the left arm.

8. On December 19, 2016, Claimant presented to Dr. Weinstein at the Colorado Center of Orthopedic Excellence for an evaluation of his left shoulder. Claimant discussed his injury on October 14, 2016 when he fell on his back and braced onto his left arm. Claimant reported pain in his anterior, posterior, and lateral aspect of the shoulder as well as into the lateral neck. Claimant stated his pain was notable with sleeping on the left side as well as shoulder level activities.

9. Physical examination revealed tenderness over the trapezius bilaterally, more notable on the left than the right. ROM showed a decreased ROM in the cervical spine in all planes. Dr. Weinstein stated, "most of his symptoms are related to adhesive capsulitis of his shoulder and general inflammation as well as a myofascial component with radiculopathy from his neck. Dr. Weinstein suggested a surgical intervention in the form of a left shoulder arthroscopy. (Ex. 4, pp. 372-373). On a return visit on February 1, 2017, Claimant agreed to undergo the procedure, but it was denied by Respondents at this time.

10. On March 9, 2017, Claimant returned to Dr. Weinstein for a follow-up for his left shoulder injury. Physical examination showed mild tenderness over the left trapezius and a slightly positive Spurling's test. Dr. Weinstein administered a cortisol injection for the left shoulder because the surgery had not been authorized. (Ex 4, pp. 376-377).

11. Over the next three years, Claimant's reported neck symptoms varied. On December 30, 2016, Claimant reported that the numbness and weakness in his arms was gone, but his pain continued. (Ex. I, p. 91). On February 3, 2017, Claimant was treated by Dr. Baptist and reported that his neck still hurt, but he did not have any radiculopathy. (Ex. I, p. 95). Dr. Baptist noted that Claimant was moving his neck better. *Id.*

12. On March 3, 2017, Claimant followed up with Dr. Baptist and reported ongoing pain in his left shoulder and low back, but did not mention any neck pain. (Ex. I, p. 99). On April 5, 2017, Claimant was examined by Dr. Hammers. (Ex. 4, p. 342). Dr. Hammers noted no cervical midline tenders and full range of motion. *Id.* Claimant did have mild tenderness over the left trapezius. On April 7, 2017, Claimant was evaluated by Dr. Baptist. (Ex. I, p. 104). Claimant did not report any neck pain and Dr. Baptist noted that the neck was supple and appearance was normal with full movement and no apparent pain.

13. At this same visit with Dr. Baptist on April 7, 2017, the following was noted in Claimant's file by Dr. Baptist:

I have told the patient that he must not obtain narcotics from any other provider while I'm caring for him. I checked the PDMP today, as I checked previously, and there are several scripts written and filled by his PCP which didn't appear before this to my knowledge, and also not in clinical summary except as ordered by his PCP 2/27. Patient at first stated he did not take the hydrocodone prescribed at 60/month by other providers but later admitted to this. In reviewing PDMP, over the year prior to this case he was provided multiple scripts by multiple providers, ostensibly for chronic pain in elbow. *Id.* at 104.

14. From April 4, 2017 through July 7, 2017 Claimant returned to PT for 23 visits based on a referral from Dr. Weinstein. Chief complaints consisted of shoulder, back and neck pain. Treatment diagnosis included cervicalgia. Claimant reported that his condition had worsened since he stopped PT in late January 2017. Initial subjective complaints showed his left shoulder ROM was extremely limited and that he was unable to do most activities of daily living with his left arm. Claimant also reported that his neck feels 'misaligned'. Claimant now reported headaches that began after his fall on October 14, 2016.

15. On April 5, 2017, Claimant presented to Dr. Ronald Hammers for an evaluation of his cervical spine. Claimant reported a few months of pain with neck movement but denied any radiculopathy. Claimant did report headaches. Dr. Hammers recommended conservative care.

16. Also On April 5, 2017, in an effort to bring Claimant back to work, Respondents provided Claimant with a modified job offer of light duty working for ARC Thrift Store. (Ex. O). Claimant worked a single shift of eight hours for ARC Thrift Store on April 19, 2017. *Id* at 200. Claimant's duties while working for ARC were to assist with sorting, cleaning, and tagging clothing, linens, shoes, books, electronics, and small household appliances weighing no more than five pounds. At hearing, Claimant testified that he stayed within his work restrictions at that time, by lifting electronic items weighing no more than 5 pounds.

17. Claimant testified that he began feeling right shoulder pain while working at the ARC on April 19, 2017. Claimant testified that he told his supervisor at ARC that his shoulder was starting to hurt, and he took a morning break. Claimant testified that he felt a 'pop' in the right shoulder after lunch and he could not work any further. *Claimant did not report this pop in his right shoulder to any of his treating or examining medical providers.* Claimant did not immediately report the right shoulder injury to Employer.

18. Dr. Weinstein is an orthopedic surgeon specializing in shoulder and elbow surgery. Dr. Weinstein treated Claimant for his left shoulder injury, and his reported right shoulder injury. Dr. Weinstein testified at his deposition that he did not know Claimant's prior history, and did not have any documentation about the right shoulder injury prior to his treatment of Claimant. Dr. Weinstein opined that it would be hard to tear a rotator cuff by working one day lifting items that weighed five pounds or less.

19. Around the time that Claimant was working for ARC, he was attending regular physical therapy sessions with Total Function Physical Therapy. (Ex. K). On April 20, 2017, [one day after the reported right shoulder injury], Claimant attended physical therapy and reported that he was in a lot of pain after volunteering at ARC; however, he did not mention a right shoulder *injury* or feeling a *pop* in his right shoulder while working for ARC. *Id* at 163. Claimant followed up with physical therapy on April 25, 2017. *Id* at 161. Physical Therapist Reed noted significant tightness and tenderness to palpation of the left greater than right cervical musculature. In addition, PT Reed noted that pressure to the left upper trapezius distally and proximally elicited a headache. There was no discussion of right *shoulder pain* or tenderness.

20. On April 28, 2017, Claimant followed up with Dr. Baptist. (Ex. I, p. 108). Claimant complained of neck, back, and left shoulder pain, rated at 8/10. *Id.* Dr. Baptist noted that there were no other new complaints. *Id.* On May 1, 2017, Claimant was evaluated by Dr. Weinstein. Claimant complained of pain in the area of his trapezius but no cervical pain. *Id.* Dr. Weinstein noted no midline cervical tenderness and full range of motion. There was no mention of right *shoulder pain*.

21. On May 1, 2017, Claimant returned to Dr. Weinstein for evaluation of his left shoulder. Physical examination showed mild tenderness over the left trapezius and

continued tenderness and pain over the anterior subacromial space, bicipital groove, and acromioclavicular joint. Left shoulder surgery was recommended. Claimant again stated he wished to proceed with surgery.

22. On May 23, 2017, Claimant had a left shoulder arthroscopic subacromial decompression with rotator cuff repair of the subscapularis tendon, arthroscopic biceps tenodesis and arthroscopic distal clavicle resection. (Ex. 4, p. 380).

23. On June 27, 2017, Claimant returned to Dr. Weinstein for a post-surgical visit. Physical examination revealed a slight decrease in ROM in all cervical planes. Dr. Weinstein stated Claimant is doing well six weeks out from surgery. Dr. Weinstein also instructed Claimant to avoid use of the left upper extremity except to write or type and discontinuation of the sling on July 4, 2017.

24. On June 28, 2017, Claimant returned to Dr. Hammers for a follow up on his cervical radiculopathy. Claimant reported some neck pain that radiates towards the right ear. Dr. Hammers noted that Claimant had a history of neck pain but he did not see any severe neurologic compression requiring surgery. Dr. Hammers recommended a repeat MRI to assess continued back pain. No additional care or testing was recommended for the cervical spine. (Ex. 4, pp. 348-349).

25. On August 9, 2017, Claimant returned to Dr. Weinstein. Claimant was approximately 10 weeks out from surgery and was improving. Claimant also reported increased pain in the right shoulder that was described as an ache in the anterolateral aspect. Dr. Weinstein conducted a cursory examination of the right shoulder in addition to the left shoulder. Dr. Weinstein stated Claimant's physical examination is consistent with general inflammation of the [right] rotator cuff and that his parasthesias of his hand may be related to peripheral mononeuropathias. Dr. Weinstein's impression included right shoulder rotator cuff tendinitis and hand parasthesias. (Ex. 4, pp. 384-386).

26. On August 31, 2017, Claimant reported to PT based on a new referral from Dr. Weinstein. Initial subjective complaints included pain in the right shoulder. He stated he tried a recumbent bike and it hurt the right shoulder and back when he went over a little bump. Claimant tolerated strengthening exercises on this day. However, due to right shoulder pain, all the exercises had to be single arm. (Ex. 2, p. 279).

27. On a return visit to Dr. Weinstein on October 6, 2017, Claimant was noted to be making progress on his left shoulder recovery, but right shoulder symptoms pointed towards a possible rotator cuff issues. (Ex. 4, pp. 387-388).

28. On November 10, 2017, Claimant returned to Dr. Hammers with reports of increasing neck stiffness for the past six months. Claimant reported pain that

radiates from his neck towards his right ear. In addition, Claimant reported feeling 'heat' at the back of his neck and he mentioned an additional right shoulder injury from working at the ARC thrift store. He also described pain in the right upper extremity that radiates down to the hand.

29. Dr. Hammers noted that the physical examination was limited by the recent right shoulder injury and pain. Dr. Hammers ordered an additional MRI cervical without contrast and cervical dynamic x-rays. The MRI report dated November 10, 2017 revealed cervical spondylosis with borderline central spinal canal stenosis at C3-C4 and C4-C5 as well as multilevel foraminal stenosis bilaterally, most pronounced on the left at C6-C7. (Ex. 3, pp. 357-361).

30. On November 16, 2017, Claimant presented to Dr. Baptist with a *new* workers compensation injury. Claimant stated he injured his right arm and hand while working at the ARC on April 19, 2017. Specifically, Claimant was lifting heavy objects of a trash bin with his right arm only when he felt sudden pain in his right shoulder extending into the median distal right hand. He asserted he initially thought the right shoulder injury would get better, but it didn't. Physical examination revealed very limited range of motion in the right shoulder in all planes and tenderness around the humeral head. Claimant filled out a pain diagram indicating pain in the front right shoulder extending into the right trapezius down into the right arm, pain along the entire cervical spine, and pain in the lower back. Dr. Baptist referred Claimant to hand surgery. Claimant was also referred for an MRI of the right shoulder. (Ex. 1, pp. 74-79).

31. On December 18, 2017, Claimant reported to Dr. Karl Larsen on referral from Dr. Baptist for evaluation of his right hand. Dr. Larsen noted that Claimant was functionally one-handed on the right side during his recovery from his left shoulder surgery. Dr. Larsen also noted that Claimant was sent to a warehousing area where he was *doing a lot of* box emptying one-handed. During this work, he developed significant throbbing pain throughout the right wrist and hand with some subjective tingling in the digits.

32. Dr. Larsen's impression stated he had carpal tunnel syndrome related to his use of his right arm only. Specifically, Dr. Larsen stated, "ordinarily, I would not consider just use of one extremity during recovery on the other [arm] a major cause of injury but in this case, the way it is presented ... *he was essentially on employment doing a lot of heavy repetitive gripping* and lifting activities. I think [this] has aggravated his right hand to where it now needs treatment. (Ex. 4, pp. 389-391)(emphasis added). At no point in Dr. Larsen's report does it indicate the Claimant told him that worked at this position for *one day*.

33. On a follow-up visit to Dr. Baptist on December 21, 2017, Claimant now reported not only right shoulder pain extending into the trapezius, but also pain in right hand, lower back pain, and along the *entire* cervical spine. Pain now reported at 8/10. (Ex. 1, pp. 82-85).

34. On February 28, 2018, Claimant reported to Dr. Baptist for symptoms related to his back. Physical examination revealed stiffness in the neck. Claimant was referred to PT for his cervical and lumbar radiculopathy. (Ex. 1, pp. 91-97).

35. From March 13, 2018 to April 30, 2018, Claimant returned to PT after receiving a new referral from Dr. Baptist. Claimant's primary complaints included pain in the right shoulder and neck. Claimant's neck pain stopped him from looking up or to the left because his neck felt "stuck." Claimant reported neck pain and headaches when leaning forward to shave. He gets headaches when he turns his head to the left. Claimant also reported pain in the right shoulder, which increased when he raised his arms. Physical examination revealed pain with cervical extension and left rotation. Dr. Baptist diagnosed claimant with "persistent neck and back pain ... and decreased cervical ROM." Treatment modalities included manual therapy, therapeutic exercises, neuromuscular rehabilitation and patient education. (Ex. 2, pp. 281-286).

36. On March 23, 2018, Claimant reported that he had a bulge and tenderness on the ride side of the neck that wouldn't go away. On March 29, 2018, Claimant again reported neck pain. Manual therapy on this date included left rotation at T1 3 mobilization with left cervical rotation, soft tissue mobilization of the right scalenus, upper trapezius, bilateral suboccipitals. Claimant continued to report pain to the right shoulder and neck on his April 2, 2018 visit to PT. Manual therapy included left cervical rotation. Claimant also reported right shoulder pain.

37. On May 11, 2018, Claimant returned to Dr. Baptist for a follow-up for his cervical myofascial strain and lumbar radiculopathy. Claimant reported ongoing neck pain. Dr. Baptist noted the neck pain "has not been attended to over the last few months because *the patient told me ... that his neck was back to baseline* and he was having no more pain than usual. That is apparently not the case." Physical examination of the neck showed "fairly normal" range of motion although Claimant was in pain and there was apparent endpoint pain. Dr. Baptist referred Claimant to a neck specialist for a surgical consult. (Ex. 1, pp. 99-101)(emphasis added).

38. On May 31, 2018, Claimant presented to Dr. Paul Stanton with complaints of ongoing posterior cervical pain since his October 14, 2016 fall. Claimant stated the lateral aspect of the right side of his cervical spine was most bothersome. He rated his neck pain as moderate to severe. Claimant stated overhead activity, lifting, and repetitive motion exacerbate his pain while stretching, resting and using a TENS

unit seem to help. Claimant now reported his neck pain at an 8/10. Claimant also reported his neck pain interfered with personal care, lifting, sleeping, social life, and his sex life. He described the pain to the posterior aspect of his cervical spine as a burning sensation with a chronic ache to his bilateral shoulders.

39. Physical examination showed tenderness to palpation over the cervical spinal and paraspinal muscles along with decreased cervical flexion and extension secondary to pain. Dr. Stanton impressions included degenerative disc disease of the cervical spine from C3 to C5, bilateral foraminal stenosis most severe on the left side at C6-C7, and ongoing cervical pain from the 10/14/16 fall at work. Dr. Stanton recommended facet blocks versus radiofrequency ablations in the cervical spine to alleviate Claimant's symptoms.

40. On August 21, 2018, Claimant underwent an x-ray of the right shoulder. It showed small osteophytes at the inferior glenohumeral joint and mild osteoarthritis. (Ex. N, p. 188). On November 6, 2018, Claimant underwent an MRI of the right shoulder, which showed moderate tendinitis involving the infraspinous and supraspinatus tendons, a possible labral tear, mild impingement syndrome, and a small amount of fluid in the subacromial subdeltoid bursa. The MRI scan also noted a crescentic depression involving the anterior articular surface of the right humeral head, which could be a congenital variation or a Hill Sachs deformity from an old anterior shoulder dislocation.

41. On August 23, 2018, Claimant reported to Dr. Baptist for a follow-up on his lumbar and cervical radiculopathy. Dr. Baptist stated that "the right shoulder is another separate case which I'm not addressing today." Claimant's pain diagram showed pain to the right shoulder extending into the right trapezius, pain along the entire cervical spine, and pain in the lower back. Pain was rated at a 7/10. Dr. Baptist noted that Claimant still had some discomfort in his neck and he saw a surgeon who opined that he needed injections but those were not approved. (Ex. 1, pp. 116-120).

42. On November 15, 2018, Claimant reported to Dr. Baptist for the right shoulder only. Dr. Baptist reviewed the MRI of the right shoulder taken on November 6, 2018, which showed tendinitis, and tendinosis of the rotator cuff in addition to a possible labral tear. Dr. Baptist opined that this was consistent with his symptoms of lack of range of motion and popping and instability in the shoulder. Dr. Baptist noted Claimant had an advanced frozen shoulder with limited range of motion. Dr. Baptist referred Claimant to PT to improve his passive range of motion and to orthopedics to attend to a potential labral tear.

43. Physical examination showed extremely limited range of motion with abduction to only 80 degrees and extremely limited external and internal rotation as well as possible adhesive capsulitis. Claimant's pain diagram showed pain to the

right shoulder extending into the right trapezius and pain along the entire cervical spine. Pain was now reported at an 8/10. (Ex. 1, pp. 121-123).

44. On August 23, 2018, Claimant reported to Dr. Baptist for a follow-up on his lumbar and cervical radiculopathy. Dr. Baptist stated that "the right shoulder is another separate case which I'm not addressing today." Claimant's pain diagram showed pain to the right shoulder extending into the right trapezius, pain along the entire cervical spine, and pain in the lower back. Pain was now rated at a 7/10. Dr. Baptist noted that Claimant still had some discomfort in his neck and he saw a surgeon who opined that he needed injections but those were not approved. (Ex. 1, pp. 116-120).

45. On November 15, 2018, Claimant returned to Dr. Baptist for the right shoulder only. Dr. Baptist reviewed the MRI of the right shoulder taken on November 6, 2018, which showed tendinitis, and tendinosis of the rotator cuff in addition to a possible labral tear. Dr. Baptist opined that this was consistent with his symptoms of lack of range of motion and popping and instability in the shoulder. Dr. Baptist noted Claimant had an advanced frozen shoulder with limited range of motion. Dr. Baptist referred Claimant to PT to improve his passive range of motion and to orthopedics to attend to a potential labral tear.

46. Physical examination showed extremely limited range of motion with abduction to only 80 degrees and extremely limited external and internal rotation as well as possible adhesive capsulitis. Claimant's pain diagram showed pain to the right shoulder extending into the right trapezius and pain along the entire cervical spine. Pain was now reported at an 8/10. (Ex. 1, pp. 121-123).

47. Claimant followed up with Dr. Baptist on January 25, 2019. (Ex. 1, p. 115). Claimant reported that all his symptoms from his legs were gone and his back was doing much better. *Id.* Claimant also reported that his left shoulder was doing quite well, and his neck pain was nonradicular at that point. *Id.*

48. Physical examination revealed neck stiffness and tenderness in the right upper side. Claimant's pain diagram indicated pain in the right neck and right trapezius and was rated at an 8/10. (Ex. 1, pp. 127-129).

49. On March 5, 2019, Claimant filed a Worker's Claim for Compensation alleging an injury to his right shoulder, which reportedly occurred on April 19, 2017. (Ex. 9, p. 443). Claimant reported that he injured his right shoulder by repeated lifting and using the right arm. *Id.* Claimant did not report that he experienced a 'pop' or any acute injury.

50. On March 25, 2019, Claimant returned to Dr. Weinstein for an orthopedic consult for his right shoulder pain. Claimant claimed this was related to an April 19, 2017 work incident at the ARC thrift store. Claimant stated he was engaged in

repetitive activity and noticed shoulder pain. Claimant's subjective complaints included a constant ache on the anterior aspect of his right shoulder and the axilla region. Exacerbating factors included reaching across his body to grab a seatbelt. Claimant also reported right shoulder pain wakes him during sleep and that he experiences pain with overhead activity. The location of the pain was on the anterior, posterior, and lateral aspect of the right shoulder radiating into the paracervical region and upper arm. Exacerbating factors were any use of his right arm.

51. Physical examination revealed tenderness over the anterior subacromial space and tenderness over the bicipital groove. Claimant had tenderness to palpation of his right paracervical region, right axillary region and right anterior chest wall muscles. Claimant also had a positive impingement sign. An MRI scan of the right shoulder performed on November 6, 2018 was also reviewed. The MRI showed evidence of a partial thickness rotator cuff tear in addition to the tendinitis and tendinopathy.

52. Dr. Weinstein's impressions included: Right rotator cuff tendinitis with partial rotator cuff tear; Right biceps tendinitis; and Right mild upper extremity myofascial inflammation. Dr. Weinstein's treatment plan indicated "although the patient does have a component of myofascial inflammation, the majority of the patient's symptoms are arising from inflammation of the right rotator cuff with partial tearing as well as inflammation of the right biceps." Dr. Weinstein also indicated that Claimant was treating appropriately to date. Options were extensively reviewed including the possibility of a right shoulder arthroscopic subacromial decompression with debridement versus repair of the rotator cuff and possible biceps tenodesis. Claimant wished to give one further attempt at nonoperative measures. Claimant was given a cortisol injection in his right shoulder and told to continue with PT. (Ex. 4, p. 389).

53. On May 13, 2019, Claimant returned to Dr. Weinstein for a follow-up on his right shoulder. Claimant reported his pain had returned to its previous level. Claimant described his pain as a constant low-grade ache radiating down his right biceps. Any shoulder level and overhead activity exacerbated his symptoms and he reported difficulty sleeping at night due to his right shoulder pain. Physical examination revealed tenderness over the biceps with a positive Speed's test and a positive impingement sign. Dr. Weinstein discussed the etiology of Claimant's injury and stated repetitive activity is one common mechanism of injury for this type of injury. Claimant's options, including surgery, were discussed. (Ex. 5, pp. 400-401).

54. Claimant underwent three Respondent-sponsored IMEs with Dr. Goldman. They occurred on June 22, 2017, January 8, 2019, and August 26, 2019. (Ex. E, G, P). Dr. Goldman has been licensed to practice medicine in the state of Colorado since 1985.

He is board certified in physical medicine and rehabilitation and independent medical examinations. Dr. Goldman is also Level II accredited by the Department of Labor and Division of Workers' Compensation.

55. The first IME with Dr. Goldman occurred on June 22, 2017, approximately two months after the alleged right shoulder injury at the ARC. Dr. Goldman noted that Claimant's chief complaint, self-evaluation questionnaire, and pain drawing alleged total body pain with the *exception of the right upper extremity*. (Ex. P). At hearing, Dr. Goldman testified that he was fully unaware of the ARC injury when he originally evaluated Claimant on June 22, 2017. Dr. Goldman opined that based on the history and records, if there was a right shoulder injury from April 2017, it would have been obvious when Claimant was evaluated in June 2017. (Ex. G, p. 59).

56. Dr. Goldman testified that the reported mechanism of injury would not cause a huge whiplash injury to Claimant's neck, and there was no discrete cervical spine injury. At the 6/22/ 2017 IME, Dr. Goldman reviewed the cervical MRI report, and noted that the findings were primarily *degenerative* in nature, and they did not clearly correlate with Claimant's injury or symptoms. (Ex. P). Dr. Goldman testified that his examination of Claimant's cervical spine was not completely reliable, and a little confusing and magnified at times. Dr. Goldman testified that Claimant's neck symptoms were likely from the left shoulder that travelled up through the left trapezius, and were not specific to the cervical spine itself.

57. On August 31, 2017, Claimant was treated at Total Function Physical Therapy. (Ex. 2). Claimant reported that he tried to ride his recumbent road bike, and hurt his right shoulder and back when he went over a bump. *Id* at 210. This is the first mention of the right shoulder in all of Claimant's medical records. At hearing, Claimant testified that he rode the recumbent bike down the street and went over a drainage dip. Claimant testified that he had to get off because the bump hurt his back, shoulder, and neck.

58. Dr. Goldman noted in his January 8, 2018 IME report that recumbent road bikes can place increased mechanical strain on the shoulder, and require more rotator cuff integrity and stabilization. Dr. Goldman noted that recumbent road bikes were heavy and cumbersome. Dr. Goldman opined that Claimant's underlying non-work-related pre-existing conditions and the cycling incident provide a medically probable reason for the right upper extremity complaints contrasted with the April 19, 2017 incident. (Ex. G, p. 64). Dr. Goldman testified that when determining causation, it is best to rely on prospective medical records because individual memories can be faulty.

59. Dr. Goldman testified that the history provided by Claimant did not make sense, since he personally examined Claimant in June 2017, and Claimant was not having any issues with the right shoulder at that time. Claimant reported that he was working for

ARC and lifting and sorting various items out of crates when he developed right shoulder and upper extremity pain throughout the day. (Ex. G, p. 54). Claimant did not report to him that he experienced a pop in his right shoulder.

60. Dr. Goldman opined that it was highly unlikely that Claimant's right upper extremity complaints were due to the April 19, 2017 incident at ARC. Dr. Goldman noted that there may have been a temporary exacerbation of symptoms on that day, but the records and Claimant's presentation at the IME in June 2017 strongly argue against a medically probable work-related injury that would result in the physical findings and symptoms reported more recently. Dr. Goldman noted that Claimant's right shoulder had regressed beyond expectation in a dramatic and non-physiologic fashion. *Id* at 64. Dr. Goldman opined that the findings did not correlate well with the diagnosis, nor did they make sense with the mechanism of injury reported.

61. At hearing, Claimant testified that he had a prior injury for which he was previously taking Percocet and Vicodin for several years. After the injury on October 14, 2016, Claimant continued receiving prescriptions for Percocet and Vicodin from Dr. Baptist. On April 7, 2017, Dr. Baptist noted that Claimant admitted to inappropriate narcotic use and obtaining multiple prescriptions for narcotics from multiple physicians. Dr. Baptist advised Claimant to seek immediate in-hospital treatment for narcotic addiction. Dr. Baptist opined that Claimant must obtain immediate expertise or there could be dire physical and mental deterioration and threat to his life.

62. Despite Dr. Baptist's strong warning, Claimant testified that he was able to wean himself off narcotics after one week. Dr. Goldman opined that weaning off narcotics in a week was possible, but would have caused withdrawal symptoms. Dr. Goldman testified that the recommended weaning schedule is to reduce the medication by 10% per week. Claimant testified that he recently went to the emergency room twice to obtain Vicodin because his symptoms were increasing, and Dr. Baptist refused to prescribe any narcotics.

63. Claimant underwent a third IME with Dr. Goldman on August 26, 2019. (Ex. E). Dr. Goldman noted that the timing of Claimant's recent symptomatic escalation and request for opioids was concerning. He opined it was consistent with "administrative case closure anxiety" which was frequently seen in patients nearing MMI. (Ex. E, p. 27). Dr. Goldman testified that Claimant's neck symptoms and testing was consistent with referred pain from the shoulder injury. Dr. Goldman testified that performing cervical injections would not be reasonable or necessary, since there was no sufficient physiological or objective correlating medical evidence to support more aggressive treatment of the cervical spine.

64. Dr. Goldman testified that Claimant had significant somatization or response bias that would make interpreting any diagnostic injections difficult. Dr. Goldman opined that

Claimant's pain pattern calls into question how efficacious all the treatment had been and whether additional injections and surgery would be reasonable. He opined that cervical facet injections were not a good idea. Dr. Goldman also noted that the MRI findings of the right shoulder were consistent with degenerative joint disease, a prior injury, and potential congenital abnormalities that would predispose Claimant to a gradual reinjury with activities of daily living or especially a recumbent cycling attempt. (Ex. E, p. 32).

65. Dr. Stanton testified via deposition on December 19, 2019. He is a fellowship trained orthopedic spine surgeon that is treating Claimant's cervical spine. Dr. Stanton is not level II accredited and has not received training with the Division of Workers' Compensation for causation analyses. Dr. Stanton testified that he did not have a detailed description of Claimant's fall to base his opinion on. Dr. Stanton also testified that he had not reviewed Claimant's entire history. Dr. Stanton agreed that if Claimant had a rotator cuff tear, there might be some myofascial pain into the neck. He further acknowledged that based upon what he had seen in the [cervical] imaging studies and the MRI report, that "there was a preexisting injury" [to Claimant's neck]. Doctor Stanton further testified that Claimant's mechanism of injury, his subjective complaints, and the objective reports show that his cervical injuries are, in part, probably related to his fall with an outstretched arm. Dr. Stanton further testified that conservative care, including facet block injections, were reasonable based on Claimant's presentation.

66. On November 18, 2019 Dr. Weinstein testified by deposition as an expert in orthopedic surgery. Dr. Weinstein testified that that it was more likely than not that Claimant's right shoulder inflammation was connected to his left post-shoulder injury, assuming no previous significant complaints. He indicated that it is common to see injury to an arm when the opposite arm is in post-surgical recovery and that he observes this "frequently". Dr. Weinstein opined that the mechanism of injury for Claimant's right shoulder was related to overuse and compensation. He stated his opinion was based upon Claimant's restricted use of the left shoulder and because he was doing physical activity with one hand.

67. Dr. Weinstein further testified that his right shoulder injury was related to both his recovery and his work at the Arc thrift store. Dr. Weinstein stated he did not believe the Claimant's right shoulder injury was connected to the August 2017 incident with a recumbent bike because it was a very minor trauma and because his right shoulder was bothering him before that incident. Dr. Weinstein also stated that asymptomatic rotator cuffs are common in older people and that it is possible for someone to have an asymptomatic rotator cuff tear become symptomatic due to use. Dr. Weinstein testified this happens when small tears over time grow until there is an activity that exacerbates it.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, the ALJ finds that while Claimant may not have *willfully* misled his treatment providers, his track record as a medical historian is checkered. However, it is understandable that Claimant's memory, with the passage of time, is not as persuasive as medical records which were kept contemporaneously with his reported symptoms. Secondly, while Claimant might do his best to describe his symptoms, he cannot be expected to offer persuasive opinions on issues of causation. Such opinions are best sought from medical professionals, as will be noted further.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, as is frequently the case, sincere and well-informed medical opinions differ. Such opinions will be analyzed in the context of *persuasiveness*, as opposed to *credibility* per se, with further attention to their respective training in determining *causation*, in addition to what might be reasonable and necessary.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Medical Benefits, Generally

F. Once Claimant has established the compensable nature of his/her work injury, he is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 622 (197); *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); Section 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Stated differently, occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball, supra*.

G. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (!CAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984).

Cervical Injections as recommended by Dr. Stanton

H. Dr. Goldman is a Level II accredited physician by the Division of Workers' Compensation (DOWC). He has specialized knowledge and training by the DOWC to perform causation analyses. Dr. Goldman had the ability to review and analyze Claimant's complete medical file before forming an opinion on whether Claimant's alleged neck injury or right shoulder injury were causally related to the October 14, 2016 work incident. By being able to review the complete record, Dr. Goldman had more than simply Claimant's reports of the injury and symptoms. When dealing with an alleged injury that may have occurred several months prior to the reporting of the injury, it is beneficial to have a clear picture of what happened at the time of the alleged injury. Claimant's authorized treating physicians were focused, and rightly so, on treating Claimant's *symptoms*, but did not have access to the full record and did not have a complete picture to base a *causation* analysis on.

I. Claimant's testimony and reported symptoms surrounding his neck give one pause. First, Claimant alleged that he injured his neck when he slipped and fell on October 14, 2016. However, there is no mention of a neck injury or neck pain in the emergency room records or the initial evaluation by Dr. Baptist on October 17, 2016. In fact, Claimant's neck was examined during both evaluations and it appeared supple with no tenderness and full range of motion. The first mention of neck pain was when Claimant followed up with Dr. Baptist on October 20, 2016. Despite the clearly documented lack of cervical symptoms during Claimant's initial treatment, he testified at hearing that he experienced neck pain from the date of injury. Claimant reported that he had left shoulder pain and numbness down his left upper extremity but no cervical spine symptoms. Claimant did not report any whiplash type injury or pain in his neck related to the fall. Claimant's cervical spine was supple and non-tender with full range of motion. Claimant was next treated by his ATP, Dr. Baptist, three days later on October 17, 2016. Claimant reported to Dr. Baptist that he slipped walking down a grassy slope and injured his left shoulder and low back. Claimant did not report a whiplash type injury, and he specifically denied neck pain. Dr. Baptist noted that the neck was non-tender and Claimant had full range of motion of the cervical spine. In addition, Dr. Goldman persuasively testified that the reported mechanism of injury would not cause a huge whiplash injury to the neck. Since there was no reported whiplash injury or neck pain at the time of the injury, a cervical injury is less likely, he opined.

J. Claimant's reported neck symptoms waxed and waned, and at times Claimant reported that they had completely resolved. By December, 30, 2016, Claimant no longer complained of radicular symptoms into his arms. By March 2017, Claimant no longer reported any neck symptoms and his ATPs reported full range of motion. On May 10, 2018, Dr. Baptist noted that Claimant had, in the past, reported that his neck was back to baseline. Given the documentation, Dr. Goldman noted that there was a lack of discrete, consistent, and persistent focal neck symptoms that you would expect to occur six to seven months after an alleged injury.

K. In addition, Dr. Goldman persuasively opined that diagnostic testing showed primarily diffuse and degenerative [nontraumatic] changes that do not correlate with the symptoms presentation nor physical examination of the cervical spine. Dr. Goldman noted that his examination findings were primarily nonphysiologic and did not correlate with the MRI findings. Similarly, after reviewing the MRI scan, Dr. Baptist noted that the pathology did not really explain Claimant's reported radicular symptoms. Likewise, Dr. Hammers treated Claimant for his neck pain, and noted that there was not a structural cause for Claimant's neck symptoms.

L. Dr. Goldman opined that there was no cervical injury. Claimant's neck symptoms appeared to be more referred pain pattern involving the left shoulder and trapezii as well as supportive musculature. Dr. Goldman testified that his examination of Claimant showed that Claimant was most tender in the trapezius region and it was very common for pain to radiate from a rotator cuff injury into the neck. Dr. Stanton testified that he agreed that if Claimant had a rotator cuff tear, there might be some myofascial pain up to the neck, but not necessarily an injury to the spine. There was no cervical pathology that correlated with Claimant's symptoms.

M. Claimant's presentation during his evaluations with Dr. Goldman led Dr. Goldman to conclude that Claimant's symptomatology was exaggerated and unexplainable. On June 22, 2017, Dr. Goldman attempted to evaluate Claimant's cervical spine; however, Claimant had an extreme reaction to gentle palpation. Claimant cried out and was tearful to the gentle palpation to the point that Dr. Goldman noted that the response was very unusual and may be unconscious somatization and a fear avoiding coping strategy.

N. Claimant also has a history of drug-seeking behavior, which raises additional concerns. On April 7, 2017, Claimant admitted, after apparent prodding, to inappropriate narcotic use to Dr. Baptist. Dr. Baptist checked the PDMP system and found that Claimant was obtaining several prescriptions for narcotics from multiple medical providers. Claimant initially denied seeking drugs from multiple providers, but later admitted to this after being presented with the PDMP report. Dr. Baptist recommended in-hospital treatment for narcotic addiction. This did not occur.

O. Instead, Claimant testified at the hearing that he was able to wean himself off all narcotics in one week by cutting the prescription in half. Dr. Goldman credibly testified that the recommended weaning protocol is 10% per week, which can take 10 weeks or more. It is unlikely, and the ALJ so finds, that Claimant was able to wean himself from all narcotics within a week given his history of misuse. Claimant also testified that he recently was treated at the emergency room for increased pain and to obtain opioid medications because Dr. Baptist refused to provide him with any additional narcotic medications. This shows that Claimant may not have given up his drug-seeking tendencies, which is inconsistent with his reports to his providers and his hearing testimony.

P. Dr. Goldman opined that cervical injections were not reasonable or necessary because there was not sufficient physiological and objective correlating medical evidence to support more aggressive treatment of the neck in the context of this claim. Dr. Goldman testified that injections would not be appropriate because of the possible somatization or response bias that would make interpreting the diagnostic and therapeutic effect of any injections difficult. Dr. Goldman testified that he frequently sees this type of chronic pain management where the treating providers are “chasing the pain” and when one injury gets better another gets worse. Dr. Goldman persuasively testified that this pain pattern calls into question how efficacious all of the treatment to date has been and whether additional injections or surgery is reasonable. The ALJ finds and concludes that the injections as proposed by Dr. Stanton are not reasonable and necessary to treat Claimant’s symptoms, and further finds that Claimant has not shown, by a preponderance of the evidence, that his cervical symptoms, as reported, are related to his original work injury.

Right Shoulder Symptomology and proposed Rotator Cuff Surgery

Q. Claimant testified that he injured his right shoulder on April 19, 2017 while working for ARC. Claimant testified and insisted that he felt a ‘pop’ in his right shoulder while repetitively lifting various household appliances with his right arm. However, Claimant never mentioned feeling a pop in his right shoulder to any of his treating or examining physicians. Claimant also testified that he reported the injury to Dr. Baptist on April 28, 2017; however, Dr. Baptist does not note any new injury or symptoms. Dr. Baptist specifically noted “no other new complaints.” Claimant underwent his first IME with Dr. Goldman two months after the alleged right shoulder injury; however, he did not mention any new alleged injury and *the right upper extremity was the only body part that Claimant did not complain about* during this evaluation.

R. When Dr. Goldman evaluated Claimant on January 8, 2018 specifically for the right shoulder, Claimant did not report that he experienced a ‘pop’ in his shoulder while working for ARC on April 19, 2017. Instead, he simply reported that he began experiencing pain from *overuse* of his right arm. Dr. Goldman noted that Claimant could not give a cogent explanation for the documented historical discrepancies with the alleged right shoulder injury. Claimant also filed a Worker’s Claim for Compensation and alleged an injury from overuse of his right arm. During this January 8, 2018 IME, Dr. Goldman noted that the change in Claimant’s right shoulder symptoms from the prior examination was problematic and not explainable compared to the history documented in Claimant’s medical records. Dr. Goldman noted that Claimant had regressed beyond expectation in a dramatic and non-physiologic fashion and the findings did not correlate with the diagnosis or the mechanism of injury. Claimant’s presentation, the inconsistent reporting, and reported symptoms render his theory of injury problematic.

S. The alleged mechanism of injury is not likely to cause a rotator cuff injury. Claimant’s job description for the modified job offer at ARC indicated that he would be assisting with sorting, cleaning, and tagging clothing, linens, shoes, books, electronics,

and small household appliances weighing no more than five pounds. Claimant admitted at the hearing that he was not lifting heavy electronics such as TVs or microwaves. Instead, Claimant was lifting small household items such as hair dryers and toasters. Claimant also admitted that he only worked at ARC for one day. Dr. Weinstein testified that it would be hard to tear a rotator cuff working for one day lifting items weighting five pounds or less. Dr. Weinstein further stated that it would be hard to get a significant partial tear from this activity, but some partial tearing and inflammation may occur.

T. Though Claimant did not report the right shoulder injury to his medical providers in April 2017, he did report right shoulder pain after an incident on his recumbent bike in August 2017. Claimant testified that he was cleared by his physicians to try to ride his recumbent bike in August 2017. Claimant took his bike out and rode a very short distance before he went over a drainage bump in the road which caused pain in his low back and right shoulder. This incident was significant enough that Claimant reported it to his physical therapist on August 21, 2017. This was apparently the very first mention of right shoulder pain in all of Claimant's medical records. Dr. Goldman noted that the MRI findings for the right shoulder were consistent with degenerative joint disease, a prior injury, and a potential congenital abnormality that would predispose him to gradual re-injury even with activities of daily living and certainly with recumbent cycling as attempted by Claimant. The ALJ finds that while the right rotator cuff surgery might indeed be reasonable and necessary, Claimant has not shown, by a preponderance of the evidence, that his right shoulder symptoms are causally related to his original work injury.

ORDER

It is therefore Ordered that:

1. Claimant's request for cervical spine injections as recommended by Dr. Stanton is denied and dismissed.
2. Claimant's request for right shoulder surgery as recommended by Dr. Weinstein is denied and dismissed.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: February 25, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion on the issue of MMI?
- II. Has Claimant shown, by a preponderance of the evidence, that the Medial Branch Blocks as recommended by the DIME physician, are reasonable, necessary, and related to his work injury.
- III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to Temporary Total Disability ("TTD") Payments?

STIPULATIONS

The parties agreed to hold in abeyance the issues of Average Weekly Wage and Change of Physician.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed as a truck driver. He was initially injured in February, 2018 while loading "super sandwich bales" comprised of compressed plastic recycling material onto his truck. He was required to secure the bales with straps prior to transporting them. He crawled on top of the bales in order to do this, but slipped in the process and fell over the side of the flatbed, catching himself by the strap with his left arm. (Ex. G, p. 123). Claimant pulled himself up with his left arm but had the onset of left shoulder pain and left low back pain. *Id.*

2. There was no first report of injury filed at this time. Claimant reported the injury to Employer but was able to continue working. His back pain worsened, and he ultimately sought medical treatment on May 25, 2018. At hearing, Claimant testified that he did not seek any medical care until late May of 2018, when he claimed an exacerbation of pain into his left lower extremity and back after driving a distance and then strapping down a load of super sandwich bales. Claimant's Workers' Compensation Claim ("WCC") reflects a reported date of injury as May 24, 2018.

3. Claimant was seen at the UC Health emergency room by Angela Randall, NP, on May 25, 2018. She noted he "...presents with chronic back pain exacerbated 6 months ago with the start of a new job. Patient felt that his L leg was numb getting out of his truck yesterday after a 2.5 hour drive. Pain worst to his L lower back. Denies incontinence, paresthesia. Patient recently moved here from Germany and does not have a PCP." (Ex. 2, p. 85). Lumbar x-rays revealed "no acute findings." *Id.* at 88. On

exam Ms. Randall noted left trapezius and paraspinal lumbar tenderness. She diagnosed “chronic lower back pain.” *Id* at 85, 87.

4. Claimant continued treating at UC Health. On June 28, 2018 Jessica Fisher, D.O. recommended MRI’s of the thoracic and lumbar spine. (*Id.* at 67). Those tests were performed on July 18, 2018. (Ex. 7, pp. 248, 249). The results of those MRIs were deemed “unremarkable”. *Id.* It was noted by UC Health staff that, when discussing the MRI findings, Claimant became “very upset raising his voice with me being very accusatory toward our clinic and myself because we have not cured him” and that “if he was in Germany he would have been completely better within a matter of days.” (Ex. 2, p. 63). Claimant reported no improvement with physical therapy.

5. Claimant ultimately came under the care of Elizabeth Bisgard, M.D., at UC Health. She saw him on August 5, 2018 and noted that while the MRI’s “...were normal without evidence of disc herniation or any pathology...Tim continue[s] to experience significant pain and dysesthesia. He had been given Robaxin and naproxen but neither provided relief. Despite being off work he failed to make any progress and in fact he reports that he is progressively worsening. He was brought to Castle Rock clinic today for second opinion...” (Ex. 2, p. 53). Dr. Bisgard diagnosed “diffuse myofascial pain syndrome, ulnar neuritis, left, and anxiety and depression.” She recommended pool therapy, biofeedback, and use of Cymbalta, and she imposed work restrictions.

6. On September 21, 2018 Dr. Bisgard noted pool therapy and biofeedback were beneficial. (Ex. 2, p. 41). She reported, “...On his pain diagram he continues to mark midthoracic hot burning pain which is waxing and waning. He also has his midline low back pain which he described as numbness and hot burning. He is requested [sic] a cane for ambulation as he feels that putting pressure on his left foot when he is walking is causing more pain. He is trying to get out more and walk but is having difficulty due to his increased pain.” *Id* at 42. Dr. Bisgard referred Claimant for a physiatry evaluation with Dr. Sparr or Dr. Leggett at Accelerated Recovery Specialists. (*Id.* at 43, 45).

7. On October 12, 2018 Dr. Bisgard recommended more pool therapy, and on or about October 24, 2018 she referred Claimant to psychologist Dr. Anthony Ricci for “LBP /w underlying [psych].” (Ex. 2, pp. 37-38)

8. Claimant saw Dwight Leggett, M.D., on October 25, 2018. He noted, “...Mr. Hickcox states that his primary area of complaint revolves around his low back issues. The majority of his pain is found over the left great than right region, starting just above the belt line. From here, and travels downward into the buttocks and lateral hip. This pain is described as constant, achy and occasionally stabbing in nature. From here, it transitions into the sensation of ‘tingling’ that travels down the posterior aspect of the thigh, ending in to the lateral aspect of the foot...” (Ex. 3, p. 112).

9. Dr. Leggett discussed treatment options, which included facet injections (“...highest structural pain generation seems to be coming from the left L4-L5 and L5-S1 facet joints”), trigger point injections (“...there is a large amount of myofascial irritation

identified into the left parascapular region and left low back region”), use of gabapentin, and possible SI joint injections. *Id* at 115.

10. On November 7, 2018, Dr. Ricci performed a psychological evaluation. Dr. Ricci opined that, to within a reasonable degree of psychological certainty, Claimant was manifesting issues of adjustment to disability with anxiety and depression. Dr. Ricci noted that the results of the EMG recommended by Dr. Leggett would “go a long way to clarifying the left-sided weakness, and particularly left lower extremity giveway considerations.” (Ex. C, p. 51).

11. Allison Fall, M.D., examined Claimant at Respondents’ request on November 7, 2018. Dr. Fall reported, “...In order to reach MMI, I would recommend left L4-5 and L5-S1 facet intraarticular injections. If this alleviates his pain, then I would recommend more aggressive physical therapy with progression to land therapy two times a week for four weeks ...For the scapular area, four session of massage could be trialed. Left upper extremity electrodiagnostic testing would also be medically reasonable, necessary, and related...” No surgery was anticipated by Dr. Fall at this time. (Ex. A, p. 7).

12. Dr. Bisgard wrote to Respondents’ counsel on November 18, 2018, indicating she agreed with Dr. Fall’s treatment recommendations. (Ex. 2, p. 34).

13. On December 21, 2018, Dr. Bisgard noted that if electrodiagnostic testing was negative, “...there is likely not much else to offer.” She noted that “...If Dr. Leggett recommends facet injections or trigger point injections, he will need to document not only pre and post injection pain levels but functional assessment as well.” *Id* at 32.

14. Michael Sparr, M.D., met with Claimant on January 17, 2019 and noted, “...Sacroiliac provocative tests are quite positive on the left side including Patrick’s maneuver, sacroiliac shear and compression test and are mildly positive on the right. Sensation today is not particularly diminished. He walks with a markedly antalgic gait pattern, does not demonstrate an obvious foot drop.” (Ex. 3, p. 103). Dr. Sparr performed EMG/NCV testing of the lower extremities and there was “no electrodiagnostic evidence whatsoever of lumbosacral radiculopathy left or right-sided,” that would account for Claimant’s lower extremity symptoms. He noted Claimant would follow-up with Dr. Leggett. *Id* at 104.

15. Dr. Leggett saw Claimant on February 28, 2019 and reported, “...At this point, highest pain generation from a structural standpoint seems to be involving the lumbar facet joints. I believe that it would be medically reasonable justifiable to move forward with a medial branch block targeting these regions. If this procedure is beneficial from a diagnostic standpoint, consideration could be made for moving forward with radiofrequency ablation.” (Ex. 3, p. 100).

16. Dr. Leggett noted that the study showed no lumbar radiculopathy, distal compression neuropathy, peripheral neuropathy, or any other issues which would be associated to the work-related claim or specific lumbosacral injury. Claimant reported

ongoing left leg pain of 8/10 and was unable to tolerate facet loading at L4- L5 or L5-S1 or sacroiliac joint manipulation due to complaints of pain and tenderness. Dr. Leggett confirmed his plan for “Bilateral L4/5 and L5/S1 medial branch blocks with functional testing before and after mbb...”

17. Dr. Steven Scheper administered the injections on April 4, 2019. (Ex. 3, p. 94). Afterwards he reported, “The patient reported pre-injection 7/10 pain. At 15 minutes after the procedure the patient was reporting standing and walking slightly better. Standing flexion was painful at about 20° and standing extension at only about 10° was still painful with 5/10 pain.” *Id* at 95. There is nothing else in the reports to indicate that Dr. Scheper otherwise addressed “functional testing before and after” the injections as had been recommended by Dr. Leggett and Dr. Bisgard.

18. On April 10, 2019, Dr. Bisgard reported, “...He recently underwent bilateral facet injections at the L4 5 and L5 S1 level. Dr. Scheper, who did the injections, noted Tim’s visual analog scale only changed by 2 points and had no functional improvement; to him, indicating a non-diagnostic response.” (Ex. 2, p. 28). Dr. Bisgard stated she planned to proceed with an impairment rating.

19. On April 16, 2019, Dr. Bisgard issued a response to Respondents’ April 12, 2019 correspondence regarding whether Claimant was at MMI. (Ex. C, p.19). Dr. Bisgard opined that Claimant was not at MMI, pending the scheduling of an evaluation for MMI and impairment status based on objective findings. *Id*.

20. Dr. Leggett met with Claimant for a post-injection follow-up on April 23, 2019 and noted, “...*Today, he states that he is unsure if he gave appropriate responses after the injection.* He reports that after the injection, he felt ‘scared,’ and reported that his pain was a ‘5/10’ somewhat randomly. He did note that after the injection, he didn’t seem to be as sensitive to bumps in the road while driving home...” (Ex. 3, p. 91)(emphasis added). Dr. Leggett continued, “...*He indicates that he was confused with how to rate this pain afterward.* He also indicates that he did not feel the ‘bumps in the road’ where [were] as pain provoking after the injection. However, this does not give us a substantial diagnostic result. It does not appear that he had a clear reduction in pain, but only a mild decrease in reaction to potentially pain producing stimuli.” (*Id.* at 93)(emphasis added). Dr. Leggett concluded, “...He continued to be quite persistent with his frustration due to his injury. He indicated that he may need to return to Germany to explore other treatment options if his pain persists. I again reiterated the findings of our diagnostic testing, and the above recommendations of increasing activity.” *Id* at 93.

21. Dr. Ricci noted on April 24, 2019 that Claimant presented on April 9, 2019 with slightly improved ambulation and that his anxiety and despondence were mildly reduced. (Ex. 5, p. 193). Dr. Ricci noted that Claimant reported having two-to-three hours of relief from injections, after which time pain returned.

22. Dr. Bisgard placed Claimant at MMI on April 24, 2018, concluding, “...I am hopeful with time he will experience some relief. But at this point there is really nothing

further to do under his work injury..." She opined that Claimant had a 2% whole person rating for mental impairment with no impairment for the back or other physical injuries. Dr. Bisgard opined that the facet injections were nondiagnostic, and that other diagnostic imaging was normal. (Ex. B, p. 9). She also opined that, based on the negative diagnostic studies and nonphysiologic examination, Claimant did not qualify for a Table 53 impairment rating [and therefore, range of motion loss] under the *AMA Guidelines 3rd ed. Id* at 16.

23. Dr. Bisgard did note significant psychological overlay and therefore indicated a mental rating was appropriate. She opined that there was no anatomic or physiologic reason impeding Claimant from resuming full duty work and normal activities. Dr. Bisgard did not recommend maintenance care except six months of Cymbalta refills, and maintenance visits with Dr. Ricci. (Ex. B, p. 17). She released Claimant with no permanent work restrictions.

24. Respondents filed a FAL consistent with Dr. Bisgard's opinions on May 3, 2019. (Ex. 8). Claimant objected to the FAL and requested a DIME.

25. Dr. John Tyler performed the DIME on September 16, 2019. He addressed the medial branch block injections and the events that transpired afterwards. Dr. Tyler reported:

Mr. Hickcox today states that in the report from Dr. Leggett [4/23/19] there is 'a misunderstanding' in what he was trying to explain. It is important to note that Mr. Hickcox was raised in Germany and has a heavy German accent and did not understand some common words that I utilized during conversations with him on today's date and I can understand why there may have been some verbal miscommunication being given. What Mr. Hickcox informs me today is that immediately after the injections he felt 'drunk.' He believes that his *pain symptomatology was diminished by '80%'* and gave a quick answer of '5/5-10' as the level of his pain after the injection, but *actually states it was down close to a '2/10' where it was a '7/10' before the procedure.* He [Claimant] states that indeed he was able to ambulate without a significant level of pain in his low back and he states that typically whenever he was in a car that was going over any kind of rough ground or a dip in the road, he would feel that pain shoot up into his mid back. On the ride home, he reported that he tolerated the drive without any severe pain in his low back or any exacerbation of his upper back pain. He also states that where Dr. Leggett is reporting that his mid back was worse after the injection, he meant to state that he noticed his mid back pain 'more' because his low back was no longer hurting him to the same level. Dr. Leggett in his report of April 24 [sic, April 23] does state that the patient indeed was apparently feeling that he was misunderstood in his responses and Dr. Leggett (who did not do the procedure itself) believed that his responses were not accurate enough to be definitive as a "therapeutic diagnostic medial branch block result." (Ex. 1, pp. 6, 7)(emphasis added).

26. On examination, Dr. Tyler found

...a significant pelvic obliquity at this time. There is at least a 2 cm elevation of the left posterior superior iliac spine over the right. This is secondary to localized spasm and active trigger point formation easily palpated within the left quadratus lumborum and iliocostalis lumborum. There are also diffuse and *fairly large active trigger points* found within the gluteus medius and gluteus minimus muscles in the left buttocks as well as in the tensor fasciae latae and right-greater-than-left piriformis muscles. There is a positive piriformis sign seen, with the patient lying supine, on the right. There is shortening with fascial restrictions found in the IT band on the left. There is significant spasm in the left psoas major muscle which is inducing an *anterior torsion of the right pelvis*. There is tenderness to the point of insertion of the right iliolumbar ligament along the medial ilium. *There is positive facet loading pain in the lower lumbar spine at approximately L4-5 and/or L5-S1 on the left greater than on the right...*" (Ex. 1, p. 8)(emphasis added).

Dr. Tyler's diagnoses included L4-5 and L5-S1 lumbar facet syndrome, pelvic obliquity, fibromyositis/myofascial pain syndrome, right piriformis syndrome, right iliolumbar ligament strain, and left psoas major spasm. *Id* at 9.

27. Dr. Tyler concluded Claimant has not reached MMI:

I do not feel that this patient is at a point of maximum medical improvement at this time. I do not believe this patient is "falsifying or exaggerating" his pain symptomology, but I do believe he is quite fixated on the level of his pain and its secondary consequences on his level of activity, capacity to be a loving husband and father, and his fears and worries about the future capacity of him caring for his family. These overriding emotional and psychological features do exacerbate his level of limitations, but *I do believe that he does have facet driven pain symptomatology.* I understand the confusion that may have occurred not only with Dr. Scheper immediately after the injections, but even in follow-up with Dr. Leggett at the time of his re-evaluation 2-3 weeks after the procedure. Based on my clinical examination today as well as what he now describes to me as the response he had and his hope to be able to undergo a procedure that may to some degree that *even a '50% improvement' would mean a world of difference to this gentleman and to his capacity to care for his family at this time.* I am going to recommend, as I trust both Dr. Leggett and Dr. Scheper not only as excellent physicians, but as excellent interventionalists, to see this patient again and give him 1 further trial of medial branch blocks. If there is significant diminishment of pain, this patient should be able to undergo radiofrequency rhizotomies to the L4-5 and L5-S1 levels bilaterally. Tim states he understands that this may not actually improve his level of pain long term, but actually may worsen it to some degree. He states that the

quality of life that he has now makes that potential risk an acceptable outcome as he cannot continue to function at the level he is with his current pain state. I am not recommending this approach just to appease Mr. Hickcox, but do believe that because of language barriers that were noted on our visit today, there was just simple misunderstanding of the level of improvement to be reported. *I do believe that he is an excellent candidate for a repeat trial and possible rhizotomies to be performed.* I will defer the final decision as to whether to proceed forward with rhizotomy obviously to Dr. Scheper or Dr. Leggett, but would *recommend that the same physician who performs the medial branch blocks also be the one that has the follow-up with the patient for clarification as to his response to the diagnostic injections.*" (Ex. 1, p. 9)(emphasis added).

28. Dr. Tyler addressed work restrictions; "...This patient is incapable or working even in a sedentary position at this time based on his level of spinal and muscle pathology. If he were to work at all, he would be limited to no more than 4 hours in a day and at a position that would allow him to shift from sit-to-stand and stand-to-sit almost continuously and no lifting capacities beyond 5 pounds occasionally..." (Ex. 1, p. 11).

29. Dr. Tyler also indicated a 15% whole person impairment rating of the lumbar spine. This rating included a 5% whole person impairment for "ongoing pain in the lumbar spine with mild clinical findings" pursuant to Table 53(II)(B) of the *AMA Guidelines, 3rd ed., rev.*, combined with an 11% rating for measured loss of range of motion. (Ex. G, p. 129).

30. On December 4, 2019, Dr. Fall performed a medical record review and addendum IME after review of Dr. Tyler's opinion. Dr. Fall opined that, "Even if there were difficulty in communication due to language, there is no indication that he does not understand the concept of numbers for rating pain . . . The procedure note indicated that, post procedure, he had a 5/10 pain level which was a nondiagnostic response." Dr. Fall agreed with the ATP that Claimant was at MMI in light of a nondiagnostic response to injections, unremarkable imaging through x-rays, MRI, and (diagnostic) EMG, and "obvious pain behaviors and psychosocial issues playing a role" which Dr. Tyler acknowledged but did not ultimately reflect in the conclusions of his report. (Ex. A, p. 2) Dr. Fall opined that, in agreement with Dr. Bisgard, there was a clear error in the DIME report of Dr. Tyler in issuing a Table 53-based impairment rating for the lumbar spine due to non-physiologic examination and negative studies (lack of objective basis for findings).

31. Claimant testified at hearing. He stated that following the medial branch block injections, "I felt very foggy. I didn't know where was up and down, kind of – and I felt under pressure a little bit because I couldn't really give an answer to the questions that he had right away to me." Claimant testified Dr. Scheper asked questions about his pain level, and in response, "...I first said, I don't know yet. I can't tell. I'm very unsure – uncertain, I mean. And then he kept asking. He said, I – I -you know, I need an answer. And I said then a five out of ten because it's just in the middle. And I don't

know what else to say, because I - yeah. I couldn't determine what was going on with my body at this point, yeah."

32. Claimant testified he "absolutely" obtained pain relief from the injections; "...I first experienced it in the car. I didn't feel all the bumps anymore. And I got better out of the car. I was walking way better with less pain. My mid-back or upper back was way more - it hurt way more than lower back at that point, and - yeah." Claimant testified the injections "...made my low back pain go almost away, I would say, but my mid-back, I would feel more than - more than the lower back." He testified that during the period of time he experienced pain relief, he was doing "...the same things as before, but a little bit more. I was walking around. I took my kids for a walk. And yeah, I was doing physically a little bit more. Yes, I was walking around without pain as of - I was way better..."

33. Claimant testified he told Dr. Bisgard that he "felt relieved, that I felt way better than before" after the injections, but that the beneficial effect "wore out" after 4-6 days."

34. Claimant also testified he was given a pain diary after the injections, he completed it, but nobody asked him for it. Claimant testified he wants to have the repeat injections recommended by Dr. Tyler "because I am very certain that they helped..." Claimant testified he has been physically unable to perform any work since May 24, 2018. Claimant testified he was born in Arizona, but moved to Germany with his mother when his parents divorced. He was "two years old or so" at the time. He grew up in Germany and came back to the U.S. in 2013. He went to college in Arizona and learned English. Prior to that, his English was "very bad."

35. Dr. Fall testified at hearing as an expert in the field of physical medicine and rehabilitation. It was her opinion that Claimant did not have a "diagnostic response" to the medial branch block injections. Dr. Fall testified that such injections are supposed to be performed "...on two separate days, two separate occasions, and both need to have diagnostic positive responses." In this case, Claimant underwent medial branch blocks ("MBB") on only one occasion [April 4, 2019]. Dr. Fall addressed Claimant's testimony that he experienced pain relief for 4-6 days following the injections, and she called this non-diagnostic, "...Because the medicine that blocks the nerve only lasts several hours, so it wasn't having any effect for those days - those additional days." She attributed Claimant's 4-6 days' worth of pain relief to a likely "placebo effect."

36. Dr. Fall opined Dr. Tyler "clearly erred" in determining Claimant is not at MMI "...because there was not a diagnostic response" to the injections. Dr. Fall further opined Dr. Tyler erred in issuing an advisory impairment rating because "...there's been no, you know, Table 53 diagnosis." Dr. Fall confirmed she saw Claimant only one time, on November 7, 2018 at the request of Respondents. Dr. Fall testified that this was not merely a difference of opinion between two doctors, but rather an error in assessing the diagnosis and calling for a repeat block.

37. Dr. Fall further testified that Dr. Tyler's report was in error because of his assignment of an impairment rating based on Table 53 of the *AMA Guidelines, 3rd ed., rev.* She stated that, in order for there to be a ratable impairment, there must be objective findings to support a diagnosis caused by a work-related injury. Dr. Fall testified that she agreed with Dr. Bisgard that there was no Table 53 diagnosis, because there was no consistent, objectively verifiable presentation causing permanent problems documented in the medical records. Dr. Fall testified that the structural examination findings performed by Dr. Tyler inconsistent with any of the other documentation by the providers in the record.

38. Dr. Tyler testified at hearing as an expert in the field of physical medicine and rehabilitation with "forty-nine plus years" of experience in the field. Dr. Tyler testified MBB's are a diagnostic tool to assess for the potential of the facet joints in the posterior elements of the bony structure of the spine as an inducer of pain. He explained the diagnostic purpose; "...they're to rule in the probability that a component of a patient's pain, symptomology coming from that area of the body, is being caused by irritability within a joint that is known as a facet joint." Dr. Tyler explained what it means to have a "diagnostic response" to MBB's; "Diagnostic response is typically greater than fifty to sixty percent diminishment of pain, short term, after application of an anesthetic to the post universal rami branches, which are small branches that come from above and below the joint, that innervate the joint for sensation."

39. Dr. Tyler was asked whether Claimant had a "diagnostic response" to the injections; "My opinion is that the understanding that was to be given by the gentleman - and I think we can all agree that Mr. Hickcox doesn't understand the spoken English language as well as most of us present do. And that there was a inconclusive non-diagnostic or diagnostic response to the injections. And I spout like that in my report" {The ALJ is unsure how to interpret this commentary}.

40. Dr. Tyler testified that the results of the medial branch block were inaccurately interpreted and that he believed it was critical in this instance that the blocks should have been performed and evaluated by the same clinician because "it doesn't necessarily always have to be that way, but if you have somebody who understands and speaks the English language to the degree that all parties but Mr. Hickcox [does], then it's not absolutely - absolutely necessary." Dr. Tyler testified in effect that the method by which American clinicians use to document pain on a "zero to ten" scale was outdated. A more accurate method of documentation would be to ascertain baseline pain and then determine a patient's degree of improvement after a procedure by documenting pain relief as a percentage value from the baseline (e.g. 30% diminished). Dr. Tyler opined that the difference between German and American cultures was responsible for differing accounts in the nature of the reported pain. Tr. 68-72.

41. Dr. Tyler explained why he determined Claimant has not reached MMI:

The basis is that this patient's pain symptomology, based upon clinical examination - not only for myself, but from other providers who

have seen him - therapy related to an induction of pain or a primary inducer of pain from the facet joints in the lower lumbar spine. It's not the only component that is causing this pain, and I outline that in my report as well, but is the probable underlying primary cause of pain.

I think that the interpretation as this being a nondiagnostic result is fallacy, and I say that with all due respect to Dr. Fall; but the reality is, is I believe that this gentleman is being a hundred percent upfront and honest with us. I don't question that he has emotional aspects to his pain - that's outlined in my report as well - but I think it is inappropriate from a medical standpoint to base this patient's potential for significant long-term improvement, quality of life, and mobile function based on what I perceive to be a misunderstanding between the providers that performed the injection and did the follow up from that injection.

And like I stated in my report, I have great respect for both Dr. Scheper and Dr. Leggett; they're both very qualified physicians. But because of the language difficulties that are obviously present and were notified or-or seen from today's testimony, I think they shortchanged this gentleman without giving him the opportunity to have him repeat it. And all parties that are pursuing-or performing the injections not only be the ones to perform the injection and get the information from the patient immediately afterwards, but also to be the clinician who follows up with the patient to get a more clearer understanding of the benefit, or lack thereof, from it.

As I stated in my report, I am not recommending that this patient proceed forward with any type of rhizotomy, and will defer entirely to the judgment of either Dr. Scheper or Dr. Leggett in that response. But I think it is critical of us to presume we know the answers are accurate, and based on our understanding, based upon the capacity of this patient to clearly outline-as what will form or a lack thereof-so I can see from the reports, as well as from my evaluation into the (inaudible)." (Transcript, pp. 58-60).

42. Dr. Tyler testified concerning the significance of the fact that the physician who administered the injections, Dr. Scheper, was not the one who reviewed the effects with Claimant, Dr. Leggett; "In this case, I think it was critical. And the reason why I say that, it doesn't necessarily always have to be that way, but if you have somebody who understands and speaks the English language to the degree that all parties but Mr. Hickcox in this room I presume do, then it's not absolutely--absolutely necessary. But in this case, I would strongly recommend, if you want to get a truly accurate and diagnostic assessment as to the benefit, or lack thereof, from the diagnostic medial branch blocks, then it should be performed for both the procedure and the follow up by the same clinician."

43. Dr. Tyler testified at length about his findings on physical examination of Claimant. He concluded; "So the mechanical aspect that I've described to you with the pelvic obliquity and the muscle spasms are a secondary problem that were brought on because of the, I believe, on the irritability of the facet joints to the left greater than right, L4 or 5 and L5 S1 levels. Because I had not performed the procedures or have an opportunity to clarify with this patient to make sure that he truly understood what I was asking, because of the language difficulties, I can't form positive--state that this testing was either positive or negative....And thus, *I asked for a repeat of those procedures to be performed...*" (emphasis added).

44. Dr. Tyler was asked why Claimant should have a repeat of the MBB's; "Because I believe his perception of level of improvement was such that the potential for life-changing--and I'm not talking about short-term, but life-changing--improvement and quality of life I think is being taken away from this gentleman based upon a misinterpretation of what he was trying to describe through his vocabulary versus what was being perceived by the clinicians at that time." Dr. Tyler added that; "...*Without those facets being calmed down, I don't think there's anything that's going to long term change his level of pain and his quality of life.* And I think that is a shame." (emphasis added).

45. Dr. Tyler addressed Dr. Fall's testimony that the relief provided by MBB's lasts only several hours; "Sure. And if indeed the facet joints were the only inducer of pain, then I could agree with her that you would not expect for any significant improvement to be going on days later. But that's not the case in this patient, is it? This patient has a significant component of myofascial or muscular spasticity and such going on as well. And if you've been living with a certain level of pain that is interfering with your level of function and quality of life, as much as this pain state seems to be for this patient, and you get the primary generator of pain to calm down, you will also then, secondarily, get some of the other surrounding areas to relax enough so that you will see a longer term improvement in pain than just a few hours."

46. Dr. Tyler testified regarding the propriety of the Table 53 impairment rating he issued; "Only level of the spasticity going on in the muscles with the lumbar spine -- I won't list them all, I did that in my report--causing the obliquity to be present. That's all a hundred percent objective, and it correlates well with a large part of his pain symptomology that he's been describing from day one. And that twelve other doctors aren't qualified to assess for that or did not assess for that doesn't take away that the pathology I found is directly related to the injuries that this man suffered."

47. Dr. Tyler confirmed he is recommending repeat MBB's because there was no clear diagnostic or non-diagnostic response after the first trial; "That is correct...and again, I am not stating that one side or the other is incorrect in their perception of what the results of the first one were. I just believe the results have been muddied to a large degree because of what I've described above or in this testimony as well. And it would be of great benefit if either Dr. Leggett or Dr. Scheper could have a clearer verbal exchange with this patient so that both parties understand exactly what the other one is trying to say. Just like you all noticed when Mr. Hickcox was testifying earlier, he--to us,

what were simple (inaudible) terms that we use commonly, he didn't understand. And that's where I think a lot of the problems come up. And to analyze this gentleman strictly based on that, I think is an injustice.”

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (“Act”) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). Irrespective of the standard of proof involved, it is solely for the trier of fact to determine the persuasive effect of the evidence and whether the burden of proof has been satisfied. *Mehlbrand v. Hall*, 213 P.2d 605 (Colo. 1950). An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). Substantial evidence is that “quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence.” *Metro Moving & Storage Co. v. Gussert, supra*. It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential*

Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. In this instance, the ALJ finds Claimant to be sincere and credible. While he is sufficiently conversant in English to make himself understood, Claimant does not appear to be *bilingual* in the classic sense- nor does he purport to be. There are different legal and cultural expectations for the provision of medical services than Claimant was accustomed to. Throw in the bewilderment of a first-time diagnostic procedure overlaying a history of pain, and you have the recipe for potential miscommunication. This is especially so when there is a different physician administered the injections from the one asking the questions. Quite understandably, from the standpoint of Drs. Leggett and Scheper, they needed tangible, quantitative answers to satisfy certain criteria for repeat injections. Just a little more time with this patient could have yielded what they needed.

E. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). Frequently, well-trained physicians reach sincerely held, differing medical opinions based upon similar data. Such is the case here. Thus, the ALJ must determine who is more *persuasive*, rather than who is more per se *credible*, being mindful of the burden of proof herein.

F. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

G. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must

be “unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

H. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, *supra*. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO November 21, 2008).

I. As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician’s finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, *supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office*, *supra*.

Overcoming the DIME Opinion, as Applied

J. Dr. Tyler persuasively testified Claimant is not at MMI because he requires a repeat of the MBB injections. He explained the nature of MBB injections, their diagnostic purpose, and the anatomy and the pain symptoms they are designed to address. He testified, again persuasively, regarding the language and communication barriers that exist between Claimant and some of his treating physicians. Especially as they concern Dr. Scheper and Dr. Leggett, those problems led Dr. Tyler to reasonably conclude there had not actually been a “non-diagnostic response” to the first set of injections. To the contrary, Dr. Tyler’s more detailed questioning, and Claimant’s responses at hearing, would lead one to believe such responses were, in fact, diagnostic. Accordingly, Claimant requires a second set of MBB’s so that this issue can be resolved. Until this issue is resolved, Claimant is not at MMI.

K. Dr. Fall’s sincerely expressed opinions were different of those issued by Dr. Tyler. She testified that Claimant stated that the blocks provided up to six days of pain relief to the low back. Dr. Fall testified that this would not be a diagnostic response, based on the above criteria. It would, instead, represent a placebo effect. Dr. Fall noted that diagnostic imaging from an x-ray, MRI, and EMG testing showed no notable abnormalities and that there was no objective basis for any additional medial branch block for further assessment based on the nondiagnostic response to the initial injection. Dr. Fall testified that Dr. Bisgard was correct in her assessment of MMI, based on the nondiagnostic response and exhaustion of treatment.

L. In this instance, the ALJ concludes that Dr. Fall’s medical opinions do not rise to the level of “clear and convincing evidence” that demonstrates that it is “highly

probable” that Dr. Tyler’s opinion concerning MMI is incorrect. Rather, they constitute a [sincerely held] difference of opinion between physicians regarding whether Claimant has reached MMI. Respondents have not proved by clear and convincing evidence that Dr. Tyler was incorrect in determining Claimant is not at MMI. Because Claimant is not at MMI, it is premature to address in this Order the advisory impairment rating issued by Dr. Tyler.

Medical Benefits

M. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The ALJ concludes, based primarily upon Dr. Tyler’s report and testimony, that Claimant has proven, by a preponderance of the evidence, that the repeat MBB’s are reasonable and necessary to cure or relieve the effects of Claimant’s compensable work injury. Depending upon the response thereto, the administration of a rhizotomy would be in the discretion of Claimant’s assigned ATPs.

Temporary Total Disability Benefits

N. Despite the DIME opinion, and the ALJ’s Conclusions in support, Claimant has conceded this point. TTD benefits cease when the injured worker reaches MMI, or when the attending physician issues a written release to return to regular employment. Section 8-42-105(3)(a)(c), C.R.S. Here, attending physician Dr. Bisgard placed Claimant at MMI on April 24, 2018, and released him to regular employment with no permanent work restrictions. Dr. Tyler opined Claimant was capable of only sedentary work at 4 hours per day.

O. However, nothing in Section 8-42-107.2, C.R.S. treats the opinion of the DIME physician as binding with respect to the claimant’s ability to perform regular employment. See *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680, 685 (Colo. App. 1999) (DIME provisions apply to determinations of maximum medical improvement, but Act creates no specific procedure to review attending physician’s release to regular employment). Further, the Court of Appeals has determined that §8-42-105(3)(c) mandates termination of TTD benefits if the attending physician gives the employee a written release to return to regular employment. The courts have determined that an ALJ may not [despite the temptation herein] disregard the attending physician’s opinion that a claimant is released to return to regular employment. *Imperial Headware, Inc. v. Industrial Claim Appeals Office* 15 P.3d 295 (Colo. App. 2000); *Burns v. Robinson Dairy, Inc.*, 911 P.2d 661 (Colo. App. 1995). Thus, because Dr. Bisgard

released Claimant to regular employment on April 24, 2018 he is not entitled to TTD benefits thereafter, barring a possible worsening of his condition.

ORDER

It is therefore Ordered that:

1. Respondents have not overcome the DIME opinion on MMI. Claimant is not at MMI.
2. Respondents shall pay for the repeat Medial Branch Blocks as recommended by the DIME physician.
3. Claimant's request for TTD benefits is denied and dismissed.
4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: February 28, 2020

Colorado Springs, Colorado 80906

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-117-876-001**

ISSUES

- Did Claimant prove she suffered a compensable occupational disease on September 4, 2019?
- If Claimant proved a compensable injury, did she prove entitlement to reasonably necessary medical treatment, including a wrist brace dispensed by PA-C Cox at the ROMP Clinic?

FINDINGS OF FACT

1. Claimant works for Employer as a child welfare caseworker. She started the job in November 2015.

2. Claimant's job entails a mix of office work and fieldwork. Some days she spends most of her time doing office tasks. Other days she is primarily in the field, visiting and working with children and transporting them to appointments or medical treatment. Some days are a combination of both. Claimant frequently writes reports, both by hand and on the computer. She uses a keyboard and mouse when working on the computer. In January 2019, Claimant started covering the receptionist position 5-6 hours per week.

3. In August 2019, Claimant started having pain in her right arm and hand. The pain was intermittent at first but became more intense and constant over the next several weeks. On September 4, 2019, the pain became so severe she could not grip a marker while writing on a whiteboard. She went back to her office and started typing, which made the pain worse, so she typed her reports with her left hand. At that point, she decided she had to report the injury.

4. Claimant completed an injury report on September 5, 2019. She described the injury as "pain when typing and moving/gripping computer mouse, taking notes with pen/pencil, pressing the gear shifter and moving the lever, gripping steering wheel, and turning a key to start/shut off vehicle and open office door." Claimant attributed the symptoms to data entry using a keyboard and mouse, writing notes and reports, and gripping objects such as pens and the steering wheel of her car.

5. At hearing, she described an additional aggravating factor while working at the reception station. The reception station had a "split" keyboard, which differed from the traditional flat keyboard at Claimant's regular workstation. The split keyboard aggravated her right arm so badly she typed everything with only her left hand.

6. Employer referred Claimant to the ROMP Clinic in Alamosa. She saw PA-C Howard Cox at her first appointment was on September 9, 2019. Claimant told the intake nurse her pain was from "repetitive movements like typing and writing/taking notes. PT describes pain as an ache and states when she uses her mouse, pain goes up into

arm.” Mr. Cox noted Claimant’s symptoms were associated with “8+ hours per day of typing, keyboard, and mouse use.” Grip strength was diminished and she had focal tenderness of the distal flexor tendons of the right forearm. Mr. Cox diagnosed an acute right forearm strain. He gave Claimant a wrist splint and referred her to physical therapy. Mr. Cox opined the objective findings were consistent with the history and/or a work-related mechanism of injury.

7. Sarah Nowotny performed a physical demands analysis (PDA) for Respondents on September 27, 2019. She interviewed Claimant and observed her performing office tasks. The evaluation at the office took approximately two hours. From that sampling of work tasks, Ms. Nowotny “extrapolated” the exact number of minutes and hours Claimant spends each day performing various tasks such as typing, mousing, and writing. She calculated 1-2 hours per day of keyboard use, 1-2 hours per day of mousing, and 2-4 hours per day of writing. Ms. Nowotny concluded Claimant’s job does not expose her to any primary or secondary risk factor outlined in the Cumulative Trauma Disorder Medical Treatment Guidelines (CTD MTGs).

8. Claimant returned to the ROMP Clinic on October 9, 2019, and saw Dr. Susan Geiger. She reported 6/10 pain at rest and 9/10 pain with activity. Her pain level typically increased as the day progressed. She was having pain in her right bicep but “the pain is only there when she is using her mouse or typing a lot.” She had swelling in her hand. Dr. Geiger reviewed the PDA with Claimant and opined “several factors [were] probably contributing to her discomfort,”

They have been short 1 coworker since March which has increased her hours over the last several months. She was observed she states from 940 – 11 AM by [Ms. Nowotny]. Some days she works and 8-hour workday and other days she works for 15 hours. She does do front desk work or she answers phones and logs in clients on a computer. She states since her right wrist and hand have been bothering her she sometimes does that utilizing 1 finger and typing with her left hand. The keyboard that is at the front desk is a split keyboard which she states actually aggravates her wrist and hand symptoms which is why she types with one finger on her left hand. . . . She states after work sometimes she also has to work on her phone and she holds the phone in her left hand and either clicks on a form or does typing with her right hand on the phone. She states that when she is on call she has to do that for 1-week stretch and at times then is working 12 days in a row without a break. She states that she rarely has a lunch break and rarely takes her 15-minute breaks because of their workload. She states ice helps a little bit when she utilizes it at the end of the workday. Looking at the pictures [from the PDA] . . . it is noted that her wrist support for the area in her keyboard actually stretches across and is under her wrist when she is using the mouse. We did discuss removing that portion to see if that does make a difference and is a better ergonomic fit.

9. Dr. Geiger diagnosed a forearm strain and right wrist tenosynovitis, and cited the following ICD-10 diagnostic codes:

ICD-10

856.911D - Strain of unsp musc/fasc/tend at forearm lv, right arm
M65.841 – Other synovitis and tenosynovitis, right hand

ICD-9

841.9 - Sprain & Strain unspecified site elbow & forearm
727.05 – Other tenosynovitis of hand and wrist

Dr. Geiger referred Claimant to occupational therapy, and recommended she continue wearing the wrist brace, apply ice several times daily, and take regular rest breaks during the day.

10. Employer terminated Claimant on October 17, 2019 for reasons not discussed at the hearing.

11. Claimant followed up with Dr. Geiger on November 4, 2019. Her hand and wrist pain were improved since being office work. She had not started PT because Respondents were contesting the claim.

12. Claimant had another appointment with Dr. Geiger on December 3, 2019. She again reported less pain since she had not been working. Her pain level was down to 4-5/10 at rest and 7-8/10 with activity. The swelling in her fingers had also improved. She was completing applications looking for a new job. She told Dr. Geiger her pain increased after 45-60 minutes of typing job applications. Routine household activities such as vacuuming were also bothering her arm. The right palm and right biceps were tender to palpation.

13. Claimant saw Dr. Nicholas Olsen for an IME at Respondents' request on December 9, 2019. Claimant told Dr. Olson she typically worked 55 per week, and every third week she was on call 24/7 for the entire week. Claimant said she typed reports and entered data into the computer at least four hours per day. Four days per month were reserved solely for data entry, which required eight hours of typing. Claimant was experiencing 4/10 pain at the IME, but it had been as high as 8/10 and the previous two weeks. Claimant indicated typing, writing, gripping, and grasping increased her pain. She primarily walks, hikes, and reads for recreation, with no avocational activities involving significant use of the upper extremities. The physical examination was largely benign, with no evidence of nerve compression or irritation. Finkelstein's test was negative, with no indication of de Quervain's syndrome. There was "generalized tenderness" to palpation of the right wrist and palm. Grip strength was decreased in the right hand, and all other strength measures were normal. Dr. Olsen opined Claimant's "diffuse" subjective complaints of palm and wrist pain supported no specific diagnosis. He opined Claimant has none of the upper extremity diagnoses referenced in the CTD MTG causation tables, and thus cannot qualify for a work-related CTD.

14. Dr. Olsen reviewed the PDA after the appointment, which he noted did not support Claimant's statement she performed typing at least four hours each day. He opined her job involves no primary or secondary risk factors under the CTD MTGs

causation matrix. This reinforced his opinion Claimant's arm problems are not work-related.

15. Dr. Olson expanded on his opinions in his deposition on January 15, 2020. He opined the diagnosis of "forearm strain" provided by Mr. Cox is not "a specific diagnosis that would qualify for application of the cumulative trauma disorder guidelines." He gave a similar opinion regarding the diagnoses provided by Dr. Geiger, stating, "she doesn't give a diagnosis that would qualify for application of the cumulative trauma disorder guidelines." He testified, "the medical treatment guidelines state that if one is going to apply the cumulative trauma disorder guidelines, you must have one of those diagnoses listed."

16. Dr. Geiger and Mr. Cox's causation opinions are more credible and persuasive than Dr. Olson's opinions.

17. Claimant proved she suffered a compensable occupational disease consisting of soft tissue strains affecting her right upper extremity. The injury resulted directly from Claimant's work activities and not from any hazard to which she is exposed outside her job.

18. The treatment provided by the ROMP clinic was reasonably necessary to evaluate and treat Claimant's compensable injury, including the wrist brace Mr. Cox dispensed at her first appointment.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

[A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard

to which the worker would have been equally exposed outside of the employment.

The equal exposure element effectuates the “peculiar risk” test and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The claimant “must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally.” *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition “to some reasonable degree.” *Id.*

The mere fact an employee experiences symptoms while working does not compel an inference the work caused the condition. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, October 27, 2008). There is no presumption that a condition which manifests at work arose out of the employment. Rather, the Claimant must prove a direct causal relationship between the employment and the injury. Section 8-43-201; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

The Division has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP 17, Exhibit 5 addresses Cumulative Trauma Conditions (CTD MTGs), and was most recently updated in December 2016. Under § 8-42-101(3)(b) and WCRP 17-2(A), medical providers must use the MTGs when furnishing medical treatment. The ALJ may consider the MTGs as an evidentiary tool but is not bound by the MTGs when determining if requested medical treatment is reasonably necessary or injury-related. Section 8-43-201(3); *Logiudice v. Siemens Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

As found, Claimant proved she suffered a compensable occupational disease consisting of soft tissue strains affecting her right upper extremity. Mr. Cox and Dr. Geiger diagnosed soft-tissue strains, which are legitimate diagnoses as evidenced by their corresponding ICD-9 and ICD-10 codes. In fact, the CTD MTG explicitly recognizes “strains” as an “example[] of appropriate diagnoses.” See § (D)(3). The injury resulted directly from her work activities and not from any hazard to which Claimant is exposed outside her job.

Respondents’ reliance on the CTD MTG causation algorithm in this case is misplaced because, as Dr. Olson explained, Claimant has none of the diagnoses listed in the CTD causation tables. Accordingly, the causation tables are not particularly helpful in determining the cause of Claimant’s soft-tissue upper extremity strains.¹ The MTG CTD causation matrix provides a quick reference to available empirical data regarding the listed CTDs. It does not definitively limit the universe of potentially work-related conditions. The ALJ knows of no authority to support Dr. Olson’s opinion that only those

¹ Section (3)(a) of the CTD MTG concedes, “there are few studies which address less common musculoskeletal diagnoses” other than those listed in the causation tables. It makes little sense, therefore, to characterize application of the tables to unlisted diagnoses as “evidence-based.”

diagnoses listed in the CTD causation tables are eligible for coverage in a workers' compensation claim. The ALJ is not persuaded the Division intended to foreclose compensation for non-listed medical conditions if the claimant otherwise satisfies the statutory requirements for a compensable occupational disease. Indeed, such a rule would be contrary to the Act and void. *E.g.*, *Reyes v. JBS USA LLC*, W.C. No. 4-968-907-04 (December 4, 2017) (notwithstanding the MTGs, "determination of the compensable nature of an injury remains controlled by the Workers' Compensation Act and by relevant caselaw").

Multiple factors persuade the ALJ that Claimant's upper extremity strains were caused by her work. The symptoms began at work and were associated with specific work-related activities such as typing, using the mouse, and writing. Claimant's symptoms were worse at the end of her workday and workweek, but better when she was away from work. The persistent and worsening symptoms interfered with her ability to perform specific job-related tasks, prompting her to report and injury and request treatment. Claimant's symptoms improved relatively quickly after she was terminated in October 2019, which further supports a causal relationship to the work. The symptoms later recurred and worsened when she performed similar activities such as typing and mousing while filling out job applications. Finally, there is no persuasive evidence of any other potentially injurious activity, pathology, or potentially causal factor besides Claimant's work. Nor is there persuasive evidence she was at least equally exposed to the injurious activities outside of work.

B. Medical benefits

Respondents are liable for medical treatment reasonably needed to cure or relieve the effects of an industrial injury. Section 8-42-101. Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury, or suggest a course of treatment. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000); *Walker v. Life Care Centers of America*, W.C. No. 4-953-561-02 (March 30, 2017); *Jacobson v. American Industrial Service/Steiner Corp.*, W.C. No. 4-487-349 (April 24, 2007).

As found, the evaluations and treatment Claimant received through the ROMP Clinic, including the wrist brace dispensed by Mr. Cox, was reasonably necessary to cure and relieve the effects of her injury

ORDER

It is therefore ordered that:

1. Claimant's claim is compensable.
2. Insurer shall cover all treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's injury, including the wrist splint dispensed by the ROMP Clinic.
3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: March 2, 2020

Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence that his average weekly wage is an amount other than the AWW of \$982.50, admitted by the respondents.

FINDINGS OF FACT

1. Prior to his employment with the employer, the claimant owned Four Corners Locating (FCL). During his self-employment, the claimant worked as a utility locator. The claimant testified that he paid himself \$1,200.00 per week. The claimant further testified that this was based on an hourly rate of \$30 per hour and work of 40 hours per week. The claimant clarified that while the owner of FCL he was paid that \$1,200.00 per week regardless of the number of hours he actually worked.

2. On May 15, 2019, the claimant sold FCL to the employer. Thereafter, the employer established the subsidiary, Jaco Locating Services. The claimant testified that due to his extensive experience and knowledge, he was hired by the employer to assist with the initial startup and management of the employer's locating company. The claimant worked as a locator for the employer.

3. The claimant's employment with the employer began on June 1, 2019. The claimant's first actual day of work for the employer was June 16, 2019.

4. The claimant testified that he understood that the employer would pay him \$30.00 per hour. The claimant also understood that he would be a full-time employee. Therefore, the claimant believed he would be working 40 hours each week.

5. On July 29, 2019, the claimant was injured at work. Specifically, the claimant was electrocuted while attempting to connect a locating box to an electrical panel.

6. On September 6, 2019, the respondents filed a General Admission of Liability regarding the claimant's July 29, 2019 injury. In that GAL, the respondents admitted for an average weekly wage (AWW) of \$982.50.

7. Payroll records admitted at hearing demonstrate that the claimant was paid as follows:

- a. For the pay period June 16 through June 22, 2019, the claimant reported 38.5 hours worked and was paid \$1,155.00;
- b. For the pay period June 23 through June 29, 2019, the claimant reported 40 hours worked and was paid \$1,200.00;

- c. For the pay period June 30 through July 6, 2019, the claimant reported hours 28 worked and was paid \$840.00;
- d. For the pay period July 7 through July 13, 2019, the claimant reported hours 40 hours worked and was paid \$1,200.00;
- e. For the pay period July 14 through July 20, 2019, the claimant reported hours 16 hours worked and was paid \$480; and
- f. For the pay period July 21 through July 27, 2019, the claimant reported hours 34 hours worked and was paid \$1,020.00.

8. The ALJ calculates that for the six-week period of June 16, 2019 through July 27, 2019, the claimant was paid a total of \$5,895.00. When this amount is divided by six weeks, it is equal to \$982.50. This is the AWW admitted by the respondents in the September 6, 2019 GAL.¹

9. The claimant asserts that his average weekly wage should be calculated at 40 hours per week, regardless of the actual number of hours he reported to the employer. Therefore, the claimant asserts that his AWW should be \$1,200.00 per week; (40 hours per week at \$30.00 per hour)². In support of this assertion, the claimant testified that he understood that when the employer purchased FLC, they would operate their business in the same manner the claimant had run FLC. As the ALJ understands the claimant's testimony, this "same manner" would include the claimant being paid a salary of \$1,200.00 per week. The ALJ is not persuaded by the claimant's testimony or his assertions.

10. The claimant's supervisor with the employer, Curt M[Redacted] testified at hearing. Mr. M[Redacted] testified that the claimant was hired to work a full time position and was paid \$30.00 per hour. Mr. M[Redacted] confirmed that the claimant was paid for the hours he worked. Those hours and the claimant's paychecks were calculated based upon timesheets prepared by the claimant. Mr. M[Redacted] also testified that there were weeks that the claimant worked less than 40 hours. For those weeks, the claimant was paid \$30.00 per hour for the hours he reported. Mr. M[Redacted] further testified that the claimant did not assert that he was owed \$1,200.00 per week, regardless of the number of hours the claimant worked.

11. Will D[Redacted] is a locator with the employer. He testified that prior the claimant's injury, the claimant was his supervisor. Mr. D[Redacted] also testified that he contacted the claimant with questions he had about his job assignments.

¹ The ALJ notes that the parties agree that the claimant's first day of employment was June 1, 2019. However, the claimant was on a two-week vacation immediately thereafter. That is the reason that his first day of work is indicated as June 16, 2016. The ALJ notes that if this eight-week period were considered in calculating the claimant's AWW, it would result in an AWW of \$736.88; (\$5,895.00 divided by eight weeks of employment).

² The ALJ calculates that the amount asserted by the claimant is \$217.50 more than the admitted AWW of \$982.50.

12. James B[Redacted] is the President of the employer. He testified that he purchased the assets of Four Corners Locating. Mr. B[Redacted] also testified that he did not discuss a salary with the claimant. Mr. B[Redacted] understood that the claimant was to be paid \$30.00 per hour for the hours the claimant worked. Mr. B[Redacted] also testified that he did not guarantee the claimant as set weekly salary. The claimant did not indicate to Mr. B[Redacted] that he was displeased with his pay.

13. Brian H[Redacted] is the employer's Head of Operations. He testified that he was present when the claimant met with Mr. B[Redacted] to discuss the sale of FCL. Mr. H[Redacted] also testified that the claimant was not told he would receive a set salary.

14. The ALJ credits the payroll records and the testimony of Mr. M[Redacted] and Mr. B[Redacted] over the contrary testimony of the claimant. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that his AWW should be calculated to be \$1,200.00 per week. On the contrary, the payroll records reflect that the claimant was an hourly employee, and paid \$30.00 per hour. The claimant's hours varied, resulting in the AWW proposed by the respondent of \$982.50. This is further supported by the testimony of Mr. M[Redacted] and Mr. B[Redacted].

15. The claimant has made much of the content of a form completed by his spouse regarding enrollment in an employer provided vision plan. (See the claimant's exhibit 22 at page 116). The ALJ is not persuaded that the content of this document is supportive of the claimant's arguments. On the contrary, the handwritten information included only reinforces the respondents' position that the claimant was an hourly employee and paid \$30.00 per hour.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

5. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon her AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

6. As found, the claimant has failed to demonstrate by a preponderance of the records that his AWW should be calculated as an amount other than the admitted AWW of \$982.50.

ORDER

It is therefore ordered that the claimant's AWW is \$982.50, as admitted by the respondents.

Dated this 3rd day of March 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-113-544-001**

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of employment with Employer on June 24, 2019.

FINDINGS OF FACT

1. Claimant works for Employer as a Delivery Driver. Her job duties include delivering sandwiches as well as stocking and cleaning Employer's store.

2. On June 24, 2019 Claimant was involved in a motor vehicle accident while delivering sandwiches for Employer. Another driver rear-ended her vehicle.

3. Claimant has suffered numerous injuries in previous motor vehicle accidents. In 2008 she was involved in a rear-end collision and injured her lower back. In 2010 Claimant broke her hip, tailbone, sternum and ribs on the left side.

4. Immediately after the June 24, 2019 collision Claimant contacted the police and reported back pain, but declined transfer to a hospital via ambulance. Claimant's Supervisor Tyler B[Redacted] arrived at the scene and drove Claimant back to Employer's store.

5. Claimant testified that after she returned to the store, she worked for half an hour before going home due to pain. She explained that she went to Urgent Care the night of the accident. Claimant remarked that she reported back, hip, neck and shoulder pain. However, the emergency room record only documents localized complaints of low back pain, with some tingling to her fingers and toes but no numbness or weakness. Claimant denied loss of consciousness, headache or neck pain. She also did not mention any shoulder or hip pain. Edward Walter Cetaruk, M.D. diagnosed Claimant with a back strain and prescribed medications. He noted that Claimant's pain was "due to soft tissue injury of the muscles in connective tissue of her spine and back."

6. Claimant missed one day of work after the motor vehicle accident but returned to employment on June 26, 2019. She explained that she struggled with work activities, including an inability to scoop ice out of a machine, carry a bucket, use a pole to grab chip boxes and roll a floor mat. Claimant commented that she developed symptoms in her right shoulder, neck and hip while working.

7. Employer's General Manager Tyler B[Redacted] testified that he went to the scene of the accident on June 24, 2019 and gave Claimant a ride back to the store. After taking a day off, Claimant returned to work and performed her regular job duties. Mr. B[Redacted] remarked that Claimant did not request work accommodations as a result of any injuries and he did not notice any difference in her job performance. In fact, Claimant

was a hard worker who often sprinted to her car, both before and after the motor vehicle accident, in order to make sandwich deliveries.

8. On July 2, 2019 Claimant visited Kartik K. Patel, M.D. for an evaluation. She reported pain in her lower right SI joint and tingling in her fingers. Imaging of the lumbar and thoracic spines was negative. Dr. Patel did not document any hip or neck symptoms.

9. Claimant explained that on July 10, 2019 she twisted to the left at work and experienced a stabbing pain on the left side of her spine down her leg. She specified that the July 10, 2019 incident caused a new, shooting pain that radiated through the bottom of her foot.

10. Claimant ceased working for Employer on July 12, 2019. She visited multiple medical providers over the ensuing months. Claimant underwent physical therapy and diagnostic imaging.

11. On August 7, 2019 Claimant visited Michael Shen, M.D. for an examination. Claimant did not provide any history of the July 10, 2019 event and related her symptoms to the June 24, 2019 motor vehicle accident. Dr. Shen determined that Claimant's lumbar MRI was essentially normal with the exception of some age appropriate findings. He remarked that Claimant was mechanically stable and neurologically intact. Dr. Shen did not note any indications for surgery and expressed concerns about pain out of proportion to his physical examination.

12. On August 14, 2019 Claimant visited Christopher D'Ambrosia, M.D. for an evaluation. Dr. D'Ambrosia determined that Claimant's pain was "significantly out of proportion relative to her diagnostic imaging studies." He noted she experienced severe pain with even the slightest touch and was unable to complete any physical therapy because of her severe pain.

13. On September 23, 2019 Claimant visited Nathan D. Faulkner, M.D. She reported severe pain in her buttock, groin and lateral hip that was unchanged since June 24, 2019. Dr. Faulkner determined that Claimant's pain was "way out of proportion to exam" because she exhibited symptoms with even light pressure. He noted that it would be very atypical for a labral tear to cause the amount of pain in the area Claimant described.

14. On December 19, 2019 Claimant visited John S. Hughes, M.D. for an independent medical examination. Dr. Hughes recounted that Claimant suffered a motor vehicle accident on June 24, 2019. He explained that at her June 24, 2019 emergency room visit Claimant reported lower back pain. Claimant reported current symptoms of lower back, left hip and right shoulder pain. Dr. Hughes concluded that Claimant had received reasonable, necessary and related medical treatment for her June 24, 2019 injuries. He reasoned that Claimant had not reached Maximum Medical Improvement (MMI).

15. On December 19, 2019 Claimant also underwent an independent medical examination with Robert L. Messenbaugh, M.D. He initially determined that Claimant

likely sustained some level of injury to her left hip, lower back, neck and left shoulder. However, he noted that he was unable to provide a clearer opinion given the extremely limited medical records he had received. Dr. Messenbaugh subsequently obtained additional records from UCHHealth, Health Images, Usama Ghazi, D.O., Advanced Orthopedic & Sports Medicine, Colorado Orthopedic Consultants and Hughes Medical Consulting.

16. On January 16, 2020 Dr. Messenbaugh issued an Addendum Report. He amended his opinion to explain that Claimant sustained a lower back strain on June 24, 2019, but did not injure her cervical spine, right shoulder or left hip.

17. Dr. Messenbaugh testified at the hearing in this matter. He maintained that Claimant's only suffered a lower back strain in the June 24, 2019 motor vehicle accident. Dr. Messenbaugh reasoned, that during her initial emergency room visit on June 24, 2019, Claimant only mentioned lower back pain and did not note left hip, right shoulder or cervical spine pain. He explained that sciatica from an acute event would begin within 24-48 hours. Claimant's sciatica symptoms would not delay for three weeks and explode into a form of excruciating pain in which she could not bear weight or walk. Moreover, neck or cervical symptoms from whiplash would also begin immediately.

18. Dr. Messenbaugh detailed that the objective examination findings did not support a severe debilitating injury from Claimant's motor vehicle accident. The initial pain was limited to Claimant's lower back. The radiating pain and hip symptoms arose after the July 10, 2019 incident.

19. Dr. Messenbaugh summarized that an individual cannot have labrum tears and rotator cuff tears without reporting them because the conditions involve the painful tearing of tissues. The pain is immediate and does not begin at a later time. Dr. Messenbaugh noted that debilitating pain in which an individual cannot stand or walk due to a traumatic event is usually promptly reported. He reasoned that, if the motor vehicle accident caused Claimant's inability to walk, the condition would have been evident within the three week time span after the accident while Claimant was working. Finally, Dr. Messenbaugh concluded that Claimant's right shoulder symptoms were unrelated to her motor vehicle accident because there was no mechanism for a right shoulder injury. Claimant's seat belt was over her left shoulder during the June 24, 2019 accident.

20. Claimant has demonstrated that it is more probably true than not that she suffered a compensable injury in the form of a back strain during the course and scope of her employment with Employer on June 24, 2019. However, based on the persuasive medical records, Claimant did not suffer injuries to her cervical spine, left hip or right shoulder during the motor vehicle accident of June 24, 2019. Because the medical records simply reflect a lack of causation, an absence of objective evidence and exaggerated pain symptoms, they do not support cervical spine, left hip or right shoulder injuries.

21. The emergency room record from June 24, 2019 only documents localized complaints of lower back pain with some tingling to her fingers and toes, but no numbness or weakness. Claimant denied the loss of consciousness, headache or neck pain. She also did not mention any shoulder or hip pain. Dr. Cetaruk diagnosed Claimant with a

back strain and prescribed medications. Although Claimant explained that she subsequently struggled to perform her work activities, Mr. B[Redacted] credibly remarked that Claimant did not request work accommodations and he did not notice any difference in her job performance. In a July 2, 2019 evaluation with Dr. Patel Claimant only reported pain in her lower right SI joint and tingling in her fingers. Imaging of the lumbar and thoracic spines was negative. Dr. Patel did not document any hip or neck symptoms.

22. Claimant commented that on July 10, 2019 she twisted to the left at work and experienced a stabbing pain on the left side of her spine down her leg. She ceased working for Employer on July 10, 2019. Numerous medical providers subsequently noted that Claimant exhibited pain out of proportion relative to physical examination findings and diagnostic imaging studies.

23. Dr. Messenbaugh maintained that Claimant's injury as a result of the June 24, 2019 motor vehicle accident was limited to a lower back strain. He reasoned that during her initial emergency room visit on June 24, 2019 Claimant only mentioned lower back pain and did not note left hip, right shoulder or cervical spine pain. He explained that sciatica from an acute event would begin within 24-48 hours. Claimant's sciatica symptoms would not delay for three weeks and explode into a form of excruciating pain in which she could not bear weight or walk. Dr. Messenbaugh summarized that an individual cannot have labrum and rotator cuff tears without reporting them because the conditions involve the painful tearing of tissues. The pain is immediate and does not begin at a later time. Dr. Messenbaugh reasoned that, if the motor vehicle accident caused Claimant's inability to walk, the condition would have been evident within the three week period after the accident when she was working. Finally, Dr. Messenbaugh concluded that Claimant's right shoulder symptoms were unrelated to her work accident because there was no mechanism for a right shoulder injury.

24. Dr. Hughes explained that at her June 24, 2019 emergency room visit Claimant reported lower back pain as a result of the June 24, 2019 accident. Claimant reported current symptoms of lower back, left hip and right shoulder pain. Dr. Hughes thus concluded that Claimant had received reasonable, necessary and related medical treatment for her June 24, 2019 injuries. However, the persuasive medical records and opinions demonstrate the lack of a causal connection between Claimant's June 24, 2019 motor vehicle accident and left hip, right shoulder and cervical spine symptoms. Moreover, because the record is replete with pain out of proportion to physical examination findings and diagnostic imaging studies, Claimant's connection of symptoms to the June 24, 2019 accident is questionable. It is thus speculative to attribute Claimant's myriad symptoms to her work-related motor vehicle accident. Accordingly, Claimant suffered a work-related injury only in the form of a back strain during the course and scope of her employment with Employer on June 24, 2019.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1),

C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job

function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable injury in the form of a back strain during the course and scope of her employment with Employer on June 24, 2019. However, based on the persuasive medical records, Claimant did not suffer injuries to her cervical spine, left hip or right shoulder during the motor vehicle accident of June 24, 2019. Because the medical records simply reflect a lack of causation, an absence of objective evidence and exaggerated pain symptoms, they do not support cervical spine, left hip or right shoulder injuries.

8. As found, the emergency room record from June 24, 2019 only documents localized complaints of lower back pain with some tingling to her fingers and toes, but no numbness or weakness. Claimant denied the loss of consciousness, headache or neck pain. She also did not mention any shoulder or hip pain. Dr. Cetaruk diagnosed Claimant with a back strain and prescribed medications. Although Claimant explained that she subsequently struggled to perform her work activities, Mr. B[Redacted] credibly remarked that Claimant did not request work accommodations and he did not notice any difference in her job performance. In a July 2, 2019 evaluation with Dr. Patel Claimant only reported pain in her lower right SI joint and tingling in her fingers. Imaging of the lumbar and thoracic spines was negative. Dr. Patel did not document any hip or neck symptoms.

9. As found, Claimant commented that on July 10, 2019 she twisted to the left at work and experienced a stabbing pain on the left side of her spine down her leg. She ceased working for Employer on July 10, 2019. Numerous medical providers subsequently noted that Claimant exhibited pain out of proportion relative to physical examination findings and diagnostic imaging studies.

10. As found, Dr. Messenbaugh maintained that Claimant’s injury as a result of the June 24, 2019 motor vehicle accident was limited to a lower back strain. He reasoned that during her initial emergency room visit on June 24, 2019 Claimant only mentioned lower back pain and did not note left hip, right shoulder or cervical spine pain. He explained that sciatica from an acute event would begin within 24-48 hours. Claimant’s sciatica symptoms would not delay for three weeks and explode into a form of excruciating pain in which she could not bear weight or walk. Dr. Messenbaugh summarized that an individual cannot have labrum and rotator cuff tears without reporting them because the conditions involve the painful tearing of tissues. The pain is immediate and does not begin at a later time. Dr. Messenbaugh reasoned that, if the motor vehicle accident caused Claimant’s inability to walk, the condition would have been evident within the three week period after the accident when she was working. Finally, Dr. Messenbaugh concluded that Claimant’s right shoulder symptoms were unrelated to her work accident because there was no mechanism for a right shoulder injury.

11. As found, Dr. Hughes explained that at her June 24, 2019 emergency room visit Claimant reported lower back pain as a result of the June 24, 2019 accident. Claimant reported current symptoms of lower back, left hip and right shoulder pain. Dr.

Hughes thus concluded that Claimant had received reasonable, necessary and related medical treatment for her June 24, 2019 injuries. However, the persuasive medical records and opinions demonstrate the lack of a causal connection between Claimant's June 24, 2019 motor vehicle accident and left hip, right shoulder and cervical spine symptoms. Moreover, because the record is replete with pain out of proportion to physical examination findings and diagnostic imaging studies, Claimant's connection of symptoms to the June 24, 2019 accident is questionable. It is thus speculative to attribute Claimant's myriad symptoms to her work-related motor vehicle accident. Accordingly, Claimant suffered a work-related injury only in the form of a back strain during the course and scope of her employment with Employer on June 24, 2019.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable back strain during the course and scope of her employment with Employer on June 24, 2019.
2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: March 3, 2020.

ISSUES

Whether the claimant has overcome, by clear and convincing evidence, the findings of the Division-sponsored independent medical examination (DIME) physician regarding maximum medical improvement (MMI), causation, and the need for additional medical treatment.

If the claimant fails to overcome the opinion of the DIME physician, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to permanent partial disability (PPD) benefits related to her right foot and ankle.

If the claimant fails to overcome the opinion of the DIME physician, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to reasonable and necessary medical treatment to maintain maximum medical improvement (MMI).

If the claimant fails to overcome the opinion of the DIME physician, whether the claimant sustained a serious permanent disfigurement to areas of her body normally exposed to public view, resulting in additional compensation.

At hearing, the claimant withdrew the endorsed issue of an overpayment. That issue is reserved, without prejudice.

FINDINGS OF FACT

1. On August 27, 2015, the claimant suffered an injury to her left ankle when she fell down some stairs while vacuuming in a client's home. The respondents have admitted liability for the August 27, 2015 left ankle injury.

2. The claimant's initial treatment of her left ankle included use of a boot, physical therapy, and injections. Ultimately, the claimant was seen by Dr. Christopher Copeland for a surgical consultation.

3. On February 26, 2016, Dr. Copeland requested authorization for a left ankle arthroscopy with debridement, anterior decompression, and Brostrom repair.

4. On April 4, 2016, the claimant attended an independent medical examination (IME) with Dr. Eric Lindberg. In connection with the IME, Dr. Lindberg reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Lindberg opined that the surgery recommended by Dr. Copeland was reasonable and related to the claimant's August 27, 2015 injury.

5. The surgery was approved by the respondents. On May 4, 2016, Dr. Copeland performed the recommended left ankle surgery. Specifically, that procedure included left ankle arthroscopy with extensive debridement, open excision of the distal tibia, and a lateral ligament Brostrom repair.

6. On June 28, 2017, the claimant underwent a second left ankle surgery, again performed by Dr. Copeland. On that date, Dr. Copeland performed a left ankle peroneal brevis tendon repair, tenolysis of the peroneal longus tendon, and a hypertrophic scar revision.

7. On February 27, 2018, the claimant was seen for an IME with Dr. Scott Resig. As with the claimant's prior IME, Dr. Resig reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his March 1, 2018 report, Dr. Resig opined that the claimant was not a candidate for PRP injections. However, he did note that the claimant could benefit from additional surgery to her left ankle, which could include a sural nerve resection. In addition, Dr. Resig recommended that the claimant undergo electromyography (EMG) testing before additional surgery was pursued.

8. On August 29, 2018, Dr. Copeland performed a third surgery on the claimant's left ankle. That surgery included peroneal tendon tenolysis, sural nerve neurolysis, and further revision of the scar.

9. The claimant testified that she also injured her right ankle because she lost her balance on her left foot. The claimant further testified that she was at her home preparing food when she turned to step on to her left foot. However, she felt unsteady and placed all of body weight onto her right foot. As this shift occurred, the claimant twisted her right ankle. The records indicate that this incident occurred on January 17, 2019.

10. On June 4, 2019, the claimant attended an IME with Dr. Jeffrey Raschbacher. Prior to issuing his IME report, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. Dr. Raschbacher opined that the claimant's August 27, 2015 fall resulted in a "very mild sprain" of the claimant's left ankle. Dr. Raschbacher opined that the claimant had reached maximum medical improvement (MMI) as of the date of his exam, June 4, 2019. Dr. Raschbacher also opined that the claimant's left ankle did not exhibit instability. Based upon that finding, Dr. Raschbacher further noted that alleged instability of the claimant's left ankle is not a likely mechanism of injury for the claimant's right ankle. Dr. Raschbacher further noted that if the claimant did in fact injure her right ankle, it was a strain or sprain. Dr. Raschbacher further clarified that he was not certain that a right ankle injury occurred. As a result, he recommended no further treatment for the claimant's right ankle.

11. On June 7, 2019, the claimant was seen by Dr. Waqqar Khan-Farooqi for a surgical consultation. Dr. Khan-Farooqi diagnosed sural nerve entrapment in the claimant's left ankle. On that date, Dr. Kahn-Farooqi recommended two surgical options. Those recommended surgeries were either a sural neurectomy or decompression and vein wrapping. Dr. Khan-Farooqi clarified that decompression and vein wrapping would be performed by another physician (Dr. Pitcher).

12. On June 27, 2019, the parties went to hearing before ALJ Keith Mottram on the issue of whether the claimant's right ankle injury was compensable.

13. On July 9, 2019, the respondents requested a 24-month Division-sponsored independent medical examination (DIME).

14. Closing arguments for the June 27, 2019 hearing were heard on July 9, 2019. In an order issued July 24, 2019, ALJ Mottram found that the claimant's right ankle injury was compensable, because the "chain of causation" connected that new injury to the August 27, 2015 left ankle injury. In addition, ALJ Mottram ordered the respondents to pay for recommended treatment of the claimant's right ankle that included a magnetic resonance image (MRI) and physical therapy.

15. On August 2, 2019, the parties agreed to Dr. John Hughes as the DIME physician.

16. On August 22, 2019, the claimant returned to Dr. Khan-Farooqi who assessed entrapment neuropathy. Dr. Khan-Farooqi noted that the claimant's left ankle condition included "incisional neuromas involving the sural nerve". He also noted that such neuromas are "recalcitrant to further surgery". Dr. Khan-Farooqi recommended the claimant wear rocker bottom shoes.

17. The claimant attended the DIME with Dr. Hughes on September 26, 2019. In addition to completing a physical exam, Dr. Hughes reviewed the claimant's medical records and obtained a history from the claimant. In his DIME report, Dr. Hughes listed the claimant's diagnoses as a work related left ankle sprain/strain occurring on August 27, 2015; left ankle arthritis; left sural neuropathy. Dr. Hughes opposed any surgery to the claimant's left ankle, and recommended no maintenance medical treatment. With regard to permanent impairment, Dr. Hughes determined a 19% left lower extremity impairment rating. In addition, Dr. Hughes noted his agreement with Dr. Raschbacher that the claimant reached MMI on June 4, 2019.

18. With regard to the claimant's right ankle, Dr. Hughes opined that the claimant suffered a sprain strain. Additionally, he opined that the claimant's right ankle injury was not work related and identified it as a "subsequent injury". In addition, Dr. Hughes opined that the ongoing right ankle symptoms reported by the claimant would support a finding that the claimant has an underlying arthritic condition that may predispose her to lack of improvement with surgical intervention.

19. In compliance with ALJ Mottram's July 24, 2019 order, the claimant underwent a right ankle MRI on October 9, 2019. That MRI showed high-grade chondral fissuring in the anterior tibial plafond; mild to moderate subchondral bone marrow edema; small anterior marginal osteophytes; and mild hypertrophic scarring of the anterior talofibular ligament.

20. On October 17, 2019, the respondents filed a Final Admission of Liability (FAL) admitting for the MMI date of June 4, 2019 and scheduled impairment of 19 percent for the claimant's left lower extremity, as determined by Dr. Hughes.

21. The claimant testified that she wishes to pursue one of the surgical options for her left ankle, as proposed by Dr. Khan-Farooqi. With regard to her right ankle, the claimant testified that her current symptoms include swelling and pain. The claimant testified that she needs additional treatment to both her left and right ankles.

22. For purposes of a possible disfigurement award, the ALJ made the following findings regarding the appearance of the claimant's left ankle. On the outside of the claimant's left ankle, there is a well-healed surgical scar that measures approximately 8 cm long and is 0.5 cm at its widest point. In addition, there is a well-healed arthroscopic scar that is 0.5 cm in diameter. On the claimant's left Achilles, there is a circular area of discoloration that measures 0.75 cm in diameter. The ALJ also observed swelling on the claimant's left ankle to the point that visualizing the ankle bone is not distinct. The claimant testified that swelling of her left ankle is constant.

23. The ALJ credits the medical records and the opinions of Drs. Hughes and Raschbacher. Therefore, the ALJ finds that the claimant has failed to overcome the opinions of Dr. Hughes that the claimant reached MMI on June 4, 2018, that her right foot and ankle symptoms are not related to the admitted work injury, and that she does not require post-MMI medical treatment. Contrary medical opinions and the claimant's testimony are not sufficient to demonstrate that it is highly probable that Dr. Hughes's opinions are incorrect.

24. With regard to maintenance medical care necessary to maintain the claimant at MMI, the ALJ credits the opinion of Dr. Hughes. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she is entitled to post-MMI medical treatment. As noted by Dr. Hughes, the claimant has undergone a number of treatment modalities (including three surgeries) since her 2015 work injury, but her left ankle symptoms have not improved.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering

all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2015).

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra*. A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

6. As found, the claimant has failed to prove by clear and convincing evidence that Dr. Hughes's opinions regarding MMI, causation of right ankle symptoms, and post-MMI care were incorrect. The claimant has failed to establish anything other than a difference of opinion between medical providers. As found, the medical records and the opinions of Drs. Hughes and Raschbacher are credible and persuasive.

7. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she is entitled to post-MMI treatment. As found, the medical records and the opinion of Dr. Hughes are credible and persuasive.

8. Section 8-42-108 (1), C.R.S. provides that a claimant may be entitled to additional compensation if, as a result of the work injury, she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

9. As found, the claimant has a visible disfigurement on her left ankle consisting of scarring and swelling as described above.

ORDER

It is therefore ordered:

1. The claimant has failed to overcome the DIME physician's opinion on the issues of MMI, causation, and the need for additional medical treatment.

2. The claimant's claim for post-MMI medical treatment is denied and dismissed.

3. The insurer shall pay the claimant \$750.00 for disfigurement. The insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. All matters not determined here are reserved for future determination.

Dated this 4th day of March 2020.

ISSUES

- Did Claimant prove by a preponderance of the evidence an arthroscopic surgery recommended by Dr. Mark Failing is reasonably necessary to cure and relieve the effects of her admitted injury?

FINDINGS OF FACT

1. Claimant works for Employer as a server. At the time of the accident, Claimant had a second job as a Zumba instructor.

2. Claimant suffered an admitted right knee injury on February 22, 2019. She was moving a heavy pallet of food and did not realize the back wheels were locked. She planted her right leg and pushed, but the pallet did not move. She immediately felt sharp, burning pain in the medial aspect of the right knee.

3. Employer referred Claimant to Concentra Medical Centers. She saw Dr. Scott Richardson at her first appointment on March 4, 2019. She described right knee pain when walking, occasional catching, occasional clicking, and a feeling of instability. On examination, she was tender to palpation around the medial knee. McMurray test was positive on the medial side but negative on the lateral side. She had pain when stressing the medial collateral ligament, but no laxity. She walked with an antalgic gait. Dr. Richardson diagnosed a right knee "sprain" and an MCL "sprain or strain." He gave Claimant a hinged knee brace and referred her to therapy. He imposed work restrictions of no lifting, pushing, or pulling over 20 pounds, and at least 50% of each shift must be done in a seated position.

4. Claimant returned to Concentra on March 8 and saw PA-C Nathan Adams. Her symptoms were essentially unchanged, although Mr. Adams thought her medial knee pain was consistent with pes anserine bursitis. There is no indication he performed a McMurray test. The note stated Claimant "denies increased clicking or popping over her pre-injury baseline." The source of that statement is unclear, but the ALJ infers Mr. Adams misunderstood the history because there is no persuasive evidence Claimant had any preinjury right knee problems.

5. Claimant attended three PT sessions over two weeks in March 2019. At each session, the therapist documented a positive medial McMurray testing.

6. At her follow-up appointment with Dr. Richardson on March 22, 2019, Claimant described "deep ache and sharp pains in the right knee . . . without improvement." She reported clicking, popping, and increased pain with weightbearing. She also reported right knee swelling after walking. McMurray test was positive on the medial side, negative on the lateral side. Stressing the MCL produced pain by no laxity.

Dr. Richardson recommended she stop PT and ordered an MRI of the right knee for “possible medial meniscus tear.”

7. A right knee MRI was performed on April 1, 2019. The radiologist appreciated (1) a possible tear of the posterior horn of the medial meniscus with an overlying parameniscal cyst, (2) a low-grade partial-thickness tear of the medial collateral ligament, and (3) significant patellofemoral chondromalacia.

8. After reviewing the MRI report, Dr. Richardson referred Claimant to Dr. Mark Failinger for a surgical evaluation.

9. Dr. Failinger evaluated Claimant on April 18, 2019. Dr. Failinger reviewed the MRI and saw “moderate chondromalacia in the central portion of the patella and smaller chance of medial meniscus tear with small posteromedial possible parameniscal cyst.” He opined, “It is certainly not clear that there is a medial meniscus tear given the MRI findings.” He administered a cortisone injection and opined, “possibly the scope would be the next step.”

10. Claimant received no benefit from the steroid injection.

11. She returned to Dr. Failinger on May 2, 2019. She was no better and wanted to try surgery. McMurray test was equivocal; it produced pain but no obvious click. Dr. Failinger recommended arthroscopic surgery to “look for a meniscus tear as noted on the MRI reading and also clean up her chondromalacia.”

12. Dr. Jon Erickson performed a Rule 16 review for Insurer on May 20, 2019. Dr. Erickson questioned the veracity of Claimant’s reported symptoms because he was under the mistaken impression she was still working as a Zumba instructor. There is no persuasive evidence Dr. Erickson reviewed the MRI images, and the ALJ infers he only reviewed the radiologist’s report. Dr. Erickson concluded, “[the] chondromalacia patella is clearly preexisting and was not worsened or aggravated by her injury on 2/22/2019. There is no clear convincing evidence of a medial meniscal tear on her MRI. I would, therefore, recommend a denial of Dr. Failinger’s request for surgery, as there is no clear indication of an injury-related knee abnormality.”

13. Claimant followed up with Dr. Failinger on May 23, 2019 to discuss appealing the denial of surgery. Dr. Failinger noted, “she would like to try to get rid of the catching and locking more than anything.” Examination showed moderate crepitus, pain with patellofemoral compression, and focal medial joint line pain. McMurray’s produced pain, but no obvious click. Dr. Failinger requested Insurer reconsider the surgery denial, noting Claimant was asymptomatic before the work injury, had persistent and bothersome pain, catching, and locking, and had not responded to conservative treatment.

14. Dr. Erickson reviewed Dr. Failinger’s appeal on June 7, 2019, and again recommended denial of the surgery. He saw no appreciable change Claimant’s situation or the available clinical information to warrant changing his opinion. He again cited his erroneous impression Claimant still doing Zumba, which he thought was probably the reason she was not getting better.

15. Claimant saw Dr. James Lindberg for an IME at Respondents' request on July 23, 2019. She described ongoing symptoms, including swelling, locking, and feeling like her knee "wants to give out." She was working light-duty and having difficulty standing on both feet. She explained she had not been teaching Zumba since the injury and has an assistant who runs the classes. Dr. Lindberg reviewed surveillance video that shows Claimant participating in a Zumba exhibition at a sporting event. He observed, "She did not fully participate and did take a seat during the middle portion of the performance. Also shows her in the gym, but not doing much, presumably at a Zumba class." On examination, she demonstrated an antalgic gait favoring the right knee. There was bilateral patellofemoral crepitus. McMurray test was "equivocal," with pain but no audible click. She was most tender over the medial femoral condyle at the origin of the medial collateral ligament. Dr. Lindberg diagnosed "a mild medial collateral ligament sprain that appears to be recalcitrant to treatment." He opined there is no indication for surgery. He reviewed the MRI and saw degeneration of the posterior horn of the medial meniscus but no tear. He saw a "questionably related" cyst posterior to the medial meniscus, but doubted it was causing any symptoms. He concluded, "Her major problem appears to be a slow healing medial collateral ligament sprain." Dr. Lindberg recommended additional conservative care directed to the MCL, including physical therapy, ultrasound, phonophoresis, and anti-inflammatories. If those modalities did not work, he recommended a cortisone injection specifically directed to the MCL. He opined, "[the] most important thing is time and anti-inflammatories."

16. Claimant returned to Dr. Richardson on July 29, 2019 and told him Dr. Lindberg had recommended against surgery. Her symptoms were unchanged and Dr. Richardson again noted a positive McMurray test. He referred Claimant to Dr. Michael Hewitt for a second opinion regarding surgery.

17. Dr. Hewitt evaluated Claimant on August 12, 2019. His physical examination showed medial joint line tenderness and a positive McMurray test. He reviewed the MRI and saw a nondisplaced tear of the posterior horn of the medial meniscus and a parameniscal cyst. He also noted grade 3 chondromalacia of the central patella with subchondral edema. He believed her "clinical examination and MRI [are] consistent with a meniscal tear." Dr. Hewitt concluded,

The patient has undergone extensive conservative management over the past six months without improvement. Given her young age, excellent health and focal clinical examination, as well as MRI findings, she is medically appropriate for a knee arthroscopy and partial medial meniscectomy. I would highly recommend approval of the surgery to allow the patient to return to full activities including work without restriction.

18. On August 19, 2019, Dr. Failinger requested authorization for viscosupplementation injections as an alternative to surgery. Insurer denied the injections based on a report from Dr. Lindberg.

19. On September 27, 2019, Dr. Hewitt issued a supplemental report after reviewing Dr. Lindberg's IME. He disagreed with Dr. Lindberg's opinions, and stated,

I have examined the patient; she has a focal clinical examination to the medial joint line as well as a positive McMurray's test. She has undergone extensive conservative management. After 8 months of appropriate conservative management, I do not feel suggesting further conservative management is medically reasonable. Dr. Lindberg understands an MRI does not have 100% accuracy in diagnosing a medial meniscal tear. The patient does have an associated cyst often associated with a tear.

With persistent medial-sided complaints, an acute work-related injury and nonresponse to appropriate conservative management, I would reiterate [the] knee arthroscopy proposed by Dr. Failinger [is] both medically reasonable and appropriate.

20. Respondents had another radiologist, Dr. Elizabeth Carpenter, read Claimant's MRI in December 2019. She opined, "Degenerative changes [are] present within the medial meniscus posterior horn and root however no discrete tear is identified, the meniscus is not extruded, and no parameniscal cyst is present. A subacute mild proximal MCL sprain is present and patellofemoral chondromalacia is nonacute in etiology."

21. Dr. Lindberg testified at hearing consistent with his report. He disagreed with Dr. Hewitt's opinions Claimant has a meniscal tear or a parameniscal cyst. He believes she has a popliteal cyst, unrelated to the meniscus. He reiterated his opinion Claimant's problem is a slow-healing MCL strain, and the proposed surgery will not help.

22. Claimant's testimony she minimally participated in Zumba since the accident is credible. There is no persuasive evidence Zumba-related activities aggravated or contributed to any of Claimant's ongoing symptoms.

23. Dr. Hewitt's analysis and opinions are credible and persuasive.

24. Claimant proved the surgery proposed by Dr. Failinger is reasonably necessary to cure and relieve the effects of her work injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure or relieve the effects of an industrial injury. Section 8-42-101. Even if the respondents admit liability, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). The claimant must prove that an injury directly and proximately caused the condition for which he seeks treatment, and that the treatment is reasonably necessary. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A claimant is entitled to injury-related treatment that has a "reasonable prospect of success." *Reynolds v. Industrial*

Claim Appeals Office, 794 P.2d 1080, 1082 (Colo. App. 1990); *Dziewior v. Michigan Genral Corp.*, 672 P.2d 1026 (Colo. App. 1983).

The mere existence of a preexisting condition does not disqualify a claim for compensation or medical benefits where an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce the need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. Rather, a purely symptomatic aggravation is sufficient for an award of medical benefits if it caused the claimant to need treatment she would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019).

As found, Claimant proved the surgery proposed by Dr. Failinger is reasonably necessary to cure and relieve the effects of her work injury. Reasonable physicians can disagree about whether the MRI shows a meniscal tear. The initial interpreting radiologist and Dr. Failinger saw a possible tear. Dr. Hewitt was confident he saw a tear. Dr. Lindberg and Dr. Carpenter saw no tear. The ALJ concludes the existence or nonexistence of a meniscal tear cannot be definitively determined from the MRI. Nevertheless, the MRI establishes a reasonable possibility Claimant has a tear. Likewise, clinical examinations, although somewhat variable among providers, show a reasonable likelihood of a tear. Claimant has complained of medial knee pain with catching and clicking since the outset of her claim. Multiple providers repeatedly documented a positive McMurray test on the medial side, including Dr. Richardson, the physical therapist, and Dr. Hewitt. Claimant undoubtedly still has pain from the MCL injury, and probably some pain from the underlying chondromalacia. But that does not rule out the probability of symptoms related to the meniscus. The notion that Claimant will respond favorably to more “time” is not persuasive. She is already more than a year out from the work accident with no significant improvement despite conservative treatment and relative rest. The patellar chondromalacia was present before the work accident, but it was asymptomatic and non-disabling. To the extent some of Claimant’s symptoms are attributable to the chondromalacia, it was probably aggravated by the work accident. After reviewing all the evidence, the ALJ is inclined to credit the opinions and recommendations of the authorized providers over the IMEs and agree that the proposed surgery has a reasonable probability of improving Claimant’s condition.

ORDER

It is therefore ordered that:

1. Insurer shall cover the arthroscopic surgery recommended by Dr. Failinger.
2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: March 4, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-797-901-004**

ISSUE

- I. Whether Respondents must pay bills for a limited number of prescriptions filled by the IWP. Specifically, the issue is whether Respondents owe the bills for the following prescriptions:

| | | | |
|---------|--|------------------|----------|
| 8/13/19 | | Gabapentin 300MG | \$243.53 |
| 8/13/19 | | Tramadol | \$153.92 |
| 8/13/19 | | Testosterone | \$48.38 |
| 8/13/19 | | BD Needles | \$4.16 |
| 8/13/19 | | BD Syringe | \$4.21 |
| 8/13/19 | | Ibuprofen | \$76.23 |
| 8/13/19 | | Fluoxetine | \$80.39 |
| 8/13/19 | | Desvenlafaxine | \$348.04 |
| | | TOTAL | \$958.86 |

Stated more generally, can Insurer refuse payment to a previously authorized pharmacy (IWP) for these prescription medicines when Claimant elects - for whatever reason - not to use a different pharmacy as instructed by Insurer in an effort to control costs?

STIPULATIONS

The parties agree that the facts in this case are essentially undisputed, and that the ALJ consider only the undisputed facts when issuing an Order. The facts, as agreed by the parties stipulation approved February 13, 2020, are recited here:

- The prescriptions at issue were received by the claimant from the authorized treating provider, Dr. Timothy Hall. Dr. Hall has been claimant's authorized treating physician since at least 2010.
- The prescriptions were filled by the IWP, a pharmacy licensed in Colorado, and the corresponding bills are in line with the Colorado fee schedule. IWP has filled the prescriptions since November of 2012.
- Claimant is currently receiving his medications from IWP at his home through the mail.
- Respondents had previously denied the payment of the pharmacy bills which resulted in the IWP seeking penalties and the payment of the bills in dispute. A stipulation was ultimately entered by the parties and

approved by an ALJ which resolved those issues. However, there was no agreement in the stipulation as to how this issue would be handled in the future.

- To pursue this issue moving forward, respondents disputed the limited bills on August 13, 2019 but have paid all the other bills. Specifically, Respondents have voluntarily paid the pharmacy bills before and after the bills from August 13, 2019 which are in dispute. The reason respondents did this was to have this issue decided by an ALJ without discontinuance of the medications to the claimant or IWP not receiving further significant payments in the interim while the issue was litigated.
- The nature of this dispute involves a CorVel pharmacy payment card. Specifically, Respondents sent a CorVel pharmacy payment card to the claimant in the past on numerous occasions between 2013 and 2018. The claimant was specifically instructed in writing on numerous occasions during this time frame to use the CorVel pharmacy payment card when filling the prescriptions provided by Dr. Hall.
- The claimant was also instructed in writing on numerous occasions (including in March of 2018) that respondents would not pay for the ongoing prescriptions provided by Dr. Hall and filled at IWP if the CorVel pharmacy payment card was not used.
- The CorVel pharmacy payment card can be used at most pharmacies (including national chains such as Walgreens, CVS, Safeway, Sam's Club and many smaller pharmacies) and/or the claimant can have the prescriptions delivered by mail to his home for convenience. Use of the CorVel pharmacy card does not change the prescriptions or medications provided by Dr. Hall (or the choice of delivery by mail). Specifically, the claimant would obtain the precise same prescriptions and medications if the CorVel pharmacy payment card was used or not.
- The CorVel pharmacy payment card provides a further discount on the payment of the medications. As a result, the CorVel pharmacy payment card is intended by respondents as a cost savings payment measure for the prescriptions.
- The claimant has failed to use the CorVel pharmacy payment card and IWP is still filling the prescriptions. As a result, this dispute has been presented to the ALJ for consideration.

PRELIMINARY EVIDENTIARY RULINGS

I. Respondents object to IWP Exhibit 2, which is ALJ Martin Stuber's Findings of Fact, Conclusions of Law, and Order issued on April 30, 2013 under WC 4-797-901-08. This Order addressed, among other issues, Claimant's claim for prescription medications as prescribed by his ATP. Said prescriptions were then ordered to be paid for by Respondents herein. This Order does not address which pharmacy may-or shall-provide Claimant's medications. Exhibit 2 in this case merely provides contextual background for how the parties at issue today arrived at this point of dispute. *For that limited purpose, the ALJ will take administrative notice of the contents of Exhibit 2, pursuant to C.R.E. 201(b)(2).* The ALJ finds that Exhibit 2 is a matter contained within the OAC's own files and records, and is "capable of accurate and ready determination by resort to sources whose accuracy cannot reasonably be questioned."

II. Respondents object to IWP Exhibit 3, which is a letter dated December 23, 2011, from the Director of the Division of Workers Compensation to attorney David Skaggs. It outlines the position of the Division that "injured workers *have the choice* of having their prescriptions filled by any licensed pharmacy, or by the worker's treating physician if so offered." (emphasis added).

The ALJ makes note of the following:

1. The ALJ assumes that Exhibit 3 is a complete and accurate copy of this letter, unedited, and presented in good faith. It is unknown how this Exhibit was obtained.

2. This position stated by the Division appears to address the same issue before this ALJ; however, there may well be far more to the story of this 2011 letter.

3. The Director of the Division in 2011, Paul Tauriello, remains in that capacity to date. *The ALJ will administratively notice that fact.*

4. Nonetheless, it is unclear from the available record if that remains the official position of the Division. Assuming, arguendo, that it remains the position of the Division, the ALJ remains free to interpret all applicable Statutes, Rules, and Regulations differently.

5. This letter involved different parties, and was issued in response to a specific inquiry on behalf of one of those parties. The ALJ cannot identify where, or if, this letter has ever been *published*, to more definitively and permanently outline the Division's current position. There is no mechanism for *updating* the contents of a hard copy letter that has been posted.

There are certain instances where the ALJ can take administrative notice of certain records of the Division. For example, in *Habteghrgis v. Denver Marriott Hotel*,

WC no. 4-528-385 (ICAO 2006), the ALJ was tasked with determining if the statute of limitations had been met. The ALJ took administrative notice of the records of the Division insofar as they showed that claimant therein had *attempted*, pro se, to file a (defective) notice claiming compensation. However, in *Habteghrgis*, as in other similar cases, the ALJ noticed portions the Division's *official file*, and it involved the *same parties in interest*. Neither fit the facts here. For that reason, the ALJ will not take *administrative notice* of Exhibit 3.

IWP argues that Exhibit 3 meets the criteria for the hearsay exception as a Public Record under C.R.E. 803(8), as a ".....statement...of a public office or agency, setting forth (A) the activities of the office or agency." Reading the Rule 803(8) in its entirety, the ALJ does not take that broad of an interpretation. A single letter, written in response to a discrete inquiry, on an unrelated matter, does not rise to the level of "activities" of the Division. For that reason, the ALJ will not consider IWP Exhibit 3, and will base his decision independent of that as apparently expressed by the Director in 2011.

CONCLUSIONS OF LAW

Based upon the foregoing Stipulated Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina*, 860 P. 2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P. 2d 792 (1979); *People v. M.A.*, 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.*, W.C. No. 4-483-341 [Industrial Claim Appeals Office (ICAO), March 20, 2002]. Also see *Ortiz v. Principi*, 274 F.3d 1361 (D.C. Cir. 2001). The purpose of statutory construction is to effect the legislative intent. Because the best indicator of legislative intent is the language of the statute, words and phrases in a statute should be given their plain and ordinary meanings. *Weld County School District RE-12 v. Beemer*, 955 P.2d 550 (Colo. 1998). In this instance, the burden, by a preponderance of the evidence, is upon Respondents to demonstrate that they do not owe these bills.

B. The principles governing the interpretation of administrative regulations are the same as those concerning statutes. *Gerrity Oil and Gas Corp. v. Magness*, 923 P.2d 261 (Colo. App. 1995), *aff'd. in part, rev'd. in part on other grounds*, 946 P.2d 913 (Colo. 1997). In construing a statute or Rule the Court must refrain from reading nonexistent provisions into it. *Heinicke v. Industrial Claim Appeals Office* 197 P.3d 220 (Colo. App. 2008)

C. The Workers' Compensation Act and the Workers' Compensation Rules of Procedure are silent on whether a claimant can be *required* to use a cost containment measure, however, Rule 18-6(C)(2)(c) states the following:

All prescriptions shall be filled with bio-equivalent generic drugs unless the physician indicates "Dispense As Written" (DAW) on the prescription. In addition to the Rule 16 requirements, providers prescribing a brand name with a DAW indication shall provide a written medical justification explaining the reasonableness and necessity of the brand name over the generic equivalent.

This Rule calls for cheaper generic drugs to be provided in place of brand name drugs unless there is a medical justification for the more expensive brand name. The apparent intent of this Rule is to ensure prescription medications are provided to injured workers in a way that provides the intended medical benefit but is also provides reasonable cost containment.

D. While Respondents argue – and not without justification –that the same logic *should* apply to the facts of this case, they are unable to cite a Statute or Rule in support. The Administrative Courts, not being courts of equity, are simply not in a position to impose a new requirement upon the parties where one does not otherwise exist.

E. One might well argue that Claimant is simply being unreasonable. By simply using the CorVel card, he can obtain the exact benefit, including the benefit of free delivery, all the while helping contain costs - which might eventually trickle down to assist other workers. Certainly, no good reason has been supplied for Claimant's apparent intransigence. In fact, intransigence for its own sake might be his entire motivation. However, Respondents are not in a position to change that, any more than they can seek the substitution of an ATP for simply ordering treatment they don't agree with. They must pursue their remedies as authorized by law.

F. Such is the case here. The ALJ cannot conclude that it is not reasonably medically necessary to continue to allow Claimant to use the pharmacy of his choice. Respondents may seek a change via the statutory or rulemaking process, which might indeed serve valid public policy purposes. But as of the date of this Order, the ALJ cannot identify a legal mechanism to provide the relief as sought by Respondents, however reasonable their arguments might be.

ORDER

It is therefore Ordered that:

1. Respondents shall pay IWP for the prescriptions at issue, written 8/13/19.
2. Respondents shall pay interest to IWP at the rate of 8% per annum on all amounts of compensation not paid when due.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: March 4, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that the left lower extremity hardware removal surgery, as recommended by Dr. Ronald Hugate, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 8, 2018 work injury.
- Whether the claimant has demonstrated, by a preponderance of the evidence, that inpatient treatment she received at Mind Springs Health/West Springs Hospital in July 2019 constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 8, 2018 work injury.
- Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment the claimant received from Mind Springs Health and West Springs Hospital is authorized.

FINDINGS OF FACT

1. On September 8, 2018, the claimant was working for the employer as a semi-truck driver in El Paso, Texas. On that date, the claimant was using the sleeper portion of the semi-truck cab. The claimant suffered an injury to her left leg when she fell while climbing down from the top bunk of the sleeper area.
2. The claimant immediately obtained medical treatment at The Hospitals of Providence Transmountain Campus. At that time, x-rays were taken of the claimant's left femur and left knee. The x-rays showed a comminuted intraarticular fracture of the left tibial epiphysis that extended through both tibial plates. In addition, there was posterior displacement of the lateral tibial plateau.
3. On September 10, 2018, Dr. Jason Vourazeris performed an open reduction internal fixation (ORIF) of the bicondylar tibial plateau fracture.
4. Following her discharge from the hospital in El Paso, Texas, the claimant returned to her home in Colorado. At that time, Dr. Theodore Sofish became the claimant's authorized treating physician (ATP). The claimant was first seen by Dr. Sofish on October 4, 2018. On that date, Dr. Sofish referred the claimant for an orthopedic consultation.
5. On October 8, 2018, the claimant was seen by orthopedic surgeon Dr. Kennan Vance. At that time, Dr. Vance recommended physical therapy and a t-scope brace.

6. On October 18, 2018, the claimant returned to Dr. Sofish and reported pain in the surgical scar area, left foot pain, and left lower leg spasm. Thereafter, the claimant reported left foot hypersensitivity and discoloration. On December 5, 2018, Dr. Sofish observed “some reddish/purplish molting” on the claimant’s left foot. Similarly, on December 26, 2018 Dr. Sofish recorded the appearance of color change and coolness.

7. On November 1, 2018, the claimant returned to Dr. Vance and reported pain over the proximal tibia. Dr. Vance noted that if the claimant’s pain continued he would consider removing the surgical hardware. However, he would not do so until at least one year from surgery.

8. On November 5, 2018, the claimant was seen by pain specialist Dr. William James. On that date, Dr. James noted his concern that the claimant had developed complex regional pain syndrome (CRPS). Dr. James’ treatment recommendations included lumbar sympathetic blocks, spinal stimulation, and/or ketamine treatments. Thereafter, the claimant continued to treat with Dr. James. On both November 26, 2018; and January 22, 2019; Dr. James noted color and temperature changes to the claimant’s left foot.

9. On December 13, 2018, the claimant was seen by Dr. Vance. At that time, the claimant continued to complain of pain in her left knee. Dr. Vance recommended that the claimant pursue pool therapy. In the medical record of that date, Dr. Vance opined that the claimant did not have CRPS.

10. On January 8, 2019, the claimant attended an IME with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak reviewed the claimant’s medical records, obtained a history from the claimant, and completed a physical examination. In his report, Dr. Lesnak summarized medical records that addressed treatment for anxiety and depression as early as 2014, and treatment for posttraumatic stress disorder (PTSD) in 2017.¹ In light of these prior records, Dr. Lesnak opined that prior to her September 8, 2018 work injury, the claimant had “moderate to severe chronic major depression, a chronic anxiety disorder, and chronic symptoms related to [PTSD].” Dr. Lesnak further opined that the claimant’s preexisting psychological diagnoses are the cause of her current symptoms.

11. With regard to the diagnosis of CRPS, Dr. Lesnak opined that the claimant has not met the criteria for a diagnosis of CRPS. In support of this opinion, Dr. Lesnak noted that the claimant might have left superficial peroneal neuritis or neuropathy, which would exhibit similar symptoms to CRPS. Dr. Lesnak further noted that the Colorado Medical Treatment Guidelines (MTG) require a number of criteria including subjective complaints, at least two reproducible objective findings on exam, and diagnostic testing. It is the opinion of Dr. Lesnak that the claimant does not meet

¹ Neither party provided those earlier medical records as evidence at hearing. As a result, the ALJ has only Dr. Lesnak’s summary of those records for her review.

the MTG criteria. In that same report, Dr. Lesnak anticipated that the claimant would be at maximum medical improvement (MMI) by March 2019 (six months after surgery).

12. On January 24, 2019, the claimant returned to Dr. Vance. On that date, the claimant wore a “cast shoe” and reported to Dr. Vance that the shoe was for her CRPS symptoms. The claimant raised the issue of removing the hardware in her left knee. Dr. Vance advised that he would not consider hardware removal until at least one year after the initial surgery. In addition, he recommended against any such surgery if the claimant does have CRPS.

13. Subsequently, Dr. Sofish referred the claimant clinical psychologist, Dr. Dale Bowen for counseling. On February 11, 2019, the claimant was seen by Bowen. On that date, Dr. Bowen noted that the claimant has a history of depressive disorder. At that time, Dr. Bowen diagnosed the claimant with adjustment disorder with mixed anxiety and depressed mood. He noted that the claimant was experiencing anxiety and depression due to the “adjustment to her injury and change in lifestyle”. Dr. Bowen recommended 10 to 12 additional therapy sessions. Treatment with Dr. Bowen was approved and the claimant continued to treat with him until September 19, 2019.

14. On February 12, 2019, Dr. Tashof Bernton performed testing for CRPS. Dr. Bernton opined that the results of the thermogram testing met diagnostic criteria for CRPS. In addition, Dr. Bernton determined that the autonomic testing was positive for a CRPS diagnosis.

15. On February 15, 2019, the claimant attended a psychiatric independent medical examination (IME) with psychiatrist Dr. Stephen Moe. In connection with the psychiatric IME, Dr. Moe reviewed the claimant’s medical records, obtained a history from the claimant, and conducted a psychiatric interview of the claimant. Dr. Moe was asked to opine regarding the relatedness of the claimant’s psychological diagnosis, if any, to her pain complaints and CRPS symptoms. In addressing this issue, Dr. Moe opined that that claimant meets the criteria for Somatic Symptom Disorder (SSD). In support of his opinion, Dr. Moe noted that the claimant appears to be “rather comfortable with the injured role”; has “unrealistic expectations about her condition”; and is “extremely resistant to efforts to increase her functionality”.

16. In addition, Dr. Moe also opined that the claimant was not a candidate for a spinal cord stimulator. Although he found no psychiatric contraindications, Dr. Moe expressed concern related to the claimant’s moderate to severe depression and anxiety symptoms. Specifically, Dr. Moe noted that the claimant’s psychological symptoms would reduce the likelihood that the SCS trial would be successful.

17. On February 19, 2019, the claimant was seen by neurosurgeon Dr. Robert Repogle. At that time, Dr. Repogle opined that the claimant’s left leg symptoms were not attributable to a small, herniated disc at the L5-S1 level. Dr. Repogle recommended electromyography (EMG) testing to determine whether the claimant’s symptoms were related to peripheral neuropathy or lumbosacral radiculopathy.

18. On February 26, 2019, the claimant was seen by Dr. Mitchell Burnbaum for EMG testing. Based upon this testing, Dr. Burnbaum noted that that claimant had significant denervation in the anterior tibialis, but not in the posterior tibialis. He opined that the claimant had a peroneal nerve injury. Dr. Burnbaum noted that it would be reasonable to explore the peroneal nerve in the claimant's left knee.

19. On April 22, 2019, the claimant was seen by Dr. Jeffrey Pitcher. On exam, Dr. Pitcher noted decreased sensation in the claimant's left lower extremity. In addition, he noted some color change on the dorsum of the claimant's left foot. Dr. Pitcher opined that removing the hardware in the claimant's left leg could address the issue of potential nerve entrapment or compression. However, Dr. Pitcher also noted that surgery would increase the likelihood of nerve damage.

20. On May 28, 2019, Dr. Lesnak was asked to review additional medical records. In his report of that date, Dr. Lesnak reiterated his opinion that the claimant does not have CRPS. Therefore, it is his opinion that any treatment of CRPS would not be reasonable or necessary treatment for the claimant. Dr. Lesnak further reiterated that test results for peripheral neuropathies and CRPS can be similar.

21. The claimant testified that on July 2, 2019, she became suicidal. As a result, she sought guidance from a local crisis line. It was staff from that crisis line that referred the claimant to Mind Springs Health for treatment.

22. On July 2, 2019, the claimant was admitted to West Springs Hospital² for inpatient psychiatric treatment. The claimant was discharged from the hospital on July 9, 2019. However, the claimant was readmitted to West Springs Hospital on July 14, 2019 for additional inpatient treatment. The claimant was discharged on July 23, 2019.

23. The claimant testified that she improved during her first stay at West Springs Hospital. However, her suicidal ideation returned and she sought the readmission July 14, 2019.

24. The claimant has requested authorization for the treatment she has received from Minds Springs Health/West Springs Hospital. The claimant asserts that this treatment was obtained on an emergent basis.

25. On September 4, 2019, Dr. Sofish referred the claimant for a second opinion regarding the removal of the hardware in the claimant's left knee.

26. On September 19, 2019, the claimant was seen by Dr. Bowen. On that date, they discussed the claimant's psychiatric hospitalizations at Mind Springs Health/West Springs Hospital. In the medical record of that date, Dr. Bowen noted that he and the claimant had agreed that she would continue to receive mental health treatment through Mind Springs. Dr. Bowen also noted that the claimant could return to his care on an as needed basis.

² West Springs Hospital is the psychotic hospital that is affiliated with Mind Springs Health.

27. On September 26, 2019, the claimant was seen by Dr. Ronald Hugate for a second opinion. Dr. Hugate noted that the EMG testing showed issues related to the peroneal nerve. On exam, Dr. Hugate observed decreased sensation in the claimant's left peroneal nerve distribution. Dr. Hugate opined that the claimant is too young to undergo a total knee replacement. At that time, he recommended and administered an injection to the claimant's left knee. In addition, Dr. Hugate recommended the claimant undergo surgery to include: 1) hardware removal; 2) neuroplasty and neurolysis of the peroneal nerve; and 3) knee arthroscopy.

28. September 30, 2019, the claimant returned to Dr. Sofish. On that date, Dr. Sofish noted that he had not observed color or temperature changes in the claimant's left foot "since much earlier in the case". Dr. Sofish opined that if the claimant obtained psychiatric clearance for surgery, he would not be opposed to the hardware removal.

29. On October 1, 2019, Dr. Bowen formalized a referral to Mind Springs Health for psychiatric treatment.

30. On October 4, 2019, Dr. Lesnak issued an addendum to his prior reports after review of additional medical records. In that report, Dr. Lesnak opined that the claimant does not need surgical intervention. In support of this opinion, Dr. Lesnak noted that Dr. Hugate stated that the claimant's symptoms were "global". Dr. Lesnak also pointed to Dr. Moe's opinion that the claimant was not a good candidate for any interventional treatment. Again, Dr. Lesnak stated his opinion that the claimant has not met the diagnostic criteria for CRPS. Dr. Lesnak also opined that the claimant had reached MMI. Dr. Lesnak's testimony by deposition was consistent with his reports.

31. Dr. Lesnak testified that based upon his exam of the claimant, it is his opinion that the claimant may have left superficial peroneal neuritis or neuropathy. In his testimony, Dr. Lesnak agreed that the thermogram and QSART testing (as performed by Dr. Bernton) showed abnormalities. However, these same abnormalities could be indicative of a peripheral nerve problem. Dr. Lesnak also testified that the recommended surgical treatment is neither reasonable nor necessary. Dr. Lesnak opined that surgery would not help the claimant's peroneal neuritis or neuropathy, particularly given the time that has elapsed since the claimant's injury. Furthermore, it is the opinion of Dr. Lesnak that the claimant is not a good candidate for any surgery given her psychological diagnoses.

32. On October 8, 2019, the respondents notified the claimant that authorization was denied for the recommended hardware removal and peroneal nerve release surgery.

33. On October 15, 2019, the respondents notified the claimant that authorization was denied for the treatment the claimant received at Mind Springs Health.

34. On November 20, 2019, the claimant attended a second psychiatric IME with Dr. Moe. As with the February 2019 IME, Dr. Moe reviewed the claimant's medical records, obtained a history from the claimant, and conducted a psychiatric interview of the claimant. Dr. Moe was asked to opine as to whether the claimant had reached psychiatric MMI. Dr. Moe opined that the claimant would not reach psychiatric MMI until she is at MMI for her physical injuries. Dr. Moe opined that the claimant's hospitalization and treatment with Mind Springs Health/West Springs Hospital was triggered by "new-onset suicidal ideation driven by overwhelming panic" which "implicates treatment that was needed on an emergent basis." Dr. Moe specifically opined that the claimant's anxiety and depression symptoms were caused by the September 8, 2018 work injury.

35. The claimant testified that she wants to have the hardware removal surgery. The claimant noted that her CRPS symptoms are different from the pain and discomfort in her left knee. The claimant testified that she continues to have stabbing pain and numbness in her left foot. In addition, the claimant experiences discoloration in her left foot and it becomes cold. The claimant also testified that she has pain in her left knee that is a sharp constant pressure.

36. The ALJ credits the claimant's testimony and the opinions of Drs. Hugate, Sofish, and Pitcher over the conflicting opinions of Dr. Lesnak and finds that the claimant has successfully demonstrated that it is more likely than not that the hardware removal, neuroplasty, and arthroscopic surgery recommended by Dr. Hugate is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted injury.

37. The ALJ credits the medical records, the claimant's testimony and the opinions of Drs. Moe and Bowen and finds that the claimant has demonstrated that it is more likely than not that the treatment she received at Mind Springs Health/West Springs Hospital in July 2019 was emergent. As noted by Dr. Lesnak in his initial IME report, the claimant has a long history of anxiety and depression. The ALJ concludes that the claimant's September 8, 2018 work injury, related surgery, and ongoing difficulty with physical symptoms aggravated and combined with the claimant's preexisting anxiety and depression. This resulted in the suicidal ideation the claimant experienced on July 2, 2019. Seeking immediate treatment when contemplating suicide is emergent. Thereafter, when the claimant begin to have those same suicidal thoughts on July 14, 2019, it was reasonable for her to seek that same emergent care from Mind Springs Health/West Springs Hospital.

38. With regard to a chain of authorization, the ALJ notes that the claimant's ATP, Dr. Sofish referred the claimant to Dr. Bowen. Later, Dr. Bowen referred the claimant to Mind Springs. The ALJ finds that the initial treatment with Mind Springs Health/West Springs Hospital was emergent. Following Dr. Bowen's referral, Mind Springs Health/West Springs Hospital was within the normal chain of referrals, and therefore authorized.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2018).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. Section 8-43-404(5)(a), C.R.S. grants employers the initial authority to select the claimant’s authorized treating physician (ATP). However, in a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, W.C. No. 4-586-030 (ICAP, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko*, W.C. No. 3-969-031 (ICAP, June 29, 2005). Once the emergency is over the employer retains the right to designate the first “non-emergency” physician. *Bunch v. Indus. Claim Appeals Office of State of Colorado*, 148 P.3d 381, 384 (Colo. App. 2006); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has demonstrated by a preponderance of the evidence that the hardware removal, neuroplasty, and arthroscopic surgery recommended by Dr. Hugate is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the September 8, 2018 injury. As found, the medical records, the claimant's testimony, and the opinions of Drs. Hugate, Sofish, and Pitcher are credible and persuasive.

7. As found, the claimant has demonstrated by a preponderance of the evidence that treatment at Mind Springs Health/West Springs Hospital was reasonable, necessary, and emergent treatment. As found, the claimant's September 8, 2018 work injury, related surgery, and ongoing difficulty with physical symptoms aggravated and combined with the claimant's preexisting anxiety and depression. This resulted in the suicidal ideation the claimant experienced on July 2, 2019, necessitating treatment. As found, the claimant's testimony and the opinions of Drs. Moe and Bowen are credible and persuasive.

8. As found, the claimant has demonstrated by a preponderance of the evidence that Mind Springs Health/West Springs Hospital is authorized to treat the claimant in this claim. As found, Mind Springs Health/West Springs Hospital is authorized by both written referral from Dr. Bowen and by the claimant's emergent need for inpatient treatment on July 2 and 14, 2019.

ORDER

It is therefore ordered:

1. The respondents shall pay for the hardware removal, neuroplasty, and arthroscopic surgery as recommended by Dr. Hugate.
2. The respondents shall pay for the treatment the claimant received from Mind Springs Health/West Springs Hospital beginning in July 2019.
3. Mind Springs Health/West Springs Hospital is an authorized provider in this claim.

Dated this 5th day of March 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries in the form of an umbilical hernia and hand and foot pain during the course and scope of employment with Employer on January 17, 2018.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits to cure or relieve the effects of his industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a window tint and clear bra technician. He performed his job duties while standing and occasionally kneeling.

2. Claimant explained that he installed clear bras on the hoods of vehicles toward the front grill, but they occasionally extended toward the front bumper of the vehicles. The purpose of clear bras is to protect vehicles from the elements encountered during normal operation. Claimant was responsible for thoroughly cleaning the area of the vehicle upon which the bra would be applied, moving the clear bra material from its storage location to the vehicle and affixing the clear bra to the front the vehicle's hood. In applying the clear bra film, Claimant was required to stretch it across the hood and bumper of the vehicle.

3. In performing his job duties as a window tint technician, Claimant thoroughly cleaned the desired window of a vehicle. He then affixed and pressed the tinting film onto the window.

4. Claimant testified that, at some time prior to reporting an industrial injury, he experienced stomach pain. He assumed kidney stones caused the pain because he had previously suffered from the condition. Claimant continued performing his regular job duties and attempted to mitigate the pain.

5. On January 18, 2018 Claimant visited primary care provider Clinica Colorado for a follow-up appointment. He also sought to refill medications for hypertension, hyperthyroidism, obesity and stress. The medical record reflects that Claimant had "no complaints." However, treating provider Vanessa Vergarda, FNP, BC documented the existence of an umbilical hernia.

6. Claimant testified that he reported a pulled stomach muscle to his supervisor Dan W[Redacted]

on January 19, 2018. He explained that he was unaware of a specific work activity that caused the pain or a specific date on which the symptoms began.

7. On January 19, 2018 Claimant completed a Workers' Compensation Incident Report. He listed "stomach" as the injured body part. Claimant did not note any injuries to his hands or feet.

8. Claimant explained that immediately following the creation of the Incident Report, Employer provided him with a list of physicians. Employer directed him to choose a provider to treat his injury. However, Claimant chose not to select a physician from the list.

9. Claimant continued to work for Employer until he voluntarily resigned his position in November 2018. Following his resignation, Claimant texted supervisor Dan W[Redacted] and sought treatment for his hernia.

10. On March 31, 2019 Claimant filed a Worker's Claim for Compensation. He listed hernia and hand pain as his injuries. Claimant specified that his injuries occurred on January 17, 2018. He attributed his symptoms to stretching clear bra film onto vehicles under cold conditions.

11. On August 21, 2019 Claimant visited Concentra Medical Centers for an examination. Claimant commented that he had "noticed a small bump" on his abdomen a few months prior to reporting his injury. He reiterated that he did not recall a specific date on which the bump appeared. Claimant also mentioned pain in his hands and feet. He explained that he spent the majority of workdays on his feet and the bay he used was cold during the winter. Claimant also remarked that the pain in his hands and feet had worsened since he resigned his position with Employer. Treating provider Chelsea Rasis, PA-C concluded that Claimant had reached Maximum Medical Improvement (MMI) and released him without impairment to full duty employment.

12. On November 20, 2019 Ericson Tentori, D.O. performed a records review of Claimant's claim. Dr. Tentori explained that hernias develop when there is a loss of abdominal wall integrity. A hernia will develop when intra-abdominal pressure exceeds abdominal wall pressure. He noted that obesity is a risk factor for the development of hernias because the condition increases intra-abdominal pressure. Dr. Tentori commented that Claimant's umbilical hernia was an incidental finding at a January 18, 2018 visit with his personal care physician. He concluded that the hernia was more likely than not caused by Claimant's obesity because there was a lack of a specific injury or event at work. Dr. Tentori thus summarized that "it is my medically probable opinion that [Claimant's] umbilical hernia is not to be considered work-related."

13. In addressing Claimant's hand and foot symptoms, Dr. Tentori explained that the pain was likely caused by degenerative arthritis as a result of the aging process. Claimant also did not mention a specific mechanism of injury that caused his hand and foot symptoms. Dr. Tentori specified that Claimant's increasing hand and foot pain since leaving Employer in November 2018 supported his determination that the hand and foot pain was related to the aging process. He thus concluded that Claimant's bilateral hand and foot pain was not likely work related.

14. Dr. Tentori testified at the hearing in this matter. He maintained that Claimant's umbilical hernia as well as hand and foot symptoms were not caused by his work activities for Employer. He reiterated that the lack of a specific inciting event or mechanism of injury suggested it was unlikely Claimant suffered compensable injuries while working for Employer. Dr. Tentori attributed Claimant's hernia to obesity. He determined that the hand and foot symptoms were related to osteoarthritis as revealed on x-rays.

15. Claimant has failed to demonstrate that it is more probably true than not that he suffered compensable injuries in the form of an umbilical hernia and hand and foot pain during the course and scope of employment with Employer on January 17, 2018. Initially, Claimant asserts that he developed an umbilical hernia as well as hand and foot pain while performing his job duties for Employer. He specifically contends that stretching clear bra film across the hoods of vehicles caused him to develop a hernia. Furthermore, Claimant contends that working under cold conditions in Employer's facility caused hand and foot pain. However, based on the medical records and persuasive opinion of Dr. Tentori, Claimant's symptoms were not likely caused by his job duties for Employer.

16. On January 18, 2018 Claimant's primary care provider documented the existence of an umbilical hernia. On the following day Claimant reported a pulled stomach muscle to his supervisor. He explained that he was unaware of a specific work activity that caused his pain or a date on which the symptoms began. Claimant refused to select a medical provider and continued to work for Employer until he voluntarily resigned his position in November 2018. Following his resignation, Claimant contacted Employer and sought treatment for his hernia. At an August 21, 2019 visit to Concentra the treating provider concluded that Claimant had reached MMI, suffered no impairment and could return to full duty work.

17. Dr. Tentori persuasively explained that Claimant's umbilical hernia as well as hand and foot symptoms were not caused by his work activities for Employer. He remarked that the lack of a specific inciting event or mechanism of injury suggested it was unlikely Claimant suffered compensable injuries while working for Employer. Dr. Tentori attributed Claimant's hernia to obesity. He determined that the hand and foot symptoms were related to osteoarthritis as revealed on x-rays. Furthermore, Claimant's increasing hand and foot pain since leaving Employer in November 2018 supported Dr. Tentori's determination that the hand and foot pain was related to the aging process. He thus concluded that Claimant's umbilical hernia as well as bilateral hand and foot pain were not likely work related. Based on the medical records and persuasive opinion of Dr. Tentori, Claimant's Workers' Compensation claim is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A

preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job

function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered compensable injuries in the form of an umbilical hernia and hand and foot pain during the course and scope of employment with Employer on January 17, 2018. Initially, Claimant asserts that he developed an umbilical hernia as well as hand and foot pain while performing his job duties for Employer. He specifically contends that stretching clear bra film across the hoods of vehicles caused him to develop a hernia. Furthermore, Claimant contends that working under cold conditions in Employer’s facility caused hand a foot pain. However, based on the medical records and persuasive opinion of Dr. Tentori, Claimant’s symptoms were not likely caused by his job duties for Employer.

8. As found, on January 18, 2018 Claimant’s primary care provider documented the existence of an umbilical hernia. On the following day Claimant reported a pulled stomach muscle to his supervisor. He explained that he was unaware of a specific work activity that caused his pain or a date on which the symptoms began. Claimant refused to select a medical provider and continued to work for Employer until he voluntarily resigned his position in November 2018. Following his resignation, Claimant contacted Employer and sought treatment for his hernia. At an August 21, 2019 visit to Concentra the treating provider concluded that Claimant had reached MMI, suffered no impairment and could return to full duty work.

9. As found, Dr. Tentori persuasively explained that Claimant’s umbilical hernia as well as hand and foot symptoms were not caused by his work activities for Employer. He remarked that the lack of a specific inciting event or mechanism of injury suggested it was unlikely Claimant suffered compensable injuries while working for Employer. Dr. Tentori attributed Claimant’s hernia to obesity. He determined that the hand and foot symptoms were related to osteoarthritis as revealed on x-rays. Furthermore, Claimant’s increasing hand and foot pain since leaving Employer in November 2018 supported Dr. Tentori’s determination that the hand and foot pain was related to the aging process. He thus concluded that Claimant’s umbilical hernia as well as bilateral hand and foot pain were not likely work related. Based on the medical records and persuasive opinion of Dr. Tentori, Claimant’s Workers’ Compensation claim is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s Workers’ Compensation claim is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street,

4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: March 5, 2020.

ISSUES

➤ Whether respondent has established by a preponderance of the evidence that claimant has returned to work and is therefore no longer entitled to temporary total disability (“TTD”) benefits?

STATEMENT OF FACTS

1. Claimant sustained a compensable injury in the course and scope of his employment with employer on August 22, 2018. Claimant sought medical treatment following his work injury including surgery to repair his ankle and two surgeries on his right shoulder. Claimant has been under work restrictions since his work injury.

2. At the time of claimant’s injury, claimant had concurrent employment with Employer 2 as a driving instructor. Claimant’s wages from his employment with Employer 2 were taken into account in the admitted average weekly wage. Respondents admitted to temporary total disability (“TTD”) benefits beginning August 23, 2018 at an average weekly wage (“AWW”) rate of \$1,050.00 (increased from an initial amount of \$837.00 in the August 30, 2018 general admission of liability (“GAL”).

3. Claimant has not returned to work for employer.

4. Respondents obtained surveillance of claimant showing up at Employer 2 in a work shirt with Employer 2’s logo on it and performing duties consistent with being a driving instructor. These duties included getting into a vehicle with a teenage driver and giving instruction to the teenage driver while the driver operated the vehicle around the local area.

5. Respondents filed a Petition to Modify, Suspend or Terminate Benefits on October 2, 2019. Claimant filed an Objection to the Petition on October 8, 2019 and the hearing in this matter was set on Respondents’ Application for Hearing.

6. Mr. L[Redacted], owner of Employer 2, testified at hearing that he had hired claimant as a driving instructor in 2017 to work as a driving instructor. Mr. L[Redacted] testified claimant performed duties that included performing motorcycle training and some driving instruction. Mr. L[Redacted] testified that claimant would help around the office by getting tires changed on the cars.

7. Mr. L[Redacted] testified that claimant had been employed in a part-time capacity, and while still an employee, he had not paid claimant since claimant’s work injury. Mr. L[Redacted] testified that claimant was “still on the books” as an employee but had not been paid, including any cash payments. Mr. L[Redacted] testified that claimant provides motorcycle testing in order for claimant to keep his certification current. Mr. L[Redacted] testified that if claimant does not complete the required

number of exams to maintain his motorcycle certification, claimant would lose the certification.

8. Claimant testified at hearing that he works for Employer 2 on a volunteer capacity since his injury. Claimant testified he has administered motorcycle tests, but has not been compensated for his work. Claimant testified he administered the motorcycle tests in order to maintain his certification. Claimant testified he performs “behind the wheel” instruction for two to three hours at a time. Claimant testified he is not compensated for this work. Claimant testified that the actions he performed on the video obtained by respondents did not result in claimant receiving payment from Employer 2. Claimant testified he performed other tasks for Employer 2 including getting tires or oil changed on the cars and cleaning the cars owned by Employer 2. Claimant further denied any work agreement with Employer 2 for future payment.

9. Notably, Mr. L[Redacted] testified that non-employees are not allowed to drive the cars owned by Employer 2. Mr. L[Redacted] testified that only employees are added to the insurance policy for the company owned vehicles.

10. Respondents argue that claimant has returned to work for Employer 2, as he is capable of performing the tasks he performed prior to the work injury and is performing those same tasks, even if he is not accepting payment for the work he is performing.

11. Claimant argues that because he is not receiving monetary compensation for his work, he is a volunteer and not an employee, and he should continue to receive the full amount of his wage loss benefit. The ALJ finds that respondents have established that claimant has returned to work for Employer 2.

12. In this case, it is undisputed that claimant was working with Employer 2 at the time of his injury and his AWW was adjusted to take into consideration the concurrent employment. After his injury, claimant was initially off of work from both his primary employment and his concurrent employment. Claimant has since been able to return to his concurrent employment and is performing the same job duties he performed prior to his work injury, including motorcycle exams and driving instruction, along with taking the cars for oil changes, cleaning and obtaining new tires.

13. Because claimant has returned to work for Employer 2, claimant may not independently classify himself as a “volunteer” in an attempt to continue to receive a higher disability payment by refusing to collect a paycheck from Employer 2¹.

¹ The ALJ would note that Employer 2 gets a tremendous windfall under this arrangement. Employer 2 is able to continue to charge clients the same rate he would for having a driving instructor or motorcycle exam, but avoids having to pay the labor costs associated with having an employee perform these tasks. However, this windfall is not without victims, as respondents have continued to have to pay claimant disability benefits at a higher rate while claimant performs the same work he performed for Employer 2 prior to his work injury. This becomes patently unfair to respondents to bear the continued cost of disability benefits where claimant has not only demonstrated the ability to return to work, but has for all intents and purposes, actually returned to work for Employer 2. This is not the intent of the Act.

14. The ALJ finds and concludes pursuant to the testimony at hearing that claimant is not only capable of performing the work duties he performed for Employer 2 prior to his work injury, but claimant has also returned to work performing those duties. Because claimant has returned to work, claimant's right to temporary total disability benefits terminates. The ALJ therefore finds that respondents have established that it is more probable than not that claimant has returned to work in regular or modified employment for Employer 2.

15. Respondents, however, remain responsible for paying claimant temporary partial disability ("TPD") benefits based on claimant's earnings with employer. Claimant has not returned to work for employer, and respondents must continue to pay benefits for claimant's wage loss in that regard.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Section 8-42-105(3), C.R.S. states in pertinent part:

Temporary total disability benefits shall continue until the first occurrence of any one of the following:

(b) The employee returns to regular or modified employment

4. In this case, respondents have established that claimant returned to regular or modified employment for Employer 2. While claimant maintains that by virtue of the fact that he did not accept a paycheck from Employer 2 made him a volunteer

and not an employee is immaterial to a finding that claimant has returned to regular or modified employment as claimant continues to perform the same job duties he was performing for Employer 2 prior to his work injury.

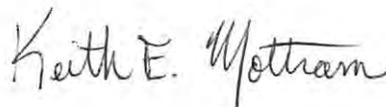

5. As found, claimant's work that he is currently performing for Employer 2 represents the same job duties he performed for Employer 2 prior to the injury. As found, the mere fact that claimant has not accepted payment from Employer 2 for the work he is performing does not negate the fact that claimant has returned to work for Employer 2 performing the same job duties claimant performed prior to his work injury.

ORDER

It is therefore ordered:

1. Respondents are allowed to modify claimant's disability benefits to no longer include the wages from the concurrent employer effective October 2, 2019, the date of the Petition to Modify.

Dated: March 6, 2020

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-034-884-001**

ISSUES

- Did Respondent prove it properly admitted for PPD benefits based on a 20% rating after apportionment?
- Which benefit "cap" under § 8-42-107.5 applies to this claim?

FINDINGS OF FACT

1. Claimant works for Employer as a police officer. His claim involves an admitted injury to his cervical spine on July 11, 2016.

2. Claimant had a prior work-related neck injury in October 2007, also while working for Employer. That claim was admitted and assigned W.C. No. 4-814-207. Dr. Miguel Castrejon was Claimant's ATP on the 2007 claim. Dr. Castrejon put Claimant at MMI on December 18, 2009, with a 6% whole person impairment rating for his cervical spine. Respondent admitted and paid \$28,930.94 in PPD benefits based on the 6% rating.

3. Dr. Nicholas Kurz is the ATP on Claimant's current (2016) claim. Dr. Kurz placed Claimant at MMI on April 9, 2019, with a 25% whole person cervical spine rating.

4. On May 1, 2019, Respondent admitted liability for the 25% rating. Respondent invoked the lower benefit "cap" under § 8-42-107.5, which limits Claimant to a combined total of \$86,697.04¹ in temporary disability and permanent partial disability benefits. Because Claimant had already received \$55,933.57 in temporary disability benefits, his PPD award was capped at \$30,763.47.

5. Claimant timely objected to the FAL and requested a DIME. Dr. John Tyler was chosen as the DIME physician. In a report dated August 28, 2019, Dr. Tyler assigned a 26% whole person impairment rating. Dr. Tyler knew of the 2007 injury, but did not have Dr. Castrejon's December 18, 2009 rating report. Dr. Tyler opined apportionment was warranted, but he did not perform the apportionment "because I do not have the necessary information of the previous impairment rating."

6. Respondent timely applied for a hearing on September 25, 2019 after receiving Dr. Tyler's DIME report.

7. Respondent does not dispute the overall 26% rating calculated by Dr. Tyler, but believes the rating should be apportioned to 20% under § 8-42-104(5)(a).

8. After the hearing, Respondent filed a new FAL dated January 27, 2020. Respondent subtracted the 6% impairment rating from Claimant's 2007 claim from Dr.

¹ The applicable benefit caps for Claimant's date of injury are \$86,697.04 and \$173,391.90.

Tyler's 26% rating and admitted for PPD based on a net 20% rating after apportionment. Respondent again invoked the \$86,697.04 benefit cap, resulting in a PPD award of \$30,763.47. Respondent attached a copy of Dr. Castrejon's prior rating and the corresponding FAL from the 2007 claim.

9. The parties had agreed at hearing Respondent's counsel would submit the most recent FAL to the ALJ for consideration when determining the appropriate rating and PPD award. The ALJ has incorporated the January 27, 2020 FAL into the record as Respondent's Exhibit F.

10. Respondent proved Claimant's current 26% rating must be apportioned to account for the prior 6% rating. Respondent proved it properly admitted for a PPD award of \$30,763.47 based on a 20% whole person impairment after apportionment.

CONCLUSIONS OF LAW

Section 8-42-104(5) ("the apportionment statute") provides,

In cases of permanent medical impairment, the employee's award or settlement shall be reduced:

(a) When an employee has suffered more than one permanent medical impairment to the same body part and has received an award or settlement under the "Workers' Compensation Act of Colorado" or a similar act from another state. The permanent medical impairment rating applicable to the previous injury to the same body part, established by award or settlement, shall be deducted from the permanent medical impairment rating for the subsequent injury to the same body part.

Section 8-42-107.5 provides,

No claimant whose impairment rating is twenty-five percent or less may receive more than [\$86,697.04] from combined temporary disability payments and permanent partial disability payments. No claimant whose impairment rating is greater than twenty-five percent shall receive more than [\$173,391.90] from combined temporary disability payments and permanent partial disability payments.²

Neither party disputes the overall 26% rating calculated by Dr. Tyler. Claimant concedes apportionment is required under § 8-42-104(5)(a) because he received an "award or settlement" for his prior 6% rating from the 2007 injury. The dispute here is over which indemnity cap under § 8-42-107.5 applies when calculating Claimant's PPD award. Respondent believes the applicable cap is determined by the net rating after apportionment. Claimant believes the higher cap applies because his overall rating is 26% before apportionment. He argues the PPD award should be calculated based on the 26%

² For ease of reference, the ALJ has inserted the maximum benefit limits applicable to Claimant's date of injury.

rating under the higher cap, and then the prior 6% rating essentially becomes a “credit” against the resulting award.³

Neither Claimant nor Respondent cited any caselaw directly on point, and the ALJ found none. Accordingly, this appears to be an issue of first impression. Statutes should be construed to further the legislative intent. The best indicator of legislative intent is the language of the statute. Where the statutory language is clear and unambiguous, the court need not resort to other rules of statutory construction. *Snyder Oil Co. v. Embree*, 862 P.2d 259 (Colo. 1993).

Based on the plain language of the apportionment statute, the ALJ agrees with Respondent’s argument. The apportionment statute lays out the specific process by which apportionment is applied, and states the “*impairment rating*” from the prior claim “shall be deducted from the . . . *impairment rating* for the subsequent injury.” (Emphasis added). Thus, apportionment under § 8-42-104(5)(a) is part of the process used to determine the claimant’s compensable rating. It reduces the rating ultimately used to calculate the PPD award. Once the claimant’s rating is established, the value of that rating is determined by other sections of the Act. One of those sections is § 8-42-107.5, which limits the benefits that would otherwise be payable for the rating based on the statutory formula.

It necessarily follows Respondent properly admitted for a 20% rating after apportionment in the January 27, 2020 FAL. The admitted PPD award of \$30,763.47 is accurate given the applicable benefit cap under § 8-42-107.5.

ORDER

It is therefore ordered that:

1. Respondent’s request to approve the January 27, 2020 FAL regarding PPD is granted. Claimant’s claim for additional PPD benefits beyond the \$30,763.47 admitted in the January 27, 2020 FAL is denied and dismissed.
2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

³ The difference in value between these two approaches is considerable. A PPD award using Claimant’s proposed methodology under the higher cap is worth an additional \$55,116.91 over the admitted PPD:

| | |
|--------------------------|---------------------|
| Higher cap: | \$173,391.90 |
| Less TTD/TPD paid: | <u>-\$55,933.57</u> |
| = Value of 26% rating: | \$117,458.33 |
| Less value of 6% rating: | <u>-\$31,577.95</u> |
| = Net PPD award: | \$85,880.38 |
| Less admitted PPD: | <u>-\$30,763.47</u> |
| = Difference: | \$55,116.91 |

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove by a preponderance of the evidence an arthroscopic right shoulder surgery recommended by Dr. John Pak is reasonably necessary and related to his admitted work injury?

FINDINGS OF FACT

1. Claimant works for Employer as a pediatric home care nurse. He injured in a multi-vehicle accident on I-25 during a snowstorm on January 18, 2019. His vehicle was subjected to multiple impacts, and he was briefly knocked unconscious.

2. Claimant went to the Penrose hospital emergency department after the accident. He complained of a headache, neck and back pain, and right shoulder pain. He could not lift his right arm up to hold a phone to his ear because of the shoulder pain. He was tender to palpation over the right AC joint and had limited shoulder range of motion. A right shoulder x-ray showed no fracture or significant arthritic changes. There was an 11.5mm gap at the right AC joint, consistent with an AC joint separation. Claimant was given a right arm sling and advised to follow up with an orthopedist.

3. Employer referred Claimant to CCOM for authorized treatment, and his initial visit took place on January 23, 2019. He saw NP Valerie Joyce, who diagnosed a shoulder strain and AC joint dislocation. NP Joyce referred ordered an MRI of the right shoulder and referred Claimant to therapy. She also prescribed medications.

4. Claimant had a history of shoulder problems many years before the work accident. He underwent right shoulder surgery in approximately 2009 while he was in the Army. Claimant credibly testified he recovered well after the surgery, with minimal residual symptoms, and no functional limitations. There is no persuasive evidence he received or required any treatment for the right shoulder for many years before January 2019.

5. The right shoulder MRI was performed on January 30, 2019. It showed: (1) supraspinatus tendinosis, without tendon tear, (2) mild glenohumeral chondromalacia, with a near full-thickness cartilage defect at the inferior glenoid rim, (3) postoperative changes from the 2009 subacromial decompression and distal clavicle resection, with no residual impingement, and (4) the long head of the biceps tendon was absent, and presumably retracted into the upper arm.

6. Dr. Thomas Centi took over as Claimant's primary ATP on February 12, 2019. Claimant was slowly improving with therapy. Dr. Centi recommended Claimant continue with therapy and medications.

7. Claimant attended regular PT sessions in February, March, and April 2019. He also began seeing a chiropractor in April. His back and neck symptoms steadily improved but the shoulder did not significantly improve.

8. On April 30, 2019, Dr. Centi referred Claimant to Dr. John Pak for an orthopedic evaluation of the right shoulder because he was no longer progressing.

9. Claimant had his first visit to Dr. Pak's office on May 21, 2019. He saw Dr. Pak's Nurse Practitioner, Trisha Finnegan. She noted Claimant's shoulder had not improved much since the accident despite approximately 11 weeks of therapy. Claimant described swelling and 3-5/10 aching pain around the shoulder, including around the AC joint. He also reported popping and grinding. Claimant was having difficulty moving his right arm, which was interfering his ability to participate in activities. On examination, he was "quite painful" around the AC joint. He had a positive impingement sign and crepitus about the AC region with movement of the shoulder. NP Finnegan administered a subacromial cortisone injection and an AC joint intra-articular cortisone injection. She recommended Claimant continue therapy and return in three weeks to assess his progress and response to the injections.

10. Claimant followed up with NP Finnegan on June 11, 2019. The injections had helped, but only for one week. His examination was unchanged, with "exquisite pain about the acromioclavicular joint with positive findings of impingement." NP Finnegan planned to discuss the case with Dr. Pak and asked Claimant to return in a week to discuss surgical intervention.

11. Claimant saw Dr. Pak on June 18, 2019. Physical examination showed tenderness around the AC joint and acromion, positive impingement sign, AC joint crepitus with motion, and painful range of motion. Dr. Pak reviewed the MRI and noted increased uptake in the AC joint and bursal impingement, which were not discussed in the radiologist's report. Although it is not clear from his report, Dr. Pak credibly testified he personally reviews all MRIs regarding his patients. Dr. Pak recommended "diagnostic arthroscopy with debridement and chondroplasty [and] subacromial decompression and probably extension of the distal clavicle excision."

12. In his deposition, Dr. Pak elaborated on he proposed surgery, explaining,

Diagnostic arthroscopy means that sometimes you do actually have to look at the area where there's abnormal signal on the MRI or any abnormality to see whether it really corresponds with the MRI finding. As good as MRI is . . . number one, it's not very good at looking at bone anatomy. CT scan and x-ray is actually better for that. And number two, such as cartilage injury, and also soft tissue injury and labral injury, it's not very accurate or sensitive. It can miss up to 20 percent of pathology.

13. Dr. Pak testified the surgery is not directed at any "age-related" findings, and the two primary issues he plans to look at are the chondral defect and the distal clavicle area. He opined the specificity of Claimant's symptoms, coupled with temporary

relief from the injection, “tells me that there are some things going on in those specific areas.”

14. Dr. O’Brien performed a Rule 16 record review for Respondents on June 25, 2019 regarding surgery request. He opined Claimant suffered only “minor” strains,” which “resolved” within two weeks of the accident. He opined “minor injuries . . . heal uneventfully and expeditiously without sequelae . . . 100 percent of the time.” Dr. O’Brien opined Claimant’s ongoing symptomology is “nonorganic” and “generated by secondary gain issues inherent in his personal injury claim.” He concluded surgery is not reasonable because Claimant has no identifiable pathology.

15. Dr. O’Brien saw Claimant for an IME on October 28, 2019. He opined, “neither the supplemental medical record documentation nor my Independent Medical Evaluation in any way alter my opinions.” He stated “there was not a single pathoanatomic abnormality on that MRI scan that could be considered a surgical indication.” Dr. O’Brien opined Claimant exhibited “nonorganic physical findings” and “significant pain magnification.” He stated, “the presence of the Workers’ Compensation claim is the reason that [Claimant] has nonorganic pain. He needs to have pain in order to continue adjudicating his claim.” Dr. O’Brien believes Claimant’s “feigned” symptoms should not be validated by the provision of any further treatment, including surgery.

16. Dr. O’Brien testified in a post-hearing deposition consistent with his reports.

17. Claimant testified credibly at hearing regarding multiple issues. He would have preferred to use Tricare after the accident because “it’s easier,” and he has no copays or deductibles. He only pursued a claim because Employer (correctly) insisted the accident and injuries had to be reported and handled through the workers’ compensation system. Claimant explained, “I didn’t even want to do this,” and having a claim against Employer upsets him because he loves his job and the organization. He credibly testified his current right shoulder symptoms are much different from anything he experienced before the accident. He credibly described significant limitations on his ability to participate in vocational and avocational activities since the accident because of ongoing right shoulder symptoms. Claimant has continued working despite pain and restrictions because he does not want to let his patients down or burden his coworkers.

18. Dr. Pak’s opinions are credible and more persuasive than the contrary opinions offered by Dr. O’Brien.

19. Claimant proved by a preponderance of the evidence the surgery proposed by Dr. Pak is recently necessary to cure and relieve the effects of his injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability for an accident, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment. *Snyder v. City of Aurora*,

942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, Claimant proved that the surgery proposed by Dr. Pak is reasonable necessary and related to his admitted injury. Claimant was a very credible witness. Although he had surgery on his right shoulder in 2009, he recovered well with no significant ongoing symptoms and no need for treatment for many years before the work accident. Dr. Pak's opinions regarding the indications for surgery are credible and persuasive. Dr. O'Brien's opinions are not persuasive, particularly his allegation Claimant is exaggerating or "feigning" his ongoing symptoms and limitations for secondary gain.

ORDER

It is therefore ordered that:

1. Insurer shall cover the arthroscopic right shoulder surgery recommended by Dr. Pak.
2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: March 9, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-100-792-001**

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable injury on February 18, 2019?
- II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability ("TTD") payments from the date of injury, and ongoing?
- III. Has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related medical treatment for compensable injuries to her left leg?
- IV. Has Claimant shown, by a preponderance of the evidence, that the right of selection of her Authorized Treating Physician ("ATP") has passed to her?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage ("AWW") is \$538.64.

The parties further stipulated that no UC Health medical records have been identified beyond February 28, 2019; therefore the ALJ will not, as of this Order, order further medical treatment from UC Health beyond that date. Assuming other such records come into possession of the parties, payment for services rendered will be addressed separately from this Order.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 76 year old who worked as a housekeeper for Employer. Claimant was hired as an employee of Healthcare Services Group in 2011, and worked at the Terrace Gardens facility. To Claimant's knowledge, Terrace Gardens owns this facility.

2. On February 18, 2019 while reporting to work at the Terrace Gardens facility, Claimant slipped on an icy sidewalk adjacent to the building and landed on her knees, seriously injuring her left leg. Healthcare Services Group provided housekeeping, laundry, maintenance, and food service to Terrace Gardens (Ex. H), which is the facility where Claimant has worked for 34 years.

3. At hearing, Claimant testified that her son dropped her off for work that day, since Claimant does not drive. She was approaching the entrance door, which she

uses to clock in for work. The work time clock is just within this door. She was within “5 to 10 feet” of this door when she fell. Claimant acknowledged that there were other doors to the building, but stated that this same entrance is the one that the employees use, and she was instructed by “Cleo” M[Redacted], [Claimant’s supervisor], to use this entrance. Claimant’s 7:00 a.m. shift was just about to begin when she fell.

4. After the incident Claimant’s son helped her up, and she presented straight to the emergency department at UC Health with a left distal femur fracture. She was admitted to the trauma unit after an orthopedic consultation and eventually taken to the OR for a repair of the fracture on February 20, 2019. According to available records, the hospitalist who oversaw Claimant’s treatment was Caley M. Copeland, MD. (Ex B, p. 52). Claimant was discharged from the hospital on February 28, 2019 and then transferred to Life Care Centers for rehabilitation.

5. Claimant was admitted to Life Care Center of Colorado Springs on February 28, 2019 with a primary diagnosis of “unspecified fracture of lower end of left femur”. Other conditions included “left artificial knee joint, muscle weakness, unsteadiness on feet, cognitive communication deficit, hypertension, type 2 diabetes without complications, anemia, vitamin D deficiency, disorder of the teeth, and age related osteoporosis. Claimant was admitted for in-patient care at this rehab facility from February 28, 2019 through April 5, 2019.

6. Claimant testified that her doctors placed restrictions on her activities. These restrictions including limitations on standing, walking and lifting. Claimant testified that she was still on restrictions as of the time of the hearing. Claimant testified she had not worked since her injury on February 18, 2020.

7. Claimant received various forms of therapy including physical therapy, occupational therapy, and speech therapy to address various issues. Exercises focused on strength, mobility, function, balance, safety, and active range of motion.

8. On March 15, 2019, Employer filed a Notice of Contest, alleging that Claimant’s injury was not work-related.

9. On November 19, 2019, Dr. Marc Steinmetz conducted an independent medical examination of Claimant. Dr. Steinmetz reviewed the records to date, took a history from claimant and conducted a medical examination. Dr. Steinmetz noted that claimant had suffered a slip and fall on ice that resulted in a severe fracture of the left lower femur necessitating a left total knee replacement with a subsequent developed deep vein thrombosis (“DVT”) of the left leg. Dr. Steinmetz considered the fracture, the knee replacement and the DVT related to the fall, and that the treatment for this would be reasonable and necessary (Ex. 6, pp. 118-119). He did not address whether the fall itself was work-related as he considered that a non-medical and legal issue.

10. He required additional records to address the reasonable necessity of the all of the treatment claimant had received. He believed Claimant was at MMI for the leg injury, with a 32% lower extremity rating and recommended sedentary work restrictions.

He did not believe Claimant's hand symptoms were work-related, and did not believe Claimant required any maintenance treatment for the injury.

11. After reviewing the supplemental records from the Life Care Rehab Center, Dr. Steinmetz reiterated his prior opinion regarding the conditions that he considered related to the February 18, 2019 fall and stated that only Claimant's lower extremity symptoms were related.

12. Dr. Steinmetz opined that Claimant's restrictions would likely be sedentary, "with a 10 pound lifting limit and occasional walking and standing and mostly sitting and no climbing." (Ex. 6, p. 119).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be

assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

4. In this instance, the only witness who testified at hearing is Claimant. The ALJ finds Claimant to have testified sincerely, credibly, and sufficiently thoroughly regarding the circumstances of her fall and subsequent treatment.

Compensability

5. To qualify for recovery under the Workers' Compensation Act of Colorado, a claimant must be performing services arising out of and in the course of her employment at the time of her injury. See § 8-41-301(1)(b) C.R.S. 2007. For an injury to occur "in the course of" employment, the claimant must demonstrate that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. See *Gregory v. Special Counsel, and Travelers Indemnity Co.*, W.C. 4-713-707 (2008); *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arise out of" requirement is narrower than the "in the course of" requirement. See *id.* For an injury to arise out of employment, the claimant must show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. See *id.* at 64-1-42; *Industrial Comm'n v. Enyeart*, 81 Colo. 521, 524-25, 256 P. 314, 315 (1927) (denying recovery to claimant who was injured when his steering gave out while he was driving across a bridge on his employer's property on his way home from work). The claimant must prove these statutory requirements by a preponderance of the evidence. See *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985).

6. In general, a claimant who is injured while going to or coming from work does not qualify for benefits because such travel is not considered to be performance of services arising out of and in the course of employment. See *Industrial Comm'n v. Lavach*, 165 Colo. 433, 437-38, 439 P.2d 359, 361 (1968); *Berry's Coffee Shop, Inc. v. Palomba*, 161 Colo. 369, 373, 423 P.2d 2, 4-5 (1967); *Varsity Contractors v. Baca*, 709 P.2d 55 (Colo. App. 1985). This principle is known as the "going to and from work" rule. See *Berry's Coffee Shop, Inc.*, 161 Colo. At 373, 432 P.2d at 4-5.

7. In *Madden v. Mountain W. Fabricators*, the court identified several factors for determining whether special circumstances applied for awarding benefits. These variables included: (1) whether the travel occurred during working hours, (2) whether the travel occurred on or off the employer's premises, (3) whether the travel was contemplated by the employment contract, and (4) whether the obligations or conditions of employment created a "zone of special danger" out of which the injury arose. No single factor is determinative.

Compensability, as Applied

8. In this instance, however, Claimant was not merely travelling to work. *She had arrived on the premises where she was required to be as a term of her employment* by Employer. Using this icy sidewalk to enter and clock in was not optional. Her supervisor told her to use this entrance. Claimant was mere steps away from clocking in, and beginning her shift inside Terrace Gardens, as she has done on Employer's behalf for years. As such, Claimant's case is much more like a parking lot injury than an injury while still commuting to work, either by car, or while walking prior to arriving on the work premises.

9. If *special circumstances* demonstrate a causal connection between the circumstances under which the work is performed and the "off premises" injury, the resulting injury arises out of and in the course of the employment. Special circumstances may be found if the employer provides a parking area as a fringe benefit to the employees and the claimant sustains injury while using the lot. *It is not essential to a finding of compensability that the employer actually own or physically operate and maintain the lot for this exception to apply.* See *Woodruff World Travel v. Industrial Claim Appeals Office*, 38 Colo. App. 92, 554 P.2d 705 (1976); *Rodriguez v. Exempla Healthcare, Inc.* W.C. No. 4-705-673 (ICAO, Apr 30, 2008). As Professor Larson noted:

As to parking lots owned by the employer, or maintained by the employer for its employees, practically all jurisdictions now consider them part of the "premises," whether within the main company premises or separated from it. *This rule is by no means confined to parking lots owned, controlled, or maintained by the employer.* The doctrine has been applied when the lot, although not owned by the employer, was exclusively used, or used with the owner's permission, or just used, by the employees of this employer. Thus, *if the owner of the building in which the employee works provides a parking lot* for the convenience of all tenants, or if a shopping center parking lot is used by employees of businesses located in the center, the rule is applicable. (emphasis added).

Larson's Workers' Compensation Law, § 13.04 [2] [a] [b] (footnotes omitted); see In re Wilson, W.C. No. 4-937-322-01 (ICAO, Mar. 16, 2015). Additionally, once a parking lot has achieved the status of "a portion of the employer's premises, compensation coverage attaches to any injury that would be compensable on the main premises." Larson's Workers' Compensation Law, § 13.04 [2] [b].

10. Similarly, special circumstances may be found where the employer, for its own benefit, intervenes in the employee's parking choices as a matter of policy. In such circumstances selection or use of a parking area is not a purely personal choice. *Friedman's Market, Inc. v. Welham*, 653 P.2d 760 (Colo. App. 1982). Further, in order for an employee's action to "arise out of" the employment it is not necessary that the activity be a strict duty or requirement of the employment. Rather if the injury arises out of a risk that is *reasonably incidental* to the conditions and circumstances under which

the employment is usually performed the resulting injury arises out of the employment. *Panera Bread v. Industrial Claim Appeals Office*, 141 P.3d 970 (Colo. App. 2006).

11. Thus, had Claimant driven herself in to work, and fallen on this very spot on her way in from the parking lot (thus walking an even greater distance), her injury would be compensable. It follows that being dropped off by her son in the manner that occurred here would yield a similar result. The risk faced by Claimant here, the ALJ concludes, was *reasonably incidental* to the conditions and circumstances under which her employment was usually performed; thus her injury arose out of her employment. Claimants injuries, therefore, are compensable.

Temporary Total Disability

12. To establish entitlement to temporary disability benefits, an employee must prove that the industrial injury, or occupational disease, has caused a “disability,” and that he/she suffered a wage loss that, “to some degree,” is the result of the industrial disability. § 8-42-103(1), C.R.S. (2009); *PDM Molding, Inc. v. Stanburg*, 898 P.2d 542, 546 (Colo. 1995). The term “disability,” as used in workers’ compensation cases, connotes two elements. The first is “medical incapacity” evidenced by loss or reduction of bodily function. “Disability” connotes both medical incapacity and restrictions to bodily function. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair her opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December18, 2000).

13. The second element of temporary disability is loss of wage earning capacity. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of “disability” may be evidenced by a complete or partial inability to work, or physical restrictions that preclude the claimant from securing employment.

14. Because there is no requirement that a claimant must produce evidence of medical restrictions (although they are in existence here through Respondents’ own IME Physician), a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Temporary Total Disability, as Applied

15. As found, Claimant has suffered both medical incapacity and temporary wage loss during the period from February 18, 2019 and continuing. Claimant's testimony was uncontested that she has not worked since her accident. She was under restrictions from standing, walking and lifting by her treating doctors. The medical basis for her work restrictions was further supported by the opinions of Dr. Steinmetz, who felt permanent restrictions were appropriate, after he opined that Claimant was at MMI.

16. No treating authorized treating physician has placed Claimant at MMI, nor has one provided Claimant a written release to return to her regular employment. Therefore, Respondents' liability for temporary disability benefits continues. Consequently, the Claimant was temporarily "disabled" under § 8-42-105, C.R.S. (2012), 8-42-106, C.R.S. (2012), and is entitled to TTD benefits from February 18, 2019 and continuing until termination pursuant to the Colorado Workers' Compensation Act. See *Culver v. Ace Electric*, supra; *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (ICAO June 11, 1999).

Medical Benefits, Generally

17. Respondents are liable for authorized medical treatment that is reasonably necessary to cure and relieve the effects of a work-related injury. Section 8-42-101(1) (a), C.R.S. (2008); *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Where a claimant's entitlement to benefits is disputed, the Claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits are sought. See *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether a claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. See *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

Medical Benefits, as Applied

18. Claimant's medical benefits received by UC Health from February 18, 2019 to February 28, 2019 were reasonable, necessary and related to her compensable left leg injury. Claimant credibly testified to seeking medical treatment at UC Health on the date of her injury and undergoing surgery for her work injury. The UC Health medical records documents Claimant's history of injury following her fall while arriving at work. Dr. Steinmetz even provided his opinion that the medical treatment was reasonable and necessary. As a result, Respondents are liable for the medical treatment from UC Health.

19. Claimant's medical benefits from Life Care Centers from March 1, 2019 to April 6, 2019 were also reasonable, necessary and related to her compensable left leg injury. Claimant credibly testified she was referred by her health care providers at UC Health for acute rehabilitation care and this information is supported by the medical

records at UC Health. The medical and therapy records from Life Care Center confirm and document the medical treatment for Claimant's left leg injury. Again, Dr. Steinmetz provided his opinion that the medical treatment from the rehabilitation facility was generally reasonable and necessary. As a result, Respondents are liable for the medical treatment from Life Care Centers-so long as such treatment is related to Claimant's injury to her leg.

20. By agreement of the parties, and due to the lack of medical records in support at this time, the ALJ will not address any UC Health medical records which might exist beyond Claimant's discharge date of February 28, 2019, nor address at this time other conditions beyond Claimant's repair of her left leg fracture, the DVT which ensued, and her therapy and rehab to address those conditions.

Authorized Treating Provider / Right of Selection

21. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office*, 148 P.3d 381, 383 (Colo. App. 2006).

22. Claimant suffered from a severe injury, which constituted a bona fide emergency. She was taken by her son straight to the emergency room, where all parties agree she received reasonable and necessary medical care from that point onwards. In this instance, Employer was put on notice no later than February, 20, 2019 when the initial Incident Report was filed. A "reasonably conscientious manager" would have followed up, and provided a list of medical providers upon Claimant's release from the ER. Instead, Employer filed a Notice of Contest on March 15, 2019. Employer denied medical treatment without further inquiry, it would appear. At no point did Employer provide a designated provider list. Instead, Claimant was apparently discharged from employment.

23. A surgery on Claimant's leg was inevitable. In this case, the right of selection has passed to Claimant in its entirety, and the ALJ so finds. Employer,

through its Notice of Contest, has surrendered any influence over who will treat Claimant. Dr. Caley Copeland, MD, the hospitalist who (apparently) oversaw Claimant's treatment at UC health, and her designees, are therefore Claimant's Authorized Treating Physicians.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable injury on February 18, 2019.
2. Claimant's Average Weekly Wage is \$538.64.
3. Respondents are responsible for Claimant's medical treatment at UC Health from February 18, 2019 through February 28, 2019, and from Life Care Rehab Centers from February 28, 2019 to April 6, 2019, so long as such care pertains to treatment for her left leg injury, DVT, and therapy and rehabilitation for same. Other such issues (such as overuse of Claimant's hand, speech therapy, teeth disorders, diabetes treatment) are *deferred* until they can be linked to the work injury.
4. Respondents will pay TTD benefits from February 18, 2019 and ongoing, until terminated by operation of law.
5. Claimant's Authorized Treating Physician is Dr. Caley Copeland, and her designees.
6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

Colorado Springs, Colorado 80906

ISSUES

- I. Whether Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury to his right arm.
- II. If compensable, whether Claimant proved by a preponderance of the evidence he is entitled to reasonable, necessary and related medical benefits.
- III. If compensable, whether Claimant proved by a preponderance of the evidence he is entitled to temporary total disability (TTD) from June 4, 2019 through June 24, 2019 and August 19, 2019 through October 1, 2019. If so, whether Respondents proved, by a preponderance of the evidence, Claimant is responsible for his termination.
- IV. Average weekly wage (AWW).
- V. The issues of permanent partial disability (PPD) and permanent total disability (PTD) as endorsed by Claimant were not ripe for hearing and are not addressed by the ALJ in this order.

FINDINGS OF FACT

1. Claimant is a 58-year-old man who has worked in construction for over 25 years. Claimant worked for Employer as a journeyman ironworker. Claimant began his employment with Employer on or around January 31, 2019. Claimant's job duties included installing windows and frames.

2. Claimant initially worked for Employer at a jobsite in downtown Denver. Claimant worked at that jobsite for several months before Employer transferred him to a different jobsite in Lakewood, Colorado. Employer removed Claimant from the downtown Denver jobsite due to allegations Claimant made inappropriate comments to a third-party. Claimant was aware of the allegations and why he was being transferred. Claimant denies the allegations.

3. Claimant began working on the new jobsite in Lakewood, Colorado on or around May 18, 2019. Claimant sustained an industrial injury to his right upper extremity while performing his job duties on May 20, 2019. Claimant testified that, while screwing screws into a window frame overhead, the screw gun torqued, causing his arm to twist. Claimant testified he felt a pop and sharp pain in his right elbow at the time. Claimant continued to perform his job duties. Approximately one hour later while carrying glass Claimant noticed swelling and weakness in his right upper extremity. Claimant testified he told the foreman on site, Robert B[Redacted], about the incident and that he thought he may have injured his arm. Claimant testified Mr. B[Redacted] instructed him to inform

Skip H[Redacted], Safety Manager, the following day. Claimant returned to work on May 21, 2019 at which time Mr. H[Redacted] instructed Claimant to go to urgent care.

4. Claimant presented to Robert Fromcheck, M.D. at CareNow Urgent Care on May 21, 2019. Claimant reported that, on May 20, 2019, he felt a pop when using a drill that torqued his right upper extremity. Claimant complained of pain, swelling and decreased range of motion in his right elbow. Claimant informed Dr. Fromcheck he had two elbow surgeries in the past – one to reattach his biceps tendon and another to “clean out the joint.” On examination, Dr. Fromcheck noted swelling of the medial aspect of the right elbow with tenderness to palpation over the olecranon and decreased range of motion on flexion and extension. An x-ray of the right elbow was obtained. The radiologist noted “severe degenerative and postoperative changes along the joint spaces, with osteophytes, spurs intra-articular bodies” and elbow joint effusion. His impression was as follows: “Postoperative and old posttraumatic changes. Positive elbow joint effusion, therefore an occult acute fracture cannot be excluded.” Dr. Fromcheck diagnosed Claimant with a right elbow sprain and referred Claimant for physical therapy and an orthopedic surgical consultation at Colorado Orthopedic Consultants. He noted that, based on the history and physical findings, there was greater than 50% probability Claimant sustained a work-related injury. Dr. Fromcheck released Claimant to modified duty. The specific work restrictions are not detailed in Dr. Fromcheck’s medical record. Neither party offered into evidence Dr. Fromcheck’s WC164 form listing the specific restrictions assigned.

5. Claimant spoke with an adjuster on the claim on May 28, 2019. The adjuster’s employee interview notes indicate Claimant reported hearing a pop in his right elbow when pushing a screw in overhead with a torque gun, telling his supervisor “Bobby” about the incident, and being sent to urgent care by Mr. H[Redacted] the following day.

6. On May 28, 2019, Employer offered Claimant a light duty position in Mead, Colorado installing foam and caulk. Claimant accepted the light duty position and began on May 29, 2019.

7. On June 3, 2019, Claimant presented to Craig Davis, M.D. at Colorado Orthopedic Consultants for an orthopedic consultation. Regarding the mechanism of injury, Dr. Davis noted Claimant was lifting a heavy frame when he experienced a pop and sudden pain in the right elbow area. Claimant complained of experiencing significant grinding, pain, weakness and loss of motion since the incident. Dr. Davis noted Claimant had a history of right distal biceps repairs in same elbow 10 years ago with good results. On examination, Dr. Davis noted grinding with range of motion mostly over the lateral aspect and range of motion of 15-145 degrees with pain at extremes. He noted Claimant brought x-rays with him, which demonstrated moderate to severe degenerative disease of the right elbow with what appear to be intra-articular loose bodies in the anterior compartment and osteophytes and joint space narrowing around the radiocapitellar joint in particular. Dr. Davis opined Claimant suffered from degenerative joint disease that was aggravated by the work injury, noting Claimant was asymptomatic prior to the injury. Dr. Davis administered an injection and prescribed

medication. He recommended an MRI and, possibly, surgical intervention, if Claimant did not experience any improvement.

8. Claimant testified that, although Dr. Davis only noted the lifting of the frame with respect to the mechanism of injury, he did tell Dr. Davis of the screw gun incident.

9. Employer terminated Claimant's employment on June 4, 2019. A June 4, 2019 indicates the foreman on the Mead, Colorado job requested Claimant's removal from his site because Claimant's work was substandard and required "re-work."

10. David S[Redacted], Operations Manager, testified on behalf of Respondents. Mr. S[Redacted] testified Employer has a three-strike termination policy for performance and attendance. Mr. S[Redacted] testified employees are informed of the policy. Mr. S[Redacted] testified that, in his view, Claimant's first strike was his removal from the downtown Denver jobsite due to the alleged inappropriate remarks. He testified Claimant's second strike was that he believed Claimant lied about being on light duty. Mr. S[Redacted] testified that Claimant informed him he was assigned to light duty; however, per Mr. S[Redacted]'s reading of the May 21, 2019 Urgent Care report, he was not assigned to light duty. Mr. S[Redacted] further testified that the third strike leading to Claimant's termination was substandard work on the Mead jobsite. Upon further questioning by Respondents' counsel, Mr. S[Redacted] testified that an additional factor in Claimant's termination was a no-call, no-show on Monday, June 3, 2019.

11. Claimant testified he was not informed of any three-strike policy. Claimant testified he spoke to Mr. S[Redacted] by telephone on June 4, 2019 and Mr. S[Redacted] told him he was being terminated because he was not doing enough work and his work was substandard. Claimant testified his work was not substandard and he believed he was performing the quality and quantity of work required. Claimant further testified that, to the extent his work required any re-work, it would not have exceeded the normal amount of re-work expected on any job. Claimant testified that he was never a no-call, no-show. He stated that he did miss work at times due to attending doctor's appointments for the work injury, but always gave Employer prior notice of his absences.

12. Scott Harris testified at hearing on behalf of Respondents. Mr. Harris worked with Claimant on the Mead jobsite as a glazer. Mr. Harris was not a foreman on the jobsite. Mr. Harris testified he observed Claimant's work and described the quality of Claimant's work as "poor." He testified that some of Claimant's work required re-work to ensure the seals were not subject to leaks.

13. John G[Redacted] testified at hearing on behalf of Respondents. Mr. G[Redacted] worked as a glazer with Claimant at the downtown Denver jobsite. He testified Claimant did good work on that project. Mr. G[Redacted] testified it was his understanding Claimant was transferred to a different jobsite because a woman alleged Claimant directed an inappropriate comment to her.

14. Robert B[Redacted] testified at hearing on behalf of Employer. Mr. B[Redacted] worked with Claimant on the Lakewood jobsite as a journeyman. Mr. B[Redacted] testified that, on May 21, 2019, Claimant informed him he may have hurt himself the day before and stated he needed to get his arm evaluated at urgent care. Mr. B[Redacted] testified that Claimant stated he felt a pop in his arm while getting dressed for work. Mr. B[Redacted] testified Claimant did not indicate to him the injury occurred at work installing frames and moving glass. Mr. B[Redacted] testified he then contacted Mr. H[Redacted], who took Claimant for medical evaluation at the urgent care.

15. Alicia L[Redacted] testified at hearing on behalf of Employer. Ms. L[Redacted] worked with Claimant on the Lakewood jobsite installing windows and is Mr. B[Redacted]' girlfriend. Ms. L[Redacted] testified she does not recall Claimant mentioning any pain or injury to her. Ms. L[Redacted] testified she heard Claimant telling Mr. B[Redacted] he popped his elbow while putting on clothes that morning.

16. Claimant testified he did not work from June 4, 2019 to June 23, 2019 because he was terminated by Employer. He testified he was looking for work during that time period. Claimant began working for a different employer on June 24, 2019.

17. Dr. Davis reevaluated Claimant on June 17, 2019. He noted Claimant underwent an MRI that demonstrated severe degenerative arthritis of the elbow with large osteophytes forming along the distal humerus and the proximal ulna as well as multiple loose bodies in the joint. The MRI also showed a low-grade partial tear of the extensor origin of the lateral epicondyle and some tendinosis of the flexor pronator origin at the medial epicondyle. Dr. Davis recommended proceeding with an arthroscopic debridement of the joint with removal of loose bodies and osteophytes.

18. Claimant underwent right elbow surgery on August 19, 2019. Dr. Davis performed arthroscopy with synovectomy, removal of 20 loose bodies and fragments of bone, excision of the coronoid process, distal humerus, and partial excision of the olecranon process.

19. Claimant did not work from August 19, 2019 to September 30, 2019 due to recovering from right elbow surgery. Claimant returned to light duty work on October 1, 2019 and has continued working since such time.

20. On November 18, 2019, John J. Aschberger, M.D. performed an Independent Medical Examination (IME) at the request of Respondents. Dr. Aschberger performed a medical record review and physical examination. Regarding the mechanism of injury, Claimant reported feeling a twist and a pop at the right elbow when using a power screwdriver to put screws into a window frame. He reported that, an hour later, he experienced weakness, pain and swelling at the elbow while lifting windows. Claimant informed Dr. Aschberger he was functioning fine and not missing any work up until the May 20, 2019 injury. Dr. Aschberger noted Claimant underwent elbow surgery in 1995 and a biceps tear repair in 1999. Dr. Aschberger opined Claimant sustained a work-

related right elbow sprain that aggravated his underlying degenerative condition. He opined physical therapy and orthopedic follow-up would be reasonable care.

21. Dr. Davis issued an undated letter reiterating his opinion that Claimant sustained a work-related aggravation. Dr. Davis noted Claimant sustained a right elbow injury on May 20, 2019 when he had a pop in his elbow when lifting a heavy frame. He wrote, “

Although [Claimant] does have degenerative arthritis, he also had loose bodies in his elbow. It's likely that the job injury either caused one of those loose bodies to catch in the joint or resulted in an osteophyte or some cartilage breaking off in the joint and causing it to become symptomatic at that point.

In other words, regarding causality, although he did have pre-existing arthritis in his elbow, it was substantially aggravated by his work injury which occurred May 20, 2019. Were it not for the lifting injury that he sustained on May 20, 2019, he would probably not have required surgical treatment for his elbow.

22. Division of Workers' Compensation records (Respondents' Exhibit A) indicate Claimant has had three prior workers' compensation claims with different employers for right upper extremity injuries, including a June 2001 injury to Claimant's radial ulnar nerve/low arm, a December 1994 injury to unspecified part of the upper extremity, and an August 1993 injury to the elbow/radial head. The prior claims resulted in payments of TTD and PPD.

23. Claimant did not identify any of the aforementioned prior workers' compensation claims in his responses to Respondents' interrogatories. Claimant did disclose in his responses a prior claim in October 2006 for a rotator cuff tear, and a claim in December 2012 for a herniated disc. When asked on cross-examination why he did not include the prior workers' compensation claims related to his upper extremity, Claimant testified he addressed the same question at a prehearing conference. Claimant testified he believed Respondents' interrogatories were asking for information from within the last 15 years. Claimant testified he disclosed the information he believed was required and did so to the best of his recollection. Claimant testified he did report prior injuries and treatment of his right upper extremity to his providers. Claimant testified that, despite the prior surgeries to his right upper extremity and pre-existing elbow arthritis, he was not experiencing any issues with his right elbow leading up to the May 20, 2019 work injury and was able to perform his normal job duties.

24. The ALJ finds Claimant's testimony more credible and persuasive than the testimony of Mr. S[Redacted], Mr. B[Redacted], Ms. L[Redacted], Mr. G[Redacted] and Mr. Harris. The ALJ credits the opinions of Drs. Fromcheck, Davis and Aschberger.

25. Claimant proved it is more probable than not he sustained a compensable industrial injury arising out of and in the course of his employment on May 20, 2019. Claimant's work duties aggravated Claimant's pre-existing degenerative condition, producing the need for medical treatment.

26. Claimant has proven the evaluations and treatment by Drs. Fromcheck and Davis, including the surgery performed by Dr. Davis, were reasonable, necessary and causally related to the industrial injury.

27. Claimant failed to prove entitlement to TTD benefits between June 4, 2019 and June 24, 2019. While Claimant did not work during this time period, Claimant did not leave work during this time frame due to a disability caused by the work injury. Claimant was not working because he was terminated due to alleged job performance issues.

28. Claimant proved by a preponderance of the evidence he is entitled to TTD benefits for lost wages incurred between August 19, 2019 and October 1, 2019. The wage loss suffered during this time period was due to Claimant undergoing right elbow surgery resulting from the May 20, 2019 industrial injury.

29. Respondents failed to prove by a preponderance of the evidence Claimant was responsible for his termination and thus not entitled to TTD benefits.

30. Claimant earned \$30.85 per hour. The number of hours Claimant worked varied, as detailed below:

| Period End Date | Total Hours |
|------------------------|--------------------|
| 2/9/2019 | 40 |
| 2/16/2019 | 37.5 |
| 2/23/2019 | 32 |
| 3/2/2019 | 38.5 |
| 3/9/2019 | 32 |
| 3/16/2019 | 32 |
| 3/23/2019 | 24 |
| 3/30/2019 | 40 |
| 4/6/2019 | 38 |
| 4/13/2019 | 32 |
| 4/20/2019 | 40 |
| 4/27/2019 | 32 |
| 5/4/2019 | 40 |
| 5/11/2019 | 40 |
| 5/18/2019 | 40 |

Claimant worked an average of 36 hours per week in the 15 full weeks of employment leading up to the work injury. An AWW of \$1,110.60 is a fair approximation of Claimant's wage loss and diminished earning capacity.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals*

Office, 107 P.3d 999 (Colo. App. 2004); H & H Warehouse v. Vicory, 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Faulkner v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000).

Respondents contend Claimant failed to meet his burden to prove he sustained a compensable industrial injury, pointing to inconsistencies in Claimant's reports regarding the mechanism of injury and failure to disclose in responses to interrogatories prior claims involving the right upper extremity. The ALJ considered this, among other things, in making her credibility determination and, as found, deemed Claimant's testimony credible and persuasive. Claimant credibly testified he felt a pop in his right elbow when the drill torqued. He credibly testified he felt additional symptoms, including swelling and weakness, while carrying a window approximately one hour later. Claimant's testimony regarding feeling a pop while drilling is consistent with his reports to Dr. Fromcheck, the adjuster, and Dr. Aschberger. Claimant also credibly explained that he also mentioned the drilling incident to Dr. Davis.

Although Mr. B[Redacted] and Ms. L[Redacted] testified Claimant reported injuring his arm while dressing at home for work, the ALJ did not find their testimony credible and persuasive. No reasonable explanation was offered by Mr. B[Redacted] or any other Employer witness as to why, in a non-emergent situation, Employer felt it was necessary to notify Mr. H[Redacted], and take Claimant to urgent care if there was no indication whatsoever Claimant was alleging a work-related injury. Furthermore, Claimant provided a credible explanation for his initial failure to disclose prior right upper extremity claims in his responses to interrogatories. The claims involving Claimant's right upper extremity took place 18 to 26 years prior to the injury at issue. The ALJ is not persuaded Claimant was attempting to conceal prior relevant right upper extremity conditions, as Claimant reported having prior treatment to his providers and provided further explanation to Respondents at a prehearing conference.

Claimant's providers, Drs. Fromcheck and Davis, along with Respondents' IME, Dr. Aschberger, all credibly opine Claimant's pre-existing right elbow condition was aggravated by the work injury. Each physician was aware Claimant had some prior treatment to his right upper extremity several years prior. Claimant credibly testified he was not experiencing symptoms in his right upper extremity leading up to the work injury. No evidence to the contrary was offered at hearing indicating that, prior to the work injury, Claimant was seeking treatment or had any issues performing the duties of his physically demanding job. Although Claimant suffered from a pre-existing condition, it is more likely than not the work injury aggravated his condition and caused the need for his medical treatment.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a “medical benefit” it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant’s physical needs. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995); *Karim al Subhi v. King Soopers, Inc.*, W.C. No. 4-597-590, (ICAO, July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006).

As Claimant proved he sustained a compensable injury, Respondents are liable for reasonably necessary and related medical benefits. As found, the evaluations and treatment by Drs. Fromcheck and Davis, including the surgery performed by Dr. Davis, are reasonable, necessary and causally related to the industrial injury.

TTD Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the

employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

As found, Claimant failed to prove entitlement to TTD benefits for any lost wages between June 4, 2019 and June 24, 2019. Although Claimant was not working during such time period, the preponderant evidence does not establish he left work as a result of a disability resulting from the industrial injury. Claimant did not work between June 4, 2019 and June 24 2019 because he was terminated by Employer and could not find other work. Although Claimant remained on restrictions at the time, there was no testimony he was unable to work due to any disability during that time period.

Nonetheless, the preponderant evidence establishes Claimant is entitled to TTD benefits for lost wages from August 19, 2019 to October 1, 2019. Claimant's lost wages during this time period were the direct result of Claimant undergoing surgery and recovery for the May 20, 2019 industrial injury.

Responsible for Termination

Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the

claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. See *Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992) (claimant disqualified from unemployment benefits after discharge for unsatisfactory performance when aware of expectations, even if not explicitly warned that job was in jeopardy). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

Respondents failed to establish Claimant was responsible for his termination and thus not entitled to TTD benefits. The ALJ did not find Mr. S[Redacted]'s testimony credible and persuasive. Respondents contend Claimant was terminated due to violating Employer's three-strike policy. Mr. S[Redacted]'s explanation regarding the termination was disjointed and incredible. Mr. S[Redacted] initially testified Claimant's "second strike" was lying about requiring light duty. This explanation was nonsensical, as the medical record specifically referred to by Mr. S[Redacted] clearly states Claimant required light duty work. Mr. S[Redacted] only included alleged no-call, no-shows as a reason for Claimant's termination when it was specifically brought up by Respondents' counsel.

Regarding alleged no-call, no-shows, Claimant credibly testified he gave prior notice to Employer when he was going to miss work due to attending medical appointments. Claimant credibly testified he was not aware of a three-strike policy. With respect to the allegations regarding Claimant's work performance, Claimant credibly and persuasively testified he kept busy and met performance standards to the best of his ability. To the extent re-work was required, the ALJ is persuaded the amount of re-work did not exceed the normal amount to be expected on any given job. Respondents failed to show by a preponderance of the evidence Claimant committed a volitional act or exercised some control over his termination under the totality of the circumstances.

Average Weekly Wage

Section 8-42-102(2) requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp.*, *supra*. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Campbell v. IBM Corp.*, *supra*.

As found, Claimant worked an average of 36 hours per week at \$30.85 per hour. An AWW of \$1,110.60 represents a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

1. Claimant proved by a preponderance of the evidence he sustained a compensable injury on May 20, 2019.
2. Respondents shall pay the costs of all reasonable, necessary and related medical treatment, including outstanding balances and reimbursement for expenses incurred in connection with the medical treatment of Drs. Fromcheck and Davis.
3. Respondents shall pay Claimant TTD benefits from August 19, 2019 to October 1, 2019. Claimant is not entitled to TTD benefits from June 4, 2019 to June 24, 2019.
4. Claimant's AWW is \$1,110.60.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: March 12, 2020

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the chiropractic treatment and massage therapy orders from Dr. Schneider on August 1, 2019 December 30, 2019 for ordering diagnoses of right shoulder pain and cervical radiculopathy are reasonable, necessary, and causally related to Claimant's July 22, 2003 work injury or the sequelae of the injury.

FINDINGS OF FACT

1. Claimant is a 61-year-old male who was employed by Employer as a network technician.

2. On July 22, 2003, Claimant sustained an admitted injury to his left ankle in the course and scope of his employment with Employer.

3. As a result of the admitted injury, Claimant underwent multiple surgeries including multiple attempts at ankle fusion. Claimant developed complications with infections and eventually had a below the knee amputation of his left leg on May 2, 2012.

4. Claimant has treated with multiple providers from the date of his injury in 2003 through the current date. Currently, David Schneider, M.D. is an authorized treating provider on his claim.

5. On February 13, 2013, Nicholas Olsen, D.O. performed an independent medical examination. Dr. Olsen reviewed significant medical records, performed an examination, and provided an assessment. The examination included obtaining a history of the initial work injury and of subsequent reported falls. Claimant reported in a subsequent fall he jammed his shoulder and Claimant reported pain in both shoulders from using crutches. The medical records reviewed showed that Claimant had reported bilateral shoulder pain especially since using crutches. However, a pain diagram Claimant filled out at that visit noted pain only in the left shoulder, right knee, and left lower extremity. See Exhibits 13, A.

6. Dr. Olsen also performed an independent medical examination on May 1, 2017. On that date, Claimant filled out a pain diagram noting pain in both shoulders, in his lower back, in his right knee, and in his left lower extremity. See Exhibit A.

7. On July 13, 2018, Claimant underwent a left shoulder replacement performed by Dr. Schneider. Following surgery, Claimant underwent physical therapy.

8. On June 19, 2019, Dr. Olsen performed an independent medical examination. Claimant reported right shoulder pain at an 8/10 increased with any motion of the right shoulder. Dr. Olsen noted that Claimant underwent a left shoulder reverse arthroplasty last fall that was quite successful. Dr. Olsen reviewed medications Claimant was taking. Dr. Olsen also reviewed past surgical history that included ten surgeries on the left ankle, left knee below knee amputation, right quadriceps tendon repair, left knee patellofemoral arthroplasty, and left shoulder reverse arthroplasty. Claimant reported anxiety, irritability, and depression and also reported a weight gain of 80 pounds. Claimant reported excessive fatigue and poor sleep with use of chronic pain medications. Claimant reported stress in his home life since he was not able to function as he once had. Claimant reported headaches twice per week and also reported tinnitus. Dr. Olsen reviewed medical records and performed a physical examination. Dr. Olsen ultimately opined that the need for right shoulder surgery was related to Claimant's end stage osteoarthritis and age related degenerative changes and was not related to Claimant's intermittent crutch use in the year 2013. See Exhibit 12.

9. On August 1, 2019, Dr. Schneider evaluated Claimant. Dr. Schneider referred Claimant to physical therapy 1 time per week for 6 weeks for chiropractic spine adjustment (no adjustment of the left shoulder) and noted in the order referral that the ordering diagnosis was pain in the right shoulder. He also indicated that the site was to be back, right shoulder, and neck massage. See Exhibits 14, B.

10. Respondents denied Dr. Schneider's August 1, 2019 referral and Claimant filed an Application for Hearing requesting authorization for the care in the referral. See Exhibit 1.

11. On October 29, 2019, ALJ Cannici issued an order finding that Claimant's request for a right total shoulder arthroplasty was not causally related to Claimant's July 22, 2003 industrial injury. ALJ Cannici found that the evidence did not support Claimant's contention that the use of crutches aggravated Claimant's right shoulder condition. ALJ Cannici found Dr. Olsen persuasive in opining that the use of crutches did not contribute or lead to the development of arthritis or the need for surgery. ALJ Cannici found that any temporary aggravation to Claimant's shoulder while using crutches in 2013 did not contribute to Claimant's need for surgery and that the need for surgery was due to end stage osteoarthritis familial and consistent with age related degenerative arthritis. See Exhibits 10, K.

12. On December 9, 2019, Nicholas Olsen, D.O. issued a letter to Respondents' counsel. Dr. Olsen reviewed information that Claimant had recently received a referral from his physicians for a chiropractic evaluation of neck pain and headaches. Dr. Olsen opined that Claimant had no indication of neck pain complaints or headaches when evaluated on February 13, 2013. Dr. Olsen noted that while Claimant had some reports of headaches up to two per week when Claimant was seen on June 19, 2019, it was clear that the headaches were not related to Claimant's work injury. Dr. Olsen opined that Claimants' complaints of neck pain and headaches were not claim related and should be treated outside of workers' compensation. See Exhibits 11, A.

13. On December 30, 2019, Dr. Schneider evaluated Claimant. Dr. Schneider referred Claimant for physical therapy two times per week for six weeks. Dr. Schneider noted in the order referral that the ordering diagnosis was cervical radiculopathy and that the surgery procedure was a left reverse total shoulder arthroplasty with strengthening of the shoulder girdle and lower cuff needed to compensate for irreparable superior cuff tear. Dr. Schneider noted that massage was okay. See Exhibit 14.

14. Claimant testified at hearing. Claimant reported that after his left total shoulder replacement and since 2016, he has had aching at the base of his neck. Claimant testified that the aching at the base of his neck did not exist prior to his left total shoulder replacement. Claimant testified that it had gotten worse and worse and that he had to go back to pain medications. Claimant testified that he wanted massage and chiropractic care.

15. Dr. Olsen also testified at hearing. Dr. Olsen testified that he had evaluated Claimant four times at independent medical examinations between February of 2013 and June of 2019. Dr. Olsen testified that he reviewed extensive medical records. Dr. Olsen noted that Claimant's left lower extremity, right knee, and left shoulder were all work related conditions related to his July 22, 2003 work injury but that Claimant's right shoulder was not a work related condition. Dr. Olsen testified that the medical records fail to demonstrate that Claimant has reported neck pain and he opined that there was no explanation of how neck pain would be related to the left shoulder. Dr. Olsen opined that treatment to the neck or for headaches was not due to Claimant's left shoulder surgery. Dr. Olsen noted that there was no neck pain reported before the left shoulder surgery nor were there neck complaints after the left shoulder surgery. However, despite this, Dr. Olsen testified that way after surgery and on August 1, 2019, there was an order for treatment to the neck and the right shoulder despite the right shoulder not being work related.

16. Dr. Olsen testified that trapezius tightness can be related to a shoulder issue and agreed that cervical symptoms could develop following a shoulder surgery. However, he testified that usually the symptoms would develop almost immediately following surgery and not 1.5 years later. Dr. Olsen testified and opined that cervical radiculopathy, listed as the ordering diagnosis in Dr. Schneider's December 30, 2019 order, was not work related or a sequelae of the left shoulder surgery. Dr. Olsen testified that symptoms would have presented within weeks of surgery if it were related and that it was probable that any cervical symptoms were due to genetics and age/time and not due to the left shoulder surgery. Dr. Olsen testified that Claimant's current complaints of cervical symptoms and headaches that would be addressed by the order of massage therapy and chiropractic treatment are not causally related to the work injury.

17. Dr. Olsen is found credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Claimant has failed to establish by a preponderance of the evidence that the care recommended by Dr. Schneider in the August 1, 2019 and December 30, 2019 orders is reasonable, necessary, and causally related to his work injury. As found above, the orders indicated ordering diagnoses of right shoulder pain and cervical radiculopathy. Claimant's right shoulder pain has been previously determined not related to his work injury. Dr. Olsen, in this case, is found persuasive that the cervical complaints also are not related to the work injury. Although Claimant testified that his left shoulder replacement performed on July 13, 2018 caused new tightness in his cervical spine and trapezius and caused headaches, this testimony is not found persuasive. Dr. Olsen testified credibly that the time period between the left shoulder surgery and the onset of cervical symptoms was too great for the symptoms to be related to the left shoulder surgery. Although it is possible for a left shoulder surgery to cause tightness in adjacent areas of the trapezius and cervical spine musculature, Dr. Olsen opined credibly and persuasively that in this case there is no causal connection. Claimant has failed to establish, more likely than not, that his July 2003 injury or the sequelae of the injury resulted in the cervical symptoms Claimant is now reporting. Dr. Olsen is credible and persuasive that Claimant's symptoms are due to age/genetics and not due to the left shoulder surgery. Thus, Claimant's request that Respondents authorize chiropractic care and massage therapy for any cervical symptoms and/or headaches is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that the chiropractic treatment and massage therapy orders from Dr. Schneider on August 1, 2019 and December 30, 2019 are reasonable, necessary, and causally related to Claimant's July 22, 2003 work injury or the sequelae of the injury. Claimant's request for massage and chiropractic treatment to his cervical area is denied and dismissed.
2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: March 12, 2020

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that on August 18, 2019 she suffered an injury arising out of and in the course and scope of her employment with the employer.
- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she has received to her right ankle is reasonable, necessary, and related to her work injury.
- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits for the period of August 19, 2019 through September 2, 2019.
- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary partial disability (TPD) benefits for the period of September 23, 2019 through September 30, 2019.
- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits beginning October 1, 2019, and ongoing.
- If the claimant proves a compensable injury, what is the claimant's average weekly wage?

FINDINGS OF FACT

1. The claimant was employed with the employer as a certified nursing assistant (CNA) and medication technician. The claimant's job duties included going into client homes and assisting with daily needs and administration of medications.

2. The claimant testified that on August 18, 2019, she was in a client's home performing cleaning duties. The claimant further testified that while walking from the living room to the bathroom, she tripped over the client's kitten. It was the claimant's testimony that this caused her right ankle to roll and she fell into the doors of the boiler room. On that same date, the claimant notified the employer of her tripping incident. She was directed to seek medical treatment at urgent care.

Medical records prior to August 18, 2019

3. Prior to the reported August 18, 2019 tripping incident, the claimant sought treatment for her right ankle.

4. On January 10, 2019, an x-ray of the claimant's right ankle showed mild degenerative changes, no soft tissue swelling, and no acute fracture. The reason for the x-ray is listed as "osteoarthritis involving multiple joints, [s]prain of right ankle, unspecified ligament".¹

5. On April 9, 2019, the claimant was seen at Marillac Clinic by Dr. Jeanne Haberer. On that date, the claimant reported pain in her right hip, right ankle, and lumbar spine. Following her exam of the claimant, Dr. Haberer noted some swelling in the claimant's right ankle. Dr. Haberer did not opine as to a specific diagnosis of the claimant's right ankle. However, she assessed "[o]ther osteoarthritis involving multiple joints" and recommended pain medications, including oxycodone-acetaminophen.

6. On April 22, 2019, the claimant returned to Marillac Clinic and was seen by Roseanna Jennings, NP. On that date, the claimant reported that she injured her right ankle a few days prior. Ms. Jennings recorded that the claimant's ankle "has been hurting for months and is now worse that she twisted it." On exam, Ms. Jennings noted mild swelling of the claimant's right ankle. Ms. Jennings diagnosed "acute on chronic ankle pain" and ordered x-rays of the claimant's right ankle.

7. The following day, April 23, 2019, the claimant sought treatment at the emergency department at St. Mary's Medical Center and was seen by Andrew Miller, PA-C. The claimant reported that she initially injured her right ankle one year prior and had been experiencing "persistent pain". The claimant also told Mr. Miller that x-rays of her right ankle showed arthritis. Mr. Miller recorded that the claimant had reinjured her right ankle two days prior, while fishing. Specifically, the claimant described sliding down the bank of a river. Mr. Miller noted right ankle swelling and ordered additional x-rays. These x-rays showed soft tissue swelling, and no evidence of an acute injury.

8. The claimant returned to Dr. Haberer the next day on April 24, 2019. The claimant reported the same fishing related mechanism of injury to her right ankle. On that date, the claimant reported pain in her right ankle into her right calf. Dr. Haberer recommended the use of a walking boot. In addition, Dr. Haberer determined that the claimant could return to work on April 27, 2019.

9. On June 12, 2019, the claimant returned to Dr. Haberer and reported improved ankle pain. However, on July 10, 2019, the claimant informed Dr. Haberer that she had persistent right ankle pain with intermittent numbness and tingling. On that date, the claimant requested a magnetic resonance image (MRI) of her right ankle and a referral to orthopedics. On exam, Dr. Haberer noted right ankle swelling. As requested by the claimant, Dr. Haberer ordered a right ankle MRI and made a referral to orthopedics.

10. On July 23, 2019, a right ankle MRI showed advanced degenerative joint disease (DJD), tendinopathy and partial thickness tearing of the posterior tibial tendon.

¹ The parties did not provide the ALJ with medical records prior to the January 10, 2019 x-ray report.

11. Thereafter on July 15, 2019, the claimant returned to Dr. Haberer for treatment of anxiety and depression. The claimant reported feeling “anxious, sad, tired” after the death of her dog and her ankle injury.

12. The claimant again sought treatment with Dr. Haberer on August 12, 2019. The claimant continued to report persistent ankle pain, and requested a refill for her Percocet. Dr. Haberer noted that the MRI showed arthritis in the claimant’s right ankle. As a result, Dr. Haberer recommended an injection to the claimant’s right ankle. However, she noted that the claimant did not have insurance and no injection was administered.

Medical records beginning August 18, 2019

13. The claimant’s first medical treatment after the August 18, 2019 incident was on that same day at Colorado Mesa University Community Care. On that date, the claimant was seen by Melissa Hein, PA-C. The claimant reported that she tripped over her client’s kitten and twisted her right ankle. The claimant also reported that she had “a torn ligament in her right ankle that she injured several months ago”. On exam, Ms. Hein noted swelling and tenderness of the claimant’s right ankle. Ms. Hein reviewed x-rays taken that day and read them as “negative”. She recommended that the claimant use her walking boot and over the counter pain medications.

14. On August 21, 2019, the claimant began treating with SMMG Occupational Health Center as her authorized treating provider (ATP). On that date, the claimant was seen by Dr. Craig Stagg. The claimant reported tripping over a kitten on August 18, 2019, inverting her right ankle. The claimant also reported that she had a prior injury to her right ankle while fishing “three or four months ago”. The claimant disclosed that x-rays and an MRI had been performed related to that prior incident. In addition, the claimant reported that she had been working full duty and her ankle had not been bothering her prior to August 18, 2018. Dr. Stagg recommended that the claimant use her CAM boot and limited her to sedentary work. In addition, Dr. Stagg recommended that the claimant see a foot and ankle specialist. Dr. Stagg indicated that he could not opine as to causation until he reviewed the claimant’s prior medical records.

15. On September 5, 2019, the claimant was seen at Western Orthopedics by Dr. Christopher Copeland. The claimant reported dull, aching pain, and swelling in her right ankle. An x-ray of the claimant’s right ankle was taken at that time and showed “significant pes planus”. Dr. Copeland reviewed that x-ray and the July 23, 2019 MRI and noted that the claimant had a posterior tibial tendon tear and ankle impingement syndrome. Dr. Copeland recommended the claimant pursue physical therapy, bracing, arch support, and pain medications. If surgery were pursued, Dr. Copeland recommended a stage two flat foot reconstruction. Dr. Copeland did not opine regarding causation.

16. On September 6, 2019, weight bearing x-rays of the claimant's right ankle showed abduction, pes planus with significant sagging of the talonavicular joint, and peri talar subluxation.

17. On September 9, 2019, the claimant returned to Dr. Stagg and reported right ankle pain. Dr. Stagg reiterated that he could not opine regarding causation until he reviewed the claimant's prior medical records.

18. On September 11, 2019, Dr. Haberer referred the claimant to Western Orthopedics. In the referral, Dr. Haberer noted that the claimant had persistent ankle pain and swelling for several months, and use of a brace for two months.

19. On September 19, 2019, the claimant was seen at Occupational Health Center by James Harkreader, NP. At that time, the claimant reported the same kitten related tripping incident. Mr. Harkreader recommended the continued use of the CAM boot. Mr. Harkreader also addressed the need review medical records before opining on causation.

20. There is an additional September 19, 2019 medical record authored by Mr. Harkreader following his review of the claimant's Marillac Clinic records. Mr. Harkreader opined that the August 18, 2019 tripping incident was not "due to [the claimant's] work." In support of this opinion, Mr. Harkreader noted that the claimant had an x-ray of her right ankle on January 10, 2019 that showed "mild soft tissue swelling, mild degenerative changes." He also referred to the April 23, 2019 right ankle x-ray that showed soft tissue swelling, as well as the July 2019 MRI that showed the partial tear of the posterior tibial tendon.

21. On October 3, 2019, the claimant returned to Mr. Harkreader and reported that prior to tripping on August 18, 2019, her right ankle was "at baseline". Mr. Harkreader reiterated his opinion that the claimant's right ankle symptoms were not work related. In addition, he noted that the claimant was at maximum medical improvement.

22. On October 8, 2019, the respondents filed a Notice of Contest of the claimant's claim. The reason for the contest was that the respondents believe that the claimant's injury is not work related.

23. The claimant testified that although she had prior right ankle issues, she was experiencing only "a little soreness" immediately prior to tripping over her client's kitten. In addition, she was working full-time and was "fine". The claimant described a change in her right ankle symptoms on August 18, 2019 that included increased pain and swelling. The ALJ does not find the claimant's testimony on this issue to be credible or persuasive.

24. The claimant testified that her current symptoms include right ankle pain, throbbing, and swelling.

25. Payroll records entered into evidence indicate that the claimant was paid two different rates; \$11.10 per hour and \$13.25 per hour. In addition, the payroll records show that the claimant was paid \$8,744.48 from January 1, 2019 through August 4, 2019. That is a 31-week period. When averaged² over 31 weeks, this equates to \$282.08.

26. The ALJ credits the medical records and the opinions of Mr. Harkreader and finds that the claimant has failed to demonstrate that it is more likely than not that she suffered a compensable work injury on August 18, 2019. The claimant's need for right ankle treatment (including surgery) is related to her prior and longstanding right ankle condition. The ALJ concludes that the August 18, 2019 kitten related incident did not aggravate, accelerate, or combine with the claimant's preexisting condition to necessitate treatment. On the contrary, the July 2019 MRI that showed the partial tear of the posterior tibial tendon, which was prior to August 18, 2019.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2018).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where

² The ALJ calculated \$8,744.48 divided by 31 is \$282.08.

the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory*, *supra*.

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that on August 18, 2019 she suffered an injury arising out of and in the course and scope of her employment with the employer. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the August 18, 2019 incident aggravated, accelerated, or combined with the claimant’s preexisting right ankle condition to necessitate treatment. As found, the medical records and the opinions of Mr. Harkreader are credible and persuasive.

ORDER

It is therefore ordered that the claimant’s claim for workers’ compensation benefits related to an August 18, 2019 date of injury is denied and dismissed.

Dated this 17th day of March 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove by a preponderance of the evidence a left total knee arthroplasty (TKA) is reasonably necessary and related to his admitted industrial injury?

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his left knee on May 2, 2018, while working for Employer as a building maintenance technician. He was walking up an incline and felt a painful pop in his left knee when he took a step.

2. Claimant had a history of left knee problems and treatment before the work accident. In 1996, he tore his ACL and MCL in a skiing accident. He underwent ACL/MCL reconstruction surgery and ultimately returned to work without restrictions. He resumed skiing, but wore a knee brace when doing so. He eventually stopped using the brace because he grew out of it. There is no persuasive evidence of any treatment for the left knee until after the May 2, 2018 work accident.

3. Claimant worked for several employers from 1996 until he started working for Employer in June 2017. All of his jobs were relatively demanding, including road maintenance, concrete work, and garbage disposal. There is no persuasive evidence Claimant's left knee interfered with his ability to perform any work tasks before May 2018.

4. Claimant injured his right knee on February 1, 2016 while working for a garbage disposal company. Two treatment records from that claim refer to the left knee. An April 1, 2016 note from CCOM stated, "he has had issues with his other [left] knee from skiing, but has not skied in 2 years." The ALJ infers the provider was referring to the original 1996 skiing injury. Claimant disputed the statement he had not skied in two years, estimating he skied four or five times in the two years before the February 2016 accident. There is no persuasive evidence to contradict Claimant's testimony in this regard. The other record is an April 18, 2016 note from Dr. Peter Janes, in the context of a surgical consultation for the right knee, noting mild effusion in the left knee and "limitation of termination flexion."

5. After the May 2, 2018 work accident, Claimant was evaluated at Arapahoe Peak Health Center on May 11, 2018. He was put on work restrictions and referred for an MRI.

6. Respondents initially denied liability for Claimant's May 2, 2018 injury, but covered conservative treatment despite the denial. Employer eventually terminated Claimant's employment because it could not accommodate his restrictions.

7. Claimant underwent a left knee MRI on May 23, 2018. The significant findings included: (1) mild diminution and fraying of the medial meniscus, (2) mild to severe multi-compartmental articular cartilage degeneration, (3) thickening and edema of the medial collateral ligament suggesting a grade 2 MCL sprain, and (4) moderate knee joint effusion.

8. Claimant had a surgical evaluation with Dr. Mitchell Seemann on August 1, 2018. Dr. Seeman discussed options of aspiration and cortisone injections versus arthroscopic surgery. Claimant was eager for a definitive solution because he was out of work and needed to find another job as soon as possible. Dr. Seeman recommended arthroscopic chondroplasty and partial meniscectomy.

9. Claimant saw Dr. Kevin Nagamani, an orthopedic surgeon, for an IME at Respondents' request on October 12, 2018. Claimant denied ongoing problems with the left knee after recovering from the ACL reconstruction in 1996; he hiked and mountain biked without difficulty before the work injury. Dr. Nagamani concluded the May 2, 2018 work accident aggravated Claimant's pre-existing arthritis. He thought the described mechanism of injury was sufficient to cause Claimant's symptoms, noting, "It is certainly possible that walking on an incline could have caused an awkward step that would have exacerbated or irritated arthritis within his knee." Dr. Nagamani opined, "treatment for arthritis exacerbation is reasonable," and should include anti-inflammatory medications, rest, ice, and physical therapy. The next steps would be a cortisone injection and possibly viscosupplementation injections. He thought surgery would not likely help because the meniscus tear appeared "very minimal" and the underlying arthritis was "significant." He opined arthroscopy could be a reasonable consideration if conservative treatment failed.

10. Respondents filed a General Admission of Liability on November 5, 2018 after receiving Dr. Nagamani's report. Respondents also authorized the surgery recommended by Dr. Seemann.

11. Dr. Seemann performed arthroscopic left knee surgery on December 5, 2018. His significant intraoperative findings included a complex tear of the posterior horn of the medial meniscus and a radial posterior root tear. Dr. Seemann excised approximately 50% of the posterior horn of the medial meniscus and performed chondroplasty in multiple areas.

12. Claimant did not respond well to the surgery. He remained symptomatic despite attended multiple post-surgery therapy sessions, aspiration, and injections. He continued to have difficulty walking and fell at least once because his knee gave out. On March 12, 2019, Dr. Seemann noted,

[Claimant] is now three months status post a left knee arthroscopy, partial medial and lateral meniscectomy, and chondroplasty. He was having some difficulty with pain and swelling, so he of actually aspirated his knee and did two cortisone shots. He kind of backed off on his physical therapy, but he is still in a position where he is unable to work I am not sure I can explain the persistent pain and swelling that he has which were clearly evident on

exam. We have discussed a different [avenues] with which to address this further, but in the end I think the most direct way is just to stick a scope in there to do a repeat arthroscopy to assess what may be causing his persistent swelling. From time to time we have seen articular cartilage break off . . . I think at this point in time, it is the only thing I could offer.

13. On April 10, 2019, Dr. Seemann performed a second arthroscopic surgery. He performed a synovectomy to address “thick” synovium in the anterior interval, trimmed the medial meniscus, debrided an unstable root of the lateral meniscus that was pinched between the femur and tibia, and smoothed the articular cartilage on the patella and trochlear groove.

14. The second surgery was not helpful, and Dr. Seemann referred Claimant to Dr. Peter Lammens for consideration of an arthroplasty.

15. Claimant saw Dr. Lammens on July 17, 2019. He described persistent and progressive left knee pain, exacerbated by standing, walking, and prolonged activity. X-rays showed grade 4 narrowing of the medial compartment with bone-on-bone contact. Dr. Lammens recommended a left total knee arthroplasty (TKA) to address “end-stage bone-on-bone osteoarthritis.”

16. Claimant saw Dr. Timothy O’Brien on August 23, 2019 for an IME at Respondents’ request. Dr. O’Brien opined Claimant’s ongoing left knee symptoms were not work-related and merely reflected the natural progression of his pre-existing degenerative arthritis. Dr. O’Brien opined the left knee pop was not evidence of an injury, and Claimant sustained no injury at work on May 2, 2018. He opined the MRI showed only pre-existing osteoarthritis related to the ACL reconstruction in 1990s, but no acute injury. Dr. O’Brien opined Dr. Seemann should not have performed the two arthroscopies:

Orthopedic surgeons frequently bill these surgeries as minimally invasive but nothing could be further from the truth. The surgeries are significantly traumatic especially when they are performed within the backdrop of osteoarthritis. The surgical trauma only serves to create an intractable synovitis due to the wakening of quiescent areas of chondromalacia and in so doing knee pain is made worse and the arthritic condition progresses.

17. Dr. O’Brien agreed a TKA is reasonable but not related to Claimant’s work.

18. Dr. O’Brien testified the arthroscopic surgeries performed by Dr. Seemann traumatized Claimant’s arthritic knee, so he is not surprised Claimant got worse instead of better. He noted the relatively rapid progression of between the first and second surgery, and opined the surgery aggravated and accelerated the underlying arthritis, which, in turn, is now driving Claimant’s need for the knee replacement.

19. Dr. Nagamani’s opinion Claimant aggravated his pre-existing knee arthritis while working on May 2, 2018 is credible and persuasive.

20. The arthroscopic surgeries performed by Dr. Seemann to treat Claimant's compensable injury were reasonably necessary based on the circumstances and information available at the time.

21. The ALJ credits Dr. O'Brien's opinion the arthroscopic surgeries aggravated and accelerated Claimant's underlying arthritis, which ultimately caused the current need for a TKA.

22. Claimant proved the left TKA proposed by Dr. Lammens is reasonably necessary to cure and relieve the effects of his compensable injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability for an accident, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravated, accelerated, or combined with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

Injuries suffered while pursuing authorized treatment for a compensable injury are compensable consequences of the original injury under the "quasi-course of employment" doctrine. *Travelers Insurance Company v. Savio*, 706 P.2d 1258 (Colo. 1985); *Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo. App. 1993). But the mere fact medical treatment was authorized and provided in a workers' compensation claim does not automatically mean all consequences of that treatment are compensable if the evidence shows the original injury was not work-related. *Gordon v. Ross Stores, Inc.*, W.C. No. 4-878-759-05 (February 5, 2015) (CRPS caused by authorized carpal tunnel surgery no longer a compensable consequence after respondents were allowed to withdraw their GAL).

As found, Claimant proved the left TKA proposed by Dr. Lammens is reasonably necessary to cure and relieve the effects of his compensable injury. Everyone agrees a

TKA is reasonable, and the primary dispute relates to causation. Dr. Nagamani's opinion Claimant aggravated his pre-existing knee arthritis at work on May 2, 2018 is persuasive and consistent with other evidence of record. Claimant had significant pre-existing degenerative arthritis in his knee, but it was asymptomatic or minimally symptomatic before the work injury, and caused no functional limitations or need for treatment. After recovering from the ACL reconstruction in 1996, Claimant worked physically demanding jobs and sought no treatment relating to his left knee for over twenty years. He also enjoyed recreational activities such as skiing, hiking, and mountain biking. Although the two surgeries performed by Dr. Seeman ultimately failed, they were reasonable at the time based on the available information. Dr. Seemann was not particularly enthusiastic about either surgery, but he thought surgery was the only remaining option with a reasonable chance of improving Claimant's symptoms and allowing him to return to work. Dr. O'Brien opinion the surgeries aggravated and accelerated Claimant's pre-existing arthritic changes is persuasive, and supported by the rapid progression of degeneration between the first and second surgery.

ORDER

It is therefore ordered that:

1. Insurer shall cover the left total knee arthroplasty recommended by Dr. Lammens.
2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-975-232-002**

ISSUE

Claimant's request for reimbursement of medical costs related to right knee treatment.

FINDINGS OF FACT

1. Claimant filed an application for hearing dated October 23, 2019 endorsing the issues of medical benefits and petition to reopen claim. The medical benefits request pertains to a right knee surgery that occurred on September 6, 2019 and follow-up treatment.

2. At hearing, the parties submitted exhibits and stipulated on the record that Claimant paid out-of-pocket medical costs for her right knee surgery. The parties agreed to a reimbursement amount of \$6,911.15.

3. Respondent will reimburse Claimant the amount of \$6,911.15. The preceding amount fully resolves all out-of-pocket medical costs associated with the September 6, 2019 surgery and subsequent rehabilitation.

CONCLUSIONS OF LAW

Instead of an order reopening the matter, the parties agreed that Respondent will file a Final Admission of Liability (FAL) reflecting the additional \$6,911.15 in the column noted "medical to date." This will be the only change on the most recent FAL filed on November 10, 2016.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent will reimburse Claimant the amount of \$6,911.15 for out-of-pocket medical costs for her September 6, 2019 right knee surgery and associated treatment.

2. Respondent will file a FAL reflecting the additional \$6,911.15 in the column noted "medical to date." This will be the only change on the November 10, 2016 FAL.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as

long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-061-617-002**

ISSUES

- Did Claimant prove by a preponderance of the evidence the average weekly wage (AWW) should be increased to account for tips she received in concurrent employment?
- If so, what is the new AWW?

STIPULATIONS

1. The parties stipulated the admitted AWW of \$347.47 accurately reflects Claimant's wages while working for Employer.
2. Respondents agree Claimant's AWW should be increased based on concurrent wages from the Magnolia Hotel, but dispute that tips should be included.

FINDINGS OF FACT

1. Claimant suffered an admitted injury on October 9, 2017 while working for Employer.
2. At the time of the injury, Claimant was concurrently employed at the Magnolia Hotel. She worked two different jobs at the Magnolia: room service and banquets. Claimant was paid \$15.00 per hour when she worked banquets. When working room service, she was paid \$9.30 per hour plus gratuity and tips. An automatic "gratuity" of 24% was added to every room service order and was automatically applied to Claimant's wages. If a guest wanted to add an additional tip to the room service order, it was added as a credit card tip and automatically included in Claimant's paycheck.
3. Claimant occasionally received cash tips. She did not record or report cash tips and paid no taxes on them.
4. The Magnolia Hotel withheld income and FICA taxes from Claimant's wages, including the gratuities and tips.
5. The Magnolia Hotel filed a 2017 Form W-2 reflecting Claimant's earnings and withholdings for the year.
6. Claimant neglected to file a timely Federal income tax return for 2017. She filed a 2017 Form 1040EZ on December 10, 2019.
7. Respondents admitted an AWW of \$347.47, based solely on Claimant's earnings from Employer.

8. Claimant was put at MMI on October 5, 2018, with an 11% whole person impairment rating. Respondents filed a Final Admission of Liability (FAL) on October 11, 2018. The FAL admitting \$1,526.07 of TPD benefits between October 23, 2017 and April 1, 2018, with a weekly rate of "VARIED." The FAL admitted for \$11,211.86 in PPD benefits.

9. Claimant proved her AWW should be adjusted to include wages from concurrent employment at the Magnolia Hotel, including gratuity and tips.

10. The 36 weeks before the date of injury are fairly representative of Claimant's typical earnings at the Magnolia Hotel. Claimant's AWW from concurrent employment is \$449.77 ($\$16,191.65 \div 36 = \449.77).

11. Claimant's combined AWW is \$797.24 ($\$347.47 + \$449.77 = \797.24).

12. The admitted 11% whole person rating is worth \$25,724.12 based on the combined AWW ($400 \text{ weeks} \times \$531.49 \times 1.1 \times 0.11 = \$25,724.12$).

CONCLUSIONS OF LAW

Section 8-42-102(2) provides compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). If a claimant was concurrently employed at the time of the accident, "the ALJ may, in order to achieve fairness, include all such wages in the computation of average weekly wage." *Broadmoor Hotel v. Industrial Claim Appeals Office*, 939 P.2d 460, 461 (Colo. App. 1996); see also *St. Mary's Church & Mission v. Industrial Commission*, 735 P.2d 902 (Colo. App. 1986). There is no *ipso facto* rule that the AWW must invariably include wages from concurrent employment, and the ALJ should consider the specific factors in each case. *Jefferson County Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

A. Should Claimant's AWW include tips and gratuities?

Under § 8-40-201(19)(b), the term "wages" includes "gratuities reported to the federal internal revenue service by or for the worker for purposes of filing income tax returns." The ICAO has repeatedly held that,

[T]he plain and ordinary meaning of the statute is that gratuities which the claimant receives in the course of employment may be considered in calculating the AWW, but only if those gratuities were reported to the IRS by the claimant, or by some other party (such as the employer) on behalf of the claimant. . . . [T]he apparent purpose of the requirements that tips be reported to the IRS is to discourage fraud by requiring reliable documentary

evidence tending to corroborate the claimant's testimony concerning the amount of the tips received.

Measho v. Brown Palace Hotel, W.C. No. 4-452-636 (June 14, 2001).

Despite acknowledging that the Magnolia Hotel filed a Form W-2 reflecting Claimant's 2017 earnings, including her tips, Respondents focus on two provisions of § 201(19)(b) to argue the tips should not be included here. First, Respondents note that the tips must be "reported to the [IRS]." Because Form W-2 is sent to the Social Security Administration instead of the IRS, Respondents argue a W-2 does not satisfy the requirement of the statute. But Respondents' argument misapprehends the interplay between the SSA and the IRS in the wage reporting process, because the SSA receives and processes wage data behalf of the IRS. 20 C.F.R. §422.114(a) provides,

SSA and IRS have entered into an agreement that sets forth the manner by which SSA and IRS will ensure that the processing of employee wage reports is effective and efficient. Under this agreement, employers are instructed by IRS to file annual wage reports with SSA on [Forms W-2 and W-3] SSA processes all wage reporting forms for updating to SSA's earnings records *and IRS tax records* (Emphasis added).

The cited regulation also describes the agencies' joint roles in identifying and reconciling discrepancies between Forms W-2/W-3 and other withholding tax forms filed by employers during the year (such as Form 941 – Employer's Quarterly Federal Tax Return). The ALJ concludes tips shown on a W-2 are "reported to the IRS."

Second, Respondents point to the phrase "for purposes of filing income tax returns," and argue that only those tips reported on an income tax return can be included in a claimant's AWW. Neither party has cited a case addressing this argument, but the ALJ is not persuaded, for several reasons. First, the completion and filing of W-2 forms by employers is intimately tied to the filing of income tax returns by individuals.¹ Taxpayers are required to report wages and withholding as reported on W-2 forms filed by the employer.

As Claimant notes, if a tax return were the only way to prove gratuities and tips for AWW purposes, an injured worker who earns tips would have to forego benefits until the tax return is filed regardless of the information on his or her pay stubs or a W-2. Furthermore, many workers never file a tax return because their total wages are below the threshold for filing a return.² Under Respondents' theory, those claimants could never

¹ Tax Topic No. 154 advises taxpayers, "If your form W-2 . . . [is not] available to you by January 31, 2020, or if your information is incorrect on these forms, **contact your employer/payor**. If you still having received the missing or corrected form by the end of February, you may call the IRS [] for assistance. . . . The IRS will contact the employer/payor for you and request the missing or corrected form. . . . If you don't receive the missing or corrected form in sufficient time to file your tax return, you may use Form 4852 to complete your return. You'll estimate your wages or payments made to you and taxes withheld on Form 4852." (Bolding in original).

² The current gross income thresholds can be found in IRS Publication 501, Dependents, Standard Deduction, and Filing Information (2019), at p.2.

have tips included in their AWW. There is no persuasive reason to believe the General Assembly intended to exclude workers in those circumstances were, as here, the tips were reported on Form W-2 by the employer.

All the income Claimant seeks to include in her AWW was subject to withholding and reported on Form W-2, including tips and gratuities. Thus, her earnings from the Magnolia Hotel earnings satisfy the requirements of the statute, and Claimant's failure to file a tax return is immaterial.

B. *What is the proper AWW?*

As found, Claimant's AWW from concurrent employment at the Magnolia Hotel is \$449.77. Her weekly earnings at the Magnolia Hotel varied fairly significantly, from a high of \$742.43 to a low of \$108.86. It is reasonable to average her earnings over a relatively long period of time to fairly account for that variability.

ORDER

It is therefore ordered that:

1. Claimant's AWW is \$797.24, including wages from concurrent employment.
2. Insurer shall pay Claimant \$25,724.12 in permanent partial disability benefits for an 11% whole person impairment based on an AWW of \$797.24. Insurer may take credit for PPD benefits previously paid in connection with this claim.
3. Insurer shall recalculate the admitted temporary partial benefits based on an AWW of \$797.24.
4. Insurer shall pay Claimant the difference between the admitted temporary partial disability benefits and the recalculated benefits within 30 days of this order.
5. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: March 20, 2020

s/Patrick C.H. Spencer II

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Respondents prove they are entitled to withdraw their admission of liability for medical benefits after MMI?
- Did Claimant prove lumbar epidural steroid injections (ESIs) recommended by Dr. Lee are reasonably necessary and causally related to the industrial injury?

FINDINGS OF FACT

1. Claimant suffered admitted injuries on October 9, 2015 while working as an automobile service technician. He was opening Employer's shop in the morning when he was startled by cats and fell backwards over a stack of tires. He landed on the right side of his body. He felt immediate pain in his neck, right shoulder, and low back.

2. PA-C Tim Bewley at High Planes Community Health Center served as Claimant's primary ATP. Mr. Bewley is also Claimant's primary care provider.

3. Mr. Bewley referred Claimant for lumbar and cervical MRIs, which were completed on November 2 and November 3, 2015, respectively. The lumbar MRI showed multilevel degenerative disc disease, multilevel foraminal stenosis, grade 1 anterior spondylolisthesis of L3 on L4, a posterior annular bulge with tear at L4-5, and a posterior midline disc extrusion at L5-S1. The cervical MRI showed multilevel degenerative changes, including disc herniations and bulges. Multiple physicians have reviewed the MRIs during this claim and agree the demonstrated spinal pathology is degenerative in nature, with no acute findings.

4. Claimant had a surgical consultation with Dr. Roger Sung on November 19, 2015. Dr. Sung determined Claimant was not a surgical candidate because most of his pain was in his low back, with no neurological deficits. Dr. Sung recommended physical therapy and possible injections if the pain did not improve.

5. On November 24, 2015, Claimant's physical therapist reported, "The patient does have a history of chronic back pain but states that he was functioning well and doing okay at work without pain med intervention when this happened" The therapist assessed cervical and lumbar DJD "with recent exacerbation at work."

6. Claimant returned to unrestricted work on December 21, 2015.

7. Claimant completed physical therapy by January 4, 2016. The discharged report documented Claimant felt nearly back to his previous level of function.

8. Claimant followed up with Mr. Bewley on January 19, 2016. He had returned to work and "having some good days and bad days." He was still having 6-7/10 back pain

at night, but Vicodin helped “a great deal and he is able to sleep well.” He was also taking Naprosyn and gabapentin. Mr. Bewley renewed Claimant’s prescriptions.

9. On April 8, 2016, Mr. Bewley wrote to the claims adjuster and opined, “I believe [Claimant] has reached MMI as of my last exam date. He did have some pre-existing neck and back problems but in terms of his acute injury there will be no impairment rating. He may need PT in the future to manage his chronic musculoskeletal condition and should stay on NSAIDs long-term with monitoring.”

10. Claimant attended an IME with Dr. Gwendolyn Henke at Respondents’ request on August 21, 2016. Dr. Henke diagnosed lumbar, cervical and right shoulder strains related to the work accident. She opined the accident temporarily exacerbated Claimant’s underlying degenerative conditions but agreed with Mr. Bewley Claimant reached MMI with no impairment on January 19, 2016. She opined the work-related strains resolved and Claimant’s residual symptoms were related to his chronic, preexisting conditions.

11. Claimant had a DIME with Dr. Michael Janssen on August 23, 2016. Dr. Janssen determined Claimant was at MMI as of the date of the DIME, with a 19% whole person rating. The rating was based on 7% for the cervical spine and 13% for the lumbar spine. The lumbar spine rating included 7% under Table 53(II)(c) for six months of medically documented pain and rigidity associated with *moderate to severe* degenerative changes.

12. Dr. Janssen issued an addendum report on October 24, 2016 after reviewing Dr. Henke’s report. He saw no reason to change any of his conclusions.

13. Respondents requested a hearing to challenge Dr. Janssen’s DIME rating. A hearing was held before ALJ Felter on January 24, 2017. Respondents stipulated to an admission for reasonably necessary and related medical benefits after MMI, and the parties sole issue for hearing was overcoming Dr. Janssen’s rating. In an Order dated February 14, 2017, Judge Felter determined Respondents failed to overcome the DIME by clear and convincing evidence. Judge Felter found Claimant’s preexisting degenerative changes in his neck and low back were “incipient” and “non-disabling” before being aggravated by the work accident. Judge Felter concluded Dr. Henke’s causation opinions reflected “a mere difference of opinion” and were insufficient to overcome Dr. Janssen’s rating by clear and convincing evidence.

14. Respondents filed a FAL on March 23, 2017 based on Judge Felter’s order. The FAL admitted for “authorized medical benefits to maintain MMI.”

15. Claimant’s back symptoms steadily worsened starting in the Fall of 2017.

16. In September 2017, Claimant reported ‘now having more pain generally.’

17. Claimant saw Mr. Bewley on October 26, 2017 after having back spasms for two days. Mr. Bewley noted,

[H]is back pain . . . seems to be worse than usual especially the low back, now he's having a lot of shoulder pain. In terms of medication is really on the maximum amount of meds he can take. He does still work as a mechanic and with his musculoskeletal issues this keeps his pain active. He also has to stand on concrete for extended period of time each day which [is making] the back pain worse. At this point he has no other option in terms of his job. He seems to be having more trouble getting through the day without a great deal of pain.

18. On April 11, 2018, Mr. Bewley noted Claimant was "still working at the garage and has to stand for prolonged periods on a concrete [floor]." Claimant's had recently driven to Texas to visit his daughter, which severely aggravated his back for several days. Mr. Bewley wrote, "Patient continues to have the same cycle of pain primarily seems to be a related to the prolonged standing and working []. His medications take the edge off, but the pain is still impacting his wife a great deal. We had a discussion again today as we have in the past about possibly finding a different way to make a living that wasn't so hard on his back. . . . [A]s long as this continues, I'm concerned that he'll continue to have a functional decline and he should strongly consider a different [v]ocation."

19. On April 24, 2018, Mr. Bewley reported, "[Claimant]'s having a great deal more low back pain in the last month. He has been to a chiropractor 6 times in the last month. Pt. is at a 10 most of the day unless he can sit down or lay down. He is using ice on a regular basis. Now having pain shooting down the L leg and falling asleep with numbness down to toes." Mr. Bewley increased Claimant Norco dosage.

20. In approximately June 2018, Mr. Bewley added MS Contin to augment the Norco.

21. Claimant started physical therapy on July 5, 2018. He told the therapist "his back pain has become particularly severe over the course of the last couple months." Claimant had purchased an inversion table and a new mattress in hopes of finding some relief for his low back pain. The therapist noted, "his work as a mechanic requires him to intermittently lift very heavy loads and to spend most of his day in a flexed position in the lumbar spine." The therapist documented 3-/5 strength in the bilateral lower extremities. The therapist thought Claimant's symptoms were consistent with a herniated lumbar disc.

22. The therapist terminated PT on July 23, 2018 because Claimant was not responding. He noted, "[Claimant] has persistent radiculopathy in his lower extremities and pain that prevents him from conducting many typical daily activities. . . . I recommend that he receive an MRI to diagnose disc pathology and a referral to a spine specialist for higher level of care."

23. On July 25, 2018, Mr. Bewley again increased the dosage of narcotics and referred Claimant to Dr. Larry Lee, a surgeon.

24. Dr. Lee evaluated Claimant on August 30, 2018. Claimant reported 9/10 low back radiating into his left leg and making his foot go numb. The pain was interfering with Claimant's ability to do his job. He told Dr. Lee the symptoms were "very consistent with the type and distribution of pain he has had for the last three years." That history is not accurate, because left foot numbness was not documented until April 2018. Dr. Lee's physical examination demonstrated loss of strength (4+/5) in the left S1 myotomal distribution, which was also a new finding.¹ Straight leg raise was positive on the left.² Dr. Lee opined Claimant's symptoms were consistent with radiculopathy from a left L5-S1 herniated disc. He requested an updated lumbar MRI and ordered an L5-S1 ESI. Dr. Lee's evaluation was the first physician exam since the October 2015 injury documenting clinical neurological signs consistent with lower extremity radiculopathy.

25. The repeat lumbar MRI was completed on August 20, 2019. The radiologist interpreted multilevel degenerative changes, "not significantly changed compared to the prior exam from 2015."

26. Claimant followed up with Dr. Lee on September 20, 2019 to review the MRI. Dr. Lee personally reviewed the images and disagreed with the radiologist's interpretation. Specifically, he saw "more spondylosis at the L4-5 level especially in facet fluid versus 4 years ago. This is suspicious for a mobile L4-5. This is not apparent on the imaging in 2015."

27. Dr. Lee referred Claimant to Dr. Finn, and Dr. Finn's office requested authorization for an L4-5 ESI. Respondents denied the procedure.

28. Flexion-extension x-rays taken on December 2, 2019 showed 1.2 cm anterolisthesis with flexion and 8 mm with extension at L4-5. Dr. Lee opined,

While the spine MRI did not show spondylolisthesis, the fact that he slips 1.2 cm on standing films places him firmly in the unstable spondylolisthesis category. This is what we suspected at the last visit. As a result, I would recommend the same plan as previously stated.

Exam and symptoms . . . are consistent with a L4-5 spondylolisthesis leading to compression of the left L4 nerve root. . . . As the symptoms do include weakness, I would recommend a more aggressive conservative approach.

29. Dr. Jeffrey Wunder conducted an IME and a record review for Respondents in 2019. Dr. Wunder opined none of Claimant's current symptoms are causally related to his October 2015 work accident.

30. Respondents proved treatment for Claimant's low back is no longer causally related to the October 2015 injuries. The treatment now recommended by Dr. Lee is aimed at radiculopathy and unstable spondylolisthesis, neither of which were caused or

¹ Dr. Janssen found normal strength throughout both legs. Dr. Sung also found normal strength.

² SLR was negative bilaterally at Dr. Janssen's examination.

aggravated by the accident. The worsening of Claimant's condition since 2017 reflects the natural progression of his underlying degenerative conditions without contribution from the work accident.

31. Claimant continues to periodically complain of neck and right shoulder symptoms, but there is no persuasive evidence any provider is recommending specific treatment for his neck or shoulder. Mr. Bewley has focused on Claimant's lumbar spine for at least the last two years. Dr. Lee recommended treatment for Claimant's low back only. Any ongoing right shoulder or neck symptoms are related to underlying degenerative conditions and Claimant's personal health status. Respondent proved Claimant requires no further treatment for his neck or right shoulder in relation to his industrial injuries.

CONCLUSIONS OF LAW

Respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the industrial injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond maximum medical improvement (MMI) if the claimant requires periodic maintenance care to prevent further deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An injury need not be the sole cause of a claimant's need for treatment so long as there is a "direct causal relationship" to the industrial accident. *Seifreid v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1996); *Munoz v. JBS Swift & Co. USA, LLC*, W.C. No. 4-780-871-03 (October 7, 2014).

Even where the respondents admit liability for medical benefits after MMI, they retain the right to challenge the compensability and reasonable necessity of specific treatment. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003). Ordinarily, the claimant must prove by a preponderance of the evidence that an injury directly and proximately caused the condition for which he seeks benefits, and that the requested treatment is reasonably necessary. *Walmart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). But § 8-43-201(1) was amended in 2009 to place the burden of proof on the party seeking to modify an issue determined by an admission or order. If the effect of the respondents' challenge to medical treatment is to terminate all previously admitted maintenance benefits, the respondents must prove no further treatment is reasonable, necessary or related to the injury. *Salisbury v. Prowers County School District RE2*, W.C. No. 7-702-144 (June 5, 2013); *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (October 1, 2013). The fact a claimant received a DIME rating for a particular diagnosis or body part does not bind the ALJ when considering relatedness of medical treatment after MMI. *Yeutter v. CBW Automation, Inc.*, W.C. No. 4-895-940-03 (February 26, 2018).

As found, Respondents proved there is no causal connection between any ongoing need for treatment and the 2015 admitted injury. The work accident caused no structural damage to Claimant's spine, and his injuries were limited to strains and a purely symptomatic aggravation of his preexisting conditions. He reasonably required treatment,

which satisfied the threshold criteria for a compensable claim. The pain and rigidity persisted for more than six months, which entitled him to a rating and PPD award. Claimant's condition has worsened since the FAL was filed in March 2017. His pain level has been consistently higher, and he started exhibiting clinical findings consistent with radiculopathy. Dr. Lee persuasively explained the spondylolisthesis at L4-5 has progressed since the 2015 MRI, with current findings suggestive of instability. The treatment recommended by Dr. Lee is directed to spinal pathology unrelated to the work accident. Similarly, the medications being prescribed by Mr. Bewley are for symptoms related to nonwork-related conditions. Claimant's current symptoms represent the natural progression of his underlying degenerative conditions, with probably at least some contribution from his continued heavy work as an automobile mechanic (for other employers). None of his current symptoms are proximately caused by the October 2015 work accident.

ORDER

It is therefore ordered that:

1. Respondents' request to withdraw their admission of liability for medical benefits after MMI is granted.
2. Claimant's claim for further medical benefits related to the October 9, 2015 accident is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: March 31, 2020

Administrative Law Judge
Office of Administrative Courts

ISSUES

- I. Have Respondents shown, by a preponderance of the evidence, that Claimant is barred, by issue preclusion, from relitigating the issues of reasonable, necessary, and related medical benefits for his cervical and lumbar spine?
- II. Have Respondents shown, by a preponderance of the evidence, that Claimant's 2018 lumbar and cervical surgeries served as intervening events, thereby severing Respondents from further liability for the medical treatment being requested by Claimant?
- III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to a general award of medical benefits for his neck and back injuries?
- IV. Has Claimant shown, by a preponderance of the evidence, that he is entitled to specific medical benefits as being reasonable, necessary, and related to his 4/13/2018 work injury, to wit: Brain MRI as recommended by Dr. Schalin; Physical Therapy as recommended by Drs. Stanton and Schalin; Neck and Back Treatment recommended by Dr. Stanton (not to include surgeries as already performed); Lumbar MRI as recommended by Dr. Stanton; Treatment with Dr. Malinky as referred by Dr. Schalin?

ADMINISTRATIVE NOTICE

On February 26, 2019, a hearing was held in WC 5-078-097-003 before the undersigned ALJ on the issues of the reasonableness, relatedness, and necessity of 1) cervical spine surgery as performed by Dr. Stanton on 7/30/2018, and 2) lumbar surgery as performed by Dr. Stanton on 12/12/2018. On April 16, 2019, this ALJ issued an Order *denying* the relief sought by Claimant. As noted by the parties, the Order was not appealed, and that Order is now final.

On May 22, 2019, a hearing was held in WC 5-078-097-004 before ALJ Patrick Spencer on the on the issue of whether the orthopedic evaluation by Dr. Simpson for Claimant's right knee was causally related to the April, 2018 work accident. On June 11, 2019, ALJ Spencer issued an Order *granting* the relief sought by Claimant, in this case the orthopedic evaluation of his right knee by Dr. Simpson.

The undersigned ALJ takes administrative notice of both Orders (Ex. B, Ex. C), and incorporates by reference all Findings of Fact and Conclusions of Law issued in connection therewith, and will not repeat those here, except as noted.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's February 11, 2020 Hearing Testimony

1. Claimant testified at hearing. He described the weather conditions, and slip and fall injury, detailing which body parts were injured. He described injuring his "head, neck, my hips, my right leg, knee, foot, then then my right elbow."
2. Claimant also described details of the mechanism of injury, treatment history, and return to work for his prior, 2009 work-related injury. Similarly, Claimant was able to recall and testify to the details of a 2006 work-related injury, treatment, and return to work. Claimant testified, in detail, to his history of pain medications and ongoing back pain.
3. However, on cross-examination, Claimant was unable to recall anything about the 29% whole person impairment rating he received through a workers' compensation claim in 2010.
4. On direct examination, Claimant testified that he felt like he broke something in his neck and low back during his slip and fall accident. On cross-examination, Claimant again testified that he hit his head during the slip-and-fall accident. Claimant also testified that his initial treating providers did not list everything that he asked them and that they did not document everything the way it should have been.
5. The medical records do not reflect any report of head or neck injury, either in the initial report to the employer or in initial treatment to any treating physician. (Ex. B, pp. 4-5).
6. Claimant testified he continues to experience symptoms related to his neck injury that include numbness in hands and forearms, weakness in his arms and hands, and neck pain. And his current low back symptoms include "out of control pain" that radiates into his legs. He explained the pain is different than that he experienced prior to the injury; the pain back then was "a little nagging numbness from overworking my back" but now it is "chronic" and feels like "electrical surges at times, from my butt bone all the way down my legs and in my hips and into my groin." When medications "take the edge off," he is left with a "dull, grinding pain."
7. Claimant initially testified, regarding his low back, that it was just 'out of control' pain. He then testified, regarding the lumbar fusion, that it 'greatly improved' his condition. He also testified that he remembered testifying that the back surgery greatly improved his condition.

8. Claimant testified that he was told that he was discharged from physical therapy because he had a fall, and that he was advised to stop by Dr. Shalin. However, on March 5, 2019, Dr. Shalin documented that the reason Claimant was discharged from post-surgical physical therapy as "...lack of progress. Per PT has had trouble remember [sic] what he was instructed to practice at home for unclear reasons." (Ex. U, p. 196).

9. On cross-examination, Claimant testified that his foot was dragging in advance of the lumbar fusion but he wasn't overly aware of it. However, the left foot drop was not documented in medical records until Dr. Shalin did so on July 15, 2019. (Ex. U, p. 264).

10 Claimant explained he has fallen numerous times because of his right knee injury; "my knee just buckles and gives out and then I fall..." He testified he has struck his head and sustained concussions as a result of these falls.

11. Claimant testified he wishes to receive the additional treatment that has been recommended for his neck and his low back because he "wants to get back work" and wants to "get back to normal."

Claimant's Treatment since the February 26, 2019 Hearing

12. On March 5, 2019 Dr. Schalín observed; "GAIT: walks very slowly, cautiously, with a shuffling gait using his walker. Is independent doing this. Is able to lift the walker over a threshold, down a curb or folding & placing it in the trunk of his car, all in slow motion. Then walks himself to drivers side of car lightly balancing himself with right hand on the car. Is able to sit down in the car by lifting each leg into the car." (Ex. 1, pg. 155). She noted he suffered from "frequent falls & unsteadiness." *Id* at 156.

13. Dr. Schalín noted, "...Discussed last week's discharge from physical therapy due to lack of progress & difficulty at times remembering the instructed home exercises. I had patient show me today, some of what he is practicing doing at home, and he was able to show me 3-4 movements. Will check in this each follow-up visit. I discussed with patient my conversation this morning with Dr. Stanton regarding the recent discharge from physical therapy, his difficulties progressing, some of the hindering factors (ex. excessive pain L lateral hip, deep abdominal pain, frequent falls)..." *Id*.

14. Also on March 5, 2019 Dr. Stanton recommended repeat lumbar MRI "...to be sure he has not had any new onset disk herniation or other collapse." He administered a left hip injection. (Ex. 3, p. 285).

15. On April 1, 2019, Dr. Schalín noted, "NECK: continues with ongoing neck pain & stiffness with tingling & numbness in both hands finger tips. Arms feel weak & kind of 'fumbly'...LOWER BACK & LEFT HIP hurts 8/10 right now, at worst 10/10, best 7/10 and on average 8/10. Pain is worse with movement, activity, sitting or standing for any length of time...Both legs are still numb & weak, L more weak than the right and he has sciatic pain radiation into both

legs.” (Ex. 1, p. 136). She recommended additional physical therapy for the neck and back. *Id* at 131.

16. Dr. Stanton injected Claimant’s left hip again on April 2, 2019 and noted, “...I believe the patient would benefit from a course of physical therapy. This will include flexibility, range of motion, and strength exercises.” (Ex. 3, pg. 281). Dr. Stanton submitted a formal request for lumbar spine physical therapy and certified it was “medically necessary.” *Id* at 278, 279.

17. On April 30, 2019 Dr. Schalin reported, “...Has been having *frequent falls before & after lumbar fusion*, slowly lessening...Did try mowing lawn with motorized hand held lawn mower fell on right side. Sees Stanton 5/21. Has not started PT, approval pending.” (Ex. 1, p. 117)(emphasis added).

18. On May 14, 2019 Dr. Schalin again noted Claimant’s “continued frequent falls,” and stated, “...The falls are likely related to still having severe weakness in the legs, especially in the *left* leg (ankle & hip). We discussed that being able to resume formal physical therapy would likely speed up his healing time.” (Ex. 1, p. 111)(emphasis added).

19. On May 21, 2019 Dr. Stanton noted Claimant was still having persistent *left* lower extremity symptoms. He again recommended repeating the lumbar MRI. *Id* at 274.

20. On July 1, 2019 Dr. Schalin noted Claimant was still waiting for authorization of physical therapy, as well as the repeat MRI Dr. Stanton recommended. She placed an order for EMG testing of the lower extremities. (Ex. 1, p. 99). Dr. Schalin noted Claimant was suffering from “...continued severe bilateral sciatica & leg weakness, L > R with left drop foot. Please provide patient with an Arizona AFO for left ankle/drop foot.” *Id* at 84.

21. On July 29, 2019 Claimant was seen by Kimberly Shenuk, PA-C, in the office of orthopedist Dr. Michael Simpson. She reported, “...Unfortunately work comp is currently denying his lumbar spine and anything associated with that...He does have a meniscal tear and will require surgery at some point, but we need to have him in an AFO brace before we can consider that. He need to have a stable gait prior to proceeding with any surgical intervention on his knee...” (Ex. W, p. 286).

22. Also on July 29, 2019 Dr. Schalin reported the recommended MRI, EMG testing, physical therapy, and AFO brace were “...all needed for further evaluation to see why he is not improving adequately, to look for complications & treatable problems, the PT to strengthen his legs so that he can tolerate right knee surgery, the AFO brace for L drop foot to help improve his gait...” (Ex. 1, p. 77).

23. Claimant saw Aaron White, PA-C, in Dr. Stanton’s office on August 1, 2019. Mr. White noted the requested MRI, AFO brace, and EMG testing had been denied by insurance. Mr. White noted, “...In reviewing his chart it did not

appear that Mr. McIntyre had left lower extremity weakness when he saw Dr. Stanton. This is a new finding.” (Ex. 3, p. 270).

24. On August 12, 2019 Dr. Schalin noted Claimant “...fell again this a.m., walking unsupported into his closet and kicked right 3, 4, 5 toes hard against door jam base. It hurts like they are broken...His lower back & bilateral hip pain is worse with activity, walking more than 100 yards...Continues with severe pain bilateral hip post trochanteric bursa and severe bilateral leg sciatica, L > R with severe leg weakness left leg.” (Ex. Z, p. 306).

25. On August 19, 2019 Ms. Shenuk reported, “...There is still no word on authorization for his AFO from his insurance company. He does go to court next month. He still [sic] having significant issues and has had multiple falls since his last visit. He did injure his *right* foot recently. He fell about a week ago and has significant swelling and bruising to his third and fourth toes.” (Ex. AA, p. 321). Claimant was provided with a *right* knee brace. *Id* at 319.

26. On August 26, 2019, Dr. Schalin recommended MRI of the brain “...due to severe concussion symptoms, headaches, L tinnitus since fall twice a couple of weeks ago (due to *left* leg weakness).” She noted Claimant was waiting for right knee meniscus surgery with Dr. Michael Simpson, “...which can only be done once he has the AFO brace for L drop foot & legs are stronger.” She again recommended physical therapy, the AFO brace, lumbar MRI, and EMG testing. (Ex. 1, p. 64).

27. Claimant underwent the repeat lumbar MRI at his own expense on September 9, 2019. (Ex. 5, pp. 399-400).

28. On September 14, 2019 Respondents denied payment for Claimant’s office visit with Dr. Stanton, and lumbar and hip x-rays, all conducted on May 21, 2019. (Ex. 6, pp. 412-413).

29. On September 23, 2019 Dr. Schalin reported, “...Right knee surgery is approved by WC, but needs legs to be stronger first.” She noted Claimant had the MRI, and that EMG testing was upcoming, but he had still not started physical therapy, received the AFO brace, or had the brain MRI she recommended. (Ex. 1, p. 50).

30. Dr. Katharine Leppard performed lower extremity EMG testing on October 2, 2019 and found the results to be “normal.” (Ex. CC, p. 351).

31. On October 8, 2019, Respondents denied payment for the lumbar MRI performed on September 9, 2019. (Ex. 6, p. 411).

32. Claimant saw Dr. Malinky on October 23, 2019 and the doctor noted that after the neck and back surgeries, “...His neck is doing better. However, he is still having back pain, leg pain, and some weakness...” (Ex. 2, pg. 246). Dr. Malinky adjusted Claimant’s medications, and discussed performing an epidural steroid injection “in the next week or two.” (*Id.*) He submitted a request for authorization of the injection on October 29, 2019. (*Id.* at 240).

33. On November 4, 2019 Dr. Schalin noted, "...He is still awaiting the approved right knee surgery, because he needs the Arizona AFO brace for L dropfoot, and physical thx to strengthen the legs first. These were approved, but has not happened yet." (Ex. 1, pg. 35). Dr. Schalin referred Claimant to Dr. Malinky "...for lumbar injection as per Dr. Stanton's 9/17 recommendation, and for pain management / pain meds. Refer to Dr. Stanton for cortisone inj of bilateral hip post-trochanteric bursitis pain." (Id. at 36).

34. On November 7, 2019 Respondents' counsel notified Dr. Malinky that his request for authorization of the injection was denied. Counsel represented that this ALJ's Order of April 16, 2019 determined the lumbar spine "...was not related to Claimant's current workplace injury." [This ALJ did conclude that the lumbar (and cervical) *surgeries* were not related to the work injury, and therefore denied and dismissed Claimant's *request for reimbursement of the costs of the surgeries*. The April 16, 2019 Order did not specifically conclude that Claimant's lumbar spine *condition* (or cervical spine condition) was unrelated to the work accident. The April 16, 2019 Order did find *an absence of sufficient evidence that Claimant ever struck his head or neck* in the fall for which he is seeking compensation.]

35. On November 20, 2019 Dr. Malinky reported, "...He has not been in physical therapy and at this point I feel like this is a significant factor negatively affecting him as he had significant trauma along with surgery. He definitely needs to be in rehab to regain strength, balance, and some neuromuscular function. I'm going to send a referral under his commercial insurance for warm water therapy. Patient definitely needs to be in therapy for at least twice a week for the next four to six weeks so he can improve his gait, get rid of his walker, improve his strength and weakness, as well as his foot drop." (Ex. 2, pg. 239).

36. On December 3, 2019, Dr. Schalin reported Claimant had received the AFO brace, but "...insurance is still denying physical therapy for anything else than right knee, so the leg strengthening will likely not happen..." She noted she would be retiring at the end of the year, and was referring Claimant to Dr. Miguel Castrejon to take over care. (Ex. 1, pg. 21).

37. On December 31, 2019 Dr. Schalin identified "problems still requiring active treatment" to include the right knee, lumbar strain with sciatica, left foot drop, concussion due to repeated falls, and neck strain. She confirmed "...Worker's comp never approved physical therapy to strengthen legs prior to surgery, so arrangements is [sic] being made to have the surgery anyhow..." (Ex. 1 pp. 8, 9).

38. On January 15, 2020, Mr. Haeffner at Dr. Malinky's office noted the medications Claimant required for his moderate-to-severe back pain included Oxycodone, Ztampza, Robaxin, and Lyrica. (Ex. 2, pg. 233). He noted a L5-S1 selective nerve root block for low back pain and radiculitis had been ordered, "...but pt couldn't afford at this time as he is having a lot of difficulty with W/C denying coverage for this and other appropriate medical treatments...Water therapy helped but he can't go often since he has to pay on his own." (Id.)

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this case (as was the case in the prior hearing), Claimant has not been a consistent or reliable medical historian. At hearing, he attributes a lack of documentation in his medical files to inattention or mistakes by his medical providers, when in fact the evidence shows that Claimant, perhaps in spite of himself, simply cannot recall what he has told his providers throughout the course of his treatment. Regular usage of opioids, unfortunate as it is, cannot be ignored in this instance.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Claim Preclusion

F. Claim preclusion works to bar the re-litigation of matters that have already been decided as well as matters that could have been raised in a prior proceeding but were not. Claim preclusion protects "litigants from the burden of relitigating an identical issue with the same party or his privy and ... promote[s] judicial economy by preventing needless litigation." *Lobato v. Taylor*, 70 P.3d 1152, 1165-66 (Colo. 2003)(quoting *Parklane Hosiery Co. v. Shore*, 439 U.S. 322, 326, 99 S. Ct. 645, 649, 58 L.Ed.2d 552 (1979)). For a claim in a second proceeding to be precluded by a previous judgment, there must exist: (1) finality of the first judgment, (2) identity of subject matter, (3) identity of claims for relief, and (4) identity of or privity between parties to the actions. *Holnam v. Industrial Claim Appeals Office*, supra.

G. As those elements are applied here; (1) this ALJ's Order dated April 16, 2019 became final on or about May 6, 2019 after neither party appealed. There is finality of the first judgment. (2) Both the hearing on February 26, 2019 and the hearing on February 11, 2020 involved the scope of Respondents' liability for Claimant's industrial injuries. In that sense, there is arguably identity of subject matter. (4) The parties to both proceedings are the same. However, element (3) – identity of claims for relief – is not satisfied.

H. Claimant argues that the February 26, 2019 hearing concerned only Respondents' potential liability for the neck and low back *surgeries*. It did not concern Respondents' liability for *other treatment* for those injuries, nor was the issue ripe at the time of that hearing. Further, there was not the opportunity to prepare and cross-examine Dr. Rauzzino during his 2/25/2019 deposition on the issue of the treatments *now* being sought. The ALJ concurs. As noted above, Respondents appear not to have denied any treatment to the neck or back at issue here until September 14, 2019 - well *after* the Order from the first hearing became final. The requested neck and back treatment (other than surgeries) was not ripe for the first hearing, since at that time Respondents had not denied anything beyond those two surgeries. The ALJ finds, therefore, that relief sought by Claimant in this matter is not precluded by either prior Order issued in this case.

Claimant's Entitlement to Medical Benefits, on the Merits

I. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. §8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

J. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Moreover, a claimant is not required to prove causation by medical certainty. Rather, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which he seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and the need for treatment. *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

Medical Benefits, as Applied

K. This is an admitted claim. A General Admission of Liability was filed on 7/3/2018, admitting for TTD and medical benefits. To the extent that Claimant is requesting a general award of medical benefits, which are reasonable, necessary, and *related* to his work injury – including his neck and back - that has already been granted by Respondents. The devil is in the details.

L. With respect to the cervical spine, records do not support that the April 13, 2018 work accident caused Claimant's current cervical spine issues. In Claimant's initial report to Employer, he does not mention any involvement or pain in the head or neck. Medical records following the accident do not describe Claimant as having any cervical pain or cervical injury. The medical evidence showed, then and now, that Claimant's cervical spine issues were pre-existing, degenerative cervical spinal disease, so extensive that they required a cervical fusion surgery which encompassed virtually the entire cervical spine. As noted, this ALJ has previously found an *absence of sufficient evidence* to show that *Claimant struck his head or neck* at all during this fall.

M. With respect to the lumbar spine, records do not support that the April 13, 2018 work accident caused Claimant's current lumbar spine issues. Claimant has a well-documented history of degenerative lower back conditions, so much so that Claimant underwent an extensive, unrelated lumbar fusion surgery. This lumbar fusion was so extensive as to effectively treat the entirety of the lumbar spine, demonstrating a

chronic, degenerative deformity, rather than an acute structural injury resulting from a single fall. Claimant's degenerative lumbar spine issues were painful enough that shortly **before** this work accident, he reported for medical care and requested an *increase* to his methadone dosage. And while physical therapy offered for his lumbar strain and contusion was likely *related* to his fall early on, certainly that is no longer the case. The requested physical therapy is now many months after the fact, and following lumbar fusion surgery.

N. The ALJ notes the physician's initial intake notes from 4/19/2018 state: "Initial Visit: DOI 4-14 on a sat not 4-10 as he [Claimant] put on intake...he had *some* increase in his *chronic* back pain..." (Ex. K, p. 73). Claimant himself waited 5 to 6 days (at hearing, he testified he was injured on 4/13/2018) before reporting this work fall, then apparently got the date wrong on the intake form-suggesting that 9 days had passed. This, especially coming from a health care worker, is strongly suggestive of a fall not causing severe trauma. As such, the ALJ cannot conclude that Claimant aggravated a preexisting condition only now requiring the requested medical treatment.

O. Since the time of Claimant's (denied) cervical and lumbar surgeries, Claimant's gait has deteriorated, resulting in frequent *falls and head injuries*, and he began reporting issues with his left leg, left foot drop, left hip, increased symptoms of erectile dysfunction and the need for ongoing treatment to his cervical and lumbar spine. These problems are on his *left* side, and have not been shown to be due to the injury to Claimant's *right* knee. Nor have they been shown to relate to the relatively minor work injury to his back.

P. As unfortunate as Claimant's medical situation is, the ALJ finds and concludes that Claimant's medical complaints, for which he now seeks further treatment stem from his longstanding degenerative issues, and were *not proximally caused* by the April 13, 2018 slip and fall accident. They did not stem from his right knee injury. While arguably reasonable, even necessary, to treat Claimant's medical condition, these treatments are not *related* to his work injury, and should be addressed outside the Workers Compensation system. Those treatment modalities specifically denied are the brain MRI, physical therapy for neck and back, lumbar MRI, and treatment by Dr. Malinky.

Lumbar and Cervical Surgeries as Intervening Events

Q. Because Claimant has failed to show that the treatments now being sought are **related** to his work injury, it is not necessary for Respondents to show that his (non-work-related) lumbar and cervical surgeries served as intervening events.

ORDER

It is therefore Ordered that:

1. Claimant's request for medical benefits, specifically: Brain MRI, physical therapy now recommended relating to Claimant's neck and back, repeat lumbar MRI, and treatment now recommended by Dr. Malinky, is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: March 23, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury involving his left shoulder.
- II. Whether Claimant established that the right to select a medical provider passed to Claimant.
- III. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical treatment, including the treatment he received through Banner Health, Dr. Reynoso, and Dr. Reynoso's referrals.
- IV. Whether Claimant is entitled to temporary disability benefits.
 - Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits as of December 24, 2017.
 - Whether Respondents established by a preponderance of the evidence that Claimant is at-fault for his wage loss and not entitled to temporary disability benefits.
- V. Whether Respondents established by a preponderance of the evidence, that Claimant violated § 8-43-102(1), in failing to timely report the June 20, 2017 industrial injury in writing and that penalties should be assessed if the claim is found to be compensable.

STIPULATIONS OR ADMISSIONS

Pursuant to Respondents' Proposed Specific Findings of Fact, Conclusions of Law, and Order, they contend Claimant's average weekly wage is \$1,249.64, without inclusion and adjustment of the Employer sponsored health insurance. Therefore, such figure will be used in this order, but Claimant is not bound by this figure since Claimant did not confirm in his proposed order that he reached an agreement with Respondents regarding his average weekly wage.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant, [Claimant's name Redacted], was born on July 10, 1953, and is currently 66 years old.

2. Claimant has been a truck driver since 2007. He was hired by Employer on June 8, 2015. (*T1, p. 53*)
3. Claimant passed a pre-employment physical when he was hired and had to pass subsequent physical exams every two years to maintain his DOT license. (*T1, p. 55*)
4. Claimant's job duties involved driving semi-trucks for Employer. He drove trucks between railroad yards and oil fields. His duties also included having to go inside the large containers used to haul sand on occasion and clean them out. At first, Claimant worked the day shift, but he switched to the nightshift where he was picking-up and delivering sand used for fracking to oil well sites. Claimant testified that he accepted the transfer since the need for the sand deliveries was year-round and that he would no longer be laid-off during the cold weather months. (*T1, p. 58*)
5. Based on his payroll records, Claimant started working the night shift towards the end of January in 2017. (*Exhibit L, p. 57*)
6. Claimant testified that the new job required the normal checking the tires, and so on, regarding his truck at the start of his shift and then driving to a sand dump site where large bins on his trailer would be filled with sand. He would then drive to the oil field and deliver the sand. He stated that his duties required him to position openings in the top of the large bins under distribution shoots, and then climb on top of the large sand containers and open metal lids to allow the sand to be dumped into the containers. Claimant would then have to close the metal lids once the containers were full of sand. Claimant testified that the loading of the sand at the OmiTrax facility required him to drive his truck up onto a ramp and then climb down steps to put information into a computer. He would then have to climb a set of stairs to get up to a catwalk, level with the top of his trailer, so he could open the hatches or lids on top of the containers. Once the containers were full of sand he would close the lids and climb back down the stairs and climb up into his truck cab before driving off.
7. Claimant testified that he had no problems performing his job duties before June 2017. He also testified that on or about June 20, 2017, however, he was at a sand delivery site and was climbing down from his cab, while holding on to the truck steering wheel with his left hand. As he did so, he stepped into a water filled hole which was deeper than he expected and he felt a pull in his left shoulder. He called his direct supervisor, Shawn T[Redacted], and reported the work injury. Claimant finished his shift without further incident. Claimant testified that when we woke up the next day he could barely use his left arm. He then discussed the matter with Mr. T[Redacted] again and was told to take a few days off and rest his shoulder. At this time, Mr. T[Redacted], Claimant's supervisor, knew about the accompanying facts connecting Claimant's shoulder injury with his employment and that his injury might involve a workers' compensation claim. Moreover, Mr. T[Redacted] testified that he advised his supervisor and/or the safety manager about Claimant's shoulder injury. Despite having actual knowledge of Claimant's work injury, neither Mr. T[Redacted] nor any other Employer representative

directed Claimant to seek medical treatment from one of the Employer's designated medical providers in June 2017.

8. After taking a few days off work, at the direction of his supervisor, Claimant was still having problems with his shoulder. But because the Employer did not timely direct Claimant to seek medical treatment from a designated medical provider, Claimant sought medical treatment with a physician on his own.
9. On June 23, 2017, Claimant sought medical treatment at Banner Health and was seen by Alan Reynoso, M.D. As noted in the report from his visit that day, Claimant's chief complaint was that he developed shoulder pain due to an accident at work and had not worked for the last three days. The history provided by Claimant, as documented by Dr. Reynoso, shows Claimant had gone back to truck driving at some point and had started developing mild pain in his left shoulder. Then, while he was getting out of his truck on or about June 20, 2017, "he fell when he was unsure of the footing and it was deeper than he thought and pulled the whole shoulder." Dr. Reynoso also said in his report that although Claimant felt much better – after not working for three days - Claimant was concerned about going back to work and further injuring his left shoulder. Moreover, at this first visit for his shoulder injury, Claimant's weight was listed as 163.9 kilograms, which is equivalent to 361.34 pounds. (*Exhibit 3, pp. 10-11*)
10. On physical examination, Dr. Reynoso documented Claimant had decreased range of motion regarding his left arm and still had pain involving his left triceps and rotator cuff. He prescribed physical therapy and recommended Claimant take over the counter medications for any pain and discomfort. Dr. Reynoso also restricted Claimant to light duty work. (*Exhibit 3, pp. 10-11*) However, because the Employer did not refer Claimant to a designated provider for his work injury, Dr. Reynoso did not complete a Physician's Report of Workers' Compensation Injury, Form WC164, and provide it to the Insurer, as required by the Workers' Compensation Rules of Procedure. Had he done so, the Insurer – and most likely the Employer - would have been apprised of Claimant's work restrictions, need for physical therapy, modified work options, and possible need for lost wage benefits.
11. Because Claimant was not directed to seek medical treatment from a designated provider, who may have also apprised the Employer about Claimant's injury and work restrictions, Claimant returned to work and attempted to do his job. But because of his injury, and inability to perform his job, Claimant began missing time from work. Claimant testified that although he had good attendance before the injury, he started losing time for work after he injured his shoulder because doing any kind of heavy or repetitive work with his left arm caused significant pain. Moreover, Claimant's supervisor, Mr. T[Redacted], testified and confirmed Claimant had first reported the injury to him and that he had passed the information on to his two supervisors, Thad H[Redacted], and Eric A[Redacted], who would have had to direct Claimant to get medical treatment from a designated provider. Mr. T[Redacted] testified that Claimant was a "workaholic" and seldom ever missed work before he injured his shoulder. He also testified that after the injury, Claimant missed a great deal of time from work due to shoulder pain, and that he, in fact, had sent Claimant home on occasion because it was obvious he was in significant

pain. (*T1, pp. 45-46*) However, despite knowing Claimant injured himself at work, and was having problems performing his job, Mr. T[Redacted] neither directed Claimant to seek medical treatment from a designated medical provider nor escalated the matter with his superiors by again advising them about Claimant's work injury and need for medical treatment. Based on the Employer's failure to provide Claimant medical treatment promptly and on an ongoing basis, Claimant continued working and doing the best he could to meet the delivery demands of the Employer and its customers.

12. Moreover, Claimant credibly testified that during the end of 2017, the Employer stopped having supervisors work during the night shift. According to Claimant, during such time, the supervisors were at home sleeping while the rest of the night employees were out working. As a result, if Claimant had an issue during the night shift, he was pretty much on his own. (*T1, p.76*)
13. A review of Claimant's wage records reveals Claimant's hours varied once he started working the night shift. The records reveal a moderate decrease in the hours Claimant worked during the end of February and the month of March in 2017. Yet, after that period, his hours increased and remained fairly consistent until his June 20, 2017, work injury. Then, after his injury, his hours decreased significantly through about July 4th. Later, his hours climbed through July, but then became more sporadic in comparison to hours before the work injury. As a result, Claimant's wage records support the testimony of Mr. T[Redacted] and Claimant that after June 20, 2017, Claimant started missing time from work because of his shoulder injury.
14. Claimant continued working for Employer, although missing some time from work because of his shoulder pain, until December 2017. Claimant testified that he was supposed to be off work for the last two weeks of December, but the Employer requested Claimant to come to work on December 22, 2017 at the last minute. Claimant testified that the weather was very bad that evening and that there was a significant blizzard occurring. Claimant testified that he was afraid to perform the climbing activities required for his job at one of the sand delivery sites, OmniTrax, because of the icy conditions on the steps and the lack of sufficient railings on the steps. Claimant also testified that when he did work at this location, he did so "painfully" because of the activities that were required to load his truck with sand and input information into the computer system were unique to the OmniTrax location. Based on the unique work requirements at this jobsite, the bad weather, and his shoulder injury that made it difficult to work at this location without pain, he was afraid he might fall on the stairs and get hurt. Moreover, there was a lack of supervisors available during the nightshift that might have been able to help Claimant. As a result, he asked his son-in-law, Jeremy K[Redacted], if he would meet him at the OmniTrax loading site and help him open and close the lids on the sand boxes, which required Claimant to climb up and down the stairs of the catwalk.
15. Claimant's testimony that he was fearful of suffering another accident and injury while performing his job duties on the night of December 22, 2017, is found to be credible for many reasons. First, Claimant's medical records document that he is

morbidly obese. He is 5'11" and weighs about 360 pounds. Second, at the time of the OmniTrax incident Claimant was 64-years-old. Third, the surveillance video submitted by Respondents also shows Claimant's lack of agility because of his age and weight. Fourth, the conditions under which he had to perform his job at the OmniTrax facility on a normal evening seemed challenging, if not perilous, for Claimant based on his age and weight. On December 22, 2017, however, the Employer sent Claimant to perform his job under blizzard conditions and at night.

16. Mr. K[Redacted] testified that he agreed to assist Claimant at the job site and drove to the site in his own car. He testified he arrived at the site before Claimant arrived with his truck. Mr. K[Redacted] testified that he went into a trailer at the site and informed a OmniTrax worker why he was there and was granted permission to assist Claimant once he arrived. That said, it does not appear Mr. K[Redacted] advised the OmniTrax worker that he was not a co-worker of Claimant.
17. Both Claimant and Mr. K[Redacted] testified that Mr. K[Redacted] assisted Claimant by climbing up onto the catwalk and opening and closing the lids on the sand boxes. Mr. K[Redacted] testified that after he completed the work activities he approached a worker at the site to ask for a light for a cigarette. At that point, the worker started yelling at Mr. K[Redacted] that he should not be at the work site without a hard hat on. Mr. K[Redacted] told the worker he had one, but that he had left it in his car. The worker and Mr. K[Redacted] had words and Mr. K[Redacted] was told to vacate the property, which he did.
18. Someone from OmniTrax called the Employer and complained about Mr. K[Redacted] being on the job site. When Claimant returned to the Employer's location with his truck he was confronted by management personnel about the incident. Although Claimant first denied the allegations, Claimant eventually admitted that he had asked Mr. K[Redacted] to come to the job site to assist him. Claimant said that he did not get the impression that the incident would be any big deal at that point. The Employer, however, was also advised by OmniTrax that based on the incident involving Claimant's son-in-law, Claimant was not allowed to return to their site.
19. After the incident at OmniTrax, the Employer placed Claimant on suspended duty while they investigated the matter and decided what to do. During this time, Claimant also advised the Employer that he was having a problem with his eyesight and would have it checked out. He was seeing flashing lights. As a result, due the OmiTrax incident and his eyesight problems, the Employer kept Claimant on suspended duty and did not terminate him.
20. Soon after, and while on suspended duty, Mr. A[Redacted] drove by the shop and saw Claimant's personal vehicle. Thus, he decided to stop in the shop and ask Claimant about his eye problem. During this visit, which was shortly after Christmas, Claimant advised Mr. A[Redacted] that he had also injured his shoulder at work back in June and that he wanted to get additional medical treatment for his injury. (T2, pp.32-33). Claimant testified that his supervisors' attitudes toward him changed drastically when he mentioned he had a workers' compensation injury.

21. After Claimant provided the Employer notice of his work injury a second time, the Employer directed Claimant to obtain medical treatment from WorkWell, which the Employer advised Claimant was its designated provider for work injuries.
22. On January 9, 2018, Claimant went to WorkWell for evaluation of his left shoulder pain. At his first appointment, Claimant was evaluated by Malcolm Staton, PA-C. The report from this visit indicates Claimant described injuring his left shoulder while getting out of his truck. The report shows Claimant described losing his footing when went to step down on the ground while getting out of his truck. When he went to put his foot on the ground, there was some standing water in a deep hole and he pulled his left shoulder when he lost his footing. The report also says Claimant stated that his pain has continued to get worse and that he also feels like his grip is becoming weaker. At this appointment, Claimant rated his pain level at a 6/10, and described his shoulder as feeling tight. (*Exhibit 4, pp. 17-20*) PA Staton performed a thorough examination of Claimant's left shoulder and noted the following tests he performed were positive: Crossover; Hawkins; Supraspinatus Empty Can; and the Drop Arm. He also noted the following tests were negative: Neer's; Yergason's; Speed's; and Spurling's. Based on his examination of Claimant, PA Staton opined Claimant had a torn rotator cuff and possibly a torn labrum of his left shoulder. PA Staton, as well as the supervising physician, also assigned work restrictions of: "No lifting, carrying, pushing, or pulling more than 5 pounds. No climbing or crawling." (*Exhibit 4, pp. 17-20*)
23. PA Staton concluded his report by ordering an MRI and stating that Claimant will be scheduled to return to WorkWell after his MRI to determine future treatment and whether surgery might be appropriate. PA Staton and the supervising physician also completed a Form WC164, which documented Claimant's work restrictions and also listed his return appointment for January 25, 2018, to go over the results of the MRI and determine the next steps for treating Claimant's shoulder injury.
24. Claimant testified that after the January 9, 2018, appointment at WorkWell, he was happy that someone was finally trying to figure out what was wrong with his shoulder. He was happy that he would get an MRI and return to WorkWell in 2 weeks, on January 25, 2018, to go over the results and determine what could be done to fix his shoulder. Claimant's happiness, however, was short-lived. He was called the next morning and advised that his Claim was denied. (T1, p. 82) Since Claimant's claim was denied, WorkWell did not obtain the MRI and did not provide Claimant his follow up appointment that was scheduled for January 25, 2018, or any other follow up appointment, to assess and treat Claimant's work injury. This amounted to a refusal to treat by WorkWell for non-medical reasons.
25. Because WorkWell would not treat Claimant for his work injury after Respondents denied liability, Claimant again sought treatment from Dr. Reynoso at Banner Health. Dr. Reynoso is the doctor Claimant originally selected when the Employer failed to timely provide Claimant with a list of designated medical providers from whom he could obtain medical treatment when he reported his injury on June 20, 2017 to Mr. T[Redacted].

26. On January 31, 2018, Claimant returned to Dr. Reynoso. At this visit, Dr. Reynoso noted the following: "Patient is a 64-year-old gentlemen comes in for left shoulder pain. He says he is unable to work because if he does any activity for very long with the shoulder he has excruciating pain." The report from this visit also states that even though Claimant previously reported his shoulder injury to his employer, his employer did not have any record of his injury. Dr. Reynoso performed provocative testing at this appointment that revealed positive Hawkin's and impingement signs. Based on the information provided by Claimant, and Dr. Reynoso's physical examination, he concluded Claimant might have a torn rotator cuff, a torn labrum, or both. To continue to evaluate Claimant's shoulder problem, he ordered an MRI. (*Exhibit 3, p. 12*)
27. On April 9, 2018, Claimant obtained an IME with John Hughes, M.D. Dr. Hughes obtained a history, reviewed Claimant's medical records, and performed a physical examination. Dr. Hughes diagnosed Claimant as likely having a rotator cuff injury of his left shoulder and concluded that the condition was caused, or aggravated, by Claimant's work injury in June 2017. Dr. Hughes based this opinion on the history provided by Claimant and his physical examination of Claimant. Dr. Hughes also based his opinion on Claimant's medical records, which included Dr. Reynoso's June 23, 2017, report that documents Claimant's description of the work accident a few days after it occurred. (*See Exhibit 9*)
28. Since Respondents did not timely designate a medical provider and their denial of the Claim in January caused WorkWell to refuse to treat Claimant for non-medical reasons, Claimant continued seeking medical care on his own. Since his Employer cancelled his health insurance after he was terminated, Claimant went through Medicaid to get the prescribed MRI. The MRI demonstrated swelling, degenerative arthritic changes, and several soft tissue tears. (*Exhibit 5, pp. 40-41*)
29. Respondents had Claimant evaluated by Dr. F. Mark, Paz, M.D. Dr. Paz examined Claimant and reviewed some of Claimant's medical records. Dr. Paz testified that it was his opinion that Claimant did not suffer a work-related injury to his shoulder. Dr. Paz based his opinion mostly on some differences with dates of onset, in the medical records, most of which appear to be typographical or transcriptional errors. He ignored the fact that the basic history of the occurrence of the injury at work was substantially the same and in agreement with the testimony of Claimant and Claimant's former supervisor. Dr. Paz also testified that even if Claimant's account of the accident is accurate, he would not have suffered a torn rotator cuff since the majority of Claimant's weight would be placed mainly on the deltoid muscle. But this opinion was not offered in his report and the emergence of this new theory at hearing, which was not adopted or even considered by any other physician or medical provider, is not found to be persuasive. The Administrative Law Judge finds that the opinions of Dr. Reynoso, the medical providers at WorkWell, and Dr. Hughes, to the effect that Claimant did suffer a work-related injury to his shoulder, to be more persuasive than the opinion of Dr. Paz on causation.
30. The MRI results are objective and confirm Claimant has abnormalities in his left shoulder. Dr. Paz admitted upon cross-examination that the abnormalities shown on the MRI can cause pain. He also admitted that there was no evidence in the

medical records that Claimant had any problems with his left shoulder before June 20, 2017. (T2, p. 129)

31. Considering all of the hearing testimony and the contents of the exhibits, the ALJ finds Claimant suffered an injury to his left shoulder in the course of his employment on or about June 20, 2017.
32. Claimant testified that after he injured his shoulder on or about June 20, 2017, his injury caused him to take a few days off from work. After first taking a few days off from work right after the accident, Claimant continued having problems performing his job duties at times because of his left shoulder injury and would miss time from work. This was also confirmed by his supervisor, Mr. T[Redacted], who testified that Claimant had problems performing his job after his shoulder injury and that Claimant missed time from work because of his shoulder injury.
33. Claimant also testified that various physicians had given him work restrictions. The assignment of work restrictions is confirmed by the medical records submitted at hearing. As found above, on June 23, 2017, Dr. Reynoso placed Claimant on light duty at work. (*Exhibit 3, pp. 10-11*).
34. In addition, Claimant's decision to ask his son-in-law for help at the OmniTrax location on December 22, 2017, was in part, because of his shoulder injury, and is further evidence that Claimant's work injury precluded Claimant from performing all of his regular job duties.
35. Moreover, on January 9, 2018, Claimant was provided work restrictions by Malcolm Staton, PA-C, and the supervising physician, which included: "No lifting, carrying, pushing, or pulling more than 5 pounds. No climbing or crawling." (*Exhibit 4, pp. 17-23*)
36. Eric A[Redacted] testified on behalf of Respondents. Mr. A[Redacted] is the Employer's health, safety, and environmental manager (HSE Manager). Mr. A[Redacted] testified that because of Claimant's shoulder injury and his work restrictions, the Employer arranged light duty work for Claimant in January 2018.
37. As a result of the above findings, the ALJ finds Claimant's work injury prevented him from performing his regular job duties as of June 20, 2017 and continuing.
38. Mr. A[Redacted] also testified that only authorized employees were allowed to be in company vehicles and that he was unaware of any requests from Claimant as needing assistance on a jobsite. (T. 2, pp. 38, 41). On the other hand, Claimant credibly testified that during his employment, he had seen other employees driving with passengers, who were not employees, in their work truck.
39. Mr. K[Redacted] testified at hearing that on the night of December 22, 2017, he arrived at the OmniTrax facility to assist Claimant. Mr. K[Redacted] also testified that while at the OmniTrax facility, following an verbal altercation about Mr. K[Redacted]'s lack of safety gear, he was instructed by multiple OmniTrax employees to leave the jobsite. (T. 2, pp. 9, 10, 12).
40. T.J. X[Redacted] testified on behalf of Respondents. He testified that he was Claimant's supervisor on December 22, 2017, and in the early morning hours

received reports from dispatch of Claimant working at the OmniTrax facility and having an unauthorized rider with him. Mr. X[Redacted] also testified Claimant first told him that his son-in-law appeared at the facility unannounced to deal with a family dispute. Mr. X[Redacted] also testified later that night he spoke with Claimant at the terminal and Claimant first tried to deny it but, finally admitted that his son-in-law was with him at the OmniTrax facility. (T. 2, pp. 70-71, 75).

41. Mr. X[Redacted] testified that the exclusion of non-employee riders was “mainly because we’re going to oil and well sites, heavily regulated and all employees that are on site have gone through numerous trainings.” Having non-employees present was “a huge liability for the company and the oil company.” Mr. X[Redacted] also testified that the non-rider policy is covered in that new hire orientation. (T. 2, pp. 76, 78).
42. Mr. A[Redacted] further testified that at first, Claimant was placed on a suspension following the December 22, 2017 OmniTrax incident for violating company policy. He also said that Claimant was on suspended duty because of his eye problem and that he could not let Claimant drive until the eye problem was resolved.
43. Mr. A[Redacted] then testified that Claimant was ultimately terminated on January 31, 2018 for a combination of things. One factor was that because of the OmniTrax incident, OmniTrax had banned Claimant from their facility and they did not have another driving position open at that time. That said, this reason does not make sense because Claimant was on restricted duty and could not drive a semi-truck at that time. As a result, the lack of an opening at that time to drive a semi-truck would not preclude the Employer from retaining Claimant until his restrictions changed and would allow Claimant to return to his regular job duties and then assess whether there was a driving position that was available. Another reason Mr. A[Redacted] provided for Claimant’s termination was Claimant’s violation of the Employer’s rule against having any non-employees in the company’s trucks. He admitted, however, that he never saw anyone riding in Claimant’s truck himself, and it is not clear whether Claimant’s son-in-law was riding in Claimant’s truck.
44. Mr. A[Redacted] further testified that the triggering event that led to Claimant’s termination was Claimant’s violation of the Employer’s “three-day no call, no show policy.” According to Mr. A[Redacted], the Employer set up modified work for Claimant and Claimant failed to show up and perform the modified work three times and also failed to call in before each of those shifts to provide proper notice that he would be unable to work that day.
45. The Employer, however, submitted a letter, dated January 18, 2018, outlining the basis for terminating Claimant. In the letter, the Employer contends they terminated Claimant for having his son-in-law riding in his truck cab. There is no indication in the letter that Claimant was terminated for his failure to show up for modified duty. (Exhibit J) There was also no credible and persuasive documentary evidence submitted at the hearings which clearly set forth the modified duty that was allegedly offered to Claimant and that it was consistent with the Employer’s policy regarding how modified duty will be assessed, approved, and offered to their employees.

46. Respondents contend Claimant received extensive training on how to report workplace injuries and that Claimant failed to timely report his work injury. Respondents also contend Claimant was advised of the rules that prohibit non-employees from riding with employees or assisting them with their job duties. Respondents also contend they have a no-show, no-call, policy and 3 events lead to termination. And Respondents contend Claimant was provided modified employment, but failed to show up for his modified employment three times and was therefore terminated. In support of these contentions, Respondents submitted several exhibits. These exhibits include the following:

- Standard Operating Procedure (SOP): The SOP sets forth the procedures for the company as a whole about the reporting of work-related injuries. The SOP discusses the progression of reporting that is required. Thus, the SOP governs the responsibilities of the employee, the employee's supervisor, the Human Resource Manager, and the Safety Manager. Yet the Employer left blank those portions of the SOP that require the Employer to specify when the procedures were implemented, last reviewed, last updated, and last approved. In the end, all this document establishes is that the Employer has this document and submitted it at hearing. It does not establish the Employer implemented these procedures and made them standard operating procedures for their employees and specifically Claimant. (*Exhibit F, p. 23*)
- New Hire Orientation. This document sets forth a laundry list of topics and/or documents that were allegedly discussed with Claimant and/or provided to Claimant during his orientation. Claimant and an Employer representative initialed over 30 topics that were allegedly covered during Claimant's orientation. Respondents highlighted "Employee Handbook." That said, Respondents did not submit into evidence a copy of the "Employee Handbook" that allegedly contains the rules Respondents contend were conveyed to Claimant and violated by Claimant.
- Driver Safety and Policy Manual Employee Receipt. This document was signed by Claimant on June 5, 2015. It confirms Claimant received a "Driver's Company Safety and Policy Manual." But despite there being a place for a company official to sign and date the receipt, that portion is blank. And the title of the manual is slightly different from the title listed on the New Hire Orientation that lists a "Commercial Motor Vehicle Driver Safety/Maintenance Policy." (See *Exhibit F, p. 26*) Nor did Respondents submit into evidence a copy of either the Commercial Motor Vehicle Driver Safety/Maintenance Policy or the Drivers' Company Safety and Policy Manual.
- New Employee Orientation and Checklist. This document was also initialed and signed by Claimant. By signing this document, Claimant confirmed that the various safety, injury reporting, and return to work policies were explained to him and that he understood them. But like many of the other documents submitted by Respondents, this document is only partially completed. For example, the spaces that require Claimant's printed name, the date he was hired, and the name of his supervisor are blank. Most importantly, the bottom

portion of the document, which requires Claimant's supervisor or safety coordinator to sign off and confirm that they "instructed the above named employee in the subjects listed above during orientation" is also blank and not signed. As a result, this document does not confirm the Employer instructed Claimant about the Employer's safety, injury reporting, and return to work policies during orientation. (*Exhibit F, p. 27*)

- Return-to-Work Policy. Claimant signed this document. Respondents also highlighted a portion of the policy that outlines how injuries are to be reported and the section that lists two medical facilities from which employees must seek medical care. But this document is written in a manner that outlines the responsibilities of the safety manager, who is to act as the "designated coordinator" for executing the Employer's return-to-work policy, rather than outline Claimant's responsibilities. For example, section 5, provides:

The designated coordinator will maintain a list of modified duty tasks. Once the employer is ready to make a job offer to the injured worker, the coordinator sends the proposed tasks to the treating physicians for approval, in accordance with the formal job offer process. (*Exhibit F, p.28*)

Mr. A[Redacted] testified that the Employer provided Claimant with a modified job and Claimant failed to show up for such job. Mr. A[Redacted] further testified that the Employer has a no-call no-show policy which provides that an employee will be terminated if they fail to show up for work and do not call in on three occasions. He also testified that it was Claimant's failure to show up for the modified job that ultimately resulted in his termination. (*T2, p. 52*) However, despite this testimony, there was no documentary evidence submitted establishing the Employer sent the job tasks involved in the modified duty to Claimant's physician for approval as required by the Employer's own Return to Work Policy. (*Exhibit F, p. 28*)

- Safety Meeting Attendance Sheet. Respondents also submitted the sign up sheet for the August 31, 2016, safety meeting that Claimant attended. The document signifies that the topics to be discussed included "Sexual Harassment/Work Injury." That said, there is no other documentary evidence or credible testimony in the record about the specific information that was discussed at the meeting and whether any of the information discussed is relevant to the issues involved in this case. (*See Exhibit F, p. 29*)

47. The Employer contends they have policies, procedures, and safety rules that govern their employees. But based on the evidence presented at hearing, Respondents failed to establish that these policies, procedures, and safety rules were adequately defined, implemented, and conveyed to all their employees – and specifically Claimant. To have legal significance, a policy is not a policy and a rule is not a rule if it merely resides on a piece of paper and sees the light of day only briefly during an employee's orientation. When an Employer manages their policies and rules in such a way, they are not policies and rules, they are merely thoughts about how things should be - but are not.

48. Claimant testified that the only thing he took away from all the information provided by the Employer about what to do if he was injured at work was to report every injury, no matter how minor, to your supervisor - which he did.
49. The failure of Claimant's supervisors to promptly send him for medical treatment led Claimant to continue trying to work with an injured shoulder. And it was the Employer's failure to timely send Claimant for medical treatment that ended up being part of the reason Claimant needed help performing his job duties on December 22, 2017 and he decided to ask his son-in-law for help at the OmniTrax location. Plus, as testified to by Claimant, the Employer stopped having supervisors work during the night shift and he felt like he had no other options under the circumstances.
50. In the end, it was the consequences of Claimant's work injury combined with the Employer's failure to implement and execute policies, procedures, and rules as well as their failure to have supervisors available during the night shift that created the conditions for which they contend they used to terminate Claimant. In other words, the reasons they contend support their decision to terminate Claimant are manifestations of the Employer's management, or mismanagement, of Claimant's work injury. This includes their failure to provide medical treatment, accommodate his work restrictions, and provide modified work. And this also includes the Employer's decision to send Claimant out to work the night shift unexpectedly during a blizzard. This placed Claimant in a situation at the OmniTrax facility for which he was not properly trained to handle and resolve.
51. Moreover, the ALJ does not find the overall testimony and evidence submitted by Employer to be credible and persuasive regarding the reason or reasons for Claimant's termination. Therefore, based on the evidence presented at hearing, the ALJ finds Respondents failed to establish by credible and persuasive evidence the actual reason that formed their decision to terminate Claimant. As a result, the ALJ finds that Respondents failed to establish Claimant is at-fault for his termination and subsequent wage loss.
52. The ALJ finds Claimant's testimony and statements to his medical providers to be credible. The ALJ finds Claimant's testimony to be credible because the general mechanism of injury, and the approximate date of injury, aligns with the initial medical report of June 23, 2017, and some of the subsequent records. Moreover, Claimant's statements to medical providers and evaluators has remained consistent throughout his claim. While there are some inconsistencies in some of the later medical records, the inconsistencies seem to be due to transcription errors, which includes errors in recording the history provided by Claimant, and not misstatements by Claimant that were properly recorded. Moreover, Claimant's testimony about the reporting of his injury to Mr. T[Redacted] is also deemed credible and persuasive.
53. The ALJ also finds the testimony of Mr. T[Redacted], Claimant's supervisor at the time of his injury, to be credible and persuasive for many reasons. First, Mr. T[Redacted]'s testimony tracked Claimant's testimony. Second, Mr. T[Redacted]'s testimony matched Claimant's medical records as it relates to the date of injury

and that Claimant took a few days off of work after the initial incident. Moreover, Mr. T[Redacted]'s testimony aligns with Claimant's wage records that reveal Claimant's work became more sporadic after the injury because Claimant had to take time off due to his shoulder injury which prevented him from fully performing his regular job duties.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is what leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. But where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990); *Marjorie Jorgensen v. Air Serve Corporation*, W.C. No. 4-894-311-03, (ICAO, Apr. 9, 2014).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice,

or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury involving his left shoulder.

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

But the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition unrelated to the employment. See *F.R. Orr Constr. v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Atsepoi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017).

Moreover, causation may be established entirely through circumstantial evidence. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). In fact, the finding of a compensable injury may be upheld where the exact medical cause of the injury remains shrouded in mystery, but the circumstantial evidence as a whole can justify the inference that it was work-related. *Indus. Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968). Medical evidence is neither required nor determinative of causation. A claimant's testimony, if credited, may alone constitute substantial evidence to support the ALJ's determination of the cause of the claimant's condition. See *Apache Corp. v. Indus. Commission*, 717 P.2d 1000 (Colo. App. 1986) (claimant's testimony was substantial evidence that his employment caused his heart attack); *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); see also *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997) (lay testimony sufficient to establish disability). But to the extent that medical

testimony is presented, it is the ALJ's province to assess its weight and credibility. *Rockwell Int'l v. Turnbull, supra*.

Whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675*, (ICAO, Sept. 1, 2006).

The ALJ found Claimant's testimony and statements to his medical providers to be credible and persuasive. The ALJ also found the testimony of Claimant's direct supervisor, Mr. T[Redacted], to be credible and persuasive. And although Claimant might have been having some mild shoulder pain before the incident of June 20, 2017, the ALJ finds and concludes that it was the June 20, 2017, work accident that occurred while he was getting out of his semi-truck that caused either a discrete shoulder injury or aggravated a preexisting shoulder condition and necessitated the need for medical treatment. In addition, the work accident also restricted Claimant's ability to perform his regular job duties and caused him to at first miss three straight days from work and then more time thereafter. As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that he suffered a compensable injury involving his left shoulder.

II. Whether Claimant established that the right to select a medical provider passed to Claimant.

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). But the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) also provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing."

An employer is considered notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office*, 148 P.3d 381, 383 (Colo. App. 2006).

Moreover, if upon notice of the injury the employer timely fails to designate an ATP, the right of selection passes to the claimant. *Rogers v. Indus. Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

In *Squitieri v. Tayco Screen Printing, Inc.*, W.C. No. 4-421-960 (ICAO Sept. 18, 2000), the ICAO held that held that the term "select," as it appears in the predecessor to

§ 8-43-404(5)(a)(I)(A) is unambiguous and should be construed to mean “the act of making a choice or picking out a preference from among several alternatives.” See *In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant “selects” a physician when she “demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury.” *Williams v. Halliburton Energy Services*, W.C. No. 4-995-888-01, (ICAO, Oct. 28, 2016). The ICAO also noted that the question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ, and the ALJ’s resolution of this issue must be upheld if supported by the record. *Squitieri v. Tayco Screen Printing, Inc.*, W.C. No. 4-421-960 (ICAO, Sept. 18, 2000).

As found, Claimant immediately reported his work injury on June 20, 2017, to his supervisor, Mr. T[Redacted]. In turn, Mr. T[Redacted] advised his supervisors of Claimant’s work injury and Mr. T[Redacted] directed Claimant to take a few days off from work. That said, despite the Employer allowing Claimant to take a few days off work due to his work injury, they did not timely designate a medical provider at the time of the accident. Moreover, even after Claimant took a few days off, Mr. T[Redacted] noticed Claimant’s shoulder injury would at times prevent Claimant from working and he would even send Claimant home on occasion. Despite this knowledge of Claimant’s injury, and his inability to perform his work, the Employer still did not timely designate a medical provider to evaluate and treat Claimant’s work injury. As a result, the right of selection passed to Claimant at the time of the injury.

Since the Employer did not timely designate a medical provider and provide Claimant a list of 4 medical providers, Claimant selected Banner Health and Dr. Reynoso to treat him for his work injury and starting treating with Dr Reynoso on June 23, 2017. For that reason, Dr. Reynoso and his referrals are authorized to treat Claimant for his work injury as of June 23, 2017.

III. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical treatment, including the treatment he received through Banner Health, Dr. Reynoso, and his referrals.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. Whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant’s work injury necessitated the need for medical treatment to diagnose and cure Claimant from the effects of his work injury. To determine the extent of Claimant’s work injury, he sought medical treatment at Banner Health and was treated by Dr. Reynoso. Dr. Reynoso evaluated Claimant, prescribed treatment, which included physical therapy, work restrictions, and an MRI. Dr. Hughes also opined Claimant suffered a compensable injury and is need of more medical treatment to determine the extent of his injury and the extent of future medical treatment necessary to cure Claimant from the effects of his work injury. As a result, the ALJ finds and concludes that Claimant

established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical treatment.

The ALJ further finds and concludes that the treatment recommended by Dr. Reynoso, which included the MRI and physical therapy is also reasonable, necessary, and related to Claimant's work injury. But since the issue of reimbursement under § 8-42-101(6) was only raised by Claimant in his post hearing submission and not tried at the hearing, the issue of reimbursement for treatment paid by others is reserved.

IV. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits starting December 24, 2017.

V. Whether Respondents established by a preponderance of the evidence that Claimant is at-fault for his wage loss and not entitled to temporary disability benefits.

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-103(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997).

Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)).

Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Although Section 8-42-103 sets forth the threshold conditions that must apply before a claimant becomes entitled to temporary total disability benefits, pursuant to Section 8-42-103(1)(g), threshold entitlement to temporary total disability benefits is precluded where the employee is responsible for the termination of employment. The

court of appeals has noted “the wide range of circumstances” the General Assembly sought to address when it enacted § 8-42-103(1)(g). *Colorado Springs Disposal v. Indus. Claim Appeals Office*, 58 1061, 1063 (Colo. App. 2002).

Section 8-42-103(1)(g) provides that if a temporarily disabled employee “is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.” Because this statute provides a defense to an otherwise valid claim for TTD benefits, the respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.*, W.C. No. 4-551-844 (I.C.A.O. July 18, 2003).

In *Colorado Springs Disposal v. Indus. Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term “responsible” as used in the termination statutes reintroduces the concept of fault as it was understood before the Supreme Court’s decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). As a result, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control given the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp.*, *supra*.

That said, violation of an employer’s policy does not necessarily establish a claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Indus. Commission*, 740 P.2d 999 (Colo. 1987). However, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Indus. Claim Appeals Office*, *supra*. This is true even if the claimant is not specifically warned that failure to comply with the employer’s expectations may lead to termination. See *Pabst v. Indus. Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992). Ultimately, whether the Claimant was responsible for the termination is one of fact for determination by the ALJ. *Gilmore v. Indus. Claim Appeals Office*, *supra*.

As found, Claimant suffered a compensable work injury that caused him to be unable to perform his regular job duties as of June 20, 2017. As found, Claimant was disabled and unable to perform all aspects of his job as of June 20, 2017. This was evidenced by his need to initially take three days off after the accident and the fact that he continued missing time from work thereafter. Moreover, it was his shoulder injury that also played a part in his inability to perform his job at the OmniTrax facility and this existed immediately before he was suspended. Plus, he was also restricted from performing his regular job duties by the medical providers at WorkWell in January of 2018. Therefore, Claimant was disabled due to his work injury and precluded from performing his regular job duties as of June 20, 2017 and continuing.

It was also found that the following factors, at a minimum, caused Claimant to seek help from his son-in-law on December 22, 2017:

1. The work injury and resulting disability,
2. The Employer’s failure to provide medical treatment promptly,
3. The Employer’s lack of having supervisors available during the night shift,

4. The Employer's failure to effectively implement safety rules and procedures, and
5. The Employer's decision to call Claimant into work unexpectedly and to work the night shift during a blizzard.

As a result, it was the culmination of the Employer's actions – or lack of action – that led to Claimant being placed in a dangerous situation at the OmiTrax facility.

Once put in that situation, Claimant had to mitigate the risk of further injury while meeting the business needs of his Employer and its clients. Claimant was not provided any specific training by his Employer to help guide him through this situation. He also did not think there was a supervisor he could contact and discuss the matter. As a result, Claimant chose to mitigate the risk of suffering another accident by asking his son-in-law to meet him at the facility and have his son-in-law traverse the stairs and catwalk and open and close the lids on the containers that would be loaded with sand.

However, the ALJ does not find and conclude Claimant was terminated due to the OmniTrax incident. The Employer offered several reasons for terminating Claimant. Although the Employer first stated Claimant was terminated due solely to the OmniTrax incident, the actual reason for terminating Claimant became less clear based on the testimony presented at hearing. For example, at hearing, Mr. A[Redacted] testified that Claimant was ultimately terminated based on his failure to start modified duty. That said, there was a lack of credible and persuasive evidence presented establishing the Employer even offered Claimant bona fide modified duty. Therefore, the Employer failed to establish the actual reason for Claimant's termination. As a result, the Employer failed to establish Claimant was at-fault for his termination. The ALJ thus finds and concludes the Employer failed to establish Claimant was at-fault for his termination and subsequent wage loss. Therefore, Claimant is entitled to temporary total disability benefits as of December 24, 2017, the day his was suspended, and such benefits shall continue until terminated by law.

VI. Whether Respondents established Claimant violated § 8-43-102(1), C.R.S. in failing to timely report the alleged June 20, 2017 industrial injury and that penalties should be assessed if the claim is found to be compensable.

Respondents seek a penalty against Claimant because Claimant failed to timely to report the injury in writing as required by § 8-43-102(1)(a), C.R.S.

Section 8-43-102(1)(a) provides that an employee that sustains an injury from an accident "shall notify the said employee's employer in writing of the injury within four days of the occurrence of the injury." If the employee fails to report the injury in writing, "said employee may lose up to one day's compensation for each day's failure to so report." Because the statute uses the word "may," imposition of a penalty for late reporting is left to the discretion of the ALJ. *LeFou v. Waste Management*, W.C. No. 4-519-354 (I.C.A.O. March 6, 2003).

As found, the Employer had notice of Claimant's injury and that Claimant was missing time from work as of the date of the accident, June 20, 2017. Moreover, after Claimant provided verbal notice to his supervisor, the Employer failed to timely provide medical treatment to Claimant, even though Claimant's direct supervisor knew Claimant was missing time from work because of his shoulder injury and even sent him home from work early at times. There was therefore no prejudice to Respondents because Claimant failed to report his injury in writing on the day it occurred or before December 24, 2017. As a result, the ALJ finds and concludes that Claimant will not be penalized for his failure to report his injury in writing.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury involving his left shoulder on June 20, 2017.
2. The right to select a medical provider passed to Claimant on June 20, 2017, and Claimant selected to treat at Banner Health with Dr. Reynoso. As a result, Banner Health and Dr. Reynoso are authorized to treat Claimant for his compensable work injury.
3. Respondents shall provide Claimant reasonable and necessary medical treatment related to his industrial injury.
4. Claimant is entitled to temporary total disability benefits as of December 24, 2017, and continuing, until terminated by law.
5. Claimant's temporary total disability benefits shall be based on an average weekly wage of \$1,249.64, but subject to redetermination.¹
6. Respondents have a right to take the appropriate offsets against Claimant's temporary disability benefits. Any dispute about the amount or extent of any offsets is reserved and can be addressed at a subsequent hearing if the parties cannot resolve the issue.
7. Respondents request for Claimant's disability benefits to be reduced pursuant to § 8-43-102(1) is denied and dismissed.
8. Claimant shall be paid interest at the rate of 8% per annum on compensation benefits not paid when due.
9. Issues not expressly decided herein are reserved to the parties for future determination.

¹ The ALJ used the AWW figure provided by Respondents in their proposed specific findings of fact, conclusions of law and order. If, however, the AWW figure used in this order is not accurate, the parties can either stipulate to a different AWW or file an Application for Hearing and set the matter for hearing and have the AWW issue resolved by an ALJ.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: March 26, 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury to her right knee on February 27, 2019?
- II. If this injury is compensable, has Claimant shown, by a preponderance of the evidence, that she is entitled to medical treatment that is reasonable, necessary, and related to her work injury, including, but not limited to: arthroscopic surgery as recommended by Dr. Minihane?
- III. If this injury is compensable, has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Partial Disability (“TPD”) payments from June 10, 2019, and ongoing?

STIPULATIONS

The parties stipulated to an Average Weekly Wage (“AWW”) of \$383.70. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant’s Hearing Testimony

1. Claimant testified at hearing. She testified that on February 27, 2019, at around 8:30 a.m., she was kneeling on both knees, ‘zoning’ merchandise on the lower shelves at Walmart. When she stood up, she felt “awful pain” extending from her right knee all the way down her leg, which she rated at a level 9/10. After approximately 30 seconds, Claimant’s knee pain abated to a “dull ache”. However, she continued to work, and completed her regularly scheduled shift.
2. Later that same evening, Claimant experienced severe pain, swelling and bruising of the right knee down the leg to the bottom of the foot. When the pain, swelling and bruising continued the following day, she reported her right knee injury to Employer. A First Report of Injury was timely filed. (Ex. A, p.1).
3. Claimant continues to experience occasional popping inside her knee, and says something still feels “wrong” and “swollen”. She has never experienced this “popping” sensation prior to the work incident, nor the type of pain she has experienced. She testified that she had not engaged in any ‘new’ activities in the months preceding her work injury, such as bicycle riding, which might have aggravated her knee.

4. Claimant testified that she is now restricted to working 4 hours per day, 4 days per week. Were it not for these work restrictions, she would be working more hours. [No additional testimony was elicited on this issue].

Claimant's Treatment by her ATPs

5. Claimant was seen by PA Steven Quackenbush at Centura Health Urgent Care on 2/28/2019. She gave PA Quackenbush a history of "zoning", when she bent down to move some stock forward and she was bent down onto her right knee. Claimant stated that she had done this on multiple times during the day and:

...as she stood up on one of these times, she developed right knee pain. There was no popping of the knee. No feeling of instability. The knee has not popped or felt unstable since the incident.... She did not slip or trip or fall. There was no fluid on the ground and no unevenness of the floor. She was not carrying anything in her arms at the time. She was not wearing any unusual footwear. She did not hit her knee." (Ex. C, p. 6).

6. On physical exam, PA Quackenbush noted the right knee was without discoloration or erythema or abrasions or ecchymosis, with very minimal swelling globally of the right knee without appreciable pain with palpation of the medial or lateral joint space. He documented "very minimal tenderness" over the tibial tubercle without palpable deformity, with "full active and passive extension and flexion of the right knee without popping or locking or crepitus". (Ex. C, p. 7).

7. X-rays were read as negative. PA Quackenbush prescribed a Medrol Dosepak and a right hinge knee brace. Despite these prescriptions, PA Quackenbush further noted:

This case is left *undetermined* regarding workplace causality as the patient was kneeling and stood up developing right knee pain. She did not slip or twist or catch her foot. She was not wearing any unusual footwear at the time. There was no fluid on the floor, unevenness of the floor. She states she did not have anything in her hands at the time of development of her symptoms." (Ex. C, p. 5)(emphasis added).

8. PA Quackenbush completed a February 28, 2019, M-164, countersigned by Dr. John Reasoner. PA Quackenbush did not respond to question 3(b), "Are your objective findings consistent with history and/or work-related mechanism of injury/illness?" (Ex. C, p. 14). He did, however, place Claimant on modified duty, with no crawling, kneeling, or squatting, and prescribed a knee brace, ice, and Medrol Dosepak. Follow-up was set for March 20, 2019. *Id.*

9. By March 20, 2019, Claimant had finished the prescribed Medrol Dosepak, without significant change of symptoms. (Ex. C, p. 19). Dr. Reasoner referred Claimant

for a right knee MRI for “persistent pain and swelling right knee with ‘some’ popping”. The diagnosis was “right knee strain/bursitis possible meniscal tear”. (Ex. C, p. 22).

10. The right knee MRI was performed April 12, 2019. It showed “mild prepatellar soft tissue edema and extending over the region of the tibial tubercle; and prominent superficial veins, with no evidence of a meniscal or cruciate ligament tear. No significant joint effusion was identified”. (Ex. D, p. 62).

11. PA Quackenbush evaluated Claimant again on April 17, 2019. Claimant was noted to be without significant or appreciable antalgic gait. He noted, “Very minimal” swelling of the right knee. (Ex. C, p. 30). Referral was made to orthopedist, Dr. Keith Minihane for “*persistent* right knee *pain/swelling*. . . unremarkable MRI”. (Ex. C, p. 32)(emphasis added).

12. Eve Schoenefeld, P.A., evaluated Claimant on May 2, 2019. On physical exam, PA Schoenefeld noted the right knee was without obvious swelling, had good ligamentous stability and no crepitus. (Ex. C, p. 37). PA Schoenefeld diagnosed right knee “patellar tenderness” and performed a right knee cortisone injection. The PA was “optimistic for resolution of symptoms by next appointment”. *Id* at 38.

13. Claimant returned to PA Quackenbush on May 10, 2019, reporting no improvement with the cortisone injection, and no relief from Voltaren gel. PA Quackenbush’s impressions included right knee strain and bursitis of other bursa, right knee. He then anticipated MMI at the next follow-up visit. (Ex. C, p. 41).

14. Orthopedist Dr. Keith Minihane evaluated Claimant on May 30, 2019. He diagnosed a pes anserinus bursitis of the right knee and injected the right anserine bursa with 1 mL of Lidocaine. (Ex. F, p. 86).

15. Following Dr. Minihane’s exam and injection, Claimant returned to PA Quackenbush on 6/7/2019. On physical exam, Claimant was ambulating without significant appreciable antalgic gait. She moved onto the exam table fluidly. Claimant had no significant reproducible tenderness with palpation of the right knee. She had full active and passive extension of the right knee without popping or locking. MMI was pending review by Dr. Reasoner at Claimant’s next follow-up visit. (Ex. C, pp. 44-46).

16. Dr. Reasoner evaluated Claimant on June 10, 2019. His clinical impressions included chronic pain of the right knee and pes anserinus bursitis of right knee. Dr. Reasoner noted the negative MRI of the right knee and Claimant’s report of no improvement with injections of the knee joint and the right pes anserinus bursa. He suspected Claimant “may be having a flare up of underlying early arthritis.” (Ex. C, p. 48).

17. On July 1, 2019, Dr. Minihane reevaluated Claimant. His diagnosis on that date included “possible medial plica”. He noted, “She has failed to improve with conservative treatments and not able [sic] to return to full work.” Dr. Minihane requested prior authorization of a knee arthroscopy and possible plica excision and chondroplasty of

chondral flap. (Ex. F, p. 90). Claimant understood the proposed surgery, and wished to proceed. *Id.* At hearing, Claimant reiterated her desire to proceed.

18. Authorization was sought for this procedure on July 2, 2019. (Ex. F, p. 93). A Notice of Contest was then filed by Respondents on 7/19/2019, citing the need for "Further Investigation for Prior Medical records". (Ex. B, p. 3). [The ALJ notes no 'prior medical records' now appear anywhere in the record herein].

IME by Dr. Kurz

19. On January 3, 2020, Dr. Nicholas Kurz performed an Independent Medical Exam ("IME") on the Respondents' behalf. Claimant gave Dr. Kurz a history of zoning on her knees for approximately 30 minutes and when she stood up, she felt a pulling sensation in the right knee. Claimant reported that evening she noticed some swelling and spots of bruising at the inferior medial distal patella aspect of her right knee. She also noted additional spots of bruising at her calf and the arch of her foot. (Ex. G, p. 95).

20. On physical exam, Claimant exhibited no obvious upper or lower extremity edema, with full range of motion of the bilateral knees, with negative Homan's testing noted bilaterally, and the ability to do a full squat. The only documented abnormality on physical exam were large tortuous varicose vein deformities noted at the anterior right knee. *Id.* at 97.

21. Based on his review of the medical records, his evaluation of Claimant, and his review of the in-store security video (Ex. H), Dr. Kurz opined that Claimant did not sustain an injury to her right knee related to her employment. Dr. Kurz opined there were no definitive objective findings - per imaging or physical exam - of any acute injuries or lasting effects from her reported injury of February 27, 2019. Dr. Kurz opined an acute structural injury to the right knee would have caused immediate and sustained symptoms. Even an acute contusion or twisting injury that may result in an internal derangement of the knee would cause immediate signs, symptoms and/or abnormal findings on imaging. Claimant's April 12, 2019 MRI was essentially normal.

22. Respondents' Exhibit H, contained two clips of Employer's in-store security video. At hearing, Dr. Kurz testified that based on his review of the medical records, evaluation of the claimant, and review of in-store security video, there was no mechanism to support a work-related right knee injury. There was no evidence of the claimant's right knee striking anything, no twisting mechanism, no wince of pain, and no alteration in weight-bearing. No physician completed a single required M-164 indicating that Claimant's objective findings were consistent with her history and/or a work-related mechanism of injury. Dr. Kurz opined that is not medically probable the claimant injured her right knee in the course and scope of her employment on February 27, 2019. Dr. Kurz felt that Claimant's pain generator was her preexisting varicose veins.

23. Regardless of causation, Dr. Kurz testified that the surgery for which Dr. Minihane has requested prior authorization is not reasonable and necessary. Claimant's right knee diagnoses have included sprain of right knee, strain of right knee,

unspecified ligament damage, bursitis of right knee, unspecified bursa, patella tenderness, pes anserinus bursitis, flare of underlying early arthritis, and possible plica syndrome. Dr. Minihane is requesting prior authorization of a knee arthroscopy and possible plica excising chondroplasty of chondral flap, despite the normal MRI showing no plica and no cartilage defect. Dr. Kurz opined the symptoms of plica syndrome include a catching or locking sensation in the knee when getting up from a chair after sitting for a long period, trouble sitting for long periods, clicking or cracking sounds when the knee is bent or extended and a feeling the knee is going to give out. Claimant reported no such symptoms and no instability in the knee. Dr. Kurz explained the surgery requested by Dr. Minihane is exploratory in nature. Based on Claimant's normal exam and MRI, the surgery is not consistent with Colorado's Medical Treatment Guidelines.

Surveillance Video

24. The ALJ has viewed Exhibit H, the surveillance video, at length. There are two clips, labeled as Clip 1 and Clip 2. Clip 1 runs for about 7 minutes, beginning at 8:50 a.m. (approximately 15 minutes after the work incident described by Claimant). The viewpoint is from slightly above Claimant's right, as she continues with her work duties. In Clip 1, Claimant appears to be able to move about freely, and in no apparent distress, although she disappears from view for a portion of Clip 1. For about 90 seconds, she squats to arrange the merchandise on the 3rd level from the floor, but at no time places either knee onto the floor.

25. Clip 2 runs from 8:29:51 a.m. until 8:36 a.m., from a higher, further vantage point, mostly viewed from Claimant's left. She is working on the lower two shelves, arranging the merchandise. She shifts body positions rather often in an apparent effort to access the lower shelves, including on her buttocks with her left arm outstretched supporting her upper body while arranging the stock with her right. At some points, she is almost laying on her side to accomplish this.

26. At 8:34:37, Claimant appears to have completed the task at hand, and appears to struggle to her feet, not straightening her knees until 8:35:06. During this interval, she can be seen holding her right knee (which was placed on the floor in kneeling position for a few seconds), and then using the shelving with her right hand to assist in getting up. Once Claimant is up, she pulls up her right pant leg, apparently inspecting her right knee, then does so with her left knee. With her left pant leg still up to her knee, Claimant begins to walk away, with a slightly antalgic gait for a few steps, then disappears from view with an apparently normal gait.

27. The ALJ further notes that while Claimant is struggling to get to her feet, an adult male store patron appears to walk at an unusually brisk pace to the aisle where Claimant was, make apparently very brief eye contact with Claimant at 8:34:44, then leave – only to go around the corner and apparently, discreetly, check on her from the other side at 8:35:12. By this time, she had made it to her feet. One could reasonably infer this patron initially heard something from several aisles over and went to check on Claimant. He then left this section of the store, immediately ahead of Claimant, holding

the same object in his left hand as when he first appeared. This patron only made a cursory look at the shelves the entire time. (No such encounter was mentioned, however, in Claimant's testimony).

Temporary Partial Disability

28. After Claimant did not respond as expected to the offered conservative treatments, ATP Dr. Reasoner noted on 6/10/2019, "She continues to work her regular duty as a cashier and irregular hours. Patient will be given modified duties and terms of no crawling, kneeling, or squatting, and no standing for more than 4 hours per day. She can sit her perform [sic] sedentary duties remained in 4 hours [sic]...Anticipated MMI would be in 3-4 weeks if no further intervention is recommended by the orthopedic specialist. (Ex. C, p. 48)(emphasis added).

29. In his Physician's Report of Workers Compensation Injury [WC164] dated 6/10/2019, Dr. Reasoner initiated Temporary Restrictions of "No Standing > 4 hrs/day" (Ex. C, p. 51). Claimant was to follow-up with orthopedist by end of June. *Id*

30. In the final WC164 in the record, dated 7/3/2019, Dr. Reasoner continued the same work restrictions, with a follow-up date of 8/5/2019, and noted that MMI is "now anticipated approximately 4 weeks post surgery." (Ex. C, p. 60).

31. The ALJ has reviewed Exhibit 1 (Claimant's wage records), and notes that Claimant is paid every two weeks by Employer. While there is some variance from pay period to pay period of hours worked, it appears that the parties have stipulated (based upon the stipulated AWW of \$383.70) to a typical bi-weekly pay period averaging 51.65 hours at \$14.86 per hour. The ALJ finds this stipulation to be reasonable, and based upon the Exhibits provided.

32. Claimant began making \$15.16 per hour, beginning with the pay period from 2/16/2019 to 3/1/2019. (Ex. 1, p. 9). For reasons unclear, the wage records in evidence omit the pay period from 6/8/2019 through 6/21/2019 - which brackets the time when the ATP placed Claimant on the new hourly restrictions. Nonetheless, there is a sharp diminution in hours worked, beginning the very next pay period, and continuing through the last date of 12/20/2019 - consistent with Claimant's hearing testimony that her hours have been significantly cut to meet the restrictions. While variable, the average number of hours worked from this point forward averages approximately 32 hours every two weeks.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a

reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.*, this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. 2008). In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

D. In this instance, the ALJ finds that Claimant has testified credibly at hearing; in addition, she has supplied the best information to her medical providers at all times pertinent in a sincere effort to recover from her injury. The ALJ further finds that Dr. Kurz has testified sincerely in an effort to make sense of Claimant’s injury, and his disagreements with the other medical providers represent a sincere difference in medical opinion. Thus, his opinions will be viewed not in terms of *credibility* per se, but rather in terms of their *persuasiveness* in light of the evidence.

Compensability, Generally

E. According to C.R.S. § 8-43-201, “a claimant in a workers’ compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the

evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Indus. Claim Appeals Off.*, 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence.").

F. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

G. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.*, 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra*. "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment merely because an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n*, 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

H. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.; *Faulkner v. Indus. Claim Appeals Off.*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner*, 12 P.3d at 846.

I. Colorado's Workers' Compensation Act creates a distinction between the terms "accident" and "injury". The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." *See* §8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." A compensable injury is one which requires medical treatment or causes a disability.

J. It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between her employment and her injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ). *See also, In the Matter of the Claim of*

Tammy Manzanares, Claimant, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

Compensability, as Applied

K. Dr. Kurz opines that Claimant's pain generator is from preexisting varicose veins, apparently being temporarily exacerbated during this snapshot in time. The ALJ is not persuaded. As noted by Claimant, said veins (as noted in the MRI) appear only on the *lateral* side of Claimant's right knee. Claimant's pain, while elusive at times, has been consistently noted on the *medial* side of her right knee. To the extent that one can observe Claimant on the floor right before she struggles to rise to her feet, she had the *medial* aspect of the front of her knee pressed against the floor.

L. Secondly, the ALJ is not convinced that this is a *temporary* exacerbation of any preexisting injury. As of the hearing date, Claimant's symptoms have persisted for a year since the date of injury. Conservative measures have all failed. *Claimant credibly has reported no similar symptoms at any point in her life until now* – nor have any medical reports been introduced to this effect. The fall in the Walmart bathroom from a date prior resulted in no significant injury or disability. She got to her feet, was checked out medically, and recovered from the bruise. The ALJ finds that incident to be a red herring.

M. From Clip 2 of the video, Claimant can be observed struggling to get to her feet for almost 30 seconds. She grabs her right knee in the process (not a natural movement for someone just getting up off the floor), then pulls up her right pant leg, apparently to inspect it – then appears to look at the left knee for a comparison. Notably, she just leaves the left pant leg up, and lets it fall back down into position on its own – not the actions of someone who is doing this for appearance's sake. As noted, she does nothing to brush off the other parts of her pants that were in significant contact with the floor. She then limps for a few steps, then appears to normalize her gait - consistent with her description of the injury, whereby it hurt severely, then dropped off rather rapidly – thus permitting her to attempt to “shake it off”, and continue her tasks. However, it continued to hurt, and she sought medical attention.

N. Due to the lack of twisting, falling, or any sudden movement, her medical providers were confounded in explaining a definitive diagnosis, despite Claimant's persistent symptoms, albeit mostly subjective in nature - but not to include the popping and clicking. Once Dr. Minihane – an orthopedic surgeon – became involved, he suspected a plica excision was warranted. The ALJ concurs. While plicae exist in a significant portion of the population, they fairly rarely become symptomatic – but that is what occurred here, and as a direct result of Claimant's work activities on 2/27/2019. The ALJ finds the injury to be compensable.

Medical Benefits, Generally

O. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. See § 8-42-101(1), C.R.S. 2003; *Snyder v.*

Industrial Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, *supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).

P. The Medical Treatment Guidelines (Guidelines) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. See, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight.

Q. Pursuant to Workers' Compensation Rule of Procedure 17-2(A) health care practitioners are to use the *Guidelines* when furnishing medical care under the Workers' Compensation Act. See §8-42-101(3)(b), C.R.S. The ALJ may also appropriately consider the *Guidelines* as an evidentiary tool. *Logiudice v. Siemens Westinghouse*, W.C. 4-665-873 (ICAP, Jan. 25, 2011). However, the ALJ is not required to grant or deny medical benefits based upon the *Guidelines*. *Thomas v. Four Corners Health Care*, W.C. 4-484-220 (ICAP, Apr. 27, 2009). The ALJ's consideration of the *Guidelines* may include deviations where there is evidence justifying the deviations. *Logiudice v. Siemens Westinghouse*, W.C. No. 4-665-873 (ICAP, Jan. 25, 2011). There is no requirement for an ALJ to award or deny medical benefits based on the *Guidelines*. *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (ICAP, Apr. 27, 2009); see *Nunn v. United Airlines*, W.C. No. 40785-790 (ICAP, Sept. 9, 2011).

Medical Benefits, as Applied

R. The ALJ has found that Claimant has suffered a compensable injury, causing her to suffer from plica syndrome. As noted by Claimant, Respondents agreed to all conservative treatment modalities – and work restrictions – for several months, up until Claimant's ATP orthopedist recommended surgery. While it might have been reasonable to file a Notice of Contest to "further investigate prior medical records" in the first instance, when no such records were uncovered, the ALJ must look with some skepticism when Respondents persist in denying this surgery. There is no viable explanation for Claimant's symptoms except a work injury.

S. Claimant has been in pain for over a year as a result of this work injury, and the ALJ finds the surgery, as proposed, to be reasonable, necessary, and related to her

work injury, despite the lack of a definitive diagnosis from the MRI imaging study. Clearly, Dr. Minihane has considered the evidence, and suggested this course of action. The ALJ is persuaded by his opinion. To the extent that the procedure is considered “exploratory”, the ALJ finds it to still be reasonable and necessary to cure and relieve Claimant of her injury. There are no further diagnostic tools being proposed by anyone prior to proceeding. To the extent that the Medical Treatment Guidelines would otherwise dictate greater objective evidence before proceeding, the ALJ finds any such deviation to be reasonable and necessary – and as noted, related to her work injury.

Temporary Partial Disability

T. Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant’s AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has *caused* the disability and consequent partial wage loss. Section 8-42-103(1), C.R.S.; *Safeway Stores, Inc. v. Husson*, 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

U. The ALJ concludes that Claimant has suffered such a partial disability, and subsequent wage loss, as a result of her 2/27/2019 work injury. Since being placed on work restrictions by her ATP (which the ALJ reaffirms were reasonable, and based upon her condition), Claimant’s reduced AWW is \$242.56 (16 hours per week x \$15.16 per hour). Respondents shall pay Temporary Partial Disability benefits until otherwise terminated by operation of law.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury on 2/27/2019.
2. Respondents shall pay for all reasonable, necessary, and related medical treatment to cure Claimant of her work injury, including, but not limited to, the surgery as proposed by Dr. Minihane.
3. Respondents shall pay Claimant Temporary Partial Disability benefits from June 10, 2019, and ongoing, until terminated by operation of law.
4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: March 26, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-110-196-001**

ISSUES

- Did Claimant prove he suffered a compensable injury on May 17, 2019?

If Claimant proved a compensable injury, the ALJ will address the following issues:

- Are Respondents liable for medical treatment provided by Pueblo Community Health Center and Parkview Medical Center?
- Did Claimant prove entitlement to TTD benefits commencing May 18, 2019?
- Did Respondents prove Claimant's TTD benefits should be reduced as a penalty for "late reporting" of the injury?

STIPULATIONS

The parties stipulated to an average with the wage of \$590, and that Southern Colorado Clinic will be the authorized provider if the claim is compensable.

FINDINGS OF FACT

1. Claimant worked in Employer's tortilla factory as a building maintenance technician. The job involved various tasks including structural repair, landscaping, drywall repair, and floor repair.

2. On May 17, 2019, Claimant repaired a large section of damaged drywall. The wall was 12 feet from floor to ceiling, necessitating three 4-foot tall "layers" of drywall. Claimant used a full 4' x 8' sheet at the bottom (oriented horizontally), and several pieces cut into smaller sections for the second and third layers. Claimant used an A-frame ladder to hang the higher pieces.

3. Claimant alleges he injured his low back while installing one of the higher pieces of drywall in an awkward position. Claimant testified he stood on the ladder for 8 to 10 minutes after the injury, waiting for his back pain to subside. He could not continue working, so he returned to the maintenance shop. He made log entries of his progress on the drywall project and told a coworker he was leaving for the day. On his way out of the building, he testified he told another coworker he was leaving and would not return that day. He went home at approximately 3:00 PM and rested. He testified he called his supervisor, Ruben M[Redacted], but Mr. M[Redacted] was unwilling to speak with him and hung up. He testified he then called the office manager in the HR manager and asked to speak to the plant supervisor, but the plant supervisor was unavailable. Claimant testified he called a "4 or 5 times" and spoke with the office manager and HR "a couple of times." He testified he told HR about the problem with his back but Employer did nothing.

4. Claimant completed a Workers' Claim for Compensation dated May 31, 2019. Claimant's counsel's office emailed the claim form to Employer on June 13, 2019 at 5:55 PM. Employer filed an Employer's First Report on June 14, 2019.

5. Claimant sought no treatment for his back pain until June 18, 2019, at Pueblo Community Health Center. Claimant had no insurance at the time of the injury, so he applied for Medicaid, and it took approximately a month for him to be approved. The initial report from PA-C Becerril documents the history as:

[H]e was on an A-frame ladder, was hanging drywall and twisted his back when trying to hold the drywall in place where he was getting his tools. Notes he injured his back. He didn't seek any medical treatment at the time of the injury as he was waiting for his union wrap to tell him where he could go, it ended up not hearing anything so he registered for Medicaid and came here for evaluation.

6. Ms. Becerril opined Claimant's symptoms were consistent with "musculoskeletal back pain" because straight leg raise testing was normal, and there were no other "red flags" suggesting neurologic compromise. She prescribed ibuprofen and referred Claimant to physical therapy.

7. Claimant returned to PA-C Becerril on June 25, 2019, and reported worsening low back pain radiating to the thighs. X-rays showed multilevel degenerative disc disease and advanced facet hypertrophy at L5-S1 resulting in severe bilateral neuroforaminal narrowing.

8. Claimant had a lumbar MRI on July 26, 2019. It showed a right-sided disc extrusion at L1-L2 contacting the right L2 nerve root, and multilevel degenerative foraminal stenosis, most severe at L5-S1.

9. Claimant had a surgical consultation with PA-C Micah Johnson on September 4, 2019. Mr. Johnson appreciated no neurological signs such as weakness or reflex changes. He saw no indication for surgery because Claimant presented primarily with axial back pain. Mr. Johnson recommended conservative treatment, including a lumbar ESI.

10. Claimant had an IME with Dr. Timothy Hall at his counsel's request on September 19, 2019. Claimant told Dr. Hall he "never" had low back pain or a back injury before May 2019. He described struggling to push a 100-pound sheet of drywall up the ladder and fasten it to the wall in May 17, 2019. Dr. Hall noted in his deposition that, "there wasn't a lot to his [physical] exam," other than range of motion deficits. Dr. Hall had only a handful of records to review, and no records pre-dating the alleged injury date. Relying on Claimant's statement had no prior low back problems, coupled with his description of the onset of low back pain while moving a heavy sheet of drywall in an awkward position, Dr. Hall reasonably concluded Claimant suffered a work-related back injury.

11. Claimant saw Dr. Albert Hattem for an IME at Respondents' request on December 3, 2019. Claimant told Dr. Hattem he developed severe back and upper leg

pain while standing at the top of the ladder securing a *full* 4' x 8' drywall sheet to the wall. Claimant said he told at least two coworkers about the injury before he left work. He also said he could not find his supervisor, Ruben M[Redacted], to report the injury. Claimant repeatedly denied having any back pain or treatment for back pain before May 2019.

12. Dr. Hattem's report described multiple medical records from 2016 that contradict Claimant's denial of prior back pain. For example, a February 22, 2016 record from Dr. Tuongvy Zamurs documents "chronic low back pain for the past years. . . . Dr. Thomas Hallfield at the Spanish Peaks Specialty Clinic previously did an MRI and worked the patient up for back pain. . . . He has had a prior MRI and x-rays with disc compression." Claimant rated his pain that date as 6-7/10. A March 2, 2016 report documents back spasms and occasional numbness in both legs. On March 16, 2016, a physical therapist indicated "The patient . . . presents with chronic low back pain that began in October 2013 when he was involved in a work-related accident. . . . He feels he is getting worse over the last year." Claimant went to physical therapy for approximately four months, but still rated his back pain is 6/10 at the last recorded therapy session on July 12, 2016. Additionally, Dr. Hattem noted several inconsistencies regarding Claimant's descriptions of interactions with coworkers and his supervisor on May 17. Dr. Hattem concluded,

[I]f [Claimant's] history of the event on May 17, 2019 is correct, then a work-related injury to the lumbar spine may have occurred. However, in this case, there were multiple inconsistencies that bring into question [Claimant's] credibility and the accuracy of his history. Considering all of these inconsistencies, it is not likely that a low back injury occurred on May 17, 2019, or that [Claimant's] current lumbar spine condition is work-related.

13. Respondents presented testimony of three witnesses, all of whom were credible and persuasive regarding various details of the case.

14. Rosemary A[Redacted], Employer's HR manager, was at the plant all day on May 17, 2019, from approximately 7:30 AM until after 5:00 PM. Another HR representative, Vickmarie M[Redacted], was there all day too. Ms. A[Redacted] recalled a conversation with Claimant the morning of May 17 because he had run out of gas and was late for work. She had no further conversations with Claimant that day. She next spoke with Claimant by phone on Monday, May 20. He was upset that someone had stolen his tools and wanted to view surveillance video. Later that day, Ms. A[Redacted] called Claimant to let him know his tools were there. Claimant wanted Employer to buy him "brand-new tools" using its account at Lowes or Home Depot. Claimant returned to the plant on May 21 to turn in his keys and quit. He told Ms. A[Redacted], "I'm not coming back to this place, you have a thief here." He continued to demand Employer buy him new tools. Claimant never mentioned a work injury during any of those interactions, and Ms. A[Redacted] knew nothing about any the claimed injury until mid-June 2019.

15. Vickmarie M[Redacted] confirmed Claimant receiving training on Employer's policies about reporting all work injuries immediately to a supervisor or HR representative. Although she could not remember the exact date of the conversation, Ms. M[Redacted] corroborated Ms. A[Redacted]'s account of Claimant coming in late on May

17 because he ran out of gas. Ms. M[Redacted] recalled seeing Claimant later that same day fixing a door in the breakroom. She neither saw nor heard from him again that day, and knew nothing about any claimed back injury. She recalls Claimant came in on a later date and was “very disgruntled claiming that someone had done something to his tool box.” He did not mention a work injury at that time or any other time.

16. Ruben M[Redacted] is Claimant’s direct supervisor. He credibly testified Claimant only used one full 4 x 8 drywall sheet on the first layer of the repair (at ground level). He cut the sheets into smaller sections for the layers above that. The only sections Claimant would have to be on the ladder to install were 4’ x 5’ and 4’ x 28”.¹ Before he left work, Claimant spoke with Mr. M[Redacted] about leaving his tools in Mr. M[Redacted]’s office overnight because he wanted to come in early the next morning and finish the drywall project. He said nothing about any back injury, and the ALJ infers he demonstrated no outward appearance of pain or discomfort. Claimant came in to the plant briefly on May 18, 2019, but was angry about his tools and walked off the job shortly after he arrived. Claimant called Mr. M[Redacted] on May 19 (not May 17 as Claimant alleged) but they had a bad cellular connection and Mr. M[Redacted] hung up. He found a place to pull over and called Claimant back. He asked why Claimant had walked off the job on May 18, and Claimant said it was because he was missing tools and some other employees were laughing at him. He did not mention any back injury.

17. Dr. Hattem’s analysis and conclusions are credible and consistent with other persuasive evidence in the record.

18. Claimant failed to prove he suffered a compensable injury on May 17, 2019.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A pre-existing condition does not necessarily preclude a claim for compensation. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A claimant must prove a compensable injury by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, Claimant failed to prove he suffered a compensable injury on May 17, 2019. As Dr. Hattem pointed out, there is no objective of evidence of any injury, and this case largely turns on Claimant’s credibility. There are simply too many inconsistencies in Claimant’s story to give his testimony or statements significant weight. For instance, he

¹ Dr. Hattem noted a 4’ x 5’ piece of drywall would weigh approximately 45 pounds, far less than the 80 or 100 pounds Claimant told Dr. Hattem and Dr. Hall, respectively.

told Dr. Hall and Dr. Hattem he “never” had prior back problems, despite medical records showing significant treatment for “chronic” low back pain starting in 2013. He walked off the job on May 18, 2019 because of an unrelated grievance, and thereafter sought no treatment for a month. He told Dr. Hattem he struggled to maneuver a “full” 4’ x 8’ drywall sheet up the ladder, and at least implied the same to Dr. Hall. But Mr. M[Redacted] confirmed the only full sheet Claimant used was at the ground level; he used smaller pieces above that.² No one corroborated Claimant’s statement to Dr. Hattem he told at least two coworkers about the injury before he left work. Claimant alleged he could not find Mr. M[Redacted] to report the injury, but he spoke with Mr. M[Redacted] before he left work about leaving his tools in the office overnight. He said nothing to Mr. M[Redacted] about any injury before he left work, nor did he mention a work injury when he spoke with Mr. M[Redacted] by phone on May 19. Claimant testified he spoke to someone in HR multiple times about the injury, but Ms. A[Redacted] and Ms. M[Redacted] did not speak with him and were not aware of anyone else who did. Claimant has the burden of proof in this matter, and after considering all the evidence, the ALJ concludes he failed to prove he more-likely-than-not suffered a compensable injury on May 17, 2019.

ORDER

It is therefore ordered that:

1. Claimant’s workers’ compensation claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: March 27, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

² The ALJ agrees with Dr. Hall and Dr. Hattem that moving a 4 x 5 piece of drywall up a ladder could cause a back injury. But that was not how Claimant described the incident, and the key point here is the inconsistency.

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that lumbar surgery, as recommended by Dr. Kirk Clifford, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted July 8, 2017 work injury.

FINDINGS OF FACT

1. While working for the employer, the claimant was a landscape and reclamation supervisor. The claimant's job duties included overseeing crews of landscapers. In addition, the claimant performed all of the physical duties of a landscaper. These duties included installing irrigation systems, planting trees and other plants, and laying sod. The claimant credibly testified that his job with the employer was physically demanding.

2. On July 8, 2017, the claimant was working to install a landscaping retaining wall. During this process, the claimant lifted a small boulder, roughly the size of a basketball, and felt a pain in his low back. The claimant reported this incident to the employer. Thereafter, the claimant was referred to SMMG Occupational Health for treatment.

3. During this claim, the claimant's authorized treating provider (ATP) has been SMMG Occupational Health. On August 9, 2017, the claimant was first seen at SMMG Occupational Health by James Harkreader, NP. At that time, the claimant described the July 8, 2017 lifting incident that resulted in a sharp pain in his left low back. Mr. Harkreader diagnosed a lumbosacral back strain. He recommended chiropractic treatment, ice, heat, and ibuprofen. In addition, he assigned a 20 pound lifting restriction. Thereafter, the claimant continued to treat with Mr. Harkreader. The claimant's treatment included the recommended chiropractic treatment, and the use of a TENS unit.

4. On November 15, 2017, the claimant returned to Mr. Harkreader and reported pain of two out of ten. On that date, Mr. Harkreader determined that the claimant had reached maximum medical improvement (MMI). Mr. Harkreader did not assess a permanent impairment or permanent work restrictions. With regard to post-MMI medical treatment, Mr. Harkreader recommended completion of chiropractic treatment and continued use of the TENS unit.

5. On March 20, 2018, a magnetic resonance image (MRI) of the claimant's lumbar spine showed a mild eccentric to the left L5-S1 disc protrusion with abutment of the descending nerve root.

6. On April 10, 2018, the claimant was seen by Dr. Stagg and reported pain levels that ranged from three to eight out of ten. Dr. Stagg noted that the claimant had seen the chiropractor approximately 30 times without relief. Dr. Stagg recommended the claimant undergo physical therapy for core strengthening. In addition, Dr. Stagg referred the claimant to Dr. Kirk Clifford with Western Colorado Spine for a surgical consultation.

7. On June 8, 2018, the claimant returned to Dr. Stagg. At that time, the claimant communicated that Dr. Clifford had recommended an injection¹. Dr. Stagg noted that the claimant continued at MMI.

8. On June 13, 2018, Dr. Clifford administered a left sided L5-S1 transforaminal epidural steroid injection (TFESI).

9. On September 10, 2018, the claimant was seen by Dr. Clifford. In the medical record of that date, Dr. Clifford noted that the claimant had a L5-S1 left sided disc herniation. The claimant reported to Dr. Clifford that following the June 2018 injection, he experienced 90 percent relief of his symptom for four weeks. Dr. Clifford recommended a repeat left L5-S1 TFESI. In addition, Dr. Clifford noted that the claimant was “getting ready to switch jobs”.

10. The claimant testified that in September 2018 he began working for another company as a supervisor. At the time of the hearing, the claimant was continuing to work full-time as a supervisor for that employer.

11. On February 20, 2019, Dr. Clifford administered the repeat left sided L5-S1 TFESI.

12. On March 25, 2019, the claimant returned to Dr. Clifford and reported that the most recent injection provided three weeks of 90 percent improvement. On that date, Dr. Clifford recommended surgical options including an anterior lumbar interbody fusion, or an artificial disc replacement.

13. On May 31, 2019, a lumbar spine MRI showed a left sided disc extrusion at the L5-S1 level. In addition, that disc extrusion was in contact with the thecal sac and the left S1 nerve root. There was also mild retolsthesis and moderate disc space narrowing at the L5-S1 level.

14. On August 29, 2019, the claimant was seen by Dr. Clifford who noted that the claimant had “stable L5-S1 [herniated nucleus pulposus]” and was still at MMI and working full duty.

15. The claimant returned to Dr. Clifford on December 23, 2019 and reported pain of four out of ten. The claimant described his pain as an ache and stabbing in his left low back and into his left buttock. On that date, Dr. Clifford reviewed the May 31, 2019 MRI. He agreed with the radiologist that the claimant had disc degeneration at the

¹ It is unclear from the medical records when this injection was recommended. However, as noted, the injection was administered on June 13, 2013.

L5-S1 level. He also noted that his reading of the MRI showed a small left sided paracentral disc bulge with some mild effacement into the S1 nerve root. Dr. Clifford continued to recommend surgical intervention. He also recommended that the claimant continue core strengthening, stretching, anti-inflammatories, and ice.

16. On January 7, 2019, the claimant was seen by Dr. Stagg. At that time, the claimant reported that his low back pain was radiating into his left lower extremity. Dr. Stagg noted that Dr. Clifford had recommended an additional injection. Dr. Stagg recommended physical therapy. Dr. Stagg noted that the claimant was working full duty.

17. On August 12, 2019, the respondents filed a General Admission of Liability.

18. On October 23, 2019, the claimant attended an independent medical examination (IME) with Dr. Brian Reiss. In connection with the IME, Dr. Reiss reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his November 12, 2019 IME report, Dr. Reiss opined that the claimant's current symptoms are "secondary to the work injury combined with deconditioning". Despite that opinion, Dr. Reiss also opined that surgical intervention, as proposed by Dr. Clifford is not reasonable or necessary to treat the claimant's axial back pain. Dr. Reiss recommended an intensive core-strengthening program and potentially a left L5-S1 facet injection. Dr. Reiss's testimony by deposition was consistent with his written report.

19. Dr. Reiss testified that it is his opinion that the claimant has not completed conservative treatment of his symptoms. Dr. Reiss reiterated his opinion that the claimant could benefit from a core-strengthening program. Dr. Reiss also testified that the injections administered by Dr. Clifford have not identified the claimant's pain generator.

20. On November 18, 2019, Dr. Clifford authored a letter in response to Dr. Reiss's IME report. In that letter, Dr. Clifford noted that the claimant has undergone extensive physical therapy. In addition, Dr. Clifford described the claimant's TFESIs as providing "excellent anesthetic and short time therapeutic results." Dr. Clifford also opined that the claimant was a candidate for an anterior lumbar fusion, which would allow the claimant improved function.

21. On December 23, 2019, the claimant returned to Dr. Clifford and reported that following the most recent TFESI he experienced 90 percent improvement of his symptoms for three weeks. On that date, Dr. Clifford noted that although he had recommended either a lumbar fusion or artificial disc replacement, those surgical options were denied by the insurer. Dr. Clifford recommended that the claimant continue core strengthening, stretching, the use of anti-inflammatories, and ice. Finally, Dr. Clifford recommended that the claimant undergo a lumbar computed tomography (CT) scan to determine if a fusion or a disc replacement would be preferable.

22. Dr. Clifford testified at hearing and stated that the claimant's lifting incident on July 8, 2017 was consistent with the claimant's low back symptoms. Dr. Clifford also

testified that surgical intervention would minimize the claimant's low back pain. In his testimony, Dr. Clifford clarified his surgical recommendations for the claimant. Specifically, Dr. Clifford has recommended the claimant undergo either 1) an anterior L5-S1 fusion, or 2) an artificial disc replacement at that level. At hearing, Dr. Clifford learned that the recommended CT scan had been performed and showed no pars defect. Based upon that information, Dr. Clifford stated that he would recommend the artificial disc replacement for the claimant. Finally, Dr. Clifford testified that the recommended surgery is reasonable, necessary, and related to the work injury.

23. The claimant testified that following his injury, he underwent four to six months of chiropractic treatment and six months of physical therapy. In addition, he has been doing a home exercise program focusing on core strengthening since April 2018. The claimant testified that he exercises six days a week doing crunches, planks, and leg lifts.

24. With regard to his current employment (that began in September 2018), the claimant testified that he oversees crews, orders materials, and operates heavy equipment. In comparison to his prior job with the employer, the claimant testified that his current position is less physical. The claimant also testified that when his current position requires more physical duties (such as shoveling or lifting small equipment) he delegates those duties to a member of his crew. The claimant testified that if he was still working for the employer he would be unable to perform all of his duties.

25. The claimant testified that his current symptoms include low back pain that is left of center, with radiating pain into his left buttock. He described the pain as stabbing and shooting at times, with a constant aching. The claimant also testified that because of his low back pain he is unable to engage in various activities. These activities include jogging, coaching his children in wrestling, overnight backpacking, and intimacy with his spouse. In addition, activities that involve slow walking, such as shopping, are painful. However, the claimant admits that he continues to work full-time, without work restrictions.

26. The claimant testified that he wants to undergo surgery. With regard to the two proposed surgeries, the claimant stated that he would defer to Dr. Clifford.

27. The ALJ credits the medical records, the claimant's testimony regarding his symptoms and limitations, and the opinions of Dr. Clifford over the contrary opinions of Dr. Reiss. The ALJ also notes that Dr. Reiss clearly opined that the claimant's current symptoms are "secondary to the work injury combined with deconditioning". The ALJ is persuaded by Dr. Clifford's opinion that the recommended disc replacement surgery will improve the claimant's function. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that the surgical intervention recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

28. The ALJ recognizes that the claimant has been placed at MMI, with no work restrictions, and no permanent impairment. However, no Final Admission of Liability (FAL) has been filed in this case. Therefore, the ALJ finds that the proper analysis is

whether the recommended surgery is reasonable and necessary to cure and relieve the claimant from the effects of the work injury, and not whether it will help maintain him at MMI.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI, Civil 3:16* (2017).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has demonstrated, by a preponderance of the evidence that the surgical intervention recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records, the claimant’s testimony, and the opinions of Dr. Clifford are credible and persuasive.

ORDER

It is therefore ordered that the respondents shall pay for the lumbar surgery, as recommended by Dr. Clifford, pursuant to the Colorado Medical Fee Schedule.

Dated this 1st day of April 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- I. Has Claimant shown that orthopedist Lucas King, MD is an Authorized Treatment Provider for Claimant's admitted work injury?
- II. Has Claimant shown that the surgeries performed by Dr. King were reasonable, necessary, and related to Claimant's admitted work injury?
- III. Has Claimant shown that he is entitled to Temporary Partial Disability payments for various periods beginning May 28, 2019, and continuing through September 10, 2019?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Testimony from Claimant

1. Claimant graduated high school from Pueblo East in 1989, and his main employment since then has been as a trucker.
2. Claimant also gained experience operating a front-end loader after his surgery 25 years ago. Claimant testified that prior to employment with Respondent, he worked as a heavy equipment loader, which required him to routinely climb inclines of rock and sand eight to ten times a day. Claimant did not have any issues with his knee during this time.
3. Claimant had a prior arthroscopic surgery on his right knee to repair a torn meniscus 25 years ago. However, Claimant testified that in the 6 months prior to March 4th, 2019, he had no pain or problems with his knee.
4. As of March 4, 2019, Claimant worked for Select Staffing, a temporary staffing agency which is owned and operated by Respondent Employbridge. He was earning \$13 per hour at 40 hours per week.
5. Claimant had begun working for Select Staffing just a few weeks earlier. Claimant was training to operate heavy machinery known as a "tugger" (similar to a forklift) for an air conditioning supplier, Trane.
6. On March 4, 2019, Claimant reported to work at 6:00 a.m. (Ex. B, p. 3). Claimant was following his trainer and a "tugger" at approximately 8:00 a.m. Wherever the trainer walked, Claimant followed. Claimant's trainer took him along a path covered with snow and ice.

7. Claimant slipped on this icy path. Claimant was sliding sideways, with weight on his right knee attempting to hold his balance. As Claimant slid on the ice to his right, the ice beneath him changed to snow, abruptly stopping his fall. Claimant's right knee "popped" and he felt immediate pain.
8. Despite the pain, Claimant thought it was temporary and "something simple." He did not immediately report his injury. However, his pain *worsened* through the evening prompting Claimant to report his work-related injury to his employer the following day.
9. Claimant reported to CCOM for evaluation. His original diagnosis was a knee sprain. Claimant was placed on light duty the following day, March 5, 2019. Claimant's light duty continued at Trane through Select Staffing under Respondent Employbridge. He described this light duty as "paperwork, filing, packets for the training department, sitting down."
10. Around the end of March 2019, Employer told Claimant stop working at the Trane location, and eventually sent him to Arc Thrift Stores to continue light duty employment through Select Staffing.
11. According to Arc Thrift Stores, Claimant was employed there through Respondent Employbridge (d/b/a Select Staffing) from April 2, 2019 through September 10, 2019. (Ex. 7). Claimant further submitted a log of work at least partially corroborating these dates. (Ex. 8). This work log prepared by the Arc shows days when Claimant was scheduled to work, if he attended, how long he worked, and contains some notes such as "sent home" or "no work remaining" or even "NC NS" indicating Claimant did not show up for his scheduled shift of modified duty. *Id.*
12. Claimant signed a document provided by Respondents informing Claimant his modified duty at the Arc Thrift Stores would continue to pay Claimant \$13 per hour, and provide Claimant with 40 hours of work per week. (Ex. 4). Also during this time, Respondents filed a General Admission of Liability on May 31, 2019, admitting liability for medical benefits and TTD benefits for this time period. (Ex. 1).
13. Claimant had been working at the Arc since April 2, 2019, but had to take time off work for his knee injury, including having surgery performed on May 19th, 2019 on his right knee by Dr. King. Respondents modified duty offer stated it was effective May 8, 2019, signed by a physician May 13th, 2019, with a start date of May 28th, 2019. *Id.* However, for reasons unclear, Respondents did not sign the modified duty offer.
14. Claimant testified that the date work was available for him at the Arc had gotten mixed up, and he was asked to sign a second modified duty offer with a start date of June 4, 2019. [This second document does not appear in the record]. Nonetheless, Claimant returned to modified duty on June 4th and continued working modified duty

at the Arc through September. Respondent did not pay Claimant TTD the week for 5/28/19 through 6/4/2019. (Ex,1, 2) (showing TTD paid only from 4/22/19 – 5/28/19).

15. Notably, the log (Ex. 8) showing specific dates Claimant was scheduled to work (as well dates Claimant did not attend scheduled work) does not indicate Claimant was scheduled to begin work the week of May 28, 2019 or that Claimant missed a week of work. Conversely, it shows Claimant began work on 6/5/2019, as scheduled.
16. Due to Claimant's continuing treatment and work restrictions, (including requiring Claimant sit 90% of the time) and there simply being not enough work to be done at the Arc, Claimant was sent home early and often, working only 15 to 20 hours per week.
17. Claimant did not resign from his duties at Arc Thrift Stores. Additionally, Arc Thrift Stores did not tell Claimant he could not work there anymore. Select Staffing's contact with the Arc ended on 9/10/2019. Claimant's last day of working at Arc Thrift store was September 10, 2019. Claimant has not worked since. He was placed on TTD.
18. Respondents submitted a second General Admission of Liability September 24, 2019, again admitting liability and medical benefits. This GAL showed TTD payments starting the day after Respondent cancelled Claimant's position with Arc Thrift Stores, September 11, 2019. (Ex. 2). Claimant testified that he continues to receive TTD benefits.
19. Claimant testified that despite being promised \$13 per hour and 40 hours per week while working modified duty at Arc Thrift Stores, he worked much less during that time and did not receive TPD benefits from April 2, 2019, to September 10th, 2019. Additionally, Claimant did not receive TTD for the week of May 28th to June 4th, 2019
20. Claimant was cross-examined about missing work as a "no call, no show" ("NCNS"), but Claimant asserted that he would call Employer and Employer's agent, Brittany R[Redacted], instead of calling the Arc directly. Additionally, Claimant pointed out that his work sheet showed there were several days when he did report to work and did not receive 8 hours of work, including specific notes saying "no work remaining."

Claimant's Medical Treatment

21. Claimant testified that he did not have a limp prior to March 4, 2019 but has had pain, swelling, and noticeable limp since.
22. Claimant's authorized provider was Daniel Olson, M.D. at CCOM. Claimant testified that his knee was "throbbing" and he called Dr. Olson's office. Claimant was told by Dr. Olson's office to go the emergency room for his severe pain without specifying an emergency room.

23. Claimant went to Park West ER for his right knee pain on 3/21/19, whereupon Claimant was noted to be in *severe pain*. (Ex. 11, p. 72) Park West further referred Claimant to a surgeon, Dr. Lucas King, and gave Claimant a referral document to provide his authorized provider, Dr. Olson. The notes show: "has not seen ortho to date. Tried to fu [follow-up] w workmans comp today but they had no appt times x 3 days. *Id* at 70.
24. Upon referral from CCOM, Claimant had undergone an MRI at Open MRI of Pueblo on March 18, 2019. The pertinent Finding was "There is a focal osteochondral defect in the medial femoral condyle measuring 6 x 12 mm. This appears to be *chronic and unstable*. Patellar cartilage was also noted to be "thinned". (Ex. 12, p. 74)(emphasis added).
25. Claimant testified that Dr. Olson's first recommendation for a surgeon was unavailable and because of that, when Claimant returned to Dr. Olson's office. He stated he was referred to Dr. King by Park West, and Dr. Olson agreed with the Park West ER that Claimant should be referred out to see Dr. Lucas King.
26. Claimant then presented to Dr. King on March 26, 2019. At that time, Dr. King was hopeful that surgery could be avoided, and performed a steroid injection, with follow-up in two months. (Ex. 10, p. 31).
27. However, Claimant continued to experience symptoms, and went back to Dr. King on April 9, 2019. At that time, Dr. King noted Claimant's lack of progress, noting specifically the possible need for the chondroplasty and debridement of his medial femoral condyle. Claimant desired to proceed with this surgery, which occurred on 4/22/2019. Surgical notes are not in the record.
28. Claimant's post-surgical follow-up with Dr. King occurred on May 7, 2019. At that time, Claimant was doing well, attending physical therapy, and was wearing a brace. (Ex. 10, p. 35).
29. Claimant's next follow-up with Dr. King was on May 14, 2019. At that time, Claimant was not progressing as hoped, despite attending physical therapy. Dr. King expressed optimism that Claimant could heal with time, and indicated that due to the large chondral defect, he would be treated like an arthritis patient *moving forward*. (Ex. 10, p. 37).
30. Claimant appeared for his next follow-up with Dr. King on May 30, 2019. PA Sloan noted continued pain, swelling, and periodic catching, with the chondral loss identified at the culprit. For the first time, total knee arthroplasty was discussed as a possible remedy, along with a Synvisc injection. (Ex. 10, p. 40).
31. Respondents filed a General Admission of Liability on May 31, 2019, admitting liability for medical benefits and TTD benefits.

32. Claimant then presented on June 13, 2019 for the Synvisc injection, which occurred without incident. (Ex. 10, p. 41). At a follow-up on June 18, 2019, Claimant continued to complain of pain, but he was set for a follow-up in 6 weeks. *Id* at 43.
33. A second MRI was performed on 6/28/2019. In this exam, the significant Findings were: "There is a large full-thickness defect in the cartilage along the lateral aspect of the medial femoral condyle, which measures 12 x 22 mm. Small joint effusion is noted." All other ligaments remained unremarkable. (Ex. 12, p. 75) (emphasis added).
34. Claimant followed up with Dr. King on 7/16/2019. Claimant continued to complain of pain. Dr. King noted, "His *work comp doctor* ordered a new MRI, which showed no new pathology present." (Ex. 10, p. 45 (emphasis added). [pages are then missing from this visit].
35. However, in a follow-up visit on 7/30/2019 with PA Sloan, it was noted that Claimant had attended the joint arthroplasty class as directed. Claimant's symptoms persisted, and he wished to go forward with the knee replacement. (Ex. 10, p. 46). The possibility of a revision due to his age was discussed. *Id*.
36. A follow-up also occurred at Parkview on 7/31/2019 with Rupal Chavda, MD, for Claimant's rheumatoid arthritis, which had been diagnosed in 2013. His last visit had been 8/24/2018, and he was set for a 6-month follow-up. At that time, the focus was on Claimant's *hands*, while it was noted in the file [thus disclosed by Claimant] that he was planning on a TKA [total knee arthroplasty], due to lack of improvement from the arthroscopic procedure. At no point in this visit was RA discussed as a factor in Claimant's *knee* complaints. (Ex. 10, pp. 48-53).
37. Respondents submitted a second General Admission of Liability on September 24, 2019, again admitting liability and medical benefits. (Ex. 2).
38. The next entry from PA Sloan is from 10/24/2019. The right knee TKA had occurred on 10/9/2019. Claimant continued to complain of right knee pain, and his range of motion was limited. Dr. King also saw Claimant. Claimant was admonished that he must get more aggressive with his ROM therapy, or his leg might get stiffer and require a manipulation. (Ex. 10, p. 55).
39. Claimant saw Dr. King on 11/11/2019. Claimant was walking on the TKA, but still complained of pain. He had 10 degrees of extension, 90 degrees of flexion. No signs of infection. Claimant was again he needed to work on his ROM, or a manipulation would be necessary. (Ex. 10, pp. 56-57).
40. Next visit was 12/10/2019 with Dr. King. Range of motion was diminished. Claimant was described as "very pain effective" (?). A manipulation [under anesthesia] was deemed necessary to restore Claimant's ROM. (Ex. 10, p. 59).

41. The next entry was 12/31/2019, at which point Claimant was 15 days' post-procedure [12/16/2019]. By this time, it noted that *Medicaid* had not authorized further physical therapy visits, but Claimant was doing his own exercises. The stated goal was to get Claimant back into physical therapy. (Ex. 10, pp. 61-62).
42. Claimant returned to Dr. King on 1/14/2020. It was noted that Claimant was not attending physical therapy as required, and thus he was not getting the desired results with his ROM. From the notes, it is unclear if it is from simple noncompliance, or a lack of approval by Medicaid. A second manipulation was not considered at this juncture. (Ex. 10, pp. 63-64).
43. Claimant returned to Dr. King on 2/11/2020. This time it was noted that Claimant had been faithfully doing his therapy by exercising at home, but still without much ROM improvement. It was agreed at this visit that a second manipulation was warranted, but accompanied by arthroscopic surgery to remove scar tissue. (Ex. 10, pp. 65-66). No further entries are noted.

Billing by Parkview Medical Center

44. Each of Claimant's visits with Dr. King with Parkview Orthopedics, as noted above, are through Parkview Medical Center letterhead. Beginning at the first visit on 3/26/2019, Claimant's insurance was listed as *Medicaid*. (Ex. 10, p. 30).
45. Parkview then noted his insurer at the next visit [4/9/2019] as "**WC** Gallagher Bassett" (Ex. 10, p. 33) (emphasis added).
46. Parkview continued to list Claimant's insurer as **WC** Gallagher Bassett at every visit up until 10/24/2019 [then also 11/11/2019], then it was changed back to *Medicaid*.
47. Parkview then changed his insurance back to **WC** Gallagher Bassett at his next two visits, 12/31/2020, and 1/14/2020, then the final visit on 2/11/2020 lists Claimant's insurer once again as *Medicaid*.

Claimant's Continued Treatment and Billing

48. Claimant testified that he received medical benefits from Respondents for the initial surgery by Dr. King and physical therapy appointments afterward, but the medical benefits through Respondents ceased for the remainder of his treatment.
49. Claimant continues to attend physical therapy twice a week since this procedure. Claimant has finally seen some improvement in his right knee; however, he still walks with a noticeable limp.

Deposition of Dr. Olson

50. Daniel Olson, M.D., is a Level II Accredited physician that has been licensed to practice medicine since 1981.
51. Claimant went to Dr. Olson's clinic on March 5th, 2019, for treatment of Claimant's March 4th, 2019, work injury. Claimant reported to Dr. Olson's office that he slipped on ice at work and his right knee buckled inward.
52. Dr. Olson examined Claimant on March 19th, 2019 and noted swelling in Claimant's knee. Dr. Olson was also asked about other conditions surrounding Claimant's work-related injury, such as Type III Chondromalacia. and Dr. Olson opined that those conditions were likely there before Claimant injured his knee at work.
53. Dr. Olson again examined Claimant on March 26th, 2019 and noted reduced flexion of the knee.
54. Dr. Olson testified that Claimant's referral to Dr. King "got started" when Claimant went to Parkview ER, [therefore corroborating Claimant's testimony that the ER first recommended Dr. King and that later Dr. Olson agreed Claimant should go see Dr. King].
55. Dr. Olson reviewed operative notes of Dr. King's. He opined that he could not determine how long the defect (an unstable flap of cartilage) had been present; however, Claimant's knee buckling inward was a sufficient event for symptoms to begin if they were asymptomatic before.
- ...I think the way he [Claimant] described it, though, is *he buckled inwardly where the defect is*, and that could certainly apply enough torsion to it. (Transcript, pp. 14-15) (emphasis added).
56. Dr. Olson testified that Claimant was placed on restrictions to mostly sitting jobs as of June 19, 2019. He testified that although Claimant was cleared to work within his restrictions, he was aware Claimant's surgery did not help his symptoms, as his pain continued on.
57. Dr. Olson noted that merely because the MRI showed pathology does not mean that the pathology was actually causing symptoms. He further acknowledged that the chondromalacia "predated" the work injury.
58. Dr. Olson testified that he was not surprised that Claimant did not have relief from the May 19th, 2019 arthroscopic surgery [which was covered by Respondents] because, "[T]here's actually been pretty good studies that doing arthroscopic surgeries on arthritic knees doesn't always work. They seem like they have a fair amount continue to have pain after the surgery." (Transcript, p. 17). Dr. Olson testified that he shared this piece of literature with Claimant.

59. Dr. Olson testified that even though he considered Claimant's total knee replacement "elective" that Claimant did not have any other choice for continued treatment for his painful knee, because a recent MRI showed that the defect on Claimant's knee was larger as a "result of [the May 19th, 2019] surgery" and "not a new problem." He opined that "the *only option* surgically, you know, from Dr. King's perspective would be a total knee [replacement]." (Transcript, p. 23) (emphasis added).

60. Dr. Olson testified that he examined Claimant the morning of this deposition, and that Claimant was not at MMI because he had significant loss of range of motion, including significant extension short lag of 28 degrees, likely has scarring in his knee, continuing knee pain, and would likely need another manipulation under anesthesia. He testified that Claimant has "not made much progress" and "has a horrible limp because of the extension lag."

61. When asked about actual injuries, Dr. Olson testified that,

If he [Claimant] was not seeing any orthopedic specialists or any primary care doctors complaining of this right knee before the incident, then I would say, yes, *the [March 4th, 2019] incident aggravated his previously asymptomatic arthritis to the point where it's symptomatic and compensable.* (Transcript, p. 30) (emphasis added).

62. Dr. Olson stated that, objectively, he could not state whether the unstable flap of cartilage was there before the injury or caused by Claimant's injury because "we're not that good at that stuff." However, he stated "if he had an asymptomatic knee before, and he [had] this incident and now the osteochondral defect either has tears or has become symptomatic, and he doesn't get better, he should get an impairment rating" because "it's an aggravation of a previously underlying condition." (Transcript, p. 31).

63. Respondent's inquired of Dr. Olson on treatment that would be reasonable and necessary:

Q: So if I understand what you're saying, if the osteochondral defect was caused by what occurred on March 4, and since Dr. King elected to remove the osteochondral defect on April 22... and since that procedure, as you predicted, did not cure or relieve [Claimant], then the only procedure left that could be tried was a total knee replacement, which, unfortunately in this case also didn't cure or relieve [Claimant]. Am I understanding you correctly?

A: Yes.

Q: All right. So assuming, hypothetically, that an administrative law judge were to find that the total knee replacement was a direct and proximate

result of the sequelae of the March 4, 2019 industrial injury, currently, based on your evaluation of today, what additional health care treatment do you believe [Claimant] needs?

A: I think he needs a second manipulation under anesthesia. Another possibility would be an arthroscopic release of adhesions and aggressive physical therapy after that procedure to maximize his range of motion.

64. Dr. Olson testified that as of January 29, 2020, Claimant could not stand or walk straight because his knee creates balance issues. Dr. Olson was asked if his opinion has remained the same as Dr. Olson's March 26, 2019, report which indicates Claimant's injury is work-related. Dr. Olson simply answered, "Yes."

Respondent's IME Report and Deposition Testimony of Dr. Ciccone

65. Dr. William Ciccone, MD, performed an IME, which Claimant attended on October 2, 2019. Dr. Ciccone produced one report on October 21st, 2019, and supplemental reports on February 10th and February 24th of 2020. (Ex. D). Dr. Ciccone testified that he does IMEs "two half-days" a month and that yields approximately 8-12 IMEs per month.

66. Dr. Ciccone stated that Claimant told him that his knee was fine before March 4, 2019, that he had no symptoms prior to that date. Dr. Ciccone did not see any medical records indicating otherwise in the 10 years prior to the incident.

67. Dr. Ciccone was asked about the March 4, 2019 incident Claimant had at work, and Dr. Ciccone stated, "It's my opinion that I did not think [Claimant] suffered an injury to his knee on that date."

68. Dr. Ciccone's initial report (10/22/19) begins by expressly stating Claimant was walking at work when he slipped on ice, caught dry ground, "felt a pop at the time of injury", "had pain over the anterior aspect of the knee", and "suffered a twisting injury to his knee." (Ex. D, p. 7). Dr. Ciccone notes that Claimant's knee began swelling that evening. Dr. Ciccone admitted that feeling a pop and pain over the anterior of the knee indicates sensations at the time the injury occurred. [Dr. Ciccone's ultimate opinion in his report, however, is that Claimant did not suffer a work-related injury because "*he did not even have pain any knee pain until late that night. One would expect immediate pain and swelling if significant injury had occurred.*" (Ex. D, p. 16) (emphasis added)].

69. Dr. Ciccone comes to this "no pain at the time of the incident" conclusion despite his own "Review of Records" indicating:

- March 4th, 2019, Report of injury states "right foot slipped in snow, then he caught it, *then he felt pain...*" (Ex. d, p. 10).

- March 12th , 2019, NP Madrid notes “the *pain began March 4, 2019.*” (Ex. D, p. 11).
- March 26th, 2016, Dr. King notes “walking on ice at work when his knee buckled... *He had immediate pain*, mainly over the medial aspect of the knee.” Dr. King’s assessment is *acute* pain in the right knee. (Ex. D, p. 12).
- September 3rd, 2019, Nurse Practitioner Madrid notes “*sharp pain* and right knee swelling” which “*began on March 4th, 2019.*” (Ex, D, p. 14).
- September 29th , 2019, Dr. Olson notes “The *problem began March 4th, 2019.*” (Ex. D, p. 15).

70. Dr. Ciccone does not believe Claimant suffered a work-related injury, he does not believe the total knee replacement surgery was necessary, reasonable (because Claimant is too young at 48 years old), or work-related.

71. In Dr. Ciccone’s February 10, 2020 supplemental report, Dr. Ciccone considers whether Claimant should undergo manipulation under anesthesia. Dr. Ciccone opines “It is unclear from the record if the knee replacement was covered by worker’s compensation. However, to maximize the function of the replacement / *agree that manipulation under anesthesia would be appropriate.* (Ex. D, p. 20) (emphasis added).

72. Dr. Ciccone’s February 24, 2020 supplemental report indicates that he thinks Claimant’s knee was never good to begin with, stating “it does not appear claimant has ever had good knee range of motion” and further states claimant had limited improvement after his manipulation under anesthesia. [Apparently Dr. Ciccone does not believe another arthroscopic procedure is necessary or reasonable.] Dr. Ciccone suggests other factors be considered such as “implant position” and “extensor mechanics.”

73. Dr. Ciccone testified that Claimant’s MRI on March 18, 2019, showed a focal osteochondral defect which he described as “an injury that involves both cartilage and bone within a joint.” He testified, “Osteochondral defects can occur as an acute injury, but can be chronic as well.”

74. However, Dr. Ciccone believed Claimant’s osteochondral “injury” or “defect” was chronic and not acute, since Dr. Ciccone would expect a bone bruise and *Claimant “didn’t even have any knee pain after the injury until later that night.”* (Transcript, p. 12) (emphasis added).

75. Dr. Ciccone opined that Claimant did not injure his knee at work, because his body did not hit the ground. Further, Dr. Ciccone testified that:

....But again, *just by his own acknowledgement, he really had no symptoms at the time,* it just got worse that night. So most of the time when there is an acute injury, you expect acute pain and symptoms, not something that comes along later (Transcript, p. 17) (emphasis added).

76. Dr. Ciccone testified that Claimant's mechanism of injury was not sufficient for it to aggravate or accelerate any pre-existing condition and therefore the total knee replacement was not related. However, under cross-examination, Dr. Ciccone admitted that twisting a knee can cause a need for surgery, but that Claimant's "event" did not cause significant injury to his knee.
77. Dr. Ciccone acknowledged that his own report indicated Claimant had no restrictions following his knee surgery over two decades ago and that Claimant "had no pain in his knee prior to this injury, he had no locking or mechanical symptoms" prior to his March 4, 2019 injury.
78. Dr. Ciccone acknowledged that if Claimant had no pain for years, then he had pain on March 4, 2019 and thereafter, and that Claimant's onset of pain was caused by the slip on the ice. Additionally, Dr. Ciccone admitted that he had no indication that the injury of first report was not accurate wherein Claimant's symptoms as described are immediate.
79. Yet, when asked directly, if Claimant had pain and swelling immediately after the incident, Dr. Ciccone responded, "No, I don't believe that is correct."
80. When asked if the treatment received to date by Claimant was reasonable and necessary, Dr. Ciccone replied "...I do not believe that there was...a need for arthroscopy due to – that was causally related to the work injury. (Transcript, p. 42).
81. Dr. Ciccone disagrees with both Dr. Olson and Dr. King's causation opinions and course of treatment, yet ultimately stated that Dr. King's decision to perform surgery was "not unreasonable." (Transcript, p. 43).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act ("Act") of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. However, it is the Claimant in a workers' compensation claim who carries the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). Furthermore, the facts in a workers' compensation case

are not to be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. It is axiomatic that a workers' compensation case must be decided on its merits. *Id.*

2. The ALJ's factual findings in a workers' compensation case concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings in this matter as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility of witnesses, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); C.J.I, Civil 3:16 (2007). In this instance, the ALJ finds that Claimant has accurately reported the symptoms he felt to his medical providers, and testified sincerely and credibly at hearing.

Authorized Treating Physician, Generally

4. Employers are liable for authorized treatment reasonably necessary to cure or relieve from the effects of the industrial injury. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The statutory authority granting an employer the right to select the treating physician is found in C.R.S. § 8-43-404(5)(a). Once selected the claimant may only change physicians with permission from the insurer or an ALJ. See *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996); *Sims* 797 P.2d 777.

5. An "authorized treating physician" refers to a physician who is legally authorized to treat the injury. *Quintana v. Turner Construction Company*, W.C. No. 4-486-339 (ICAO November 6, 2003) citing *One Hour Cleaners v. Industrial Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995). Accordingly, where the employer "directs" the claimant to a particular physician and agrees to pay for the medical expenses incurred by the claimant with a particular physician, the physician is necessarily an "authorized treating physician". *Granger v. Penrose Hospital*, W.C. No. 4-351-885 (ICAO July 20, 1999). Once selected, the ATP may make authorized referrals. These referrals must be for care and treatment needed and related to the industrial injury. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985); see *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Claimant may not independently retain additional physicians without permission from the insurer or an ALJ.

6. When an authorized treating physician refers a claimant to another health care provider, the treatment rendered by the referred provider is compensable as part of the legal chain of authorization. See *Mason Jar Restaurant v. Industrial Claim Appeals*

Office, 862 P.2d 1026, 1029 (Colo.App. 1993); Greager v. Industrial Comm'n, 701 P.2d 168 (Colo.App. 1985).

7. "Authorization" refers to the physician's legal status to treat the injury at the Respondents' expense. Popke v. Industrial Claim Appeals Office, 944 P.2d 677 (Colo. App. 1997). If an authorized provider refers a claimant to another provider in the ordinary course of medical treatment, the provider to whom the claimant was referred is considered authorized. Bestway Concrete v. Industrial Claim Appeals Office, 984 P.2d 680 (Colo. App. 1999). The question of whether such a referral has been made is usually one of fact for determination by the ALJ. City of Durango v. Dunagan, 939 P.2d 496 (Colo. App. 1997).

Authorized Treating Physician, As Applied

8. Claimant suffered a compensable work injury on March 4, 2019. Once he realized the seriousness of it, he reported to Employer. As a result of this, he reported to CCOM. His ATP was, and still is, Dr. Olson. Claimant later contacted his authorized provider, Dr. Olson, while in severe pain from his work-related injury. Claimant was told by Dr. Olson's office that if Claimant's knee is in severe pain, he should go to Emergency Room. Claimant, following the instructions of his ATP, did go to the Emergency Room and was provided with a referral to see Dr. King. This supports the chain of authorization as Dr. Olson told Claimant to go to the ER and the ER told Claimant to see Dr. King.

9. Further, Claimant testified that he returned to Dr. Olson's prior to seeing Dr. King. Claimant was told by Dr. Olson that, since Dr. Olson's first recommendation was unavailable, Claimant should go see Dr. King. Hence, Dr. Olson adopted the referral to Dr. King even though Dr. King was initially referred by the Parkview ER. Further, Dr. Olson testified that Claimant's referral to Dr. King "got started" when Claimant went to Parkview ER. A reasonable inference is that Dr. Olson subsequently joined in on Claimant's referral to Dr. King.

10. While it is unclear from the record why Parkview [and by extension, Dr. King's office] thought *WC Gallagher Bassett* was the Insurer (perhaps through Parkview's existing familiarity with Trane?), certainly *Dr. King/Parkview believed this was a Workers Compensation case*, until Respondents denied coverage; they then resorted to Medicaid. The ALJ concludes that Dr. King is an authorized provider based upon the totality of the evidence, with nothing by Respondents in rebuttal.

Reasonable and Necessary Medical Treatment, Generally

11. Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No.

4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a “medical benefit” it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant’s physical needs. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995); *Karim al Subhi v. King Soopers, Inc.*, W.C. No. 4-597-590, (ICAO, July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006).

Preexisting Medical Conditions, Generally

12. The mere fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

13. The Supreme Court of Colorado has held that: “The fact of claimant’s pre-existing condition of arthritis and its being a contributing factor to his disability does not preclude payment of compensation.” *Kamp v. Disney*, 110 Colo. 518, 135 P.2d 1019, 1021. In *Spirakoff v. Pluto Coal Mining Co.*, 105 Colo. 552, 100 P.2d 154, 157, we stated, ‘an aggravation of a pre-existing abnormal or diseased condition may be the basis for an award of compensation.’ In still another case we held that the Industrial Commission, where there is a pre-existing disease, should determine, among other things, whether or not such pre-existing condition was aggravated by the injury. *Industrial Commission v. Dorchak*, 97 Colo. 142, 47 P.2d 396. *Merriman v. Industrial Com’n*, 120 Colo. 400, 210 P.2d 448, (1949)

14. As noted in *Seifried v. Industrial Com’n of State of Colo.*, “... if a disability were 95% attributable to a pre-existing, but stable, condition and 5% attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.” *Seifried v. Industrial Com’n of State of Colo.*, 736 P.2d 1262, (1986).

Medical Treatment, as Applied

15. Claimant did not have prior knee pain leading up to the injury. He had no problems with functionality of his knee before March 4, 2019. He then slipped on the ice, and felt pain and a “pop” *immediately* with the injury. As is not uncommon, he tried to “shake it off” and continue. However, his pain increased even more that evening, and swelling increased. Claimant’s following treatment have all been to address the continuing pain and swelling that started on March 4, 2019. The ALJ finds that all treatment sought by Claimant is *related* to his industrial injury.

16. Independent medical examinations on behalf of a party are recognized by the courts as a valuable tool in assisting the ALJ in making accurate fact findings and drawing valid conclusions. While acknowledging Dr. Ciccone’s considerable credentials, the ALJ cannot help but note that Dr. Ciccone’s *very own records review* noted that Claimant felt immediate pain when he slipped on the ice, yet he later persisted in concluding, as part of his analysis, that Claimant’s pain only began later. The ALJ finds this reasoning to be overly results-oriented, and thus highly unpersuasive, across the board.

17. While the chondral defect may have preexisted his work injury, the work injury caused his condition to become painfully symptomatic. The ALJ is persuaded by testimony by Dr. Olson and medical decisions made by Dr. King. From the record, it appears Claimant’s first arthroscopic surgery is undisputed as reasonable and necessary. Dr. King, Dr. Olson, and even Respondents IME Dr. Ciccone all believe this was a reasonable course of action.

18. The ALJ finds persuasive Dr. Olson’s testimony that, because the first arthroscopic surgery did not relieve Claimant’s symptoms, that a total knee replacement was the only option left. The ALJ did not find Dr. Ciccone’s opinion that the replacement was unnecessary because Claimant was “too young” persuasive. Claimant found himself in a no-win situation once the otherwise reasonable and necessary first arthroscopic debridement occurred. He was, *from that time forward*, treated like an arthritis patient, since he had effectively become one once his chondral defect was surgically expanded. While Claimant was far from the ideal age for a total knee arthroplasty, he understood the risks, took the required class, and did so in consultation with his ATP orthopedist, with the concurrence of his ATP from CCOM.

19. Dr. King did replace Claimant’s knee and, unfortunately, Claimant’s symptoms persisted. The fact that 20-20 hindsight shows this did not cure and relieve him of his symptoms does not retroactively render it ‘not reasonable and necessary’ at the time it was ordered. It was his best chance at that point in time, and sometimes these procedures don’t yield the expected result. Such was the case here.

20. Dr. Olson and Dr. Ciccone both agreed that a manipulation of the knee under anesthesia would be recommended, reasonable, and appropriate at that time of Claimant’s treatment- this time to address range of motion deficiencies. The ALJ

concur. Claimant had the manipulation done under anesthesia and, again, Claimant's symptoms persisted.

21. Dr. Olson testified that it would now be reasonable to go back in and remove obstructive tissue. Claimant returned to Dr. King in February, 2020, and had scar tissue surrounding the total knee replacement and finally had some symptoms mitigated. Conversely, Dr. Ciccone testified he did not think this procedure was reasonable and other options should have been explored such as "placement" of the knee replacement. The ALJ finds that even if Dr. King decided to evaluate and adjust the position of Claimant's knee replacement, that may well have involved surgery and anesthesia.

22. In summary, the ALJ finds that each of the four surgeries performed to date, and all related physical therapy, home exercise, and medication, were reasonable, necessary, and related to Claimant's work injury for which Respondents have filed a GAL.

Temporary Partial Disability, Generally

23. Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the Claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has *caused* the disability and consequent partial wage loss. Section 8-42-103(1), C.R.S.; *Safeway Stores, Inc. v. Husson*, 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

24. Section 8-42-103, C.R.S., provides instruction that Claimant is entitled to temporary benefits such as TTD. To receive temporary disability benefits a claimant must establish a causal connection between the injury and the loss of wages. Section 8-43-103(1)(a), C.R.S. 2002. Once the causal connection is established benefits continue until "the first occurrence of" one of the events listed in § 8-42-105(3)(a)-(d), C.R.S. 2001.

25. Section 8-42-105(3), C.R.S., provides instances when temporary total disability benefits shall cease for a claimant, such as (a) reaching MMI, (b) returning to regular or modified work, (c) a physician has released Claimant to return to regular employment, or (d) the attending physician gives claimant a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. The respondent must prove that one of the conditions present in § 8-42-105(3)(a)-(d) has occurred. 4-465-221 (2007). KAREN FANTIN, Claimant v. KING SOOPERS, Employer (FINAL ORDER).

26. Respondents have admitted liability for TTD benefits. Those benefits must continue until terminated in accordance with the statute or the applicable rules of procedure, and unilateral terminations are considered unlawful. *Monfort Transportation*

v. Industrial Claim Appeals Office, 942 P.2d 1358 (Colo. App. 1997). This is true because once liability for TTD is determined by admission or order, the burden shifts to the respondents to show grounds for termination and the parties are entitled to have contested issues of fact determined by an ALJ.

27. The ALJ shall determine whether Respondents made a written offer of modified employment within the meaning of § 8-42-105(3)(d)(I). If the ALJ finds there was such an offer, he shall determine whether the claimant refused to begin the employment which terminates his entitlement to temporary disability benefits under § 8-42-105(3)(d)(I).

TPD, as Applied

28. Beginning March 5th, 2019, the day after Claimant's injury, Claimant began modified duty while stationed at Trane through Respondents' employment. Claimant began modified duty April 2, 2019 at the Arc, because Respondents placed him there. Claimant continued modified until April 22, 2019, when he underwent the first surgery.

29. Respondents then prepared a Modified Duty Job Offer on May 8, 2019, which was signed by Dr. Olson on May 13, 2019, with the modified duty to begin on May 28, 2019. Claimant signed the modified duty job offer on May 28, 2019. Claimant did not "refuse" the modified duty, as Claimant actually began working at the Arc on June 5th, 2019. Claimant testified that he contacted the Arc, and was told to come sign a second modified duty offer with a start date of June 5, 2019. This testimony was not refuted; instead it is largely corroborated by the contents of Exhibit 8.

30. The ALJ has examined Exhibit 8. *While the entries are likely inexact, to put it mildly, it is all there is to go on.* The Arc employment log contains dates Claimant worked and dates Claimant failed to attend (indicated by handwritten "NC/NS" or "no call, no show" and an entry of "0" hours worked). Each entry is initialed by an Arc agent. There are no entries for May 28, 2019 through June 4, 2019; such are the dates Respondents assert that Claimant "refused" to accept modified duty and seek termination of temporary benefits as a result. As noted by Claimant, there are no "NC/NS" entries between May 28 and June 4. The reasonable inference, and the one made by the ALJ, is that he was not expected to work between May 28 and June 4; otherwise, he would have been marked as a No Call, No Show. *Claimant is to be credited for this week.*

31. Claimant continued working modified duty at the Arc through September 10, 2019 upon which Respondents chose to cease the modified duty opportunity at the Arc, and placed him on TTD.

32. Exhibit 8 shows that contrary to the modified duty offer promising 40 hours a week, Claimant claims he was not given the opportunity to work full-time. This appears to be partially true. Claimant testified that he was sent home early and often due to no work being available within his restrictions or having to miss some work to attend

physical therapy for his arthroscopic knee surgery. The ALJ finds this to be partially corroborated by Exhibit 8, but not fully. To the extent that each daily logs indicates that Claimant was sent home early due to a lack of work, the ALJ will credit Claimant with an 8-hour day accordingly. *Claimant is to be paid the difference for each such occasion.*

33. There are a number of entries, however, beginning 6/28/19, and ending 8/21/2019, wherein Claimant was listed as NC/NS. There is no accompanying explanation for any of these on this Exhibit. At hearing, Claimant claims he called Employer on these dates- rather than the Arc- since he actually worked for Employer. That seems sensible enough (despite corroboration from Employbridge) - but - *while perhaps that didn't make him an "NC", he was still an "NS"*. He still didn't work those days, and has yet to supply a reason for any of them. The sole exception (and granted by the ALJ), is June 28, 2019, which corresponds with his second MRI date. *Otherwise, Claimant is not entitled to TPD payments for any other NC/NS date, and the ALJ so finds.*

34. The Exhibits indicate that Claimant informed the Arc that he was not able to complete an 8-hour shift, due to his knee pain. That might well have been true. However, Claimant signed the modified duty agreement, and agreed to 8 hour shifts, for which he was to be paid a commensurate wage. Claimant could not, on an ad hoc basis, unilaterally modify the terms in this fashion. His remedy would have been to seek a reduction in hours by his ATP. This was not done. For that reason, unless the log indicates "sent home early-no work" as noted above, *Claimant is not to be credited for any shifts that he left early, or arrived late, of his own accord.*

35. Therefore, Respondents shall pay TPD to Claimant, as modified and outlined above.

ORDER

It is therefore Ordered that:

1. Dr. King is an Authorized Treating Provider.
2. The surgeries as performed by Dr. King (and all associated treatment in connection therewith) were reasonable, necessary, and related to Claimant's admitted work injury. Respondents shall make reimbursement to the appropriate parties.
3. Respondents shall pay TPD payments to Claimant, as modified and noted in the pertinent *Conclusions of Law*.
4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: April 1, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with the employer on June 14, 2019.
- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his low back, including injections, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.
- If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that as a result of his work injury he is entitled to temporary total disability (TTD) benefits from June 18, 2019 and ongoing until terminated by law.
- At hearing, the parties stipulated to an average weekly wage (AWW) of \$850.00.
- The parties also stipulated that beginning on February 5, 2020, the claimant began receiving unemployment benefits in the amount of \$522.00 per week.

FINDINGS OF FACT

1. The employer has a contract with FedEx to deliver packages. On May 29, 2018, the claimant began working for the employer as a delivery driver. The claimant was supervised by the company owner, Mr. S[Redacted].
2. As a driver for the employer, the claimant was expected to hold a valid commercial driver's license (CDL). Therefore, prior to beginning his employment with the employer, the claimant attended a pre-employment Department of Transportation (DOT) physical with Dr. Bruce Lippman. In the medical record of that date, Dr. Lippman noted that the claimant had a "back problem a year ago", but it was resolved. Given that information, Dr. Lippman determined that the claimant would need a lifting restriction of no lifting over 50 to 100 pounds. Despite this restriction, on the DOT Medical Examiner Determination (Federal) form, Dr. Lippman indicated that the claimant met all standards of the appropriate Code of Federal Regulations.¹

¹ 49 CFR 391.41.

3. While working for the employer, the claimant's job duties included driving a FedEx truck and delivering packages to customer locations in Glenwood Spring, Colorado. The packages varied in weight from a few ounces to 150 pounds. These packages are preloaded into the trucks for the drivers by other employees. The claimant testified that he was physically able to perform all aspects of his position.

4. The claimant testified that on Friday, June 14, 2019, he stopped to reorganize the packages in his truck. The claimant further testified that during this reorganization, he lifted a heavy box that was on the floor of the truck and tried to place it on a shelf above shoulder level. While lifting that box the claimant felt a pop and pain in his low back. The claimant testified that the box in question weighed between 40 and 60 pounds.

5. The claimant continued to work his shift on June 14, 2019. However, he testified that he did so in pain. As that was a Friday, the claimant took the weekend to see if his symptoms would improve. The following Monday, the claimant reported the June 14, 2019 lifting incident to his supervisor, Mr. S[Redacted]. On June 18, 2019, Mr. S[Redacted] filed a First Report of Injury or Illness.

Medical treatment prior to June 14, 2019

6. Prior to the June 14, 2019 FedEx lifting incident, the claimant had extensive treatment of his low back. The treatment began after September 12, 2015, when the claimant injured his back while throwing bales of hay at a ranch where he was employed.

7. Following that 2015 injury, the claimant treated with Dr. Glenn Kotz as his authorized treating physician (ATP). During his treatment of the claimant, Dr. Kotz referred the claimant to physical therapy, ordered a lumbar spine magnetic resonance image (MRI), and ultimately referred the claimant to Dr. Dustin Cole.

8. On January 15, 2016, a lumbar spine MRI showed L5-S1 disc herniation contacting the descending right S1 nerve root and encroaching the left S1 nerve root.

9. On March 17, 2016, the claimant was first seen by Dr. Cole. The claimant reported low back pain with left buttock pain. The claimant also reported persistent posterior left low extremity pain and numbness and transient right lower extremity pain and paresthesias. At that time, Dr. Cole opined that the claimant's pain was coming from the L5 disc and referred the claimant to physical therapy. In addition, Dr. Cole recommended that the claimant stop using a soft back brace to help with his core strength. Finally, Dr. Cole recommended a possible L5-S1 interlaminar epidural steroid injection (ESI).

10. The claimant returned to Dr. Cole on April 27, 2016. At that time, the claimant reported improvement in his pain symptoms, even though he had not been attending physical therapy. Dr. Cole opined that the claimant was not experiencing radicular pain, but rather sacroiliac (SI) joint pain. Based upon that opinion, Dr. Cole recommended bilateral SI joint injections.

11. Subsequently, the claimant transferred his treatment to Dr. David Lorah as his ATP. The claimant was first seen by Dr. Lorah on April 29, 2016. On that date, the claimant reported low back pain that radiated into his left lower extremity. Dr. Lorah referred to the MRI findings of a disc herniation at L5-S1. At that time, Dr. Lorah assessed working restrictions of no lifting over 20 pounds.

12. On June 29, 2016, Dr. Cole administered a left SI joint injection. On August 2, 2016, the claimant returned to Dr. Cole and reported no benefit from the injection. Dr. Cole noted that he did not have further injections to offer the claimant. Instead, he recommended the claimant see Dr. Wade Ceola for a neurosurgical consultation.

13. On August 23, 2016, the claimant was seen by Dr. Ceola. In the medical report of that date, Dr. Ceola noted that the MRI showed degenerative disc disease at the L5-S1 level with central and slightly right sided paracentral disc herniation. He opined that the claimant's pain generator was that disc. Dr. Ceola noted that the claimant's surgical options would be a fusion or disc replacement. Given the claimant's young age, Dr. Ceola opined that he would be a good candidate for a disc replacement. However, before proceeding with surgery, Dr. Ceola recommended the claimant undergo a discogram at L4-L5 and L5-S1.

14. The claimant was seen by Dr. Lorah on August 31, 2016. At that time, Dr. Lorah noted Dr. Ceola's recommendation for a discogram, and eventually an artificial disc replacement. In addition, the 20-pound lifting restriction remained in place.

15. On September 13, 2016, the claimant returned to Dr. Cole who recommended an epidural injection to address the claimant's radicular symptoms.

16. On September 30, 2016, the claimant notified Dr. Lorah that he was scheduled to undergo the ESI with Dr. Cole. The claimant reported some improvement in his pain and range of motion. The 20-pound lifting restriction remained in place.

17. On October 5, 2016, Dr. Cole administered a left L5 transforaminal epidural steroid injection (TFESI). On November 1, 2016, the claimant reported to Dr. Cole that he experienced one week of 70 to 80 percent improvement of his symptoms. At that time, Dr. Cole suggested a possible repeat injection.

18. The claimant returned to Dr. Lorah on November 4, 2016 and reported 70 to 80 percent relief of his symptoms following the TFESI. The claimant also reported that it was likely he would have a repeat TFESI. The 20-pound lifting restriction remained in place.

19. On November 30, 2016, Dr. Cole administered the repeat left L5 TFESI.

20. Thereafter on December 5, 2016, the claimant continued to report to Dr. Lorah low back pain with occasional pain radiating into his left buttock and left thigh. The claimant also reported that he had minimal relief from the November 30, 2016 ESI. The 20-pound lifting restriction remained in place. Throughout this time, the claimant continued physical therapy, chiropractic treatment, and acupuncture.

21. On January 1, 2017, the claimant reported continued symptoms to Dr. Lorah. The claimant requested a referral to Dr. Ceola to discuss surgical options. The 20-pound lifting restriction remained in place.

22. On January 17, 2017, the claimant returned to Dr. Cole and reported that the November 30, 2016 TFESI provided 40 percent relief one week after the injection. Dr. Cole noted he had no additional injections to offer the claimant and recommended the claimant follow up with Dr. Ceola.

23. On March 21, 2017, Dr. Giora Hahn administered a L4-L5 and L5-S1 discogram. Dr. Hahn concluded that the claimant L5-S1 was positive and concordant.

24. On April 14, 2017, the claimant returned to Dr. Lorah. At that time, Dr. Lorah noted that the discogram results were "positive and concordant". Dr. Lorah referred the claimant back to Dr. Ceola to discuss surgical options. The 20-pound lifting restriction remained in place.

25. On April 18, 2017, the claimant attended an independent medical examination (IME) with Dr. Michael Rauzzino related to the 2015 injury. Dr. Rauzzino opined that the claimant suffered a work injury that resulted in the L5-S1 disc herniation. Dr. Rauzzino noted that if the claimant's discogram was concordant at L5-S1, he would recommend the claimant undergo either an L5-S1 fusion or an L5-S1 disc replacement.

26. On June 22, 2017, the claimant returned to Dr. Ceola who again opined that the claimant was an excellent candidate for a lumbar disc replacement. On that date, the claimant informed Dr. Ceola that he wanted to consider his options, and would call if he wished to pursue the surgery. The claimant did not undergo the recommended artificial disc replacement surgery.

27. The claimant last treated with Dr. Lorah on July 28, 2017. At that time, Dr. Lorah noted that the claimant would undergo another MRI and then seek treatment with Dr. Ceola. At that final appointment, the 20-pound lifting restriction remained in place.

28. Subsequently, the claimant settled his 2015 claim. No medical provider has placed the claimant at maximum medical improvement (MMI) for that prior injury.

Medical treatment after June 14, 2019

29. The claimant's authorized treating provider (ATP) for the current June 14, 2019 claim has been Grand River Medical Clinic (GRMC). The claimant was first seen at GRMC by Mark Quinn, PAC on June 19, 2019. On that date, the claimant reported low back pain with a numb and tingling sensation down his right leg. The claimant notified Mr. Quinn of his prior L5 disc herniation. The claimant reported that his prior low back symptoms resolved following injections. On June 19, 2019, Mr. Quinn diagnosed a lumbar strain and prescribed pain medication and a muscle relaxer. In addition, Mr. Quinn assessed work restrictions of no lifting, carrying, pushing, or pulling over 20 pounds.

30. On July 3, 2019, Mr. Quinn referred the claimant to physical therapy for four to six weeks. The claimant's first physical therapy appointment was on July 23, 2019 with Stacy Hardee. On that date, the claimant reported six weeks of low back pain with tingling in his bilateral lower extremities. Ms. Hardee noted that the claimant had limited lumbar flexion range of motion, but other trunk range of motion was "unremarkable".

31. On August 1, 2019, the claimant returned to Mr. Quinn and reported that he was continuing physical therapy and his symptoms were better. He denied leg numbness and tingling. Mr. Quinn recommended the claimant continue physical therapy and a home exercise program (HEP).

32. On September 3, 2019, the claimant was seen by Mr. Quinn. Mr. Quinn noted that the claimant's exam was "completely normal" and his range of motion was normal. At that time, Mr. Quinn released the claimant to return to work with a 20-pound lifting restriction. The claimant asked about narcotic pain medications, which Mr. Quinn declined to prescribe.

33. The claimant returned to Mr. Quinn on November 6, 2019. The claimant reported that he was "discharged" from physical therapy because he had full range of motion and was at full strength. However, the claimant continued to report pain. On that date, Mr. Quinn referred the claimant to Dr. Cole for possible injections.

34. On November 14, 2019, the claimant was seen by Dr. Cole. At that time, Dr. Cole referenced his prior treatment of the claimant and the 2016 lumbar spine MRI that showed the L5-S1 disc herniation. With regard to the claimant's current symptoms, Dr. Cole noted that the claimant had midline lumbosacral pain with radiating pain into his bilateral legs down to his feet. Dr. Cole opined that the claimant's pain was primarily discogenic. As the claimant reported that he was pain free prior to the June 14 2019 incident, Dr. Cole further opined that the June 14, 2019 lifting incident was an exacerbation of the claimant's prior symptoms, rather than a new discrete pathology. At the November 14, 2019 appointment, Dr. Cole ordered a lumbar spine MRI.

35. On December 9, 2019, a lumbar spine MRI showed a right paracentral bulging disc or small disc protrusion at the L5-S1 level. The MRI report also noted that the protrusion contacts, but does not displace, the S1 nerve root.

36. On January 1, 2020, the claimant returned to Dr. Cole and continued to report midline lumbosacral pain. On that date, Dr. Cole noted no significant changes from the 2016 MRI. Dr. Cole recommended a left paramedian L4-5 interlaminar ESI. The injection would not be at the L5-S1 level because of "the dearth of epidural fat" at that level.

37. The claimant returned to Mr. Quinn on January 16, 2020 and reported that he was waiting for authorization of the injection recommended by Dr. Cole.

38. The respondents asked Dr. Michael Janssen to review the request for treatment of the claimant's low back symptoms. In a report dated January 22, 2020, Dr. Janssen recommended denial of any treatment of the claimant's low back. In support of

this opinion, Dr. Janssen noted that the claimant's anatomical findings in December 2019 are identical to those from June 2016. In addition, Dr. Janssen noted that after the June 2016 MRI, the claimant was given the opportunity to undergo a disc replacement surgery, which the claimant did not pursue.

39. On January 31, 2020, the claimant attended an IME with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Lesnak opined that on June 14, 2019, the claimant did not sustain a new injury or a substantial aggravation of his preexisting conditions. In support of this opinion, Dr. Lesnak noted that the claimant's current symptoms are identical to those he had when treating with Dr. Lorah in 2016. In addition, Dr. Lesnak noted that the claimant had a normal exam at the IME, with no abnormalities of his lumbar spine. Dr. Lesnak's testimony at hearing was consistent with his written report.

40. Dr. Lesnak testified that at the IME, the claimant reported that his symptoms included constant diffuse low back pain, right greater than left, with frequent buttock pain that radiated into the claimant's bilateral legs. Dr. Lesnak further testified that these symptoms are very similar to those the claimant reported related to the 2015 injury. Furthermore, the 2016 and 2019 MRI findings are virtually the same. Dr. Lesnak also testified that the claimant had no lumbar spine abnormalities at the IME. In addition, Dr. Lesnak noted that Mr. Quinn noted that on September 3, 2019, the claimant had completely normal range of motion. Dr. Lesnak opined that it is medically improbable that the claimant's 2015 related symptoms, and need for surgery, would have resolved. Dr. Lesnak reiterated his opinion that the claimant did not suffer a new injury on June 14, 2019, nor did the claimant suffer an aggravation of a preexisting condition on that date. In support of this opinion, Dr. Lesnak testified that the claimant's MRI findings were unchanged.

41. The claimant's supervisor, Mr. S[Redacted] testified that on February 18, 2020, he ended the claimant's employment. The claimant was notified by an undated letter that his employment had ended. The letter informed the claimant that his employment was terminated because of the employer's need to fill the claimant's position.

42. The claimant testified that his 2015 injury involved low back symptoms that were primarily left sided. In contrast, the claimant testified that following June 14, 2019, his low back symptoms were more right sided. The claimant also testified that since June 14, 2019, his symptoms continue to include weakness, numbness, and tingling in his low back. In addition, he has sharp low back pain that radiates into his right leg down into his toes. The claimant also testified that he constantly uses Aleve or ibuprofen to address his pain symptoms.

43. The ALJ credits the medical records and the opinions of Dr. Lesnak and finds that the claimant has failed to demonstrate that he suffered an injury at work on June 14, 2019. The ALJ also finds that the claimant has failed to demonstrate that his preexisting low back condition was aggravated or accelerated by his work activities on June 14, 2019. The ALJ notes that the claimant was offered surgical intervention related

to the 2015 injury. However, the claimant did not pursue surgery. The ALJ finds that the claimant's need for medical treatment (including surgery) is not related to his work for the employer, but instead related to his 2015 injury. The ALJ notes that the claimant's symptoms and MRI findings are the same. In addition, at no time was the 20 pound lifting restriction (as assessed by Dr. Lorah) removed. Although Dr. Lippman indicated in his report that the claimant could lift up to 100 pounds, the ALJ is not persuaded that the claimant's prior low back symptoms had resolved.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that on June 14, 2019 he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the claimant has failed to

demonstrate by a preponderance of the evidence that his preexisting low back condition was aggravated or accelerated by his work activities on June 14, 2019. As found, the medical records and the opinions of Dr. Lesnak are credible and persuasive.

ORDER

It is therefore ordered the claimant's claim for workers' compensation benefits related to alleged June 14, 2019 injury is denied and dismissed.

Dated this 7th day of April 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

| STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 222 South 6th Street, Suite 414, Grand Junction, CO 81501 | <div style="text-align: center;"><input type="checkbox"/> COURT USE ONLY <input type="checkbox"/></div> CASE NUMBER: WC 5-089-703-002 |
| In the Matter of the Workers' Compensation Claim of: [Redacted], Claimant, vs. [Redacted], Employer, and [Redacted], Insurer, Respondents. | |
| FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER | |

On December 18, 2019, a hearing in this matter was held in Durango, Colorado before Administrative Law Judge Cassandra M. Sidanycz. On that date, the claimant was present and represented by [Redacted], Esq. The respondents were represented by [Redacted], Esq.

The following individuals testified on behalf of the respondents on December 18, 2019: Chris [Redacted], Office Manager; Dwayne [Redacted], Collision Repair Manager; and Greg [Redacted], General Manager. On December 18, 2019, the hearing was digitally recorded from 1:05 p.m. to 4:30 p.m. The claimant's exhibits 1 through 31 were admitted into evidence. The respondents' exhibits A through L were admitted into evidence.

The hearing was continued to January 16, 2020 in Durango, Colorado. The hearing was recorded from 8:42 a.m. to 10:07 a.m. On that date, Ray [Redacted], GM Sales Manager with the employer, testified on the claimant's behalf. The claimant was also expected to testify on January 16, 2020. However, the claimant did not appear at the hearing. The claimant did not communicate a reason for his absence. As a result, the ALJ allowed the claimant's attorney the opportunity to request a continuance. The ALJ granted a continuance in an order dated January 28, 2020. Thereafter, the hearing was continued to February 25, 2020. On that date, the parties appeared by telephone and the claimant testified. On February 25, 2020, the hearing was recorded from 8:30 a.m. to 10:32 a.m.

In this order, [Redacted], will be referred to as "the claimant"; [Redacted], will be referred to as "the employer"; and [Redacted], will be referred to as "the insurer". In

addition, the employer and the insurer will be referred to collectively as “the respondents”. Also in this order, “the ALJ” refers to the Administrative Law Judge; “C.R.S.” refers to Colorado Revised Statutes (2018); “OACRP” refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and “WCRP” refers to Workers’ Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

Whether the respondents have demonstrated, by a preponderance of the evidence, that that claimant was responsible for his termination of employment, therefore allowing the respondents to end payment of temporary total disability (TTD) benefits as of June 21, 2019.

Following the hearing, the parties stipulated that if the claimant is found to have been responsible for his termination of employment, then the claimant’s rate of temporary partial disability (TPD) benefits shall be \$390.03.

PROCEDURAL HISTORY

1. On July 1, 2019, the respondents filed a Petition to Modify, Terminate, or Suspend Compensation. The claimant timely objected to the Petition, and on July 26, 2019 the respondents’ filed an Expedited Application for Hearing.

2. A hearing was initially scheduled for September 19, 2019. On August 26, 2019, the claimant filed an opposed motion to continue the September 19, 2019 hearing. On August 27, 2019, ALJ Mottram granted the claimant’s motion to continue the hearing to October 16, 2019. In addition, ALJ Mottram temporarily granted the respondents’ petition to terminate temporary disability benefits. On September 20, 2019, PALJ Sandberg granted the respondents’ motion to resume payment of temporary partial disability (TPD) benefits, which the claimant was receiving when his employment was terminated.

3. Thereafter, the parties agreed to reschedule the hearing to November 13, 2019, in Durango. However, at the status conference on October 24, 2019, the claimant requested a continuance of the November 13, 2019 hearing date because he was scheduled to receive treatment for his injury on that date. Due to the prior continuances, the respondents withdrew their prior application for hearing, without prejudice, and refiled their application for expedited hearing on October 25, 2019. That application for hearing was set for hearing on December 18, 2019.

4. The respondents have continued to pay TPD pursuant to PALJ Sandberg’s September 20, 2019 order. At the time of his termination, the claimant received \$390.03 per week in TPD benefits. The parties have stipulated that if the claimant is found responsible for termination of his employment, (and the petition to modify temporary disability benefits is granted), the claimant’s TPD should be \$390.03.

FINDINGS OF FACT

5. In March 2011, the claimant was hired to work as a detail technician. At all times material to the issue before the ALJ, the claimant worked as a detail technician in the employer's Collision Repair department. The claimant's job duties included cleaning cars after repairs.

6. In mid-2018, the claimant's co-workers noted that he appeared to be in pain while at work. The employer directed the claimant to seek medical treatment for his symptoms. Although the claimant initially refused, ultimately the claimant attended a medical appointment on September 26, 2018 with Animas Occupational Medicine. The claimant was diagnosed with a left inguinal hernia.

7. The development of the claimant's hernia was deemed a work related injury. The respondents have admitted liability for this work injury. As a result, the respondents have paid the claimant both temporary partial disability (TPD) benefits and temporary total disability (TTD) benefits.

8. The claimant underwent hernia repair surgery on October 11, 2018. After a period of recovery, the claimant returned to modified duty with the employer. On February 19, 2019, Dr. Jonathan Rudolf determined that the claimant was able to work four hours per day, five days a week. The claimant worked under that part-time schedule from February 2019 until his final day of employment on June 20, 2019.

Prior Disciplinary Matters

9. On April 18, 2018, the claimant was disciplined after he wrote on a coworker's vehicle. The warning notice entered into evidence lists the claimant's infractions as improper conduct, property damage, and failure to comply with company policy. In addition, the notice stated that the claimant's "[f]ailure to make appropriate corrections will lead to further discipline, up to and including discharge."

10. The claimant was issued another disciplinary notice on May 11, 2018 after he drove a customer's vehicle off the employer's property without authorization. The infractions listed in that notice were insubordination and violation of company policy. As with the April 2018 notice, the claimant received written notice that "[f]ailure to measurably improve your job performance or any repeat of the infractions described in this notice will likely lead to suspension or discharge."

Employment Terminated

11. The claimant's employment was terminated on June 20, 2019. The claimant's direct supervisor, Dwayne B[Redacted], Collision Repair Manager, testified that he discovered the claimant's work area in disarray on June 19, 2019. Specifically, Mr. B[Redacted] noted that the hoses were laying on the floor, rags used for drying vehicles were strewn on floor, the basin for the eye wash station was broken in half and thrown on the floor, pieces of a broken broom were also on the floor, along with a number of other cleaning materials and canisters. On June 20, 2019, Mr. B[Redacted] took photographs of the condition of the wash bay. Mr. B[Redacted] credibly testified that this was not the normal state of the wash bay, nor was it an acceptable condition for the

claimant's work area. Mr. B[Redacted] reported the condition of the claimant's work area to Greg R[Redacted], General Manager. Mr. R[Redacted] also saw the condition of the wash bay on June 20, 2019. Together Mr. B[Redacted] and Mr. R[Redacted] spoke to the claimant about the wash bay. Mr. B[Redacted] testified that the claimant explained that he had been in a great deal of pain and was frustrated with the status of his medical treatment and he "took it out" on his work area. It was the decision of senior management (including Mr. R[Redacted]) to terminate the claimant's employment.

12. Mr. R[Redacted]'s testimony is consistent with that of Mr. B[Redacted]. In addition, Mr. R[Redacted] testified that he was involved with the final decision to end the claimant's employment. Mr. R[Redacted] further testified that he and the other two owners discussed the claimant's destruction of his work area. Together they determined that the claimant's actions constituted destruction of the employer's property. Mr. R[Redacted] testified that such behavior was not acceptable and could not be tolerated.

13. Chris H[Redacted], Office Manager, also testified. Ms. H[Redacted]'s testimony was consistent with that of both Mr. B[Redacted] and Mr. R[Redacted].

14. Ray S[Redacted], GM Sales Manager testified that he was the claimant's supervisor prior to the claimant working in the Collision Repair department. That period of supervision was more than eight years prior to the claimant's work injury. Mr. S[Redacted] testified that while he supervised the claimant there were instances in which the claimant was not respectful of his coworkers. Mr. S[Redacted] also testified that the claimant struggled with his interaction with his coworkers. Mr. S[Redacted] did not observe improvement in the claimant's behavior.

15. The claimant testified that on June 19, 2019 he left the wash bay in "a mess" because he was experiencing hernia related pain. In addition, he was unable to locate his water blade that he utilizes to dry vehicles. As a result, he used a number of towels to hand dry a vehicle. The claimant explained that is why there were towels littered throughout the wash bay. The claimant also testified that he did not damage the broom or eyewash station. The claimant further testified that when he arrived at work on June 20, 2019, the wash bay was "spotless". The ALJ does not find the claimant's testimony to be credible or persuasive.

16. The ALJ credits the testimony of Mr. B[Redacted], Mr. R[Redacted], and Ms. H[Redacted] over the contradictory testimony of the claimant. The ALJ finds that the claimant exercised control over the termination of his employment when he engaged in behavior that damaged the employer's property on June 19, 2019. The ALJ finds that the claimant was in control of his behavior. Therefore, his actions were volitional in nature. The ALJ finds that the claimant knew, or reasonably should have known, that such behavior was unacceptable and could lead to the loss of his employment. This was not the first time the claimant had engaged in unacceptable behavior at work. In fact, the claimant had been warned about inappropriate behavior prior to the June 19, 2019 incident. For all the foregoing reasons, the ALJ finds that the respondents have demonstrated that it is more likely than not that the claimant is responsible for the termination of his employment.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

2. A claimant in a Workers’ Compensation claim generally has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. However, when the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. Section 8-43-201(1), C.R.S.; see also *Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that “a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.”

3. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

4. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

5. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

6. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases “where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury.” In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held that the term “responsible” reintroduced into the Workers’ Compensation Act the concept of “fault” applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of “fault” as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, “fault” requires

that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. See *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

7. Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. See *Pabst v. Industrial Claim Appeals Office*, 833 P.2d 64 (Colo. App. 1992) (claimant disqualified from unemployment benefits after discharge for unsatisfactory performance when aware of expectations, even if not explicitly warned that job was in jeopardy). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

8. As found, the respondents have demonstrated by a preponderance of the evidence that the claimant committed a volitional act that resulted in his termination of employment. As found, the ALJ credits the testimony of Mr. B[Redacted], Mr. R[Redacted], and Ms. H[Redacted] over the contradictory testimony of the claimant regarding the June 19, 2019 wash bay incident.

ORDER

It is therefore ordered:

1. The claimant is responsible for his June 20, 2019 termination of employment and all related lost wages.

2. The respondents are entitled to reduce the claimant's temporary disability benefits by the amount of wage loss for which the claimant is responsible.

Dated this 9th day of April 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-109-330-001**

ISSUES

- Did Respondents prove Claimant's wage loss was not caused by a work-related disability, thereby permitting withdrawal of the admission of liability for temporary disability benefits?
- Did Respondents prove Claimant's indemnity benefits should be reduced by 50% for willful violation of a safety rule?
- Did Claimant prove by a preponderance of the evidence Respondents are liable for medical benefits for treatment of myasthenia gravis?
- Did Claimant prove physical therapy, occupational therapy, and speech therapy are reasonably necessary to cure and relieve the effects of her work accident?
- The parties stipulated to an average weekly wage (AWW) of \$2,025.50.

FINDINGS OF FACT

1. Claimant worked for Employer as a sales executive. Her job involved frequent travel throughout Colorado, Kansas, Nebraska, and Wyoming.

2. On May 7, 2019, Claimant was returning from a work-related appointment in Breckenridge when she was involved in a motor vehicle accident. The accident occurred on Highway 24 in South Park, approximately five miles East of Hartsel, slightly east of Elkhorn Road. Even though the road in that location is relatively straight, it covers mild rolling hills.

3. The accident occurred at approximately 11:30 AM. The roadway was covered with several inches of fresh hail from a rainstorm that had passed overhead shortly before. According to Respondents' meteorology expert, the strongest cell passed over the accident site sometime between 11:11 AM and 11:24 AM. Rain had passed over the highway between Hartsel and the accident site, so the roadway was damp and/or wet for several miles before the crash.

4. Claimant was using her cruise control and traveling the posted speed limit of 65 m.p.h. at the time of the accident. Claimant perceived the road as damp, and she does not recall activating her windshield wipers. Claimant perceived areas of mixed clouds and sun at the edge of the storm ahead of her. She was surprised by the sudden appearance of accumulated hail on the roadway, and immediately lost traction and began to spin. She overcorrected, lost control and rolled the vehicle twice.

5. Despite extensive damage to the vehicle, Claimant remained conscious and crawled out of the vehicle. She was shaken and sore, but otherwise escaped without serious injuries.

6. Colorado State Patrol Trooper Benjamin Evans arrived at the scene at 1:03 PM. Claimant completed a Driver's Statement on which she stated, "Had cruise on 65 mph – road was damp then turned into complete ice," Trooper Evans' report described the accident at "A crash due to sudden hail-covered roadway." Although he opined Claimant was driving too fast for conditions, he did not issue a citation.

7. Claimant declined medical attention and went home to rest. After a few hours, she felt "stiffness" in her neck and upper back and noticed "diamond flickers" in her right eye. The next morning, she noticed her right eye was drooping, so she went to the DaVita Urgent Care Clinic.

8. Claimant was evaluated by Dr. Robi Baptist at DaVita on May 8, 2019. Claimant reported a headache, back pain, left arm pain, generalized achiness, and a "drooping" right eyelid. Dr. Baptist ordered a CT scan, which came back normal. Dr. Baptist assumed Claimant suffered a mild head injury. She diagnosed 3rd cranial nerve palsy and referred Claimant to a neurologist.

9. Claimant returned to work on May 9, 2019, but had a headache, difficulty concentrating, and double vision. These issues made it difficult for her to read and prevented her from driving. Claimant continued working the next week, but she could not travel because of her vision. She also developed slurred speech and difficulty chewing. Employer paid Claimant's regular wage despite her limitations.

10. On June 3, 2019, Claimant was admitted to the Memorial Hospital for progressive neurological symptoms including right eye ptosis, headache, slurred speech, lethargy, neck pain, incontinence, oral dysphasia, photophobia, and phonophobia. She was examined by neurologist Dr. Amita Singh on June 4, who opined her symptoms were likely related to a head injury. Claimant was discharged on June 6 to a rehabilitation hospital.

11. Claimant was admitted to Memorial Hospital on July 4, 2019 because she was having problems swallowing, which had caused her to lose 25 pounds in a month. She developed aspiration pneumonia and was admitted to the ICU, where she was intubated, sedated, and placed on a ventilator.

12. On July 10, 2019, Claimant was evaluated by Dr. Jonathan O'Neil, a neurologist with experience diagnosing and treating neuromuscular disorders including myasthenia gravis ("MG"). Dr. O'Neil noted progressive worsening of neurological symptoms after the May 7, 2019 MVA. He thought her symptoms may be from a neuromuscular disorder such as MG instead of a head injury as assumed by previous providers.

13. MG is an autoimmune neuromuscular disease caused by antibodies binding to acetylcholine receptors in the neuromuscular junction, which prevents normal muscle

activation. MG is frequently associated with thymic disorders such as thymoma (tumor of the thymus) or thymic hyperplasia (enlargement of the thymus).

14. Test results and Claimant's response to treatments ultimately confirmed the diagnosis of MG.

15. A CT scan had identified a suspected thymoma, a likely source of the MG. Claimant underwent surgery on August 21, 2019 to remove the tumor. The surgeon did not find thymoma but instead found thymic hyperplasia.

16. Dr. Bruce Morgenstern, a neurologist, performed a record review for Respondents on August 29, 2019. He opined Claimant's progressive neurological symptoms of fluctuating ptosis, diplopia, dysarthria, and dysphasia, were not consistent with a head injury, and were consistent with a fluctuating neuromuscular disorder such as MG. He opined the coincidental occurrence of the motor vehicle accident had distracted Claimant's physicians from the true diagnosis and led them to incorrectly focus on the presumed TBI. He did not have the August 21 surgical report, and opined the (suspected) thymoma was the unequivocal cause of her MG. He reviewed current medical literature and found no persuasive evidence of a link between MG and trauma. He noted a 2009 case study by Lane, et. al, regarding a patient who developed symptoms of MG within minutes of a minor trauma to the cheek and neck. He opined this study did not apply to Claimant because he was under the mistaken impression she manifested no MG symptoms until two weeks after the accident. He stated, "if this unlikely explanation were valid, one would expect [Claimant's] myasthenic symptoms to similarly present within minutes of her trauma." He opined the MG was "unequivocally caused by her radiographically proven thymoma," so there was no need to look for an alternate cause.

17. Dr. Morgenstern issued a supplemental report on September 5 after reviewing Dr. Baptist's May 8, 2019 report documenting right eye ptosis the day after the MVA. He agreed the ptosis reflected the first manifestation of MG, but maintained it was not related to the accident. He opined this was "a simply temporal correlation, not an etiology," and reiterated the "incontrovertible relationship" of the MG to the (presumed) thymoma.

18. On December 6, 2019, Dr. O'Neil issued a report addressing causation of the MG. He opined,

[Claimant's] Myasthenia Gravis was made symptomatic by the MVA that occurred on 5/7/19. My opinion is based on the fact that [Claimant] was asymptomatic prior to the accident and subsequently had symptoms consistent with Myasthenia Gravis possibly as early as the day after the accident. She, subsequently, was found to have elevated acetylcholine receptor antibodies, confirming the diagnosis. The literature supports this temporal relationship with the development of Myasthenia Gravis after traumatic events, such as [Claimant's].

19. Dr. O'Neil noted the August 21 surgery showed thymic hyperplasia but no evidence of a thymoma. He cited the 2009 case study by Lane, et. al. documenting the onset of seropositive MG in a previously asymptomatic patient within minutes of a chest trauma. The authors of that study speculated that "the remote effects of the auto inflammation secondary to tissue microtrauma led to a sudden increase in muscle permeability and great exposure of receptors to antibody, with resulting acute impairment of neuromuscular transmission." They also suggested "trauma might have resulted in increased antibody production by remnants thymic tissue, leading to a chronic disease." Dr. O'Neil opined Claimant's situation similar to the patient referenced in the case study. He also cited a 2012 study by Peterson, et. al., regarding a patient who developed MG 2 months after a motor vehicle accident involving a serious chest injury. He also cited information from Johns Hopkins University and the Mayo Clinic that MG symptoms and myasthenic crisis can be aggravated or triggered by stress. He believes the MVA "was a significant stress, emotionally and physically, that likely led to the precipitation and unmasking of an underlying, previously quiescent Myasthenia Gravis."

20. Dr. John Raschbacher performed a record review for Respondents on December 30, 2019. He agreed with Dr. Morgenstern that Claimant's MG is not related to the MVA. He opined,

MG is an autoimmune disease caused by production of antibodies. It is not likely, medically, that an auto accident would likely cause the body to produce antibodies. In fact, it is very unlikely. In particular, if a ptosis from the MVA were already present on 5-8-19 from the MG, one would have to postulate that in less than one day's time, the MVA caused the production of antibodies and that they affected the target tissue or organ. This appears to be very unlikely. . . . The fact that [Claimant] already had a ptosis on the day after the MVA indicates that the likelihood is that she was in fact already developing MG by the time she had the MVA.

21. Dr. O'Neil testified in a deposition on January 14, 2020 to elaborate on the opinions expressed in his report. He reiterated his belief the MVA "unmasked" and exacerbated Claimant's previously asymptomatic MG. He opined stress is a "major exacerbator of myasthenia gravis . . . when they get stressed, their myasthenia gravis either gets unmasked or their symptoms worsen." Dr. O'Neil cited no published studies or other literature to support his opinion regarding the effects of "stress" on MG.

22. Dr. Morgenstern testified for Respondents at hearing. He conceded his previous attribution of MG to the thymoma was a mistake, because the surgery proved she did not have a thymoma. He disagreed with Dr. O'Neil's theory of causation and opined there is no persuasive epidemiological evidence associating MG with trauma. He opined the existence of ptosis on May 8, 2019 proves the condition was pre-existing, and not caused by the accident. He explained,

So that day, she had a droopy eyelid. We know it wasn't caused by trauma. Retrospectively, there is no question that that droopy eyelid represents myasthenia gravis. But in addition, we talked about the origin of myasthenia.

Myasthenia is due to antibodies. . . . The antibodies don't come immediately. It takes 7 to 10 days to make antibodies. That is why when you get a vaccination for the flu or something, you are not immediately protected the moment you walked out of the doctor's office. It takes a while for those antibodies to – for the certain lymphocytes to look at the protein [and] say, oh, this is in a good protein, we need to fight it, process it, multiply, and generate antibodies against it. The process takes at least sort of within a week, plus or minus. So we know if she had ptosis the next day after the car accident, those antibodies had been there for a while.

23. Dr. Morgenstern opined stress does not trigger MG and there is no textbook or peer-reviewed article that supports a stress-related theory of causation. He agreed stress can affect an MG patient's perception of their symptoms, but opined there is no epidemiologic evidence stress can trigger MG or cause otherwise asymptomatic MG to manifest.

24. Dr. Morgenstern's hearing testimony was credible and persuasive. His opinions largely dovetail with those expressed by Dr. Raschbacher, which are also credible and persuasive. Respondents proved the May 7, 2019 accident did not cause, aggravate, exacerbate, or accelerate Claimant's diagnosis of MG.

25. Considering this finding, Claimant's request for general medical benefits related to MG is moot.

26. Respondents admitted liability for TTD benefits commencing June 6, 2019, based on the assumption Claimant's progressive neurological symptoms were probably related to a head injury or other sequelae of the MVA. Claimant has been off work since June 6, 2019 because of symptoms and limitations attributable to MG.

27. Claimant has been treating with Dr. Timothy Sandell since August 2019, whom the parties agree is the primary ATP. Dr. Sandell has never assigned any work restrictions for any medical condition other than from MG. On October 14, 2019, Dr. Sandell opined, "I have still not placed her at MMI as relates to the motor vehicle accident. When she is released from the care of the neurologist, I will address any work restrictions necessary as relates to the motor vehicle accident." He also opined, "I am unaware of any trauma-induced myasthenia gravis. However, I have minimal experience in this area and would have to defer to someone with more expertise. Dr. Morgenstern has already opined that there is not a connection between the two. I will continue to see her and treat symptoms as related to the motor vehicle accident specifically. . . . In the meantime, she is restricted from a neurology standpoint from returning to work." Claimant's job involves sedentary to light-level activities. There is no persuasive evidence of any medical limitations apart from the effects of MG that would disable her from her regular work.

28. Respondent proved Claimant was not entitled to TTD benefits commencing June 6, 2019, because her disability and associated wage loss was not proximately caused by the work accident.

29. Respondent proved Claimant received an overpayment of TTD benefits paid since June 6, 2019.

30. Employer had various rules relating to driving, one of which was to “Honor all posted traffic signs and obey all state and local laws.” Respondents allege Claimant “willfully” violated this safety rule by failing to disengage cruise control and slow down before reaching the hail-covered portion of the roadway.
